Below is a sample academic plan for students majoring in robotics engineering. As part of the major declaration process students prepare an academic plan and the selected electives may affect the placement of other courses as well. Careful planning is required to complete the degree within four years. Students who are unable to follow this planner should consult with ECE advisors for alternatives. General education requirements that are not covered in the four-year planner are: CC (Cross-Cultural Analysis), ER (Ethnicity and Race), IM (Interpreting Arts and Media), TA (Textual Analysis), PE (Perspective), and C (Composition).

Year	Fall	Winter	Spring
1st (frosh)	MATH 19A	MATH 19B	AM 10
	CSE 20	PHYS 5A & PHYS 5L	CSE 16
		CSE 12	ECE 13
2nd (soph)	AM 30 or MATH 23A	ECE 9	ECE 10
	PHYS 5C & PHYS 5N	AM 20	CSE 30
	ECE 8 (recommended)	ECE 101 & ECE 101L	CSE 107
3rd (junior)		ECE 121	Upper-division elective
	ECE 103 & ECE 103L		ECE 118
	CSE 100 & CSE 100L	CSE 101	
4th (senior)	ECE 129A	ECE 129B	ECE 129C
	ECE 141	Advanced robotics elective	ECE 167

Plan for Junior Transfers

Below is a sample academic plan for students transferring to UC Santa Cruz in robotics engineering in their junior year. It assumes that all lower-division course requirements have already been satisfied, except ECE 9 and ECE 10. The plan for the third and fourth years will vary according to the electives and capstone selected. As part of the major declaration process students prepare a plan and the selected electives may affect the placement of other courses as well. Careful planning at the time of declaration is required to complete the degree within two years.

This planner assumes that most general education courses have been completed before coming to UCSC.

Year	Fall	Winter	Spring
3rd (junior)	ECE 101	ECE 121	ECE
	& 101L		118
	CSE 101	ECE 9	ECE 10
	CSE 100	CSE 107	ECE
4th (senior)	& CSE		103 &
	100L		ECE
			103L
	ECE	ECE 129B	ECE
	129A		129C
	ECE 141	Advanced	ECE

Curriculum charts for all Baskin Engineering majors are available at the BE Undergraduate Advising Major Curriculum Charts page.

ELECTRICAL ENGINEERING MINOR

The electrical engineering minor provides a solid foundation in the core areas of electronic circuits and signals and systems, as well as the prerequisite material in mathematics and physics. Concentration of upper-division electives in either of the major tracks constitutes substantial and focused work in the discipline of electrical engineering. This minor is particularly suitable for students with majors in applied physics or any Baskin Engineering major.

Course Requirements

Requirements for the minor in Electrical Engineering are the following:

Lower-Division Courses

Mathematics

Math placement is required for one or more of the foundational courses for this minor. For more information, please review the Math Placement website.

All of the following

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5

Plus one of the following courses

MATH 23A	Vector Calculus	5
AM 30	Multivariate Calculus for Engineers	5

Plus one of the following options

Either these courses		
AM 10	Mathematical Methods for Engineers I	5
AM 20	Mathematical Methods for Engineers II	5
or these courses		
MATH 21	Linear Algebra	5
MATH 24	Ordinary Differential Equations	5

Science

One of the following lecture/lab combinations

Either these courses		
PHYS 5A	Introduction to Physics I	5
PHYS 5L	Introduction to Physics I Laboratory	1
or these courses		
PHYS 6A	Introductory Physics I	5
PHYS 6L	Introductory Physics I Laboratory	1

Plus one of the following lecture/lab combinations

Either these courses		
PHYS 5C	Introduction to Physics III	5
PHYS 5N	Introduction to Physics Laboratory III	1
or these courses		
PHYS 6C	Introductory Physics III	5
PHYS 6N	Introductory Physics III Laboratory	1

Upper-Division Courses

All of the following courses

ECE 101	Introduction to Electronic Circuits	5
ECE 101L	Introduction to Electronic Circuits Laboratory	2
ECE 103	Signals and Systems	5
ECE 171	Analog Electronics	5

ECE 171L	Analog Electronics Laboratory	2
----------	-------------------------------	---

Electives

Plus at least 15 additional credits of upper-division or graduate courses from the lists below. All of the upper-division electives must come from the same concentration.

Electronics/Optics Concentration Courses

Electrical and Computer Engineering

ECE 104	Bioelectronics	5
ECE 118	Introduction to Mechatronics	10
ECE 121	Microcontroller System Design	7
ECE 130	Introduction to Optoelectronics and Photonics	5
ECE 130L	Introduction to Optoelectronics Laboratory	1
ECE 230	Optical Fiber Communication	5
ECE 136	Engineering Electromagnetics	5
ECE 141	Feedback Control Systems	5
ECE 241	Introduction to Feedback Control Systems	5
ECE 157	RF Hardware Design	5
ECE 157L	RF Hardware Design Laboratory	2
ECE 167	Sensing and Sensor Technologies	7
ECE 172	Advanced Analog Circuits	5
ECE 221	Advanced Analog Integrated Circuits	5
ECE 173	High-Speed Digital Design	7
ECE 175	Energy Generation and Control	5
ECE 175L	Energy Generation and Control Laboratory	2
ECE 176	Energy Conservation and Control	5
ECE 176L	Energy Conversion and Control Laboratory	2
ECE 177	Power Electronics	5
ECE 177L	Power Electronics Laboratory	2
ECE 178	Device Electronics	5
ECE 180J	Advanced Renewable Energy Sources, Storage, and Smart Grids	5
ECE 201	Introduction to Nanotechnology	5

ECE 203	Nanocharacterization of Materials	5
ECE 231	Optical Electronics	5

(ECE 130 and ECE 230, ECE 141 and ECE 241, and ECE 172 and ECE 221 are undergraduate and graduate courses taught in conjunction, and only one can be taken for this program.)

Communications, Signals, Systems, and Controls Concentration

Electrical and Computer Engineering

ECE 118	Introduction to Mechatronics	10
ECE 130	Introduction to Optoelectronics and Photonics	5
ECE 130L	Introduction to Optoelectronics Laboratory	1
ECE 230	Optical Fiber Communication	5
ECE 136	Engineering Electromagnetics	5
ECE 141	Feedback Control Systems	5
ECE 241	Introduction to Feedback Control Systems	5
ECE 152	Introduction to Wireless Communications	5
ECE 252	Wireless Communications	5
ECE 153	Digital Signal Processing	5
ECE 250	Digital Signal Processing	5
ECE 237	Image Processing and Reconstruction	5
ECE 251	Principles of Digital Communications	5
ECE 253	Introduction to Information Theory	5
ECE 255	Error Control Coding	5
ECE 256	Statistical Signal Processing	5

Computer Science and Engineering

CSE 150	Introduction to Computer Networks	7
---------	-----------------------------------	---

(ECE 130 and ECE 230, ECE 152 and 252, ECE 141 and ECE 241, and ECE 153 and ECE 250 are undergraduate and graduate courses taught in conjunction, and only one can be taken for this program.)

ASSISTIVE TECHNOLOGY MINOR

The assistive technology minor is designed for students interested in helping people with movement disabilities. The emphasis is on designing exoskeletons and robots built on two core cross-disciplinary courses: Mechatronics (ECE 118) and Functional Anatomy (METX 135 & METX 135L).

The minor requirements may satisfy the requirements of other majors or minors under the campus policy discussed under Major and Minor Requirements. Because of the large number of courses required, it is most suitable for students in majors already requiring a substantial number of these courses. The minor cannot be combined with the Assistive Technology: Motor concentration of the former bioengineering major or the Robotics Engineering B.S. major. ECE 121, ECE 141 and ECE 167 cannot also be used to satisfy electrical engineering B.S. electives.

Course Requirements

Requirements for the minor in assistive technology are the following:

Lower-Division Courses

Math placement is required for one or more of the foundational courses for this minor. For more information, please review the Math Placement website.

All of the following

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
PHYS 5A	Introduction to Physics I	5
PHYS 5L	Introduction to Physics I Laboratory	1
PHYS 5C	Introduction to Physics III	5
PHYS 5N	Introduction to Physics Laboratory III	1
CHEM 1A	General Chemistry	5
BIOL 20A	Cell and Molecular Biology	5
BIOE 20B	Development and Physiology	5
CSE 12	Computer Systems and Assembly Language and Lab	7
CSE 13E	Embedded Systems and C Programming	7

Plus one of the following

Either this course		
AM 10	Mathematical Methods for Engineers I	5
or this course		
MATH 21	Linear Algebra	5

Plus one of the following

Either this course		
AM 20	Mathematical Methods for Engineers II	5
or this course		

MATH 24	Ordinary Differential Equations	5
---------	---------------------------------	---

Upper-Division Courses

All of the following courses

ECE 101	Introduction to Electronic Circuits	5
ECE 101L	Introduction to Electronic Circuits Laboratory	2
ECE 103	Signals and Systems	5
CSE 100	Logic Design	5
CSE 100L	Logic Design Laboratory	2
ECE 118	Introduction to Mechatronics	10
METX 135	Functional Anatomy	5
METX 135L	Functional Anatomy Lab	3
ECE 167	Sensing and Sensor Technologies	7

Plus one of the following courses

ECE 121	Microcontroller System Design	7
ECE 141	Feedback Control Systems	5

BIOELECTRONICS AND BIOPHOTONICS MINOR

The bioelectronics and biophotonics minor is designed for students in chemical, biological, environmental sciences, and biomolecular engineering to learn how to interface biological systems with electronics including sensors, actuators, and wireless communications. Introductory chemistry and physiology is desired, but not required.

Course Requirements

Essential courses for the minor in bioelectronics and biophotonics deal with the analog electronics to interface biological systems to sensors and with the signals they produce, both analog and digital, for interfacing to computer systems. The minor requirements may satisfy the requirements of other majors or minors under the campus policy discussed under Major and Minor Requirements. The minor cannot be combined with the bioelectronics concentration of the former bioengineering major or the electrical engineering B.S. or electrical engineering minor.

Requirements for the minor in bioelectronics and biophotonics consist of the following:

Lower-Division Courses

Math placement is required for one or more of the foundational courses for this minor. For more information please review the Math placement website.

All of the following

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
PHYS 5A	Introduction to Physics I	5
PHYS 5L	Introduction to Physics I Laboratory	1
PHYS 5C	Introduction to Physics III	5
PHYS 5N	Introduction to Physics Laboratory III	1
CSE 12	Computer Systems and Assembly Language and Lab	7
ECE 13	Computer Systems and C Programming	7

Plus one of the following

Either this course		
AM 10	Mathematical Methods for Engineers I	5
or this course		
MATH 21	Linear Algebra	5

Plus one of the following

Either this course		
AM 20	Mathematical Methods for Engineers II	5
or this course		
MATH 24	Ordinary Differential Equations	5

Upper-Division Courses**All of the following courses**

CSE 100	Logic Design	5
CSE 100L	Logic Design Laboratory	2
ECE 101	Introduction to Electronic Circuits	5
ECE 101L	Introduction to Electronic Circuits Laboratory	2
ECE 103	Signals and Systems	5
ECE 121	Microcontroller System Design	7
ECE 167	Sensing and Sensor Technologies	7

Plus one of the following options

Either this course		
ECE 104	Bioelectronics	5
or these courses		

ECE 130	Introduction to Optoelectronics and Photonics	5
ECE 130L	Introduction to Optoelectronics Laboratory	1
or this course		
BME 140	Bioinstrumentation	5

ECE 130 & ECE 130L requires PHYS 5B

ELECTRICAL AND COMPUTER ENGINEERING CONTIGUOUS BACHELORSMASTERS PATHWAY

The Department of Electrical and Computer Engineering (ECE) offers a combined bachelor's (B.S.) and master's of science (M.S.) degree path. Undergraduate students can apply to this program to earn a B.S. degree in their own major together with an M.S. degree in electrical and computer engineering. Depending on the student's progress, students can complete the combined path in five years.

Admission process to the contiguous pathway

Students can apply to the B.S./M.S. contiguous pathway in electrical and computer engineering at any time starting in the first quarter of junior standing. Admission to the contiguous pathway program in ECE is open to all qualified UC Santa Cruz students. All students who apply to the pathway will be admitted into it, provided they satisfy the requirements (see below). However, approval of an undergraduate student into a five-year bachelor's/master's path does not automatically guarantee admission into the one-year master's program. Students apply for admission into the M.S. program during their senior year using the same procedure and timeline as all other applicants to the program, except that no graduate record examination (GRE) is required to apply. Students are then considered for the M.S. program along with regular applicants. Students who do not satisfy the requirements for the contiguous pathway will be encouraged to apply to the regular M.S. program.

Requirements**Requirements**

The minimum requirements for the B.S./M.S. contiguous pathway are as follows:

- Applicants must have a 3.0 GPA when they apply to the B.S./M.S. contiguous pathway program, and must maintain a 3.0 GPA or higher until the completion of their undergraduate requirements.

- For the chosen core area the student is applying to, it is required to meet the following course requirements before starting the M.S. year of the B.S./M.S. contiguous pathway program:

ELECTRICAL AND COMPUTER ENGINEERING M.S.

Introduction

The Department of Electrical and Computer Engineering (ECE) at the University of California, Santa Cruz (UCSC) offers master of science (M.S.) and doctor of philosophy (Ph.D.) degree programs and conducts research in the following core areas:

- Electronic Circuits and Energy Systems
- Photonic and Electronic Devices
- Robotics, Control, and Cyber-Physical Systems
- Signals, Image Processing, and Communication Systems

For more information about the core areas and associated graduate courses, the department, and its faculty, please visit the Electrical and Computer Engineering Department website.

Students begin the program with the completion of courses in a core area of interest and then proceed to do research in their area of specialization. The M.S. degree can be completed in one year. M.S. students must complete a master's thesis (Plan I: Thesis), pass the comprehensive examination (Plan II: Comprehensive Examination), or complete a project (Plan II: Project). Part-time study is possible for students working in industry while attending school.

The default track for all admitted students is the comprehensive examination track. Upon enrollment, students are assigned an academic faculty adviser. These advisers will assist in course selection and guidance on program options. Students indicate their core area of study on their admission application. Core areas of study are 1) electronic circuits and energy systems; 2) photonic and electronic devices; 3) robotics, control, and cyber-physical systems; 4) signals, image processing, and communications systems. These core areas determine the broad focus of a student's study (providing depth) while still providing the flexibility needed within the program to allow for breadth and the desire to meet each individual student's goals for study.

Requirements

Course Requirements

Thesis Track

Each student is required to take 45 credits, which must consist of:

- At least 15 credits from one of the four core areas defined above.
- At least 20 credits of the total 45 credits must be satisfied through ECE graduate courses.*
- At most 10 credits of independent study (ECE 297, ECE 299) are counted toward the ECE course requirements.
- At most 5 credits of ECE 290 and ECE 291 can be counted toward the ECE course requirements. A combined total of 5 credits from ECE 290 and/or ECE 291 are mandatory.

Total credits required for the M.S. degree is 45.

*The 20 credits of ECE graduate courses can include courses from the core areas only if they are ECE graduate courses. Graduate courses offered by other departments and approved for the core areas are not counted as ECE graduate courses.

Note that each graduate course satisfying the above requirements typically covers 5 credits.

Comprehensive Examination Track

Each student is required to take 45 credits, which must consist of:

- At least 15 credits from one of the four core areas defined above.
- At least 25 credits of the total 45 credits must be satisfied through ECE graduate courses*.
- At most 5 credits of ECE 290 and ECE 291 can be counted toward the ECE course requirements. A combined total of 5 credits from ECE 290 and/or ECE 291 are mandatory.

Total credits required for the M.S. degree is 45.

*The 25 credits of ECE graduate courses can include courses from the core areas only if they are ECE graduate courses. Graduate courses offered by other departments and approved for the core areas are not counted as ECE graduate courses.

Note that each graduate course satisfying the above requirements typically covers 5 credits. Independent study credits do not count toward the degree requirements for students in the comprehensive examination track.

Each student in the comprehensive examination track must pass three comprehensive exam subjects from ECE courses in their chosen core area. Students may not take the comprehensive exam in the same subject more than twice, and may attempt a maximum of six subjects.

Project Track

Each student is required to take 45 credits, which must consist of:

- At least 15 credits must be satisfied with courses from one of the four core areas defined above.
- At least 25 credits of the total 45 credits must be satisfied through ECE graduate courses*.
- At most 5 credits of ECE 290 and ECE 291 can be counted toward the ECE course requirements. A combined total of 5 credits from ECE 290 and/or ECE 291 are mandatory.

Total credits required for the M.S. degree is 45.

*The 25 credits of ECE graduate courses can include courses from the core areas only if they are ECE graduate courses. Graduate courses offered by other departments and approved for the core areas are not counted as ECE graduate courses.

Note that each graduate course satisfying the above requirements typically covers 5 credits.

Other Requirements

Thesis Track

A master's research thesis, viewed as acceptable by a thesis committee appointed by the program faculty, is required of each student in this track. To fulfill this requirement, the student submits a written proposal to a faculty member, usually by the third academic quarter. By accepting the proposal, the faculty member becomes the thesis advisor. The remaining members of the thesis reading committee are appointed by the student's program in consultation with the thesis advisor. The majority of the membership of a thesis reading committee shall be members of the Santa Cruz Division of the Academic Senate. Each committee member is provided a copy of the proposal. Upon completion of the thesis work, the student presents an expository talk on the thesis research, and the final thesis must be accepted by the master's thesis reading committee before the award of the master of science degree. The completed thesis must be filed with the Graduate Division by the end of instruction in the term in which the student expects the degree to be awarded.

Comprehensive Examination Track

The comprehensive exams are only available for ECE graduate courses approved in the four core areas. Graduate courses approved in the four core areas outside ECE (such as AM or CSE) are not available for the comprehensive exams.

At the end of each quarter students will have the opportunity to take the section of the comprehensive examination relevant to the courses offered that quarter that are approved for the core areas as outlined above. The comprehensive examination will focus on fundamental material related to the subject matter of the course and will be offered, typically, on Friday of the last week of instruction. The results of these examination sections, when integrated, will comprehensively test the student's mastery of the

curriculum. In order to pass the overall comprehensive examination, a student is required to pass at least three sections of the comprehensive examination in the proposed core area of study. Students may attempt more than one section per quarter.

Master's students must take the corresponding course in order to take the comprehensive exam in a given subject. A maximum of six exams may be attempted, and a student must pass a minimum of three subjects within their core area in order to fulfill the comprehensive exam capstone requirement.

Students must register for the exam subjects they wish to take each quarter when the call for exam registrations is sent. Students who do not register may not be permitted to take the exam.

The comprehensive examinations are closed-note, closed-book exams, and the use of calculators or other electronic devices is not permitted during the exam. The instructor who writes the exam may deem it appropriate to provide an equation sheet or other reference sheet with the exam, however no other reference materials are allowed. Students are allocated one hour per exam subject. Students who are taking only one exam will be asked to leave the exam room after one hour. Students who are taking multiple exams in the same quarter may allocate their exam time as they see fit, however they will receive only one hour of exam time per subject.

Students are notified of their exam results (pass/fail) by email prior to the start of the following quarter, and the results are also recorded in the student's file by the graduate advisor. If students have questions about the exam or how it was graded, they should contact the instructor who wrote the exam to request a meeting to go over the exam. Once a student has passed three exam subjects within their core area, they have fulfilled the comprehensive examination requirement and are eligible for graduation as soon as they have completed all of the other requirements for the degree.

Students in the M.S. comprehensive examination track are not eligible for Filing Fee status.

Note that Plan II: Comprehensive Examination track, is the default option for all M.S. students. Students can select Plan I: Thesis track, or Plan II: Project, only if they can find a faculty sponsor to supervise the thesis or project.

Project Track

Completion of a project report is required for the master's degree in this track. To fulfill this requirement, the student submits a written proposal to a faculty member, usually by the third academic quarter. By accepting the proposal, the faculty member becomes the project advisor. In consultation with the advisor, the student forms a project reading committee with at least one additional faculty member, each of whom is provided a copy of the proposal. Upon completion of the project, the student submits the report to the project

reading committee, and the final project must be accepted by the reading committee before the award of the master of science degree.

Review of Progress

Each year, the faculty reviews the progress of every student. Students not making adequate progress toward completion of degree requirements (see the Graduate Student Handbook for the policy on satisfactory academic progress) are subject to dismissal from the program. Students with academic deficiencies may be required to take additional courses. Full-time students with no academic deficiencies are normally expected to complete the degree course requirements at the rate of at least two courses each quarter. Full-time students must complete all course requirements within two years for the M.S.

Students receiving two or more grades of U (unsatisfactory) or below B- in Baskin Engineering courses are not making adequate progress and will be placed on academic probation for the following three quarters of registered enrollment. Withdrawing or taking a leave of absence does not count as enrollment. Part-time enrollment is counted as a half-quarter of enrollment.

If an electrical and computer engineering graduate student fails a Baskin Engineering course while on probation, the Electrical and Computer Engineering Department may request the graduate dean to dismiss that student from the graduate program. If after being removed from probation, the student again fails a Baskin Engineering course, he or she will return immediately to academic probation.

Graduate students experiencing circumstances or difficulties that impact their academic performance should contact their advisor and the graduate director immediately. Students may appeal their dismissal to the graduate committee.

Applying for Graduation

All candidates for a degree must submit an Application for the Master's Degree to the Graduate Advising Office by the date stated in the Academic and Administrative Calendar for the quarter you wish to receive the degree. Failure to declare candidacy by the deadline means that you cannot be considered a candidate until the next term.

A student is required to be registered or on Filing Fee Status, whichever is applicable, during the quarter in which the degree is conferred. Students should consult the department advisor to determine which option fits their situation. For more information about applying for graduation, visit the Baskin Engineering Graduate Studies website.

Optional Catchall

ELECTRICAL AND

COMPUTER ENGINEERING PH.D.

Introduction

The Department of Electrical and Computer Engineering (ECE) at the University of California, Santa Cruz (UCSC) offers master of science (M.S.) and doctor of philosophy (Ph.D.) degree programs and conducts research in the following core areas:

- Electronic Circuits and Energy Systems
- Photonic and Electronic Devices
- Robotics, Control, and Cyber-Physical Systems
- Signals, Image Processing, and Communication Systems

For more information about the core areas and associated graduate courses, the department, and its faculty, please visit the Electrical and Computer Engineering Department website.

Students begin the program with the completion of courses in a core area of interest and then proceed to do research in their area of specialization. Ph.D. students are required to complete the preliminary exam requirement within their first four quarters of study. After completing the course requirements, students must pass an oral qualifying exam and write a dissertation. Part-time study is possible for students working in industry while attending school.

Advancement to Candidacy

Course Requirements

Each student is required to take 55 credits which must consist of:

- At least 20 credits in one of the four core areas defined above.
- At least 30 of the total 55 credits must be satisfied through ECE graduate courses.
- At most 10 credits of independent study (ECE 297, ECE 299) will be counted toward ECE course requirements.
- A combined total of 5 credits from ECE 290 and/or ECE 291 are mandatory, but no more than 5 credits from these two courses can be counted toward degree requirements. Students are required to take ECE 291 in order to become eligible to be a teaching assistant.

Total credits required for the Ph.D. degree is 55.

The 30 credits of ECE graduate courses can include courses from the core areas only if they are ECE graduate courses. Graduate courses offered by other

departments and approved for the core areas are not counted as ECE graduate courses.

* For students already holding a Master of Science in Electrical Engineering (M.S.E.E.) or equivalent degree, at most 20 credits of transfer credit may be granted for equivalent coursework performed at the students' M.S. granting institution. Credit transfer is subject to approval by the instructor of the equivalent UCSC course and the electrical and computer engineering graduate director.

The ECE Department sponsors a weekly graduate seminar course, ECE 290, in fall, winter, and spring quarters. All graduate students are required to register and attend for at least one quarter during their graduate student career, and are encouraged to enroll every quarter. The graduate seminar consists of talks by invited speakers from industry and academia.

Some faculty also sponsor a weekly lab seminar or lab meeting, ECE 280. Faculty advisers can require their students to enroll for these seminars and they do count toward maintaining full-time enrollment, however they do not count toward the coursework requirements for the degree.

Foreign Language Requirements

Teaching Requirements

Pre-Qualifying Requirements

Preliminary Examination

At the end of the first year (i.e., no later than the fall quarter in the following year after their entry), students admitted to the Ph.D. program must satisfy the requirements of the preliminary examination to continue in the Ph.D. program. This examination is as follows:

- Pass three comprehensive exams from subjects in their chosen core area
- Pass one additional section of the comprehensive examination from a different core area.

The preliminary exams are only available for ECE graduate courses approved in the four core areas. Graduate courses approved in the four core areas outside ECE (such as AM or CSE) are not available for the preliminary exams.

At the end of each quarter, students will have the opportunity to take the section(s) of the preliminary examination relevant to the courses offered that quarter that are approved for the core areas. The preliminary examination will focus on fundamental material related to the subject matter of the course and will be offered, typically, the Friday before finals week. The results of these examination sections, when integrated, will comprehensively test the student's mastery of the curriculum. In order to pass the overall preliminary examination, a student is required to pass at least three

preliminary exam subjects in their core area, plus one exam that is not approved for their core area.

Students may attempt more than one subject per quarter. A maximum of eight exams may be attempted, and a student must pass a minimum of four subjects—three within their selected core area, and one from a different core area. Students who have obtained approved course substitutions for one or more courses within their core area may attempt the preliminary exams for those substituted courses without having taken the course at UCSC. In such cases, students are strongly encouraged to contact the instructor of the UCSC course at the beginning of the quarter to request course materials and/or audit the class.

Students must register for the exam subjects they wish to take each quarter when the call for exam registrations is sent. Students who do not register may not be permitted to take the exam.

Passing three preliminary exam subjects within one core area satisfies the comprehensive exam capstone requirement for the ECE Master's degree. Ph.D. students who wish to apply for a non-terminal Master's degree once they have completed this requirement are welcome to do so, provided that they have also met the coursework requirements for the M.S. degree.

Qualifying Examination

This oral examination is a defense of the student's thesis prospectus and a test of the student's knowledge in advanced technical areas of relevance to the dissertation topic. This oral examination consists of a seminar-style talk before the examining committee, where the student describes the thesis prospectus, followed by questions from the committee on the substance of the talk and the areas of presumed expertise of the student. The examination, taken typically in the third year of Ph.D. study, is administered by a Ph.D. qualifying examination committee, consisting of at least four examiners. The composition of the committee must be approved by the graduate director and the dean of graduate studies whereupon the student and the committee are notified.

If the student does not pass the qualifying examination, the student may be asked to complete additional coursework, or other research-related work, before retaking the examination. The student may be allowed to retake the qualifying examination once, and the composition of the examining committee will remain the same for the second try. Students who fail the qualifying examination twice may be dismissed from the Ph.D. program.

Ph.D. students who have not advanced to candidacy by the end of the fourth year will be recommended for academic probation.

Post-Qualifying Requirements

Advancement to candidacy requires that the student:

- pass the preliminary examination;
- complete all course requirements prior to taking the qualifying examination;
- clear all Incompletes from the student's record;
- pass the qualifying examination; and
- have an appointed Ph.D. dissertation reading committee.

Transfer Credit

For students already holding an M.S.E.E. or equivalent degree, at most 20 credits of transfer credit may be granted for equivalent coursework performed at the student's M.S. granting institution. Credit transfer is subject to approval of the instructor of the equivalent UCSC course and the ECE graduate director.

Non-Terminal Master's Degree

Students not already holding an M.S.E.E. degree, who are studying for the Ph.D. degree, may apply to be granted a M.S. degree when they have fulfilled all the M.S. degree requirements (including submission of an M.S. thesis or project, or passing the comprehensive examination).

Materials Fee

Please see the section on fees under School of Engineering.

Optional Catchall

Dissertation

Dissertation

After advancement to candidacy, work on the dissertation research progresses until the dissertation is completed. The Ph.D. dissertation must show the results of in-depth research, be an original contribution of significant knowledge to the student's field of study, and include material worthy of publication. The student is strongly advised to submit research work for publication in advance of completing the dissertation so that the latter requirement is clearly satisfied. The Ph.D. dissertation results are presented in both oral and written forms, the oral form being a dissertation defense (see below) and the written form being the Ph.D. dissertation. The student must submit his or her written Ph.D. dissertation to the dissertation reading committee at least one month before the defense.

Dissertation Defense

Each Ph.D. candidate submits the completed dissertation to a Ph.D. dissertation reading committee at least one month prior to the dissertation defense. The appointment of the dissertation reading committee is made immediately after the qualifying examination and is necessary for advancing to candidacy. The candidate presents his or her research results in a public seminar

sponsored by the dissertation supervisor. The seminar is followed by a defense of the dissertation to the reading committee (only), who will then decide whether the dissertation is acceptable or requires revision. Successful completion of the dissertation fulfills the final academic requirement for the Ph.D. degree.

Academic Progress

Each year, the faculty reviews the progress of every student. Students not making adequate progress toward completion of degree requirements (see the Graduate Student Handbook for the policy on satisfactory academic progress) are subject to dismissal from the program. Students with academic deficiencies may be required to take additional courses. Full-time students with no academic deficiencies are normally expected to complete the degree course requirements at the rate of at least two courses each quarter. Full-time students must complete all course requirements within two years for the M.S. and three years for the Ph.D.

Students receiving two or more grades of U (unsatisfactory) or below B- in the School of Engineering courses are not making adequate progress and will be placed on academic probation for the following three quarters of registered enrollment. Withdrawing or taking a leave of absence does not count as enrollment. Part-time enrollment is counted as a half-quarter of enrollment.

If an electrical and computer engineering graduate student fails a School of Engineering course while on probation, the Electrical and Computer Engineering Department may request the graduate dean to dismiss that student from the graduate program. If after being removed from probation, the student again fails a School of Engineering course, he or she will return immediately to academic probation.

Graduate students experiencing circumstances or difficulties that impact their academic performance should contact their adviser and the graduate director immediately. Students may appeal their dismissal to the graduate committee.

Normative Time

Normative time for completion of the dissertation is three years from the date of advancement to candidacy, and six years in total. Students who fail to complete the degree in six years must request a program extension from the Graduate Division. A written request, signed by the student and their faculty adviser, detailing the timeline to degree completion should be approved by the graduate director prior to submission to the dean of graduate studies. Multiple extensions may be considered.

Students who fail to complete their dissertation within three years of advancement to candidacy, or who fail to complete the Ph.D. degree within six years, may be recommended for academic probation. In order to maintain good academic standing, students must

advance to candidacy within the first three years, and complete the degree within the subsequent three years.

Students who are on part-time status accrue time-to-degree at one-half the rate of full-time students for those quarters during which they are on approved part-time study. Doctoral students who have advanced to candidacy accrue time-to-degree at the regular rate, regardless of part-time or full-time status. Taking a leave of absence does not “stop the clock” on normative time. Time-to-degree continues to accrue at the normal rate while students are on approved leave.

If the Ph.D. degree is not awarded within seven years from the date of advancement to candidacy, the student's candidacy will lapse and the student will be required to pass a new Qualifying Exam prior to submitting the dissertation, or to undergo another formal review as directed by the student's department, and the result of this examination or review will be transmitted in writing to the Graduate Council (Academic Senate Regulation 18.6).

Applying for Graduation

All candidates for a degree must submit an Application for Doctor of Philosophy Degree to the Graduate Advising Office by the date stated in the Academic and Administrative Calendar for the quarter you wish to receive the degree. Failure to declare candidacy by the deadline means that you cannot be considered a candidate until the next term.

A student is required to be registered or on Filing Fee Status, whichever is applicable, during the quarter in which the degree is conferred. Students should consult the department adviser to determine which option fits their situation. For more information about applying for graduation, visit the Baskin School of Engineering Graduate Studies website.

ROBOTICS AND CONTROL DESIGNATED EMPHASIS

Introduction

The graduate designated emphasis (DE) leading to the degree notation “with an emphasis in Robotics and Control” is a collaboration of faculty from several Baskin School of Engineering programs and is administered by the Department of Electrical and Computer Engineering. Students wishing to complete a master's thesis or doctoral dissertation in this area must satisfy the degree requirements of a primary program as well as of the DE. The DE is most suitable for students pursuing degrees in Applied Mathematics, Electrical and Computer Engineering, and Statistics, but students from any area may work in this interdisciplinary field so long as they meet all requirements, including progress, within the primary degree program. A current list of the robotics and control faculty and electives is available at the Electrical and Computer Engineering website.

Requirements

Committee Composition and Departmental Approvals

The student's M.S. project or Ph.D. qualifying exam, or Ph.D. committee must include one member of the robotics and control faculty.

Course Requirements

The student must complete four five-credit graduate courses and several two-credit seminar courses. All students must complete ECE 241, Introduction to Feedback Control Systems, and three 5-credit robotics and control graduate electives.

Master's students must complete two offerings of ECE 280C, Seminar in Control (2 credits).

Doctoral students must complete four offerings of ECE 280C.

ECE 241	Introduction to Feedback Control Systems	5
ECE 280C	Seminar on Control	2

Writing, Research and/or Teaching Requirements

The student's dissertation or thesis must include a significant section (chapter) related to robotics and control, with content suitable for a conference or journal article. Students pursuing the M.S. project track must complete a project report related to robotics and control, with content suitable for a conference or journal article.

PROGRAMS OFFERED

Statistics Minor (p. 550)

Statistical Science Contiguous
Bachelor's/Master's Pathway (p. 551)

Statistical Science M.S. (p. 554)

Statistical Science Ph.D. (p. 556)

Statistics Designated Emphasis (D.E.) (p. 559)

Data Science Designated Emphasis (D.E.) (p. 559)

Statistics is a discipline devoted to the use of mathematical methods and reasoning to solve real-world problems of a scientific or decision-making nature in a wide variety of subjects, principally (but not exclusively) in engineering, medicine, the physical and

biological sciences, and the social sciences. Statistics, construed broadly, is the study of uncertainty: how to measure it (using ideas and methods in probability theory), and what to do about it (using concepts from statistical inference and decision theory).

The Statistics Department at UC Santa Cruz offers M.S. and Ph.D. programs in statistical science. The goal of these programs is to help students develop into independent scholars who are prepared for productive careers in research, teaching, and industry. The department also offers a designated emphasis in statistics and a minor in statistics.

Additional information on these programs can be found on the department website.

STATISTICS MINOR

The statistics minor is available for students who wish to gain a quantitative understanding of how to (a) measure uncertainty and (b) make good decisions on the basis of incomplete or imperfect information, and to apply these skills to their interests in another field. This minor could also be combined with a major in mathematics as preparation for a graduate degree in statistics or biostatistics.

Math placement is required for one or more of the foundational courses for this minor. For more information, please review the Math Placement website.

Course Requirements

Lower-Division Courses

Basic calculus sequence

Either these courses

AM 11A	Mathematical Methods for Economists I	5
AM 11B	Mathematical Methods for Economists II	5

or these courses

MATH 11A	Calculus with Applications	5
MATH 11B	Calculus with Applications	5

or these courses

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5

or these courses

MATH 20A	Honors Calculus	5
MATH 20B	Honors Calculus	5

Plus one course from each of the following four

categories

Statistical concepts

Either this course

STAT 5	Statistics	5
--------	------------	---

or these courses

STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2

Computer Programming

Either this course

BME 160	Research Programming in the Life Sciences	6
---------	---	---

or one of these courses

CSE 20	Beginning Programming in Python	5
CSE 30	Programming Abstractions: Python	7
ASTR 119	Introduction to Scientific Computing	5

Linear Algebra

One of the following courses:

AM 10	Mathematical Methods for Engineers I	5
MATH 21	Linear Algebra	5

It is recommended that students also take AM 20 or MATH 24.

Multivariate Calculus

Either this course

MATH 22	Introduction to Calculus of Several Variables	5
---------	---	---

or this course

AM 30	Multivariate Calculus for Engineers	5
-------	-------------------------------------	---

or these courses

MATH 23A	Vector Calculus	5
MATH 23B	Vector Calculus	5

Upper-Division Courses

Probability

One of the following "probability" courses:

STAT 131	Introduction to Probability Theory	5
----------	------------------------------------	---

STAT 203	Introduction to Probability Theory	5
CSE 107	Probability and Statistics for Engineers	5
Statistical Inference		
STAT 132	Classical and Bayesian Inference	5
Computational Methods		
AM 147	Computational Methods and Applications	5
Plus two electives from the following list of courses		
STAT 108	Linear Regression	5
STAT 204	Introduction to Statistical Data Analysis	5
STAT 206	Applied Bayesian Statistics	5
STAT 207	Intermediate Bayesian Statistical Modeling	5
STAT 208	Linear Statistical Models	5
BME 205	Bioinformatics Models and Algorithms	5
ECE 145	Estimation and Introduction to Control of Stochastic Processes	5
CSE 142	Machine Learning	5
ECON 104	Is There Truth in Numbers: The Role of Statistics in Economics	5
ECON 113	Introduction to Econometrics	5
ECON 114	Advanced Quantitative Methods	6
ECON 120	Development Economics	5
ECON 161B	Marketing Research	5
ECON 190	Senior Proseminar	5
MATH 105A	Real Analysis	5
MATH 105B	Real Analysis	5
MATH 114	Introduction to Financial Mathematics	5
PSYC 181	Psychological Data Analysis	5

Note: Students planning graduate work in statistics are recommended to choose MATH 23A and MATH 23B, STAT 204, STAT 205, and MATH 105A and MATH 105B.

STATISTICAL SCIENCE CONTIGUOUS BACHELOR'S MASTER'S PATHWAY

Information and Policies

Introduction

The Department of Statistics offers a Statistical Science Bachelor's/Master's pathway. Undergraduate students in certain majors can apply to the pathway in order to earn a B.S. degree in their own major together with an M.S. degree in Statistical Science. Approved programs are:

- B.S. in Applied Physics, Astrophysics, or Physics
- B.S. in Computer Science
- B.S. in Economics/Mathematics
- B.A. in Mathematics (Pure Math and Computational)

Sample planners for the pathway are available through the Baskin Engineering Graduate Affairs Office website. Qualified undergraduates from other undergraduate majors may also apply to the pathway and their applications will be considered on a case by case basis.

Depending on the student's progress, the B.S./M.S. pathway can be completed in five years.

Admission Requirements and Process

The requirements for admission into the 4+1 pathway are: (1) a cumulative GPA of 3.0 or more; (2) to have taken, or to have a plan to take, foundational coursework in univariate and multivariate calculus, linear algebra, introductory statistics, and programming; and (3) to have completed both STAT 131 and STAT 132 with an A- or above. (Please see Course Requirements section below for details.)

Interested students should schedule a meeting with the STAT graduate director to discuss their curriculum plan and fill the application form. The ultimate deadline for application to the pathway is the end of their junior year (ninth quarter of study at UC Santa Cruz), although students are encouraged to apply significantly earlier, ideally at the same time as their major declaration.

All students who apply to the pathway will be admitted into it, provided they satisfy the requirements. However, approval of an undergraduate student into a five-year bachelor's/master's path does not automatically guarantee admission into the one-year master's program.

Students apply for admission into the M.S. program during their senior year using the same procedure and timeline as all other applicants to the program, and they will be considered for the M.S. program along with regular applicants. The pathway assists qualified enrolled students with a simplified graduate application process that does not require students to submit Graduate Record Examination (GRE) scores. This will be made clear to students admitted into the pathway, as early as possible.

Course Requirements

Students pursuing the contiguous pathway are expected to have a strong quantitative background. At the time they apply to the pathways they will be expected to have completed the following coursework:

Basic Requirements

To be admitted into the contiguous pathway, students must have completed this series of courses with an average GPA of 3.0 or above.

Univariate Calculus

Either both MATH 19A and MATH 19B, or both MATH 20A and MATH 20B.

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 20A	Honors Calculus	5
MATH 20B	Honors Calculus	5

Multivariate Calculus

MATH 22	Introduction to Calculus of Several Variables OR	5
AM 30	Multivariate Calculus for Engineers OR	5
MATH 23A	Vector Calculus AND	5
MATH 23B	Vector Calculus	5

Linear Algebra

AM 10	Mathematical Methods for Engineers I OR	5
MATH 21	Linear Algebra OR	5
PHYS 116A	Mathematical Methods in Physics	5

Introductory Statistics

STAT 5	Statistics OR	5
STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences OR	5
PHYS 133	Intermediate Laboratory	5

Programming

CSE 20	Beginning Programming in Python	5
--------	---------------------------------	---

or higher level programming course; or equivalent

Advanced Requirements

During their junior year (or before, if appropriate), students in the pathway will be expected to take two courses:

STAT 131	Introduction to Probability Theory	5
STAT 132	Classical and Bayesian Inference	5

Students must obtain a grade no lower than A- in both courses to remain eligible for the pathway. A grade of A- or higher in STAT 131 will waive the M.S. requirement of taking STAT 203, Introduction to Probability Theory. Instead of STAT 203, students in the pathway will need to take an additional elective course to satisfy the credit requirements for the M.S. program (see sample plan below).

Students who pass STAT 131 and STAT 132 with a grade of C or higher but lower than A-, although not eligible to continue in the contiguous pathway to the M.S., will still have the opportunity to complete a minor in statistics or to apply to the M.S. through the regular admission process.

Senior Year Requirements

Students apply for admission into the M.S. program during their senior year using the same procedure and timeline as all other applicants to the program. In addition, during the senior year, students in the pathway will be required to take three graduate-level courses:

STAT 204	Introduction to Statistical Data Analysis	5
STAT 206	Applied Bayesian Statistics	5
STAT 207	Intermediate Bayesian Statistical Modeling	5

Note that all three courses satisfy requirements for the Statistical Science M.S. program and therefore cannot be counted as part of the minimum 40 credits of upper-division courses required by the undergraduate major.

Students who are accepted into the M.S. program but fail any of the three senior-year graduate courses will revert to the regular two-year M.S. timeline and will be allowed to retake them

M.S. Year Course Requirements

Students will complete the remaining required courses (STAT 200, STAT 280B, STAT 205 and STAT 208) and electives (three, one of them in lieu of STAT 203) for the M.S. program, as well as their capstone project, during their fifth year in the program. At least one of the three electives must be chosen from List A (courses offered by the Statistics Department).

A student enrolled in the 4+1 contiguous program will complete a total of 45 credits in classroom courses, just like students in the standard M.S. program, with 15 of those credits having been completed as part of their undergraduate degree.

If for any reason a student cannot complete the M.S. requirements during their fifth year, they will revert to the standard M.S. timeline.

Core Courses

STAT 200	Research and Teaching in Statistics	3
STAT 205	Introduction to Classical Statistical Learning	5
STAT 208	Linear Statistical Models	5
STAT 280B	Seminars in Statistics	2

STAT 205 and STAT 208 must be taken for a letter grade.

List A Electives

Electives offered by the Statistics Department and open to M.S. students.

STAT 209	Generalized Linear Models	5
STAT 222	Bayesian Nonparametric Methods	5
STAT 223	Time Series Analysis	5
STAT 224	Bayesian Survival Analysis and Clinical Design	5
STAT 225	Multivariate Statistical Methods	5
STAT 226	Spatial Statistics	5
STAT 227	Statistical Learning and High Dimensional Data Analysis	5
STAT 229	Advanced Bayesian Computation	5
STAT 243	Stochastic Processes	5
STAT 244	Bayesian Decision Theory	5
STAT 246	Probability Theory with Markov Chains	5

List B Electives

Electives offered outside the Statistics Department and open to STAT M.S. students.

AM 216	Stochastic Differential Equations	5
AM 230	Numerical Optimization	5
AM 250	An Introduction to High Performance Computing	5
CSE 242	Machine Learning	5
CSE 243	Data Mining	5
CSE 249	Large-Scale Web Analytics and Machine Learning	5
CSE 261	Advanced Visualization	5
CSE 263	Data Driven Discovery and Visualization	5
CSE 272	Information Retrieval	5
CSE 277	Random Process Models in Engineering	5
ECE 253	Introduction to Information Theory	5
ECE 256	Statistical Signal Processing	5
ECON 211A	Advanced Econometrics I	5

ECON 211B	Advanced Econometrics II	5
ENVS 215A	Geographic Information Systems and Environmental Applications	5
ENVS 215L	Exercises in Geographic Information Systems	2

ENVS 215L is the concurrent lab to ENVS 215A. The lecture/lab combination counts as one course.

Capstone Requirement

This is a Plan II Capstone. For the M.S. degree, students conduct an individual capstone research project (up to three quarters) and in the spring participate in a seminar in which results from their project are presented. Examples of capstone research projects include: review and synthesis of the literature on a topical area of statistical science, application and comparison of different models and/or computational techniques from a particular area of study in statistics, and comprehensive analysis of a data set from a particular application area.

Students must submit a proposal to the potential faculty sponsor no later than the end of their first academic quarter. If the proposal is accepted, the faculty member becomes the sponsor and supervises the research and writing of the project. When the project is completed and written, it must be submitted to and accepted by a committee of two individuals, consisting of the faculty advisor and one additional reader. The additional reader will be chosen appropriately from within the graduate program faculty or outside of it. Either the advisor or the additional reader must be from within the graduate program faculty.

Planner

STAT 131 and STAT 132 are requirements to qualify for the program, but do not satisfy any M.S. requirement (except, in the case of STAT 131, waiving the requirement of taking STAT 203). An M.S. elective is required in lieu of STAT 203.

STATISTICAL SCIENCE M.S.

Introduction

Students in the statistical science program learn to develop and use statistical methods to provide a probabilistic assessment of the variability in different data structures. This knowledge is applied to the quantification of the uncertainties inherent in the discoveries, summaries and conclusions that are drawn from the data analysis. The Statistical Science M.S. places emphasis on the application of statistical methods to the solution of relevant scientific, technological and engineering problems, with the goal of preparing students for professional careers.

Students will obtain an M.S. in statistical science. More specifically, students will develop background on statistical theory, methods, and computing through the program coursework, with emphasis on novel methods and applications.

Undergraduate preparation for admission

We will accept students with undergraduate degrees in fields that include computer science, engineering, mathematics, natural sciences, physics, and statistics, subject to appropriate course requirements in statistics and mathematics. Undergraduate preparation in mathematics and statistics should include:

- single variable and multivariate differential and integral calculus (UC Santa Cruz equivalent AM 11A, AM 11B or MATH 19A, MATH 19B, and MATH 23A, MATH 23B);
- linear algebra (UCSC equivalent AM 10 or MATH 21);
- introductory statistics (UCSC equivalent STAT 5 or STAT 7); and
- introductory calculus-based probability and statistical inference (UCSC equivalent STAT 131 and STAT 132).

Relationship of M.S. and Ph.D. programs

The M.S. and Ph.D. programs are freestanding and independent, so that students can be admitted to either program. Students completing the M.S. program may proceed into the Ph.D. program upon successful completion of the pre-qualifying examination (also known as the First-Year Exam), and successful application to the graduate committee and the graduate committee's approval. Students in the Ph.D. program have the option of receiving the M.S. degree upon completion of the M.S. program requirements, including the capstone research project. Ph.D. core

courses STAT 205B and STAT 206B can be used in place of STAT 205 and STAT 206, respectively, to fulfill the M.S. degree course requirements.

Requirements

Course Requirements

Eight core courses

M.S. students must complete eight core courses: the six 5-credit courses listed below; a 3-credit course on research and teaching (STAT 200); and a 2-credit research seminar (STAT 280B). M.S. students must complete two additional 5-credit courses from the approved list of elective courses, bringing the total non-seminar credit requirement to 43 credits. None of the additional elective courses required to satisfy the unit requirements for the M.S. program can be substituted by independent study courses (M.S. Project, Independent Study/Research, or Thesis Research).

Students in the M.S. program must take the following eight core courses:

STAT 200	Research and Teaching in Statistics	3
STAT 203	Introduction to Probability Theory	5
STAT 204	Introduction to Statistical Data Analysis	5
STAT 205	Introduction to Classical Statistical Learning	5
STAT 206	Applied Bayesian Statistics	5
STAT 207	Intermediate Bayesian Statistical Modeling	5
STAT 208	Linear Statistical Models	5
STAT 280B	Seminars in Statistics	2

Elective Courses

In order to maintain a full load for graduate standing after their first year, students take additional courses, including independent study courses, from the approved list of elective courses, appropriate to their research interests and selected in consultation with their advisors.

All M.S. students must complete at least **two** 5-credit electives from the approved electives listed below. One of these electives must be taken from list A, while the remaining elective(s) might be taken from either list A or B.

In addition to the core and approved elective courses required to satisfy credit requirements for the program, students can take additional courses from across Baskin Engineering.

Electives available to MS students include:

List A Electives

Electives taught by the Statistics Department.

STAT 202	Linear Models in SAS	5
STAT 209	Generalized Linear Models	5
STAT 222	Bayesian Nonparametric Methods	5
STAT 223	Time Series Analysis	5
STAT 224	Bayesian Survival Analysis and Clinical Design	5
STAT 225	Multivariate Statistical Methods	5
STAT 226	Spatial Statistics	5
STAT 227	Statistical Learning and High Dimensional Data Analysis	5
STAT 229	Advanced Bayesian Computation	5
STAT 243	Stochastic Processes	5
STAT 244	Bayesian Decision Theory	5
STAT 246	Probability Theory with Markov Chains	5

List B Electives

Electives taught outside the Statistics Department.

AM 216	Stochastic Differential Equations	5
AM 230	Numerical Optimization	5
AM 250	An Introduction to High Performance Computing	5
CSE 242	Machine Learning	5
CSE 243	Data Mining	5
CSE 249	Large-Scale Web Analytics and Machine Learning	5
CSE 261	Advanced Visualization	5
CSE 263	Data Driven Discovery and Visualization	5
CSE 272	Information Retrieval	5
CSE 277	Random Process Models in Engineering	5
ECE 253	Introduction to Information Theory	5
ECE 256	Statistical Signal Processing	5
ECON 211A	Advanced Econometrics I	5
ECON 211B	Advanced Econometrics II	5
ENVS 215A	Geographic Information Systems and Environmental Applications	5
ENVS 215L	Exercises in Geographic Information Systems	2

ENVS 215L is the concurrent lab to ENVS 215A. The lecture/lab combination counts as one course.

M.S. Capstone Project Requirements

This is a Plan II Capstone. For the M.S. degree, students conduct an individual capstone research project in their

second year (up to three quarters), and in the spring of that year participate in a seminar in which results from their project are presented. Examples of capstone research projects include: review and synthesis of the literature on a topical area of statistical science; application and comparison of different models and/or computational techniques from a particular area of study in statistics; comprehensive analysis of a data set from a particular application area.

Students must submit a proposal to the potential faculty sponsor no later than the end of the fourth academic quarter. If the proposal is accepted, the faculty member becomes the sponsor and supervises the research and writing of the project. When the project is completed and written, it must be submitted to and accepted by a committee of two individuals, consisting of the faculty advisor and one additional reader. The additional reader will be chosen appropriately from within the graduate program faculty or outside of it. Either the advisor or the additional reader must be from within the graduate program faculty.

Normative Time to Degree

The normative time to the M.S. degree (for students enrolled full-time) is two academic years.

Review of Academic Progress

Students will be admitted to the M.S. program, not to the research group of any individual faculty member. However, each student will be matched with a first-year mentor, to ensure that adequate guidance is provided in the crucial first year of graduate school. In the second year, the role of the mentor will be played by the M.S. project advisor. Faculty advisors will be responsible for charting the progress of their students on a regular basis, and for making necessary adjustments to their plan of study and research.

The graduate program faculty will meet in the spring quarter of each academic year to review the performance of all students in the program. Based on the results from the faculty review, a written report will be provided to each student with an assessment of her/his performance and description of specific program objectives for the following academic year.

Transfer Credit

Up to three Baskin Engineering courses fulfilling the degree requirements of the M.S. degree may be taken before beginning the graduate program through the concurrent enrollment program. Courses from other institutions may not be applied to the M.S. degree course requirements.

Students who complete the M.S. degree in statistical science and continue onto the Ph.D. program in statistical science can transfer all applicable courses taken during the M.S. to the Ph.D. program, provided that such students meet the minimum residency

requirement for Ph.D. programs at UC Santa Cruz, as specified by the UCSC Graduate Division.

Applying for Graduation

All candidates for a degree must submit an Application for Master's Degree to the Baskin Engineering Graduate Student Affairs office by the date stated in the Academic and Administrative Calendar for the quarter they wish to receive the degree. Failure to declare candidacy by the deadline means that you cannot be considered a candidate until the next term. The deadline for degree applications is typically in the second week of the quarter. For more information about applying for graduation, visit the Baskin Engineering Graduate Studies website.

Optional Catchall

STATISTICAL SCIENCE PH.D.

Introduction

Students in the statistical science program learn to develop and use statistical methods to provide a probabilistic assessment of the variability in different data structures. This knowledge is applied to the quantification of the uncertainties inherent in the discoveries, summaries and conclusions that are drawn from the data analysis. The Ph.D. program provides mastery of fundamental concepts in statistical theory and methods, as well as analytical and computational skills to build modern statistical models, implement them, and effectively communicate their results. Through the process of learning these skills, the students develop the ability to conduct independent research.

Students will obtain a Ph.D. in statistical science. More specifically, students will develop background on statistical theory, methods, and computing through the program coursework, with research emphasis on novel methods and applications.

Undergraduate preparation for admission

We will accept students with undergraduate degrees in fields that include computer science, engineering, mathematics, natural sciences, physics, and statistics, subject to appropriate course requirements in statistics and mathematics. Undergraduate preparation in mathematics and statistics should include:

- single variable and multivariate differential and integral calculus (UC Santa Cruz equivalent AM 11A, AM 11B or MATH 19A, MATH 19B, and MATH 23A, MATH 23B);
- linear algebra (UCSC equivalent AM 10 or MATH 21); introductory statistics (UCSC equivalent STAT 5 or STAT 7); and

- introductory calculus-based probability and statistical inference (UCSC equivalent STAT 131 and STAT 132).

Relationship of M.S. and Ph.D. programs

The M.S. and Ph.D. programs are freestanding and independent, so that students can be admitted to either. Students completing the M.S. program may proceed into the Ph.D. program upon successful completion of the pre-qualifying examination, and application to the graduate committee and acceptance. Students in the Ph.D. program have the option of receiving the M.S. degree upon completion of the M.S. program requirements, including the capstone research project. Ph.D. core courses STAT 205B and STAT 206B can be used in place of STAT 205 and STAT 206, respectively, to fulfill the M.S. degree course requirements.

Advancement to Candidacy

Course Requirements

Nine core courses

Ph.D. students must complete nine core courses: seven 5-credit courses; a 3-credit course on research and teaching (STAT 200); and a 2-credit research seminar (STAT 280B). Ph.D. students must complete four additional 5-credit courses from the approved list of elective courses, bringing the total non-seminar credit requirements to 58 credits. None of the additional elective courses required to satisfy the credit requirements for the Ph.D. program can be substituted by independent study courses (Independent Study/Research or Thesis Research).

Students in the Ph.D. program must take the following nine core courses:

STAT 200	Research and Teaching in Statistics	3
STAT 203	Introduction to Probability Theory	5
STAT 204	Introduction to Statistical Data Analysis	5
STAT 205B	Intermediate Classical Inference	5
STAT 206B	Intermediate Bayesian Inference	5
STAT 207	Intermediate Bayesian Statistical Modeling	5
STAT 208	Linear Statistical Models	5
STAT 209	Generalized Linear Models	5
STAT 280B	Seminars in Statistics	2

Elective Courses

In order to maintain a full load for graduate standing after their first year, students take additional courses, including independent study courses, from the approved list of elective courses, appropriate to their research

interests and selected in consultation with their advisors.

All Ph.D. students must complete at least **four** 5-credit electives from the approved electives listed below. Two of these electives must be taken from list A, while the remaining two electives might be taken from either list A or B.

None of the additional elective courses required to satisfy the credit requirements for the Ph.D. program can be substituted by independent study courses (STAT 297, Independent Study/Research; or STAT 299, Thesis Research). However, students are encouraged to enroll in Independent Study courses even when not engaged with formal classroom courses.

In addition to the core and approved elective courses required to satisfy credit requirements for the program, students can take additional courses from across Baskin Engineering.

Electives available to PhD students include:

List A Electives

Electives taught by the Statistics Department.

STAT 222	Bayesian Nonparametric Methods	5
STAT 223	Time Series Analysis	5
STAT 224	Bayesian Survival Analysis and Clinical Design	5
STAT 225	Multivariate Statistical Methods	5
STAT 226	Spatial Statistics	5
STAT 227	Statistical Learning and High Dimensional Data Analysis	5
STAT 229	Advanced Bayesian Computation	5
STAT 243	Stochastic Processes	5
STAT 244	Bayesian Decision Theory	5
STAT 246	Probability Theory with Markov Chains	5

List B Electives

AM 216	Stochastic Differential Equations	5
AM 230	Numerical Optimization	5
AM 250	An Introduction to High Performance Computing	5
CSE 242	Machine Learning	5
CSE 243	Data Mining	5
CSE 249	Large-Scale Web Analytics and Machine Learning	5
CSE 272	Information Retrieval	5
CSE 277	Random Process Models in Engineering	5
ECE 253	Introduction to Information Theory	5
ECE 256	Statistical Signal Processing	5

ECON 211A	Advanced Econometrics I	5
ECON 211B	Advanced Econometrics II	5
ENVS 215A	Geographic Information Systems and Environmental Applications	5
ENVS 215L	Exercises in Geographic Information Systems	2
MATH 204	Analysis I	5
MATH 205	Analysis II	5
MATH 208	Manifolds I	5

ENVS 215L is the concurrent lab to ENVS 215A. The lecture/lab combination counts as one course.

Transfer Credit

Up to three Baskin Engineering courses fulfilling the degree requirements of the Ph.D. degree may be taken before beginning the graduate program through the concurrent enrollment program. Ph.D. students who have previously earned a M.S. degree in a related field at another institution may substitute courses from their previous university with approval of the advisor and the graduate committee. Petitions should be submitted along with the transcript from the other institution or UC Santa Cruz Extension. For courses taken at other institutions, copies of the syllabi, examinations, and other course work should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UC Santa Cruz. At most, a total of three courses may be transferred from concurrent enrollment and other institutions.

Foreign Language Requirements

Teaching Requirements

Ph.D. students are required to serve as teaching assistants for at least one quarter during their graduate study. Certain exceptions may be permitted for those with extensive prior teaching experience, for those who are not allowed to be employed due to visa regulations, or for other reasons approved by the director of graduate studies.

Pre-Qualifying Requirements

At the end of the first year, Ph.D. students take a pre-qualifying examination, also known as the First-Year Exam, covering the six 5-credit core courses: STAT 203, STAT 204, STAT 205B, STAT 206B, STAT 207 and STAT 208. This examination comprises two parts: an in-class written examination, followed by a take-home project involving data analysis. Students who do not pass this examination can retake it before the start of the following fall quarter; if they fail the second examination they are dismissed from the Ph.D. program, but have the option to continue in the M.S. program.

Qualifying Examination

Ph.D. students must select a research advisor by the end of their second year in the program. Ph.D. students must complete the qualifying examination (advancement to candidacy) requirement by the end of the spring quarter of their third year. A written dissertation proposal must be submitted to the advisor, and filed with the Graduate Student Affairs Office. A qualifying examination committee will be formed, consisting of the advisor and at least three additional members, approved by the director of graduate studies and the dean of the Graduate Division. The following conditions must be met for the examination committee:

1. The chair of the qualifying examination committee must be a tenured faculty from within the graduate program faculty. The committee chair cannot be the student's advisor or one of their co-advisors.
2. For students with a single advisor, or two co-advisors one of which is from outside the graduate program faculty, the committee must include at least two members from within the graduate program faculty other than the advisor or co-advisor. For students with two co-advisors that are both members of the graduate program faculty, the committee must include at least one additional member from within the graduate program faculty.
3. The committee must include at least one member from outside the graduate program faculty, for which the Senate Regulations for committee membership apply. The outside member can be the student's advisor or co-advisor.

The student submits the written dissertation proposal to all members of the committee no less than one month in advance of the qualifying examination. The dissertation proposal is formally presented in a public oral qualifying examination with the committee, followed by a private examination.

Students will advance to candidacy after they have completed all course requirements (including removal of any incompletes), passed the qualifying examination, nominated a dissertation reading committee, and paid the advancement to candidacy fee. Under normal progress, a student will advance to candidacy by the end of the spring quarter of their third year. A student who has not advanced to candidacy by the start of the fourth year will be subject to academic probation.

Dissertation Reading Committee

Upon advancement to candidacy, a dissertation reading committee is formed, consisting of the dissertation advisor who serves as the chair of the committee, and at least two additional readers. Therefore, the minimum number of dissertation reading committee members is three.

For students with a single advisor, or two co-advisors one of which is from outside the graduate program faculty, the committee must include at least two additional readers from within the graduate program faculty.

For students with two co-advisors that are both members of the graduate program faculty, the committee must include at least one additional reader from within the graduate program faculty.

The committee is subject to the approval of the graduate director and of the Graduate Division.

Dissertation

Dissertation

The Ph.D. dissertation should consist of a minimum of three chapters composed of material suitable for publication in major professional journals in statistics and journals in relevant scientific fields where the statistical methodology is applied.

Dissertation Defense

The completed dissertation must be submitted to the reading committee at least one month before the dissertation defense, which consists of a public presentation of the research followed by a private examination by the reading committee. Successful completion of the dissertation defense is the final requirement for the Ph.D. degree.

Review of Academic Progress

Students will be admitted to the Ph.D. program, not to the research group of any individual faculty member. However, each student will be matched with a first-year mentor, to ensure that adequate guidance is provided in the crucial first year of graduate school. In later years, the role of the mentor will be played by the Ph.D. dissertation advisor. Faculty advisors will be responsible for charting the progress of their students on a regular basis, and for making necessary adjustments to their plan of study and research.

The graduate program faculty will meet in the spring quarter of each academic year to review the performance of all students in the program. Based on the results from the faculty review, a written report will be provided to each student with an assessment of their performance and description of specific program objectives for the following academic year.

The normative pre-candidacy period for Ph.D. students (enrolled full-time) is three years and the normative candidacy period is two years, for a total of five years to the Ph.D. degree.

Applying for Graduation

All candidates for a degree must submit an application for the Ph.D. degree to the Baskin Engineering Graduate Advising Office by the date stated in

the Academic and Administrative Calendar for the quarter you wish to receive the degree. Failure to declare candidacy by the deadline means that you cannot be considered a candidate until the next term.

A student is required to be registered or on Filing Fee Status, whichever is applicable, during the quarter in which the degree is conferred. Students should consult the department advisor to determine which option fits their situation. For more information about applying for graduation, visit the Baskin Engineering Graduate Studies website.

STATISTICS DESIGNATED EMPHASIS

Introduction

Students from a Ph.D. degree program, other than statistical science, who meet the following requirements can have the designated emphasis of “statistics” annotated to their degree title. For example, a Ph.D. student in electrical engineering who meets the requirements would receive a diploma that reads “Ph.D. Electrical Engineering with an emphasis in (Statistics).”

Requirements

Committee Composition and Departmental Approvals

Upon electing to pursue a designated emphasis (DE) in statistics, students must choose a DE faculty advisor in the Statistics Department. A list of eligible DE advisors is maintained online. The student must organize a preliminary meeting with the DE advisor, and agree on a plan for completion of the requirements. Once this plan has been designated, the student and the DE advisor must complete the Application for a Designated Emphasis in Statistics form. The completed application form should be signed by the student's home department advisor, the DE advisor, and the statistics graduate director, and then filed with the Baskin Engineering Graduate Student Affairs Office (bsoe-ga@rt.ucsc.edu). This should be done at least one quarter before the student's advancement to candidacy.

Course Requirements

Both these courses

STAT 203	Introduction to Probability Theory	5
STAT 207	Intermediate Bayesian Statistical Modeling	5

Plus one of these courses

STAT 206	Applied Bayesian Statistics	5
STAT 206B	Intermediate Bayesian Inference	5

Plus one other statistics course from the

following list of approved courses

STAT 204	Introduction to Statistical Data Analysis	5
STAT 205	Introduction to Classical Statistical Learning	5
STAT 205B	Intermediate Classical Inference	5
STAT 208	Linear Statistical Models	5
STAT 209	Generalized Linear Models	5
STAT 222	Bayesian Nonparametric Methods	5
STAT 223	Time Series Analysis	5
STAT 225	Multivariate Statistical Methods	5
STAT 226	Spatial Statistics	5
STAT 227	Statistical Learning and High Dimensional Data Analysis	5
STAT 229	Advanced Bayesian Computation	5
STAT 243	Stochastic Processes	5
STAT 244	Bayesian Decision Theory	5
STAT 246	Probability Theory with Markov Chains	5
STAT 291	Advanced Topics in Bayesian Statistics	3

Students can take either STAT 205 or STAT 205B.

Writing, Research and/or Teaching Requirements

DATA SCIENCE DESIGNATED EMPHASIS

Introduction

The Data Science Designated Emphasis is a non-degree program housed in the Department of Statistics of Baskin Engineering at the University of California, Santa Cruz. The program aims to provide Ph.D. students from a wide swath of graduate degree programs across campus with the training required to apply state-of-the-art methods and tools from data wrangling, data visualization, statistical data analysis, machine learning, and artificial intelligence to their own research.

Requirements

Committee Composition and Departmental Approvals

Students must include one of the Data Science program faculty members that is not a member of their home department in their qualifying exam and dissertation committees. This faculty member is the “DE advisor” for purposes of the designated emphasis. This faculty member must be identified at the time the student applies to the program. A list of current program faculty can be found at the program faculty website.

The student must organize a preliminary meeting with the DE advisor, and agree on a plan for completion of the requirements. Once this plan has been designated, the student and the DE advisor must complete the Application for a Designated Emphasis in Data Science form. The completed application form should be signed by the student's home department advisor, the DE advisor, and the DE executive committee chair, and then filed with the Baskin Engineering Graduate Student Affairs Office (bsoe-ga@rt.ucsc.edu). This must be done before the student's advancement to candidacy.

Course Requirements

Required Courses

All students in the designated emphasis are required to complete 18 credits in mandatory courses covering the following topics:

Data Wrangling and Visualization

STAT 266A	Data Visualization and Statistical Programming in R	3
STAT 266C	Introduction to Data Wrangling	3

Statistical Data Analysis

STAT 204	Introduction to Statistical Data Analysis	5
----------	---	---

Machine Learning

CSE 242	Machine Learning	5
---------	------------------	---

Speaker Series

STAT 280B	Seminars in Statistics	2
-----------	------------------------	---

Elective Courses

In addition to completing all required courses, all students must complete at least one five-credit elective from the list below. Students may not double-count a course that is required for their main program as an elective for the Data Science DE.

Applied Mathematics

AM 229	Convex Optimization	5
AM 230	Numerical Optimization	5
AM 250	An Introduction to High Performance Computing	5

Astronomy and Astrophysics

ASTR 234	Statistical Techniques in Astronomy	5
----------	-------------------------------------	---

Computational Media

CMPM 243	Social Computing Research: Design, Algorithms, and Incentives	5
CMPM 268	Immersive Analytics	5

Computer Science and Engineering

CSE 243	Data Mining	5
---------	-------------	---

CSE 248	Foundations of Data Science	5
CSE 261	Advanced Visualization	5

Economics

TECHNOLOGY AND INFORMATION MANAGEMENT

Baskin Engineering
(831) 459-2158
engineering.ucsc.edu

PROGRAMS OFFERED

Technology Information Management B.S. (p. 561)

Technology Information Management Minor (p. 567)

Technology and Information Management (TIM) is a multi-disciplinary program that focuses on the integration of engineering, computer science, and economics for two purposes: the technology of management, which includes the design of information technology to solve business problems; and the management of technology, which includes the management, development, and commercialization of products, innovation, and entrepreneurship. The program offers a bachelor of science (B.S.) degree in technology and information management (TIM) as well as a minor in technology and information management (TIM).

TECHNOLOGY AND INFORMATION MANAGEMENT B.S.

Information and Policies

Introduction

Technology and Information Management (TIM) is a rigorous, challenging major for those students wanting to pursue careers in the management of information and technology. TIM students will receive a thorough grounding in the fundamental principles and practices of technology (in particular, computer science and computer engineering) and management, and the scientific, mathematics, and economics principles upon

which they are built. In particular, they will become proficient in the following areas: strategy, planning, innovation, entrepreneurship, information technology, software design, product development, and supply-chain management.

The essence of the technology and information management major at the University of California, Santa Cruz is the integration of fundamental intellectual content from the disciplines of computer science, computer engineering, business management economics, and finance. TIM students learn how to apply the fundamentals of these diverse disciplines to solving problems that require the integration of management and technology, e.g., developing information technology systems to manage all activities and operations in a firm, e-commerce, managing and commercializing a new technology, and starting a new high-technology company.

To graduate with a B.S. in technology and information management, students normally complete 26 required courses (with two laboratories, totaling 133 quarter credits) plus three elective courses (15 quarter credits) for the technology and information management major program. Honors students are likely to find the rigorous management and leadership elements of the program of significant interest. Industrial interactions and projects are key features of this major.

Program Learning Outcomes

Students graduating from the TIM program will acquire the following:

1. Students will learn how to apply knowledge of engineering, economics, and mathematics to analyze complex problems in the management of technology and information science.
2. Students will develop a broad, interdisciplinary knowledge of problems in the management of technology and information science, and skills to address them.
3. Students will develop depth of expertise in the management of technology and information science.
4. Students will be able to collaborate and communicate effectively with individuals who have diverse ideas, expertise, and skill levels within the fields of management of technology and information science.

Academic Advising for the Program

The Baskin Engineering undergraduate advising office offers general advising for prospective and declared undergraduates majoring in Baskin Engineering programs. The office handles major declarations, transfer credits, course substitutions, articulations, and degree certifications. Undergraduate students obtain and submit all paperwork requiring departmental approval to the undergraduate advising office. Transfer students

should also refer to the Transfer Information and Policy section.

Baskin Engineering Building, Room 225
bsoeadvising@ucsc.edu
(831) 459-5840

Getting Started in the Major: Frosh

The technology and information management major is intended for students with an interest in both technology and business. It is recommended that students intending to declare this major have completed four years of mathematics (through advanced algebra and trigonometry) and three years of science in high school. Completion of business-oriented computer literacy and basic programming courses is of benefit to students entering this major. Completion of any economics and/or business-related courses in high school is also beneficial, but the faculty realizes that these courses may not be available at many high schools. Completion of comparable college courses at other institutions serves to strengthen the preparation of a student for the technology and information management major.

This major is highly course intensive and sequential; students who intend to pursue this major must begin taking classes for the major in their first quarter at UC Santa Cruz.

Math placement is required for one or more of the foundation courses for this major. For more information, please review the Math Placement website.

Transfer Information and Policy

Transfer students who want to pursue the technology and information management major, must have applied and been admitted to UC Santa Cruz as a proposed Technology and Information Management major.

Transfer Admission Screening Policy

The requirements for transfer students are as follows:

- 1) Transfer students must have completed at least six of the lower-division courses from the list below.
- 2) A minimum cumulative GPA of 2.4 is required in all the lower-division courses taken from the list below.

Students who wish to graduate in two years are strongly recommended to complete all screening courses except TIM 50, CSE 12, and CSE 13S, as well as most general education requirements, before coming to UC Santa Cruz.

Students should consult assist.org to determine which courses at other institutions in California are transferable to UC Santa Cruz.

CSE 12	Computer Systems and Assembly Language and Lab	7
CSE 13S	Computer Systems and C Programming	7

CSE 30	Programming Abstractions: Python	7
CSE 16	Applied Discrete Mathematics	5
TIM 50	Business Information Systems	5
ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5
ECON 10A	Economics of Accounting	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 20A	Honors Calculus	5
MATH 20B	Honors Calculus	5
MATH 22	Introduction to Calculus of Several Variables	5
MATH 23A	Vector Calculus	5
AM 30	Multivariate Calculus for Engineers	5

Only one course from each of the following sets can be counted:

MATH 19A and MATH 20A

MATH 19B and MATH 20B

MATH 22 and MATH 23A and AM 30

Getting Started in the Major: Transfer Students

Transfer students should declare their major in their first quarter at UC Santa Cruz. Instructions for declaring a major in Baskin Engineering are on the Baskin Engineering Undergraduate Advising website.

Major Qualification Policy and Declaration Process

Major Qualification

Transfer students should refer to the transfer admission screening requirements.

In order to be admitted into the technology and information management major students must be listed as a proposed major within Baskin Engineering. Please refer to the Baskin Engineering "Proposed Major Retention" and its "Declaring a Baskin Engineering Major" sections in the catalog for more information.

In addition, to be admitted to the TIM major after a student has entered UC Santa Cruz, students need to complete a total of six courses chosen from the following:

Mathematics

At least one of the following:

One of these courses

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
----------	--	---

MATH 20A	Honors Calculus	5
----------	-----------------	---

or one of these courses

MATH 19B	Calculus for Science, Engineering, and Mathematics	5
----------	--	---

MATH 20B	Honors Calculus	5
----------	-----------------	---

or one of these courses

MATH 22	Introduction to Calculus of Several Variables	5
---------	---	---

MATH 23A	Vector Calculus	5
----------	-----------------	---

AM 30	Multivariate Calculus for Engineers	5
-------	-------------------------------------	---

or this course

CSE 16	Applied Discrete Mathematics	5
--------	------------------------------	---

Engineering

At least one course from the following:

CSE 12	Computer Systems and Assembly Language and Lab	7
--------	--	---

CSE 13S	Computer Systems and C Programming	7
---------	------------------------------------	---

CSE 30	Programming Abstractions: Python	7
--------	----------------------------------	---

Students with no prior programming will take CSE 20 before CSE 30 and CSE 12.

Economics and Technology and Information Management

At least one additional course must be chosen from the following:

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
--------	---	---

ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5
--------	--	---

ECON 10A	Economics of Accounting	5
----------	-------------------------	---

TIM 50	Business Information Systems	5
--------	------------------------------	---

Three additional courses

At least three additional courses must be chosen from the following:

CSE 12	Computer Systems and Assembly Language and Lab	7
--------	--	---

CSE 13S	Computer Systems and C Programming	7
---------	------------------------------------	---

CSE 30	Programming Abstractions: Python	7
--------	----------------------------------	---

CSE 16	Applied Discrete Mathematics	5
--------	------------------------------	---

TIM 50	Business Information Systems	5
--------	------------------------------	---

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
--------	---	---

ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5
--------	--	---

ECON 10A	Economics of Accounting	5
----------	-------------------------	---

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
----------	--	---

MATH 19B	Calculus for Science, Engineering, and Mathematics	5
----------	--	---

MATH 20A	Honors Calculus	5
----------	-----------------	---

MATH 20B	Honors Calculus	5
----------	-----------------	---

MATH 22	Introduction to Calculus of Several Variables	5
---------	---	---

MATH 23A	Vector Calculus	5
----------	-----------------	---

AM 30	Multivariate Calculus for Engineers	5
-------	-------------------------------------	---

MATH 19A and MATH 20A		
-----------------------	--	--

MATH 19B and MATH 20B		
-----------------------	--	--

MATH 22 and MATH 23A and AM 30		
--------------------------------	--	--

MATH 22 and MATH 23A and AM 30		
--------------------------------	--	--

Only one course from each of the following sets can be counted:

MATH 19A and MATH 20A

MATH 19B and MATH 20B

MATH 22 and MATH 23A and AM 30

Eligibility to qualify for the major

Students in their first six quarters who have completed at least six qualifying courses in the TIM major will need to meet the following:

1. Their cumulative GPA is at least 2.4 in all of the major qualification courses attempted.
2. They have no more than 7 credits resulting in grades of C-, D+, D, D-, F or NP among all of the TIM major qualification courses attempted.

Appeal Process

Students who are informed that they do not qualify for the the major may appeal this decision by submitting a letter to the undergraduate director through the Baskin Engineering undergraduate advising office within 15 days from the date the notification was mailed. Within 15 days of receipt of the appeal, the department will notify the student, college, and Office of the Registrar of the decision.

How to Declare a Major

There are four steps to declaring a Baskin Engineering (BE) major. For a detailed guide to this process, please consult the BE Undergraduate Advising Declare Your Major website.

Students should start the declaration of major process by completing Step One on the BE Undergraduate Advising Declare Your Major website as soon as they complete the major qualification courses or reach their declaration deadline quarter, whichever comes first.

Students petitioning when the campus declaration deadline is imminent (i.e., in their sixth quarter, for students admitted as frosh), will either be approved, denied, or provided with conditions (e.g., completion of some courses with certain grades) that will be resolved within at most one more enrolled quarter, even if they have not completed the major qualification courses.

Letter Grade Policy

All students admitted to a Baskin Engineering major, or seeking admission to a major, must take all courses required for that major for a letter grade. This policy includes courses required for these degrees that are sponsored by other departments.

Baskin Engineering Policies

Please refer to the Baskin Engineering section of the catalog for additional policies that apply to all Baskin Engineering programs. These policies include admission to the major and the need for UC Santa Cruz students to obtain pre-approval before taking courses elsewhere.

Course Substitution Policy

Undergraduate engineering students who wish to substitute a major course with a course from another department at UC Santa Cruz, or from another academic institution, must first consult the Baskin Engineering Undergraduate Advising Office. The advising office requires a Petition for Course Substitution be approved before credit for an alternate course can be applied to any Baskin Engineering major requirement.

Petition forms are available at the undergraduate advising office and online.

Petitions and procedures for approval must be obtained from and submitted to the Undergraduate Advising Office.

Double Majors and Major/Minor Combinations Policy

Study Abroad

Honors

The TIM program awards honors to students whose academic performance is excellent. Students with a GPA 3.5 or higher but lower than 3.7 will be awarded honors. Students with a GPA of 3.7 or higher will be awarded highest honors. Students who have been found guilty of academic misconduct are not eligible for either honors or highest honors.

Requirements and Planners

Course Requirements

Lower-Division Courses

Statistics

Both of the following

STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2

Mathematics

One of the following options

Either these courses		
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
or these courses		
MATH 20A	Honors Calculus	5
MATH 20B	Honors Calculus	5

Plus one of the following

AM 30	Multivariate Calculus for Engineers	5
MATH 22	Introduction to Calculus of Several Variables	5
MATH 23A	Vector Calculus	5

Plus the following

One of theses courses

AM 10	Mathematical Methods for Engineers I	5
-------	--------------------------------------	---

MATH 21	OR Linear Algebra	5
And one of these courses		
AM 20	Mathematical Methods for Engineers II	5
MATH 24	OR Ordinary Differential Equations	5

Economics

All of the following

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5
ECON 10A	Economics of Accounting	5

Computer Science and Engineering

All of the following

CSE 12	Computer Systems and Assembly Language and Lab	7
CSE 13S	Computer Systems and C Programming	7
CSE 16	Applied Discrete Mathematics	5
CSE 20	Beginning Programming in Python	5
CSE 30	Programming Abstractions: Python	7

Students with no prior programming will take CSE 20 before CSE 30 and CSE 12. Students with a prior programming course, AP credit, or clearing the “Test-out” bar will start with CSE 30 and CSE 12.

Plus these courses

TIM 50	Business Information Systems	5
TIM 58	Systems Analysis and Design	5

Upper-Division Courses

Computer Science and Engineering

All of the following:

CSE 150	Introduction to Computer Networks	7
TIM 170	Management of Technology Seminar	2
TIM 172A	Introduction to Management of Technology I	5

TIM 172B	Introduction to Management of Technology II	5
TIM 172P	Management of Technology Project I	3
TIM 172Q	Management of Technology Project II	3
TIM 175	Business Strategy and Information Systems	5
CSE 182	Introduction to Database Management Systems	5

Economics

One of the following courses

ECON 100A	Intermediate Microeconomics	5
ECON 100M	Intermediate Microeconomics, Math Intensive	5

Plus the following

ECON 113	Introduction to Econometrics	5
----------	---------------------------------	---

Electives

Two 5-credit Baskin Engineering courses

Students select two upper-division Baskin Engineering electives on the basis of their particular interests. These electives may be any 5-credit upper-division or graduate Baskin Engineering courses, with the following limitations:

- Either STAT 131 or CSE 107, but not both;
- At most, one independent or field-study course (TIM 193, TIM 195, TIM 198, TIM 199) with prior approval from the department to be used as an elective.

Plus

One 5-credit, upper-division economics course

A list of suggested economics courses can be found on the Technology and Information curriculum chart on the Baskin Engineering Undergraduate Advising Major Curriculum page.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in technology and information management is satisfied by completing TIM 175.

TIM 175	Business Strategy and Information Systems	5
---------	--	---

Comprehensive Requirement

Students complete the comprehensive requirement in two areas, the management of technology and the

technology of management. The comprehensive requirement in the management of technology consists of two five-credit courses, TIM 172A and TIM 172B, and two three-credit project courses, TIM 172P and TIM 172Q. TIM 172A and TIM 172P need to be taken concurrently, as do TIM 172B and TIM 172Q. The comprehensive requirement in the technology of management consists of a five-credit project-intensive course, TIM 175.

TIM 172A addresses strategic, engineering, marketing, and financial processes and tools for the management, development, and commercialization of high-tech products.

TIM 172B addresses the development and application of processes and tools for the management, design, optimization, and operation of supply chain networks for high-tech products.

TIM 172P is the first of a two-course project sequence in which students apply the knowledge and skills gained in TIM 172A to complete the first part of a major quarter-long comprehensive team project in the management of technology. In this course, taken concurrently with TIM 172A, the team project focus is on the management, design, and commercialization of a new product within a high-tech company. TIM 172A and TIM 172P together form the first part of the required management of technology comprehensive requirement for the TIM B.S. major.

TIM 172Q is the second of a two-course project sequence in which students apply the knowledge and skills gained in TIM 172B to complete the second part of a major comprehensive team project in the management of technology. In this course, taken concurrently with TIM 172B, the team project focus is on the supply chain management for the new product developed in the project course TIM 172P. TIM 172B and TIM 172Q together form the second part of the required management of technology comprehensive requirement for the TIM B.S. major.

TIM 175 requires that students understand and use a structured methodology to evaluate the competitive use of information systems within an enterprise. This is accomplished by a team project as well as by an individual project that involves researching and writing a comprehensive analytical term paper using a methodology taught as part of this course.

TIM 172A	Introduction to Management of Technology I	5
TIM 172B	Introduction to Management of Technology II	5
TIM 172P	Management of Technology Project I	3
TIM 172Q	Management of Technology Project II	3
TIM 175	Business Strategy and Information Systems	5

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements (p. **Error! Bookmark not defined.**) for more information.

The following are two sample academic plans for students pursuing the technology and information management major. Plan One is for first-year students, and Plan Two is designed for transfer students that have completed all general education requirements. Students completing the courses in the four-year planner will have satisfied the MF, PE and SR General Education requirements.

Four-Year Major Planner

	Fall	Winter	Spring
1st (frosh)	MATH 19A	MATH 19B	ECON 1
	ECON 10A	CSE 20	CSE 30
2nd (soph)	TIM 50	ECON 2	STAT 7 & STAT 7L
	AM 10	MATH 22 or MATH 23A	ECON 100A TIM 170
3rd (junior)	CSE 13S CSE 16	CSE 150 TIM 58	CSE 12 CSE 182 AM 20
	TIM 172A & TIM 172P	TIM 172B & TIM 172Q	TIM 175
4th (senior)	ECON 113	BE elective ECON elective	BE elective

Two-Year Transfer Major Planner*

	Fall	Winter	Spring
1st (junior)	TIM 50	TIM 58	TIM 170
	ECON 100A	CSE 12	CSE 150 ECON 113
2nd (senior)	TIM 172A & TIM 172P	TIM 172B & TIM 172Q	TIM 175
	BE elective CSE 13S	ECON elective	BE elective CSE 182

*This plan assumes that transfer students have completed all of their lower-division courses for the technology and information management major, with

the exception of CSE 12, CSE 13S, TIM 50 and TIM 58, prior to attending UC Santa Cruz.

Curriculum charts for all BE majors are available at the Baskin Engineering Undergraduate Advising website.

TECHNOLOGY AND INFORMATION MANAGEMENT MINOR

Course Requirements

Lower-Division Courses

Mathematics (2 Courses)

Math placement is required for one or more of the foundational courses for this minor. For more information, please review the Math Placement website.

One of the following

AM 11A	Mathematical Methods for Economists I	5
MATH 11A	Calculus with Applications	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 20A	Honors Calculus	5

Plus one of the following

AM 11B	Mathematical Methods for Economists II	5
MATH 11B	Calculus with Applications	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 20B	Honors Calculus	5

Computer Science and Engineering (3 Courses)

One of the following

CSE 20	Beginning Programming in Python	5
CSE 30	Programming Abstractions: Python	7

Plus the following course

TIM 50	Business Information Systems	5
--------	------------------------------	---

Plus one of the following options

TIM 58	Systems Analysis and Design	5
TIM 80C	Starting a New Technology Company	5

Upper-Division Courses

Mathematics (1 Course)

One of the following courses:

CSE 107	Probability and Statistics for Engineers	5
ECON 113	Introduction to Econometrics	5
STAT 131	Introduction to Probability Theory	5

Electives (4 Courses)

Four courses from the following list:

CSE 150	Introduction to Computer Networks	7
CSE 180	Database Systems I	5
CSE 182	Introduction to Database Management Systems	5
ECON 100A	Intermediate Microeconomics	5
ECON 100M	Intermediate Microeconomics, Math Intensive	5
ECON 100B	Intermediate Macroeconomics	5
ECON 100N	Intermediate Macroeconomics, Math Intensive	5
TIM 172A	Introduction to Management of Technology I	5
TIM 172B	Introduction to Management of Technology II	5
TIM 175	Business Strategy and Information Systems	5

Either CSE 180 or CSE 182

Either ECON 100A or ECON 100M

Either ECON 100B or ECON 100N

SOCIAL SCIENCES DIVISION

460 Humanities and Social Sciences Building
(831) 459-3212
<http://socialsciences.ucsc.edu/>

The Division of Social Sciences focuses on the study of human relationships and society. As global economic and political changes transform the world around us, social scientists help us meet the challenges and opportunities of the 21st century.

Our eight departments offer more than 30 undergraduate and graduate degree programs, including many that are interdisciplinary collaborations. Our faculty members conduct leading-edge research in their fields, frequently working with students in research clusters linking departments to our research centers. We also offer extensive opportunities for experiential learning through field studies.

Our research, teaching, and state-of-the-art facilities provide students with a comprehensive and rigorous education that prepares them for productive careers and further academic pursuits. For more information on the division, see our website.

ANTHROPOLOGY

361 Social Sciences 1 Building
(831) 459- 3320
<https://anthro.ucsc.edu/>

PROGRAMS OFFERED

Anthropology B.A. (p. 569)

Anthropology Minor (p. 575)

Anthropology Ph.D. (p. 576)

Anthropology Designated Emphasis (p. 580)

OTHER PROGRAMS OF INTEREST

Earth Sciences/Anthropology B.A. (p. 293)

Anthropology is the study of people throughout the world and through time. Because it covers a wide range of topics—biological evolution, material remains of the past, and the world that humans create through their ideas and practices in present-day societies—anthropology is an especially integrative discipline. The anthropology program at UC Santa Cruz offers courses that reflect the diversity of the field.

- Cultural anthropology explores the everyday lives, beliefs, activities, and movements of people, objects, and ideas in diverse societies. Cultural anthropology courses examine such topics as race and ethnicity, medicine, health,

science, gender, sexuality, environment, religion, law, popular culture, politics, economics, and institutions.

- Archaeology uses the material evidence of human activities to understand past human lives. Archaeology at UCSC focuses on past people's interactions with one another at the local level and within their wider social and ecological contexts. Faculty research areas include the pre-colonial and early post-colonial history of Africa, Mesoamerica, the Caribbean, and western North America.
- Biological anthropology traces the human journey from its beginnings in Africa over five million years ago. Biological anthropology courses look at fossil evidence, evolutionary theory, human variation, and the behavior of primate relatives in order to analyze biological, social, and cultural changes over time. Biological anthropology at UCSC has a methodological emphasis in innovative approaches to human and non-human primate ecology and diversity founded on our expertise in genomics, isotope biochemistry, as well as human osteology.

UCSC students have the opportunity to do independent library and field research in cultural anthropology, archaeology, and biological anthropology. Laboratory courses in archaeology and biological anthropology offer practical experience in the analysis of biological and cultural materials. In cultural anthropology courses, students learn to carry out anthropological research through interviews, participant observation, surveys, the collection of oral histories, analysis of textual, visual, and aural materials, and the interpretation of archival materials.

Because anthropology is concerned with understanding human interaction, it is a useful major for anyone planning a career that involves working with people, especially those from diverse cultures. Some UCSC anthropology graduates are in social work, many are in teaching, and others pursue careers in law, city planning, politics, medicine, public health, cultural resource management, and journalism. Students intending to specialize in anthropology usually go on to graduate school because professional employment in the field almost always demands an advanced degree.

A combined major in Anthropology and Earth and Planetary Sciences, leading to a bachelor of arts (B.A.) degree, is also offered; for that program description, see Earth and Planetary Sciences (p. 293).

Most anthropology faculty have their offices in Social Sciences 1 Building. Social Sciences 1 also houses laboratories for archaeology and biological anthropology where space is provided for laboratory and individual studies courses and for collections of

human and non-human mammalian skeletal material, a variety of archaeological artifacts, and collaborative workspaces for cultural anthropology research.

The Anthropology Colloquium series showcases guest speakers and gives faculty and students an opportunity to discuss new approaches to anthropological questions. Students and faculty interested in archaeology also gather informally at the Archaeology/Biological Anthropology Lunch forum to share information on fieldwork and employment opportunities. There are various anthropology-themed student groups for those who wish to connect with fellow students interested in anthropology.

ANTHROPOLOGY B.A.

Information and Policies

Introduction

The anthropology bachelor of arts (B.A.) incorporates the three anthropological subfields of anthropological archaeology, cultural anthropology, and biological anthropology, while providing undergraduates with a solid grounding in theory and methods.

Students do not declare an emphasis or concentration within the anthropology major. All students therefore are general anthropology majors and complete the same requirements. However, students can choose to take additional courses in a specific area of anthropology while completing the upper-division anthropology electives required for the major, or by choosing to take courses above and beyond what is required for the major.

Program Learning Outcomes

A student who graduates with a B.A. in anthropology has the following knowledge and skills.

Core Concepts in Anthropology

The student demonstrates understanding of the core concepts in three primary subfields of anthropology: cultural anthropology, archaeology, and biological anthropology.

Knowledge of Cultural Differences

The student demonstrates knowledge of cultural variation and the diversity of perspectives, practices, and beliefs found within each culture and across cultures.

Integration of Subfields

The student integrates cultural, biological, and archaeological perspectives on human bodies, behavior, materialities, and institutions.

Written Communication

The student demonstrates the ability to write clearly by formulating well-organized arguments that are grounded in supporting evidence while countering evidence that contradicts the student's claims.

Oral Communication

The student is able to organize ideas and information and articulate them effectively.

Research and Analytical Skills

The student demonstrates knowledge of the basic steps involved in scholarly research, including locating and critically evaluating scholarly and other information sources relevant to the chosen topic. The student can recognize and demonstrate a basic understanding of research methods used in the various subfields of anthropology, including—but not limited to—participant observation, thick description, laboratory and field analysis, and interviewing.

Understanding of Long-Term Changes in Human Behavior and Conditions in Deep Time

The student has a grasp of long-term changes in the conditions that have shaped humans and the environments they inhabit.

Academic Advising for the Program

For more information regarding department policies, please consult the undergraduate coordinator at the Anthropology Department undergraduate advising website.

All majors, including double majors, must prepare a program of study. This can be done in consultation with faculty or undergraduate coordinator. The Anthropology Department urges students to seek faculty advice early in planning for the major. Faculty hold regular office hours weekly and encourage students to come in to talk about their program, or coursework, and career and professional advising. Students planning to pursue graduate training should plan course schedules in close consultation with faculty advisors. Transfer students should consult the Transfer Information and Policy section of this program statement.

Peer Advisors

The Anthropology Department has instituted a peer advisor program as a supplement to academic advising offered by faculty members. The peer advisors are juniors and seniors who have been trained to help students with questions and general guidance through the anthropology major. Please consult the Anthropology Department undergraduate advising website for scheduling with the peer advisors.

Getting Started in the Major: Frosh

This major is not highly sequential or course intensive. Students may begin taking courses toward the major in the first year, but it is not required.

Transfer Information and Policy

Transfer Admission Screening Policy

Students planning to apply in this major are not required to complete specific major preparation courses for consideration of admission to the University of California, Santa Cruz. Transfer students are strongly encouraged to complete ANTH 1, ANTH 2, and ANTH 3 before transferring to UC Santa Cruz, however, it is not required for admission.

Getting Started in the Major: Transfer Students

Transfer Credit Toward Major/Minor Requirements

Students may transfer courses equivalent to ANTH 1, ANTH 2, and ANTH 3 from California community colleges and universities with existing articulation agreements (www.assist.org).

Students may also petition to transfer courses equivalent to ANTH 1, ANTH 2, and ANTH 3 from other community colleges or from four-year institutions.

Students may petition up to 10 quarter credits (equivalent to two UC Santa Cruz courses) of upper-division transfer credit toward the elective requirements under the following circumstances:

- A student has taken an upper-division anthropology course at another four-year university (including courses taken through study abroad) and wants to petition for the course to count toward the anthropology major or minor elective.
- A student was enrolled in an accredited Field School Program and wants to petition for the course to count toward the anthropology elective requirements.

Prior to Enrolling in Your First Quarter at UCSC

Complete Lower-Division Requirements

Most upper-division courses have one of the following lower-division introductory courses as a prerequisite:

- ANTH 1 Introduction to Biological Anthropology
- ANTH 2 Introduction to Cultural Anthropology
- ANTH 3 Introduction to Archaeology

Confirm Transfer Credit Has Been Processed

After you have been admitted to UCSC and all your final official transcripts from other colleges have been received, the Office of Admissions will evaluate your transfer credit. The evaluation shows which of your past courses are transferable to UCSC and how many credits you have accrued. It also shows which general education requirements you have satisfied, whether you

have satisfied the Intersegmental General Education Transfer Curriculum (IGETC), and whether you have satisfied the University of California Entry Level Writing and American History and Institutions requirements. Students access this information through MyUCSC by viewing the Academic Advisement Report from the "more links" drop-down menu in the Academics area of the Student Center. If this information is not available for your first enrollment period, contact a college or major advisor to help you select appropriate classes. It is an excellent idea to keep an unofficial copy of your transcripts from your previous schools. You should take these documents with you to all academic advising appointments.

Confirm Transfer Credit Articulates with UCSC Courses

Courses taken at community colleges or four-year universities may be used to satisfy the lower-division requirements for the major. View the UC Articulation Agreements to determine which California community college courses are equivalent to our ANTH 1, ANTH 2 and ANTH 3. ***Please note that courses approved by the Office of Admissions for transfer credit do not necessarily satisfy major requirements. Courses must have an articulation agreement to count automatically toward major requirements.***

If your transfer credit course does not articulate with a UC Santa Cruz course, you may submit a coursework petition. ***Faculty are not appointed during summer, so fall admits will likely need to wait until after the beginning of fall quarter for coursework petitions to be approved.***

Enrolling in Your First Quarter at UCSC

We strongly recommend that transfer students take ANTH 150, Communicating Anthropology, during their first quarter at UCSC. This course is designed to provide transfer students with a transition to UCSC coursework. It emphasizes critical reading and writing skills and is an excellent foundation for further upper-division coursework. This class fulfills the anthropological theory core requirement.

We also recommend taking only one additional upper-division course in anthropology during your first quarter at UCSC. Most upper-division anthropology courses are offered only on an every-other-year basis. Transfer students are advised to plan accordingly.

"Free Quarter" for Transfer Students with Unarticulated, Lower-Division Courses

Any student who has taken a course analogous to ANTH 1, ANTH 2, or ANTH 3 will be issued a permission code by the undergraduate advisor for courses listing ANTH 1, ANTH 2, or ANTH 3 as a prerequisite (provided the class has not reached maximum enrollment) in their first quarter at UCSC. Students must provide unofficial transcripts as evidence

that they have completed courses analogous to ANTH 1, ANTH 2, or ANTH 3.

If the student fails to petition for a course substitution during their first quarter, they must receive instructor permission to enroll in courses with ANTH 1, ANTH 2, or ANTH 3 as prerequisites thereafter until the prerequisite is satisfied either by taking the class or approved course substitution petition.

Major Qualifications

In order to qualify for the major, students must have received a "C" or better in at least one lower-division anthropology course (ANTH 1, ANTH 2, or ANTH 3) and have either received a "C" or better in a second lower-division anthropology course or be enrolled in a second lower-division anthropology course at the time of declaration.

Major Qualification Policy and Declaration Process

Major Qualification

In order to qualify for the major, students must have received a "C" or better in at least one lower-division anthropology course (ANTH 1, ANTH 2, or ANTH 3) and have either received a "C" or better in a second lower-division anthropology course or be enrolled in a second lower-division anthropology course at the time of declaration. Transfer students should consult the Transfer Information and Policy section of this program statement.

Appeal Process

Students who are informed that they are not eligible to declare the major may appeal this decision by submitting a letter to the department chair within 15 days from the date the notification was mailed. Within 15 days of receipt of the appeal, the department will notify the student, college, and Office of the Registrar of the decision.

How to Declare a Major

Students should submit a petition to declare by completing the petition for major/minor declaration form as soon as they complete the major qualification courses or reach their declaration deadline quarter, whichever comes first.

Students petitioning when the campus declaration deadline is imminent (i.e., in their sixth quarter, for students admitted as frosh), will either be approved, denied, or provided with conditions (e.g., completion of some courses with certain grades) that will be resolved within at most one more enrolled quarter, even if they have not completed major qualification courses.

CSC Academic Planning Form

STEP 2: Make an appointment in Slug Success to meet an anthropology peer adviser to review major requirements and start making your academic plan.

STEP 3: Share your Academic Planning Form Google Doc with the anthropology undergraduate adviser (anthugra@ucsc.edu). *It is very important that you complete this step, as you will not be declared until you do so!*

STEP 4: Complete a Petition for Major/Minor Declaration (once you have completed Major Qualifications) in MyUCSC.

Recommended: Meet with an Anthropology Senate faculty member to discuss your major plans and academic plan. It is best to meet with faculty during their quarterly office hours or email them to schedule an appointment. The Anthropology Department does not assign faculty advisers – we suggest that you meet with a faculty member whose work coincides with your interests. In addition to reviewing the required declaration paperwork, you should also talk with the faculty member about your intellectual and career interests, graduate school preparation, opportunities for experiential learning (e.g. internships or research), and options for satisfying the senior comprehensive requirement.

If you are a transfer student, you must provide the department with an unofficial copy of your transcript from any institution where you took anthropology courses that you would like to apply to the major requirements. *Please do this as soon as possible as it may effect your enrollment in anthropology courses that have prerequisites.*

Letter Grade Policy

This program does not have a letter grade policy.

Course Substitution Policy

Courses from California Community Colleges

Courses taken at community colleges or four-year universities may be used to satisfy the lower-division requirements for the major. View the UC Articulation Agreements to determine which California community college courses are equivalent to our ANTH 1, ANTH 2, and ANTH 3.

Courses from Other Four-Year Universities

The Anthropology Department may also accept introductory anthropology courses equivalent to ANTH 1, ANTH 2 and ANTH 3 from other four-year universities but students must petition to have these courses count toward the anthropology major or minor requirements.

You may also apply up to 10 credits (two classes) of upper-division credit toward the major. These credits must be taken at four-year universities, through EAP, or

through an approved field study program. The director of undergraduate studies must approve each course. For more information about the approval and waiver process, see the Coursework Petition.

Anthropology courses from other universities that are approved by the Anthropology Department will count toward the elective requirement. Students **must** complete the Anthropology Senior Comprehensive requirement at UCSC—course petitions will not be accepted for this requirement.

Double Majors and Major/Minor Combinations Policy

Study Abroad

Anthropology is a very international discipline: the classes and coursework in this department draw upon studies of many different places and peoples. Most anthropologists work in foreign countries and all engage with scholarship from around the world. Anthropology students are strongly encouraged to make study abroad part of their education and the department is currently developing a plan of study to enable students to conduct independent research abroad with which to write a senior thesis.

For more information on programs and planning, please see the UC Education Abroad Programs and the Conducting Thesis Research While Abroad pages.

Anthropology students who participate in EAP can petition up to two upper-division anthropology courses taken abroad to count toward the anthropology major or minor requirements. When approved, these courses count toward major/minor requirements as upper-division electives.

Note: The Anthropology Department at most will accept up to **two** courses from another university—this includes universities throughout the country and courses taken abroad.

The Anthropology Department **does not** pre-approve EAP courses to count toward the major/minor requirements. Students must petition for EAP courses to count toward requirements after returning from abroad by completing the Coursework Petition Form. It is very important that students save all of their EAP coursework as it may be needed for the course petition. Syllabi that are submitted for course petitions must include detailed information about the course—brief descriptions of courses and syllabi written in languages other than English will not be accepted. It is the student's responsibility to ask for a more detailed course description if the EAP instructor does not provide it.

Only anthropology courses taken through EAP are normally eligible to count toward anthropology major/minor requirements; however, if a university abroad does not have an anthropology department, other related courses may be considered.

Again, **save all EAP coursework**. It is the student's responsibility to retain all relevant course materials for EAP programs. It can often be difficult to contact instructors after an EAP program has ended.

Honors

The Anthropology Department awards honors in the major and highest honors in the major based on a ranked departmental grade point average (GPA) that is calculated using all upper-division courses taken in the major with the exception that only one independent-study course can be used in this calculation. For students who have taken multiple independent-study courses in the department, the independent-study course that has the highest grade is used for the calculation. Approximately 15 percent of the graduating class is considered for honors based on their ranked departmental GPA through the quarter before graduation. The criteria for awarding highest honors in the major are overall superlative performance in the major (top 5 percent of ranked departmental GPA) and general breadth of excellence across the subfields of anthropology. Receiving honors on the senior comprehensive requirement is also considered as a factor in awarding highest honors, but is not always determinative.

Anthropology Website

The Anthropology website outlines information on department procedures and requirements, program planning, independent study, faculty interests, and campus resources for anthropology majors.

Requirements and Planners

Course Requirements

To graduate with an anthropology major, students must successfully complete the following courses:

Lower-Division Courses

ANTH 1	Introduction to Biological Anthropology	5
ANTH 2	Introduction to Cultural Anthropology	5
ANTH 3	Introduction to Archaeology	5

Upper-Division Courses

Ten upper-division courses

Five core requirements

- one course in anthropological theory
- one course in sociocultural anthropology
- one course in regional specialization
- one course in archaeology
- one course in biological, medical or environmental anthropology

Four anthropology electives (any additional upper-division anthropology courses)

Two-credit courses do not count toward the 10 upper-division courses required for the major. Only one 5-credit individual studies course (ANTH 197, ANTH 198, or ANTH 199) may be counted toward the 10 required upper-division courses. Theory courses can only be counted toward the theory requirement or an upper-division elective. See the section on Transfer Credit Toward Major/Minor Requirements for information on receiving credit for upper-division coursework taken at other institutions to be applied toward electives.

Students who are given permission to take a graduate seminar in anthropology may use the course to satisfy an upper division elective.

Electives

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division disciplinary communication (DC) requirement. Anthropology's DC requirement aims especially at cultivating high-level skills in critical and ethnographic writing.

To satisfy the DC requirement students must complete a senior seminar series course or complete an independent senior thesis following the guidelines below.

Senior Seminar

Either a course in the ANTH 194 series or a course in the ANTH 196 series.

Senior Thesis

Either these courses		
ANTH 195A	Senior Thesis Seminar	5
ANTH 195B	Senior Thesis Research	3
ANTH 195C	Senior Thesis Capstone	3
or this course		
ANTH 195S	Senior Thesis	5

Comprehensive Requirement

Students can fulfill the senior comprehensive requirement in anthropology either by passing a senior seminar (ANTH 194/ANTH 196-series course) or by writing an acceptable independent senior thesis (ANTH 195S or ANTH 195A, ANTH 195B and ANTH 195C)

Senior seminars are small, writing-intensive classes focusing on advanced topics in anthropology. The prerequisite for admission to a senior seminar is successful completion of courses ANTH 1, ANTH 2, and ANTH 3; senior seminars are restricted to senior anthropology majors.

Students considering an independent thesis must arrange for the sponsorship and support of a faculty member before beginning research. An independent senior thesis (not written within a senior seminar) should be based on original research and reflect the student's understanding of fundamental theories and issues in anthropology. The thesis should be comparable in content, style, and length (generally 25–30 pages) to a professional journal article in its subfield. Students who wish to complete the senior comprehensive requirement through an independent thesis will enroll in a section of ANTH 195S supervised by their thesis sponsor or ANTH 195A, ANTH 195B and ANTH 195C series.

The senior comprehensive requirement can be satisfied in one of two ways:

Senior Seminar

Either a course in the ANTH 194 series or a course in the ANTH 196 series.

Senior Thesis

Requires enrollment in one of the following options:

Either this course			
ANTH 195S	Senior Thesis		5
or these courses			
ANTH 195A	Senior Thesis Seminar		5
ANTH 195B	Senior Thesis Research		3
ANTH 195C	Senior Thesis Capstone		3

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements (p. **Error! Bookmark not defined.**) for more information.

The following are two sample academic plans: (1) a four-year plan for frosh students as preparation for the anthropology B.A. major and (2) a two-year plan for transfer students for the anthropology B. A. major. ANTH 1 and ANTH 3 satisfy the SI general education requirement, and ANTH 2 satisfies the CC general education requirement.

Four-Year Plan

Year	Fall	Winter	Spring
1st (frosh)	ANTH 1	ANTH 2	ANTH 3
2nd (soph)	Bio/Med/Env	Sociocultural	Archaeology
3rd (junior)	Theory	Regional	Upper-division elective

division
elective

4th (senior)	Upper-division elective	Upper-division elective	Senior Seminar*
--------------	-------------------------	-------------------------	-----------------

*Alternatives listed in the section Requirements of the B.A.

Students must complete all other GE requirements, some of which are satisfied by anthropology courses.

Two-Year Plan

Year	Fall	Winter	Spring
3rd (junior)	Theory	Regional	Archaeology
4th (senior)	Upper-division elective	Sociocultural	Bio/Med/Env
	Upper-division elective	Upper-division elective	Senior Seminar*

*Alternatives listed in the section Requirements of the B.A.

It is assumed that a student has completed ANTH 1, ANTH 2, and ANTH 3 before transferring to UCSC.

ANTHROPOLOGY MINOR

The minor in anthropology has a total of 10 courses required: three lower-division and seven upper-division courses. There is no theory course or senior comprehensive requirement for the minor in anthropology.

Course Requirements

Lower-Division Courses

ANTH 1	Introduction to Biological Anthropology	5
ANTH 2	Introduction to Cultural Anthropology	5
ANTH 3	Introduction to Archaeology	5

For information on receiving credit for lower-division coursework taken at other institutions, see the section Transfer Credit Toward Major/Minor Requirements

Upper-Division Courses

- one course in regional specialization
- one course in sociocultural anthropology
- one course in archaeology
- one course in biological, medical, or environmental anthropology
- three anthropology courses from the Courses in Anthropology by Category (no independent study courses)

ANTHROPOLOGY PH.D.

Introduction

The anthropology doctoral program at UCSC consists of three tracks: cultural anthropology, anthropological archaeology, and biological anthropology.

Although applicants are accepted only for the doctor of philosophy (Ph.D.) program, students may obtain a master of arts (M.A.) degree after fulfilling specific requirements during the first two years.

The theme of emerging worlds—culture and power after progress—unites the research interests of faculty in the cultural anthropology graduate program.

Our concentration on “emerging worlds” and on the construction of anthropological knowledge is especially well suited for drawing together diverse scholars and specialists in challenging and enriching conversations. Rather than reproduce the boundaries among the traditional subfields of anthropology, we explore how recombination of these approaches can elucidate specific anthropological problems.

The Ph.D. program in anthropological archaeology focuses on the pre-colonial and early post-colonial history of Africa, Mesoamerica, the Caribbean, and western North America. It is distinctive in insisting that theories of power, production and exchange, human ecology, gender, ethnicity, and technological practice be explored through rigorous laboratory and field research methods.

The Ph.D. program in biological anthropology has a methodological emphasis in innovative approaches to human and non-human primate ecology and diversity founded on our expertise in genomics and isotope biochemistry, as well as a longstanding expertise in skeletal biology and its application in bioarchaeology and forensic anthropology.

Advancement to Candidacy

Anthropology Ph.D. students are expected to advance to candidacy by the end of their third year in the program in order to maintain satisfactory academic progress.

Course Requirements

Both the department and the university define the major requirements for each stage of study. The first year of the program is geared toward giving students a theoretical foundation so that they may begin to formulate ideas for a research project. All graduate students are expected to be in residence (on campus) during their first year in the program. At the end of the first year, students will submit a portfolio of substantive work to their first-year committee.

Cultural Track Requirements

Students are expected to pass a first-year review and have advanced to Ph.D. candidacy by the end of their third year. In order to advance to candidacy in cultural anthropology, students must complete:

Core Courses

Must be completed in fall/winter of the first year in the program.*

ANTH 200A	Cultural Graduate Core Course	5
ANTH 200B	Cultural Graduate Core Course	5

* ANTH 252, Survey of Cultural Anthropology, is recommended if the student comes from a non-anthropological background.

Ethnographic Writing Requirement

This requirement may be completed by passing Ethnographic Practice, (ANTH 208A) or, upon approval from the department, through an independent research project in which the student engages in research based on participant observation or other ethnographic methodology and in which the student adequately translates that research experience into a written text.

Three Additional Cultural Anthropology Graduate Seminars

Grant Writing (ANTH 228), Colloquia (ANTH 292), Independent Study (ANTH 297/ANTH 299), and tutorials do not count toward this requirement. Tutorials that are taught in conjunction with undergraduate courses do not count toward this requirement.

Note: Not all of these courses are offered each year.

ANTH 208C	Design Anthropology	5
ANTH 219	Religions, States, Secularities	5
ANTH 220	Cartographies of Culture	5
ANTH 224	Anthropology of Secularism	5
ANTH 225	The Anthropology of Things: Sign, Gift, Commodity, Tool	5
ANTH 229	Constructing Regions	5
ANTH 233	Politics of Nature	5

ANTH 234	Feminist Anthropology	5
ANTH 235	Language and Culture	5
ANTH 238	Advanced Topics in Cultural Anthropology	5
ANTH 241	Social Justice	5
ANTH 247	Critical Perspectives on Nutrition	5
ANTH 248	Shadowy Dealings: Anthropology of Finance, Money, and Law	5
ANTH 249	Ecological Discourses	5
ANTH 253	Advanced Cultural Theory	5
ANTH 254	Medicine and Culture	5
ANTH 255	Regulating Religion/Sex	5
ANTH 258	Experimental Cultures	5
ANTH 259	Race in Theory and Ethnography	5
ANTH 262	Documenting Cultures	5
SOCY 268B	Science and Justice Research Seminar	5
ANTH 269	Global History and the Longue Duree	5

Archaeology Track Requirements

Students are expected to pass a first-year review and have advanced to Ph.D. candidacy by the end of their third year. In order to advance to candidacy in archaeology, students must complete:

Two Core Theory Courses

Must be completed during first year in the program.

ANTH 270A	Archaeology Graduate Core Course: History of Archaeological Theory	5
ANTH 270B	Current Directions in Archaeological Theory	5

Two Research Methods/Laboratory Courses

Student may substitute courses in another department with advisor approval.

NOTE: Lecture and Lab combinations count as a single course

ANTH 202A	Skeletal Biology	5
ANTH 280	Advanced Ceramic Analysis	5
ANTH 280L	Advanced Ceramic Analysis Laboratory	2
ANTH 285	Osteology of Mammals, Birds, and Fish	5

Two Courses on the Archaeology of a Geographical, Temporal, or Topical Area

Student may substitute courses in another department with advisor approval.

ANTH 273	Origins of Farming	5
ANTH 274	Origins of Complex Societies	5

ANTH 275	Tutorial in African Archaeology	5
ANTH 276A	Advanced Topics in North American Archaeology	5
ANTH 276B	Mesoamerican Archaeology	5
ANTH 276G	Archaeology of Colonial Borderlands	5
ANTH 287	Advanced Topics in Archaeology	5

Two Additional Graduate Seminars

Students may substitute a graduate seminar in cultural or biological anthropology or in another department with advisor approval. Tutorials that are taught in conjunction with undergraduate courses do not count toward this requirement.

ANTH 225	The Anthropology of Things: Sign, Gift, Commodity, Tool	5
ANTH 279	Feminism and Gender in Archaeology	5
ANTH 282	Household Archaeology	5

One Course in Grant Writing or Research Design

ANTH 228	Grant Writing	5
ANTH 272	Advanced Archaeological Research	5

Quantitative Methods Requirement

Students in the Archaeology PhD track must demonstrate competency in statistical or computational analysis techniques appropriate to their specific dissertation research projects and professional goals. Plans for gaining and demonstrating this competency should be developed as part of the first year review for each student, in consultation with their advisor and first year committee and with the approval of the department. This competency must be demonstrated and approved by the department prior to taking the qualifying exam and advancing to candidacy.

Two Laboratory Apprenticeships

ANTH 298	Advanced Laboratory Apprenticeship	5
----------	------------------------------------	---

Biological Anthropology Track Requirements

Students are expected to pass a first-year review and have advanced to Ph.D. candidacy by the end of their third year. In order to advance to candidacy in biological anthropology, students must complete:

Core Course

Must be completed in Fall/Winter of first year in program.

ANTH 295A	Scientific Method: Biological Anthropology	5
-----------	--	---

Ecology and Evolutionary Theory Requirement

Students in the biological anthropology Ph.D. track must demonstrate competency in ecology and evolutionary theory appropriate to their specific dissertation research projects and professional goals. Plans for gaining and demonstrating this competency should be developed during the first quarter in the program, in consultation with their advisor. This competency must be demonstrated and approved by the department by the end of the first year.

One Advanced Anthropological Methods and Research Course

Students in the biological anthropology Ph.D. track must demonstrate competency in advanced methods in human skeletal biology, forensics and bioarchaeology, molecular analysis (genetics), or stable isotope analysis. Plans for gaining and demonstrating this competency should be developed during the first quarter in the program, in consultation with their advisor. This competency must be demonstrated and approved by the department by the end of the first year.

One Additional Advanced Methods and Research Course

Must be completed by the end of the second year. Student may substitute courses in another department with advisor approval.

One Graduate Seminar in Archaeology or Cultural Anthropology

Tutorials that are taught in conjunction with undergraduate courses do not count toward this requirement.

Must be completed by the end of the second year.

Quantitative or Computational Requirement

Students in the biological anthropology Ph.D. track must demonstrate competency in statistical or computational analysis techniques appropriate to their specific dissertation research projects and professional goals. Plans for gaining and demonstrating this competency should be developed as part of the first-year review for each student, in consultation with their advisor and first-year committee and with the approval of the department. This competency must be demonstrated and approved by the department prior to taking the qualifying examination and advancing to candidacy.

Nine Quarters of Advanced Reading in Biological Anthropology

Students are expected to enroll in ANTH 294R, Advanced Readings in Biological Anthropology, every quarter prior to advancing to candidacy.

ANTH 294R	Advanced Readings in Biological Anthropology	5
-----------	--	---

Two Laboratory Apprenticeships

Students are required to enroll in ANTH 298, Advanced Laboratory Apprenticeship, or equivalent in another department.

ANTH 298	Advanced Laboratory Apprenticeship	5
----------	------------------------------------	---

Six Quarters of Methods in Biological Anthropology

Students are expected to enroll in ANTH 216, Methods in Biological Anthropology, in every quarter prior to advancing to candidacy starting their second year.

ANTH 216	Methods in Biological Anthropology	5
----------	------------------------------------	---

Nine Quarters of Seminar Series

Students are required to attend at least 8 talks per quarter in the Anthropology Colloquia, Arch-BioAnth Lunch Series, EEB Seminar Series, or EPS Seminar Series.

Comprehensive Exam

This must be completed prior to the end of the second year. Students must demonstrate knowledge in Ecological and Evolutionary Theory, expertise in at least two subfields of Biological Anthropology, and sufficient background in either Archaeology or Cultural Anthropology, especially Medical or Environmental Anthropology. The exam format is a written essay and a two-hour oral exam.

Students may satisfy both the oral and written requirement with a manuscript (worthy of submission to a professional journal) based on a research project undertaken in the second year with advisor approval. They have to be first author of this manuscript in order to satisfy the requirement.

Foreign Language Requirements

The foreign language requirement must be fulfilled before taking the qualifying examination. A qualifying examination cannot be scheduled until the requirement has been met.

It is the responsibility of each graduate student to work with their advisor to identify the language competencies necessary for fieldwork and scholarship and to initiate study toward meeting these needs. To meet the language requirement, competency in one language must be formally demonstrated. Each student's advisor will recommend how this requirement should be met, as well as what additional skills should be sought. Generally accepted ways of meeting the language requirement include:

- Passing a standardized test at a predetermined level
- Taking and passing a translation examination administered by a UCSC language instructor or

an outside assessor approved by the advisor. If necessary (i.e. for uncommon languages), a translation examination may be administered by a UCSC faculty member who is not a language instructor

- Taking and passing a series of language courses at a specified advanced level at UCSC or elsewhere, again, to be determined in consultation with the advisor

In some cases, the language in which a relevant scholarly literature exists will be the logical language of examination. In other cases, the language in which fieldwork will be conducted will be the most logical language for examination.

In the case of non-native English speakers who plan to undertake research in their own native language, English can meet the foreign language requirement. In the case of English native speakers who plan to do research in their native language, the requirement should be met by another language relevant to the field research or scholarly resources.

In cases where a foreign language is not necessary for field research nor for scholarly work, and learning a foreign language would significantly delay progress to degree and/or conflict with time needed to learn other necessary technical skills, students may apply to the department for an Exemption to Policy for the foreign language requirement.

Pre-Qualifying Requirements

Biological Anthropology Track students must present a seminar on proposed research.

Qualifying Examination

The qualifying examination consists of two parts: a written file and a three-hour oral examination with the Qualifying Examination (QE) Committee during which the student presents and discusses the file.

For cultural track students, the file includes:

1. A theoretically focused dissertation research prospectus (approximately 18-25 pages, double-spaced, actual length to be determined by QE committee).
2. Two field statements on two anthropological topics selected and developed in consultation with the QE committee. Field statements typically review fields of literature that have (a) an area/regional focus and (b) a thematic/theoretical focus (approximately 18-25 pages, double-spaced, each; actual length to be determined by QE committee).

For archaeology track students, the file includes:

1. A theoretically focused dissertation research prospectus (approximately 18-25 pages, double-

spaced, actual length to be determined by the QE Committee).

2. Three field statements reviewing literature of 18-25 pages each on (a) a geographic cultural area, (b) a set of research methods, and (c) a theoretical tradition or theme.

For biological anthropology track students, the file includes:

A theoretically focused dissertation research prospectus (approximately 18-25 pages, double-spaced, actual length to be determined by the QE Committee).

Post-Qualifying Requirements

Biological Anthropology Track students must complete two quarters as a teaching assistant. Archaeology and Cultural Anthropology Track students must complete one quarter as a teaching assistant. This requirement may be satisfied pre- or post-qualifying exam.

Residency Requirement

In accordance with Senate Regulation 686, the minimum residence requirement for the Ph.D. degree is six terms, three of which must be spent in residence at the University of California, Santa Cruz campus. Residence is established by the satisfactory completion of one course per term.

Dissertation

Dissertation

Ph.D. candidates must prepare and submit a dissertation that is based on original research and meets the requirements of their dissertation reading committee.

Dissertation Defense

Academic Progress

Good Academic Standing and Probation

A duly registered graduate student is considered to be in good standing so long as the student's department determines that he or she is making satisfactory progress toward a terminal degree. The department and the graduate dean review the academic progress of each continuing graduate student annually.

If the Anthropology Department deems a student's work unsatisfactory, he or she may be placed on probation. A student whose academic progress has been found unsatisfactory in two successive annual reviews will be subject to dismissal from the university.

Recommended probation for a student states:

1. Reason why (failed X class, etc.)
2. Steps that must be taken to restore satisfactory academic standing
3. The timeline for completion of the required work

The letter to the student will state that the failure to meet any one of the requirements may result in dismissal. No action for dismissal is taken until and unless the department recommends dismissal.

A student who has completed 12 or more quarters of full-time work in the same graduate program without advancing to candidacy for the Ph.D. is not considered to be making satisfactory progress. In such cases, the student will be recommended for dismissal or placed on probation until advancement is achieved. A student advanced to candidacy for more than nine quarters who has yet to complete his or her Ph.D. is not considered to be making satisfactory academic progress. Consult the Graduate Student Handbook for more information about academic progress, probation, dismissal, and the appeal process.

Applying for Graduation

The Application for the Doctor of Philosophy Degree form must be completed with all necessary signatures obtained and submitted to the Division of Graduate Studies. Application deadlines are posted in the Academic and Administrative Calendar.

Students may request an extension for submission of their dissertation until late June with approval of their advisor. To request an extension, contact the Anthropology Graduate Program coordinator.

If the student does not complete all the requirements for the degree, including submission of the dissertation by the deadline date, a new application form must be filed for the quarter in which the student will complete the requirements.

ANTHROPOLOGY DESIGNATED EMPHASIS

Introduction

A designated emphasis (DE) denotes a broadening of training that comes from adding course work, training, and/or research work from an external department, degree-granting program, or cross-departmental grouping of faculty who together offer a designated emphasis.

Requirements

Committee Composition and Departmental Approvals

One member of the student's qualifying examination committee must be a faculty member of the anthropology department. In addition, one member of the anthropology department must serve on the student's doctoral thesis committee.

Course Requirements

The student must take four graduate courses in the Department of Anthropology. An independent study

with a faculty member of the Anthropology Department may count as only one of the four courses. Grant Writing (ANTH 228) may not be counted toward these requirements. Tutorials that are taught in conjunction with undergraduate courses do not count toward these requirements.

Writing, Research and/or Teaching Requirements

At the time of the qualifying examination, the student must submit to the Anthropology Department a full statement, up to five pages, summarizing the pre-qualifying examination work done in anthropology (courses, papers, research projects, independent studies) and characterizing how that work and the dissertation to follow draw from and contribute to anthropological and ethnographic inquiry. The dissertation research will normally include a fieldwork component.

In the quarter prior to announcing candidacy for graduation, the student must contact the graduate program coordinator to review their progress and confirm that all course and committee requirements have been met for the designated emphasis. In the quarter in which the student announces candidacy for graduation, the faculty member from the anthropology department serving on the student's doctoral thesis committee will evaluate the depth of engagement with anthropology displayed in the doctoral thesis and decide whether the thesis fulfills the requirement to contribute to anthropological and ethnographic inquiry.

<https://communitystudies.ucsc.edu/>

PROGRAMS OFFERED

Community Studies B.A. (p. 584)

Founded in 1969, community studies is the oldest interdisciplinary academic program at the University of California, Santa Cruz. The hallmarks of community studies are its focus on social justice and its distinctive pedagogy integrating classroom learning and extended field study. Community studies was a national pioneer in experiential education and its curricular model has been emulated widely. Community studies also was a pioneer in addressing principles of social justice, specifically inequities arising from race, class and gender dynamics in society at large, and in critically engaging with strategies for achieving social change.

Community studies alumni pursue a wide variety of professional careers in health care, K-12 education, public policy, social work, urban planning, higher education, and law. According to a 2005 alumni survey, more than 100 alumni have founded non-profit social justice organizations and many more have served on non-profit boards and/or in executive director positions. The phrase “we are everywhere” is an apt description of the myriad contributions community studies alumni

make to society through their work and in their everyday lives.

COMMUNITY STUDIES B.A.

Information and Policies

Introduction

Founded in 1969, community studies is the oldest interdisciplinary academic program at UC Santa Cruz. The hallmarks of community studies are its focus on social justice and its distinctive pedagogy integrating classroom learning and extended field study. Community studies was a national pioneer in experiential education and its curricular model has been emulated widely. Community studies also was a pioneer in addressing principles of social justice, specifically inequities arising from race, class and gender dynamics in society, and in critically assessing social change strategies.

The undergraduate major offers highly motivated and focused students the opportunity to pursue a rigorous course of study combining on- and off-campus learning. On campus, students complete a core curriculum examining the histories and contemporary dynamics of social justice movements, the nonprofit sector, public policy, and social enterprise. The core curriculum works in tandem with topical coursework that develops social science knowledge related to the program's twin emphases of economic justice and health equity. Off campus, students spend six months on field study participating in the work of an organization, contributing to its mission and developing a critical analysis of its wider field of social action. Students work independently but with guidance from both campus faculty and an on-site supervisor from the field study organization.

The undergraduate core curriculum begins with the development of skills in social analysis and field observation/participation while deepening students' knowledge of specific histories and theoretical perspectives essential to the study of communities and social transformation. Next, through the six-month full-time field study, students engage with specific communities through immersion and participation in an organization pursuing a social justice mission. This intensive and extended field study experience is a distinguishing feature of the community studies major. Finally, students return to campus to analyze their field study experience and its relation to their classroom-based learning. The major culminates with an original senior capstone integrating academic coursework with field study experience and analysis.

With the guidance of faculty and staff advisers, community studies students choose field placements related to the program's areas of focus in health equity and economic justice. In the past, placements have been arranged with community health clinics, women's and feminist organizations, immigrant rights centers, media

advocacy organizations, homeless resource and support groups, sustainable development projects, queer and transgender organizations, neighborhood or workers' collectives, civil rights groups, community food security programs, legal clinics, community-based cultural organizations, programs for seniors, tenant or labor unions, tenant organizing projects, HIV/AIDS advocacy groups, housing rights advocates, harm-reduction programs, government agencies and the offices of elected officials, and still other organizations committed to and working for social good. As political, economic, cultural and technological landscapes shift, so do the needs and opportunities for social justice organizing. Community studies is attuned to how social transformations generate new opportunities for field study learning. Students graduate from community studies having engaged with a dynamic world through a unique mix of traditional pedagogy and direct experience.

Program Learning Outcomes

Community studies identifies eight Program Learning Outcomes (PLOs) that capture exciting cross currents within the major. The PLOs combine classroom and experiential learning related to the social justice domains of health equity and economic justice. They also enumerate expectations for student achievement in social science research and writing and communication skills within a diverse society.

Critical Thinking

Students earning a B.A. in community studies will be able to:

1. demonstrate deep knowledge of the history, causes, and contemporary manifestations of specific social justice issues related to health and economic inequality;
2. deconstruct institutional power residing in private enterprise, government, the media, and/or the non--profit sector;
3. analyze how communities attempt to overcome problems associated with inequality, cultural stigma, prejudice, and discrimination;
4. articulate research questions, methods, and findings appropriate to social science inquiry; and
5. demonstrate analytical writing ability that effectively integrates theoretical and experiential knowledge about social justice.

Community Engagement

Students earning a B.A. in community studies will be able to:

1. identify, analyze, and help to construct strategies for social change through participation in the social justice work of an organization;

2. exhibit ethnographic observation skills by maintaining a regular record of detailed field notes;
3. demonstrate effective communication with the diverse constituencies involved in social justice work.

Academic Advising for the Program

213 Oakes College Academic Building
(831) 459-2371

To receive advising for the community studies major, students should schedule an appointment via slug success, email or call the program adviser. Full contact information is available on the program webpage. Our office is located on the second floor of the Oakes College Academic Building in room 213. The office telephone number is 831-459-2371. Students are encouraged to meet early on with the program adviser to develop an academic plan enabling them to take full advantage of the many learning opportunities available at UC Santa Cruz.

Transfer students should also consult the Transfer Information and Policy section.

Getting Started in the Major: Frosh

Students interested in pursuing the community studies major should communicate with the program adviser to learn about the program's distinctive curriculum and requirements. This is a moderately course-intensive sequential program, and students who intend to pursue this major should begin taking classes for the major in their first or second year at UC Santa Cruz. Completing lower-division general education courses that build an understanding of and engagement with social justice issues is a great way to satisfy university requirements while building a solid foundation for the upper-division coursework required in the community studies major. Completion of the writing requirements before taking the first upper-division topical is strongly encouraged.

Transfer students should consult the Transfer Information and Policy section for specific recommendations to prepare for the major.

Transfer Information and Policy

Transfer Admission Screening Policy

Prospective students are encouraged to complete the Intersegmental General Education Transfer Curriculum (IGETC) or to complete all UC Santa Cruz general education requirements before matriculation. The Community Studies program can easily accommodate students who transfer to UCSC for the fall quarter.

Transfer students who plan to major in community studies will also find it useful to obtain a background in politics, sociology, psychology, anthropology, or community action and service. Prior to their first quarter at UC Santa Cruz, transfer students should

prepare a program of study and once on campus meet with the community studies program adviser to discuss the focus of their academic and field study plans.

Getting Started in the Major: Transfer Students

Transfer students are strongly encouraged to participate in the campus orientation program and connect with the community studies program adviser to develop an academic plan prior to their fall course enrollment.

Students must complete both CMMU 10, Introduction to Community Activism (offered only in the summer and fall quarters) and one topical course (see the Community Studies website) in either Summer Edge or their first fall term in order to declare the major by the transfer student deadline. Major qualification courses must be taken for a letter grade. Satisfactory completion is defined by a grade of C or better in both major qualifying courses.

As part of the declaration process, transfer students meet with the program director and/or staff adviser to review their academic plan for the major, including discussion of field study possibilities and appropriate courses to meet topical requirements. Students must submit their approved academic plan and declaration petition to the community studies staff adviser.

Significant changes to the student's academic plan must be approved by the program director.

Major Qualification Policy and Declaration Process

Major Qualification

Students qualify to declare the community studies major by satisfactorily completing CMMU 10, Introduction to Community Activism, and at least one upper-division topical course from the approved list of courses. Major qualification courses must be taken for a letter grade. Satisfactory completion is defined by a grade of C or better in both major qualifying courses. Students must declare prior to enrolling in CMMU 102, Preparation for Field Study.

Students can file a petition to declare the major while still enrolled in major qualification courses if they are approaching their campus declaration deadline (i.e., in their sixth quarter, if admitted as frosh).

Transfer students should also consult the Transfer and Information Policy Section.

Appeal Process

Students who are informed that they are not eligible to declare the major may appeal this decision by submitting a letter addressed to the community studies program director within 15 days from the date of notification. Appeal letters should be submitted via email to the community studies program program adviser. Within 15 days of receipt of the appeal, the

program will notify the student and college of the decision.

How to Declare a Major

As part of the declaration process, students meet with the program director and/or staff adviser to review their academic plan for the major, including discussion of field study possibilities and appropriate courses to meet topical requirements. Students must submit their approved academic plan and declaration petition to the community studies staff adviser. Significant changes to the student's academic plan must be approved by the program director.

Letter Grade Policy

All courses for the major must be taken for a letter grade. Satisfactory completion of all major course requirements (core curriculum and topical courses) is defined by a grade of C or higher.

Course Substitution Policy

Double Majors and Major/Minor Combinations Policy

Many students combine community studies with another major. Students wishing to pursue community studies and a second major (i.e., "double major") should consult with the program adviser as early as possible to plan their course work to satisfy all their degree requirements.

Community Studies does not offer a minor.

Study Abroad

Participation in EAP and other off-campus programs is strongly encouraged but requires advanced planning. Students considering EAP should schedule a meeting with the community studies adviser to determine the best quarter(s) for participation in such programs. Students may petition to have EAP coursework satisfy one (1) of their topical courses for the major if the EAP course work clearly relates to the student's academic plan in the major. Petitions will be evaluated on a case by case basis. Students are encouraged to learn more about study abroad and other opportunities on UC Santa Cruz's Global Learning website.

Honors

Honors in the community studies major are awarded to graduating seniors whose performance, including coursework, field study, and the senior capstone, is judged by a faculty committee to have achieved excellence. Highest honors in the major are reserved for students with consistently outstanding academic performance.

Requirements and Planners

Course Requirements

Community Studies Majors are required to take a total of 11 courses (one lower-division course in preparation for the major; seven upper-division core classes, two of which are 15 credits each; and three topical classes). In addition, they must successfully complete the senior capstone prior to graduation.

Lower-Division Courses

Complete CMMU 10 as early as possible, the course is only offered in the summer and fall quarter and is one of two required courses to declare the major.

CMMU 10	Introduction to Community Activism	5
---------	---------------------------------------	---

Upper-Division Courses

Community Studies core curriculum courses follow a sequential pattern and are only offered during specific academic quarters. Therefore it is very important to develop an academic plan as early as possible that takes the core curriculum sequence into account. Below are the required upper division core courses and quarters they are offered:

CMMU 101 winter quarter

CMMU 102 spring quarter

CMMU 105A, CMMU 105B, CMMU 105C summer and fall quarters (30 credits total)

CMMU 107 winter quarter

In addition to the core curriculum, students must successfully complete three topical courses to develop expertise in health equity and/or economic justice. Students are required to take all three topical courses prior to their field study (CMMU 105 Full-time field study- 15 credits per quarter, completed in the summer and fall)

CMMU 101	Communities, Social Movements, and the Third Sector	5
CMMU 102	Preparation for Field Studies	5
CMMU 105A	Field Study	5
CMMU 105B	Field Study	5
CMMU 105C	Field Study	5
CMMU 107	Analysis of Field Materials	5

Topical Courses

Students must complete three upper-division courses on topics related to health equity and economic justice from available approved courses. The program director also may approve other courses as appropriate and necessary. Topical courses are an essential component

of the community studies major because they define the focus of students' overall academic plan and their work on full-time field study. The topical courses also permit students to work across academic disciplines by learning from community studies affiliate faculty. Note that not all topical courses are offered every academic year. Check the program website for current academic year offerings.

Topical courses for the major must be taken for a letter grade and satisfactory completion of the topical courses is defined by a grade of C or higher. All three topical courses must be completed before a student begins full-time field study (CMMU 105A-B-C).

Electives**Disciplinary Communication (DC) Requirement**

Students of every major must satisfy that major's upper-division DC requirement. The community studies program's model of experiential pedagogy relies heavily on writing instruction to develop students' analytical, reflexive, and communication skills. Although students in the major develop disciplinary writing skills throughout the core curriculum, they fulfill the DC requirement with two courses:

CMMU 102	Preparation for Field Studies	5
CMMU 107	Analysis of Field Materials	5

Comprehensive Requirement**Senior Capstone Requirement**

In addition to the full-time field study, another distinctive feature of the major is the emphasis placed on the capstone. Each student must fulfill this requirement whether through a senior essay, a senior thesis or a student-directed seminar. For a thesis or student-directed seminar, the student must work directly with a faculty adviser.

Senior Essay

All students complete a senior essay that incorporates field study observations and contextualizes their findings historically and theoretically. Most students pursue this capstone option. The minimum length is 25 pages, plus bibliography. The senior essay is completed entirely in:

CMMU 107	Analysis of Field Materials	5
----------	-----------------------------	---

Senior Thesis

Outstanding students may choose to complete a senior thesis, which is comprised of field-study observations, historical and theoretical contextualizations of the field study, and deeper analysis of the social justice issues and histories at the heart of the field study. The thesis also involves post-field-study research; typical length is 40–50 pages, including bibliography. The senior essay completed during CMMU 107 will become the foundation for the thesis, whether as a template to be elaborated or as one or more chapters of the completed

thesis. Students electing to write a senior thesis must have a faculty thesis adviser and under direction of the adviser, may enroll in the following courses for variable units in order to complete the thesis.

CMMU 195A	Senior Thesis	5
CMMU 195B	Senior Thesis	5
CMMU 195C	Senior Thesis	5

Student-Directed Seminar (SDS)

The SDS capstone option is reserved for exceptional students with a clear vision of a unique lower-division course they would like to offer other UC Santa Cruz students. Under the direction of a faculty adviser, the student develops and teaches a CMMU 42 course related to the student's field study and academic coursework and submits a seminar completion report. Student-directed seminars required considerable advance planning; a proposal for the SDS must be completed before beginning the field study, i.e., a full year before the seminar would be offered. All proposed SDS courses must be reviewed and approved by the campus Academic Senate's Committee on Courses of Instruction.

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements (p. **Error! Bookmark not defined.**) for more information.

PROGRAMS OFFERED

Economics B.A. (p. 600)

Business Management Economics B.A. (p. 590)

Global Economics B.A. (p. 606)

Economics/Mathematics Combined B.A. (p. 613)

Economics Minor (p. 618)

Applied Economics and Finance M.S. (p. 619)

Economics Ph.D. (p. 622)

OTHER PROGRAMS OF INTEREST

Environmental Studies/Economics B.A. (p. 682)

An understanding of economics is a vital component of a liberal arts education and a necessity for anyone interested in how the economic system actually works. Subject areas include business, environmental policy, economic development, immigration, educational reform, international competitiveness and trade, economic inequality, and transformations in the global economy.

The programs offered by the UC Santa Cruz Economics Department are designed to acquaint students with a broad range of economic issues and with the tools economists use.

UNDERGRADUATE PROGRAM

The economics curriculum begins at the introductory level; no specific high school preparation is required. All economics majors study a substantial core of economic theory and mathematical and statistical methods, and then choose among a wide variety of upper-division electives.

Economics majors may combine their upper-division elective choices in a variety of ways to achieve specialization in a number of possible areas, including environmental economics, public policy, political economy, international economics, economic development, and quantitative methods.

GRADUATE PROGRAM

The Department of Economics offers programs leading to the Ph.D. degree in economics and M.S. degree in applied economics and finance.

The Ph.D. program in economics provides students with training in modern microeconomics, macroeconomics, and econometrics, combined with specialized training in the fields of international finance and international trade and options to pursue specializations in economic development, monetary economics, applied microeconomics, experimental economics and other areas. The core emphasis of the program is on international trade and finance, and the program offers more intensive course work in these areas, as well as greater faculty depth in various aspects of international economics, than do traditional Ph.D. programs in economics that offer international economics as a single subfield. However, the department is also home to a

large number of internationally recognized faculty whose work is outside of international and who regularly supervise Ph.D. students. Graduates of the program have conducted research on a wide variety of topics; examples include monetary economics, experimental economics, environmental economics, and economic growth and development as well as international economics.

Past graduates of the Ph.D. program have gone on to successful careers in the academic and research sectors with placements at a diverse range of companies and institutions, including Central Banks, Federal Reserve Board of Governors, Facebook, Microsoft, Amazon, UBER, Middlebury College, Occidental College, IMPAQ International, California State University, University of Wisconsin, Purdue University, Bank of International Settlements and many more.

The M.S. program in applied economics and finance is designed for students who wish to supplement their undergraduate work in economics with analytical graduate training that prepares them for careers in business, international and domestic banking, consulting firms, government, and nonprofit organizations. The program combines theory with meaningful applications that students are likely to face in their professional careers. The program is more practical than a typical M.A. program and provides more training in economics and statistics than most MBA programs.

Past graduates of this program have gone on to successful careers in the private and public sectors with placements at a diverse range of companies and institutions, including ADM Associates, Inc., Anderson Tax, SoFi, Cisco Systems, Seagate Technology, Google, Sony Computer Entertainment, Plantronics, Wells Fargo, Securities and Exchange Commission, all of the big four accounting firms, McKesson Corp., Pepsi Corp., Visa, Square Trade, the California Franchise Tax Board, Guardian News (UK), Blue Cross, the World Bank, Stanford University, and the Bank of Japan. Other graduates have gone on to earn Ph.D.s in economics.

BUSINESS MANAGEMENT ECONOMICS B.A.

Information and Policies

Introduction

The business management economics major provides students who are interested in careers in business or management with a foundation in economics and a selection of applied fields related to business management. This course of study prepares students for entrance into the business world or admission to graduate programs—either the master's program in applied economics and finance at UCSC or graduate programs in business and management at other universities.

The program provides a business and management education embedded within a broader economics and liberal arts context and is closely related to the economics and global economics majors and the technology and information management major. The department also offers a series of accounting courses that prepare students interested in certified public accountant (CPA) licensure. Students in the business management economics major have the option of adding an accounting concentration designation on their transcripts, provided they meet the curricular criteria. Electing to complete the accounting course sequence will prepare students for the Uniform Certified Public Accountants' Exam and the credits will count toward exam eligibility. It will assist students in documenting their concrete expertise in accounting and thus help them compete for entry-level accounting positions in industry and public accounting as well as secure internship opportunities. For the concentration the eight (8) required courses include: ECON 110: Managerial Cost Accounting and Control, ECON 111A: Intermediate Accounting I, ECON 111B: Intermediate Accounting II, ECON 111C: Intermediate Accounting III, ECON 112: Audit, ECON 116: Advanced Topics in Accounting and Ethics, ECON 117A: Tax Factors for Individuals, and ECON 117B: Tax Factors for Business. Students electing the accounting concentration may also reduce their computer literacy requirements by one course (from two to one).

This major has several important elements. First, it combines the strong analytic approach of economics with the technical aspects of management. Second, it recognizes that computing is intrinsic to business and is an essential skill for those who wish to enter this field. Students in this major gain knowledge about using computing as a tool of analysis for economic, statistical, and financial data. Third, the major offers field placements (arranged with the economics advisors) which provide an excellent way to apply students' academic knowledge of economics, business, and management to issues and problems in the real world; they provide marketable skills as well as important job contacts.

Students who are committed to the major early in their academic career should plan to complete ECON 1, ECON 2, ECON 10A, ECON 10B, AM 11A/ECON 11A, AM 11B/ECON 11B, STAT 17 and STAT 17L and preferably ECON 100A, ECON 100B, and ECON 113 no later than the end of their sophomore year.

Program Learning Outcomes

Program learning outcomes for economics, economics and mathematics, business management economics, and global economics majors:

Critical Thinking Skills: Students are expected to be able to apply economic analysis to everyday problems in real world situations, to understand current events and evaluate specific policy proposals, and to evaluate the role played by assumptions in arguments that reach

different conclusions to a specific economic or policy problem.

Quantitative Reasoning Skills: Students are expected to understand how to use empirical evidence to evaluate the validity of an economic argument, use statistical methodology, interpret statistical results, and conduct appropriate statistical analysis of data.

Problem-Solving Skills: Students are expected to be able to solve problems that have clear solutions and to address problems that do not have clear answers and explain conditions under which these solutions may be correct.

Specialized Knowledge and Application of Skills: Students are expected to develop critical and quantitative thinking skills specific to business and accounting.

Communication Skills: Students are expected to be able to communicate effectively in written, oral, and graphical form about specific issues, and to formulate well-organized written arguments that state assumptions and hypotheses supported by evidence.

Academic Advising for the Program

The Economics Department office is located at 401 Engineering 2. There are two staff undergraduate advisors, peer advisors (except summer), a field study coordinator, as well as a faculty director for each of the Economics Department's undergraduate programs. Our faculty, staff advisors and peer advisors play an important role in advising on all aspects of the major and assisting you to maximize your educational opportunities. Please check the department website for more information about drop-in hours.

Getting Started in the Major: Frosh

The economics curriculum begins at the introductory level: no specific high school preparation is required.

This is a course-intensive and sequential program, and students who intend to pursue this major must begin taking classes for the major in their first year at the University of California, Santa Cruz.

Math placement is required for one or more of the foundational courses for this major. For more information, please review the Math Placement website.

All majors study a substantial core of economic theory and statistical methods and they then choose among a wide variety of subfields.

Transfer Information and Policy

Transfer Admission Screening Policy

The following courses or their equivalents are required prior to transfer, by the end of the spring term for students planning to enter in the fall: ECON 1, ECON 2 and first quarter of calculus (MATH 11A, MATH 19A OR AM 11A/ECON 11A).

A minimum GPA of 2.8 must be obtained in the courses listed above. The admissions office screens transfer applicants for meeting major qualification criteria.

In addition, the following courses are recommended prior to transfer to ensure timely graduation: completion of the calculus sequence (AM 11B or MATH 22/MATH 23A); lower-division accounting (ECON 10A and ECON 10B equivalents).

Prospective students are encouraged to prioritize required and recommended major preparation, and may additionally complete courses that articulate to UC Santa Cruz general education requirements as time allows.

Getting Started in the Major: Transfer Students

The department request that new transfer students send unofficial transcripts of any previously completed coursework to econ_ugrad_coordinator@ucsc.edu. For coursework completed outside of a California community college submitting course syllabi for articulation purposes is required. The advisors will then be able to make course recommendations for fall quarter or summer session courses prior to the first fall quarter.

All transfer students must complete the three-course senior comprehensive requirement (ECON 100A, ECON 100B, ECON 113) and the Disciplinary Communication (DC) requirement (ECON 104 or ECON 197) at UC Santa Cruz. Economics majors must take at least three of their upper-division economics electives at UCSC. Courses taken for credit elsewhere may not be repeated for credit here.

Students who were admitted under a different proposed major and have advanced standing when they come to UC Santa Cruz require permission from the department to change into the major. Admission to the major is not guaranteed.

Major Qualification Policy and Declaration Process

Major Qualification

The Economics Department administers four undergraduate majors: economics, business management economics, global economics, and economics/mathematics.

Students must complete three courses, with combined GPA of 2.8 or higher, to qualify for entry to the business management economics major:

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5

And one of the following calculus courses:

AM 11A	Mathematical Methods for Economists I	5
MATH 11A	Calculus with Applications	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5

ECON 11A is also offered as AM 11A.

Appeal Process

Students who have a GPA lower than 2.8 in ECON 1, ECON 2, and the calculus course are not eligible to declare an economics major. Students not eligible for the economics majors may appeal by submitting a letter to the Economics Department. The appeal letter must be filed no later than the first quarter of their junior year. Please check the "Appeals" area on the department web site for further information on declaring a major or appealing ineligibility and deadlines.

How to Declare a Major

Students can initiate the major declaration process by completing the Petition for Major/Minor Declaration and the Academic Planning forms and by supplying evidence of their grades in the three pre-major courses. Candidates must meet major qualifications listed above under "Major Qualification" prior to declaring the major.

Declaration sessions are mandatory for those seeking to declare the major/minor. If you cannot attend a workshop, you must meet with an economics peer advisor first before obtaining signatures from a staff advisor. Workshop schedules and drop-in advising hours are available online, on our bulletin board outside the office, and in the department office. All students are advised to bring verification of their grades, which can be printed off the student portal, to the declaration of major advising session. Students who do not bring in verification of their grades could have the approval of their petition for major declaration delayed by up to two working days.

Letter Grade Policy

All classes included for major qualification determination must be taken for a letter grade. If students have not taken a letter grade, they must appeal by submitting a letter to the Economics Department.

The Economics Department allows classes toward major requirements taken for the Pass/No Pass (P/NP) grade notification. We recommend no more than two courses in the major be taken P/NP. Overall no more than 25 percent of a student's UC Santa Cruz classes can be taken P/NP.

Course Substitution Policy

For courses not already articulated through assist.org, students must present their transfer credit

summary (available on the student portal) and course syllabi or descriptions to an Economics Department advisor. The department approves courses applicable for economics prerequisites and major requirements. The course substitution form can be found on the department website under "Forms for students".

Double Majors and Major/Minor Combinations Policy

Study Abroad

UC Education Abroad Program (UCEAP) is the University of California's official study abroad program and a global leader in international education for over 50 years. All the benefits of home—UC credit, grades, and financial aid—travel with you. Approximately 600 UC Santa Cruz students study abroad on UCEAP every year.

Students can petition UCEAP courses to count toward their major or minor requirements. In addition, there are scholarships available and financial aid can be applied to UCEAP programs. UCEAP provides opportunities in:

- 46 countries around the world
- 420 summer quarter, semester or yearlong programs
- Internships, volunteer work, and research programs

Economics at the Autonomous University of Barcelona-Direct Exchange Program

Located in Spain, the Autonomous University of Barcelona (UAB) is an institution known for its excellent research and teaching. Unlike UCEAP, this direct exchange program through the UC Santa Cruz Economics Department offers the opportunity for students to enroll in three courses that will fulfill economics major requirements and one course outside of economics. Students must take a total of four courses and will receive transfer credit for all courses. Along with enrolling in courses, students may enjoy the renowned architecture, food, and art. This program is open to students who are economics majors in junior or senior class standing and have a 3.0 cumulative GPA or above. Students must also be in good academic standing and 18 years of age or older at the time of departure to Barcelona. Economics courses at UAB may also be taken in Spanish if students have completed two years of university-level Spanish with a minimum GPA of 2.85 in those language courses.

Honors

The Economics Department considers for honors and highest honors students who have completed a major program with superior or exceptional work. Honors decisions are made by the department's Honors and Scholarship Committee.

At the end of each quarter, faculty teaching the upper-division core courses submit to the department a list of students in their respective classes whose performance is at the honors level. At the time of graduation, all students who received an honors designation in one or more of these courses are reviewed by the department's honor committee. The faculty committee looks for a record of excellence in courses offered toward the major, with a strong performance in the upper-division core (theory and econometrics—ECON 100A/ECON 100M, ECON 100B/ECON 100N, and ECON 113) being a necessary condition for honors. Although a GPA is not computed for the economics courses, in general highest honors are awarded to students who have received a grade of at least an "A" throughout their economics program. Honors are awarded to students who have no more than two courses with grades of less than an "A-." Students who have completed a portion of the major at another institution may be asked to submit a transcript for evaluation.

Students interested in being reviewed for honors may request that the department conduct a review, and such requests are always granted.

In general, honors have been awarded to between 10 and 15 percent of each year's graduating class.

Independent Study

Students are encouraged to petition for independent study on topics of special interest to them. ECON 199, Tutorial, may be used as only one of the upper-division courses required for the major or minor.

Field-Study Program

The Economics Department offers its majors the opportunity to integrate their academic knowledge with career-related work in areas connected to economics or business. The field-study program places students in internships under the supervision of a faculty sponsor and a professional at the workplace. Students can select from a wide variety of field placements such as accounting firms, community non-profits, government agencies, brokerage firms, marketing agencies, banks, and businesses in Santa Cruz and beyond. Students apply for field-study a quarter in advance. Participation in the field-study program requires at least junior standing, completion of courses ECON 100A (or ECON 100M), ECON 100B (or ECON 100N), and ECON 113 as well as good academic standing. Students may earn a maximum of 10 academic credits and complete up to two quarters in a field placement. A 5-credit field study requires 12-14 hours per week spent working on internship duties (a 2-credit field study requires 5-6 hours per week spent on internship duties) and completion of an academic project supervised by a faculty sponsor. Time spent toward the academic requirements set by the faculty sponsor is not included in the 12-14 internship hours spent at the field placement.

Along with the training and supervision by a professional at the workplace, students receive guidance from a faculty sponsor who directs their academic project. Students earn credit through the completion of this project and the job supervisor's evaluation of performance. Economics field-study courses do not satisfy any upper-division requirements for the major and are available as Pass/No Pass only.

Interested students should make an appointment or stop by the Economics Department at 403C Engineering 2; or e-mail econintern@ucsc.edu.

Combined Majors

The Economics Department offers the following combined majors: economics/mathematics (p. 613) and environmental studies/economics (p. 682). Requirements for these majors may be reviewed under their separate entries in this catalog.

General Business Management Economics Major

Course Requirements

ECON 1 and ECON 2, ECON 10A, ECON 10B, AM 11A/ECON 11A, AM 11B/ECON 11B, STAT 17 and STAT 17L, ECON 100A (or ECON 100M), ECON 100B (or ECON 100N), ECON 113 or equivalent courses are required for all business management economics majors and are prerequisites for most upper-division courses. Students are urged to complete these courses as soon as possible. Students who are committed to the major early in their academic career, should plan to complete at least ECON 1, ECON 2, AM 11A/ECON 11A, AM 11B/ECON 11B, STAT 17 and STAT 17L and preferably ECON 100A, ECON 100B, and ECON 113 by the end of their sophomore year. Students are also encouraged to choose the letter grade option when taking these courses.

Students who major in business management economics are required to take the following courses:

Lower-Division Courses

All of the following courses:

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5
ECON 10A	Economics of Accounting	5
ECON 10B	Economics of Accounting	5

Plus one of the following mathematics content options:

Either these courses

AM 11A	Mathematical Methods for Economists I	5
AM 11B	Mathematical Methods for Economists II	5
or these courses		
MATH 11A	Calculus with Applications	5
MATH 11B	Calculus with Applications	5
MATH 22	Introduction to Calculus of Several Variables	5
or these courses		
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 23A	Vector Calculus	5
or these courses		
MATH 11A	Calculus with Applications	5
AM 11B	Mathematical Methods for Economists II	5
or these courses		
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
AM 11B	Mathematical Methods for Economists II	5

MATH 11A, MATH 11B, MATH 23A may be taken to satisfy the mathematics content only by petition via the Mathematics Department.

Students who have completed AM 30 will be allowed to use it instead of MATH 22/MATH 23A by appeal to the Economics Department.

Plus the following statistics courses:

STAT 17	Statistical Methods for Business and Economics AND	5
STAT 17L	Statistical Methods for Business and Economics Laboratory	2

Any transfer credit for STAT 17 and STAT 17L will be evaluated on a case-by-case basis. Students should contact the undergraduate advisors by emailing econ_ugrad_coor@ucsc.edu.

Computer literacy requirement

Students must complete a minimum of two courses from the following list (with department approval, a student may substitute other computing courses):

Note: Lecture/lab combinations count as one course

Students with no prior programming experience are encouraged to take CSE 5J, CSE 10 or CSE 20.

(CSE 10 is not offered regularly.)

Computer Science and Engineering

CSE 5J	Introduction to Programming in Java	5
CSE 10	Introduction to Computer Science	5
CSE 12	Computer Systems and Assembly Language and Lab	7
CSE 13S	Computer Systems and C Programming	7
CSE 20	Beginning Programming in Python	5
CSE 30	Programming Abstractions: Python	7
CSE 50	Business Information Systems	5
CSE 58	Systems Analysis and Design	5
CSE 80N	Introduction to Networking and the Internet	5
ECE 13	Computer Systems and C Programming	7

Upper-Division Courses

Choose one of the following courses:

ECON 100A	Intermediate Microeconomics	5
ECON 100M	Intermediate Microeconomics, Math Intensive	5

Plus one of the following courses:

ECON 100B	Intermediate Macroeconomics	5
ECON 100N	Intermediate Macroeconomics, Math Intensive	5

Plus the following course:

ECON 113	Introduction to Econometrics	5
----------	------------------------------	---

Plus one of the following disciplinary communication (DC) courses:

ECON 104	Is There Truth in Numbers: The Role of Statistics in Economics	5
ECON 197	Economic Rhetoric: Using Economic Theory and Empirical Evidence in Arguing Policy	5

Upper-division electives

Students are required to take five additional courses: four in business management and one other economics elective.

Students must choose four business management courses from the following list; at least one of the four must be ECON 101, ECON 133, or ECON 135.

ECON 130, ECON 159, ECON 160A, ECON 160B:

Students can use **only one** of these courses as either a business management elective or an economics elective, but the course cannot be counted twice.

ECON 101	Managerial Economics	5
ECON 110	Managerial Cost Accounting and Control	5
ECON 111A	Intermediate Accounting I	5
ECON 111B	Intermediate Accounting II	5
ECON 111C	Intermediate Accounting III	5
ECON 112	Auditing and Attestation	5
ECON 115	Introduction to Management Sciences	5
ECON 117A	Income Tax Factors for Individuals	5
ECON 117B	Tax Factors of Business and Investment	5
ECON 119	Advanced Accounting	5
ECON 124	Machine Learning for Economists	5
ECON 130	Money and Banking	5
ECON 131	International Financial Markets	5
ECON 133	Security Markets and Financial Institutions	5
ECON 135	Corporate Finance	5
ECON 136	Business Strategy	5
ECON 138	The Economics and Management of Technology and Innovation	5
ECON 139A	The Economics of Electronic Commerce	5
ECON 139B	E-Commerce Strategy	5
ECON 159	The Economics of Organizations	5
ECON 160A	Industrial Organization	5
ECON 160B	Government and Industry	5
ECON 161A	Marketing	5
ECON 161B	Marketing Research	5
ECON 164	Economics and the Telecommunications Industry	5

ECON 188	Management in the Global Economy	5
ECON 194	Advanced Topics in Management	5

Courses ECON 191, ECON 192, ECON 193, ECON 193F may not be used to meet major requirements. Either course ECON 195 or ECON 199 may be used to fill one of the five elective upper-division major requirements.

Economics Elective (choose one)

ECON 105	Topics in Macroeconomics	5
ECON 114	Advanced Quantitative Methods	6
ECON 114L	Advanced Quantitative Methods Lab	2
ECON 120	Development Economics	5
ECON 121	Economic Growth	5
ECON 125	Economic History of the U.S	5
ECON 126	Why Economies Succeed or Fail: Lessons from Western and Japanese History	5
ECON 128	Poverty and Public Policy	5
ECON 130	Money and Banking	5
ECON 140	International Trade	5
ECON 141	International Finance	5
ECON 142	Advanced Topics in International Economics	5
ECON 143	Policy Issues in the International Economy	5
ECON 148	Latin American Economies	5
ECON 149	The Economies of East and Southeast Asia	5
ECON 150	Public Finance	5
ECON 156	Health Economics and Policy	5
ECON 159	The Economics of Organizations	5
ECON 160A	Industrial Organization	5
ECON 160B	Government and Industry	5
ECON 165	Economics as an Experimental Science	5
ECON 166A	Game Theory and Applications I	5
ECON 166B	Game Theory and Applications II	5
ECON 169	Economic Analysis of the Law	5
ECON 170	Environmental Economics	5
ECON 171	Natural Resource Economics	5
ECON 175	Energy Economics	5
ECON 180	Labor Economics	5
ECON 183	Women in the Economy	5
ECON 190	Senior Proseminar	5

Field-study

One quarter of field study is strongly recommended. Placements and credit for course ECON 193 are arranged through the economics field-study coordinator. See above under field-study program description.

Electives

Disciplinary Communication (DC) Requirement

All undergraduate majors must satisfy the campus' disciplinary communication (DC) requirement. The DC requirement in economics is satisfied by completing one of the following courses:

ECON 104	Is There Truth in Numbers: The Role of Statistics in Economics	5
ECON 197	Economic Rhetoric: Using Economic Theory and Empirical Evidence in Arguing Policy	5

Comprehensive Requirement

The comprehensive requirement is satisfied by passing the following intermediate core courses with grades of C or better here at UC Santa Cruz:

Choose one of the following courses:

ECON 100A	Intermediate Microeconomics	5
ECON 100M	Intermediate Microeconomics, Math Intensive	5

Plus one of the following courses:

ECON 100B	Intermediate Macroeconomics	5
ECON 100N	Intermediate Macroeconomics, Math Intensive	5

Plus the following course:

ECON 113	Introduction to Econometrics	5
----------	------------------------------	---

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements (p. **Error! Bookmark not defined.**) for more information.

Sample Frosh Planner

	Fall	Winter	Spring
1st (frosh)	MATH 3 or AM 3	ECON 1 AM 11A/EC ON 11A	ECON 2 AM 11B/ECON 11B
2nd	ECON	ECON	ECON 113

(soph)	ECON 10A	100B STAT 17 & STAT 17L	ECON 10B	ment elective	ECON 135 (Business Management el ective) ECON 104 or ECON 197
3rd (junior)	Econ elective	Business Management elective Computer Course	Business Management el ective		
4th (senior)	Business Management elective Computer course	ECON 104 or ECON 197 ECON 101, ECON 133 or ECON 135 (Business Management elective) Field Study internship (optional)	Field Study (optional)		

The courses shown above satisfy the MF, PE, and SR and, if ECON 193 is completed, then the PR general education requirements. In addition to the specific courses shown in these planners, a student must complete courses satisfying the UC Santa Cruz general education requirements as well as credit requirements.

Sample Transfer Planner

	Fall	Winter	Spring
3rd (junior)	AM 11B/ECON 11B ECON elective	ECON 100A Computer course	ECON 100B Business Management elective
	ECON 10A	ECON 10B	STAT 17 & STAT 17L
4th (senior)	ECON 113 Business Management	Business Management el ective ECON 101, ECON 133 or	Field Study (optional) Computer Course

This planner assumes that a student has completed the major preparation requirements (ECON 1, ECON 2 and at least first calculus course) before coming to UC Santa Cruz. In addition to the specific courses shown in these planners, a student must complete courses satisfying the UCSC general education requirements as well as credit requirements.

Business Management with Accounting Concentration

Only students in the business management economics major have the option of adding an accounting concentration designation on their transcripts, provided they meet the curricular criteria. Electing to complete the accounting course sequence will prepare students for the Uniform Certified Public Accountants' Exam and the credits will count toward exam eligibility. It will assist students in documenting their concrete expertise in accounting and thus help them compete for entry-level accounting positions in industry and public accounting as well as secure internship opportunities. For the concentration the eight (8) required courses include: ECON 110: Managerial Cost Accounting and Control, ECON 111A: Intermediate Accounting I, ECON 111B: Intermediate Accounting II, ECON 111C: Intermediate Accounting III, ECON 112: Audit, ECON 116: Advanced Topics in Accounting and Ethics, ECON 117A: Tax Factors for Individuals, and ECON 117B: Tax Factors for Business. Students electing the accounting concentration may also reduce their computer literacy requirements by one course (from two to one).

Course Requirements

ECON 1 and ECON 2, ECON 10A, ECON 10B, AM 11A/ECON 11A, AM 11B/ECON 11B, ECON 100A (or ECON 100M), ECON 100B (or ECON 100N), ECON 113, and STAT 17 & STAT 17L or equivalent courses are required for all business management economics majors and are prerequisites for most upper-division courses. Students are urged to complete these courses as soon as possible. Students who are committed to the major early in their academic career, should plan to complete at least ECON 1, ECON 2, AM 11A/ECON 11A, AM 11B/ECON 11B, and preferably ECON 100A, ECON 100B, and ECON 113 by the end of their sophomore year. Those students interested in the accounting concentration should also complete ECON 10A and ECON 10B by the end of their sophomore year. Students are also encouraged to choose the letter grade option when taking these courses.

Students who major in business management economics are required to take the following courses:

Lower-Division Courses**All of the following courses:**

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5
ECON 10A	Economics of Accounting	5
ECON 10B	Economics of Accounting	5

Plus one of the following mathematics options:

Either these courses		
AM 11A	Mathematical Methods for Economists I	5
AM 11B	Mathematical Methods for Economists II	5
or these courses		
MATH 11A	Calculus with Applications	5
MATH 11B	Calculus with Applications	5
MATH 22	Introduction to Calculus of Several Variables	5
or these courses		
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 23A	Vector Calculus	5
or these courses		
MATH 11A	Calculus with Applications	5
AM 11B	Mathematical Methods for Economists II	5
or these courses		
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
AM 11B	Mathematical Methods for Economists II	5

MATH 11A, MATH 11B, MATH 23A may be taken to satisfy the mathematics content only by petition via the Mathematics Department.

Plus the following statistics courses:

STAT 17	Statistical Methods for Business and Economics	5
AND		

STAT 17L	Statistical Methods for Business and Economics Laboratory	2
----------	---	---

Any transfer credit for STAT 17 and STAT 17L will be evaluated on a case-by-case basis. Students should contact the undergraduate advisors by emailing econ_ugrad_coor@ucsc.edu.

Computer literacy requirement

Students pursuing the accounting concentration must complete one course from the following list (with department approval, a student may substitute other computing courses):

NOTE: Lecture/lab combinations count as one course

Students with no prior programming experience are encouraged to take CSE 5J, CSE 10 or CSE 20.

(CSE 10 is not offered regularly.)

CSE 5J	Introduction to Programming in Java	5
CSE 10	Introduction to Computer Science	5
CSE 12	Computer Systems and Assembly Language and Lab	7
CSE 13S	Computer Systems and C Programming	7
CSE 20	Beginning Programming in Python	5
CSE 30	Programming Abstractions: Python	7
CSE 50	Business Information Systems	5
CSE 58	Systems Analysis and Design	5
CSE 80N	Introduction to Networking and the Internet	5
ECE 13	Computer Systems and C Programming	7

Upper-Division Courses**Choose one of the following courses:**

ECON 100A	Intermediate Microeconomics	5
ECON 100M	Intermediate Microeconomics, Math Intensive	5

Plus one of the following courses:

ECON 100B	Intermediate Macroeconomics	5
ECON 100N	Intermediate Macroeconomics, Math Intensive	5

Plus the following course:

ECON 113	Introduction to Econometrics	5
----------	------------------------------	---

Electives**Required courses for the accounting concentration:**

Students in the accounting concentration are required to take 10 additional courses: eight upper-division accounting electives, plus ECON 101 or ECON 133 or ECON 135 and one other economics elective.

Courses ECON 191, ECON 192, ECON 193, ECON 193F may not be used to meet major requirements. Either course ECON 195 or ECON 199 may be used to fill the upper-division economics elective.

ECON 110	Managerial Cost Accounting and Control	5
ECON 111A	Intermediate Accounting I	5
ECON 111B	Intermediate Accounting II	5
ECON 111C	Intermediate Accounting III	5
ECON 112	Auditing and Attestation	5
ECON 116	Advanced Topics in Accounting and Ethics	5
ECON 117A	Income Tax Factors for Individuals	5
ECON 117B	Tax Factors of Business and Investment	5

Plus one of the following courses:

ECON 101	Managerial Economics	5
ECON 133	Security Markets and Financial Institutions	5
ECON 135	Corporate Finance	5

Economics Elective (choose one)

ECON 114 and ECON 114L count as one course

ECON 105	Topics in Macroeconomics	5
ECON 114	Advanced Quantitative Methods	6
ECON 114L	Advanced Quantitative Methods Lab	2
ECON 120	Development Economics	5
ECON 121	Economic Growth	5
ECON 125	Economic History of the U.S.	5
ECON 126	Why Economies Succeed or Fail: Lessons from Western and Japanese History	5
ECON 128	Poverty and Public Policy	5
ECON 130	Money and Banking	5
ECON 140	International Trade	5
ECON 141	International Finance	5
ECON 141	International Finance	5
ECON 142	Advanced Topics in International Economics	5
ECON 143	Policy Issues in the International Economy	5
ECON 148	Latin American Economies	5

ECON 149	The Economies of East and Southeast Asia	5
ECON 150	Public Finance	5
ECON 156	Health Economics and Policy	5
ECON 159	The Economics of Organizations	5
ECON 160A	Industrial Organization	5
ECON 160B	Government and Industry	5
ECON 165	Economics as an Experimental Science	5
ECON 166A	Game Theory and Applications I	5
ECON 166B	Game Theory and Applications II	5
ECON 169	Economic Analysis of the Law	5
ECON 170	Environmental Economics	5
ECON 170	Environmental Economics	5
ECON 171	Natural Resource Economics	5
ECON 175	Energy Economics	5
ECON 180	Labor Economics	5
ECON 183	Women in the Economy	5

Field Study

One quarter of field study is strongly recommended. Placements and credit for course ECON 193 are arranged through the economics field-study coordinator. See above under field-study program description. ECON 193 also fulfills the PR general education requirement.

Disciplinary Communication (DC) Requirement

All undergraduate majors must satisfy the campus' Disciplinary Communication (DC) requirement. The DC requirement in economics is satisfied by completing one of the following courses:

ECON 104	Is There Truth in Numbers: The Role of Statistics in Economics	5
ECON 197	Economic Rhetoric: Using Economic Theory and Empirical Evidence in Arguing Policy	5

Comprehensive Requirement

The comprehensive requirement is satisfied by passing the following intermediate core courses with grades of C or better here at UC Santa Cruz:

Either one of these courses		
ECON 100A	Intermediate Microeconomics	5
ECON 100M	Intermediate Microeconomics, Math Intensive	5
AND		

Either one of these courses		
ECON 100B	Intermediate Macroeconomics	5
ECON 100N	Intermediate Macroeconomics, Math Intensive	5
ECON 113	AND Introduction to Econometrics	5

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements (p. **Error! Bookmark not defined.**) for more information.

Sample Frosh Planner

	Fall	Winter	Spring
1st (frosh)	MATH 3 or AM 3 Writing course	ECON 1 AM 11A/ECO N 11A	ECON 2 AM 11B/ECON 11B
2nd (soph)	ECON 100A ECON 10A	ECON 100B ECON 10B STAT 17 & STAT 17L	ECON 113 ECON 110 Computer Literacy course
3rd (junior)	ECON 111A ECON elective	ECON 111B ECON 112 Ethics course (optional) *	ECON 111C ECON 116
4th (senior)	ECON 117B Field Study internship (optional)	ECON 117A ECON 104 or ECON 197 ECON 101, ECON 133 or ECON 135	Field Study (optional)

*Not required for the concentration, but required for California CPA Licensure. At the time of publication, a total of 15 qualified units in ethics is required for the

California CPA licensure, 10 of which are satisfied by required courses ECON 112 and ECON 116.

The courses shown above satisfy the MF, PE, and SR and, if ECON 193 is completed, then the PR general education requirements. In addition to the specific courses shown in these planners, a student must complete courses satisfying the UC Santa Cruz general education requirements as well as credit requirements.

Sample Transfer Planner

	Fall	Winter	Spring
3rd (junior)	AM 11B/ECON 11B ECON 111A Computer literacy course	ECON 100A ECON 111B Ethics course (optional)*	ECON 100B ECON 111C STAT 17 & STAT 17L

*Not required for the concentration, but required for California CPA Licensure. At the time of publication, a total of 15 qualified units in ethics is required for the California CPA licensure, 10 of which are satisfied by required courses ECON 112 and ECON 116.

This planner assumes that a student has completed ECON 10A, ECON 10B and major preparation requirements (ECON 1, ECON 2 and at least first calculus course) before coming to UC Santa Cruz. In addition to the specific courses shown in these planners, a student must complete courses satisfying the UCSC general education requirements as well as credit requirements.

ECONOMICS B.A.

Information and Policies

Introduction

Economics studies how individuals, firms, governments, and other organizations within our society make choices, and how these choices affect the society's use of its available resources. Economists study a wide range of questions such as: How do individuals make decisions in the face of uncertainty? What are the causes of the Great Recession of 2009? Why do Europeans work fewer hours than Americans?

Why have health care and education costs risen so much? What are the consequences of government deficits? Why has the gap between rich and poor in many countries risen? Why have some poor countries grown faster than many rich countries in recent years?

Economics majors study a substantive core of theory and mathematical and statistical methods that aid in addressing these questions. This required core can be combined with electives that emphasize specialized areas such as international economics, finance, public policy, applied microeconomics, law and economics, economic development, quantitative methods, macroeconomics, game theory and behavioral economics. A focus on core theory as well as mathematical and quantitative tools provides a foundation for graduate studies in economics. Selecting a range of electives to sample the broad domain of economics offers an excellent background for students who plan to enter careers in the private sector, in public service, the non-profit sector or to attend law school or other professional schools.

Program Learning Outcomes

Program learning outcomes for economics, economics and mathematics, business management economics, and global economics majors:

Critical Thinking Skills: Students are expected to be able to apply economic analysis to everyday problems in real world situations, to understand current events and evaluate specific policy proposals, and to evaluate the role played by assumptions in arguments that reach different conclusions to a specific economic or policy problem.

Quantitative Reasoning Skills: Students are expected to understand how to use empirical evidence to evaluate the validity of an economic argument, use statistical methodology, interpret statistical results, and conduct appropriate statistical analysis of data.

Problem-Solving Skills: Students are expected to be able to solve problems that have clear solutions and to address problems that do not have clear answers and explain conditions under which these solutions may be correct.

Specialized Knowledge and Application of Skills: Students are expected to develop critical and quantitative thinking skills specific to business and accounting.

Communication Skills: Students are expected to be able to communicate effectively in written, oral, and graphical form about specific issues, and to formulate well-organized written arguments that state assumptions and hypotheses supported by evidence.

Academic Advising for the Program

The Economics Department office is located at 401 Engineering 2. There are two staff undergraduate advisors, peer advisors (except summer), a field study

coordinator, as well as a faculty director for each of the Economics Department's undergraduate programs. Our faculty, staff advisors and peer advisors play an important role in advising on all aspects of the major and assisting you to maximize your educational opportunities. Please check the department website for more information about drop-in hours.

Getting Started in the Major: Frosh

The economics curriculum begins at the introductory level: no specific high school preparation is required. This is a course-intensive and sequential program, and students who intend to pursue this major must begin taking classes for the major in their first year at the University of California, Santa Cruz.

Math placement is required for one or more of the foundational courses for this major. For more information, please review the Math Placement website.

All majors study a substantial core of economic theory and statistical methods and they then choose among a wide variety of subfields.

Transfer Information and Policy

Transfer Admission Screening Policy

The following courses or their equivalents are required prior to transfer, by the end of the spring term for students planning to enter in the fall:

ECON 1, ECON 2 and first quarter of calculus (MATH 11A, MATH 19A or AM 11A/ECON 11A).

A minimum GPA of 2.8 must be obtained in the courses listed above. The admissions office screens transfer applicants for meeting major qualification criteria.

In addition, the following courses are recommended prior to transfer to ensure timely graduation:

completion of the calculus sequence (AM 11B or MATH 22/MATH 23A).

Prospective students are encouraged to prioritize required and recommended major preparation, and may additionally complete courses that articulate to UC Santa Cruz general education requirements as time allows.

Getting Started in the Major: Transfer Students

The department requests that new transfer students send unofficial transcripts of any previously completed coursework to econ_ugrad_coor@ucsc.edu. For coursework completed outside of a California community college, submitting course syllabi for articulation purposes is required. The advisors will then be able to make course recommendations for fall quarter or summer session courses prior to the first fall quarter.

All transfer students must complete the three-course comprehensive requirement (ECON 100A, ECON

100B, ECON 113) and the disciplinary communication requirement (ECON 104 or ECON 197) at UC Santa Cruz. Economics majors must take at least three of their upper-division economics electives at UCSC. Courses taken for credit elsewhere may not be repeated for credit here.

Students who were admitted under a different proposed major and have advanced standing when they come to UC Santa Cruz require permission from the department to change into the major. Admission to the major is not guaranteed.

Major Qualification Policy and Declaration Process

Major Qualification

The Economics Department administers four undergraduate majors: economics, business management economics, global economics, and economics/mathematics.

(Qualifications for the environmental/economics combined major differ from above; see environmental studies for details.) Students should declare the major as soon as they have completed these requirements.

Students must complete three courses, with combined GPA of 2.8 or higher, to qualify for entry to the economics major:

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5

And one of the following calculus courses:

AM 11A	Mathematical Methods for Economists I	5
MATH 11A	Calculus with Applications	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5

Appeal Process

Students who have a grade point average (GPA) lower than 2.8 in ECON 1, ECON 2, and the calculus course are not eligible to declare an economics major. Students not eligible for the economics majors may appeal by submitting a letter to the Economics Department. The appeal letter must be filed no later than the first quarter of their junior year. Please check the "Appeals" area on the department web site for further information on declaring a major or appealing ineligibility and deadlines.

How to Declare a Major

Students can initiate the major declaration process by completing the Petition for Major/Minor Declaration and the Academic Planning forms and by supplying evidence of their grades in the three pre-major courses. Candidates must meet major qualifications listed above under "Major Qualification" prior to declaring the major.

Declaration sessions are mandatory for those seeking to declare the major/minor. If you cannot attend a workshop, you must meet with an economics peer advisor first before obtaining signatures from a staff advisor. Workshop schedules and drop-in advising hours are available online, on our bulletin board outside the office and in the department office. All students are advised to bring verification of their grades, which can be printed off the student portal, to the declaration of major advising session. Students who do not bring in verification of their grades could have the approval of their petition for major declaration delayed by up to two working days.

Letter Grade Policy

All classes included for major qualification determination must be taken for a letter grade. If students have not taken a letter grade, they must appeal by submitting a letter to the Economics Department.

The Economics Department allows classes toward major requirements taken for the pass/no pass (P/NP) grade notification. We recommend no more than two courses in the major be taken P/NP. Overall no more than 25 percent of a student's UC Santa Cruz classes can be taken P/NP.

Course Substitution Policy

For courses not already articulated through assist.org, students must present their transfer credit summary (available on the student portal) and course syllabi or descriptions to an Economics Department advisor. The department approves courses applicable for economics prerequisites and major requirements. The course substitution form can be found on the department website under "Forms for students".

Double Majors and Major/Minor Combinations Policy

Study Abroad

UC Education Abroad Program (UCEAP) is the University of California's official study abroad program and a global leader in international education for more than 50 years. All the benefits of home—UC credit, grades, and financial aid—travel with you. Approximately 600 UC Santa Cruz students study abroad on UCEAP every year.

Students can petition UCEAP courses to count toward their major or minor requirements. In addition, there are scholarships available and financial aid can be applied

to UCEAP programs. UCEAP provides opportunities in:

- 46 countries around the world
- 420 summer quarter, semester or year-long programs
- Internships, volunteer work, and research programs

Economics at the Autonomous University of Barcelona -- Direct Exchange Program

Located in Spain, the Autonomous University of Barcelona (UAB) is an institution known for its excellent research and teaching. Unlike UCEAP, this direct exchange program through the UC Santa Cruz Economics Department offers the opportunity for students to enroll in three courses that will fulfill economics major requirements and one course outside of economics. Students must take a total of four courses and will receive transfer credit for all courses. Along with enrolling in courses, students may enjoy the renowned architecture, food, and art. This program is open to students who are economics majors in junior or senior class standing and have a 3.0 cumulative GPA or above. Students must also be in good academic standing and 18 years of age or older at the time of departure to Barcelona. Economics courses at UAB may also be taken in Spanish if students have completed two years of university-level Spanish with a minimum GPA of 2.85 in those language courses.

Honors

The Economics Department considers for honors and highest honors students who have completed a major program with superior or exceptional work. Honors decisions are made by the department's honors and scholarship committee.

At the end of each quarter, faculty teaching the upper-division core courses submit to the department a list of students in their respective classes whose performance is at the honors level. At the time of graduation, all students who received an honors designation in one or more of these courses are reviewed by the department's honor committee. The faculty committee looks for a record of excellence in courses offered towards the major, with a strong performance in the upper-division core (theory and econometrics—ECON 100A/ECON 100M, ECON 100B/ECON 100N, and ECON 113) being a necessary condition for honors. Although a GPA is not computed for the economics courses, in general highest honors are awarded to students who have received a grade of at least an "A" throughout their economics program. Honors are awarded to students who have no more than two courses with grades of less than an "A-." Students who have completed a portion of the major at another institution may be asked to submit a transcript for evaluation.

Students interested in being reviewed for honors may request that the department conduct a review, and such requests are always granted.

In general, honors have been awarded to between 10 and 15 percent of each year's graduating class.

Independent Study

Students are encouraged to petition for independent study on topics of special interest to them. ECON 199, Tutorial, may be used as only one of the upper-division courses required for the major or minor.

Field-Study Program

The Economics Department offers its majors the opportunity to integrate their academic knowledge with career-related work in areas connected to economics or business. The field-study program places students in internships under the supervision of a faculty sponsor and a professional at the workplace. Students can select from a wide variety of field placements such as accounting firms, community non-profits, government agencies, brokerage firms, marketing agencies, banks, and businesses in Santa Cruz and beyond. Students apply for field-study a quarter in advance. Participation in the field-study program requires at least junior standing, completion of courses ECON 100A (or ECON 100M), ECON 100B (or ECON 100N), and ECON 113 as well as good academic standing. Students may earn a maximum of 10 academic credits and complete up to two quarters in a field placement. A 5-credit field study requires 12-14 hours per week spent working on internship duties (a 2-credit field study requires 5-6 hours per week spent on internship duties) and completion of an academic project supervised by a faculty sponsor. Time spent toward the academic requirements set by the faculty sponsor is not included in the 12-14 internship hours spent at the field placement.

Along with the training and supervision by a professional at the workplace, students receive guidance from a faculty sponsor who directs their academic project. Students earn credit through the completion of this project and the job supervisor's evaluation of performance. Economics field-study courses do not satisfy any upper-division requirements for the major and are available as Pass/No Pass only.

Interested students should make an appointment or stop by the Economics Department at 403C Engineering 2; or e-mail econintern@ucsc.edu.

Combined Majors

The Economics Department offers the following combined majors: economics/mathematics (p. 613) and environmental studies/economics (p. 682).

Requirements for these majors may be reviewed under their separate entries in this catalog.

Requirements and Planners

Course Requirements

ECON 1 and ECON 2, AM 11A/ECON 11A, AM 11B/ECON 11B, ECON 100A (or ECON 100M), ECON 100B (or ECON 100N), ECON 113, and STAT 17 and STAT 17L or equivalent courses are required for all economics majors and are prerequisites for most upper-division courses. Students are urged to complete these courses as soon as possible. Students who are committed to the major early in their academic career, should plan to complete at least ECON 1, ECON 2, AM 11A/ECON 11A, AM 11B/ECON 11B, STAT 17 and STAT 17L and preferably ECON 100A, ECON 100B, and ECON 113 by the end of their sophomore year. Students are also encouraged to choose the letter grade option when taking these courses.

Students who major in economics are required to take the following courses:

Lower-Division Courses

All of the following courses:

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5

Plus one of the following mathematics content options:

Either these courses		
AM 11A	Mathematical Methods for Economists I	5
AM 11B	Mathematical Methods for Economists II	5
or these courses		
MATH 11A	Calculus with Applications	5
MATH 11B	Calculus with Applications	5
MATH 22	Introduction to Calculus of Several Variables	5
or these courses		
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 23A	Vector Calculus	5
or these courses		
MATH 11A	Calculus with Applications	5
AM 11B	Mathematical Methods for Economists II	5

or these courses		
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
AM 11B	Mathematical Methods for Economists II	5

Mathematics content:

MATH 11A, MATH 11B, MATH 23A may be taken to satisfy the mathematics content only by petition via the Mathematics Department.

Students who have completed AM 30 will be allowed to use it instead of MATH 22/MATH 23A by appeal to the Economics Department.

Plus the following statistics courses:

STAT 17	Statistical Methods for Business and Economics AND	5
STAT 17L	Statistical Methods for Business and Economics Laboratory	2

Any transfer credit for STAT 17 and STAT 17L will be evaluated on a case-by-case basis. Students should contact the undergraduate advisors by emailing econ_ugrad_coor@ucsc.edu.

Upper-Division Courses

Choose one of the following courses:

ECON 100A	Intermediate Microeconomics	5
ECON 100M	Intermediate Microeconomics, Math Intensive	5

Plus one of the following courses:

ECON 100B	Intermediate Macroeconomics	5
ECON 100N	Intermediate Macroeconomics, Math Intensive	5

Plus the following course:

ECON 113	Introduction to Econometrics	5
----------	------------------------------	---

Plus one of the following disciplinary communication (DC) courses:

ECON 104	Is There Truth in Numbers: The Role of Statistics in Economics	5
ECON 197	Economic Rhetoric: Using Economic Theory and Empirical Evidence in Arguing Policy	5

Plus five additional upper-division economics courses, three to five of which must be selected

from the following economics courses:

NOTE: Lecture/lab combinations count as one course (i.e., ECON 114 and ECON 114L).

ECON 105	Topics in Macroeconomics	5
ECON 114	Advanced Quantitative Methods	6
ECON 114L	Advanced Quantitative Methods Lab	2
ECON 121	Economic Growth	5
ECON 125	Economic History of the U.S.	5
ECON 120	Development Economics	5
ECON 124	Machine Learning for Economists	5
ECON 126	Why Economies Succeed or Fail: Lessons from Western and Japanese History	5
ECON 128	Poverty and Public Policy	5
ECON 130	Money and Banking	5
ECON 140	International Trade	5
ECON 141	International Finance	5
ECON 142	Advanced Topics in International Economics	5
ECON 143	Policy Issues in the International Economy	5
ECON 148	Latin American Economies	5
ECON 149	The Economies of East and Southeast Asia	5
ECON 150	Public Finance	5
ECON 156	Health Economics and Policy	5
ECON 159	The Economics of Organizations	5
ECON 160A	Industrial Organization	5
ECON 160B	Government and Industry	5
ECON 165	Economics as an Experimental Science	5
ECON 166A	Game Theory and Applications I	5
ECON 166B	Game Theory and Applications II	5
ECON 169	Economic Analysis of the Law	5
ECON 170	Environmental Economics	5
ECON 171	Natural Resource Economics	5
ECON 175	Energy Economics	5
ECON 180	Labor Economics	5
ECON 183	Women in the Economy	5
ECON 190	Senior Proseminar	5

Up to two of the five electives may be taken from the following business management economics courses:

ECON 131	International Financial Markets	5
ECON 133	Security Markets and Financial Institutions	5

ECON 135	Corporate Finance	5
----------	-------------------	---

No more than one of the five electives may be taken from the following business management economics courses:

ECON 101	Managerial Economics	5
ECON 110	Managerial Cost Accounting and Control	5
ECON 111A	Intermediate Accounting I	5
ECON 111B	Intermediate Accounting II	5
ECON 111C	Intermediate Accounting III	5
ECON 112	Auditing and Attestation	5
ECON 115	Introduction to Management Sciences	5
ECON 117A	Income Tax Factors for Individuals	5
ECON 117B	Tax Factors of Business and Investment	5
ECON 119	Advanced Accounting	5
ECON 136	Business Strategy	5
ECON 138	The Economics and Management of Technology and Innovation	5
ECON 139A	The Economics of Electronic Commerce	5
ECON 139B	E-Commerce Strategy	5
ECON 161A	Marketing	5
ECON 161B	Marketing Research	5
ECON 164	Economics and the Telecommunications Industry	5
ECON 188	Management in the Global Economy	5
ECON 194	Advanced Topics in Management	5

ECON 191, ECON 192, ECON 193, and ECON 193F may not be used to meet major requirements. Either ECON 195 or ECON 199 may be used to fill one of the five upper-division elective major requirements.

Electives**Disciplinary Communication (DC) Requirement**

All undergraduate majors must satisfy the campus' disciplinary communication (DC) requirement. The DC requirement in economics is satisfied by completing one of the following courses:

ECON 104	Is There Truth in Numbers: The Role of Statistics in Economics	5
----------	--	---

ECON 197	Economic Rhetoric: Using Economic Theory and Empirical Evidence in Arguing Policy	5
----------	--	---

(senior)	N elective	ECON 197	elective
----------	---------------	----------	----------

Comprehensive Requirement

The comprehensive requirement is satisfied by passing the following intermediate core courses with grades of C or better here at UC Santa Cruz:

Choose one of the following courses:

ECON 100A	Intermediate Microeconomics	5
ECON 100M	Intermediate Microeconomics, Math Intensive	5

Plus one of the following courses:

ECON 100B	Intermediate Macroeconomics	5
ECON 100N	Intermediate Macroeconomics, Math Intensive	5

Plus the following course:

ECON 113	Introduction to Econometrics	5
----------	------------------------------	---

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements (p. **Error! Bookmark not defined.**) for more information.

Sample Frosh Planner

	Fall	Winter	Spring
1st (frosh)	Courses	Course	Course
	MATH 3 or AM 3	ECON 1	ECON 2
		AM 11A/ECON 11A	AM 11B/ECON 11B
2nd (soph)	ECON 100A	ECON 100B	ECON 113
		STAT 17 & STAT 17L	
3rd (junior)	ECON elective	ECON elective	ECON elective
		Field Study (Internship) <i>optional</i>	Field Study <i>optional</i>
4th	ECON	ECON 104 or	ECON

The courses shown above satisfy the MF, PE, and SR and, if ECON 193 is completed, then the PR general education requirements. In addition to the specific courses shown in these planners, a student must complete courses satisfying the UC Santa Cruz general education requirements as well as credit requirements.

Sample Transfer Planner

	Fall	Winter	Spring
3rd (junior)	AM 11B/ECO N 11B	ECON 100A	ECON 100B
	ECON elective		ECON elective
			STAT 17 & STAT 17L
4th (senior)	ECON 113	ECON elective	Field Study <i>optional</i>
	ECON elective	ECON 104 or ECON 197 (DC) Field Study (Internship) <i>optional</i>	ECON elective

This planner assumes that a student has completed the major preparation requirements (ECON 1, ECON 2 and at least first calculus course) before coming to UC Santa Cruz. In addition to the specific courses shown in these planners, a student must complete courses satisfying the UCSC general education requirements as well as credit requirements.

GLOBAL ECONOMICS B.A.

Information and Policies

Introduction

Global economics is an economics major focusing on global issues with an interdisciplinary element. It is designed to prepare students to understand and participate in the global economy; the program aims to deepen the student's knowledge of economics within a culturally and linguistically diverse world. The major is particularly useful to students contemplating careers at home or overseas in international relations, in international business, or with international organizations. Hence the major requires overseas study, regional area study, and second-language proficiency in addition to the basic economics requirements and additional emphasis in international economics.

Program Learning Outcomes

Program learning outcomes for economics, economics and mathematics, business management economics, and global economics majors:

Critical Thinking Skills: Students are expected to be able to apply economic analysis to everyday problems in real world situations, to understand current events and evaluate specific policy proposals, and to evaluate the role played by assumptions in arguments that reach different conclusions to a specific economic or policy problem.

Quantitative Reasoning Skills: Students are expected to understand how to use empirical evidence to evaluate the validity of an economic argument, use statistical methodology, interpret statistical results, and conduct appropriate statistical analysis of data.

Problem-Solving Skills: Students are expected to be able to solve problems that have clear solutions and to address problems that do not have clear answers and explain conditions under which these solutions may be correct.

Specialized Knowledge and Application of Skills:

Students are expected to develop critical and quantitative thinking skills specific to business and accounting.

Communication Skills: Students are expected to be able to communicate effectively in written, oral, and graphical form about specific issues, and to formulate well-organized written arguments that state assumptions and hypotheses supported by evidence.

Academic Advising for the Program

The Economics Department office is located at 401 Engineering 2. There are two staff undergraduate advisors, peer advisors (except summer), a field study coordinator, as well as a faculty director for each of the Economics Department's undergraduate programs. Our faculty, staff advisors and peer advisors play an important role in advising on all aspects of the major and assisting you to maximize your educational opportunities. Please check the department website for more information about drop-in hours.

Getting Started in the Major: Frosh

The economics curriculum begins at the introductory level: no specific high school preparation is required.

This is a course-intensive and sequential program, and students who intend to pursue this major must begin taking classes for the major in their first year at the University of California, Santa Cruz.

Math placement is required for one or more of the foundational courses for this major. For more information, please review the Math Placement website.

This major requires students to complete a language of their choosing through level 6 (two year equivalent).

Students interested in this major should start taking language courses in their first year at UC Santa Cruz. For more information, please review Language Placement.

All majors study a substantial core of economic theory and statistical methods and they then choose among a wide variety of subfields.

Transfer Information and Policy

Transfer Admission Screening Policy

The following courses or their equivalents are required prior to transfer, by the end of the spring term for students planning to enter in the fall.

- ECON 1, ECON 2 and first quarter of calculus (MATH 11A, MATH 19A or AM 11A/ECON 11A). A minimum GPA of 2.8 must be obtained in these courses. The admissions office screens transfer applicants for meeting major qualification criteria.

In addition, the following courses are recommended prior to transfer to ensure timely graduation.

- completion of calculus sequence (AM 11B or MATH 22 & MATH 23A)
- two years of language study in the student's chosen language

Prospective students are encouraged to prioritize required and recommended major preparation, and may additionally complete courses that articulate to UC Santa Cruz general education requirements as time allows.

Getting Started in the Major: Transfer Students

The department request that new transfer students send unofficial transcripts of any previously completed coursework to econ_ugrad_coor@ucsc.edu. For coursework completed outside of a California community college submitting course syllabi for articulation purposes is required. The advisors will then be able to make course recommendations for fall quarter or summer session courses prior to the first fall quarter.

This major requires students to complete a language of their choosing through level 6 (two-year equivalent). Students with prior knowledge in a foreign language need to contact the language department for assessment of their language skills. For more information, please review Language Placement.

All transfer students must complete the three-course comprehensive requirement (ECON 100A, ECON 100B, ECON 113) and the disciplinary communication requirement (ECON 104 or ECON 197) at UC Santa Cruz. Global economics majors must take at least two of their upper-division economics electives at UC Santa Cruz. Courses taken for credit elsewhere may not be repeated for credit here.

Students who were admitted under a different proposed major and have advanced standing when they come to UCSC require permission from the department to change into the major. Admission to the major is not guaranteed.

Major Qualification Policy and Declaration Process

Major Qualification

The Economics Department administers four undergraduate majors: economics, business management economics, global economics, and economics/mathematics.

(Qualifications for the environmental/economics combined major differ from above; see environmental studies for details.) Students should declare the major or minor as soon as they have completed these requirements.

Students must complete three courses, with combined GPA of 2.8 or higher, to qualify for entry to the global economics major:

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5

and one of the following calculus courses:

AM 11A	Mathematical Methods for Economists I	5
MATH 11A	Calculus with Applications	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5

Appeal Process

Students not eligible for the economics majors may appeal by submitting a letter to the Economics Department. The appeal letter must be filed no later than the first quarter of their junior year. Please check the "Appeals" area on the department web site for further information on declaring a major or appealing ineligibility and deadlines.

How to Declare a Major

Students can initiate the major declaration process by completing the Petition for Major/Minor Declaration and the Academic Planning forms and by supplying evidence of their grades in the three pre-major courses. Candidates must meet major qualifications listed above under "Major Qualification" prior to declaring the major.

Declaration sessions are mandatory for those seeking to declare the major/minor. If you cannot attend a

workshop, you must meet with an economics peer advisor first before obtaining signatures from a staff advisor. Workshop schedules and drop-in advising hours are available on the department's website, on our bulletin board outside the office, and in the department office. All students are advised to bring verification of their grades, which can be printed from the student portal, to the declaration of major advising session. Students who do not bring in verification of their grades could have the approval of their petition for major declaration delayed by up to two working days.

Letter Grade Policy

All classes included for major qualification determination must be taken for a letter grade. If students have not taken a letter grade, they must appeal by submitting a letter to the Economics Department.

The Economics Department allows classes toward major requirements taken for the Pass/No Pass (P/NP) grade notification. We recommend no more than two courses in the major be taken P/NP. Overall no more than 25 percent of a student's UC Santa Cruz classes can be taken P/NP.

Course Substitution Policy

For courses not already articulated through assist.org, students must present their transfer credit summary (available on the student portal) and course syllabi or descriptions to an Economics Department advisor. The department approves courses applicable for economics prerequisites and major requirements. The course substitution form can be found on the department website under "Forms for students."

Double Majors and Major/Minor Combinations Policy

Study Abroad

UC Education Abroad Program (UCEAP) is the University of California's official study abroad program and a global leader in international education for over 50 years. All the benefits of home—UC credit, grades, and financial aid—travel with you. Approximately 600 UC Santa Cruz students study abroad on UCEAP every year.

Students can petition UCEAP courses to count toward their major or minor requirements. In addition, there are scholarships available and financial aid can be applied to UCEAP programs. UCEAP provides opportunities in:

- 46 countries around the world
- 420 summer quarter, semester or yearlong programs
- Internships, volunteer work, and research programs

Economics at the Autonomous University of Barcelona -- Direct Exchange Program

Located in Spain, the Autonomous University of Barcelona (UAB) is an institution known for its excellent research and teaching. Unlike UCEAP, this direct exchange program through the UC Santa Cruz Economics Department offers the opportunity for students to enroll in three courses that will fulfill economics major requirements and one course outside of economics. Students must take a total of four courses and will receive transfer credit for all courses. Along with enrolling in courses, students may enjoy the renowned architecture, food, and art. This program is open to students who are economics majors in junior or senior class standing and have a 3.0 cumulative GPA or above. Students must also be in good academic standing and 18 years of age or older at the time of departure to Barcelona. Economics courses at UAB may also be taken in Spanish if students have completed two years of university-level Spanish with a minimum GPA of 2.85 in those language courses.

Honors

The Economics Department considers for honors and highest honors students who have completed a major program with superior or exceptional work. Honors decisions are made by the department's honors and scholarship committee.

At the end of each quarter, faculty teaching the upper-division core courses submit to the department a list of students in their respective classes whose performance is at the honors level. At the time of graduation, all students who received an honors designation in one or more of these courses are reviewed by the department's honor committee. The faculty committee looks for a record of excellence in courses offered toward the major, with a strong performance in the upper-division core (theory and econometrics—ECON 100A/ECON 100M, ECON 100B/ECON 100N, and ECON 113) being a necessary condition for honors. Although a GPA is not computed for the economics courses, in general highest honors are awarded to students who have received a grade of at least an "A" throughout their economics program. Honors are awarded to students who have no more than two courses with grades of less than an "A-." Students who have completed a portion of the major at another institution may be asked to submit a transcript for evaluation.

Students interested in being reviewed for honors may request that the department conduct a review, and such requests are always granted.

In general, honors have been awarded to between 10 and 15 percent of each year's graduating class.

Independent Study

Students are encouraged to petition for independent study on topics of special interest to them. ECON 199,

Tutorial, may be used as only one of the upper-division courses required for the major or minor.

Field-Study Program

The Economics Department offers its majors the opportunity to integrate their academic knowledge with career-related work in areas connected to economics or business. The field study program places students in internships under the supervision of a faculty sponsor and a professional at the workplace. Students can select from a wide variety of field placements such as accounting firms, community non-profits, government agencies, brokerage firms, marketing agencies, banks, and businesses in Santa Cruz and beyond. Students apply for field-study a quarter in advance. Participation in the field-study program requires at least junior standing, completion of courses ECON 100A (or ECON 100M), ECON 100B (or ECON 100N), and ECON 113 as well as good academic standing. Students may earn a maximum of 10 academic credits and complete up to two quarters in a field placement. A 5-credit field study requires 12-14 hours per week spent working on internship duties (a 2-credit field study requires 5-6 hours per week spent on internship duties) and completion of an academic project supervised by a faculty sponsor. Time spent toward the academic requirements set by the faculty sponsor is not included in the 12-14 internship hours spent at the field placement.

Along with the training and supervision by a professional at the workplace, students receive guidance from a faculty sponsor who directs their academic project. Students earn credit through the completion of this project and the job supervisor's evaluation of performance. Economics field study courses do not satisfy any upper-division requirements for the major and are available as Pass/No Pass only.

Interested students should make an appointment or stop by the Economics Department at 403C Engineering 2; or email econintern@ucsc.edu.

Combined Majors

The Economics Department offers the following combined majors: economics/mathematics (p. 613) and environmental studies/economics (p. 682). Requirements for these majors may be reviewed under their separate entries in this catalog.

Requirements and Planners

Course Requirements

ECON 1 and ECON 2, AM 11A/ECON 11A, AM 11B/ECON 11B, ECON 100A (or ECON 100M), ECON 100B (or ECON 100N), ECON 113, and STAT 17 & STAT 17L or equivalent courses are required for all economics majors and are prerequisites for most upper-division courses. Students are urged to complete these courses as soon as possible. Students who are committed to the major early in their academic career,

should plan to complete at least ECON 1, ECON 2, AM 11A/ECON 11A, AM 11B/ECON 11B, STAT 17 & STAT 17L, and preferably ECON 100A, ECON 100B, and ECON 113 by the end of their sophomore year. Students are also encouraged to choose the letter grade option when taking these courses.

Students who major in economics are required to take the following courses:

Lower-Division Courses

All of the following courses:

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5

Plus one of the following mathematics content options:

Either these courses

AM 11A	Mathematical Methods for Economists I	5
AM 11B	Mathematical Methods for Economists II	5

or these courses

MATH 11A	Calculus with Applications	5
MATH 11B	Calculus with Applications	5
MATH 22	Introduction to Calculus of Several Variables	5

or these courses

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 23A	Vector Calculus	5

or these courses

MATH 11A	Calculus with Applications	5
AM 11B	Mathematical Methods for Economists II	5

or these courses

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
AM 11B	Mathematical Methods for Economists II	5

Mathematics Content

MATH 11A, MATH 11B, MATH 23A may be taken to satisfy the mathematics content only by petition via the Mathematics Department.

Students who have completed AM 30 will be allowed to use it instead of MATH 22 & MATH 23A by appeal to the Economics Department.

Plus the following statistics courses:

STAT 17	Statistical Methods for Business and Economics	5
AND		
STAT 17L	Statistical Methods for Business and Economics Laboratory	2

Enrollment in STAT 17 requires concurrent enrollment in STAT 17L (2-credit lab). Any transfer credit for STAT 17 & STAT 17L will be evaluated on a case-by-case basis.

Foreign Language Study

The global economics major requires a foreign language since students who plan to work in the larger world must have fluency in a language other than English. This language should be relevant to their regional area of interest. Students can meet this requirement by completing two years of university-level language courses or by demonstrating an equivalent level of competence through a recognized language test.

Upper-Division Courses

Choose one of the following courses:

ECON 100A	Intermediate Microeconomics	5
ECON 100M	Intermediate Microeconomics, Math Intensive	5

Plus one of the following courses:

ECON 100B	Intermediate Macroeconomics	5
ECON 100N	Intermediate Macroeconomics, Math Intensive	5

Plus the following course:

ECON 113	Introduction to Econometrics	5
----------	------------------------------	---

Plus one of the following disciplinary communication (DC) courses:

ECON 104	Is There Truth in Numbers: The Role of Statistics in Economics	5
ECON 197	Economic Rhetoric: Using Economic Theory and Empirical Evidence in Arguing Policy	5

Additional upper-division requirements.

Four additional upper-division courses are required.

At least one of the four courses must be selected from List 1 below.

In addition, two more courses must be taken from List 2 below.

The fourth course may be any other upper-division economics course except ECON 191, ECON 192, ECON 193, ECON 193F.

Please see the entire economics course list.

List 1

ECON 120	Development Economics	5
ECON 140	International Trade	5
ECON 141	International Finance	5

List 2

ECON 120	Development Economics	5
ECON 121	Economic Growth	5
ECON 126	Why Economies Succeed or Fail: Lessons from Western and Japanese History	5
ECON 131	International Financial Markets	5
ECON 140	International Trade	5
ECON 141	International Finance	5
ECON 142	Advanced Topics in International Economics	5
ECON 143	Policy Issues in the International Economy	5
ECON 148	Latin American Economies	5
ECON 149	The Economies of East and Southeast Asia	5
ECON 188	Management in the Global Economy	5

Area Study

The major requires students to take two additional courses selected from the offerings of departments other than economics in order to learn about the history, political economy, or culture of some other part of the world. These can be lower- or upper-division courses; the courses should focus on the area of the student's language study and overseas study. The Economics Department provides a list of approved courses (p. 624); substitute courses are welcomed when they are part of the student's overseas program or from other UC Santa Cruz departments, but must be approved by the advisor for the global economics major.

Study Abroad

All students are required to spend at least one term abroad in an approved course of study in their regional area of concentration; students may also choose a year-long program. Typically, a student will do this through the UC Education Abroad Program (UCEAP). Numerous overseas study sites are available through UCEAP. Students desiring to fulfill their required study abroad through UCEAP must apply directly to the

UCEAP office for the selected program and are subject to the admission requirements determined by UCEAP. In countries and at universities where UCEAP programs are not available, students may make their own arrangements for study with the permission of the director of the program. Students may use the time abroad to further their language study, to meet the area study course requirements, to meet some of the upper-division economics course requirements, or to take courses unrelated to the major. Students who are not accepted to an overseas program or who cannot meet the language or area course requirements are advised to complete the general economics major as an alternative.

Electives

Disciplinary Communication (DC) Requirement

All undergraduate majors must satisfy the campus' disciplinary communication (DC) requirement. The DC requirement in economics is satisfied by completing one of the following courses:

ECON 104	Is There Truth in Numbers: The Role of Statistics in Economics	5
ECON 197	Economic Rhetoric: Using Economic Theory and Empirical Evidence in Arguing Policy	5

Comprehensive Requirement

The comprehensive requirement is satisfied by passing the following intermediate core courses with grades of C or better here at UC Santa Cruz:

Choose one of the following courses:

ECON 100A	Intermediate Microeconomics	5
ECON 100M	Intermediate Microeconomics, Math Intensive	5

Plus one of the following courses:

ECON 100B	Intermediate Macroeconomics	5
ECON 100N	Intermediate Macroeconomics, Math Intensive	5

Plus the following course:

ECON 113	Introduction to Econometrics	5
----------	------------------------------	---

Students may elect to complete a senior thesis with consent of an instructor in addition to completing the intermediate core courses.

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation

Requirements (p. **Error! Bookmark not defined.**) for more information.

Sample Frosh Planner

	Fall	Winter	Spring
1st (frosh)	MATH 3 or AM 3 Language	ECON 1 AM 11A/ECO N 11A Language	ECON 2 AM 11B/ECO N 11B Language
2nd (soph)	ECON 100A Language	ECON 100B STAT 17 & STAT 17L Language	ECON 113 Language
3rd (junior)	Study abroad for at least one quarter. Students can apply up to two courses from study abroad toward major requirements. Could be upper-division ECON electives or Area Studies or a combination of both.		
4th (senior)	ECON elective ECON elective Area Study	ECON 104 or ECON 197 ECON elective Field Study Internship (optional)	ECON elective Field Study (optional) Area Study

courses shown in these planners, a student must complete courses satisfying all UC Santa Cruz general education requirements.

Sample Transfer Planner

	Fall	Winter	Spring	Summer
3rd (junior or)	AM 11B/E CON 11B	ECO N 100A	ECO N 100B	Study abroad (or fall quarter senior year). Students can apply up to two courses from study abroad toward major requirements. Could be upper-division ECON electives or Area Studies or a combination of both.
4th (senior)	ECON elective STAT 17 & STAT 17L ECON 113 ECON elective	Area Study ECO N elective ECO N 104 or ECO N 197 Field Study internship (optional)	ECO N elective Area Study Field Study (optional)	

The courses shown above satisfy the MF, PE, and SR and, if ECON 193 is completed, then the PR general education requirements. In addition, to the specific

This planner assumes that a student has completed two years of foreign language study, and major preparation requirements (ECON 1, ECON 2 and at least first calculus course) before coming to UC Santa Cruz. In addition, to the specific courses shown in these planners, a student must complete courses satisfying the UCSC general education requirements. Transfer students are encouraged to complete "core courses," ECON 100A, ECON 113 and ECON 100B by fall of their fourth year. Core courses are offered every summer.

ECONOMICS/MATHEMATICS COMBINED B.A.

Information and Policies

Introduction

The major in economics and mathematics is designed to meet the needs of undergraduate students who plan to pursue doctoral study in economics or business, or who wish to pursue a career as an actuary or other professional requiring a sophisticated understanding of economics and mathematics. The major combines the main undergraduate content of both economics and mathematics within a programmatic structure that joins the two disciplines. It provides a coursework combination required to prepare for an economics doctoral (Ph.D.) program, or for a group of technically demanding professional careers.

Program Learning Outcomes

Program learning outcomes for economics, economics and mathematics, business management economics, and global economics majors:

Critical Thinking Skills: Students are expected to be able to apply economic analysis to everyday problems in real world situations, to understand current events and evaluate specific policy proposals, and to evaluate the role played by assumptions in arguments that reach different conclusions to a specific economic or policy problem.

Quantitative Reasoning Skills: Students are expected to understand how to use empirical evidence to evaluate the validity of an economic argument, use statistical methodology, interpret statistical results, and conduct appropriate statistical analysis of data.

Problem-Solving Skills: Students are expected to be able to solve problems that have clear solutions and to address problems that do not have clear answers and explain conditions under which these solutions may be correct.

Specialized Knowledge and Application of Skills: Students are expected to develop critical and quantitative thinking skills specific to business and accounting.

Communication Skills: Students are expected to be able to communicate effectively in written, oral, and graphical form about specific issues, and to formulate well-organized written arguments that state assumptions and hypotheses supported by evidence.

Academic Advising for the Program

The Economics Department office is located at 401 Engineering 2. There are two staff undergraduate advisors, peer advisors (except summer), a field study coordinator, as well as a faculty director for each of the Economics Department's undergraduate programs. Our faculty, staff advisors and peer advisors play an important role in advising on all aspects of the major and assisting you to maximize your educational opportunities. Please check the department website for more information about drop-in hours.

Getting Started in the Major: Frosh

The economics curriculum begins at the introductory level: no specific high school preparation is required.

This is a course-intensive and sequential program, and students who intend to pursue this major must begin taking classes for the major in their first year at the University of California, Santa Cruz.

Math placement is required for one or more of the foundational courses for this major. For more information, please review the Math Placement website.

All majors study a substantial core of economic theory and statistical methods and they then choose among a wide variety of subfields.

Transfer Information and Policy

Transfer Admission Screening Policy

The following courses or their equivalents are required prior to transfer, by the end of the spring term for students planning to enter in the fall: ECON 1, ECON 2 and first quarter of calculus (MATH 19A).

A minimum GPA of 2.8 must be obtained in the courses listed above. The admissions office screens transfer applicants for meeting major qualification criteria.

In addition, the following courses are recommended prior to transfer to ensure timely graduation: the completion of the calculus sequence (MATH 22 or MATH 23A and MATH 23B).

Prospective students are encouraged to prioritize required and recommended major preparation, and may additionally complete courses that articulate to UC Santa Cruz general education requirements as time allows.

Getting Started in the Major: Transfer Students

The department requests that new transfer students send unofficial transcripts of any previously completed coursework to econ_ugrad_coor@ucsc.edu. For

coursework completed outside of a California community college, submitting course syllabi for articulation purposes is required. The advisors will then be able to make course recommendations for fall quarter or summer session courses prior to the first fall quarter.

All transfer students must complete the three-course senior comprehensive requirement (ECON 100A, ECON 100B, ECON 113) and the DC requirement at UC Santa Cruz. Economics/mathematics majors must take at least one of their upper-division economics electives at UC Santa Cruz. Courses taken for credit elsewhere may not be repeated for credit here.

Students who were admitted under a different proposed major and have advanced standing when they come to UCSC require permission from the department to change into the major. Admission to the major is not guaranteed.

Students who have met all lower-division requirements through articulations before transferring will need at least six economics and five mathematics upper-division courses at UC Santa Cruz to complete the major.

Major Qualification Policy and Declaration Process

Major Qualification

The Economics Department administers four undergraduate majors: economics, business management economics, global economics, and economics/mathematics. The qualification requirements for major declaration are the same for all four.

Students must complete three courses, with combined GPA of 2.8 or higher, to qualify for entry to the economics/mathematics major:

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5

and the following calculus course:

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
----------	--	---

Appeal Process

Students not eligible for the economics majors may appeal by submitting a letter to the Economics Department. The appeal letter must be filed no later than the first quarter of their junior year. Please check the "Appeals" area on the department website for further information on declaring a major or appealing ineligibility and deadlines.

How to Declare a Major

Students can initiate the major declaration process by completing the Petition for Major/Minor Declaration and the Academic Planning forms and by supplying evidence of their grades in the three pre-major courses. Candidates must meet major qualifications listed above prior to declaring the major.

Declaration sessions are mandatory for those seeking to declare the major or minor. If you cannot attend a workshop, you must meet with an economics peer advisor first before obtaining signatures from a staff advisor. Workshop schedules and drop-in advising hours are available online, on our bulletin board outside the office, and in the department office. All are advised to bring in verification of their grades, which can be printed off the student portal, to the declaration of major advising session. Students who do not bring in verification of their grades could have the approval of their petition for major declaration delayed by up to two working days.

Letter Grade Policy

All classes included for major qualification determination must be taken for a letter grade. If students have not taken a letter grade, they must appeal by submitting a letter to the Economics Department.

The Economics Department allows classes toward major requirements taken for the Pass/No Pass (P/NP) grade notification. We recommend no more than two courses in the major be taken P/NP. Overall no more than 25 percent of a student's UC Santa Cruz classes can be taken P/NP.

Course Substitution Policy

For courses not already articulated through assist.org, students must present their transfer credit summary (available on the student portal) and course syllabi or descriptions to an Economics Department advisor. The department approves courses applicable for economics prerequisites and major requirements. The course substitution form can be found on the department website under "Forms for students."

Double Majors and Major/Minor Combinations Policy

Study Abroad

UC Education Abroad Program (UCEAP) is the University of California's official study abroad program and a global leader in international education for more than 50 years. All the benefits of home—UC credit, grades, and financial aid—travel with you. Approximately 600 UC Santa Cruz students study abroad on UCEAP every year.

Students can petition UCEAP courses to count toward their major or minor requirements. In addition, there are scholarships available and financial aid can be applied

to UCEAP programs. UCEAP provides opportunities in:

- 46 countries around the world
- 420 summer quarter, semester or yearlong programs
- Internships, volunteer work, and research programs

Economics at the Autonomous University of Barcelona-Direct Exchange Program

Located in Spain, the Autonomous University of Barcelona (UAB) is an institution known for its excellent research and teaching. Unlike UCEAP, this direct exchange program through the UC Santa Cruz Economics Department offers the opportunity for students to enroll in three courses that will fulfill economics major requirements and one course outside of economics. Students must take a total of four courses and will receive transfer credit for all courses. Along with enrolling in courses, students may enjoy the renowned architecture, food, and art. This program is open to students who are economics majors in junior or senior class standing and have a 3.0 cumulative GPA or above. Students must also be in good academic standing and 18 years of age or older at the time of departure to Barcelona. Economics courses at UAB may also be taken in Spanish if students have completed two years of university-level Spanish with a minimum GPA of 2.85 in those language courses.

Honors

The Economics Department considers for honors and highest honors students who have completed a major program with superior or exceptional work. Honors decisions are made by the department's honors and scholarship committee.

At the end of each quarter, faculty teaching the upper-division core courses submit to the department a list of students in their respective classes whose performance is at the honors level. At the time of graduation, all students who received an honors designation in one or more of these courses are reviewed by the department's honor committee. The faculty committee looks for a record of excellence in courses offered toward the major, with a strong performance in the upper-division core (theory and econometrics—ECON 100A/ECON 100M, ECON 100B/ECON 100N, and ECON 113) being a necessary condition for honors. Although a GPA is not computed for the economics courses, in general highest honors are awarded to students who have received a grade of at least an "A" throughout their economics program. Honors are awarded to students who have no more than two courses with grades of less than an "A-." Students who have completed a portion of the major at another institution may be asked to submit a transcript for evaluation.

Students interested in being reviewed for honors may request that the department conduct a review, and such requests are always granted.

In general, honors have been awarded to between 10 and 15 percent of each year's graduating class.

Independent Study

Students are encouraged to petition for independent study on topics of special interest to them. ECON 199, Tutorial, may be used as only one of the upper-division courses required for the major or minor.

Field-Study Program

The Economics Department offers its majors the opportunity to integrate their academic knowledge with career-related work in areas connected to economics or business. The field-study program places students in internships under the supervision of a faculty sponsor and a professional at the workplace. Students can select from a wide variety of field placements such as accounting firms, community non-profits, government agencies, brokerage firms, marketing agencies, banks, and businesses in Santa Cruz and beyond. Students apply for field-study a quarter in advance. Participation in the field study program requires at least junior standing, completion of courses ECON 100A (or ECON 100M), ECON 100B (or ECON 100N), and ECON 113 as well as good academic standing. Students may earn a maximum of 10 academic credits and complete up to two quarters in a field placement. A 5-credit field study requires 12-14 hours per week spent working on internship duties (a 2-credit field-study requires 5-6 hours per week spent on internship duties) and completion of an academic project supervised by a faculty sponsor. Time spent toward the academic requirements set by the faculty sponsor is not included in the 12-14 internship hours spent at the field placement.

Along with the training and supervision by a professional at the workplace, students receive guidance from a faculty sponsor who directs their academic project. Students earn credit through the completion of this project and the job supervisor's evaluation of performance. Economics field-study courses do not satisfy any upper-division requirements for the major and are available as Pass/No Pass only.

Interested students should make an appointment or stop by the Economics Department at 403C Engineering 2; or e-mail econintern@ucsc.edu.

Combined Majors

The Economics Department offers the following combined majors: economics/mathematics and environmental studies/economics. Requirements for these majors may be reviewed under their separate entries in this catalog.

Requirements and Planners

Course Requirements**Lower-Division Courses****Economics Required Courses**

All of the following lower-division courses:

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5

Mathematics Required Courses

All of the following lower division courses:

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 21	Linear Algebra	5

Plus one of the following options:

Either this course		
MATH 22	Introduction to Calculus of Several Variables	5
or these courses		
MATH 23A	Vector Calculus	5
MATH 23B	Vector Calculus	5

Plus the following statistics courses:

STAT 17	Statistical Methods for Business and Economics AND	5
STAT 17L	Statistical Methods for Business and Economics Laboratory	2

MATH 11A, MATH 11B, MATH 23A may be taken to satisfy the mathematics content only by petition via the Mathematics Department.

Any transfer credit for STAT 17 and STAT 17L will be evaluated on a case-by-case basis. Students should contact the undergraduate advisors by emailing econ_ugrad_coor@ucsc.edu.

Upper-Division Courses**Economics Required Courses**

Choose one of the following courses:

ECON 100A	Intermediate Microeconomics	5
ECON 100M	Intermediate Microeconomics, Math Intensive	5

Plus one of the following courses:

ECON 100B	Intermediate Macroeconomics	5
ECON 100N	Intermediate Macroeconomics, Math Intensive	5

Plus the following course:

ECON 113	Introduction to Econometrics	5
----------	---------------------------------	---

Mathematics Required Courses

Plus all of the following courses:

MATH 100	Introduction to Proof and Problem Solving	5
MATH 105A	Real Analysis	5

Electives**Economics Elective Courses**

(choose two from the following list)

NOTE: Lecture/lab combinations (i.e., ECON 114 and ECON 114L) count as one course.

ECON 101	Managerial Economics	5
ECON 114	Advanced Quantitative Methods	6
ECON 114L	Advanced Quantitative Methods Lab	2
ECON 115	Introduction to Management Sciences	5
ECON 120	Development Economics	5
ECON 121	Economic Growth	5
ECON 124	Machine Learning for Economists	5
ECON 125	Economic History of the U.S	5
ECON 126	Why Economies Succeed or Fail: Lessons from Western and Japanese History	5
ECON 128	Poverty and Public Policy	5
ECON 130	Money and Banking	5
ECON 131	International Financial Markets	5
ECON 133	Security Markets and Financial Institutions	5
ECON 135	Corporate Finance	5
ECON 136	Business Strategy	5
ECON 138	The Economics and Management of Technology and Innovation	5
ECON 139A	The Economics of Electronic Commerce	5

ECON 139B	E-Commerce Strategy	5	MATH 107	Partial Differential Equations	5
ECON 140	International Trade	5	MATH 114	Introduction to Financial Mathematics	5
ECON 141	International Finance	5	MATH 115	Graph Theory	5
ECON 142	Advanced Topics in International Economics	5	MATH 116	Combinatorics	5
ECON 148	Latin American Economies	5	MATH 117	Advanced Linear Algebra	5
ECON 149	The Economies of East and Southeast Asia	5	MATH 124	Introduction to Topology	5
ECON 150	Public Finance	5	MATH 134	Cryptography	5
ECON 156	Health Economics and Policy	5	MATH 145	Introductory Chaos Theory	5
ECON 159	The Economics of Organizations	5	MATH 145L	Introductory Chaos Laboratory	1
ECON 160A	Industrial Organization	5	MATH 148	Numerical Analysis	5
ECON 160B	Government and Industry	5	MATH 148L	Numerical Analysis Laboratory	1
ECON 161A	Marketing	5	MATH 152	Programming for Mathematics	5
ECON 164	Economics and the Telecommunications Industry	5	STAT 131	Introduction to Probability Theory	5
ECON 165	Economics as an Experimental Science	5	STAT 132	Classical and Bayesian Inference	5
ECON 166A	Game Theory and Applications I	5			
ECON 166B	Game Theory and Applications II	5			
ECON 169	Economic Analysis of the Law	5			
ECON 170	Environmental Economics	5			
ECON 171	Natural Resource Economics	5			
ECON 175	Energy Economics	5			
ECON 180	Labor Economics	5			
ECON 183	Women in the Economy	5			
ECON 188	Management in the Global Economy	5			

Mathematics Electives

(choose three from the following list)

NOTE: Lecture/lab combinations (i.e., MATH 145 and MATH 145L, MATH 148 and MATH 148L) count as one course.

AM 114	Introduction to Dynamical Systems	5
AM 147	Computational Methods and Applications	5
MATH 105B	Real Analysis	5
MATH 106	Systems of Ordinary Differential Equations	5

Disciplinary Communication (DC) Requirement

All undergraduate majors must satisfy the campus' Disciplinary Communication (DC) requirement. The DC requirement in the economics/mathematics combined major is satisfied by completing either :

One of the following

ECON 104	Is There Truth in Numbers: The Role of Statistics in Economics	5
ECON 197	Economic Rhetoric: Using Economic Theory and Empirical Evidence in Arguing Policy	5

Or

The following course

MATH 100	Introduction to Proof and Problem Solving	5
----------	---	---

Plus one of the following courses

MATH 194	Senior Seminar	5
MATH 195	Senior Thesis	5

Comprehensive Requirement

The comprehensive requirement is satisfied by passing the following intermediate core courses with grades of C or better here at UC Santa Cruz:

Choose one of the following courses:

ECON 100A	Intermediate Microeconomics	5
ECON 100M	Intermediate Microeconomics, Math Intensive	5

Plus one of the following courses:

ECON 100B	Intermediate Macroeconomics	5
ECON 100N	Intermediate Macroeconomics, Math Intensive	5

Plus the following course:

ECON 113	Introduction to Econometrics	5
----------	------------------------------	---

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements (p. **Error! Bookmark not defined.**) for more information.

Sample Frosh Planner

1st (frosh)	Fall	Winter	Spring
	MATH 19A	MATH 19B ECON 1	ECON 2
2nd (soph)	MATH 23A MATH 21	ECON 100A MATH 23B	ECON 100B MATH 100
3rd (junior)	MATH 105A STAT 17 & STAT 17L	ECON 113 Math elective	Econ elective Math elective
4th (senior)	Econ elective	Math elective ECON 104 or ECON 197 Field Study internship (optional)	Field Study (optional)

The courses shown above satisfy the MF, PE, and SR and, if ECON 193 is completed, then the PR general education requirements. In addition, to the specific courses shown in these planners, a student must complete courses satisfying all UC Santa Cruz general education requirements as well as credit requirements.

Sample Transfer Planner One

3rd (junior)	Fall	Winter	Spring
	MATH 19B	MATH 22 or MATH 23A	MATH 23B*
	MATH 21	MATH 100	Math elective

	Econ elective		
4th (senior)	ECON 100A MATH 105A STAT 17 & STAT 17L	ECON 113 Econ elective Math elective	ECON 100B Math elective ECON 104 or ECON 197

*If MATH 23A is taken in the winter term, otherwise ECON 100A

This planner assumes that a student has completed the following major requirements: ECON 1, ECON 2, MATH 19A. In addition, to the specific courses shown in these planners, a student must complete courses satisfying the UC Santa Cruz general education requirements as well as credit requirements.

Sample Transfer Planner Two

3rd (junior)	Fall	Winter	Spring
	ECON 100A MATH 23B	ECON 100B MATH 21 STAT 17 & STAT 17L	ECON 113 MATH 100
4th (senior)	MATH 105A Math elective	Econ elective ECON 104 or ECON 197 Math elective	Econ elective Math elective Field Study (optional)

This planner assumes that the student has completed the following major requirements: ECON 1, ECON 2, MATH 19A, MATH 19B, MATH 23A. In addition to the specific courses shown in these planners, a student must complete courses satisfying the UC Santa Cruz general education requirements as well as credit requirements.

ECONOMICS MINOR**Course Requirements**

Students earn a minor in economics by completing the following requirements:

Lower-Division Courses**Take these courses**

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
--------	---	---

ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5
--------	---	---

Plus one of the following options

Either these
courses

AM 11A	Mathematical Methods for Economists I	5
AM 11B	Mathematical Methods for Economists II	5

or these
courses

MATH 11A	Calculus with Applications	5
MATH 11B	Calculus with Applications	5
MATH 22	Introduction to Calculus of Several Variables	5

or these
courses

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 23A	Vector Calculus	5

Plus the following statistics courses:

STAT 17	Statistical Methods for Business and Economics AND	5
STAT 17L	Statistical Methods for Business and Economics Laboratory	2

Any transfer credit for STAT 17 & STAT 17L will be evaluated on a case-by-case basis. Students should contact the undergraduate advisors by emailing econ_ugrad_coor@ucsc.edu.

Upper-Division Courses

Choose one of the following courses:

ECON 100A	Intermediate Microeconomics	5
ECON 100M	Intermediate Microeconomics, Math Intensive	5

Plus one of the following courses:

ECON 100B	Intermediate Macroeconomics	5
ECON 100N	Intermediate Macroeconomics, Math Intensive	5

Plus the following course:

ECON 113	Introduction to Econometrics	5
----------	---------------------------------	---

Three additional upper-division economics

electives.

Courses ECON 191, ECON 192, ECON 193, and ECON 193F may not be used to meet minor requirements.

APPLIED ECONOMICS AND FINANCE M.S.

Introduction

The M.S. program in applied economics and finance is a one-year program that provides analytical graduate training designed to prepare students for careers in business, international and domestic banking, consulting firms, government, and nonprofit organizations. The program combines core training in economic theory with meaningful applications that students are likely to face in their professional careers. Compared to a typical M.A. in economics, our program has a more applied orientation. Compared to most M.B.A. programs, our program provides more training in economics, statistics, and econometrics. The curriculum stresses mastery of core principles in micro and macroeconomics and finance. In addition, each student learns how to solve practical problems and to communicate the results clearly. The emphasis of the program, and perhaps its greatest strength, is exposing students to cutting edge data analytics approaches, advanced econometric techniques, statistical and data analysis software packages (R, Stata, Python), and large-scale financial and microeconomic data sets throughout their coursework.

International students in the M.S. program are eligible to apply for optional practical training (OPT) through the Office of International Education. Our M.S. program in applied economics and finance is also eligible for the OPT STEM Extension. For more information please visit the International Scholar and Student Services website.

Past graduates of this program have gone on to successful careers in the private and public sectors with placements at a diverse range of companies and institutions, including tech giants such as Apple, Amazon, Google, Twitter; smaller tech firms such as ZipRecruiter, Zillow, Expedia; biotech and industrial companies including Genentech and Toyota; financial companies including traditional such as Bloomberg, Citigroup, Morgan Stanley, new such as SoFi, as well as regional and foreign commercial banks; all of the "Big Four" accounting firms; and government and regulatory institutions such as Federal Reserve, the California Franchise Tax Board, State Bar of California, and local governments and agencies. Other graduates have gone on to earn Ph.D. degrees in economics.

Requirements

Course Requirements

M.S. students are required to take the following classes starting in the fall quarter of the academic year they enroll in the program. Students may also take additional classes if they desire.

Courses and Program Requirements

Fall

ECON 186	Mathematical Methods for Economic Analysis	5
ECON 200	Microeconomic Analysis	5
ECON 216	Applied Econometric Analysis I	5
ECON 233	Finance I	5
ECON 294A	Applied Economics and Finance Laboratory	2

ECON 186 Note: M.S. students are required to enroll in ECON 186, a three-week pre-fall mathematics course, which is highly beneficial to students' success in the program. ECON 186 is offered as an accelerated short course before the start of fall quarter. Students may test out of taking ECON 186 by passing an exam at any time after June 15 and by July 31.

Winter

ECON 202	Macroeconomic Analysis	5
ECON 294A	Applied Economics and Finance Laboratory	2
ECON 294B	Applied Economics and Finance Seminar	2
	Master's elective AND	
ECON 217	Applied Econometric Analysis II	5
or these courses		
ECON 114	Advanced Quantitative Methods	6
ECON 114L	Advanced Quantitative Methods Lab	2

Spring

ECON 201	Applications in Microeconomics	5
ECON 236	Financial Engineering	5
ECON 294B	Master's elective Applied Economics and Finance Seminar	2

Electives

Students may satisfy the elective requirements by taking approved courses within the Economics Department or from another discipline. The department has assembled a list of pre-approved master's electives (curricular offerings are subject to change annually). Students will need to file a departmental petition for review and approval of courses that are not on the pre-approved elective list.

Pre-Approved M.S. Electives

Please note courses are not offered every quarter or every year.

Economics

ECON 111A	Intermediate Accounting I	5
ECON 111B	Intermediate Accounting II	5
ECON 111C	Intermediate Accounting III	5
ECON 124	Machine Learning for Economists	5
ECON 188	Management in the Global Economy	5
ECON 211C	Advanced Econometrics III	5
ECON 231	International Financial Management	5
ECON 234	Financial Institutions and Markets	5
ECON 235	Corporate Finance	5
ECON 238	Market Design: Theory and Pragmatics	5
ECON 259B	Public Policy Analysis	5

Enrollment in these ECON courses requires permission of instructor: ECON 111A, ECON 111B, ECON 111C, ECON 211C.

Applied Mathematics

AM 216	Stochastic Differential Equations	5
--------	-----------------------------------	---

Computer Science and Engineering (CSE)

CSE 20	Beginning Programming in Python	5
CSE 101	Introduction to Data Structures and Algorithms	5
CSE 102	Introduction to Analysis of Algorithms	5
CSE 182	Introduction to Database Management Systems	5

CSE 20 Note: As it is a lower-division course, CSE 20 does not count toward the 35 credits required by the university to obtain a master's degree. However, since it broadens the skill-set of students in the program, we allow for it as a master's elective to satisfy department requirements. Before enrolling in this course, students should take care to ensure that they will have 35 eligible credits for graduation.

CSE Pre-Approved course electives (require permission of instructor)

CSE 111	Advanced Programming	5
CSE 142	Machine Learning	5
CSE 201	Analysis of Algorithms	5
CSE 202	Combinatorial Algorithms	5
CSE 243	Data Mining	5

CSE 270B	Management of Technology II	5
CSE 271	E-Business Technology and Strategy	5
CSE 272	Information Retrieval	5
CSE 277	Random Process Models in Engineering	5

Enrollment in these computer science and engineering courses requires permission of instructor: CSE 111, CSE 142, CSE 201, CSE 202, CSE 243, CSE 270B, CSE 271, CSE 272, CSE 277.

Environmental Studies

ENVS 140	National Environmental Policy	5
----------	-------------------------------	---

Statistics

STAT 206	Applied Bayesian Statistics	5
STAT 206B	Intermediate Bayesian Inference	5
STAT 207	Intermediate Bayesian Statistical Modeling	5
STAT 208	Linear Statistical Models	5
STAT 226	Spatial Statistics	5

Other Requirements

Students must pass a comprehensive capstone requirement to receive their degree. This capstone requirement consists of a comprehensive examination, which will take place within two weeks of spring graduation. Students who do not pass the June examination may take it again in August at a date scheduled by the department. Further attempts at passing the comprehensive examination will be approved by the master's committee on an appeal-only basis, with appeals only given for extraordinary or extenuating circumstances.

Students may choose an emphasis in their comprehensive exam requirement based on their academic and professional interests, as reflected in their choices. The applied microeconomics and finance exams, respectively, will consist of one section each from the following courses:

Applied Microeconomics (complete 4 of 5 sections):

- ECON 200*
- ECON 201*
- ECON 216
- ECON 217
- ECON 259B

Finance (complete 4 of 5 sections)

- ECON 231
- ECON 233*

- ECON 234
- ECON 235
- ECON 236*

To complete the capstone exam requirement, students must declare an intended emphasis for the capstone from the following three options prior to June 1 of their spring quarter:

1. **Applied Microeconomics:** Students must pass the applied microeconomics exam in full, which entails choosing four of the five sections of the exam corresponding to the courses listed above.
2. **Finance Emphasis:** Students must pass the finance exam in full, which entails choosing four of the five sections of the exam corresponding to the courses listed above.
3. **General Emphasis:** Students must pass the core components of both exams, two in applied microeconomics and two in finance, for a total of four sections (see courses designated by *).

For those students who have specific research interests and have distinguished themselves in their coursework, a faculty-sponsored research project and thesis may replace the comprehensive examination requirement. This track requires approval of a faculty advisor and the master's degree committee prior to Feb. 1 of the student's initial winter quarter.

Academic Progress

Along with enrolling in the necessary number of credits, students are expected to maintain satisfactory academic standing during their time at UC Santa Cruz. Students not making satisfactory progress will be placed on academic probation, and students will be dismissed from the program if they do not remove their probationary status within one quarter. For example, if a student is placed on probation starting in the winter quarter, they must improve to the extent that their probationary status is removed by the beginning of the spring quarter.

Specifically, a student will be placed on academic probation if they fail any of the core (i.e., non-elective), 5-credit courses in the program. Students will be dismissed from the program if they fail core courses in consecutive quarters. The core courses are: ECON 200, ECON 202, ECON 216, ECON 233, and ECON 217 OR ECON 114/ECON 114L.

Note that probation and dismissal can only be formally issued by the Graduate Division (under recommendation from the Economics Department). More details on these procedures, as well as student's right to appeal such decisions, can be found in the Graduate Division Handbook.

Applying for Graduation

By the end of the second week of instruction in the quarter you intend to graduate, you must file an "Application for Degree" form with the Division of Graduate Studies.

Optional Catchall

ECONOMICS PH.D.

Introduction

The Ph.D. program in economics provides students with training in modern microeconomics, macroeconomics, and econometrics, combined with specialized training in the fields of international finance, international trade, economic development, monetary economics, applied microeconomics, experimental economics, and other areas.

Advancement to Candidacy

Course Requirements

First-year Ph.D. students are required to enroll in the following courses:

- ECON 210B*, and the three sequences:
- ECON 204A-ECON 204B-ECON 204C, Advanced Micro Theory I-II-III;
- ECON 205A-ECON 205B-ECON 205C, Advanced Macro Theory I-II-III; and
- ECON 211A-ECON 211B-ECON 211C, Advanced Econometrics I-II-III.

* Scheduled in pre-fall as a three-week math camp that precedes the start of fall quarter. The three sequences are taken during the traditional academic year.

Second-year Ph.D. students are required to complete two field sequences, and take 30 credits of coursework in the second year. Only two courses per topic are needed to satisfy one sequence. Students may choose one of the following sequences:

- International Trade I-II (ECON 240A-ECON 240B),
- Advanced International Finance I-II-III (ECON 241A-ECON 241B-ECON 241C),
- Development Economics I-II (ECON 220A-ECON 220B),
- Advanced Methods in Macroeconomics I-II-III (ECON 221A-ECON 221B-ECON 221C),
- Applied Microeconomics I-II-III (ECON 250A-ECON 250B-ECON 250C), and
- Experimental Economics (ECON 238*, ECON 270, ECON 272*);

*Normally offered in alternate years

Students are required to submit a second-year field paper which is **due on Aug. 31**, just before the start of the third year. The department's graduate online handbook details the evaluation procedure for the field papers.

Third-year Ph.D. students must attempt and pass the Oral Qualifying Exam by the end of the spring quarter (of the third year). In addition, students must enroll in a workshop focused on advanced topics in their field of interest: ECON 274, ECON 275, or ECON 276. In addition, students enroll in ECON 299B, Doctoral Thesis Research (10 credits), under their advisor.

Fourth-year Ph.D. students and beyond are focused on their dissertation research and enroll in ECON 299B, Doctoral Thesis Research (10 credits), and a workshop focused on advanced topics in their field of interest: ECON 274, ECON 275, or ECON 276.

All graduate courses must be taken for letter grade with the exception of ECON 210B, ECON 274, ECON 275, ECON 275 and courses numbered ECON 293 and higher. Only courses with a letter grade of B- or higher can be counted toward the degree requirements.

Ph.D. Courses and Program Requirements

First Year

ECON 204A	Advanced Microeconomic Theory I	5
ECON 204B	Advanced Microeconomic Theory II	5
ECON 204C	Advanced Microeconomic Theory III	5
ECON 205A	Advanced Macroeconomic Theory I	5
ECON 205B	Advanced Macroeconomic Theory II	5
ECON 205C	Advanced Macroeconomic Theory III	5
ECON 211A	Advanced Econometrics I	5
ECON 211B	Advanced Econometrics II	5
ECON 211C	Advanced Econometrics III	5
ECON 210B	Mathematical Methods for Economic Analysis	5

Second Year

Complete 30 credits of coursework and complete two field sequences.

ECON 220A	Development Economics I	5
ECON 220B	Development Economics II	5
ECON 221A	Advanced Methods in Macroeconomics I	5
ECON 221B	Advanced Methods in Macroeconomics II	5

ECON 238	Market Design: Theory and Pragmatics	5
ECON 240A	International Trade I	5
ECON 240B	International Trade II	5
ECON 241A	Advanced International Finance I	5
ECON 241B	Advanced International Finance II	5
ECON 241C	Advanced International Finance III	5
ECON 250A	Applied Microeconomics I	5
ECON 250B	Applied Microeconomics II	5
ECON 270	Advanced Topics in Applied Microeconomics	5
ECON 272	Evolutionary Game Theory	5

*Not all field sequences are offered every year or in the same quarter each year.

Third Year

ECON 274	Macroeconomics Workshop	3
ECON 275	Applied Microeconomics Workshop	3
ECON 276	Behavioral, Experimental, and Theoretical Economics Workshop	3
ECON 299B	Doctoral Thesis Research	10

Fourth Year and Beyond

ECON 274	Macroeconomics Workshop	3
ECON 275	Applied Microeconomics Workshop	3
ECON 276	Behavioral, Experimental, and Theoretical Economics Workshop	3
ECON 299B	Doctoral Thesis Research	10

Foreign Language Requirements

Teaching Requirement

Pre-Qualifying Requirements

First-year students take two written preliminary examinations; one each in Micro and Macro, in the second week after final exams in June. Students who do not pass either exam may attempt the exam again in September at a date scheduled by the department. Students who fail either exam twice are not allowed to continue in the program.

Second-year students must complete a field paper that consists of original research demonstrating the student's readiness to undertake the Ph.D. in economics. The paper is due on Aug. 31 in the summer after the second year in the program.

Qualifying Examination

Advancement to candidacy for the Ph.D. degree requires completion with satisfactory grades or better of the required coursework, preliminary examinations, the field paper, and the oral examination. The oral examination is taken after all other requirements have been completed. A student cannot advance to candidacy before clearing any incomplete grades from their record. Students are expected to complete the oral qualifying examination (QE) during the spring quarter of their third year.

Post-Qualifying Requirements

Dissertation

Dissertation

The final requirement for the Ph.D. degree is acceptance of the student's dissertation under the rules of the Academic Senate. A three-member dissertation advisory committee, headed by the student's research advisor, evaluates the dissertation for the department. The dissertation advisory committee must be approved by both the economics Ph.D. committee and the Graduate Division. The committee may require a formal public defense of the dissertation.

Dissertation Defense

Academic Progress

The main requirements for the program are as follows:

- Students must pass all first-year courses.
- Students must pass the micro and macro preliminary exams within the maximum two attempts.
- Students must pass the 2nd-year paper, due on Aug. 31 in the summer after the second year.
- Students must pass the oral qualifying exam. This is expected to be completed by the end of the spring quarter of the third year.
- Students must pass a workshop in each quarter in years three and above.

Students who fail to meet any of these requirements within the timeline specified will be placed on academic probation with the Graduate Division. Students who fail to rectify the terms of their probation within the timeline specified in their probation will be dismissed from the program. Note that probation and dismissal can only be formally issued by the Graduate Division (under recommendation from the Economics Department). More detail on these procedures, as well as student's right to appeal such decisions, can be found in the Graduate Division Handbook. The minimum residency requirement for a Ph.D. degree at UC Santa Cruz is six quarters. To receive a graduate degree from UC Santa Cruz, you must be registered at the Santa

Cruz campus for at least three of the six quarters. A minimum of one quarter in residence must elapse between advancement to candidacy and awarding of degree.

Applying for Graduation

By the end of the second week of instruction in the quarter you intend to graduate, you must file an "Application for Degree" form with the Division of Graduate Studies.

The purpose of the Education Department's instructional programs is to prepare all students—both undergraduates and graduates—to engage in the analysis and integration of educational theory, research, and practice for an increasingly diverse society. Our commitment is built around four interrelated domains: 1) schools, families, and communities; 2) teacher education and teacher development; 3) language, literacy, and learning; and 4) mathematics and science education. Foundational to our programs is an acknowledgment of the social, cultural, and political contexts in which all aspects of education occur.

The Education Department offers a doctor of philosophy (Ph.D.) program for students who have exemplary academic preparation as well as experience working in educational settings. We offer a master's level/teaching credential (MA/C) teacher-preparation program; an education major, Education, Democracy and Justice B.A. (p. 626); and we have two vibrant undergraduate education minor tracks, the education minor and the STEM education minor, that serve more than 300 undergraduates each year.

UNDERGRADUATE PROGRAM

The UC Santa Cruz undergraduate courses in education engage students in histories of educational thought and philosophy, the politics and economics of education, multiple approaches to learning theory and teaching pedagogy, and contemporary issues of cultural and linguistic diversity in education.

The state of California does not allow academic majors in education that lead to a teaching credential. Instead, UC Santa Cruz offers an undergraduate major in education and two minors in education for students who are considering a career in teaching or who hold a more general interest in educational studies. Please note that the major and minors in education do not provide a California Teaching Credential. Additionally, please note that the UC Santa Cruz teaching credential program is a graduate program and coursework taken in the major or minor cannot be substituted for credential requirements, except in specifically designated pathways.

In addition to students with a general interest in educational studies, the undergraduate major in education is an option for students considering a career in K-6 teaching and planning to enter a credential program after undergraduate degree completion. Students in other majors who are considering a career in K-6 or 7-12 teaching should start planning in their junior year. Find out more about K-12 school teaching careers here.

GRADUATE PROGRAMS

The master of arts (M.A.) in education and California teaching credential program prepares prospective teachers to work with California's culturally and linguistically diverse student population. Students in

this program earn a master's degree and are eligible to apply for a Preliminary California Credential upon completing a 12-month, five-quarter program comprised of two summers and one academic year. Graduates of the program are prepared to teach English language learners enrolled in K-12 public schools. The program also offers the Bilingual Authorization (in Spanish) for primary language instruction or dual language immersion instruction in a K-12 setting.

The goal of the Ph.D. in education is to support graduate students in becoming creative scholars who engage in research focused on the educational needs of students from linguistic and cultural groups that have historically not fared well in our nation's public schools. To achieve this goal, this program provides students with grounding in the varieties of interdisciplinary theorizing, research methods, and applications needed to advance the study of learning and teaching for diverse student populations. The courses and research experiences are closely related to practice in K-12 classrooms and informal settings. Students in this interdisciplinary program apply tools and perspectives from education, anthropology, linguistics, philosophy, psychology, sociology, cognitive science, and cultural historical activity theory. The program integrates theory and practice to examine learning and teaching within the multiple contexts of classroom, school, family, and community. Graduates of this program will be qualified to teach and to conduct the kinds of educational research demanded by tenure-track positions in research and regional universities. Graduates may also work in non-university based institutions that focus on teacher professional development, curriculum development, and related areas of educational research and development.

EDUCATION, DEMOCRACY, AND JUSTICE B.A.

Information and Policies

Introduction

The Education, Democracy and Justice major (EDJ; pronounced as 'Edge') will provide opportunities to examine critical questions, theories, practices, and research in the field of education considered broadly and not only in relation to formal schooling. Courses in the major will provide the conceptual knowledge for students to engage in critical thinking about social and policy contexts as well as everyday practices affecting inequitable structures in schooling, society, and culture that have enduring impacts on the quality of our democracy and communities. The major's course of study will explore the history and politics of education and public schooling and their relation to the formation of just and democratic societies; theories of cognition, learning, and pedagogy; and issues of equity and cultural and linguistic diversity in education and in public school policies and practices. The major will not

focus on education in international contexts but will address the effects of immigration and globalization on U.S. education.

The department faculty and the program's social justice orientations bridge theory and practice, drawing on a variety of fields and areas of study in the humanities and social sciences—including sociology, psychology, anthropology, history, philosophy—as well as critical interdisciplinary theories and the learning sciences. Core required courses and elective field experiences will incorporate history and insights from action and participatory forms of research and community organizing to highlight the relationship between education and democratic politics. These studies and field experiences will ground students in an understanding of the transformative power of the linguistic, cultural, epistemic, and social resources that individuals, families, social groups, and communities bring to bear on their circumstances, and how these resources provide the foundations for personal and social change to address historic and enduring inequities that have been barriers to education as a democratic project. The aim of the EDJ major is to provide students with the knowledge, skills, and dispositions to become leaders in their communities who can impact a wide array of educational and social institutions, including schools, and put their combination of coursework, research, and fieldwork experiences to work in improving the lives of the least advantaged to advance the welfare of all.

The Education, Democracy, and Justice (EDJ) major does not provide a professional education degree or teaching credential. However, for students interested in a future career as a K-5 teacher, it will provide a strong background for applying to a master's (M.A. or M.Ed.) teaching credential program. Students interested in 6-8 or 9-12 levels of teaching might wish to double-major in education to provide a strong educational context to support their major in a subject area (e.g. literature, history, science, math) if they intend to apply to a graduate program in teacher education. Students cannot teach in 9-12 grades in California schools with a single major in education. Students who complete the major with at least a 3.0 GPA along with other advised coursework and experiences will be given priority for admission into UCSC's Master of Arts and Credential program in K-5 (multiple subjects) on the recommendation of the faculty.

The Education, Democracy, and Justice (EDJ) major's sociocultural perspective emphasizes equity and social justice related education in and out of school, with a particular focus on how cognition, language, and knowledge production, circulation, and mobilization are related to social, cultural, and other identities and their processes of formation. Students will examine critical, transformative pedagogies that focus on meeting the needs of low-income, ethnically, racially, and linguistically non-dominant students and their families, and how these pedagogies support the development of

more healthy and flourishing children and youth and a more just and democratic society.

Program Learning Outcomes

1. Students will demonstrate an understanding of the key theoretical perspectives and existing research on innovative teaching and learning approaches that value and promote historically disadvantaged and under-served communities and their cultural and linguistic resources.
2. Students will apply critical perspectives in reflecting on and/or conducting research and/or fieldwork, and present their findings in multi-modal forms.
3. Students will demonstrate knowledge of broad historical, social, and political contexts that impact equal opportunity to learn and contribute to society, and the role that education and schooling can play in expanding opportunity.
4. Students will demonstrate basic knowledge of transformative teaching and learning principles that can be applied in a wide range of learning environments and youth serving educational organizations.
5. Students will demonstrate oral and written communication skills through individual and group presentations and assignments in their courses.

Academic Advising for the Program

Undergraduate Advisor

The undergraduate advisor offers specific information about navigating through the program and the curriculum and assists students with prerequisites, requirements, policies, procedures, learning support, guidance on internships, scholarships, and opportunities for undergraduate research. Please contact the EDJ undergraduate advisor at education@ucsc.edu.

Peer Advisors

Peer advising can assist in academic planning in regards to major and minor requirements, help prepare declaration of major and minor paperwork. Please contact the Education peer advising team at edpeeradvising-group@ucsc.edu.

Transfer Students should also consult the Transfer Information and Policy section below.

Getting Started in the Major: Frosh

Students interested in pursuing the Education, Democracy, and Justice (EDJ) major should complete EDUC 10, and EDUC 60 and attend a declaration workshop or meet with the department advisor. After completing these requirements, students may petition to declare the education major.

Understanding what's required to get on track with the graduation requirements for your major is a primary goal for new first-year students! The guides below will provide information about any placement that's required, which classes to take, and additional information to support your success. Review the guide for any major that you are considering.

New frosh who are exploring majors may have chosen an "Advising Cluster" on their UC application, and can find information about getting started on the Advising Clusters site.

EDUC 10	Introduction to Learning	5
EDUC 60	Schooling, Democracy, and Justice	5

Transfer Information and Policy

Transfer Admission Screening Policy

Students planning to apply to UC Santa Cruz in the Education, Democracy, and Justice (EDJ) major are not required to complete specific courses for consideration of admission.

Transfer students considering the education major are strongly encouraged to complete most, if not all, general education requirements before transfer. Introductory education courses completed by transfer students at their prior institution will be reviewed to determine equivalency for EDUC 10 and EDUC 60. To ensure that students desiring a transfer to UCSC's EDJ major are on track for meeting these goals, they need to connect with their community college or university advisors for guidance and course planning.

EDUC 10	Introduction to Learning	5
EDUC 60	Schooling, Democracy, and Justice	5

Getting Started in the Major: Transfer Students

Transfer students can designate the Education, Democracy, and Justice (EDJ) major as their intended major and begin working on the requirements as soon as they arrive at UCSC.

Transfer students interested in pursuing the education, democracy, and justice (EDJ) major should complete EDUC 10, and EDUC 60 or courses taken at their previous institution that the Education Department has approved as equivalent. Transfer students should also attend a declaration workshop or meet with the department advisor.

After completing these requirements, students may petition to declare the education major.

Students who wish to pursue the education major should arrange to meet with the education undergraduate advisor as early as possible to discuss plans for enrolling in EDUC 10 and EDUC 60, if needed, declaring the major, and other course planning. Students should bring a copy of their UCSC Transfer Credit Summary to the meeting with the undergraduate advisor. This may be printed from the student portal.

Understanding what's required to get on track with the graduation requirements for your major is a primary goal for new transfer students! Review the guide for your major below for information about any placement that's required, which classes to take, and additional information to support your success.

EDUC 10	Introduction to Learning	5
EDUC 60	Schooling, Democracy, and Justice	5

Major Qualification Policy and Declaration Process

Major Qualification

To qualify to declare the EDJ major, students must have:

- Attended an Education, Democracy, and Justice (EDJ) Major Workshop
- Completed EDUC 10, Introduction to Education, and EDUC 60, Schooling, Democracy, and Justice. (Students may still petition to declare if they have completed one required lower-division course and are currently enrolled in the second required lower-division course.)

The Committee on Educational Policy on Major Declaration Process and Deadlines can be found [here](#).

EDUC 10	Introduction to Learning	5
EDUC 60	Schooling, Democracy, and Justice	5

Appeal Process

Students who are informed that they are not qualified to declare the Education, Democracy, and Justice (EDJ) major may appeal this decision by submitting a letter to the program director within 15 days from the date the notification was made. Within 15 days of receipt of the appeal, the program will notify the student, college, and the Office of the Registrar of the decision.

How to Declare a Major

To officially declare the Education, Democracy, and Justice (EDJ) major, students must bring a completed Petition for Major/Minor Declaration and UC Santa Cruz Academic Planning Form to the Education Department's undergraduate advisor. Students pursuing the EDJ major should meet with the Education Department's undergraduate advisor as early as possible.

For specific instructions about how to declare a major in education and for the current Drop-in Advising Schedule, please refer to the Education Department's website. For other inquiries, please contact the undergraduate advisor by sending an email to education@ucsc.edu.

Letter Grade Policy

The Education, Democracy, and Justice (EDJ) major lower-division qualification courses (EDUC 10 and EDUC 60) may be taken for letter grades or Pass/No Pass. All other major requirements may be taken as a letter grade or Pass/No Pass. No more than 25 percent of credits earned at UCSC may be graded on a Pass/No Pass basis. Students must be in good academic standing to choose the Pass/No Pass option.

Course Substitution Policy

Education, Democracy, and Justice (EDJ) B.A. students may substitute two of the upper-division elective requirements with upper-division electives from other UCSC departments, individual study courses, education abroad electives, or other four-year institution electives. Students are limited in the number of outside electives accepted toward the major and must petition for approval of the course prior to applying it to the major. Review the department's Petition for a Course Exception page for information about the petition process.

Double Majors and Major/Minor Combinations Policy

The department accepts proposals for double majors. A student pursuing a double major meets the full requirements of the Education, Democracy, and Justice (EDJ) major as well as the full requirements of the other major.

Education Abroad Program (EAP)

Students seeking to study abroad must be declared in their major prior to studying abroad.

It is recommended that the students have the courses intended to be taken abroad reviewed and approved by the Education Department prior to departure. Up to two relevant courses taken through study abroad programs from which credits are transferable to UCSC may be used toward satisfaction of the Education, Democracy, and Justice (EDJ) B.A. elective requirements when the content is deemed appropriate and approved by the Education Department.

Honors

A student with a major GPA of 3.75 or better qualifies for honors in the Education, Democracy, and Justice (EDJ) major. A student with a major GPA of 3.90 or better qualifies for highest honors in the major. Per UCSC policy, no more than approximately 15 percent of the graduating class can be considered for honors or highest honors in the major. Courses and units taken at UCSC to satisfy the major requirements are used to calculate the major GPA. Courses transferred from other institutions (with the exception of study abroad programs through UCSC) are not calculated into major GPA.

Requirements and Planners

Course Requirements

Education, Democracy, and Justice (EDJ) majors are required to take 10 5-credit courses for a total of 50 credits:

Lower-Division Courses

Both of the following

EDUC 10	Introduction to Learning	5
EDUC 60	Schooling, Democracy, and Justice	5

Upper-Division Courses

One of the following

Students will be required to take either EDUC 110, Popular Education, Democracy, and Social Movements (5 credits); or EDUC 180, Introduction to Teaching (5 credits).

EDUC 110	Popular Education, Democracy, and Social Movements	5
EDUC 180	Introduction to Teaching	5

Plus

Six upper-division electives from the education catalog.

Plus

Successful completion of the comprehensive requirement is required prior to graduation.

EDUC 190	Senior Seminar Capstone	5
----------	-------------------------	---

Electives

Beyond the three foundational required courses, all students will take any six (6) upper-division elective courses (30 credits) from from the EDUC course list.

Students may chose to follow an area of emphasis but it is not required. The two areas of emphasis are Social Contexts and Educational Foundations, and Learning and Teaching.

Students may take both EDUC 110 and EDUC 180. One course will count as the required upper-division course and the other will count toward the six upper-division electives.

Social Contexts and Educational Foundations

EDUC 110 is required

EDUC 102	Education, Media, and Society	5
EDUC 128	Immigrants and Education	5
EDUC 135	Gender and Education	5
EDUC 141	Bilingualism and Schooling	5
EDUC 164	Urban Education	5
EDUC 166	Technology and Education	5

EDUC 160	Issues in Educational Reform	5
EDUC 173	Seminar in Critical Pedagogy	5
EDUC 174	Ethnographic Research in Schools and Communities	5
EDUC 178	Special Topics in Education	5
EDUC 181	Race, Class, and Culture in Education	5
CRES 121	The Struggle for K-12 Ethnic Studies	5

Learning and Teaching

EDUC 180 is required

EDUC 104	Ethical Issues and Teaching	5
EDUC 115	K-12 Student Assessment	5
EDUC 120	The Arts in Schools: Aesthetic Education Theory and Practice	5
EDUC 125	Multicultural Children's Literature for Elementary Classrooms	5
EDUC 126	Foundations of Literacy Learning: Contemporary Perspectives	5
EDUC 140	Language, Diversity, and Learning	5
EDUC 177	Teaching Linguistically Diverse Students	5
EDUC 187	Cognition and Instruction	5
EDUC 183	Children's Mathematical Thinking	5
EDUC 182	Social and Political Contexts of Teachers' Work	5
EDUC 166	Technology and Education	5
EDUC 173	Seminar in Critical Pedagogy	5
EDUC 141	Bilingualism and Schooling	5
EDUC 185B	Introduction to Mathematics Education	5
EDUC 185C	Introduction to Teaching Science	5
EDUC 178	Special Topics in Education	5
CRES 121	The Struggle for K-12 Ethnic Studies	5

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division disciplinary communication (DC) requirement. The DC requirement in Education, Democracy, and Justice B.A. is satisfied by completing EDUC 110 or EDUC 180, and EDUC 190.

One of the following courses

EDUC 110	Popular Education, Democracy, and Social Movements	5
EDUC 180	Introduction to Teaching	5

Plus

EDUC 190	Senior Seminar Capstone	5
----------	-------------------------	---

Comprehensive Requirement

EDUC 190 (5 credits) will satisfy the senior capstone requirement with a focus on advanced topics in education, emphasizing at least one of the following: critical and analytical thinking, field research, advanced research methods (qualitative or quantitative), or advanced theory.

EDUC 190	Senior Seminar Capstone	5
----------	-------------------------	---

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements (p. **Error! Bookmark not defined.**) for more information.

A four-year course plan for frosh majoring in education, democracy, and justice (EDJ) and a two-year course plan for transfer students are provided below.

Following are two recommended academic plans for frosh, and two plans for transfer students. Plan One is a suggested guideline for frosh who may choose social contexts and educational foundations (EDUC 110 is recommended) as an area of emphasis. Plan Two is for frosh who may choose learning and teaching (EDUC 180 is recommended) as an area of emphasis. The third and fourth planners are suggested two-year guidelines for transfer students. Students may choose to take education electives in summer quarters.

Plan One for Incoming Frosh

Year	Fall	Winter	Spring
1st (frosh)	EDUC 60		EDUC 10
2nd (soph)			
3rd (junior)	EDUC 180	EDUC elective EDUC elective	EDUC elective
4th (senior)	EDUC elective EDUC elective	EDUC elective	EDUC 190

The courses listed above will satisfy the PR-S and DC general education requirements. Other GE requirements may be satisfied by elective courses. All other GE requirements have to be satisfied.

Plan Two for Incoming Frosh

Year	Fall	Winter	Spring
1st (frosh)	EDUC 10		EDUC 60
2nd (soph)			
3rd (junior)	EDUC elective EDUC elective	EDUC 110	EDUC elective
4th (senior)	EDUC elective EDUC elective	EDUC elective	EDUC 190

The courses listed above will satisfy the PR-S and DC general education requirements. Other GE requirements may be satisfied by elective courses. All other GE requirements have to be satisfied.

Sample Plan One Transfer Planner

Year	Fall	Winter	Spring
3rd (junior)	EDUC 60* EDUC elective	EDUC 180	EDUC 10* EDUC elective
4th (senior)	EDUC elective EDUC elective	EDUC elective EDUC elective	EDUC 190

The courses listed above will satisfy the PR-S and DC general education requirements. Other GE requirements may be satisfied by elective courses. All other GE requirements have to be satisfied.

*Articulated equivalent courses may be taken prior to transfer.

Plan Two for Transfer Students

Year	Fall	Winter	Spring
3rd (junior)	EDUC 10* EDUC elective	EDUC 110	EDUC 60* EDUC elective
4th (senior)	EDUC elective EDUC elective	EDUC elective EDUC elective	EDUC 190

The courses listed above will satisfy the PR-S and DC general education requirements. Other GE requirements may be satisfied by elective courses. All other GE requirements have to be satisfied.

* Approved equivalent courses may be taken prior to transfer.

EDUCATION MINOR GENERAL

Declaring the Minor

To officially declare a general minor in education, students must bring a completed Petition for Major/Minor Declaration and UC Santa Cruz Academic Planning Form to the Education Department's undergraduate advisor. Students pursuing a minor in education should meet with the Education Department's undergraduate advisor as early as possible.

To be eligible to declare the general minor in education, students must have:

- Attended an Education Minor Workshop or met with the Education undergraduate advisor
- Completed or be enrolled in EDUC 60, Introduction to Education
- Successfully declared a major

For specific instructions about how to declare a minor in education and for the current Drop-in Advising Schedule, please refer to the Education Department's website. For other inquiries, please contact the undergraduate advisor by sending an email to education@ucsc.edu.

Course Requirements

The general minor in education consists of six courses totaling 30 credits:

Lower-Division Courses

EDUC 60	Schooling, Democracy, and Justice	5
---------	-----------------------------------	---

Upper-Division Courses

EDUC 180	Introduction to Teaching	5
----------	--------------------------	---

EDUC 180 includes a 30-hour classroom observation practicum, plus additional travel time to school sites.

For EDUC 180, background checks (Live Scan Fingerprinting), evidence of a negative TB test or Risk Assessment Form, and Online Mandated Reporter training are required of all participants prior to the first day of instruction. The department will contact enrolled students with information about how to complete these items.

Four upper-division elective courses

Education courses other than EDUC 180 numbered EDUC 102-EDUC 187.

Declared minors have priority enrollment for upper-division education courses. Upper-division electives may be taken before EDUC 180.

SCIENCE TECHNOLOGY ENGINEERING AND MATHEMATICS STEM EDUCATION MINOR

The Science, Technology, Engineering, and Mathematics (STEM) education minor specifically serves students in STEM majors who are considering careers in secondary mathematics or science teaching.

Students pursuing the STEM education minor should meet with the Cal Teach staff as early as possible. Entry into EDUC 50 is by application only, and interested students must submit an application to the Cal Teach program (see the Cal Teach website or email calteach@ucsc.edu). Entry into EDUC 100 and EDUC 185L is contingent upon successful completion of previous Cal Teach internships and sufficient university-level science or mathematics coursework.

Declaring the STEM Minor

To officially declare a STEM minor in education, students must bring a completed Petition for Major/Minor Declaration and UC Santa Cruz Academic Planning Form to the Education Department's undergraduate advisor. Students pursuing a minor in education should meet with the Education Department's undergraduate advisor as early as possible.

To be eligible to declare the STEM minor in education, students must have:

- Attended an Education Minor Workshop or met with the Education undergraduate advisor
- Completed or be enrolled in EDUC 50 (which requires being accepted into the Cal Teach Program)
- Completed or be enrolled in EDUC 60, Introduction to Education
- Successfully declared a major

For specific instructions about how to declare a minor in education and for the current Drop-in Advising Schedule, please refer to the Education Department's website. For other inquiries, please contact the undergraduate advisor by sending an email to education@ucsc.edu.

Course Requirements

The STEM minor in education consists of eight courses, totaling 32 credits and including approximately 75 hours of classroom field placements.

Lower-Division Courses

Choose one of the following courses

EDUC 50A	CAL Teach 1: Science and Mathematics	2
EDUC 50B	CAL Teach 1: Mathematics	2
EDUC 50C	CAL Teach 1: Science	2

Plus the following course

EDUC 60	Schooling, Democracy, and Justice	5
---------	-----------------------------------	---

Upper-Division Courses

Choose one of the following courses:

EDUC 100A	Cal Teach 2: Science and Mathematics	2
EDUC 100B	Cal Teach 2: Mathematics	2
EDUC 100C	Cal Teach 2: Science	2

Plus one of the following courses:

EDUC 185B	Introduction to Mathematics Education	5
EDUC 185C	Introduction to Teaching Science	5

Plus the following course:

EDUC 185L	Introduction to Teaching: Cal Teach 3	3
-----------	---------------------------------------	---

Plus one upper-division education course addressing cultural and linguistic diversity:

EDUC 125	Multicultural Children's Literature for Elementary Classrooms	5
EDUC 128	Immigrants and Education	5
EDUC 135	Gender and Education	5
EDUC 140	Language, Diversity, and Learning	5
EDUC 141	Bilingualism and Schooling	5
EDUC 164	Urban Education	5
EDUC 177	Teaching Linguistically Diverse Students	5
EDUC 181	Race, Class, and Culture in Education	5

Plus two upper-division education courses

Courses numbered EDUC 102-EDUC 187. Please refer to the Education Department's website for a list of approved upper-division courses being offered during the current academic year.

CRITICAL RACE AND ETHNIC STUDIES AND EDUCATION

MA/C CONTIGUOUS BACHELOR'S/MASTER'S PATHWAY

The 4+1 pathway into the M.A./Credential Master's program is an option that allows undergraduates in the critical race and ethnic studies (CRES) major at U.C. Santa Cruz to:

- Finish the master's degree in just one additional year (5 Quarters July to July).
- Apply to the Education master's program through a streamlined application process.

Undergraduate students currently enrolled in the CRES major have the opportunity, any time after the start of their junior year until Dec. 1 of their senior year, to apply to be admitted to the 4+1 contiguous pathway leading to the Education Master's Degree.

The requirements for admission into the 4+1 pathway are:

- Undergraduate major in CRES
- A GPA in the major of 3.0 or more
- Overall GPA of 3.0 or higher
- Junior or senior standing
- Complete two upper-division courses selected from the following with a grade of B or higher: EDUC 104, EDUC 115, EDUC 125, EDUC 126, EDUC 135, EDUC 141, EDUC 160, EDUC 162, EDUC 164, EDUC 174, EDUC 177.

Interested students should schedule a meeting with the CRES undergraduate advisor to discuss their curriculum plan and complete the application forms. The deadline for application to the pathway is Dec. 1 of the senior year, although students are encouraged to apply earlier.

While students in the pathway are not guaranteed admission to the MA/Credential Program, the Education Department expects to admit students who:

1. have met the requirements for admission to the 4+1, above;
2. have classroom experience with youth; and
3. have a commitment to teaching in communities serving traditionally underserved populations, barring any extenuating circumstances, or if the applicant does not obtain clearance from the State of California. Additionally, students will be eligible for a streamlined admission process if, at the time of application, they have met the state Basic Skills and Subject Matter requirements, typically by providing passing scores on California state tests: the CBEST and the CSET (applicants must pass the required subtests for a

secondary Single Subject Social Science credential or the Multiple Subjects credential).

CSET Social Science consists of three subtests:

- Social Science Subtest I (test code 114)
- Social Science Subtest II (test code 115)
- Social Science Subtest III (test code 116)

CSET Multiple Subjects consists of three subtests:

- Multiple Subjects Subtest I (test code 101)
- Multiple Subjects Subtest II (test code 214)
- Multiple Subjects Subtest III (test code 103)

After entering into the Master's/Credential Program, students from the pathway will follow the same requirements as any other students in the MA/C program with expected graduation in July of the year after their graduation from the UC Santa Cruz CRES program.

Students who have completed one of these identified undergraduate education courses will have the course EDUC 205 waived from their MA/Credential requirements.

- EDUC 102, Education, Media and Society,
- EDUC 128, Immigrants and Education,
- EDUC 140, Language, Diversity & Learning,
- EDUC 173, Critical Pedagogy,
- EDUC 181, Race, Class and Culture in Education.

Students intending to apply for the MA/Credential Program may also choose to complete these courses in Summer Session II between their junior and senior years, instead of during the MA/Credential Program:

- EDUC 210, Health, Safety and Community, 2 credits,
- EDUC 213, Child and Adolescent Development for Educators, 2 credits,

The following State of California requirements for a California teaching credential, which have to be completed before the end of the final quarter of the MA/Credential Program, can also be completed at the undergraduate stage if a student chooses:

- The US Constitution Examination, when offered by the Education Department. (Completion of any of the courses POLI 20, POLI 111A, POLI 120A or HIS 10A also satisfies this requirement.)
- The UC Santa Cruz Extension online course EDUC.XSC209 can be completed any time it is offered to satisfy the Preliminary Technology Requirement.

- A certified cardiopulmonary resuscitation (CPR) course (infant, child, and adult) must be completed before the end of the final quarter of the MA/Credential Program and be valid at the time of application for the preliminary credential in the final summer session of the MA/Credential Program. (A CPR course that will remain valid through the preliminary credential application may be taken during the undergraduate state; 12-month certifications will not be sufficient. Student must check with course provider.)

MATHEMATICS AND EDUCATION MA/C CONTIGUOUS BACHELOR'S/MASTER'S PATHWAYS

Mathematics and Education MA/C Contiguous Bachelor's/Master's Pathway

The 4+1 pathway into the Master of Arts/Credential (MA-C) Program is an option that allows undergraduates in the mathematics education major at the University of California, Santa Cruz to:

- Finish the master's degree in just one additional year (five quarters, July to July).
- Apply to the Education master's program through a streamlined application process.

Undergraduate students currently enrolled in the mathematics education major have the opportunity, any time after the start of their junior year until Dec. 1 of their senior year, to apply to be admitted to the 4+1 contiguous pathway leading to the Education master's degree.

The requirements for admission into the 4+1 pathway are:

1. a GPA in the major of 3.0 or more;
2. completion of EDUC 185B, Introduction to Mathematics Education, with a grade of B or better. It is recommended students take 185B by the end of their junior year. The course previews the reading and writing workload required in most of the courses in the MA-C Program. EDUC 185B is typically offered in winter; and
3. completion or current enrollment or plan to enroll by fall of the senior year in all of the required Cal Teach courses.

Interested students should schedule a meeting with the Mathematics Education undergraduate advisor to discuss their curriculum plan and complete the application forms. The deadline for application to the pathway is Dec. 1 of the senior year, although students are encouraged to apply earlier.

While students in the pathway are not guaranteed admission to the MA/Credential Program, the Education Department expects to admit students who have met the three requirements for admission, above, barring any extenuating circumstances, or if the applicant does not obtain clearance from the State of California, as described in the program statement for the MA/Credential Master's Program. Additionally, students will be eligible for a streamlined admission process if, at the time of application, they have met the state Basic Skills and Subject Matter requirements, typically by providing passing scores on California State tests: the CBEST and the CSET (applicants must pass the required sub test for a secondary Single Subject Mathematics credential or the Foundational-Level Mathematics credential). CSET Mathematics consists of three subtests: Subtest I, Subtest II, and Subtest III. Students seeking the Foundational-Level Mathematics Credential only required to pass Subtest I and Subtest II.

After entering into the Master's/Credential Program, students from the pathway will follow the same requirements as any other students in the MA/C Program with expected graduation in July of the year after their graduation from the UC Santa Cruz Mathematics Education program.

Students who have completed EDUC 177 will have the course EDUC 205 waived from their MA/Credential requirements. Students intending to apply for the MA/Credential program may also choose to complete these courses in Summer Session II between their junior and senior years, instead of during the MA/Credential Program:

EDUC 210, Health, Safety and Community, 2 credits;

EDUC 213, Child and Adolescent Development for Educators, 2 credits.

The following State of California requirements for a California teaching credential, which have to be completed before the end of the final quarter of the MA/Credential Program, can also be completed at the undergraduate stage if a student chooses:

- The U.S. Constitution Examination, when offered by the Education Department. (Completion of any of the courses POLI 20, POLI 111, POLI 120A or HIST 10A also satisfies this requirement.)
- The UCSC Extension online course EDUC.XSC209 can be completed any time it is offered to satisfy the Preliminary Technology Requirement.
- A certified cardiopulmonary resuscitation (CPR) course (infant, child, and adult) must be completed before the end of the final quarter of the MA/Credential Program and be valid at the time of application for the preliminary credential

in the final summer session of the MA/Credential Program. (A CPR course that will remain valid through the preliminary credential application may be taken during the undergraduate state; 12-month certifications will not be sufficient. Student must check with course provider.)

Course planner and sample program.

During their undergraduate years, a student follows the planner for the Math Education B.S. program. The program has different sample plans, depending on where students start, frosh and transfer planners for each plan published in the General Catalog. The sample plan below is for students starting at Math 19A or MATH 20A.

Sample Math Education Four-Year Planner

	Fall	Winter	Spring
1st (frosh)	MATH 19A or MATH 20A Core/Writing GE/ME*	MATH 19B or MATH 20B Core/Writing GE/ME*	MATH 21 MATH 23A GE/ME*
2nd (soph)	MATH 23B GE/ME*: EDUC 10, EDUC 60, or EDUC 180 EDUC 50B (2 credits)	MATH 100 STAT 5	MATH 128A EDUC 100B (2 credits)
3rd (jr)	MATH 110 MATH 101	MATH 181 EDUC 185B	EDUC 177 MATH 111T
Summer Term II (July-August): EDUC 210 and EDUC 213			
4th (sr)	STAT 131 EDUC 177	MATH 103A or MATH 105A CSE 20	MATH 194 EDUC 185L

* General Education/Major Exploration

Extra Math course: MATH 101 (offered Fall) or CSE 16 (offered FWS)

MATH 101, Math Problem Solving (F), highly recommended out of all these choices

Education Summer courses:

EDUC 210, Health, Safety and Community, (2 credits) Summer Term II (July-August);

EDUC 213, Child and Adolescent Development for Educators, (2 credits) Summer Term II (July-August);

Education online course (XSC 209), Introduction to Technology in Schools, UCSC Extension.

Math Subject Matter Program

Students following the Math ED 4+1 are likely to also wish to complete the Math Subject Matter Program to waive the CSET exams. The requirements (or equivalents taken at another university) for the CSET waiver are as follows:

Introductory Math Education Concentration Coursework:

- MATH 19A or MATH 20A
- MATH 19B or MATH 20B
- MATH 21
- MATH 23A
- MATH 23B
- STAT 5

Advanced Math Education Concentration Coursework:

- MATH 100
- MATH 103A or MATH 105A
- MATH 110
- MATH 111A or MATH 111T
- MATH 128A
- MATH 181
- MATH 194 or MATH 195
- STAT 131
- Both EDUC 50B and EDUC 100B

Additional Courses Specific to the SMP in addition to the Math Education Curriculum:

- EDUC 185B
- 1 Extra Math course--MATH 24 or MATH 101* or MATH 115 or CSE 16
- 1 Coding Course--CSE 5J or CSE 10/CSE 10L or CSE 20

The Sample course plan for the MA/Credential will be largely unaltered, with the exceptions that EDUC 205** may be waived and EDUC 210 and EDUC 213*** may have been completed by the student as an undergraduate (see Section II.1.A earlier in this proposal).

*Highly recommended for Math Education majors

**May substitute EDUC 177 taken as an undergraduate for EDUC 205

***EDUC 210 and EDUC 213 may be taken in Summer Session II between junior and senior years

Note: Beginning placement begins on the first day of our partner schools' and continues through to the end of their K-12 academic year in June; both winter and spring quarter breaks align to the breaks of the partner schools and not the UC Santa Cruz calendar.

SCIENCE EDUCATION AND EDUCATION MA/C CONTIGUOUS BACHELOR'S/MASTER'S PATHWAY

The 4+1 pathway into the Master of Arts (M.A.)/Credential Master's program is an option for UC Santa Cruz Science Education majors at U.C. Santa Cruz to apply to the M.A./Credential program through a streamlined application process.

Undergraduate students currently enrolled in the science education major may, any time after the start of their junior year until Dec. 1 of their senior year, apply to be admitted to the 4+1 contiguous pathway leading to the education master's degree and teaching credential.

The requirements for admission into the 4+1 pathway are:

1. a GPA in the major of 3.0 or higher;
2. Completion of EDUC 185C Introduction to Teaching Science, and with a grade of B or better; and
3. Completion or current enrollment or plan to enroll by fall of the senior year in all of the required Cal Teach courses.

Interested students should schedule a meeting with the science education undergraduate advisor to discuss their curriculum plan and complete the application forms. The deadline for application to the pathway is Dec. 1 of the senior year, although students are encouraged to apply earlier.

While students in the pathway are not guaranteed admission to the M.A./Credential Program, the Education Department expects to admit students who have met the three requirements for admission above, barring any extenuating circumstances or if the applicant does not obtain clearance from the State of California as described in the program statement for the M.A./Credential Master's program. Additionally, students will be eligible for a streamlined admission process if, at the time of application, they have met the state Basic Skills and Subject Matter requirements, typically by providing passing scores on California State tests: the CBEST and the CSET (applicants must pass the required sub tests¹ for a secondary Single

Subject Science credential or the Foundational-Level General Science credential).

After entering into the Master's/Credential program, students from the pathway will follow the same requirements as any other students in the M.A./Credential program with expected graduation in July of the year after their graduation from the UCSC Science Education program.

Students who have completed EDUC 177 for the UCSC Science Education program will have the course EDUC 205 waived from their M.A./Credential requirements. Students intending to apply for the M.A./Credential program may also choose to complete EDUC 210 (Health, Safety and Community) and EDUC 213 (Child and Adolescent Development for Educators) in Summer Session II between their junior and senior years, instead of during the M.A./Credential program.

The following State of California requirements for a California teaching credential, which have to be completed before the end of the final quarter of the M.A./Credential program, can also be completed at the undergraduate stage if a student chooses:

- The U.S. Constitution Examination, when offered by the Education Department. Completion of any of the courses POLI 20, POLI 111A, POLI 120A or HIS 10A also satisfies this requirement.
- The UCSC Extension online course EDUC.XSC209.
- A certified cardiopulmonary resuscitation (CPR) course (infant, child, and adult). A CPR course that will remain valid through the preliminary credential application may be taken during the undergraduate state; 12-month certifications will not be sufficient. Students must check with the course provider.

¹CSET Science consists of two subtests: Subtest I (test code 215) and Subtest II -- Life Sciences (test code 217), Chemistry (test code 218), Earth and Space Sciences (test code 219), or Physics (test code 220). Students seeking the Foundational-Level General Science Credential take only Subtest I.

EDUCATION AND CALIFORNIA TEACHER CREDENTIAL PROGRAM M.A.

Introduction

The Master of Arts (M.A.) in Education and California Teaching Credential Program prepares prospective teachers to work with California's culturally and linguistically diverse student population. Students in this program earn a master's degree and are eligible to apply for a Preliminary California Credential upon completing a 12-month, five-quarter program

comprised of two summers and one academic year. Graduates of the program are prepared to teach English language learners enrolled in K–12 public schools. The program also offers the Bilingual Authorization (in Spanish) for primary language instruction or dual language immersion instruction in a K–12 setting.

Please note that we do not offer a stand-alone Master of Arts in Education nor a stand-alone credential program. Additionally, holders of a previously issued California or out-of-state credential are not eligible for admission to the program.

Students who complete the program are eligible to apply for a California Preliminary Multiple Subject Teaching Credential or a California Preliminary Single Subject Teaching Credential. The Multiple Subject Teaching Credential authorizes the holder to teach in a K–12, self-contained public school classroom, where all subjects are taught by the same teacher. The Single Subject Teaching Credential authorizes the holder to teach in his/her credential subject area in a 6–12 departmentalized classroom setting within a public school system.

The UC Santa Cruz Single Subject Teacher-Credential Program offers the following subject areas: mathematics, English, social science, and science. Programs of study are subject to change.

Because program requirements are authorized by statutes and regulated by a state entity, the California Commission on Teacher Credentialing program requirements must be responsive to new legislation and regulatory policies. Admission requirements and programs of study referred to are subject to change to comply with regulatory mandates.

Prerequisite Admission Requirements

All candidates for the M.A./Credential program must have preparation in the following areas:

A course, or equivalent experience, that addresses cultural and linguistic diversity. The following UC Santa Cruz undergraduate education courses are examples of courses that meet this requirement: EDUC 128, Immigrants and Education; EDUC 141, Bilingualism and Schooling; EDUC 164, Urban Education; EDUC 181, Race, Class, and Culture in Education. Other courses offered outside the Education Department may be acceptable, however, outside coursework cannot be preapproved by the department. When applying to the program note your outside coursework in your statement of purpose along with an explanation as to how your coursework addresses cultural and linguistic diversity.

A documented field experience with children or youth in an educational setting at the general age level which the candidate aspires to teach. Experiences such as directed observation, substitute teaching, school tutoring, work in after-school programs, camp counseling, instructional aide, or the equivalent are acceptable experiences. When applying to the program,

please describe your field experience in the designated area of the application titled Statement of Purpose.

Application Selection Criteria

Admission to the program is competitive. Candidates for admission are selected, in part, on the following criteria:

Academic Record

College coursework is evaluated with attention to content and grades. The appropriateness of courses taken for the credential sought is also taken into consideration. For the multiple subject credential, students should have an extensive breadth of courses in the core subject areas taught in elementary school—mathematics, science, social science, and English. For the single subject credential, students should have an extensive body of coursework in the content area.

Statement of Purpose, Writing Sample, Letters of Recommendation, Personal History, and Résumé

Information provided in these documents is used in the selection of candidates. All documents must be submitted by the application deadline.

Statement of Purpose

The Statement of Purpose should discuss the following:

- An explanation of why you want to become a teacher
- How your experience has contributed to your motivation and potential to be an educational leader
- A description of your experiences related to youth, cultural and linguistic diversity, and community involvement

Writing Sample

- A sample of your writing (no more than 10 double-spaced pages)
- A research-based paper is preferred, for example, a paper written on an educational topic or a paper written in your content area
- Alternatively, applicants may choose to write a brief piece specifically for this application

Letters of Recommendation

- Three letters of recommendation are required
- Two letters should be submitted by university faculty who can address the applicant's academic merit and subject area expertise, and at least one letter submitted by someone in the field who has observed the applicant's work with children or youth in the applicable general age-group for the credential you are seeking through the UCSC Credential Program

- It is recommended that these letters are current and address your qualifications in the following areas:

Academic performance and subject-area expertise

Field work with youth

Experience in culturally and linguistically diverse settings and with student populations who have traditionally been underserved in schools and classrooms.

Personal History

- Write a statement (approximately two to five pages) explaining how your personal history has influenced your decision to apply to this graduate program.

Résumé

- A résumé that includes an employment history; any relevant volunteer or community work, especially in schools and/or with children; and experiences in multicultural and multilingual settings
- Include information on languages (other than English) in which you have competence.

Bilingual Authorization Essay (Bilingual Authorization applicants only)

- Candidates must submit an essay in Spanish as described in the online application.

Admission Requirements

California Basic Skills Requirement

All admitted applicants must verify completion of the California Basic Skills Requirement by meeting one of the options A through G below. The deadline to complete this requirement: June 10 of each year (prior to official enrollment in the program). However, it is highly recommended that documentation of completion be submitted with the application. Exam registration confirmations, and/or exam score reports, or verification of meeting an alternate option for the Basic Skills Requirement must be submitted at the time of application via the online application.

- The California Basic Skills Test (CBEST).
- The California Subject Examinations for Teachers (CSET): Multiple Subjects Subtests I-III plus the CSET: Writing Skills subtest #142 (**passing these tests also meets the Subject Matter Competency requirement for Multiple Subject candidates; see below**).
- CSU EAP ('Ready' in English and Math) or CSU Placement Exams (English Placement Test (EPT) and Entry Level Math (ELM)).
- SAT (Math 550, English Critical Thinking 500).
- ACT (Math 23, English 22).
- AP English (3 or higher) and AP Calculus or AP

Statistics (3 or higher).

G. College coursework in reading, writing and mathematics. See the MA/C Program website for more information about this option.

For more information on these additional options, see California Commission on Teaching Credentialing Basic Skills Requirements.

Subject-Matter Requirement

California state law mandates that all teachers provide evidence of their subject-matter knowledge. Exam registration confirmations, exam score reports, or documentation of an approved waiver program must be submitted on the online application. Deadline to complete this requirement is June 10 of each year (prior to official enrollment in the program). However, it is highly recommended that documentation of meeting the subject matter requirement be submitted with the application. **Please note that admission priority may be given to applicants who provide documentation at the time of application.** In addition to the options listed below, the Subject Matter Requirement may be met if your bachelor's degree is in the same area as the credential that you see. Additionally, there is a college course work option. Please see the MA/C Program website for details on these two options.

Multiple Subject Applicants

Individuals can verify subject-matter competence by passing all required subtests of the California Subject Examinations for Teachers (CSET). Passing exam scores are valid for 10 years.

The CSET Multiple Subjects exams are comprised of three required subtests. Admitted MA/Credential applicants are required to submit passing test scores for the following:

- CSET: Multiple Subjects - Subtest I (test code 101)
- CSET: Multiple Subjects - Subtest II (test code 214)
- CSET: Multiple Subjects - Subtest III (test code 103)

Additionally, Multiple Subject applicants may satisfy Subject Matter Competency via a CTC-Approved Subject Matter Waiver Program.

The deadline to submit evidence of satisfying Subject Matter Competency Requirement is June 10. However, it is **highly recommended** that documentation of satisfying the Subject Matter Competency Requirement be submitted at the time of application.

Single Subject Applicants

Individuals may verify subject-matter competence by passing all required subtests of the California Subject Examinations for Teachers (CSET) by content area. Passing exam scores are valid for 10 years.

Admitted MA/Credential applicants are required to submit passing test scores for the following:

Single Subject Area	Credential Type	CSET Subtests Required (test code)
English	English	English Subtest I (105) English Subtest II (106) English Subtest III (107) English Subtest IV (108)
Mathematics	Mathematics	Mathematics Subtest I (211) Mathematics Subtest II (212) Mathematics Subtest III (213)
	Foundational-Level Mathematics	Mathematics Subtest I (211) Mathematics Subtest II (212)
Science	Science: Life Science	Science Subtest I (215) Science Subtest II (217)
	Science: Chemistry	Science Subtest I (215) Science Subtest II (218)
	Science: Earth and Space Sciences	Science Subtest I (215) Science Subtest II (219)
	Science: Physics	Science Subtest I (215) Science Subtest II (220)
	Science: Foundational-Level	Science Subtest I (215)
Social Science	Social Science	Social Science Subtest I (114) Social Science Subtest II (115) Social Science Subtest III (116)

Additionally, Single Subject applicants may satisfy Subject Matter Competency via a CTC-Approved Subject Matter Waiver Program.

Certificate of Clearance

In accordance with Education Code Section 44320(b), each credential candidate for an initial credential, prior to admission to any credential program, must obtain a Certificate of Clearance from the California Commission on Teacher Credentialing (CTC). This certificate is a document issued by the commission to an individual who has completed the commission's fingerprint character and identification process. Please note that the CTC requires either a United States-issued Social Security Number (SSN) or Individual Tax

Identification Number (ITIN) to apply for a Certificate of Clearance. The IRS issues ITINs regardless of immigration status, primarily for the purpose of federal tax reporting. Detailed instructions for obtaining a Certificate of Clearance may be found [here](#).

A Certificate of Clearance must be submitted directly to the UCSC Online Application. **Please upload a copy of your valid Certificate of Clearance or Emergency 30-Day Substitute Teaching Permit into the online application.**

1. To comply with this regulation the UCSC Education Department must have on file a copy of the Certificate of Clearance before allowing a person to begin public school fieldwork or student teaching.
2. If you hold a valid (non-expired) Emergency 30-Day Substitute Teaching Permit, you are not required to apply for another Certificate of Clearance. Please upload a copy (pdfs are accepted) of your valid permit.
3. Out-of-state/international applicants must contact the UCSC Education Department for further instructions: edma@ucsc.edu

NOTE: A U.S. Government-issued social security number or ITIN is required to apply for a Certificate of Clearance and the fingerprinting process.

Applicants should be aware that a criminal conviction on their record may preclude them from obtaining a Certificate of Clearance.

Bilingual Authorization Candidates

CSET—Spanish Language and Culture of Emphasis Requirements

- The CSET LOTE (Spanish) Subtest III (CSET test code 147) and CSET LOTE (Spanish) Subtest V (CSET test code 258) (Culture of Emphasis) are required. Admitted applicants must submit verification of having passed the examination **prior** to completing the final quarter of the M.A./Credential program.
- Additional testing information can be found at the CSET Registration website.

Essay in Spanish

Bilingual Program applicants will be required to submit a 1-2-page essay in Spanish with their application to the M.A./Credential Program. The essay should address topical questions listed on the Education M.A. Supplemental Application contained within the online UCSC Graduate School Application.

For further Information

Please contact the department by email to education@ucsc.edu, or view the Education

Department's home page where potential applicants can obtain full details about the programs.

Requirements

Course Requirements

Capstone Requirements

Students will complete a capstone portfolio, which includes a teaching performance assessment and reflective papers. Prompts for these assignments may vary from year to year as they reflect the most current California state credentialing requirements.

Multiple Subject Course Requirements

Take all of the following:

EDUC 200	Beginning Student Teaching	5
EDUC 201	Intermediate Student Teaching	5
EDUC 202A	Advanced Student Teaching	5
EDUC 202B	Advanced Student Teaching	5
EDUC 202C	Advanced Student Teaching	5
EDUC 203	Teaching English Language Development: Foundations, Approaches, and Strategies	5
EDUC 205	Teaching, Learning, and Schooling in a Diverse Society	5
EDUC 207	Social Foundations of Education	5
EDUC 208	Portfolio Development	2
EDUC 210	Health, Safety, and Community	2
EDUC 211	Teaching Special Populations in the General Education Classroom	2
EDUC 213	Child and Adolescent Development for Educators	2
EDUC 214	Contemporary Issues in Education	2
EDUC 217	Topics in Elementary Education: Physical Education	2
EDUC 218	Topics in Elementary Education: Visual Arts	2
EDUC 219	Topics in Elementary Education: Performing Arts	2
EDUC 220	Reading and Language Arts for Elementary Classrooms	5
EDUC 221	Science Learning and Teaching in Elementary Classrooms	5

EDUC 222	Mathematics Learning and Teaching in Elementary Classrooms	5
----------	--	---

EDUC 212A, EDUC 212B, EDUC 212C: Bilingual Authorization students only

Single Subject Course Requirements

Take all of the following:

EDUC 200	Beginning Student Teaching	5
EDUC 201	Intermediate Student Teaching	5
EDUC 201A	Intermediate Student Teaching: Single Subject	5
EDUC 202A	Advanced Student Teaching	5
EDUC 202B	Advanced Student Teaching	5
EDUC 202C	Advanced Student Teaching	5
EDUC 204	Methods of English Language Development: Single Subject	5
EDUC 205	Teaching, Learning, and Schooling in a Diverse Society	5
EDUC 207	Social Foundations of Education	5
EDUC 208	Portfolio Development	2
EDUC 210	Health, Safety, and Community	2
EDUC 211	Teaching Special Populations in the General Education Classroom	2
EDUC 213	Child and Adolescent Development for Educators	2
EDUC 214	Contemporary Issues in Education	2
EDUC 225	Reading Across the Curriculum in Middle School and Secondary	5

EDUC 212A, EDUC 212B, EDUC 212C: Bilingual Authorization students only

Single Subject Credential students enroll in the two methods courses related to their subject area:

EDUC 226	English Teaching: Theory and Curriculum	5
EDUC 227	English Teaching for Secondary Classrooms	5
EDUC 228	Math Education: Research and Practice	5
EDUC 229	Teaching Mathematics in the Secondary Classroom	5
EDUC 230	Science Education: Research and Practice	5
EDUC 231	Teaching Science in the Secondary Classroom	5

EDUC 232	Social Science: Theory and Curriculum	5
EDUC 233	Social Science Teaching for Secondary Classrooms	5

Bilingual Authorization Course Requirements

Take all of the following:

EDUC 212A	Bilingualism and Biliteracy: History, Politics, Theory, and Practice	2
EDUC 212B	Bilingualism and Biliteracy: Language, Literacy and Content Instruction	2
EDUC 212C	Bilingualism and Biliteracy: Community and School Partnerships	2

Other Requirements

Program and State of California Requirements

(Not Required for Initial Admission to the Program)

These requirements may be met prior to or while enrolled in the program, but they must be met to be eligible for a California teaching credential.

U.S. Constitution Requirement

A course on the U.S. Constitution (or completion of an examination offered by the Education Department to enrolled students) is required. UCSC-approved courses that meet this requirement are POLI 20, American Politics; POLI 111A/LGST 111A, Constitutional Law; POLI 120A, Congress, President, and the Court in American Politics; and HIS 10A, United States History to 1877.

Admitted applicants must submit verification of completing the U.S. Constitution Requirement prior to completing the final quarter of the M.A./Credential program.

Preliminary Technology (Level 1) Requirement

All candidates for their credential must fulfill the requirements for Level 1 technology skills which includes general and specialized skills in the use of computers in educational settings.

UC Santa Cruz students meet this requirement in one of two ways:

- Option 1: Pass the CSET Preliminary Educational Technology Subsets I & II, (CSET test codes 133 & 134). For more information, see the Technology Subsets I & II information on the CSET website.
- Option 2: Pass the UCSC approved course offered through the UCSC Extension Program,

XSC209, Technology in Schools, Introduction (online format).

Admitted applicants must submit verification of completing the Level 1 Technology Requirement **prior** to completing the final quarter of the M.A./Credential program.

Reading Instruction Competence Assessment (RICA)

Multiple Subjects candidates are required—prior to completion of the program and in order to be recommended for a preliminary credential—to pass the RICA examination. The RICA measures the knowledge, skills, and abilities essential to offer effective reading instruction to K–12 students. For more information on the RICA examination, see the RICA examination information on the CSET website.

Candidates should not take this examination prior to completing EDUC 220.

Admitted applicants must submit verification of having passed the RICA **prior** to completing the final quarter of the M.A./Credential program.

CPR

A certified cardiopulmonary resuscitation (CPR) course (infant, child, and adult) must be completed and valid upon application for the credential.

Admitted applicants must submit verification of obtaining certification in Infant/Child/Adult CPR prior to completing the final quarter of the M.A./Credential program.

Tuberculosis (TB) Test

All K-12 schools require anyone working with children to be tested for TB. You can get tested through the UCSC Student Health Center (831-459-2500 to make an appointment) or your private doctor. A copy of your official results must be turned into the Education Department before the end of the first summer quarter.

Student Teaching

The successful development of teaching skills in the classrooms is the culmination of a teacher education program. Therefore, candidates must demonstrate, by the end of their program, teaching competence in the classroom. Credentialed public school teachers are responsible for the nurturing of children and youth. Therefore, teaching credential candidates must consistently display conduct befitting the profession. To this end, the candidate must be able to cope with the demands and responsibilities of teaching as outlined below:

- Meet university and program requirements and deadlines (including school expectations during field experiences).

- Plan ahead to anticipate the transportation needs and potential demands of student teaching.
- Be able to adapt to institutional and/or professional expectations and policies.
- Relate appropriately to children, parents, and school staff.
- Demonstrate sensitivity to the social, cultural, and economic context of the school environment.
- Adhere to school expectations for dress, appearance, and personal hygiene.

Candidates whose professional behavior does not meet these minimal standards may be recommended for dismissal from the program.

Beginning Student Teaching, which begins in August during the Summer Bridge between the university summer and fall quarters, constitutes the first classroom observation experience for students in the program, and continues through most of fall quarter. Student teachers are in their classroom placements from 10–14 hours a week depending on the school site schedule. To enroll in this course, students must have a Certificate of Clearance issued and on file with the California Commission on Teacher Credentialing.

Intermediate and advanced student teaching begins late fall and continues through winter and spring, until the end of the academic year in June. Student teachers are placed with cooperating teachers in local schools throughout Santa Cruz County and beyond. Students are in the classroom placements 14 or more hours a week in winter quarter leading toward full time in the classroom by spring quarter. They gradually assume responsibility for preparation, instruction, and evaluation of the class during this period. Supervisors of teacher education give ongoing and frequent support to students in their classroom placements and in seminars at UCSC. Multiple Subject candidates obtain classroom experience in both primary and intermediate grades. Single Subject candidates obtain classroom experience in middle school/junior high and high school.

Admission to EDUC 201 and EDUC 201A, Intermediate Student Teaching, and EDUC 202A-EDUC 202B-EDUC 202C, Advanced Student Teaching, is based on an assessment of academic performance, experience, leadership, and initiative shown in public school placements and required courses taken earlier in the program. Please note that passing the CSET examination is a requirement for Advanced Student Teaching. Students who have not completed the CSET requirement prior to winter quarter will be asked to take a leave of absence from the program.

Applying for Graduation

EDUCATION PH.D.

Introduction

The goal of the Ph.D. in education is to support graduate students in becoming creative scholars who engage in research focused on the educational needs of students from linguistic and cultural groups that have historically not fared well in our nation's public schools. To achieve this goal, this program provides students with grounding in the varieties of interdisciplinary theorizing, research methods, and applications needed to advance the study of learning and teaching for diverse student populations. The courses and research experiences are closely related to practice in K-12 classrooms and informal settings. Students in this interdisciplinary program apply tools and perspectives from education, anthropology, linguistics, philosophy, psychology, sociology, cognitive science, and cultural historical activity theory. The program integrates theory and practice to examine learning and teaching within the multiple contexts of classroom, school, family, and community. Graduates of this program will be qualified to teach and to conduct the kinds of educational research demanded by tenure-track positions in research and regional universities. Graduates may also work in non-university based institutions that focus on teacher professional development, curriculum development, and related areas of educational research and development.

Together with his or her faculty adviser, each student develops an integrated program of study that includes advanced coursework, seminars, and electives. Students learn through an apprenticeship model in which they develop expertise through active participation in research. Courses may be taken in other departments, when appropriate.

Ph.D. Admissions Guidelines

The minimum GPA established by the University of California for admission to graduate school is 3.0. In general, the Ph.D. in education program looks for potential excellence in graduate students, whether this manifests itself in a high GPA, strong letters of recommendation, or a high Graduate Record Examination (GRE) score (optional for the 2020-21 admissions cycle) or a strong Statement of Purpose. Applicants will be evaluated on their individual merits and also with regard to how well their proposed doctoral research can be supported by the existing resources of the program.

Admission Requirements

- Bachelor's degree, or its equivalent, from an accepted university prior to the quarter for which admission is sought
- 3.0 GPA or above

- Official GRE scores taken within the last five years are optional for the 2020-21 admission cycle
- Experience working with culturally and linguistically diverse students and/or communities
- Statement of Purpose
- Personal History Statement
- A writing sample, preferably in education or a related field. The sample can be a term paper, a field report, a research proposal, or an essay written especially for the application
- Official transcripts from all colleges/universities attended after high school
- Three current recommendation letters specifying potential for academic or scholarly work
- Current résumé
- Application fee
- International applicants must take the Test of English as a Foreign Language (TOEFL) or the International English Language Testing System (IELTS) test. A minimum score of 550 on the TOEFL (paper), 220 on the TOEFL (computer), or 83 on the Internet-based test is required for admission. For those choosing to take the IELTS, a minimum overall score of 7 is required. The program follows Graduate Division guidelines when considering TOEFL waivers.

Prior to completing your application, we highly recommend a personal (in person or on the phone) interview with at least one of our faculty members. Please contact an education faculty member whose research interest is similar to your own (for descriptions of faculty research, please visit the Education Department website).

Financial Support

Financial support for students includes a variety of fellowships, research assistantships, and teaching assistantships in the Education Department. Students may participate in research projects under the auspices of several interdisciplinary research centers and research projects. In the past, these have included the Chicano/Latino Research Center (CLRC), the Vocabulary Innovations in Education (VINE) project, The Teachers With Computers: Ward Annotations for Vocabulary Education (tecWAVE) project, English Language and Literacy Integration in Subject Areas (ELLISA), Effective Science Teaching for English Language Learners (ESTELL) project, The Center for Collaborative Research for an Equitable California (CCREC), and the Center for Educational Research in the Interest of Underserved Students (CERIUS). Recently, students have participated in research projects

with the Center for Research on Equity and Collaborative Evaluation (CRECE) and the History & Civics Project (H&CP).

For Further Information

Contact the doctoral student adviser by sending an email to edphd@ucsc.edu or view the Education Department's home page where potential applicants can obtain full details about the programs.

Advancement to Candidacy

To achieve Ph.D. candidacy, students are expected to pass an annual review of their written work, maintain satisfactory academic progress, complete all required courses, attend department colloquia, complete a second-year research project, complete a TAship or teaching internship, pass a qualifying examination, and meet the specific requirements of the Division of Graduate Studies.

Course Requirements

During the first two years of study, all students are expected to enroll in a set of required courses, including foundational courses, methodology courses, and elective courses. The student and his/her faculty adviser will determine the overall program of study, depending on the student's preparation, interests, and plans. The program encourages interdisciplinary study.

Course Requirements and Sequencing

The following courses constitute the minimum requirements: four foundational courses, five research methods courses, four elective courses, one additional course in any category, a second-year project independent study, a second-year doctoral proseminar sequence, and a research apprenticeship. Incoming students consult with their faculty advisers about the current course offerings to determine the order in which they will complete required courses. Students are encouraged to take courses beyond the minimum required; in consultation with their advisers, students will determine the full set of research methods and elective courses they will complete based on their intellectual interests and professional goals. All required courses must be completed prior to advancement to candidacy.

The department typically offers approximately eight doctoral courses during each year. The Education Department annually admits 4-6 Ph.D. students, leaving room for doctoral students from other departments to take courses in education.

Courses required before advancing to candidacy:

EDUC 235	Introduction to Educational Inquiry	5
EDUC 236	Quantitative Research Methods	5

EDUC 237	Qualitative Research Methods	5
EDUC 250	Teaching and Teachers	5
EDUC 255	Intermediate Quantitative Methods	5
EDUC 256	Intermediate Qualitative Analysis	5
EDUC 261	Thinking and Learning	5
EDUC 262	Social and Cultural Context of Education	5
EDUC 272	Language in Education and Society	5

And four electives, two of which must be from the list below:

Choose two of the following:

EDUC 263	Educational Reform	5
EDUC 264	Research on Teacher Development and Teacher Education	5
EDUC 268	Schools, Communities, and Families	5
EDUC 280	Language and Literacy Across Disciplines	5
EDUC 286	Research in STEM Education	5
EDUC 295	Critical Perspectives on Education	5

Plus one additional course from any category

Plus the following courses

A total of 16 credits from the following:

Both of the following courses

EDUC 293B	Research Apprenticeship	5
EDUC 294	Second-Year Research Project	5

EDUC 293A is a 2-credit course and can fulfill the requirement for EDUC 293B if it is taken three times.

Plus 6 credits from the following Second-Year

Doctoral Proseminar series

EDUC 277A	Second-year Doctoral Proseminar	2
EDUC 277B	Second-year Doctoral Proseminar	2
EDUC 277C	Second-year Doctoral Proseminar	2

EDUC 277A, EDUC 277B, EDUC 277C must each be taken to satisfy the requirement.

The following may also be counted toward meeting elective requirements:

- M.A. course in education with additional readings and assignments. (One maximum to count toward the four electives and/or the additional course.)

- Independent Study. (One maximum to count toward the four electives and/or the additional course.)
- Undergraduate upper-division course with additional readings and assignments. (One maximum to count toward the four electives and/or additional course.)

Other Requirements

Students are required to attend the Education Department's colloquium series during their first and second years in the program.

Students are required to complete a second-year project paper (the same project to be approved for the en route M.A.). The final version must be approved by two faculty readers by the end of spring quarter of their second year.

Foreign Language Requirements

Teaching Requirement

The education Ph.D. program emphasizes teaching experience, and all students are required to complete one TAship or teaching internship in education prior to advancement to candidacy.

Pre-Qualifying Requirements

Students are required to attend the Education Department's colloquium series during their first and second years in the program.

Students are required to complete a second-year project paper (the same project to be approved for the en route M.A.). The final version must be approved by two faculty readers by the end of spring quarter of their second year.

Qualifying Examination

The qualifying examination is intended to assess a student's depth and breadth of knowledge in their areas of concentration and his/her competence to do extended dissertation-level research. Normally taken near the end of the third year of enrollment, the examination consists of both written and oral components. For the written portion, the student prepares three papers, two of which advance a position based on a review of related research, theoretical framework, or research design/methods; the third is a dissertation prospectus. The student presents and defends their work at the oral examination.

Post-Qualifying Requirements

To achieve Ph.D. candidacy, students are expected to pass an annual review of their written work, maintain satisfactory academic progress, complete all required courses, attend department colloquia, complete a second-year research project, complete a TAship or teaching internship, pass a qualifying examination

(QE), and meet the specific requirements of the Division of Graduate Studies.

Advancement to Candidacy

To achieve Ph.D. candidacy, students are expected to pass an annual review of their written work, maintain satisfactory academic progress, complete all required courses, attend department colloquia, complete a second-year research project, complete a TAsip or teaching internship, pass a qualifying examination, and meet the specific requirements of the Division of Graduate Studies.

Requirements for the M.A. Degree

Although applications for a master's degree independent of the Ph.D. program are not accepted, students in the Ph.D. program may obtain a M.A. degree after successfully completing a minimum of six quarters residency, a total of 81 course credits (including four foundational courses, five research methods courses, at least four elective courses, a minimum of two from the Education Electives list, one more course from any category, a 5-credit course for the second-year research project, a three-quarter second-year proseminar sequence), and an approved and completed second-year research project. Students seeking an M.A. degree must adhere to the guidelines set forth by the Graduate Division.

Optional Catchall

Dissertation

Dissertation

A dissertation based on substantive original research is required.

Dissertation Defense

After the dissertation has been completed, students must defend the dissertation in an oral examination.

Academic Progress

Applying for Graduation

EDUCATION DESIGNATED EMPHASIS

Introduction

The Designated Emphasis in Education enables doctoral students in other departments to pursue interests in education and obtain formal certification of competence in the field of education. Most Education Department Ph.D. courses are offered every other year; the Education Department welcomes D.E. students from other departments to take courses in education. Students should work closely with their education adviser to develop a plan for taking the coursework in a timely fashion.

Education is an institutional field in which scholars from a wide variety of disciplines—including sociology, psychology, politics, economics, mathematics and science—have scholarly interests. A Designated Emphasis in Education enables graduate students from other departments to ground their work in theory and research on important issues in education.

Requirements

The requirements for obtaining a designated emphasis in education are the following:

Committee Composition and Departmental Approvals

Obtain a designated faculty advisor from the faculty in the Education Department. This faculty advisor will be in addition to the faculty advisor from the student's home department. The education faculty advisor must serve on the student's qualifying examination committee and, as appropriate, may also serve on the student's dissertation committee.

Course Requirements

Complete at least five EDUC 5-credit doctoral courses for a total of 25 credits, and 25 credits, from the following list, with no more than two in research methods. Any requests for substitutions must be approved by the Education Department graduate director.

Choose five courses from the following options:

Choose five courses from the following options:

EDUC 235	Introduction to Educational Inquiry	5
EDUC 236	Quantitative Research Methods	5
EDUC 237	Qualitative Research Methods	5
EDUC 250	Teaching and Teachers	5
EDUC 255	Intermediate Quantitative Methods	5
EDUC 256	Intermediate Qualitative Analysis	5
EDUC 261	Thinking and Learning	5
EDUC 262	Social and Cultural Context of Education	5
EDUC 263	Educational Reform	5
EDUC 264	Research on Teacher Development and Teacher Education	5
EDUC 268	Schools, Communities, and Families	5
EDUC 272	Language in Education and Society	5
EDUC 280	Language and Literacy Across Disciplines	5

EDUC 286	Research in STEM Education	5
EDUC 295	Critical Perspectives on Education	5

With no more than two courses from the following group:

EDUC 235	Introduction to Educational Inquiry	5
EDUC 236	Quantitative Research Methods	5
EDUC 237	Qualitative Research Methods	5
EDUC 255	Intermediate Quantitative Methods	5
EDUC 256	Intermediate Qualitative Analysis	5

And the remainder from this group:

EDUC 250	Teaching and Teachers	5
EDUC 261	Thinking and Learning	5
EDUC 262	Social and Cultural Context of Education	5
EDUC 263	Educational Reform	5
EDUC 264	Research on Teacher Development and Teacher Education	5
EDUC 268	Schools, Communities, and Families	5
EDUC 272	Language in Education and Society	5
EDUC 280	Language and Literacy Across Disciplines	5
EDUC 285	Culture and Learning	5
EDUC 295	Critical Perspectives on Education	5

Writing, Research and/or Teaching Requirements

Prepare a significant piece of writing in some area of education. This writing may take the form of a substantial position paper (QE paper) grounded in the literature of educational research, as determined by the graduate advisor in education. In the event the education faculty advisor serves on the dissertation committee then the writing may instead be a dissertation chapter.

Academic Progress

Agroecology BA (p. 664)

Environmental Studies/Biology B.A. (p. 670)

Environmental Studies/Earth Sciences B.A. (p. 676)

Environmental Studies/Economics B.A. (p. 682)

Environmental Studies Ph.D. (p. 688)

Environmental Studies Designated Emphasis (D.E.) (p. 689)

Environmental Studies is a field of study that views the Earth and our place in it, as a set of complex, interacting socio-ecological systems. At UC Santa Cruz, we use an interdisciplinary approach to study the social, cultural, and scientific relationships with the environment. Courses in environmental studies provide training not only in the physical and social sciences, but also in writing, critical thinking, quantitative analysis, project and team management, and more. Environmental studies alumni are making a difference in conservation organizations, habitat restoration, sustainable agriculture, environmental mediation, biodiversity research, and many other areas.

UNDERGRADUATE PROGRAM

The environmental studies major prepares students for meaningful lifetime engagement with the environmental challenges that are facing society. UCSC environmental studies graduates hold leadership positions as legislative and policy analysts, environmental lawyers, environmental managers, city and state planners, educators, restoration ecologists, organic farmers and agroecology specialists, conservation biologists, environmental engineers, museum curators, business consultants, and political advocates. In addition, many graduates go on to obtain professional, master's, or doctoral degrees at the nation's finest institutions.

Students pursue an interdisciplinary curriculum that combines coursework in the natural and social sciences. Introductory courses cover the ecological, political, and economic aspects of historic, current and future environmental issues. The core course, Environmental Studies 100/L, Ecology and Society builds on the skills acquired in the lower-division classes, and encourages students to apply ecological, economic, and political skills toward environmental and ecosystem management. The remaining upper-division elective courses further emphasize the integration of ecological knowledge with an understanding of social institutions and policies. The program emphasizes active, interdisciplinary learning with the overall objective of instilling the necessary skills to conserve biodiversity.

and integrate the principles of sustainability with respect to management of complex environmental systems. Faculty work on these issues at local, regional, and global levels, providing a unique, proactive, and progressive academic environment for students wishing to pursue a degree program within the Environmental Studies Department.

As a complement to classroom instruction and research, many courses have field components. The Environmental Studies Internship Program helps qualified students find placements with government and educational agencies, community organizations, and private firms. Furthermore, faculty-directed, independent, or field-oriented research courses allow environmental studies students the opportunity to learn more about their specific academic career or personal interests, often while earning academic credit.

In addition to the single environmental studies major, students can also choose to pursue the agroecology major. The major will provide students with a depth of expertise in interdisciplinary knowledge and skills related to agroecology and sustainable food systems. UCSC students pursuing the B.A. in agroecology will gain knowledge and skills in multiple disciplines and an increased understanding of complex agricultural systems.

Students may also choose to pursue one of three combined majors with biology, earth sciences, or economics. The combined major curricula offer the unique integration of the underlying concepts of environmental studies with a focus on the application of these concepts in a closely related field (or vice versa).

The general environmental studies B.A. major offers three concentrations in addition to the major without a concentration. Below are the concentrations offered in the environmental studies B.A. major.

Geographic Information Systems Concentration

Geographic Information Systems (GIS) is an interdisciplinary field that links ecology, geography, and society to evaluate and facilitate environmental planning, policy, management and conservation. Within environmental studies, GIS addresses complex and interconnected social and ecological problems and fosters more sustainable environmental futures by supporting the visualization of geographical distribution of environmental problems and solutions. GIS is also an information technology field that acquires, manages, interprets, integrates, displays, analyzes, or otherwise uses socio-economic and environmental data focusing on geographic, temporal, and spatial contexts. Students in the GIS concentration will develop a strong foundation in environmental problem solving that is linked to geospatial data acquisition and management, computer-based GIS technologies, and advanced geospatial analysis. GIS is a key emerging industry in the U.S. today and job growth is rapidly expanding. GIS

specialists work in many areas, including research and analysis in resource and environmental management, biology, sociology, marine sciences, commercial business and marketing, and urban and regional planning.

The GIS concentration provides students within environmental studies majors with a set of foundational courses in introductory geospatial data management and visualization, information technology and software in GIS, and advanced geospatial analytical approaches for environmental applications. The program learning outcomes and student competencies that are achieved through the concentration include the successful development of basic geospatial technology skills and abilities, advanced geo-spatial data analysis abilities for environmental applications, enhanced understanding of scale, co-production of space, politics and power of representation, and the preparation of students for entry and mid-level careers as GIS specialists.

Global Environmental Justice Concentration

According to the United States Environmental Protection Agency (EPA), environmental justice is defined as ‘the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies.’ Today, environmental justice is a pillar of national environmental policy, with a swathe of laws and legislation that covers a wide range of sectors. It is a growing area in policy, advocacy and scholarship internationally, embracing topics as diverse as indigenous rights, gender equity and climate justice. In recent years, a parallel idea—of human rights and the environment—has emerged in legal and policy contexts. Environmental justice and human rights are thus among the fastest growing subjects in environmental public policy globally.

This concentration provides students within environmental studies majors with special depth of understanding of the issues and approaches central to global environmental justice. The global environmental justice concentration is premised on the assertion that the distribution of environmental problems reflects longstanding, uneven terrains of power and privilege, exploitation, and dispossession. Globalization and the fluidity of corporate capital, commodity chains and community campaigns require approaches that conceptualize the frictions between the local and global, legacies of colonialism, and multiplicity of responses—human and non-human—in the face of oppression, adaptation, and resistance. The inextricable interconnections between ecological and social degradation, and the social implications of efforts to remedy ecological degradation, are an intrinsic and important core of environmental studies.

Conservation Science and Policy Concentration

Effective conservation of biological diversity requires integrating principles of conservation biology and environmental policy. Conservation science is built on a foundation of natural history embedded into a framework of modern ecological theory. Conservation policy reflects social values and provides the economic and legislative tools to achieve desired goals surrounding the conservation of species and ecosystems. The purpose of the conservation science and policy concentration is to provide students within environmental studies majors with the depth and necessary skills in natural history, conservation biology, and environmental policy to effectively engage in this intrinsically interdisciplinary field. Students completing this concentration will be prepared for positions with government agencies and conservation organizations concerned with biodiversity conservation and ecosystem management.

The concentration requires upper-division core courses in both natural and social science aspects of conservation, as well as a field-based course in ecology, natural history, or conservation. The field-based course is important because effective work in the conservation field requires a deep understanding of natural ecosystems. This is best learned through immersive, experiential field courses that develop a natural history-based understanding of ecosystems as well as how to ask and answer critical ecological and conservation questions.

GRADUATE PROGRAM

Environmental Studies Ph.D. Program

Established in 1994, the doctoral program* in the Department of Environmental Studies at UC Santa Cruz emphasizes close faculty-student interactions, department-wide intellectual exchange, and cross-discipline innovation. The goal of our Ph.D. program is to develop exceptional individuals with strong foundations in their own fields, and the ability to work with those in other relevant specialties.

The program draws from two main areas: ecology and social science. These are historically independent fields and UCSC's Environmental Studies program is one of the first to link them.

Graduates of the Environmental Studies Doctoral Program at UC Santa Cruz are expected to be informed in conservation biology, global change ecology, agroecology, environmental policy, and political economy of the environment. Our students have deep intellectual strength in their area of specialty, and make substantial contributions toward the understanding of an environmental problem.

Please contact our Graduate Program coordinator with any questions or inquiries you may have.

Designated Emphasis

The Designated Emphasis is the equivalent of a “minor” for doctoral study. It will provide you with a framework for in-depth study in specialized fields in your area, and an opportunity for recognition of particular scholarly expertise.

Discuss your intention to declare the Environmental Studies Designated Emphasis with your primary advisor and the Graduate Program coordinator, in your primary Ph.D. program.

Please see this page for information about the Designated Emphasis in Environmental Studies.

**Our program is doctoral only, we do not offer a terminal master's degree at our program.*

ENVIRONMENTAL STUDIES B.A.

Information and Policies

Introduction

The environmental studies major provides an interdisciplinary approach to learning how to move toward a more sustainable future for human and ecological systems. Courses in environmental studies provide training not only in the physical, biological, and social sciences, but also in writing, critical thinking, quantitative analysis, project and team management, and more. Most students extend their learning outside the classroom through the departmental internship program.

The major is available either without a concentration or in conjunction with one of three more specialized concentrations that provide depth in particular areas of expertise. See the Undergraduate Program page for a description of each of the concentrations offered.

Program Learning Outcomes

Students graduating with a B.A. degree in environmental studies will be able to:

- Identify the societal (social, political, economic and ethical) agents and structures that contribute to environmental change. (social science competency)
- Describe the structure and functioning of major physical and ecological components of the earth's systems. (natural science competency)
- Access and analyze a complex literature addressing specific topics in environmental studies, and evaluate the usefulness and limitations of individual sources of information. (analytic thinking)

- Demonstrate effective oral and written communication skills. (communication skills).

Academic Advising for the Program

Advising is one way to make the most of your university experience. The advising system at the University of California, Santa Cruz, is amazing, and we encourage you to use it often. Ask questions, seek advice, and make decisions that work best for you.

To receive advising for this major, contact envsadv@ucsc.edu. Additional information for prospective transfer students can be found in the Transfer Information and Policy section.

Getting Started in the Major: Frosh

This is a course-intensive and/or sequential program, and students who intend to pursue this major must begin taking classes for the major in their first year at UC Santa Cruz. Math placement is required for one or more of the foundational courses for this major. For more information, please review the Math Placement website. Language placement is not required for the major.

Transfer Information and Policy

Transfer Admission Screening Policy

Students who apply for transfer admission to the major are required to have taken the equivalents of the following courses with a C grade (2.0) or better by the end of the spring term for students planning to enter in the fall.

One of the following:

ENVS 23 or a general chemistry course

Plus one of the following:

ENVS 24	General Ecology	5
BIOE 20C	Ecology and Evolution	5

Plus one of the following:

AM 3	Precalculus for the Social Sciences	5
AM 11A	Mathematical Methods for Economists I	5
AM 11B	Mathematical Methods for Economists II	5
MATH 3	Precalculus	5
MATH 11A	Calculus with Applications	5
MATH 11B	Calculus with Applications	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 22	Introduction to Calculus of Several Variables	5

MATH 23A	Vector Calculus	5
----------	-----------------	---

Plus one of the following options:

Either this course:

ENVS 25	Environmental Policy and Economics	5
---------	------------------------------------	---

Or these courses:

ECON 2 and a course in national or international politics

Or these courses:

ECON 1 and a course in national or international politics

GPA Requirement

To be considered for admission in the environmental studies majors, transfer students must pass the screening policy courses or its equivalents with a C grade (2.0) or better.

Recommended Courses

In addition, the following courses are recommended prior to transfer to ensure timely graduation.

SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5
ANTH 2	Introduction to Cultural Anthropology	5
PHIL 22	Introduction to Ethical Theory	5
PHIL 24	Introduction to Ethics: Contemporary Moral Issues	5
PHIL 28	Environmental Ethics	5
BME 80G	Bioethics in the 21st Century: Science, Business, and Society	5

General Education Courses (GEs)

Prospective students are also encouraged to complete the Intersegmental General Education Transfer Curriculum (IGETC) or to complete all UC Santa Cruz general education requirements before matriculation.

Getting Started in the Major: Transfer Students

Transfer students pursuing environmental studies majors are encouraged to transfer in the fall quarter.

Transfer students should enroll in STAT 7 & STAT 7L during the summer or fall quarter in order to take ENVS 100 & ENVS 100L in winter or spring quarter of their first year. Transfer students who have completed the screening requirements listed above can formally declare their major once STAT 7 and STAT 7L are completed. Transfer students can formally declare their major once qualification courses are successfully

completed, following the steps in How to Declare a Major given above.

ENVS 25 and CHEM 1A are usually offered during Summer Session at UC Santa Cruz, and transfer students are encouraged to take these classes if they have not yet completed a substitute requirement or if they want a better understanding of the relevant material. If you are transferring, compare catalog descriptions, consult your current institution's advisor, and refer to the ASSIST website to determine equivalency. Prospective transfer students should review the transfer information.

Students who are proposed in a different major and have advanced standing when they come to UCSC require permission from the department to change into the major. Contact envsadvi@ucsc.edu to request permission.

Major Qualification Policy and Declaration Process

Major Qualification

To qualify for the environmental studies major, students must complete the specific courses listed below, or their approved equivalents.

For transfer requirements see Transfer Admission Screening Requirements. Transfer students must have ENVS major listed on their application in order to pursue the major, unless approved by appeal. If a student has questions about the appeals process, they should contact envsadvi@ucsc.edu.

One of the following:

ENVS 23	The Physical and Chemical Environment	5
CHEM 1A	General Chemistry	5

Plus one of the following:

ENVS 24	General Ecology	5
BIOE 20C	Ecology and Evolution	5

Plus all of the following:

STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2
ENVS 25	Environmental Policy and Economics	5

Determining qualification

- Students who complete all the qualification courses with a grade of P, or letter grade of C or better are qualified to declare the major.
- Students who have received one grade of NP, C-, D+, D, D-, or F in one of the qualification courses taken at UC Santa Cruz will only be

qualified to declare the major after successfully completing the same or an equivalent course with a grade of P, or letter grade of C or better.

- Students with two or more grades of NP, C-, D+, D, D-, or F in the qualification courses taken at UC Santa Cruz are not qualified to declare the major.
- Students with AP credit (score of 3 or higher) for any of the qualification course(s) are qualified to declare after successfully completing the remaining qualification courses.
- Students must attend an Environmental Studies Department declaration workshop when requesting to declare the major.

Appeal Process

Students who are not qualified to declare the major may appeal this decision by submitting an appeal to qualify for the major within 15 days of the denial of the declaration. Within 15 days of receipt of the appeal, the department will notify the student and college of the decision. If a student has questions about the appeals process, they should contact envsadvi@ucsc.edu.

How to Declare a Major

All students are required to attend one declaration workshop offered during the first three weeks of the quarter they are eligible to declare. Before students attend declaration workshops, they should check to see if they are eligible to declare using the major qualification page. Students wishing to declare within the Environmental Studies Department should visit the Environmental Studies Department website and follow the steps listed in the "how to declare" tab. Degree requirement sheets may be downloaded from the Environmental Studies Undergraduate Program Requirements page.

Letter Grade Policy

This program does not have a letter grade policy, except that the comprehensive requirement must be taken for a letter grade.

Course Substitution Policy

Single environmental studies students can petition up to two upper-division courses to count toward the single environmental studies major requirements. These two substitutions courses may be the following:

- Pre-approved substitution courses: You may enroll into this list of courses (p. 690) without petition to substitute for up to two ENVS electives.
- By petition: You may petition to substitute courses taken outside of ENVS and/or UC Santa Cruz such as: other institutions, other

departments, courses not listed on the pre-approved substitution list, other programs including Educational Abroad Program (EAP), Wildlands Studies, or the Sierra Institute. Please review the petitioning process here.

Double Majors and Major/Minor Combinations Policy

Study Abroad

Students in environmental studies are encouraged to participate in Study Abroad programs and other off-campus programs. Students who are interested in these programs shall note the following policies:

- Students who are planning to take part in Study Abroad programs must be declared in their major prior to studying abroad.
- Students must have their courses they plan to take abroad reviewed and approved by Environmental Studies Advising.
- Single environmental studies majors may petition to substitute up to two courses taken abroad to count toward the environmental studies upper-division electives. Combined environmental studies majors cannot petition for substitution. Please review the petitioning process here prior to your EAP program.
- For more information on EAP, please visit the UC Education Abroad Program website.

Honors

Departmental Honors. Students must have a 3.5 grade point average (GPA) in all courses used to satisfy the environmental studies upper-division requirements. To be considered for departmental honors, students are limited to no more than one grade of P in those upper-division courses.

Senior Comprehensive Honors. Only applicable to a senior thesis, senior internship, or individual work in a senior seminar. Honors must be awarded by the student's faculty sponsor, and a second faculty member (chosen by the student's faculty advisor) must concur.

Highest Departmental Honors. Students must have a 3.75 grade point average (GPA) in all courses used to satisfy the environmental studies upper-division requirements and must also receive senior comprehensive honors (see above). To be considered for highest departmental honors, students are limited to no more than one grade of P in those upper-division courses.

Major Without a Concentration

Course Requirements

Continuing students must complete all lower-division course requirements before taking ENVS 100 and ENVS 100L.

Lower-Division Courses

One of the following courses

ENVS 23	The Physical and Chemical Environment	5
CHEM 1A	General Chemistry	5

Plus one of the following courses

ENVS 24	General Ecology	5
BIOE 20C	Ecology and Evolution	5

Plus the following course:

ENVS 25	Environmental Policy and Economics	5
---------	------------------------------------	---

Plus one of the following options:

One of the following courses

AM 3	Precalculus for the Social Sciences	5
AM 11A	Mathematical Methods for Economists I	5
AM 11B	Mathematical Methods for Economists II	5
MATH 3	Precalculus	5
MATH 11A	Calculus with Applications	5
MATH 11B	Calculus with Applications	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 22	Introduction to Calculus of Several Variables	5
MATH 23A	Vector Calculus	5

Or take a placement exam:

Take the Math Placement Exam (MPE) with a score of 300 or higher or take the AP Calculus exam with a score of 3 or higher

Plus all of the following

STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2

Plus one introductory course in sociology, cultural anthropology, or ethics

Choose one of the following:

ANTH 2	Introduction to Cultural Anthropology	5
BME 80G	Bioethics in the 21st Century: Science, Business, and Society	5
PHIL 22	Introduction to Ethical Theory	5
PHIL 24	Introduction to Ethics: Contemporary Moral Issues	5
PHIL 28	Environmental Ethics	5
SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5

Upper-Division Courses

Students are required to complete the following upper-division courses:

ENVS 100	Ecology and Society	3
ENVS 100L	Ecology and Society Writing Laboratory	5

Environmental studies core course is offered twice yearly during the winter and spring quarters.

Electives

A total of seven upper-division electives (environmental studies courses numbered ENVS 101 through ENVS 179) must be completed. One course must be from the list below of upper-division courses based on natural sciences, and one course must be from the list below of upper-division courses based on the social sciences.

A list of all courses offered by the Environmental Studies Department is available in the courses section of the catalog (p. **Error! Bookmark not defined.**). A list of which upper-division courses offered in the current year by the Environmental Studies Department are based in the natural sciences and which in the social sciences is available on the department website.

Lecture/lab combinations count as one course.

Courses based on natural sciences

ENVS 104A	Introduction to Environmental Field Methods	5
ENVS 104L	Field Methods Laboratory	2
ENVS 106A	Natural History of Birds	5
ENVS 107A	Natural History Field Quarter	5
ENVS 107B	Natural History Field Quarter	5
ENVS 107C	Natural History Field Quarter	5
ENVS 108	General Entomology	5
ENVS 108L	General Entomology Laboratory	3

BIOE 151A	Ecology and Conservation in Practice Supercourse: Ecological Field Methods	5
BIOE 151B	Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory	5
BIOE 151C	Ecology and Conservation in Practice Supercourse: Functions and Processes of Terrestrial Ecosystems	5
BIOE 151D	Ecology and Conservation in Practice Supercourse: Conservation in Practice	4
ENVS 120	Conservation Biology	5
ENVS 121	Landscape Ecology	5
ENVS 122	Tropical Ecology and Conservation	5
ENVS 123	Animal Ecology and Conservation	5
BIOE 125	Ecosystems of California	5
ENVS 129	Integrated Pest Management	5
ENVS 129L	Integrated Pest Management Laboratory	2
ENVS 130A	Agroecology and Sustainable Agriculture	5
ENVS 130L	Agroecology and Sustainable Agriculture Laboratory	2
ENVS 130C	Field Experiences in Agroecology and Sustainable Food	5
ENVS 131	Insect Ecology	5
ENVS 133	Agroecology Practicum	5
ENVS 138	Field Ethnobotany	5
ENVS 160	Restoration Ecology	5
ENVS 161A	Soils and Plant Nutrition	5
ENVS 162	Plant Physiological Ecology	5
ENVS 162L	Plant Physiological Ecology Laboratory	2
ENVS 163	Plant Disease Ecology	5
ENVS 163L	Plant Disease Ecology Lab	2
ENVS 164	Projects and Practices in Soil Ecology	5
ENVS 166	Agroecosystem Analysis and Watershed Management	5
ENVS 167	Freshwater and Wetland Ecology	5
ENVS 167L	Freshwater and Wetland Ecology Lab	2
ENVS 168	Biogeochemistry and the Global Environment	5
ENVS 169	Climate Change Ecology	5
ENVS 170	Agriculture and Climate Change	5

Courses based on the social sciences

ENVS 110	Institutions, the Environment, and Economic Systems	5
ENVS 130B	Justice and Sustainability in Agriculture	5
ENVS 140	National Environmental Policy	5
ENVS 141	Ecological Economics	5
ENVS 143	Sustainable Development: Economy, Policy, and Environment	5
ENVS 144	Global Climate Change Politics	5
ENVS 145	Green Cities	5
ENVS 146	Water Quality: Policy, Regulation, and Management	5
ENVS 147	Global Environmental Justice	5
ENVS 149	Environmental Law and Policy	5
ENVS 150	Coastal and Marine Policy	5
ENVS 151	Environmental Assessment	5
ENVS 152	International Environmental Politics	5
ENVS 153	Globalization and the Environment: Trade Complements and Conflicts	5
ENVS 154	Amazonian Cultures and Conservation	5
ENVS 158	Political Ecology and Social Change	5
ENVS 165	Sustainable Water Systems	5
ENVS 172	Environmental Risks and Public Policy	5
ENVS 173	An Introduction to World Environmental History	5
ENVS 176	Vulnerability, Complex Systems, and Disasters	5

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. A primary goal of the environmental studies major is to train students who are able to critically analyze interdisciplinary environmental problems, justify their position on an issue, and communicate that position to a range of audiences verbally and in writing.

The DC requirement in environmental studies is satisfied by completing

ENVS 100	Ecology and Society	3
ENVS 100L	Ecology and Society Writing Laboratory	5

Plus one of the following

BIOE 151B	Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory	5
ENVS 183B	Senior Internship	5
ENVS 190	Capstone Course: Environmental Problem Solving	5
ENVS 195B	Senior Thesis Group	5
ENVS 196	Senior Seminar	5

ENVS 183B and ENVS 195B are usually taken after successfully completing ENVS 183A and ENVS 195A respectively.

Comprehensive Requirement

The senior comprehensive may be satisfied by completing one of the options listed below. All courses used to satisfy the senior comprehensive requirement must be taken for a letter grade.

Before enrolling in the senior thesis or senior internship option, students must formally apply to work with a particular faculty mentor very early in their thesis or project preparation. The senior thesis and senior internship option require careful planning, additional independent research, and at least a two-quarter commitment.

Students with advanced skills in one of the graduate focal areas may also take a graduate seminar by invitation from the instructor.

Either this course		
BIOE 151B	Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory	5
or these courses		
ENVS 183A	Senior Internship	5
ENVS 183B	Senior Internship	5
or this course		
ENVS 190	Capstone Course: Environmental Problem Solving	5
or these courses		
ENVS 195A	Senior Research	5
ENVS 195B	Senior Thesis Group	5
or this course		
ENVS 196	Senior Seminar	5

ENVS 190 is offered in the spring and summer.

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements (p. **Error! Bookmark not defined.**) for more information.

The following are two sample academic plans for students pursuing the environmental studies B.A. major without a concentration. Plan One is for incoming frosh and Plan Two is for incoming transfer students.

Plan One for Incoming Frosh

	Fall	Winter	Spring
1st (frosh)	MAT H 3 or A M 3	SOC/ANTH/P HIL course ENVS 25	ENVS 23 or CHEM 1A
2nd (soph)	ENV S 24 or BIOE 20C STA T 7 & STA T 7L	ENVS 100 & ENVS 100L*	Upper-division ENVS
3rd (junior)	Upper-division ENV S (social science)	Upper-division ENVS (natural science)	Upper-division ENVS
4th (senior)	Upper-division ENV S	Upper-division ENVS	Upper-division ENVS Comprehensive requirement

*This course is also offered in the spring term.

Students completing this major will have satisfied the SI, IN, PE-E, IS, and PR-E general education requirements. In addition, they will need to fulfill all remaining university, college, and general education requirements.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must take ENVS 195A (thesis) or ENVS 183A (internship) in the quarter before completing ENVS 195B (thesis) or ENVS 183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

Plan Two for Incoming Transfer Students

	Fall	Winter	Spring
3rd (junior)	STAT 7 & STAT 7L	ENVS 100 & ENVS 100L* Upper-division ENVS	Upper-division ENVS (social science)
4th (senior)	Upper-division ENVS Upper-division ENVS	Upper-division ENVS (natural science)	Comprehensive requirement

*This course is also offered in the spring term.

This planner assumes that a student has completed all required lower-division courses—including UCSC or community college general education requirements—with the exception of STAT 7 and STAT 7L, which is only offered at UC Santa Cruz.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must take ENVS 195A (thesis) or ENVS 183A (internship) in the quarter before completing ENVS 195B (thesis) or ENVS 183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

A transfer student who has completed the requirements for the Intersegmental General Education Transfer Curriculum (IGETC) before matriculating at UC Santa Cruz, with at most two course requirements left to complete, is allowed to satisfy IGETC in lieu of the UCSC general education requirements.

Geographic Information Systems Concentration

Course Requirements

Continuing students must complete all lower-division courses before taking ENVS 100 & ENVS 100L.

Lower-Division Courses**One of the following**

CHEM 1A	General Chemistry	5
ENVS 23	The Physical and Chemical Environment	5

Plus one of the following courses

ENVS 24	General Ecology	5
BIOE 20C	Ecology and Evolution	5

Plus the following

ENVS 25	Environmental Policy and Economics	5
---------	---------------------------------------	---

Plus one of the following**One of the following**

AM 3	Precalculus for the Social Sciences	5
AM 11A	Mathematical Methods for Economists I	5
AM 11B	Mathematical Methods for Economists II	5
MATH 3	Precalculus	5
MATH 11A	Calculus with Applications	5
MATH 11B	Calculus with Applications	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 22	Introduction to Calculus of Several Variables	5
MATH 23A	Vector Calculus	5

Or take a placement exam

Take the Math Placement Exam (MPE) with a score of 300 or higher or take the AP Calculus exam with a score of 3 or higher

Plus all of the following

STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2

**Plus one introductory course in sociology,
cultural anthropology, or ethics**

Students choose one of the following introductory courses in sociology, cultural anthropology, or ethics:

ANTH 2	Introduction to Cultural Anthropology	5
BME 80G	Bioethics in the 21st Century: Science, Business, and Society	5

PHIL 22	Introduction to Ethical Theory	5
PHIL 24	Introduction to Ethics: Contemporary Moral Issues	5
PHIL 28	Environmental Ethics	5
SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5

Upper-Division Courses

Students are required to complete the following upper-division courses:

All of the following

ENVS 100	Ecology and Society	3
ENVS 100L	Ecology and Society Writing Laboratory	5

Environmental studies core course is offered twice yearly during the winter and spring quarters.

Plus all of the following

ENVS 115A	Geographic Information Systems and Environmental Applications	5
ENVS 115L	Exercises in Geographic Information Systems	2
ENVS 115B	Intermediate Geographic Information Systems (GIS)	5
ENVS 115C	Advanced Geographic Information Systems	5

Electives

Four upper-division electives (environmental studies courses numbered ENVS 101 through ENVS 179).

One course must be from the list below of upper-division courses based on natural sciences, and one course must be from the list below of upper-division courses based on the social sciences.

Lecture and lab combinations count as a single course.

A list of all courses offered by the Environmental Studies Department is available in the courses section of the catalog (p. **Error! Bookmark not defined.**). A list of which upper-division courses offered in the current year by the Environmental Studies Department are based in the natural sciences and which in the social sciences is available on the department website.

In addition to coursework, it is strongly recommended that students complete at least one internship related to GIS applications environmental problem-solving (either upper- or lower-division).

Courses based on natural sciences

ENVS 104A	Introduction to Environmental Field Methods	5	ENVS 163L	Plant Disease Ecology Lab	2
ENVS 104L	Field Methods Laboratory	2	ENVS 164	Projects and Practices in Soil Ecology	5
ENVS 106A	Natural History of Birds	5	ENVS 166	Agroecosystem Analysis and Watershed Management	5
ENVS 107A	Natural History Field Quarter	5	ENVS 167	Freshwater and Wetland Ecology	5
ENVS 107B	Natural History Field Quarter	5	ENVS 167L	Freshwater and Wetland Ecology Lab	2
ENVS 107C	Natural History Field Quarter	5	ENVS 168	Biogeochemistry and the Global Environment	5
ENVS 108	General Entomology	5	ENVS 169	Climate Change Ecology	5
ENVS 108L	General Entomology Laboratory	3	ENVS 170	Agriculture and Climate Change	5
BIOE 151A	Ecology and Conservation in Practice Supercourse: Ecological Field Methods	5	Courses based on the social sciences		
BIOE 151B	Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory	5	ENVS 110	Institutions, the Environment, and Economic Systems	5
BIOE 151C	Ecology and Conservation in Practice Supercourse: Functions and Processes of Terrestrial Ecosystems	5	ENVS 130B	Justice and Sustainability in Agriculture	5
BIOE 151D	Ecology and Conservation in Practice Supercourse: Conservation in Practice	4	ENVS 140	National Environmental Policy	5
ENVS 120	Conservation Biology	5	ENVS 141	Ecological Economics	5
ENVS 121	Landscape Ecology	5	ENVS 143	Sustainable Development: Economy, Policy, and Environment	5
ENVS 122	Tropical Ecology and Conservation	5	ENVS 144	Global Climate Change Politics	5
ENVS 123	Animal Ecology and Conservation	5	ENVS 145	Green Cities	5
BIOE 125	Ecosystems of California	5	ENVS 146	Water Quality: Policy, Regulation, and Management	5
ENVS 129	Integrated Pest Management	5	ENVS 147	Global Environmental Justice	5
ENVS 129L	Integrated Pest Management Laboratory	2	ENVS 149	Environmental Law and Policy	5
ENVS 130A	Agroecology and Sustainable Agriculture	5	ENVS 150	Coastal and Marine Policy	5
ENVS 130L	Agroecology and Sustainable Agriculture Laboratory	2	ENVS 151	Environmental Assessment	5
ENVS 130C	Field Experiences in Agroecology and Sustainable Food	5	ENVS 152	International Environmental Politics	5
ENVS 131	Insect Ecology	5	ENVS 153	Globalization and the Environment: Trade Complements and Conflicts	5
ENVS 133	Agroecology Practicum	5	ENVS 154	Amazonian Cultures and Conservation	5
ENVS 138	Field Ethnobotany	5	ENVS 158	Political Ecology and Social Change	5
ENVS 160	Restoration Ecology	5	ENVS 165	Sustainable Water Systems	5
ENVS 161A	Soils and Plant Nutrition	5	ENVS 172	Environmental Risks and Public Policy	5
ENVS 162	Plant Physiological Ecology	5	ENVS 173	An Introduction to World Environmental History	5
ENVS 162L	Plant Physiological Ecology Laboratory	2	ENVS 176	Vulnerability, Complex Systems, and Disasters	5
ENVS 163	Plant Disease Ecology	5			

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. A primary goal of the environmental studies major is to train students who are able to critically analyze interdisciplinary environmental problems, justify their position on an issue, and communicate that position to a range of audiences verbally and in writing.

The DC requirement in environmental studies is satisfied by completing

ENVS 100	Ecology and Society	3
ENVS 100L	Ecology and Society Writing Laboratory	5

Plus one of the following

ENVS 183B	Senior Internship	5
ENVS 195B	Senior Thesis Group	5
ENVS 196	Senior Seminar	5

ENVS 183B and ENVS 195B are usually taken after successfully completing ENVS 183A and ENVS 195A respectively.

Comprehensive Requirement

The senior comprehensive may be satisfied by completing one of the options listed below. All courses used to satisfy the senior comprehensive requirement must be taken for a letter grade. The topic engaged in the senior comprehensive courses must be relevant to the field of Geographic Information Systems. The relevance of the topic will be reviewed by the instructor of the senior comprehensive course.

Before enrolling in the senior thesis or senior internship option, students must formally apply to work with a particular faculty mentor very early in their thesis or project preparation. The senior thesis and senior internship options require careful planning, additional independent research, and at least a two-quarter commitment. The topic must be related to geographic information systems.

Either these courses

ENVS 183A	Senior Internship	5
ENVS 183B	Senior Internship	5

or these courses

ENVS 195A	Senior Research	5
ENVS 195B	Senior Thesis Group	5

or this course

ENVS 196	Senior Seminar	5
----------	----------------	---

ENVS 196 must be a topic related to geographic information systems

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit

requirements. See Undergraduate Graduation Requirements (p. **Error! Bookmark not defined.**) for more information.

The following are two sample academic plans for students pursuing the environmental studies B.A. major with a concentration in geographic information systems. Plan One is for incoming frosh and Plan Two is for incoming transfer students.

Plan One for Incoming Frosh

	Fall	Winter	Spring
1st (frosh)	MAT H 3 or AM 3	ENVS 25	ENVS 23 or CHEM 1A
		SOC/ANTH/P HIL course	
2nd (soph)	ENV S 24 or BIOE 20C STAT 7 & STAT 7L	ENVS 100 & ENVS 100L*	ENVS upper-division
3rd (junior)	ENV S 115A & ENV S 115L	ENVS 115B	ENVS 115C
4th (senior)	ENV S upper-division (social science)	ENVS upper-division (natural science)	ENVS upper-division
			Comprehensive requirement

*This course is also offered in the spring term.

This planner assumes that a student has placed into MATH 3 or AM 3.

Students completing this major will have satisfied SI, IN, PE-E, IS, and PR-E general education requirements. In addition, they will need to fulfill all remaining university, college, and general education requirements.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must take ENVS 195A (thesis) or ENVS 183A (internship) in the quarter before completing ENVS 195B (thesis) or ENVS 183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

Plan Two for Incoming Transfer Students

	Fall	Winter	Spring
1st (junior)	STAT 7 & STAT 7L	ENVS 100 & ENVS 100L* ENVS upper- division (social science)	ENVS upper- division (natural science)
2nd (senior)	ENVS 115A & ENVS 115L	ENVS 115B ENVS upper- division	ENVS 115C Comprehensive requirement

*This course is also offered in the spring term.

This planner assumes that a student has completed all required lower division courses—including UCSC or community college General Education requirements—with the exception of STAT 7 & STAT 7L, which is only offered at UC Santa Cruz.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must take ENVS 195A (thesis) or ENVS 183A (internship) in the quarter before completing ENVS 195B (thesis) or ENVS 183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

A transfer student who has completed the requirements for the Intersegmental General Education Transfer Curriculum (IGETC) before matriculating at UC Santa Cruz, with at most two course requirements left to complete, is allowed to satisfy IGETC in lieu of the UCSC general education requirements.

Global Environmental Justice Concentration

Course Requirements

Continuing students must complete all lower-division courses before taking ENVS 100 & ENVS 100L.

Lower-Division Courses

One of the following

CHEM 1A	General Chemistry	5
ENVS 23	The Physical and Chemical Environment	5

Plus one of the following courses

ENVS 24	General Ecology	5
BIOE 20C	Ecology and Evolution	5

Plus the following

ENVS 25	Environmental Policy and Economics	5
---------	---------------------------------------	---

Plus one of the following

One of the following

AM 3	Precalculus for the Social Sciences	5
AM 11A	Mathematical Methods for Economists I	5
AM 11B	Mathematical Methods for Economists II	5
MATH 3	Precalculus	5
MATH 11A	Calculus with Applications	5
MATH 11B	Calculus with Applications	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 22	Introduction to Calculus of Several Variables	5
MATH 23A	Vector Calculus	5

Or take a placement exam

Take the Math Placement Exam (MPE) with a score of 300 or higher or take the AP Calculus exam with a score of 3 or higher

Plus all of the following

STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2

Plus one introductory course in sociology, cultural anthropology, or ethics

Students choose one of the following introductory courses in sociology, cultural anthropology, or ethics:

ANTH 2	Introduction to Cultural Anthropology	5
BME 80G	Bioethics in the 21st Century: Science, Business, and Society	5

PHIL 22	Introduction to Ethical Theory	5
PHIL 24	Introduction to Ethics: Contemporary Moral Issues	5
PHIL 28	Environmental Ethics	5
SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5

Upper-Division Courses

Students are required to complete the following upper-division courses:

All of the following

ENVS 100	Ecology and Society	3
ENVS 100L	Ecology and Society Writing Laboratory	5

Environmental studies core course is offered twice yearly during the winter and spring quarters.

Plus one of the following

ENVS 147	Global Environmental Justice	5
ENVS 172	Environmental Risks and Public Policy	5

Plus one of the following

ENVS 158	Political Ecology and Social Change	5
ENVS 173	An Introduction to World Environmental History	5

Plus two of the following

No duplicate courses from lists above.

ENVS 130B	Justice and Sustainability in Agriculture	5
ENVS 140	National Environmental Policy	5
ENVS 143	Sustainable Development: Economy, Policy, and Environment	5
ENVS 147	Global Environmental Justice	5
ENVS 154	Amazonian Cultures and Conservation	5
ENVS 158	Political Ecology and Social Change	5
ENVS 172	Environmental Risks and Public Policy	5
ENVS 173	An Introduction to World Environmental History	5
ENVS 176	Vulnerability, Complex Systems, and Disasters	5
JRLC 135	Apprenticeship in Community Engaged Research	5
SOCY 185	Environmental Inequality	5

Electives

Three upper-division electives (environmental studies courses numbered ENVS 101 – ENVS 179).

One course must be from the list below of upper division courses based on natural sciences.

Lecture and lab combinations count as a single course.

A list of all courses offered by the Environmental Studies Department is available in the courses section of the catalog (p. **Error! Bookmark not defined.**). A list of which upper-division courses offered in the current year by the Environmental Studies Department are based in the natural sciences and which in the social sciences is available on the department website.

Courses based on natural sciences

ENVS 104A	Introduction to Environmental Field Methods	5
ENVS 104L	Field Methods Laboratory	2
ENVS 106A	Natural History of Birds	5
ENVS 107A	Natural History Field Quarter	5
ENVS 107B	Natural History Field Quarter	5
ENVS 107C	Natural History Field Quarter	5
ENVS 108	General Entomology	5
ENVS 108L	General Entomology Laboratory	3
BIOE 151A	Ecology and Conservation in Practice Supercourse: Ecological Field Methods	5
BIOE 151B	Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory	5
BIOE 151C	Ecology and Conservation in Practice Supercourse: Functions and Processes of Terrestrial Ecosystems	5
BIOE 151D	Ecology and Conservation in Practice Supercourse: Conservation in Practice	4
ENVS 120	Conservation Biology	5
ENVS 121	Landscape Ecology	5
ENVS 122	Tropical Ecology and Conservation	5
ENVS 123	Animal Ecology and Conservation	5
BIOE 125	Ecosystems of California	5
ENVS 129	Integrated Pest Management	5
ENVS 129L	Integrated Pest Management Laboratory	2
ENVS 130A	Agroecology and Sustainable Agriculture	5

ENVS 130L	Agroecology and Sustainable Agriculture Laboratory	2
ENVS 130C	Field Experiences in Agroecology and Sustainable Food	5
ENVS 131	Insect Ecology	5
ENVS 133	Agroecology Practicum	5
ENVS 138	Field Ethnobotany	5
ENVS 160	Restoration Ecology	5
ENVS 161A	Soils and Plant Nutrition	5
ENVS 162	Plant Physiological Ecology	5
ENVS 162L	Plant Physiological Ecology Laboratory	2
ENVS 163	Plant Disease Ecology	5
ENVS 163L	Plant Disease Ecology Lab	2
ENVS 164	Projects and Practices in Soil Ecology	5
ENVS 166	Agroecosystem Analysis and Watershed Management	5
ENVS 167	Freshwater and Wetland Ecology	5
ENVS 167L	Freshwater and Wetland Ecology Lab	2
ENVS 168	Biogeochemistry and the Global Environment	5
ENVS 169	Climate Change Ecology	5
ENVS 170	Agriculture and Climate Change	5

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. A primary goal of the environmental studies major is to train students who are able to critically analyze interdisciplinary environmental problems, justify their position on an issue, and communicate that position to a range of audiences verbally and in writing.

The DC requirement in environmental studies is satisfied by completing

ENVS 100	Ecology and Society	3
ENVS 100L	Ecology and Society Writing Laboratory	5

Plus one of the following

ENVS 183B	Senior Internship	5
ENVS 190	Capstone Course: Environmental Problem Solving	5
ENVS 195B	Senior Thesis Group	5
ENVS 196	Senior Seminar	5

ENVS 183B and ENVS 195B are usually taken after successfully completing ENVS 183A and ENVS 195A respectively.

Comprehensive Requirement

The senior comprehensive may be satisfied by completing one of the options listed below. All courses used to satisfy the senior comprehensive requirement must be taken for a letter grade. The topic engaged in the senior comprehensive courses must be relevant to the field of global environmental justice.

Before enrolling in the senior thesis or senior internship option, students must formally apply to work with a particular faculty mentor very early in their thesis or project preparation. The senior thesis and senior internship options require careful planning, additional independent research, and at least a two-quarter commitment. The topic must be related to global environmental justice.

Either these courses

ENVS 183A	Senior Internship	5
ENVS 183B	Senior Internship	5
or this course		
ENVS 190	Capstone Course: Environmental Problem Solving	5

or these courses

ENVS 195A	Senior Research	5
ENVS 195B	Senior Thesis Group	5
or this course		
ENVS 196	Senior Seminar	5

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements (p. **Error! Bookmark not defined.**) for more information.

The following are two sample academic plans for students pursuing the environmental studies B.A. major with a concentration in global environmental justice. Plan One is for incoming frosh and Plan Two is for incoming transfer students.

Plan One for Incoming Frosh

	Fall	Winter	Spring
1st (frosh)	MAT H 3 or AM 3	ENVS 25	ENVS 23 or CHEM 1A
		SOC/ANTH/P HIL course	

2nd (soph) ENV S 24 or BIOE 20C STAT 7 & STAT 7L

3rd (junior) ENV S 158 or ENV S 173

4th (senior) ENV S upper-division (natural science)

*This course is also offered in the spring term.

Students completing this major will have satisfied SI, IN, PE-E, IS, IN, and PR-E general education requirements. In addition, they will need to fulfill all remaining university, college, and general education requirements.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must take ENV S 195A (thesis) or ENV S 183A (internship) in the quarter before completing ENV S 195B (thesis) or ENV S 183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

Plan Two for Incoming Transfer Students

	Fall	Winter	Spring
1st (junior)	STAT 7 & STAT 7L	ENV S 100 & ENV S 100L*	ENV S upper-division (concentration elective)
		ENV S 147 or ENV S 172	
2nd	ENV S	ENV S	ENV S

(senior)	158 or ENV S 173	upper-division (concentration elective)	upper-division
	ENV S upper-division (natural science)	ENV S upper-division	Comprehensive requirement

*This course is also offered in the spring term.

This planner assumes that a student has completed all required lower division courses—including UCSC or community college general education requirements—with the exception of STAT 7 & STAT 7L, which is only offered at UC Santa Cruz.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must take ENV S 195A (thesis) or ENV S 183A (internship) in the quarter before completing ENV S 195B (thesis) or ENV S 183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

A transfer student who has completed the requirements for the Intersegmental General Education Transfer Curriculum (IGETC) before matriculating at UC Santa Cruz, with at most two course requirements left to complete, is allowed to satisfy IGETC in lieu of the UCSC general education requirements.

Conservation Science and Policy Concentration

Course Requirements

Continuing students are required to complete all six lower-division courses before taking ENV S 100 & ENV S 100L. Five of the lower-division courses are preset and are listed below. See the course descriptions for more specific information.

Lower-Division Courses

One of the following

CHEM 1A	General Chemistry	5
ENV S 23	The Physical and Chemical Environment	5

Plus one of the following courses

ENV S 24	General Ecology	5
BIOE 20C	Ecology and Evolution	5

Plus the following

ENV S 25	Environmental Policy and Economics	5
----------	------------------------------------	---

Plus one of the following**One of the following**

AM 3	Precalculus for the Social Sciences	5
AM 11A	Mathematical Methods for Economists I	5
AM 11B	Mathematical Methods for Economists II	5
MATH 3	Precalculus	5
MATH 11A	Calculus with Applications	5
MATH 11B	Calculus with Applications	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 22	Introduction to Calculus of Several Variables	5
MATH 23A	Vector Calculus	5

Or take a placement exam

Take the Math Placement Exam (MPE) with a score of 300 or higher or take the AP Calculus exam with a score of 3 or higher

Plus all of the following

STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2

Plus one introductory course in sociology, cultural anthropology, or ethics

Students choose one of the following introductory courses in sociology, cultural anthropology, or ethics:

ANTH 2	Introduction to Cultural Anthropology	5
BME 80G	Bioethics in the 21st Century: Science, Business, and Society	5
PHIL 22	Introduction to Ethical Theory	5
PHIL 24	Introduction to Ethics: Contemporary Moral Issues	5
PHIL 28	Environmental Ethics	5
SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5

Upper-Division Courses

Students are required to complete the following upper-division courses:

All of the following

ENVS 100	Ecology and Society	3
ENVS 100L	Ecology and Society Writing Laboratory	5

Environmental studies core course is offered twice yearly during the winter and spring quarters.

Plus one of the following

ENVS 120	Conservation Biology	5
ENVS 160	Restoration Ecology	5

Plus one of the following

ENVS 140	National Environmental Policy	5
ENVS 150	Coastal and Marine Policy	5

Plus two of the following

No duplicate courses from lists above.

Lecture/lab combinations count as a single course.

ENVS 110	Institutions, the Environment, and Economic Systems	5
ENVS 115A	Geographic Information Systems and Environmental Applications	5
ENVS 115L	Exercises in Geographic Information Systems	2
ENVS 120	Conservation Biology	5
ENVS 121	Landscape Ecology	5
ENVS 122	Tropical Ecology and Conservation	5
ENVS 123	Animal Ecology and Conservation	5
ENVS 140	National Environmental Policy	5
ENVS 141	Ecological Economics	5
ENVS 146	Water Quality: Policy, Regulation, and Management	5
ENVS 149	Environmental Law and Policy	5
ENVS 150	Coastal and Marine Policy	5
ENVS 151	Environmental Assessment	5
ENVS 160	Restoration Ecology	5
ENVS 165	Sustainable Water Systems	5
ENVS 167	Freshwater and Wetland Ecology	5

Field course

One of the following options:

One of the following field courses

ENVS 104A	Introduction to Environmental Field Methods	5
ENVS 104L	Field Methods Laboratory	2

ENVS 107A	Natural History Field Quarter	5
ENVS 107B	Natural History Field Quarter	5
ENVS 107C	Natural History Field Quarter	5
BIOE 114L	Field Methods in Herpetological Research	2
BIOE 128L	Large Marine Vertebrates Field Course	5
BIOE 141L	Behavioral Ecology Field Course	5
BIOE 145L	Field Methods in Plant Ecology	5
BIOE 150L	Ecological Field Methods Laboratory	5
BIOE 151A	Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory	5
BIOE 151B	Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory	5
BIOE 151C	Ecology and Conservation in Practice Supercourse: Functions and Processes of Terrestrial Ecosystems	5
BIOE 151D	Ecology and Conservation in Practice Supercourse: Conservation in Practice	4
BIOE 161L	Kelp Forest Ecology Laboratory	5

The ENVS 104A & ENVS 104L lecture/lab combination counts as a single course.

Or UCNRS field course

Or a University of California Natural Reserve System (UCNRS) California Ecology and Conservation Field Course

Electives

Two upper-division electives (environmental studies courses numbered ENVS 101 – ENVS 179).

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. A primary goal of the environmental studies major is to train students who are able to critically analyze interdisciplinary environmental problems, justify their position on an issue, and communicate that position to a range of audiences verbally and in writing.

The DC requirement in environmental studies is satisfied by completing

ENVS 100	Ecology and Society	3
ENVS 100L	Ecology and Society Writing Laboratory	5

Plus one of the following

BIOE 151B	Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory	5
ENVS 183B	Senior Internship	5
ENVS 190	Capstone Course: Environmental Problem Solving	5
ENVS 195B	Senior Thesis Group	5
ENVS 196	Senior Seminar	5

ENVS 183B and ENVS 195B are usually taken after successfully completing ENVS 183A and ENVS 195A respectively.

Comprehensive Requirement

The senior comprehensive may be satisfied by completing one of the options listed below. All courses used to satisfy the senior comprehensive requirement must be taken for a letter grade. The topic engaged in senior comprehensive courses must be relevant to the field of conservation science and policy. The relevance of the topic will be reviewed by the instructor of the senior comprehensive course.

Before enrolling in the senior thesis or senior internship option, students must formally apply to work with a particular faculty mentor very early in their thesis or project preparation. These courses require careful planning, additional independent research, and at least a two-quarter commitment. The topic must be related to conservation science and policy.

Either this course		
BIOE 151B	Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory	5
or these courses		
ENVS 183A	Senior Internship	5
ENVS 183B	Senior Internship	5
or this course		
ENVS 190	Capstone Course: Environmental Problem Solving	5
or these courses		
ENVS 195A	Senior Research	5
ENVS 195B	Senior Thesis Group	5
or this course		
ENVS 196	Senior Seminar	5

ENVS 196 must be a topic related to conservation science and policy.

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements (p. **Error! Bookmark not defined.**) for more information.

The following are two sample academic plans for students pursuing the environmental studies B.A. major with a concentration in conservation science and policy. Plan One is for incoming frosh and Plan Two is for incoming transfer students.

Plan One for Incoming Frosh

	Fall	Winter	Spring
1st (frosh)	MAT H 3 or AM 3	ENVS 25	ENVS 23 or CHEM 1A
		SOC/ANTH/P HIL course	
2nd (soph)	ENV S 24 or BIOE 20C STA T 7 & STA T 7L	ENVS 100 & ENVS 100L*	ENVS 140 or ENVS 150
3rd (junior)	ENV S 120 or ENV S 160	ENVS upper-division (concentration elective)	ENVS upper-division (concentration elective)
4th (senior)	ENV S upper-division	ENVS upper-division (field course)	ENVS upper-division
			Comprehensive requirement

*This course is also offered in the spring term.

Students completing this major will have satisfied SI, SR, IN, PE-E, IS, and PR-E general education requirements. In addition, they will need to fulfill all remaining university, college, and general education requirements.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must

take ENVS 195A (thesis) or ENVS 183A (internship) in the quarter before completing ENVS 195B (thesis) or ENVS 183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

Plan Two for Incoming Transfer Students

	Fall	Winter	Spring
1st (junior)	STAT 7 & STAT 7L	ENVS 100 & ENVS 100L*	ENVS 140 or ENVS 150
			ENVS upper-division (concentration elective)
2nd (senior)	ENVS 120 or ENVS 160	ENVS upper-division (concentration elective)	ENVS upper-division
	ENVS upper-division (field course)	ENVS upper-division	Comprehensive requirement

*This course is also offered in the spring term.

This planner assumes that a student has completed all required lower division courses—including UCSC or community college General Education requirements—with the exception of STAT 7 & STAT 7L, which is only offered at UC Santa Cruz.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must take ENVS 195A (thesis) or ENVS 183A (internship) in the quarter before completing ENVS 195B (thesis) or ENVS 183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

A transfer student who has completed the requirements for the Intersegmental General Education Transfer Curriculum (IGETC) before matriculating at UC Santa Cruz, with at most two course requirements left to complete, is allowed to satisfy IGETC in lieu of the UCSC general education requirements.

AGROECOLOGY B.A.

Information and Policies

Introduction

The agroecology major provides ecological concepts that can be applied to the development of sustainable agricultural systems. Students will develop their understanding of social, political, and economic aspects of agriculture. Students will also engage in hands-on experiences, and obtain skills in research, fieldwork, production, and communication in order to achieve multiple sustainability goals in complex, social-ecological food systems.

Students interested in the available concentrations should choose to pursue the environmental studies bachelor of arts (B.A.) degree.

Program Learning Outcomes

Students graduating with a B.A. degree in agroecology will be able to:

- Analyze the problems faced in agriculture and food systems by identifying the societal (historical, social, political, economic, cultural, and ethical) agents and structures that contribute to environmental change. (Social science competency)
- Describe the structure and functioning of major physical and ecological components of earth's systems, including agricultural systems. (Natural science competency)
- Access and assess complex literature and review specific topics in agroecology and sustainable food systems, and evaluate the usefulness and limitations of individual methods. (Analytical thinking)
- Demonstrate effective oral and written communication skills. (Communication skills)
- Demonstrate an introductory level of competence in horticulture or agronomy or aquaculture. (Production skills)

Academic Advising for the Program

Advising is one way to make the most of your university experience. The advising system at the University of California, Santa Cruz, is amazing, and we encourage you to use it often. Ask questions, seek advice, and make decisions that work best for you.

To receive advising for this major, contact envsadv@ucsc.edu. Additional information for prospective transfer students can be found in the Transfer Information and Policy section.

Getting Started in the Major: Frosh

This is a course-intensive and/or sequential program, and students who intend to pursue this major must begin taking classes for the major in their first year at UC Santa Cruz. Math placement is required for one or

more of the foundational courses for this major. For more information, please review the Math Placement website. Language placement is not required for the major.

Transfer Information and Policy

Transfer Admission Screening Policy

Students who apply for transfer admission to the major are required to have taken the equivalents of the following courses with a C grade (2.0) or better by the end of the spring term for students planning to enter in the fall:

One of the following:

ENVS 23 or a general chemistry course

Plus one of the following:

ENVS 24	General Ecology	5
BIOE 20C	Ecology and Evolution	5

Plus one of the following:

AM 3	Precalculus for the Social Sciences	5
AM 6	Precalculus for Statistics	5
MATH 3	Precalculus	5

Plus one of the following options:

Either this course:

ENVS 25	Environmental Policy and Economics	5
---------	------------------------------------	---

Or these courses:

ECON 2 and a course in national or international politics

Or these courses:

ECON 1 and a course in national or international politics

GPA Requirement

To be considered for admission in the environmental studies majors, transfer students must pass the following courses or their equivalents of the following courses with a C (2.0) or better in the required courses.

General Education Courses (GEs)

Prospective students are also encouraged to complete the Intersegmental General Education Transfer Curriculum (IGETC) or to complete all UC Santa Cruz general education requirements before matriculation.

Recommended Courses

In addition, one of the following courses is recommended prior to transfer to ensure timely graduation.

SOCY 1	Introduction to Sociology	5
--------	---------------------------	---

SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5
ANTH 2	Introduction to Cultural Anthropology	5
PHIL 22	Introduction to Ethical Theory	5
PHIL 24	Introduction to Ethics: Contemporary Moral Issues	5
PHIL 28	Environmental Ethics	5
BME 80G	Bioethics in the 21st Century: Science, Business, and Society	5

Getting Started in the Major: Transfer Students

Transfer students pursuing agroecology majors are encouraged to transfer in the fall quarter.

Transfer students should enroll in STAT 7 & STAT 7L during the summer or fall quarter and ENVS 80F in the fall in order to take ENVS 100 & ENVS 100L in winter or spring quarter of their first year. Transfer students who have completed the screening requirements listed above can formally declare their major once STAT 7 & STAT 7L and ENVS 80F are completed. Transfer students can formally declare their major once qualification courses are successfully completed, following the steps in How to Declare a Major given above.

Courses recommended for transferring into the agroecology major include:

- ENVS 80F: Introduction to Agroecology and Sustainable Food Systems
- One of the following: SOCY 1, SOCY 10, SOCY 15, ANTH 2, PHIL 22, PHIL 24, PHIL 28, or PHIL 80G

ENVS 25 and CHEM 1A are usually offered during Summer Session at UC Santa Cruz, and transfer students are encouraged to take these classes if they have not yet completed a substitute requirement or if they want a better understanding of the relevant material. If you are transferring, compare catalog descriptions and consult your current institution's advisor to determine equivalency. Prospective transfer students should review the transfer information.

Students who are proposed in a different major and have advanced standing when they come to UC Santa Cruz require permission from the department to change into the major. Contact envsadvi@ucsc.edu to request permission.

Major Qualification Policy and Declaration Process

Major Qualification

To qualify for the agroecology major, students must complete the specific courses listed below, or their approved equivalents. For transfer requirements see

Transfer Admission Screening Requirements. Transfer students must have ENVS major listed on their application in order to pursue the major, unless approved by appeal. If a student has questions about the appeals process, they should contact envsadvi@ucsc.edu.

One of the following

ENVS 23	The Physical and Chemical Environment	5
CHEM 1A	General Chemistry	5

Plus one of the following:

ENVS 24	General Ecology	5
BIOE 20C	Ecology and Evolution	5

Plus all of the following:

STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2
ENVS 25	Environmental Policy and Economics	5
ENVS 80F	Introduction to Agroecology and Sustainable Food Systems	5

Determining Qualification

Students who complete all the qualification courses with a grade of P, or letter grade of C or better are qualified to declare the major.

Students who have received one grade of NP, C-, D+, D, D-, or F in one of the qualification courses taken at UC Santa Cruz will only be qualified to declare after successfully completing the same or an equivalent course with a grade of P, or letter grade of C or better.

Students with two or more grades of NP, C-, D+, D, D-, or F in the qualification courses taken at UC Santa Cruz are not qualified to declare the major.

Students with AP credit (score of 3 or higher) for any of the qualification course(s) are qualified to declare after successfully completing the remaining qualification courses.

Students must attend an Environmental Studies Department declaration workshop when requesting to declare the major.

Appeal Process

Students who are not qualified to declare the major may appeal this decision by submitting an appeal to qualify for the major here within 15 days of the denial of the declaration. Within 15 days of receipt of the appeal, the department will notify the student and college of the decision. If a student has questions about the appeals process, they should contact envsadvi@ucsc.edu.

How to Declare a Major

All students are required to attend one declaration workshop offered during the first three weeks of the quarter they are eligible to declare. Before students attend declaration workshops, they should check to see if they are eligible to declare using the major qualification page. Students wishing to declare within the Environmental Studies Department should visit the Environmental Studies Department website and follow the steps listed in the "how to declare" tab. Degree requirement sheets may be downloaded from the Environmental Studies Undergraduate Program Requirements page.

Letter Grade Policy

This program does not have a letter grade policy, except that the comprehensive requirement must be taken for a letter grade.

Course Substitution Policy

Of the four elective courses, agroecology students can substitute to take one elective course from:

- Another ENVS upper-division course (ENVS 104-ENVS 179) not listed as one of the four elective course options.
- A relevant course in SOCY, LALS, ANTH by petition*
- A relevant course taken in a study abroad program by petition*

*By petition: You may petition to substitute courses taken outside of ENVS and/or UC Santa Cruz such as other institutions, other departments, courses not listed on the pre-approved substitution list, other programs including Educational Abroad Program (EAP), Wildlands Studies, or the Sierra Institute. Please review the petitioning process on the department's website.

Double Majors and Major/Minor Combinations Policy

Study Abroad

Students in environmental studies are encouraged to participate in Study Abroad programs and other off-campus programs. Students who are interested in these programs shall note the following policies:

- Students planning to study abroad must be declared in their major prior to studying abroad.
- Students must have the courses they plan to take abroad reviewed and approved by Environmental Studies Advising.
- Single environmental studies majors may petition to substitute up to two courses taken abroad to count toward the environmental studies upper-division electives. Agroecology majors may

petition for one course to fulfill their four electives. Combined environmental studies majors cannot petition for substitution. Please review the petitioning process here prior to your EAP program. For more information on EAP, please visit the UC Education Abroad Program website.

Honors

Departmental Honors. Students must have a 3.5 grade point average (GPA) in all courses used to satisfy the environmental studies upper-division requirements. To be considered for departmental honors, students are limited to no more than one grade of P in those upper-division courses.

Senior Comprehensive Honors. Only applicable to a senior thesis, senior internship, or individual work in a senior seminar. Honors must be awarded by the student's faculty sponsor, and a second faculty member (chosen by the student's faculty advisor) must concur.

Highest Departmental Honors. Students must have a 3.75 GPA in all courses used to satisfy the environmental studies upper-division requirements and must also receive senior comprehensive honors (see above). To be considered for highest departmental honors, students are limited to no more than one grade of P in those upper-division courses.

Requirements and Planners

Course Requirements

Continuing students must complete all lower-division course requirements before taking ENVS 100 and ENVS 100L.

Lower-Division Courses

One of the following courses

ENVS 23	The Physical and Chemical Environment	5
CHEM 1A	General Chemistry	5

Plus one of the following courses:

ENVS 24	General Ecology	5
BIOE 20C	Ecology and Evolution	5

Plus all of the following:

STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2
ENVS 25	Environmental Policy and Economics	5
ENVS 80F	Introduction to Agroecology and Sustainable Food Systems	5

Plus one of the following:

AM 3	Precalculus for the Social Sciences	5
AM 6	Precalculus for Statistics	5
MATH 3	Precalculus	5

Plus one introductory course in sociology, cultural anthropology, or ethics

Choose one of the following:

ANTH 2	Introduction to Cultural Anthropology	5
BME 80G	Bioethics in the 21st Century: Science, Business, and Society	5
PHIL 22	Introduction to Ethical Theory	5
PHIL 24	Introduction to Ethics: Contemporary Moral Issues	5
PHIL 28	Environmental Ethics	5
SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5

Upper-Division Courses**All of the following courses:**

ENVS 100	Ecology and Society	3
ENVS 100L	Ecology and Society Writing Laboratory	5
ENVS 130A	Agroecology and Sustainable Agriculture	5
ENVS 130L	Agroecology and Sustainable Agriculture Laboratory	2
ENVS 130B	Justice and Sustainability in Agriculture	5

ENVS 100 and ENVS 100L are offered twice yearly during the winter and spring quarters. ENVS 130A and ENVS 130L are offered fall quarter only. ENVS 130B is offered winter quarter only.

Plus one of the following courses:

ENVS 130C	Field Experiences in Agroecology and Sustainable Food	5
ENVS 133	Agroecology Practicum	5
ENVS 135	Sustainable Aquaculture	5

Plus four of the following:

Not duplicating any courses taken from the above lists. Lecture and lab combinations count as a single course.

ENVS 108	General Entomology	5
ENVS 108L	General Entomology Laboratory	3
ENVS 129	Integrated Pest Management	5

ENVS 130C	Field Experiences in Agroecology and Sustainable Food	5
ENVS 131	Insect Ecology	5
ENVS 133	Agroecology Practicum	5
ENVS 135	Sustainable Aquaculture	5
ENVS 142	Sustainable Energy	5
ENVS 143	Sustainable Development: Economy, Policy, and Environment	5
ENVS 146	Water Quality: Policy, Regulation, and Management	5
ENVS 160	Restoration Ecology	5
ENVS 161A	Soils and Plant Nutrition	5
ENVS 162	Plant Physiological Ecology	5
ENVS 162L	Plant Physiological Ecology Laboratory	2
ENVS 163	Plant Disease Ecology	5
ENVS 163L	Plant Disease Ecology Lab	2
ENVS 164	Projects and Practices in Soil Ecology	5
ENVS 165	Sustainable Water Systems	5
ENVS 166	Agroecosystem Analysis and Watershed Management	5
ENVS 168	Biogeochemistry and the Global Environment	5
ENVS 169	Climate Change Ecology	5
ENVS 170	Agriculture and Climate Change	5
BIOE 118	Plants and Society: the Biology of Food, Shelter, and Medicine	5
CMMU 149	Political Economy of Food and Agriculture	5
CMMU 186	Food and Agriculture Social Movements	5

Students can petition to take one elective course from: a) another ENVS upper-division course (ENVS 104A through ENVS 179) not listed above; b) a relevant course in SOCY, LALS, ANTH by petition; or c) a relevant course taken in a study abroad program by petition. Please review the petition process listed on the department's website.

Electives**Required Internship or Independent Study**

Complete one of the following in a topic related to agroecology, aquaculture, or sustainable food systems:

ENVS 83	Environmental Studies Internship	5
ENVS 184	Environmental Studies Internship	2
ENVS 199F	Tutorial	2

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. A primary goal of the environmental studies major is to train students who are able to critically analyze interdisciplinary environmental problems, justify their position on an issue, and communicate that position to a range of audiences verbally and in writing.

The DC requirement in agroecology is satisfied by completing:

ENVS 100	Ecology and Society	3
ENVS 100L	Ecology and Society Writing Laboratory	5

Plus one of the following:

ENVS 183B	Senior Internship	5
ENVS 190	Capstone Course: Environmental Problem Solving	5
ENVS 195B	Senior Thesis Group	5
ENVS 196	Senior Seminar	5

ENVS 183B and ENVS 195B are usually taken after successfully completing ENVS 183A and ENVS 195A respectively.

Comprehensive Requirement

The senior comprehensive may be satisfied by completing one of the options listed below. All courses used to satisfy the senior comprehensive requirement must be taken for a letter grade. The topic engaged in the senior comprehensive courses must be relevant to the field of agroecology.

Before enrolling in the senior thesis or senior internship option, students must formally apply to work with a particular faculty mentor very early in their thesis or project preparation. The senior thesis and senior internship option require careful planning, additional independent research, and at least a two-quarter commitment.

Students with advanced skills in one of the graduate focal areas may also take a graduate seminar by invitation from the instructor.

One of the following options

Either these courses		
ENVS 183A	Senior Internship	5
ENVS 183B	Senior Internship	5
or this course		
ENVS 190	Capstone Course: Environmental Problem Solving	5

or these courses

ENVS 195A	Senior Research	5
ENVS 195B	Senior Thesis Group	5
or this course		
ENVS 196	Senior Seminar	5

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements (p. **Error! Bookmark not defined.**) for more information.

The following are two sample academic plans for students pursuing the agroecology B.A. major. Plan One is for incoming frosh and Plan Two is for incoming transfer students.

Plan One for Incoming Frosh

	Fall	Winter	Spring
1st (frosh)	MAT H 3 or AM 3 ENV S 80F	SOCY/ANTH/ethics course ENVS 25	ENVS 23 or CHEM 1A
2nd (soph)	ENV S 24 or BIOE 20C STA T 7 & STA T 7L	ENVS 100 & ENVS 100L*	Upper-division elective ENVS 83 or ENVS 184 or ENVS 199F
3rd (junior)	ENV S 130A & ENV S 130L	ENVS 130B	ENVS 130C or ENVS 133
		ENVS 133 or ENVS 135	
4th (senior)	Upper-division elective	Upper-division elective	Upper-division elective Comprehensive requirement

t

*This course is also offered in the spring term

Students completing this major will have satisfied the SI, IN, PE-E, IS, and PR-E general education requirements needed to fulfill all remaining university, college, and general education requirements.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must take ENV5 195A (thesis) or ENV5 183A (internship) in the quarter before completing ENV5 195B (thesis) or ENV5 183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

Plan Two for Incoming Transfer Students

	Fall	Winter	Spring
3rd (junior)	STAT 7 & STAT 7L	ENV5 100 & ENV5 100L*	ENV5 130C or ENV5 133
	ENV5 80F	ENV5 130B	Upper-division elective
	ENV5 83 or ENV5 184 or ENV5 199F		
	ENV5 130A & ENV5 130L	ENV5 133 or ENV5 135	ENV5 130C
	Upper-division elective	Upper-division elective	Upper-division elective
4th (senior)			Comprehensive requirement

*This course is also offered in the spring term

This planner assumes a student has completed all lower-division courses except STAT 7 & STAT 7L and ENV5 80F before transferring to UCSC.

Students completing this major will have satisfied the SI, IN, PE-E, IS, and PR-E general education requirements needed to fulfill all remaining university, college, and general education requirements.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must take ENV5 195A (thesis) or ENV5 183A (internship) in the quarter before completing ENV5 195B (thesis) or ENV5 183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

ENVIRONMENTAL

STUDIES/BIOLOGY COMBINED MAJOR B.A.

Information and Policies

Introduction

This course of study provides students with the basic tools of biological science and sufficient understanding of resource conservation, conservation biology, and concerns about environmental sustainability to apply these tools to environmental problems.

Students interested in the available concentrations should choose to pursue the environmental studies B.A. degree. This does not apply to students who declared a combined major and concentration in agroecology and sustainable food systems prior to 2019.

Program Learning Outcomes

Students graduating with a B.A. degree in environmental studies/biology combined will be able to:

- Identify the societal (social, political, economic and ethical) agents and structures that contribute to environmental change. (social science competency)
- Describe the structure and functioning of major physical and ecological components of the earth's systems. (natural science competency)
- Access and analyze a complex literature addressing specific topics in environmental studies, and evaluate the usefulness and limitations of individual sources of information. (analytic thinking)
- Demonstrate effective oral and written communication skills. (communication skills).

Academic Advising for the Program

Advising is one way to make the most of your university experience. The advising system at the University of California, Santa Cruz, is amazing, and we encourage you to use it often. Ask questions, seek advice, and make decisions that work best for you.

To receive advising for this major, contact envsadv@ucsc.edu. Additional information for prospective transfer students can be found in the Transfer Information and Policy section.

Getting Started in the Major: Frosh

This is a course-intensive and/or sequential program, and students who intend to pursue this major must begin taking classes for the major in their first year at UC Santa Cruz. Math placement is required for one or more of the foundational courses for this major. For more information, please review the Math Placement website. Language placement is not required for the major.

Transfer Information and Policy

Transfer Admission Screening Policy

Students who apply for transfer admission to the major are required to have taken the equivalents of the following courses with a C grade (2.0) or better by the end of the spring term for students planning to enter in the fall:

All of the following

BIOE 20C	Ecology and Evolution	5
BIOL 20A	Cell and Molecular Biology	5
CHEM 1A	General Chemistry	5
CHEM 1B	General Chemistry	5
CHEM 1C	General Chemistry	5
CHEM 1N	General Chemistry Laboratory	2

Plus one of the following

AM 3	Precalculus for the Social Sciences	5
AM 11A	Mathematical Methods for Economists I	5
AM 11B	Mathematical Methods for Economists II	5
MATH 11A	Calculus with Applications	5
MATH 11B	Calculus with Applications	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 22	Introduction to Calculus of Several Variables	5
MATH 23A	Vector Calculus	5

Plus one of the following options

ENVS 25; or ECON 1 and a course in national or international politics ; or ECON 2 and a course in national or international politics

Recommended Courses

In addition, one of the following courses is recommended prior to transfer to ensure timely graduation.

SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5
ANTH 2	Introduction to Cultural Anthropology	5
PHIL 22	Introduction to Ethical Theory	5
PHIL 24	Introduction to Ethics: Contemporary Moral Issues	5
PHIL 28	Environmental Ethics	5

BME 80G	Bioethics in the 21st Century: Science, Business, and Society	5
---------	---	---

And the following course

BIOE 20B	Development and Physiology	5
----------	----------------------------	---

GPA Requirement

To be considered for admission in the environmental studies majors, transfer students must pass the preceding courses or their equivalents of the preceding courses with a C (2.0) or better in the required courses.

General Education Courses

Prospective students are encouraged to prioritize required and recommended major preparation, and may additionally complete courses that articulate to UC Santa Cruz general education requirements as time allows.

Getting Started in the Major: Transfer Students

Transfer students pursuing environmental studies majors are encouraged to transfer in the fall quarter. Transfer students should enroll in STAT 7 and STAT 7L during the summer or fall quarter in order to take ENVS 100 and ENVS 100L in winter or spring quarter of their first year. Transfer students can formally declare their major once qualification courses are successfully completed, following the steps in How to Declare a Major given above.

ENVS 25 and CHEM 1A are usually offered during Summer Session at UC Santa Cruz, and transfer students are encouraged to take them if they have not completed a substitute requirement or want a better understanding of the relevant material. If you are transferring, compare catalog descriptions, consult your current institution's advisor, and refer to the ASSIST website to determine equivalency. Prospective transfer students should review the transfer information.

Students who are proposed in a different major and have advanced standing when they come to UC Santa Cruz require permission from the department to change into the major. Contact envsadvi@ucsc.edu to request permission.

Major Qualification Policy and Declaration Process

Major Qualification

To qualify for the environmental studies/biology combined major, students must complete the specific courses listed below, or their approved equivalents. For transfer requirements see Transfer Admission Screening Requirements. Transfer students must have ENVS major listed on their application in order to pursue the major, unless approved by appeal. If a student has questions about the appeals process, they should contact envsadvi@ucsc.edu.

ENVS 25	Environmental Policy and Economics	5
BIOE 20C	Ecology and Evolution	5
BIOL 20A	Cell and Molecular Biology	5
CHEM 1A	General Chemistry	5
STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2

Students must take all of these courses for a letter grade.

Determining qualification

- Students who complete all the qualification courses with a letter grade of C or better are eligible to declare a major.
- Students who have received one grade of C-, D+, D, D-, or F in one of the qualification courses taken at UC Santa Cruz will only be eligible to declare after successfully completing the same or an equivalent course with a letter grade of C or better.
- Students with two or more grades of C-, D+, D, D-, or F in the qualification courses taken at UC Santa Cruz are not eligible to declare.
- Students with non-letter grades in any of the qualification courses for the environmental studies/biology combined B.A. major will not be eligible to declare until a grade of C or better has been assigned.
- Students must attend an Environmental Studies Department declaration workshop when requesting to declare the major.

Appeal Process

Students who are not qualified to declare the major may appeal this decision by submitting an appeal to qualify for the major within 15 days of the denial of the declaration. Within 15 days of receipt of the appeal, the department will notify the student and college of the decision. If a student has questions about the appeals process, they should contact envsadv@ucsc.edu.

How to Declare a Major

All students are required to attend one declaration workshop offered during the first three weeks of the quarter they are eligible to declare. Before students attend declaration workshops, they should check to see if they are eligible to declare using the major qualification page. Students wishing to declare within the Environmental Studies Department should visit the

Environmental Studies Department website and follow the steps listed in the "how to declare" tab. Degree requirement sheets may be downloaded from the Environmental Studies Undergraduate Program Requirements page.

Letter Grade Policy

All requirements for the environmental studies/biology combined major must be taken for a letter grade.

Course Substitution Policy

Students pursuing the Environmental Studies/Biology Combined Major cannot substitute courses to count toward their upper division electives.

Double Majors and Major/Minor Combinations Policy

Study Abroad

Students in environmental studies-are encouraged to participate in Study Abroad programs and other off-campus programs. Students who are interested in these programs shall note the following policies:

- Students planning to study abroad must be declared in their major prior to studying abroad.
- Students must have their courses they plan to take abroad reviewed and approved by Environmental Studies Advising.
- Environmental studies/biology combined majors cannot petition their courses taken abroad for upper division course substitution.
- For more information on EAP, please visit the UC Education Abroad Program website.

Honors

Departmental Honors. Students must have a 3.5 grade point average (GPA) in all courses used to satisfy the environmental studies upper-division requirements.

Senior Comprehensive Honors. Only applicable to a senior thesis, senior internship, or individual work in a senior seminar. Honors must be awarded by the student's faculty sponsor, and a second faculty member (chosen by the student's faculty advisor) must concur.

Highest Departmental Honors. Students must have a 3.75 grade point average (GPA) in all courses used to satisfy the environmental studies upper-division requirements and must also receive senior comprehensive honors (see above). Students must fulfill all requirements for honors from environmental studies/biology combined.

Requirements and Planners

Course Requirements

Lower-Division Courses

Biology and mathematics courses may require placement examinations. See the course descriptions for prerequisite information.

All of the following courses

BIOL 20A	Cell and Molecular Biology	5
BIOE 20B	Development and Physiology	5
BIOE 20C	Ecology and Evolution	5
ENVS 25	Environmental Policy and Economics	5

Plus one of the following

ANTH 2	Introduction to Cultural Anthropology	5
PHIL 22	Introduction to Ethical Theory	5
PHIL 24	Introduction to Ethics: Contemporary Moral Issues	5
PHIL 28	Environmental Ethics	5
BME 80G	Bioethics in the 21st Century: Science, Business, and Society	5
SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5

Plus one of the following

One of the following:

AM 3	Precalculus for the Social Sciences	5
AM 6	Precalculus for Statistics	5
MATH 3	Precalculus	5
AM 11A	Mathematical Methods for Economists I	5
AM 11B	Mathematical Methods for Economists II	5
MATH 11A	Calculus with Applications	5
MATH 11B	Calculus with Applications	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 22	Introduction to Calculus of Several Variables	5
MATH 23A	Vector Calculus	5

Or take a placement exam:

Take the Math Placement Exam (MPE) with a score of 300 or higher or take the AP Calculus exam with a score of 3 or higher.

Plus all of the following

STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2

Plus all of the following

CHEM 1A	General Chemistry	5
CHEM 1B	General Chemistry	5
CHEM 1C	General Chemistry	5
CHEM 1N	General Chemistry Laboratory	2

Plus one of the following options in physics

Either this course		
PHYS 1A	Physics for Everyone	5
or these courses		
PHYS 6A	Introductory Physics I	5
PHYS 6L	Introductory Physics I Laboratory	1
or these courses		
PHYS 7A	Elementary Physics I	5
PHYS 7L	Elementary Physics Laboratory	1

Upper-Division Courses

Students are required to complete nine upper-division courses and the senior comprehensive requirement. Three of the nine upper-division courses must be the following courses (ENVS 100 and ENVS 100L is considered a single course).

ENVS 100	Ecology and Society	3
ENVS 100L	Ecology and Society Writing Laboratory	5
BIOL 105	Genetics	5
BIOE 109	Evolution	5

Electives

The remaining six upper-division elective courses include three in ecology and evolutionary biology (ecology and evolutionary biology courses numbered BIOE 107-BIOE 188) and three in environmental studies (environmental studies courses numbered ENVS 101-ENVS 179).

One of the six electives must be a laboratory course; laboratory courses are upper-division courses in BIOE or ENVS that carry 5 credits and have a "L" in their course number.

Additionally, one of the three environmental studies courses electives must be based in the social sciences selected from the following upper-division courses:

ENVS 110	Institutions, the Environment, and Economic Systems	5
----------	---	---

ENVS 130B	Justice and Sustainability in Agriculture	5	BIOE 137L	Molecular Ecology Laboratory	2
ENVS 140	National Environmental Policy	5	BIOE 141L	Behavioral Ecology Field Course	5
ENVS 141	Ecological Economics	5	BIOE 145L	Field Methods in Plant Ecology	5
ENVS 143	Sustainable Development: Economy, Policy, and Environment	5	BIOE 150L	Ecological Field Methods Laboratory	5
ENVS 145	Green Cities	5	BIOE 151B	Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory	5
ENVS 146	Water Quality: Policy, Regulation, and Management	5	BIOE 159D	Marine Ecology Field Quarter: Methods in Field Ecology Laboratory	5
ENVS 147	Global Environmental Justice	5	BIOE 161L	Kelp Forest Ecology Laboratory	5
ENVS 149	Environmental Law and Policy	5	BIOE 163L	Ecology of Reefs, Mangroves, and Seagrasses Laboratory	2
ENVS 150	Coastal and Marine Policy	5	ENVS 104L	Field Methods Laboratory	2
ENVS 151	Environmental Assessment	5	ENVS 108L	General Entomology Laboratory	3
ENVS 154	Amazonian Cultures and Conservation	5	ENVS 115L	Exercises in Geographic Information Systems	2
ENVS 158	Political Ecology and Social Change	5	ENVS 129L	Integrated Pest Management Laboratory	2
ENVS 165	Sustainable Water Systems	5	ENVS 130L	Agroecology and Sustainable Agriculture Laboratory	2
ENVS 172	Environmental Risks and Public Policy	5	ENVS 162L	Plant Physiological Ecology Laboratory	2
ENVS 173	An Introduction to World Environmental History	5	ENVS 163L	Plant Disease Ecology Lab	2
ENVS 176	Vulnerability, Complex Systems, and Disasters	5	ENVS 167L	Freshwater and Wetland Ecology Lab	2
One lab-based course			Disciplinary Communication (DC) Requirement		
One of the six electives must be a laboratory course; laboratory courses are upper-division courses in BIOE or ENVS that carry 5 credits and have a “L” in their course number. In order to fulfill the lab-based requirement students must take the lecture and lab. Students must take the concurrent lecture and lab of one of the following:			Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement for the environmental studies/biology combined major is satisfied by completing:		
BIOE 112L	Ornithology Field Studies	2	The DC requirement in environmental studies/biology combined is satisfied by completing		
BIOE 117L	Systematic Botany of Flowering Plants Laboratory	2	ENVS 100	Ecology and Society	3
BIOE 120L	Marine Botany Laboratory	2	ENVS 100L	Ecology and Society Writing Laboratory	5
BIOE 122L	Invertebrate Zoology Laboratory	2	Plus one of the following		
BIOE 124L	Mammalogy Laboratory	2	Where two-credit lab courses have to be taken concurrently with a 5-credit lecture course, the combination counts as one course.		
BIOE 127L	Ichthyology Laboratory	2	BIOE 151B	Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory	5
BIOE 128L	Large Marine Vertebrates Field Course	5			
BIOE 129L	Biology of Marine Mammals Laboratory	2			
BIOE 131L	Animal Physiology Laboratory	2			
BIOE 133L	Exercise Physiology Laboratory	2			
BIOE 134L	Comparative Vertebrate Anatomy Laboratory	2			
BIOE 135L	Plant Physiology Laboratory	2			

ENVS 183B	Senior Internship	5	independent research, and at least a two-quarter commitment.
ENVS 190	Capstone Course: Environmental Problem Solving	5	Students with advanced skills in one of the graduate focal areas may also take a graduate seminar by invitation from the instructor.
ENVS 195B	Senior Thesis Group	5	Either this course

Comprehensive Requirement

The senior comprehensive may be satisfied by completing one of the options listed below. All courses used to satisfy the senior comprehensive requirement must be taken for a letter grade.

Before enrolling in the senior thesis or senior internship option, students must formally apply to work with a particular faculty mentor very early in their thesis or project preparation. The senior thesis and senior internship option require careful planning, additional

Plan One for Incoming Frosh

	Fall	Winter	Spring
1st (frosh)	MATH 3 or AM 3	CHE M 1A	CHEM 1B
		ENVS 25	SOCY/ANTH/P HIL course
2nd (soph)	BIOE 20C	ENVS 100 &	BIOE 20B

	STAT 7 & STAT 7L	ENVS 100L* BIOL 20A	CHEM 1C & CHEM 1N
3rd (junior)	BIOL 105 Upper- division ENVS	BIOE 109 PHYS 1	Upper-division BIOE Upper-division ENVS
4th (senior)	Upper- division BIOE Upper- division ENVS (social science s)	Upper- - division BIOE	Comprehensive requirement

*This course is also offered in the spring term.

This plan does not explicitly show the required lab course among the ENVS or BIOE electives.

Students completing this major will have satisfied the SI, IN, PE-E, IS, and PR-E general education requirements. In addition, they will need to fulfill all remaining university, college, and general education requirements.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must take ENVS 195A (thesis) or ENVS 183A (internship) in the quarter before completing ENVS 195B (thesis) or ENVS 183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

Plan Two for Incoming Transfer Students

	Fall	Winter	Spring
3rd (junior)	STAT 7 & STAT 7L	ENVS 100 & ENVS 100L* BIOL 105	Upper-division ENVS BIOE 109
4th (senior)	Upper- division ENVS (social sciences) Upper-	Upper- division ENVS Upper-	Upper-division BIOE Comprehensiv

division
BIOE
division
BIOE
PHYS
1
e
requirement

*This course is also offered in the spring term.

This plan does not include the required lab based course. Students must complete the lab-based requirement with the courses listed in the course requirements.

This planner assumes that a student has completed all required lower-division courses—including UCSC or community college general education requirements—with the exception of STAT 7 and STAT 7L, which is only offered at UC Santa Cruz.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must take ENVS 195A (thesis) or ENVS 183A (internship) in the quarter before completing ENVS 195B (thesis) or ENVS 183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

A transfer student who has completed the requirements for the Intersegmental General Education Transfer Curriculum (IGETC) before matriculating at UC Santa Cruz, with at most two course requirements left to complete, is allowed to satisfy IGETC in lieu of the UCSC general education requirements.

ENVIRONMENTAL STUDIES/EARTH SCIENCES COMBINED MAJOR B.A.

Information and Policies

Introduction

This course of study provides students with the basic tools of Earth sciences and environmental studies needed to address environmental problems.

Students interested in the available concentrations should choose to pursue the environmental studies B.A. degree. This does not apply to students who declared a combined major and concentration in agroecology and sustainable food systems prior to 2019.

Program Learning Outcomes

Students graduating with a B.A. degree in environmental studies/Earth sciences combined will be able to:

- Identify the societal (social, political, economic and ethical) agents and structures that contribute to environmental change. (social science competency)

- Describe the structure and functioning of major physical and ecological components of the earth's systems. (natural science competency)
- Access and analyze a complex literature addressing specific topics in environmental studies, and evaluate the usefulness and limitations of individual sources of information. (analytic thinking)
- Demonstrate effective oral and written communication skills. (communication skills).

Academic Advising for the Program

Advising is one way to make the most of your university experience. The advising system at UC Santa Cruz is amazing, and we encourage you to use it often. Ask questions, seek advice, and make decisions that work best for you.

To receive advising for this major, contact envsadv@ucsc.edu. Additional information for prospective transfer students can be found in the Transfer Information and Policy section.

Getting Started in the Major: Frosh

This is a course-intensive and/or sequential program, and students who intend to pursue this major must begin taking classes for the major in their first year at UC Santa Cruz. Math placement is required for one or more of the foundational courses for this major. For more information, please review the Math Placement website. Language placement is not required for the major.

Transfer Information and Policy

Transfer Admission Screening Policy

Students who apply for transfer admission to the major are required to have taken the equivalents of the following courses with a C grade (2.0) or better by the end of the spring term for students planning to enter in the fall:

One of the following

ENVS 24	General Ecology	5
BIOE 20C	Ecology and Evolution	5

Plus all of the following

CHEM 1A	General Chemistry	5
CHEM 1B	General Chemistry	5
CHEM 1M	General Chemistry Laboratory	2
CHEM 1C	General Chemistry	5
CHEM 1N	General Chemistry Laboratory	2

Plus one of the following courses

AM 3	Precalculus for the Social Sciences	5
MATH 3	Precalculus	5

MATH 11A	Calculus with Applications	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5

Plus one of the following options

Either ENVS 25; or ECON 1 and a course in national or international politics; or or ECON 2 and a course in national or international politics.

GPA Requirement

To be considered for admission in the environmental studies majors, transfer students must pass the following courses or their equivalents of the following courses with a C (2.0) or better in the required courses.

Recommended courses

In addition, the following courses are recommended prior to transfer to ensure timely graduation.

MATH 11A	Calculus with Applications	5
EART 5	California Geology	5
EART 5L	California Geology Laboratory	1
PHYS 6A	Introductory Physics I	5
PHYS 6L	Introductory Physics I Laboratory	1
PHYS 6B	Introductory Physics II	5
PHYS 6M	Introductory Physics II Laboratory	1

And one of the following courses

SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5
ANTH 2	Introduction to Cultural Anthropology	5
PHIL 22	Introduction to Ethical Theory	5
PHIL 24	Introduction to Ethics: Contemporary Moral Issues	5
PHIL 28	Environmental Ethics	5
BME 80G	Bioethics in the 21st Century: Science, Business, and Society	5

Prospective students are encouraged to prioritize required and recommended major preparation, and may additionally complete courses that articulate to UC Santa Cruz general education requirements as time allows.

Getting Started in the Major: Transfer Students

Transfer students pursuing environmental studies majors are encouraged to transfer in the fall quarter.

Transfer students should enroll in STAT 7 and STAT 7L during the summer or fall quarter in order to take

ENVS 100 and ENVS 100L in winter or spring quarter of their first year. Transfer students who have completed the screening requirements listed above can formally declare their major, following the steps in How to Declare a Major given above.

ENVS 25 and CHEM 1A are usually offered during Summer Session at UC Santa Cruz, and transfer students are encouraged to take them if they have not completed a substitute requirement or want a better understanding of the relevant material. If you are transferring, compare catalog descriptions, consult your current institution's adviser, and refer to the ASSIST website to determine equivalency. Prospective transfer students should review the transfer information.

Prospective transfer students should review transfer information on the environmental studies transfer information.

Students who are proposed in a different major and have advanced standing when they come to UC Santa Cruz require permission from the department to change into the major. Contact envsadvi@ucsc.edu to request permission.

Major Qualification Policy and Declaration Process

Major Qualification

To qualify for the environmental studies/Earth sciences combined major, students must complete the specific courses listed below, or their approved equivalents. For transfer requirements, see Transfer Admission Screening Requirements. Transfer students must have ENVS major listed on their application in order to pursue the major, unless approved by appeal. If a student has questions about the appeals process, they should contact envsadvi@ucsc.edu.

One of the following

ENVS 24	General Ecology	5
BIOE 20C	Ecology and Evolution	5

Plus all of the following

ENVS 25	Environmental Policy and Economics	5
CHEM 1A	General Chemistry	5
STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2

Determining qualification

- Students who complete all the qualification courses with a grade of P, or letter grade of C or better are qualified to declare a major.

- Students who have received one grade of C-, D+, D, D-, or F in one of the qualification courses taken at UC Santa Cruz will only be qualified to declare after successfully completing the same or an equivalent course with a letter grade of C or better.
- Students with two or more grades of C-, D+, D, D-, or F in the qualification courses taken at UC Santa Cruz are not qualified to declare the major.
- Students with AP credit (score of 3 or higher) for any of the qualification course(s) are qualified to declare after successfully completing the remaining qualification courses.
- Students must attend an Environmental Studies Department declaration workshop when requesting to declare the major.

Appeal Process

Students who are not qualified to declare the major may appeal this decision by submitting an appeal to qualify for the major within 15 days of the denial of the declaration. Within 15 days of receipt of the appeal, the department will notify the student and college of the decision. If a student has questions about the appeals process, they should contact envsadvi@ucsc.edu.

How to Declare a Major

All students are required to attend one declaration workshop offered during the first three weeks of the quarter they are eligible to declare. Before students attend declaration workshops, they should check to see if they are eligible to declare using the major qualification page. Students wishing to declare within the Environmental Studies Department should visit the Environmental Studies Department website and follow the steps listed in the "how to declare" tab. Degree requirement sheets may be downloaded from the Environmental Studies Undergraduate Program Requirements page.

Letter Grade Policy

This program does not have a letter grade policy, except that the senior comprehensive requirement must be taken for a letter grade.

Course Substitution Policy

Students pursuing the Environmental Studies/Earth Sciences Combined Major cannot substitute courses to count toward their upper division electives.

Double Majors and Major/Minor Combinations Policy

Study Abroad

Students in environmental studies-are encouraged to participate in Study Abroad programs and other off-

campus programs. Students who are interested in these programs shall note the following policies:

- Students planning to study abroad must be declared in their major prior to studying abroad.
- Students must have their courses they plan to take abroad reviewed and approved by Environmental Studies Advising.
- Environmental studies combined majors cannot petition their courses taken abroad for upper division course substitution.
- For more information on EAP, please visit the UC Education Abroad Program website.

Honors

Departmental Honors. Students must have a 3.5 grade point average (GPA) in all courses used to satisfy the environmental studies upper-division requirements. To be considered for departmental honors, students are limited to no more than one grade of P in those upper-division courses.

Senior Comprehensive Honors. Only applicable to a senior thesis, senior internship, or individual work in a senior seminar. Honors must be awarded by the student's faculty sponsor, and a second faculty member (chosen by the student's faculty adviser) must confer.

Highest Departmental Honors. Students must have a 3.75 grade point average (GPA) in all courses used to satisfy the environmental studies upper-division requirements and must also receive senior comprehensive honors (see above). To be considered for highest departmental honors, students are limited to no more than one grade of P in those upper-division courses.

Students must fulfill all requirements for honors from environmental studies and biology.

Requirements and Planners

Course Requirements

Lower-Division Courses

Both of the following

STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2

Plus one of the following options

Either these courses

MATH 11A	Calculus with Applications	5
MATH 11B	Calculus with Applications	5

or these courses

MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5

Plus all of the following

CHEM 1A	General Chemistry	5
CHEM 1B	General Chemistry	5
CHEM 1M	General Chemistry Laboratory	2
CHEM 1C	General Chemistry	5
CHEM 1N	General Chemistry Laboratory	2

Plus one of the following options

Either these courses

PHYS 6A	Introductory Physics I	5
PHYS 6L	Introductory Physics I Laboratory	1
PHYS 6B	Introductory Physics II	5
PHYS 6M	Introductory Physics II Laboratory	1

or these courses

PHYS 5A	Introduction to Physics I	5
PHYS 5L	Introduction to Physics I Laboratory	1
PHYS 5B	Introduction to Physics II	5
PHYS 5M	Introduction to Physics II Laboratory	1

Plus one of the following options

Either these courses

EART 20	Environmental Geology	5
EART 20L	Environmental Geology Laboratory	1

or these courses

EART 5	California Geology	5
EART 5L	California Geology Laboratory	1

or these courses

EART 10	Geologic Principles	5
EART 10L	Geologic Principles Laboratory	1

Plus one of the following

ENVS 24	General Ecology	5
BIOE 20C	Ecology and Evolution	5

Plus the following

ENVS 25	Environmental Policy and Economics	5
---------	------------------------------------	---

Plus one of the following

ANTH 2	Introduction to Cultural Anthropology	5
PHIL 22	Introduction to Ethical Theory	5
PHIL 24	Introduction to Ethics: Contemporary Moral Issues	5
PHIL 28	Environmental Ethics	5
BME 80G	Bioethics in the 21st Century: Science, Business, and Society	5
SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5

Upper-Division Courses**One of the following options**

Either this course		
EART 110A	Evolution of the Earth	7
or these courses		
EART 110B	Earth as a Chemical System	5
EART 110M	Earth as a Chemical System Laboratory	2
or these courses		
EART 110C	The Dynamic Earth	5
EART 110N	The Dynamic Earth Laboratory	2

Plus all of the following

ENVS 100	Ecology and Society	3
ENVS 100L	Ecology and Society Writing Laboratory	5

Electives

The upper-division courses should be selected in pursuit of a coherent plan of study, such as water policy-hydrology, restoration ecology-geochemistry, agroecology-soil physical processes, or environmental policy-climate change, among others, in consultation with faculty from both the Environmental Studies and Earth and Planetary Sciences departments. None of the three environmental studies upper-division courses can be an environmental studies internship, individual study or substitution course.

Three upper-division environmental studies courses

Three additional upper-division environmental studies courses (numbered ENVS 101-ENVS 179) including at

least one course based in the social sciences selected from the following upper-division courses:

ENVS 110	Institutions, the Environment, and Economic Systems	5
ENVS 130B	Justice and Sustainability in Agriculture	5
ENVS 140	National Environmental Policy	5
ENVS 141	Ecological Economics	5
ENVS 143	Sustainable Development: Economy, Policy, and Environment	5
ENVS 145	Green Cities	5
ENVS 146	Water Quality: Policy, Regulation, and Management	5
ENVS 147	Global Environmental Justice	5
ENVS 149	Environmental Law and Policy	5
ENVS 150	Coastal and Marine Policy	5
ENVS 151	Environmental Assessment	5
ENVS 154	Amazonian Cultures and Conservation	5
ENVS 158	Political Ecology and Social Change	5
ENVS 165	Sustainable Water Systems	5
ENVS 172	Environmental Risks and Public Policy	5
ENVS 173	An Introduction to World Environmental History	5
ENVS 176	Vulnerability, Complex Systems, and Disasters	5

None of the three environmental studies upper-division courses can be an environmental studies internship, individual study or substitution course.

Three upper-division Earth sciences courses

Three additional upper-division Earth sciences courses (Earth and Planetary Sciences courses numbered EART 100-EART 191C). A list of the upper-division courses offered by the Earth and Planetary Sciences Department is available in the courses section of the catalog (p. **Error! Bookmark not defined.**).

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement for the environmental studies/Earth sciences combined major is satisfied by completing:

The following courses:

ENVS 100	Ecology and Society	3
ENVS 100L	Ecology and Society Writing Laboratory	5

Plus one of the following options:

Either one
of these
courses

BIOE 151B	Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory	5
ENVS 183B	Senior Internship	5
ENVS 190	Capstone Course: Environmental Problem Solving	5
ENVS 195B	Senior Thesis Group	5
ENVS 196	Senior Seminar	5
EART 195	Senior Thesis	5
or these courses		
EART 189A	Geographic Information Systems with Applications in Earth Sciences	5
EART 189B	Summer Field Study	5

Students taking the cross-listed course BIOE 151B/ENVS 109B are recommended to enroll in ENVS 109B.

Comprehensive Requirement

Students satisfy the senior comprehensive requirement in environmental studies or Earth sciences by completing either:

- One of the senior comprehensive options for single environmental studies B.A. majors (see options listed below);
- One of the senior comprehensive options for Earth sciences B.S. (see Comprehensive Requirement under the Earth Sciences B.S.).

The senior comprehensive may be satisfied by completing one of the options listed below. All courses used to satisfy the senior comprehensive requirement must be taken for a letter grade.

Before enrolling in the senior thesis or senior internship option, students must formally apply to work with a particular faculty mentor very early in their thesis or project preparation. The senior thesis and senior internship option require careful planning, additional independent research, and at least a two-quarter commitment.

Students with advanced skills in one of the graduate focal areas may also take a graduate seminar by invitation from the instructor.

Either this
course

BIOE 151B	Ecology and Conservation in Practice Supercourse:	5
-----------	--	---

Ecological Field Methods
Laboratory

or these
courses

ENVS 183A	Senior Internship	5
ENVS 183B	Senior Internship	5
or this course		
ENVS 190	Capstone Course: Environmental Problem Solving	5
or these courses		
ENVS 195A	Senior Research	5
ENVS 195B	Senior Thesis Group	5
or this course		
ENVS 196	Senior Seminar	5

Students taking the cross-listed course BIOE 151B/ENVS 109B are recommended to enroll in ENVS 109B.

ENVS 190 is offered in the spring and summer.

ENVS 183B and ENVS 195B are usually taken after successfully completing ENVS 183A and ENVS 195A respectively.

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements (p. **Error! Bookmark not defined.**) for more information.

The following are two sample academic plans for students pursuing the environmental studies B.A. major without a concentration. Plan One is for incoming frosh and Plan Two is for incoming transfer students.

Plan One for Incoming Frosh

	Fall	Winter	Spring
1st (frosh)	MATH 3 or AM 3	ENVS 25	CHEM 1A
		EART 5 & EART 5L	SOCY/ANTH/P HIL course
2nd (soph)	ENVS 24 or BIOE 20C STAT 7 &	ENVS 100 & ENVS 100L*	CHEM 1B & CHEM 1M
		MAT H 11A	PHYS 6A & PHYS 6L or

	STAT 7L		PHYS 5A & PHYS 5L	
3rd (junior)	CHEM 1C & CHEM 1N	Upper - division ENVS	PHYS 6B & PHYS 6M or PHYS 5B & PHYS 5M	Upper-division EART
	MATH 11B	EART 110B & EART 110M	Upper-division ENVS	Upper-division EART
4th (senior)	Upper-division EART	Upper - division EART	Upper-division EART	
	Upper-division ENVS (social sciences)		Comprehensive requirement	

*This course is also offered in the spring term.

This planner assumes that a student has placed into MATH 3 or AM 3.

Students completing this major will have satisfied the SI, IN, PE-E, IS, IN, MF, and PR-E general education requirements. In addition, they will need to fulfill all remaining university, college, and general education requirements.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must take ENVS 195A (thesis) or ENVS 183A (internship) in the quarter before completing ENVS 195B (thesis) or ENVS 183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

Plan Two for Incoming Transfer Students

	Fall	Winter	Spring
3rd (junior)	STAT 7 & STAT 7L	ENVS 100 & ENVS 100L*	Upper-division EART
	MATH 11B	EART 110B & EART 110M	Upper-division ENVS
4th (senior)	Upper-division ENVS	Upper-division ENVS (social sciences)	Comprehensive requirement

*This course is also offered in the spring term.

This planner assumes that a student has completed all required lower-division courses—including UCSC or community college general education requirements—with the exception of STAT 7 and STAT 7L, which is only offered at UC Santa Cruz.

A transfer student who has completed the requirements for the Intersegmental General Education Transfer Curriculum (IGETC) before matriculating at UC Santa Cruz, with at most two course requirements left to complete, is allowed to satisfy IGETC in lieu of the UCSC general education requirements.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must take ENVS 195A (thesis) or ENVS 183A (internship) in the quarter before completing ENVS 195B (thesis) or ENVS 183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

ENVIRONMENTAL STUDIES/ECONOMICS COMBINED MAJOR B.A.

Information and Policies

Introduction

This major provides students with the basic tools of economic analysis and an understanding of the mechanics of resource production, conservation, and use, in both ecological and economic terms.

Students interested in the available concentrations should pursue the environmental studies B.A. degree. This does not apply to students who declared a combined major and concentration in agroecology and sustainable food systems prior to 2019.

Program Learning Outcomes

Students graduating with a B.A. degree in environmental studies/economics combined will be able to:

- Identify the societal (social, political, economic and ethical) agents and structures that contribute to environmental change. (social science competency)
- Describe the structure and functioning of major physical and ecological components of the earth's systems. (natural science competency)

- Access and analyze a complex literature addressing specific topics in environmental studies, and evaluate the usefulness and limitations of individual sources of information. (analytic thinking)
- Demonstrate effective oral and written communication skills. (communication skills).

Academic Advising for the Program

Advising is one way to make the most of your university experience. The advising system at UC Santa Cruz is amazing, and we encourage you to use it often. Ask questions, seek advice, and make decisions that work best for you.

To receive advising for this major, contact envsadv@ucsc.edu. Additional information for prospective transfer students can be found in the Transfer Information and Policy section.

Getting Started in the Major: Frosh

This is a course-intensive and/or sequential program, and students who intend to pursue this major must begin taking classes for the major in their first year at UC Santa Cruz. Math placement is required for one or more of the foundational courses for this major. For more information, please review the Math Placement website. Language placement is not required for the major.

Transfer Information and Policy

Transfer Admission Screening Policy

Students who apply for transfer admission to the major are required to have taken the equivalents of the following courses with a C grade (2.0) or better by the end of the spring term for students planning to enter in the fall:

One of the following:

ENVS 23 or a general chemistry course

Plus one of the following:

ENVS 24	General Ecology	5
BIOE 20C	Ecology and Evolution	5

Plus the following:

ECON 1 or ECON 2 and a course in national or international politics

Plus one of the following:

AM 11A	Mathematical Methods for Economists I	5
MATH 11A	Calculus with Applications	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5

Recommended Courses

In addition, one of the following courses is recommended prior to transfer to ensure timely graduation.

SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5
ANTH 2	Introduction to Cultural Anthropology	5
PHIL 22	Introduction to Ethical Theory	5
PHIL 24	Introduction to Ethics: Contemporary Moral Issues	5
PHIL 28	Environmental Ethics	5
BME 80G	Bioethics in the 21st Century: Science, Business, and Society	5

And all of the following courses

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5
AM 11B	Mathematical Methods for Economists II	5

GPA Requirement

To be considered for admission in the environmental studies majors, transfer students must pass the preceding courses or their equivalents of the following courses with a C (2.0) or better in the required courses.

General Education (GEs)

Prospective students are encouraged to prioritize required and recommended major preparation, and may additionally complete courses that articulate to UC Santa Cruz general education requirements as time allows.

Getting Started in the Major: Transfer Students

Transfer students pursuing environmental studies majors are encouraged to transfer in the fall quarter.

Transfer students should plan to enroll in ECON 100A or ECON 100M and STAT 7/STAT 7L during the summer or fall quarter, and ECON 113 in the winter quarter in order to take ENVS 100 and ENVS 100L in spring quarter of their first year. Transfer students who have completed the screening requirements listed above can formally declare their major, following the steps in How to Declare a Major given above.

ENVS 25 and CHEM 1A are usually offered during Summer Session at UC Santa Cruz, and transfer

students are encouraged to take them if they have not completed a substitute requirement or want a better understanding of the relevant material. If you are transferring, compare catalog descriptions, consult your current institution's advisor, and refer to the ASSIST website to determine equivalency. Prospective transfer students should review the transfer information.

Students who are proposed in a different major and have advanced standing when they come to UC Santa Cruz require permission from the department to change into the major. Contact envsadvi@ucsc.edu to request permission.

Major Qualification Policy and Declaration Process

Major Qualification

To qualify for the environmental studies/economics combined major, students must complete the specific courses listed below, or their approved equivalents.

For transfer requirements, see Transfer Admission Screening Requirements. Transfer students must have ENVS major listed on their application in order to pursue the major, unless approved by appeal. If a student has questions about the appeals process, they should contact envsadvi@ucsc.edu.

One of the following:

ENVS 23	The Physical and Chemical Environment	5
CHEM 1A	General Chemistry	5

Plus one of the following

ENVS 24	General Ecology	5
BIOE 20C	Ecology and Evolution	5

Plus all of the following

ENVS 25	Environmental Policy and Economics	5
ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
AM 11A	Mathematical Methods for Economists I	5
STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2

Determining Qualification

- Students who complete all the qualification courses with a grade of P, or letter grade of C or better are qualified to declare the major.
- Students who have received one grade of C-, D+, D, D-, or F in one of the qualification courses

taken at UC Santa Cruz will only be qualified to declare the major after successfully completing the same or an equivalent course with a letter grade of C or better.

- Students with two or more grades of C-, D+, D, D-, or F in the qualification courses taken at UC Santa Cruz are not qualified to declare the major.
- Students with AP credit (score of 3 or higher) for any of the qualification course(s) are qualified to declare after successfully completing the remaining qualification courses.
- Students must attend an Environmental Studies Department declaration workshop when requesting to declare the major.

Appeal Process

Students who are not qualified to declare the major may appeal this decision by submitting an appeal to qualify for the major within 15 days of the denial of the declaration. Within 15 days of receipt of the appeal, the department will notify the student and college of the decision. If a student has questions about the appeals process, they should contact envsadvi@ucsc.edu.

How to Declare a Major

All students are required to attend one declaration workshop offered during the first three weeks of the quarter they are eligible to declare. Before students attend declaration workshops, they should check to see if they are eligible to declare using the major qualification page. Students wishing to declare within the Environmental Studies Department should visit the Environmental Studies Department website and follow the steps listed in the "how to declare" tab. Degree requirement sheets may be downloaded from the Environmental Studies Undergraduate Program Requirements page.

Letter Grade Policy

This program does not have a letter grade policy, except that the senior comprehensive requirement must be taken for a letter grade.

Course Substitution Policy

Students pursuing the environmental studies/economics combined major cannot substitute courses to count toward their upper-division electives.

Double Majors and Major/Minor Combinations Policy

Study Abroad

Students in environmental studies are encouraged to participate in Study Abroad programs and other off-campus programs. Students who are interested in these programs shall note the following policies:

- Students planning to study abroad must be declared in their major prior to studying abroad.
- Students must have their courses they plan to take abroad reviewed and approved by Environmental Studies Advising.
- Environmental studies combined majors cannot petition their courses taken abroad for upper division course substitution.
- For more information on EAP, please visit the UC Education Abroad Program website.

Honors

Departmental Honors. Students must have a 3.5 grade point average (GPA) in all courses used to satisfy the environmental studies upper-division requirements. To be considered for departmental honors, students are limited to no more than one grade of P in those upper-division courses.

Senior Comprehensive Honors. Only applicable to a senior thesis, senior internship, or individual work in a senior seminar. Honors must be awarded by the student's faculty sponsor, and a second faculty member (chosen by the student's faculty advisor) must confer.

Highest Departmental Honors. Students must have a 3.75 grade point average (GPA) in all courses used to satisfy the environmental studies upper-division requirements and must also receive senior comprehensive honors (see above). To be considered for highest departmental honors, students are limited to no more than one grade of P in those upper-division courses.

Students must fulfill all requirements for honors from environmental studies and biology.

Requirements and Planners

Course Requirements

Lower-Division Courses

All of the following courses

ECON 1	Introductory Microeconomics: Resource Allocation and Market Structure	5
ECON 2	Introductory Macroeconomics: Aggregate Economic Activity	5
AM 11A	Mathematical Methods for Economists I	5
AM 11B	Mathematical Methods for Economists II	5

STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2

Plus one of the following

ENVS 23	The Physical and Chemical Environment	5
CHEM 1A	General Chemistry	5

Plus one of the following

ENVS 24	General Ecology	5
BIOE 20C	Ecology and Evolution	5

Plus the following

ENVS 25	Environmental Policy and Economics	5
---------	------------------------------------	---

Plus one of the following

ANTH 2	Introduction to Cultural Anthropology	5
PHIL 22	Introduction to Ethical Theory	5
PHIL 24	Introduction to Ethics: Contemporary Moral Issues	5
PHIL 28	Environmental Ethics	5
BME 80G	Bioethics in the 21st Century: Science, Business, and Society	5
SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5

Upper-Division Courses

One of the following

ECON 100A	Intermediate Microeconomics	5
ECON 100M	Intermediate Microeconomics, Math Intensive	5

And all of the following

ECON 113	Introduction to Econometrics	5
ENVS 100	Ecology and Society	3
ENVS 100L	Ecology and Society Writing Laboratory	5

Electives

Six upper-division elective courses, three in economics and three in environmental studies.

Economics electives

Economics electives must be chosen from the following list:

ECON 100B	Intermediate Macroeconomics	5	ENVS 104L	Field Methods Laboratory	2
ECON 100N	Intermediate Macroeconomics, Math Intensive	5	ENVS 106A	Natural History of Birds	5
ECON 101	Managerial Economics	5	ENVS 107A	Natural History Field Quarter	5
ECON 114	Advanced Quantitative Methods	6	ENVS 107B	Natural History Field Quarter	5
ECON 115	Introduction to Management Sciences	5	ENVS 107C	Natural History Field Quarter	5
ECON 120	Development Economics	5	ENVS 108	General Entomology	5
ECON 128	Poverty and Public Policy	5	ENVS 108L	General Entomology Laboratory	3
ECON 130	Money and Banking	5	BIOE 151A	Ecology and Conservation in Practice Supercourse: Ecological Field Methods	5
ECON 131	International Financial Markets	5	BIOE 151B	Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory	5
ECON 133	Security Markets and Financial Institutions	5	BIOE 151C	Ecology and Conservation in Practice Supercourse: Functions and Processes of Terrestrial Ecosystems	5
ECON 135	Corporate Finance	5	BIOE 151D	Ecology and Conservation in Practice Supercourse: Conservation in Practice	4
ECON 136	Business Strategy	5	ENVS 120	Conservation Biology	5
ECON 138	The Economics and Management of Technology and Innovation	5	ENVS 121	Landscape Ecology	5
ECON 139A	The Economics of Electronic Commerce	5	ENVS 122	Tropical Ecology and Conservation	5
ECON 139B	E-Commerce Strategy	5	ENVS 123	Animal Ecology and Conservation	5
ECON 140	International Trade	5	BIOE 125	Ecosystems of California	5
ECON 141	International Finance	5	ENVS 129	Integrated Pest Management	5
ECON 142	Advanced Topics in International Economics	5	ENVS 129L	Integrated Pest Management Laboratory	2
ECON 150	Public Finance	5	ENVS 130A	Agroecology and Sustainable Agriculture	5
ECON 156	Health Economics and Policy	5	ENVS 130L	Agroecology and Sustainable Agriculture Laboratory	2
ECON 159	The Economics of Organizations	5	ENVS 130C	Field Experiences in Agroecology and Sustainable Food	5
ECON 160A	Industrial Organization	5	ENVS 131	Insect Ecology	5
ECON 160B	Government and Industry	5	ENVS 133	Agroecology Practicum	5
ECON 161A	Marketing	5	ENVS 138	Field Ethnobotany	5
ECON 162	Legal Environment of Business	5	ENVS 160	Restoration Ecology	5
ECON 165	Economics as an Experimental Science	5	ENVS 161A	Soils and Plant Nutrition	5
ECON 169	Economic Analysis of the Law	5	ENVS 162	Plant Physiological Ecology	5
ECON 170	Environmental Economics	5	ENVS 162L	Plant Physiological Ecology Laboratory	2
ECON 175	Energy Economics	5	ENVS 163	Plant Disease Ecology	5
ECON 180	Labor Economics	5	ENVS 163L	Plant Disease Ecology Lab	2
ECON 183	Women in the Economy	5	ENVS 164	Projects and Practices in Soil Ecology	5

Environmental studies electives

Environmental studies electives must be chosen from those numbered ENVS 101 through ENVS 179, with at least one course based in the natural sciences selected from the following upper-division courses (lecture and lab combinations count as a single course):

ENVS 104A	Introduction to Environmental Field Methods	5
-----------	---	---

ENVS 166	Agroecosystem Analysis and Watershed Management	5
ENVS 167	Freshwater and Wetland Ecology	5
ENVS 167L	Freshwater and Wetland Ecology Lab	2
ENVS 168	Biogeochemistry and the Global Environment	5
ENVS 169	Climate Change Ecology	5
ENVS 170	Agriculture and Climate Change	5

None of the three environmental studies upper-division courses can be an environmental studies internship, individual study or substitution course.

A list of which upper-division courses offered in the current year by the Environmental Studies Department are based in the natural sciences and in the social sciences is available on the department's website.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement for the environmental studies/economics combined major is satisfied by completing:

The following courses:

ENVS 100	Ecology and Society	3
ENVS 100L	Ecology and Society Writing Laboratory	5

Plus one of the following

BIOE 151B	Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory	5
ENVS 183B	Senior Internship	5
ENVS 190	Capstone Course: Environmental Problem Solving	5
ENVS 195B	Senior Thesis Group	5
ENVS 196	Senior Seminar	5

Students taking the cross-listed course BIOE 151B/ENVS 109B are recommended to enroll in ENVS 109B.

ENVS 183B and ENVS 195B are usually taken after successfully completing ENVS 183A and ENVS 195A respectively.

Comprehensive Requirement

Students satisfy the senior comprehensive requirement by completing both of the following:

- One of the options for environmental studies B.A.

- Pass those portions of the economics comprehensive examination administered in ECON 100A and ECON 113.

The senior comprehensive may be satisfied by completing one of the options listed below. All courses used to satisfy the senior comprehensive requirement must be taken for a letter grade.

Before enrolling in the senior thesis or senior internship option, students must formally apply to work with a particular faculty mentor very early in their thesis or project preparation. The senior thesis and senior internship option require careful planning, additional independent research, and at least a two-quarter commitment.

Students with advanced skills in one of the graduate focal areas may also take a graduate seminar by invitation from the instructor.

Either this course		
BIOE 151B	Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory	5
or these courses		
ENVS 183A	Senior Internship	5
ENVS 183B	Senior Internship	5
or this course		
ENVS 190	Capstone Course: Environmental Problem Solving	5
or these courses		
ENVS 195A	Senior Research	5
ENVS 195B	Senior Thesis Group	5
or this course		
ENVS 196	Senior Seminar	5

Students taking the cross-listed course BIOE 151B/ENVS 109B are recommended to enroll in ENVS 109B.

ENVS 190 is offered in the spring and summer.

ENVS 183B and ENVS 195B are usually taken after successfully completing ENVS 183A and ENVS 195A respectively.

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements (p. **Error! Bookmark not defined.**) for more information.

The following are two sample academic plans for students pursuing the environmental studies/economics combined B.A. major without a concentration. Plan One is for incoming frosh and Plan Two is for incoming transfer students.

Plan One for Incoming Frosh

	Fall	Winter	Spring
1st (frosh)	MATH 3 or AM 3	ENVS 25 ECON 1	ENVS 23 or CHEM 1A ECON 2
2nd (soph)	ENVS 24 or BIOE 20C AM 11A/EC ON 11A	STAT 5 or STAT 7 & STAT 7L AM 11B/EC ON 11B	SOCY/ANTH/ethics course ECON 100A or ECON 100M
3rd (junior)	ECON 113	ENVS 100 & ENVS 100L* Upper-division ECON	Upper-division ENVS (natural science) Upper-division ECON
4th (senior)	Upper-division ENVS Upper-division ECON	Upper-division ENVS	Comprehensive requirement

*This course is also offered in the spring term.

This planner assumes that a student has placed into MATH 3 or AM 3.

Students completing this major will have satisfied the SI, IN, PE-E, IS, PE-H, MF, and PR-E general education requirements. In addition, they will need to fulfill all remaining university, college, and general education requirements.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must take ENVS 195A (thesis) or ENVS 183A (internship) in the quarter before completing ENVS 195B (thesis) or ENVS 183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

Plan Two for Incoming Transfer Students

	Fall	Winter	Spring
3rd (junior)	ECON 100A or ECON	ECON 113	Upper-division ENVS (natural sciences)

100M	STAT 7 & STAT 7L	ENVS 100 & ENVS 100L	Upper-division ECON
------	------------------	----------------------	---------------------

4th (senior)	Upper-division ENVS Upper-division ECON	Upper-division ENVS Upper-division ECON	Comprehensive requirement
---------------------	--	--	---------------------------

This planner assumes that a student has completed all required lower-division courses—including UCSC or community college general education requirements.

A transfer student who has completed the requirements for the Intersegmental General Education Transfer Curriculum (IGETC) before matriculating at UC Santa Cruz, with at most two course requirements left to complete, is allowed to satisfy IGETC in lieu of the UCSC general education requirements.

Students interested in taking the senior thesis or senior internship as their comprehensive requirement must take ENVS 195A (thesis) or ENVS 183A (internship) in the quarter before completing ENVS 195B (thesis) or ENVS 183B (internship). Both the senior thesis and senior internship are two consecutive quarter commitments.

ENVIRONMENTAL STUDIES PH.D.

Introduction

Advancement to Candidacy

A three-person interdisciplinary guidance committee works to ensure that each student's preparation is individually designed to meet particular needs and interests, to help ensure their success as scholars, and to help students fully engage interdisciplinary dimensions of their training and research. One committee member is the major professor and at least one member needs to be from a complementary meta-discipline from the student's general research area. For instance, a student whose interests are in conservation science may have two committee members who are ecologists and one who is a political scientist.

Course Requirements

All of the following courses:

ENVS 201A	Research Approaches in Environmental Studies	5
ENVS 201B	Environmental Studies In Practice	5

Plus one of the following courses from natural sciences

ENVS 220	Conservation Biology	5
ENVS 230	Agroecology and Sustainable Agriculture	5

Plus one of the following courses from social sciences:

ENVS 210	Political Ecological Thought and Environment	5
ENVS 240	Public Policy and Conservation	5

Plus all of the following:

- An approved graduate course in quantitative methods that provides a basis in research design and analysis;
- An approved graduate course in qualitative methods that provides a basis in research design and analysis;
- An approved graduate elective course that provides focused expertise.

In addition, all students are required to participate in three quarters of:

ENVS 290L	Graduate Research Seminar	2
-----------	---------------------------	---

Before advancement to candidacy:

Every quarter before advancement to candidacy, all students are required to participate in:

ENVS 290	Interdisciplinary Research Seminar	2
AND		
ENVS 292	Topics in Research in Environmental Studies	2

Foreign Language Requirements

If the venue of a student's research is in a non-English-speaking country, certification of competence in the language of that country may be required before advancement to candidacy.

Teaching Requirements

Students are expected to serve as teaching assistants in undergraduate courses for two quarters.

Pre-Qualifying Requirements

The interdisciplinary guidance committee helps guide the student in preparation for pre-qualifying examinations in three general areas of scholarly interest, and depending on the student's background, interests, and intentions, may require additional coursework, including courses from other departments. The pre-qualifying examination must be taken no later than winter quarter of the third year.

Qualifying Examination

The qualifying examination committee includes an additional member from outside the environmental studies department, and helps guide the student to define and plan their dissertation research. This committee is responsible for certifying that the student is qualified to advance to candidacy for the Ph.D. degree. The qualifying examination must be completed by the end of the third year.

Post-Qualifying Requirements**Dissertation****Dissertation**

A dissertation in environmental studies is expected to present an original contribution to the understanding of a significant environmental problem or issue. It should demonstrate a clear understanding of the relevant literature, careful and rigorous research design and data analysis, and effective communication of the results within the context of the student's area of emphasis. The dissertation is guided by a committee that includes both natural and social scientists.

Dissertation Defense**Optional Catchall****Academic Progress**

The typical duration of the doctoral program is five to six years.

Applying for Graduation**ENVIRONMENTAL STUDIES DESIGNATED EMPHASIS****Introduction**

The designated emphasis is the equivalent of a "minor" for doctoral study. It will provide you with a framework for in-depth study in specialized fields in your area, and an opportunity for recognition of particular scholarly expertise.

Requirements

Complete the Environmental Studies Designated Emphasis Plan and contact the Graduate Program coordinator if you are interested in taking the Environmental Studies Designated Emphasis Plan. You must declare your intent to complete a designated emphasis in environmental studies before you officially advance to candidacy.

Committee Composition and Departmental Approvals

An environmental studies faculty member is required to act as your designated emphasis advisor. They will

advise you about coursework as you complete the Environmental Studies Designated Emphasis Plan, serve on your qualifying examination committee, and your dissertation reading committee.

Course Requirements

Doctoral students from other departments at UC Santa Cruz may complete a designated emphasis in environmental studies by completing

ENVS 201A	Research Approaches in Environmental Studies	5
ENVS 201B	Environmental Studies In Practice	5

Two advanced graduate courses or seminars

Take two advanced graduate courses or seminars from the departmentally approved list below (current list is also provided on the ENVS DE Plan), and participate for at least two quarters in a environmental studies graduate research group registered under ENVS 292, Topics in Research in Environmental Studies.

ENVS 210	Political Ecological Thought and Environment	5
ENVS 220	Conservation Biology	5
ENVS 230	Agroecology and Sustainable Agriculture	5
ENVS 235	Social Theories of Nature	5
ENVS 240	Public Policy and Conservation	5
ENVS 247	Regional Approaches to Environmental Policy	5
ENVS 263	Plant Disease Ecology	5
ENVS 271	Valuing the Environment	5
ENVS 280	Advanced Topics in Environmental Studies	5
ENVS 291	Advanced Readings in Environmental Studies	3
ENVS 291C	Advanced Readings in Risk and Public Policy	3
ENVS 291D	Advanced Readings in Tropical Ecology, Agriculture, and Development	3
ENVS 291M	Advanced Readings in Biogeochemistry	3
ENVS 291P	Advanced Readings in Environmental History and Anthropology	3

Plus

Participate for at least two quarters in an environmental studies graduate research group registered under ENVS 292, Topics in Research in Environmental Studies.

ENVS 292	Topics in Research in Environmental Studies	2
----------	---	---

Writing, Research and/or Teaching Requirements

Include a significant scholarly written component (i.e., a chapter of the student's dissertation or a paper to be

submitted for publication) on an appropriate environmental topic.

ENVIRONMENTAL STUDIES COURSE LISTS

Global and Community Health B.S. (p. 370)

GLOBAL AND COMMUNITY HEALTH B.A.

Information and Policies

Introduction

Global and Community Health (GCH) is an interdisciplinary field of study that is connected both to urgent practical work in the world at large and the core concerns of a liberal arts education. Since GCH topics are embedded in and reflective of wide-ranging social forces, their study is situated at the intersection of diverse traditional disciplines ranging from art, literature, and history, to anthropology, sociology, psychology, politics, economics, and the natural and environmental sciences. Other interdisciplinary fields such as feminist studies and Latin American and Latino studies also intersect in influential ways with GCH, creating exciting opportunities for double majors.

University of California, Santa Cruz, students have many opportunities in the GCH curriculum for practical work in the world beyond the university. Students reflect repeatedly through the major on how their own personal learning can be effectively connected with and communicated to external audiences ranging from community organizations to employers to graduate schools.

More than two hundred courses offered by faculty from all five divisions of UC Santa Cruz contribute to the GCH curriculum. These faculty are committed to the value of interdisciplinary learning, as well as to the possibilities of connecting student research and writing with GCH concerns in the world beyond the university.

No specific courses at the high school level are required for admission to the GCH B.A. at UC Santa Cruz. Courses in the natural sciences, social sciences, and humanities, whether taken at the high school or college level, are appropriate background and preparation.

The GCH B.A. is appropriate for students interested in careers ranging from medicine, nursing, dentistry and pharmacy to public health and environmental health work in governmental agencies, to global health and community health work with non-governmental organizations, law firms and universities. Many of these careers also require additional post baccalaureate degrees for which the GCH B.A. provides an excellent foundation. But there are also jobs open to those with just the B.A. in a subset of community health, counseling and educational settings as well as in business sectors such as human resources, administration, hospitality, recreation, food services, farming and construction.

Program Learning Outcomes

Students completing requirements for the B.A. in GCH will develop knowledge and competency in the following five domains:

1. the biological and environmental contexts of global and community health;
2. the social and cultural contexts of global and community health;
3. the institutional and policy contexts of global and community health;
4. the methods, skills and humanities-informed analysis of global and community health; and
5. the interdisciplinary design and implementation of global and community health work.

Academic Advising for the Program

The GCH undergraduate adviser offers specific information about navigating through the program and assists students with requirements, policies, procedures, learning support, guidance on internships, scholarships, and opportunities for undergraduate research.

Contact GCH_BA@ucsc.edu.

Transfer students should also consult the Transfer Information and Policy section.

Getting Started in the Major: Frosh

This is a moderately course-intensive sequential program, and students who intend to pursue this major should begin taking classes for the major in their first year at UC Santa Cruz.

It is crucial for students to take the required introductory course Foundations for Global and Community Health as soon as possible. This fall it is cross-listed three ways as POLI 89/ANTH 89/BIOL89, and students can register under any one of these three subject codes.

Transfer Information and Policy

Transfer Admission Screening Policy

Students planning to apply in this major are not required to complete specific major preparation courses before they come to UC Santa Cruz.

Getting Started in the Major: Transfer Students

A transfer student must take the required lower-division GCH course (GCH 1) in the fall of their first year at UC Santa Cruz or as soon thereafter as possible.

Courses from another institution may be considered only if they appear on the student's Transfer Credit Summary. Students who wish to substitute transferable courses taken elsewhere for the GCH B.A. major's

requirements should discuss the procedure with a GCH adviser.

Major Qualification Policy and Declaration Process

Students may declare the major after completing the required lower-division GCH course (GCH1, cross-listed in fall 2022 as ANTH89/BIOL89/POLI89) with grades of C or better. This course is normally taken during the first year or second year.

Major Qualification

Appeal Process

A student who has not been able to satisfy the pre-declaration requirement may petition the GCH program for an exception by using this Appeal to Qualify form within 15 days of the denial of the declaration. Within 15 days of receipt of the appeal, the department will notify the student and college of the decision. If a student has questions about the appeals process, they should contact gchBAadvising@ucsc.edu.

How to Declare a Major

Students who are eligible to declare the major must bring a completed declaration of major worksheet and GCH B.A. worksheet to the GCH advising office to declare officially.

Letter Grade Policy

All courses that are taken to satisfy any major requirement must be taken for a letter grade.

Course Substitution Policy

Double Majors and Major/Minor Combinations Policy

Students interested in pursuing multiple majors may **NOT** declare a combination of the Global and Community Health B.S. and B.A.. Double majors with other degrees are permitted so long as students qualify for and complete all requirements for each of the majors, including the Disciplinary Communication and comprehensive requirements.

Study Abroad

Honors

Honors in the GCH B.A. are awarded to graduating seniors, based primarily on a review of grades, whose academic performance is judged to be consistently excellent by a committee of GCH faculty. Highest honors in the major are reserved for students with consistently outstanding academic performance.

Independent and Field Studies

Students may petition the program to substitute one upper-division independent study or field study toward the elective requirements of the major. In addition,

students may take UCEAP study abroad courses focused on public and global health to fulfill the Area IV upper-division elective requirement for the major after approval of a request submitted to a GCH undergraduate adviser.

Medical and Professional School Admission

Medical and professional school admissions requirements vary; students should verify that their coursework will satisfy the admissions requirements of the specific programs to which they plan to apply.

Requirements and Planners

Course Requirements

Lower-Division Courses

One lower-division GCH requirement

All students are required to complete and pass Foundations for Global and Community Health (GCH 1), cross-listed in fall 2022 as ANTH89/BIOL89/POLI89.

GCH 1	Foundations for Global and Community Health	5
-------	---	---

Four Lower Division GCH Electives

All students are required to take four lower-division electives from the four lists below: one from the natural science and bio-environmental competency list; one from the social science and political-cultural competency list; one from the quantitative competency list; and one from the linguistic competency list. These courses are normally taken during the student's first year.

One course required from each of the four lists.

Natural science and bio-environmental competency for GCH

ANTH 1	Introduction to Biological Anthropology	5
BIOE 19	Biodiversity in the Age of Humans	5
BIOL 20A	Cell and Molecular Biology	5
BIOL 80A	Female Physiology and Gynecology	5
BIOL 80J	Biology of Emerging and Pandemic Diseases	5
BIOL 86	Research Deconstruction: MCD Biology	3
BIOL 88	Studies in Medicine: Its Art, History, Science, and Philosophy	5
BME 5	Introduction to Biotechnology	5
BME 18	Scientific Principles of Life	5
BME 80H	The Human Genome	5

CHEM 1A	General Chemistry	5		Environmental Justice at UCSC	
CHEM 8A	Organic Chemistry	5			
CSE 80A	Universal Access: Disability, Technology, and Society	5	LALS 5	Introduction to Human Rights and Social Justice	5
ENVS 24	General Ecology	5	LALS 45	Intersections of Race, Class, and Gender	5
ENVS 25	Environmental Policy and Economics	5	LALS 55	AIDS Across the Americas	5
ENVS 80F	Introduction to Agroecology and Sustainable Food Systems	5	LALS 80J	Race, Nation, and War	5
			LALS 80S	Sexualities and Genders in Latin American and Latina/o Studies	5
COM HLT 48	Community Health Sciences 48: Nutrition and Food Studies: Principles and Practice (UCLA)		LIT 80K	Topics in Medical Humanities	5
NUT 010V	Discoveries & Concepts in Nutrition (UCD)		POLI 17	U.S. and the World Economy	5
PUBHLTH 1	Principles of Public Health (UCI)		POLI 61	Politics of Social Policy	5
SAS2V	Feeding the World (UCD)		PSYC 1	Introduction to Psychology	5
VME 57V	Global Pop Health & Env (UCD)		SOCY 1	Introduction to Sociology	5
			SOCY 10	Issues and Problems in American Society	5
			SOCY 15	World Society	5
Social science and political-cultural competency for GCH			Quantitative Competency for GCH		
ANTH 2	Introduction to Cultural Anthropology	5	BIOE 80S	Lies, Damn Lies, and Statistics	5

			SPHS 6	Spanish for Heritage Speakers	5
			YIDD 3	First-Year Yiddish	5

For information on placement exams, go to Languages and Applied Linguistics Department Placement and Articulation Information page and click on the language of interest.

Upper-Division Courses

Upper-division GCH requirements

All students are required to complete and pass two common core courses: the first, a course in Community Analysis for Global and Community Health; the second, a course chosen from the list in Social Analysis for Global and Community Health.

Required Common Core Courses.

Requirement 1

One course in Community Analysis for Global and Community Health:

CMMU 165	Community Analysis for Global Health	5
----------	--------------------------------------	---

Requirement 2

One course in Social Analysis for Global and Community Health:

ANTH 134	Medical Anthropology: An Introduction	5
SOCY 146	Introduction to Population Health	5
POLI 186	Global Health Politics	5

Six upper-division electives from the four GCH "context" areas

The following four groups of context courses constitute the core upper-division courses of the GCH B.A. One course must be taken from each of the four GCH context areas, plus two additional electives from any of the areas.

Area I: Biological and environmental contexts

ANTH 104	Human Variation and Adaptation	5
ANTH 110F	Evolution of Human Diet	5
ANTH 111	Human Ecology	5
ANTH 112	Life Cycles	5
ANTH 136	The Biology of Everyday Life	5
BIOE 118	Plants and Society: the Biology of Food, Shelter, and Medicine	5
BIOL 117	Global Health and Neglected Diseases	5
BIOL 188	A Life in Medicine	3
CMMU 162	Community Gardens and Social Change	5
ENVS 130B	Justice and Sustainability in Agriculture	5
ENVS 135	Sustainable Aquaculture	5

ENVS 176	Vulnerability, Complex Systems, and Disasters	5
METX 100	Introduction to Microbiology	5
METX 102	Cell and Molecular Toxicology	5
METX 115	Environmental Health Science	5
BIOL 166	Global Change Biology (UCR)	
GLBH 171R	Global Mental Health (UCSD)	
PUBHLTH 121	Intro to Alternative Medicine (UCD)	
PUBHLTH 170	Intro to Global Health (UCI)	

Area II: Social, cultural and historical contexts

ANTH 110T	Motherhood in American Culture	5
ANTH 110Y	Feeding California	5
ANTH 129	Beyond Borders: Other Globalizations and Histories of Interconnection	5
ANTH 134	Medical Anthropology: An Introduction	5
ANTH 146	Anthropology and the Environment	5
ANTH 161	The Anthropology of Food	5
ANTH 161S	Anthropology of Food, Abroad	5
CMMU 156	Politics of Food and Health	5
CMMU 160	Public Health	5
CMMU 161	Gender Health and Justice	5
CMMU 163	Health Care Inequalities	5
CMMU 164	Health Justice in Conflict	5
ECON 104	Is There Truth in Numbers: The Role of Statistics in Economics	5
ECON 120	Development Economics	5
FMST 124	Technology, Science, and Race Across the Americas	5
FMST 125	Race, Sex, and Technology	5
FMST 133	Science and the Body	5
FMST 189	Advanced Topics in Feminist Theory	5
HIS 101D	World History of Science	5
HIS 101F	Global Environmental History	5
HIS 149	Plants, People, and the Making of Modern Southeast Asia	5
HIS 151	History of Science, Medicine, and Technology	5

	from Antiquity to the Enlightenment		LGST 108	Gender, Sexuality, and Law	5
HIS 151A	Medicine and the Body in the Colonial World	5	LGST 137	International Environmental Law and Policy	5
LALS 100	Concepts and Theories in Latin American and Latina/o Studies	5	LGST 173	Disability, Law, & Politics	5
LALS 112	Immigration and Assimilation	5	POLI 160B	International Law	5

PUBHLTH 174	Global Health Ethics (UCI)	

UCEAP study abroad courses focused on public and global health can be substituted for the upper-division electives listed in Area IV “Methods, skills & humanities-informed analysis” of the GCH B.A.

Electives

Comprehensive Requirement

The comprehensive requirement for the GCH B.A. is satisfied by completing the same courses as those required for the Disciplinary Communication requirements.

Disciplinary Communication (DC) Requirement

Students of every major at UC Santa Cruz must satisfy that major’s upper-division Disciplinary Communication (DC) requirement. The 7-credit DC requirement for the GCH B.A. is satisfied by completing one of the following course combination options:

Option 1

Both of the following courses:

GCH 190	Global and Community Health Task Force	5
GCH 195	Global and Community Health Communication	2

Option 2

Both of the following courses:

GCH 195	Global and Community Health Communication	2
GCH 199A	Global and Community Health Senior Thesis	5

Option 3

All three of the following courses

GCH 195	Global and Community Health Communication	2
GCH 199A	Global and Community Health Senior Thesis	5
GCH 199B	Global and Community Health Senior Thesis B	5

Planners

LATIN AMERICAN AND LATINO STUDIES

32 Merrill Academic Building
(831) 459-4284

PROGRAMS OFFERED

Latin American and Latino Studies B.A. (p. 699)

Latin American and Latino Studies/Politics Combined Major (p. 704)

Latin American and Latino Studies/Sociology Combined Major (p. 707)

Latin American and Latino Studies Minor (p. 710)

Latin American and Latino Studies Ph.D. (p. 710)

Latin American and Latino Studies Designated Emphasis (p. 712)

A combination of Latin American studies and Latinx studies, Latin American and Latino Studies (LALS) merges area and ethnic studies. LALS is animated by the understanding that U.S. Latinxs and Latin American peoples, subjects, histories, and processes are interrelated. Multiple disciplines and fields, including sociology, history, anthropology, political science, economics, literature, migration studies, environmental studies, media studies, communications, cultural studies, feminist studies, and health studies, comprise LALS. Our scope encompasses the Américas, and our mission is driven by a deep commitment to activist scholarship, engaged teaching, and social justice.

UNDERGRADUATE PROGRAM

The LALS Department prepares students to be active global citizens, engaged in rigorous educational study with "real world" applications. We foster a commitment to social change in our majors and work to provide them with the tools to help make our world a more just place for all. Our students are committed scholars who want to better understand the roots of major issues like inequality, rights, oppression, globalization, and migration, and to learn about effective strategies for addressing them through a variety of fields and disciplines. They take seriously the importance of understanding others from a variety of perspectives, and learn about the historical, economic, social, political,

and cultural processes that are shaping and transforming the Américas.

LALS is for students interested in better understanding the Américas. It is for students who 1) want to learn from multiple perspectives and work directly with faculty; 2) are interested in ethnic studies, Latin America, human rights, and social change; and, 3) want to know about the roles various countries, peoples, and cultures have played in shaping the U.S. Latinx population and Latin America today. LALS students have the opportunity to take major courses in Spanish, English, and Portuguese. Our majors study topics, concepts, and theories grounded in the Américas to learn about local, regional, global, and transnational dimensions shaping our world. LALS students often become involved in local communities, in Santa Cruz County, and in their hometowns. They strive to build the community resources and opportunities that help everyone thrive.

LALS is for students who want flexibility in pursuing educational opportunities within their degree coursework. The interdisciplinary structure of our major encourages students to explore many different kinds of courses, opportunities, and programs. Many of our students combine their study with other majors in the social sciences, humanities, arts, and sciences. LALS also welcomes transfer students and works closely with them to ensure their success in the major.

The LALS undergraduate program offers three majors and a minor to help students prepare for and meet their vocational and educational goals. The LALS minor, major, and language intensive concentration allow students the most flexibility to explore their specific interests within our program. The language intensive concentration will also provide valuable target-language preparation for students interested in pursuing graduate study and conducting field research related to their LALS B.A. Combined major programs with politics and sociology provide students a more specific interdisciplinary experience with LALS, without the course-heavy requirements of a full double major.

In addition to learning about Latinxs in and of the United States, LALS students learn about individual countries of the Américas; about historical and contemporary issues, processes, and cultures; about migration, transnationalism, intersectionality, inequality, collective action, social movements, power and culture; and about strategies and solutions for addressing questions of rights, advocacy, and justice. LALS students investigate the historical, political, economic, social, and cultural processes that are shaping and transforming the Américas region. By viewing societies as interrelated—specifically U.S. Latinx communities and Latin American/Caribbean communities—LALS students learn to analyze from multiple perspectives, to understand imperialism and colonialism, and to clarify local, regional, global, and transnational dimensions affecting the histories, politics, and cultures of the hemisphere.

LALS also supports and encourages students to pursue opportunities to acquire practical skills. Through internships and field study experiences, students can gain useful, pre-professional skills in key areas, such as political advocacy, community development, public policy, education, legal services, and research.

Graduates of the LALS major have forged careers in a wide variety of fields, including environmental activism, community organizing, teaching, health care, legal services, politics and government service, and journalism. Many have gone on to pursue advanced degrees in the US or abroad in fields such as law, anthropology, bilingual education, media, communications, cultural studies, ecology, economics, geography, history, literature, educational counseling, public health, and sociology. LALS majors graduate with knowledge, skills, and understandings that propel them forward into exciting careers grounded in justice, rights, and creating social change.

GRADUATE PROGRAM

The first doctoral program to link Latin American and Latinx studies, the Ph.D. program in Latin American and Latino Studies at UC Santa Cruz offers an innovative transnational and interdisciplinary approach to the study of the peoples, cultures, societies and institutions of the Américas. Drawing from theories, methods, and sources in the humanities and social sciences, the program introduces students to this new field of study and trains them to develop the conceptual and analytical skills necessary for understanding the dynamics of hemispheric change. As part of our rigorous approach to studying the Américas, the department offers four thematic clusters in the emerging field of Latin American and Latino studies: 1) transnational migrations within the Américas; 2) social inequalities; 3) cultural politics and cultural flows; and 4) collective action and social movements. Doctoral students specialize in one of these four substantive themes, as well as a focus area of their own design.

1. **Transnationalisms, Migrations, and Displacement.** While transnational migrations are the subject of research in multiple disciplines, this program analyzes these transformative processes through an interdisciplinary lens. A transnational approach examines links between regions in the Américas, analyzing the social and historical foundations of economic dynamics such as remittances from the United States or the dollarization of Latin American countries. A transnational approach to the study of migratory processes explores the dynamics of bi-national communities, bilingualism and multilingualism, immigrant integration into host societies, and North-South exchanges of ideas and cultures.
2. **Intersectionality, Identities, and Inequalities.** This program's research foregrounds the study of transnational social inequalities formed by power relations based on

race, ethnicity, nationality, citizenship, class, territory, gender and/or sexuality in the Américas. These social hierarchies are analyzed as institutions, historical processes, discourses, or signifiers with multiple meanings, and are examined in terms of how they have been mobilized to build, transform, or challenge identities, communities, and social movements in local, national, and global contexts over time.

3. **Culture, Power, and Knowledge.** Another distinctive area of inquiry in the Américas is the study of cultural politics and cultural flows that shape everyday life, institutions, social identities, discourses, meanings, and cultural forms and practices, in global, regional, and local contexts in the Américas and in an increasingly interconnected and integrated world. The transnational analysis of culture focuses on the ways in which cultural forces and cross-cultural communication and media are contributing to the formation of new transnational imaginaries, as well as how these cultural processes are transforming and redefining national and local cultures.
4. **Collective Action, Social Movements, and Social Change.** This area of research addresses collective action and social movements at local, national and international levels viewed through transnational lenses. As migrants engage in public life, both in their communities of residence and in their communities of origin, they construct diverse practices of political participation, including "civic bi-nationality." These processes are crucial for understanding the largest wave of immigration in a century, including how migrants relate to U.S. society.

While our doctoral program prepares students for research and teaching at the university level, we also support students who opt to seek employment outside academia (e.g., in the corporate or non-profit sectors).

LATIN AMERICAN AND LATINO STUDIES B.A.

Information and Policies

Introduction

A degree in Latin American and Latino studies (LALS) trains students to be critical and analytical thinkers, to be active, engaged global citizens, and to be skilled strategic activists in making the world a more just place for all. An LALS bachelor of arts (B.A.) prepares students to learn from and work with people from a variety of cultures and perspectives, to understand the complexity of our current political, social, and cultural moment, and to use skills from many disciplines and fields.

Program Learning Outcomes

All students completing a degree in Latin American and Latino Studies will have proficiency or competency in the following four areas: critical thinking, research methods, communication, and lifelong learning skills.

1. **Critical Thinking.** Ability to analyze from a transnational/transborder/translocal perspective—to see the interconnections between Latin American and Latino issues, people, ideas, problems, and solutions. This includes key skills, such as understanding sources, comparing arguments, analysis, and historical perspective.
2. **Research Methods.** Working knowledge of social scientific and/or humanistic approaches to LALS relevant topics. This includes acquiring qualitative and quantitative skills, gathering or obtaining research data, finding/using primary sources, and other research methods.
3. **Communication.** Key communication skills, including written, oral presentation, and digital, including an understanding of media sources and ability to apply media literacy to cross-cultural analysis.
4. **Lifelong Learning Skills.** Acquisition of practical hands-on skills in community engagement, cross-cultural fluency, familiarity with Latin America, and familiarity with Latino experience acquired through experiential learning while working with community and civic organizations.

Academic Advising for the Program

Advising information for new and continuing students is available on the LALS Advising website. Students may also make an appointment with an advisor or peer advisor through Navigate Slug Success or contact us at any time at lalsadvising@ucsc.edu. We look forward to hearing from you.

LALS Undergraduate Program
32 Merrill Academic Building
(831) 459-2119
lalsadvising@ucsc.edu

Getting Started in the Major: Frosh

Students interested in the LALS B.A. are encouraged to enroll in LALS 1: Introduction to Latin American and Latino Studies, at their earliest opportunity. Find this information and more online at our LALS Undergraduate Program site.

Transfer Information and Policy

Latin American and Latino Studies (LALS) welcomes transfer students. Students planning to apply in this major are not required to complete specific major preparation courses for consideration of admission to the University of California, Santa Cruz. Find this

information and more online at our LALS Undergraduate Program site.

Transfer Admission Screening Policy

Students interested in transferring to UC Santa Cruz as an LALS major are encouraged to enroll in courses related to the discipline prior to transfer, and to check with the LALS advisor about using a transfer course toward the lower-division elective requirement(s) when possible.

Getting Started in the Major: Transfer Students

Transfer students should enroll in LALS 1: Introduction to Latin American and Latino Studies. LALS 1 is offered in fall and winter quarters and during summer session. To make timely progress in the major, transfer students entering in the fall quarter should also enroll in the first course in our core series, LALS 100: Concepts and Theories in Latin American and Latino Studies.

For more information on the major, we encourage students to review our LALS Undergraduate Program online.

Major Qualification Policy and Declaration Process

Major Qualification

LALS Major

To declare an LALS major, students must successfully complete any one LALS course with a grade of C or better or Pass. For an overview of the program, students are encouraged to choose LALS 1: Introduction to Latin American and Latino Studies, as their first course.

Students should declare the major as soon as they complete an LALS course or reach their declaration deadline quarter, whichever comes first.

Students petitioning when the campus declaration deadline is imminent (i.e., in their sixth quarter, for students admitted as frosh), will either be approved, denied, or provided with conditions (e.g., completion of some courses with certain grades) that will be resolved within at most one more enrolled quarter, even if they have not completed major qualification courses.

LALS Language Intensive Major

In addition to completing any one LALS course with a grade of C or better or Pass, students must have a plan for establishing proficiency in Spanish, Portuguese, or another approved target language in sufficient time to take the required courses taught in the target language by the expected graduation term.

Appeal Process

Students who do not satisfy the major declaration requirement but believe there are extenuating circumstances may file a written appeal. Appeals should be submitted to undergraduate advising by

emailing: lalsadvising@ucsc.edu. Students must file the appeal within 15 days of denial of major declaration. The department will notify the student and college of the decision within 15 days of the receipt of the appeal.

How to Declare a Major

Students may declare the major on the MyUCSC portal or by making an appointment with the LALS advisor through Navigate Slug Success.

Letter Grade Policy

The program does not have a letter grade policy. Major and minor requirements will be met with grades of C or better or Pass, within the parameters of the UC Santa Cruz Pass/No Pass grading policy (p. **Error!**

Bookmark not defined.)

Course Substitution Policy

Students may substitute two courses taken outside of LALS when satisfying the requirements for the major. Students may use courses from our list of pre-approved electives, or see the undergraduate advisor to petition a new course or learn about using study abroad courses toward the LALS requirements.

Transfer students who have completed LALS-related work prior to transfer should contact the LALS advisor to ask about transfer credit.

No substitutions are permitted for our core curriculum: LALS 1, LALS 100, LALS 100A/LALS 100L, LALS 100B, and LALS 194/LALS 194L. See the undergraduate advisor for more information.

Double Majors and Major/Minor Combinations Policy

LALS students are encouraged to consider double major and major/minor plans. Contact the LALS advisor for more information.

Study Abroad

Students may study abroad through UC Santa Cruz faculty-led programs, the University of California Education Abroad Program (UCEAP), other UC study abroad programs, or through non-UC programs. UCEAP offers opportunities for students to study in Buenos Aires, Argentina; Mexico City and Oaxaca, México; Villarrica and Santiago, Chile; Rio de Janeiro, Brazil; and Madrid, Córdoba, Granada, and Barcelona in Spain. In addition to language and culture and university immersion programs, UCEAP also offers a field research program in México, which is an experiential program geared toward juniors and seniors who want to explore the “real” México outside the classroom and at the same time receive undergraduate research training. The program has research sites in states such as Chiapas, Yucatán, Oaxaca, and Michoacán (final site choice depends on the research topic). There is also a leadership in social justice and public policy, México City and Sacramento

program; students study abroad in the capital of México and then add a related internship in Sacramento.

Application deadlines are generally about one year in advance of the program, so students should visit global engagement early to plan for study abroad and to begin the application process. The department will consider by petition the approval of courses taken abroad that cover topics appropriate to the LALS curriculum for credit toward the major.

All credit for UCEAP classes is fully incorporated into students’ UC Santa Cruz transcripts; students receive transfer credit for independent study abroad programs. Financial aid may apply to all study abroad programs, which take into account airfare and living costs in addition to tuition and fees. Before departure, students should present an academic plan for courses abroad to the department advisor for review. Credit for up to three study abroad courses may be applied toward the major when courses are approved by the department. (A maximum of three courses of field study and study abroad combined may be applied toward the major requirements.)

Honors

The LALS faculty considers awarding honors in the major based on overall student academic performance in courses that count toward the major. To receive the strongest consideration for honors in the major the following grade point average (GPA) criteria must be met: highest honors, 4.0; honors, 3.7.

In addition to honors in the major, LALS may award honors for a thesis, or creative or community action project, or student-taught seminar, by the recommendation of the faculty advisor.

Students may qualify for both honors in the major and honors for a thesis, project, or student-taught seminar. Expanded papers and senior seminars do not qualify for a separate honors designation, but students who choose these options may still qualify for honors in the major.

Field-Study and Internship Opportunities

All majors are encouraged to undertake a field study in Latin America, the Caribbean, or a Latino/a community in the U.S., and/or formal academic study abroad. These paths are the best ways to improve language skills, explore the nature and direction of specific academic and career interests in relation to Latin American and Latino studies, and deepen cross-cultural understanding and relationships.

Field studies are independent, community-based study projects for academic credit, done under faculty sponsorship and arranged on an individual basis. Local opportunities for internships and field study in Latino/a communities on California’s Central Coast are numerous. Credit for up to three upper-division courses may be applied toward the major from field study; however, course credit from field study and study

abroad combined may not exceed three upper-division courses. Students should check with the LALS undergraduate advisor for further information about internship and field study opportunities.

Latin American and Latino Studies Major

Course Requirements

The LALS major requires 10 courses with two labs: two lower-division courses, three upper-division core courses and one core lab, four upper-division electives, and the senior seminar and lab.

Lower-Division Requirements

Two Lower-Division Courses

All students are required to take LALS 1: Introduction to Latin American and Latino Studies and one additional lower-division elective.

Upper-Division Requirements

LALS Core Courses

All majors must complete the core course series, which aims to build students' intellectual foundation in the major concepts of Latin American and Latino studies (LALS), identify multiple social scientific approaches to LALS, introduce the fundamentals of research design, and prepare students to use this knowledge in further academic study and real world interventions.

LALS 100	Concepts and Theories in Latin American and Latina/o Studies	5
LALS 100B	Cultural Theory in the Americas	5
LALS 100A	Social Science Analytics	5
LALS 100L	Social Science Analytics Lab	1

Upper-Division LALS Electives

All LALS majors may use up to two pre-approved outside electives—including courses taken during study abroad—to complete their major requirements. Students who wish to use an independent study course to satisfy an elective requirement should contact the undergraduate advisor.

The LALS major requires four upper-division electives.

Senior Seminar

All majors must complete one senior seminar (any of the LALS 194 courses) and the associated writing lab (LALS 194L).

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division disciplinary communication (DC) requirement. The DC requirement for the Latin American and Latino Studies B.A. is met by completing:

LALS 100A	Social Science Analytics	5
-----------	--------------------------	---

LALS 100B	Cultural Theory in the Americas	5
-----------	---------------------------------	---

Comprehensive Requirement

The Comprehensive Requirement is fulfilled by passing a Latin American and Latino studies senior seminar (LALS 194 course) and lab (LALS 194L).

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements (p. **Error! Bookmark not defined.**) for more information.

Four-Year Sample Planner for Frosh Students

	Fall	Winter	Spring
1st (frosh)	LALS 1*		LALS lower-division elective
2nd (soph)	LALS 100*	LALS 100B	LALS 100A/LALS 100L

Latin American and Latino Studies Language Intensive Concentration

The LALS Language Intensive Concentration requires 13 courses with two labs: three lower-division courses, three upper-division core courses and one core lab, six upper-division electives--two or more must be taken in target language(s)--and the senior seminar and lab.

Lower-Division Requirements

All students are required to take LALS 1: Introduction to Latin American and Latino Studies, and two lower-division LALS electives.

Upper-Division Requirements

LALS Core Courses

All majors must complete the core course series, which aims to build students' intellectual foundation in the major concepts of Latin American and Latino studies (LALS), identify multiple social scientific approaches to LALS, introduce the fundamentals of research design, and prepare students to use this knowledge in further academic study and real world interventions.

LALS 100	Concepts and Theories in Latin American and Latina/o Studies	5
LALS 100B	Cultural Theory in the Americas	5
LALS 100A	Social Science Analytics	5
LALS 100L	Social Science Analytics Lab	1

Upper-Division LALS Electives

All LALS majors may use up to two pre-approved outside electives—including courses taken during study abroad—to complete their major requirements. Students who wish to use an independent study course to satisfy an elective requirement should contact the undergraduate advisor.

The LALS Language Intensive major requires six upper-division electives, with at least two taught in the target language(s) of Spanish, Portuguese, or another approved language.

Students should review the Language Requirement page on our website for more information about preparation for these courses.

Senior Seminar

All majors must complete one senior seminar (any of the LALS 194 courses) and the associated lab (LALS 194L).

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division disciplinary communication (DC) requirement. The DC requirement for the Latin American and Latino Studies Language Intensive Concentration is met by completing:

LALS 100A	Social Science Analytics	5
LALS 100B	Cultural Theory in the Americas	5

Comprehensive Requirement

The Comprehensive Requirement is fulfilled by passing a Latin American and Latino studies senior seminar (LALS 194 course) and lab (LALS 194L).

LATIN AMERICAN AND LATINO STUDIES/POLITICS COMBINED B.A.

Information and Policies

Introduction

A combined degree in Latin American and Latino studies (LALS) and politics allows students to focus on the methods and theories of the discipline of political science within the broader interdisciplinary perspective of LALS.

Program Learning Outcomes

Latin American and Latino Studies Program Learning Outcomes:

We expect that all graduating LALS seniors will have gained proficiency or competency in the following four areas: critical thinking, research methods, communication, and lifelong learning skills.

1. **Critical Thinking.** Ability to analyze from a transnational/transborder/translocal perspective—to see the interconnections between Latin American and Latino issues, people, ideas, problems and solutions. This includes key skills, such as understanding sources, comparing arguments, analysis, and historical perspective.
2. **Research Methods.** Working knowledge of social scientific and/or humanistic approaches to LALS relevant topics. This includes acquiring qualitative and quantitative skills, gathering or obtaining research data, finding/using primary sources, and other research methods.
3. **Communication.** Key communication skills, including written, oral presentation, and digital, including an understanding of media sources and ability to apply media literacy to cross-cultural analysis.
4. **Lifelong Learning Skills.** Acquisition of practical hands-on skills in community engagement, cross-cultural fluency, familiarity with Latin America, and familiarity with Latino experience acquired through experiential learning, and working with community and civic organizations.

Politics Program Learning Outcomes:

Upon completion of the major, students will have met the following objectives:

1. Understand the origins, development, and nature of political institutions, practices, and ideas;
2. Place particular political phenomena in broader context (national, historical, cross-cultural, and theoretical, etc);
3. Demonstrate familiarity with various theoretical approaches to the study of politics, and their application in different geographic and substantive areas;
4. Critically evaluate arguments about political institutions, practices, and ideas based on logic and evidence;

5. Develop and sustain coherent written and oral arguments regarding political phenomena, theories, and values based on appropriate empirical and/or textual evidence and logic.

Academic Advising for the Program

LALS Undergraduate Advising
32 Merrill Academic Building
(831) 459-2119
lalsadvising@ucsc.edu

Politics Undergraduate Advising
25 Merrill Academic Building
(831) 459-2505
gdiaz5@ucsc.edu

Advising for the combined major in LALS and politics is available from both advising offices, though the major is housed in the LALS Department.

Getting Started in the Major: Frosh

Students interested in the combined major in LALS and politics are encouraged to enroll in LALS 1 and one lower-division politics course, chosen from POLI courses 1-79, at their earliest opportunity.

Transfer Information and Policy

Students planning to apply in this major are not required to complete specific major preparation courses for consideration of admission to the University of California, UC Santa Cruz.

Transfer Admission Screening Policy

Students interested in transferring to UC Santa Cruz as an LALS and politics combined major are encouraged to enroll in courses related to both disciplines prior to transfer, and to check with the politics advisor to ask about using transfer credit to satisfy the lower-division politics requirement.

Getting Started in the Major: Transfer Students

Transfer students must complete LALS 1 and one politics course, chosen from POLI 1-79 (or equivalent transfer credit), to declare the combined major in LALS and politics. LALS 1 is offered in fall and winter quarters and during summer session. To make timely progress in the major, transfer students entering in fall quarter should also enroll in LALS 100: Concepts and Theories in Latin American and Latino Studies.

Major Qualification Policy and Declaration Process

Major Qualification

To declare the major, students must complete a lower-division politics course, chosen from POLI 1-79, with a grade of C or better, and LALS 1, completed with a grade of C or better or Pass.

Students should apply to declare the major as soon as they complete the required courses or reach their declaration deadline quarter, whichever comes first.

Students petitioning when the campus declaration deadline is imminent (i.e., in their sixth quarter, for students admitted as frosh), will either be approved, denied, or provided with conditions (e.g., completion of some courses with certain grades) that will be resolved within at most one more enrolled quarter, even if they have not completed major qualification courses.

LALS 1	Introduction to Latin American and Latino Studies	5
--------	---	---

Appeal Process

Students who do not satisfy the major declaration requirement but believe there are extenuating circumstances may file a written appeal. Appeals should be submitted to undergraduate advising by emailing: lalsadvising@ucsc.edu. Students must file the appeal within 15 days of denial of major declaration. The department will notify the student and college of the decision within 15 days of the receipt of the appeal.

How to Declare a Major

Students may declare their major using the MyUCSC portal, or start by making an appointment with the LALS advisor through Navigate Slug Success.

Letter Grade Policy

The program does not have a letter grade policy. Major and minor requirements will be met with grades of C or better or Pass, within the parameters of the UC Santa Cruz Pass/No Pass grading policy (p. **Error! Bookmark not defined.**).

Course Substitution Policy

Double Majors and Major/Minor Combinations Policy

Study Abroad

Honors

For combined majors, academic performance must meet the criteria in both departments to be awarded honors. Honors can only be conferred if both departments agree.

For LALS, honors are awarded based on performance in courses taken for the major. To receive the strongest consideration for honors in LALS, the following grade point average (GPA) criteria must be met: highest honors, 4.0; honors, 3.7.

For politics, honors are awarded to graduating seniors whose academic performance is judged to be consistently excellent by a committee of politics faculty, based primarily on a review of grades. Highest

honors in the major are reserved for students with consistently outstanding academic performance.

Requirements and Planners

Course Requirements

A minimum of 12 courses and one lab are required for the Latin American and Latino Studies (LALS) and politics combined B.A.

Lower-Division Requirements

For the combined major, students must complete two lower-division courses: LALS 1 (must be taken at UC Santa Cruz) and one course from politics, chosen from POLI 1-79 (may be satisfied with approved transfer course).

LALS 1	Introduction to Latin American and Latino Studies	5
--------	---	---

Upper-Division Requirements

LALS 100	Concepts and Theories in Latin American and Latina/o Studies	5
LALS 100A	Social Science Analytics	5
LALS 100B	Cultural Theory in the Americas	5
POLI 140C	Latin American Politics	5

Six Upper-Division Electives

Four from Politics

Three chosen from these options:

POLI 105A	Ancient Political Thought	5
POLI 105B	Early Modern Political Thought	5
POLI 105C	Modern Political Thought	5
POLI 120A	Congress, President, and the Court in American Politics	5
POLI 120B	Society and Democracy in American Political Development	5
POLI 120C	State and Capitalism in American Political Development	5
POLI 140A	European Politics	5
POLI 140D	Politics of East Asia	5
POLI 160A	Theories of International and World Politics	5
POLI 160B	International Law	5
POLI 160C	Security, Conflict, Violence, War	5
POLI 160D	International Political Economy	5

Two from LALS

LALS upper-division electives may be chosen from any course numbered 101-194.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy a disciplinary communication (DC) requirement. The DC requirement for the LALS and politics combined B.A. is met by completing:

LALS 100A	Social Science Analytics	5
LALS 100B	Cultural Theory in the Americas	5

Comprehensive Requirement

To complete the senior comprehensive requirement, students may take either a Politics (190 series) or LALS (194 series) senior seminar. Students who choose the LALS senior seminar option may use the course as one of their required upper-division electives.

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements (p. **Error! Bookmark not defined.**) for more information.

Four-Year Sample Course Planner for Frosh Students

LATIN AMERICAN AND LATINO STUDIES/SOCIOLOGY COMBINED B.A.

Information and Policies

Introduction

A combined degree in Latin American and Latino studies (LALS) and sociology allows students to focus on the methods and theories of the discipline of sociology within the broader interdisciplinary perspective of LALS.

Program Learning Outcomes

LALS Program Learning Outcomes:

We expect that all graduating LALS seniors will have gained proficiency or competency in the following four areas: critical thinking, research methods, communication, and lifelong learning skills.

1. **Critical Thinking.** Ability to analyze from a transnational/transborder/translocal perspective—to see the interconnections between Latin American and Latino issues, people, ideas, problems and solutions. This includes key skills, such as understanding sources, comparing arguments, analysis, and historical perspective.
2. **Research Methods.** Working knowledge of social scientific and/or humanistic approaches to LALS relevant topics. This includes acquiring qualitative and quantitative skills, gathering or obtaining research data, finding/using primary sources, and other research methods.

3. **Communication.** Key communication skills, including written, oral presentation, and digital, including an understanding of media sources and ability to apply media literacy to cross-cultural analysis.
4. **Lifelong Learning Skills.** Acquisition of practical hands-on skills in community engagement, cross-cultural fluency, familiarity with Latin America, and familiarity with Latino experience acquired through experiential learning while working with community and civic organizations.

Sociology Program Learning Outcomes:

Students graduating with a bachelor of arts degree in sociology will:

1. Demonstrate critical thinking and critical citizenship skills intended to promote social justice through the ability to analyze and evaluate social, political, and/or cultural arguments.
2. Demonstrate sociological understandings of phenomena, for example, how individual biographies are shaped by social structures, social institutions, cultural practices, and multiple axes of difference and/or inequality.
3. Formulate effective and convincing written and/or oral arguments.
4. Demonstrate an understanding of, and the ability to use, several of the major classical and/or contemporary perspectives in social theory.
5. Demonstrate an understanding of several of the major social science research methodologies.
6. Demonstrate knowledge of some of the key substantive areas within the field of sociology.

Academic Advising for the Program

LALS Undergraduate Advising
32 Merrill Academic Building
(831) 459-2119
lalsadvising@ucsc.edu

Sociology Undergraduate Advising
Rachel Carson College Rm 224/226
831-459-4497
socadvising@ucsc.edu

Advising for the combined major in LALS and sociology is available from both advising offices, though the major is housed in the LALS Department.

Getting Started in the Major

Students interested in the combined major in LALS and sociology are encouraged to enroll in LALS 1, and the two required lower-division sociology courses, chosen from SOCY 1, SOCY 10, or SOCY 15, at their earliest opportunity.

Transfer Information and Policy

Students planning to apply in this major are not required to complete specific major preparation courses for consideration of admission to the University of California, Santa Cruz.

Transfer Admission Screening Policy

Students interested in transferring in to UC Santa Cruz as a combined LALS and sociology majors are encouraged to enroll in courses related to both disciplines prior to transfer. Visit Assist.org to review transfer articulations.

Getting Started in the Major: Transfer Students

Transfer students must complete LALS 1 and two courses chosen from SOCY 1, SOCY 10, or SOCY 15 (or equivalent transfer credit) to declare the combined major in LALS and sociology. LALS 1 is offered in fall and winter quarters and during summer session. To make timely progress in the major, transfer students entering in the fall quarter should enroll in LALS 100: Concepts and Theories in Latin American and Latino Studies. Sociology course enrollment will be determined by the Sociology Department based on transfer coursework.

Major Qualification Policy and Declaration Process

Major Qualification

Students must complete the lower-division sociology courses (two chosen from SOCY 1, SOCY 10, or SOCY 15) and LALS 1 with grades of C or better or Pass before the major can be declared.

Students should submit a petition to declare as soon as they complete the required courses or reach their declaration deadline quarter, whichever comes first.

Students petitioning when the campus declaration deadline is imminent (i.e., in their sixth quarter, for students admitted as frosh), will either be approved, denied, or provided with conditions (e.g., completion of some courses with certain grades) that will be resolved within at most one more enrolled quarter, even if they have not completed major qualification courses.

LALS 1	Introduction to Latin American and Latino Studies	5
--------	---	---

Plus two courses chosen from:

SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5

Appeal Process

Students who did not satisfy the major declaration requirement but believe there are extenuating circumstances may file a written appeal. Appeals

should be submitted to undergraduate advising by emailing: lalsadvising@ucsc.edu. Students must file the appeal within 15 days of denial of major declaration. The department will notify the student and college of the decision within 15 days of the receipt of the appeal.

How to Declare a Major

Students may declare the major through the MyUCSC portal, or by meeting with the LALS advisor.

Letter Grade Policy

The program does not have a letter grade policy. Major requirements will be met with grades of C or better or Pass, within the parameters of the UC Santa Cruz Pass/No Pass grading policy (p. **Error! Bookmark not defined.**).

Course Substitution Policy

Double Major and Major/Minor Combinations Policy

Study Abroad

Honors

For combined majors, academic performance must meet the criteria in both departments to be awarded honors. Honors can only be conferred if both departments agree.

The LALS faculty considers awarding honors in the major based on overall student academic performance in courses that count toward the major. To receive the strongest consideration for honors in the major, the following grade point average (GPA) criteria must be met: highest honors, 4.0; honors, 3.7.

In addition to honors in the major, LALS may award honors for a thesis by the recommendation of the faculty advisors in both LALS and sociology.

For sociology, honors are awarded based on the student's cumulative GPA for all courses taken at UC Santa Cruz to satisfy the program's major requirements, excluding the comprehensive requirement. Students with a GPA of 3.75 or above will be considered for honors in the major. Students with a GPA of 3.9 or above will be considered for highest honors in the major. No more than approximately 15 percent of the graduating class will be considered for honors or highest honors in the major. Comprehensive honors is awarded to students who complete the senior thesis option, and their faculty thesis sponsor and one additional reader evaluate the thesis to be of honors quality.

Requirements and Planners

Course Requirements

A minimum of 12 courses and one lab are required for the Latin American and Latino studies (LALS) and sociology combined B.A.

Lower-Division Requirements

LALS 1	Introduction to Latin American and Latino Studies	5
--------	---	---

And select two from the following three options:

SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5

Upper-Division Requirements

Upper-division core courses:

LALS 100	Concepts and Theories in Latin American and Latina/o Studies	5
LALS 100B	Cultural Theory in the Americas	5
LALS 100A	Social Science Analytics	5
LALS 100L	Social Science Analytics Lab	1
SOCY 105A	Classical Social Theory	5
SOCY 105B	Contemporary Social Theory	5

Upper-division elective courses:

Four additional upper-division electives are required, two from sociology and two from LALS. One LALS elective may be satisfied by completing a senior seminar (LALS 194 series).

Disciplinary Communication (DC) Requirement

Students of every major must satisfy a disciplinary communication (DC) requirement. The DC requirement for the LALS and sociology combined B.A. is met by completing:

LALS 100A	Social Science Analytics	5
LALS 100B	Cultural Theory in the Americas	5

Comprehensive Requirement

Each student must complete a senior comprehensive requirement to graduate. The requirement is fulfilled by one of the following options:

1. Passing a Latin American and Latino studies senior seminar (LALS 194 series). In these courses, students must write at least 30 pages cumulatively during the quarter. The final paper must be based on independent scholarly research, demonstrate advanced skills in critical analysis, and have undergone revisions. Senior standing and completion of LALS 100A and LALS 100B

are required before taking a LALS 194 course for fulfillment of the senior exit requirement

2. A senior thesis, generally between 40–60 pages, planned in consultation with an adviser from each department, completed under the supervision of a faculty member from either department, and read and approved by both advisers; one adviser is sufficient if this faculty member is affiliated with both departments. This option is recommended for those students seeking to enter graduate school.

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements (p. **Error! Bookmark not defined.**) for more information.

LATIN AMERICAN AND LATINO STUDIES MINOR

The minor in Latin American and Latino studies requires seven LALS courses: two lower-division courses and five upper-division courses. Students may use up to two pre-approved elective courses from outside of LALS toward the minor.

Course Requirements

Lower-Division Courses

Any two lower-division LALS courses.

Upper-Division Courses

One course chosen from the three following core courses:

LALS 100	Concepts and Theories in Latin American and Latina/o Studies	5
LALS 100A	Social Science Analytics	5
LALS 100B	Cultural Theory in the Americas	5

Four Upper-Division Electives

Four upper-division LALS electives.

LATIN AMERICAN AND LATINO STUDIES PH.D.

Introduction

The Ph.D. program in Latin American and Latino Studies at UCSC offers an innovative transnational and interdisciplinary approach to the study of the peoples, cultures, societies and institutions of the Americas. The program is designed to educate students in this new field of study and train them to develop the conceptual and analytical skills necessary for understanding the dynamics of hemispheric change. This is the first doctoral program in Latin American and Latino Studies.

In preparing students for research and teaching at the university level, the department offers four thematic clusters in the emerging field of Latin American and Latino Studies: 1) transnational migrations within the Americas; 2) social inequalities; 3) cultural politics and cultural flows; and 4) collective action and social movements. Doctoral students specialize in one of these

four substantive themes, as well as a focus area of their own design.

- **Transnationalisms , Migrations, and Displacement.** While transnational migrations are the subject of research in multiple disciplines, this program analyzes these transformative processes through an interdisciplinary lens. A transnational approach examines links between regions in the Americas, analyzing the social and historical foundations of economic dynamics such as remittances from the United States or the dollarization of Latin American countries. A transnational approach to the study of migratory processes explores the dynamics of bi-national communities, bilingualism and multilingualism, immigrant integration into host societies, and North-South exchanges of ideas and cultures.
- **Intersectionality , Identities, and Inequalities.** This program's research foregrounds the study of transnational social inequalities formed by power relations based on race, ethnicity, nationality, citizenship, class, territory, gender and/or sexuality in the Américas. These social hierarchies are analyzed as institutions, historical processes, discourses, or signifiers with multiple meanings, and are examined in terms of how they have been mobilized to build, transform, or challenge identities, communities, and social movements in local, national, and global contexts over time.
- **Culture, Power, and Knowledge.** Another distinctive area of inquiry is the study of cultural politics and cultural flows that shape everyday life, institutions, social identities, discourses, meanings, and cultural forms and practices, in global, regional, and local contexts in the Américas and in an increasingly interconnected world. The transnational analysis of culture focuses on the ways cultural forces and cross-cultural communication and media are contributing to the formation of new transnational imaginaries, as well as how these cultural processes are transforming and redefining national and local cultures.
- **Collective Action, Social Movements, and Social Change.** This area of research addresses collective action and social movements at local, national and international levels viewed through transnational lenses. As migrants engage in public life, both in their communities of residence and in their communities of origin, they construct diverse practices of political participation, including "civic bi-nationality." These processes are crucial for understanding the largest wave of immigration in a century, including how migrants relate to US society.

The doctoral program provides rigorous training in both disciplinary and interdisciplinary approaches to the

study of transnational processes that link the Americas. The program educates doctoral students in the theories and research methods based in disciplines of the social sciences and the humanities.

The deadline for applications to the doctoral program is mid-December in the preceding year. The program only accepts students for admission in fall quarter.

Advancement to Candidacy

Course Requirements

Thirteen Courses

The program requires a total of 13 courses with LALS Graduate Program affiliated faculty. Of the required courses, up to two may be independent studies with LALS faculty. Of the 13 required courses, students may take up to five graduate courses offered in other departments. The graduate advisor will determine whether these courses count for the LALS program requirements.

Before advancement to candidacy, a full-time course load is two or three courses at the graduate level.

The following are the course requirements:

LALS 200	Bridging Latin American and Latina/o Studies	5
LALS 200A	Power and Structure in the Americas	5
LALS 200B	Cultures and Subjectivities in the Americas	5
LALS 201	Research in Practice	5

Foreign Language Requirement

The language of instruction in most seminars is English, and students are expected to develop their reading, writing, and speaking/presentation abilities as they complete the program requirements. In addition, they are expected to develop their research abilities and proficiency in Spanish, Portuguese, an Indigenous language of the Americas, or another language that is central to their research, according to their research goals and in order to engage with the scholarship being produced across the Americas.

As per Graduate Division requirements, the secondary language requirement must be satisfied by the end of the third year, prior to Advancing to Candidacy. The secondary language requirement may be fulfilled by:

1. UC Santa Cruz graduate courses in Spanish, Portuguese, or another language central to the research project:
Passing a 5-credit graduate seminar in LALS or other UCSC department offered in the language during the academic year, or passing a UCSC Literature Summer Research Language course
2. Accredited summer immersion program, e.g. Berkeley, Cornell, or abroad – the program must

have a scholarly and rigorous focus, the student must receive advance approval from their faculty advisor, and the student must submit to the graduate advisor a letter from the program attesting to their completion of the program and their satisfactory performance in the language.

3. Graduated from a university with primary instruction in Spanish, Portuguese, or another language central to the research project.
4. Pass LALS Department language exam in Spanish or Portuguese.

Students will be required to include information regarding their plans for satisfying the secondary language requirement in their end-of-year statements in the first and second years.

Students are required to demonstrate, by one of the methods listed above, their proficiency in a language other than English before the completion of the qualifying examination.

Qualifying Examination

Doctoral students will be required to submit two qualifying essays (field statements), two original course syllabi, a dissertation prospectus, and an oral Qualifying Examination (QE), as described below.

A Qualifying Exam Committee, composed of four faculty members, will approve both the scope of the field statements and the final written products, including the dissertation prospectus, and will conduct the oral examination. The committee also provides students with guidance and feedback throughout the QE process. Of the four members, this committee must include at least two LALS faculty members—at least one of whom is an LALS core faculty member, while the other may be LALS core or affiliate. One of these two must chair the committee. The committee also must include one tenured faculty from outside the LALS department (this person might or might not be an affiliate faculty member). Emeriti faculty are not permitted to chair the committee, and only one emeritus faculty member is permitted on each committee. Both the outside member of the QE committee and the QE chair must be tenured. The qualifying examination committee must be approved in advance by the Graduate Division.

Students should take their oral examinations by spring quarter of the third year. The Qualifying Exam process is discussed in detail in a mandatory colloquium session with the graduate program coordinator and graduate director each academic year.

1. Qualifying Essays.

Students are required to complete two qualifying essays. The qualifying essay topics should address broad non-overlapping fields and review the literatures related to the proposed dissertation questions. Students should consult with their qualifying examination committee early in the process, regarding the appropriate scope and content of

their essays.

One of the qualifying essays must focus on one of the department's four themes: transnational migrations and social displacement; intersectionality, identities and inequalities; collective action, social movements and social change; and culture, power, and knowledge. The qualifying essay should demonstrate command of the methodology relevant to the student's specialized research interests (e.g., ethnographic field methods, textual analysis, archival research methods, statistics, media analysis, and/or comparative methods) and include relevant texts in the second language. The committee chair must approve these essays at least one month prior to the oral examination.

In addition, the essays must be accompanied by two proposed course syllabi for potential undergraduate courses.

2. **Prospectus.** The prospectus is a carefully conceived, coherent research proposal for the doctoral dissertation. It should clearly present and justify the student's research interests and the questions that will guide the dissertation. It should demonstrate command of the methodology relevant to the student's specialized interests (e.g., ethnographic field methods, textual analysis, archival research methods, statistics, media/content analysis and/or comparative methods, etc.). The prospectus will often need to be revised even after the student passes the Qualifying Exam and advances to candidacy.
3. **Qualifying Examination.** An oral examination will follow the approval of the qualifying essays.

After successfully completing the Qualifying Examination, students are expected to assemble a Dissertation Committee that includes a minimum of three faculty members, one of whom must be designated as the dissertation chair/advisor. The Dissertation Committee chair may be the same faculty member who served as the QE committee chair. The Dissertation Committee must be chaired by a LALS core ladder-rank faculty member and include two additional members, one of which must be a faculty member from LALS—including core ladder-rank, emeriti, and affiliate faculty. Only one faculty emeritus/a is permitted on each Dissertation Committee. Students may have one member from another campus. Normally the Dissertation Committee is selected from the QE Committee, but this is not required.

Coursework and the qualifying process should be completed by the end of the third year. Students may petition for a non-terminal master's degree after advancing to candidacy.

Dissertation

Dissertation

Students will be expected to complete the dissertation prospectus and secure approval from the dissertation

committee by the last day of the quarter after the qualifying examination. In the prospectus, students should clearly articulate the logic of an interdisciplinary, transnational approach, as well as the methodologies to be used for addressing the research questions.

The dissertation must demonstrate in-depth research, make a significant and original scholarly contribution, and include material worthy of publication.

LATIN AMERICAN AND LATINO STUDIES DESIGNATED EMPHASIS

Introduction

The Designated Emphasis (DE) in Latin American & Latino Studies (LALS) provides graduate students from other graduate programs at the University of California, Santa Cruz, with opportunities for interdisciplinary study with faculty from across the campus. Completion of the program will be listed on the graduate degree as a designated emphasis.

Students wishing to pursue the Designated Emphasis in LALS should consult with their respective graduate program coordinators and with their faculty advisors before submitting the Petition to Enroll. Students should declare their intent to undertake the DE prior to the execution of their Qualifying Examinations (QE). Graduate students are strongly encouraged to submit the application no later than the end of the third year.

The application and an annually updated list of regularly offered, approved graduate courses are available on the LALS website.

Requirements

The following are required for the designated emphasis:

Committee Composition and Departmental Approvals

The student must have a designated LALS advisor (DE advisor) from among the Latin American and Latino studies core or affiliated faculty. This advisor will be in addition to the faculty advisor from the student's home department. The Latin American and Latino Studies advisor must serve on the student's QE and/or dissertation committee.

Course Requirements

Students must submit a course plan to the LALS Graduate Committee for approval to enroll in the DE. The student must take five graduate courses in Latin American and Latino Studies: the required LALS 200, one LALS course taught by a core LALS faculty member, and three courses with LALS content in any UC Santa Cruz department taught by core, participating, or affiliated LALS faculty.

Legal Studies B.A. (p. 719)

Legal Studies Minor (p. 724)

OTHER PROGRAMS OF INTEREST

Latin American and Latino Studies/Politics Combined Major (p. 704)

The study of politics is the exploration of the ways human communities shape and share a common life through their institutional practices, ideas, interests, and expectations. It looks at the way collective decisions are made, and at the obstacles citizens meet as they try to forge a shared and just life. Courses address issues central to public life, such as democracy, power, freedom, political economy, social movements, international law and conflict, institutional reforms, and how public life, as distinct from private life, is constituted. In describing the department and major at UC Santa Cruz, we use the term 'politics' (rather than 'political science' or 'government') because the study of political life requires a more inclusive approach than that associated solely with the discipline of political science, and because politics happens in places other than governments.

The programs offered by the UCSC Politics Department are designed to acquaint students with a broad range of issues studied by those in the field. The department offers an undergraduate major, a minor, a combined Latin American and Latino studies/politics major, and a doctoral degree.

The Politics Department also encourages students to pursue additional academic opportunities while at UCSC. Possible programs include: the UCDC Program, a one-quarter program at the UC campus in Washington, D.C. that includes coursework and an internship; UCSAC, a one-quarter program at the center in Sacramento; and the Education Abroad Program (UCEAP).

The Politics Department also administers the Legal Studies Program.

POLITICS B.A.

Information and Policies

Introduction

The study of politics is a critical part of a liberal arts education. Since political issues and practices are embedded in and reflective of the whole experience of a community, the study of politics can constitute the center of a broad-based course of study drawing on history, sociology, anthropology, philosophy, political science, economics, literature, science, and law.

Politics students at the University of California, Santa Cruz have many opportunities for field work and for internship placements. Students are encouraged to develop their own extensive independent research projects. The Politics Department also encourages students to pursue additional academic opportunities while at UC Santa Cruz. Possible programs include: the UCDC program, a one-quarter program at the UC campus in Washington, D.C. that includes coursework and an internship, UC Sacramento, a one-quarter program at the UC Center in Sacramento, and the UC Education Abroad Program.

Politics faculty members give students individual attention to help them in their studies. Faculty members are firmly committed to the value of a liberal arts education, but they are also actively engaged in programs of research and writing. The research interests of the faculty range from questions of justice to the problem of war, from campaign strategy to relations between the rich and the poor countries of the world.

No specific courses at the high school level are required for admission to the major in politics at UCSC. Courses in history, literature, philosophy, and the social sciences, whether taken at the high school or college level, are appropriate background and preparation for the politics major.

A major in politics is appropriate for students interested in careers in law, journalism, or teaching; in political and governmental work from local to international settings; in non-governmental organizations; and in corporations dealing with regulatory or global issues. Many UCSC politics graduates have also gone on to do advanced work in distinguished graduate and professional schools. Others have found active and challenging careers in business and community organizing. Still others have turned to scholarship and writing. But regardless of career direction, the most significant purpose of the politics major is to help educate a reflective and activist citizenry capable of sharing power and responsibility in a contemporary democracy.

Program Learning Outcomes

Upon completion of the major, students will have met the following objectives:

1. understand the origins, development, and nature of political institutions, practices, and ideas;
2. place particular political phenomena in broader context (national, historical, cross-cultural, and theoretical, etc);
3. demonstrate familiarity with various theoretical approaches to the study of politics, and their application in different geographic and substantive areas;
4. critically evaluate arguments about political institutions, practices, and ideas based on logic and evidence;
5. develop and sustain coherent written and oral arguments regarding political phenomena, theories, and values based on appropriate empirical and/or textual evidence and logic.

Academic Advising for the Program

Undergraduate Advisor

The undergraduate advisor offers specific information about navigating through the program and the curriculum and assists students with prerequisites, requirements, policies, procedures, learning support, guidance on internships, scholarships, and opportunities for undergraduate research. Contact polimajor@ucsc.edu.

Transfer students should also consult the Transfer Information and Policy section

Peer Advisors

Peer advising assists with academic planning, major and minor requirements, preparing declaration paperwork and provides guidance on UCDC program requirements. Contact lgstpoli@ucsc.edu.

Getting Started in the Major: Frosh

This major is not highly sequential or course intensive. Although it is advisable to begin taking courses toward the major in the first year, it is not required. To ensure timely completion of the major, prospective politics majors are encouraged to meet with a major advisor to develop an academic plan during their first year.

Transfer Information and Policy

Transfer Admission Screening Policy

No major preparation courses are required prior to transfer; however, one or two of the following courses or their equivalents are recommended to ensure timely graduation.

POLI 1	Politics: Power, Principle, Process, and Policy	5
POLI 3	Keywords: Concepts in Politics	5
POLI 4	Citizenship and Action	5

POLI 17	U.S. and the World Economy	5
POLI 20	American Politics	5
POLI 21	Governing the Golden State	5
POLI 45	Music and Politics in Contemporary Society	5
POLI 46	Africa in Global Perspective	5
POLI 60	Comparative Politics	5
POLI 61	Politics of Social Policy	5
POLI 65	Introduction to International Relations	5
POLI 70	Global Politics	5

Getting Started in the Major: Transfer Students

To ensure a smooth transition into UC Santa Cruz and timely completion of the major, transfer students should meet with the politics undergraduate advisor as early as possible to discuss a two-year major planner and course enrollment. Completion of a lower-division politics course in the first quarter will allow timely declaration of the major (required in the second quarter of enrollment).

Major Qualification Policy and Declaration Process

Major Qualification

Students may declare the major after completing two lower-division politics courses POLI 1–POLI 79 with grades of C or better. These courses are normally taken during the first year for frosh.

Appeal Process

Students who are approaching the campus declaration deadline and who have not completed two lower-division courses POLI 1–POLI 79, or their transfer equivalents, with grades of C or better may petition to declare the major: the petition will either be approved, denied, or provided with conditions (e.g., completion of some courses with certain grades) to be resolved within at most one more enrolled quarter.

How to Declare a Major

Students who are eligible to declare the major must complete the Politics Academic Planning Form and share it via email with polimajor@ucsc.edu. Declaration of major workshops provide additional information on this process and are offered each quarter.

Letter Grade Policy

This program does not have a letter grade policy.

Optional Catchall

Course Substitution Policy

Double Majors and Major/Minor Combinations

Policy

The department accepts proposals for double majors. A student pursuing a double major meets the full requirements of the politics major as well as the full requirements of the other major.

The Politics Department offers a combined major with the Latin American and Latino Studies Department. Requirements may be found in the Latin American and Latino studies section of the catalog.

Honors

Students receiving "Honors" and "Highest Honors" in the politics major upon graduation will typically have taken at least 10 major courses for a letter grade and will have achieved in those courses GPAs of 3.7 and 3.85 respectively. Final determinations about honors are made by a faculty committee that judges the rigor, breadth, depth, improvement, and overall achievement evident in the student's academic record in the major.

Independent and Field Studies

Students may petition the department to substitute only one upper-division independent study or field study toward the elective requirement in the politics major. UCDC and UCSAC internships are exempt from this limit.

Optional Catchall

Requirements and Planners

Course Requirements

Lower-Division Courses

Two lower-division politics courses numbered 1-79

All students are required to complete and pass two such courses, numbered POLI 1 through POLI 79, as a foundation for continued success in the politics major and as a requirement to declare the major. These courses are normally taken during the student's first year.

Upper-Division Courses

Four upper-division politics core courses.

The following four groups of courses constitute the core of the politics major. Four courses are required: two courses from one group, one course from a second group, and one course from a third group. In general, upper-division courses are not recommended for frosh.

Theory

POLI 105A	Ancient Political Thought	5
POLI 105B	Early Modern Political Thought	5
POLI 105C	Modern Political Thought	5

POLI 105D	Contemporary Political Theory: Modernity and its Discontents	5
-----------	--	---

U.S. Politics

POLI 120A	Congress, President, and the Court in American Politics	5
POLI 120B	Society and Democracy in American Political Development	5
POLI 120C	State and Capitalism in American Political Development	5

Comparative

POLI 140A	European Politics	5
POLI 140C	Latin American Politics	5
POLI 140D	Politics of East Asia	5

Global Politics/International Relations

POLI 160A	Theories of International and World Politics	5
POLI 160B	International Law	5
POLI 160C	Security, Conflict, Violence, War	5
POLI 160D	International Political Economy	5

Four upper-division politics electives

Four courses selected from POLI 100-POLI 189 (see the "Course Description" page for details about these courses).

Electives

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement for politics majors is satisfied by completing any three of the four required core courses. The politics core course list is detailed above in the major requirements.

Comprehensive Requirement

The comprehensive requirement in the Politics Department can be satisfied in any of the following methods:

- **Senior Seminar:** Successful completion of a politics senior seminar (POLI 190 series) that includes the writing of an extensive paper (no less than 15 pages) with a substantial research content. To enroll in a specific POLI 190 seminar, students must have successfully completed the prerequisite courses listed in the seminar's catalog course description.
- **Additional (Fifth and Sixth) Electives:** Successful completion of two additional politics upper-division electives, one of which includes a substantial writing component comparable to a

paper for a senior seminar, either as part of the existing course requirements or added with the approval of the instructor. The student must receive prior approval from the instructor of the course with the substantial writing component, and must enroll in a two-credit independent study, POLI 199F as part of this option. Generally, instructors with the title of lecturer are not available to supervise POLI 199F.

- **Graduate Seminar:** Successful completion of a politics graduate seminar (enrollment is contingent on the written recommendation of two politics faculty) that includes the writing of an extensive paper (no less than 15 pages) with a substantial research content.
- **Thesis (2-3 quarters):** Successful completion of a senior thesis (POLI 195A, POLI 195B, POLI 195C) of a minimum of 50 pages. This option is for students interested in working on original research and writing under the supervision of a politics faculty member.

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements (p. **Error! Bookmark not defined.**) for more information.

A four-year course plan for frosh majoring in politics and a two-year course plan for transfer students are provided below.

Four-Year Sample Course Planner for Frosh Students

Year	Fall	Winter	Spring
1st (frosh)	POLI (Lower-division)	POLI (Lower-division)	
2nd (soph)	POLI (Upper-division elective)	POLI (Upper-division elective)	POLI (Upper-division core)
3rd (junior)	POLI (Upper-division core) POLI (Upper-division elective)	POLI (Upper-division elective) POLI (Upper-division core)	POLI (Upper-division core)
4th (senior)	POLI 190 (Senior Seminar)		

In addition to the specific courses shown in this four-year planner, a student must complete courses satisfying the general education requirements. While many politics courses that fulfill major requirements also fulfill a GE requirement, which GE requirements are fulfilled by completion of the major depends on which specific courses a student takes to fulfill the major requirements.

Two-Year Sample Course Planner for Transfer Students

Year	Fall	Winter	Spring
1st (junior)	POLI (Lower-division)*	POLI (Upper-division elective)	POLI (Upper-division elective)
	POLI (Lower-division)	POLI (Upper-division core)	POLI (Upper-division core)
	POLI (Upper-division elective)		
2nd (senior)	POLI (Upper-division core)	POLI 190 (Senior Seminar)	
	POLI (Upper-division elective)	POLI (Upper-division core)	

This planner assumes that a student has completed all general education requirements—beyond major preparation requirements before coming to UC Santa Cruz.

*Articulated equivalent courses may be taken prior to transfer.

POLITICS MINOR

Students in our minor gain a solid grounding in ideas, concepts, and real-world problems and possibilities of politics through a selection of at least six courses.

Course Requirements

The minor requires one lower-division politics course and five upper-division politics courses. Of these, four are to be selected from core classes in our subfields: political theory (105 series), American politics (120 series), comparative politics (140 series) and global/international politics (160 series).

Students select two subfields' core series and are required to complete two core classes in each.

The sixth course can be any politics upper-division elective numbered 100-189.

Completion of the minor does not require a senior seminar.

Lower-Division Courses

One lower-division politics course from POLI 1-POLI 79.

POLI 1	Politics: Power, Principle, Process, and Policy	5
POLI 3	Keywords: Concepts in Politics	5
POLI 4	Citizenship and Action	5
POLI 17	U.S. and the World Economy	5
POLI 20	American Politics	5
POLI 21	Governing the Golden State	5
POLI 45	Music and Politics in Contemporary Society	5
POLI 46	Africa in Global Perspective	5
POLI 60	Comparative Politics	5
POLI 61	Politics of Social Policy	5
POLI 65	Introduction to International Relations	5
POLI 70	Global Politics	5

Upper-Division Courses

Five upper-division politics courses are required. Of these, four are to be selected from the core courses listed below: two from one concentration and two from another concentration (concentrations are: Theory, U.S., Comparative, and Global/IR). A fifth course is to be selected from POLI 100-POLI 189.

Theory

POLI 105A	Ancient Political Thought	5
POLI 105B	Early Modern Political Thought	5
POLI 105C	Modern Political Thought	5
POLI 105D	Contemporary Political Theory: Modernity and its Discontents	5

U.S. Politics

POLI 120A	Congress, President, and the Court in American Politics	5

POLI 120C	State and Capitalism in American Political Development	5

Comparative

POLI 140A	European Politics	5
POLI 140C	Latin American Politics	5
POLI 140D	Politics of East Asia	5

Global Politics/International Relations

POLI 160A	Theories of International and World Politics	5
POLI 160B	International Law	5
POLI 160C	Security, Conflict, Violence, War	5
POLI 160D	International Political Economy	5

LEGAL STUDIES B.A.

Information and Policies

Introduction

Legal Studies (LGST) is an interdisciplinary, liberal arts major focused on legal ideas, institutions, and issues in and beyond the U.S. Our courses introduce students to the integral roles of law in social life, including its complex relation to values and shifting views of justice, rights, liberty, equality, citizenship, and authority; to culture and social practices; and to historical, political, and economic forces and institutions.

Our program is housed under the auspices of the Politics Department, but operates independently and is designed to provide different disciplinary lenses on intersections between law and other realms. These include the relation of law to human rights, civil rights, voting rights, and property rights; to immigration, citizenship, borders, and sovereignty; to racial, gender, and economic inequalities; to environmental and health justice; to the scope and limits of governmental power; to the law of democracy and relation between citizens and the state; to relations between nation-states; and to concerns regarding access to justice, justice gaps, and historical and systemic injustices.

Students who join this major have the opportunity to take courses with faculty from a range of backgrounds in the social sciences, humanities, arts, and law. Our curriculum includes course offerings spanning from anthropology, art, economics, environmental studies, feminist studies, history, Latin American and Latino studies, literature, music, philosophy, politics, psychology, and sociology. This allows our students to engage their interests through different approaches and analytical frameworks, and to consider many dimensions of law and its operation. For example, legal studies students might learn how to use approaches from psychology or philosophy to think about crime and punishment; they might use approaches from political theory or economics to think about property rights or social welfare policies; they might consider civil rights or privacy issues through approaches from critical race theory or feminist studies; they might use approaches from history or sociology to consider law in different eras or in relation to different groups; they might use approaches from politics to consider human rights and legal systems outside the U.S.

The legal studies major provides a broad academic platform from which students can pursue many

different career paths and/or advanced studies. Alumni from our program work in many areas: law and the legal profession, government, non-profits, education, health, and community services, technology and software engineering, business, consulting and accounting, the entertainment industry, media, journalism, and communications. Our alums are also successful in pursuing graduate degrees in many fields. Although legal studies is often of interest to students considering law school or law-related careers, the major is not designed as “pre-law” or preparation for law school. (Students who are considering law school should visit the Career Center's website and pre-law coach.

Our program strongly encourages students to enrich their studies with additional learning and opportunities. Legal Studies sponsors a speakers series and co-sponsors other talks and events, including career and alumni panels. We also encourage students to pursue internships or field experiences, such as through our legal studies internship seminar (LGST 185); Legal Aid & Advocacy (LGST 188A and OAKS 188B/LGST 188B) through the UCDC program, a one-quarter study and internship program in Washington, D.C.; or through the UC Center Sacramento, which offers a one-quarter study and internship program at the state capitol. Students may also want to study abroad through Global Learning at UC Santa Cruz, and some may want to consider developing independent research projects on topics of special interest to them.

Program Learning Outcomes

Upon completion of the major, undergraduates with a B.A. in Legal Studies will have met the following objectives:

1. describe, explain, and compare the sources and functions of law in the U.S. and other national or international contexts, including drawing on theoretical perspectives, institutional perspectives, and social/cultural perspectives;
2. analyze the role of laws, courts, and other legal institutions in broader society, including the historical, social, political, and economic contexts in which it operates;
3. evaluate the operation and function of legal norms, practices, and systems/institutions from a variety of disciplinary and social perspectives;
4. apply and critically evaluate arguments about legal principles and norms, practices, and institutions based on logic and evidence, and from a variety of disciplinary perspectives; and
5. develop and communicate well-organized, persuasive, and well-supported written and oral arguments and analyses regarding law and legal issues based on appropriate empirical and/or theoretical evidence and logic.

Academic Advising for the Program

Undergraduate Advisor

The undergraduate advisor offers specific information about navigating through the program and the curriculum and assists students with prerequisites, requirements, policies, procedures, learning support, guidance on internships, scholarships, and opportunities for undergraduate research. Please contact the LGST undergraduate advisor at legalstudies@ucsc.edu.

Peer Advisors

Peer advising can assist in academic planning in regards to major and minor requirements and help prepare declaration of major and minor paperwork. Please contact the LGST peer advising team at lgstpoli@ucsc.edu.

Getting Started in the Major: Frosh

This major is not highly sequential or course intensive. Although it is advisable to begin taking courses toward the major in the first year, it is not required.

Transfer Information and Policy

Transfer Admission Screening Policy

No major preparation courses are required prior to transfer; however, one of the following courses or their equivalents are recommended to ensure timely graduation.

PHIL 7	Elementary Logic	5
PHIL 9	Introductory Symbolic Logic	5
PHIL 22	Introduction to Ethical Theory	5
PHIL 24	Introduction to Ethics: Contemporary Moral Issues	5
PHIL 27	Business Ethics	5

Getting Started in the Major: Transfer Students

To ensure a smooth transition into UC Santa Cruz and timely completion of the major, transfer students should meet with the undergraduate advisor as early as possible to discuss a two-year major planner and course enrollment. Completion of LGST 10 in the first quarter will allow timely declaration of the major (required in the second quarter of enrollment).

Major Qualification Policy and Declaration Process

Major Qualification

Students may declare the major after completing the following course: LGST 10, Introduction to the Legal Process.

Students will ideally have completed some or all of the remaining lower-division requirements before declaring the major.

Transfer students should also consult the Transfer Information and Policy section.

Appeal Process

Students who are approaching the campus declaration deadline and who have not completed LGST 10, with a grade of C or better may petition to declare the major. This petition will either be approved, denied, or provided with conditions (e.g., completion of other courses with certain grades) to be resolved within at most one more enrolled quarter.

How to Declare a Major

Students who are eligible to declare the major must complete the legal studies academic planning form and share it via email with ymonterh@ucsc.edu. Declaration of major workshops provide additional information on this process and are offered each quarter.

Students develop a program of study during the major declaration process. The major requirements consist of 11 courses, mapped out in the Requirements and Planners tab. Please also see the bottom of the Requirements and Planners tab for a four-year sample course plan for legal studies majors.

Letter Grade Policy

This program does not have a letter grade policy.

Optional Catchall

Course Substitution Policy

Students may petition the department to substitute only one upper-division independent study or field study toward the elective requirement in the legal studies major. UCDC and UCSAC internships are exempt from this limit.

Double Major and Major/Minor Combinations Policy

Honors

To be considered for honors or highest honors at graduation, a student must have taken a minimum of nine (9) graded courses in the major. P/NP grades are not included when calculating GPA in the major. "Honors" and "Highest Honors" classifications will be awarded to graduating students who achieve GPAs of 3.67 and 3.8 respectively, based on classes taken within the legal studies major. Per UC Santa Cruz policy, generally no more than 15 percent of the graduating class earns honors or highest honors in the major.

Optional Catchall

Requirements and Planners

Course Requirements

In addition to completing LGST 10, legal studies majors are required to take a course in philosophical

logic or ethics, a course on constitutional law, and a course on international or comparative law. They must also take courses in each of three broadly defined thematic areas: theory, public law and institutions, and law and society. Within the theory theme, students may take courses such as legal theory, jurisprudence, ethics, logic, and social and political thought; within the law and society theme, courses topics range from gender to race to psychology to economics; within the public law and institutions theme, courses range from environmental law to human rights law to criminal justice to public policy. To fulfill the senior exit requirement, students can take a senior capstone seminar, or they may opt to write a senior thesis.

Lower-Division Courses

All students are required to complete and pass LGST 10 prior to declaring the major. This course is normally taken the first year.

LGST 10	Introduction to Legal Process	5
---------	-------------------------------	---

Choose one of the following courses:

All legal studies majors are required to take one of these philosophy courses (transfer students are strongly encouraged to take a similar course prior to enrolling at UC Santa Cruz).

PHIL 7	Elementary Logic	5
PHIL 9	Introductory Symbolic Logic	5
PHIL 22	Introduction to Ethical Theory	5
PHIL 24	Introduction to Ethics: Contemporary Moral Issues	5
PHIL 27	Business Ethics	5

Upper-Division Courses

Complete one of the following courses:

POLI 111A	Constitutional Law	5
LGST 111B	Civil Liberties	5

Plus one of the following courses:

LGST 116	Comparative Law	5
POLI 160B	International Law	5

Thematic Core Course Requirement — 6 courses

Legal studies majors are required to take six thematic core courses, with a minimum of one in each of the three thematic areas:

- A. Theory
- B. Public Law and Institutions
- C. Law and Society

A. Theory Theme Courses

The following courses are offered by the Legal Studies Program, are cross-listed with LGST by another department, or are offered by another department. Enrollment in LGST or the listed course code will count toward the legal studies "Theory" major requirements.

POLI 103	Feminist Interventions	5
POLI 105A	Ancient Political Thought	5
POLI 105B	Early Modern Political Thought	5
POLI 105C	Modern Political Thought	5
POLI 105D	Contemporary Political Theory: Modernity and its Discontents	5
PSYC 114	Human Development as a Cultural Process	5
PHIL 126	Philosophy of Social Sciences	5
SOCY 128C	Social History of Democracy, Anarchism, and Indigenism	5
SOCY 128J	The World Jury on Trial	5
PHIL 140	History of Ethics	5
PSYC 140M	Legitimizing (In)Equality: Attitudes, Beliefs, and Social Policy	5
PHIL 144	Topics in Social and Political Philosophy	5
LGST 146	Philosophy of Law	5
ENVS 147	Global Environmental Justice	5
ANTH 148	Gender and Global Development	5
PHIL 153	Philosophy of Race	5
LGST 155	Topics in American Legal History: Making of American Constitutionalism	5
LGST 157	Political Jurisprudence	5
LIT 168A	The Culture of Islamic Law	5
ART 172	Public Art: Memory, Landscape, and Artist as Activist	5
ART 181	Art, Power & Politics	5
ANTH 187	Cultural Heritage in Colonial Contexts	5
FMST 194O	The Politics of Gender and Human Rights	5

B. Public Law and Institutions Theme Courses

The following courses are offered by the Legal Studies Program, are cross-listed with LGST by another department, or are offered by another department. Enrollment in LGST or the listed course code will count toward the legal studies "Public Law and Institutions" major requirements.

POLI 111A	Constitutional Law	5
LGST 111C	Issues in Constitutional Law	5

LGST 115	Law and the Holocaust	5
LGST 116	Comparative Law	5
SOCY 117E	Migrant Europe	5
POLI 120C	State and Capitalism in American Political Development	5
LGST 125	History of the U.S. Penal Culture	5
ECON 128	Poverty and Public Policy	5
SOCY 128J	The World Jury on Trial	5
SOCY 128M	International Law and Global Justice	5
LGST 131	Wildlife, Wilderness, and the Law	5
POLI 132	California Water Law and Policy	5
LGST 133	Law of Democracy	5
POLI 134	Congress: Representation and Legislation	5
LGST 135	Native Peoples Law	5
LGST 136	Federal Indian Law and International Comparative Indigenous Peoples' Law	5
LGST 137	International Environmental Law and Policy	5
LGST 139	War Crimes	5
ENVS 140	National Environmental Policy	5
ENVS 149	Environmental Law and Policy	5
ENVS 152	International Environmental Politics	5
LGST 152	Courts and Litigation	5
LGST 153	Immigration, Citizenship, and Law	5
LGST 155	Topics in American Legal History: Making of American Constitutionalism	5
LGST 156	Administrative Law and Challenges of Regulation	5
LGST 159	Property and the Law	5
POLI 167	Politics of International Trade	5
LGST 173	Disability, Law, & Politics	5
POLI 175	Human Rights	5
POLI 186	Global Health Politics	5
LGST 188A	Introduction to the Legal Profession and Legal Aid Work	2
OAKS 188B	Legal Field Practice: Professional Skills and Ethics	3

C. Law and Society Theme Courses

The following courses are offered by the Legal Studies Program, are cross-listed with LGST by another department, or are offered by another department. Enrollment in LGST or the listed course code will count

toward the legal studies "Law and Society" major requirements.

LGST 108	Gender, Sexuality, and Law	5
POLI 110	Law and Social Issues	5
HIS 110B	Revolutionary America, 1740-1815	5
ANTH 110C	California Pasts	5
HIS 110D	The Civil War Era	5
LGST 111B	Civil Liberties	5
LGST 113	Gay Rights and the Law	5
LGST 114	Jews, Anti-Semitism, and the American Legal System	5
LGST 117	Sports, Law, and Politics	5
POLI 120B	Society and Democracy in American Political Development	5
POLI 120C	State and Capitalism in American Political Development	5
POLI 121	Racism & Justice in America	5
SOCY 122	The Sociology of Law	5
SOCY 127	Drugs in Society	5
SOCY 128	Law and Politics in Contemporary Japan and East Asian Societies	5
ANTH 130C	Politics and Culture in China	5
LGST 135	Native Peoples Law	5
ANTH 138	Political Anthropology	5
ANTH 142	Anthropology of Law	5
ENVS 144	Global Climate Change Politics	5
PSYC 147A	Psychology and Law	5
PSYC 147B	Psychology and Law	5
LGST 150	Children and the Law	5
POLI 151	Politics of Law	5
LGST 153	Immigration, Citizenship, and Law	5
LGST 154	The Legal Profession	5
LGST 155	Topics in American Legal History: Making of American Constitutionalism	5
ECON 160A	Industrial Organization	5
LGST 161	Intellectual Property	5
ECON 162	Legal Environment of Business	5
LIT 168A	The Culture of Islamic Law	5
ECON 169	Economic Analysis of the Law	5
LGST 173	Disability, Law, & Politics	5
ECON 183	Women in the Economy	5
LGST 185	Legal Studies Internship/Field Seminar:	5

ANTH 187	Experiences in Law, Policy, and Society	5
ANTH 187B	Cultural Heritage in Colonial Contexts	5
LIT 189A	Cultural Resource Management	5
FMST 194O	De la conquista a Sor Juana	5
	The Politics of Gender and Human Rights	5

Electives

Disciplinary Communication (DC) Requirement

Students in every major must satisfy that major's upper-division disciplinary communication (DC) requirement. The DC requirement in legal studies is satisfied by completing one of the following three alternatives:

1. Both

POLI 111A	Constitutional Law	5
POLI 160B	International Law	5

2. OR a Senior Seminar

LGST 196	Senior Capstone	5
----------	-----------------	---

3. OR a Senior Thesis (two or three quarters)

LGST 195A	Senior Thesis	5
LGST 195B	Senior Thesis	5
LGST 195C	Senior Thesis	5

Comprehensive Requirement

Students can satisfy the senior comprehensive requirement in the legal studies major by successfully completing one of the following two options:

Senior Capstone

The capstone is designed to provide an interdisciplinary integration of themes related to the study of law and includes a substantial writing requirement.

LGST 196	Senior Capstone	5
----------	-----------------	---

Senior Thesis (2-3 quarters).

Completion of a senior thesis of a minimum of 50 pages with a substantial research content, supervised by a legal studies faculty member or affiliate.

LGST 195A	Senior Thesis	5
LGST 195B	Senior Thesis	5
LGST 195C	Senior Thesis	5

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements (p. **Error! Bookmark not defined.**) for more information.

Sample four-year and two-year course plans for students majoring in legal studies are provided below.

Four-Year Sample Course Planner for Frosh Students

Year	Fall	Winter	Spring
1st (frosh)		LGST 10	Phil 9 or 22
2nd (soph)	LGST Core - Law & Society (LS)	LGST Core - Theory (T)	LGST Core - Public Law & Institution (PLI) POLI 160B/LGS T 160B (Required)
3rd (junior)	LGST Core (LS, PLI or T)	POLI 111A/LGS T 111A (Required)	
	LGST Core (LS, PLI or T)	LGST Core (LS, PLI or T)	
4th (senior)	LGST 196 (Capstone)		

In addition to the specific courses shown in this four-year planner, a student must complete courses satisfying the general education requirements. See the UC Santa Cruz Legal Studies website to view courses and designations for which courses fulfill the majors' three-core thematic requirements: Theory, Public Law and Institutions, and Law & Society.

Two-Year Sample Course Planner for Transfer Students

Year	Fall	Winter	Spring
1st (junior)	LGST 10	PHIL 9*	POLI 160B/LGS T-160B (required)
	LGST Core - Public Law & Institution (PLI)	LGST Core - Theory (T)	LGST Core - Law & Society (LS)
2nd (senior)	LGST Core (LS, PLI or T)	LGST 196 (Senior Capstone)	LGST Core (LS, PLI or T)
	LGST Core (LS, PLI or T)	POLI 111A/LGS T 111A (Required)	

This planner assumes that a student has completed all general education requirements, beyond major preparation requirements before coming to UC Santa Cruz. See the UCSC Legal Studies website to view courses and designations for which courses fulfill the majors' three-core thematic requirements: Theory, Public Law and Institutions, and Law & Society.

*Articulated equivalent courses may be taken prior to transfer.

LEGAL STUDIES MINOR

Course Requirements

The legal studies minor comprises six courses: LGST 10 plus any five upper-division LGST courses.

Students in the legal studies minor are not required to follow major requirements such as taking courses in each thematic area, the philosophy (ethics) requirement, or a senior seminar course.

Lower-Division Courses

One lower-division course.

LGST 10	Introduction to Legal Process	5
---------	-------------------------------	---

Upper-Division Courses

Any five upper-division electives may be used to complete the minor.

The following courses are offered by the Legal Studies (LGST) Program, are crosslisted with LGST by another department, or are offered by another department. Enrollment in LGST or the course code listed will count toward the legal studies major requirements.

POLI 102	Doing Research	5
POLI 103	Feminist Interventions	5
LGST 108	Gender, Sexuality, and Law	5
LGST 109	Legal Theory	5
HIS 110B	Revolutionary America, 1740-1815	5
HIS 110D	The Civil War Era	5
ANTH 110C	California Pasts	5
LGST 111B	Civil Liberties	5
LGST 111C	Issues in Constitutional Law	5
LGST 113	Gay Rights and the Law	5
LGST 114	Jews, Anti-Semitism, and the American Legal System	5
PSYC 114	Human Development as a Cultural Process	5
LGST 115	Law and the Holocaust	5
LGST 116	Comparative Law	5

LGST 117	Sports, Law, and Politics	5	ANTH 187	Cultural Heritage in Colonial Contexts	5
LGST 118	Law and Literature	5	ANTH 187B	Cultural Resource Management	5
HIS 121B	African American History: 1877 to the Present	5	LGST 188A	Introduction to the Legal Profession and Legal Aid Work	2
LGST 125	History of the U.S. Penal Culture	5	OAKS 188B	Legal Field Practice: Professional Skills and Ethics	3
LGST 130	Inequality and Law	5	FMST 1940	The Politics of Gender and Human Rights	5
ANTH 130C	Politics and Culture in China	5	LALS 194X	Extractivism and Socio-Environmental Conflicts in the Americas	5
LGST 131	Wildlife, Wilderness, and the Law	5			
LGST 133	Law of Democracy	5			
LGST 135	Native Peoples Law	5			
LGST 136	Federal Indian Law and International Comparative Indigenous Peoples' Law	5			
LGST 137	International Environmental Law and Policy	5			
LGST 139	War Crimes	5			
ENVS 140	National Environmental Policy	5			
PHIL 140	History of Ethics	5			
PSYC 140M	Legitimizing (In)Equality: Attitudes, Beliefs, and Social Policy	5			
LGST 146	Philosophy of Law	5			
ANTH 148	Gender and Global Development	5			
LGST 150	Children and the Law	5			
ENVS 152	International Environmental Politics	5			
LGST 152	Courts and Litigation	5			
LGST 153	Immigration, Citizenship, and Law	5			
PHIL 153	Philosophy of Race	5			
PSYC 153	The Psychology of Poverty and Social Class	5			
LGST 154	The Legal Profession	5			
LGST 155	Topics in American Legal History: Making of American Constitutionalism	5			
LGST 156	Administrative Law and Challenges of Regulation	5			
LGST 157	Political Jurisprudence	5			
LGST 158	Law and Politics of Memory	5			
LGST 159	Property and the Law	5			
POLI 160B	International Law	5			
LGST 161	Intellectual Property	5			
LIT 168A	The Culture of Islamic Law	5			
LGST 173	Disability, Law, & Politics	5			
POLI 175	Human Rights	5			
ENVS 179	Environmental Interpretation	5			
LGST 185	Legal Studies Internship/Field Seminar: Experiences in Law, Policy, and Society	5			
SOCY 185	Environmental Inequality	5			
POLI 186	Global Health Politics	5			

POLITICS PH.D.

Introduction

The Faculty

The work of the UCSC Politics Department's faculty has led the field toward interdisciplinary and engaged research, and represents the diverse cutting edge of U.S. and international political research. A group of affiliated graduate faculty extends the program's intellectual breadth and the range of the course offerings.

The department enjoys several areas of special strength, including American political development, the social foundations of democratic politics and democratization; political economy; politics of the developing world; the politics of language; sub-national politics; post-colonial theory and nationalist discourse; early modern political thought; and informal and translocal political organization.

The Curriculum

The Politics Department is impressed by the fact that many of the best studies of politics today disregard the conventional boundaries of the political science's disciplinary subfields. Therefore, the core graduate curriculum and qualifying examination process are structured around four interrelated themes central to political inquiry. Each of these areas of emphasis focuses, in a different way, on the relations among material life, institutional authority, collective mobilization, and political vision at all levels of politics.

Political and Social Thought. Brings together the history of political thought; contemporary social and critical theory; and the contributions of legal and institutional analysis of various kinds. This area of inquiry emphasizes the critical study of political practices that are experienced or understood as in some way limiting, oppressive, or wrong. The work of political and social theory as we see it is to transform our understanding of these practices; to see their contingent conditions; and to articulate the possibilities of governing ourselves differently.

Political and Social Forces. Concerns the interaction of social forces and political forces, drawing upon the work of scholars focused on social mobilizations and histories. Accordingly, this area of inquiry focuses on the articulation and organization of political interest and identities. This area studies the mutual interaction of these interests and identities with structure (states, discourses, public policy, and the law) uniting substantive and theoretical concerns across regional, national, and global politics.

States and Political Institutions. Emphasizes the international study of political institutions as instruments of collective decision-making and action. This area of inquiry focuses on the state and on transnational, subnational, and regional political institutions. In this area, we emphasize historical patterns of institutional development in relation to domestic political conflict and the changing contours of international political economy and patterns of conflict and cooperation among states.

Political Economy. Focuses on the relationship between states, markets, and societies. This area of inquiry explores the various understandings of political economy that have emerged within a number of different theoretical perspectives, including Marxism, realism, and liberalism. At subnational, national, and supranational levels, this area seeks to understand political economy outcomes as the result of the mutual interactions between political institutions, societal interests, and ideas and norms.

The politics graduate curriculum works critically upon and within conventional social science research and also ranges beyond its methods, drawing upon cultural studies, historical sociology, and history as they inform the study of politics. Students in the politics graduate program also work with faculty in other distinguished departments at UCSC, including literature, history of consciousness, history, Latin American and Latino studies, environmental studies, sociology, philosophy, international economics, and feminist studies.

Scholars and students in the program emphasize the articulation of important questions prior to the development of methods for grappling with them, while recognizing the importance of appropriate methodological tools for doing meaningful political research.

To support the growth of students as scholars, the department also offers a series of professional development sessions to introduce and help develop the skills of successful academic work. All graduate students are also expected to attend department events with notable visitors brought to campus for public lectures, presentation, and/or graduate colloquia.

Advancement to Candidacy

Course Requirements

All curricular requirements are aimed at preparing students for timely and successful completion of a doctoral dissertation. The graduate curriculum in politics includes seven stages: 1) three core seminars plus POLI 201, Logics of Inquiry seminar; 2) five other graduate-level Politics Department courses; 3) three additional graduate-level courses that may be from Politics or other departments, along with further training as appropriate in language and methodology; 4) teaching assistant seminar training; 5) a qualifying examination consisting of written and oral parts; 6) the research and writing of the dissertation; and 7) its oral defense.

Core Seminars and Methods Training

Required Core Seminars:

During the first two years in residence, students are required to take three of the four core seminars that correspond to the areas of emphasis:

POLI 200A	Political and Social Thought Core Seminar	5
POLI 200B	Social Forces and Political Change Core Seminar	5
POLI 200C	States and Political Institutions Core Seminar	5
POLI 200D	Political Economy Core Seminar	5

Logics of Inquiry:

The department also recognizes the importance of informed and critically engaged methodology. Logics of Inquiry, POLI 201, is a required course that investigates approaches to the study of politics and to the enterprise of social science in general. We also regularly offer POLI 202, Political Research, a seminar providing a foundation in qualitative methods, and occasionally offer other methods courses as well. Students sometimes pursue further coursework in other UC Santa Cruz departments, and the department has sent many students to summer training programs such as the Institute for Qualitative and Multi-Method Research (IQMR).

POLI 201	Logics of Inquiry	5
POLI 202	Fundamentals of Political Research	5

Additional Courses

Prior to the qualifying examination, a minimum of five additional politics graduate courses taught by Politics Department faculty or affiliated graduate faculty must be completed. Three additional graduate-level courses are also required, which may be taken from any UCSC department (including Politics).

Each candidate shall develop with his or her advisor language and method requirements appropriate to the student's project, graduate education, and career goals.

Foreign Language Requirements

Teaching Requirement

Throughout its history, the department has been strongly committed to undergraduate teaching. The graduate program offers graduate students the opportunity to work closely with faculty and undergraduates as teaching assistants. The Politics Department's faculty is committed to "the teaching of teaching": its training of college educators emphasizes the importance of civic education in undergraduate instruction. All students who are teaching assistants will be required to attend a TA training program in which pedagogic and substantive issues will be considered.

See our website for details about the policies for admission to graduate standing as well as the application, and information about financial-support opportunities. For more information, refer to the Graduate Division website.

Pre-Qualifying Requirements

Qualifying Examination

The Qualifying Examination (QE) process intends to demonstrate a student's mastery of and engagement with a range of literatures, including a) core literatures in two of the program's four areas of emphasis, and b) specialized literatures relevant to the research trajectory. It provides a forum to specify and develop research questions and plans for the dissertation.

Preparation begins with the first core seminar and continues throughout the required coursework. The QE is completed during the third year and has three components: 1) two written examinations; 2) the dissertation prospectus; and 3) an oral examination. All components are evaluated by a committee of four faculty members, one of whom is not a member of the Politics Department.

Students must complete the QE process by the end of their third year. A student who fails any component of the QE process twice will not be permitted to continue in the program.

Post-Qualifying Requirements

Dissertation

Dissertation

Upon advancing to candidacy students begin formal work on the dissertation, with the assistance and oversight of the dissertation committee.

Dissertation Committee

The dissertation committee must be composed of at least three professors, two of whom (including the chair) are members of the Politics faculty. The dissertation committee is selected by the student and

approved by the Graduate Division. The dissertation committee need not be the same as the QE committee. The chair of the two committees can be the same professor.

Dissertation Defense

Upon completion, the student will be asked to defend her/his dissertation before the dissertation committee.

Academic Progress

Normative time to completion of the Ph.D. is six years. Upon advancement to candidacy, students are expected to complete the dissertation within three years.

At the end of each academic year, whether the student is in residence at UC Santa Cruz or not, s/he will file a statement of progress with the dissertation committee.

If the Ph.D degree is not awarded within seven years from the date of advancement to candidacy, the student's candidacy shall lapse and the student will be required to pass a new qualifying exam prior to submitting the dissertation or undergo such other formal review as the department directs.

Applying for Graduation

At the end of the dissertation writing process, the student must file a petition for the degree, format the dissertation according to Graduate Division guidelines, complete an oral defense, and obtain signatures of the committee members on the official title page. Once these items are complete, the student may file the dissertation to complete the Ph.D.

Students must either be registered or on Filing Fee the quarter in which the degree is to be conferred. In order to be eligible for Filing Fee, a student must have been registered or on an approved leave of absence the previous quarter.

POLITICS DESIGNATED EMPHASIS

Introduction

Graduate students in politics may obtain a designated emphasis on the politics Ph.D. diploma indicating they have completed an additional specialized course of study in another department that offers a designated emphasis. Please consult the department of interest for more information.

Requirements

To receive a designated emphasis in politics, graduate students from other departments must complete the following requirements **in addition to degree requirements for the doctorate in their home (or coordinating) department.**

Committee Composition and Departmental

Approvals

The student must have a designated faculty advisor from among the politics core faculty. This advisor will be in addition to the faculty advisor from the student's home department. The politics advisor must serve on the student's qualifying examination committee and on the student's dissertation committee.

Course Requirements

The student must take four (4) graduate courses offered by the Politics Department. Two of these courses must be core courses (Political and Social Thought, Political Institutions, Political Economy, or Social Forces) and two courses may be electives appropriate to the student's thesis research. No more than one of these two elective courses may be an independent study.

POLI 200A	Political and Social Thought Core Seminar	5
POLI 200B	Social Forces and Political Change Core Seminar	5
POLI 200C	States and Political Institutions Core Seminar	5
POLI 200D	Political Economy Core Seminar	5

Writing, Research and/or Teaching Requirements

The student must prepare a significant piece of writing in the area of politics. This writing may take the form of a doctoral dissertation chapter or a paper to be submitted for publication.

Academic Progress

PSYCHOLOGY

273 Social Sciences 2 Building

PROGRAMS OFFERED

Psychology B.A. (p. 730)

Cognitive Sciences B.S. (p. 738)

Psychology Ph.D. (p. 744)

UNDERGRADUATE PROGRAMS

The Psychology Department offers undergraduate programs in psychology (B.A.) and cognitive science (B.S.)

Psychology B.A.

Psychology majors at UC Santa Cruz are introduced to theory and scientific research in the field. Students

begin with lower-division courses that include introductory psychology, precalculus, statistics, and introduction to developmental psychology. In addition, majors take upper-division courses in research methods and several areas of psychology.

The department offers coursework in cognitive, social, developmental, and clinical-personality psychology.

Cognitive psychology focuses on topics such as perception; brain and behavior; motor control; learning and memory; thinking, feeling, and emotions; psycholinguistics; computational modeling, and human-computer interaction. Our cognitive psychologists extend traditional boundaries in the study of cognition to encompass bodies, physical environments, and information technologies.

Social psychology involves the study of persons embedded within social contexts. Social psychology courses at UC Santa Cruz are organized around themes of social justice.

Developmental psychology is concerned with processes of cognitive, language, social, emotional, and personality development across the life span.

Additionally, both developmental and social psychology are concerned with issues of diversity including race, ethnicity, culture, gender, sexual identity, social class, and family structure.

Clinical-personality psychology focuses on issues of individual traits, psychological distress, well-being, and adjustment.

The Psychology Department offers a general psychology major and an intensive major. The intensive psychology major requires additional coursework in research methods as well as additional research or field study credits. See program descriptions below for details.

The B.A. programs in psychology provide a foundation for a career in psychological research, clinical practice, industry, or non-profits. Some careers in psychology require master's or doctoral degrees, for instance focused on research or clinical practice. Students primarily interested in clinical and counseling psychology should realize that training in these areas does not occur at the undergraduate level but requires professional training through an advanced degree. UC Santa Cruz does not offer advanced degrees in clinical or counseling psychology.

Cognitive Science B.S.

Cognitive science focuses on achieving a scientific understanding of how human cognition works. Its subject matter encompasses cognitive functions (such as memory and perception), the structure and use of human language, the evolution of the mind, artificial intelligence, and more.

The cognitive science degree provides a strong grounding in the principles of cognition through courses in cognitive psychology, and, in addition, provides breadth in the interdisciplinary aspects of cognitive science such as anthropology, linguistics, biology, philosophy, and computer science. Graduates will be well prepared for advanced training in research fields of cognitive psychology and cognitive neuroscience, technology industries such as human-computer interaction, and health fields, such as the treatment of brain disorders.

The cognitive science major is intended for students wishing to enter graduate programs in cognitive fields or health science fields, or students seeking jobs in industry in fields such as human-computer interaction or user experience research

GRADUATE PROGRAM

The psychology program offers three areas of specialization leading to the doctoral degree: cognitive, developmental, and social psychology. The program prepares students for research, teaching, and administrative positions in colleges and universities as well as for positions in schools, government, and other public and private institutions. Each student is primarily associated with one of the three research areas and participates in the courses and research forums sponsored by the faculty in that area. The program requires full-time enrollment as a graduate student. Although applicants for a master's degree are not accepted, students in the doctor of philosophy (Ph.D.) program may obtain a master of science (M.S.) degree by fulfilling specific requirements. Note that the program does not offer courses, training, or supervision in clinical psychology.

The cognitive psychology graduate program focuses on research of "Minds, Brains, and Beyond," offering a blend of traditional topics and new directions in cognitive science. With core strengths in language and interaction, memory and learning, and perception and performance, we are exploring topics such as: reading, speaking, psycholinguistics, discourse processing; language production and comprehension; bilingualism and multilingualism; remembering and forgetting; metacognition in learning and memory; creative cognition; cognitive offloading and transactive memory; socially distributed remembering and collective memory; human performance, information processing, and computational cognitive modeling; working memory and executive control; visual psychophysics; face perception; sensory integration; perception in virtual reality; cognitive and computational neuroscience; perceptual decision-making, attention, and awareness. Our graduates find careers in academia, tech industries, and more.

The developmental psychology graduate program focuses on research that integrates cultural, interpersonal, and individual aspects of human development. We focus especially on issues of diversity

in relation to culture, ethnicity, race, gender, sexuality, and social economic opportunity as people engage across contexts of family, peers, school, community, technology, and media. Our programs of research include moral development; neurodiversity; language and cognitive development; learning through observation and social interaction; children and playable media; personal and social identities; family and peer relationships; communication technologies; prejudice and discrimination; gender development; adolescent development; the transition to adulthood; school climate and motivation; and diversity issues in university outreach programs. Several of our faculty carry out research in cultural communities outside the U.S. and collaborate with faculty in the U.S. and other countries. At UC Santa Cruz, our interdisciplinary collaborations with other programs (such as computer engineering, computational media, education, Latin American and Latino studies, linguistics, and philosophy) help nurture students' research and prepare them for a wide variety of careers. Graduates of our program have accepted positions in academia, research institutes, and community and non-profit organizations.

The social psychology graduate program at UC Santa Cruz has a unique mission and focus. We use Kurt Lewin's model of "full-cycle" social psychology (theory-application-action) to study a broad range of topics related to social justice. In this way, knowledge gained in action-oriented research leads, in turn, to the development of new theory. Accordingly, our students learn to apply psychological theories and data to the analysis and solution of a wide range of social problems. We use a variety of research methods to examine justice-related issues in different cultural, political, and policy contexts. Our students are trained in laboratory, field, and survey methods; they are encouraged to attend to issues of race, class, sexuality, ethnicity, gender, and physical ableness; and, in addition to traditional social psychological approaches, are steeped in critical theoretical perspectives such as feminist theory. Our graduates go on to successful careers in academia as well as in community, government, and non-profit settings. Our approach to research and training, combined with the quality and competencies of our faculty, make our program among the nation's best for the psychological study of social justice issues. Current faculty research interests include: aggression and trauma; educational quality/access; achievement and disparities; feminisms; institutional analysis; intersectionality; narrative and identity; race as a social process; social identities and stigmatization of immigrant-origin students; poverty and economic justice; power and oppression; psychology and law; sexual and gender diversity; sexuality; social identity; social policy analysis; and structural inequality.

Graduate students in psychology may obtain a designated emphasis on the psychology Ph.D. diploma indicating that they have obtained additional training in another discipline such as feminist studies, Latin American and Latino studies, or sociology. For the full list of programs that offer a designated emphasis, see

the Fields of Study section of the catalog. For specific requirements for a designated emphasis in a program, please refer to the program statement for that department.

Details on the policies for admission to graduate standing and requirements for the Ph.D. degree, as well as the online application can be found on the Division of Graduate Studies website. The department's graduate program brochure, and faculty research are available on the department website.

PSYCHOLOGY B.A.

Information and Policies

Introduction

Program Learning Outcomes

Students who complete the psychology major should demonstrate competency in:

- **Application of knowledge with critical thinking skills.** Students should be able to use critical thinking to evaluate and interpret evidence, and to apply psychological concepts, theories, and research findings to individual, social, and cultural issues.
- **Application of research methods with values and integrity.** Students should be able to apply basic research methods in psychology, with sensitivity to ethical principles.
- **Communication skills.** Students should be able to demonstrate effective communication skills following professional conventions in psychology appropriate to purpose and context.
- **Awareness of sociocultural diversity and societal inequality.** Students should be able to understand the complexity of sociocultural diversity and societal inequality in the inquiry and analysis of psychological issues.

Academic Advising for the Program

The Psychology Department has an advising office located at 273 Social Sciences 2, (831) 459-2002, psyadv@ucsc.edu. The advisors assist students in obtaining information regarding major requirements and petitions, course planning, substitution of transfer courses for advance enrollment, careers, and graduate schools. Students are encouraged to take advantage of the advising office throughout their college career. Transfer students are encouraged to consult the Transfer Information and Policy Section.

Acceptance to the Psychology Major

Students are admitted to UCSC with a "proposed major" in most cases, and later petition to officially declare the major. Admission to UCSC does not guarantee acceptance into a particular major. Students

must be declared in a major by the end of the sixth quarter (or equivalent), so learning about and preparing for a major is a primary goal for first-year students.

Getting Started in the Major: Frosh

Students interested in pursuing the psychology major should complete PSYC 1, the mathematics requirement, and the statistics requirement (see below for courses that can be used to satisfy these requirements). PSYC 1 and the statistics requirement must be taken for a letter grade. If the minimum grade (B-) is not met for PSYC 1, PSYC 10 or PSYC 20 must be taken for a letter grade. After completing these three lower-division requirements, students may petition to declare the psychology major subject to the grade requirements described in the Qualification to the Major section below. Students are recommended to fulfill major qualifications as early as possible to avoid delays in the major declaration and enrollment processes. Refer to the Requirements and Planners section below, and consult with a department advisor early to begin the process toward the completion of major qualifications and major declaration.

High school students considering psychology as their university major find that the best preparation is a solid general education in English writing and mathematics (including precalculus), and social sciences.

Transfer Information and Policy

Transfer Admission Screening Policy

The following courses or their equivalents are required prior to transfer, by the end of the spring term for students planning to enter in the fall:

- Minimum grade of B- (2.7)* in a course articulated to UC Santa Cruz's PSYC 1, Introduction to Psychology (An AP Psychology score of 4 or 5 can substitute for PSYC 1.)
*Note: If a grade of C (2.0) or C+ (2.3) was earned in an equivalent course, a student must earn a minimum grade of B- (2.7) in a course articulated to UC Santa Cruz's PSYC 10, Introduction to Developmental Psychology, or PSYC 20, Cognition: Fundamental Theories.
- Minimum grade of B- (2.7) in a course articulated to UC Santa Cruz's PSYC 2, Introduction to Psychological Statistics, or STAT 5 or STAT 7 & STAT 7L, Statistics. (An AP Statistics score of 4 or 5 can substitute for PSYC 2 or STAT 5.)
- Minimum grade of C (2.0) in a course articulated to UC Santa Cruz's MATH 3, Precalculus. (An AP Calculus AB or BC score of 3, 4, or 5 can substitute for MATH 3.) Please note that an acceptable course in calculus may be used as a substitution of this course requirement. Business calculus is also acceptable.

In addition, the following courses are recommended prior to transfer to ensure timely graduation:

- PSYC 10, Introduction to Developmental Psychology
- PSYC 20, Cognition: Fundamental Theories

Prospective students are also encouraged to complete the Intersegmental General Education Transfer Curriculum (IGETC) or to complete all UC Santa Cruz general education requirements before matriculation.

Getting Started in the Major: Transfer Students

Students are admitted to UC Santa Cruz with a "proposed major" in most cases, and later petition to officially declare the major. Admission does not guarantee acceptance into a particular major, although transfer students' records are screened for preparation for many majors at the time of admission. In order to successfully transition to UCSC, Junior transfer students must be formally declared by the deadline in their second quarter of enrollment. Students are advised to set up and check their UCSC email regularly, make contact with their major advisors, submit course descriptions for articulation purposes, and consider taking summer session courses prior to their first fall quarter.

Transfer students who satisfy the requirements of the screening policy can declare the major at any time after matriculation at UC Santa Cruz. See the How to Declare the Major Section.

Major Qualification Policy and Declaration Process

Major Qualification

Students may petition to declare the psychology major once they have demonstrated foundational skills by completing each of the following three requirements:

One of the following courses

Mathematics requirement

AM 3	Precalculus for the Social Sciences	5
AM 6	Precalculus for Statistics	5
AM 11A	Mathematical Methods for Economists I	5
MATH 3	Precalculus	5
MATH 4	Mathematics of Choice and Argument	5
MATH 11A	Calculus with Applications	5
MATH 11B	Calculus with Applications	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5

Or take the placement exam

Score 300 or higher on the ALEKS Mathematics Placement or score a 3, 4, or 5 on either the AP Calculus AB or the AP Calculus BC examination.

Plus take the following course and obtain a B- or better

PSYC 1	Introduction to Psychology	5
--------	----------------------------	---

PSYC 1 must be taken in order to declare. If a B- or better grade is not achieved in PSYC 1, achieving a B- or better in PSYC 10 or PSYC 20 will fulfill declaration requirements.

Plus one of the following options and obtain a grade of B- or better

Either this course		
PSYC 2	Introduction to Psychological Statistics	5
or this course		
STAT 5	Statistics	5
or these courses		
STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2

Or a score of 4 or 5 on the AP Statistics exam.

Appeal Process

Students who did not satisfy the major admission requirements but believe that there are extenuating circumstances concerning their performance in the foundational courses may file a written appeal describing these circumstances; however, such appeals are rarely granted. Appeals may be filed by emailing psyadv@ucsc.edu. The department will notify the student and college of the decision within 15 days of the receipt of the appeal.

How to Declare a Major

Students should submit a petition to declare as soon as they complete the major qualification courses or reach their declaration deadline quarter, whichever comes first.

Students petitioning when the campus declaration deadline is imminent (i.e., in their sixth quarter, for students admitted as frosh), will either be approved, denied, or provided with conditions (e.g., completion of some courses with certain grades) that will be resolved

within at most one more enrolled quarter, even if they have not completed major qualification courses.

To petition to declare the major, students should follow the instructions on the department's psychology major website.

Letter Grade Policy

PSYC 1 and the statistics requirement must be taken for a letter grade. If alternative courses are taken to meet the major qualification requirements, they must also be taken for a letter grade (e.g., PSYC 10 or PSYC 20).

Course Substitution Policy

Students who want to fulfill requirements with courses taken at other colleges (excluding articulated courses from California community colleges) must petition for the substitution of their transfer courses via email to psyadv@ucsc.edu. PSYC 100, Research Methods in Psychology, and the senior seminar must be taken at UC Santa Cruz. Students planning to transfer to UC Santa Cruz should check with the advising office of their present college or refer to assist.org.

Double Majors and Major/Minor Combinations Policy

Upper-division courses from other departments taken to fulfill the psychology elective requirement may not be counted toward another major or minor (See "Course Requirements" in "Upper-Division Courses" below). Students wishing to pursue double majors or a major/minor combination are encouraged to meet with a peer advisor to create an academic plan to do so.

Study Abroad

Up to three courses taken through UC Santa Cruz study abroad may be approved for the major, and prior course approval is recommended. Please review the department's study abroad webpage if you are considering studying abroad and want to try to obtain approval for such courses to count toward the major.

Honors

Honors in the psychology major are awarded to graduating seniors whose UC Santa Cruz grade point average is a 3.6 or higher in psychology courses (1-189).

Highest honors in the major are reserved for students who meet the honors criteria as well as successful completion of a senior thesis, or whose UC Santa Cruz grade point average is a 3.9 or higher in psychology courses (1-189).

Research, Field Study, and Other Educational Opportunities

The Psychology Department offers a range of educational opportunities, including opportunities for undergraduate research and field study. For more

information, see the department's educational opportunities website.

Optional Catchall

General Psychology Major

Course Requirements

Thirteen courses are required for the general major. Here is a brief overview of these courses:

- Five lower-division courses are required before completing most upper-division courses. These should be completed as soon as possible, ideally by the end of the sophomore year. They include:
 - three lower-division courses required for declaration (PSYC 1, mathematics requirement, and statistics requirement), and
 - two additional lower-division courses (PSYC 10, PSYC 20)
- PSYC 100, Research Methods, which is a prerequisite for many other upper-division courses and fulfills half of the Disciplinary Communication requirement. This course **MUST** be taken at UC Santa Cruz.
- Six additional upper-division courses in psychology, including a senior seminar (see below for details)
- One non-psychology upper-division course (see below for details)

Lower-Division Courses

Take this course:

PSYC 1	Introduction to Psychology	5
--------	----------------------------	---

Or a score of 4 or 5 on the AP Psychology exam.

Plus one of the following options:

Either this course		
PSYC 2	Introduction to Psychological Statistics	5
or this course		
STAT 5	Statistics	5
or these courses		
STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2

Or a score of 4 or 5 on the AP Statistics exam.

Plus:

PSYC 10	Introduction to Developmental Psychology	5
---------	--	---

Plus:

PSYC 20	Cognition: Fundamental Theories	5
---------	---------------------------------	---

Plus one of the following courses:

AM 3	Precalculus for the Social Sciences	5
AM 6	Precalculus for Statistics	5
AM 11A	Mathematical Methods for Economists I	5
MATH 3	Precalculus	5
MATH 4	Mathematics of Choice and Argument	5
MATH 11A	Calculus with Applications	5
MATH 11B	Calculus with Applications	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5

Score 300 or higher on the ALEKS Mathematics Placement or score a 3, 4, or 5 on either the AP Calculus AB or the AP Calculus BC examination.

Upper-Division Courses

Eight upper-division courses are required for the general major. At least four of the eight courses (including PSYC 100), must be taken through the psychology program at UC Santa Cruz, not transferred from elsewhere (the four courses include psychology courses only, not the out-of-department course). Students must satisfy the fundamental requirement that they take at least one upper-division UC Santa Cruz psychology course from each of the Developmental, Cognitive, and Social subfields.

Research Methods:

PSYC 10	Introduction to Developmental Psychology	5
---------	--	---

One course in each of the following subfields (three courses):

- Developmental (courses numbered PSYC 101-PSYC 119)
- Cognitive (courses numbered PSYC 120-PSYC 139)
- Social (courses numbered PSYC 140-PSYC 159)

One additional 5-credit upper-division course

from THREE of the subfields listed below (i.e., a total of three courses, each from a separate subfield):

- Developmental (PSYC 101-PSYC 119)
- Cognitive (PSYC 120-PSYC 139)
- Social (PSYC 140-PSYC 159)
- Clinical-Personality (PSYC 160-PSYC 179)
- Methods (PSYC 180-PSYC 189)
- Independent Study (PSYC 193-PSYC 199)

One upper-division course outside of psychology:

One upper-division course from one of the following related areas outside of psychology. The course must be 5 credits, and neither crosslisted with psychology nor taught by psychology faculty. These courses also cannot be counted twice in cases of double majors or minors:

- Anthropology
- Community Studies
- Critical Race and Ethnic Studies
- Ecology and Evolutionary Biology
- Economics
- Education
- Environmental Studies
- Feminist Studies
- History of Consciousness
- Latin American and Latino Studies
- Legal Studies
- Linguistics
- Philosophy
- Politics
- Sociology
- Or a specific course from the list below:
- CMPM 146
- CMPM 148
- CSE 104
- CSE 140
- STAT 131
- STAT 132
- STAT 162

Upper-Division Seminar:

One of the upper-division courses must be an upper-division seminar; these courses are psychology courses identified within the General Catalog by their course descriptions containing the phrase “satisfies seminar requirement.”

Students can access a full list of courses on the department’s website. Upper-division courses and their catalog descriptions are grouped within each of the subfields.

Electives

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in psychology is satisfied by completing PSYC 100 and a seminar. Seminar courses are psychology courses identified within the General Catalog by their course descriptions containing the phrase “satisfies seminar requirement,” and are numbered PSYC 119, PSYC 139, PSYC 159, and PSYC 179.

Comprehensive Requirement

UC Santa Cruz requires that every student satisfy a senior exit/comprehensive requirement prior to graduation. Psychology students will satisfy this requirement by receiving a passing grade in a psychology seminar which is also part of the DC requirement (see above). To ensure that all students can meet the seminar requirement, students will enroll in only one senior seminar.

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements (p. **Error! Bookmark not defined.**) for more information.

Following are two recommended academic plans for frosh, and one additional plan for transfer students. Plan One is a suggested guideline for frosh who are committed to the major early in their academic career. Plan Two is for frosh who are considering the major or who need more preparation. Students should note that precalculus (AM 3, or see Lower Division Courses section for other qualifying courses or test scores) is a requirement for the major and is a prerequisite for PSYC 2 and PSYC 100. The third planner is a suggested two-year guideline for transfer students.

Frosh Plan One

	Fall	Winter	Spring
1st (frosh)	PSYC 1	AM 3	PSYC 2
2nd	PSYC		

(soph)	20	PSYC 10	
3rd (junior)	PSYC 100	upper-division developmenta l	upper-division social
4th (senior)	upper-division cognitive	upper-division PSYC elective (seminar)	upper-division PSYC elective
	upper-division PSYC elective	out of dept. course	

The courses listed above will satisfy the PE, SR, and DC general education requirements. All other GE requirements have to be satisfied.

Frosh Plan Two

	Fall	Winter	Spring
1st (frosh)	MATH 2	AM 3	PSYC 1
2nd (soph)	PSYC 20	PSYC 2	PSYC 10
3rd (junior)	PSYC 100	upper-division cognitive	upper-division developmenta l
4th (senior)	upper-division social	out of dept. course	upper-division PSYC elective
	upper-division PSYC elective (seminar)	upper-division PSYC elective	

The courses listed above will satisfy the PE, SR, and DC general education requirements. All other GE requirements have to be satisfied.

Transfer Plan

	Fall	Winter	Spring
3rd (junior)	PSYC 100	PSYC 20	upper-division developmenta

	PSYC 10	upper- division social	1
4th (senior)	upper- division cognitive	out of dept. course	upper- division PSYC elective (seminar)
	upper- division PSYC elective	upper- division PSYC elective	

Intensive Psychology Major

Course Requirements

The intensive major involves additional upper-division coursework, including a requirement of an advanced methods class and independent study. Students intending to take the intensive major should declare this on their proposed study plan during the junior year, outlining their plan for completing the requirements. **Note:** the intensive major designation appears on the transcript but it does not formally appear on students' diplomas.

Sixteen courses are required for the intensive major. Here is a brief overview of these courses:

- Five lower-division courses are required before completing most upper-division courses. These should be completed as soon as possible, ideally by the end of the sophomore year. They include:
 - three lower-division courses required for declaration (PSYC 1, mathematics requirement, and statistics requirement), and
 - two additional lower-division courses (PSYC 10, PSYC 20)
- PSYC 100, Research Methods, which is a prerequisite for many other upper-division courses and fulfills half of the Disciplinary Communication requirement. This course **MUST** be taken at UC Santa Cruz.
- Seven additional upper-division courses in psychology, including an advanced research course and a senior seminar (see below for details)
- Two quarters of independent study (research, field study, or senior thesis- see below for details)
- One non-psychology upper-division course (see below for details)

Lower-Division Courses

Take this course:

PSYC 1	Introduction to Psychology	5
--------	----------------------------	---

Or a score of 4 or 5 on the AP Psychology exam.

Plus one of the following options:

Either this course		
PSYC 2	Introduction to Psychological Statistics	5
or this course		
STAT 5	Statistics	5
or these courses		
STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2

Or a score of 4 or 5 on the AP Statistics exam.

Plus:

PSYC 10	Introduction to Developmental Psychology	5
---------	--	---

Plus:

PSYC 20	Cognition: Fundamental Theories	5
---------	---------------------------------	---

Plus one of the following courses:

AM 3	Precalculus for the Social Sciences	5
AM 6	Precalculus for Statistics	5
AM 11A	Mathematical Methods for Economists I	5
MATH 3	Precalculus	5
MATH 4	Mathematics of Choice and Argument	5
MATH 11A	Calculus with Applications	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 19B	Calculus for Science, Engineering, and Mathematics	5
MATH 11B	Calculus with Applications	5

Score 300 or higher on the ALEKS Mathematics Placement or score a 3, 4, or 5 on either the AP Calculus AB or the AP Calculus BC examination.

Upper-Division Courses

Eleven upper-division courses are required for the intensive major:

Research Methods:

PSYC 100	Research Methods in Psychology	7
----------	--------------------------------	---

One course in each of the following subfields (three courses):

- Developmental (courses numbered PSYC 101-PSYC 119)
- Cognitive (courses numbered PSYC 120-PSYC 139)
- Social (courses numbered PSYC 140-PSYC 159)

One additional 5-credit upper-division course from THREE of the subfields listed below (i.e., a total of three courses, each from a separate subfield):

- Developmental (PSYC 101-PSYC 119)
- Cognitive (PSYC 120-PSYC 139)
- Social (PSYC 140-PSYC 159)
- Clinical-Personality (PSYC 160-PSYC 179)
- Methods (PSYC 180-PSYC 189)
- Independent Study (PSYC 193-PSYC 199)

One of the following:

PSYC 181	Psychological Data Analysis	5
PSYC 182	Qualitative Research Methods	5

Two quarters of study from one of the following:

PSYC 193	Field Study	5
PSYC 194A	Research Internship in Developmental Psychology	5
PSYC 194B	Research Internship in Cognitive Psychology	5
PSYC 194C	Research Internship in Social Psychology	5
PSYC 195A	Senior Thesis	5
PSYC 195B	Senior Thesis	5

One five-credit course outside of psychology:

One upper-division course from one of the following related areas outside of psychology. The course must be 5 credits, and neither cross listed with psychology nor taught by psychology faculty. These courses can be counted twice in cases of double majors or minors:

- Anthropology

- Community Studies
- Critical Race and Ethnic Studies
- Ecology and Evolutionary Biology
- Economics
- Education
- Environmental Studies
- Feminist Studies
- History of Consciousness
- Latin American and Latino Studies
- Legal Studies
- Linguistics
- Philosophy
- Politics
- Sociology
- Or a specific course from the list below:
- CPM 146
- CPM 148
- CSE 104
- CSE 140
- STAT 131
- STAT 132
- STAT 162

Upper-Division Seminar:

One of the upper-division courses must be an upper-division seminar; these courses are psychology courses identified within the General Catalog by their course descriptions containing the phrase “satisfies seminar requirement.”

Students can access a full list of courses on the department’s website. Upper-division courses and their catalog descriptions are grouped within each of the subfields.

Electives

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in psychology is satisfied by completing PSYC 100 and a seminar. Seminar courses are psychology courses identified within the General Catalog by their course descriptions containing the phrase “satisfies seminar requirement”

and are numbered PSYC 119, PSYC 139, PSYC 159, and PSYC 179.

Comprehensive Requirement

UC Santa Cruz requires that every student satisfy a senior exit/comprehensive requirement prior to graduation. Psychology students will satisfy this requirement by receiving a passing grade in a psychology seminar which is also part of the DC requirement (see above). Passing a seminar course is also required for the major. Courses that meet this requirement are designated as seminars in the campus catalog as “satisfies seminar requirement.”

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements (p. **Error! Bookmark not defined.**) for more information.

Following are two recommended academic plans for frosh, and one additional plan for transfer students. Plan One is a suggested guideline for frosh who are committed to the major early in their academic career. Plan Two is for frosh who are considering the major or who need more preparation. Students should note that AM 3 is a requirement for the major and is a prerequisite for PSYC 2 and PSYC 100.

Frosh Plan One

	Fall	Winter	Spring
1st (frosh)	AM 3	PSYC 1	PSYC 2
2nd (soph)	PSYC 20	PSYC 10	PSYC 100
3rd (junior)	Upper-division cognitive	Upper-division developmental Out of department course	Upper-division social
4th (senior)	PSYC 193/ PSYC 194/ PSYC 195 Upper-division PSYC elective	PSYC 193/ PSYC 194/ PSYC 195 PSYC 181/ PSYC 182	Upper-division PSYC elective Upper-division PSYC elective (seminar)

The courses listed above will satisfy the PE, SR, and DC general education requirements. All other GE requirements have to be satisfied.

Frosh Plan Two

	Fall	Winter	Spring
1st (frosh)	MATH 2	PSYC 1	PSYC 20
4th (soph)	AM 3	PSYC 2	PSYC 10
3rd (junior)	PSYC 100	Upper-division cognitive Out of department course	Upper-division developmental
4th (senior)	PSYC 193/ PSYC 194/ PSYC 195 Upper-division PSYC elective Upper-division social	PSYC 193/ PSYC 194/ PSYC 195 PSYC 181/ PSYC 182	Upper-division PSYC elective Upper-division PSYC elective (seminar)

The courses listed above will satisfy the PE, SR, and DC general education requirements. All other GE requirements have to be satisfied.

Transfer Plan

	Fall	Winter	Spring
3rd (junior)	PSYC 100	Upper-division developmental	Upper-division social
	PSYC 10	Out of department course	PSYC 20
4th (senior)	PSYC 193/ PSYC 194/ PSYC 195 Upper-division PSYC	PSYC 193/ PSYC 194/ PSYC 195 PSYC 181/ PSYC 182	Upper-division PSYC elective (seminar) Upper-division PSYC

COGNITIVE SCIENCE B.S.

Information and Policies

Introduction

Program Learning Outcomes

Students who complete the cognitive science major should demonstrate competency in:

- **Application of knowledge with critical thinking skills.** Students should be able to use critical thinking to evaluate and interpret evidence, and to apply cognitive science concepts, theories, and research findings to individual, social, and cultural issues.
- **Application of research methods with values and integrity.** Students should be able to apply basic research methods in cognitive science, with sensitivity to ethical principles.
- **Communication skills.** Students should be able to demonstrate effective communication skills following professional conventions in cognitive science appropriate to purpose and context.
- **Awareness of methodological and theoretical diversity.** Students should be able to understand the complexities of cognition using neural, embodied, social, and/or technological approaches.

Academic Advising for the Program

The Psychology Department has an advising office located at 273 Social Sciences 2, (831) 459-2002, psyadv@ucsc.edu. The advisors assist students in obtaining information regarding major requirements and petitions, course planning, substitution of transfer courses for advance enrollment, careers, and graduate schools. Students are encouraged to take advantage of the advising office throughout their college career. Transfer students are encouraged to consult the Transfer Information and Policy Section.

Acceptance to the Cognitive Science Major

Students are admitted to the University of California, Santa Cruz with a "proposed major" in most cases, and later petition to officially declare the major. Admission to UC Santa Cruz does not guarantee acceptance into a particular major. Students must be declared in a major by the end of the sixth quarter (or equivalent), so learning about and preparing for a major is a primary goal for first-year students.

Getting Started in the Major: Frosh

Students interested in pursuing the cognitive science major should complete PSYC 20, the statistics requirement, the calculus mathematics requirement, and the computer programming requirement. These classes should be taken for a letter grade. After completing these four lower-division required courses, students may petition to declare the cognitive science major subject to the grade requirements described in the Major Qualification section below. Students are recommended to fulfill major qualifications as early as possible to avoid delays in the major declaration and enrollment processes. Refer to the Requirements and Planners section below, and consult with a department advisor early to begin the process toward the completion of major qualifications and major declaration.

High school students considering cognitive science as their university major find that the best preparation is a solid general education in English writing, mathematics at least through precalculus, biological and physical sciences, and social sciences.

Transfer Information and Policy

Transfer Admission Screening Policy

The following courses or their equivalents are required prior to transfer, by the end of the spring term for students planning to enter in the fall:

- Minimum grade of C (2.0) in a course articulated to a UC Santa Cruz calculus course (AM 11A/ECON 11A, MATH 12A/B, MATH 19A, or MATH 20A). (An AP Calculus AB score of 4 or 5, or Calculus BC score of 3, 4, or 5 can be substituted.)
- Minimum grade of C (2.0) in a course articulated to UCSC's PSYC 2, Introduction to Psychological Statistics, or STAT 5, or STAT 7 & STAT 7L, Statistics. (An AP Statistics score of 4 or 5 can substitute for PSYC 2 or STAT 5.)
- Minimum grade of C (2.0) in a course articulated to one of the following UCSC programming courses (An AP Computer Science A score of 4 or 5 can be substituted for the programming requirement): ECE 13, CSE 13S, CSE 20, or CSE 30.

A minimum GPA of 2.8 must be obtained in the courses listed above.

In addition, the following courses are recommended prior to transfer to ensure timely graduation:

- PSYC 20, Cognition: Fundamental Theories

Prospective students are also encouraged to complete the Intersegmental General Education Transfer Curriculum (IGETC) or to complete all UC Santa Cruz general education requirements before matriculation.

Getting Started in the Major: Transfer Students

Students are admitted to UC Santa Cruz with a "proposed major" in most cases, and later petition to officially declare the major. Admission does not guarantee acceptance into a particular major, although transfer students' records are screened for preparation for many majors at the time of admission. In order to successfully transition to UCSC, Junior transfer students must be formally declared by the deadline in their second quarter of enrollment. Students are advised to set up and check their UCSC email regularly, make contact with their major advisors, submit course descriptions for articulation purposes, and consider taking summer session courses prior to their first fall quarter.

Transfer students who satisfy the requirements of the screening policy can declare the major at any time after matriculation at UC Santa Cruz. See the How to Declare the Major Section.

Major Qualification Policy and Declaration Process

Major Qualification

Students may petition to declare the cognitive science major once they have completed the lower-division requirements (PSYC 20, the statistics requirement, the calculus requirement, and the computer programming requirement). For students to be admitted to the major, they must have a 2.80 or higher cumulative GPA in the lower-division requirements and receive a C or better in each of the courses. Transfer students may substitute equivalent courses from other institutions. Students not meeting the grade requirements in the lower-division courses may take any of the listed alternatives as substitutions; the department will use the highest grade to compute GPA.

Appeal Process

Students who did not satisfy the major admission requirements but believe that there are extenuating circumstances concerning their performance in the foundational courses may file a written appeal describing these circumstances; however, such appeals are rarely granted. Appeals may be filed by emailing psyadv@ucsc.edu. The department will notify the student and college of the decision within 15 days of the receipt of the appeal.

How to Declare a Major

Students should submit a petition to declare as soon as they complete the major qualification (MQ) courses or reach their declaration deadline quarter, whichever comes first.

Students petitioning when the campus declaration deadline is imminent (i.e., in their sixth quarter, for students admitted as frosh), will either be approved, denied, or provided with conditions (e.g., completion of

some courses with certain grades) that will be resolved within at most one more enrolled quarter, even if they have not completed MQ courses.

To petition to declare the major, students should follow the instructions on the department's website.

Letter Grade Policy

All lower-division courses required for the major declaration have to be taken for a letter grade.

Course Substitution Policy

Students who want to fulfill requirements with courses taken at other colleges must petition for the substitution of their transfer courses at an orientation session or at an appointment with the department advisor. PSYC 100, Research Methods in Psychology, and the senior seminar must be taken at UC Santa Cruz. Students planning to transfer to UC Santa Cruz should check with the advising office of their present college, or refer to assist.org.

Double Majors and Major/Minor Combinations Policy

Students wishing to pursue double majors or a major/minor combination are encouraged to meet with an advisor to create an academic plan to do so.

Study Abroad

Up to three courses taken through UC Santa Cruz study abroad may be approved for the major, and prior course approval is recommended. Please review this webpage if you are considering studying abroad and want to try to obtain approval for such courses to count toward the major.

Honors

Honors in the cognitive science major are awarded to graduating seniors whose UC Santa Cruz grade point average is a 3.6 or higher in psychology courses (1-189).

Highest honors in the major are reserved for students who meet the honors criteria as well as successful completion of a senior thesis, or whose UC Santa Cruz grade point average is a 3.9 or higher in psychology courses (1-189).

Research, Field Study, and Other Educational Opportunities

The Psychology Department offers a range of educational opportunities, including opportunities for undergraduate research and field study. For more information, see the department's educational opportunities website.

Requirements and Planners

Course Requirements

The undergraduate degree program in cognitive science is a program offering a course of study leading to the bachelor of science (B.S.) degree. Fifteen courses (77 credits) are required. Because some courses have additional prerequisites, students should read the descriptions of courses carefully, noting the prerequisites for courses of interest to them.

Lower-Division Courses

Introduction to Cognition

Take the following course:

PSYC 20	Cognition: Fundamental Theories	5
---------	---------------------------------	---

Statistics

Choose one of the following courses:

Either this course		
PSYC 2	Introduction to Psychological Statistics	5
or this course		
STAT 5	Statistics	5
or these courses		
STAT 7	Statistical Methods for the Biological, Environmental, and Health Sciences	5
STAT 7L	Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory	2

Lecture and lab combinations count as a single course.

Calculus

Choose one of the following courses:

AM 11A	Mathematical Methods for Economists I	5
MATH 11A	Calculus with Applications	5
MATH 19A	Calculus for Science, Engineering, and Mathematics	5
MATH 20A	Honors Calculus	5

Computer Programming

Choose one of the following courses:

CSE 13S	Computer Systems and C Programming	7
CSE 20	Beginning Programming in Python	5
CSE 30	Programming Abstractions: Python	7
ECE 13	Computer Systems and C Programming	7

Some of these courses have prerequisites.

Upper-Division Courses

Take the following course:

PSYC 100	Research Methods in Psychology	7
----------	--------------------------------	---

Core Courses

Students must complete a course from three of the four following areas:

Perception

PSYC 120	Visual and Spatial Cognition	5
PSYC 121	Perception	5

Neuroscience

PSYC 123	Cognitive Neuroscience	5
----------	------------------------	---

Language

PSYC 125	The Psychology of Language	5
----------	----------------------------	---

Memory

PSYC 129	Human Learning and Memory	5
----------	---------------------------	---

Electives

Cognitive Psychology Electives

Students must complete three additional upper-division psychology courses.

One Senior Seminar from the following list:

PSYC 119A	Development as a Sociocultural Process	5
PSYC 119D	Cultural Perspectives on Adolescent Development	5
PSYC 119E	The World of Babies	5
PSYC 119F	Language Development	5
PSYC 119H	Children, Research, and Policy	5
PSYC 119I	Special Topics in Narrative Development	5
PSYC 119K	Emotional Development	5
PSYC 119L	The Development and Psychology of Cheating and Dishonesty	5
PSYC 119M	Identity Development in Social and Cultural Contexts	5
PSYC 119P	Children and Technology	5
PSYC 119Q	Perspectives on Autism	5
PSYC 119S	The Developmental Psychology of Love	5

PSYC 119T	Media Contexts of Adolescent and Young Adult Development	5	PSYC 104	Development in Infancy	5
PSYC 139B	Consciousness	5	PSYC 105	Children's Thinking	5
PSYC 139D	Modeling Human Performance	5	PSYC 112	Moral Development	5
PSYC 139G	Eye-tracking: A Window into Cognition	5	PSYC 116	Communication Technologies, Culture, and Human Development	5
PSYC 139H	Weird Science	5	PSYC 120	Visual and Spatial Cognition	5
PSYC 139J	Forgetting	5	PSYC 120D	Deafness and Sign Language	5
PSYC 139K	Face Recognition	5	PSYC 121	Perception	5
PSYC 139L	Illusions	5	PSYC 122	The Science of Learning	5
PSYC 139N	Diversity in Cognitive Psychology	5	PSYC 123	Cognitive Neuroscience	5
PSYC 139P	Natural and Artificial Intelligence	5	PSYC 124	Psychology of Reading	5
PSYC 139Q	Analogy and Transfer	5	PSYC 125	The Psychology of Language	5
PSYC 139R	Social Frames of Memory	5	PSYC 126	Conversations	5
PSYC 139T	Memory, Metacognition, and Education	5	PSYC 129	Human Learning and Memory	5
PSYC 159A	Sexual Identity	5	PSYC 130	Deception, Brain, and Behavior	5
PSYC 159D	Psychology of Sexual Aggression	5	PSYC 133	Bilingualism from a Cognitive Perspective	5
PSYC 159E	Peace Psychology	5	PSYC 138	Computer Programming for the Cognitive Sciences	5
PSYC 159H	Community-Based Interventions	5	PSYC 138M	Introduction to Matlab Programming for the Cognitive Sciences	5
PSYC 159I	Psychology of Immigration	5	PSYC 140F	Mind, Society, and Culture	5
PSYC 159J	Social Psychology of Social Justice	5	PSYC 147A	Psychology and Law	5
PSYC 159N	Psychology of Mentoring	5	PSYC 181	Psychological Data Analysis	5
PSYC 159P	Race, Ethnicity, and Environmental Inequality	5	PSYC 193	Field Study	5
PSYC 159R	Achievement Disparities: A Social Psychological Perspective	5	PSYC 194B	Research Internship in Cognitive Psychology	5
PSYC 159S	Queer Intimacies	5	PSYC 195A	Senior Thesis	5
PSYC 159X	Psychology of Social Activism	5	<p>One of these may be replaced by a core course that was not used to satisfy the core courses requirement. PSYC 204-PSYC 252, graduate cognitive courses, may be substituted by petition.</p> <p>Interdisciplinary Electives</p> <p>Students must complete four interdisciplinary electives from lists of courses pre-approved by the Psychology Department, at least one of which must be upper-division. The electives fall into four groups: Evolution; Artificial Intelligence and Human-Computer Interaction; Linguistics; Philosophy. Three of the four electives must be selected from the same group. Students are responsible for planning their course of study to complete any necessary prerequisites for electives they wish to take. Possible sequences of interdisciplinary courses, including prerequisites, are given below.</p>		
PSYC 179A	Theories of Moral Psychology	5			
PSYC 179D	Psychological Interpretation	5			
PSYC 179E	Psychology of Emotion	5			
PSYC 179F	The Path to a Science of Dreaming	5			

Plus two additional courses from the following list:

PSYC 103	Adult Development and Aging	5
----------	-----------------------------	---

Group 1: Evolution

ANTH 1	Introduction to Biological Anthropology	5
--------	---	---

ANTH 100	History and Theory of Biological Anthropology	5	CMPM 80A	Accessible Games	5
ANTH 101	Human Evolution	5	CMPM 80K	Foundations of Video Game Design	5
ANTH 104	Human Variation and Adaptation	5	CMPM 121	Game Technologies	5
ANTH 105	Human Paleopathology	5	CMPM 131	User Experience for Interactive Media	5
ANTH 106	Primate Behavior and Ecology	5	CMPM 146	Game AI	5
ANTH 109	Evolution of Sex	5	CMPM 148	Interactive Storytelling	5
ANTH 112	Life Cycles	5	CMPM 177	Creative Strategies for Designing Interactive Media	5
ANTH 139	Language and Culture	5	CMPM 178	Human-Centered Design Research	5
ANTH 173	Origins of Farming	5	CSE 80A	Universal Access: Disability, Technology, and Society	5
ANTH 174	Origins of Complex Societies	5	CSE 107	Probability and Statistics for Engineers	5
ANTH 184	Zooarchaeology	5	ECE 8	Robot Automation: Intelligence through Feedback Control	5
ANTH 184L	Zooarchaeology Laboratory	2	ECE 9	Statics and Mechanics of Materials	5
ANTH 194B	Chimpanzees: Biology, Behavior, and Evolution	5	ECE 167	Sensing and Sensor Technologies	7
ANTH 194H	Paleoanthropology	5	MUSC 80L	Artificial Intelligence and Music	5
BIOE 20C	Ecology and Evolution	5	STAT 131	Introduction to Probability Theory	5
BIOE 109	Evolution	5			
BIOE 124	Mammalogy	5			
BIOE 124L	Mammalogy Laboratory	2			
BIOE 129	Biology of Marine Mammals	5			
BIOE 129L	Biology of Marine Mammals Laboratory	2			
BIOE 140	Behavioral Ecology	5			
BIOE 141L	Behavioral Ecology Field Course	5			
BIOE 147	Community Ecology	5			
BIOE 172	Population Genetics	5			
BIOL 105	Genetics	5			
BIOL 120	Developmental Biology	5			
BIOL 125	Introduction to Neuroscience	5			
PHIL 127	Philosophy of Biology	5			
PHIL 190	Senior Seminar	5			

Lecture and lab combinations count as a single course.

ANTH 139 also listed in Group 3

PHIL 127 also listed in Group 4

PHIL 190 also listed in Group 4

Group 2: Artificial Intelligence and Human-Computer Interaction

ARTG 80G	Visual Communication and Interaction Design	5
ARTG 80H	Critical History of Digital Games	5
CMPM 25	Introduction to 3D Modeling	5
CMPM 26	Introduction to 3D Animation	5
CMPM 35	Data Structures for Interactive Media	5

Lecture and lab combinations count as a single course.

The upper-division School of Engineering courses in this section have additional prerequisites that are not listed here.

Group 3: Linguistics

ANTH 139	Language and Culture	5
LING 50	Introduction to Linguistics	5
LING 53	Semantics I	5
LING 80C	Language, Society, and Culture	5
LING 80D	Language and Mind	5
LING 80K	Invented Languages, from Elvish to Esperanto	5
LING 101	Phonology I	5
LING 102	Phonology II	5
LING 105	Morphology	5
LING 111	Syntactic Structures	5
LING 112	Syntax I	5
LING 113	Syntax II	5
LING 116	Semantics II	5
LING 117	Pragmatics	5
LING 124	Language Typology	5
LING 125	Foundations of Linguistic Theory	5
LING 140	Language Change	5
LING 151	Phonetics II	5
LING 152	Applied Phonetics	5
LING 155	Language and Cognition	5
LING 171	Psycholinguistics I	5
LING 172	Psycholinguistics II	5

ANTH 139 also listed in Group 1

LING 111 formerly LING 55

LING 112 formerly LING 52

Group 4: Philosophy

PHIL 7	Elementary Logic	5
PHIL 9	Introductory Symbolic Logic	5
PHIL 11	Introduction to Philosophy	5
PHIL 23	Philosophy of Cognitive Science	5
PHIL 80S	The Nature of Science	5
PHIL 100B	The Rationalists	5
PHIL 100C	The Empiricists	5
PHIL 121	Epistemology	5
PHIL 123	Philosophy of Language	5
PHIL 125	Philosophy of Science	5
PHIL 127	Philosophy of Biology	5
PHIL 133	Philosophy of Mind	5
PHIL 135	Philosophy of Psychology	5
PHIL 190	Senior Seminar	5

PHIL 127 also listed in Group 1

PHIL 190 satisfies this requirement by petition only

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in cognitive science is satisfied by completing PSYC 100, Research Methods in Psychology, and one of the seminar courses offered by the department (listed above)

Comprehensive Requirement

UC Santa Cruz requires that every student satisfy a senior exit/comprehensive requirement prior to graduation. Cognitive Science students will satisfy this requirement by receiving a passing grade in a senior seminar which is also part of the DC requirement (see above). To ensure that all students can meet the seminar requirement, students are encouraged to enroll in only one senior seminar. Students would only be allowed to enroll in additional seminars after all who still need to fulfill their seminar requirement have enrolled.

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements (p. **Error! Bookmark not defined.**) for more information.

Following are two recommended academic plans for frosh, and one for transfer students to complete the Cognitive Science major. Plan 1 (for frosh) assumes typical curriculum selections. Plan 2 (for frosh) includes two additional interdisciplinary prerequisites, which some students find they need in order to take the upper-

division courses they desire. Students who place out of MATH 2 and MATH 3 do not need these courses, which are otherwise prerequisites to Calculus, PSYC 2 and PSYC 100.

Frosh Plan One

Year	Fall	Winter	Spring
1st (frosh)	MATH 2 PSYC 20	MATH 3 Programming	Calculus
2nd (soph)	Interdisciplinary prerequisite	PSYC 2 Interdisciplinary prerequisite	PSYC 100
3rd (junior)	Cognitive core Interdisciplinary elective	Cognitive core Interdisciplinary elective (UD)	Cognitive core Interdisciplinary elective
4th (senior)	Cognitive elective Interdisciplinary elective		Cognitive elective

The courses listed above will satisfy the SR, and DC general education requirements. All other GE requirements have to be satisfied.

Frosh Plan Two

Year	Fall	Winter	Spring
1st (frosh)	MATH 2 PSYC 20	MATH 3 Programming	Calculus
2nd (soph)	Interdisciplinary prerequisite	PSYC 2 Interdisciplinary prerequisite	PSYC 100 Interdisciplinary prerequisite
3rd (junior)	Cognitive core Interdisciplinary prerequisite	Cognitive core Cognitive elective	Cognitive core
4th (senior)	Cognitive elective	Interdisciplinary	Interdisciplinary

or)	elective (UD)	elective
Senior Seminar	Interdisciplinary elective	
Interdisciplinary elective		

The courses listed above will satisfy the SR, and DC general education requirements. All other GE requirements have to be satisfied.

Transfer Plan

Year	Fall	Winter	Spring
3rd (junior)	PSYC 20	Cognitive core	Cognitive core
or)	PSYC 100	Interdisciplinary elective	Interdisciplinary elective
4th (senior)	Cognitive elective	Cognitive core	Senior Seminar
or)	Interdisciplinary elective	Cognitive elective	Interdisciplinary elective (upper-division)

PSYCHOLOGY PH.D.

Introduction

The psychology program offers three areas of specialization leading to the doctoral degree: cognitive, developmental, and social psychology. The program prepares students for research, teaching, and administrative positions in colleges and universities as well as for positions in schools, government, and other public and private institutions. Each student is primarily associated with one of the three research areas and participates in the courses and research forums sponsored by the faculty in that area. The program requires full-time enrollment as a graduate student. Although applicants for a master's degree are not accepted, students in the doctor of philosophy (Ph.D.) program may obtain a master of science (M.S.) degree by fulfilling specific requirements. Note that the program does not offer courses, training, or supervision in clinical psychology.

The cognitive psychology graduate program focuses on research of "Minds, Brains, and Beyond," offering a blend of traditional topics and new directions in cognitive science. With core strengths in language and interaction, memory and learning, and perception and performance, we are exploring topics such as: reading, speaking, psycholinguistics, discourse processing; language production and comprehension; bilingualism and multilingualism; remembering and forgetting; metacognition in learning and memory; creative cognition; cognitive offloading and transactive

memory; socially distributed remembering and collective memory; human performance, information processing, and computational cognitive modeling; working memory and executive control; visual psychophysics; face perception; sensory integration; perception in virtual reality; cognitive and computational neuroscience; perceptual decision-making, attention, and awareness. Our graduates find careers in academia, tech industries, and more.

The developmental psychology graduate program focuses on research that integrates cultural, interpersonal, and individual aspects of human development. We focus especially on issues of diversity in relation to culture, ethnicity, race, gender, sexuality, and social economic opportunity as people engage across contexts of family, peers, school, community, technology, and media. Our programs of research include moral and emotional development; neurodiversity; language and cognitive development; learning through observation and social interaction; children and playable media; personal and social identities; family and peer relationships; communication technologies; prejudice and discrimination; gender development; adolescent development; the transition to adulthood; school climate and motivation; and diversity issues in university outreach programs. Several of our faculty carry out research in cultural communities outside the U.S. and collaborate with faculty in the U.S. and other nations. At UC Santa Cruz, our interdisciplinary collaborations with other programs (such as computer engineering, computational media, education, Latin American and Latino studies, linguistics, and philosophy) help nurture students' research and prepare them for a wide variety of careers. Graduates of our program have accepted positions in academia, research institutes, and community and non-profit organizations.

The social psychology graduate program at UC Santa Cruz has a unique mission and focus. We use Kurt Lewin's model of "full-cycle" social psychology (theory-application-action) to study a broad range of topics related to social justice. In this way, knowledge gained in action-oriented research leads, in turn, to the development of new theory. Accordingly, our students learn to apply psychological theories and data to the analysis and solution of a wide range of social problems. We use a variety of research methods to examine justice-related issues in different cultural, political, and policy contexts. Our students are trained in laboratory, field, and survey methods; they are encouraged to attend to issues of race, class, sexuality, ethnicity, gender, and physical ableness; and, in addition to traditional social psychological approaches, are steeped in critical theoretical perspectives such as feminist theory. Our graduates go on to successful careers in academia as well as in community, government, and non-profit settings. Our approach to research and training, combined with the quality and competencies of our faculty, make our program among the nation's best for the psychological study of social justice issues. Current faculty research interests include:

aggression and trauma; educational quality/access; achievement and disparities; feminisms; institutional analysis; intersectionality; narrative and identity; race as a social process; social identities and stigmatization of immigrant-origin students; poverty and economic justice; power and oppression; psychology and law; sexual and gender diversity; sexuality; social identity; social policy analysis; and structural inequality.

Graduate students in psychology may obtain a designated emphasis on the psychology Ph.D. diploma indicating that they have obtained additional training in another discipline such as feminist studies, Latin American and Latino studies, or sociology. For the full list of programs that offer a designated emphasis, see the Fields of Study section of the catalog. For specific requirements for a designated emphasis in a program, please refer to the program statement for that department.

Details on the policies for admission to graduate standing and requirements for the Ph.D. degree, as well as the online application can be found on the Division of Graduate Studies website. The department's graduate program brochure, and faculty research are available on the department website.

Advancement to Candidacy

Course Requirements

First-Year and Second-Year Project:

Students enrolled in the psychology graduate program will complete a first-year and second-year research project. All students must enroll and participate in the colloquium series in their graduate program each quarter that they are in residence.

PSYC 230	Research in Cognitive Psychology Seminar	5
PSYC 231	Research in Social Psychology Seminar	5
PSYC 242	Research in Developmental Psychology Seminar	5

Statistics

First-year students must take two courses in statistics:

PSYC 204	Quantitative Data Analysis	5
PSYC 214A	Multivariate Techniques for Psychology	5

Plus a Two-Quarter Proseminar Sequence During Fall and Winter Quarters

For Cognitive

PSYC 224A	Proseminar: Cognitive I	5
PSYC 224B	Proseminar: Cognitive II	5
PSYC 224C	Proseminar: Cognitive III	5

For Developmental

PSYC 244A	Proseminar I: Cognitive and Language Development	5
PSYC 244B	Proseminar II: Social and Personality Development	5

Additional Requirements for the Developmental Area

PSYC 225A	Introduction to Developmental Research I	3
PSYC 225B	Introduction to Developmental Research II	3
PSYC 225C	Introduction to Developmental Research III	5
PSYC 246	Cultural Diversity in Human Development	5

For Social

PSYC 211A	Proseminar: Social Justice and the Individual	5
PSYC 211B	Social Justice, Society, and Policy	5
PSYC 211C	Communicating in Social Psychology	3

Additional Requirements for the Social Area

Both of these courses

PSYC 210	The Experimental Method in Social Psychology	5
PSYC 248	Survey Methods	5

Plus four additional courses

One other advanced social graduate seminar; a graduate course in cognitive psychology; a graduate course in developmental psychology; and a substantive advanced course in a discipline other than psychology.

Plus one of the following

PSYC 249	Field Methodologies and Social Ethnography	5
PSYC 255	Qualitative Inquiry in Psychology	5
PSYC 261	Participatory Action Research	5

Letter Grade

Students are required to take their graduate courses as satisfactory/unsatisfactory.

Foreign Language Requirements

Teaching Requirements

Students are required to serve as a teaching assistant for at least two courses during their graduate career (one of which must be PSYC 10 for developmental and PSYC 40 for social).

Pre-Qualifying Requirements

Qualifying Examination

After satisfying the formal course and research requirements, psychology graduate students must take an oral examination to qualify as a candidate for the Ph.D., ideally by the end of their third year. The qualifying examination is intended to assess a student's knowledge of psychology and competence to conduct the dissertation research. For the qualifying examination, students write a major paper that reflects a conceptual analysis of their main research area, prepare a list of readings representative of their expertise in three areas of psychology, and satisfactorily complete an oral qualifying examination.

Post-Qualifying Requirements

Dissertation

Dissertation

Within a year of advancing to candidacy, students will prepare a written dissertation proposal that should demonstrate the student's in-depth knowledge of some research topic, along with a detailed outline of the empirical research to be conducted for the dissertation. The student's dissertation committee reviews the proposal, and the student will orally defend the proposal for approval by the committee.

Dissertation Defense

After the final draft of the dissertation has been completed and submitted to the faculty committee members, students must defend their thesis in an oral exam.

The Ph.D. degree is awarded upon successful completion and submission of the dissertation.

Sociology Ph.D. (p. 754)

Sociology Designated Emphasis (p. 756)

OTHER PROGRAMS OF INTEREST

Latin American and Latino Studies/Sociology
Combined B.A. (p. 707)

Sociology is the study of social interactions among individuals and social groups. More specifically, sociologists examine the cultural, ideological, economic and political contexts of human action including the processes whereby social institutions are created, maintained, and transformed.

Sociology was born as an intellectual response to the democratic and industrial revolutions that ushered in the modern era. As such, it considers how society is organized in relationship to a vision of a just, free, and equal society—a vision that may require fundamental social change. Developing an understanding of both social change and social justice as part of the sociological tradition is one of the teaching goals of sociologists at UCSC. In the process, we expect to develop in students an appreciation for the craft of social science: disciplined inquiry, observation, and research as part of informed global citizenship.

Our faculty have expertise in topics that include, but are not limited to:

- Children, youth, and families
- Civic engagement, voting, and citizenship
- Community-engaged research
- Cultural politics and the politicization of culture
- The cultural politics of sex work
- Critical ethnography
- Drugs, botanicals, and pharmaceuticals in society
- Educational inequality
- Education (K-12 and higher education)
- Environmental sociology
- Feminist studies
- Global and community health
- Global inequality, crime, and deviance
- Globalization and international development
- Health, medicine, and wellness
- Human rights and health justice
- Identities and identity changes
- Immigration and migration
- International law

- Intersection of race, class, gender and sexualities
- Labor studies
- Latinx communities
- Law and society
- Mass media and digital technology
- Medicine and technology
- Mortality studies
- Political economy
- Popular culture and cultural studies
- Public policy
- Queer studies
- Science and technology
- Social movements
- Sociology of emotion and affect
- Survey design and quantitative data analysis
- Sustainability
- Technology and social change
- Traditional and holistic medicine
- Urban studies

Sociology faculty use a number of approaches and methods, including field research, critical ethnography, cultural analysis, comparative historical analysis, and quantitative techniques.

UNDERGRADUATE PROGRAM

The sociology major at UC Santa Cruz is a rigorous program of study that retains enough flexibility to accommodate students with diverse career goals and plans. It ensures that all students are trained in the main theoretical and methodological traditions of sociology, yet permits considerable variation in students' own areas of specialization. The major provides the necessary intellectual foundation for students who are considering graduate studies in sociology and related social sciences. It also can be used as preparation for careers in fields as diverse as law, social work, management, environmental planning, public service, education, health services, journalism, and counseling. Finally, the sociology major can provide a general liberal arts education for undergraduates interested in the study of contemporary society and social problems.

Because of the interdisciplinary emphasis among sociology faculty, undergraduates find the department amenable for double majors and minors, and non-majors find many sociology courses of interest. In recent years, students have conducted independent

studies and written senior theses on a variety of subjects including undocumented immigrants, cultural diversity and inclusion in education, low-wage workers in Santa Cruz County, housing shortage, race and musical theater, homelessness, the impact of COVID on students, using technology for social good, incarceration and health care, weight stigmas and eating disorders, and belonging and exclusion.

The Sociology Department offers two undergraduate majors: 1) a general sociology major; 2) a sociology with a concentration in global information and social enterprise studies (GISES) intensive major. Students also have the option of a combined major in Latin American and Latino studies (LALS) and sociology, which can be found through the LALS Department. Additionally, there is a minor in GISES that is open to students in any major.

GLOBAL INFORMATION AND SOCIAL ENTERPRISE STUDIES

Sponsored by the Sociology Department at UC Santa Cruz is Global Information and Social Enterprise Studies (GISES), a rigorous and innovative program developed in collaboration with the Everett Program for Technology and Social Change. It aspires to create a new generation of well-trained advocates for social justice and sustainable development, who use the tools of information technology and social enterprise to solve global problems. Practically, students develop projects in solidarity with local and global organizations to democratize globalization, deepen social justice, reduce poverty, support digital education, and advance the transition to a sustainable world. The Everett Program combines social entrepreneurship with peer-to-peer and near-to-peer trainings in information technologies with the aim that students learn how to be innovative and creative problem-solvers in order to increase the informational, communication and organizational capacity of community and non-governmental organizations (NGOs). The GISES program provides an excellent foundation for students pursuing careers in non-profit management, social advocacy, sustainable businesses, and technology. Depending on a student's major, there are two ways to enter the GISES program. If a student is a sociology major and wishes to participate in GISES, they should declare the sociology with concentration in GISES intensive major. A student who majors in any field other than sociology should declare GISES as a minor.

GRADUATE PROGRAM

The Sociology Department at UC Santa Cruz is intellectually innovative, both in its interdisciplinary emphasis and in its commitment to inquiry that is engaged with the world beyond the university. The Ph.D. program is designed to educate students in sociological theory and methods and in the discipline's

major substantive areas while simultaneously exposing students to other arenas of intellectual inquiry that will aid them as they pursue their research questions and interests. After completing a group of required courses, students work closely with individual faculty members in designing their course of study. The program leads to a doctor of philosophy (Ph.D.) degree in sociology and prepares students for both academic and non-academic careers. The department does not offer a terminal master of arts (M.A.) program. However, students have the option of applying for a non-terminal master's degree en route to the Ph.D.

SOCIOLOGY B.A.

Information and Policies

Introduction

Program Learning Outcomes

The sociology curriculum prepares students graduating with a bachelor of arts degree to demonstrate the following program learning outcomes:

1. Critical Thinking: Demonstrate critical thinking skills by analyzing and evaluating social, political, and/or cultural arguments, across a variety of areas such as inequality; social problems; and race, class, and gender.
2. Sociological Understanding: Demonstrate sociological understandings of phenomena, for example, how individual biographies are shaped by social structures, social institutions, cultural practices, and multiple axes of difference and/or inequality.
3. Written and Oral Communication: Formulate effective and convincing written and/or oral arguments.
4. Social Theory: Demonstrate the ability to use several of the major classical or contemporary perspectives in social theory.
5. Research Methodology: Demonstrate the ability to use several of the major social science research methodologies.

Academic Advising for the Program

For sociology-related advising inquiries contact:

socyadvising@ucsc.edu
831-459-4888

Visit the sociology website for additional advising information, including advising hours, appointments, and peer advising.

Sociology advising is located in Rachel Carson College Academic Building, Rm 226.

Transfer students must also review the Transfer Information and Policy section below.

Getting Started in the Major: Frosh

This major is not highly sequential or course intensive. Although it is advisable to begin taking courses toward the major in the first year, it is not required. This major does not require a math placement nor a language placement exam.

Transfer Information and Policy

Transfer Admission Screening Policy

The following courses or their equivalents are required prior to transfer, by the end of the spring term for students planning to enter in the fall:

SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5

A minimum GPA of 2.0 (C) or better must be obtained in the courses listed above.

Getting Started in the Major: Transfer Students

Transfer students who meet the selection criteria and are offered admission are admitted as proposed sociology majors. They must work with the sociology undergraduate coordinator when they arrive on campus to begin the process to declare the major and prepare for enrollment. Declaration of the major for transfer students must be completed by the campus declaration deadline, in the second term of residency.

If a student enters in the winter quarter, it is highly recommended to have taken SOCY 3A or its articulated equivalent at their previous institution. If possible, having taken SOCY 3B or its equivalent is recommended to ensure timely graduation.

If a student enters in the fall quarter as a proposed sociology major, they must take SOCY 3A at UC Santa Cruz that quarter if they have not satisfied the articulated equivalent at their previous institution.

If a student transfers in either fall or winter quarter and they have already taken SOCY 3A or its articulated equivalent at their previous institution, they are recommended to take SOCY 105A in their quarter of entry.

In addition, transfer students who are pursuing the GISES intensive concentration must take SOCY 30A in fall quarter as it is the start of a yearlong course series.

Major Qualification Policy and Declaration Process

Major Qualification

General Sociology Major

Students must take two of the following courses, and pass each with C+ or better, to qualify:

SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5

SOCY 15 World Society 5

Students who are transferring in should also refer to the section below, Transfer Information and Policy, on the major selection criteria used during the admissions screening process. Transfer students who are proposed in a different major when they come to UC Santa Cruz require permission from the department to change into the sociology major. Students must work with the sociology undergraduate advisor to discuss the change of major process.

Sociology with a Concentration in GISES Intensive Major

Students must take three courses, for a letter grade, to qualify for the sociology with a concentration in Global Information and Social Enterprise Studies (GISES) intensive major. The following course is required:

SOCY 30A	Introduction to Global Information and Social Enterprise Studies	5
----------	--	---

Plus two of the following courses

SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5

Students are required to pass each of the courses with a B- or better, and obtain approval from the faculty director, to qualify for the GISES concentration. Students transferring in the articulated equivalents to SOCY 1 and SOCY 10 will only be required to meet the B- or better requirement in SOCY 30A. SOCY 1 and SOCY 10 taken outside of UC Santa Cruz will be accepted with grades of C or better. Students will begin the approval process while enrolled in SOCY 30A. Prior to enrollment into the second course in the series, SOCY 107A, the faculty director works with students to ensure there is an appropriate match between student interests and project partners.

How to Declare a Major

Students should submit a petition to declare as soon as they complete the major qualification courses or reach their declaration deadline quarter, whichever comes first.

Students petitioning when the campus declaration deadline is imminent (i.e., in their sixth quarter, for students admitted as frosh), will either be approved, denied, or provided with conditions (e.g., completion of some courses with certain grades) that will be resolved within at most one more enrolled quarter, even if they have not completed courses.

Students pursuing a double major or major/minor must also work with the department advising office to create an academic plan for the major. For information about the declaration process please review the Sociology Department website.

Appeal Process

Students who are informed that they are not eligible to declare the major may appeal this decision by submitting a letter to the Sociology Department Undergraduate Education chair within 15 days from the date of notification. Within 15 days of receipt of the appeal, the department will notify the student and college of the decision. Letters of appeal should describe any extenuating circumstances that might have affected the student's record. Students should submit the appeal letter via email to socyadvising@ucsc.edu or in-person to the Sociology advising office, located in Rachel Carson College Academic Building, Room 226. Students may contact the sociology undergraduate advisor for any questions.

Letter Grade Policy

All major qualification courses must be taken for letter grades. All other major requirements may be taken as a letter grade or Pass/No Pass. No more than 25 percent of credits earned at UC Santa Cruz may be graded on a Pass/No Pass basis. Students must be in good academic standing to choose the Pass/No Pass option.

Course Substitution Policy

Sociology B.A. students may substitute two of the upper-division elective requirements with upper-division electives from other UC Santa Cruz departments, individual study courses, education abroad electives, or other four-year institution electives. Students are limited in the number of outside electives accepted toward the major and must petition for approval of the course prior to applying it to the major. Review the sociology webpage for information about the petition process.

Double Majors and Major/Minor Combinations Policy

Study Abroad

Students seeking to study abroad must be declared in their major prior to studying abroad.

It is recommended that the students have the courses intended to be taken abroad reviewed and approved by the Sociology Department prior to departure, if possible. Up to two relevant courses taken through study abroad programs from which credits are transferable to UC Santa Cruz may be used toward satisfaction of the sociology B.A. elective requirements when the content is deemed appropriate and approved by the Sociology Department. Up to five relevant courses taken through study abroad programs from which credits are transferable to UCSC may be used toward satisfaction of the sociology B.A. with a concentration in GISES intensive major elective requirements when the content is deemed appropriate and approved by the Everett/GISES program faculty director.

Visit the sociology webpage for additional information and planners for study abroad.

Honors

The Sociology Department awards honors in the major based on the student's cumulative GPA for all courses taken through UC Santa Cruz to satisfy the program's major requirements. Students with a GPA of 3.75 or above will be considered for honors in the major. Students with a GPA of 3.9 or above will be considered for highest honors in the major. No more than approximately 15 percent of the graduating class will be considered for honors or highest honors in the major. Comprehensive honors is awarded to students who complete the senior thesis option, and their faculty thesis sponsor and one additional reader evaluate the thesis to be of honors quality.

General Sociology Major

Course Requirements

Sociology majors are required to take a total of 11 courses (two lower-division courses in preparation for the major, two prescribed lower-division core courses, two prescribed upper-division core courses, and five upper-division electives). In addition, they must successfully complete the comprehensive requirement prior to graduation.

Lower-Division Courses

Lower-division preparation:

All sociology majors are required to take two lower-division preparation courses, or their articulated equivalents.

Select two from the following three courses:

SOCY 1	Introduction to Sociology	5
SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5

Lower-division core courses:

The following two sociology courses, or their articulated equivalents, are required as the foundation of statistical and research methods in the discipline.

SOCY 3A	The Evaluation of Evidence	5
SOCY 3B	Statistical Methods	5

Upper-Division Courses

Upper-division core courses:

The following two sociology courses are required as the foundation of theoretical training in the discipline.

SOCY 105A	Classical Social Theory	5
SOCY 105B	Contemporary Social Theory	5

Upper-division advanced coursework:

Five upper-division sociology electives are required. The Sociology Department offers upper-division electives that reflect a wide range of ideas within the discipline and the diversified research interests of the faculty. All upper-division electives offered by the department are numbered Sociology 110-189. The annual course offerings can be viewed on the sociology webpage.

Electives

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The goal of the Sociology Department's Disciplinary Communication requirement is to ensure that students acquire and develop the skills in writing and other forms of communication that will best serve them in their study of sociology, and as future learners. The following courses satisfy the Disciplinary Communication requirement for students in programs administered by the Sociology Department.

SOCY 105A	Classical Social Theory	5
SOCY 105B	Contemporary Social Theory	5

Comprehensive Requirement

Prior to graduation, all sociology majors are required to complete one of the following comprehensive requirements.

Senior Seminar

SOCY 196S	Senior Seminar	5
-----------	----------------	---

Sociology Graduate Course

Students may satisfy the comprehensive requirement by successfully completing a graduate-level sociology course, numbered SOCY 201-SOCY 294. Enrollment into a graduate-level sociology course is by invitation or approval of the course instructor.

Senior thesis

SOCY 195A	Senior Thesis	5
SOCY 195B	Senior Thesis	5
SOCY 195C	Senior Thesis	5

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements (p. **Error! Bookmark not defined.**) for more information.

Sociology Major Planner One

The following is a recommended academic plan for students in the sociology major.

Option One

Year 1st (frosh)	Fall SOCY 1	Winter SOCY 10	Spring	(or in fall or winter) (or thesis fall- winter- spring)
2nd (soph)	SOCY 3A	SOCY 3B		
3rd (junior)	SOCY 105A	SOCY 105B	SOCY upper-division elective	SOCY upper-division elective
4th (senior)	SOCY upper-division elective	SOCY upper-division elective	SOCY 196S or SOCY graduate course (or in fall or winter) (or thesis fall-winter-spring)	
<p>All sociology majors are required to take SOCY 3B which also satisfies the SR general education (GE) requirement. SOCY 15, which satisfies the CC GE, may be selected as one of the major qualification course options. In addition, students may satisfy the CC, ER, and PE GE requirements by selecting certain upper-division sociology electives. Visit the Office of the Registrar's website for an up-to-date list of the sociology upper-division electives that satisfy GE requirements. The IM, MF, SI, TA, PR and composition GE requirements are not offered through the sociology department.</p>				
Sociology Major Planner Two				
The following is a recommended academic plan for transfer students entering the sociology major. It is assumed that SOCY 1 and SOCY 10 equivalencies were completed at the previous college.				
Option One				
Year 1st (frosh)	Fall	Winter	Spring	
2nd (soph)	SOCY 15			
3rd (junior)	SOCY 3A	SOCY 3B	SOCY upper-division elective	
4th (senior)	SOCY 105A	SOCY 105B	SOCY 196S or SOCY graduate course	
<p>*Articulated equivalent courses may be taken prior to transfer.</p>				
Option Two				
Year 1st (frosh)	Fall	Winter	Spring	
2nd (soph)	SOCY 15			
3rd (junior)	SOCY 3A	SOCY 3B	SOCY upper-division elective	
4th (senior)	SOCY 105A	SOCY 105B	SOCY 196S or SOCY graduate course	

All sociology majors are required to take SOCY 3B which also satisfies the SR general education (GE) requirement. SOCY 15, which satisfies the CC GE, may be selected as one of the major qualification course options. In addition, students may satisfy the CC, ER, and PE GE requirements by selecting certain upper-division sociology electives. Visit the Office of the Registrar's website for an up-to-date list of the sociology upper-division electives that satisfy GE requirements. The IM, MF, SI, TA, PR and composition GE requirements are not offered through the sociology department.

Sociology Major Planner Two

The following is a recommended academic plan for transfer students entering the sociology major. It is assumed that SOCY 1 and SOCY 10 equivalencies were completed at the previous college.

Option One

Year 1st (junior)	Fall SOCY 3A* SOCY upper-division elective	Winter SOCY 3B* SOCY 105A	Spring SOCY 105B SOCY upper-division elective
2nd (senior)	SOCY upper-division elective	SOCY upper-division elective	SOCY 196S or SOCY graduate course (or in fall or winter) (or thesis fall-winter-spring)
	SOCY upper-division elective		

*Articulated equivalent courses may be taken prior to transfer.

Option Two

Year 1st (junior)	Fall SOCY 3A*	Winter SOCY 3B*	Spring SOCY upper- division elective
	SOCY 105A	SOCY 105B	SOCY upper- division elective
2nd (senior)	SOCY upper- division elective	SOCY upper- division elective	SOCY 196S (or in fall or winter) (or thesis fall- winter- spring)
	SOCY upper- division elective		

*Articulated equivalent courses may be taken prior to transfer.

Sociology with Concentration in GISES Intensive Major

The GISES intensive concentration is an option for students wishing to major in sociology and focus in the area of Global Information and Social Enterprise Studies (GISES). The major is sponsored and administered by the Department of Sociology. This major is designed for highly motivated, self-directed and enterprising students who have demonstrated the capacity to design and complete an honors-quality project in partnership with a civil society group. Students are required to take a total of 15 courses (three prescribed lower-division courses in preparation for the major, two prescribed lower-division core courses, two prescribed upper-division GISES courses, two prescribed upper-division core courses, five upper-division electives, and a project practicum course). In addition, they must successfully complete the comprehensive requirement prior to graduation.

Course Requirements

Lower-Division Courses

Lower-division preparation:

Students must take the following three courses or their articulated equivalents.

SOCY 30A	Introduction to Global Information and Social Enterprise Studies	5
----------	--	---

And select two from the following three options:

SOCY 1	Introduction to Sociology	5
--------	---------------------------	---

SOCY 10	Issues and Problems in American Society	5
SOCY 15	World Society	5

Lower-division core courses:

The following two sociology courses, or their articulated equivalents, are required as the foundation of statistical and research methods in the discipline.

SOCY 3A	The Evaluation of Evidence	5
SOCY 3B	Statistical Methods	5

Upper-Division Courses

Upper-division GISES core courses

The following two courses are required for the design and implementation of the GISES project.

SOCY 107A	Designing ICT Projects for Social Enterprise	5
SOCY 107B	Project Implementation and Grant Writing for Social Entrepreneurs	3

Upper-division core courses

The following two sociology courses are required as the foundation of theoretical training in the discipline.

SOCY 105A	Classical Social Theory	5
SOCY 105B	Contemporary Social Theory	5

Upper-division advanced coursework

Five upper-division electives are required, selected from the Sociology Department elective courses, Sociology 110-189, or from the list of approved courses. Students are strongly recommended to consult with the director of GISES before choosing their electives, to ensure that their choices contribute to their selected project and/or their growth as a technology activist or technology linked social change advocate. Courses outside the list of approved courses may also be approved by the director of GISES. For more information on the process students must follow to have their courses approved, please visit the Sociology Department webpage.

Project Practicum

Students must enroll in SOCY 196G, Project Practicum, and complete their GISES capstone project. SOCY 196G is offered every fall quarter. Students may review the GISES webpage, or contact the program director of GISES (socy@ucsc.edu) for more detailed guidelines regarding the GISES capstone project. Prior to enrolling in SOCY 196G, students must have completed SOCY 107A and SOCY 107B, which prepares and supports students in completing a project that makes a contribution to advancing a solution to a problem associated with global social justice and/or sustainable development. To complete the final requirements for GISES, the integrated project practicum—narrative and

digital deliverable—must be mounted on the appropriate web-enabled database managed by the Everett Program.

SOCY 196G	Project Practicum: Global Information and Social Enterprise	5
-----------	---	---

Electives

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The goal of the Sociology Department's Disciplinary Communication requirement is to ensure that students acquire and develop the skills in writing and other forms of communication that will best serve them in their study of sociology, and as future learners. The following courses satisfy the Disciplinary Communication requirement for students in programs administered by the Sociology Department.

SOCY 105A	Classical Social Theory	5
SOCY 105B	Contemporary Social Theory	5

Comprehensive Requirement

Prior to graduation, students are required to complete one of the following comprehensive requirements.

Senior Seminar

SOCY 196S	Senior Seminar	5
-----------	----------------	---

Sociology Graduate Course

Students may satisfy the comprehensive requirement by successfully completing a graduate-level sociology course, numbered SOCY 201- SOCY 294. Enrollment into a graduate-level sociology course is by invitation or approval of the course instructor.

Senior thesis

SOCY 195A	Senior Thesis	5
SOCY 195B	Senior Thesis	5
SOCY 195C	Senior Thesis	5

Planners

The tables below are for informational purposes and do not reflect all university, general education, and credit requirements. See Undergraduate Graduation Requirements (p. **Error! Bookmark not defined.**) for more information.

Sociology with Concentration in GISES Intensive Major Planner One

The following is a recommended academic plan for students in the sociology with concentration in GISES intensive major.

Option One

Year	Fall	Winter	Spring
1st	SOCY 1	SOCY	

(frosh)		10		
2nd (soph)	SOCY 3A SOCY 30A	SOCY 3B SOCY 107A		SOCY 107B
3rd (junior)	SOCY 105A SOCY 196G	SOCY 105B Upper-division elective		Upper-division elective
4th (senior)	Upper-division elective	Upper-division elective		SOCY 196S or SOCY Graduate Course (or in fall or winter) (or thesis fall-winter-spring)
Option Two Year 1st (frosh)	Fall	Winter	Spring	SOCY 1
2nd (soph)	SOCY 15 SOCY 3A	SOCY 3B		
3rd (junior)	SOCY 30A Upper-division elective	SOCY 107A Upper-division elective		SOCY 107B Upper-division elective
4th (senior)	SOCY 105A	SOCY 105B		SOCY 196S or SOCY Graduate Course (or in fall or winter) (or thesis fall-winter-spring)
	SOCY 196G	Upper-division elective		Upper-division elective

All students majoring in sociology with concentration in GISES are required to take SOCY 3B which also satisfies the SR general education (GE) requirement, as well as SOCY 30A which satisfies the PE-H GE. SOCY 15, which satisfies the CC GE, may be selected as one

of the major qualification course options. In addition, students may satisfy the CC, ER, and TA GE by selecting certain upper-division sociology electives. Visit the Office of the Registrar's website for an up-to-date list of the sociology upper-division electives that satisfy general education requirements. The IM, MF, SI, PR and composition GE requirements are not offered through the Sociology Department.

Sociology with Concentration in GISES Intensive Major Planner Two

The following is a recommended academic plan for transfer students entering the sociology with concentration in GISES intensive major. It is assumed that SOCY 1 and SOCY 10 equivalencies were completed at the previous college.

Year	Fall	Winter	Spring
1st	SOCY	SOCY	SOCY 107B
(junior)	3A*	3B*	
	SOCY	SOCY	SOCY 105B
	30A	107A	
	Upper-division elective	SOCY 105A	
2nd	Upper-division elective	Upper-division elective	SOCY 196S or SOCY Graduate Course (or in fall or winter) (or thesis fall-winter-spring)
(senior)			
	SOCY 196G	Upper-division elective	Upper-division elective

*Articulated equivalent courses may be taken prior to transfer

This planner also assumes that a student has completed most of the general education requirements, beyond major preparation requirements, before transferring to UC Santa Cruz.

GISES MINOR

Students must take one course prior to petitioning for entry to the GISES minor: SOCY 30A, Introduction to Global Information and Social Enterprise Studies. In order to declare the GISES minor, students must first have declared a major and must also connect with the sociology undergraduate advisor to review and complete the declaration process. For details, please review the Sociology Department webpage.

Course Requirements

Students minoring in GISES are required to complete the following courses and requirements:

Lower-Division Courses

Lower-division preparation:

SOCY 30A	Introduction to Global Information and Social Enterprise Studies	5
----------	--	---

Upper-Division Courses

Upper-division GISES core courses:

SOCY 107A	Designing ICT Projects for Social Enterprise	5
SOCY 107B	Project Implementation and Grant Writing for Social Entrepreneurs	3

Upper-division advanced coursework:

Three additional upper-division electives are required, selected from the Sociology Department elective courses, Sociology 110-189, or from the list of approved courses. Students are strongly recommended to consult with the director of GISES before choosing their electives, to ensure that their choices contribute to their selected project and/or their growth as a technology activist or technology linked social change advocate. Courses outside the list of approved courses may also be approved by the director of GISES. For more information on the process students must follow to have their courses approved, please visit the Sociology Department page.

Project practicum:

Students must enroll in SOCY 196G, Project Practicum, and complete their GISES capstone project. SOCY 196G is offered every fall quarter. Students may review the GISES webpage, or contact the program director of GISES (socy@ucsc.edu) for more detailed guidelines regarding the GISES capstone project. Prior to enrolling in SOCY 196G, students must have completed SOCY 107A and SOCY 107B, which prepares and supports students in completing a project that makes a contribution to advancing a solution to a problem associated with global social justice and/or sustainable development. To complete the final requirements for GISES, the integrated project practicum—narrative and digital deliverable—must be mounted on the appropriate web-enabled database managed by the Everett Program.

SOCIOLOGY PH.D.

Introduction

Features of the Program

The core curriculum is divided into two parts, 1) basic grounding in sociological theory and methods, and 2) exposure to research in three areas of concentration: a) political economies and political ecologies; b) new studies of inequality; and c) culture, knowledge, and power. To prepare students to conduct their own research projects, the department trains students in

multiple methods—field research, critical ethnography, cultural analysis, comparative historical analysis, and quantitative data analysis.

Graduate students are supported through teaching assistantships, teaching fellowships, research fellowships and other grant/fellowship opportunities. A number of faculty receive research grants that support graduate student research assistantships.

When asked what they most appreciate about the sociology graduate program, most students cite the students' and faculty's commitment to social change in combination with their dedication to teaching, scholarly research, and understanding of the social forces of our society. The Sociology Department's colloquium series enhances scholarship, practice, and collegial networks. The diversity in age, ethnicity, and work experience of the student body creates a vibrant atmosphere for learning.

Many of the faculty in the Sociology Department have affiliations with other departments and programs on campus, and the graduate program consequently encourages interdisciplinary work. Seminars in the anthropology, environmental studies, history, history of consciousness, politics, psychology, and feminist studies programs are open to sociology students. Graduate students in sociology may obtain a designated emphasis on the sociology Ph.D. diploma which indicates that in addition to sociology, they have also specialized in another field, such as feminist studies, Latin American and Latino studies, critical race and ethnic studies, environmental studies, philosophy, or education. Students must meet requirements for the designated emphasis as spelled out by the relevant department. For a complete list of programs that offer a designated emphasis, refer to the fields of study in the General Catalog. Students also participate in research projects under the auspices of a number of interdisciplinary social science research centers: the Science and Justice Research Center; the Center for Agroecology and Sustainable Food Systems; the Center for Labor Studies; the Research Center for the Americas; and the Affect Studies Working Group. Research opportunities also are available in the areas of environmental studies, feminist studies, and lesbian/gay/queer studies.

Many of our graduate students present papers at professional conferences and publish articles during the course of their graduate studies. The sociology master's paper is designed to prepare students to write for professional journals. Advanced graduate students also participate in faculty seminars organized around specific research topics.

The sociology program provides graduate students with many teaching opportunities so they can practice the skills required for good teaching—the ability to articulate ideas, to organize and present materials in logical sequence, and to listen attentively and discern someone else's comprehension. Graduate students typically serve as teaching assistants for at least three

quarters, if not more, in the department's core classes of the undergraduate curriculum.

Details of the policies for admission to the graduate program, the requirements for the Ph.D. degree, and information on financial support opportunities are available from the Department of Sociology. For more information, please refer to the Graduate Studies (p. **Error! Bookmark not defined.**) section of the catalog.

Advancement to Candidacy

Course Requirements

Students are required to take at least 10 courses as follows.

A three-course core group:

SOCY 201	The Making of Classical Theory	5
SOCY 202	Contemporary Sociological Theory	5
SOCY 203	Sociological Methods	5

Two methods courses:

This course

SOCY 204	Methods of Quantitative Analysis	5
----------	----------------------------------	---

And one of the following eight courses:

SOCY 205	Field Research Methods	5
SOCY 206	Comparative Historical Methods	5
SOCY 209	The Analysis of Cultural Forms	5
SOCY 241	Cross-National and Cross-Cultural Research	5
SOCY 242	Feminist Research Seminar	5
SOCY 268A	Science and Justice: Experiments in Collaboration	5
SOCY 282	Social Policy Research	5
PSYC 248	Survey Methods	5

Two of three thematic area courses:

SOCY 220	Global Transformation: Macrosociological Perspectives	5
SOCY 240	Inequality and Identity	5
SOCY 260	Culture, Knowledge, Power	5

A minimum of three elective graduate seminars, one of which may be from outside sociology (excluding SOCY 250 and SOCY 293).

SOCY 204: Students with no background in statistics are strongly advised to take an undergraduate course in statistical methods before enrolling in Methods of Quantitative Analysis, but can be admitted with permission of the instructor.

Elective Courses

A minimum of three elective graduate seminars, one of which may be from outside sociology (excluding SOCY 250 and SOCY 293). The elective course offerings change yearly. This selection of courses are offerings from the recent past.

SOCY 208	Writing Practicum	5
SOCY 209	The Analysis of Cultural Forms	5
SOCY 220	Global Transformation: Macrosociological Perspectives	5
SOCY 223	Sociology of the Environment	5
SOCY 225	Political Economy for Sociologists	5
SOCY 229	Work and Labor Markets in the New Economy	5
SOCY 240	Inequality and Identity	5
SOCY 242	Feminist Research Seminar	5
SOCY 244	Race and Ethnicity	5
SOCY 246	Class, Culture, and Movement	5
SOCY 249	Feminisms and Cultural Politics	5
SOCY 255	Engaging Cultural Studies	5
SOCY 256	Urban Sociology	5
SOCY 257	Colonialism, International Law, and Global Justice	5
SOCY 259	Space and the Politics of Difference	5
SOCY 260	Culture, Knowledge, Power	5
SOCY 263	Cultural Politics of Difference	5
SOCY 268A	Science and Justice: Experiments in Collaboration	5
SOCY 268B	Science and Justice Research Seminar	5
SOCY 290	Advanced Topics in Sociological Analysis	5

SOCY 209 SOCY 268A: Can be taken as an elective if not fulfilling the methods requirement.

Students are required to take two of the three thematic area courses—SOCY 220, SOCY 240, SOCY 260—and the third may count as an elective.

Foreign Language Requirements

Teaching Requirement

Pre-Qualifying Requirements

Graduate students initiate work on their master's paper by the end of the first year.

Completion of the master's paper and required coursework is expected by the end of the second year.

Graduate students prepare field statements in two distinct areas of sociology as a written pre-qualifying stage to the oral qualifying examination.

Qualifying Examination

The qualifying examination is an oral defense of the student's dissertation proposal and occurs one quarter after the pre-qualifying field statement stage has been passed.

Students are expected to take their oral qualifying examination by the end of the third year, but no later than the end of the fourth year.

Post-Qualifying Requirements

Dissertation

Dissertation

After passing the qualifying examination, a student advances to candidacy and begins work on the dissertation under the guidance of a three-person dissertation committee.

Dissertation Defense

After the complete dissertation has been submitted to and accepted by the dissertation committee, students must pass an oral dissertation defense.

Academic Progress

Applying for Graduation

SOCIOLOGY DESIGNATED EMPHASIS

Introduction

Graduate students interested in pursuing the Designated Emphasis in Sociology should contact the Sociology graduate program coordinator.

Requirements

To receive the Designated Emphasis (DE) in Sociology, a graduate student from another department must complete the following requirements in addition to the degree requirements for the doctorate in their degree-granting department. Students must initiate the request for the DE through their home departments. Then the student must meet with the Sociology graduate director who will: a) decide whether to approve the application; b) help find a Sociology faculty advisor; and c) oversee progress in the Designated Emphasis.

Committee Composition and Departmental Approvals

Advisor: In addition to the student's advisor(s) in their home department, the student must have a faculty advisor from among the core faculty of the Sociology Department who commits to serve on the qualifying

examination (QE) committee. Outside members of a QE committee must be tenured.

Course Requirements

The student must take five (5) Sociology graduate seminar courses:

Two (2) core courses:

SOCY 201	The Making of Classical Theory	5
SOCY 202	Contemporary Sociological Theory	5

One (1) methods course from the following:

SOCY 203	Sociological Methods	5
SOCY 204	Methods of Quantitative Analysis	5
SOCY 205	Field Research Methods	5
SOCY 206	Comparative Historical Methods	5
SOCY 209	The Analysis of Cultural Forms	5
SOCY 241	Cross-National and Cross-Cultural Research	5
SOCY 242	Feminist Research Seminar	5
SOCY 282	Social Policy Research	5

Two (2) other graduate seminar electives offered by the Sociology Department

*SOCY 208, SOCY 250, SOCY 293, SOCY 297, SOCY 299 cannot be counted toward the requirements for the Designated Emphasis.

All courses must be offered by the Sociology Department. Courses offered by other departments do not count towards the requirements for the Designated Emphasis in Sociology.

Writing, Research and/or Teaching Requirements

The student must prepare a significant piece of scholarly writing in the area of sociology. This may take the form of a substantial seminar paper, a master's essay, a paper submitted for publication, or a chapter of the doctoral dissertation. The student's Sociology faculty advisor will determine whether a particular piece of writing meets the requirement.

THE COLLEGES

UC Santa Cruz combines the resources of a world-class public research university with a distinctive undergraduate experience characterized by our college system. Each college is a vibrant living/learning community supported by enrichment courses, advising and academic support, and faculty and staff who organize student activities and sponsor events to enhance the intellectual and social life of the campus. The colleges are committed to fostering a nurturing and academically thriving environment for students of all backgrounds. Each college strives to promote the attributes of a diverse and multicultural community in its own unique way.

In order of founding, the colleges are Cowell, Stevenson, Crown, Merrill, Porter, Kresge, Oakes, Rachel Carson College, College Nine, and John R. Lewis College. Self-contained and architecturally distinct, each college is a relatively small community of 30 to 110 faculty members and between 1,500 and 1,800 students, about half of whom live on campus. Each college has its own housing, as well as academic, social, and educational programming, and each is an integral part of the larger campus. The colleges have their own academic emphases and cultural traditions, although each seeks faculty and students from a variety of disciplines to foster broad intellectual interests. The colleges play a primary role in academic advising and are the center of student life. Students graduate from their college. At the same time, all university academic programs, resources, and student services are open to students of every college.

ACADEMIC PROGRAMS

Academic Literacy Curriculum (p. 232)

College Scholars Program

ACADEMIC EMPHASIS

College Nine's theme of International and Global Perspectives emphasizes the causes and consequences of our increasingly interconnected world. We challenge students to grapple with complex, controversial, and multi-scalar issues, for which there exist vastly differing opinions about the nature of problems and how to solve them. Becoming a global citizen requires critical thinking, cultural awareness, and effective communication, all skills our training provides to our students. Our academic and co-curricular programs analyze economic and cultural globalization,

immigration, environmental crises, ethnic conflicts, genocide, and human rights, among other issues. Students interested in these issues either as their major focus or as part of their general education are invited to join the College Nine community.

ORIENTATION

All new frosh and transfer students who start fall quarter are required to enroll in one of two online orientation courses. Frosh will enroll in CLNI 1A, College Nine 1A: Introduction to University Life and Learning. Transfer students will enroll in KRSO 1T, Kresge 1T: Introduction to Research Universities and the Liberal Arts. CLNI 1A and KRSO 1T integrate introductions to academic skills with the online Slug Orientation process, and begin student preparation for their studies at College Nine and throughout UC Santa Cruz.

CLNI 1A Introduction to University Life and Learning (1 credit)

Offered online in summer quarter

KRSO 1T Introduction to Research Universities and the Liberal Arts (1 credit)

Offered online in summer quarter

Students who are admitted to winter quarter will take an orientation course during their first term.

CORE COURSE

CLNI 1: Academic Literacy and Ethos: International and Global Perspectives

Offered in fall quarter

First-year students examine current issues pertinent to the college's intellectual theme. This course challenges students to address what it means to be a global citizen, in recognition of our growing interconnections and interdependencies, and the fact that certain intractable problems cannot be addressed without large-scale collective action. Topics address issues such as globalization, inequities in wealth and poverty across the world, human rights, climate change, and social movements. The seminar teaches foundational concepts for intellectual exploration and personal development within an academic community—analysis, critical thinking, metacognition, engagement with others across difference, and self-efficacy. The instructors work closely with each student throughout the quarter.

COLLEGE ADVISING

Contact information:
nineadvising@ucsc.edu

Phone: 831-459-5034
217 Social Sciences 1

Located on the second floor of Social Sciences 1, our team of dedicated, knowledgeable and caring advisers are here to guide students throughout their journey at UC Santa Cruz, from being admitted to the university through graduation. Our approach is collaborative and student-centered, assisting undergraduates with identifying and exploring their academic interests and capacities, and providing advice as to how to make the most of their time at UCSC. Our advisers answer questions about navigating the policies and life at UC Santa Cruz, course scheduling and selection, degree and general education requirements, qualifying for a major, educational support and opportunities, and much more. Close partnerships with units across campus mean that if we do not know the answer to a question, we usually know someone who does.

Students who wish to connect with advising should visit the College Nine Academic Advising website for open hours, drop-ins, and appointments.

OTHER ACADEMIC PROGRAMS

Optional programs are available to involve College Nine students in academic and co-curricular activities beyond the first-quarter course. They are designed to promote students' academic achievement and success by connecting them with faculty mentors and helping them pursue leadership experiences.

Global Action

Global Action, CLNI 85, is a peer facilitated course where students learn about current international and global issues through interactive exercises, small group discussions, and faculty presentations. Students will develop an "action plan" to raise awareness about one or more of these concerns and take practical steps to create positive change in the world. Projects in past years have partnered with organizations doing outstanding work in countries like Ecuador, India and Nepal. Students who have taken and excelled in CLNI 85 are eligible to teach the course in a future year, enrolling in CLNI 191: Teaching Global Action, where they gain the skills, techniques and tools to facilitate their own section. Mentoring by our experienced staff is vital to realizing the potential of such peer-to-peer learning.

Apprenticeship in Community Engaged Research

The Apprenticeship in Community Engaged Research (or (H)ACER) is a new program at College Nine and John R. Lewis College designed to teach students qualitative research methods with a focus on community-engaged and participatory methodologies. The objectives of our work encompass student

enrichment, uplifting the work of our community partners, and conducting relevant, critical research to solve real-life challenges at the intersections of education, health, economics, immigration, nutrition, labor and the environment. The benefits for students of experiential learning in the community are multiple: abstract academic concepts become more tangible, students expand their web of social connection, and skills such as teamwork and problem solving are heightened. Students reach outside of their comfort zone, have their assumptions challenged, and meet remarkable local heroes.

(H)ACER offers a scaffolded progression of opportunities for students: students can begin by getting involved with Praxis, participating in Alternative Spring Break, or signing up for internships with community partners such as an after-school, garden-based educational program at Calabasas Elementary School in Watsonville. Praxis is a student club for community service in which College Nine and John R. Lewis College students undertake monthly volunteer opportunities throughout Santa Cruz County and neighboring communities. During campus meetings, Praxis participants engage in discussion, reading, and reflection to increase their awareness and knowledge about key issues.

Alternative Spring Break (ASB) in Watsonville centers on issues of food security, sovereignty, and justice. After getting to know each other at a retreat, discussing readings, and hearing from a panel of Watsonville leaders, ASB participants undertake five days of experiential learning with a variety of community partners (e.g., schools, artists, non-profits). After Spring Break, a final gathering is held for students to share their final projects.

These community learning opportunities for students then transition in our (H)ACER class series. The classes train students in research methodologies, support data collection and analysis with our community and university partners, and provide cutting-edge and methodologically rich research experiences for UCSC undergraduate students. These classes set students up to develop their own research projects that can then extend into senior theses and pathways to distinction in Colleges Nine and Ten.

Practical Activism: Tools for Local and Global Change

The annual Practical Activism Conference is a day-long, student-led event featuring keynote speakers, multiple workshops, tabling by on- and off-campus organizations, performances, and a variety of hands-on activism activities. Students gain valuable leadership and organizing skills through developing and planning this exceptional program, which involves collaboration among faculty, staff, and the local community. Visit Practical Activism for more information.

Community Garden Class

In cooperation with the work of the Community Garden Club, this course explores such topics as collaborative garden design, community gardening best practices, building regenerative social and ecological systems, sustainability, and food justice, while also offering hands-on experience in the Colleges Nine and Ten community garden.

Education Abroad

The UC Education Abroad Program places students at a university in another country for one or more quarters. Studying abroad can be a valuable way to expand one's understanding of the world. Given the international focus at College Nine, students are encouraged (but not required) to develop a second language or to study abroad.

College Nine Pathways to Distinction

Another feature of College Nine is that qualified students may graduate with College Nine Distinction. This recognition is intended to serve as an incentive for students to pursue activities (research, course work, service, leadership, internships, etc.) that are especially apt to help them succeed in college and beyond related to the theme of international and global perspectives.

COWELL COLLEGE

Cowell 118
831-459-2253
<https://cowell.ucsc.edu>

ACADEMIC PROGRAMS

Academic Literacy Curriculum (p. 232)
College Scholars Program (p. 782)

ACADEMIC EMPHASIS

The academic theme of the college encourages students to pursue their general and disciplinary study with attention to the values of a liberal arts education: understanding one's individual perspectives by the exploration of one's historical background and world context. Students affiliated with the college pursue majors from all departments on campus.

In satisfying their general education requirements, first-year Cowell students are required to take the Cowell core course in the fall term. The core course is taught in small seminar sections and seeks to develop critical reading, analytical writing, and seminar discussion skills through engagement with a selection of classic and contemporary texts focused on the theme of justice.

Enrichment courses are offered every term at the college, and priority is given to Cowell students. Some courses emphasize the development of skills such as

public speaking or researching in library collections. Some courses take a broader perspective, examining the role of education in democracy or the epistemological bases of our judicial system.

The college also enriches the intellectual and cultural life of the campus by sponsoring events of various kinds: lectures and presentations by local faculty and visiting scholars, theatrical and musical performances, and forums and debates on topics of current interest.

Students who develop ideas for research, creative projects, community service, or internship experiences may apply to the college provost for financial support. The college also awards several annual scholarships and sponsors prizes for outstanding academic work.

The faculty fellows affiliated with the college represent all academic divisions (arts, engineering, humanities, physical and biological sciences, and social sciences). The faculty fellows guide the college academic programs and often contribute to the college-based advising system.

The college academic buildings house humanities faculty, with notable concentrations in philosophy, classics (study of ancient Greek and Latin language and civilization), and modern foreign languages, especially Chinese, French, Italian, Russian, German, and Japanese. Interdisciplinary faculty groups in visual and performance studies and in pre- and early-modern studies are centered at Cowell College.

ORIENTATION

All new frosh and transfer students who start fall quarter are required to enroll in one of two online orientation courses. Frosh will enroll in COWL 1A, Cowell 1A: Introduction to University Life and Learning. Transfer students will enroll in KRSRG 1T, Kresge 1T: Introduction to Research Universities and the Liberal Arts. Cowell 1A and Kresge 1T integrate introductions to academic skills with the online Slug Orientation process, and begin student preparation for their studies at Cowell College and throughout UC Santa Cruz.

COWL 1A Introduction to University Life and Learning (1 credit)

Offered online in summer quarter

KRSRG 1T Introduction to Research Universities and the Liberal Arts (1 credit)

Offered online in summer quarter

Students who are admitted to winter quarter will take an orientation course during their first term.

Core Course

COWL 1, Academic Literacy and Ethos: Imagining Justice

Offered fall quarter

Cowell College One, Imagining Justice, is a first-year analytical reading and critical thinking seminar required of all first-year students, offered only in the fall quarter. It provides intensive practice in critical thinking and analysis, while also giving students opportunities to increase their speaking and presentation skills, and to engage in creative expression. More broadly, it introduces students to university-level discourse including key skills and common practices, and UC Santa Cruz's academic expectations. It works to build an intellectual community here at Cowell College not only within the incoming class, but across all students at Cowell, since some texts are held over from year to year, so that students from frosh to seniors have reading and ideas in common.

COLLEGE ADVISING

Contact information:

cowell@ucsc.edu
831-459-2253

Cowell College Administration Building, Room 118

Cowell College advisors help students interpret academic policies and procedures and clarify educational goals. They provide support to students to ensure their academic success and progress toward their degree throughout their time at UC Santa Cruz. Advisors help students make informed decisions, develop resiliency, and develop the ability to take ownership of their academic choices. Advisors also connect students to resources that will enrich their academic experiences.

OTHER ACADEMIC PROGRAMS

College Scholars Program

Along with several other residential colleges, Cowell participates in the College Scholars Program, a program that engages first- and second-year students with faculty research in research seminars and service learning opportunities on campus and in the Santa Cruz community. Some students begin by invitation in the fall. Others apply to start in the spring. In the spring of their first year, the spring-start scholars join the fall-start scholars in a special two-credit class together, which includes special lectures and dinners. The program continues with selected seminars in the second year.

Cowell hosts several campuswide programs including the Chancellor's Undergraduate Internship Program (CUIP), Model United Nations, Mock Trial, the Smith Society, the Center for Public Philosophy, and the Experiential Leadership Program.

Cowell supports student research through quarterly research awards and through a variety of scholarships and service awards.

CROWN COLLEGE

Crown College Administration Building
831-459-2412
<https://crown.ucsc.edu>

ACADEMIC PROGRAMS

Academic Literacy Curriculum (p. 232)
College Scholars Program (p. 782)

CROWN COLLEGE

Crown College seeks to provide our students with a living and learning environment in which they can positively develop intellectually and socially. Crown is traditionally viewed as the "science college," and it does have a strong presence of engineering, biology and other STEM (Science, Technology, Engineering, and Math) students but lots of students majoring in the social sciences and some arts and humanities students call Crown home as well.

Crown is located on a hilltop surrounded by a redwood forest. The award-winning architecture with its white walls and high-pitched tiled roofs suggests a hillside Mediterranean village. The college's residential facilities house approximately 800 students. The facilities at Crown College were built through a partnership of public funds and a gift from the Crown Zellerbach Foundation.

We enjoy the strong support of generations of Crownies that have maintained alive the connection they formed when they were students here. Alumni participate in advisory capacity in the college's governance and their generous contributions have allowed Crown to renovate both Crown's Library and its Fireside Lounge; enrich our Core experience, and expand our curriculum.

For more information on the Crown's academic and social environment please visit Crown's website and also see this feature article: Crown College: Science Minded, Socially Mindful.

ACADEMIC EMPHASES

From the time of its founding in 1967, issues pertaining to the role of science and technology in society have been a focus of special interest at Crown College. We approach these issues from an interdisciplinary perspective that recognizes the influence of social and cultural factors on the scientific enterprise, as well as the ways in which science and technology influence our society.

ORIENTATION

All new frosh and transfer students who start fall quarter are required to enroll in one of two online orientation courses. Frosh will enroll in CRWN 1A, Crown 1A: Introduction to University Life and

Learning. Transfer students will enroll in KRSJ 1T, Kresge 1T: Introduction to Research Universities and the Liberal Arts. Crown 1A and Kresge 1T integrate introductions to academic skills with the online Slug Orientation process, and begin student preparation for their studies at Crown and throughout UC Santa Cruz.

CRWN 1A Introduction to University Life and Learning (1 credit)

Offered online in summer quarter

KRSJ 1T Introduction to Research Universities and the Liberal Arts (1 credit)

Offered online in summer quarter

Students who are admitted to winter quarter will take an orientation course during their first term.

CORE COURSE

CRWN 1, Academic Literacy and Ethos: Ethical and Societal Implications of Emerging Technologies

Offered fall quarter

Crown College's entering frosh enroll in our core course, CRWN 1, which explores the theme, Ethical and Societal Implications of Emerging Technologies. Students work individually, in small groups of four to five students, and in sections of 25 to 30 students, thereby modeling and embracing the diversity found across campus. CRWN 1 looks at the current technological revolution and its implications both locally and globally. CRWN 1 also explores the ethical dilemmas involved and what we can do as responsible citizens to address the challenges facing our society. Deeper goals of this course include fostering a sense of belonging, and ensuring that our students develop the analytical reading, critical thinking, and effective communication skills that they need to succeed in their studies.

A central component of the course is a group research project, in which students study the impact of a technology of their choice, while learning strategies for effective group work. The core course is enhanced through our plenary series, which gives students opportunities to meet intellectual leaders and hear them speak, and through focus groups, where they have the opportunity to engage in discussion with all our faculty. We also organize a science-fiction short story contest, and students are encouraged to attend and/or present at Crown's Social Fiction Conference. In winter of their frosh year, our students also have other opportunities to build on their Core experience by performing a play connected to the theme of Core or by turning their research project into a podcast.

OTHER ACADEMIC PROGRAMS

Complementing its focus on science and technology, Crown supports the development of transferable skills

and experiential learning through funding for class projects and through its curriculum in the areas of entrepreneurship, computer modeling, and multimodal communication.

On the entrepreneurship front, Crown offers entrepreneurship (CRWN 90) and social entrepreneurship (CRWN 92) classes, opportunities for experiential learning getvirtual.org getvirtual.org taking care of business, and facilitates interested students access to incubator space and funding opportunities through its partnership with the Center for Innovation and Entrepreneurial Development. Crown also offers an internship with Crown's Center for Applied Ethics and Values of Emerging Technologies to examine in depth the ethical implications of emerging technologies (CRWN 97)

To support computer modeling, Crown offers one class in computer modeling of human behavior (CRWN 88) and one bioinformatics class (CRWN 89).

Crown also offers a variety of classes supporting multimodal communication and artistic expression. This includes a drama class tied to Core (CRWN 96), a videography class (CRWN 86), a podcasting class (Crown 98), and a sci-fi class (CRWN 80).

Crown College is one of the colleges hosting the College Scholars Program, which provides a congenial and challenging academic home for a select group of well-prepared students at UC Santa Cruz. This enriched program of study includes special courses, seminars, colloquia, and other events into the fall of the sophomore year. Admission to the College Scholars Program can be by invitation during the admissions process based on high school academic performance (early entry) or in winter of the freshman year based on academic potential shown during the first quarter at UC Santa Cruz (late entry).

COLLEGE ADVISING

Crown Advising is located in the Crown Administration Building and is staffed by the college assistant, professional academic advisors, and peer advisors, when staff are permitted on campus. Crown Advising offers appointment advising (phone, in-person, or remotely via Zoom) every weekday in fall, winter, spring, and summer. To schedule an appointment, students should use Slug Success (<https://ucsc.campus.eab.com>). For quick questions or completion of most forms, students are encouraged to email crownadvising@ucsc.edu. Please visit our website for the most up to date information about advisor availability.

Crown Fellows and Staff

Crown College faculty fellows are listed on the college's faculty directory.

Crown College Core faculty instructors are listed on our Core Course Faculty directory.

Crown College staff are listed on the college's staff page.

JOHN R LEWIS COLLEGE

College Office
217 Social Sciences 1
(831) 459-5034
<https://collegeten.ucsc.edu>

ACADEMIC PROGRAMS

Academic Literacy Curriculum (p. 232)

College Scholars Program

Formerly known as College Ten, the college was dedicated as John R Lewis College on May 6, 2022, a naming that was made possible by the generosity of anonymous donors who are inspired by the life and legacy of the Civil Rights Leader and member of Congress. All of us at John R. Lewis College are humbled by this honor, and committed to continuing, deepening, and strengthening our efforts toward our theme of social justice and community.

ACADEMIC EMPHASIS

John R Lewis College's theme of Social Justice and Community addresses a range of social problems and their impacts on society. Understanding the contemporary United States, for instance, requires social and historical frameworks that address concepts like racialized and gendered social hierarchies, the construction of marginalization and difference, the impacts of class differences, and many manifestations of unequal power relationships. A flourishing society that progresses toward social and environmental justice depends on informed, critical, and empathetic people willing to make the efforts necessary to create social change. At John R Lewis College, we strive toward the goals of analyzing, embodying, and implementing ideas that help our students become knowledgeable and critical social actors who recognize and practice the principle that all people possess equal intrinsic worth. Our academic and co-curricular programs consider the injustices that many people confront in their lives, and possible policies for overcoming social, political, and economic inequalities. In addition, the college provides students with opportunities to make their own positive contributions to social change through community involvement and/or scholarly research.

ORIENTATION

All new frosh and transfer students who start fall quarter are required to enroll in one of two online orientation courses. Frosh will enroll in JRLC 1A, John R. Lewis College 1A: Introduction to University Life and Learning. Transfer students will enroll in KRS

1T, Kresge 1T: Introduction to Research Universities and the Liberal Arts. JRLC 1A and KRS 1T integrate introductions to academic skills with the online Slug Orientation process, and begin student preparation for their studies at John R Lewis College and throughout UC Santa Cruz.

JRLC 1A Introduction to University Life and Learning (1 credit)

Offered online in summer quarter

KRS 1T Introduction to Research Universities and the Liberal Arts (1 credit)

Offered online in summer quarter

Students who are admitted to winter quarter will take an orientation course during their first term.

CORE COURSE

JRLC 1: Academic Literacy and Ethos: Social Justice and Community

Offered in fall quarter

First-year students examine current issues pertinent to the college's intellectual theme. The core curriculum explores the causes and consequences of social injustice in several ways. Students examine the roots of prejudice, discrimination, and violence directed toward groups based on their ethnicity, skin color, gender, sexual orientation, religious practices, or political views. They also consider the causes and consequences of economic inequality both within the United States and around the world. In addition to articulation with the college theme, the core seminar teaches foundational concepts for intellectual exploration and personal development within an academic community—analysis, critical thinking, metacognition, engagement with others across difference, and self-efficacy. The instructors work closely with each student throughout the quarter.

COLLEGE ADVISING

Contact information:

tenadvising@ucsc.edu
Phone: 831-459-5034
Social Sciences 1, Room 217

Located on the second floor of Social Sciences 1, our team of dedicated, knowledgeable and caring advisors is here to guide students throughout their journey at UC Santa Cruz, from admission to the university through graduation. Our approach is collaborative and student-centered, assisting undergraduates with identifying and exploring their academic interests and capacities, and providing advice as to how to make the most of their time at UCSC. Our advisors answer questions about navigating the policies and life at UC Santa Cruz, course scheduling and selection, degree and general education requirements, qualifying for a major,

educational support and opportunities, and much more. Close partnerships with units across campus mean that if we do not know the answer to a question, we usually know someone who does.

Students who wish to connect with Advising should visit the John R Lewis College Academic Advising website for open hours, drop-ins, and appointments.

OTHER ACADEMIC PROGRAMS

Optional programs are available to involve John R Lewis College students in academic and co-curricular activities beyond the first-quarter core course. They are designed to promote students' academic achievement and success by connecting them with faculty mentors and helping them pursue leadership experiences and experiential learning opportunities.

Social Justice Issues Workshop

Social Justice Issues Workshop is a two-credit course, taught by student facilitators that meets once per week and can be taken in addition to a regular 15-credit academic load. The workshop offers a small, dynamic learning community in which members explore important issues of personal and cultural identity; social, political, and environmental concerns; and community-mindedness. The class emphasizes small-group experiential learning through structured exercises and group activities, and also includes discussions, film presentations, and guest speakers. Mentoring by our experienced staff is vital to realizing the potential of such peer-to-peer learning.

Apprenticeship in Community Engaged Research

The Apprenticeship in Community Engaged Research (or (H)ACER) is a new program at College Nine and John R Lewis College designed to teach students qualitative research methods with a focus on community-engaged and participatory methodologies. The objectives of our work encompass student enrichment, uplifting the work of our community partners, and conducting relevant, critical research to solve real-life challenges at the intersections of education, health, economics, immigration, nutrition, labor and the environment. The benefits for students of experiential learning in the community are multiple: abstract academic concepts become more tangible, students expand their web of social connection, and skills such as teamwork and problem solving are heightened. Students reach outside of their comfort zone, have their assumptions challenged, and meet remarkable local heroes.

(H)ACER offers a scaffolded progression of opportunities for students: students can begin by getting involved with Praxis, participating in Alternative Spring Break, or signing up for internships with community

partners such as an after-school, garden-based educational program at Calabasas Elementary School in Watsonville. Praxis is a student club for community service in which College Nine and John R Lewis College students undertake monthly volunteer opportunities throughout Santa Cruz County and neighboring communities. During campus meetings, Praxis participants engage in discussion, reading, and reflection to increase their awareness and knowledge about key issues.

Alternative Spring Break (ASB) in Watsonville centers on issues of food security, sovereignty, and justice. After getting to know each other at a retreat, discussing readings, and hearing from a panel of Watsonville leaders, ASB participants undertake five days of experiential learning with a variety of community partners (e.g., schools, artists, non-profits). After Spring Break, a final gathering is held for students to share their final projects.

Practical Activism: Tools for Local and Global Change

The annual Practical Activism Conference is a day-long, student-led event featuring keynote speakers, multiple workshops, tabling by on-and off-campus organizations, performances, and a variety of hands-on activism activities. Students gain valuable leadership and organizing skills through developing and planning this exceptional program, which involves collaboration among faculty, staff, and the local community. Visit Practical Activism for more information.

Community Garden Class

In cooperation with the work of the Community Garden Club, this course explores such topics as collaborative garden design, community gardening best practices, building regenerative social and ecological systems, sustainability, and food justice, while also offering hands-on experience in the Colleges Nine and Ten community garden.

John R Lewis College Pathways to Distinction

Students are recognized with John R Lewis College Distinction upon successful completion of three quarters (approximately 15 credits) of research experiences, coursework, service and leadership and/or writing intensive courses focused on social justice and community themes. Applicable John R Lewis College courses, service opportunities and research opportunities with faculty can fulfill the criteria for distinction. This recognition is intended to serve as an incentive for students to pursue activities that help them succeed in college and beyond related to the theme of social justice and community.

KRESGE COLLEGE

Kresge College Administration Building
831-459-2071
<https://kresge.ucsc.edu>

ACADEMIC PROGRAMS

Academic Literacy Curriculum (p. 232)
College Scholars Program (p. 782)

ACADEMIC EMPHASIS

Kresge was the sixth college to be built on the UC Santa Cruz campus. The college was founded on principles of participatory democracy and experiential education, with a vision of profound social and individual empowerment within an active living and learning community. Its motto is **Power and Representation**.

Kresge College strives to blend the promise of a traditional liberal arts college with its distinctive and prominent legacy of experimental and interdisciplinary education. Its curriculum is designed to create opportunities for **community-building, community-strengthening, and personal growth**, to foster **creative and critical thinking** about the world we live in, to **cultivate good citizenship**, and to **facilitate stewardship of a just and sustainable society**. Kresge College aims to help students of the widest possible range of backgrounds and biographies, to succeed in a path to higher learning at a research institution.

Kresge's academic life is centered on the integration of living and learning in a community that values self-determination, consensus-building, intellectual freedom, sustainability, and justice. These principles take shape in a curriculum that emphasizes participatory learning, hands-on experience, and conscientious academic inquiry that transcends the walls of traditional classrooms. The wide-ranging topics of its curriculum include (but are not limited to) media studies, photography, writers' workshops, cooperative leadership, agro-ecology, natural history, journalism and service learning. Kresge's courses offer varied ways for Kresge students to fulfill general education requirements while broadening their educational experience in the company of dedicated and imaginative faculty.

The **core curriculum** (see Core Course, below) consists of one required course and a range of elective extensions. All entering first-year students enroll in KRS 1, Academic Literacy and Ethos: Power and Representation, a fall-quarter seminar and plenary-series course that prepares students to develop and engage discourse and knowledge exchange in a university environment, and provides a foundation of questions and aspirations for the intellectual community that will shape Kresge students' whole engagement

with their UC Santa Cruz education. Following that course, Kresge students have the option to extend their core learning in courses that deepen those questions into specific domains. KRS 2, Power and Representation and Media, extends the questions of social justice and media representation in a more advanced seminar in media literacy. KRS 3, Natural History Practicum, offers students weekly opportunities to practice critical and empirical reflection on the shared multi-species environment of the UC Santa Cruz campus. KRS 25, Successful Transition to Research University (for the transfer community), and KRS 100, Learning with Intention and Purpose, are intended for the Kresge junior or senior year: they instill students with renewed passion for fundamental principles of liberal arts education, and the relationship of higher learning to the world beyond our campus.

Kresge also boasts a richly varied **enrichment curriculum**, with three distinct emphases:

Service Learning courses (KRS 12A, KRS 12C) support student-initiated initiatives in community service and community action, cultivate grant-writing and fundraising skills, and raise the profile of the college in visible and positive community impacts.

Kresge Labs include KRS 3, Natural History Practicum; KRS 45, Achieving Consensus in Diverse Communities; and the KRS 60 and KRS 65 series on writing and creative work. These are courses in which traditional academic disciplines (ranging from writing, to photography, to natural history, music, and more) are approached in 2- and 3-credit courses for "lay inquiry", fostering learning in which students are the primary critical and collaborative audience for one another's academic work.

The Common Ground Center hosts courses on transformative justice (KRS 67, KRS 68, and KRS 69) and leadership and sustainability (KRS 72, KRS 73, and KRS 74). These are courses that support student cooperatives, foster initiatives for sustainability and justice, communication, and contemplative-studies, and support our function as the North American host of the Right Livelihood College.

Students can collaborate with the provost to encourage developments to this curriculum, including proposing student-driven or student-led courses, or recommending invited lecturers to participate in our core plenary, Media and Society, or Common Ground Center speaker series.

ORIENTATION

All new frosh and transfer students who start fall quarter are required to enroll in one of two online orientation courses. Frosh will enroll in KRS 1A, Kresge 1A: Introduction to University Life and Learning. Transfer students will enroll in KRS 1T, Kresge 1T: Introduction to Research Universities and the Liberal Arts. KRS 1A and KRS 1T integrate introductions to academic skills with the online Slug

Orientation process, and begin student preparation for their studies at Kresge College and throughout UC Santa Cruz.

KRSG 1A Introduction to University Life and Learning (1 credit)

Offered online in summer quarter

KRSG 1T Introduction to Research Universities and the Liberal Arts (1 credit)

Offered online in summer quarter

Students who are admitted to winter quarter will take an orientation course during their first term.

CORE COURSE

KRSG 1 Academic Literacy and Ethos: Power and Representation

Offered in fall quarter

Offered to entering frosh, Kresge's core course, KRSG 1, Academic Literacy and Ethos: Power and Representation, prepares students for engagement with university discourse. Students read a selected range of contemporary nonfiction and creative work in varied media, developing a practice of interpretation and dialogue that serves as a model for their future academic endeavors. Power and Representation emphasizes texts that reflect on the struggles of individuals and communities to represent and constitute themselves in the United States. In contemplating those struggles, students are encouraged to think beyond easy answers, to express themselves clearly, to reflect on their own thinking and learning styles, and to think critically about their place in a larger world of knowledge and experience. In addition to their seminar meetings, all students in KRSG 1 meet periodically with academic mentors—fellow Kresge students who model successful learning styles. The entire core cohort also meets five times during the quarter for the required evening Plenary Series, guest lectures that deepen engagement on specific topics of the course.

Visit Kresge Core Course for additional information about Kresge College academics, including core course requirements and other academic programs.

COLLEGE ADVISING

kresgeadvising@ucsc.edu
Phone: 831-459-2071

Kresge has a team of three academic advisors who work collaboratively with students to support them as they explore majors, navigate university policy, clarify academic goals, and develop strategies for success. Kresge's advisors serve as advocates for students who are experiencing institutional barriers to their success, while also upholding university policy when necessary.

Kresge's advising staff regularly participate in professional development opportunities both on- and off-campus in order to stay abreast of new research and best practices in the wider academic advising community. They celebrate and reflect the diversity of the Kresge student body and seek to model the goal of being lifelong learners.

College advisors work with students from Summer Orientation and Welcome Week through graduation, although much of the interaction is concentrated in the student's first year or two on campus before they've declared a major. Students come to the College Office with all of their questions, and college advisors and front desk staff frequently facilitate connections with other campus resources as appropriate.

In addition to one-on-one in-person and email advising, Kresge's advisors collaborate with the provost, Residence Life office, and campus-wide academic and student support services to offer holistic programming. Past workshops have covered topics such as options for summer enrollment, how to choose a major, and finding family away from home.

OTHER ACADEMIC PROGRAMS

Kresge is a rich and multidimensional academic community, uniquely oriented toward media studies, and known by many as "the writers' college," participatory and consensus-based decision making, service-learning, and cooperative and non-profit leadership.

Kresge is home to the Media and Society series, a lecture series co-organized and co-promoted with Kresge's media-oriented student groups: City on a Hill Press, the Third World And Native American Students Collective Press (TWNAS), and the SCTV Collaborative Curriculum, as well as the Kresge Writing Center (a west-campus home of the UC Santa Cruz Writer's Society, Matchbox Press, Red Wheelbarrow, and the Creative Writing Archives).

The Common Ground Center at Kresge College promotes social and environmental change through undergraduate-focused action-education, research, advocacy, and civic engagement. Our Service Learning courses prepare students to become innovators and activists, through community service projects and grant-writing workshops that connect students' academic lives to the world outside the university. Kresge College also hosts courses related to our student cooperatives: the Kresge Garden Co-op, Photo Co-op, Music Co-op, and Food Co-op.

MERRILL COLLEGE

Merrill College
Merrill College Administration Building

831-459-2144
<https://merrill.ucsc.edu>

ACADEMIC PROGRAMS

Academic Literacy Curriculum (p. 232)

College Scholars Program (p. 782)

ACADEMIC EMPHASIS

Founded in 1968 with a generous gift from Charles E. Merrill, Jr., Merrill College is the fourth of the pioneering living-learning communities at UC Santa Cruz. From its inception it has focused on the challenges raised by global economic disparity, and on solutions that can be imagined when young people have the opportunity to learn via direct experience. Such opportunities are often associated with the social sciences, though Merrill's students and faculty apply them to the full range of academic studies.

The college ethos is "Cultural Identities and Global Consciousness." This pairing signals the college's commitment to drawing on the "funds of knowledge" brought by individual college members to the community of scholars, and a corresponding commitment to understanding these identities within a larger global context.

ORIENTATION

All new frosh and transfer students who start fall quarter are required to enroll in one of two online orientation courses. Frosh will enroll in MERR 1A, Merrill 1A: Introduction to University Life and Learning. Transfer students will enroll in KRSG 1T, Kresge 1T: Introduction to Research Universities and the Liberal Arts. MERR 1A and KRSG 1T integrate introductions to academic skills with the online Slug Orientation process, and begin student preparation for their studies at Merrill College and throughout UC Santa Cruz.

MERR 1A Introduction to University Life and Learning (1 credit)

Offered online in summer quarter

KRSG 1T Introduction to Research Universities and the Liberal Arts (1 credit)

Offered online in summer quarter

Students who are admitted to winter quarter will take an orientation course during their first term.

CORE COURSES

MERR 1, Academic Literacy and Ethos: Reading Ourselves, Reading the World

Offered fall quarter

MERR 1, also known as "Core," introduces students to analytical reading and critical thinking at the university level. It is the required first part of a larger program of study, the Academic Literacy Curriculum, which includes formal instruction in university-level writing. Core offers students a foundation for intellectual exploration and personal development as members of an academic community. It teaches reading and thinking processes essential to success at the university, and "habits of mind" that demystify academic work and promote independent, self-reflective, and collaborative participation in campus culture. It focuses on Analysis, Critical thinking, Metacognition, Engagement with others across difference, and Self-efficacy ("ACMES," for short) and assigns carefully chosen readings designed to teach these concepts. Starting in 2021, one section of the Core course will participate in an international education "global classroom" partnership with students from the Cooperative University of Kenya, during which students from both universities will work together remotely—a project meant to encourage global citizenship and to advance the aim of engagement with others.

Students also read a range of texts specific to Merrill's intellectual traditions. These focus on historical or political flashpoints, particularly those illuminating social, cultural, and economic change in relationships between the developed and the developing world. Students read the daily New York Times, which provides an unfolding narrative about events around the world and offers a valuable opportunity for students to analyze how these events are represented for a U.S. audience. They also read book-length texts and complementary secondary literature. These works show individuals and groups dealing with critical issues of nationalism, globalization, war, economic underdevelopment, and social and gender differentials, and encourage students to examine critically their own underlying assumptions and positions. By closely examining these readings in discussion with others, students develop strategies for effectively engaging different kinds of texts, formulate their own analyses in relation to these readings, and share their ideas in course projects and seminar discussions. The course thus emphasizes skills central to intellectual life at the university: critical reading, analytical writing, oral presentation of ideas, and reflective consideration of how these ideas and methods apply in other settings.

COLLEGE ADVISING

Contact Information:
merrilladvising@ucsc.edu
 Phone: 831-459-2144
 Merrill College Administration Building

Merrill College advisors help students interpret academic policies and procedures and clarify educational goals. They provide support to students to ensure their academic success and progress toward their degree throughout their time at UC Santa Cruz. Advisors help students make informed decisions,

develop resiliency, and develop the ability to take ownership of their academic choices. Advisors also connect students to resources that will enrich their academic experiences.

OTHER ACADEMIC PROGRAMS

Merrill College offers several funding opportunities for experiential education. These include the Merrill Undergraduate Research Mentorships, which provide students with paid research internships and prepare advanced undergraduates to pursue graduate studies. These internships provide invaluable research experience and personal and professional development for Merrill students. The Sandra Frausto Education Abroad Scholarship provides a modest scholarship to one qualified undergraduate annually to study in Latin America. Finally, eligible students may apply for Merrill special projects funds and campus-backed research funds.

The college also sponsors a variety of two-, three-, and five-credit courses. A key characteristic of Merrill's academic program from its founding has been the importance of experiencing the world, not just studying it. Thus Merrill's academic programming focuses especially on theory-backed experiential learning. Merrill offers a field study practicum that teaches methods of responsible participant observation and helps students arrange internships in local agencies and organizations. An education-focused service-learning course, Classroom Connection, addresses current issues in educational theory and arranges for students to volunteer in local public schools.

In keeping with Merrill's spirit of community-mindedness, we offer a Careers in Public Service course that features Merrill alumni as weekly speakers. Several other courses also help prepare students for their professional lives: Careers in STEM provides students with information, tools, and strategies to embark on STEM career exploration and preparation, including strategies for addressing challenges and opportunities related to diversity within STEM career fields. Also, a series of leadership courses is open to students involved in any of UC Santa Cruz's many registered student organizations. This series teaches principles of critical engagement, collaboration, and organizational leadership for social change.

Continuing the college's long history of involvement with Africa studies, Merrill also offers the alumnus-led Focus on Africa course which, like Core, now involves a remote partnership with university students in Kenya. Eligible first-year students are also invited to join the College Scholars Program, which provides a series of stimulating research-based opportunities (a speaker series, seminars, and research funding opportunities) via two pathways: "fall start" commences with students' first quarter of enrollment as frosh, and

"spring start" enrolls a second cohort the following spring.

ACADEMIC PROGRAMS

Academic Literacy Curriculum (p. 232)
College Scholars Program (p. 782)
Community-based Advocacy and Research (CARA)
Certificate Program (p. 775)

ACADEMIC EMPHASIS

Oakes College is a multicultural community committed to social justice, freedom from oppression, and to providing the highest quality education to students from diverse backgrounds. Oakes is at the leading edge of scholarship, community-building, integrated co-curricular experiences, and community-engaged learning. Oakes students strive to understand the self, community, and systemic oppression, and take action for change in the world.

The Oakes College faculty represents a wealth of expertise from the natural sciences to the humanities, and we are proud to have some of the top scholars in the world among our faculty fellows. Our students major in every discipline at the University of California, Santa Cruz—from economics and computer science, to theater arts and Latin American and Latino studies—and they are well supported by the depth and breadth of the Oakes College faculty and the extensive knowledge of our advising team. Oakes graduates have gone on to successful careers in fields such as medicine, law, education, medical research, and community service.

The Oakes Core Course, Communicating Diversity for a Just Society, helps first-quarter, first year students build deeper critical connections by engaging with some of the most challenging and relevant issues that face us in the world. We do this by examining the intersections between reading, personal identity, and social justice. In our readings, discussions, and assignments, we seek to answer questions about how materials we read connect with our cultural, religious, sexual, ethnic, class, racial, and gender identities. Those who are admitted as transfer students are exempt from the Core Course requirement, but may take the course at their option pending available space.

ORIENTATION

All new frosh and transfer students who start fall quarter are required to enroll in one of two online orientation courses. Frosh will enroll in OAKS 1A, Oakes 1A: Introduction to University Life and Learning. Transfer students will enroll in KRSO 1T,

Kresge 1T: Introduction to Research Universities and the Liberal Arts. OAKS 1A and KRSO 1T integrate introductions to academic skills with the online Slug Orientation process, and begin student preparation for their studies at Oakes College and throughout UC Santa Cruz.

OAKS 1A Introduction to University Life and Learning (1 credit)

Offered online in summer quarter

KRSO 1T Introduction to Research Universities and the Liberal Arts (1 credit)

Offered online in summer quarter

Students who are admitted to winter quarter will take an orientation course during their first term.

CORE COURSE

OAKS 1, Academic Literacy and Ethos: Communicating Diversity for a Just Society (5 credits)

Offered fall quarter

This course examines the intersections between reading as a college student practice, personal and social identities, and social justice. In our readings, discussions, and assignments, we seek to answer questions about how materials we read connect with our cultural, religious, sexual, ethnic, class, racial, and gender identities. How have our own ways of identifying—of naming or defining ourselves—shaped our individual experiences? Where do we position our own stories within our shared family histories? How do our own autobiographies and essays, as written accounts of our process of identification, bring our search for ourselves and our relationship with reading and writing into the same conversation?

COLLEGE ADVISING

First floor, Oakes Administration Building

Mailing address:

The Office of Advising and Records
Oakes College
University of California, Santa Cruz
1156 High Street
Santa Cruz, CA 95064

Contact information:

oakesadvising@ucsc.edu
(831) 459-4531

At Oakes College, our role as college advisers is to serve as the first point of contact for our undergraduate students. We believe that effective advising mandates that we collaborate with students to identify and clarify their goals, develop a sense of self-authorship, and learn to make meaningful decisions about their lives. We ensure our students know that their educational trajectory extends beyond coursework, and includes

opportunities and experiences that will enhance their education.

Investing in an advising model where a student's lived experience is an educational asset, we advance our practices and become more engaged and proactive in our work. Our Oakes college advisers advocate for necessary policy and procedural changes. We address institutional barriers by engaging with justice rather than simply adopting it as a value. In turn, we aspire for students to see the greater meaning of their educational experience and how it can transform their lives beyond their undergraduate career.

The purview of colleges advising includes navigating campuswide requirements such as general education, academic progress, time to degree, and major selection and qualification.

OTHER ACADEMIC PROGRAMS

At Oakes College, we foster student engagement and leadership within and beyond the classroom. To this end, we encourage students to develop the knowledge, skills, and cross-cultural understanding necessary to become actively engaged people and future leaders in their own communities, workplaces, and academic disciplines as well as in the larger U.S. society and the world as a whole. We also provide a range of resources and programs that enable all students to succeed in their academic endeavors. Such resources include:

The Learning Center and the **Westside Writing Center** at Oakes College provide space for study groups as well as tutoring. Special assistance in academic reading and writing in a variety of subjects is offered to Oakes students.

The Oakes Computer Lab provides access to 20 PCs for Oakes students.

Co-curricular programs like the **Oakes Core Café**, and the residential **Science Community at Oakes College** all offer living-learning opportunities to enhance student success and to provide students with unique opportunities for interacting with faculty in small group contexts.

The Oakes College CARA Program. The Community-based Action Research and Advocacy (CARA) Program of Oakes College works to create opportunities for experiential education, leadership, research, and career development; we center the strengths and needs of first-generation college students and projects for transformative social justice. Courses emphasize community-building along with research and communication techniques within the critical frameworks that build confidence and support justice initiatives. The program includes a development and outreach strategy with campus and community groups—including schools, youth sites, direct-service provider networks, and grassroots organizations, both

on-campus and off. Upper-division courses are commonly accepted as major requirement substitutions in multiple departments. The Corre la Voz after-school program offers paid student leadership positions; the Puentes Program, in collaboration with Legal Studies, sponsors interns. Oakes students can earn a CARA certificate by completing a sequence of community-engaged coursework focused on social justice.

Student services at Oakes include academic advising and psychological counseling.

CARA Certificate Program

The Oakes Community-based Action Research and Advocacy (CARA) program builds on the mission of Oakes College to leverage university-based education for social and political change. Our courses support Oakes students to build connections with community-based organizations and to gain tangible skills they can leverage for social justice in various contexts, from grassroots activism to working with nonprofits, public agencies, and beyond. The CARA program also supports first-generation, low-income, students of color, undocumented and other student communities to make meaningful connections that bridge their academic studies to social justice issues that are most pressing for their communities and their own lives.

CARA courses pose rigorous, interdisciplinary academic questions about how to expand justice within and across contexts. Students connect course readings, seminar practice, reflexivity, and writing with their field-based research projects or internships, often in partnership with local organizations. In the process, students develop a variety of skills, from conducting qualitative research to analyzing data, communication, mentorship, advocacy, and more, deepening their own understanding and capacities to contribute to social justice initiatives. In addition, many CARA courses also support students to complete their general education requirements.

While any student may enroll in our community-engaged research and learning courses, our aim is to support Oakes students to complete the CARA Certificate. The CARA Certificate is awarded to students upon their successful completion of at least 14 credits, as outlined in the four program areas. Students should notify the CARA program director and community liaison via email that they've successfully completed the program courses, or of their intent to complete in their last quarter of the CARA program (oakscara@ucsc.edu). The CARA program director will also accept petition requests for other courses that fit the programmatic themes, per written request of the student and submission of the course syllabus. Courses listed in more than one program area can count toward each area, provided a total of 14 credits are completed across all four areas.

Students are encouraged to list the CARA Certificate in their resumes, in addition to articulating the skills they've developed through program courses. The

CARA Certificate will not appear on students' transcripts.

OAKES CARA CERTIFICATE 2022-23

Students who successfully complete a minimum of 14 credits from the following courses qualify for the Oakes CARA Program Certificate. Students can choose any of the classes in order to qualify.

Building Capacities for Community Voice, Advocacy, and Organizing

OAKS 47 Building An Inner Sanctuary, 2 credits, PR-S
OAKS 48 Slugs Speak, 2 credits, PR-S
OAKS 67 The Politics Of Food: Labor and Social Justice, 2 credits
OAKS 70 Diverse Voices In Contemporary American Women's Poetry, 2 credits, PR-C
OAKS 73B Mentoring, 2 credits, PR-S
OAKS 80H Rainbow Theater, 5 credits
OAKS 130 Creative Writing Workshop, 5 credits, PR-S

Community Voice, Advocacy and Organizing in Practice

OAKS 151 Corre la Voz, 5 credits total, PR-S (A&B)
OAKS 167 Food Systems: Culture, SJ, Sustainability, 5 credits, PR-S
OAKS 185 Tracing Health, 5 credits, PE-H
OAKS 188 Intro to the Legal Profession and Legal Aid, 5 credits, PR-S (A&B)
OAKS 189 Building Websites For Social Justice, 2 credits, PR-S

Community-based Action Research

OAKS 76 Social Geography & Justice in Santa Cruz, 5 credits, PR-S
OAKS 152 Transformative Literacies, 5 credits, PR-S
OAKS 153 Community Mapping, 5 credits, PR-S
OAKS 155 Research for Social Justice: Special Topics, 5 credits, SI

PORTER COLLEGE

Porter College Office, D-Building
831-459-2273
<https://porter.ucsc.edu>

ACADEMIC PROGRAMS

Academic Literacy Curriculum (p. 232)
College Scholars Program (p. 782)

ACADEMIC EMPHASIS

Porter College was founded in 1969 as the fifth of UC Santa Cruz's residential colleges and was later renamed in honor of a generous grant from the Porter-Sesnon

family. Its mission is to foster achievement in all areas of study. Porter is especially dedicated to achievement in the arts and humanities, believing that creative and humanistic inquiry are essential parts of a rigorous and broad-minded education, a flourishing society, and a happy life.

Porter College fellows hail from every academic division on campus and from many non-academic professions, but all of them share the philosophy of education that the college's curriculum embodies: first, discover how to learn; then, learn by doing; and finally, let your learning make a difference in the world.

The Porter College curriculum encourages students to explore unusual topics and provocative ideas, to test and revise hypotheses about the meaning of their experiences, to learn from the failures that are an inevitable part of new learning and discovery, and to assume responsibility for the decisions they make in their studies. In addition to core courses for first-year students, which provide rigorous training in critical reading and writing and study skills, Porter offers a variety of smaller interdisciplinary seminars that combine historical and theoretical approaches to the arts, humanities, and sciences with practical experience conducting scholarly research and making creative work.

ORIENTATION

All new frosh and transfer students who start fall quarter are required to enroll in one of two online orientation courses. Frosh will enroll in PRTR 1A, Porter 1A: Introduction to University Life and Learning. Transfer students will enroll in KRSG 1T, Kresge 1T: Introduction to Research Universities and the Liberal Arts. Porter 1A and Kresge 1T integrate introductions to academic skills with the online Slug Orientation process, and begin student preparation for their studies at Porter College and throughout UC Santa Cruz.

PRTR 1A Introduction to University Life and Learning (1 credit)

Offered online in summer quarter

KRSG 1T Introduction to Research Universities and the Liberal Arts (1 credit)

Offered online in summer quarter

Students who are admitted to winter quarter will take an orientation course during their first term.

Core Course

PRTR 1, Academic Literacy and Ethos: Arts of Reading, Offered fall quarter

PRTR 1 teaches foundational concepts for intellectual exploration and personal development within an academic community: analysis, critical thinking, metacognition, engagement with others across difference, and self-efficacy. Engages Porter's

intellectual tradition of investigating the contribution the arts and humanities make to a good life, a just society, and a flourishing world.

Requirements: Enrollment is restricted to first-year college members.

Credits: 5

Quarter Offered: Fall

Instructor: Provost Casel

COLLEGE ADVISING

porteradviser@ucsc.edu

Phone: 831-459-2273

Porter D-Building, Room 104

Porter College advisers help students interpret academic policies and procedures and clarify educational goals. They provide support to students to ensure their academic success and progress toward their degree throughout their time at UC Santa Cruz. Advisers help students make informed decisions, develop resiliency, and develop the ability to take ownership of their academic choices. Advisers also connect students to resources that will enrich their academic experiences.

OTHER ACADEMIC PROGRAMS

Porter College offers fellowships and grants to students and faculty in support of scholarly and creative projects. Among the grants offered annually are the Porter College Undergraduate Fellowship (PCUF), the Porter College Research Assistantship (PCRA) and the Nathan Foley Mendelssohn Memorial Travel Scholarship (NFM).

RACHEL CARSON COLLEGE

Rachel Carson College Administration Building, Room 114

<https://rachelcarson.ucsc.edu>

ACADEMIC PROGRAMS

Academic Literacy Curriculum (p. 232)

College Scholars Program (p. 782)

Sustainability Studies Minor (p. 777)

ACADEMIC EMPHASIS

Rachel Carson College's academic classes focus on the theme of environment and society. The college sponsors a number of educational initiatives and courses aimed at furthering its theme and mission, as well as programs offering experiential learning for students. CRSN 1 is

the required first-year college core course, part of the Academic Literacy Curriculum that introduces students to critical and analytical reading at the university level. The core course is mandatory for all incoming frosh.

ORIENTATION

All new frosh and transfer students who start fall quarter are required to enroll in one of two online orientation courses. Frosh will enroll in CRSN 1A, Rachel Carson 1A: Introduction to University Life and Learning. Transfer students will enroll in KRSG 1T, Kresge 1T: Introduction to Research Universities and the Liberal Arts. CRSN 1A and KRSG 1T integrate introductions to academic skills with the online Slug Orientation process, and begin student preparation for their studies at Rachel Carson College and throughout the University of California, Santa Cruz.

CRSN 1A Introduction to University Life and Learning (1 credit)

Offered online in summer quarter

KRSG 1T Introduction to Research Universities and the Liberal Arts (1 credit)

Offered online in summer quarter

Students who are admitted to winter quarter will take an orientation course during their first term.

CORE COURSE

CRSN 1, Academic Literacy and Ethos: Environment and Society

Offered fall quarter

The Rachel Carson College core course focuses on the theme “Environment and Society,” through examination of California’s environment history and how the contemporary landscape has been shaped by capital, labor, technology and politics. A secondary focus is on food: how it is grown, who works in the fields, and why some are malnourished in the midst of agricultural plenty. The course also considers the ecological and environmental histories of California—the shape and biology of the land as well as the role of people in shaping the state’s many landscapes; what novels, stories and articles can tell us about environment and society in California; the central role of water, soil and species in shaping society; and the potential impacts of climate change on both land and society. In pursuing these topics, students also delve into some of the environmental and ecological science that underpins them. The course consists of a weekly plenary (large lecture) and a bi- or tri-weekly seminar (discussion section).

COLLEGE ADVISING

carsonadvising@ucsc.edu
Phone: 831-459-2361

Rachel Carson College Administration Building, room 114

Rachel Carson College advisers help students interpret academic policies and procedures and clarify educational goals. They provide support to students to ensure their academic success and progress toward their degree throughout their time at UC Santa Cruz. Advisers help students make informed decisions, develop resiliency, and develop the ability to take ownership of their academic choices. Advisers also connect students to resources that will enrich their academic experiences.

OTHER ACADEMIC PROGRAMS

In addition to the core course, practicum internships, research projects, and a minor in sustainability studies all enable students to acquire skills that they can apply to their career at UC Santa Cruz, including service-learning work with campus and community-based agencies and organizations. Additional college courses include garden internships, academic and STEM preparation classes, student-facilitated classes in sustainability, a class on peregrine falcons, and a seminar on environment in film. For more information about academics, see Rachel Carson College.

Sustainability Studies

Rachel Carson College Office
(831) 459-2361
<https://rachelcarson.ucsc.edu/>

Sustainability Studies Minor (p. 777)

SUSTAINABILITY STUDIES MINOR

The rapidly growing and linked ecological and social crises arising from stresses on supplies of energy, water, food, land use and other natural resources are among the most critical societal challenges of the next 50 years. These crises are not simply about the adequacy of supply relative to demand; they are also the result of the complex social relations within and among societies, in the past, present, and future. Sustainability is not a fixed state that can be achieved once and maintained. Creative solutions for socio-ecological problems require ever-evolving adaptive approaches and robust interdisciplinary collaborations among engineers, social scientists, economists, policy makers, artists and natural scientists. College graduates will need to be flexible and responsive, able to learn new knowledge and skills rapidly, and cognizant of the complex organization of society and technology. The minor in sustainability studies administered by Rachel Carson College takes a “learning by doing” approach to prepare students as change-makers equipped with professional conduct, analytic abilities, a global perspective and practical know-how.

The pedagogical underpinnings of this minor are anchored in design as a creative process and premised on relationships between classroom learning, character development, non-violent communication, community engagement, and technical innovation through research and application. Broad interdisciplinarity and individual grounding in STEM, social sciences and the arts are critical elements at the center of the minor's core courses. The curriculum is therefore structured to 1) facilitate interdisciplinary academic and research collaborations among faculty and students across multiple UC Santa Cruz divisions (drawing on but **outside** of the divisional structure) and in the off-campus community; 2) teach and train students in **ecology and sustainability** for regenerative design thinking, entrepreneurship and impact assessment in the **built and natural environment**; 3) integrate the use of science, technology, engineering, art and mathematics (STEAM) skills and social science knowledge to these ends; and 4) meet undergraduate demand for a sustainability curriculum with focuses distinct from those offered in existing UCSC departments.

The program is designed to graduate students who can think past mere technology-based solutions to design and implement disruptive innovations that challenge the existing paradigm and invite regenerative systems that support our demands for energy, food, water, mobility and shelter by cultivating mutually beneficial relationships. Students are introduced to concepts and topics such as living-system and cradle-to-cradle design, life-cycle analysis, waste management, coastal and marine conservation, and natural resource management. During the program, students will design and participate in service-learning projects in collaboration with on- and off-campus units, agencies, and organizations; and apply the knowledge and skills acquired through the minor.

No specific prior preparation or prerequisites are required for entry to the minor.

Program learning objectives are as follows:

- Demonstrate whole system awareness with the ability to identify and understand interconnectedness (intersecting, related and/or connected systems; synergies and rebound effects) and how all human-made designs rely upon and are embedded within nested ecological systems.

- Demonstrate awareness that a design is a system, that users interact with designs and that designs and users are embedded in higher level systems that include environmental ecosystems and the life they sustain.

- Demonstrate knowledge and understanding of whole life-cycle and closed-loop systems thinking as related to

the impact of mitigation work (e.g., understanding of life-cycle burdens of design alternatives).

- Comprehend and apply understanding of the causes, features, data, complexities, policies, and practices giving rise to and needed to address a perceived crisis in the contemporary global socioecological context including the role of production, consumption, politics, policies, markets and human behavior in this crisis.

- Show proficiency in applying basic STEM skills needed for evaluation and design practices in real-world applications including quantitative and qualitative metrics for impact and risk assessments and a selection of software and hardware-specific skills (e.g., computer animated design, 3D printing, Arduino programming etc.) Use cognizance of appropriate social science knowledge/methods and entrepreneurial practices to design and implement social enterprise and service learning projects in sustainability and ecological design and practice.

- Demonstrate the ability to forecast the near- and long-term costs and value of their work to the environment and society through the efficient use of resources (e.g., efficient for whom?) and socially/culturally responsible engagement with stakeholders.

- Show awareness of risks and opportunities related to changing environments and stakeholder interests on their work (e.g., extended costs, value, trade-offs, partnerships, regulations, policies, etc.).

- Demonstrate the ability to identify relevant cultural implications and influences in the context of their work (e.g., cultural expressions and sensitivities, services and goods procurement, heritage site appreciation) as well as equity awareness (e.g., gender, race, ethnicity, class, etc.).

- Feel familiar with ways to create robust, dynamic, and resilient systems and ways to develop transdisciplinary stakeholder networks.

- Understand ethical implications relative to social impact of their work.

Course Requirements

Substitutes for any of the required courses must be approved by the program director.

A minimum of 26 credits of CRSN courses and electives are required to complete the minor. Students should select upper-division courses based on remaining credits needed to satisfy the 26-credit minimum.

Lower-Division Courses

One of the following courses:

ECE 80G	Creating and Financing a Sustainable Startup in the Global Economy	5
ECE 80H	Bending the Curve: Solutions to Climate Change	5
ECE 80S	Sustainability Engineering and Practice	5

- ECE 80G/CRSN 80G is offered in the summer

- ECE 80H/CRSN 80H is offered in the fall

- ECE 80S/CRSN 80S is offered in the fall

And two quarters of CRSN 55 (2 credits per quarter)

CRSN 55	Rachel Carson College: Service Learning Practicum	2
CRSN 155	Rachel Carson College Sustainability Internship	2
CRSN 155S	Innovation & Sustainability for Global Impact Practicum	3

Students shall complete two quarters of CRSN 55 (2 credits per quarter). CRSN 55 is offered all three quarters; **or** CRSN 155S is offered for 3 credits during summer session; **or** CRSN 155 with permission.

Required Upper-Division Courses

The following three upper-division courses are required:

CRSN 151A	Sustainability Praxis in the Natural and Built Environment	5
CRSN 151B	Innovation and Professionalization for Sustainability Designers, Engineers, and Entrepreneurs	5
CRSN 151C	Sustainability Laboratory Tools, Techniques, and Applications	3

Elective Upper-Division Courses

The following courses can be used to satisfy upper-division credits:

CRSN Electives

CRSN 151C	Sustainability Laboratory Tools, Techniques, and Applications	3
CRSN 155S	Innovation & Sustainability for Global Impact Practicum	3
CRSN 160	Developing Leadership to Facilitate Environmental Education	5
CRSN 161	Education for Sustainable Living Program	5

- These courses can be used to satisfy upper-division credits.
- CRSN 151C will be offered all three quarters (fall, winter, and spring). A 10-credit version of the course is proposed and has been approved by Global Engagement beginning summer 2022 for students interested in studying abroad. This course can be repeated for credit as topics change.
- If selecting to take a second quarter of CRSN 151C, the two quarters must cover different skill sets, (e.g., 3D printing vs. CAD drawing), a 5-credit breadth elective, and complete the IDEASS capstone (three quarters of CRSN 152).
- CRSN 61 may be substituted for CRSN 161 if the student otherwise has sufficient upper-division credit (26 credits of required courses and electives). Students should discuss with the sustainability minor academic coordinator to determine if they have sufficient upper-division credits.

Breadth Electives

The list of breadth elective courses applies to all of the upper-division options above. This list is updated regularly, but course offerings change. Please consult course lists prior to each quarter to see what is being offered. Some of these courses require permission of the instructor to enroll. You can find the most updated listing of breadth electives here.

Capstone Options

Option 1 (6 credits)

- 152 IDEASS Quarter 1 (2 credits); and
- 152 IDEASS Quarter 2 (2 credits); and
- 152 IDEASS Quarter 3 (2 credits).

Option 2 (8-10 credits)

- Breadth elective; and
- CRSN 151C or breadth elective.

Option 3 (5 credits)

- CRSN 151C*, Leadership Training (3 credits); and
- CRSN 152-05, Leadership Training (2 credits).

STEVENSON COLLEGE

Stevenson College
(831) 459-2020
stcollege@ucsc.edu
<https://stevenson.ucsc.edu>

Cowell-Stevenson Collaborative

ACADEMIC EMPHASIS

Stevenson distinguishes itself as the only college with a required two-quarter core course intended to provide all first-year students with a common academic experience. The core course allows for more rigorous development of students' critical reading and analytical skills. It provides a unique learning environment and a

supportive intellectual community for all Stevenson first-year students. Those admitted as transfer students are exempt from the core course requirement but may take the core course at their option pending available space.

The Stevenson core course, Self and Society, helps students examine the nature of the self and the relationship of the individual to society. It teaches foundational concepts for intellectual exploration and personal development within an academic community—analysis, critical thinking, metacognition, engagement with others across difference, and self-efficacy. In addition, the course fosters an intellectual commitment to the general philosophy that has helped to define Stevenson College since its inception: preservation of human dignity, the social cultivation of individual creativity and citizenship, and a belief in ethical responsibility. The core course reflects the college's long-standing commitment to interdisciplinary and culturally diverse readings, while at the same time affording students an opportunity to develop research interests, to acquire greater understanding of the role of research universities in contemporary societies, and to acquire the requisite skills to engage in increasingly more sophisticated intellectual work while at UCSC.

Stevenson's second quarter of the core course satisfies a further general education requirement, the TA, or textual analysis designation.

Students in majors that have a large number of course requirements should consider how they plan to fit both the two-quarter college core course and their intended major's first-year requirements into their first year at UC Santa Cruz.

Students are encouraged to consult with both their college and major advisors. Stevenson College advisors can be found on the Stevenson advising website.

Students who are placed in the Multilingual Curriculum when they enter UC Santa Cruz will be required to take only the first quarter of the core course requirement.

ORIENTATION

All new frosh and transfer students who start fall quarter are required to enroll in one of two online orientation courses. Frosh will enroll in STEV 1A, Stevenson 1A: Introduction to University Life and Learning. Transfer students will enroll in KRSG 1T, Kresge 1T: Introduction to Research Universities and the Liberal Arts. STEV 1A and KRSG 1T integrate introductions to academic skills with the online Slug Orientation process, and begin student preparation for their studies at Stevenson College and throughout UC Santa Cruz.

STEV 1A Introduction to University Life and Learning (1 credit)

Offered online in summer quarter

KRSG 1T Introduction to Research Universities and the Liberal Arts (1 credit)

Offered online in summer quarter

Students who are admitted to winter quarter will take an orientation course during their first term.

Core Courses

STEV 1: Academic Literacy: Self and Society, offered fall quarter

Introduction to University Discourse: Self and Society. College 1 helps students develop academic and civic proficiency in reading, critical thinking, and “academic ethos,” and habits of mind and practice tied to a sense of belonging and academic success. This course prepares students for success in other UC Santa Cruz courses requiring critical thinking, listening, discussion, and effective communication. It explores rhetorical principles and conventions of university discourse and considers the roots of modern society using foundational religious texts and major classical and modern philosophical works. Enrollment is restricted to first-year college members.

STEV 2: Academic Literacy: Self and Society 2, offered winter quarter

The winter quarter class that follows College 1 continues the development of critical reading, analysis, and effective speaking exploring conflicts inherent in modern society. The course fulfills the TA GE and investigates themes of colonization, race, gender, class, as well as cultural conflict. Enrollment is restricted to first-year and sophomore college members.

OTHER ACADEMIC PROGRAMS

Scholarships

Students have the opportunity to apply for funding for special research projects each quarter. Stevenson also provides several annual scholarships and service awards, including the Josh Alper Marines Memorial Award, the Michele Guard Memorial Scholarship, the Matthew Graviano Memorial Scholarship, the John Halverson Scholarship, and the Robert Dodge Service Award.

Junior Fellow Program

The Stevenson College Junior Fellows Program offers juniors and seniors an opportunity to serve as instructors in Self and Society. Junior fellows, who must have completed outstanding work in Self and Society during their first year, undergo a rigorous application and selection process. Junior fellows (enrolled in Stevenson 120, Teaching Practicum) earn five course credits.

Writing Assistance

Stevenson provides writing assistance for all of its students. Stevenson Writing Assistantships are paid student positions open to juniors and seniors with excellent academic records. Additional information about the Stevenson College academic event is available [here](#).

College Advising

Located in the Stevenson College Office in the Stevenson Administration Building, Rooms 118-119 across from the Stevenson Coffee House patio.

To schedule an appointment, log onto Slug Success or call 831-459-4930.

The Stevenson advising staff assists students in their academic endeavors by providing them with guidance, support, and information. They advise students on many issues, ranging from helping them select their first UCSC classes to making sure that they’ve fulfilled all graduation requirements. Advisors provide students with tools and resources so that they feel confident and empowered to navigate the university.

Advisors encourage students to enter into an active partnership with staff and faculty to ensure that they will learn about existing programs, deadlines, procedures, and opportunities. Advisors also encourage students to become involved in the many extra-curricular activities available at the college. Stevenson students pride themselves on being the most politically active on campus. With this involvement comes the responsibility of maintaining academic goals as a priority. Advisors help students maximize their potential and balance their commitments inside and outside of the classroom so that they can get the most out of their education during and after their time at Stevenson.

COLLEGE SCHOLARS PROGRAM

PROGRAM OVERVIEW

The UC Santa Cruz College Scholars Program (CSP) offers a congenial and stimulating academic home for a select group of well-prepared first-year students at UC Santa Cruz. Through this honors program, students can expect to challenge themselves academically, find other students who are similarly motivated, and explore undergraduate research. This enriched program of study includes special courses, seminars, colloquia, and other events during each quarter of the student's first academic year and fall of the student's second academic year.

CSP provides an opportunity for outstanding students to engage deeply with the best of UCSC. Early in their career, students are able to explore the full potential of

the university setting, beyond the coursework that might be required in their respective disciplines.

CSP has close ties to the college system. In 2018-2019, Fall Start scholars (see below for information about Spring Start scholars) will live at Cowell, Crown, Merrill or Porter College. Each college will have a cohort of about 20-25 College Scholars Program students, and students in each cohort will be housed together. Students receive priority enrollment during their time in the program.

COLLEGE SCHOLARS PROGRAM CURRICULUM

The CSP academic program is designed to both challenge participants and give them the opportunity to develop a strong foundation in our research university.

Year 1

Fall Quarter 1—Supplement to College "Core Course": Students will take part in a series of gatherings led by the Faculty Director and the Provosts at the four Fall Start colleges. These meetings are meant to supplement their college "core course" and to build relationships with other CSP students.

Winter Quarter 1—Service Learning Course: All students will take a two-credit service-learning course offered through Cowell College (COWL 168). This course includes three main components: classroom meetings, journal reflections and papers, and placement in a local organization. Guest speakers are a part of the class and in the past have included local alumni and elected public officials, all working to promote positive social change locally, nationally, or internationally. Over the course of the term, students contribute 40 hours of work to an organization in the community. Organizations that have welcomed students in the past include: the Homeless Service Center, Rising International, Santa Cruz Boys and Girls Club, and the Museum of Art and History.

Spring Quarter 1—Faculty Research Colloquium: Students will take a two-credit course (COWL 89) where weekly faculty lectures are followed by dinner at one of the Provosts' houses. Each student is invited to attend one dinner during the term.

Faculty guests will be drawn from a variety of fields within the university, and students will be encouraged to listen to and appreciate scholars and scholarship beyond their own comfortable niche in engineering, biology, linguistics, music, or whatever their area of interest may be. The invited scholars will be speaking not only about the substance of their work, but also about the types of questions that are particular to their fields of study. By the end of the course, students should have a good sense of the modes of inquiry that animate intellectual life in a research university.

Year 2

Fall Quarter 2—Seminar: Students choose from one of several five-unit research seminars. Each of the seminars focuses on developing significant hands-on skills: whether it is a chance to "do real science" through guided research in the field and in a lab, or address important primary sources directly and debate them together in a text-centered seminar room, students will get training in the real intellectual work that scholars do.

College Scholars Programs: Fall Start and Spring Start

Fall Start—Invitation Only: Admission to the Fall Start cohort of College Scholars Program is by invitation only. A select group of UCSC applicants who are offered admission to the university will be invited to join the program, based on their record of academic achievement. Those students who accept the invitation will be housed together at either Cowell, Crown, Merrill, or Porter College.

Spring Start: Students can apply to the College Scholars Program after the Fall quarter of their first year. In this case, students accepted into CSP will join the program in Spring quarter and will participate in the spring research colloquium. Spring Start students will be selected based on applications reviewed through their college. Students may apply to Spring Start from any of UCSC's colleges.

PHYSICAL EDUCATION

East Field House
(831) 459-5076
goslugs.com
recreation.ucsc.edu

Physical education (P.E.) offers students opportunities to learn and improve skills in a variety of areas while gaining knowledge about the relationship between fitness and wellness. With this information, students will be better prepared to make important choices leading to healthy lifestyles.

Physical education courses at UC Santa Cruz, which are elective and without academic credit, are offered in a wide variety of activities. The courses consist of instruction, practice, and full participation consistent with each student's ability. While many of the courses are for students at a beginning level, some are designed with more advanced students in mind. Most courses involve class meetings one hour in length, twice a week; but some consist of two weekly one-and-a-half-hour meetings or a single two-hour meeting per week. Some courses are offered exclusively to graduate students.

COURSES

ACEN - ACADEMIC ENGLISH

Upper-Division

ACEN 110A - Advanced Academic English 1 (5)

Students develop an academic vocabulary and successful reading strategies in English in order to understand high-level academic texts. Students also practice pronunciation and apply the rules of grammar to written and spoken academic language through weekly oral presentations and written assignments. Enrollment by instructor consent only. Enrollment is restricted to international students.

ACEN 110B - Advanced Academic English 2 (5)

Students continue to develop an academic vocabulary (e.g., collocations, idiomatic expressions), which is a significant contributor to successful academic reading and writing. Students also practice complex sentence structures in written and spoken language through weekly oral presentations and written assignments. Enrollment is by instructor consent only. Enrollment is restricted to international students.

ACEN 110C - Advanced Grammar in Context (5)

Students continue to develop an academic vocabulary, and practice reading and writing complex sentences in English with a high level of grammatical and stylistic accuracy. Students also increase their oral fluency and pragmatic skills and their awareness of second-language learning. Enrollment by instructor consent only. Enrollment restricted to international students. (Formerly Advanced Academic English 3.)

ACEN 110D - Advanced Academic English 4 (5)

Students continue to develop an academic vocabulary, and practice reading and writing complex essays in English with a high level of grammatical and stylistic accuracy. Students also continue to increase their oral fluency, pragmatic skills, and awareness of second-language learning. Enrollment is by instructor consent only. Enrollment is restricted to international students.

AM - APPLIED MATHEMATICS

Lower-Division

AM 3 - Precalculus for the Social Sciences (5)

Introduces mathematical functions and their uses for modeling real-life problems in the social sciences. Includes inequalities, linear and quadratic equations, functions (linear, quadratic, polynomial, rational, power, exponential, logarithmic, trigonometric), inverses, and the composition of functions. Students

cannot receive credit for both this course and MATH 3. MATH 3 can substitute for this course. (Formerly Applied Mathematics and Statistics 3.)

Prerequisite: Prerequisite(s): score of 200 or higher on the mathematics placement examination (MPE), or MATH 2.

AM 6 - Precalculus for Statistics (5)

Reviews and introduces mathematical methods useful in the elementary study of statistics, including logic, real numbers, inequalities, linear and quadratic equations, functions, graphs, exponential and logarithmic functions, and summation notation. (Formerly AMS 6.)

Prerequisite: Prerequisite(s): MATH 2 or mathematics placement examination (MPE) score of 200 or higher or higher.

AM 10 - Mathematical Methods for Engineers I (5)

Applications-oriented course on complex numbers and linear algebra integrating Matlab as a computational support tool. Introduction to complex algebra. Vectors, bases and transformations, matrix algebra, solutions of linear systems, inverses and determinants, eigenvalues and eigenvectors, and geometric transformations.

Students cannot receive credit for this course and for AM 10A or MATH 21. (Formerly AMS 10.)

Prerequisite: Prerequisite(s): score of 400 or higher on the mathematics placement examination (MPE) or MATH 3.

AM 11A - Mathematical Methods for Economists I (5)

Introduction to mathematical tools and reasoning, with applications to economics. Topics are drawn from differential calculus in one variable and include limits, continuity, differentiation, elasticity, Taylor polynomials, and optimization. Students cannot receive credit for both this course and MATH 11A or MATH 19A or AM 15A. (AM 11A formerly AMS 11A.)

Prerequisite: ,Students who have already taken MATH 11A or MATH 19A should not take this course. Prerequisite(s): score of 300 or higher on the mathematics placement examination (MPE), AM 3 or AM 6, or MATH 3.

AM 11B - Mathematical Methods for Economists II (5)

Mathematical tools and reasoning, with applications to economics. Topics are drawn from multivariable differential calculus and single variable integral calculus, and include partial derivatives, linear and quadratic approximation, optimization with and without constraints, Lagrange multipliers, definite and indefinite integrals, and elementary differential equations.

Students cannot receive credit for both this course and MATH 11B or MATH 19B or AM 15B. (AM 11B formerly AMS 11B.)

Prerequisite: Prerequisite(s): ECON 11A, or AM 11A, or MATH 11A, or MATH 19A.

AM 20 - Mathematical Methods for Engineers II (5)

Applications-oriented class on ordinary differential equations (ODEs) and systems of ODEs using Matlab as a computational support tool. Covers linear ODEs and systems of linear ODEs; nonlinear ODEs using substitution and Laplace transforms; phase-plane analysis; introduction to numerical methods. Students cannot receive credit for this course and for AM 20A or MATH 24. (Formerly AMS 20.)

Prerequisite: Prerequisite(s): MATH 19B, and AM 10 or MATH 21.

AM 30 - Multivariate Calculus for Engineers (5)

Advanced multivariate calculus for engineering majors. Coordinate systems, parametric curves, and surfaces; partial derivatives, gradient, Taylor expansion, stationary points, constrained optimization; integrals in multiple dimensions; integrals over curves and surfaces. Applications to engineering form an integral part of the course.

Prerequisite: Prerequisite(s): AM 10; and MATH 19B or MATH 20B.

Upper-Division

AM 100 - Mathematical Methods for Engineers (5)

Covers important concepts in applied mathematics, including complex analysis, vector calculus, Fourier Series, and integral transforms. Applications of the methods to various problems in science and engineering are discussed.

Prerequisite: Prerequisite(s): AM 20 and AM 30, or by permission of instructor.

AM 107 - Introduction to Fluid Dynamics (5)

Covers fundamental topics in fluid dynamics: Euler and Lagrange descriptions of continuum dynamics; conservation laws for inviscid and viscous flows; potential flows; exact solutions of the Navier-Stokes equation; boundary layer theory; gravity waves. Students cannot receive credit for this course and AM 217. (AM 107 formerly AMS 107.)

Prerequisite: Prerequisite(s): AM 112 or MATH 107 or PHYS 116C or EART 111.

AM 112 - Introduction to Partial Differential Equations (5)

Focuses on analytical methods for partial differential equations (PDEs) of two variables, including: the method of characteristics for first-order PDEs; classification of second-order PDEs; separation of variables; Sturm-Liouville theory; and Green's functions. Illustrates each method using applications

taken from examples in physics. Students cannot receive credit for this course and AM 212A.

Prerequisite: Prerequisite(s): AM 100 or by permission of the instructor. Enrollment is restricted to juniors and seniors.

AM 114 - Introduction to Dynamical Systems (5)

Introduces continuous and discrete dynamical systems. Topics include: fixed points; stability; limit cycles; bifurcations; transition to and characterization of chaos; fractals. Examples are drawn from sciences and engineering. Students cannot receive credit for this course and AM 214 or MATH 145. (Formerly AMS 114.)

Prerequisite: Prerequisite(s): AM 20; or MATH 21 and MATH 24; or PHYS 116A. Enrollment is restricted to sophomores, juniors and seniors.

AM 115 - Stochastic Modeling in Biology (5)

Application of differential equations, probability, and stochastic processes to problems in cell, organismal, and population biology. Topics include systems biology, cellular processes, gene-regulation, and population biology. Students may not receive credit for this course and AM 215.

Prerequisite: Prerequisite(s): STAT 131 and AM 20; a university-level course in biology, and operational knowledge of a programming language; or consent of instructor.

AM 129 - Foundations of Scientific Computing for Scientists and Engineers (5)

Covers fundamental aspects of scientific computing for research. Students are introduced to algorithmic development, programming (including the use of compilers, libraries, debugging, optimization, code publication), computational infrastructure, and data analysis tools, gaining hands-on experience through practical assignments. Basic programming experience is assumed.

Prerequisite: Prerequisite(s): AM 10 and MATH 11A; or AM 10 and MATH 19A; or AM 10 and MATH 20A; or MATH 21 and MATH 11A; or MATH 21 and MATH 19A; or MATH 21 and MATH 20A.

AM 147 - Computational Methods and Applications (5)

Applications of computational methods to solving mathematical problems using Matlab. Topics include solution of nonlinear equations, linear systems, differential equations, sparse matrix solver, and eigenvalue problems. Students cannot receive credit for this course and MATH 148. (Formerly AMS 147.)

AM 148 - GPU Programming for Scientific Computations (5)

This second course in scientific computing focuses on the use of parallel processing on GPUs with CUDA.

Basic topics covered include the idea of parallelism and parallel architectures. The course then presents key parallel algorithms on GPUs such as scan, reduce, histogram and stencil, and compound algorithms. Applications to scientific computing are drawn from problems in linear algebra, curve fitting, FFTs, systems of ODEs and PDEs, and image processing. Finally, the course presents optimization strategies specific to GPUs. Basic knowledge of Unix, and C is assumed. (Formerly AMS 148.)

Prerequisite: Prerequisite(s): AM 147 or MATH 148 or PHYS 115. Enrollment is restricted to juniors and seniors.

AM 170A - Mathematical Modeling 1 (5)

Introduction to mathematical modeling emphasizing model construction, tool selection, methods of solution, critical analysis of the results, and professional-level presentation of the results (written and oral). Focuses on problems that can be solved using only analytical tools, and simple Matlab routines. Applications are drawn from a variety of fields such as physics, biology, engineering, and economics.

Prerequisite: Prerequisite(s): Satisfaction of the ELWR requirements. AM 30, and AM 114 or AM 214, and STAT 131 or CSE 107, or by permission of the instructor. Enrollment is restricted to juniors and seniors; graduate students may apply by permission.

AM 170B - Mathematical Modeling 2 (5)

Second course in mathematical modeling emphasizing the general process of scientific inquiry: model construction, tool selection, numerical methods of solution, critical analysis of the results, and professional-level presentation of the results (written and oral). Focuses on problems that must be solved using numerical tools. Applications are drawn from a variety of fields.

Prerequisite: Prerequisites: AM 129 or AM 209, AM 147, and AM 170A. AM 170A may be taken concurrently with AM 170B on an exceptional basis by permission of the instructor. Enrollment is restricted to seniors. Graduate students may apply with permission of the instructor.

AM 198 - Independent Study or Research (5)

Students submit petition to sponsoring agency.

AM 198F - Independent Study or Research (2)

Students submit petition to sponsoring agency.

Graduate

AM 200 - Research and Teaching in Applied Mathematics (3)

Basic teaching techniques for teaching assistants, including responsibilities and rights; resource materials; computer skills; leading discussions or lab sessions;

presentation techniques; maintaining class records; and grading. Examines research and professional training, including use of library; technical writing; giving talks in seminars and conferences; and ethical issues in science and engineering. (Formerly AMS 200.)

Prerequisite: Enrollment is restricted to graduate students.

AM 211 - Foundations of Applied Mathematics (5)

Accelerated class reviewing fundamental applied mathematical methods for all sciences. Topics include: multivariate calculus, linear algebra, Fourier series and integral transform methods, complex analysis, and ordinary differential equations. (Formerly AMS 211.)

Prerequisite: Enrollment is restricted to graduate students.

AM 212A - Applied Partial Differential Equations (5)

Focuses on analytical methods for partial differential equations (PDEs), including: the method of characteristics for first-order PDEs; canonical forms of linear second-order PDEs; separation of variables; Sturm-Liouville theory; Green's functions. Illustrates each method using applications taken from examples in physics. AM 211 or equivalent is strongly recommended as preparation. Students cannot receive credit for this course and AM 112. (Formerly AMS 211, Applied Mathematical Methods I.)

AM 212B - Applied Mathematical Methods II (5)

Covers perturbation methods: asymptotic series, stationary phase and expansion of integrals, matched asymptotic expansions, multiple scales and the WKB method, Pad approximants and improvements of series. (Formerly AMS 212B.)

Prerequisite: Prerequisite(s): Enrollment is restricted to graduate students. Undergraduates may enroll by permission of the instructor.

AM 213A - Numerical Linear Algebra (5)

Focuses on numerical solutions to classic problems of linear algebra. Topics include: LU, Cholesky, and QR factorizations; iterative methods for linear equations; least square, power methods, and QR algorithms for eigenvalue problems; and conditioning and stability of numerical algorithms. Provides hands-on experience in implementing numerical algorithms for solving engineering and scientific problems. Basic knowledge of mathematical linear algebra is assumed. (Formerly AMS 213A.)

Prerequisite: Enrollment is restricted to graduate students. Undergraduate students may enroll with permission of the instructor.

AM 213B - Numerical Methods for the Solution of

Differential Equations (5)

Introduces the numerical solutions of ordinary and partial differential equations (ODEs and PDEs). Focuses on the derivation of discrete solution methods for a variety of differential equations, and their stability and convergence. Also provides hands-on experience in implementing such numerical algorithms for the solution of engineering and scientific problems using MATLAB software. The class consists of lectures and hands-on programming sections. Basic mathematical knowledge of ODEs and PDEs is assumed, and a basic working knowledge of programming in MATLAB is expected. (Formerly AMS 213B.)

Prerequisite: Enrollment is restricted to graduate students.

AM 214 - Applied Dynamical Systems (5)

Introduces continuous and discrete dynamical systems. Topics include: fixed points; stability; limit cycles; bifurcations; transition to and characterization of chaos; and fractals. Examples drawn from sciences and engineering; founding papers of the subject are studied. Students cannot receive credit for this course and AM 114 or MATH 145. (Formerly AMS 214.)

AM 215 - Stochastic Modeling in Biology (5)

Application of differential equations, probability, and stochastic processes to problems in cell, organismal, and population biology. Topics include systems biology, cellular processes, gene-regulation, and population biology. Students may not receive credit for this course and AM 115. (Formerly AMS 215.)

Prerequisite: Enrollment is restricted to graduate students; undergraduates may enroll by permission of the instructor.

AM 216 - Stochastic Differential Equations (5)

Introduction to stochastic differential equations and diffusion processes with applications to biology, biomolecular engineering, and chemical kinetics. Topics include Brownian motion and white noise, gambler's ruin, backward and forward equations, and the theory of boundary conditions. (Formerly AMS 216.)

Prerequisite: Enrollment is restricted to graduate students; undergraduates may enroll by permission of the instructor.

AM 217 - Introduction to Fluid Dynamics (5)

Covers fundamental topics in fluid dynamics at the graduate level: Euler and Lagrange descriptions of continuum dynamics; conservation laws for inviscid and viscous flows; potential flows; exact solutions of the Navier-Stokes equation; boundary layer theory; gravity waves. Students cannot receive credit for this course and AM 107. (Formerly AMS 217.)

Prerequisite: Enrollment is restricted to graduate students; undergraduates may enroll by permission of the instructor.

AM 227 - Waves, Instabilities, and Turbulence in Fluids (5)

Advanced fluid dynamics course introducing various types waves and instabilities that commonly arise in geophysical and astrophysical systems, as well as turbulence. Topics covered include, but are not limited to: pressure waves, gravity waves, convection, shear instabilities, and turbulence. Advanced mathematical methods are used to study each topic. Undergraduates are encouraged to take this course with permission of the instructor. (Formerly Waves and Instabilities in Fluids.)

Prerequisite: Prerequisite(s): AM 212A and AM 217.

AM 229 - Convex Optimization (5)

Focuses on recognizing, formulating, analyzing, and solving convex optimization problems encountered across science and engineering. Topics include: convex sets; convex functions; convex optimization problems; duality; subgradient calculus; algorithms for smooth and non-smooth convex optimization; applications to signal and image processing, machine learning, statistics, control, robotics and economics. Students are required to have knowledge of calculus and linear algebra, and exposure to probability. (Formerly AMS 229.)

Prerequisite: Enrollment is restricted to graduate students.

AM 230 - Numerical Optimization (5)

Introduces numerical optimization tools widely used in engineering, science, and economics. Topics include: line-search and trust-region methods for unconstrained optimization, fundamental theory of constrained optimization, simplex and interior-point methods for linear programming, and computational algorithms for nonlinear programming. (Formerly AMS 230.)

AM 231 - Nonlinear Control Theory (5)

Covers analysis and design of nonlinear control systems using Lyapunov theory and geometric methods. Includes properties of solutions of nonlinear systems, Lyapunov stability analysis, effects of perturbations, controllability, observability, feedback linearization, and nonlinear control design tools for stabilization. (Formerly AMS 231.)

Prerequisite: Prerequisite(s): basic knowledge of mathematical analysis and ordinary differential equations is assumed. Enrollment is restricted to graduate students; undergraduates may enroll by permission of the instructor.

AM 232 - Applied Optimal Control (5)

Introduces optimal control theory and computational optimal control algorithms. Topics include: calculus of variations, minimum principle, dynamic programming, HJB equation, linear-quadratic regulator, direct and indirect computational methods, and engineering application of optimal control. (Formerly AMS 232.)

Prerequisite: Prerequisite(s): AM 114 or AM 214, or ECE 240 or ECE 241, or MATH 145. Enrollment is restricted to graduate students. Undergraduates may enroll by permission of the instructor.

AM 238 - Fundamentals of Uncertainty Quantification in Computational Science and Engineering (5)

Computing the statistical properties of nonlinear random system is of fundamental importance in many areas of science and engineering. Introduces students to state-of-the-art methods for uncertainty propagation and quantification in model-based computations, focusing on the computational and algorithmic features of these methods most useful in dealing with systems specified in terms of stochastic ordinary and partial differential equations. Topics include: polynomial chaos methods (gPC and ME-gPC), probabilistic collocation methods (PCM and ME-PCM), Monte-Carlo methods (MC, quasi-MC, multi-level MC), sparse grids (SG), probability density function methods, and techniques for dimensional reduction. Basic knowledge of probability theory and elementary numerical methods for ODEs and PDEs is recommended. (Formerly AMS 238.)

Prerequisite: Prerequisite(s): STAT 203 or equivalent, and AM 213B or equivalent. Enrollment is restricted to graduate students.

AM 250 - An Introduction to High Performance Computing (5)

Designed for STEM students and others. Through hands-on practice, this course introduces high-performance parallel computing, including the concepts of multiprocessor machines and parallel computation, and the hardware and software tools associated with them. Students become familiar with parallel concepts and the use of MPI and OpenMP together with some insight into the use of heterogeneous architectures (CPU, CUDA, OpenCL), and some case-study problems. (Formerly AMS 250.)

Prerequisite: Enrollment is restricted to graduate students; undergraduates may enroll by permission of the instructor.

AM 260 - Computational Fluid Dynamics (5)

Introduces modern computational approaches to solving the differential equations that arise in fluid dynamics, particularly for problems involving discontinuities and shock waves. Examines the fundamentals of the mathematical foundations and computation methods to obtain solutions. Focuses on writing practical numerical

codes and analyzing their results for a full understanding of fluid phenomena. (Formerly AMS 260.)

Prerequisite: Prerequisite(s): Basic knowledge of computer programming languages is assumed. Enrollment is restricted to graduate students.

AM 275 - Magnetohydrodynamics (5)

Studies the interaction of fluid motion and magnetic fields in electrically conducting fluids, with applications in many natural and man-made flows ranging from, for example, planetary physics and astrophysics to industrial metallurgic engineering. (Formerly AMS 275.)

Prerequisite: Prerequisite(s): AM 107 or AM 217. AM 227 suggested. Enrollment is restricted to graduate students.

AM 280A - Seminar in Mathematical and Computational Biology (2)

Weekly seminar on mathematical and computational biology. Participants present research findings in organized and critical fashion, framed in context of current literature. Students present own research on a regular basis. (Formerly AMS 280A.)

Prerequisite: Enrollment is restricted to graduate students.

AM 280B - Seminar in Applied Mathematical Modeling (2)

Weekly seminar series covering topics of current research in applied mathematics and statistics. Permission of instructor required. Enrollment is restricted to graduate students. (Formerly AMS 280B.)

AM 280C - Seminar in Geophysical and Astrophysical Fluid Dynamics (2)

Weekly seminar/discussion group on geophysical and astrophysical fluid dynamics covering both analytical and computational approaches. Participants present research progress and findings in semiformal discussions. Students must present their own research on a regular basis. (Formerly AMS 280C.)

Prerequisite: Enrollment is restricted to graduate students; undergraduates may enroll by permission of the instructor.

AM 296 - Masters Project (2)

Independent completion of a masters project under faculty supervision. Students submit petition to sponsoring agency. Enrollment is restricted to graduate students.

AM 297A - Independent Study or Research (5)

Independent study or research under faculty supervision. Students submit petition to sponsoring agency. Enrollment is restricted to graduate students.

AM 297B - Independent Study or Research (10)

Independent study or research under faculty supervision. Students submit petition to sponsoring agency. Enrollment is restricted to graduate students.

AM 297C - Independent Study or Research (15)

Independent study or research under faculty supervision. Students submit petition to sponsoring agency. Enrollment is restricted to graduate students.

AM 297F - Independent Study (2)

Independent study or research under faculty supervision. Students submit petition to sponsoring agency. Enrollment is restricted to graduate students.

AM 299A - Thesis Research (5)

Thesis research under faculty supervision. Students submit petition to sponsoring agency. Enrollment restricted to graduate students.

AM 299B - Thesis Research (10)

Thesis research under faculty supervision. Students submit petition to sponsoring agency. Enrollment restricted to graduate students.

AM 299C - Thesis Research (15)

Thesis research under faculty supervision. Students submit petition to sponsoring agency. Enrollment restricted to graduate students.

ANTH - ANTHROPOLOGY**Lower-Division****ANTH 1 - Introduction to Biological Anthropology (5)**

Study of evolution illustrated by Pleistocene hominid fossils and variation in living human groups. Behavior and evolution of primates examined as they contribute to the understanding of human evolution. Required for all anthropology majors. (Formerly Introduction to Human Evolution.)

ANTH 2 - Introduction to Cultural Anthropology (5)

A number of different peoples are studied and a variety of approaches to the nature of the culture and to the study of specific cultures presented. Required for all anthropology majors.

ANTH 3 - Introduction to Archaeology (5)

Overview of ways of learning about the human past beyond the scope of written history. Reviews development of archaeology, fundamental methods and theories, and archaeology's contribution to understanding human origins, the emergence of farming, and the origins of complex societies.

ANTH 93 - Field Study (5)

Supervised research or organized projects on anthropological topics for lower-division students. Conducted either on or off campus. Students submit petition to sponsoring agency.

ANTH 97 - Laboratory Safety Practicum (2)

Covers laboratory health and safety and standard operating procedures within the anthropology laboratories. Prepares students for future laboratory research activities while providing support of laboratory administration, collections management, and laboratory course demonstration needs. Enrollment by application.

Upper-Division**ANTH 100 - History and Theory of Biological Anthropology (5)**

Provides an historical overview from the 18th century to the present of race, ape-human relationships, and human nature. Emergence of an evolutionary framework and of fossil, genetic, and primate information becomes the basis for reformulating ideas about human biology within anthropology.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3 and satisfaction of the Entry Level Writing and Composition requirements.

ANTH 101 - Human Evolution (5)

Study of human evolution covering the last five million years. Examines the fossil evidence and emphasizes the reconstruction of behavior from the paleontological and anatomical evidence.

Prerequisite: Prerequisite(s): ANTH 1.

ANTH 102A - Human Skeletal Biology (5)

Presents basic human osteology allowing students to identify skeletal material by element. Emphasizes the dynamic nature of bone by integrating anatomy with a discussion of bone physiology within the context of the human life cycle.

Prerequisite: Prerequisite(s): ANTH 1.

ANTH 103 - Forensic Anthropology (5)

Covers the basic analysis of human skeletal remains for the medicolegal profession. Assessment of age, sex, ancestry, and general physical characteristics, trauma, and disease are discussed. Addresses the legal responsibilities of the anthropologist. Online lectures with in-class discussion sections, quizzes, and exams. Students cannot receive credit for this course and ANTH 103L.

Prerequisite: Prerequisite(s): ANTH 102A. Enrollment is restricted to juniors and seniors.

ANTH 103I - Forensic Anthropology (4)

This online course teaches the basic analysis of human remains for the medico-legal profession. Covers the development of forensic anthropology, creating a biological profile, evaluating skeletal trauma, estimation of interval since death, and how these assessments can be supported. Students cannot receive credit for this course and for ANTH 103.

Prerequisite: Prerequisite(s): ANTH 102A.

ANTH 104 - Human Variation and Adaptation (5)

Explores the major environmental factors (temperature, altitude, diet, and disease); how they are perceived by the human body; the physiological, micro- and macroanatomical responses; and how behavior and culture can modify the impact of these stresses. ANTH 1 is highly recommended as preparation. (Formerly Human Adaptability.)

ANTH 105 - Human Paleopathology (5)

Examines paleopathology beginning with ancient hominid populations and proceeding to modern populations. Uses both the skeletal evidence and historical documentation when available. Considers evolutionary, cultural, and biological factors. Topics include: osteological diagnosis of infectious disease; trauma; nutritional deficiencies; dental disease; and developmental defects.

Prerequisite: Prerequisite(s): ANTH 1; ANTH 102A recommended.

ANTH 106 - Primate Behavior and Ecology (5)

The nature of primate social systems and social bonds is examined in the light of evolutionary and ecological concepts. We explore the evolution of primate social system behavior and culture, as well as the ecologies of primate populations.

Prerequisite: Prerequisite(s): ANTH 1.

ANTH 107A - Methods and Research in Biological Anthropology: Genetics (5)

Introduces the molecular analyses of anthropological questions and explores the intersection of genetics and anthropology. Covers the basic principles of molecular and population genetics as they relate to the study of humans. Prerequisite(s): ANTH 1 and ANTH 104. ANTH 102A is recommended. Enrollment by permission of instructor. (Formerly ANTH 107, Methods and Research in Molecular Anthropology.)

ANTH 107B - Methods and Research in Biological Anthropology: Stable Isotopes (5)

This combination of lectures, readings, discussions, and hands-on laboratory experience provides a comprehensive overview of stable isotope research to reconstruct diet and mobility. Discover the wide application of isotopic research in biological

anthropology, bioarcheology, primatology and forensics. Prerequisite(s): at least one of ANTH 101, ANTH 104, ANTH 106, ANTH 107, or ANTH 110F and by permission of the instructor. (Formerly Methods and Research in Stable Isotope Ecology.)

Prerequisite: Prerequisite(s): ANTH 101 or ANTH 104 or ANTH 106 or ANTH 107 or ANTH 110F.

ANTH 107C - Methods and Research in Biological Anthropology: Chimpanzee Behavior and Culture (5)

Lab class analyzing trail camera footage from chimpanzees and other wildlife, and installing our own cameras in the UCSC forest. Also includes readings and discussion of papers related to the newest findings on chimpanzee behavioral diversity and culture. Prerequisite(s): ANTH 106. Enrollment is by instructor consent.

ANTH 107D - Methods and Research in Biological Anthropology—Computational Population Genetics (5)

Practical introduction to computational population genetics. Covers the basic principles of population and evolutionary genetics, and explores those with a range of computational methods for the analysis of genetic diversity, population structure, and admixture. Enrollment is by instructor consent.

ANTH 109 - Evolution of Sex (5)

Provides a physical anthropology understanding of the evolution of sex. Focuses on genetics and the alterations in allele associations that take place as a result of sexual processes.

Prerequisite: Prerequisite(s): ANTH 1.

ANTH 110A - Public Life and Contemporary Issues (5)

How can cultural anthropology help us to understand current events unfolding locally, nationally, and globally? Students learn how to read newspapers differently--that is, through the lens of cultural analysis. The world of everyday politics and society, as it unfolds in debates happening right now, forms the topical substance of the course.

ANTH 110B - From Indiana Jones to Stonehenge: Archaeology as Popular Culture (5)

Addresses the meaning of archaeology as generated in television, movies, literature, newspapers, and even National Geographic. Students engage with several case-studies illustrating how archaeology is portrayed in popular culture.

ANTH 110C - California Pasts (5)

This course is structured around four critical moments--missionization, Rancho-Era, Gold Rush, and World War II--through the eyes of the ethnic and racial minorities who experienced them. Special attention is given to oral, archival, and archaeological sources which reveal California's multiethnic pasts.

ANTH 110D - Tourism Imaginaries and Encounters (5)

Explores anthropological approaches to the study of tourism, in particular themes of authenticity, othering, visual economies, development, identity politics, alternative tourisms, and material culture with reference to history, power, and location.

ANTH 110E - Anthropology of Global Environmental Change (5)

Introduces anthropological and historical approaches to environmental change and globalization. Key themes include: capitalism and industrialization, environmental politics, global culture, and relations between humans and other species.

ANTH 110F - Evolution of Human Diet (5)

Presents the evolution of human diet and subsistence from a biological anthropological perspective. Covers the key hypothesis and methodologies related to diet, from our early fossil ancestors up to agriculture and animal husbandry. (Formerly Biocultural Approaches to Food.)

ANTH 110G - Westside Stories: Race, Place and the California Imaginary (5)

From South Central to La Misi3n, this course explores the role of race and culture in creating the California Dream. Draws on films, music, and activism as lenses into the complex flows of power that shape our communities.

ANTH 110H - Brazilian Amazon Cultures and Environments (5)

General introduction to the astonishing diversity of cultures and environments in the Brazilian Amazon. Designed to provide upfront understanding of what underlies perverse (non)development and forest destruction, but also social defense of the forest and sustainable life within it.

ANTH 110I - Cultures of Sustainability and Social Justice (5)

Brings together diverse forms of cultural knowledge and complexities of everyday life to illuminate longstanding concerns of sustainability and justice. Investigates multiple theories of sustainable development as well as tools, techniques, and contexts for ecological integrity, economic security, empowerment, responsibility and social well-being characteristic of sustainable communities. Case studies are drawn from around the world highlighting the work of Right Livelihood Award Laureates in tandem with UC faculty.

ANTH 110J - Emerging Humanity (5)

Using an anthropological and archaeological perspective to learn about human history before AD 1500, course explores fossil remains of human ancestors and traces the more recent history of

humanity from forgers/hunters to the emergence of complex societies/civilizations. Topics include human biological evolution, the development of organized human societies, the origins of food production (domestication of plants and animals), the origins of the world's earliest urban centers, and the development of social inequality.

ANTH 110K - Culture Through Food (5)

Examines anthropology of food and politics of eating. Cultural and social uses of food in rituals of solidarity or fasting, identities and meanings of food for individuals, and consumption in the global context are key components of study.

ANTH 110L - The Human Ocean (5)

From coral reefs to Arctic sea ice, this course examines how humans interact with and transform earth's oceans, and how humans are shaped by the sea. Topics include: marine conservation, migration, shipping and logistics, slavery, fisheries management, and climate change.

ANTH 110N - Anthropology of Food (5)

Focuses on social institutions around the world that shape food and its meanings; how people use food to organize their worlds; and production, sharing, or consumption of food as a political or meaningful act.

ANTH 110O - Postcolonial Britain and France (5)

Transdisciplinary examination of the politics and culture of postcolonial Britain and France. Topics include: immigration from South Asia, Africa, and the Caribbean; racism and antiracism; minority difference and citizenship practices; and the emergence of Islam as a major category of identity and difference.

ANTH 110P - India and Indian Diaspora through Film (5)

Explores several themes of relevance in contemporary India and Indian diaspora, concentrating on anthropological research and various documentary and popular Bollywood films. Through films and ethnographies, students analyze the nature of anthropological contributions to the study of Indian societies. (Formerly course 80P.)

ANTH 110Q - Queer Sexuality in Black Popular Culture (5)

From Janet Mock to Young M.A., queerness has become hypervisible in Black popular culture--but at what cost? Using music, television, and social media as central texts, students investigate the intersections of sexuality, gender, and race in public life.

ANTH 110R - Discourses in American Religions and Their Role in Public Life (5)

Introduces dominant discourses about major American religions and their role in public life, with particular attention to intersecting differences, such as race,

sex/gender, and disability, and to shifting religious/political boundaries. Visual and textual media, political commentary, and popular ethnographies are analyzed.

ANTH 110S - Evolution of Democracy (5)

Examines the state and its institutions from a historical, social, and cross-cultural perspective, paying attention to the varied discourses and practices that constitute what we call the state.

ANTH 110T - Motherhood in American Culture (5)

Examines the culture wars around motherhood in the United States with a focus on the political mobilization of normative ideas about the correct way to mother, from the moment of conception on. Special attention is given to the historical construction of deviant motherhood among marginalized groups.

ANTH 110U - Histories and Cultures of Piracy (5)

An interdisciplinary yet anthropologically informed approach to studying pirates and piracy across different historical eras and spaces. Explores the role of pirates in world history from ancient to present times, including piracy both at sea and online.

ANTH 110V - American Capitalism (5)

Capitalism shapes our lives in unequal ways, but what is it? Course explores histories and machinations of capitalism in the Americas, focusing on the United States. Investigates what capitalism is, how it operates, its origins, and what might come next.

ANTH 110W - Land and Waterscapes Entropology (5)

Establishes anthropological interconnections of emergent worlds where environmental matters, social justice, and human survival interrelate. Focuses on anti-essential nature and waterscape ethnographies in which different pluricultures revalidate local understandings as ways of contesting increasing forms of land and water privatization.

ANTH 110Y - Feeding California (5)

Online course introducing students to social practices, political processes, and cultural contexts that shape food production and consumption. Considers identity, heritage, choice, power, agency, body practices, belonging, access, safety, and security. Prioritizes California case studies, with comparative examples from around the world.

ANTH 111 - Human Ecology (5)

Reviews the environmental, physiological, behavioral, and cultural ways that humans interact with their physical surroundings. The effects of human culture on the environment and of the environment on the shape of human culture is emphasized.

ANTH 112 - Life Cycles (5)

Examines the human life cycle using an evolutionary framework. Examines key aspects of the human life stages using findings and concepts from developmental biology, physiology, nutrition, evolutionary ecology, and life-history theory.

Prerequisite: Prerequisite(s): ANTH 1.

ANTH 113 - Tutoring Writing in Anthropology (2)

Trains students to tutor writing in undergraduate anthropology courses; supports and guides them during the quarter they are tutoring. Enrollment by interview only. Prerequisite(s): satisfaction of the Composition requirement.

ANTH 119 - Indigenous Visual Culture (5)

Examines the relationship between visual cultures and indigenous peoples. First, class discusses what is visual anthropology. Second, class examines the relationship between museums and indigenous peoples. Third, class examines ethnographic photography and indigenous uses of photography. Fourth, class examines the uses of ethnographic film, and then its relationship to indigenous peoples. Finally, class examines indigenous uses of film.

ANTH 121 - Socialism (5)

Ethnography-based course that examines the social worlds of socialism, with particular focus on state socialism. Topics include: social problems that inspired socialist movements; implementation and experience of socialism in daily life; and significance of class, race, nation, science, technology, rationality.

ANTH 122 - Postsocialism (5)

Examines the demise of socialist systems. Addresses the political, social, cultural, and economic experiences of everyday life that led to that demise, what new social inequalities have arisen since, and how citizens use the socialist past to critique the present.

ANTH 123 - Psychological Anthropology (5)

An introduction to some of the central theoretical issues in psychological anthropology. Psychoanalytic, cognitive, and relativist perspectives on the link between person and society are discussed and compared.

Prerequisite: Prerequisite(s): ANTH 2.

ANTH 124 - Anthropology of Religion (5)

Study of the phenomenon of religion as manifested in ethnographic literature, with special attention to traditional and recent modes of analysis of religious behavior. Special topics include myth, religious healing, witchcraft and sorcery, ritual, and millenarian movements.

ANTH 125 - Magic, Science, and Religion (5)

With a theoretical understanding of the concepts of magic, science, and religion, students draw on ethnographies of these practices to critique distinctions between them and critically analyze the understanding of these categories and their relation in the modern world

ANTH 126 - Contraband: Shadow Economies and the Law (5)

Course takes an interdisciplinary approach to studying contraband and smuggling. Focusing on concepts used to describe illegality we examine how "shadow economies" are central to the making of states and sovereignty, the legal and illegal being blurred.

ANTH 127 - Ethnographies of Capitalism (5)

Challenges approaches to capitalism that treat it as socioeconomic relations separable from culture. Readings include ethnographies demonstrating the inextricability of cultural meanings from capitalist practices. Topics include capitalism's relationship to colonialism, nationalism, socialism, gender, and the commodification of aesthetics.

ANTH 128 - Contemporary American Evangelical Cultures (5)

Study of contemporary, American, born-again Protestant discourse using ethnographic materials and interpretive theories. Topics include biblical literalism, Christian conversion and self-fabulation, charismatic gifts, preaching, sacrificial giving, prosperity theology, apocalypticism, creationism, pro-family and pro-life rhetoric, and televangelism. (Formerly *Born-Again Religion and Culture*.)

ANTH 129 - Beyond Borders: Other Globalizations and Histories of Interconnection (5)

The history of social and cultural interconnections at a global scale. Anthropological approaches to the study of cultural encounter are used to investigate topics such as trade, religion, and citizenship and to evaluate shifting concepts of civilization and barbarism. (Formerly *Other Globalizations: Cultures and Histories of Interconnection*.)

Prerequisite: Prerequisite(s): ANTH 2.

ANTH 130A - Anthropology of Africa. (5)

Survey of sub-Saharan societies. Analysis of principles of social organization and factors of cultural unity of selected western, eastern, central, and southern African peoples. (Formerly *Peoples and Cultures of Africa*)

ANTH 130B - Brazil (5)

Examines Brazilian culture and its link to interpersonal relationships, religion, politics, and psychological experience.

Prerequisite: Prerequisite(s): ANTH 2.

ANTH 130C - Politics and Culture in China (5)

Joins substantive information about Chinese society and culture with debates in social theory and rethinks conventional wisdom about colonialism and modernity. Topics include representations of Chineseness, class revolution, Chinese diaspora, popular culture, family and kinship, nationalism, history/memory, race and gender.

ANTH 130E - Culture and Politics of Island Southeast Asia (5)

Southeast Asia includes a variety of societies exhibiting many ecological adaptations, religions, marriage systems, and experiences with colonial powers. Case studies of particular societies, chosen to reveal variety, are examined comparatively. Emphasis on religion and social organization.

Prerequisite: Prerequisite(s): ANTH 2.

ANTH 130F - Blackness In Motion: Anthology of the African Diasporas (5)

What connects Black communities in the Caribbean, the U.S., Latin America, and Canada, and what sets them apart? Examines theories of diaspora, gender and sexuality, slavery, colorism, music, U.S. hegemonies, social movements, and comparative racialization and global anti-blackness (Formerly *African Diasporas in the Americas*.)

ANTH 130G - Asian Americans in Ethnography and Film (5)

Critically examines category of Asian Americans. Addresses historic representations of Asians and Asian Americans in ethnographic research and film. Explores contemporary issues of race, culture, and politics through ethnographic practice and cultural production.

ANTH 130H - Ethnography of Russia and Eastern Europe (5)

Introduces students to the ethnography of Eurasia, with special attention to the lived experience and legacy of state socialism in this region. Topics include new ideas of personhood, changing economic practices, public health, and international development.

ANTH 130I - Cultures of India (5)

An examination of anthropological studies of tribal, rural, and urban cultures of India and a look at changes taking place in India.

ANTH 130J - Politics and Statemaking in Latin America (5)

Introduction to ethnohistory and political anthropology of one or more Latin American countries: Typically Mexico and one other country. Students explore how contested concepts such as indigeneity, nation or state come to gain credibility and are deployed in contemporary politics.

ANTH 130L - Ethnographies of Latin America (5)

A broad introduction to issues and areas of cultural production and transformation in the Caribbean, Mexico, and Central and South America. Colonial, neocolonial, class, ethnic, gender, religious, ecological, and political relations intersect as represented in ethnographies and film.

Prerequisite: Prerequisite(s): ANTH 2.

ANTH 130M - Inside Mexico (5)

Examines various communities within the Republic of Mexico as represented in ethnographic texts and other forms of cultural production, particularly music and dance. Emphasis on the interplay between the concept of regionalism and national identity. Previous course work in Mexican culture and/or history strongly recommended. Some reading in Spanish is required.

ANTH 130N - Native Peoples of North America (5)

A survey of Native American cultures and experience during the past century, with emphasis on Pueblo cultures of the American Southwest.

ANTH 130O - Native Feminisms, Gender, and Settler Colonialism (5)

Covers Native feminisms, gender, settler colonialism, and ethnography. Students read ethnographies that intervene in Native feminisms and its possibilities. Focuses on ethnographies in the U.S., including Native men and masculinities in Hawaii.

ANTH 130P - Ethnography of Southern Cone Chile and Argentina (5)

Chile and Argentina, although both established within Spanish colonization and physically close, have dissimilar histories and culture. We explore areas of friction and overlap that shaped different peoples, institutions, cultural identities, and histories in countries that share a particular history.

ANTH 130S - Ethnography of Russia and Eastern Europe, Abroad (5)

This study abroad introduces the ethnography of Russia and Eastern Europe, with special attention to lived experience and legacy of state socialism. Topics: effects of socialism, changing economic practices; constructions of new identities; modernization/development; belief systems; and memory and history.

ANTH 130T - Religion and Politics in the Muslim World (5)

Analyzes post-colonial forms of Islam, with particular attention to Muslim societies and cultures in the Middle East, North Africa, and Europe. Emphasizes the relationship between power, knowledge, and representation in anthropological approaches to Islam

and Muslims. (Formerly Anthropological Approaches to Islam.)

ANTH 130U - Central America (5)

Draws on political, economic, and anthropological perspectives to analyze the key role of transnationalism and neoliberalism in contemporary Central America. Key topics include: the aftermath of revolutions; labor and gender; indigenous movements and multiculturalism; and transnational migration and governance.

ANTH 130V - Ethnography of Russia (5)

Examines daily life in Russia and affiliated formerly Soviet Republics through historical and cultural comparison. Topics include: socialist and postsocialist daily life; 20th- and 21st-century Russian empire building; cultural politics; economic systems; state-citizen relations; citizenship regimes; labor and leisure; and religion.

ANTH 130W - Ethnography of Eastern Europe (5)

Examines daily life in Eastern Europe, especially how residents in this region have navigated the transition from state socialism to accession to the European Union. Topics include: the legacies of state socialism; cultural politics; new economies; consumption; the European Union; new forms of governance; and political activism.

ANTH 130X - Special Topics in Ethnography (5)

This course on special topics in ethnography will be taught on a rotating basis by various faculty members. Precise focus of each year's courses will vary according to the instructor and will be announced by the department.

Prerequisite: Prerequisite(s): ANTH 2.

ANTH 131 - Gender in Cross-Cultural Context (5)

Examines the diversity of women's as well as men's roles, experiences, and self-conceptions in a number of societies to explore how women and men shape, and are shaped by, particular forms of social life.

ANTH 131H - Russian-Language Readings Course: Readings in Anthropology of Russia (2)

Contemporary topics and readings in anthropology of Russia and the former Soviet Union. All readings, films, and other materials are in Russian. Discussions are in English. Accompanies ANTH 130H, Ethnography of Russia and Eastern Europe. Prerequisite(s): ANTH 130H and proof of Russian proficiency in reading and writing. Enrollment by permission of instructor.

ANTH 133 - Narratives of the Popular (5)

Addresses the increasing importance of popular culture as the terrain upon which to address issues of culture and power. Emphasizes an ethnographic approach to

popular culture as sociocultural phenomena. Students learn about a variety of activities including television and film viewing, music, fashion, photography, postcards, comic books, and urban spatial relations and architecture.

ANTH 134 - Medical Anthropology: An Introduction (5)

Cross-cultural study of health, disease, and illness behavior from ecological and ethnomedical perspectives. Implications for biomedical health care policy. Students cannot receive credit for this course and ANTH 254.

Prerequisite: Prerequisite(s): ANTH 2.

ANTH 135A - Cities (5)

Examines cities from an anthropological perspective. Reviews pertinent social scientific literature of the 19th and early 20th centuries. Surveys the concepts and methods used by contemporary anthropologists to investigate urban phenomena.

ANTH 136 - The Biology of Everyday Life (5)

Addresses cross-cultural attitudes to the human body and its everyday biological concerns: sleeping, eating, breathing, sex, and defecation.

Prerequisite: Prerequisite(s): ANTH 2.

ANTH 137 - Consuming Culture (5)

Explores consumption as a cultural form. Beginning with theories of capitalism and exchange, it then focuses on sites and modes of consumption and display such as department stores, museums and zoos, advertisements and photography, cultural tourism.

ANTH 138 - Political Anthropology (5)

The ideas, in selected non-Western societies, about the nature of power, order, social cohesion, and the political organization of these societies.

ANTH 139 - Language and Culture (5)

Examination of language system and language use in relationship to cultural contexts of communication in Western and non-Western societies. Topics include the Sapir-Whorf linguistic relativity hypothesis; linguistic constructions of gender; speech variation in relation to class, ethnicity, and national identity; and the emergence of self in communicative acts.

Prerequisite: Prerequisite(s): ANTH 2.

ANTH 140 - The Body in Rain: Environmental and Medical Intersections (5)

Explores medical and environmental anthropologies, including how bodies-human and other-are implicated in processes often figured as environmental. Explores how the body and the environment combine and interact to form nexus of political, cultural, and material forces.

ANTH 142 - Anthropology of Law (5)

An ethnographically informed consideration of law, dispute management, and social control in a range of societies including the contemporary U.S. Topics include conflict management processes, theories of justice, legal discourse, and relations among local, national, and transnational legal systems.

Prerequisite: Enrollment is restricted to anthropology and legal studies majors.

ANTH 143 - Performance and Power (5)

Explores relationships between power and performance forms and media, both traditional and emergent. Links aesthetics with politics, and recent transcultural exchanges with local circumstances and consequences.

Prerequisite: Prerequisite(s): ANTH 2 or any other Anthropology course.

ANTH 144 - Anthropology of Poverty and Welfare (5)

Examines phenomena of poverty and welfare in cross-cultural perspective with an emphasis on critical ethnographies and social analyses of social pathologies, economic systems, and community. Topics include informal economies, labor, household systems, social-support networks, and public policies.

ANTH 145X - Special Topics in Socio-Cultural Anthropology (5)

Taught annually on a rotating basis by faculty members. Each year's topic varies by instructor and is announced by the department.

Prerequisite: Prerequisite(s): ANTH 2.

ANTH 146 - Anthropology and the Environment (5)

Examines recent approaches to study of nature and the environment. Considers historical relationship between nature, science, and colonial expansion as well as key issues of contemporary environmental concern: conservation, environmental justice, and social movements. Students cannot receive credit for this course and ANTH 246.

Prerequisite: Prerequisite(s): ANTH 2.

ANTH 147 - Anthropology and the Anthropocene (5)

Looks at how humans have lived with their environments in other times and places; the long-distance transfers of humans and other animals, as well as plants and microorganisms; and how we can best live in the Anthropocene.

Prerequisite: Prerequisite(s): ANTH 2.

ANTH 148 - Gender and Global Development (5)

Uses the critical tools of feminist theory and cultural anthropology to look at how global development discourses and institutions mobilize, reinforce, and challenge systems of gender-based inequality. Topics

include non-governmental organizations (NGOs), development practice, microcredit, and technocrat cultures. (Formerly Gender and Development.)

ANTH 149 - Anthropology of Activism (5)

Examining activism from an anthropological perspective, students look at beliefs, ideals, and practices of social movements and those involved in them. Taking a procedural approach, course focuses on how things happen in unexpected ways, and examines activism as a collective matter.

ANTH 150 - Communicating Anthropology (5)

Encourages anthropology majors to explore different means of communicating anthropology with much attention to individual writing and presentation skills. Intensive work on library research; recognizing, comparing, and making arguments; and analyzing ethnographies, articles, reviews, and films.

Prerequisite: Prerequisite(s): two of the following courses: ANTH 1, ANTH 2, or ANTH 3; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to sophomore and junior anthropology majors.

ANTH 151 - Workshop in Ethnography (5)

Through demonstration, practice, and participation, acquire skills in collecting and analyzing cultural data. Work with members of other cultures and with each other to learn to identify significant cultural patterns. Lectures and readings provide added perspective and a theoretical base.

Prerequisite: Prerequisite(s): ANTH 2.

ANTH 152 - Survey of Cultural Anthropological Theory (5)

Major figures, ideas, and writings in 19th- and 20th-century cultural anthropology surveyed. Students cannot receive credit for this course and ANTH 252.

Prerequisite: Prerequisite(s): ANTH 2 and satisfaction of the Entry Level Writing and Composition requirements; enrollment is restricted to anthropology majors.

ANTH 153 - Medicine and Colonialism (5)

Addresses the overlapping relationship between medicine and colonialism in the 19th century, with attention to post-colonial theory and contemporary studies of post-colonial medical pluralism in the 20th century.

Prerequisite: Prerequisite(s): ANTH 2 and ANTH 134.

ANTH 157 - Modernity and Its Others (5)

Beginning with the conquest of the Americas, considers how Western thinkers have explained seemingly irrational beliefs and practices (e.g. human sacrifice, witchcraft, prophetic dreams, shamanism, spirit

worlds), and asks how we might better understand notions of reality very different from our own.

ANTH 158 - Feminist Ethnographies (5)

Considers the relationship between anthropology and feminism. Provides historical perspective on gender inequalities in the discipline as well as the emergence of feminist anthropology. Students read and engage with examples of feminist ethnography from a variety of regions and subfields.

ANTH 159 - Race and Anthropology (5)

Examines concept of race in anthropology. Begins with histories of race in anthropology; turns to contemporary analysis of racism, identity formation, and diaspora; and concludes with current debates on the validity of race as an object of analysis.

ANTH 160 - Reproductive and Population Politics (5)

Examines reproductive and population politics across the globe, with a focus on feminist and ethnographic analyses of the stakes of various actors, from states to religious bodies to non-governmental organizations, in questions of who reproduces and in what circumstances.

ANTH 161 - The Anthropology of Food (5)

Critically examines food as a fundamental aspect of social and cultural life and key concept in the development of anthropological theory and methods. Topics include: power relationships; community building; exchange and reciprocity; symbolism; cultural rules and rituals; globalization; and memory.

ANTH 161S - Anthropology of Food, Abroad (5)

Food as a fundamental aspect of social/cultural life and key concept in development of anthropological theory and methods. Studying abroad, investigations are grounded in local ethnographic context to learn how anthropologists study food, practice methods, and understand food's local importance.

ANTH 162 - Anthropology of Displaced Persons (5)

Examines the causes, consequences, forms, and experiences of human movement, displacement, and abandonment. Topics include: migration, refugees, forced displacement, environmental displacement, tourism, transnational communities, and other displaced populations.

ANTH 163 - Kinship (5)

Provides a critical survey of debates, old and new, in the study of kinship. Readings range from classical treatments to recent reformulations that use kinship as a lens for exploring intimacy, memory, futurity, embodiment, commodification, and power. Students cannot receive credit for this course and ANTH 263.

ANTH 164 - The Anthropology of Dance (5)

An intense reading seminar which critically reviews anthropological works in dance ethnography and dance theory. Recommended for anthropology majors.

Prerequisite: Prerequisite(s): ANTH 2.

ANTH 166 - States, Bureaucracies, and Other Cosmological Propositions (5)

Investigates the cosmologies of states and bureaucracies and the practices through which officials or rulers seek to produce order, knowledge, or stability. Looks at paperwork, nationalist and court rituals, practices of mapping and classification, forms of citizenship.

ANTH 170 - History of Archaeological Theory (5)

Historical review of prehistoric archaeology from antiquarianism to the present. Emphasis on development of archaeological theory and its relation to evolutionary and anthropological theory. Students cannot receive credit for this course and ANTH 270.

Prerequisite: Prerequisite(s): ANTH 3; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to anthropology and Earth sciences/anthropology combined majors. Recommended for juniors.

ANTH 171 - Materials and Methods in Historical Archaeology (5)

In this intensive, hands-on course, students learn the step-by-step processes involved in conducting laboratory research on historic artifacts. Students study the ins and outs of analyzing, cataloging, and dating historic artifacts.

Prerequisite: Prerequisite(s): ANTH 3.

ANTH 172 - Archaeological Research Design (5)

Develops practical skills for connecting archaeological theory and methods to grant writing, final reports and presentations. Examines elements of good research design, including the logic of scientific inquiry, ethics, project conceptualization, measurement, sampling, data analysis, and effective writing.

Prerequisite: Prerequisite(s): ANTH 3. Enrollment is restricted to anthropology majors.

ANTH 173 - Origins of Farming (5)

Survey of the ecological and archaeological evidence for the origins of plant and animal domestication in Africa, Eurasia, and the Americas. Discussion will center on the preconditions of this drastic alteration in human ecology and its consequences in transforming human societies. Open to nonmajors. Students cannot receive credit for this course and ANTH 273.

Prerequisite: Enrollment is restricted to juniors and seniors.

ANTH 174 - Origins of Complex Societies (5)

Deals with evidence and theories concerning the origins of complex society; the transition from egalitarian, foraging societies to the hierarchical, economically specialized societies often referred to as civilizations. Focuses on both Old World and New World cultures. Students cannot receive credit for this course and ANTH 174.

Prerequisite: Prerequisite(s): ANTH 3.

ANTH 175 - African Archaeology (5)

Introduces the evolution of African kingdoms and states from the emergence of farming communities to initial contact with Europe. Particular attention paid to the origins of social inequality and the evolution of centralized polities. Students cannot receive credit for this course and ANTH 275. (Formerly African Complex Societies.)

Prerequisite: Prerequisite(s): ANTH 3.

ANTH 176A - North American Archaeology (5)

Development of Native cultures in North America. Topics include peopling of the New World, early foragers, spread of agriculture and complex societies in the Southwest and Eastern Woodlands, and review of cultural developments in the West and Far North.

Prerequisite: Prerequisite(s): ANTH 3 or consent of instructor.

ANTH 176B - Meso-American Archaeology (5)

Review of the archaeological and ethnohistorical evidence for the origins and development of pre-Columbian civilizations in Meso-America including the Olmec, Maya, Zapotec, Mixtec Teotihuacan, Toltec, Tarascan, and Aztec. Students cannot receive credit for this course and ANTH 276B.

Prerequisite: Prerequisite(s): ANTH 3.

ANTH 176C - Archaeology of the American Southwest (5)

Outlines the development of native cultures in the American Southwest from Paleo-Indian times (Ca. 11,500 B.C.) through early European contact (ca. A.D. 1600). Topics include the greater environment; early foraging culture; the development of agriculture and village life; the emergence and decline of regional alliances; abandonment and reorganization; and changes in social organization, external relations, and trade.

Prerequisite: Prerequisite(s): ANTH 3 and ANTH 176A.

ANTH 176D - Colonial Encounters in the Americas (5)

Uses archaeological case studies to explore processes of cultural confrontation, resistance, and transformation among Native American groups in the wake of

European colonial expansion in the Western Hemisphere during the late 15th through mid-19th centuries.

Prerequisite: Prerequisite(s): ANTH 2 and ANTH 3.

ANTH 176E - Archaeology of the Pacific Northwest (5)

Explores some of the important issues surrounding the anthropological and archaeological study of the Pacific Northwest Coast--a roughly 1,800-kilometer-long shoreline that stretches from Yakutat Bay in Alaska to Cape Mendocino in California.

Prerequisite: Prerequisite(s): ANTH 3.

ANTH 176F - California Archaeology (5)

Introduces the Native peoples of California from an archaeological perspective. Covering the past 13,000 years, a variety of geographic and temporal settings are examined as well as current research in California archaeology.

Prerequisite: Prerequisite(s): ANTH 3.

ANTH 177 - Environmental Archaeology (5)

Introduces students to methods and theories in the study of past human-environment interactions. Examines the use of archaeological environmental data (geological, botanical, faunal, chemical) and explores topics, such as megafaunal extinctions, domestication, and human impacts on environments.

ANTH 178 - Historical Archaeology: A Global Perspective (5)

Introduces the archaeology of European colonialism and the early-modern world. Topics include historical archaeological methods; the nature of European colonial expansion in New and Old Worlds; culture contact and change; and power and resistance in colonial societies. Students cannot receive credit for this course and ANTH 278.

ANTH 180 - Ceramic Analysis in Archaeology (5)

Focuses on theories and techniques used by archaeologists to bridge the gap between the recovery of ceramic materials and their interpretation within cultural contexts. Topics include the origins of pottery, production methods, classification and typology, seriation, functional analysis, materials analysis and description, organization of production, trade, and the analysis of style. Students cannot receive credit for this course and ANTH 280.

Prerequisite: Prerequisite(s): ANTH 3. Concurrent enrollment in ANTH 180L required. Enrollment is restricted to anthropology majors.

ANTH 180L - Ceramic Analysis Laboratory (2)

Practicum in ceramic materials analysis and description. Students perform material experiments in materials selection and processing, hand-building techniques, and

open-pit firing. Demonstrations of standard techniques of attribute analysis and the mineralogical and chemical characterization of ceramic materials are presented. Students cannot receive credit for this course and ANTH 280L.

Prerequisite: Prerequisite(s): ANTH 3. Concurrent enrollment in ANTH 180 required. Enrollment is restricted to anthropology majors.

ANTH 181X - Special Topics in Archaeology (5)

Taught annually on a rotating basis by various faculty members. Precise focus of each year's course varies according to the instructor and is announced by the department.

Prerequisite: Prerequisite(s): ANTH 3.

ANTH 182A - Lithic Technology (5)

Introduction to lithic and ceramic analysis in archaeology. Includes lab analysis, discussions of classification and typology, and exploration of the concept of style as it relates to ceramics and lithics in archaeology.

Prerequisite: Prerequisite(s): ANTH 3.

ANTH 184 - Zooarchaeology (5)

Lectures and seminar on archaeological faunal analysis. Topics include mammalian evolution and osteology, vertebrate taphonomy, reconstruction of human diet from faunal remains, foraging strategy theory, data collection and management, and methods of quantitative analysis. Students cannot receive credit for this course and ANTH 284.

Prerequisite: Prerequisite(s): ANTH 3; concurrent enrollment in ANTH 184L is required.

ANTH 184L - Zooarchaeology Laboratory (2)

Practical laboratory in archaeological analysis, with demonstrations and exercises on human-caused modifications to animal bones and non-human modifications to animal bones.

Prerequisite: Prerequisite(s): ANTH 3 and concurrent enrollment in ANTH 184. Enrollment is restricted to anthropology majors and combined Earth sciences/anthropology majors.

ANTH 185 - Osteology of Mammals, Birds, and Fish (5)

Practicum in archaeological faunal analysis. Students learn to identify bones of all larger mammal species of central California plus selected bird and fish species. Students cannot receive credit for this course and ANTH 285. Prerequisite(s): ANTH 184 or ANTH 102 or BIOL 138 BIOL 138L or EART 100 or ENVS 105 ENVS 105L, and permission of instructor.

ANTH 187 - Cultural Heritage in Colonial Contexts (5)

Critical examination of the definitions of cultural heritage, its development as a concept, and the various laws, charters, and conventions that shape our management of the past in the present. The focus is on heritage in comparative colonial contexts.

ANTH 187B - Cultural Resource Management (5)

Explores how the past is managed or cared for in the present, especially in the context of the United States.

Prerequisite: Prerequisite(s): ANTH 3.

ANTH 188A - Practicum in Archaeology A (2)

Introduces practical skills in archaeological materials identification of stone, shell, bone, and other materials, curation, and database management. Students receive entry-level training with once-weekly class meetings and five hours per week of hands-on work. Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3, and instructor consent. All three courses in sequence (ANTH 188A, ANTH 188B, ANTH 188C) required to count for the anthropology major or minor.

ANTH 188B - Practicum in Archaeology B (2)

Introduces practical skills in archaeological materials identification of stone, shell, bone, and other materials, curation, and database management. Students receive entry-level training with once-weekly class meetings and five hours per week of hands-on work.

Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3, and instructor consent. All three courses in sequence (ANTH 188A, ANTH 188B, ANTH 188C) required to count for the anthropology major or minor.

ANTH 188C - Practicum in Archaeology C (2)

Two-credit course introducing practical skills in archaeological materials identification of stone, shell, bone, and other materials; curation; and database management. Students receive entry-level training with once-weekly class meetings and five hours per week of hands-on work. Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3. All three courses in sequence (ANTH 188A, ANTH 188B, ANTH 188C) required to count for the anthropology major or minor.

ANTH 189 - Archaeology Field Methods (5)

Lecture, laboratory, and fieldwork sessions on archaeological field methods including survey, mapping, excavation, record and database maintenance, artifact accessioning, curation, and analysis on the UCSC campus. Students attend lectures/laboratories two evenings each week and do fieldwork all day on Saturdays. Enrollment by instructor consent.

Prerequisite(s): course 3 and application letter. Students who have done no previous fieldwork in archaeology have priority.

ANTH 190X - Special topics in Biological Anthropology

(5)

Taught annually on a rotating basis by various faculty members. Precise focus of each year's course varies according to the instructor and is announced by the department. (Formerly Special topics in Archaeology-Physical Anthropology.)

Prerequisite: Prerequisite(s): ANTH 1.

ANTH 194A - Anthropology of Dead Persons (5)

Explores the cultural meanings of dead bodies and dead persons, including memorialization; the body in the United States legal system; cadavers in education and research; dead persons in mass disasters and human-rights cases; and repatriation of the dead.

Prerequisite(s): Satisfaction of the Entry Level Writing and Composition requirements, and ANTH 1, ANTH 2, and ANTH 3. Enrollment restricted to senior anthropology and Earth sciences/Anthropology combined majors. Enrollment by permission of instructor.

ANTH 194B - Chimpanzees: Biology, Behavior, and Evolution (5)

Explores studies on wild and captive chimpanzees with reference to other apes and humans. Topics include sociality, tool using, locomotion, traditions, and life history; social and physical dimensions of growth and development; language studies, genetics, and applications to human evolution.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3; satisfaction of the Entry Level Writing and Composition requirement. Enrollment is restricted to senior anthropology majors.

ANTH 194C - Feminist Anthropology (5)

Considers feminist perspectives on the human past, archaeologists' perspectives on feminist theory, and the impact of gender, feminist, and critical social theory on archaeology as a profession. Students cannot receive credit for this course and ANTH 279.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3, and satisfaction of the Entry Level Writing and Composition requirement. Enrollment restricted to senior anthropology and Earth sciences/Anthropology combined majors.

ANTH 194D - Tribes/Castes/Women (5)

Examines historical constructions and contemporary deployments of the categories that have structured popular and anthropological understandings of social life in South Asia, particularly those of tribe, caste, and women. Students gain familiarity with the mobilization of these categories in contemporary political movements across India.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3. Satisfaction of the Entry Level Writing and

Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 194E - Belief (5)

Focuses on problems and opportunities raised by the concept of belief. Students work to develop an anthropological understanding of belief as practiced, then put it to use in analyzing episodes from the NPR series *This I Believe*.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3 and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 194F - Memory (5)

Intensive and fast-paced seminar focusing on theoretical and ethnographic studies of memory as a means for dealing with the past. Examines how ordinary people and societies have coped with the past through acts of selective remembering and forgetting.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3; satisfaction of the Entry Level Writing and Composition requirement. Enrollment is restricted to senior anthropology majors.

ANTH 194G - Politics and Secularism (5)

Examines secularism as political doctrine and practice of government. Topics include: transformation of religion by secularization; forms of inclusion/exclusion enacted by secularism; relationship between secularism and colonial rule. Case studies drawn from Europe, South Asia, United States, and the Middle East.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3, and satisfaction of the Entry Level Writing and Composition requirements; enrollment is restricted to senior anthropology majors.

ANTH 194H - Paleoanthropology (5)

Detailed overview of the evidence for the origin and evolution of humans with emphasis on reconstructing the paleobiology of extinct hominids. Discussion of individual groups of ancient hominids from the Miocene apes to anatomically modern humans.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; ANTH 1, ANTH 2, and ANTH 3. Enrollment is restricted to senior anthropology and Earth sciences/Anthropology combined majors.

ANTH 194I - Consumption and Consumerism (5)

Investigates cultural analysis of consumer society, commodities, and consumer practices. Students develop their own research projects. Themes include: critiques of consumer society; symbolic analysis of goods, consumption as resistance, anthropologies of marketing, culture jamming; consumption and (post) colonialism.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3; satisfaction of the Entry Level Writing and Composition requirement. Enrollment is restricted to senior anthropology majors.

ANTH 194J - Histories of Forests and Other Wild Places (5)

Wild Nature has a history. This class offers tools for understanding the social and natural construction of wild nature. We will learn to read rural landscapes--ethnographically, biologically, historically, creatively, and politically.

Prerequisite: Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 194K - Reading Ethnographies (5)

Explores issues in the representation of culture through reading and discussing ethnographies. Recent experimental ethnographies open topics including the relation between fieldwork and writing, textual strategies, and the politics of ethnographic writing and research.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 194L - Archaeology of the African Diaspora (5)

Senior seminar on African diaspora archaeology. Draws on archaeological, historical, and anthropological perspectives to examine the cultural, social, economic, and political lives of Africans and their descendants in the New World and West Africa from the 15th through 19th centuries.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, ANTH 3 and an upper-division course in archaeology; satisfaction of the Entry Level Writing and Composition requirement. Enrollment is restricted to senior anthropology majors.

ANTH 194M - Medical Anthropology (5)

Focuses on critical issues in the social sciences of health and healing. Designed for students pursuing graduate work in medical anthropology and/or public health.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, ANTH 3, and ANTH 134; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 194N - Comparison of Cultures (5)

Seminar for upper-division students interested in theories and methodology of social and cultural anthropology. Devoted to critical discussion of different methods of comparison practiced in anthropology.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 194O - Masculinities (5)

Considers the social construction of men and masculinities in a variety of ethnohistorical contexts as well as the unique contribution enabled by anthropological methods, particularly ethnographic fieldwork, to the study of gender and power.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3 and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 194P - Space, Place, and Culture (5)

Examines ways anthropologists have studied relationship between space, place, and culture. Covers early formulations acknowledging people in different cultural contexts ascribe particular meanings to places and to the concept of space and then traces the ways these questions have come to the fore in more recent scholarship.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 194Q - Race, Ethnicity, Nation (5)

Provides students with theoretical and methodological approaches to studying the relationships between race, ethnicity, and nation, with a comparative focus on the United States, Latin America, and Europe. Students use ethnographic methods and/or discourse analysis to develop individual research projects.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and ANTH 1, ANTH 2, and ANTH 3. Enrollment is restricted to senior anthropology majors.

ANTH 194R - Religion, Gender, Sexuality (5)

Examines religion in relation to gender and sexuality. Examines how gender, sexuality, and religion intersect in notions of civilization, progress, and modernity in the contemporary and colonial periods. Particular attention paid to Islam, Christianity, and Hinduism.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and ANTH 1, ANTH 2, and ANTH 3. Enrollment is restricted to senior anthropology majors.

ANTH 194S - Hearing Culture: The Anthropology of Sound (5)

Explores relationships between culture and acoustic worlds--environmental, verbal, and musical--within which we live. How sound is shaped by human belief

and practice and the role sound plays in cultural and social life, both past and present.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 194T - Poverty and Inequality (5)

Through ethnographies about homelessness, food deprivation, and unemployment, examines the institutions through which poverty is recognized, the systems of morality shaping debates about need and appropriate behavior, and the effects of community responses to poverty.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; ANTH 1, ANTH 2, and ANTH 3. Enrollment is restricted to senior anthropology majors.

ANTH 194U - Environmental Anthropology: Nature, Culture, Politics (5)

Presents key readings in environmental anthropology focusing on environmental conflicts. Students guided in developing research paper on a society environment topic of their choice. Class is writing intensive with in-class discussion and final presentations.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 194V - Who Owns the Past? Ethical and Political Dimensions of Contemporary Archaeology (5)

Considers the various stakeholders in archaeological practice. Students identify and evaluate the ethical and political issues involved in the study, interpretation, presentation, and conservation of the archaeological past through weekly readings, discussions, and case studies.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3, and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors and Earth sciences and anthropology combined majors.

ANTH 194W - The Anthropology of Social Movements (5)

Focuses on the anthropology of social movements, especially the impact that global capital provokes on peripheral Latin American societies and the ways these respond through the organizing of social movements validating alternative worldviews that coalesce around issues pertaining to indigeneity, the environment, gender, and concepts of human dignity.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3, and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 194X - Women in Politics: A Third World Perspective (5)

Focuses cross-culturally on the status of women in the Third World and their formal and informal participation in politics. Also discussed are organized efforts, through participation in both national and autonomous movements, for women's rights.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 194Y - Archaeologies of Space and Landscape (5)

Examines contemporary archaeological perspectives on space and landscape. Focuses on how archaeology can contribute to an appreciation of the economic, cultural, and political factors that shape human perception, use, and construction of the physical world.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3; an upper-division archaeology course; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 194Z - Emerging Worlds (5)

Addresses encounters and contact zones between cultures that give rise to emerging worlds. Emerging worlds refers to the cultural heterogeneity and diversity created within world-making networks, geographies, innovations, and meanings, moving us beyond ideas about vanishing, autonomous cultures.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3, and satisfaction of the Entry Level Writing and Composition requirements; enrollment is restricted to senior anthropology majors.

ANTH 195A - Senior Thesis Seminar (5)

Covers the basics like the planning and organization of research; writing research proposals; the publication and presentation of scientific research results; the recapitulation of laboratory methods; and intensification of specific recent research discussions in anthropology. Prerequisite(s): ANTH 1 and ANTH 107, and either ANTH 101, or ANTH 104, or ANTH 105. Enrollment is restricted to senior anthropology majors and by permission of the instructor. Students cannot receive credit for this course and ANTH 295A.

ANTH 195B - Senior Thesis Research (3)

Students conduct the research projects they proposed in ANTH 195A. Students have weekly group meetings with the research supervisor.

Prerequisite: Prerequisite(s): ANTH 195A. Enrollment is restricted to senior anthropology majors.

ANTH 195C - Senior Thesis Capstone (3)

Students finalize their research projects and write their thesis in the form of a research paper that is in publishable form so it can be submitted to a relevant journal or conference.

Prerequisite: Prerequisite(s): ANTH 195B. Enrollment is restricted to senior anthropology majors.

ANTH 195S - Senior Thesis (5)

Produce a quality research paper focusing on an anthropological topic of interest to you and that builds upon your experience in the major. Develop effective writing strategies and research skills to assist in professional development.

Prerequisite: Prerequisite(s): Satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to anthropology majors. Enrollment is by permission of the instructor.

ANTH 196C - Traveling Cultures (5)

Considers why traveling cultures have posed a threat, often met with violence, to regimes of rule, particularly modern nation-states. Also explores the unique problems that conducting research with mobile communities poses for the ethnographer.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; and ANTH 1, ANTH 2, and ANTH 3. Enrollment is restricted to senior anthropology majors.

ANTH 196D - Food and Medicine (5)

Examines the intersections of food, medicine, and culture with special focus on nutrition, cultural knowledge, industrial foodways, genetically modified organisms (GMOs), ethnopharmacology, food safety, and biosecurity.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; and ANTH 1, ANTH 2, and ANTH 3.

ANTH 196E - Pastoralists Past and Present (5)

Senior seminar treating the history and modern situation of the world's herding peoples. Readings draw on ethnographic, historical, archaeological, and ecological literatures. Students are coached in writing a 25-page research paper on a topic related to this theme.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; and ANTH 1, ANTH 2, and ANTH 3. Enrollment is restricted to senior anthropology majors.

ANTH 196F - The Anthropology of Things: Gift, Sign, Commodity, Tool (5)

Examines some approaches used by anthropologists and other thinkers to bring things into focus: as gifts, signs, commodities, and tools. Explores whether, by taking

things seriously, anthropologists might learn to be empirical in new ways. Students cannot receive credit for this course and ANTH 225.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; and ANTH 1, ANTH 2, and ANTH 3. Enrollment is restricted to senior anthropology majors.

ANTH 196G - Queer Worlds: Sexuality, Intimacy and Power in Contemporary Ethnography (5)

How do we read, write, and recognize the queer body? How is it marked in politics, in intimate spaces, and in the ethnographic text? Drawing on ethnic studies and black queer studies, this seminar engages contemporary anthropological approaches to sexuality.

Prerequisite: Prerequisite(s): Satisfaction of the Entry Level Writing and Composition requirements; and ANTH 1, ANTH 2, and ANTH 3. Enrollment is restricted to senior anthropology majors.

ANTH 196H - Global History and the Longue Duree (5)

Emerging anthropological approaches to global history, with an eye to historical frameworks of 500 years or more. Course requires engagement with advanced theoretical concepts and challenging historical texts. Intensive seminar format. Students cannot receive credit for this course and ANTH 269.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; and ANTH 1, ANTH 2, and ANTH 3. Enrollment is restricted to senior anthropology majors.

ANTH 196I - Hard Problems (5)

Explores interrelated, long-standing, difficult problems in human theory. Considers why these problems are so forbidding; what makes them significant; why they are hard; and whether hard problems come in different varieties or strengths.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3; and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 196J - Imagining America (5)

Explores sites of heritage and the politics of cultural memory in the American context. Focuses on public representation and interpretation at places where multiple views of history come into conflict.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3 and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 196K - Settler Colonialism (5)

Provides seniors in anthropology a capstone experience. Settler colonialism is an all-encompassing, land-centered project that revolves around the elimination of

the Native. This course revolves around a series of ethnographies and histories about settler colonialism.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3 and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 196L - Archaeology of the American Southwest (5)

Outlines the development of native cultures in the American Southwest from Paleo-Indian times (ca. 11,500 B.C.) through early European Contact (ca. A.D. 1600).

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3 and satisfaction of the Entry Level Writing and Composition requirements. ANTH 178 is strongly recommended. Enrollment is restricted to senior anthropology and Earth sciences/Antropology combined majors.

ANTH 196M - Modernity and its Others (5)

Examines how Western modernity has interpreted various forms of radical difference, beginning with the 15th-century conquest of the New World. Considers historical and contemporary examples of how Western thinkers have explained irrational beliefs and practices (e.g., witchcraft, human sacrifice, devil-worship).

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3; and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 196N - The Body, Narrative, and Creative Practice (5)

Seminar proposing that arts, such as dance, weaving, and creative writing, and the cultivation of more traditional scholarly works can and should be pursued together. The pursuit of such research-creation is a social justice practice that values many ways of knowing and can lead to emotionally compelling and politically effective communication. Students are introduced to concepts and debates from crip theory, feminist, queer, and critical race studies, performance studies, and narrative theory. They also participate in workshops using body-centered writing, moment work, visual arts, and embodied listening to produce creation-scholarship in a medium of their choice. Taught in conjunction with ANTH 296N; students cannot receive credit for this course and ANTH 296N. Prerequisite(s): Satisfaction of the Entry Level Writing and Composition requirements; and ANTH 1, ANTH 2, and ANTH 3. Enrollment is restricted to senior anthropology majors and by permission of instructor.

ANTH 196O - Gender and Politics (5)

Analyzes how gender defines those who participate in the public sphere and circumscribes their actions, with

particular attention to individuals who identify as female and are engaged in political activities.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3; and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 196P - Disability and Difference (5)

Challenges limiting conceptions of what it means to be human in a range of arenas, from our understandings of culture to our conceptions of built space to our assumptions about citizenship, asking why disability makes people nervous.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3; and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior Anthropology majors.

ANTH 196Q - Property (5)

Analyzes and denaturalizes property as a key aspect of social life and power relations. Students develop their own research projects. Themes include: concepts of property; politics of private property, home and rent; racialized dispossession; and cultural appropriation.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3, and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 196R - Design Anthropology (5)

Senior seminar introduces students to principles, approaches, methods, and professional dimensions of design anthropology. Emphasizes collaborative methods and development of new methods for ethnographic research, analysis, and communication. Through a quarter-long research project, students develop professional skills and portfolio materials. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to senior anthropology majors and is by permission. Students cannot receive credit for this course and ANTH 208C.

ANTH 196T - Archaeology of Technology (5)

Examines approaches mobilized by archaeologists to reconstruct ancient technologies and to explore how technological practices are implicated in processes of social formation and change. Approaches that engage technology as embodied technique and situated cultural practice are emphasized.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3, and satisfaction of the Entry Level Writing and Composition requirement. Enrollment is restricted to senior anthropology and Earth sciences/Anthropology combined majors.

ANTH 196U - Historical Anthropology (5)

Provides seniors in anthropology a capstone experience. Involves critical engagement with archaeological, ethnohistorical, ethnographic, and oral line of evidence to evaluate the outcomes of indigenous people's interactions with different forms of missionary, settler, and mercantile colonialism.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3, and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology and Earth sciences/Anthropology combined majors.

ANTH 196V - Radical Craft (5)

Examines how making and artisanship can be harnessed to solve challenging social, political, and environmental issues. Examines anthropology's historical role in creating a dichotomy between "art" and "craft," as well as contemporary ethnographic work that examines craft practices from weaving to pottery to the creation of mask trees for mutual aid during a time of global pandemic. Weekly topics include research-creation, "craftivism," speculative design, Indigenous art worlds, and responses to the environmental and social ravages of fast fashion. Students select a pressing social problem and then complete a hands-on, craft-based project of their choice; no prior skills or talents are required.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3, and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors.

ANTH 196W - Anthropology of Weather and Exposure (5)

Students discuss how differing approaches to weather and exposure generate different approaches to culture, science, and politics; identify key moments in cultural anthropology's engagement with environmental and climactic questions; and delineate new areas of research.

Prerequisite: Prerequisite(s): ANTH 1, ANTH 2, and ANTH 3. Satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior Anthropology majors.

ANTH 197 - Laboratory Tutorial (5)

Independent laboratory research on selected topics in archeology and physical anthropology. Interview with appropriate instructor required.

ANTH 197F - Laboratory Tutorial (2)

Independent laboratory research on selected topics in archaeology and physical anthropology. Interview with appropriate instructor required. Enrollment restricted to anthropology majors.

ANTH 198 - Independent Field Study (5)

Off-campus field study. Students submit petition to sponsoring agency.

ANTH 198F - Ind Field Study (2)

Ind Field Study

ANTH 198G - Independent Field Study (3)

Off-campus field study. Students submit petition to sponsoring agency.

ANTH 199 - Tutorial (5)

Students submit petition to sponsoring agency.

ANTH 199F - Tutorial (2)

Tutorial

Graduate

ANTH 200 - Theoretical Foundations of Physical Anthropological Research (5)

Provides historical and theoretical foundation of physical anthropology. Grounds students in the changing frameworks and perspectives during the last 150 years regarding questions in human biology, evolution, nature, and culture, by examining texts and scientific journals.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 200A - Cultural Graduate Core Course (5)

Introduces history, ethnography, and theory of cultural anthropology with emphasis on awareness of construction of anthropological canon and areas of conflict within it, leading up to contemporary debates on a variety of issues. Two-term course: students must enroll in both quarters.

Prerequisite: Enrollment is restricted to anthropology graduate students.

ANTH 200B - Cultural Graduate Core Course (5)

Introduces history, ethnography, and theory of cultural anthropology with emphasis on awareness of construction of anthropological canon and areas of conflict within it, leading up to contemporary debates on a variety of issues. Multiple-term course; students must enroll in both quarters to receive academic credit.

Prerequisite: Enrollment is restricted to anthropology graduate students.

ANTH 201 - Human Evolution (5)

Provides an overview of the first five million years of human evolution and a framework for studying evolution and reconstructing the human past. Emphasizes that all lines of evidence must be included:

hominid fossils, archaeology, paleoecology, and molecular data.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 202A - Skeletal Biology (5)

Focuses on human skeletal biology, the identification of elements, physiology of hard tissue formation, growth, and maintenance. Students are required to show competence in skeletal identification to pass this class.

Prerequisite: Prerequisite(s): ANTH 102A or permission of instructor. Enrollment is restricted to graduate students.

ANTH 208A - Ethnographic Practice (5)

Introduces graduate students to the practice of fieldwork. Students design and carry out a quarter-long research project exploring a range of methods and producing an analytical case study. Readings and discussion emphasize both methodological critique and successful implementation.

Prerequisite: Enrollment is restricted to anthropology graduate students.

ANTH 208C - Design Anthropology (5)

Introduces the principles, approaches, methods, and professional dimensions of design anthropology. Emphasis is on collaborative methods and development of new methods for ethnographic research, analysis, and communication. Through a quarter-long research project, students develop non-academic professional skills, including portfolio materials. Students cannot receive credit for this course and ANTH 196R.

Prerequisite: Open to second-year graduate students and higher (first-year students are required to take ANTH 208A).

ANTH 210R - Religion in American Politics and Culture (5)

Introduces dominant discourses about major American religions and their role in public life with particular attention to intersecting differences, such as race, sex/gender, and disability and to shifting religious/political boundaries. Visual and textual media, political commentary, and popular ethnographies are analyzed.

Prerequisite: Enrollment restricted to graduate students.

ANTH 211 - Human Ecology (5)

Reviews environmental, physiological, behavioral, and cultural ways that humans interact with their physical surroundings. Effects of human culture on the environment, and of the environment on the shape of human culture will be emphasized.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 212 - The Human Life Cycle (5)

Examines the human life cycle using an evolutionary framework. Examines key aspects of the human life stages using findings and concepts from developmental biology, physiology, nutrition, evolutionary ecology, and life history theory. These stages include: gestation, infancy, childhood, juvenile and adolescent periods, and senescence. Each stage of the life cycle is compared and contrasted with the developmental life of nonhuman primates and mammals. Other related topics include developmental plasticity and epigenetics.

Prerequisite: Enrollment restricted to graduate students.

ANTH 214 - Culture and Power (5)

Takes the many strands of scholarship on power relations between individuals within the context of institutions and conceptualizes how individuals come to exist through power relations, and how power is fundamental to social being.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 216 - Methods in Biological Anthropology (5)

Deepens students' understanding of methods applied in biological anthropology research. (Formerly Methods in Physical Anthropology.)

Prerequisite: Enrollment is restricted to graduate students.

ANTH 219 - Religions, States, Secularities (5)

Examines theories and case studies at the intersection of religion, states, and secularity. Topics include: secularism as a political doctrine; state and social regulation of religion and religious normativity; secular cultural practices; and lines of secular/religious entanglement and conflict.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 220 - Cartographies of Culture (5)

Examines, theoretically and ethnographically, how societies and their cultures are created and reified through spatializing practices, including border-making, mapping, landscape aesthetics, globalization, time/history/memory, movement, and other locating activities.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 224 - Anthropology of Secularism (5)

Examines secularism as a practice of government with a concomitant set of ethics. Topics include: the notion of religion necessary for secularism; forms of moral and political inclusion/exclusion enacted by secular governance; and the kind of ethical subject secularism engenders. (Formerly course 255.)

Prerequisite: Enrollment is restricted to graduate students.

ANTH 225 - The Anthropology of Things: Sign, Gift, Commodity, Tool (5)

Examines some approaches used by anthropologists and other thinkers to bring things into focus: as gifts, signs, commodities, and tools. Explores whether, by taking things seriously, anthropologists might learn to be empirical in new ways. Students cannot receive credit for this course and ANTH 196F.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 228 - Grant Writing (5)

Devoted entirely to writing grant proposals. Students either work on their graduate education fellowships or their doctoral dissertation grants or both. Reading materials consist of granting agency documents plus examples of successful applications.

Prerequisite: Enrollment is restricted to anthropology graduate students.

ANTH 229 - Constructing Regions (5)

Discusses centrality of the idea of regions in studies of culture, the history of locating social theory, and debates about area studies. Students develop area of transregional bibliographies. Primarily for second- or third-year anthropology graduate students reading area literatures.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 230 - Bodies, Images, Screens (5)

Visuality as epistemology, image-consumption, and the political and representational possibilities stemming from digitization and the World Wide Web are increasingly important issues in the humane sciences. Offers historical and critical background and the possibility of hands-on practice using visual material in current research.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 231 - Intimacy and Affective Labor (5)

Examines recent work on the role of intimacy and affective labor in value production, political mobilization, and transnational capital linkages. Special attention given to how these terms are invoked to answer methodological and narrative concerns in ethnographic writing.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 232 - Bodies, Knowledge, Practice (5)

Contemporary social theory and science both focus on bodies as critical sites of inquiry and the production of knowledge. Explores these theoretical intersections and constructions of the body with new ethnographic works. Questions how race, gender, and culture are inscribed through bodily practice, imagery, and phenomenology.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 233 - Politics of Nature (5)

Advanced graduate seminar in environmental anthropology and science and technology studies, focusing on how nature is produced in the modern world and what political and practical significance this has in different contexts.

Prerequisite: Enrollment restricted to graduate students.

ANTH 234 - Feminist Anthropology (5)

Examines how feminist anthropology creates its objects of knowledge by focusing on questions of method and representation. The class reads across these traditional objects--women and gender, for example--to highlight the epistemological and political stakes of feminist work in anthropology.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 235 - Language and Culture (5)

An examination of language system and language use in relationship to cultural contexts of communication in Western and non-Western societies. Also examines the complex role which linguistic inquiry and models have played in broader theories of culture.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 238 - Advanced Topics in Cultural Anthropology (5)

Advanced topics in cultural anthropology. Current topics in anthropological theory and ethnography taught on a rotating basis by various faculty members. Precise focus of each seminar varies and will be announced by the department.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 241 - Social Justice (5)

Explores theoretical and methodological issues in the field of social justice with an emphasis on ethnographic analysis. Topics include: rights, obligations, justice, equality, compensation, and ethics.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 243 - Cultures of Capitalism (5)

Introduction to selected themes in political economy, stressing the work of Marx. Topics include the development of capitalism, colonialism, dependency, world systems, state formation, class consciousness, commodity fetishism, the nature of late capitalism, post-modernism, and the aesthetics of mass culture. Through political economy's interlocutors, raises questions about gender, race and ethnicity, and post-structuralist critiques.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 246 - Advanced Readings in Environmental Anthropology (5)

Survey of history and topics of contemporary interest in environmental anthropology, including political ecology, environmental history, ethnoecology, and multi-species anthropology. Additional advanced readings on contemporary environmental anthropology research. Students cannot receive credit for this course and ANTH 146.

Prerequisite: Enrollment is restricted to Anthropology graduate students or by permission of the instructor.

ANTH 247 - Critical Perspectives on Nutrition (5)

Examines emerging critiques on the science, communication, and practice of nutrition using multidisciplinary approaches. Special attention is given to the effects of modern nutrition.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 248 - Shadowy Dealings: Anthropology of Finance, Money, and Law (5)

Moves from a brief introduction to classic economic anthropology to recent work on histories of money and capitalism and cultures of financial markets, of accounting, and of legal and illegal trading practices

Prerequisite: Enrollment is restricted to graduate students.

ANTH 249 - Ecological Discourses (5)

Explores narratives of nature and their practical consequences in contests over wild places and their resources. Readings focus on the histories of forests and on analytic frameworks—ecology, social history, interpretation, cultural studies—with which to investigate competing constructions of the environment.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 252 - Survey of Cultural Anthropological Theory

(5)

Major figures, ideas, and writing in 19th- and 20th-century cultural anthropology surveyed. Students cannot receive credit for this course and ANTH 152.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 253 - Advanced Cultural Theory (5)

Examines cultural anthropology's interdisciplinary practices of knowledge formation at an advanced level. Drawing on various types of theoretical texts, the course elaborates on the relationship between culture and power, taking up different themes each time it is taught.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 254 - Medicine and Culture (5)

Surveys medicine cross-culturally, with particular focus on power, tradition, and theories of embodiment. Students cannot receive credit for this course and ANTH 134.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 255 - Regulating Religion/Sex (5)

First examines the regulation of religion and the normalization of sex/sexuality as parallel modalities of secular rule in the production of modern citizens and subjects. Ultimately inquires into the relationship between proper religion and proper sexuality in secular state formations. (Formerly course 259.)

Prerequisite: Enrollment is restricted to graduate students.

ANTH 258 - Experimental Cultures (5)

Addresses the use of experiments in anthropological research, theory, and writing.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 259 - Race in Theory and Ethnography (5)

Explores theoretical and methodological approaches to the cross-cultural study of race, with an emphasis on historical and ethnographic analysis. Main approaches considered include Foucauldian, Gramscian, diaspora theory, and the everyday poetics and politics of race. (Formerly course 246.)

Prerequisite: Enrollment is restricted to graduate students.

ANTH 260 - Anthropology of Freedom (5)

Examines conceptualizations and practices of freedom across geographical space and historical time. Readings drawn from Greek philosophy, Islamic, Christian, and

Buddhist religious traditions. Enlightenment philosophy, liberal and neo-thought, and contemporary ethnographies.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 261 - Replication, Mimesis, and Fakery (5)

Replicas, copies, and fakes anchored conceptually by the authentic/original enable the marketing of cultural commodities like arts and crafts, especially since the advent of photography. Course explores these commercial and signifying processes in the global art and culture market.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 262 - Documenting Cultures (5)

Follows the history of film and ethnography, media and methodology into the birth of cinema and anthropology in the early 20th century. Students learn theories of representation and media, conduct ethnographic research, and prepare a short film.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 263 - Kinship (5)

Provides a critical survey of debates, old and new, in the study of kinship. Readings range from classical treatments to recent reformulations that use kinship as a lens for exploring intimacy, memory, futurity, embodiment, commodification, and power. Students cannot receive credit for this course and ANTH 163.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 269 - Global History and the Longue Duree (5)

Emerging anthropological approaches to global history. Considers both 500-year and much longer historical frameworks. For the former, the evidence of documents, both European and non-European, is particularly important. For the latter, archaeological and evolutionary approaches are essential. Students cannot receive credit for this course and ANTH 196H.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 270 - History of Archaeology (5)

Historical review of prehistoric archaeology from antiquarianism to the present. Emphasis on the development of archaeological theory, its relation to evolutionary and anthropological theory, and themes ongoing over time. Students cannot receive credit for this course and ANTH 170.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 270A - Archaeology Graduate Core Course: History of Archaeological Theory (5)

Historical overview of archaeology, concentrating on archaeological practice in the English-speaking world from the late 19th through the 21st Centuries. Emphasis is on development of archaeological theory in its social context; its relation to evolutionary and anthropological theory; and themes ongoing over time. Students cannot receive credit for this course and ANTH 270.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 270B - Current Directions in Archaeological Theory (5)

Provides an in-depth understanding of current trends in archaeological thought, and enables students to place issues of archaeological interpretation into broader historical and theoretical frameworks. This course is a follow-up to ANTH 270, but not a substitute.

Prerequisite: Prerequisite(s): ANTH 270A. Enrollment is restricted to graduate students.

ANTH 272 - Advanced Archaeological Research (5)

Introduces graduate students to archaeological research design. Topics include: middle range theory; multistage research strategies; sampling strategies and appropriate field methodology; and issues specific to particular scales of archaeological analysis (artifact, household, site, region).

Prerequisite: Enrollment is restricted to graduate students.

ANTH 273 - Origins of Farming (5)

Survey of the ecological and archaeological evidence for the origins of plant and animal domestication in Africa, Eurasia, and the Americas. Discussion will center on the preconditions of this drastic alteration in human ecology and its consequences in transforming human societies. Students cannot receive credit for this course and ANTH 173.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 274 - Origins of Complex Societies (5)

The origins of complex society: the transition from egalitarian foraging societies to the hierarchical, economically specialized societies often referred to as states or civilizations. Focuses on both Old World and New World cultures. Students may not receive credit for this course and ANTH 174.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 275 - Tutorial in African Archaeology (5)

Graduate tutorial on the archaeology of precolonial African kingdoms and states. Particular attention paid

toward the origins of social inequality and the evolution of centralized politics. Students cannot receive credit for this course and ANTH 175.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 276A - Advanced Topics in North American Archaeology (5)

In-depth examination of development of Native cultures in North America from end of last ice age to time of European contact. Focuses on specific regional trajectories and problems of social change.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 276B - Mesoamerican Archaeology (5)

Examines the pre-Columbian cultures of Mesoamerica and reviews the archaeological and ethnohistorical evidence related to the origins and development of cultures including the Olmec, Maya, Zapotec, Mixtec, and Aztec. Students cannot receive credit for this course and ANTH 176B.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 276G - Archaeology of Colonial Borderlands (5)

This seminar draws from readings in archaeology, history, and Native American/Indigenous studies to assess borderlands throughout colonial-era North America as important arenas of change and continuity for indigenous societies, including indigenous technologies, foodways, gender roles, governance, and much more.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 278 - Tutorial on Historical Archaeology (5)

Tutorial on archaeology of European colonialism and the early-modern world. Focuses on the nature of European colonial expansion in New and Old Worlds; culture contact and change; and power and resistance in colonial societies. Students cannot receive credit for this course and ANTH 178.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 279 - Feminism and Gender in Archaeology (5)

Considers feminist perspectives on the human past; archaeologists' perspectives on feminist theory; and the impact of gender, feminist, and critical social theory on the archaeological profession. Students cannot receive credit for this course and ANTH 194C.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 280 - Advanced Ceramic Analysis (5)

Advanced graduate seminar that focuses on techniques and theories used to bridge the gap between the recovery of ceramic remains from archaeological contexts and their interpretation with respect to various anthropological issues and problems. Students cannot receive credit for this course and ANTH 180.

Prerequisite: Enrollment is restricted to graduate students. Concurrent enrollment in ANTH 280L is required.

ANTH 280L - Advanced Ceramic Analysis Laboratory (2)

Emphasizes advanced techniques of ceramic analysis, including materials selection and processing, hand-building, and open-pit firings. Standard techniques for describing and measuring formal and technological attributes of pottery also presented. Students cannot receive credit for this course and ANTH 180L.

Prerequisite: Enrollment is restricted to graduate students. Concurrent enrollment in ANTH 280 is required.

ANTH 281 - Landscape Archaeology (5)

"Landscape" has emerged as a unifying concept for the interpretation of such archaeological features at multiple scales of analysis. This course answers these and other questions by examining how "landscapes" have been tackled archaeologically from multiple perspectives (settlement archaeology, "off-site" archaeology, and approaches building on ideas about culture, ideology and power).

Prerequisite: Enrollment is restricted to graduate students.

ANTH 282 - Household Archaeology (5)

Explores the theoretical and methodological challenges faced by archaeologists excavating ancient households. Students examine the social, economic, and political characteristics of households and investigate how they intersect and support the social and physical aspects of communities.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 284 - Tutorial in Zooarchaeology (5)

Lectures and seminar on archaeological faunal analysis. Topics include: mammalian evolution and osteology; vertebrate taphonomy; reconstruction of human diet from faunal remains; foraging strategy theory; data collection and management; and methods of quantitative analysis. Students cannot receive credit for this course and ANTH 184.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 285 - Osteology of Mammals, Birds, and Fish (5)

Practicum in vertebrate osteology, covering all larger mammal species of central California, plus selected bird and fish species, and topics in evolution and ecology of selected taxa. Students cannot receive credit for this course and ANTH 185.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 287 - Advanced Topics in Archaeology (5)

A graduate seminar on advanced theoretical or methodological topics pertinent to advanced graduate student and faculty interests.

Prerequisite: Enrollment is restricted to graduate students or by consent of instructor.

ANTH 287A - Advanced Topics: Indigenous Archaeology (5)

Traces the development of indigenous archaeology primarily in North America. Topics include: the Native American Graves Protection and Repatriation Act (NAGPRA) and issues of cultural patrimony; postcolonialism; decolonizing methodologies; community-based research; oral sources and other ways of knowing the past; and future directions.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 290T - Pedagogy of Anthropology (2)

Provides training in scientifically backed educational practices for new Anthropology TAs. Through reading, class discussion and activities, we explore different methods of teaching and ways to conceptualize pedagogy. Includes teaching theories; survey of educational tools and techniques; and lesson planning.

Prerequisite: Enrollment restricted to anthropology graduate students.

ANTH 292 - Graduate Colloquium (2)

Designed to offer an institutionalized mechanism for the presentation of research papers and teaching efforts by faculty and advanced graduate students.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 294N - Comparison of Cultures (5)

Seminar for students interested in theories and methodology of social and cultural anthropology devoted to critical discussion of different methods of comparison practiced in anthropology.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 294R - Advanced Readings in Biological

Anthropology (5)

Introduces literature relevant to students' research emphases and allows for discussion of new scientific publications.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 295A - Scientific Method: Biological Anthropology (5)

The first core course of the Biological Anthropology Graduate Program. Students learn the principles and methods by which research projects in biological anthropology are devised and executed. Students cannot receive credit for this course and ANTH 195A.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 296N - The Body, Narrative, and Creative Practice (5)

Seminar proposing that arts, such as dance, weaving, and creative writing, and the cultivation of more traditional scholarly works can and should be pursued together. The pursuit of such research-creation is a social justice practice that values many ways of knowing and can lead to emotionally compelling and politically effective communication. Students are introduced to concepts and debates from crip theory, feminist, queer, and critical race studies, performance studies, and narrative theory. They also participate in workshops using body-centered writing, moment work, visual arts, and embodied listening to produce creation-scholarship in a medium of their choice. Taught in conjunction with ANTH 196N; students cannot receive credit for this course and ANTH 196N.

Prerequisite: Enrollment is restricted to graduate students.

ANTH 297A - Independent Study (5)

Students submit petition to sponsoring agency.

ANTH 297B - Independent Study (10)

Students submit petition to sponsoring agency.

ANTH 297C - Independent Study (15)

Students submit petition to sponsoring agency.

ANTH 297F - Independent Study (2)

Students submit petition to sponsoring agency.

ANTH 298 - Advanced Laboratory Apprenticeship (5)

Supervised tutorial in specialized analytic methods in archaeology or physical anthropology. Students collaborate on laboratory research with a departmental mentor or, with advisor's consent, with researchers on or off campus, preparing a manuscript for publication or an extensive literature review. Permission of instructor required. Enrollment restricted to graduate students.

ANTH 299A - Thesis Research (5)

Students submit petition to sponsoring agency.

ANTH 299B - Thesis Research (10)

Students submit petition to sponsoring agency.

ANTH 299C - Thesis Research (15)

Students submit petition to sponsoring agency.

APLX - APPLIED LINGUISTICS**Lower-Division****APLX 55 - Pardon My French: Politeness, Impoliteness, Swearing, Slang, and Humor (5)**

Explores the history and use of "bad;" language, including issues of politeness, impoliteness, swearing, slang, and humor. In readings, lectures and discussions, we examine contexts of language use: who can say what, when, how and under what communicative conditions.

APLX 80 - Introduction to Applied Linguistics (5)

Introduces the field of applied linguistics, learning about language acquisition, use, and teaching in multilingual contexts from multiple disciplinary perspectives. Also, introduces research models that examine psycholinguistic, sociolinguistic, and/or educational aspects of multilingualism..

APLX 99 - Tutorial (5)

Students submit petition to sponsoring agency.

APLX 99F - Tutorial (2)

Students submit petition to sponsoring agency.

Upper-Division**APLX 101 - Second-Language Acquisition (5)**

Introduces the field of second-language acquisition. Topics include contexts of acquisition, the impact of individual differences, and basic methods of data collection and analysis.

Prerequisite: Prerequisite(s): APLX 80 or LING 50.

APLX 102 - Bilingualism (5)

An overview of bilingualism. Focuses on bilingualism as an individual phenomenon (i.e., how two languages develop and are represented in the minds of individual speakers), and as a social one (i.e., how do bilinguals interact in a community and how does this context of language contact shape their linguistic identity).

Prerequisite: Prerequisite(s): APLX 80 or LING 50.

APLX 103 - Second Language Speech (5)

Examines themes related to the acquisition of L2 phonetics and phonology, including theories and models of L2 speech learning; phonetics and phonology in L2 acquisition; as well as the training effects on L2 pronunciation.

Prerequisite: Prerequisite(s): APLX 80 or LING 50.

APLX 105 - Language Loss (5)

The phenomenon of losing your native language is well attested anecdotally by many speakers who are separated from their first language environment. Course provides a broad overview of first language attrition (loss) in different populations including adult native speakers, children, international adoptees, heritage speakers, and bilingual returnees. Examines the linguistic aspects of attrition in order to determine which areas of language are typically impacted by attrition, then focuses on individual differences (e.g., identity) and contextual factors (e.g., input) that may speed up or prevent attrition. Emphasizes considering first language attrition and second language (L2) acquisition as two inseparable sides of bilingualism, both in individual speakers and in bilingual communities.

Prerequisite: Prerequisite(s): APLX 80 or LING 50 or by permission of instructor.

APLX 112 - Language and Gender (5)

Examines the relationship between language and gender. Topics include: gender differences in speech; linguistic gender norms and stereotypes; gender and the construction of identity in discourse; sexuality and language; sexism in language; social, educational, and political implications. (Formerly Languages 112.)

APLX 113 - Inter-Cultural Communication (5)

Examines intercultural communication and miscommunication between individuals and speech communities, both within North American and global contexts. Through discourse and analytic approaches, students explore cultural stereotypes and interactional expectations, among other issues, that influence the outcome of intercultural communication. (Formerly Languages 113, Cross-Cultural Communication and Miscommunication.)

Prerequisite: Enrollment is restricted to juniors and seniors.

APLX 113I - Intercultural Communication—Global Internship (5)

Examines intercultural (mis)communication among individuals and speech communities, both within U.S. and global contexts. Using discourse and other analytic approaches, students explore cultural values, stereotypes, and interactional expectations, among other issues, that influence the outcome of intercultural

communication. Enrollment is restricted to students enrolled in the Global Internship summer program.

APLX 115 - Language and Power (5)

Examines the relationship between language and power. Explores the ways in which national languages, regional and social dialects, and specific phonological morpho-syntactic, or lexical features come to be associated with particular social meanings and contribute to creating social inequality.

Prerequisite: Prerequisite(s): APLX 80. Enrollment is restricted to sophomores, juniors, and seniors.

APLX 116 - Discourse Analysis: Language Use and Context (5)

Familiarizes students with the methods and theoretical assumptions behind discourse analytic approaches to the study of language. Examines language used in specific contexts. Topics include: genres, registers; discourse organization; discourse grammar; interaction; conversation; pragmatics; and social practice.

Prerequisite: Prerequisite(s): LING 50 or by consent of the instructor. Enrollment is restricted to juniors and seniors.

APLX 122 - Linguistic Diversity & Social Justice (5)

Explores the relationship between linguistic diversity and social justice: the celebration of multilingualism on the one hand and the negative experiences of people who speak "minority" languages in "dominant" cultural contexts on the other.

Prerequisite: Prerequisite(s): APLX 80; enrollment restricted to applied linguistics and multiculturalism, language studies, and linguistics majors.

APLX 124 - Second Language Variation and Sociolinguistics (5)

Addresses issues related to the second-language acquisition and use of variable structures and the development of sociolinguistic competence. Topics include: overview of linguistic variation and sociolinguistics; immersion contexts; individual differences and predictors of success; and ultimate attainment.

Prerequisite: Prerequisite(s): APLX 101.

APLX 135 - Second Language Teaching (5)

Introduces the theories of second-language acquisition and their connection to second-language teaching. Students develop cutting-edge teaching and testing materials, and engage with current scholarship on language instruction. Recommend at least one year of college-level study of a foreign language, or its equivalent. Enrollment is restricted to applied linguistics and multiculturalism, linguistics, and language studies majors, or by permission of

instructor. Students cannot receive credit for this course and APLX 235.

Prerequisite: Enrollment is restricted to applied linguistics and multiculturalism, linguistics, and language studies majors, or by permission of instructor. Students cannot receive credit for this course and APLX 235.

APLX 136 - Second Language Assessment (5)

Introduces the fundamentals of second-language testing by presenting theories, key concepts, and practical applications in language assessment. Throughout the course, students develop their own assessment portfolios, creating materials they can use in their post-B.A. career.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in APLX 135.

APLX 138 - English Grammar for TESOL (5)

What is it that teachers of English as a second/foreign language should know about the English grammar system—and about pedagogical options for teaching grammar—in order to best facilitate students' language development? Course is designed to be an accessible overview of English grammatical structures and grammar-teaching methods for practical classroom application.

APLX 190 - Research Seminar in Applied Linguistics (5)

Prepares students to conduct research in applied linguistics. Students evaluate published studies that represent both quantitative and qualitative methods.

Prerequisite: Prerequisite(s): APLX 80 and APLX 101; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to seniors.

APLX 199 - Tutorial (5)

Students submit petition to sponsoring agency.

APLX 199F - Tutorial (2)

Students submit petition to sponsoring agency.

Graduate

APLX 235 - Second Language Teaching (5)

Helps novice instructors learn about the theory and practice of language teaching and learning. Focuses on current methods used in communicatively oriented classrooms. Topics include: listening comprehension, grammar, vocabulary, reading, writing, and testing/assessment. Students cannot receive credit for this course and course 135. (Formerly Language Studies 201.)

Prerequisite: Enrollment is restricted to graduate students.

ARBC - ARABIC

Lower-Division

ARBC 1 - First-Year Arabic (5)

Introduction to Arabic language and Arabic-speaking culture with practice in all four language skills: listening, speaking, reading, and writing. Intended for students with no previous study of Arabic as well as heritage speakers.

ARBC 2 - First-Year Arabic (5)

Introduction to Arabic and Arabic-speaking culture with practice in all four language skills: listening, speaking, reading, and writing. Intended for students with no previous study of Arabic as well as heritage speakers.

Prerequisite: ARBC 1 or equivalent proficiency.

ARBC 3 - First-Year Arabic (5)

Introduction to Arabic and Arabic-speaking culture with practice in all four language skills: listening, speaking, reading, and writing. Intended for students with no previous study of Arabic as well as heritage speakers.

Prerequisite: Arabic 2 or equivalent proficiency.

ARBC 4 - Second-Year Arabic (5)

Continuation of Arabic language and Arabic-speaking culture courses with practice in all four language skills: listening, speaking, reading, and writing. Intended for students who have successfully completed Arabic 3 or possess equivalent proficiency.

Prerequisite: Prerequisite(s): ARBC 3 or equivalent proficiency.

ARBC 5 - Second-Year Arabic (5)

Continuation of Arabic language and Arabic-speaking culture courses with practice in all four language skills: listening, speaking, reading, and writing. Intended for students who have successfully completed Arabic 4 or possess equivalent proficiency.

Prerequisite: Prerequisite(s): ARBC 4 or comparable proficiency.

ARBC 6 - Second-Year Arabic (5)

Continuation of Arabic language and Arabic-speaking culture courses with practice in all four language skills: listening, speaking, reading, and writing. Intended for students who have successfully completed ARBC 5 or possess equivalent proficiency.

Prerequisite: Prerequisite(s): ARBC 5 or comparable proficiency.

ART - ART

Lower-Division

ART 10D - 2D Foundation (5)

Introduces students to the fundamental principles of two-dimensional art and design and focuses on analyzing the concepts of line, color shape, value, space, form, unity, balance, scale, proportion, texture, and emphasis to be used to express complex ideas. This course is a hybrid studio/lecture.

ART 10E - 3D Foundation (5)

Introduces students to the fundamental principles of three-dimensional art and design through basic concepts, techniques, and technical practice. Focuses on three-dimensional art and the design fundamentals of sculpture, public art, architecture, and the industrial-design process and production. This course is a hybrid studio/lecture.

Prerequisite: Enrollment is restricted to art majors.

ART 10F - 4D Foundation (5)

Introduces students to the fundamental principles of four-dimensional/time-based art and design through basic concepts, techniques, and technical practices. Computers and video, photo, sound, and lighting equipment are used to create short-form, time-based work. This course is a hybrid studio/lecture.

Prerequisite: Enrollment is restricted to proposed ART majors during first-pass enrollment; restrictions lifted after first pass.

ART 15 - Introduction to Drawing for the Major (5)

Introduction to the methods, materials, and purposes of drawing to develop perceptual and conceptual skills through a series of assignments, providing various approaches to drawing as a tool for creative exploration. Discussions and critiques facilitate the development of critical skills. Designed for students considering the art major.

ART 20G - Introduction to Print Media and Drawing (5)

Introduces the methods, materials, and history of printmaking and drawing as a tool for creative exploration. Understanding and development of concepts and skills are achieved through a series of lectures, studio demonstrations and practice, assignments, and critiques.

Prerequisite: Prerequisite(s): two courses from ART 10D, ART 10E, ART 10F. Enrollment is restricted to proposed art and art majors.

ART 20H - Introduction to Sculpture and Public Art (5)

Introduces sculpture and art in public space. The course is composed of lectures, readings, discussions, studio assignments, and demonstrations.

Prerequisite: Prerequisite(s): two courses from ART 10D, ART 10E, ART 10F. Enrollment is restricted to proposed art and art majors.

ART 20I - Introduction to Photography (5)

Introduces basic skills and conceptual development in photography and related digital media through image-making in the field, on the web, and in laboratories, through readings, discussions, and critiques.

Prerequisite: Prerequisite(s): two courses from ART 10D, ART 10E, ART 10F. Enrollment is restricted to proposed art and art majors.

ART 20J - Introduction to Drawing and Painting (5)

Introduces the practices of drawing and painting in combination with the formal vocabulary of the visual arts. A discussion of values, form, color, and figure/ground relationships enters into each class.

Prerequisite: Prerequisite(s): two courses from ART 10D, ART 10E, ART 10F. Enrollment is restricted to proposed art and art majors.

ART 20K - Introduction to New Media and Digital Artmaking (5)

Introduces digital and new media art practice. Explores the use of the computer as tool and medium. Provides a hands-on introduction to the fundamentals of graphics; digital-image acquisition and manipulation; video; web design; and computer programming. Lectures, readings, and discussions examine the history of technology artwork and technology's relationship to contemporary culture.

Prerequisite: Prerequisite(s): two courses from ART 10D, ART 10E, ART 10F. Enrollment is restricted to proposed art and art majors.

ART 20L - Introduction to Drawing (5)

Drawing course using traditional media taught online through demonstration videos, digital submissions, and small-group critiques. Introduces the basics of observational drawing in a progression designed to develop and build skills in sighting, measuring, value, and rendering. Familiarity with Canvas, access to a digital camera, and purchase of art supplies are required. Assumes 30 hours per week of coursework.

Prerequisite: Prerequisite(s): two courses from ART 10D, ART 10E, ART 10F. Enrollment is restricted to proposed art and art majors.

ART 26 - Introduction to Printmaking (5)

Survey of print medium: basic terminology, techniques, application of tools, materials, and condensed history of development of printmaking. Assignments consist of individual and collaborative projects aimed at building skills and gathering technical experience. Introduction to relief printing (black and white and color), intaglio, letterpress, and interface between

photography/computer and the handmade print. Exploration of print media for communication of issues including formal aesthetics, social/psychological and personal narrative.

ART 80D - Fundamentals of Photography (5)

Introductory course for beginners. Various techniques examined and assigned in specific exercises. Work on projects using color film; this is a non-darkroom course. Examples given of photography from 1826 to the present. Balances historical study and practice through assigned homework exercises. Students must provide their own camera, preferably one with a manual setting. No phone cameras allowed.

ART 80E - Environmental Art in the Expanded Field (5)

Examines the ways artists engage, interact, and comment upon ecology and nature in their artworks by examining environmental art from the 1960s through the present. Offers students a foundational introduction to art and artists working in the field of environmental and ecological art/activism.

ART 80F - Introduction to Issues in Digital Media (5)

Digital media was positioned as a radical new social and creative medium in the 1980s and 1990s. The ensuing decades have seen this area become ubiquitous mass media with structural inequalities, centralized ownership, environmental damage, and precarious labor conditions. At the same time, it has become the language of our time and remains a site of creativity and intervention and offers opportunities for social changes. This course provides an introduction to key issues in this area through the lens of race and ethnicity.

ART 80T - Digital Tools for Contemporary Art Practice (5)

Introduces the digital tools and mediums available to contemporary art practices. Tools are explored from a historical and theoretical context and from a technical perspective through hands-on tutorials. A variety of artworks that use digital mediums are also examined. Covers photo and vector editors, sound and video editing, basic 3D modeling, and images and interactions generated by code. Students should have basic computer literacy.

ART 80X - Ars Erotica: Sexual Imagery in Culture and Art (5)

What is sexually explicit imagery all about? Is it art, porn, trash, political hot potato, or hot commodity? This course enables students to critically explore these questions and more in an academic setting.

ART 99 - Tutorial (5)

Students submit petition to sponsoring agency.

Upper-Division

ART 101 - Introduction to Computer Programming for

the Arts (5)

Combines an introduction to computer programming for beginners with special topics that are essential for the digital arts. Basic concepts of programming are developed in the JavaScript language and applied to digital arts media, such as algorithmically generated still images and animations in two and three dimensions, sound art, and music composition. Presentation of digital artwork in the theater and via the web are covered in detail.

ART 104 - Digital Video (5)

An exploration of the video medium including production using the digital video format. Digital video cameras will be used to produce digital source material to be manipulated in a non-linear digital editing system. Image manipulation, effects, and editing will be explored. A variety of video structures, theories, concepts, and forms will be examined through production, discussions, and viewing students' and artists' work.

Prerequisite: Prerequisite(s): Three courses from: ART 15, ART 20G, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L, ART 26 or by permission of instructor. Enrollment is restricted to art majors.

ART 106A - 2D Animation (5)

Introduces animation techniques, practices, history, and theories. Students learn techniques and process in 2D, stop-motion, and digital animation. Projects teach students the workflow of animating including script development, storyboarding, frame-by-frame animation, animatic, digital, and post-production. Students are required to research artists, both historical and contemporary, working in the field of animation and to be able to discuss the work. The course teaches theoretical and historical perspectives on animation and requires students to develop a critical analysis and vocabulary. (Formerly Introduction to 2D Animation).

Prerequisite: Prerequisite(s): Three courses from: ART 15, ART 20G, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 106C - Stop Motion Animation (5)

Introduction to imagining, producing, and creating stop motion animations. Includes hands-on work in storyboarding, drawing and paper-based animation, pixalization, animation of everyday objects, and Claymation with basic characters and sets. Historical and contemporary animations will be viewed in class to inspire animation ideas, aesthetics, and practices. (Formerly Introduction to Stop Motion Animation.)

Prerequisite: Prerequisite(s): Three courses from: ART 15, ART 20G, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L, ART 26; or by permission of instructor. Enrollment is restricted to art majors.

ART 106E - 3D Modeling and Animation (5)

Independent and collaborative creative projects using advanced computer methods. May include networking projects, virtual representations, interactive multimedia, installation, performance, 3D modeling and animation, or robotics. Emphasis on advanced critical and experimental approaches to computers as a unique art medium, and contemporary research issues. Students are required to enroll in scheduled lab section.

Prerequisite: Prerequisite(s): Three courses from: ART 15, ART 20G, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L, ART 26; or by permission of instructor. Enrollment is restricted to art majors.

ART 106O - 2D Animation (5)

This project-centered studio course introduces 2D animation concepts, history, techniques and contemporary practices, production strategies, processes, and tools from a practical approach rooted in a historical/theoretical context. During each project's development, students research artists working within relevant categories and/or topics of animation, presenting findings to assist in their creative process.

ART 108 - Activate Media! New Media Art Activism and Organizing (5)

Studio-based course teaching strategies for social change, activism and organizing using new media and digital tools. Students gain experience of developing new media artworks to communicate their position on issues that affect their lived experiences and community struggles. Students develop artworks and content using new media practices, tools, systems, and strategies. The final artwork can utilize video, film, digital media, social networks, apps, games, and design among other new media art forms.

Prerequisite: Prerequisite(s): Three courses from: ART 15, ART 20G, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L, ART 26; or by permission of instructor. Enrollment is restricted to art majors.

ART 110 - Intermediate/Advanced Drawing (5)

Work moves toward individual directions in drawing. A variety of media are explored. Each student is expected to do 150 hours of drawing over the quarter.

Prerequisite: Prerequisite(s): One course from ART 15, ART 20G, ART 20J, ART 20L, ART 111, ART 112, ART 119; and two from ART 20H, ART 20I, ART 20K, ART 26; or by permission of instructor. Enrollment is restricted to art majors.

ART 111 - Figure Drawing (5)

Focuses on drawing from the human figure and exploring the figure for the purpose of personal expression and social communication. Intended for the intermediate/advanced drawing student.

Prerequisite: Prerequisite(s): One course from ART 15, ART 20G, ART 20J, ART 20L, ART 110, ART 112, ART 119; and two from ART 20H, ART 20I, ART 20K, ART 26; or by permission of instructor. Enrollment is restricted to art majors.

ART 112 - Mixed Media Works on Paper (5)

This course stresses alternative drawing processes, techniques, and materials. Intended for the intermediate or advanced student.

Prerequisite: Prerequisite(s): One course from ART 15, ART 20G, ART 20J, ART 20L, ART 110, ART 111, ART 119; and two from ART 20H, ART 20I, ART 20K, ART 26; or by permission of instructor. Enrollment is restricted to art majors.

ART 113 - Illustrating Stories: Fantasy and Documentary Narratives (5)

This drawing/painting class is taught using New Yorker magazine covers as examples of illustration at a level of excellence that is accessible and which are examined for content and formal qualities. Work is done in drawing and painting media; some digital and mixed media may be incorporated. Painting will be water-based. Wit, humor, restraint, and sophistication are discussed, as well as inclusivity, exclusivity, and explicit and implicit social issues.

ART 119 - Special Topics in Drawing (5)

Special topics in drawing as announced.

Prerequisite: Prerequisite(s): One course from ART 15, ART 20G, ART 20J, ART 20L, ART 110, ART 111, ART 112; and two from ART 20H, ART 20I, ART 20K, ART 26; or by permission of instructor. Enrollment is restricted to art majors.

ART 125 - Environmental Art Studio (5)

Introduces students to environmental art and design through basic concepts, techniques, and studio practice.

Prerequisite: Enrollment is restricted to juniors and seniors.

ART 130 - Intermediate/Advanced Painting (5)

Continuation of the development of a basic foundation in painting with emphasis on the development of individual, experimental procedures. A foundation in drawing is recommended.

Prerequisite: Prerequisite(s): One from ART 20J, ART 133, ART 137, ART 138, ART 139; and two non-painting lower-division studios from ART 15, ART 20G, ART 20H, ART 20I, ART 20K, ART 20L, ART 26. A foundation in drawing is recommended. Enrollment is restricted to art majors.

ART 132 - Figure Painting (5)

Students learn the classical practice of painting the nude figure from life using traditional oil painting techniques.

Students study short poses, limited color, and graduate to long pose, full color.

ART 133 - Abstract Painting (5)

Exploration of abstract painting through studio work, lectures, and critiques with emphasis on progressive abstraction, minimalism, op art, and abstract expressionism as well as other 20th-century and 21st-century forms. A foundation in drawing is recommended.

Prerequisite: Prerequisite(s): One from ART 20J, ART 20L, ART 130, ART 137, ART 138, ART 139; and two non-painting lower-division studios from ART 15, ART 20G, ART 20H, ART 20I, ART 20K, ART 26.

Enrollment is restricted to art majors.

ART 135 - Digital Painting (5)

Gives students a comprehensive understanding of the digital painting, from basic techniques, to new media art and industry application, to how these programs operate. Studies and assignments develop and expand skills of digital paint application. Students build a cumulative digital portfolio of all of the studies and assignments completed throughout the course.

ART 137 - Outdoor Painter's Project (5)

Explores contemporary landscape through the practice of plein air painting. Observational plein air painting will provide the foundation for the class. Instruction includes technical instruction in materials and technique as well as conceptual material. Student may work with oils, alkyds, or acrylic on panels, paper, or canvas.

Prerequisite: Prerequisite(s): One from ART 20J, ART 130, ART 133, ART 138, ART 139; and two non-painting lower-division studios from ART 15, ART 20G, ART 20H, ART 20I, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 138 - Facture and Meaning (5)

Explores the materials and history of painting through lectures, demonstrations, and practice in oils, egg tempera, distemper, and Flashe paint. Students participate in group practices and also work independently on projects designed by them in consultation with the instructor. A foundation in drawing is recommended.

Prerequisite: Prerequisite(s): One from ART 20J, ART 130, ART 133, ART 137, ART 139; and two non-painting lower-division studios from ART 15, ART 20G, ART 20H, ART 20I, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 139 - Special Topics in Painting (5)

Special studies in painting as announced. A foundation in drawing is recommended.

Prerequisite: Prerequisite(s): One from ART 20J, ART 130, ART 133, ART 137, ART 138; and two non-

painting lower-division studios from ART 15, ART 20G, ART 20H, ART 20I, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 150 - Darkroom Practices (5)

Students concentrate on darkroom practices and explore visual ideas, directing their work toward individualized goals. Required work includes making photographic prints, reading historical and theoretical works, and examination of photographs.

Prerequisite: Prerequisite(s): ART 20I and two non-photography lower-division art studios from ART 15, ART 20G, ART 20H, ART 20J, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 152A - Photographic Book (5)

This studio-based course engages with the traditions and practices of the photographic book to examine and explore both narrative and non-narrative strategies. Students create a coherent photographic photo-book. Course examines the contemporary status of the photobook as well as the rich history of the medium. Editing, sequencing, and the production of photobooks is the centerpiece of this class.

Prerequisite: Prerequisite(s): ART 20I, ART 156, and two courses from ART 15, ART 20G, ART 20H, ART 20J, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 152C - View Camera Photography (5)

Explores the processes, materials, and techniques of large-format photography. Students learn the concepts and theories related to the view camera. Emphasizes advanced understanding of negative exposure, sheet-film processing, tonal-range manipulation, digital scanning, and large-format output. Contemporary issues and concepts explored.

ART 153 - Still to Moving: Topics in Cinematography for Artists (5)

The natural evolution from still image making to moving image making is at the heart of this course as students look at this evolution from a historical, social, conceptual, and technical perspective. Artists who have been primarily working in still photography will learn to transition to creating with moving images by addressing time, structure, sound, and installation. Advanced discussions on film and digital formats, quality of image, camera support systems, and post-production will be explored through a combination of screenings, assignments, and readings.

Prerequisite: Prerequisite(s): ART 20I; and two courses from ART 15, ART 20G, ART 20H, ART 20J, ART 20K, ART 20L, ART 26. Plus one course from ART 150 or ART 156. Enrollment is restricted to art majors.

ART 154A - Being Social: Photography and

Engagement (5)

Explores historical and contemporary ways in which photography has been used to examine social issues and invites students to produce work that responds to issues that are important to them. Students learn about photograph's historical significance in raising social awareness, analyzing the aesthetic and methodological strategies of modern and contemporary photographers seeking to catalyze economic, political and cultural change through the production of images.

Prerequisite: Prerequisite(s): ART 20I and ART 156; and two courses from ART 15, ART 20G, ART 20H, ART 20J, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 154B - Photography, Place, Environment (5)

The impact of our industrialized culture on nature is one of the most crucial and urgent issues of our times. Discussions on environmental photography, place, and landscape, set out to investigate environmental change and to explore our relation to nature. Throughout the quarter students develop an environmental photography art project that follows in the photographic tradition of raising awareness and supporting policymakers, politicians, researchers, environmentalists, and activists.

Prerequisite: Prerequisite(s): ART 20I; and two courses from ART 15, ART 20G, ART 20H, ART 20J, ART 20K, ART 20L, ART 26. Plus one course from ART 150 or ART 156, or by permission of instructor. Enrollment is restricted to art majors.

ART 154C - After Archives: Photographers & Research (5)

The role of archives, photographers, and research in contemporary photographic practice is addressed by examining the special archives at the UCSC library and the Prelinger Library in San Francisco and by curating a group exhibition. Students make a project in multiple media, such as photography, video, text, installation, and drawing prompted by UCSC Special Collections' vast archives and collections. Through studio projects, readings, discussions, and case studies, students engage the immediate context of the university as source material for their artworks as a means to explore the effect that research and knowledge production might have on contemporary artistic practice.

Prerequisite: Prerequisite(s): ART 20I; and ART 150 or ART 156; and two courses from ART 15, ART 20G, ART 20H, ART 20J, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 155 - Photo Field Research Quarter (PFRQ): California Road Trip (10)

Offers students the unique opportunity to live and learn and photograph outside the classroom, actively engaging locations across the state of California. Students will cover 2400 miles from Northern Mendocino County to the Salton Sea, Eastern Sierra,

Death Valley, and Big Sur. Class exposes students to cultural, historical, and environmental issues facing California. Due to the rigor of the course, students must submit an application demonstrating the commitment and photo preparation necessary for successful completion of the class. Students are billed a materials fee of \$550.

ART 156 - Project Development in Photography (5)

Concentrates on photographic project development, developing analytical skills designed to help direct students' own photographic ideas. Helps students create a conceptual theoretical framework through image-making in the field and studio, through critique and discussion, through readings, and by studying the work of artists.

Prerequisite: Prerequisite(s): One course from ART 20I; and two non-photography lower-division art studios from ART 15, ART 20G, ART 20H, ART 20J, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 157 - Immersive Arts Field Research (5)

Students are immersed in site specific field research over the span of a four-day in-the-field trip utilizing the public land of California, via the UC Natural Reserve System. Students are educated about research related to a specific place while exploring concepts of site-specificity and develop their own new inquiries about a place by experiencing it physically and by engaging with contemporary art concepts and art project development. Prerequisite(s): two lower-division studio art courses. Enrollment is restricted to junior and senior art majors. Enrollment is by permission of instructor. Due to the rigor of the course, students must submit an application demonstrating the commitment and photo preparation necessary for successful completion of the class.

ART 158 - Advanced Photography (5)

Students produce a portfolio of photographs, read historical and theoretical works, and study photographs and other art works.

Prerequisite: Prerequisite(s): ART 156; and one course from ART 150, ART 152A, ART 152C, ART 153, ART 154A, ART 154B, ART 154C or ART 159. Enrollment is restricted to art majors.

ART 159 - Special Topics in Photography (5)

Special studies in photography, concentrating on specific subject matter or media. Topics may include documentary photography, landscape, alternative processes, or mixed media.

Prerequisite: Prerequisite(s): ART 150 or ART 156. Enrollment is restricted to art majors.

ART 161B - Relief/Mixed Media Printmaking (5)

Explores traditional, contemporary, and experimental processes, issues, and concepts of relief and mono/mixed media printmaking. Students gain in-depth information and working knowledge to specialize individual ideas and build artistic development through varieties of class activities.

Prerequisite: Prerequisites: ART 20G or ART 26 and two non-print lower-division media studios from ART 15, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L. Enrollment is restricted to art majors.

ART 161C - Tradition and Innovation: Relief Printmaking in Korea (6)

Explores the history of printing from the world's oldest printed text developed in Korea to the latest cutting-edge technology, including laser cutting. Students study many aspects of both traditional and contemporary relief (woodblock) printmaking, both materials, tools, and techniques and the issues, concepts and history of the field. Through various class activities, field trips and cultural visits (to UNESCO World Heritage Sites) in Korea, students will be exposed to diverse and multi-regional art practices that will broaden their perspectives and increase their understanding not only in the fields of print media but in the larger contemporary visual culture.

ART 161J - Mokuhanga: UCSC Printmaking in Japan (6)

Course taught both at UCSC and at the host university in Tokyo. At UCSC, oil-based woodblock printmaking covers techniques, application of tools, materials, history, issues and concepts. In Japan, the class studies Mokuhanga, resulting in a great understanding and appreciation of this traditional process. Via class activities, field trips, excursions, and cultural visits, students encounter diverse multi-regional art practices, thus broadening perspectives and increasing understanding not only of print media but of contemporary visual culture.

ART 162A - Intaglio I (5)

Introduces students to various methods used in making intaglio prints. Encourages individual artistic growth of imagery and technique through assignments designed to explore the medium. Includes discussion and critique of work with equal emphasis on technique and concept.

Prerequisite: Prerequisites: ART 20G or ART 26 and two non-print lower-division media studios from ART 15, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L. Enrollment is restricted to art majors.

ART 163A - Lithography I (5)

Introduction to drawing, processing, and printing of lithographs from stone. Emphasis on discovery of tonal, textural, and expressive potential from the surface of the stone, while establishing individual directions in

imagery. Condensed history of the medium, technical theory, and critique in lecture and demonstrations.

Prerequisite: Prerequisites: ART 20G or ART 26 and two non-print lower-division media studios from ART 15, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L. Enrollment is restricted to art majors.

ART 163C - Magnified Imagination: A Printmaking Approach (5)

Examines the wonders of visual magnification of the natural world by using enlargement lenses, scanner, and microscopes to create photo-based and autographic prints that enhance strange and unperceived realities. Visits to the UCSC Norris Center for Natural History, Thimann's Roof Garden and Greenhouse will provide opportunities to explore natural world specimens for projects.

Prerequisite: Prerequisite(s): ART 20G and two courses from ART 15, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L, ART 26. Enrollment restricted to art majors.

ART 164A - Screenprinting (5)

Introduces water-based screen printing. Students are introduced to processes including basic equipment, printing techniques, printing papers, stenciling processes, and photographic and digital techniques. Emphasis is on continued development of content and aesthetic awareness through the possibilities of screen printing.

Prerequisite: Prerequisites: ART 20G or ART 26 and two non-print lower-division media studios from ART 15, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L. Enrollment is restricted to art majors.

ART 164S - Serigraphy in Spain (5)

Introduces water-based screen printing processes including basic equipment, printing techniques, printing papers, stenciling processes, and photographic and digital techniques. Emphasis is on continued development of content and aesthetic awareness through the possibilities of screen printing.

ART 165 - Print Media in Visual Communication (5)

Explores a unique approach reviewing the printed images in visual communications. A wide blend of traditional and cutting-edge print media processes with an interdisciplinary focus will be taught for conceptualizing, producing, and presenting the printed image.

Prerequisite: Prerequisite(s): one course from ART 160B, ART 161B, ART 161C, ART 162A, ART 162B, ART 163A, ART 163B, ART 163C, ART 164A, ART 164S, ART 168, ART 169. Enrollment is restricted to art majors.

ART 166 - Art of Bookmaking (5)

Introduction to production of small edition books and multiples utilizing sequential visual imaging, narrative content, and mixed media in bookmaking. Provides instruction in conceptualizing, producing, and distributing printed artists' multiples. Ideas encouraged within a broad range of possibilities via the format of artists' books.

Prerequisite: Prerequisite(s): Three courses from: ART 15, ART 20G, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L, ART 26 or by permission of instructor. Enrollment is restricted to art majors.

ART 168 - Photo-Based Printmaking (5)

Intermediate/advanced studio course exploring the processes, history, and the recent developments in contemporary photomechanical printmaking. Through experimentation and research students learn how to utilize photographic imagery, blending them in multiple layers and colors, thereby facilitating articulation of their conceptual foundations.

Prerequisite: Prerequisite(s): Three courses from the following: ART 15, ART 20G, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 169 - Special Topics in Printmaking (5)

Special studies in printmaking, as announced.

Prerequisite: Prerequisites: ART 20G or ART 26 and two non-print lower-division media studios from ART 15, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L. Enrollment is restricted to art majors.

ART 172 - Public Art: Memory, Landscape, and Artist as Activist (5)

In-depth exploration of art in the public sphere. Students build an understanding of public art sparked by practical experience designing and developing projects. Theoretical aspects of contemporary public art, and an introduction to the range of current public art practices will be introduced through readings, lectures, and artist's talks. The combination of practical hands-on technique and theoretical ideology will enable students to fully develop their own project within the class.

Prerequisite: Enrollment is restricted to juniors and seniors.

ART 175 - Taking Art to the Streets (5)

Expands traditional definitions of art making taking art beyond the museum. Students take art making to the streets. We explore art making in the public sphere from murals to graffiti, street art to shop dropping, protests to public commissioned projects and community engaged interventions.

Prerequisite: Prerequisite(s): Three courses from ART 15, ART 20G, ART 20H, ART 20I, ART 20J, ART

20K, ART 20L, ART 26, or by consent of instructor. Enrollment restricted to art majors.

ART 177 - Careers in the Creative Economy (2)

Provides students with information, tools, and strategies to embark on arts career exploration and preparation, including strategies for addressing challenges and opportunities related to diversity, equity, and inclusion. Students explore their career values; network with guest speakers in creative fields (alumni, faculty, graduate students, professional artists); and prepare and create career-related documents (update resumes, cover letters, project proposals) as well as learn about a variety of arts careers through guest speakers, readings, and podcasts. Enrollment is by permission of the instructor and is restricted to juniors, seniors, and graduate students. Please contact the art advisor at artadvisor@ucsc.edu for the application.

ART 180B - Sculpture II (5)

More advanced fabrication techniques in sculpture using wood, metal, industrial, and other materials. Techniques include carpentry and woodshop skills, and an introduction to sculptural forms, processes, and ideas. Demonstrations, slide lectures, and critical discussion of work help develop technical and conceptual skills.

Prerequisite: Prerequisite(s): One course from ART 20H, ART 120, ART 121, ART 122, ART 124, ART 125, ART 129, ART 172, ART 183, ART 188, or ART 189; and two non-sculpture/intermedia/public art lower-division studios from ART 15, ART 20G, ART 20I, ART 20J, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 181 - Art, Power & Politics (5)

Explores strategies artists use to engage political subject matter in the 21st century. Students create their own projects, research and test approaches, techniques and strategies learning from the ways national and international artists encode and convey information in creating political work. Methods range from community collaboration; to tactical culture jamming, participatory collaborative projects, activism and intervention, symbolic and gestural work, artist-led projects, performances and community projects.

Prerequisite: Prerequisite(s): three courses from: ART 15, ART 20G, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 182 - Materiality of Color (5)

A research-based, studio art class in which students experiment with ideas and processes, and pursue projects exploring the materiality of color, including social and cultural effects and environmental implications. Following a sequence of short assignments paired with class critiques, students design and complete their own research-based art projects (in

any media) that investigate color as a material phenomenon. Class discussions address physical, perceptual, psychological, geological, biological, cultural, social, political, philosophical and aesthetic aspects of color in concert with readings, guest lectures, field trips, technical demonstrations and visual presentations. Students harvest, make, and use dyes from plant materials grown at the UCSC Farm, and contribute to the ongoing development of a dye garden on campus.

Prerequisite: Prerequisite(s): Three courses from: ART 15, ART 20G, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 183 - Metal Fabrication (5)

Focus on teaching intermediate to advanced students the processes and techniques of direct metal fabrication for contemporary sculpture and design. Explores a range of welding, cutting, and forming techniques and processes through demonstrations, slide lectures, field trips, and studio time. Demonstrations, slide lectures, and critical discussion of work help develop technical and conceptual skills.

Prerequisite: Prerequisite(s): One course from ART 20H, ART 120, ART 121, ART 122, ART 124, ART 125, ART 129, ART 172, ART 180B, ART 188, ART 189; and two non-sculpture/intermedia/public art lower-division studios from ART 15, ART 20G, ART 20I, ART 20J, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 184 - 3D Art and Design I (5)

Emphasizes the conceptual aspects of 3D art and design using the laser cutter to prototype and experiment with construction methods and materials to create, represent, respond to, and reflect on 3D forms in space. Students learn about mixed-media fabrication techniques, materials, and processes that include using a woodshop and metal-fabrication shop. The course is structured around assignments that develop individual expressiveness, research skills, creative industry, and class participation. Students are billed a materials fee of \$120. (Formerly 3D Art and Design: Laser Cutting and CNC Routing.)

Prerequisite: One course from ART 20H, ART 20K, ART 101, ART 102, ART 103, ART 106E, ART 108, ART 120, ART 121, ART 122, ART 124, ART 125, ART 129, ART 146T / THEA 106, ART 172, ART 180B, ART 183, ART 188, ART 189 and two courses from ART 15, ART 20G, ART 20I, ART 20J, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 185 - 3D Art and Design II (5)

Expands 3D art and design principles, methodologies, process, and skills via structured projects using 3D printers and modeling. The metal-fabrication shop and the woodshop allow students to prototype and experiment with construction methods and materials

used to develop assignments. The course is structured around assignments that develop critical thinking, individual industry, research skills, creative expressiveness, and class participation. Students are billed a materials fee of \$120. (Formerly 3D Art and Design: Printing and Prototyping.)

Prerequisite: One course from ART 20H, ART 20K, ART 101, ART 102, ART 103, ART 106E, ART 108, ART 180B, ART 183, ART 184, ART 188; and two courses from ART 15, ART 20G, ART 20I, ART 20J, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 186 - Art and Globalization (5)

This immersive studio class explores art making in a globalized world. Studies the complex relationship between object-making, place-making, aesthetics, and cultural identity in a global context. Examines the impacts and creative responses to a global economy, networked culture and globalized art markets (art fairs and biennales) and explores artists resisting globalization, commodification and the art market, moving beyond traditional sculptural form to transcend traditional conceptions of art and art making. Students are billed a materials fee.

Prerequisite: Prerequisite(s): Three courses from: ART 15, ART 20G, ART 20H, ART 20I, ART 20J, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 188 - Intermediate to Advanced Sculpture (Foundry) (5)

This intermediate/advanced course provides the information and facilities necessary to express ideas through the indirect process of metal casting. The lost wax method is used to manifest ideas in sculpture. Lectures and demonstrations are combined with work time in class. Students generate sculpture forms in wax then gate, invest, weld, chase, patina, and present at least one finished piece. Students are billed a materials fee of \$175. May be repeated for credit.

Prerequisite: Prerequisite(s): One course from ART 20H, ART 120, ART 121, ART 122, ART 124, ART 125, ART 129, ART 172, ART 180B, ART 183, ART 189; and two non-sculpture/intermedia/public art lower-division studios from ART 15, ART 20G, ART 20I, ART 20J, ART 20K, ART 20L, ART 26. Enrollment is restricted to art majors.

ART 189 - Special Topics in Sculpture (5)

Special topics in sculpture as announced, concentrating on specific aspects of subject matter and media.

Prerequisite: Prerequisite(s): One course from ART 20H, ART 120, ART 121, ART 122, ART 124, ART 125, ART 129, ART 172, ART 175, ART 180B, ART 183, ART 188; and two non-sculpture/intermedia/public art lower-division studios from ART 15, ART 20G,

ART 20I, ART 20J, ART 20K, ART 20L, ART 26.
Enrollment is restricted to art majors.

ART 190A - Writing for Artists (5)

Provides practice in using writing as a tool to support creative work--to generate ideas, to critically analyze and interpret artworks, and to communicate clearly with others about one's own work. Lectures, discussions, and visiting artist talks introduce and explore contemporary art contexts, ideas, discourses, artworks, artists, and practices to build students' capacities to place their work in the world. Readings introduce and unfold ideas for discussion, and provide examples of writing formats and purposes as they relate to art practice.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements.
Enrollment is restricted to junior and senior art majors.

ART 190B - Senior Project (5)

Advanced senior art majors create and complete a senior project to fulfill their comprehensive graduation requirement. Focuses on a weekly lecture, studio work, peer critique, and professional practices such as the documentation and exhibition of work.

Prerequisite: Enrollment is restricted to senior art majors.

ART 191 - Teaching Apprenticeship (5)

Designed for art majors at the upper-division level. Each student assists in a lower-division art course under the direct supervision of a faculty member. Students assist in technical instruction, critiques, and class discussions. May not be repeated for credit. Does not count toward upper-division major requirements. Enrollment restricted to art majors.

ART 192 - Directed Student Teaching (5)

Teaching of a lower-division seminar under faculty supervision. (See course 42.) Students should have upper-division standing with a proposal supported by a faculty member willing to supervise. Students submit petition to sponsoring agency.

ART 193 - Field Study (5)

Supervised off-campus study conducted under the immediate and direct guidance of a faculty supervisor. To be used primarily by upper-division students doing part-time off-campus study. Students submit petition to sponsoring agency. Petitions may be obtained in the Art Department Office.

ART 194 - Forms and Ideas (5)

A non-media specific class introducing a range of contemporary visual practices, contexts, issues, forms, and UCSC resources of use to artists, emphasizing relationships between material, form, meaning and between private expression, public communication, and systems of exchange.

Prerequisite: Enrollment is restricted to junior and senior art majors. Strongly recommended for junior transfer art majors.

ART 196 - Independent Senior Project (5)

Student will concentrate on completing work for comprehensive exhibition under the direction of his or her art adviser, with help from other faculty as needed. Students submit petition to sponsoring agency.

ART 197 - Individual Study (5)

Individual study in areas approved by sponsoring instructors. Students submit petition to sponsoring agency.

ART 198 - Independent Field Study (5)

Provides for department-sponsored independent study programs off campus for which faculty supervision is not in person (e.g., supervision is by correspondence). Students submit petition to sponsoring agency.

ART 199 - Tutorial (5)

Individual study in areas approved by sponsoring instructors. Students submit petition to sponsoring agency.

ART 199F - Tutorial (2)

Tutorial

Graduate

ART 210A - Practice-Based Research Group: Sites (5)

The first in the required core course sequence taken by students in the first year of the environmental art and social practice M.F.A. The sequence offers students a graduated learning opportunity to engage in practice-based research in the field. The concept of practice-based research involves "an original investigation undertaken in order to gain new knowledge partly by means of practice and the outcomes of that practice." (Sydney) In this site-specific course, students apply research to site work and art practice.

Prerequisite: Enrollment is restricted to graduate students.

ART 210B - Practice-Based Research Group: Systems (5)

The second in the required core course sequence taken by students in the first year of the environmental art and social practice M.F.A. The sequence offers students a graduated learning opportunity to engage in practice-based research in the field. The concept of practice-based research involves "an original investigation undertaken in order to gain new knowledge partly by means of practice and the outcomes of that practice." (Sydney) Students develop their research through the lens of systems and relationships.

Prerequisite: Prerequisite(s): ART 210A. Enrollment is restricted to graduate students.

ART 210C - Practice-Based Research Group: Contexts (5)

Third in the required core course sequence taken by students in the first year of the environmental art and social practice M.F.A. The sequence offers students a graduated learning opportunity to engage in practice-based research in the field. The concept of practice-based research involves "an original investigation undertaken in order to gain new knowledge partly by means of practice and the outcomes of that practice." (Sydney) Students engage with questions of context and community.

Prerequisite: Prerequisite(s): ART 210A and ART 210B. Enrollment is restricted to graduate students.

ART 220 - Methods and Histories (5)

First-year seminar on methods of the field. Topics include: strategies for artists working in the field, social and environmental art research methods, histories and case studies (artists, projects, and issues).

Prerequisite: Enrollment is restricted to graduate students.

ART 230 - Theory and Practice (5)

First- or second-year graduate seminar focusing on contemporary theory as it relates to social and environmental art practice.

Prerequisite: Prerequisite(s): ART 220. Enrollment is restricted to graduate students.

ART 240 - Art Pedagogies (2)

First-year seminar course introducing and exploring pedagogical methods and approaches in art education and in art practice. The teachings of Paolo Freire and others serve as working models to construct open and respectful learning environments both in and outside the classroom.

Prerequisite: Enrollment is restricted to graduate students.

ART 250 - Writing Matters (2)

First-year seminar course focusing on research and writing skills as a dimension of project-based art practice and as support for planning a thesis. This course can be taken for Satisfactory/Unsatisfactory grading only.

Prerequisite: Enrollment is restricted to graduate students.

ART 257 - Immersive Arts Field Research (5)

Immersive site-specific field research over the span of a four-day (24 hours/overnight) field trip utilizing public lands of California, via the UC Natural Reserve System.

Students engage and relate to a specific place while exploring concepts of site-specificity and develop their own new inquiries about a place by experiencing it physically and by learning about contemporary art concepts through topics of land use. Students also reflect upon the multiple factors that constitute a "site" and how they present possibilities for creative engagement, learn research method skills and approaches that are unique to each site historically, politically, culturally, and environmentally. Due to the rigor of the course, students must submit an application demonstrating the commitment and preparation necessary for successful completion of the class. Enrollment is restricted to graduate students.

ART 260 - Curatorial Collective (2)

Second-year seminar course focusing on exhibition, curatorial questions, and practices as they relate to presenting final thesis work for public reception. Covers practical, theoretical, and historical considerations for artists and researchers in the process of preparing for presenting the outcome of MFA research. Students examine multiple modalities for presentation and exhibition and address issues of diversity and access in exhibition and curatorial practices. This course can be taken for Satisfactory/Unsatisfactory grading only.

Prerequisite: Enrollment is restricted to graduate students.

ART 270A - Project Development and Critique I (5)

First in a sequence of two second-year courses, continuing the focus on students' production and critique. Through peer discussions students continue to deepen their ability to engage in conceptual, scholarly, and interdisciplinary dialogue about their projects and the work of fellow students.

Prerequisite: Prerequisite(s): ART 210A, ART 210B, ART 210C, and ART 220.

ART 270B - Project Development and Critique II (5)

Second in a sequence of two second-year courses, continuing the focus on students' production and critique. Through peer discussions students continue to deepen their ability to engage in conceptual, scholarly and interdisciplinary dialogue about their projects and the work of fellow students.

Prerequisite: Prerequisite(s): ART 270A.

ART 280 - MFA Project Production (5)

Students produce their final project in conjunction with refining and completing their written thesis. Critique, tutorials, and directed study in writing and studio production leads to the presentation of their project.

Prerequisite: Prerequisite(s): ART 270A and ART 270B. Enrollment is restricted to graduate students.

ART 297 - Independent Study (5)

Independent study or research for graduate students. Students submit petition to sponsoring agency.

ART 299F - Thesis Research (2)

Students complete work toward their final thesis project production with the guidance and supervision of a faculty member. Students obtain permission from the faculty member and submit petition to the sponsoring agency. Enrollment is restricted to graduate students in environmental art and social practice.

Prerequisite: Enrollment is restricted to graduate students in environmental art and social practice.

ARTG - ART & DESIGN: GAMES + PLAYABLE MEDIA

Lower-Division**ARTG 80G - Visual Communication and Interaction Design (5)**

Survey of the basics of visual communication and interaction design, focusing on communicating designs of interactive systems. Covers techniques from a breadth of visual communication traditions; how to choose, use, and innovate; and how to structure dialogue around them.

ARTG 80H - Critical History of Digital Games (5)

Surveys the history of digital games from open university games through the home console, PC, and contemporary platforms, and on to indie and art games. Throughout, the course locates connections between technology, marketing, and play culture. (Formerly History of Digital Games.)

ARTG 80I - Foundations of Play (5)

Understanding the foundations of play through reading influential texts; in-class lectures and activities; designing and playtesting games; and the ethnographies of players in the physical world.

ARTG 91 - Introduction to Game Art Production (5)

Project-centered studio-lecture hybrid course that introduces the process of world-building and interaction design from the standpoint of the art director. Each project addresses a milestone in the art direction development pipeline, and demonstrates corresponding entry-level technical and conceptual skills and strategies. Utilizing this split methodology, the big-picture game development process is presented in tandem with related fundamental digital art and design skills at an achievable scale for an introductory course.

Upper-Division**ARTG 118 - Character Creation for Video Games (5)**

This is a hands-on studio course, intended to give students an understanding of the techniques used to create characters for use in video games. Through this course, students will understand and develop the skills necessary to take a video game character design through all of the stages necessary to have a finished character for use in 2D or 3D video games. You will learn industry tools and techniques to be an effective game artist. (Formerly, Digital Drawing/Painting for Game Design.)

Prerequisite: Enrollment is restricted to junior and senior art and design: games and playable media majors and proposed majors.

ARTG 120 - Game Design Experience (5)

Teaches the concrete skills associated with making a digital game, from start to finish. Activities include establishing a team, concepting, storyboarding, prototyping, producing, and testing a game for release. Students are organized into groups and work together to create and produce a playable game.

Prerequisite: Prerequisite(s): ARTG 80G or ARTG 80H or ARTG 80I; and CMPM 80K; and FILM 80V; and CSE 30 or CSE 15 and CSE 15L or CMPM 35. Concurrent enrollment in CMPM 120 is required. Enrollment is restricted to juniors and seniors. Corequisite: Concurrent enrollment in CMPM 120 is required. .

ARTG 129 - Special Topics in Game Design (5)

Allows students to explore game designs related to their ongoing work within their major in either digital or non-digital formats. Students choose a topic and develop game projects that engage players.

Prerequisite: Prerequisite(s): Two of the following courses: ARTG 80G, ARTG 80H, ARTG 80I. Enrollment is restricted to art & design: games and playable media and computer science:computer game design majors.

ARTG 129A - Special Topics in Game Design (5)

Gives students an opportunity to explore game designs related to their ongoing work within the AGPM major, in either digital or analog formats. Students develop projects that engage players on a topic of their choosing.

Prerequisite: Prerequisite(s): ARTG 80G, ARTG 80H, and ARTG 80I. Enrollment is restricted to art and design: games and playable media and computer science: games and playable media majors.

ARTG 131 - 3D Game Art Production (5)

Studio course in which students learn the highly technical and fundamental skills in the production of 3D

art assets for video games. Covers the essential steps in the 3D art pipeline, starting with basic 3D modeling, UV unwrapping, the creation of texture maps, and finally, game engine implementation. Focuses on developing an understanding of the processes and creative thinking necessary to produce industry-level artwork rather than specific software. Students provided with video lectures and demos, and students can expect to produce weekly assignments to practice basic skills and concepts covered.

ARTG 132 - 3D Character Rigging and Animation for Video Games (5)

Gives students an in-depth understanding of the techniques of 3D character rigging and animation for video games. Students understand and develop the skills necessary to be an effective technical artist and animator with a focus on industry standard methods for animating characters to be implemented into a game engine. Course provides students with video and written lectures, video demonstrations, assignments and discussion boards aimed at giving them historical understanding of game animation, the evolution of these techniques, hands-on work to become proficient, as well as the ability to communicate online with other students and the instructor to answer questions and further their knowledge.

ARTG 134 - Spectacular Play: Performance, Ritual, and Making a Scene IRL (5)

What do immersion and interactivity look like outside of virtual worlds? How can we activate social dynamics and public space for the purpose of play? How might we evoke feelings of purpose, or even magic, for players and spectators alike? Students will study and create immersive experiences designed to play out in real life. Drawing inspiration from performance studies, activism, art history, and more, we will transform the everyday into the extraordinary.

Prerequisite: Two of the following courses: ARTG 80G, ARTG 80H, ARTG 80I.

ARTG 136 - Digital Sculpting for Video Games (5)

In this studio course, students learn the basics of digital sculpting in ZBrush with a focus on 3D character art. Through a mix of in-class demos and periodic assignments, students learn how to produce high-fidelity digital sculpts and their practical application in the 3D game art pipeline.

ARTG 137 - Experimental Tabletop RPG Design (5)

Explores experimental mechanics, dynamics, themes, and aesthetics within the tabletop RPG form. In groups and individually, students will play, run, design, write, workshop, and print/produce experimental tabletop RPGs, as well as conduct usability tests focused on layout, design cohesion, and accessibility.

Prerequisite: Prerequisite(s): ARTG 80G, ARTG 80H, and ARTG 80I.

ARTG 138 - Feminist Games (5)

Feminist games including intersectional feminist games, trans feminist games and queer feminist games, will be created by students in this course. Students will study the existing history and present of these genres of games, including game mods, personal experience games, narrative games, alternate reality, augmented reality and electronic literature. Students will work individually to create games as art and activism building on critical theories of race, gender, sexuality and algorithms.

Prerequisite: Prerequisite(s): Two courses from the following: ARTG 80G, ARTG 80H, or ARTG 80I.

ARTG 140 - Writing for Interactive Narrative (5)

Discusses a variety of aspects of writing found in videogames and other interactive forms of media. Using a mix of creative writing projects and in class discussions, students will practice and critique existing work as well as their own.

ARTG 141 - Introduction to Virtual Reality (5)

Introduction to Virtual Reality is an introductory course with a combination of theory and practice. Students are exposed to the history of Virtual Reality and hands-on experience in making VR and developing their own VR project. By introducing broad topics around VR, such as immersive spectacle, virtual embodiment, sonic immersiveness, students will gain knowledge about cultural, historical, and practical perspectives of VR. Students will also learn technical skills in developing VR in Unity 3D. 3D modeling experience is not required in this class. This class is an integration of the production of 3D and 360 degree VR experience. Photogrammetry, 360 degree video production and editing, and other expressive media will also be introduced for advancing the development of VR.

ARTG 142 - Black Aesthetics: Interventions in Digital Media (5)

How do we conceptualize a Black Aesthetic in the realm of digital art and media? How do we re/define Black virtuality when, historically, computer graphics has failed to accurately render Blackness? This course looks at the field of digital media from a technological and cultural perspective, understanding the ways in which anti-Blackness has been embedded in our technology, from photography to video games. Concurrently, course examines the history of the Black Aesthetic as an interventionist art movement, and find ways to intervene in the contemporary digital media landscape.

Prerequisite: Enrollment is restricted to sophomore, junior, and senior art and design: games and playable media, and critical race and ethnic studies majors, and Black studies minors. Crosslisted as: Enrollment is restricted to sophomore, junior, and senior art and design: games and playable media, and critical race and ethnic studies majors, and Black studies minors.

ARTG 143 - Ecofutures (5)

Students study the fields of ecofeminist art, climate fiction, virtual environmental art, Afrofuturism, Latinx futurism and Indigenous futurism, and create digital art relevant to these fields. The dual global crises of climate change and COVID-19 have forced a reevaluation of the idea of the human through a confrontation with the realities and histories of global colonialism and white supremacy. In response, social movements and artists have created artistic strategies which can envision futures beyond the horizon of the imagination of capitalism.

Prerequisite: Prerequisite(s): ARTG 80H, and ARTG 80I or THEA 10 or THEA 20. Crosslisted as:
Prerequisite(s): ARTG 80H, and ARTG 80I or THEA 10 or THEA 20.

ARTG 145 - Non-Digital Game Design (5)

Looks specifically at the design of non-digital games. Surveys a variety of game types and designs. Students prototype card or board game, culminating in a final project that engages players on a socially relevant topic.

ARTG 170 - Game Design Studio I (5)

Students create novel, interesting game concepts and outline and polish a game pitch for their yearlong project, starting with concept ideation and storyboarding to prototyping and presenting the game idea. This course is part one of the art and design: games and playable media capstone requirement.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements and ARTG 120 and CPM 120. Enrollment restricted to senior art and design: games and playable media majors.

ARTG 171 - Game Design Studio II (7)

Students craft the core loop of their yearlong game project. Students build the game, examine player feedback, and repeat the process to make the game better. This course places particular emphasis on advanced production techniques for working in teams, as well as software engineering practices for software design, software testing, and build management. This course is part two of the art and design, games and playable media capstone requirement.

Prerequisite: Prerequisite(s): ARTG 170. Enrollment is restricted to senior art and design: games and playable media majors.

ARTG 172 - Game Design Studio III (7)

Students scope and polish their final game designs. Students work towards releasing one specific game platform while coordinating across disciplinary boundaries to create and integrate all the necessary code, art, animation, and sound assets for their game. This course is part III of the art and design: games and playable media capstone requirement.

Prerequisite: Prerequisite(s): ARTG 171. Enrollment is restricted to senior art and design: games and playable media majors.

ARTG 176 - Game Design Collaborative (2)

Supports students who are collaborating with the ARTG/CPM 170-series teams on the creation of their capstone game projects. Enrollment is restricted to students who are working with senior game-design project groups, and by permission of the instructor,

ARTG 199 - Tutorial (5)

Individual study in areas approved by sponsoring instructors. Tutorial may not be used to satisfy major requirements. Petition required, approved by instructor and department; petitions available on the program website.

ARTG 199F - Tutorial (2)

Individual study in areas approved by sponsoring instructors. Tutorial may not be used to satisfy major requirements. Petition required, approved by instructor and department; petitions available on the program website.

ASTR - ASTRONOMY AND ASTROPHYSICS

Lower-Division

ASTR 1 - Introduction to the Cosmos (5)

Overview of the main ideas in our current view of the universe and how these ideas originated. Galaxies, quasars, stars, black holes, and planets. Students cannot receive credit for this course after receiving credit for ASTR 2.

ASTR 2 - Overview of the Universe (5)

An overview of the main ideas in our current view of the universe, and how they originated. Galaxies, quasars, stars, pulsars, and planets. Intended primarily for nonscience majors interested in a one-quarter survey of classical and modern astronomy. Students cannot receive credit for for ASTR 1 after receiving credit for ASTR 2.

ASTR 3 - Introductory Astronomy: Planetary Systems (5)

Properties of the solar system and other planetary systems. Topics include the Sun, solar system exploration, the physical nature of the Earth and the other planets, comets and asteroids, the origin of the solar system, the possibility of life on other worlds, planet formation, and the discovery and characterization of planets beyond the solar system. Intended for nonscience majors. ASTR 3, ASTR 4, and ASTR 5 are independent and may be taken separately or sequentially.

ASTR 4 - Introductory Astronomy: The Stars (5)

Stellar evolution: observed properties of stars, internal structure of stars, stages of a star's life including stellar births, white dwarfs, supernovae, pulsars, neutron stars, and black holes. Planet and constellation identification. Intended for nonscience majors. ASTR 3, ASTR 4, and ASTR 5 are independent and may be taken separately or sequentially.

ASTR 5 - Introductory Astronomy: The Formation and Evolution of the Universe (5)

The universe explained. Fundamental concepts of modern cosmology (Big Bang, dark matter, curved space, black holes, star and galaxy formation), the basic physics underlying them, and their scientific development. Intended for non-science majors. ASTR 3, ASTR 4, and ASTR 5 are independent and may be taken separately.

ASTR 6 - The Space-Age Solar System (5)

Scientific study of the Moon, Earth, Mercury, Venus, and Mars by the space program; history of rocket development; the Apollo program and exploration of the Moon; unmanned spacecraft studies of the terrestrial planets; scientific theories of planetary surfaces and atmospheres. Intended for nonscience majors.

ASTR 7 - Black Holes (5)

Examines the nature of black holes, including their creation and evolution; evidence for their existence from astronomical observations; and the role of black holes in the evolution of the universe. Also examines current ideas about the nature of space, time, and gravity.

ASTR 8 - Exploring the Universe with Astronomical Data (5)

Introduces how we use observational data to learn about stars, galaxies, planets, and cosmology. Covers astronomical data and experimental design and basic physics and statistical techniques, such as model fitting, regression, significance tests, and error estimation.

ASTR 9A - Introduction to Research in Physics and Astrophysics (2)

Introduction to research for first-year students interested in physics and astrophysics. Students complete projects in small groups with scientists. Introduces techniques for collaboration; science writing; physics careers. Continuing course spanning two quarters. Enrollment is restricted to first-year proposed astrophysics and physics majors and by permission of the instructor.

ASTR 9B - Introduction to Research in Physics and Astrophysics (3)

Introduction to research for first-year students interested in physics and astrophysics. Students complete projects in small groups with scientists. Introduces techniques for collaboration; science writing; physics careers.

Continuing course spanning two quarters.

Prerequisite(s): ASTR 9A. Enrollment is restricted to first-year proposed applied physics, physics, and physics (astrophysics) majors and by permission of the instructor.

ASTR 10 - From the Big Bang to Planet Earth (5)

Broad scientific overview of the universe, from the Big Bang to planet Earth. Origin and content: Big Bang, dark matter, dark energy, galaxies, black holes, star systems, exoplanets. Solar system and properties of Earth in relation to other planets. Physics of planetary atmospheres and impact of human activity on Earth's climate. Possibility of terraforming and of life beyond the solar system. Fate of Earth, the solar system, and the universe. Active learning class with continuous assessment. Intended for non-science majors. No previous college-level math, physics, or astronomy required.

ASTR 19 - Practical Programming for the Sciences (5)

Introduces how we use computer programming to solve scientific problems. Covers basic Python programming, code repositories, and scientific plotting and graphing. Introduces more advanced techniques through small projects featuring real data from throughout the sciences, with a focus on using programming to evaluate the statistical significance of scientific claims.

ASTR 12 - Stars and Stellar Evolution (5)

An introduction to the observational facts and physical theory pertaining to stars. Topics include the observed properties of stars and the physics underlying those properties; stellar atmospheres; stellar structure and evolution. Intended for science majors and qualified non-science majors. Knowledge of high school physics and an understanding of mathematics at the MATH 2 level required.

ASTR 13 - Galaxies, Cosmology, and High Energy Astrophysics (5)

Introduction to modern cosmology and extragalactic astronomy. Topics include the origin of the universe, Big Bang cosmology, expansion of the universe, dark matter and dark energy, properties of galaxies and active galactic nuclei, and very energetic phenomena in our own and other galaxies. Intended for science majors and qualified non-science majors. Knowledge of high school physics and an understanding of mathematics at the MATH 2 level required.

ASTR 15 - Dead Stars and Black Holes (5)

Course is primarily concerned with the structure, formation, and astrophysical manifestations of compact objects, such as white dwarfs, neutron stars, and black holes, and the astronomical evidence for their existence. Intended for science majors and qualified non-science majors. Knowledge of high school physics and an understanding of mathematics at the MATH 2 level required.

ASTR 16 - Astrobiology: Life in the Universe (5)

Topics include the detection of extrasolar planets, planet formation, stellar evolution and properties of Mars, the exploration of our solar system and the search for life within it, and the evolution of life on Earth. Intended for science majors and qualified non-science majors. Knowledge of high school physics and an understanding of mathematics at the MATH 2 level required.

ASTR 18 - Planets and Planetary Systems (5)

Our solar system and newly discovered planetary systems. Formation and structure of planets, moons, rings, asteroids, comets. Intended for science majors and qualified non-science majors. Knowledge of high school physics and an understanding of mathematics at the MATH 2 level required.

Upper-Division

ASTR 111 - Order-of-Magnitude Astrophysics (5)

Examines the most basic and direct connection between physics and astrophysics in order to derive a better understanding of astrophysical phenomena from first principles to the extent possible.

Prerequisite: Prerequisite(s): MATH 22 or MATH 23A; PHYS 5B or PHYS 6B; and previous or concurrent enrollment in PHYS 102.

ASTR 112 - Physics of Stars (5)

The leading observational facts about stars as interpreted by current theories of stellar structure and evolution. Spectroscopy, abundances of the elements, nucleosynthesis, stellar atmospheres, stellar populations. Final stages of evolution, including white dwarfs, neutron stars, supernovae.

Prerequisite: Prerequisite(s): MATH 22 or MATH 23A, PHYS 5B or PHYS 6B, and PHYS 102.

ASTR 113 - Introduction to Cosmology (5)

Physical examination of our evolving universe: the Big Bang model; simple aspects of general relativity; particle physics in the early universe; production of various background radiations; production of elements; tests of geometry of the universe; dark energy and dark matter; and formation and evolution of galaxies and large-scale structure.

Prerequisite: Prerequisite(s): MATH 22 or MATH 23A, PHYS 5B or PHYS 6B, and PHYS 102.

ASTR 117 - High Energy Astrophysics (5)

Theory and practice of space and ground-based x-ray and gamma-ray astronomical detectors. High-energy emission processes, neutron stars, black holes. Observations of x-ray binaries, pulsars, magnetars, clusters, gamma-ray bursts, the x-ray background.

High-energy cosmic rays. Neutrino and gravitational-wave astronomy.

Prerequisite: Prerequisite(s): MATH 22 or MATH 23A, PHYS 5B or PHYS 6B, and PHYS 102.

ASTR 118 - Physics of Planetary Systems (5)

Determination of the physical properties of the solar system, its individual planets, and extrasolar planetary systems through ground-based and space-based observations, laboratory measurements, and theory. Theories of the origin and evolution of planets and planetary systems.

Prerequisite: Prerequisite(s): MATH 22 or MATH 23A; and PHYS 5B or PHYS 6B.

ASTR 119 - Introduction to Scientific Computing (5)

Introduction to solving scientific problems using computers. A series of simple problems from Earth sciences, physics, and astronomy are solved using a user-friendly scientific programming language (Python/SciPy).

Prerequisite: Prerequisite(s): MATH 11A or MATH 19A or MATH 20A or AM 15A.

ASTR 136 - Advanced Astronomy Laboratory (5)

Introduces the techniques of modern observational astrophysics at optical wavelengths through hands-on experiments and use of remote observatories. Students develop the skills and experience to pursue original research. Course is time-intensive and research-oriented.

Prerequisite: Prerequisite(s): ASTR 119 and PHYS 133. Enrollment is restricted to junior and senior astrophysics majors.

ASTR 192 - Dir Stu Teach (5)

Dir Stu Teach

ASTR 199 - Tutorial (5)

Graduate

ASTR 202 - Astrophysics I (5)

Survey of radiative processes of astrophysical importance from radio waves to gamma rays. The interaction of radiation with matter: radiative transfer, emission, and absorption. Thermal and non-thermal processes, including bremsstrahlung, synchrotron radiation, and Compton scattering. Radiation in plasmas. Enrollment is by permission of the instructor.

ASTR 204 - Astrophysics II (5)

Explores how physical conditions in astrophysical objects can be diagnosed from their spectra. Discussion topics include how energy flows determine the thermal state of radiating objects and how the physics of radiative transfer can explain the emergent spectral

characteristics of stars, accretion disks, Lyman-alpha clouds, and microwave background. (Formerly Astrophysical Flows.)

Prerequisite: Enrollment is restricted to graduate students.

ASTR 205 - Introduction to Astronomical Research and Teaching (5)

Lectures and seminar-style course intended to integrate new graduate students into the department; to introduce students to the research and interests of department faculty; and to expose graduate students to teaching skills and classroom techniques. (Formerly Introduction to Astronomical Research.)

Prerequisite: Enrollment is restricted to graduate students.

ASTR 214 - Special Topics in Galactic and Extragalactic Astronomy (5)

Survey of some principal areas of research on the origin and growth of cosmic structures and galaxies: the dark ages; 21cm tomography; first galaxies; first stars and seed black holes; reionization and chemical enrichment of the intergalactic medium; the assembly of massive galaxies; quasi-stellar sources; interactions of massive black holes with their environment; extragalactic background radiation; numerical simulations and the nature of the dark matter; the dark halo of the Milky Way.

Prerequisite: Enrollment is restricted to graduate students.

ASTR 215 - Research Practicum for Astrophysics (5)

Introduces graduate students to practical and efficient research methodology. Covers best practices in coding and code development, documentation of research, project management, preprint and journal article writing and submission, professional presentation preparation, and grant writing. Introduces more advanced techniques through experiential learning research projects developed in collaboration with the instructor.

Prerequisite(s): ASTR 202, ASTR 204, ASTR 205, and ASTR 257. Students must take ASTR 215 from an instructor outside their Ph.D. specialty, and requires permission of the instructor to enroll.

ASTR 220A - Stars and Planets I (5)

Survey of stellar structure and evolution. Physical properties of stellar material. Convective and radiative energy transport. Stellar models and evolutionary tracks through all phases. Brown dwarfs and giant planets. Comparison with observations. (Formerly Stellar Structure and Evolution.)

Prerequisite: Enrollment is restricted to graduate students.

ASTR 222 - Stars and Planets II (5)

Theory and observations of protoplanetary disks. Origin and evolution of the solar nebula. Formation and evolution of the terrestrial planets and the giant planets. (Formerly Planetary Formation and Evolution.)

Prerequisite: Enrollment is restricted to graduate students.

ASTR 225 - High-Energy Astrophysics (5)

High-energy astrophysics and the final stages of stellar evolution: supernovae, binary stars, accretion disks, pulsars; extragalactic radio sources; active galactic nuclei; black holes. (Formerly *Physics of Compact Objects*)

ASTR 230 - Diffuse Matter in Space (5)

Fundamental physical theory of gaseous nebulae and the interstellar medium. Ionization, thermal balance, theory and observation of emission spectra. Interstellar absorption lines, extinction by interstellar dust. Ultraviolet, optical, infrared, and radio spectra of gaseous nebulae.

ASTR 233 - Galaxies and Cosmology I (5)

Advanced survey of topics in cosmology and galaxy formation. Appropriate for graduate students and undergraduates with a significant background in physics and astronomy. Topics include modern physical cosmology, curved space-times, observational tests of cosmology, the early universe, dark matter, the emergence of cosmic structure and the formation and evolution of galaxies. Enrollment is by permission of the instructor.

ASTR 234 - Statistical Techniques in Astronomy (5)

Introduces probability and statistics in data analysis with emphasis on astronomical applications. Topics include probability, Bayes' theorem, statistics, error analysis, correlation, hypothesis testing, parameter estimation, surveys, time-series analysis, surface distributions, and image processing. Students learn to identify the appropriate statistical technique to apply to an astronomical problem and develop a portfolio of analytic and computational techniques that they can apply to their own research.

Prerequisite: Enrollment is restricted to graduate students.

ASTR 240A - Galaxies and Cosmology II (5)

Structure and evolutionary histories of nearby galaxies. Stellar populations, galactic dynamics, dark matter, galactic structure and mass distributions. Peculiar galaxies and starbursting galaxies. Structure and content of the Milky Way. Evolution of density perturbations in the early universe. Hierarchical clustering model for galaxy formation and evolution. (Formerly Galactic and Extragalactic Stellar Systems.)

ASTR 257 - Observational Astronomy (5)

Introduction to observational astronomy with a multi-day field trip to Lick Observatory. Students learn the fundamentals of planning and executing observational projects, manipulating and interpreting raw astronomical data with standard tools and algorithms, presenting their observations in a standard written format that is appropriate for publication, and observatory operations and career paths.

Prerequisite: Designed for graduate students; available to qualified undergraduate astrophysics majors by instructor permission.

ASTR 260 - Instrumentation for Astronomy (5)

An introduction to astronomical instrumentation for infrared and visible wavelengths. Topics include instrument requirements imposed by dust, atmosphere, and telescope; optical, mechanical, and structural design principles and components; electronic and software instrument control. Imaging cameras and spectrographs are described. Offered in alternate academic years.

Prerequisite: Enrollment is restricted to graduate students.

ASTR 289 - Adaptive Optics and Its Application (5)

Introduction to adaptive optics and its astronomical applications. Topics include effects of atmospheric turbulence on astronomical images, basic principles of feedback control, wavefront sensors and correctors, laser guide stars, how to analyze and optimize performance of adaptive optics systems, and techniques for utilizing current and future systems for astronomical observations.

Prerequisite: Enrollment is restricted to graduate students.

ASTR 292 - Seminar (0)

Seminar attended by faculty, graduate students, and upper-division undergraduate students.

ASTR 293 - Current Literature in Astrophysics (2)

Training for following daily progress in astrophysical research to keep pace with the rapidly evolving scientific field. Students learn how to select and read interesting papers (that span a wide range of topics) efficiently and how to summarize their key results. Students have an opportunity to practice presentation skills in an informal group discussion setting.

Prerequisite: Enrollment is restricted to graduate students.

ASTR 294 - Pedagogy of Astrophysical Research (5)

Teaches fundamental skills for scientific research in the context of coursework. Course has two branches: an instructor-intensive hands-on research training in an

area beyond the thesis; and an instructor-led literature review. The research branch involves short, quarter-long projects with faculty that are designed to introduce skills and concepts broadly applicable to research but within a focused science domain. The literature branch involves short review projects for building expertise in evaluating literature, writing papers, refereeing articles, and reviewing grants and proposals.

Prerequisite: Enrollment is restricted to astronomy and astrophysics graduate students.

ASTR 297A - Independent Study (5)

Independent study or research for graduate students who have not yet begun work on their theses. Students submit petition to sponsoring agency. Enrollment restricted to graduate students.

ASTR 297B - Independent Study (10)

Independent study or research for graduate students who have not yet begun work on their theses. Students submit petition to sponsoring agency. Enrollment restricted to graduate students.

ASTR 297C - Independent Study (15)

Independent study or research for graduate students who have not yet begun work on their theses. Students submit petition to sponsoring agency. Enrollment restricted to graduate students.

ASTR 299A - Thesis Research (5)**ASTR 299B - Thesis Research (10)****ASTR 299C - Thesis Research (15)**

BIOC - BIOCHEMISTRY AND MOLECULAR BIOLOGY

Upper-Division

BIOC 100A - Biochemistry and Molecular Biology (5)

Fundamentals of molecular biology, structure and function of nucleic acids, and protein structure. Designed for students preparing for research careers in biochemistry and molecular biology. Lecture: 3-1/2 hours; discussion: 1-1/4 hours.

Prerequisite: Prerequisite(s): CHEM 8B; and BIOL 20A.

BIOC 100B - Biochemistry and Molecular Biology (5)

Covers principles of protein function from ligand binding and enzyme mechanism, kinetics and regulation to membrane composition and membrane protein function. Lecture: 3-1/2 hours; discussion: 1-1/4 hours.

Prerequisite: Prerequisite(s): BIOC 100A.

BIOC 100C - Biochemistry and Molecular Biology (5)

Biochemistry: intermediary metabolism and bioenergetics. How enzymatically catalyzed reactions are organized and regulated; how energy from molecules is extracted for chemical work. Lecture: 3-1/2 hours; discussion: 1-1/4 hours. (Formerly Biochemistry.)

Prerequisite: Prerequisite(s): BIOC 100B.

BIOC 110L - Advanced Biochemistry Laboratory (5)

An introduction to the major techniques used in the isolation and characterization of biological components. Laboratory: 8 hours; lecture: 1-3/4 hours. Students are billed a materials fee of \$350.

Prerequisite: Prerequisite(s): BIOC 100B and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to chemistry majors in the biochemistry concentration. Other majors by permission.

BIOC 163A - Quantum Mechanics, Spectroscopy and Molecular Structure for Biochemistry and Molecular Biology (5)

Detailed introduction to molecular quantum mechanics and application of spectroscopic and diffraction techniques to problems involving biological macromolecules. Designed as an alternative to CHEM 163A for the biochemistry and molecular biology major requirement. Students cannot receive credit for this course and CHEM 163A.

Prerequisite: Prerequisite(s): CHEM 1B and CHEM 1C; and PHYS 5A, and PHYS 5B, or PHYS 6A and PHYS 6B; and previous or concurrent enrollment in PHYS 5C or PHYS 6C.

BIOC 163B - Biochemical Thermodynamics and Statistical Mechanics for Biochemistry and Molecular Biology (5)

Detailed introduction to the fundamentals of classical and statistical thermodynamics and applications to problems involving biochemical equilibria, macromolecular structure and function. Course is designed as an alternative to CHEM 163B for partial fulfillment of the biochemistry and molecular biology major physical chemistry requirement. Students cannot receive credit for this course and CHEM 163B.

Prerequisite: Prerequisite(s): CHEM 1B and CHEM 1C; PHYS 6A or PHYS 5A; and previous or concurrent enrollment in BIOC 100A. .

BIOE - BIOLOGY ECOLOGY**AND EVOLUTIONARY****Lower-Division****BIOE 16 - Introduction to Horticulture (2)**

Surveys the production of indoor crops and landscape plants to gain a working knowledge of how light, temperature, water, fertilizers, and soilless media interact in a controlled environment. Also covers pest management and propagation. Lectures and demonstrations are combined with activities in the UCSC Greenhouses and at the UCSC Arboretum to give students direct experience with horticulture practices and principles in controlled environments. The approach is to develop practical skills and familiarity with agricultural technology while mastering basic principles in plant biology. Emphasis is placed on indoor growth systems.

BIOE 19 - Biodiversity in the Age of Humans (5)

How can we better understand how humans have affected Earth and its inhabitants? Explores how DNA shed by organisms into the environment can be collected and used to study Earth's biodiversity, with applications in medicine, anthropology, agriculture, and conservation.

Prerequisite: Enrollment is restricted to first-year students, sophomores, and juniors.

BIOE 20B - Development and Physiology (5)

Topics in morphology, physiology, development, genetics, and endocrinology selected to exemplify current issues and perspectives in organismic biology.

Prerequisite: Prerequisite(s): BIOL 20A.

BIOE 20C - Ecology and Evolution (5)

Introduction to ecology and evolution covering principles of evolution at the molecular, organismal, and population levels. Evolutionary topics include genetic and phenotypic variation, natural selection, adaptation, speciation, and macroevolution. Also covers behavioral, population, and community ecology including applied ecological issues.

BIOE 20F - Field Biology in Practice (2)

Introduction to the practice of field biology. Includes implementing the scientific process from formulating and testing hypotheses, sampling, data collection, analysis, interpretation, and presentation. Grounded in the natural ecosystems surrounding the UC Santa Cruz campus, this course incorporates field and laboratory techniques, natural history of flora and fauna, and both observational and experimental biology.

Prerequisite: Prerequisite(s): BIOE 20C.

BIOE 75 - Scientific Diving Certification (2)

Prerequisite for course 161/L, *Kelp Forest Ecology*, and all research diving performed under the auspices of UCSC or other academic institutions. Course work includes lectures and scuba diving. Topics include subtidal sampling techniques, navigation, low visibility diving, search and recovery, rescues, small boat use, oxygen administration for divers, technical blue water deep diving, physics, and physiology. Apply online at <http://www2.ucsc.edu/sci-diving>. Students are billed a course materials fee that covers costs for equipment use, materials, and transportation. Prerequisite(s): skill level equal to Advanced Scuba Diver Certification, pass scuba physical, provide own scuba gear, be certified in CPR and First Aid; and interview: pass swim test and scuba skills test.

BIOE 80S - Lies, Damn Lies, and Statistics (5)

Probability and statistics underlie much of our everyday experience and, as such, there is a fundamental need for an understanding of the use, and misuse, of statistics. This course is taught through case studies based in biology, politics, economics, crime, education, disease, conservation, and other fields of interest. For example, does a change in crime rate really affect your probability of being a victim of a crime? The goal is to provide all students with sufficient understanding probability and statistics to determine if everyday and often sensationalistic reporting of statistical results is meaningful.

BIOE 82 - Introduction to Field Research and Conservation (2)

A field-based course with overnight and day trips to regionally diverse areas throughout Central California. Field trips and lectures familiarize students with a wide variety of topics in the ecological, conservation, and environmental science as well as natural-resource management. Enrollment is by instructor permission. Students are billed a materials fee of \$180.

BIOE 85 - Natural History of the UCSC Natural Reserves (5)

Lectures and field trips familiarize students with the flora and fauna of the UCSC Natural Reserves. Field trips focus on surveying and identifying vertebrates and plants at each UCSC Natural Reserve (Fort Ord, Campus Reserve, Big Creek, Younger Lagoon, and Ano Nuevo).

BIOE 95 - Seymour Center Docent Training (2)

Taught as a series of seminars, course provides a survey of marine sciences and the role of scientific research in understanding and conserving the world's oceans. Topics include: marine biology, ecology, conservation, coastal geology, and climate change. This series is intended to prepare students to interpret research and inform the public by leading tours at the Seymour Marine Discovery Center at the Long Marine Lab. Enrollment is by application and interview.

BIOE 99 - Tutorial (5)

Individual, directed study for undergraduates. Students submit petition to sponsoring agency.

Upper-Division**BIOE 107 - Ecology (5)**

Focuses on physiological, behavioral, and population ecology, and on linking ecological processes to evolution. It includes basic principles, experimental approaches, concepts of modeling, and applications to ecological problems.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; BIOL 20A, BIOE 20B, and BIOE 20C.

BIOE 108 - Marine Ecology (5)

Paradigms and designs in marine ecology. A review of the paradigms that have shaped our understanding of marine ecology; analysis and discussion of experiments with these paradigms. Students cannot receive credit for this course and BIOE 208.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; BIOL 20A, BIOE 20B, and BIOE 20C; BIOE 107 or BIOE 140 recommended. Enrollment is restricted to juniors and seniors.

BIOE 109 - Evolution (5)

An examination of the history and mechanisms of evolutionary change. Topics include molecular evolution, natural and sexual selection, adaptation, speciation, biogeography, and macroevolution.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; BIOL 20A, BIOE 20B, BIOE 20C, and BIOL 105.

BIOE 112 - Ornithology (5)

Introduction to the evolution, ecology, behavior, and natural history of birds, using exemplary case histories to illustrate key concepts in evolution, ecology, and behavior.

Prerequisite: Prerequisite(s): BIOE 107, BIOE 109, or BIOE 140. Concurrent enrollment in BIOE 112L is required.

BIOE 112L - Ornithology Field Studies (2)

Field trips introduce students to field identification skills and field investigation of census, foraging behavior, migration, social behavior, and communication. Examination of specimens in the laboratory will be used to highlight the diversity and taxonomy of birds. Some field trips may require students to provide their own transportation.

Prerequisite: Prerequisite(s): BIOE 107, BIOE 109, or BIOE 140. Concurrent enrollment in BIOE 112 is required.

BIOE 114 - Herpetology (5)

Lectures introduce students to evolution, development, physiology, behavior, ecology, and life history of reptiles and amphibians. The materials integrate with conceptual and theoretical issues of ecology, evolution, physiology, and behavior.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; BIOE 107, BIOE 109, BIOE 110, or BIOE 140. Concurrent enrollment in BIOE 114L is required.

BIOE 114L - Field Methods in Herpetological Research (2)

Field trips introduce students to natural history, censusing techniques, physiological ecology, and behavioral analysis of reptiles and amphibians. Laboratories introduce students to techniques for analyzing behavior and physiology. Field studies culminate with a group project in a natural setting. Some field trips may be held on weekends due to weather considerations. Some field trips may require students to provide their own transportation, some transportation will be provided by UCSC. Students are billed a materials fee of \$435.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; BIOE 107, BIOE 109, BIOE 110, or BIOE 140. Concurrent enrollment in BIOE 114 is required.

BIOE 117 - Systematic Botany of Flowering Plants (5)

An examination of the taxonomy and evolution of flowering plants. Special topics include phylogenetics and cladistics, plant species concepts, and modern methods of systematic research.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C, and satisfaction of the Entry Level Writing and Composition requirements. Must be taken concurrently with BIOE 117L.

BIOE 117L - Systematic Botany of Flowering Plants Laboratory (2)

Weekly laboratory concerned primarily with California flora and plant families. Several field trips.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. Must be taken concurrently with BIOE 117.

BIOE 118 - Plants and Society: the Biology of Food, Shelter, and Medicine (5)

Introduces plant biology as it affects human society. Topics include the origins of agriculture, the morphology and chemistry of food plants, the material

uses of plant products, the biology of medicinal plants, and plant diversity and bioprospecting.

Prerequisite: Prerequisite(s): BIOL 20A and BIOE 20B and BIOE 20C; or ENVS 23 and ENVS 24.

BIOE 120 - Marine Botany (5)

An introduction to the biology of marine algae, fungi, and angiosperms with regard to form and function. Major boreal, temperate, and tropical marine plant communities. Lecture format.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C, and satisfaction of the Entry Level Writing and Composition requirements. Must be taken concurrently with BIOE 120L.

BIOE 120L - Marine Botany Laboratory (2)

One laboratory weekly and several field trips. Focuses on marine algae, fungi, and angiosperms.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C, and satisfaction of the Entry Level Writing and Composition requirements. Must be taken concurrently with BIOE 120.

BIOE 122 - Invertebrate Zoology (5)

An examination of invertebrates and their habitats. Lecture format.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C and satisfaction of the Entry Level Writing and Composition requirements. Must be taken concurrently with BIOE 122L.

BIOE 122L - Invertebrate Zoology Laboratory (2)

An examination of invertebrates and their habitats. Weekly laboratories or field trips.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C, and satisfaction of the Entry Level Writing and Composition requirements. Must be taken concurrently with BIOE 122.

BIOE 124 - Mammalogy (5)

Introduces the biology of mammals, including their classification, evolution, behavior, reproductive strategies, and general ecology. Examines the diagnostic traits of mammals; provides a survey of the living orders along with their diagnostic features, physiological and behavioral specializations, and adaptations.

Prerequisite: Prerequisite(s): BIOL 20A and BIOE 20B and BIOE 20C. Concurrent enrollment in BIOE 124L is required.

BIOE 124L - Mammalogy Laboratory (2)

Focuses on the identification of mammals and their specific traits. Exercises provide hands-on experience at identifying mammal orders, families, and species. Field

trip provides students with field techniques in mammalogy.

Prerequisite: Prerequisite(s): BIOL 20A and BIOE 20B and BIOE 20C. Concurrent enrollment in BIOE 124 is required.

BIOE 125 - Ecosystems of California (5)

A survey of the diversity, structure, and functioning of California's ecosystems through time and the ways they have influenced and responded to human activities and stewardship. Topics include: ecosystem drivers such as climate, soils, and land-use history; human and ecological prehistory; comparative marine, freshwater, and terrestrial ecosystem dynamics; and managed ecosystems such as range, fisheries, and agriculture.

Prerequisite: Prerequisite(s): BIOE 20C. Enrollment is restricted to ecology and evolution, marine biology, plant sciences, and biology B.A. majors.

BIOE 126 - Biology of Large Marine Vertebrates (5)

Broad overview of the ecology, evolution, physiology, and behavior of marine mammals, birds, and turtles, with an emphasis on local Monterey Bay species.

Prerequisite: Prerequisite(s): BIOE 20C.

BIOE 127 - Ichthyology (5)

An introduction to the biology of jawless, cartilaginous, and bony fishes--their classification, evolution, form, physiology, and ecology.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C, and satisfaction of the Entry Level Writing and Composition requirements. Must be taken concurrently with BIOE 127L.

BIOE 127L - Ichthyology Laboratory (2)

One laboratory session a week and several field trips to study the biology of fish.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C, and satisfaction of the Entry Level Writing and Composition requirements. Must be taken concurrently with BIOE 127.

BIOE 128L - Large Marine Vertebrates Field Course (5)

Lectures combined on fieldwork with large marine vertebrates in the laboratory and lectures with large marine vertebrates in the field (Monterey Bay, Ano Nuevo). Fieldwork familiarizes students with research methods, study design, and statistical approaches for research on large marine vertebrates (seals, birds, fish, and sharks). Research includes: animal tracking; physiology; behavior; foraging ecology; and energetics. Students are billed a materials fee of \$100.

Prerequisite(s): BIOL 20A and BIOE 20B and BIOE 20C, and satisfaction of the Entry Level Writing and Composition requirements.

BIOE 129 - Biology of Marine Mammals (5)

A survey of cetaceans, pinnipeds, sirenians, and sea otters, including natural history, systematics, physiology, behavior, anatomy, and conservation.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C; and satisfaction of the Entry Level Writing and Composition requirements. BIOL 110 is recommended.

BIOE 129L - Biology of Marine Mammals Laboratory (2)

Covers the basics of marine mammal taxonomy, anatomy, and field methods with an emphasis on local field identification and understanding of local species. Will include field trips to Long Marine Lab, Ano Nuevo, and Monterey Bay.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. Must be taken concurrently with BIOE 129.

BIOE 131 - Animal Physiology (5)

Principles and concepts underlying the function of tissues and organ systems in animals with emphasis on vertebrate systems. Students cannot receive credit for this course and BIOL 130.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C.

BIOE 131L - Animal Physiology Laboratory (2)

Experiments conducted with primary focus on quantitative physiological principles of organ systems and intact organisms. Students cannot receive credit for this course and BIOL 130L.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. Concurrent enrollment in BIOE 131 is required.

BIOE 133 - Exercise Physiology (5)

An advanced-level course concerning physiological and biochemical processes associated with human performance. Emphasis is on the integration of organ systems for exercise. Topics include metabolism and fuel utilization, cardiovascular and respiratory dynamics during activity, and the effects of training. Requires a good understanding of basic physiological function and anatomy.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B and BIOE 20C. BIOE 131 is recommended. Concurrent enrollment in BIOE 133L is required.

BIOE 133L - Exercise Physiology Laboratory (2)

An introduction to basic measurement techniques used in assessing the physiological response of humans to exercise. Sessions cover oxygen consumption, respiratory rate, and heart rate monitoring during aerobic and anaerobic activity.

Prerequisite: Prerequisite(s): BIOL 20A, and BIOE 20B and BIOE 20C. BIOE 131 is recommended. Concurrent enrollment in BIOE 133 is required.

BIOE 134 - Comparative Vertebrate Anatomy (5)

Course focuses on vertebrate form and function: an integration of physiology and biomechanics. Topics include: the physiology and biomechanics underlying vertebrate locomotion; vertebrate feeding; and the morphological changes associated with different locomotion and feeding strategies through evolutionary time.

Prerequisite: Prerequisite(s): BIOL 20A and BIOE 20B and BIOE 20C. Concurrent enrollment in BIOE 134L is required.

BIOE 134L - Comparative Vertebrate Anatomy Laboratory (2)

Course focuses on the gross dissections all major clades of vertebrates: development, form, and diversity of organ systems and basic principles of evolution; vertebrate classification; and functional morphology, with emphasis on feeding and locomotion. Anatomical dissections integrated with the associated lecture material focusing on biomechanics, form, and function.

Prerequisite: Prerequisite(s): BIOL 20A and BIOE 20B and BIOE 20C. Concurrent enrollment in BIOE 134 is required.

BIOE 135 - Plant Physiology (5)

Cellular and organismal functions important in the life of green plants.

Prerequisite: Prerequisite(s): BIOL 20A and BIOE 20B and BIOE 20C; concurrent enrollment in BIOE 135L is required.

BIOE 135L - Plant Physiology Laboratory (2)

Weekly laboratory concerning the cellular and organismal functions of green plants.

Prerequisite: Prerequisite(s): BIOL 20A and BIOE 20B and BIOE 20C; concurrent enrollment in BIOE 135.

BIOE 136 - Environmental Physiology (5)

Explores how an organism's physiology interacts with its environment including molecular to whole organism-level processes. How do animals thrive in the most diverse regions of Earth and why are some more vulnerable to change than others?

Prerequisite: Prerequisite(s): BIOL 20A and BIOE 20B and BIOE 20C.

BIOE 137 - Molecular Ecology (5)

This combination lecture/laboratory course explores the use of molecular (DNA and/or protein) data in ecological and conservation research. Topics covered include data collection; marker choice; estimating

genetic diversity and population structure; the inference of mating systems; and environmental genomics.

Prerequisite: Prerequisite(s): BIOE 20B and BIOE 20C and BIOL 20A and BIOL 105, and satisfaction of the Entry Level Writing and Composition requirements. Concurrent enrollment in BIOE 137L is required.

BIOE 137L - Molecular Ecology Laboratory (2)

This combination lecture/laboratory course explores the use of molecular (DNA and/or protein) data in ecological and conservation research. Topics covered include data collection; marker choice; estimating genetic diversity and population structure; the inference of mating systems; and environmental genomics. Students are billed a materials fee of \$120.

Prerequisite: Prerequisite(s): BIOE 20B and BIOE 20C and BIOL 20A and BIOL 105. Concurrent enrollment in BIOE 137 is required.

BIOE 138 - Modeling Evolution and Ecology (5)

Introduces students to how mathematical models can be used to ask and answer evolutionary and ecological questions. Methods covered include optimality theory, population genetics, population dynamic models, game theory, and dynamic state-variable models. Students learn to develop their own mathematical models and to use models to make predictions. Statistical methods for combining theory and data are not covered. Class focuses on learning by doing, using in-class activities, weekly problem sets and an independent project. Students cannot receive credit for this course and BIOE 238. Prerequisite(s): BIOE 107, BIOE 109 and by permission of the instructor. (Formerly BIOE 148B, Quantitative Methods in Ecology and Evolution.)

BIOE 139 - Mathematical Modeling and Data Science in Ecology and Evolution (5)

Teaches students how to build mathematical models and fit them to data to answer questions in ecology and evolution. Includes learning to write code in the R programming language to simulate models and perform statistical analyses. Topics include population and evolutionary dynamics, species interactions, and behavior. Students cannot receive credit for this course and BIOE 239. Prerequisite(s): BIOE 107, BIOE 109, and permission of instructor. (Formerly offered as BIOE 148A Quantitative Ecology.)

BIOE 140 - Behavioral Ecology (5)

An introduction to social and reproductive behavior. Emphasis on studies of vertebrates in their natural habitat. Ideas concerning the evolution of social behavior, mating systems, and individual reproductive strategies. Case histories of well-studied animals that illustrate key principles in courtship and mating, parental behavior, and food-getting behavior.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C.

BIOE 141L - Behavioral Ecology Field Course (5)

A field-based course introducing students to concepts and methods for studying behavioral ecology in nature. Students will conduct observations and field experiments on various local model organisms including elephant seals, hummingbirds, sparrows, lizards, ants, bees, frogs, and salamanders.

Prerequisite: Prerequisite(s): BIOE 107 or BIOE 140 or BIOE 110; and satisfaction of the Entry Level Writing and Composition requirements.

BIOE 142L - Animal Behavior in the Wild (A Virtual Field Course) (5)

Online laboratory course with a remote (not in-person), virtual field component. Students learn about the scientific study of animal behavior from an ecological and evolutionary perspective through lectures, behavior videos, assignments, field observations, digital labs and final research project. The general goal, however, is to develop the ability to observe the natural world, design research, collect and interpret data, and communicate ideas.

Prerequisite: Prerequisites: BIOL 20A, BIOE 20B, and BIOE 20C. Students may benefit from taking BIOE 142L after or concurrently with BIOE 107 or BIOE 140.

BIOE 145 - Plant Ecology (5)

An exploration of the ecology of plant form, function, distribution, abundance, and diversity. Topics include plant adaptation to environmental conditions, reproductive ecology, life history, population dynamics, competition, herbivory, disease, community assembly, ecosystem responses to global change, plant conservation, and restoration. Lecture with discussions of original papers and independent field projects. Students cannot receive credit for this course and BIOE 245.

Prerequisite: Prerequisite(s): Either [BIOL 20A, BIOE 20B, and BIOE 20C], or ENVS 100; and satisfaction of the Entry Level Writing and Composition requirements. BIOE 107 is recommended. Enrollment is restricted to Ecology and Evolution, Plant Sciences, and ENVS majors during first pass enrollment.

BIOE 145L - Field Methods in Plant Ecology (5)

Hands-on exploration of the concepts and techniques of plant ecology. A combination of lab, greenhouse, and field-based exercises (irrespective of weather conditions). Statistical analysis and scientific writing. One required weekend field trip. Students cannot receive credit for this course and BIOE 245L.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C, and satisfaction of the Entry Level Writing and Composition requirements. Concurrent enrollment in BIOE 145 is required. BIOE 107 is recommended.

BIOE 147 - Community Ecology (5)

Develops the major themes of community biology: structure, trophic dynamics, succession, complex interactions among species, herbivory, evolution and coevolution. Uses case histories of well-studied marine and terrestrial systems. Students cannot receive credit for this course and BIOE 247.

Prerequisite: Prerequisite(s): BIOE 107, BIOE 108, BIOE 145, BIOE 155 or BIOE 159A; or ENVS 24 by permission of instructor.

BIOE 149 - Disease Ecology (5)

Focuses on the ecological and evolutionary processes that drive the transmission of pathogens between hosts; the impact of disease on host populations; and what causes the emergence of an infectious disease. Includes theoretical framework, description of field techniques, and discussion of wildlife and human diseases including malaria, West Nile virus, Lyme disease, HIV, avian influenza (bird flu), Chikungunya, tuberculosis, chytridiomycosis, and Ebola.

Prerequisite: Prerequisite(s): BIOL 20A, and BIOE 20B and BIOE 20C and BIOE 107.

BIOE 150 - Ecological Field Methods (5)

Lectures and laboratory computer exercises designed to familiarize students with research methods, study design, statistical approaches, and analysis tools for ecological research. Students cannot receive credit for this course and ENVS 104A.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C; concurrent enrollment in BIOE 150L is required. BIOE 107, BIOE 108, BIOE 140, or BIOE 147 recommended.

BIOE 150L - Ecological Field Methods Laboratory (5)

Field-oriented course in the study of animal ecology and behavior. Combines overview of methodologies and approaches to field research with practical field studies. Students are billed a materials fee of \$120.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C, and satisfaction of the Entry Level Writing and Composition requirements. Concurrent enrollment in BIOE 150 is required. BIOE 107, BIOE 108, BIOE 140, or BIOE 147 recommended.

BIOE 151A - Ecology and Conservation in Practice Supercourse: Ecological Field Methods (5)

An intensive, on-site learning experience in terrestrial field ecology and conservation, using the University of California Natural Reserves and other natural areas. Students study advance concepts in ecology, conservation, and field methods for four weeks, then experience total immersion in field research at the UC Natural Reserves and other natural areas. Lectures, field experiments, writing assignments, and computer exercises familiarize students with research methods,

study design, statistical approaches, and analytical tools for ecological research. Students complete and communicate the results of short field projects in ecology, learn the natural history of the flora and fauna of California, and plan and execute a significant, independent field-research study at the end of the quarter. Enrollment is by application. Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C or ENVS 23, ENVS 24, ENVS 100; and STAT 7 & STAT 7L (formerly AMS 7 & AMS 7L). Concurrent enrollment in BIOE 151B-BIOE 151C-BIOE 151D or ENVS 109B-ENVS 109C-ENVS 109D is required. Satisfies the senior exit requirement for biological sciences majors and satisfies the senior exit requirement for environmental studies majors by prior approval. Students cannot receive credit for this course and BIOE 150, BIOE 150L, ENVS 104A or ENVS 196A.

BIOE 151B - Ecology and Conservation in Practice
Supercourse: Ecological Field Methods Laboratory (5)

Field-oriented course in ecological research. Combines overview of methodologies and approaches to field research with practical field studies. Students complete field projects in ecology and also learn the natural history of the flora and fauna of California. Students are billed a materials fee of \$1,450. Enrollment is by application. Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C or ENVS 23, ENVS 24, ENVS 100; and STAT 7 & STAT 7L (formerly AMS 7 & AMS 7L); satisfaction of the Entry Level Writing and Composition requirements. Concurrent enrollment in BIOE 151A-BIOE 151C-BIOE 151D or ENVS 109A-ENVS 109C-ENVS 109D is required. Satisfies the senior exit requirement for biological sciences majors and satisfies the senior exit requirement for environmental studies majors by prior approval. Students cannot receive credit for this course and BIOE 150, BIOE 150L, ENVS 104A or ENVS 196A.

BIOE 151C - Ecology and Conservation in Practice
Supercourse: Functions and Processes of Terrestrial Ecosystems (5)

From lectures and discussion of terrestrial community and ecosystem ecology, students work individually or in small groups to present an idea for a project, review relevant literature, develop a research question/hypothesis, design and perform an experiment, collect and analyze data, and write a report. The instructor evaluates the feasibility of each student's project before it begins. Enrollment is by application. Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C or ENVS 23, ENVS 24, ENVS 100; and STAT 7 & STAT 7L (formerly AMS 7 & AMS 7L). Concurrent enrollment in BIOE 151A-BIOE 151B-BIOE 151D or ENVS 109A-ENVS 109B-ENVS 109D is required. Satisfies the senior exit requirement for biological sciences majors and satisfies the senior exit requirement for environmental studies majors by prior approval. Students cannot receive credit for this course and BIOE 150, BIOE 150L, ENVS 104A or ENVS 196A.

BIOE 151D - Ecology and Conservation in Practice

Supercourse: Conservation in Practice (4)

Focuses on current issues in environmental and conservation biology and the emerging field methods used to address them. From field-oriented lectures about current issues in environmental and conservation biology, students pursue research project as individuals and small groups to develop hands-on experience with field skills in conservation research and resource management. Enrollment is by application.

Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C or ENVS 23, ENVS 24, ENVS 100; and STAT 7 & STAT 7L (formerly AMS 7 & AMS 7L). Concurrent enrollment in BIOE 151A-B-C or ENVS 109A-B-C required. Satisfies the senior exit requirement for biological sciences majors and satisfies the senior exit requirement for environmental studies majors by prior approval. Students cannot receive credit for this course and BIOE 150, BIOE 150L, ENVS 104A or ENVS 196A.

BIOE 153A - Introduction to Arctic Ecology (5)

Field-intensive course comprised of weekly classes in preparation for the field component. Focuses on issues relevant to the ecology of arctic regions including arctic ecology, arctic geology and paleontology, and arctic environmental change. Students are charged a materials fee of \$2,570. Enrollment is by permission of the instructor. Prerequisite(s): BIOL 20A, and BIOE 20B and BIOE 20C; and concurrent enrollment BIOE 153B and BIOE 153C.

BIOE 153B - Arctic Ecology (5)

Field-intensive course focusing on issues relevant to the ecology of the arctic regions. Explores the changing arctic environment through lectures and hands-on research during an 18-day camping trip transecting the subarctic boreal forest to the high Arctic. Enrollment is by permission of the instructor. Prerequisite(s): BIOL 20A, and BIOE 20B and BIOE 20C; and concurrent enrollment BIOE 153A and BIOE 153C.

BIOE 153C - Disciplinary Communication for Biologists (5)

Writing-intensive course focusing on developing skills in scientific communication with an emphasis on communicating issues relevant to the ecology of arctic regions. Communication products are developed during an 18-day camping trip in the Arctic. Enrollment is by permission of the instructor. Prerequisite(s): BIOL 20A, and BIOE 20B and BIOE 20C; and satisfaction of the Entry Level Writing and Composition requirements; and concurrent enrollment BIOE 153A and BIOE 153B.

BIOE 155 - Freshwater Ecology (5)

Provides an overview of the physical, chemical, and biological processes that characterize inland waters such as lakes, streams, rivers, and wetlands. Also addresses relationships between humans and freshwater, and discusses these challenges in conservation.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C.

BIOE 155L - Freshwater Ecology Laboratory (5)

Field and laboratory study of the ecology of freshwater systems including lakes, streams, and estuaries. Students gain experience sampling and identifying freshwater organisms, designing and analyzing ecological experiments, and writing scientific reports. Students are billed a materials fee of \$145.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C and BIOE 155.

BIOE 158L - Field Methods in Marine Ecology (5)

Supervised individual research projects in experimental marine biology. Students carry out a complete research project, including (1) the formation of hypotheses; (2) the design and implementation of experiments; (3) collection, analysis, and interpretation of data; and (4) write-up of an oral presentation.

Prerequisite: Prerequisite(s): BIOE 108; satisfaction of the Entry Level Writing and Composition requirements.

BIOE 159A - Marine Ecology Field Quarter: Marine Ecology with Laboratory (5)

Total immersion in marine ecology for very motivated students. Students develop a research project during first five weeks on campus and then spend five weeks of immersion in directed research without distraction in isolated locations off campus (past locations include the Gulf of California in Mexico and Moorea in French Polynesia). Not available through University Extension. No other courses may be taken during this quarter. Students must sign a contract agreeing to standards of behavior outlined in the UCSC Rule Book and by the instructors. Students are billed a materials, transportation (not airfare), and room and board fee of \$3,000. Paradigms and designs in marine ecology. A review of the paradigms that have shaped our understanding of marine ecology and analysis and discussion of experiments with these paradigms. Students carry out a complete research project, including the formation of hypotheses; the design and implementation of experiments; the collection, analysis, and interpretation of data; and the write-up and oral presentation of results. Admission by interview during previous winter quarter. BIOE 159A, BIOE 159B, BIOE 159C, and BIOE 159D are equivalent to BIOE 127, BIOE 127L, BIOE 108, and BIOE 158L for major requirements. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; BIOE 159A, BIOE 159B, BIOE 159C, and BIOE 159D must be taken concurrently.

BIOE 159B - Marine Ecology Field Quarter: Ichthyology with Laboratory (5)

An introduction to the biology of jawless, cartilaginous, and bony fishes—their classification, evolution, form, physiology, and ecology. Admission by interview

during previous winter quarter. BIOE 159A, BIOE 159B, BIOE 159C, and BIOE 159D are equivalent to BIOE 127, BIOE 127L, BIOE 108, and BIOE 158L for major requirements. BIOE 159A, BIOE 159B, BIOE 159C, and BIOE 159D must be taken concurrently.

BIOE 159C - Marine Ecology Field Quarter: Methods in Field Ecology (5)

Students learn quantitative methods for field experiments and surveys. Emphasis will be on marine environments, but there will also be exposure to terrestrial systems. This is the lecture component to BIOE 159D. No text is required for this course; instead, readings from the current literature will be assigned. Students are evaluated on written independent field project proposals and class participation. Admission by interview during previous winter quarter. BIOE 159A, BIOE 159B, BIOE 159C, and BIOE 159D are equivalent to BIOE 127, BIOE 127L, BIOE 108, and BIOE 158L for major requirements. BIOE 159A, BIOE 159B, BIOE 159C, and BIOE 159D must be taken concurrently.

BIOE 159D - Marine Ecology Field Quarter: Methods in Field Ecology Laboratory (5)

This is laboratory portion of BIOE 159C. Students carry out independent field projects under the supervision of course instructors. All work is done during the 5-6 week off-campus portion of BIOE 159. Students are evaluated on field techniques, the final write-up of their independent field projects, and class participation. Admission by interview during previous winter quarter. BIOE 159A, BIOE 159B, BIOE 159C, and BIOE 159D are equivalent to BIOE 127, BIOE 127L, BIOE 108, and BIOE 158L for major requirements. BIOE 159A, BIOE 159B, BIOE 159C, and BIOE 159D must be taken concurrently.

BIOE 159E - Marine Ecology Field Quarter: Behavioral Ecology (5)

Study of animal behavior from an ecological and evolutionary perspective, using lectures, exercises, discussion, and research experience in the field. Emphasis on marine environments with exposure to extraterrestrial systems and laboratory studies. Focus on how scientists study animal behavior and what has been learned about evolution and ecology and ecology of animal behavior. Admission by interview during previous winter quarter. BIOE 159E is equivalent to BIOE 140 for major requirements. BIOE 159A, BIOE 159B, BIOE 159C, and BIOE 159E must be taken concurrently.

BIOE 159F - Marine Ecology Field Quarter: Global Change Ecology (5)

Engages students in the evolving discipline of global change biology, which examines the relationships between organisms and their environment. Includes discussion of changes in the climate system and other human disturbances, as well as the effects of these changes on biology, from shifts in organismal

performance to species distributions and the timing of biological events. Includes discussion and analysis of different lines of evidence for understanding biological responses to global change, including paleoecology, observations, experiments and modeling. Last, this course also focuses on topics in climate literacy and science communication. Admission by interview during previous winter quarter. BIOE 159A, BIOE 159C, BIOE 159D, and BIOE 159F must be taken concurrently.

BIOE 161 - Kelp Forest Ecology (5)

Study of organization of kelp forests as models for examining biological communities. The physical and biotic factors responsible for community organization of kelp forests are explored using original literature and data collected in BIOE 161L. Class meets one full morning each week. Prerequisite(s): by interview only; BIOL 20A, BIOE 20B, and BIOE 20C are required. Students must pass the University Research Diving Certification (contact the diving safety officer, Institute of Marine Sciences, for further information). Enrollment is restricted to seniors. BIOE 161L must be taken concurrently; BIOE 107, BIOE 120 & BIOE 120L, BIOE 122 & BIOE 122L are recommended.

BIOE 161L - Kelp Forest Ecology Laboratory (5)

Fieldwork using SCUBA to quantitatively and qualitatively examine the abundance and distribution of organisms in kelp forests, with additional laboratory work. Culminates with a directed individual research project. Class meets one full morning each week. Students are billed a materials fee of \$500. Admission by interview. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C; satisfaction of the Entry Level Writing and Composition requirements; BIOE 161 must be taken concurrently; BIOE 107, 120/L, 122/L are recommended. Students must pass the University Research Diving Certification (contact the Diving Safety Officer, Institute of Marine Sciences, for further information).

BIOE 163 - Ecology of Reefs, Mangroves, and Seagrasses (5)

Integrated treatment of coral reefs, sea grasses, and mangroves emphasizing interactions and processes through time. Major topics: biological and geological history, biogeography, evolution and ecology of dominant organisms, biodiversity, community and ecosystem ecology, geology, biogeochemistry, global change, human impacts.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. Concurrent enrollment in BIOE 163L is required.

BIOE 163L - Ecology of Reefs, Mangroves, and Seagrasses Laboratory (2)

An interdisciplinary laboratory exploration of the anatomy, morphology, adaptations, diversity, evolution, and ecology of corals, mangroves, and seagrasses and

of their physical, chemical, and geological environments.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. Concurrent enrollment in BIOE 163 is required.

BIOE 165 - Marine Conservation Biology (5)

Initially undertakes an in-depth comparison of the biology and conservation of marine versus terrestrial ecosystems. With this foundation, course examines marine biodiversity loss resulting from overexploitation, habitat loss, species introduction, and pollution, with particular emphasis on the resulting trophic cascades, biodiversity losses, and climate change. Students cannot receive credit for this course and ENVS 120.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C; OCEA 101 recommended.

BIOE 171 - Disciplinary Communication for Biologists (5)

Writing-intensive course focusing on developing skills in scientific communication, with an emphasis on communicating issues relevant to ecologists and evolutionary biologists. Presents the norms and standards of scientific communication spanning multiple genres. Students cannot receive credit for this course and BIOE 271.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and BIOL 20A, BIOE 20B, and BIOE 20C.

BIOE 172 - Population Genetics (5)

Basic population genetics and selected topics will be covered, including genetics of speciation, tempo and mode of evolution, genetics of social behavior, natural selection in human populations, and the impact of molecular studies on evolutionary theory. Students cannot receive credit for this course and BIOE 272.

Prerequisite: Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C, and BIOL 105, and satisfaction of the Entry Level Writing and Composition requirements.

BIOE 182F - Exploring Research in EEB (2)

Provides undergraduate students with exposure to research in the laboratory of an Ecology and Evolutionary Biology (EEB) faculty member, affiliate, or adjunct. Students are not expected to do independent research but rather to assist in laboratory or field research projects under the supervision of the faculty mentor or appointed researcher. Prerequisite(s): Undergraduate research contract on file with the department. If supervised by different faculty or researchers, may be repeated for credit.

BIOE 183L - Undergraduate Research in EEB (3)

Designed to ensure that students are intellectually engaged in the planning or implementation of a supervised or independent research project, achieve a fundamental understanding of implementing the scientific method, and develop their scientific writing and presentation skills. Prerequisite(s): concurrent enrollment in BIOE 183W and an Undergraduate Research Contract on file with the department.

BIOE 183W - Undergraduate Research in EEB--Writing (2)

Working in coordination with an Ecology and Evolutionary Biology (EEB) faculty member, affiliate or adjunct, students develop and write a formal research proposal or report and give a presentation on their research project. Includes weekly class meetings focused on the philosophy of science, basic statistics, library searches, inputting data, creating graphs, and preparing results for publication, posters, and talks.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; and BIOE 107, BIOE 108, or BIOE 109; and an undergraduate research contract on file with the department.

BIOE 186 - Experimental Design and Data Analysis (7)

Students provided with the programming and statistical tools needed to undertake experimental design and data analysis in ecology and evolutionary biology—from data manipulation, exploration, and visualization to interpretation. Lectures and lab practicals provide a primer on: R programming, basic statistics and probability, hypothesis testing, linear regression, analysis of variance, multiple regression, and categorical data analysis. Students cannot receive credit for this course and BIOE 286. Enrollment is restricted to sophomore, junior, and senior biology, ecology and evolution, plant sciences, and marine biology majors and by permission of the instructor.

BIOE 193 - Independent Research in EEB (5)

Continued undergraduate research on a project sponsored by an Ecology and Evolutionary Biology (EEB) faculty member, affiliate, or adjunct. Students are graded on the quality of their research and meeting the terms of their undergraduate research contract. Prerequisites: course 183W and an undergraduate research contract on file with the department.

BIOE 193F - Independent Research in EEB (2)

Continued undergraduate research on a project sponsored by an Ecology and Evolutionary Biology (EEB) faculty member, affiliate, or adjunct. Students are graded on the quality of their research and meeting the terms of their undergraduate research contract. Prerequisites: course 183W and an undergraduate research contract on file with the department.

BIOE 195 - Senior Thesis (5)

An individually supervised course, with emphasis on independent research. Students required to submit a senior thesis. Enrollment is restricted to majors in biology, ecology and evolution, marine biology, plant sciences, and the combined major with environmental studies. Students submit petition to sponsoring agency.

BIOE 198F - Independent Field Study (2)

Provides for two credits of independent field study (a) by means other than the usual supervision in person, or (b) when the student is doing all or most of the coursework off campus. Students submit petition to sponsoring agency.

BIOE 199 - Tutorial (5)

Reading, discussion, written reports, and laboratory research on selected biological topics, using facilities normally available on campus. Students submit petition to sponsoring agency.

BIOE 199F - Tutorial (2)

Two-credit Tutorial. Reading, discussion, written reports, and laboratory research on selected biological topics, using facilities normally available on campus. Students submit petition to sponsoring agency.

Graduate**BIOE 200A - Scientific Skills (5)**

Exposes graduate students to teaching skills, understanding the scientific method, searching and organizing literature, grant proposal and scientific writing, data management and presentation, and scientific speaking. Students are evaluated on their participation and the quality of a written research proposal.

Prerequisite: Enrollment is restricted to graduate students.

BIOE 200B - Advanced Organismal Biology (5)

Consists of lectures focusing on pivotal topics in ecology and evolution. Relevant background material is developed followed by a critical analysis of readings from the primary literature. Designed to give graduate (and advanced undergraduate) students direct contact with the major areas of research that are currently at the forefront of organismal biology.

Prerequisite: Enrollment is restricted to graduate students.

BIOE 203 - Introductory Seminar in Ecology and Evolutionary Biology (3)

Introduction to high-level analysis and discussion of published research papers in theoretical or applied ecology and evolutionary biology. Course consists of weekly meetings with extensive independent work outside of class. Course is required for all first-year

graduate students and forms part of the graduate core curriculum. (Formerly offered as BIOE 293, Readings in Ecology and Evolution.)

Prerequisite: Enrollment is restricted to graduate students or by permission of instructor.

BIOE 208 - Marine Ecology (5)

Paradigms and designs in marine ecology. A review of the paradigms that have shaped our understanding of marine ecology; analysis and discussion of experiments with these paradigms. Students cannot receive credit for this course and BIOE 108.

Prerequisite: Enrollment is restricted to graduate students.

BIOE 215 - Advanced Seminar in Ecology and Evolutionary Biology (3)

Intensive exploration of an advanced topic in theoretical or applied evolutionary biology, ecology, physiology, behavior, or conservation biology. Course consists of weekly meetings with extensive independent work outside of class, resulting in mastery of an area of innovation in the field, or in a comprehensive familiarity with an important body of work. Independent work generally culminates in independent or group projects and products. Course is targeted at students who already have reached a professional level of expertise in their field and advanced master's students. (Formerly offered as BIOE 295, Advanced Ecology and Evolutionary Biology Seminar.)

Prerequisite: Enrollment is restricted to graduate students, except by special permission.

BIOE 238 - Modeling Evolution and Ecology (5)

Introduces students to how mathematical models can be used to ask and answer evolutionary and ecological questions. Methods covered include optimality theory, population genetics, population dynamic models, game theory, and dynamic state-variable models. Students learn to develop their own mathematical models and to use models to make predictions. Statistical methods for combining theory and data are not covered. This class focuses on learning by doing, using in class activities, weekly problem sets and an independent project. Students cannot receive credit for this course and BIOE 138. Enrollment is restricted to graduate students. Enrollment is by permission of the instructor. (Formerly offered as BIOE 248B, Quantitative Methods in Ecology and Evolution.)

BIOE 239 - Mathematical Modeling and Data Science in Ecology and Evolution (5)

Teaches students how to build mathematical models and fit them to data to answer questions in ecology and evolution. Includes learning to write code in the R programming language to simulate models and perform statistical analyses. Topics include: population and evolutionary dynamics; species interactions; and

behavior. Students cannot receive credit for this course and BIOE 139. (Formerly BIOE 248A, Quantitative Ecology.)

Prerequisite: Enrollment is restricted to graduate students.

BIOE 245 - Plant Ecology (5)

An exploration of the ecology of plant form, function, distribution, abundance, and diversity. Topics include plant adaptations to environmental conditions, life history variation, competition, reproductive ecology, herbivory, and patterns of diversity. Lecture with discussions of original papers and independent field project. Students cannot receive credit for this course and BIOE 145.

Prerequisite: Prerequisite(s): BIOE 107 or ENVS 24 or permission of instructor. Enrollment is restricted to graduate students.

BIOE 245L - Field Methods in Plant Ecology Laboratory (5)

Hands-on exploration of the concepts and techniques of plant ecology. A combination of lab, greenhouse, and field-based exercises (irrespective of weather conditions), statistical analysis, and scientific writing. One required weekend field trip. Students cannot receive credit for this course and BIOE 145L.

Prerequisite: Enrollment is restricted to graduate students.

BIOE 247 - Community Ecology (5)

Develops the major themes of community ecology: structure, trophic dynamics, succession, complex interactions among species, herbivory, evolution, and coevolution. Uses case histories of well-studied marine and terrestrial systems. Students cannot receive credit for this course and BIOE 147.

Prerequisite: Enrollment is restricted to graduate students.

BIOE 258L - Experimental Marine Ecology (5)

Supervised individual research projects in experimental marine biology. Students carry out a complete research project, including (1) the formation of hypotheses, (2) the design and implementation of experiments, (3) collection, analysis, and interpretation of data, and (4) the write-up of an oral presentation. Prerequisite(s): BIOE 208; and interview to assess ability to carry out field project.

BIOE 262 - Facilitating Change in Coastal Science Policy (5)

Skills-based course in effective leadership and communication, including stakeholder engagement, facilitation, conflict resolution, team building, and introduction to project management. Communication training includes identifying audiences and objectives

(public, philanthropy, policymakers, managers, scientist practitioners) and leveraging non-traditional communication platforms. Enrollment is by application and restricted to graduate students.

BIOE 271 - Disciplinary Communication for Biologists (5)

Writing-intensive course focusing on developing skills in scientific communication, with an emphasis on communicating issues relevant to ecologists and evolutionary biologists. This course presents the norms and standards of scientific communication spanning multiple genres. Students cannot receive credit for this course and BIOE 171.

Prerequisite: Enrollment is restricted to graduate students.

BIOE 272 - Population Genetics (5)

Basic population genetics and selected topics are covered including genetics of speciation, tempo and mode of evolution, genetics of social behavior, natural selection in human populations, and the impact of molecular studies on evolutionary theory. Students cannot receive credit for this course and BIOL 172.

Prerequisite: Enrollment is restricted to graduate students.

BIOE 279 - Evolutionary Ecology (5)

Analysis of the ways in which ongoing evolution and coevolution shape the ecological structure and dynamics of populations, species, and species interactions across geographic landscapes.

Prerequisite: Enrollment is restricted to graduate students.

BIOE 281A - Topics in Basic and Applied Marine Ecology (2)

Seminar focusing on concepts in basic and applied ecology. Structure rotates quarterly between graduate student research and readings of journal articles and textbooks.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOE 281B - Topics in Molecular Evolution (2)

A discussion of current research and literature review on the subject of molecular evolution. Primary focus on recent results on molecular phylogenetics and molecular population genetics.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOE 281C - Topics in Physiological Ecology (2)

An intensive seminar focusing on the interaction between physiological constraint and life history options and solutions employed by animals. Topics vary from comparative physiology to ecological theory. Participants are required to present results of their own research or review papers of interest.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOE 281D - Topics in Global Change Ecology (2)

Focuses on fundamental concepts in global-change ecology, with emphasis on coastal and marine ecosystems and issues of sustainability. The seminar is devoted to reading and evaluating current and classic literature and discussing graduate student research.

Prerequisite: Enrollment is restricted to graduate students.

BIOE 281E - Topics in Freshwater Ecology (2)

Current topics in freshwater ecology, eco-evolutionary dynamics, fisheries, and fish ecology.

Prerequisite: Enrollment is restricted to graduate students. Qualified undergraduates may enroll with permission from instructor.

BIOE 281F - Ecological Research Topics (2)

Intensive research and discussions on plant-animal interactions. All students undertake a research project and meet weekly with the faculty sponsor to monitor progress. The group meets weekly to discuss experimental design and analysis, specific problems related to the students' research, relevant research papers, or manuscripts that the group members are writing. Each student gives a formal presentation of research plans or progress each quarter.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOE 281G - Topics in Sexual Selection and Social Behavior (2)

Discussion of current topics, research, and methods in sexual selection and social behavior focusing on theoretical and empirical research and links between evolution and ecology. Students present and discuss their research, read and discuss current and classic literature, or read and discuss methods used in the field.

Prerequisite: Enrollment is restricted to graduate students. Qualified undergraduates may enroll by permission of the instructor.

BIOE 281H - Topics in Comparative Marine Physiology

(2)

Intensive seminar on selected topics in marine physiology. Students present results from their own research and discuss recent advances from the literature.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOE 281I - Topics in Disease Ecology, Population Biology, and Conservation (2)

Selected topics in population biology and disease ecology. Students present results from their own research and discuss recent advances from the literature.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll by permission of instructor.

BIOE 281K - Topics in Plant Evolution (2)

Intensive seminar on selected topics in plant evolution. Students present results from their own research and discuss recent advances from the literature.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll by permission of instructor.

BIOE 281L - Topics in Behavioral and Evolutionary Ecology (2)

An intensive seminar on selected topics in behavioral and evolutionary ecology. Students are expected to discuss the current literature and present literature reviews, research proposals, and preliminary results from their ongoing research.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOE 281N - Topics in Marine Vertebrate Ecology (2)

Seminar on the ecology of marine vertebrates. Topics vary from the factors that explain the distribution of marine predators to island biogeography and the ecosystem effects of introduced vertebrates on islands.

Prerequisite: Enrollment is restricted to graduate students.

BIOE 281O - Topics in Plant-Water Relations (2)

Intensive seminar focusing on fundamental and evolutionary concepts in plant-water relations. Students present results from their own research and discuss recent advances from the literature.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll by permission of instructor.

BIOE 281P - Topics in Plant Population Ecology (2)

An intensive seminar on selected topics in plant ecology and population biology. Students present results from their own research and discuss recent advances from the literature.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission from instructor.

BIOE 281Q - Topics in Molecular Evolutionary Genetics (2)

An intensive seminar on selected topics in molecular evolutionary genetics. Students are required to present results from their own research projects, present a critical review paper at least once during the quarter, and submit a written research proposal.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduate students may enroll with permission of instructor.

BIOE 281R - Topics in Marine Ecology and Evolutionary Biology (2)

An intensive seminar series focusing on fundamental concepts in marine ecology. Emphasis changes quarter to quarter. At least one quarter per year is devoted to discussion of graduate student research. Other quarters involve reading and evaluating current and classic literature on marine ecology and evolutionary biology.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOE 281S - Topics in Ancient DNA and Paleogenomics (2)

Topics in population genetics and genomics, focusing on work involving paleontological and archaeological material. Students present weekly written and oral reports of their research projects. Once each term, students critique a recent publication.

Prerequisite: Enrollment is restricted to graduate students. Qualified undergraduates may enroll with permission from instructor.

BIOE 281T - Species Interactions and Coevolution (2)

The genetics and ecological structure of species interactions, and the role of coevolution between species in shaping biodiversity.

Prerequisite: Enrollment is restricted to graduate students.

BIOE 281U - Topics in Invertebrate Biology (2)

An intensive study about concepts, theory, and techniques for graduate students conducting research on the ecology, genetics, evolution, systematics, or biodiversity of marine invertebrates.

Prerequisite: Enrollment is restricted to graduate students; advanced undergraduates may enroll with permission of instructor.

BIOE 281V - Topics in Behavioral Ecology (2)

A discussion of current topics and methods in behavioral ecology and life history evolution.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOE 281W - Topics in Exercise and Environmental Physiology (2)

A weekly seminar discussion on current research and techniques in mammalian exercise and environmental physiology. Areas covered include locomotor physiology, exercise testing and cardiovascular monitoring, and biomechanics. Oral presentation of ongoing research or current literature required from each student.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOE 281X - Topics in Behavioral Ecology of Large Marine Vertebrates (2)

Weekly seminar course centering on reading and discussion of selected publications along with peer review of research plans, grant proposals, manuscripts, lectures, and conference presentations. The overarching goal is to support the development and progress of graduate students in the Ecology and Evolutionary Biology Department whose thesis work and interests align with the course topic (reviewing innovative approaches in marine mammal science, coupling physiological with ecological concepts using integrative tools, identifying ecological and evolutionary context of large marine vertebrate research).

Prerequisite: Enrollment is restricted to ecology and evolutionary biology graduate students; other students may enroll by consent of the instructor.

BIOE 281Z - Conservation Science in a Changing World (2)

Selected readings and guest speakers in conservation, climate science and the ecology of environmental change coupled with peer review of participants' research proposals, grant proposals, manuscripts and scientific presentations.

Prerequisite: Enrollment is restricted to ecology and evolutionary graduate students.

BIOE 286 - Experimental Design and Data Analysis (5)

Focuses on problems and designs in ecology and population biology. Topics include experimental design; exploratory data analysis; hands-on statistics; and graphical theory. Structured around a statistical

analysis and graphics program to teach students to design surveys and experiments and analyze data. Previous work in statistics strongly recommended.

Prerequisite: Concurrent enrollment in BIOE 286L is required. Enrollment is restricted to graduate students.

BIOE 286L - Experimental Design and Data Analysis Lab (2)

Lab will focus on hands-on statistical problem solving, graphical presentations and experimental design issues.

Prerequisite: Concurrent enrollment in BIOE 286 is required. Enrollment is restricted to graduate students.

BIOE 294 - Ecology, Evolutionary Biology Seminar (0)

Selected topics of current interest to ecologists and evolutionary biologists presented by weekly guest speakers.

Prerequisite: Enrollment is restricted to graduate students.

BIOE 297A - Independent Study (5)

Independent study for graduate students who have not yet settled on a research area for their thesis. Students submit petition to sponsoring agency.

BIOE 297B - Independent Study (10)

Independent study for graduate students who have not yet settled on a research area for their thesis. Students submit petition to sponsoring agency.

BIOE 297C - Independent Study (15)

Independent study for graduate students who have not yet settled on a research area for their thesis. Students submit petition to sponsoring agency.

BIOE 299A - Thesis Research (5)

Students submit petition to sponsoring agency.

BIOE 299B - Thesis Research (10)

Students submit petition to sponsoring agency.

BIOE 299C - Thesis Research (15)

Students submit petition to sponsoring agency.

BIOL - BIOLOGY MOLECULAR CELL AND DEVELOPMENTAL

Lower-Division

BIOL 15 - Undergraduate Research Reports (1)

Undergraduate students who work in faculty research laboratories present the results of their projects. Organized by the Minority Undergraduate Research

Program and the Minority Access to Research Careers Program. Designed for students with membership in the above-mentioned programs. Prerequisite(s): qualifications as determined by instructor at first class meeting.

BIOL 20A - Cell and Molecular Biology (5)

Introduction to biochemistry, cell biology, molecular biology, and genetics.

Prerequisite: Prerequisite(s): CHEM 1A or CHEM 4A.

BIOL 20L - Experimental Biology Laboratory (2)

Provides biology majors with the theory and practice of experimental biology. A wide range of concepts and techniques used in the modern laboratory are included in the exercises. Designed to satisfy the introductory biology lab requirement of many medical and professional schools.

Prerequisite: Prerequisite(s): BIOL 20A and previous or concurrent enrollment in BIOE 20B.

BIOL 80A - Female Physiology and Gynecology (5)

Biochemical, medical, social, and clinical aspects of the female body. Emphasis will be on biological-chemical interactions in the female organs. Topics include female anatomy, cell physiology, endocrine functions, sexuality and intimacy, sexually transmitted diseases, puberty, pregnancy, menopause, birth control, abortion, immunity, cancer.

BIOL 80J - Biology of Emerging and Pandemic Diseases (5)

Designed to introduce non-biology majors to the biology of viruses, the human immune system, HIV/AIDS, and emerging viral pandemics. Also explores vaccine technology and viral mediated therapies. Social, political, and economic influences of HIV and other viral pandemics discussed.

BIOL 86 - Research Deconstruction: MCD Biology (3)

Explores scientific principles and logic through research seminars in molecular, cellular, and developmental biology. Additional topics may include diseases, stem cell biology, and other medically relevant areas in biomedical research. Prerequisite(s): Mathematics 3 or equivalent (i.e., mathematics placement examination score), and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to first-year, sophomore, and junior students. Enrollment is by permission of the instructor.

BIOL 88 - Studies in Medicine: Its Art, History, Science, and Philosophy (5)

An interdisciplinary, multicultural, and historical perspective of medicine focused primarily upon therapy and practice to achieve better understanding of the scope, practice, and limits of medicine.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements.

Upper-Division

BIOL 100 - Biochemistry (5)

Introduction to biochemistry including biochemical molecules, protein structure and function, membranes, bioenergetics, and regulation of biosynthesis. Provides students with basic essentials of modern biochemistry and the background needed for upper-division biology courses. Students who desire a more in-depth exposure to biochemistry should consider taking the BIOC 100A/BIOC 100B/BIOC 100C series as an alternative. Students cannot receive credit for this course after they have completed the BIOC 100A, BIOC 100B, and BIOC 100C sequence.

Prerequisite: Prerequisite(s): BIOL 20A and BIOE 20B; and CHEM 8B.

BIOL 100L - Biochemistry Laboratory (5)

Basic techniques and principles of laboratory biochemistry including isolation and characterization of a natural product, manipulation of proteins and nucleic acids to demonstrate basic physical and chemical properties; and characterization of enzyme substrate interactions.

Prerequisite: Prerequisite(s): BIOL 100 or BIOC 100A; BIOL 101L or BIOL 102L; and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to declared Biochemistry and Molecular Biology; Biology B.S.; Molecular, Cell and Developmental Biology and Neuroscience majors. Other majors may enroll by permission of the instructor. Students cannot enroll in BIOL 100L after receiving credit with a 'C' or better in BIOL 103L, BIOL 105L, BIOL 106L, BIOL 108L, BIOL 109L, BIOL 115L, BIOL 120L, BIOL 121L, BIOL 129L, BIOL 186L or METX 119L.

BIOL 101 - Molecular Biology (5)

Covers the basic molecular mechanism of DNA replication and transcription, protein synthesis, and gene regulation in bacterial and eukaryotic organisms. The experimental techniques used to determine these mechanisms are emphasized.

Prerequisite: Prerequisite(s): BIOL 100. Enrollment is restricted to Biology B.S., Human Biology B.S., Molecular, Cell, and Developmental Biology B.S., and Neuroscience B.S. majors. Other majors may enroll by permission of the instructor.

BIOL 101L - Molecular Biology Laboratory (2)

Laboratory course providing hands-on experience with, and covering conceptual background in, fundamental techniques in molecular biology and biochemistry, including DNA cloning, PCR, restriction digest, gel electrophoresis, protein isolation, protein quantification,

protein immunoblot (Western) analysis, and use of online bioinformatics tools.

Prerequisite: Prerequisite(s): BIOL 20L or BIOL 102J or BIOL 107J; and previous or concurrent enrollment in BIOL 101; or BIOC 100A and BIOC 100B is required. Students cannot receive credit for this course and BIOL 102L or BIOL 107L. Enrollment is restricted to biochemistry and molecular biology, biology B.S., molecular, cell, and developmental biology, and neuroscience majors.

BIOL 102J - Toxic RNA Lab I (5)

Introduction to hypothesis-driven laboratory research. Students will create models of a unique uncharacterized disease causing mutation using site directed mutagenesis. An understanding of introductory molecular biology and genetics required. Students are billed a materials fee. Prerequisite(s): BIOL 20A. Enrollment restricted to biological sciences and affiliated majors with sophomore standing or higher. Enrollment by application and permission of instructor.

BIOL 102L - Toxic RNA Lab II (5)

Introduces hypothesis-driven laboratory research. Students create models of a unique uncharacterized disease causing mutation and determine how it impacts the process of pre-mRNA splicing. An understanding of introductory molecular biology and genetics is required. Students are billed a materials fee. Prerequisite(s): BIOL 20A; and BIOL 20L or BIOL 102J. Enrollment is restricted to sophomore, junior, and senior biological sciences and affiliated majors. Enrollment is by application and permission of the instructor.

BIOL 103L - Toxic RNA Lab III (5)

Introduces hypothesis-driven laboratory research. Students create models of a unique, uncharacterized, disease-causing mutation and determine how it impacts the process of pre-mRNA splicing. An understanding of introductory molecular biology and genetics is required. Prerequisite(s): BIOL 102J and BIOL 102L and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to sophomores, juniors, and seniors majoring in biology, molecular, cell, and developmental biology, neuroscience, human biology, and biochemistry and molecular biology. Enrollment is by application and permission of the instructor. Students cannot enroll in BIOL 103L after receiving credit with a 'C' or better in BIOL 100L, BIOL 105L, BIOL 106L, BIOL 108L, BIOL 109L, BIOL 115L, BIOL 120L, BIOL 129L, BIOL 121L, BIOL 186L or METX 119L.

BIOL 104L - Coronavirus Bioinformatics Lab (2)

The overall objective of this lab is to apply bioinformatic tools to analyze the structure, function, and evolution of SARS-CoV-2 (the virus responsible for the COVID-19 pandemic). Students experience using web-based tools to retrieve and annotate genetic sequences, align sequences from related species,

perform phylogenetic analyses, design sequence-based diagnostic protocols, and perform three-dimensional protein structure analyses.

Prerequisite: Prerequisites: BME 105 or BIOL 105; and BIOC 100A or BIOL 100; and BIOL 20L or BIOL 101L. It is assumed that students have minimal level exposure to bioinformatic/sequence analysis tools prior to this course. Students who have taken BME 110 should not enroll in this lab. Enrollment is restricted to biology B.S., biochemistry and molecular biology, human biology, molecular, cell and developmental biology, and neuroscience majors.

BIOL 105 - Genetics (5)

Mendelian and molecular genetics; mechanisms of heredity, mutation, recombination, and gene action.

Prerequisite: Prerequisite(s): BIOL 20A and BIOE 20B.

BIOL 105L - Eukaryotic Genetics Laboratory (5)

Classical and newly developed molecular-genetic techniques used to explore genetic variation in wild populations of the fruit fly *Drosophila melanogaster*. Topics include Mendelian fundamentals, mapping, design of genetic screens, bio-informatic and database analysis, genetic enhancers, and population genetics.

Prerequisite: Prerequisite(s): BIOL 100 or BIOC 100A; BIOL 101L or BIOL 102L; BIOL 105; and satisfaction of the Entry Level Writing and Composition Requirements. Enrollment is restricted to declared Biochemistry and Molecular Biology; Biology B.S.; Molecular, Cell and Developmental Biology and Neuroscience B.S. majors. Other majors may enroll by permission of the instructor. Students may not enroll in BIOL 105L after receiving credit with a 'C' or better in BIOL 100L, BIOL 103L, BIOL 106L, BIOL 108L, BIOL 109L, BIOL 115L, BIOL 120L, BIOL 121L, BIOL 129L, BIOL 186L or METX 119L.

BIOL 106L - Eukaryotic Genetic Engineering (5)

Lab course focusing on teaching students specific molecular genetic methods such as Phenotype analysis, Cloning, PCR, Expression analysis, CRISPR/Cas9-based Gene insertions, Protein Blots, etc., for the genetic manipulation of model organisms.

Prerequisite: Prerequisite(s): BIOL 100 or BIOC 100A; BIOL 101L or BIOL 102L; BIOL 105; and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to declared Biochemistry and Molecular Biology; Biology B.S. ; Molecular, Cell and Developmental Biology and Neuroscience B.S. majors. Other majors may enroll by permission of the instructor. Students cannot enroll in BIOL 106L after receiving credit with a 'C' or better in BIOL 100L, BIOL 103L, BIOL 105L, BIOL 108L, BIOL 109L, BIOL 115L, BIOL 120L, BIOL 121L, BIOL 129L, BIOL 186L or METX 119L.

BIOL 107J - Synthetic Gene Regulation Lab I (5)

Goal-driven research laboratory. Students collectively formulate a goal and design experiments to achieve their objectives. Students develop molecular tools and use these and other methods to investigate various aspects of gene silencing in eukaryotes. An understanding of introductory molecular biology is required. Prerequisites: CHEM 1B and BIOL 20A. Students who have taken BIOL 102J or BIOL 20L cannot enroll in BIOL 107J. Completion of BIOL 107J is required to enroll in BIOL 107L. Enrollment is by permission and is restricted to sophomores, juniors, and seniors.

BIOL 107L - Synthetic Gene Regulation Lab II (5)

The Synthetic Gene regulation course is a goal-oriented research laboratory. Students are given a project and discuss and design experiments to reach that aim. Students develop molecular tools and use these and other methods to investigate various aspects of gene silencing in eukaryotes. An understanding of introductory biology and genetics is required. Prerequisite(s): BIOL 107J. Completion of BIOL 107L is necessary to enroll in BIOL 108L. Enrollment is by permission of the instructor and is restricted to sophomore, junior, and senior biology B.S., molecular, cell, and developmental biology, biochemistry and molecular biology majors and proposed majors.

BIOL 108L - Synthetic Gene Regulation Lab III (5)

The Synthetic Gene regulation course is a goal-oriented research laboratory. Students will be given a project and will discuss and design experiments to reach that aim. Students will develop molecular tools and will use these and other methods to investigate various aspects of gene silencing in eukaryotes. An understanding of introductory biology and genetics is required. Prerequisite(s): BIOL 107L and satisfaction of the Entry Level Writing and Composition is required. Students cannot enroll in BIOL 108L after receiving credit with a 'C' or better in BIOL 100L, BIOL 103L, BIOL 105L, BIOL 106L, BIOL 109L, BIOL 115L, BIOL 120L, BIOL 121L, BIOL 186L and METX 119L. Enrollment by permission of instructor.

BIOL 109L - Yeast Molecular Genetics Laboratory (5)

Using budding yeast as a eukaryotic model organism, this laboratory provides practical experience in classic and modern molecular biology techniques and experimental genetic and epigenetic methods, alongside developing strong scientific analysis, interpretation and communication skills. Topics include mendelian genetics, linkage, gene replacement, chromatin immunoprecipitation and gene function assays.

Prerequisite: Prerequisite(s): BIOL 100 and BIOL 101; or BIOC 100A and BIOC 100B; and BIOL 101L or BIOL 102L or BIOL 107L; and BIOL 105. Satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to declared

Biochemistry and Molecular Biology; Biology B.S.; Molecular, Cell and Developmental Biology and Neuroscience B.S. majors. Other majors may enroll by permission of the instructor. Students cannot enroll in BIOL 109L after receiving credit with a 'C' or better in BIOL 100L, BIOL 103L, BIOL 105L, BIOL 106L, BIOL 108L, BIOL 115L, BIOL 120L, BIOL 121L, BIOL 129L, BIOL 186L, and METX 119L.

BIOL 110 - Cell Biology (5)

Covers the structure, organization, and function of eukaryotic cells. Topics include biological membranes, organelles, protein and vesicular trafficking, cellular interactions, the cytoskeleton, and signal transduction. Requires a good understanding of basic biochemistry and molecular biology.

Prerequisite: Prerequisite(s): BIOL 101 or BIOC 100A; and BIOL 105; and BIOL 101L or BIOL 102L or BIOL 20L.

BIOL 111A - Immunology I (5)

Principles and concepts of the innate and adaptive immune systems, with emphasis on mechanisms of action and molecular and cellular networks. The development, differentiation, and maturation of cells of the immune system are also discussed.

Prerequisite: Prerequisite(s): courses BIOC 20B, BIOL 20A, BIOL 105, and BIOL 110.

BIOL 111B - Immunology II (5)

The immune system in health and disease, including failures of host immune-defense mechanisms, allergy and hypersensitivity, autoimmunity, transplantation biology, the immune response to tumors, immune-system interactions with pathogens, and manipulation of the immune response.

Prerequisite: Prerequisite(s): BIOL 111A.

BIOL 112 - Virology (3)

Principles of virology illustrated through study of specific examples. Topics include: viral genome organization, viral assembly, virus-host interactions, genetic diversity of viruses, viral ecology, and the epidemiology of viral diseases. Prerequisite(s): BIOL 101 and BIOL 110 and consent of instructor.

BIOL 113 - Principles of Epidemiology (5)

Epidemiology is the study of the distribution and determinants of health and disease across human populations; it is the basic science of public health. This course introduces students to the principles and methodologies of public health epidemiology. Students read, analyze, and discuss epidemiological data. This course is intended for undergraduate students majoring in global and community health.

Prerequisite: Prerequisite(s): STAT 5, or STAT 7 and STAT 7L.

BIOL 114 - Cancer Cell Biology (5)

Focuses on the molecular and cellular mechanisms behind cancer. Topics covered include oncogenes, tumor suppressor genes, cell growth genes, checkpoint genes, telomeres, and apoptosis. Students will gain experience in reading the primary scientific literature.

Prerequisite: Prerequisite(s): BIOL 110 or BIOL 115.

BIOL 115 - Eukaryotic Molecular Biology (5)

Covers eukaryotic gene and genome organization; DNA, RNA, and protein synthesis; regulation of gene expression; chromosome structure and organization; and the application of recombinant DNA technology to the study of these topics.

Prerequisite: Prerequisite(s): BIOL 101 or BIOC 100A; and BIOL 105; and BIOL 101L or BIOL 102L. Enrollment restricted to biological sciences and affiliated majors, non-majors by permission of instructor.

BIOL 115L - Eukaryotic Molecular Biology Laboratory (5)

A laboratory designed to provide students with direct training in basic molecular techniques. Each laboratory is a separate module which together builds to allow cloning, isolation, and identification of a nucleic acid sequence from scratch. Students are billed a materials fee of \$125.

Prerequisite: Prerequisite(s): BIOL 100 and 101; or BIOC 100A and 100B; and BIOL 101L or BIOL 102L or BIOL 107L; and satisfaction of the Entry Level Writing and Composition Requirements. Enrollment is restricted to declared Biochemistry and Molecular Biology; Biology B.S.; Molecular, Cell and Developmental Biology and Neuroscience B.S. majors. Other majors may enroll by permission of the instructor. Students cannot enroll in BIOL 115L after receiving credit with a 'C' or better in BIOL 100L, BIOL 103L, BIOL 105L, BIOL 106L, BIOL 108L, BIOL 109L, BIOL 120L, BIOL 121L, BIOL 129L, BIOL 186L or METX 119L.

BIOL 116 - Advanced Topics in Cell Biology (3)

Advanced course in cell biology featuring small-classroom discussion of topics related to the structure and function of cells and their organelles. Emphasis is given to experimental strategies used in cell biology research. Requires discussion of scientific literature and student-led presentations.

Prerequisite: Prerequisite(s): BIOL 110. Enrollment is restricted to senior human biology, molecular, cell, and developmental biology, and neuroscience majors. Other majors by permission of instructor.

BIOL 117 - Global Health and Neglected Diseases (5)

Neglected tropical diseases afflict more than 1 billion of the poorest individuals on the planet. Course covers the

molecular basis and pathology of the most prevalent neglected diseases and emerging strategies to combat these diseases.

Prerequisite: Prerequisite(s): BIOL 110. Enrollment is restricted to senior human biology, molecular, cell, and developmental biology, and neuroscience majors. Other majors by permission of instructor.

BIOL 118 - Principles of Human Genetics (5)

Overview of human and medical genetics covering the molecular basis of genetic disease, quantitative methodologies utilized in calculation of genetic risk, and genetic testing and counseling. Includes discussion of ethical issues in genetics and genomic medicine.

Prerequisite: Prerequisite(s): STAT 5, or STAT 7 and STAT 7L; BIOL 105 or BME 105; and BIOL 101 or BIOL 115. Enrollment is restricted to biology B.S.; human biology; neuroscience; and molecular, cell, and developmental biology majors. Other students may enroll with instructor permission.

BIOL 120 - Developmental Biology (5)

A description and analysis of selected developmental events in the life cycle of animals. Experimental approaches to understanding mechanisms are emphasized.

Prerequisite: Prerequisite(s): BIOL 110.

BIOL 120L - Development Laboratory (5)

Experimental studies of animal development using a variety of locally obtainable organisms. Approximately eight hours weekly, but it will often be necessary to monitor continuing experiments throughout the week.

Prerequisite: Prerequisite(s): BIOL 100 or BIOC 100A; and BIOL 101L or BIOL 102L; satisfaction of the Entry Level Writing and Composition requirements. Previous or concurrent enrollment in BIOL 120 is required. Enrollment is restricted to declared Biochemistry and Molecular Biology; Biology B.S.; Molecular, Cell and Developmental Biology and Neuroscience B.S. majors. Other majors may enroll by permission of the instructor. Students cannot enroll in BIOL 120L after receiving credit with a 'C' or better in BIOL 100L, BIOL 103L, BIOL 105L, BIOL 106L, BIOL 108L, BIOL 109L, BIOL 115L, BIOL 121L, BIOL 129L, BIOL 186L, and METX 119L.

BIOL 121L - Environmental Phage Biology Laboratory (5)

Introduction to hypothesis-driven laboratory research. Students isolate a unique bacteriophage and characterize its structure and genome. An understanding of molecular biology and basic genetics is required. Students are billed a materials fee. Prerequisite(s): BIOL 100 or BIOC 100A; and BIOL 101L or BIOL 102L; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to declared Biochemistry and Molecular Biology; Biology

B.S.; Molecular, Cell and Developmental Biology and Neuroscience B.S. majors. Enrollment is by application and permission of instructor. Students cannot enroll in BIOL 121L after receiving credit with a 'C' or better in BIOL 100L, BIOL 103L, BIOL 105L, BIOL 106L, BIOL 108L, BIOL 109L, BIOL 115L, BIOL 120L, BIOL 129L, BIOL 186L or METX 119L.

BIOL 124 - Optical Imaging for Biological Research (3)

Covers the theory and application of light microscopy in a non-mathematical way. Course starts with basic optics, introduces the working principles of various microscopes, and discusses recent innovations in imaging techniques with an emphasis on neuroscience applications.

Prerequisite: Prerequisite(s): PHYS 5B or PHYS 6B; and BIOL 110.

BIOL 125 - Introduction to Neuroscience (5)

The structure and function of the nervous system. Topics include elementary electrical principles, biophysics and physiology of single nerve and muscle cells, signal transduction at synapses, development of the nervous system, and neural basis of behavior. Requires a good understanding of basic biochemistry, cell biology, and molecular biology.

Prerequisite: Prerequisite(s): BIOL 20A, and BIOE 20B; and BIOL 100, or BIOC 100A and BIOC 100B.

BIOL 126 - Neural Plasticity and Cognitive Neuroscience (5)

Focuses on the dynamic aspect of the nervous system and how it subserves various cognitive functions. Starting with synaptic plasticity, students explore the neural circuit mechanisms underlying various cognitive functions and how they go astray in neurological disorders. Students cannot receive credit for this course and BIOL 226. (Formerly Advanced Molecular Neuroscience.)

Prerequisite: Prerequisite(s): BIOL 125. Enrollment is restricted to neuroscience majors and proposed majors.

BIOL 127 - Mechanisms of Neurodegenerative Disease (5)

Focuses on cellular and molecular processes that underlie neurodegenerative diseases. Includes lectures, student oral presentations, discussions, a term paper, and exams.

Prerequisite: Prerequisite(s): BIOL 110.

BIOL 128 - Developmental Neurobiology (5)

Covers the principles of nervous-system development from the molecular control of development, cell-cell interactions, to the role of experience in influencing brain structure and function. Students cannot receive credit for this course and BIOL 228.

Prerequisite: Prerequisite(s): BIOL 110 and BIOL 125. Enrollment is restricted to juniors and seniors.

BIOL 129A - Advanced Topics in System Neuroscience (5)

Covers the principles and applications of a wide spectrum of modern approaches in systems neuroscience. Students read and analyze the original literature describing these techniques and exemplary works that utilize the techniques to address important neurobiological questions.

Prerequisite: Prerequisite(s): BIOL 126, BIOL 129L; students cannot enroll in BIOL 129A after receiving credit with a 'C' or better in BIOL 129B. Enrollment is restricted to seniors and graduate students.

BIOL 129B - Advanced Topics in Developmental Neurobiology (5)

Covers current research topics and methods in the field of developmental neurobiology. Students read, analyze, and discuss original research articles related to the development of the nervous system. Intended for upper-level undergraduate students majoring in neuroscience.

Prerequisite: Prerequisite(s): BIOL 105, BIOL 125 and BIOL 128; students cannot enroll in BIOL 129B after receiving credit with a 'C' or better in BIOL 129A. Enrollment is restricted to seniors.

BIOL 129C - Advanced Topics in Nervous System Disorders (5)

Provides a basic introduction to the fundamental aspects of common diseases affecting the central nervous system and current methods used to treat them. Students read, analyze, and discuss original research articles related to nervous system disorders. To facilitate in-class discussion and presentation, enrollment is limited to 30 students.

Prerequisite: Prerequisite(s): BIOL 125; students cannot enroll in BIOL 129C after receiving credit with a 'C' or better in BIOL 129A or BIOL 129B. Enrollment is restricted to seniors majoring in neuroscience.

BIOL 129L - Neurobiology Lab (5)

Laboratory course giving students experience with electrophysiological, molecular, microscopic, and behavioral techniques used to analyze the function of nervous systems. Students gain experience with collecting and analyzing neurobiological data and presenting their results in written, oral, and visual presentation formats. Students also learn to critically read and analyze primary literature in neurobiology and to use the knowledge they gain to develop their own research proposal.

Prerequisite: Prerequisite(s): either BIOL 100 and BIOL 101; or BIOC 100A and BIOC 100B; and BIOL 125; and STAT 5 or STAT 7 and STAT 7L. Satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to declared Neuroscience B.S.

majors. Other majors may enroll by permission of the instructor. Students cannot enroll in BIOL 129L after receiving credit with a 'C' or better in BIOL 100L, BIOL 103L, BIOL 105L, BIOL 106L, BIOL 108L, BIOL 109L, BIOL 115L, BIOL 120L, BIOL 121L, BIOL 186L and METX 119L.

BIOL 130 - Human Physiology (5)

Function, organization, and regulation of the major organ systems of humans, with emphasis on integration among systems. Students cannot receive credit for this course and BIOE 131.

Prerequisite: Prerequisite(s): BIOL 110.

BIOL 130L - Human Physiology Laboratory (2)

Examines fundamental principles of systemic physiology focusing on the human. Students cannot receive credit for this course and BIOE 131L.

Prerequisite: Prerequisite(s): BIOL 110; BIOL 20L or BIOL 102J; and previous or concurrent enrollment in BIOL 130 is required. Satisfaction of Entry Level Writing and Composition requirements. Enrollment is restricted to biological sciences and affiliated majors; biology minors; other majors by permission.

BIOL 140 - The RNA World (5)

This active-learning course explores the origins, evolution, and functions of ribonucleic acid (RNA), including ribozymes, ribosomes, IRNAs, spliceosomes, riboswitches, messenger RNA, microRNAs, snRNAs, snoRNAs, and other guide RNAs, CRISPR, long noncoding RNAs, retrotransposons, and RNA viruses.

Prerequisite: Prerequisite(s): BIOL 105 or BME 105, and BIOL 101.

BIOL 186F - Undergraduate Research in MCD Biology (2)

Supervised undergraduate research in laboratory of an MCD biology faculty member accompanied by weekly lectures on ethical and practical scientific issues. Topics include: laboratory safety; the scientific method; the collection, treatment, and presentation of data; critical evaluation of scientific literature; scientific misconduct; and peer review. Career issues, including how to apply for admission to graduate and professional schools, are also discussed. Prerequisite(s): BIOL 100 or BIOC 100A; and BIOL 20L or BIOL 102J; and previous completion of the Disciplinary Communication requirement. Each enrolled student must have a committed MCD faculty sponsor by the first class meeting. Enrollment is restricted to biology and affiliated majors.

BIOL 186L - Undergraduate Research in MCD Biology (5)

Supervised undergraduate research in laboratory of an MCD biology faculty member accompanied by weekly lectures on ethical and practical scientific issues. Topics

include: laboratory safety; the scientific method; the collection, treatment, and presentation of data; critical evaluation of scientific literature; scientific misconduct; and peer review. Career issues, including how to apply for admission to graduate and professional schools, are also discussed. Prerequisite(s): Entry Level Writing and Composition requirements; BIOL 100 or BIOC 100A; and BIOL 20L or BIOL 102J. Each enrolled student must have a committed MCD faculty sponsor by the first class meeting. Enrollment is restricted to declared Biochemistry and Molecular Biology; Biology B.S.; Molecular, Cell and Developmental Biology and Neuroscience B.S. majors. Other majors may enroll by permission of the instructor. Students cannot enroll in BIOL 186L after receiving credit with a 'C' or better in BIOL 100L, BIOL 103L, BIOL 105L, BIOL 106L, BIOL 108L, BIOL 109L, BIOL 115L, BIOL 120L, BIOL 121L, BIOL 129L, or METX 119L.

BIOL 186R - Undergraduate Research in MCD Biology (5)

Supervised undergraduate research in the laboratory of an MCD biology faculty member accompanied by weekly lectures on practical scientific issues. Topics include: laboratory safety; the scientific method; the collection, treatment, and presentation of data; critical evaluation of scientific literature; ethics and scientific misconduct; and peer review. Career issues, including how to apply for admission to graduate and professional schools, are discussed. Students cannot receive credit for this course and course 186L. Prerequisite(s): BIOL 100 or BIOC 100A; and BIOL 20L or BIOL 102J; and previous completion of the Disciplinary Communication requirement. Each enrolled student must have a committed MCD faculty sponsor by the first class. Enrollment is restricted to MCD Biology-affiliated majors.

BIOL 188 - A Life in Medicine (3)

Students explore healthcare from the perspectives of both clinicians and patients. The class focuses on medicine's cognitive, emotional, and spiritual elements, with the goal of understanding the rewards and costs of healthcare practice.

Prerequisite: Enrollment is restricted to junior and senior human biology majors, and others by permission of instructor.

BIOL 189 - Health Sciences Internship (3)

Structured off-campus learning experience providing experience and pre-professional mentoring in a variety of health-related settings. Interns are trained and supervised by a professional at their placement and receive academic guidance from their faculty sponsor. Students spend 8 hours per week at their placement, participate in required class meetings on campus, and keep a reflective journal. Enrollment is by application. Students interview with health sciences internship coordinator; applications are due one quarter in advance to the Health Sciences Internship Office.

Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; previous or concurrent enrollment in BIOL 189W is required. Enrollment is restricted to human biology majors.

BIOL 189W - Disciplinary Communication: Human Biology (3)

Writing-intensive course offered in conjunction with the health sciences internship. Weekly class meetings include academic guidance and mentoring as well as discussion of the mechanisms and conventions of academic writing about health and health care. Students complete multiple writing assignments, culminating in a term paper in the format of a scholarly article.

Enrollment is by application. Students interview with the health-sciences internship coordinator; applications are due one quarter in advance to the Health Care Sciences Internship Office. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Previous or concurrent enrollment in course 189 is required. Enrollment is restricted to human biology majors.

BIOL 195 - Senior Thesis Research (5)

An individually supervised course, with emphasis on independent research, to culminate in a senior thesis. Students submit petition to sponsoring agency.

BIOL 198 - Independent Field Study (5)

Provides for individual programs of study (a) by means other than the usual supervision in person, or (b) when the student is doing all or most of the coursework off campus. With permission of the department, may be repeated for credit, or two or three courses taken concurrently. Students submit petition to sponsoring agency.

BIOL 198F - Independent Field Study (2)

Provides for two credits of independent field study (a) by means other than the usual supervision in person, or (b) when the student is doing all or most of the coursework off campus. Students submit petition to sponsoring agency.

BIOL 199 - Tutorial (5)

Reading, discussion, written reports, and laboratory research on selected biological topics, using facilities normally available on campus. Students submit petition to sponsoring agency.

BIOL 199F - Tutorial (2)

Two-credit Tutorial. Reading, discussion, written reports, and laboratory research on selected biological topics, using facilities normally available on campus. Students submit petition to sponsoring agency.

Graduate

BIOL 200A - Critical Analysis of Scientific Literature (5)

Development of critical thinking skills via discussion of research articles on a broad range of topics. Prepares students to critically evaluate research publications, and improves their ability to organize effective oral presentations and to evaluate the oral presentations of other scientists.

Prerequisite: Enrollment is restricted to graduate students in MCD biology, or by permission of instructor.

BIOL 200B - Advanced Molecular Biology (5)

An in-depth coverage of the structure, function, and synthesis of DNA, RNA, and proteins. Discussion of the roles of macromolecules in the regulation of information in the cell.

Prerequisite: Prerequisite(s): Enrollment is restricted to graduate students.

BIOL 200C - Advanced Cell Biology (5)

An in-depth coverage of topics in cellular and subcellular organization, structure, and function in plants and animals. Emphasis on current research problems.

Prerequisite: Prerequisite(s): BIOL 200B. Enrollment is restricted to graduate students.

BIOL 200D - Developmental Biology (5)

Key topics in developmental biology, including developmental genetics, epigenetics, stem cell biology, and developmental neurobiology. Lectures are accompanied by critical analysis and discussion of recent publications.

Prerequisite: Enrollment is restricted to graduate students in MCD biology, or by permission of instructor.

BIOL 200E - Experimental Design (3)

A multidisciplinary course that focuses on topics to consider when tackling biomedical research questions experimentally. Lectures highlight important issues to take into account, are coupled with group discussions and intensive analysis of primary literature, and involve case studies to practically demonstrate how these considerations might be implemented.

Prerequisite: Concurrent enrollment in BIOL 200A is required.

BIOL 200F - Logic and Approaches to Scientific Discovery (5)

Multidisciplinary course with an emphasis on discussion of approaches and methods involved in the study of biological questions. Lectures focus on current gaps in our knowledge of topics and approaches to test

models and hypotheses. Course focuses on current topics in RNA and DNA molecular biology, cell biology, developmental biology, stem cells, neurobiology, and genomics. Lectures coupled with small group discussions and written assignments.

Prerequisite: Prerequisite(s): BIOL 200A or METX 200 or CHEM 200A or BME 205. Enrollment is restricted to graduate students.

BIOL 201 - RNA Processing (5)

An advanced graduate-level course on biological aspects of RNA function and processing in eukaryotes. Lectures and discussions will be developed using the current literature.

Prerequisite: Prerequisite(s): BIOL 200B or permission of instructor. Enrollment is restricted to graduate students.

BIOL 203 - Ribosomes and Translation (5)

Covers the field of ribosome research in depth, including the structure and function of ribosomes and the molecular mechanisms of protein synthesis. Begins with historical review of the ribosome field and proceeds to the most recent findings. Focus is on central questions: (1) How is the accuracy of the aminoacyl-tRNA selection determined? (2) What is accommodation? (3) What is the mechanism of peptide bond formation (peptidyl transferase)? (4) What is the mechanism of translocation? (5) What are the mechanistic roles of the ribosome and translation factor EF-G in translocation? (6) To what extent is the mechanism of translation determined by RNA? (7) Why is RNA so well suited for the ribosome? (8) How did translation evolve from an RNA world?

Prerequisite: Prerequisite(s): BIOC 100A, BIOL 200B or permission of instructor. Enrollment is restricted to graduate students.

BIOL 204 - Chromatin (5)

Eukaryotic DNA is complexed with histones to form chromatin. This course focuses on the ways in which chromatin influences and is manipulated to regulate gene expression

Prerequisite: Prerequisite(s): BIOL 105 and BIOL 115; undergrads by permission of instructor. Enrollment is restricted to graduate students.

BIOL 205 - Epigenetics (5)

In-depth coverage of epigenetics focusing on how alterations in chromatin structure and DNA methylation establish and maintain heritable states of gene expression. Lectures are supplemented with critical discussion of recent publications.

Prerequisite: Prerequisite(s): BIOL 105 and BIOL 115, or permission of instructor. Enrollment is restricted to graduate students.

BIOL 206 - Introduction to Stem Cell Biology (5)

Fundamental concepts, experimental approaches, and current advances in stem cell biology, with consideration of key ethical issues. Topics include: self-renewal and differentiation; the microenvironment; epigenetics; cell-cycle regulation; and how basic research translates to medical therapeutics. Ethical, moral, and political issues surrounding stem cell research are discussed with lectures from philosophy and other relevant disciplines.

Prerequisite: Enrollment is restricted to graduate students.

BIOL 206L - Current Protocols in Stem Cell Biology (5)

Provides students with hands-on experience in embryonic stem cell culture methods.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll by permission of instructor.

BIOL 208 - Cellular Signaling Mechanisms (5)

All eukaryotic cells utilize intricate signaling pathways to control such diverse events as cell-cell communication, cell division, and changes in cell morphology. This course covers the molecular basis of these cellular signaling pathways, focusing on the most current research.

Prerequisite: Prerequisite(s): BIOL 105, BIOL 110, and BIOL 115. Enrollment is restricted to seniors and graduate students.

BIOL 214 - Advances in Cancer Biology (5)

Provides students with knowledge of the latest concepts in cancer biology and cancer therapeutics, and a general appreciation of the rapid advances being made in this area of biomedicine.

Prerequisite: Prerequisite(s): BIOL 200B or by permission of instructor. Enrollment is restricted to graduate students.

BIOL 215 - Applied Statistics for Molecular, Cell, and Developmental Biology (5)

For experimental biologists: focuses on resolving practical statistical issues typically encountered in molecular, cellular, and developmental biology lab research. No prior experience in statistics or programming is necessary.

Prerequisite: Enrollment is restricted to graduate students in molecular, cellular, and developmental biology.

BIOL 217 - Influence of Environment and Experience on Brain Development (5)

How environmental factors (animals' experiences, environmental toxins, etc.) affect the formation of

neuronal circuits and brain function. Lectures and discussions use current literature.

Prerequisite: Prerequisite(s): BIOL 200A, BIOL 200B, BIOL 200C, and BIOL 200D, or by permission of the instructor. Enrollment is restricted to graduate students.

BIOL 218 - CRISPR/Cas Technologies (5)

Provides an overview of the continually emerging roles for CRISPR in biomedical research. Topics will include an overview of the CRISPR genome defense systems in bacteria, the mechanisms of DNA cleavage and repair, the many uses of CRISPR as a genome editing tool in model organisms, and discussions on the ethical use of the technology in precision medicine.

Prerequisite: Prerequisite(s): BIOL 200A, BIOL 200B, and BIOL 200C. Enrollment restricted to graduate students.

BIOL 220 - STEM Outreach (2)

Trains students how to plan, design, and develop STEM outreach programs. Outreach proposals focused on engaging communities from under-represented backgrounds.

BIOL 226 - Advanced Molecular Neuroscience (5)

Basis of neural behavior at the cellular, molecular and system levels. First half of course focuses on cellular, molecular, and developmental aspects of the nervous system and covers two sensory systems: olfaction and auditory. Last half of course concerns higher-level functions of the nervous system, such as processing and integrating information. Discusses human diseases and disorders. Students cannot receive credit for this course and BIOL 126.

Prerequisite: Enrollment is restricted to graduate students.

BIOL 228 - Developmental Neurobiology (5)

Covers the principles of nervous-system development from the molecular control of development, and cell-cell interactions, to the role of experience in influencing brain structure and function. Students cannot receive credit for this course and course 128. Enrollment is restricted to graduate students and by permission of the instructor.

BIOL 230 - Grant Writing in the Biomedical Sciences (5)

Introduction to the fundamentals of grant writing in biomedical research, including best practices for presentation of data and communication of research findings. Participants write and peer-edit most components of the NIH Ruth Kirschstein F31/F32 pre- or post-doctoral fellowship.

Prerequisite: Enrollment is restricted to graduate students.

BIOL 247 - Stem Cell Research: Scientific, Ethical,

Social, and Legal Issues (2)

Investigates the scientific, ethical, social, and legal dimensions of human embryonic stem-cell research, including the moral status of the embryo; the concept of respect for life; ethical constraints on oocyte procurement; creation of embryonic chimeras; federal policies; and political realities. (Also offered as Biomolecular Engineering 247. Students cannot receive credit for both courses.) Prerequisite(s): Course in stem cell biology (ex: BME 278 Stem Cell Research) or the equivalent knowledge. Enrollment is restricted to graduate students.

Prerequisite: Prerequisite(s): Course in stem cell biology (ex: BME 278 Stem Cell Research) or the equivalent knowledge. Enrollment is restricted to graduate students.

BIOL 280A - Topics in Research on Molecular Genetics of Yeast (2)

Intensive research seminar on the structure and function of the gene expression machinery in the simple eukaryote *Saccharomyces cerevisiae* and its relationship to the human gene expression machinery.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with approval of instructor.

BIOL 280B - Chromatin Structure and Transcriptional Regulation (2)

Weekly seminar on structure and gene regulatory function of chromatin. Discusses research of participants and relevant scientific literature.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOL 280C - Mammalian Brain Development (2)

Seminar covers research into the development of the mammalian brain.

Prerequisite: Enrollment is restricted to graduate students; undergraduates may enroll with permission of instructor.

BIOL 280D - RNA Processing (2)

A discussion of current research and literature concerning the regulation of precursor messenger RNA processing.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOL 280E - Meiotic Chromosome Dynamics (2)

Intensive course on the molecular mechanisms underlying homolog pairing, synapses, and recombination; and how they are regulated,

coordinated, and monitored to ensure accurate meiotic chromosome segregation.

Prerequisite: Enrollment is restricted to graduate students; undergraduates may enroll with permission of instructor.

BIOL 280F - Development of Vertebrate Neural Connections (2)

Intensive research seminar on molecular mechanisms by which neural connections are established during mouse development. Special focus on topographic maps and role of Eph receptors and ephrins in this process.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOL 280G - Physiology of the Developing Brain (2)

Research seminar covering circuit structure and function in the developing brain.

Prerequisite: Enrollment is restricted to graduate students; undergraduates may enroll by permission of the instructor.

BIOL 280H - Topics on Research into Chromatin and Transcription (2)

Seminar covering research into the effects of chromatin on transcription in yeast.

Prerequisite: Enrollment is restricted to graduate students; undergraduates may enroll with permission of instructor.

BIOL 280I - Epigenetic Gene Silencing and Insulators (2)

Intensive course on molecular mechanisms by which insulator elements regulate epigenetic gene silencing.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOL 280J - Structures of Macromolecular Complexes (2)

Focuses on structure and function of the spliceosome using electron microscopy and x-ray crystallography. Participants present results from their own research and relevant journal articles.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOL 280K - Topics in Cell Cycle Research (2)

An intensive seminar focusing on current research on the molecular mechanisms that control cell division. Participants are required to present results of their own research or to review journal articles of interest.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOL 280L - Development (2)

Seminar covering research into breast development and cancer.

Prerequisite: Enrollment is restricted to graduate students.

BIOL 280M - Post-Transcriptional Control of Mammalian Gene Expression (2)

Intensive course on the molecular mechanisms by which RNA binding proteins regulate gene expression.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with the permission of the instructor.

BIOL 280N - Long Noncoding RNA and the Immune System (2)

Weekly seminar discussion of the current research and literature concerning the functions for long noncoding RNA in gene regulation within inflammatory signaling pathways.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll by permission of the instructor.

BIOL 280O - Cell type specific computations in neural circuits (2)

Introduces students to classic and current research in the area of systems neuroscience with specific focus on how different neural cell types shape the computations that are performed in neural circuits. Each week, a different student or the instructor will give a presentation and/or lead a discussion on a topic of their choosing. These topics can be the student's research project, a classic or current neuroscience journal article, or a tutorial on a new method. Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOL 280P - Quality Control in Gene Expression (2)

Intensive, discussion-based course concerning ongoing research in quality control and gene expression via analysis of published and unpublished observations and theories.

Prerequisite: Enrollment is restricted to graduate students.

BIOL 280Q - Cell Biology of Oocytes, Embryos, and

Neurons (2)

Weekly seminar and round-table discussion about research problems and recent advances in molecular motor proteins, cytoskeletons, and the control of force-producing processes. Each participant reports recent advances in their field from current literature, their own primary research questions, current approaches to answering those questions, and their research progress.

Prerequisite: Enrollment is restricted to graduate students; undergraduates may enroll with permission of instructor.

BIOL 280R - Gene regulation in *C. elegans* and human parasitic nematodes (2)

Intense weekly seminar on the mechanisms of gene regulation, focusing on *C. elegans* and human parasitic nematodes.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with the permission of the instructor.

BIOL 280S - Chromatin and RNA Regulation in *C. elegans* (2)

Intensive research seminar about regulators of chromatin organization; the composition and function of germ granules; and the roles of both levels of regulation in germline development in *C. elegans*. Participants present their research results and report on related journal articles.

Prerequisite: Enrollment is restricted to graduate students; undergraduates may enroll with permission of instructor.

BIOL 280T - Molecular Biology of *Drosophila* Development (2)

An intensive seminar concerning the molecular genetics of *Drosophila*. Recent research is discussed weekly, with an emphasis on gene regulation and development. Students present their own research or critical reviews of recent articles at least once during the quarter.

Prerequisite: Enrollment is restricted to graduate students. Qualified undergraduates may enroll with permission of instructor.

BIOL 280U - Discussions on the Development of the *Drosophila* Embryo (2)

Involves a two-hour weekly meeting in which the students discuss topics concerning the cell cycle, early embryonic development, and the cytoskeleton. These discussions critically evaluate ongoing research in this area. Material is drawn from student research and recently published journal articles. Students are also expected to meet individually with the instructor two hours weekly. In addition to a three–five page research proposal, each student gives two one-hour oral presentations.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOL 280V - Translational pediatric genomics (2)

Weekly discussion of the current research and literature on translational pediatric genomics. Specific patient cases may be discussed.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll by permission of the instructor.

BIOL 280W - Development, Connectivity, and Genetic Identity of Neural Circuits (2)

This seminar course will cover the current topics and progress of neuroscience research on neural circuit development, connectivity, function and genetics. (Formerly Membrane Proteins.)

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOL 280X - RNA-mediated epigenetic inheritance (2)

Intensive research seminar about epigenetic inheritance and the role of small non-coding RNAs in the intergenerational inheritance of paternal environmental effects. Participants present their research results and report on related journal articles.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll by permission of the instructor.

BIOL 280Y - Activity-Dependent Synaptic Plasticity (2)

Research seminar covering the regulation of synaptic plasticity in the mammalian nervous system, focusing on how the activity regulates the structural and functional dynamics of synapses.

Prerequisite: Enrollment is restricted to graduate students; undergraduates may enroll with permission of instructor.

BIOL 280Z - Prostate Development and Cancer Biology (2)

Weekly research seminar covering gene regulation, cellular interactions, and stem cell behaviors in mammalian prostate development and prostate cancer progression.

Prerequisite: Enrollment is restricted to graduate students; undergraduates may enroll by the permission of the instructor.

BIOL 281A - Host Responses to Respiratory Viral Infections (2)

Weekly seminar and discussion of current research and literature concerning mechanisms by which the host immune response determines the severity of disease

following a respiratory viral infection. Enrollment is limited to 10.

Prerequisite: Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOL 281B - Mucosal Immunology and Microbiology (2)

Weekly seminar covering current research and literature concerning the gut barrier and microbes, with particular emphasis on enteric viruses. Enrollment is limited to 10.

Prerequisite: Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BIOL 288 - Pedagogy in STEM (2)

Prepares graduate students to help teach university science courses. Weekly class sessions include activities and interactive discussions of diverse modes of learning, diverse ways of teaching, peer instruction, assessment of learning, equity and inclusion, and professional ethics. Students also visit an active learning class and an active learning discussion section at UCSC, then write evaluations of the teaching strategies used in those classes. (Formerly Teaching Assistant Training.)

Prerequisite: Enrollment is restricted to graduate students.

BIOL 289 - Practice of Science (5)

Examination of ethical and practical scientific issues, including the collection and treatment of data, attribution of credit, plagiarism, fraud, and peer review. Career issues, including how to apply for grants and positions in industry or academia, will be discussed.

Prerequisite: Prerequisite(s): BIOL 200A, BIOL 200B, and BIOL 200C or permission of instructor. Enrollment is restricted to graduate students; undergraduates may enroll with permission of the instructor.

BIOL 290 - Career Planning (2)

An important goal of graduate programs is to train students for diverse careers. Exposes molecular cell and developmental biology graduate students to diverse career options and helps them develop individual development plans to target their graduate training to their selected career goals.

Prerequisite: Enrollment is restricted to graduate students.

BIOL 291 - Molecular, Cellular, and Developmental Biology Seminar (2)

Topics of current interest in molecular, cellular, and developmental biology are presented weekly by graduate students, faculty, and guest speakers.

Prerequisite: Enrollment is restricted to graduate students.

BIOL 292 - MCD Seminar (0)

Various topics by weekly guest speakers.

Prerequisite: Enrollment is restricted to graduate students.

BIOL 296 - Laboratory Research in Molecular, Cell, and Developmental Biology (5)

Independent laboratory research in molecular, cellular, and developmental biology. Students submit petition to sponsoring agency.

BIOL 297A - Independent Study (5)

Independent study for graduate students who have not yet settled on a research area for their thesis. Students submit petition to sponsoring agency.

BIOL 297B - Independent Study (10)

Independent study for graduate students who have not yet settled on a research area for their thesis. Students submit petition to sponsoring agency.

BIOL 297C - Independent Study (15)

Independent study for graduate students who have not yet settled on a research area for their thesis. Students submit petition to sponsoring agency.

BIOL 297F - Independent Study (2)

Independent study for graduate students who have not yet settled on a research area for their thesis. Students submit petition to sponsoring agency.

BIOL 299A - Thesis Research (5)

Students submit petition to sponsoring agency.

BIOL 299B - Thesis Research (10)

Students submit petition to sponsoring agency.

BIOL 299C - Thesis Research (15)

Students submit petition to sponsoring agency.

BIOL 299F - Thesis Research (2)

Students submit petition to sponsoring agency.

Prerequisite: Enrollment is restricted to graduate students.

BME - BIOMOLECULAR

ENGINEERING

Lower-Division

BME 5 - Introduction to Biotechnology (5)

Introduces the tools and applications of biotechnology in the fields of medicine, agriculture, the environment, and industry.

BME 18 - Scientific Principles of Life (5)

The principles of life as it exists on this planet and how they generalize. Darwinian evolution, genomes, scientific theories of life (mechanistic, thermodynamic, information theoretic). Future of life: Internet, machine learning and adaptation, artificial intelligence, genome editing, fully artificial life.

BME 21L - Introduction to Basic Laboratory Techniques (3)

Introduces students to basic laboratory techniques that are essential to begin work in faculty research labs and on capstone projects. Students have several independent blocks/fixed projects and learn how to use various instruments and techniques employed in biotechnology laboratories, such as: calibration and use of the pipette; making up various buffers; pH titration; Bacterial transformation; TAcloning; plasmid and DNA isolation; Polymerase Chain Reaction (PCR); gel electrophoresis; Pyrosequencing; and an introduction to Linux for DNA sequence analysis.

Prerequisite: Enrollment is restricted to bioengineering, bioinformatics, and biomolecular engineering and bioinformatics majors and proposed majors.

BME 22L - Foundations of Design and Experimentation in Molecular Biology, Part I (2)

The first in a two-part series that includes BME 23L. Together these courses prepare bioengineering students for successful junior/senior year projects in faculty research laboratories, iGEM, or Senior Design. The focus is on molecular biology laboratory and introductory bioinformatics skills. Students will design and initiate an original metagenome study near the end of the term.

Prerequisite: Prerequisites: BME 21L and CHEM 1A, CHEM 1B, CHEM 1M, and CHEM 1N; or by permission of instructor. Enrollment is restricted to sophomores and juniors.

BME 23L - Foundations of Design and Experimentation in Molecular Biology, Part II (2)

Continuation of BME 22L. Together these courses prepare bioengineering students for successful junior/senior year projects in faculty research laboratories, iGEM, or Senior Design. The focus is on molecular biology laboratory and introductory bioinformatics skills. Students will complete original metagenome and transcriptome studies.

Prerequisite: Prerequisites: BME 22L or by permission of instructor.

BME 51A - Applied Electronics for Bioengineers Part 1 (5)

Lab-based course that introduces measuring, modeling, and designing electronics circuits, emphasizing voltage dividers and complex impedance culminating in simple, negative-feedback op amp circuits for amplifying audio signals.

Prerequisite: Prerequisite(s): MATH 19A; or MATH 11A by consent of instructor. High school physics recommended. Enrollment is restricted to bioengineering and biomolecular engineering & bioinformatics majors and proposed majors; other majors by consent.

BME 51B - Applied Electronics for Bioengineers Part 2 (5)

Lab-based course that introduces designing, measuring, and modeling electronics circuits, emphasizing RC filters and negative-feedback amplifiers for various sensors circuits for amplifying audio signals, design of multi-stage amplifiers, instrumentation amplifiers, and class-D power amplifiers.

Prerequisite: Prerequisite(s): BME 51A.

BME 55 - Introduction to Lab Groups (2)

Course intended to assist second-year biomolecular engineering and bioinformatics undergraduates find research labs that they might join. Students sit in on different lab group meetings, read papers recommended by the lab groups, and report back to other students in the class both verbally and in writing. Course is offered for pass/no pass only.

Prerequisite: Enrollment is restricted to sophomore and junior proposed biomolecular engineering and bioinformatics majors, or by permission of the instructor.

BME 80G - Bioethics in the 21st Century: Science, Business, and Society (5)

Serves science and non-science majors interested in bioethics. Guest speakers and instructors lead discussions of major ethical questions having arisen from research in genetics, medicine, and industries supported by this knowledge.

BME 80H - The Human Genome (5)

Course will focus on understanding human genes. Accessible to non-science majors. Will cover principles of human inheritance and techniques used in gene analysis. The evolutionary, social, ethical, and legal issues associated with knowledge of the human genome will be discussed.

BME 94 - Group Tutorial (5)

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency.

BME 94F - Group Tutorial (2)

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency.

BME 99 - Tutorial (5)

Students submit petition to sponsoring agency.

BME 99F - Tutorial (2)

Students submit petition to sponsoring agency.

Upper-Division**BME 105 - Genetics in the Genomics Era (5)**

Principles of genetics and genomics focusing on how sequencing technologies enable us to understand gene function, genotype to phenotype relationships, and genetic inheritance.

Prerequisite: Prerequisite(s): BIOL 20A. Enrollment is restricted to bioengineering, biomolecular engineering and bioinformatics, biotechnology, and bioinformatics majors and proposed majors and bioinformatics minors.

BME 110 - Computational Biology Tools (5)

Hands-on lectures and laboratory geared to teach basic tools and skills used in computational biology (genome browsers, sequence database searching, motif analysis, multiple sequence alignment, gene finders, phylogenetics analysis, protein structure visualization, and others). Web-based tools/databases are used on student laptops. Open to all science students; no prior programming or Unix experience required.

Prerequisite: Prerequisite(s): BME 105, or BIOL 100, or BIOL 105, or BIOC 100A, or CHEM 103, or bioinformatics majors, or biomolecular engineering and bioinformatics majors.

BME 122H - Extreme Environmental Virology (5)

Examines life in extreme environments with an emphasis on the viruses that live there. Integrates aspects of virology, molecular biology, and computational biology. Students investigate a high-salt, extreme environment at the Don Edwards National Wildlife Refuge, and use DNA extraction methods to find molecular evidence of the organisms that live there and describe the genetic content of viruses and the community living in those high-salt ponds.

Prerequisite: Enrollment is restricted to College Scholar Students, and or by permission of the instructor.

BME 123T - Senior Thesis Writing (5)

For bioengineering senior thesis students, guidance in preparing a draft manuscript describing their senior research project. Students also practice conference-style oral or poster presentation.

Prerequisite: Prerequisite(s): BME 185 or CSE 185E. Concurrent enrollment in BME 193F or BME 195F or BME 198F or CSE 193F or CSE 195F or CSE 198F or ECE 193F or ECE 195F or ECE 198F is required. Enrollment is restricted to senior biomolecular engineering and bioinformatics and bioengineering majors.

BME 128 - Protein Engineering (5)

For bioengineering, bioinformatics, and biology majors, focuses on engineering (i.e., changing) of proteins. Topics focus on practical aspects of protein engineering strategies that are crucial to modern biotechnology and biomedical applications.

Prerequisite: Prerequisite(s): BIOL 20A; and BIOL 100 or BIOC 100A, or by permission of instructor.

BME 128L - Protein Engineering Laboratory (2)

Students address a current scientific question about protein stability using structure-guided protein engineering. Specifically, Students use recombinant DNA technology to produce an engineered protein that is predicted to have enhanced stability. Students then assess its stability with differential scanning fluorimetry. Students are billed a materials fee of \$140.

Prerequisite: Prerequisite(s): BME 128; and BIOL 101L, or BIOL 20L, or BME 21L. Enrollment is restricted to junior and senior bioengineering, biomolecular engineering, and bioinformatics majors; other majors by permission of instructor.

BME 129A - Project Design and Implementation in Biomolecular Engineering I (5)

First of a three-part series focused on senior design projects in biomolecular engineering. In this first part, students examine experiments that elucidated the function of biological macromolecules at the Angstrom scale, and how technologies related to those functions were invented and implemented. Guided by these examples, each student develops a senior design project concept or small business proposal and defends its utility, plausibility, and inventiveness in a written document and an oral presentation.

Prerequisite: Prerequisite(s): BIOL 20A; BME 23L or BIOL 20L or BIOL 101L; BIOL 100 or BIOC 100A; and previous or concurrent enrollment in BME 185 or CSE 185E. Enrollment is restricted to junior and senior bioengineering and biomolecular engineering and bioinformatics majors or by permission of the instructor.

BME 129B - Project Design and Implementation in

Biomolecular Engineering II (5)

Second part of a three-course sequence that is the culmination of the bioengineering program for students who chose a senior design group project to fulfill their capstone requirement. Students apply knowledge and skills gained in biomolecular engineering coursework to articulate, organize, and plan a senior design group project. Student groups complete research, specification, planning, and procurement for their project. Includes technical discussions, design reviews, and formal presentations.

Prerequisite: Prerequisite(s): BME 129A or BME 150. Enrollment is restricted to senior bioengineering or biomolecular engineering and bioinformatics majors.

BME 129C - Project Design and Implementation in Biomolecular Engineering III (5)

Final part of a three-course sequence that is the culmination of the bioengineering program for students who chose a senior design group project to fulfill their capstone requirement. Students apply knowledge and skills gained in biomolecular engineering coursework to articulate, organize, and plan a senior design group project. Student groups complete research, specification, planning, and procurement for their project. Includes technical discussions, design reviews, and formal presentations.

Prerequisite: Prerequisite(s): BME 129A and BME 129B. Enrollment is restricted to senior bioengineering or biomolecular engineering and bioinformatics majors.

BME 130 - Genomes (5)

Advanced elective for biology majors, examining biology on the genome scale. Topics include genome sequencing; large scale computational and functional analysis; features specific to prokaryotic, eukaryotic, or mammalian genomes; proteomics; SNP analysis; medical genomics; and genome evolution.

Prerequisite: Prerequisite(s): BIOL 105 or BME 105; or permission of the instructor.

BME 132 - Evolutionary Genomics (5)

Covers major recent advances in evolutionary genomics. Students learn to analyze and interpret scientific writing in depth. Students also present on work covered in the class and produce one research or review paper. Students cannot receive credit for this course and course 232.

Prerequisite: Prerequisite(s): BME 105 or BIOL 105 or METX 140. Enrollment is restricted to juniors and seniors.

BME 140 - Bioinstrumentation (5)

Introduces the fundamental aspects of bioinstrumentation that are essential for beginning-level employment in clinical, pharmaceutical, and biotechnology laboratories. The advantages and

disadvantages of several instruments are discussed and demonstrated, such as thermocycler, polymerase chain reaction (PCR), next-generation DNA sequencing platforms, pyrosequencing, fabless nanofabrication, ion-sensitive measurements, microarray fabrication, and fluorescent-activated cell sorter (FACS).

Prerequisite: Prerequisite(s): BME 5; or BME 51A and BME 51B; or ECE 101 and ECE 101L; or BIOL 100; or BIOC 100A.

BME 160 - Research Programming in the Life Sciences (6)

No programming experience is required, but basic computer and molecular biology understanding is assumed. Students without prior programming experience may benefit from taking CSE 20 in preparation for this course. Students learn programming in Python to manipulate biological data. Programming assignments comprise the majority of the assignments, and a final project using skills developed in this course is required. Lab section registration is required. BioPython and other modules will be introduced for use in the final project.

Prerequisite: Prerequisite(s): BIOL 20A or BIOL 21A.

BME 163 - Applied Visualization and Analysis of Scientific Data (3)

Python and its Numpy, Scipy, and Matplotlib packages as well as Inkscape are used on scientific data to generate publication-quality figures. Students cannot receive credit for this course and course 263.

Prerequisite: Prerequisite(s): BME 160 or BME 205. Prerequisites can be waived in cases where students have the required programming skills. Enrollment is restricted to juniors and seniors.

BME 175 - Entrepreneurship in Biotechnology (5)

Focuses on contemporary issues in commercializing biotechnology and genomics, emphasizing development of teamwork and communication skills. Topics include intellectual property management, fundraising, market analysis, and technology development as related to biotechnology start-ups. Students perform real-world tasks preparing for commercialization. Taught in conjunction with BME 275.

BME 177 - Engineering Stem Cells (5)

For bioengineering students interested in stem cells. Class uses project-based learning to discuss basic stem cell concepts and past breakthrough approaches to identify and design solutions for technological hurdles in stem cell research.

Prerequisite: Prerequisite(s): BIOL 20A or by consent of instructor. Basic knowledge of molecular and cellular biology is required.

BME 178 - Stem Cell Biology (5)

Basic concepts, experimental approaches, and therapeutic potential are discussed. Students gain experience in reading the primary scientific literature.

Prerequisite: Prerequisite(s): BIOL 110; BIOL 115 recommended.

BME 180 - Professional Practice in Bioengineering (2)

Seminar course where students develop a research proposal and the collaborative skills needed for independent research projects. Includes professional practice development in collaboration skills, project management, proposal development, and funding.

Prerequisite: Prerequisite(s): previous or concurrent enrollment in BME 185 or CSE 185E. Enrollment is restricted to junior and senior bioengineering, biomolecular engineering and bioinformatics, and bioinformatics majors or by permission.

BME 185 - Technical Writing for Biomolecular Engineers (5)

Writing by biomolecular engineers, not to general audiences, but to engineers, engineering managers, and technical writers. Exercises include job application and resume, library puzzle, graphics, laboratory protocols, document specification, progress report, survey article or research proposal, poster, and oral presentation.

Prerequisite: Prerequisite(s): BIOL 20A; satisfaction of Entry Level Writing and Composition requirements; Enrollment restricted to junior and senior bioengineering, biomolecular engineering and bioinformatics, and biotechnology majors.

BME 188A - Synthetic Biology--Mentored Research A (2)

This two-credit course is the first of three courses in a 12-credit collaborative research project available to students in physical sciences, and biomolecular engineering intended to satisfy the capstone requirement. Provides a multidisciplinary, collaborative research experience working on a project in synthetic biology. Working with one or more research faculty, student teams complete a substantial project. Multiple oral/written presentations are required, including a formal conference presentation. Prerequisite(s): BME 180. Enrollment is restricted to juniors and seniors. Enrollment is by instructor permission.

Prerequisite: Prerequisite(s): BME 180. Enrollment is restricted to juniors and seniors. Enrollment is by instructor permission.

BME 188B - Synthetic Biology--Mentored Research B (5)

This five-credit course is the second of three courses in a 12-credit collaborative research project available to students in physical sciences and biomolecular engineering intended to satisfy the capstone

requirement. Multiple oral/written presentations are required, including a formal conference presentation. Prerequisite(s): BME 188A. Enrollment is restricted to juniors and seniors. Enrollment is by instructor permission.

BME 188C - Synthetic Biology Mentored Research C (5)

Third of three courses in a 12-credit collaborative research project available to students in physical sciences and biomolecular engineering intended to satisfy the capstone requirement. Students in this course sequence may be participating in the annual IGEM (International Genetically Engineered Machines) competition. Course includes training in specific skills relevant to the specific sub-team and overall project, including lab-specific training (pcr, DNA electrophoresis, gel documentation, standard reagent prep, lab safety, lab equipment, project specifics). Prerequisite(s): BME 188B. Enrollment is restricted to juniors and seniors. Enrollment is by instructor permission.

BME 193 - Field Study (5)

Provides for individual programs of study with specific aims and academic objectives carried out under the direction of a BME faculty member and a willing sponsor at a field site, using resources not normally available on campus. Credit is based upon written and oral presentations demonstrating the achievement of the objectives of the course. Students submit petition to sponsoring agency.

BME 193F - Field Study (2)

Provides for individual programs of study with specific aims and academic objectives carried out under the direction of a BME faculty member and a willing sponsor at a field site, using resources not normally available on campus. Credit is based upon written and oral presentations demonstrating the achievement of the objectives of the course. Students submit petition to sponsoring agency.

BME 194 - Group Tutorial (5)

A program of study arranged between a group of students and a faculty member. Students submit petition to sponsoring agency.

BME 194F - Group Tutorial (2)

A program of independent study arranged between a group of students and a faculty member. Students submit petition to sponsoring agency.

BME 195 - Senior Thesis Research (5)

Students submit petition to sponsoring agency.

BME 195F - Senior Thesis or Research (2)

Students submit petition to sponsoring agency.

BME 198 - Individual Study or Research (5)

Students submit petition to sponsoring agency.

BME 198F - Individual Study or Research (2)

Students submit petition to sponsoring agency.

BME 199 - Tutorial (5)

For fourth-year students majoring in bioinformatics or bioengineering.

Graduate

BME 201 - Scientific Writing (3)

Covers effective writing styles for scientific communication for bio-science and engineering graduate students. Covers instruction for writing grant applications, scientific manuscripts, and thesis proposals. Students practice by preparing, editing, and evaluating each of these documents.

Prerequisite: Enrollment is restricted to graduate students.

BME 205 - Bioinformatics Models and Algorithms (5)

Covers bioinformatics models and algorithms: the use of computational techniques to convert the masses of information from biochemical experiments (DNA sequencing, DNA chips, and other high-throughput experimental methods) into useful information. Emphasis is on DNA and protein sequence alignment and analysis.

Prerequisite: Enrollment is restricted to graduate students. Undergraduates may enroll with prerequisite(s): BME 160; and CSE 107 or STAT 131; and concurrent enrollment in BIOC 100A.

BME 215 - Applied Gene Technology (5)

Detailed insight into the techniques and technological trends in genomics and transcriptomics, building the necessary foundations for further research in genetic association studies, population genetic association studies, population genetics, diagnostics, medicine, and drug development. Students should already have a deeper understanding of the basic tools of molecular biotechnology than acquired in introductory courses in biotechnology, biochemistry, and molecular biotechnology.

Prerequisite: Enrollment is restricted to graduate students.

BME 229 - Protein and Cell Engineering (5)

Focuses on established and novel strategies for protein and cell engineering. Explores concepts, design, and practical applications of engineered proteins, cells, and organisms as research tools and in therapeutic applications. Recommended for graduate students with interests in bioengineering.

Prerequisite: Enrollment is restricted to graduate students. Undergraduates by permission of instructor.

BME 230A - Introduction to Computational Genomics and Systems Biology (5)

Introductory and intermediate-level topics in computational genomics, DNA and RNA sequence analysis, mapping, quantification, detection of variants and their associations with disease. Covers topics in machine-learning, probabilistic graphical models, gene regulatory network inference, and single cell analysis. Students conduct related independent research.

Prerequisite: Prerequisite(s): BME 205. Enrollment is restricted to juniors, seniors, and graduate students.

BME 230B - Advanced Computational Genomics and Systems Biology (5)

Covers advanced topics in computational genomics, DNA and RNA sequence analysis, mapping, quantification, detection of variants and their associations with disease. Topics include machine-learning, probabilistic graphical models, gene regulatory network inference, and single cell analysis. Students participate in teams in a computational analysis competition.

Prerequisite: Prerequisite(s): BME 230A. Enrollment is restricted to juniors, seniors, and graduate students.

BME 232 - Evolutionary Genomics (5)

Covers major recent advances in evolutionary genomics. Students learn to analyze and interpret scientific writing in depth. Students also present on work covered in the class and produce one research or review paper. Students may not receive credit for this course and course 132.

Prerequisite: Enrollment is restricted to graduate students. BME 105 or BIOL 105 or equivalent courses in higher-level genetic processes are highly recommended.

BME 237 - Applied RNA Bioinformatics (5)

Teaches methods for RNA gene discovery; gene expression quantification; probabilistic modeling, secondary structure/trans-interaction prediction; mRNA splicing; and functional analysis. Emphasis on leveraging comparative genomics and employing high-throughput RNA sequencing data. Includes lectures, scientific literature discussion, problem sets, and final gene-discovery project.

Prerequisite: Enrollment is restricted to seniors and graduate students.

BME 263 - Applied Visualization and Analysis of Scientific Data (5)

Python and its Numpy, Scipy, and Matplotlib packages as well as Inkscape are used to generate publication

quality figures from scientific data. Students cannot receive credit for this course and course 163.

Prerequisite: Prerequisite(s): BME 160 or BME 205. Prerequisite(s) can be waived in cases where students have required programming skills. Enrollment is restricted to graduate students.

BME 272 - Precision Medicine (5)

Focuses on modern "precision" approaches to understanding human health, where every patient is unique. Explores basic and clinical discoveries and 'omics-based medicine for the prevention, diagnosis, and treatment of disease. Emphasis is on genomic approaches and applications to cancer.

Prerequisite: Enrollment restricted to juniors, seniors, and graduate students.

BME 275 - Entrepreneurship in Biotechnology (5)

Focuses on contemporary issues in commercializing biotechnology and genomics, emphasizing development of teamwork and communication skills. Topics include intellectual property management, fundraising, market analysis, and technology development as related to biotechnology start-ups. Students perform real-world tasks preparing for commercialization. Taught in conjunction with Biomolecular Engineering 175.

BME 278 - Stem Cell Biology (5)

Basic stem cell concepts, experimental approaches, and therapeutic potential are discussed. Students gain experience in reading and critically evaluating the primary scientific literature. Students cannot receive credit for this course and BME 178.

Prerequisite: Enrollment is restricted to graduate students in PBSE program (Program in Biomedical Science and Engineering: Biomolecular Engineering and Bioinformatics (BMEB), Microbial Biology and Pathogenesis (MICRO), Chemical Biology, Biochemistry and Biophysics (CB3), Molecular, Cell and Developmental Biology (MCDB)) or consent of instructor.

BME 280B - Seminar on Bioinformatics and Bioengineering (2)

Weekly seminar series covering topics of current research in computational biology, and bioinformatics. Current research work and literature in these areas are discussed. Short papers reflecting on presentations required. Available for Satisfactory/Unsatisfactory (or Pass/No Pass) grading only.

BME 281A - Seminar on Processive Enzymes and Nanopores (2)

Weekly seminar series covering experimental research in nanopore technology and single-molecule analysis of polymerase function. Current research work and literature is discussed. Students lead some discussions and participate in all meetings.

Prerequisite: Enrollment is restricted to graduate students. Qualified undergraduates may enroll with permission of instructor.

BME 281C - Seminar in Cancer Genomics (2)

Presents current computational biology research to identify genomics-based signatures of cancer onset, progression, and treatment response. Examples of such investigations include: genetic pathway interpretation of multivariate high-throughput datasets; discovery of mutations in whole-genome sequence; identifications and quantification of gene isoforms, alleles, and copy number variants; and machine-learning tools to predict clinical outcomes. Students present their own research, host journal clubs, and attend lectures and teleconferences to learn about research conducted by national and international projects.

Prerequisite: Enrollment is restricted to graduate students.

BME 281D - Seminar on Protein Engineering (2)

Weekly seminar series covering experimental research in protein structure, function, and engineering. Current research work and literature in this area are discussed. Students lead some discussions and participate in all meetings.

Prerequisite: Enrollment is restricted to graduate students.

BME 281E - Seminar in Genomics (2)

Current topics in genomics including high-throughput sequencing, genome assembly, and comparative genomics. Students design and implement independent research projects. Weekly laboratory meetings are held to discuss these projects and related research in the field.

Prerequisite: Enrollment is restricted to graduate students.

BME 281F - Blood Cell Development (2)

Weekly seminar covering topics in current research on blood cell development and stem cell biology. Current research and literature in these areas discussed. Students lead some discussions and participate in all meetings.

Prerequisite: Enrollment is restricted to graduate students. Undergraduates may enroll with permission of instructor.

BME 281H - Seminar in Comparative Genomics (2)

Weekly seminar series covering topics of current computational and experimental research in comparative genomics. Current research work and literature in this area discussed. Students lead some discussions and participate in all meetings.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BME 281J - Seminar in Computational Genomics and Biomedicine (2)

Research seminar of the UCSC Computational Genomic Laboratory and Platform Teams. Students receive hands-on instruction in modern computational methods to address research questions. Topics include: genomic and transcriptomic sequence analysis methods, comparative and evolutionary genomics, big-data genomic analysis, biomedical data sharing, and precision medicine. Students attend and participate in monthly lab meetings, monthly all-hands meetings, where students give a quick report on their progress and the next month's goals, and a bi-weekly journal club, where pairs of students present and discuss a paper of their choosing with the lab. Students also participate in hands-on, active computational laboratory-based research. Student evaluation is based on suitable progress toward research goals and graduate program progress.

Prerequisite: Enrollment is restricted to graduate students.

BME 281L - Seminar in Computational Genetics (2)

Weekly seminar series covering topics and experimental research in computational genetics. Current research work and literature in this area discussed. Students lead some discussions and participate in all meetings.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BME 281N - Seminar in Transcriptomics (2)

Covers current topics in computational and experimental research in transcriptomics. Current research work and literature discussed. Weekly laboratory meetings held to discuss these projects and related research in the field.

Prerequisite: Enrollment is restricted to graduate students.

BME 281P - Seminar on Nanotechnology and Biosensors (2)

Weekly seminar covering topics of research in the development of new tools and technologies to detect and study genes and proteins. Latest research work and literature in these areas are discussed. Students lead some discussions and participate in all meetings.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BME 281R - Seminar in Stem Cell Genomics (2)

Weekly seminar series covering topics in research on stem cell genomics. Current research and literature in this area is discussed. Students lead some discussions and participate in all meetings.

Prerequisite: Enrollment restricted to graduate students; qualified undergraduates may enroll with instructor permission.

BME 281S - Seminar in Computational Functional Genomics (2)

Weekly seminar series covering topics of current computational and experimental research in computational functional genomics. Current research work and literature in this area discussed. Students lead some discussions and participate in all meetings.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BME 281V - Immunogenomics Seminar (2)

Journal club and research presentations in immunogenomics. Enrollment is by consent of the instructor and is restricted to graduate students, juniors, and seniors.

BME 281Z - Seminar in Population and Evolutionary Genomics (2)

Covers major recent topics in evolutionary and population genomics. Consists primarily of discussions of recent literature and updates on group members' research. Enrollment is available only to members of the Corbett-Detig laboratory.

BME 293 - Seminar in Biomolecular Engineering (5)

Weekly seminar series covering topics of bioinformatics and biomolecular engineering research. Current research work and literature in this area discussed. Students lead some discussions and participate in all meetings.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

BME 296 - Research in Bioinformatics (5)

Independent research in bioinformatics under faculty supervision. Although this course may be repeated for credit, not every degree program accepts a repeated course toward degree requirements. Students submit petition to sponsoring agency.

BME 297A - Independent Study or Research (5)

Independent study or research under faculty supervision. Although course may be repeated for credit, not every degree program accepts a repeated course toward degree requirements. Students submit petition to sponsoring agency.

BME 297B - Independent Study or Research (10)

Independent study or research under faculty supervision. Although course may be repeated for credit, not every degree program accepts a repeated

course toward degree requirements. Students submit petition to sponsoring agency.

BME 297C - Independent Study or Research (15)

Independent study or research under faculty supervision. Although course may be repeated for credit, not every degree program accepts a repeated course toward degree requirements. Students submit petition to sponsoring agency.

BME 297F - Independent Study or Research (2)

Independent study or research under faculty supervision. Although course may be repeated for credit, not every degree program accepts a repeated course toward degree requirements. Students submit petition to sponsoring agency. Enrollment is restricted to graduate students.

BME 299A - Thesis Research (5)

Thesis research conducted under faculty supervision. Although course may be repeated for credit, not every degree program accepts a repeated course towards degree requirements. Students submit petition to sponsoring agency.

BME 299B - Thesis Research (10)

Thesis research conducted under faculty supervision. Although course may be repeated for credit, not every degree program accepts a repeated course towards degree requirements. Students submit petition to sponsoring agency.

BME 299C - Thesis Research (15)

Thesis research conducted under faculty supervision. Although course may be repeated for credit, not every degree program accepts a repeated course towards degree requirements. Students submit petition to sponsoring agency.

CHEM - CHEMISTRY AND BIOCHEMISTRY

Lower-Division

CHEM 1A - General Chemistry (5)

An integrated study of general chemistry. Covers a range of topics including the atomic structure of matter; molecules; chemical reactions; acids and bases; gases; and equilibria in the gas and liquid phase. Students are expected to use algebra to solve problems. General Chemistry is articulated in a full-year series. Partial transfer credit is not allowed for the A,B,C series.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in MATH 3, AM 3, or equivalent, or a mathematics placement score of 300 or higher; taking the online chemistry self-assessment exam is strongly recommended.

CHEM 1B - General Chemistry (5)

An integrated study of general chemistry. Coverage includes quantum mechanics; the hydrogen atom; many-electron atoms and chemical periodicity; elementary covalent bonding; transition metals; and chemical kinetics. Prerequisite(s): Strong high-school level chemistry is strongly recommended; taking the online chemistry self-assessment examination is strongly recommended. Concurrent enrollment in CHEM 1M is recommended. General Chemistry is articulated in a full-year series. Partial transfer credit is not allowed for the A,B,C series.

CHEM 1C - General Chemistry (5)

An integrated study of general chemistry. Coverage includes thermodynamics; oxidation-reduction and electrochemistry; liquids and solids; intermolecular forces and solutions, including colligative properties; and nuclear chemistry. General Chemistry is articulated in a full-year series. Partial transfer credit is not allowed for the A,B,C series.

Prerequisite: Prerequisite(s): CHEM 1A. Concurrent enrollment in CHEM 1N is recommended.

CHEM 1M - General Chemistry Laboratory (2)

Laboratory sequence illustrating topics covered in CHEM 1B and CHEM 1C and important experimental techniques.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in CHEM 1B is required.

CHEM 1N - General Chemistry Laboratory (2)

Laboratory sequence illustrating topics covered in CHEM 1B and CHEM 1C, respectively, and important experimental techniques.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in CHEM 1C is required.

CHEM 4A - Advanced General Chemistry: Molecular Structure and Reactivity (5)

The first course of the two-quarter accelerated general chemistry series intended for students with a strong high school chemistry background. Coverage includes atomic structure and periodicity, general concepts of chemical bonding, covalent bonding, chemical equilibria and acid-base equilibria.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in MATH 3 (or equivalent) or a mathematics placement score of 300 or higher. Concurrent enrollment in CHEM 1M is required. Strong high-school-level chemistry is strongly recommended.

CHEM 4B - Advanced General Chemistry: Molecular Structure and Reactivity (5)

The second course of the two-quarter accelerated general chemistry series. Coverage includes thermodynamics; kinetics, oxidation-reduction, and

electrochemistry; liquids and solids; intermolecular forces and solutions, including colligative properties; and nuclear chemistry.

Prerequisite: Prerequisite: CHEM 4A. Concurrent enrollment in CHEM 1N is required.

CHEM 4BL - Advanced General Chemistry Lab (2)

Focuses on science skills building with an emphasis on the general chemistry lab setting. Provides an introduction to important concepts and practices related to lab safety, fundamental experimental techniques, chemical handling, waste disposal, data collection/analysis, scientific writing/communication, and small-group collaboration. Coursework includes in-person lab experiments/work as well as asynchronous work completed in Canvas and Webassign. This course taken with CHEM 4AL provides an advanced alternative to the CHEM 3BL/CHEM 3CL series.

Prerequisite: Prerequisite(s): Prior or concurrent enrollment in CHEM 4B.

CHEM 8A - Organic Chemistry (5)

Introduces organic chemistry, with an emphasis on bonding and reactivity of organic compounds.

Prerequisite: Prerequisite(s): CHEM 1B and CHEM 1C.

CHEM 8B - Organic Chemistry (5)

Introduction to organic chemistry, with an emphasis on reactivity and synthesis of organic compounds.

Prerequisite: Prerequisite(s): CHEM 8A.

CHEM 8L - Organic Chemistry Laboratory (2)

Laboratory experience in organic chemistry associated with CHEM 8A. Designed to introduce the student to the many techniques associated with organic chemistry while affording an opportunity to explore the concepts discussed in the lecture material. Laboratory: 4 hours, lecture: 1-1/4 hours.

Prerequisite: Prerequisite(s): CHEM 1C and CHEM 1N and previous or concurrent enrollment in CHEM 8A is required.

CHEM 8M - Organic Chemistry Laboratory (2)

Laboratory experience in organic chemistry associated with course 8B. Designed to introduce the student to the many techniques associated with organic chemistry while affording an opportunity to explore the concepts discussed in the lecture material. Laboratory: 4 hours, lecture: 1-1/4 hours.

Prerequisite: Prerequisite(s): CHEM 8A and CHEM 8L and previous or concurrent enrollment in CHEM 8B is required.

CHEM 8N - Honors Organic Chemistry Lab (2)

Honors laboratory experience in organic chemistry associated with course CHEM 8B. Designed to

introduce the exceptional student to many of the techniques associated with organic chemistry while taking part in an active organic chemistry research experience. Laboratory: 6 hours per week minimum. Prerequisite(s): CHEM 8A and CHEM 8L; concurrent enrollment in CHEM 8B is required. Enrollment is by permission of the instructor. Students must pass safety training to begin research. Students may only receive credit for one of the following: CHEM 8M or CHEM 8N. This class may only be taken as Pass/No Pass, which cannot be converted to a letter grade.

Prerequisite: Prerequisite(s): CHEM 8A and CHEM 8L concurrent enrollment in CHEM 8B is required.

CHEM 80H - Introduction to Wine Science and Chemistry (5)

A glimpse of the science and technology of wines through critical analysis. Students gain an appreciation of the scientific method and are exposed to data from chemistry, biology, viticulture, and enology. This analysis is extended to examine commonly accepted practices used by scientists vs. non-scientist to assess and describe wine quality. (Formerly Introduction to Wines and Wine Chemistry.)

CHEM 99 - Tutorial (5)

Students submit petition to sponsoring agency.

CHEM 99F - Tutorial (2)

Students submit petition to sponsoring agency.

Upper-Division

CHEM 103 - Biochemistry (5)

Introduction to biochemistry including biochemical molecules, protein structure and function, membranes, bioenergetics, and regulation of biosynthesis. Provides students with basic essentials of modern biochemistry. Students who plan to do advanced work in biochemistry and molecular biology should take the Biochemistry and Molecular Biology (BIOC) 100 series. Students cannot receive credit for this course after they have completed any two courses from the BIOC 100A, BIOC 100B, and BIOC 100C sequence.

Prerequisite: Prerequisite(s): CHEM 8B.

CHEM 109 - Intermediate Organic Chemistry and Applications to Biology (3)

Integrated study of fundamental organic chemistry, with emphasis on materials especially relevant to biological sciences.

Prerequisite: Prerequisite(s): CHEM 8B or equivalent.

CHEM 110 - Intermediate Organic Chemistry with Emphasis on Synthesis and Analytical Methods (5)

An intermediate study of organic chemistry, including synthetic methods, reaction mechanisms, and application of synthetic chemistry techniques.

Prerequisite: Prerequisite(s): CHEM 8B. Enrollment is restricted to chemistry majors, minors and proposed majors.

CHEM 110L - Intermediate Organic Chemistry Laboratory (2)

Laboratory experience in organic chemistry and associated principles. Experiments involve the preparation, purification, characterization, and identification of organic compounds, and make use of modern as well as classical techniques.

Prerequisite: Prerequisite(s): CHEM 8M and previous or concurrent enrollment in CHEM 110.

CHEM 110N - Honors Organic Chemistry Lab (2)

Honors laboratory experience in organic chemistry associated with CHEM 109 or CHEM 110. Designed to introduce the exceptional student to many of the techniques associated with organic chemistry while taking part in an active organic chemistry research experience. Laboratory: 6 hours per week minimum. Prerequisite(s): CHEM 8A, CHEM 8B and CHEM 8L and either CHEM 8M or CHEM 8N and previous or concurrent enrollment in CHEM 109 or CHEM 110 is required. Enrollment is by permission of the instructor. Students must pass safety training to begin research. Students may only receive credit for one of the following: CHEM 110L, or CHEM 110N. This class may only be taken as Pass/No Pass, which cannot be converted to a letter grade.

Prerequisite: Prerequisite(s): CHEM 8A, CHEM 8B and CHEM 8L and either CHEM 8M or CHEM 8N and CHEM 160; previous or concurrent enrollment in CHEM 109 or CHEM 110 is required.

CHEM 122 - Principles of Instrumental Analysis (5)

A laboratory course designed to develop familiarity with techniques and instrumentation used in analytical chemistry, emphasizing determination of trace inorganic species. Primary emphasis on applications utilizing the absorption or emission of electromagnetic radiation and on voltammetry. Topics include molecular UV-visible absorption and fluorescence spectrometry; atomic absorption, emission and fluorescence spectrometry; and various forms of voltammetry. Lecture: 2 hours; laboratory: 8 hours.

Prerequisite: Prerequisite(s): CHEM 110 and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior chemistry (B.S.) majors.

CHEM 124 - Bioanalytical Chemistry (4)

Introduces modern measurement science for biomolecules. DNA, proteins, and specialized metabolites and the methodologies for measuring them, both qualitative and quantitative, are covered. Techniques are presented with the basic framework and concepts, and modern applications are covered in

lecture followed by a hands-on lab component. Provides students with the necessary framework to design and execute their own research-based bioanalytical experiments. Group lab reports are prepared as a "Letter" to Analytical Chemistry to report the findings from the laboratory-based experiments. Tests cover the material from the lecture prior to the test day and are not cumulative in nature, however, concepts may build on one another.

Prerequisite: Prerequisite(s): CHEM 122. Enrollment is restricted to juniors, seniors, and graduate students.

CHEM 139 - Chemical Problem Solving: Learning to Think Like a Scientist (5)

Students actively develop the skills and strategies required to become proficient problem solvers in both upper-division science classes and in scientific research. The focus is on systematic problem solving and scientific creativity. (Formerly CHEM 139A, Chemical Problem Solving I: Learning to Think Like a Scientist.)

Prerequisite: Prerequisite(s): CHEM 1C; and MATH 11A or MATH 19A.

CHEM 143 - Organic Chemical Structure and Reactions (5)

Advanced topics such as the chemistry of terpenes, steroids, synthetic polymers, alkaloids, reactive intermediates, and reaction mechanisms are treated. Lecture: 4 hours.

Prerequisite: Prerequisite(s): CHEM 110.

CHEM 144 - Catalysis In Organic Synthesis Using Metals and Metalloids Based Reagents (5)

Designed to introduce Junior/Senior undergraduates to the field of catalysis in organic synthesis. Course acquaints students with the chemistry, with relevant techniques of metals and metalloid chemistry, and focuses on new advancements in organoborane field. Also provides knowledge of the methods to use chemistry to address synthetic challenges in organic chemistry. Students become familiar with the concepts and approaches in the current field of chemical biology.

Prerequisite: Prerequisite(s): CHEM 110.

CHEM 146A - Advanced Laboratory in Organic Chemistry (3)

Exposes students to advanced laboratory techniques in organic chemistry. Designed for students without previous research background in organic chemistry. Experiments carry a research-like format and cover the areas of natural products and reaction chemistry. Modern methods of organic analysis are emphasized including chromatographic methods and organic structure determination by spectroscopy. Laboratory: 8 hours.

Prerequisite: Prerequisite(s): CHEM 110 and CHEM 110L; satisfaction of Entry Level Writing and

Composition requirements. Enrollment is restricted to chemistry majors. Minors by permission of instructor.

CHEM 146B - Advanced Laboratory in Inorganic Chemistry (3)

Designed to expose students to advanced synthetic and spectroscopic techniques in inorganic chemistry. Examples include anaerobic manipulations, characterization of inorganic materials through spectral assignments and synthesis of coordination and organometallic complexes. Lecture: 1-1/4 hours; laboratory: 8 hours. Students billed a materials fee of \$240.

Prerequisite: Prerequisite(s): CHEM 151A and CHEM 151L; CHEM 163A; satisfaction of Entry Level Writing and Composition requirements. Enrollment restricted to chemistry majors. Minors by permission of instructor.

CHEM 146C - Advanced Laboratory in Physical Chemistry (5)

Provides advanced laboratory experience in the areas of nanomaterial synthesis and characterization; spectroscopy; fabrication and measurements energy-conversion devices; and soft lithography techniques and instrumentation. Lecture: 1-1/4 hours; laboratory: 4 hours.

Prerequisite: Prerequisite(s): CHEM 163B and CHEM 164; satisfaction of Entry Level Writing and Composition requirements. Enrollment restricted to chemistry majors. Minors by permission of instructor.

CHEM 151A - Chemistry of Metals (5)

Fundamental topics of inorganic chemistry are presented at the level of the standard texts of field. Special emphasis is given to maintain breadth in the areas of metallic, nonmetallic, and biological aspects of inorganic chemistry. Lecture: 3-1/2 hours; discussion: 1-1/4 hours.

Prerequisite: Prerequisite(s): CHEM 8B and CHEM 8M and CHEM 163A. Concurrent enrollment in CHEM 151L is required.

CHEM 151B - Chemistry of the Main Group Elements (5)

Fundamental aspects of inorganic chemistry of main group elements are discussed. The emphasis is placed on the chemistry of nontransition elements including noble gases and halogens. In addition, students are exposed to the concepts of extended structures, new materials, and solid-state chemistry. Lecture: 3-3/4 hours.

Prerequisite: Prerequisite(s): CHEM 8B and CHEM 8M and CHEM 163A. Recommended for chemistry majors.

CHEM 151L - Inorganic Chemistry Laboratory (2)

Laboratory experience in inorganic chemistry. Experiments involve the preparation, purification, and

characterization of inorganic compounds. In addition, experiments are designed to illustrate fundamental principles in inorganic chemistry and are coordinated with lectures in CHEM 151A. Laboratory: 4 hours per week. Laboratory lecture: 1 1/4 hours per week.

Prerequisite: Prerequisite(s): CHEM 8B and CHEM 8M and CHEM 163A. Concurrent enrollment in CHEM 151A is required.

CHEM 156C - Materials Chemistry (5)

Advanced topics in inorganic chemistry and an introduction to solid-state chemistry. Synthesis and structure of materials discussed as well as their influence on properties for modern devices and applications. Recent developments in area of material science also explored. Taught in conjunction with CHEM 256C.

Prerequisite: Prerequisite(s): CHEM 151A. Enrollment is restricted to seniors.

CHEM 160J - Biochemistry Research Laboratory (5)

Introduction to hypothesis-driven laboratory research. Students collectively design and execute a novel research project that addresses a question about macromolecular structure, function, or regulation. Working individually and in small groups, students learn aspects of experimental design, literature and public data base research, data analysis and interpretation, and scientific collaboration. Learned laboratory techniques include molecular cloning, recombinant protein expression and purification, and biochemical assay implementation.

Prerequisite: Prerequisite(s): CHEM 8L and completion of or enrollment in BIOC 100A, BIOL 100, or CHEM 103.

CHEM 160K - Biochemistry Research Laboratory (5)

Introduction to hypothesis-driven laboratory research. Students collectively design and execute a novel research project that addresses a question about macromolecular structure, function, or regulation. Working individually and in small groups, students learn aspects of experimental design, literature and public data base research, data analysis and interpretation, and scientific collaboration. Learned laboratory techniques include molecular cloning, recombinant protein expression and purification, and biochemical assay implementation.

CHEM 160L - Biochemistry Research Laboratory (5)

Introduction to hypothesis-driven laboratory research. Students collectively design and execute a novel research project that addresses a question about macromolecular structure, function, or regulation. Working individually and in small groups, students learn aspects of experimental design, literature and public data base research, data analysis and interpretation, and scientific collaboration. Learned

laboratory techniques include molecular cloning, recombinant protein expression and purification, and biochemical assay implementation.

Prerequisite: Prerequisite(s): CHEM 160K, satisfaction the Entry Level Writing and Composition requirements.

CHEM 163A - Quantum Mechanics and Basic Spectroscopy (5)

A detailed introduction to quantum theory and the application of wave mechanics to problems of atomic structure, bonding in molecules, and fundamentals of spectroscopy. Students cannot receive credit for this course and BIOC 163A.

Prerequisite: Prerequisite(s): CHEM 1B and CHEM 1C; PHYS 5A, PHYS 5B, and PHYS 5C or PHYS 6A, PHYS 6B, and PHYS 6C; and MATH 22 or MATH 23B. PHYS 6C can be taken concurrently.

CHEM 163B - Chemical Thermodynamics (5)

Fundamentals of thermodynamics and applications to chemical and biochemical equilibria. Students cannot receive credit for this course and BIOC 163B.

Prerequisite: Prerequisite(s): CHEM 1B and CHEM 1C, PHYS 6A or PHYS 5A, and MATH 22 or MATH 23B.

CHEM 163C - Statistical Thermodynamics and Kinetics (5)

Statistical mechanics, kinetic theory, and reaction kinetics and topics in spectroscopy. (Formerly Kinetic Theory and Reaction Kinetics, Statistical Mechanics, Spectroscopic Applications.)

Prerequisite: Prerequisite(s): CHEM 163A and CHEM 163B, or BIOC 163A and BIOC 163B.

CHEM 164 - Physical Chemistry Laboratory (5)

Provides laboratory experience and data analysis in the areas of thermodynamics, kinetics, and spectroscopy. Lecture: 1.75 hours; experimental laboratory: 4 hours; computer laboratory: 2 hours.

Prerequisite: Prerequisite(s): CHEM 1B and CHEM 1C; and PHYS 5A and PHYS 5B and PHYS 5C, or PHYS 6A and PHYS 6B and PHYS 6C; and MATH 22 or MATH 23B. CHEM 163A is recommended.

CHEM 169 - Chemistry and Biology of Drug Design and Discovery (5)

An overview of the central elements of drug discovery, including target selection and validation; computational or virtual screening; high-throughput screening; fragment-based methods; and pharmacokinetics.

Prerequisite: Prerequisite(s): CHEM 103 or BIOC 100A.

CHEM 171 - Chemical Biology (5)

Covers methods and techniques for the field of chemical biology. Brings together methods in

chemistry, biochemistry, and genetics to study the interaction of small molecules with biological systems. Students cannot receive credit for this course and course CHEM 271.

Prerequisite: Prerequisites: CHEM 8B, and CHEM 103 or BIOC 100A. Enrollment is restricted to senior chemistry, biochemistry or related life science majors and minors. BIOC 101 and CHEM 110 recommended but not required.

CHEM 192 - Dir Stu Teach (5)

Dir Stu Teach

CHEM 194 - Senior Essay (5)

An individually supervised course with emphasis on reviewing the current scientific literature. Students are required to submit a summary and a critique of a scientific paper in the form of a senior essay. Students submit a petition to the sponsoring agency. This course may not be repeated for credit.

CHEM 195A - Senior Research (5)

An individually supervised course with emphasis on independent research. Multiple-term course extending over two or three quarters; the grade and evaluation submitted for the final quarter apply to all previous quarters. Students submit petition to sponsoring agency; may not be repeated for credit.

CHEM 195B - Senior Research (5)

An individually supervised course with emphasis on independent research. Multiple-term course extending over two or three quarters; the grade and evaluation submitted for the final quarter apply to all previous quarters. Students submit petition to sponsoring agency; may not be repeated for credit.

CHEM 195C - Senior Thesis (5)

An individually supervised course with emphasis on independent research. Multiple-term course extending over two or three quarters; the grade and evaluation submitted for the final quarter apply to all previous quarters. Students submit petition to sponsoring agency; may not be repeated for credit.

CHEM 199 - Tutorial (5)

Students submit petition to sponsoring agency.

CHEM 199F - Tutorial (2)

Students submit petition to sponsoring agency.

Graduate

CHEM 200A - Advanced Biochemistry: Biophysical

Methods (5)

An introduction to the theory, principles, and practical application of biophysical methods to the study of biomolecules, especially proteins and nucleic acids. Emphasis on spectroscopic techniques. Topics include magnetic resonance, optical spectroscopy, fast reaction techniques, crystallography, and mass spectrometry.

CHEM 200B - Advanced Biochemistry: Macromolecular Structure and Function (5)

A detailed discussion of nucleic acid and protein chemistry, ranging from the structure, thermodynamics, and folding to the relationship between structure and function, and encompassing the methods used to determine such information.

CHEM 200C - Advanced Biochemistry: Enzyme Mechanisms and Kinetics (5)

A study of enzyme kinetics, mechanisms, and factors involved in enzymic catalysis. Lecture: 3-1/2 hours.

CHEM 222 - Career Success in Industrial Science/Engineering (2)

Provides skills for the transition from academia into industrial research careers, addressing presentation skills, project prioritization, teamwork, salary-benefit expectations, intellectual property, performance reviews, Myers-Briggs profiles, and career planning. Participant teams will analyze the commercialization of a technical innovation.

Prerequisite: Enrollment is restricted to Physical and Biological Sciences and School of Engineering graduate students who have completed one consecutive year. Undergraduates may enroll on a space available basis by permission of instructor.

CHEM 230 - Grant Writing in Biomedical Research (5)

Introduces the fundamentals of grant writing in biomedical research, including best practices for presentation of data and communication of research findings. Students write and peer-edit most components of the NIH Ruth L. Kirschstein F31 predoctoral fellowship. Course is designed for students in their second year or later of graduate study.

Prerequisite: Enrollment is restricted to graduate students.

CHEM 234 - Bioinorganic Chemistry (5)

The role played by transition metals in biological systems is discussed through application of the principles of coordination chemistry and inorganic spectroscopy. Topics include metalloproteins involved in oxygen binding, iron storage, biological redox reactions, and nitrogen fixation, as well as metal complexes of nucleic acids. Lecture: 4 hours.

Prerequisite: Prerequisite(s): CHEM 151A, CHEM 151L, CHEM 163A, and BIOC 100A; or graduate students.

CHEM 238 - Topics in Biophysical Chemistry (5)

A discussion of the application of selected topics in biophysical chemistry to contemporary problems in biochemistry and molecular biology. Lecture: 3-1/2 hours.

CHEM 242A - Modern Physical Organic Chemistry (5)

Covers molecular structure and bonding, strain, and non-covalent binding forces. Other topics include acid-base chemistry, kinetics, thermodynamics, catalysis, organic reactions and mechanism, and quantum mechanical approaches to the analysis of organic molecules.

Prerequisite: Enrollment is restricted to seniors who have taken CHEM 143, and graduate students.

CHEM 242B - Modern Synthetic Methods in Organic Chemistry (5)

Presents concepts in bond formation, conformation, selectivity, and stereocontrol in modern organic synthesis. Focuses on understanding reaction mechanisms. Culminates with strategy in designing multi-step synthesis of complex targets.

Prerequisite: Enrollment is restricted to seniors who have taken CHEM 143, and graduate students.

CHEM 242C - Spectroscopy and Applied Analytical Methods (5)

Presents strategies in organic structure elucidation, including nuclear magnetic resonance (NMR) and mass spectrometry. Provides theory and practical elements of structure elucidation and modern analytical methods for organic molecules.

Prerequisite: Enrollment is restricted to seniors who have taken CHEM 143, and graduate students.

CHEM 244 - Organic Free Radical Chemistry (5)

Explores organic free radicals. Fundamental principles in physical chemistry provide an understanding of free-radical transformations in organic synthesis, polymerization, and some examples of free radicals in biology. For students who have a firm grounding in organic chemistry.

Prerequisite: Enrollment is restricted to graduate students.

CHEM 247 - Using DFT Computational Methods to Study Molecular Structure and Reactivity (5)

This course is fully hands-on, highly interactive, and project-based. Students receive extensive training on the DFT program Gaussian and are then offered the opportunity to deepen their knowledge, tailored to their specific research projects. Students have the option to

bring in their own molecules of interest from their research laboratories.

Prerequisite: Enrollment is restricted to graduate students.

CHEM 256A - Advanced Topics in Inorganic Chemistry (5)

Advanced topics in inorganic chemistry are presented. Topics covered vary from year to year, and are announced in advance. Possible topics include A) organometallic chemistry; B) structural methods in inorganic chemistry; C) solid-state chemistry.

Prerequisite: Enrollment is restricted to graduate students or previous enrollment in CHEM 151A, CHEM 151L, and CHEM 146B.

CHEM 256B - Advanced Topics in Inorganic Chemistry (5)

Advanced topics in inorganic chemistry are presented. Topics covered vary from year to year, and are announced in advance. Possible topics include A) organometallic chemistry; B) structural methods in inorganic chemistry; C) solid-state chemistry.

Prerequisite: Enrollment is restricted to graduate students or previous enrollment in CHEM 151A, CHEM 151L, and CHEM 146B.

CHEM 256C - Advanced Topics in Inorganic Chemistry (5)

Advanced topics in inorganic chemistry are presented. Topics covered vary from year to year, and are announced in advance. Possible topics include A) organometallic chemistry; B) structural methods in inorganic chemistry; C) solid-state chemistry.

Prerequisite: Enrollment is restricted to graduate students or previous enrollment in CHEM 151A, CHEM 151L, and CHEM 146B.

CHEM 256D - X-ray Crystallography (5)

Course in chemical crystallography focuses on the needs of small-molecule, single-crystal diffraction studies. Includes diffraction theory, space-group analysis, data collection, structure solution, and refinement. Practical component: use of diffraction equipment and solution/refinement software.

Prerequisite: Enrollment is restricted to graduate students and seniors who have taken CHEM 151A, CHEM 151L, and CHEM 163A.

CHEM 261 - Foundations of Spectroscopy (5)

The basic theory of time-dependent processes is covered at an advanced level. The interaction of electromagnetic radiation and matter is described using both semiclassical and quantum field formulations. A variety of modern spectroscopic techniques are discussed both in terms of the basic processes and their

use in the elucidation of chemical structure and dynamics.

Prerequisite: Enrollment is restricted to chemistry graduate students or previous enrollment in CHEM 163A.

CHEM 262 - Statistical Mechanics (5)

Theory and concepts of statistical mechanics with applications to ideal gases, condensed systems, phase transition, and non-equilibrium thermodynamics. Lecture: 3-1/2 hours.

Prerequisite: Enrollment is restricted to chemistry graduate students or previous enrollment in CHEM 163A.

CHEM 263 - Quantum Mechanics (5)

A rigorous introductory course: the Schrödinger equation, operator formalism, matrix mechanics, angular momentum, and spin. Perturbation and other approximate methods. Applications to atomic and molecular problems. Lecture: 3-1/2 hours.

Prerequisite: Enrollment is restricted to chemistry graduate students or previous enrollment in CHEM 163A, PHYS 116A, and PHYS 116C.

CHEM 264 - Computational Materials (5)

Introduction of quantum mechanical simulations of materials at the atomistic level. This includes introduction of solid-state electronic structure formulated with density functional theory and plane-wave basis, calculations of spectroscopic and transport properties for solids and condensed phases from first-principles. Basic calculations of electronic structure, lattice dynamics with phonon dispersion and dielectric properties, treatment of electron correlation for open-shell systems with linear and non-linear magnetism. Advanced topics include calculations of excited-state spectroscopy with many-body interaction, ab-initio molecular dynamics, Wannier function and topological properties, and electron-phonon coupling for superconductivity and carrier transport.

Prerequisite: Prerequisite(s): Enrollment is restricted to graduate students; undergraduates who have completed PHYS 102 or CHEM 163A may enroll.

CHEM 265 - Computer Simulation in Statistical Mechanics (5)

A detailed introduction of the use of computer simulation methods in physical and biophysical chemistry. Includes review of thermodynamics and statistical mechanics, molecular mechanics, molecular dynamics, and Monte-Carlo methods. Applications to liquid structure, reaction dynamics, and protein dynamics.

CHEM 268 - Solid State and Materials Chemistry (5)

Topics include synthesis of solid-state materials and their characterization using experimental techniques: XRD, TEM spectroscopy, NMR, and their applications in technologies. Emphasis on new materials, e.g., polymer, biopolymers, nanomaterials, organic/inorganic composites, ceramics, superconductors, electronic, magnetic, and opto-electronic materials.

Prerequisite: Enrollment is restricted to chemistry graduate students or students previously enrolled in CHEM 163A and CHEM 163B.

CHEM 269 - Electrochemistry (5)

Designed to introduce basic principles and applications of electrochemistry to students at upper undergraduate and lower graduate levels in various fields including analytical, physical, and materials chemistry.

Prerequisite: Enrollment is restricted to seniors and graduate students.

CHEM 271 - Chemical Biology (5)

Methods and techniques for the field of chemical biology. Brings together methods in chemistry, biochemistry, and genetics to study the interaction of small molecules with biological systems. Students cannot receive credit for this course and CHEM 171.

Prerequisite: Enrollment is restricted to chemistry graduate students.

CHEM 272 - Mass Spectrometry: Fundamentals and Applications (5)

Lecture and lab course introducing graduate students to mass spectrometry. Begins with the basic framework and concepts in mass spectrometry to break down modern instrumentation to build toward utilizing modern biomedical applications of the technology. Course focuses on biological molecules (amino acids to proteins). Interpretation of organic mass spectra is only be briefly covered. Provides students with the necessary framework to design and execute their own research-based mass spectrometry experiments. Two weeks are dedicated to hands-on experiments using modern mass spectrometers and preparing short technical notes based on the Journal of the American Society for Mass Spectrometry (JASMS) to report findings from laboratory base experiments.

Prerequisite: Enrollment is restricted to graduate students.

CHEM 274 - Proseminar in Synthetic and Polymer Chemistry (5)

Weekly meetings devoted to study of synthetic organic chemistry and controlled polymer design for applications in nanotechnology. Topics drawn from current literature and research interests of participants.

CHEM 275 - Proseminar in Biological Inorganic**Chemistry (5)**

Weekly meetings devoted to biological inorganic chemistry and biochemistry. Topics are drawn from current literature. Papers and reviews are discussed, and participants give short seminars on their research interests.

CHEM 280 - Proseminar in Materials Chemistry (5)

Weekly meetings devoted to materials and inorganic research. Topics are drawn from current literature. Papers and reviews are discussed. Participants also give short seminars on topics of their research interests.

CHEM 282 - Proseminar: Synthetic Methods (5)

Weekly meetings devoted to the study of asymmetric and/or enantio-selective synthesis of optically active organic compounds of biological and medicinal significance. Topics drawn from the current literature and the research interests of the participants.

Prerequisite: Enrollment is restricted to graduate students.

CHEM 284 - Proseminar in Synthetic Organic Chemistry (5)

Weekly meetings devoted to the study of synthetic organic chemistry. Topics drawn from the current literature and the research interests of the participants.

Prerequisite: Enrollment is restricted to graduate students.

CHEM 285 - Proseminar: Photobiochemistry and Photobiology (5)

A detailed study of molecular mechanisms of light energy conversion and light-signal transduction processes in biological systems. Student participation in critical discussion of current literature examples are emphasized. Two-hour lecture and two-hour seminar weekly.

Prerequisite: Enrollment is restricted to graduate students.

CHEM 286 - Proseminar in Natural Products Chemistry (5)

Weekly meetings devoted to the study of natural products. Topics drawn from the current literature and research interests of the participants.

Prerequisite: Enrollment is restricted to graduate students.

CHEM 288 - Proseminar in Bioinorganic Chemistry (5)

Weekly meetings devoted to inorganic and bioinorganic research. Topics are drawn from current literature. Papers and reviews are discussed. Participants also give short seminars on topics of their research interests.

CHEM 291 - Chemistry and Biochemistry Research

Seminar (5)

A weekly chemistry and biochemistry seminar series covering recent developments and current research, led by experts from other institutions, as well as local speakers. Open to chemistry and biochemistry graduate students.

Prerequisite: Enrollment is restricted to graduate students.

CHEM 292 - Seminar (2)

Prerequisite: Enrollment is restricted to graduate students or approval of the graduate adviser.

CHEM 296 - Teaching Chemistry (2)

University-level pedagogy in chemistry; examines the role of preparation, assessment, and feedback in teaching chemistry discussion and laboratory sections. Effective classroom techniques and organizational strategies discussed; oral presentations analyzed critically. Required of entering chemistry graduate students.

Prerequisite: Enrollment is restricted to chemistry graduate students.

CHEM 297A - Independent Study (5)

A topic will be studied with faculty tutorial assistance to satisfy a need for the student when a regular course is not available. Students submit petition to sponsoring agency.

CHEM 297B - Independent Study (10)

A topic will be studied with faculty tutorial assistance to satisfy a need for the student when a regular course is not available. Students submit petition to sponsoring agency.

CHEM 299A - Thesis Research (5)

Thesis Research

CHEM 299B - Thesis Research (10)

Thesis Research

CHEM 299C - Thesis Research (15)

Thesis Research

CHIN - CHINESE**Lower-Division****CHIN 1 - First-Year Chinese (5)**

Instruction in elementary spoken and written Chinese (Mandarin), beginning with the sounds of Chinese and their representation in the pinyin romanization system. Conversation, structural analysis, and an introduction to character texts. The first-year sequence (1-2-3) begins only in the fall quarter. Students interested in learning

Chinese who are uncertain about where they should enter the sequence should meet with the instructor prior to the first class meeting.

CHIN 2 - First-Year Chinese (5)

Continuation of Chinese 1, which assumes that students are familiar both with the pinyin romanization system and approximately 150 basic characters.

Prerequisite: Prerequisite(s): CHIN 1 or by consent of instructor.

CHIN 3 - First-Year Chinese (5)

Continuation of Chinese 2, which assumes that students are familiar both with the pinyin romanization system and approximately 300 basic characters.

Prerequisite: Prerequisite(s): CHIN 2 or by consent of instructor.

CHIN 4 - Second-Year Chinese (5)

Instruction in intermediate spoken and written Chinese (Mandarin). Conversation, composition, and the reading of modern texts. The second-year sequence (4-5-6) begins only in the fall quarter.

Prerequisite: Prerequisite(s): CHIN 3 or by consent of instructor.

CHIN 5 - Second-Year Chinese (5)

Continuation of Chinese 4. Conversation, composition, and the reading of modern texts.

Prerequisite: Prerequisite(s): CHIN 4 or CHIN 4H or by consent of instructor.

CHIN 6 - Second-Year Chinese (5)

Continuation of Chinese 5. Conversation, composition, and the reading of modern texts.

Prerequisite: Prerequisite(s): CHIN 5 or CHIN 5H or by consent of instructor.

CHIN 94 - Group Tutorial (5)

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency.

CHIN 99 - Tutorial (5)

Students submit petition to sponsoring agency.

CHIN 99F - Tutorial (2)

Students submit petition to sponsoring agency.

Upper-Division**CHIN 103 - Advanced Chinese: Language and Society (5)**

Designed to enhance the students' ability to understand, analyze, and discuss authentic Chinese reading

materials. Chinese linguistic and cultural aspects are introduced.

Prerequisite: Prerequisite(s): CHIN 6 or by consent of instructor.

CHIN 104 - Advanced Chinese: Readings in Literature (5)

Close readings in Chinese vernacular literature of recognized merit from contemporary and modern writers as well as from models from the traditional period. Students are introduced to the basic critical issues, in Chinese, relating to narrative and drama, revealed by the works under discussion.

Prerequisite: Prerequisite(s): CHIN 103 or CHIN 105 or CHIN 107 or CHIN 108; or by consent of instructor.

CHIN 105 - Advanced Chinese: Readings in History (5)

Offers an appreciation of some of the central issues in Chinese history as defined by Chinese historians of the 20th century. Through readings of graduated difficulty, the vocabulary, style, and form of modern Chinese historical writing are introduced.

Prerequisite: Prerequisite(s): CHIN 103 or CHIN 104 or CHIN 107 or CHIN 108; or by consent of instructor.

CHIN 107 - Introduction to Classical Chinese Prose (5)

Introduces the grammar and lexicon of classical Chinese and the language of China's pre-modern canonical writings in philosophy, religion, history, music, visual art, and literature. Reading from the Han and pre-Han era is featured.

Prerequisite: Prerequisite(s): CHIN 103 or CHIN 104 or CHIN 105 or CHIN 108; or by consent of instructor.

CHIN 108 - Introduction to Classical Chinese Poetry (5)

Introduces the grammar and lexicon of classical Chinese and the language of China's pre-modern canonical writings in philosophy, religion, history, music, visual art, and literature. Classical poetry and lyrics are featured.

Prerequisite: Prerequisite(s): CHIN 103 or CHIN 104 or CHIN 105 or CHIN 107; or by consent of instructor.

CHIN 194 - Group Tutorial (5)

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency.

CHIN 199 - Tutorial (5)

Students submit petition to sponsoring agency.

CHIN 199F - Tutorial (2)

Students submit petition to sponsoring agency.

CLNI - COLLEGE NINE

Lower-Division

CLNI 1 - Academic Literacy and Ethos: International and Global Perspectives (5)

Teaches foundational concepts for intellectual exploration and personal development within an academic community: analysis, critical thinking, metacognition, engagement with others across difference, and self-efficacy. Addresses large-scale political, cultural, and economic issues to inform global citizenship.

Prerequisite: Enrollment is restricted to first-year college members.

CLNI 1A - Introduction to University Life and Learning (1)

Orientation to and exploration of the nature of the liberal arts, and of learning at research universities. Topics include: academic planning for upper-division coursework; enrollment processes; and understanding pathways to degree completion; UCSC resources that support health and well-being strategies for academic success; the cultivation of just communities; the prevention of sexual harassment and violence; campus conduct policies; awareness of risks associated with drug and/or alcohol use; and an introduction to traditions of community-engaged learning, ground-breaking research, and interdisciplinary thinking that define a UC Santa Cruz degree. This course can be taken for Pass/No Pass grading only.

Prerequisite: Enrollment is restricted to entering first-year College Nine students.

CLNI 60 - Water Justice: Global Insights for a Critical Resource (5)

Groundwater is a challenging resource to manage and conserve, one critically depleted across our state, country and world. Course explores the many manifestations of groundwater access, use and justice on multiple interlocking scales (i.e. local, national, transnational) while illustrating analytical ideas connecting to a range of socio-environmental processes including urbanization and infrastructure development, deprivation and exclusion, privatization of land and water, and claims for human rights. We will draw from cases based on our multi-country research project that brings together scholars and practitioners from Latin America, Europe, Africa and South Asia. Students will have the opportunity to conduct qualitative and secondary research contributing to the California case study in the Central Coast, focused on groundwater governance and perspectives of Latinx farmworkers and residents.

Prerequisite: Enrollment is restricted to College Scholars students.

CLNI 70 - Colleges Nine and Ten Community Garden (2)

Students in this course design and build a new community garden at Colleges Nine and Ten. Students engage in a collaborative design process with campus stakeholders; learn hands-on skills and community gardening best practices; and build regenerative social and ecological systems.

Prerequisite: Enrollment is restricted to College Nine and College Ten students.

CLNI 85 - Global Action (2)

Workshop facilitated by peer instructors. Students learn about current international and global issues through interactive exercises, small-group discussions, and faculty presentations. Students develop an action plan to raise awareness about one or more of these concerns and take practical steps to create positive change in the world.

Prerequisite: Enrollment is restricted to College Nine members during priority enrollment only.

CLNI 86 - College Leadership Development (2)

Students newly appointed into leadership positions at College Nine explore the concept of leadership relating to the college's theme of International and Global Perspectives. Prerequisite(s): current College Nine student leader; permission of instructor.

CLNI 90 - Intercultural Understanding (2)

Provides an opportunity to enhance the intercultural experience, increase cultural competency, promote further understanding, and examine the various trends facing a uniquely diverse community. Geared toward U.S. and international students affiliated with the International Living Center. Enrollment by instructor permission.

CLNI 91 - Global Issues Colloquium (1)

Weekly colloquium on global issues with different topical focus each quarter. Presentations by UCSC faculty and invited speakers. Students must attend class, read an assigned article, and write a one-page synopsis.

Prerequisite: Enrollment is restricted to College Nine members.

Upper-Division**CLNI 105 - Researching Food Sovereignty (5)**

Students engage in individual and collective research projects on transformational food systems in the United States and abroad. Readings look at the current global food system and grassroots responses to food and environmental crises.

Prerequisite: Enrollment is restricted to junior and senior College Nine and College Ten members during priority enrollment only.

CLNI 106 - Israel and Palestine: Pathways to a Deeper Understanding (2)

Explores, and seeks to provide a deeper understanding of, the Israeli-Palestinian conflict through materials and guest speakers that offer varying perspectives. Self-reflection and structured communication facilitate the positive exchange of ideas and views. Enrollment by permission of instructor.

CLNI 112A - Model United Nations Part A: A Group Seminar (2)

Introduces the Model United Nations. Students learn parliamentary procedure and U.N. protocols, as well as how to research and present position papers to the general assembly. Students learn resolution writing, alliance building, and persuasive speech. (Formerly course 112, Model United Nations: A Group Seminar)

CLNI 112B - Model United Nations Part B: International Crises (2)

Students are assigned a country to represent in the U.N. Three international crises allow students to present position papers, make speeches, and debate the issues.

Prerequisite: Prerequisite(s): CLNI 112A.

CLNI 115 - Community Investing for Social Good: A Micro-finance Lab (2)

Service-learning laboratory course that centers around investing by and in students to seed new social, economic, and environmental projects, ultimately aiming to build a campus culture of community investing to address needs linked to poverty and inequality.

CLNI 120 - Practical Activism Conference Planning and Development (2)

Offers an applied experience of collaborative planning, production, and leadership. Students plan workshops and other event components; conduct outreach and publicity; and address all aspects of educational event planning. Enrollment restricted to members of the spring volunteer Practical Activism planning group. Enrollment by permission of the instructor.

CLNI 140 - Designing Your Life (5)

Do you ever think, "I want to make a difference!" but don't know where to start? In this class students learn design thinking methods by addressing the question of what they want to do with their lives after college. Students build deeper awareness of values and goals, define areas of life and work they want to grow in, examine multiple life paths and careers that interest them, and take small steps to try these out. This is an experiential class that asks students to try new ways of thinking and step outside their comfort zone, all within a supportive community of peers.

Prerequisite: Enrollment is restricted to juniors and seniors.

CLNI 191 - Teaching Global Action (5)

Undergraduates at upper-division level participate in teaching discussion groups for CLNI 85 (W).
Prerequisite(s): permission of instructor: essay describing interest in becoming course assistant, copies of evaluations, and letter of recommendation from faculty member and/or college staff member.
Enrollment is restricted to College Nine juniors and seniors.

CLNI 199 - Tutorial (5)

Individual directed study for upper-division college members with college-affiliated faculty. Students must submit petition with one of the college academic advisers with accompanying letter from faculty adviser. Approval of provost required. Enrollment is restricted to upper-division College Nine members.

CLNI 199F - Tutorial (2)

Individual directed study for upper-division college members with college-affiliated faculty. Students must submit petition with one of the college academic advisers with accompanying letter from faculty adviser. Approval of provost required. Enrollment is restricted to upper-division College Nine members.

CLST - CLASSICAL STUDIES**Lower-Division****CLST 99 - Tutorial (5)**

Students submit petition to sponsoring agency.

Upper-Division**CLST 197F - Senior Comprehensive Examination Preparation (2)**

Students submit petition to sponsoring agency.

CLST 199 - Tutorial (5)

Students submit petition to sponsoring agency.

CLST 199F - Tutorial (2)

Students submit petition to sponsoring agency.

CMMU - COMMUNITY STUDIES**Lower-Division****CMMU 10 - Introduction to Community Activism (5)**

Surveys different strategies of community activism including charity, volunteering, labor and community organizing, and recently emerging global activism with goal of demonstrating how certain strategies challenge existing social relations and arrangements while others typically (and often by design) reproduce them.

CMMU 20 - Media and Social Movements (5)

From #BlackLivesMatter to #MeToo, from the Women's March on Washington to the March for Our Lives following the Stoneman Douglas High School shooting, a new generation of activists is using media to advance social justice goals. From the perspectives of sociology, psychology, and political science, course explores how contemporary activists harness a diverse range of media tools and platforms for social change and how contemporary strategies are rooted in and/or diverge from historical practices of using media to effect social and political change. Defines "media" broadly to include social media and legacy media forms, such as radio, television, and print journalism.

CMMU 30 - Numbers and Social Justice (5)

Relates simple lessons of quantitative thinking to topical materials that are accessible and relevant to working for justice and social change. Students learn practical techniques to distinguish credible statistical evidence from misleading statistical claims.

CMMU 42A - Student-Directed Seminar: Perceptions and Presentations of Transness (5)

Explores how the concept of transgender identity has developed in the U.S., evolving from a cisnormative depiction of gender to an increasingly expansive ideal. Engages with various fields of discourse to see how factors such as medicalization, neoliberalism, and colonization have shaped the perceptions and presentations of transness. Also navigates how art, education, and activism continue to guide a cultural shift regarding transness.

CMMU 93 - Field Study (5)

Supervised work in a community-based setting conducted under the guidance of a faculty member. Students submit petition to sponsoring agency.

CMMU 93F - Field Study (2)

Supervised work in a community-based setting conducted under the guidance of a faculty member. Students submit petition to sponsoring agency.

CMMU 93G - Field Study (3)

Supervised work in a community-based setting conducted under the guidance of a faculty member. Students submit petition to sponsoring agency.

CMMU 99 - Tutorial (5)

Individual directed study for lower-division undergraduates.

CMMU 99F - Tutorial (2)

Individual directed study for lower-division undergraduates.

Upper-Division

CMMU 101 - Communities, Social Movements, and the Third Sector (5)

Engages with crosscutting ideas and concepts central to the major including constructions of community in social-change efforts and the institutionalization of social movements in third-sector organizations. Deepens students' understanding of the opportunities and obstacles embedded in various avenues of social action.

Prerequisite: Enrollment is restricted to sophomore, junior, and senior community studies majors and proposed majors.

CMMU 102 - Preparation for Field Studies (5)

A practicum to prepare students for field study. Course must be successfully completed prior to the six-month field study. Prerequisite(s): CMMU 10; CMMU 101; satisfaction of the Entry Level Writing and Composition requirements; submission of the signed Goals and Objectives form; and completion of the declaration of major process. Enrollment restricted to community studies majors.

CMMU 103 - Field Study Practicum (2)

A practicum in social change work in which the students works for a social change organization on a part-time basis. Concurrent enrollment in CMMU 102 is required.

CMMU 105A - Field Study (5)

Full-time independent field study in an approved off-campus setting with onsite supervision by the sponsoring organization and regular distanced supervision by campus faculty. Enrollment is restricted to community studies majors upon completion of the required preparatory coursework. Prerequisite(s): CMMU 102. (Formerly CMMU 198, Independent Field Study.)

CMMU 105B - Field Study (5)

Full-time independent field study in an approved off-campus setting with onsite supervision by the sponsoring organization and regular distanced supervision by campus faculty. Enrollment is restricted to community studies majors upon completion of the required preparatory coursework. Prerequisite(s): CMMU 102. (Formerly CMMU 198, Independent Field Study.)

CMMU 105C - Field Study (5)

Full-time independent field study in an approved off-campus setting with onsite supervision by the sponsoring organization and regular distanced supervision by campus faculty. Enrollment is restricted to community studies majors upon completion of the required preparatory coursework. Prerequisite(s):

CMMU 102. (Formerly CMMU 198, Independent Field Study.)

CMMU 107 - Analysis of Field Materials (5)

A seminar for students who have completed a full-time field study. Devoted to the systematic analysis of field materials, integrating appropriate concepts and relevant literature, as well as utilizing the experience of other students. (Formerly course 194.)

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, CMMU 198. Enrollment is restricted to community studies majors.

CMMU 130 - Community Organizing Principles and Practice (5)

Community organizing brings people together in pursuit of self-determination in one or several realms of their lives. This course explores the history, philosophy, goals and accomplishments of community organizing and introduces students to practical community organizing skills.

CMMU 132 - American Cities and Social Change (5)

Examines the historical development of and contemporary conditions within U.S. cities by focusing on social and economic restructurings of cities, cultural and political transformations, and spatial reorganizations of the urban landscape. Goal is understanding the changing nature of urban experience.

CMMU 133 - Making California: Landscapes, People, Politics, Economy (5)

Examines key moments in the development of California to provide understanding of the challenges and opportunities facing California today. Particular focus is given to abiding tensions around wealth and poverty, opportunity and exclusion, and progressive and conservative politics.

CMMU 134 - No Place Like Home (5)

Examines the class and race dynamics of the housing market and public policy, asking what kinds of housing get built, where it gets built, and for whom it is (or is not) built--and, crucially, why. Questions how homelessness became normalized in contemporary society.

CMMU 137 - Communities and Climate Change (5)

For many communities the impacts of global warming, rising sea levels and environmental degradation compound already existing systemic racial, class, and gender inequalities. How do we understand the relationships between people and the environment? How are movements for social and ecological justice (dis)connected? This class considers how and why communities, activists and organizations press for alternatives through case studies from the U.S. environmental justice movement and related local and

global struggles for food sovereignty, Indigenous rights and climate justice.

CMMU 141 - Political Justice in Theory and Practice (5)

Examines how markets operate within the political economy of contemporary capitalism to generate myriad and often chronic forms of economic and social inequality in the United States. Explores different approaches to addressing inequality within the multifaceted economic justice movement. (Formerly Political Economy of Inequality.)

Prerequisite: Enrollment is restricted to community studies majors and proposed majors during First Pass enrollment.

CMMU 143 - Wal-Mart Nation (5)

Examines origins and growth of Wal-Mart stores as powerful guides to understanding dynamics of contemporary global political economy and, relatedly, the changing fortunes of global social classes.

CMMU 145 - Global Capitalism: a History of the Present (5)

Provides an overview of the history of capitalism in order to understand current crises within the global political economy. Gives particular attention to the origin, character, and consequences of neoliberalism. (Formerly Globalization and Its Discontents.)

CMMU 148 - The Problem with Solutions (5)

"Solutionism" encourages college students to tackle the world "grand challenges" in areas such as energy and resources, food and agriculture, education and literacy, or global health, with "innovative" technologies or program design. Rarely, however, are they encouraged to learn more about the problems they are trying to solve. Course examines contemporary solutionism, with a specific focus on agriculture and food, in order to recognize and understand its contexts, cultures, and consequences for social and ecological justice.

CMMU 149 - Political Economy of Food and Agriculture (5)

Examines key concepts in agrarian political economy; the historical development of the world food system; and a selection of contemporary issues related to food production, consumption, distribution, and regulation.

CMMU 151 - Sex, Race, and Globalization (5)

Examines globalization by attending to shaping forces of sexuality, gender, and race. Foregrounds Third World feminist theories, social movements. Topics include sexual and racial dynamics of free trade and labor fragmentation; global sex trades; HIV/AIDS politics in the South and North; transnational LGBT/queer politics.

CMMU 156 - Politics of Food and Health (5)

Critically examines contemporary debates about market and policy approaches to improve nutrition and dietary health and to address issues, such as food insecurity, obesity, and malnutrition.

CMMU 157 - Ageism and Activism (5)

Introduces students to gerontology, the study of aging. Taking a multidisciplinary approach, critically examines the theories, stereotypes, and realities of worldwide demographic transition and considers the many interesting implications for organizing social and personal life.

CMMU 160 - Public Health (5)

Examination of community activism to address health issues: examples are drawn from a range of concerns, e.g., environmental racism, prison conditions, feminist health matters, the AIDS epidemic, violence, and alcoholism. Special attention is given to the social frameworks of health and to the utilization of social and political strategies for improving community well-being.

CMMU 161 - Gender Health and Justice (5)

Critically examines concrete aspects of health in U.S. social and political contexts, emphasizing how gendered interpretations and practices construct and affect health equity and the practices of health care.

CMMU 162 - Community Gardens and Social Change (5)

Examines history, theory, and practice of community gardening, emphasizing contemporary garden projects using the transformative power of direct contact with nature to effect social change. Aims include understanding the nonprofit sector's response to social problems with novel programs and practices.

CMMU 163 - Health Care Inequalities (5)

Examines system and non-system that is American health care with special attention to inequalities in access, financing, and quality of care. Covers concepts such as equality, fairness, and need as well as community organizing and community building for health.

CMMU 164 - Health Justice in Conflict (5)

Explores three case studies to address critical themes of healthcare inequalities in the context of conflict: the legal battle of Ecuadorians against Texaco/Chevron; the struggle of comfort women during World War II; and chemical saturation in Iraq.

CMMU 165 - Community Analysis for Global Health (5)

Practical, skill-building course that starts from the premise that while all communities value health, different communities develop distinctive understandings of what health means to them and how

best to achieve it given their specific environments and economies. Course focuses on health justice from a political economy perspective, analyzing how health is shaped by the interaction of multiple societal forces, including who holds power and what steps marginalized groups have taken to achieve more just distributions of resources. By studying community health, across multiple communities in a variety of locations, students learn how to be effective agents of global health equity.

CMMU 167 - Special Topics in Health Equity (5)

Special topics course in the field of health equity that offers focused content and/or perspectives within a field of study already central to the community studies curriculum, in this case public health and health equity. Specific course content varies with instructor.

CMMU 186 - Food and Agriculture Social Movements (5)

Examines the primary ways in which activists are attempting to resist, provide alternatives to, and/or transform aspects of the food system using social and environmental justice frameworks to evaluate such activism. Topics explored include organic farming, food charity, fair trade, relocalization, and farmworker organizing.

CMMU 189 - Mentoring in Community Studies (5)

Each student serves as a facilitator for small discussion groups in connection with core community studies courses. Facilitators complete course readings and meet with instructor as a group to discuss the teaching process. May not be counted toward upper-division major requirements. Prerequisite(s): prior course work in the major.

CMMU 191 - Student Volunteer Internship (3)

Course bridges Santa Cruz and university communities through students organizing volunteer opportunities and charitable events. Students contribute 10 hours per week on and off campus, including outreach, event-planning, and database maintenance; supplemented by reading and biweekly discussions. Enrollment is by permission of instructor after application and interview.

CMMU 192 - Directed Student Teaching (5)

Teaching of a lower-division seminar, course 42, under faculty supervision. Students submit petition to sponsoring agency. Approval by the Committee on Educational Policy the prior quarter.

CMMU 193 - Field Study (5)

Supervised work in a community-based setting conducted under the guidance of a faculty member. Students submit petition to sponsoring agency.

CMMU 193F - Field Study (2)

Supervised work in a community-based setting conducted under the guidance of a faculty member. Students submit petition to sponsoring agency.

CMMU 193G - Field Study (3)

Supervised work in a community-based setting conducted under the guidance of a faculty member. Students submit petition to sponsoring agency.

CMMU 195A - Senior Thesis (5)

Individual study with a faculty member to complete the senior thesis.

CMMU 195B - Senior Thesis (5)

Individual study with a faculty member to complete the senior thesis.

CMMU 195C - Senior Thesis (5)

Individual study with a faculty member to complete the senior thesis.

CMMU 199 - Tutorial (5)

Advanced directed reading and research for the serious student.

CMMU 199F - Tutorial (2)

Advanced directed reading and research for the serious student.

Graduate

CMMU 297 - Independent Study (5)

Either study related to a course being taken or a totally independent study. Designed for graduate students. Students submit petition to sponsoring agency.

CMPM - COMPUTATIONAL MEDIA

Lower-Division

CMPM 15 - Research Explorations (1)

Students participate in two exploratory reading groups on topics related to ongoing research activities. Students read a selection of 8-10 papers providing a general overview and introduction to active research areas within each topic. May be repeated for credit. This class can be taken for Pass/No Pass credit only.

CMPM 25 - Introduction to 3D Modeling (5)

Introduces theory and techniques of 3D computer graphics. Topics include: capabilities of modern graphics hardware; 3D coordinate spaces; modeling with polygons; NURBS and subdivision surfaces; applying textures and materials; lighting; and simple effects. Students develop proficiency in 3D modeling

via lectures and assignments focused on the use of a 3D modeling tool.

CMPM 26 - Introduction to 3D Animation (5)

Introduces theories and techniques of 3D computer animation. Topics include: character animation; rigging; simulation of cloth, liquids, and fire; motion capture; rendering; and editing animated scenes. Students develop proficiency in 3D animation via lectures and assignments focused on the use of a 3D animation tool and use of motion-capture software.

Prerequisite: Prerequisite(s): CMPM 25.

CMPM 27 - Fundamentals of Substance Designer and Painter (5)

Introduction to the development of physically based materials in Substance Designer and Substance Painter. These are then applied to a range of character and machine models within either the Blender or Maya 3D modeling applications.

Prerequisite: Prerequisite(s): CMPM 25 or by permission of the instructor.

CMPM 35 - Data Structures for Interactive Media (5)

Introduction to common data structures, algorithms that operate on them, and techniques for implementation. Uses digital authoring of interactive media as a frame to motivate asymptotic (big-O) analysis of design scalability. Students will program in a strongly typed language.

Prerequisite: Prerequisite(s): CSE 30.

CMPM 80A - Accessible Games (5)

Overview of the physical, psychological, cultural, and psychosocial aspects of disability and how they impact game play. Discusses implications for universal and accessible game design.

CMPM 80H - Human-Centered AI (5)

As AI technologies start to integrate and permeate our everyday lives, we become aware of how they impact our lives and the biases inherent in these systems. Course introduces Human-Centered AI, investigating humanistic values and issues of a variety of current AI systems, including those in your car, on your phone (e.g., Siri), on public streets (delivery robots), and at different vendors. Introduces various societal, economic, and humanistic issues such as bias, trust, and accountability, and delves into methods that can be used to design more human-centered AI systems.

CMPM 80I - Introduction to Human Computer Interaction (5)

Introduces students to Human Computer Interaction (HCI) as a field, using their everyday experience with technology as a starting point. Students learn key HCI concepts and concerns in lectures, and try out HCI design techniques in sections.

CMPM 80K - Foundations of Video Game Design (5)

A generally accessible course in which students explore how video games (and games generally) shape experiences and express ideas. Students develop novel games, engage in game interpretation, and survey related topics (e.g., game history, technology, narrative, and ethics) through lectures and readings. Programming experience is not required.

CMPM 80L - Entrepreneurial Organization and Leadership (5)

Provides a framework for leadership in entrepreneurial organizations. Topics include leading with authenticity, motivation and personality, storytelling, teamwork and management, organizational culture and processes. Learning is integrated with practice through deep engagement with entrepreneurial leaders and a time-intensive entrepreneurial project. (Formerly Technology and Information Management 80L.)

CMPM 94 - Group Tutorial (5)

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit a petition to the sponsoring agency.

CMPM 94F - Group Tutorial (2)

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit a petition to the sponsoring agency.

Upper-Division

CMPM 110 - Writing for Game Technologies (5)

Game writers create worlds, characters, and stories, and also craft computational systems so that players can experience these fictions interactively. This course covers the fundamentals of authoring fictions and systems that work together toward powerful player experiences.

Prerequisite: Prerequisite(s): CMPM 120, or by permission of the instructor.

CMPM 115 - Lead by Design: Experiential Learning Collaborative (5)

Students work in teams to develop a template for a 10-week-long engineering design project. Teaches teamwork, leadership skills, inclusive team practices, Agile process, engineering ethics, and identity formation in engineers.

Prerequisite: Enrollment is restricted to juniors and seniors.

CMPM 118 - Collaborative Research Experience in Engineering (5)

Guides small student teams through the performance of a quarter-long research project. Provides an overview of the process of performing research, research

communities, and processes for finding and presenting research results.

CMPM 120 - Game Development Experience (5)

Teaches the concrete programming and collaboration skills associated with making a digital game from start to finish, including but not limited to: establishing a team, concepting, storyboarding, prototyping, producing, and testing a game for release. Students are organized into groups and work together to create and produce a playable game. This course is taught in conjunction with ARTG 120 which covers the skills required to design and critique digital games.

Prerequisite: Prerequisite(s): CMPM 80K; and FILM 80V; and CSE 15 and CSE 15L or CSE 30 or CMPM 35; and ARTG 80G or ARTG 80H or ARTG 80I; and concurrent enrollment in ARTG 120. Enrollment is restricted to juniors and seniors or by permission of the instructor.

CMPM 121 - Game Technologies (5)

Introduction to construction of games using game engine technology, using a specific game engine as a focus. Covers major game engine features: input, collision, animation, model import, lighting, camera, rendering, textures, particle systems. Introduction to a specific game scripting language, custom game logic, game programming patterns.

Prerequisite: Prerequisite(s): CMPM 120.

CMPM 122 - Business of Games (5)

Ten-week course to provide instruction on important business topics for videogame creators—many related to the games themselves and others for pursuing success in bringing the games to customers: publishing, distribution, marketing, funding, operations, and more.

CMPM 131 - User Experience for Interactive Media (5)

Theories and practices for approaching the design problems of interactive media holistically, beyond usability and accessibility. Includes hands-on learning, application of human-centered design and evaluation skills in group projects, and peer critique.

Prerequisite: Enrollment is restricted to juniors, seniors, and graduate students.

CMPM 132 - Interaction Design Studio (5)

Practice-based interaction design studio course. Students learn about design-led approaches to Human-Computer Interaction through participating in group projects. Course offers introductions to design methods and actionable strategies to do interaction design work and design-led technology research.

Prerequisite: Enrollment is restricted to juniors, seniors, and graduate students.

CMPM 146 - Game AI (5)

Course provides a comprehensive introduction to the use of artificial intelligence (AI) in computer games. Building on fundamental principles of AI, course explains how to create non-player characters (NPCs) with progressively more sophisticated capabilities.

Prerequisite: Prerequisite(s): CSE 101; familiarity with C++. Enrollment is restricted to sophomores, juniors, seniors, and graduate students.

CMPM 147 - Generative Design (5)

Introduces generative methods for design. Uses algorithmic techniques to generate and evaluate game content (images, sounds, map designs) along with mechanics and progression systems. Search-based and learning-based techniques with connections to artificial intelligence are also covered.

Prerequisite: Prerequisite(s): CMPM 120.

CMPM 148 - Interactive Storytelling (5)

Covers a range of design approaches and technologies including storytelling in games, interactive fiction, interactive drama, and artificial intelligence-based story generation. Through a mixture of readings, assignments, and project work, students explore the theoretical positions, debates, and technical and design issues arising from these approaches.

Prerequisite: Prerequisite(s): CSE 101 or CMPM 35. Enrollment is restricted to juniors and seniors.

CMPM 150 - Creating Digital Audio (5)

Introduces digital sound recording and editing technologies, sound synthesis, and concepts in sound design for media production. Covers the basics of sound capture, microphones, audio manipulation and editing, effects, sound formats, mixing and dynamics, synthesizers, audio software, and game audio.

Prerequisite: Enrollment is restricted to sophomores, juniors, and seniors.

CMPM 151 - Algorithmic Music for Games (5)

Introduces compositional techniques and procedural audio as exhibited in the sound and music of video games. Surveys different styles of music implemented in video games and associated compositional approaches. Students develop skill in procedural audio via a series of workshops and assignments.

Prerequisite: Prerequisite(s): CSE 14 and CSE 14L, or CSE 11.

CMPM 152 - Musical Data (5)

Surveys the relationship between music and data as exhibited in industry and research implementations of sonification and music information retrieval. Students introduced to various styles and algorithms of sound

analysis and modeling and develop skills to program unique approaches in this area.

Prerequisite: Prerequisites: CMPM 35 or CMPM 120 or CMPM 150 or CMPM 151 or by permission of instructor. Enrollment is restricted to juniors, seniors, and graduate students.

CMPM 163 - Game Graphics and Real-Time Rendering (5)

Introduces real-time, hardware-accelerated graphics programming suitable for game development, visual effects, and interactive multimedia projects. Emphasizes contemporary shader-programming techniques and developing custom effects using game engines and multimedia software.

Prerequisite: Prerequisite(s): CMPM 120 (exceptions granted in special cases with permission of the instructor).

CMPM 164 - Game Engines (5)

Covers the graphic elements in computer games. Topics include modifying, optimizing, adding components, and building a game engine. Course evaluation based on exams and several programming projects, including a game built using the student's game engine.

Prerequisite: Prerequisite(s): CSE 160 and CSE 160L. Concurrent enrollment in CMPM 164L is required.

CMPM 164L - Game Engines Lab (2)

Provides hands-on experience in using, designing, and building game engines. Students also explore different special effects, such as particle systems, spring systems, and game physics.

Prerequisite: Concurrent enrollment in CMPM 164 is required.

CMPM 169 - Creative Coding (5)

Surveys seminal and contemporary artworks and interactive installations that utilize and critically analyze new media, new technologies, and new algorithms. Students introduced to creative coding practices and encouraged to emulate existing digital arts techniques and to develop their own computational arts projects.

Prerequisite: Prerequisites: CMPM 35 or CMPM 120 or CMPM 163 or by permission of instructor. Enrollment is restricted to juniors, seniors, and graduate students.

CMPM 170 - Game Design Studio I (5)

First of a three-course capstone sequence for the computer game design program. Students work in teams to develop a comprehensive game design for a substantial computer game, including detailed storyline, level design, artistic approach, implementation technologies, and art-asset pipeline. Emphasis placed on creating novel, artistic game design concepts. Includes design reviews and formal presentations. Companion

lectures cover advanced topics in game design, game programming, and software project management.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; CMPM 120, ARTG 120 and CSE 111. Enrollment is restricted to Computer science: computer game design majors.

CMPM 171 - Game Design Studio II (7)

Second of a three-course capstone sequence for the computer game design program. Students work in teams on the software design, implementation, and testing of the computer game designed in CMPM 170. Includes design reviews, progress reviews, and formal presentations. Companion lectures cover topics in software engineering, including design, testing, and project management. Game design and game programming also covered.

Prerequisite: Prerequisite(s): CMPM 170 and CMPM 176 and one computer game engineering elective. Enrollment is restricted to computer science: computer game design majors.

CMPM 172 - Game Design Studio III (7)

Third of a three-course capstone sequence for the computer game design program. Students work in teams on the software design, implementation and testing of the computer game designed in courses 170 and 171. Includes progress reviews and formal presentations. Companion lectures cover topics in software engineering, including user and software testing, release engineering and project management; also covered are game design and game programming.

Prerequisite: Prerequisite(s): CMPM 171. Enrollment is restricted to Computer science: computer game design major.

CMPM 176 - Game Systems (5)

Presents game design as the interplay of multiple interacting game systems. Surveys various game systems: movement, combat, reward, economic, logistics, quest, information visibility, narrative. Students explore systems via study, design, and play of board, card, and computer games.

Prerequisite: Prerequisite(s): CMPM 80K.

CMPM 177 - Creative Strategies for Designing Interactive Media (5)

Surveys tactical, structural, contextual, and other methods to enhance creativity and innovation in the design of games and other interactive media. Investigates strategies for creativity and innovation drawn from diverse fields, including interactive affordances, narrative and poetics, biology, contextual inquiry, and design research. To innovate in a field of fixed genres is challenging: the allure of modeling exemplars is strong. Although imitation can be successful in the marketplace, the most creative action occurs on the leading edge of change. Innovation

benefits from strategies and methods that are directly aimed at exploring new perspectives and structures to learn through the process of discovery.

Prerequisite: Enrollment is restricted to juniors and seniors.

CMPM 178 - Human-Centered Design Research (5)

Students move through a rigorous design-research process involving skills and principles in human-centered design research as well as selected formal research methods. They learn to use tools for ideation, human-centered qualitative research, domestic probes, mock-ups, and prototypes.

Prerequisite: Enrollment is restricted to juniors, seniors, and graduate students.

CMPM 179 - Game Design Practicum (5)

Provides the opportunity to practice the creation of novel computer games. Students learn a new game-making technology, then create three games using this technology.

Prerequisite: Prerequisite(s): CMPM 120 and CMPM 80K.

CMPM 194 - Group Tutorial (5)

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit a petition to the sponsoring agency.

CMPM 194F - Group Tutorial (2)

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit a petition to the sponsoring agency.

CMPM 195 - Senior Thesis Research (5)

Students submit a petition to the sponsoring agency.

CMPM 195F - Senior Thesis Research (2)

Intended for majors. Students submit a petition to the sponsoring agency.

CMPM 198 - Individual Study or Research (5)

Students submit petition to sponsoring agency.

CMPM 198F - Individual Study or Research (2)

Intended for majors. Students submit petition to sponsoring agency.

CMPM 199 - Tutorial (5)

For fourth-year students majoring in computational media. Students submit a petition to the sponsoring agency.

CMPM 199F - Tutorial (2)

For fourth-year students majoring in computational media. Students submit a petition to the sponsoring agency.

Graduate

CMPM 201 - Introduction to Computational Media (5)

Provides a broad foundation in the history, theory, and contemporary practice of computational media, examining its roots in a variety of fields and current structures of participation. Also covers a selection of key critical lenses for understanding computational media.

Prerequisite: Enrollment is restricted to computational media graduate students, or by permission of the instructor.

CMPM 202 - Computation Media Research (5)

Overview of computational media research strategies. Includes case studies of how particular projects were defined and completed and how interdisciplinary concerns have been successfully integrated. Considers the expressive and authorial affordances of different system architecture approaches.

Prerequisite: Prerequisite(s): CMPM 201, or by permission of the instructor. Enrollment is restricted to graduate students.

CMPM 203 - Computational Media Methods (5)

Overview of major methods in computational media research. Includes non-numerical methods such as playtesting, arts critique, ethnographic observation, and humanistic interpretation. Also includes numerically oriented methods such as survey instruments, data mining, user experiments, and characterizing expressive/generative spaces.

Prerequisite: Enrollment is restricted to Computational Media graduate students.

CMPM 204 - Computational Media Project Definition (5)

Students define the topic, approach, and scope for an M.S. thesis or project. Includes discussion of successful past projects and theses, visits from faculty presenting open problems, reviews of related literature, topic and timeline presentations, and critiques.

Prerequisite: Enrollment is restricted to computational media graduate students, or by permission of the instructor.

CMPM 206 - Computational Media Research Preparation (3)

Covers skills for finding relevant literature for a novel research topic, integrating that literature, and communicating the results. Also covers how to select work for a research portfolio, present that work, and describe contributions. Enrollment is by permission of

the instructor. Prerequisite(s): CMPM 201, CMPM 202, and CMPM 203 for an understanding of media creation and computer programming; good standing in the Ph.D. program. Enrollment is restricted to graduate students.

CMPM 230 - Game Data Science (5)

Introduces the topic of game data science, where students use game data to understand players' behaviors. Goes through the process of data collection, processing, cleaning, visualization, analysis and reporting in detail. Covers the fundamental tools, methods, and principles of data science, including the feature extraction and selection, pattern recognition. Uses outputs of such methods to help derive design decisions concerning churn analysis and user segmentation.

Prerequisite: Enrollment is restricted to graduate students in games and playable media, serious games, human computer interaction, and computational media programs, or by permission of the instructor.

CMPM 232 - Psychology of Play (5)

Psychology plays an important aspect in users' engagement and understanding psychological aspects that can affect users as they interact with technology. This course discusses theories of motivation, perception, emotions, personality, and preferences. Also discusses how such theories affect users' interaction with technologies, such as games, social media, mobile application, and other common technologies used today. Also reviews new papers and results showing the types of models affecting users engagement and their influence and use in the different phases of design or development.

Prerequisite: Enrollment is restricted to graduate students in games and playable media, serious games, human computer interaction, and computational media programs, or by permission of the instructor.

CMPM 235 - User Evaluation of Technology (5)

Presents a variety of evaluation methodologies to assess usability, acceptance, and effectiveness of technology with the intended users. Combines lectures and exercises for students to gain firsthand experiences of these methodologies with real users.

Prerequisite: Enrollment is restricted to graduate students. Seniors may enroll with completion of CSE 165.

CMPM 237 - Advanced Topics in Human-Robot Interaction (5)

Study of current topics in human-robot interaction design and research. Topics vary, but are expected to include how people think, act, and behave around robotic agents; telepresence and teleoperated robotics; applications of human-robot systems; collaborative robotics; and social robotics.

Prerequisite: Enrollment is restricted to graduate students.

CMPM 243 - Social Computing Research: Design, Algorithms, and Incentives (5)

Provides an interdisciplinary view of computational systems and human interaction, with an emphasis on human-computer interaction and algorithmic economics. Students learn about seminal and cutting-edge research contributions and methodologies, and carry out a quarter-long research project. (Formerly Technology and Information Management 243.)

Prerequisite: Prerequisite(s): A background in either mathematical proofs or user-centered design and programming. Enrollment is restricted to graduate students; undergraduates may enroll by permission of the instructor.

CMPM 244 - Artificial Intelligence in Games (5)

The use of AI techniques to enable new player interactions, game mechanics, and genres. Combines elements from academic AI and machine learning with industry game AI techniques. Includes lecture and paper discussions as well as AI programming exercises and projects.

Prerequisite: Enrollment is restricted to graduate students; others by permission.

CMPM 248 - Interactive Storytelling (5)

Covers wide range of practices including hypertext, interactive fiction, embedded narratives in games, interactive drama, and artificial intelligence-based story generation. Through a mixture of readings, assignments, and project work, explores the theoretical positions, debates, and technical and design issues arising from these different approaches.

Prerequisite: Enrollment is restricted to graduate students.

CMPM 265 - Generative Methods (5)

In-depth exploration of algorithms for the automated generation of 2D and 3D models and content. Covers multiple approaches, including noise, grammars, genetic algorithms and programming, parametric design, and answer-set programming. Includes application of techniques to computer-game content and level design.

Prerequisite: Enrollment is restricted to graduate students.

CMPM 268 - Immersive Analytics (5)

Investigates how new immersive display technologies and interaction techniques can support analytical reasoning and decision making in a variety of contexts.

Prerequisite: Enrollment is restricted to graduate students.

CMPM 269 - Machine Learning for Creativity and Design (5)

Introduces contemporary techniques in deep learning focusing on the application of these techniques to a range of tasks related to art and design outputs.

Prerequisite: Prerequisites: CMPM 202 or by permission of the instructor. Enrollment is restricted to graduate students.

CMPM 280C - Computational Media Seminar (2)

Graduate seminar with speakers from academia and industry. Covers state of the art research and industry trends in Computational Media and related areas.

Prerequisite: Enrollment is restricted to computationalmedia and games and playable media graduate students.

CMPM 280F - Seminar in Creative Coding and Computational Media (2)

Covers advanced topics and current research in creative coding as it intersects computational media. Focuses on student presentations and seminar participation. Enrollment is restricted to graduate students and by permission of instructor. This class can be taken for Satisfactory/Unsatisfactory credit only.

CMPM 280G - Seminar in Generative Methods (2)

Weekly seminar covering advanced topics and current research in generative methods--the field focused on algorithms for creation of 2D and 3D models and content.

Prerequisite: Enrollment is restricted to graduate students.

CMPM 280H - Seminar in Human-Computer Interaction and Computational Media (2)

Covers advanced topics and current research in human-computer interaction as it intersects computational media. Focuses on student presentations and seminar participation. Enrollment restricted to graduate students and by permission of the instructor.

CMPM 280I - Human Computer Interaction Seminar (2)

Ongoing participatory seminar toward staying informed about the current state of the art in Human Computer Research, both within the Computational Media department, as well as in the broader field. Course consists of weekly lectures and discussion. Graduate students will take part in giving presentations.

Prerequisite: Enrollment restricted to computational media and games and playable media graduate students.

CMPM 280K - Seminar in Interactive Systems for

Individuals with Special Needs (2)

Covers advanced topics and current research in interactive systems for individuals who have special needs. Focuses on student presentations and seminar participation.

Prerequisite: Enrollment is restricted to graduate students.

CMPM 280P - Seminar in Player Experience and Modeling (2)

Covers advanced topics and current research in player experience and modeling. Delves into topics related to: artificial intelligence, psychology, data science, as well as computer human interaction as they intersect with games and player experience. Course is conducted as a studio/seminar, where students read and analyze previous research within this area. Students are asked to present and discuss current state of the art of research in the area of player experience and modeling and then develop their own research within this area. Through interaction with the instructor and other colleagues within the class, students work toward refining their research. This course can be taken for Satisfactory/Unsatisfactory credit only.

Prerequisite: Enrollment is restricted to graduate students.

CMPM 280R - Topics in Human-Robot Interaction (2)

Focuses on human-centered design and research approaches to the development of robotic technologies. Students read primary research papers, examine prototype robotic systems, and build upon those materials to lead group discussions, propose research projects, and conduct HRI research.

Prerequisite: Enrollment is restricted to graduate students.

CMPM 280S - Seminar Topics (2)

Weekly seminar series of current research on a special topic in information systems and technology management. The theme of research presented throughout the course selected by the instructor. Topics may include, but are not limited to, knowledge planning, new product development and management of technology. Enrollment with permission of instructor. (Formerly Technology and Information Management 280S.)

CMPM 280W - Seminar in Digital Media (2)

Covers advanced topics and current research in digital media—the interdisciplinary field at the intersection of computer science, media authoring, and models of interpretation from the humanities and social sciences. Focuses on student presentations and seminar participation.

Prerequisite: Enrollment is restricted to graduate students.

CMPM 280X - Expressive AI (2)

Weekly seminar covering topics of current research in artificial intelligence applied to interactive art and entertainment, including computer games. Enrollment by permission of instructor. Enrollment restricted to graduate students.

CMPM 290A - Topics in Computational Media (5)

Students learn about a current research area in computational media and make a contribution. Each course offering focuses on a different aspect of technical, creative, and/or interpretive work in the field.

Prerequisite: Enrollment is restricted to computational media graduate students.

CMPM 290J - Playable Media (5)

Focuses on media, such as computer games, that invite and structure play. Work includes building and critiquing a series of prototypes; studying major examples in the field; and discussing both theoretical and practice-oriented texts. Enrollment by permission of instructor. Enrollment restricted to graduate students.

CMPM 290K - Social and Emotional Approaches to Human Computer Interaction (5)

Focuses on enhancing social and emotional capabilities and qualities in interactive systems. Students read research, look at sample systems, and engage in evaluation, design, and prototyping exercises. A research project and helping to lead class discussions are also required.

Prerequisite: Enrollment is restricted to graduate students.

CMPM 290P - Topics in Computational Cinematography (5)

Focuses on discussion of recent advances in visual storytelling in graphical environments. Major topics covered are: intelligent camera control, shot-compositions, lighting design, interactive storytelling, and computational techniques associated with these applications. Class consists of in-class discussions and student presentations of research papers and a final student project.

Prerequisite: Enrollment is restricted to graduate students.

CMPM 296 - Masters Project (5)

Students work on their master's project with a faculty supervisor. Students submit petition to sponsoring agency. Assessment is done based on project goals and the ability of the student to apply his/her knowledge and skills accumulated through the master's classes into the project.

CMPM 297A - Independent Study or Research (5)

Independent study or research under faculty supervision. Although this course may be repeated for credit, not every degree program will accept a repeated course toward degree requirements. Students submit petition to sponsoring agency.

CMPM 297B - Independent Study or Research (10)

Independent study or research under faculty supervision. Although this course may be repeated for credit, not every degree program will accept a repeated course toward degree requirements. Students submit petition to sponsoring agency.

CMPM 297C - Independent Study or Research (15)

Independent study or research under faculty supervision. Although this course may be repeated for credit, not every degree program will accept a repeated course toward degree requirements. Students submit petition to sponsoring agency.

CMPM 297F - Independent Study or Research (2)

Independent study or research under faculty supervision. Although this course may be repeated for credit, not every degree program will accept a repeated course toward degree requirements. Students submit petition to sponsoring agency.

CMPM 299A - Thesis Research (5)

Thesis research conducted under faculty supervision. Although this course may be repeated for credit, not every degree program will accept a repeated course toward degree requirements. Students submit petition to sponsoring agency.

CMPM 299B - Thesis Research (10)

Thesis research conducted under faculty supervision. Although this course may be repeated for credit, not every degree program will accept a repeated course toward degree requirements. Students submit petition to sponsoring agency.

CMPM 299C - Thesis Research (15)

Thesis research conducted under faculty supervision. Although this course may be repeated for credit, not every degree program will accept a repeated course toward degree requirements. Students submit petition to sponsoring agency.

COWL - COWELL COLLEGE

Lower-Division

COWL 1 - Academic Literacy and Ethos: Imagining Justice (5)

Teaches foundational concepts for intellectual exploration and personal development within an academic community: analysis, critical thinking,

metacognition, engagement with others across difference, and self-efficacy. Examines the emergence and development of key concepts of justice including procedures, rights, and reparation.

Prerequisite: Enrollment is restricted to first-year college members.

COWL 11F - Slug Ambassador (3)

Develop the leadership and professional skills and confidence that will enable you to make a difference in your personal, academic, and professional life. Course offers students the opportunity to give back by sharing their stories and successes, engaging in networking events, and serving as role models for fellow students. Course limited to students participating in the Slug Ambassador program. Enrollment is by permission of the instructor.

COWL 1A - Introduction to University Life and Learning (1)

Orientation to and exploration of the nature of the liberal arts, and of learning at research universities. Topics include: academic planning for upper-division coursework; enrollment processes; and understanding pathways to degree completion; UCSC resources that support health and well-being strategies for academic success; the cultivation of just communities; the prevention of sexual harassment and violence; campus conduct policies; awareness of risks associated with drug and/or alcohol use; and an introduction to traditions of community-engaged learning, ground-breaking research, and interdisciplinary thinking that define a UC Santa Cruz degree. This course can be taken for Pass/No Pass grading only.

Prerequisite: Enrollment is restricted to entering first-year Cowell College students.

COWL 10 - Becoming a Successful Student (5)

An interactive approach to effective studying, note-taking, critical thinking, and exams. Also explored: time management; good communication with staff and faculty; major and career exploration; and use of campus resources. Enrollment priority given to first-year students and sophomores.

COWL 11A - Experiential Leadership Program Core Course: Tools for Leadership and Conflict Resolution (2)

Students gain skills and confidence to lead groups; develop a leadership mindset; build tools for communication, conflict resolution, and receiving feedback; cultivate an inclusive and welcoming environment. (Formerly offered as STEV 11A.)

COWL 11B - ELP Core Course: Leadership From the Inside Out, Networking and Professionalism (2)

Gain insights, tools, and confidence to identify and pursue goals, dreams, and aspirations. This Experiential Leadership Program course focuses on developing greater self-awareness, and practical tools for getting

where you want to go. Includes an all day adventure hike. No experience necessary. (Formerly offered as STEV 11B.)

COWL 11C - ELP Core Course: Tone-Setting and Leading with Cultural/Emotional Intelligence (2)

Experiential Learning Program course in which students gain insights and confidence to work with multicultural and global teams. Focuses on developing a mindset and frameworks that support people to work effectively with one another. Includes an all-day sea kayak adventure (funding dependent). No experience necessary.

COWL 11D - ELP Elective Course: Risk Management and Social Justice Through the Lens of Outdoor Leadership (2)

Although applicable to any setting, this Experiential Leadership Program (ELP) course explores topics of risk management and social justice through the lens of outdoor leadership. Students gain tools and insights to cultivate a safe and inclusive environment. Includes a weekend backpack trip (funding dependent). No experience necessary.

COWL 11E - Leadership Spring Break Intensive: Backpacking the Canyons of Southern Utah (2)

Experiential Leadership Program course focusing on tools to build a high functioning team that has the confidence and skill to work together, solve complex problems, and navigate challenges to achieve a shared goal. Includes a 10-day wilderness expedition as a testing ground to practice and apply new team skills. Includes leadership development, and learning about good expedition and team behavior. Enrollment is by instructor permission. (Formerly offered as STEV 13.)

COWL 12 - Public Speaking (5)

This introductory level seminar is designed to reduce anxiety and increase competence and confidence in a variety of public speaking situations. While providing some theory, this seminar emphasizes the practice of composing and delivering speeches, including formal, informal, and extemporaneous occasions.

Prerequisite: Enrollment is restricted to college members during priority enrollment.

COWL 39 - Brain, Mind, and Consciousness (3)

An interdisciplinary introduction to the study of the brain, mind, and consciousness. Topics include the philosophy of mind, neuroscience, cognition, and social psychology, and their applications in fields such as health science, technology, and social development.

COWL 40 - Near-Death Experiences: Evidence and Inference in the Post-Modern World (5)

Explores evidence and inferences from existing literature surrounding near-death experiences. Uses a

multidisciplinary approach to investigate concepts, such as consciousness, aging, life, and death.

COWL 50 - Library Skills for the Digital Age (2)

Intended to enhance students' skills in using the most powerful learning tool in any university: the library. Topics: organization of the library; how to begin researching; search engine and database use; judging the quality of sources; using sources responsibly. Disciplinary focus changes from quarter to quarter.

Prerequisite: Enrollment is restricted to first-year and sophomore college members, or by permission of instructor.

COWL 52 - Personal Finance and Investing (5)

Overview of the financial responsibilities that young adults take on after college. Topics include: taxes, budgeting, student loans, credit, and investing in the stock market. Ubiquitous terms, such as 401(k), are defined, and financial principles are used to develop a framework for personal financial decision-making.

COWL 61 - Critical Journeys (2)

For publication in a Cowell literary journal, students substantively revise one of their fall quarter essays by studying a major work that influences, acknowledges, or further clarifies a required reading of the Cowell core course.

Prerequisite: Prerequisite(s): course 80A or 80B; enrollment is restricted to college members.

COWL 64 - Social Justice: Issues and Debates (2)

Focused followup on social justice topics and readings introduced in the Cowell core course. Allows first-year students to pursue social justice themes in greater depth. Students must have previously taken a Cowell core course (or equivalent).

Prerequisite: Enrollment is restricted to first-year students.

COWL 65 - Meaning, Paradox, and Love (5)

Mary Holmes--legendary founding faculty member of UCSC, keen observer, painter of mythic images, and profound thinker--had a visionary's insight into the mysteries of love, paradox, and meaning. This course explores her art, teaching, and wisdom.

COWL 70A - Introduction to Book Arts (5)

Students learn techniques of bookbinding, construction, and design, and fundamentals of letterpress printing. Enrollment is by permission of instructor.

COWL 70B - Intermediate Book Arts (5)

Learn fundamental skills in fine letterpress printing, including hand typesetting and instruction in the operation of printing presses. Basic typography

explored as students design and print a small edition of a selected text.

Prerequisite: Prerequisite(s): COWL 70A or by permission of instructor.

COWL 70C - Advanced Book Arts (5)

Students learn fundamental skills in fine letterpress printing, including hand typesetting and instruction in the operation of printing presses. Basic typography explored as students design and print a small edition of a selected text.

Prerequisite: Prerequisite(s): COWL 70B or by instructor permission.

COWL 78 - Children, Technology, and Development (5)

First-year honors seminar focusing on current research and theory related to children and technology. Attention is given to the gaps between public opinion about the impact of technology on children and the actual evidence regarding such impacts. Topics may include how use of digital devices may influence children's thinking; how children learn to use new technologies; computer gaming and aggression; and how children's social development may be influenced by social media and other technology.

Prerequisite: Enrollment is restricted to College Scholar students.

COWL 82 - Good vs. Good (5)

Explores the world of philanthropy. Examines the different models of philanthropy to evaluate its strengths and weaknesses. Also examines what drives philanthropists to give. Enrollment by permission and restricted to College Scholar students.

COWL 83 - The Modern Metropolis: Paris, London, New York 1770-1860 (5)

A comparison of three great modern cities, with emphasis on their roles as incubators of new forms of art, spectacle, and entertainment; the specters of alienation, poverty, and crime during periods of explosive growth; and immigration and diversity as sources of cultural dynamism.

Prerequisite: Enrollment is restricted to Cowell and Crown Honors students.

COWL 84 - Chinese Approaches to Human Values (5)

Through study of primary sources in translation, considers a range of classic Chinese approaches to basic reflective questions about human experience, with special focus on issues of justice, social engagement, and meaning and authenticity in everyday life.

Prerequisite: Enrollment is restricted to College Scholars students.

COWL 85 - Introduction to Chinese Writing Systems (5)

Gateway course illuminating the operation of the writing systems of greater China. Intended for students who are curious about the world's longest continually used symbol set as well as for those who may be considering a serious commitment to learning the language.

COWL 86 - Leading Social Change (2)

Offers students the knowledge and skills required to lead diverse teams. Topics include the social-change model of leadership and principles of collaboration. Geared toward Cowell and Stevenson Residential Assistants, but students interested in the topics may take the course with permission from the instructor.

COWL 87 - The History of Time (5)

Examines the history of temporality or the human experience of time. Theoretical readings and primary sources are used to explore the ways that humans have related to the past, present, and future. Course focuses on research and writing methods.

Prerequisite: Enrollment is restricted to College Scholar students.

COWL 89 - Faculty Research Colloquium (2)

Introduction of UCSC as a research university, our notable researchers, and their work. Weekly discussions with UCSC faculty from a variety of disciplines.

Prerequisite: Enrollment is restricted to participants in the first-year scholars program.

COWL 93 - Field Study (5)

Various topics to be arranged. Students submit petition to sponsoring agency.

COWL 93F - Field Study (2)

Various topics to be arranged. Students submit petition to sponsoring agency.

COWL 94 - Group Tutorial (5)

A program of independent study arranged between a group of students and a faculty instructor. Students submit petition to sponsoring agency.

COWL 94F - Group Tutorial (2)

A program of independent study arranged between a group of students and a faculty instructor. Students submit petition to sponsoring agency.

COWL 99 - Tutorial (5)

Various topics to be arranged. Students submit petition to sponsoring agency.

COWL 99F - Tutorial (2)

Various topics to be arranged. Students submit petition to sponsoring agency.

Upper-Division**COWL 107 - Trust Rules: How to Tell the Good People from the Bad (2)**

Students learn practical tools and techniques for assessing trustworthiness, including your own, and applying these tools in a variety of situations. Integrating insights from practical experience, philosophy, and psychology, this course teaches us how to pay attention to red flags in relationships and ultimately develop a network of trustworthy people that will help us succeed in work and in our personal lives.

Prerequisite: Enrollment is restricted to college members or by permission of instructor.

COWL 110 - Introduction to Mock Trial (2)

Introduces Mock Trial, which is open to all students. Covers the basics of argumentation, cross and direct examinations, permissible evidence, witness testimony, and courtroom protocol. Special emphasis is on public speaking. Students write speeches for opening and closing arguments and create questions for witnesses. Students must read the Mock Trial handbook for examples and strategies. Each student has an opportunity for public speaking and creating a coherent legal argument.

Prerequisite: Enrollment is restricted to college members.

COWL 111 - Mock Trial Workshop (2)

Offers opportunities to improve students' public speaking and communication skills through weekly exercises which challenge a student's ability to think quickly, organize information effectively and speak persuasively. Students also learn and practice courtroom procedures and legal argument styles. Each week students learn about a facet of mock trial. Students focus on different speaking skills weekly. Speakers of all skill levels are welcome and receive constructive criticism both from peers and the teachers and participate in debates within a small team.

COWL 118B - Words & Music: Poetry, Musical Theater, Opera (5)

Study of significant texts enhanced by music for performance. Topics vary annually. Course compares original texts in English translation with their adaptation to musical theater (My Fair Lady, Oklahoma, etc.) and opera (Carmen, etc.)

COWL 118C - Musical Theater in America (5)

Investigates the early years of musical theater by focusing on the arrival and spread of opera across the continental United States. Explores popular genres, media reception, discourses on race and art, and the way that opera transformed the American landscape. Students read important social, cultural and political histories of American opera, listen to recorded versions

and watch several films. Class also features collaboration with the UCSC Opera Program to examine questions of performance.

COWL 122 - United Nations Contemporary Issues (2)

Introduces the Model United Nations through discussion of contemporary issues. Students learn parliamentary procedures and U.N. protocols, as well as how to work collaboratively to research and to present position papers. Students learn resolution writing, alliance building, and persuasive speech.

COWL 126 - Trajectories of Justice: Standing Rock, Climate Change, and Trump's Potential Impeachment (5)

Enables students to become expert on the potential impeachment of Donald Trump in the context of progressive American history, emphasizing his Neglect of Duty regarding global climate change through the lens of The Native Uprising against the Dakota Access Pipeline. (Formerly The Trajectory of Justice in America.)

COWL 138A - The Place of Higher Education in a Democratic Society (5)

Centers around interviews of alumni and involves a reflective term paper on a specific topic having to do with the role of higher education in a democratic society. Teaches students how to conduct interviews.

Prerequisite: Prerequisite(s): COWL 80A or COWL 80B.

COWL 138B - Life Development (2)

Visits from alumni form the centerpiece of this course. In teams, students study the lives and the issues of the visitors. The aim is to reflect on the meaning of education in adult development.

Prerequisite: Prerequisite(s): COWL 80A or COWL 80B. Enrollment is restricted to sophomore, junior, and senior Cowell College members.

COWL 156M - Medical Ethics and Justice in Literature and Film (5)

Course approaches literature and literary devices in their capacity to address the patient's experience of illness, medical education and practice, and medical ethics and to understand and assess how considerations of justice impact these themes in medicine. Particular issues raised by a variety of topics are examined and discussed in the context of case examples as presented in literature and film, e.g., informed consent, the doctor-patient relation, withdrawing vs. withholding life-sustaining treatment, organ transplantation, health care reform, rationing/social justice, etc.

COWL 158A - Special Topics: Oral History (5)

Introduction to the theory, practice, technology, and ethics of conducting oral history. Readings and expert guest speakers offer both theoretical and practical

insights. Students plan and implement oral history projects in accordance with professional standards.

Prerequisite: Enrollment restricted to sophomores, juniors, and seniors.

COWL 161A - Bards to Bloggers: Literature and Technology in Transhistorical Focus (5)

Through study of ancient and contemporary forms (epics to e-literature), students study the connections that have tied literary reading and writing to specific technologies, including memory, the alphabet, pens, printing, radio, computing, the Internet, and handheld devices.

Prerequisite: Enrollment is restricted to junior and senior college members.

COWL 165 - Fundraising Practicum (3)

Covers the fundamental skills, ethics, and practices of crowd-sourced fundraising in the liberal arts. Students build a project portfolio that includes mission statement, donor-cultivation tools, and action reports. Enrollment is by permission of the instructor. Meet with the instructor to verify enrollment in a Giving Day campaign with liberal arts focus.

COWL 168 - Social Change (2)

How do you change the world, working alone and in concert with others? To find out students spend the quarter learning about how one non-profit organization of their choosing creates change in their community. Students research an agency, focusing on who is served, how funding works and how real change is created.

Prerequisite: Enrollment is restricted to college members.

COWL 174 - Global Leadership (3)

Students learn about leadership styles, how leaders work with constituent groups, build cooperation, and develop implementation plans. Students learn to consider how decision making is done, and what is best practice for best working in a variety of communities and cultures. Enrollment is restricted to those participating in Virtual Global Internships.

COWL 175A - Imagination (5)

Examines contemporary perspectives on the theme of imagination. Course readings include philosophical treatments of imagination, Indigenous imaginative cultural formations, and Black radical imaginations for socio-spatial liberation. Addresses the following questions: To what extent is imagination tied to our particular position, culture, and time period? What are some ways to expand our imaginations and when are these approaches limited? And how can imagination help us advance radical social change? Explores imagination as an inherently cross-cultural topic and teaches students to present, analyze, and critically discuss philosophical and sociological arguments about

imagination. Students cannot receive credit for this course and PHIL 136A, PRTR 175A/PHIL 136B, or STEV 136/PHIL 136C

COWL 184A - Leadership and Institution Building (2)

Through lectures by senior administrators and student consensus-and-recommendation teams, students learn how leaders work with constituent groups, build cooperation, and develop implementation plans in an institution such as the University of California, specifically, UC Santa Cruz. Enrollment is restricted to undergraduates accepted in the Chancellor's Undergraduate Internship Program. Students submit applications winter quarter for the following academic year.

COWL 184B - Leadership and Institution Building (2)

Through lectures by senior administrators and student consensus-and-recommendation teams, students learn how leaders work with constituent groups, build cooperation, and develop implementation plans in an institution such as the University of California, specifically, UC Santa Cruz. Enrollment is restricted to undergraduates accepted in the Chancellor's Undergraduate Internship Program. Students submit applications winter quarter for the following academic year.

COWL 184C - Leadership and Institution Building (2)

Through lectures by senior administrators and student consensus-and-recommendation teams, students learn how leaders work with constituent groups, build cooperation, and develop implementation plans in an institution such as the University of California, specifically, UC Santa Cruz. Enrollment is restricted to undergraduates accepted in the Chancellor's Undergraduate Internship Program. Students submit applications winter quarter for the following academic year.

COWL 192 - Directed Student Teaching (5)

Teaching of a lower-division seminar under faculty supervision. (See COWL 42.) Upper-division standing required and a proposal supported by a faculty member willing to supervise.

COWL 193 - Field Study (5)

Program of study arranged between a group of students and an instructor, which may involve work with an off-campus or non-departmental agency (e.g., internship or field work). Interview only; prior arrangement with instructor. Enrollment is restricted to juniors and seniors.

COWL 193F - Field Study (2)

Program of study arranged between a group of students and an instructor, which may involve work with an off-campus or non-departmental agency (e.g., internship or field work). Interview only; prior arrangement with

instructor. Enrollment is restricted to juniors and seniors.

COWL 194 - Group Tutorial (5)

A program of independent study arranged between a group of students and an instructor. Students submit petition to sponsoring agency.

COWL 194F - Group Tutorial (2)

A program of independent study arranged between a group of students and an instructor. Students submit petition to sponsoring agency. Enrollment is restricted to juniors and seniors.

COWL 195 - Senior Thesis (5)

Students submit petition to sponsoring agency.

COWL 198 - Independent Field Study (5)

Provides for college-sponsored individual study programs off campus, for which faculty supervision is not in person (e.g., supervision is by correspondence.) Up to three such courses may be taken for credit in any one quarter. Approval of student's adviser, certification of adequate preparation, and approval by provost required.

COWL 199 - Tutorial (5)

Various topics to be arranged. Students submit petition to sponsoring agency.

COWL 199F - Tutorial (2)

Various topics to be arranged. Students submit petition to sponsoring agency.

CRES - CRITICAL RACE AND ETHNIC STUDIES

Lower-Division

CRES 10 - Critical Race and Ethnic Studies: An Introduction (5)

Examines the concept of race, followed by an investigation of colorblindness, multiculturalism, and post-racialism. Race and ethnicity are examined as historically formulated in relationship to the concepts of gender, sexuality, class, nationalism, indigeneity, citizenship, immigration, and inequality.

Prerequisite: Prerequisite(s): Satisfaction of the Entry Level Writing requirement.

CRES 14 - Center for Racial Justice Service Learning (5)

Supplemented by invited guest speakers and field activities, this Center for Racial Justice-sponsored course is facilitated by an activist-in-residence. Through critical readings, discussions, and situated learning, students take part in an experiential learning project and

contribute service hours to a community-based organization.

CRES 15 - Resource Centers Service Learning Course (5)

This service learning course offers students of all majors the opportunity to intern at UCSC Resource Centers. Students organize educational community-oriented programs and projects to address retention and equity issues in higher education. Through this course, students develop critical thinking, problem-solving, project planning, and writing skills by combining theoretical concepts and experiential learning experience. Students explore texts that highlight resiliency of minoritized communities through the study of trans, queer, Asian American/Pacific Islander, Black, American Indian, Chicana/Latinx, undocumented, and feminist political thought.

CRES 45 - Pilipinx Historical Dialogue (5)

Examines the history, politics, and cultural expressions of the Pilipinx community, in the Philippines and the diaspora, with an emphasis on Pilipinx and Pilipinx-American activism.

CRES 60E - Blackness and Indigeneity in Europe (5)

What are the contours of Black Europe? This course emphasizes a range of disciplinary approaches to the concepts of blackness and indigeneity, introducing and questioning Black Europe as a field, a culture, and a set of ideologies.

CRES 68 - Approaches to Black Studies (5)

Provides a diasporic approach to the field of Black Studies in the modern era, with a focus on histories of dispossession and resistance.

CRES 70B - Black Radical University? (5)

Course emerges from a collaboration with the Black Student Union around Black student organizing and Black liberationist pedagogies. Students explore and archive histories of Black student organizing on the UC Santa Cruz campus and beyond (locally, nationally, and globally), as well as Black liberationist pedagogy (e.g., decolonial thought in the Third World, freedom schools in the U.S. South, Black Panther Party liberation schools, Black feminist pedagogies). Course is offered for pass/no pass grading only.

CRES 70S - Introduction to the Sikhs (2)

Introduces the Sikh community, including its origins, history, belief system and contemporary challenges. Other topics include Sikh music, art, literature, and aspects of Sikh society. Specific attention is paid to the Sikh diaspora community in the United States, and in California in particular, including comparative perspectives with respect to other minority communities.

CRES 70U - (Un)docu Studies (5)

Deconstructs the common perception of immigration as strictly a Latinx issue in order to develop solidarity among different groups of students and to explore a range of narratives surrounding undocumented status and migration with the aim of empowering us as agents of transformative social change. Legal papers, as a violent affirmation of settler sovereignty, do not capture the complexities of who we are, much less all our relations—to each other, to place, to life worlds. By exploring those complexities, we strive to create a communal space where we courageously articulate self, community, and relationality in ways that state documents must disavow. Course is offered for Pass/No Pass grading only.

CRES 94 - Group Tutorial (5)

A lower-division group tutorial, led by a faculty member, that focuses on various problems within critical race and ethnic studies. Topics to be chosen by the instructor and undergraduate student participants. Enrollment is restricted to critical race and ethnic studies majors.

CRES 94F - Group Tutorial (2)

A program of independent study arranged between a group of students and a faculty instructor. Students submit petition to sponsoring agency. Enrollment is restricted to critical race and ethnic studies majors.

CRES 99 - Tutorial (5)

Students submit petition to sponsoring agency.

Upper-Division

CRES 100 - Comparative Theories of Race and Ethnicity (5)

Examines race and ethnicity as categories of lived identity intersecting with gender, sexuality, class, and culture; historical discourses of difference underwriting social inequalities and movements to redress those inequalities; and concepts critical to the understanding and reshaping of power and privilege.

Prerequisite: Prerequisite(s): CRES 10 and satisfaction of the Entry Level and Composition requirements.

CRES 101 - Research Methods and Writing in Critical Race and Ethnic Studies (5)

Introduces students to tools, conceptual frameworks, keywords, and methods for research and writing in critical race and ethnic studies. Drawing from ethnic studies, Asian American studies, Arab American studies, Black studies, Indigenous studies, Latinx studies, feminist studies, and queer studies, students analyze how scholars do the work of studying the effects of and resistance to U.S. colonialism, capitalism, empire, war, globalization, and migration. Examines questions of settler colonial state practice, dispossession, diaspora, incarceration, and the ethics of

research methods. Students practice the craft of writing about race, colonialism, state violence, and the manifold movements that imagine alternative, decolonized futures.

Prerequisite: Prerequisite(s): CRES 10 and satisfaction of the Entry Level Writing and Composition requirements.

CRES 111 - The Sounds of Struggle (5)

Explores relations between music and democratic politics. Is harmony the ideal condition of the nation-state? Is disharmony a necessary condition of democracy? Students read literary texts alongside political philosophy and listen to music as we explore how musical recordings and performances produce our understanding of the citizen-nation relationship.

CRES 112 - AsianAm Enviro Justice (5)

Explores the concept of environmental racism in a transnational framework, focusing on the shaping of Asian American and Pacific Islander communities in the United States and in the current and former territories of U.S. empire in the Pacific. Students explore environmental racism within the historical contexts of U.S. militarism and imperial warfare, empire and settler colonialism, disasters and disaster aid, and climate change refugeehood.

CRES 114 - Race and Disability in American Drama (5)

Investigates how African-American, Asian-American, and Latin-American playwrights represent and criticize the concept of race and disability in their dramas on topics from freak shows to Jim Crow laws to the Virginia Tech massacre. Students cannot receive credit for this course and LIT 151K.

CRES 116 - Race and the Pacific: U.S. and Japanese Empires in Comparative Perspective (5)

A lens on the U.S. and Japanese empires that moves beyond the limits of traditional area and ethnic studies by thinking comparatively about the racial logic of empire. Examines how the U.S. and Japanese empires as rival powers that from the early 20th century onward, have competed against and conspired with each other in Asia and the Pacific.

CRES 118 - Abolitionist Futures (5)

Grounded in local, national, and global prison abolition movements, this course explores through feminist political frameworks creative strategies that imagine and work to end all systems of domination and exploitation. Looks at California's prisoner organizing and abolition movements, along with other historic and contemporary social movements which deepen our understandings of the ways in which carceral systems are shaped by and through capitalist formations of race, gender, sexuality, and disability. Also examines strategies such as disability justice and transformative justice which demonstrate expansive and liberatory

visions of abolition, extending far beyond the prison system itself.

CRES 121 - The Struggle for K-12 Ethnic Studies (5)

Critical analysis of the movement for K-12 ethnic studies in historical and contemporary time periods with a particular focus on the Liberated Ethnic Studies Model Curriculum. Students read, discuss, and analyze past and present K-12 ethnic studies research, policy, and practice to deepen their knowledge and strengthen their ability to critique issues in K-12 ethnic studies education while reflecting on how the concepts and questions that arise relate to their own educational experiences and lives.

CRES 131 - Black Freedom Movements (5)

Examines the development of Black freedom movements ranging from resistance to slavery to contemporary movements for Black power in Jackson, Mississippi. Interdisciplinary in scope, course examines a variety of materials ranging from novels, to autobiographies, to political manifestos in order to understand fully the broad scope of Black freedom movements.

CRES 150 - Race, Gender and Algorithms (5)

Algorithms shape race and gender today, yet algorithms are older than digital media and can be understood as recipes or rituals. Course engages with the emerging field of trans of color poetics by studying readings in women of color feminism, transgender studies, and decolonial theory. Digital media art grounds the discussion, including works from queer and trans artists of color working in digital games, anti-surveillance fashion and performance art. Students create digital media projects in response to the ideas of the course, in the medium or platform of their choice, including video prototypes, web sites, Scalar books, Twine games, podcasts and/or video channels, the technical aspects of which will be covered in class.

CRES 181 - The Lynch Doctrine: From Rough Justice to Stand Your Ground (5)

Interdisciplinary course examining the history, politics, and aesthetics of lynching culture in the United States.

CRES 185A - Race, Gender, and Science (5)

Examines how science as epistemology and its accompanying practices participate in, create, and are created by understandings of race, gender, sexuality, and nation.

Prerequisite: Enrollment is restricted to critical race and ethnic studies majors. Other majors by permission.

CRES 188A - Topics in Transnational Asian American and Pacific Islander Studies (5)

Focuses on a particular topic in Asian American and Pacific Islander studies. Topics vary with each offering but might include approaching racial and ethnic

formations through a range of disciplinary and interdisciplinary perspectives, with a focus on a transnational critique of intellectual histories, political movements, cultural expressions, lived experiences and critical theories of Asian Americans and Pacific Islanders.

CRES 188B - Topics in Black Studies (5)

Focuses on a particular topic in black studies. Topics vary with each offering but might include approaching racial and ethnic formations through a range of disciplinary and interdisciplinary perspectives, with a focus on the intellectual histories, political movements, cultural expressions, lived experiences, and critical theories of peoples throughout the Black diaspora and Africa.

CRES 188S - Topics in Settler Colonial Critique (5)

Focuses on a particular topic in settler and colonial studies. Topics vary with each offering but might include examining the intersections of race and racism through a variety of disciplinary and interdisciplinary perspectives, intellectual histories, and political movements as they relate to empire, racial capitalization, colonial occupation and dispossession, mass incarceration and concepts of property and accumulation.

CRES 188T - Topics in Race, Science and Technology (5)

Focuses on a particular topic in race and science/technology. Topics vary, but focus on the history and politics of scientific inquiry and technological development within legacies and realities of racism and colonialism, including in the areas of public health, migration, labor, and reproductive rights.

CRES 188X - Topics in Critical Race and Ethnic Studies (5)

Focuses on a particular topic in critical race and ethnic studies. Topics vary with each offering but might include approaching racial and ethnic formations through a range of disciplinary and interdisciplinary perspectives, including indigenous studies, Black studies, Latinx studies, Asian American studies, queer critique, gender studies, transgender studies, performance studies, human rights studies, mixed race studies, legal studies, critical area studies, war and empire studies, environmental studies, science studies, and critical university studies.

CRES 190A - Critical Race Feminisms (5)

Focuses on key learning outcomes of humanistic research and writing: developing a method for critical race feminist analysis, identifying objects and fields of study, formulating an appropriately narrow topic and thesis, identifying and critiquing sources, and completing well-structured written argumentation. Readings offer key theoretical models in critical race and ethnic studies, feminist studies, and queer theory.

Prerequisite: Prerequisite(s): CRES 10 and CRES 100; and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to critical race and ethnic studies majors.

CRES 190B - Critical Migration Studies (5)

Focuses on critically analyzing public representations of migration. Exploring key scholarship in migration and diaspora studies, including recent writings on "border crises," students develop an individual research project exploring a controversy, archive, cultural text, or historical debate in research on a specific migrant or diasporic group. The focus is on key learning outcomes of humanistic research and writing: developing a method for studying migration attentive to critical race analysis; identifying objects and fields of study, formulating research questions, organizing an appropriately narrow thesis, identifying and critiquing sources, and completing well-structured written argumentation.

Prerequisite: Prerequisite(s): CRES 10 and CRES 100; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior critical race and ethnic studies majors.

CRES 190D - Black Geographies and the Imperative of Abolition (5)

Far from a recent development, abolitionist demands to defund the police are actually central to a 400-year legacy of Black struggle. In the wake of the 2020 Black Lives Matter uprisings that erupted in response to several high-profile police murders, this senior seminar takes an interdisciplinary look at the burgeoning field of Black geographies to help us understand the renewed urgency of these calls in our current moment by engaging with works of activism, speculative fiction, and multimedia, including videos, podcasts, music, websites, and graphics.

Prerequisite: Prerequisite(s): CRES 10 and CRES 100; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior critical race and ethnic studies majors.

CRES 190P - Trans of Color Performance and Media (5)

Trans of color poetics are emerging in media art and performance, the voice of movements for liberation from colonial systems of racialized gender, and the structures which uphold them, including the prison-industrial complex. Trans people of color, and people who exist in resistance to colonial gender constructs are responding to the ways that both popular media and academic fields such as transgender studies have focused on white, wealthy, normative transgender subjects. Seminar considers the social movements and the embodied movement of trans people of color and gender non-conforming people in media, art and performance. (Formerly Trans of Color Movements in Media, Art and Performance.)

Prerequisite: Prerequisite(s): CRES 10 and CRES 100; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior critical race and ethnic studies majors.

CRES 190S - From Slavery to Precarity: Race, Logistics and Globalization (5)

Over the past half-century, there has been a profound transformation in the way that goods are produced and moved about the world resulting in what has been referred to as the "logistics revolution". Course examines the ways in which this "revolution" in mass circulation of goods necessitates a radical thinking of race and racial politics in the context of contemporary capitalist globalization.

Prerequisite: Prerequisite(s): CRES 10 and CRES 100; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior critical race and ethnic studies majors.

CRES 190T - The War on Terror: Imperialism Past and Present (5)

Senior seminar focusing on the theoretical underpinnings of U.S. imperialism from a global perspective, from the annexation of the Philippines in 1898 to the current War on Terror. Drawing on the history of U.S. settler-colonialism and liberal empire as racial projects, the course investigates contemporary forms of racialization surrounding the Muslim as figure for foreign enemy. Utilizing a diverse range of media, course considers various theoretical texts in critical race and ethnic studies, visual studies, gender and queer studies, history, and literature.

Prerequisite: Prerequisite(s): CRES 10 and CRES 100 and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior critical race and ethnic studies majors. .

CRES 190X - Racial Capitalism (5)

Overview of the history and conceptualization of racial capitalism. Students study recent works in critical race and ethnic studies that analyze capitalism as a specifically racial phenomenon, and evaluate their contribution in a historical lens.

CRES 192 - Directed Student Teaching (5)

Teaching of a lower-division seminar by an upper-division student under faculty supervision. (See CRES 42.)

CRES 194 - Group Tutorial (5)

Group tutorial, led by a faculty member, that focuses on various problems within critical race and ethnic studies. Topics to be chosen by the instructor and undergraduate student participants. Enrollment restricted to critical race and ethnic studies majors.

CRES 199 - Tutorial (5)

Students submit a petition to the sponsoring agency.

CRES 199F - Tutorial (2)

Individual study in areas approved by sponsoring instructors. May not be counted toward upper-division major requirements. Student submits petition to sponsoring agency. Enrollment is restricted to critical race and ethnic studies majors.

Graduate

CRES 200 - Black Studies Methods (5)

Exploration of interdisciplinary research methodology—a broader set of scientific beliefs, approaches, inquiries, theories, and analytics—relevant to the study of Black communities. Students read, explore, and engage in particular methods—approaches to data collection and analyses—emphasizing various forms of ethnographic research. Course also examines other approaches to the study of Blackness, such as historical/archival, cultural studies and discursive analyses, and mixed methods.

Prerequisite: Enrollment is restricted to graduate students.

CRES 297A - Independent Study (5)

Independent study and research under faculty supervision. Students submit petition to sponsoring agency. Enrollment is restricted to graduate students.

CRSN - CARSON COLLEGE

Lower-Division

CRSN 1 - Academic Literacy and Ethos: Environment and Society (5)

Teaches foundational concepts for intellectual exploration and personal development within an academic community: analysis, critical thinking, metacognition, engagement with others across difference, and self-efficacy. Engages students in Rachel Carson's intellectual tradition of investigating relationships between environment and society.

Prerequisite: Enrollment is restricted to first-year college members.

CRSN 1A - Introduction to University Life and Learning (1)

Orientation to and exploration of the nature of the liberal arts, and of learning at research universities. Topics include: academic planning for upper-division coursework; enrollment processes; and understanding pathways to degree completion; UCSC resources that support health and well-being strategies for academic success; the cultivation of just communities; the prevention of sexual harassment and violence; campus

conduct policies; awareness of risks associated with drug and/or alcohol use; and an introduction to traditions of community-engaged learning, ground-breaking research, and interdisciplinary thinking that define a UC Santa Cruz degree. This course can be taken for Pass/No Pass grading only.

Prerequisite: Enrollment is restricted to entering first-year Rachel Carson College students.

CRSN 10 - Academic Success (2)

An interactive course providing students with the opportunity to assess and revise methods of and purposes in studying. Critical, effective approaches to reading, writing, participating in lectures and sections, taking exams, balancing competing responsibilities, and utilizing campus resources are all explored. Enrollment by permission of college adviser.

CRSN 15 - Strategies to Jump Start Your STEM Learning (2)

Introduces tips and techniques to supplement and expand a student's existing repertoire of science/mathematics problem-solving skills for science, technology, engineering, and mathematics (STEM) classes. The material covered is intended to aid development as a confident learner and future expert in the student's major.

Prerequisite: Enrollment is restricted to first-year through third-year students. Others may enroll with instructor permission.

CRSN 15A - STEM Essentials (2)

Introduces tips and techniques to supplement and expand a student's existing repertoire of science/mathematics problem-solving skills for science, technology, engineering, and mathematics (STEM) classes. The material covered is intended to aid development as a confident learner and future expert in the student's major.

CRSN 20C - The Water Environment: Literature of the Sea (2)

Students consider the representation of the sea in selected texts, noting how it becomes the focal point for the fears, hopes, and prejudices of Western civilization. Students write critical papers and their own narratives.

Prerequisite: Enrollment restricted to first-year and sophomore college members.

CRSN 20D - College Students' Lives (2)

Students understand their peers and themselves better through an exploration of issues that affect the daily life of college students. Topics include campus/student cultures, the academic system, and other critical issues. Overview of campus resources also provided.

Prerequisite: Enrollment restricted to first-year and sophomore College members.

CRSN 20F - Justice on Earth (3)

Examines issues of oppression, privilege, and social justice within a global and environmental context through self-reflective and group work. May include an optional service-learning component requiring travel during spring break.

CRSN 20G - Peregrine Falcons Return (2)

A case study of the 1970s-1990s UC Santa Cruz effort to restore a nearly extinct peregrine falcon population including reviews of the Endangered Species Act, falcon physiology, and the innovative conservation biology techniques that led to success.

CRSN 28 - Peer Leadership in Higher Education (3)

Overview of theories of student development, critical student issues, and skills needed for appropriate peer leadership interventions. Utilizes a variety of learning modes including readings, discussions, case studies, lectures, and group projects. Interview only: approval of instructor; Resident Assistant (RA) pre-employment training course.

CRSN 55 - Rachel Carson College: Service Learning Practicum (2)

Introduces service-learning theory and practice for students engaging in service-learning work in the college, college-related projects, community service organizations, or public agencies.

Prerequisite: Enrollment restricted to college members until after priority enrollment.

CRSN 56 - Media Internships for Sustainability (2)

Students develop and work on media projects related to the college theme of Environment and Society in film, on television, in print, and on the Internet. Students work in groups with specific instructors and project leaders. Enrollment by application and instructor consent.

CRSN 61 - Education for Sustainable Living Program (2)

Analyzes sustainability and its application in daily life and on campus, involving collaboration between students, faculty, staff, administration, and the community. Guest lecturers, discussions, an optional UC-wide retreat, and essays allow engagement with aspects of ecological and social sustainability.

CRSN 81C - Designing a Sustainable Future (5)

Introduces key technological solutions to environmental problems; discusses their underlying principles; and examines their societal dimensions. Topics include: conventional and renewable energy; emerging technologies for transportation, energy efficiency clean water; planetary engineering; and lean manufacturing.

Prerequisite: Prerequisite(s): CRSN 80A or CRSN 80B. Enrollment restricted to first-year and sophomore college members.

CRSN 82 - Environment and Society in Film (2)

Students write about and discuss a variety of films and articles about environment and society. Topics may include water, food systems, wilderness, wildlife, pollution, global warming, nuclear energy, conservation, and environmental activism.

Prerequisite: Enrollment restricted to college members.

CRSN 90 - Cultivating Food Justice and Sustainability (1)

Learn sustainable, ecologically sound horticulture, permaculture, and small-scale organic agricultural practices through hands-on gardening experience. This outdoor interdisciplinary course operates within a food justice framework. (Formerly Rachel Carson College Garden Internship.)

Prerequisite: Enrollment restricted to college members. Other students by permission of the instructor.

CRSN 93 - Field Study (5)**CRSN 99 - Tutorial (5)****CRSN 99F - Tutorial (2)**

Individual study for lower-division students directed by a faculty member affiliated with the college. Students submit petition to sponsoring agency.

Upper-Division**CRSN 128 - Advanced Peer Leadership Practicum (3)**

Advanced practicum for the application of skills and theoretical knowledge studied in course 28. Uses many learning modes including readings, discussions, case studies, lectures, and group projects. Prerequisite(s): CRSN 28. Enrollment by permission of instructor.

CRSN 151A - Sustainability Praxis in the Natural and Built Environment (5)

Introduces the concepts, methods, practices, and tools of the trade for conceptualizing and conducting research in sustainability praxis in the built and natural environment, and the quantitative and analytical tools required to conduct such analysis and research.

CRSN 151B - Innovation and Professionalization for Sustainability Designers, Engineers, and Entrepreneurs (5)

Teaches how to become innovators and entrepreneurs, develop projects and enterprises, and adopt professional practices. Focuses on sustainability for students in Sustainability Studies, especially in connection with students' research and interests.

CRSN 151C - Sustainability Laboratory Tools, Techniques, and Applications (3)

Introduces the concepts, skills, and strategies fundamental to the successful development of

sustainability-related projects appropriate to the Sustainability Lab. Provides access to functional and living laboratory space, equipment, professional development, and technical training.

CRSN 151S - Sustainability Field Laboratory Tools, Techniques, and Applications (5)

Introduces the concepts, skills, and strategies fundamental to the successful development of sustainability-related projects in the field, for community and ecosystem development. Provides technical and professional training in quantitative and qualitative methods for data accumulation using laboratory and field equipment for resource assessment, data analysis, and efficiency in water and energy systems.

CRSN 152 - IDEASS Laboratory Practicum (2)

Laboratory designed to advance sustainability education with real-world impact. Enables students to develop as change agents and to make valued contributions to sustainable-design projects that advance new technologies or strategies and bring about societal and environmental change.

CRSN 155 - Rachel Carson College Sustainability Internship (2)

For students undertaking sustainability-oriented service-learning work in the college (college-related projects, community service organizations, or public agencies). Students are supervised by the instructor and project supervisor, and determine the content of their internship with the instructor and supervisor.

Prerequisite: Enrollment restricted to college members or by permission of instructor.

CRSN 155S - Innovation & Sustainability for Global Impact Practicum (3)

Centered around an internship, students learn how to use design thinking and lean innovation tools to research global sustainability problems, design innovative solutions, prototype and test them, and launch them in the real world. These tools will help students initiate and develop sustainability innovation projects in companies, non-profit organizations, startups, government, and more, with the intention to make a positive impact on people and the environment. This course fulfills a requirement for the sustainability minor, and is also open to any students from other minors and majors.

CRSN 160 - Developing Leadership to Facilitate Environmental Education (5)

Prepares students to facilitate working groups for Sustainable Living (courses 61/161) during the spring quarter. The skills acquired during this course include: facilitation skills; problem-solving; syllabus planning; curriculum building; experiential learning techniques; leadership skills; cultural competence; and non-violent

communication training. Enrollment by interview only. Enrollment restricted to sophomores, juniors, and seniors.

CRSN 161 - Education for Sustainable Living Program (5)

Analyzes sustainability and its application in daily life and on campus, involving collaboration between students, faculty, staff, administration, and the community. Guest lecturers, discussions, an optional UC-wide retreat, and essays allow engagement with aspects of ecological and social sustainability.

CRSN 162 - Sustainability Internship Practicum (5)

Introduces students to sustainable practices and state, local, and UC-wide policies through projects. Matches students with UCSC staff partners to work collaboratively on projects that integrate sustainability into aspects of campus operations. Supports students to develop the competencies necessary to become effective environmental professionals through learning models including hands-on work experience; professional skills training; guest lectures; reading, and discussion; and peer-to-peer advising. In addition to project deliverables, students complete and present a portfolio of their work upon completion of their project. Enrollment limited to Sustainability Office Interns and by instructor permission; an interview, resume, and cover letter are required.

CRSN 193 - Field Study (5)

CRSN 193F - Field Study (2)

Provides for individual programs of study sponsored by the college and performed off campus. Must be sponsored by college faculty. Approval of the student's adviser and the academic preceptor is needed to enroll. May be repeated three times for credit. Students submit petition to sponsoring agency.

CRSN 195 - Senior Thesis (5)

CRSN 198 - Independent Field Study (5)

CRSN 199 - Tutorial (5)

CRSN 199F - Tutorial (2)

Individual study for upper-division students directed by a faculty member affiliated with the college. Students submit petition to sponsoring agency.

CRWN - CROWN COLLEGE

Lower-Division

CRWN 1 - Academic Literacy and Ethos: Ethical and Societal Implications of Emerging Technologies (5)

Teaches foundational concepts for intellectual exploration and personal development within an academic community: analysis, critical thinking, metacognition, engagement with others across

difference, and self-efficacy. Examines how technological revolutions happen, how they transform societies, and how these changes generate new ideological narratives.

Prerequisite: Enrollment is restricted to first-year college members.

CRWN 1A - Introduction to University Life and Learning (1)

CRWN 1A explores opportunities, expectations, and responsibilities in university life. Topics include: academic planning; general education requirements; majors and minors; campus policy; and preparation for CRWN 1A: Power & Representation. Students gain familiarity with resources for health, well-being, time management, academic success, cultivating just communities, sexual harassment and violence prevention, reflection on UCSC's principles of community, and an introduction to the living and learning tradition of Crown College. This course can be taken for Pass/No Pass grading only.

Prerequisite: Enrollment is restricted to entering first-year Crown College students.

CRWN 28 - Crown Student Leadership Development Seminar (2)

Explore leadership as it relates to student development at Crown College. Examine how values, ethics, involvement, identity, and theory affect leadership in a variety of content areas. Evaluate student's leadership strengths to determine objectives for improvement.

CRWN 31 - Crown College Student Leadership in Action Seminar (2)

Focuses on developing and establishing leadership skills and styles for new leaders at Crown College. Explores communication styles, group dynamics, community development, programming, moral development and conflict resolution concepts and strategies. Applies theory to action. Enrollment limited to college members and by permission of instructor.

CRWN 60 - The Environment on Film: Rhetoric of Ecocriticism (5)

Examines the overt as well as the subtle cinematic elements that depict, ponder, and persuade concerning issues of the environment and the role of humans regarding nature, animals, and the human-made landscape.

Prerequisite: Enrollment is restricted to college members.

CRWN 70 - Introduction to Broadcast Media: Radio (3)

S. Stoklos

Comprehensive history of noncommercial radio as a mass-communication medium. Course also serves as an introduction to UCSC's radio station KZSC-FM and

broadcasting. Through lectures, hands-on instruction, and written assignments, students learn the fundamentals of program presentation and audio production. Prerequisite(s): After completing 20 hours of orientation volunteering at KZSC, students apply to the instructor. Enrollment is by permission of the instructor. Concurrent enrollment in CRWN 70L is required.

CRWN 70L - Broadcast Production: Radio (2)

Practical application of technical and creative skills in the KZSC studios. Production of audio content and promotional materials for broadcast. Critical evaluation in a workshop setting. Assignments require original research, professional writing, and the operation of complex technology. Prerequisite(s): After completing 20 hours of orientation volunteering at KZSC, students apply to the instructor. Enrollment is by permission of the instructor. Concurrent enrollment in CRWN 70 is required.

CRWN 79 - Introduction to Social and Ethical Implications of Emerging Technologies (2)

An introduction to the theme of Crown College, "Social and Ethical Implications of Emerging Technologies". Taught in a small class format and articulated around a group project, both of which help generate sense of belonging, and is the key to the success of our transfer students. The group project will be used to introduce academic research and also strategies for effective work in groups, which is an essential skill in most fields, and of particular relevance to STEM disciplines.

CRWN 80F - Science Fictions (5)

D. Farquhar

Examines how science fictions have imagined better and worse worlds, social relations, and identities by using science and technology. Students read novels and short stories from the 19th Century to the present and discuss and debate questions of justice, freedom, difference, and identity.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing requirement.

CRWN 80J - Cyborg Society: Myths, Realities, Choices (5)

Examines content and methodologies of the emerging field of cyborgology. Includes social studies of science, anthropology, sociology, philosophy, politics, art, biology, and informatics.

CRWN 80L - Food Safety and Environmental Quality: The Complexities of a Safe Salad (5)

In recent years, outbreaks of food-borne illness have alarmed farmers and consumers alike. This course examines the complexities of ensuring food safety in the complex natural, economic, and social settings that characterize U.S. food-production systems.

CRWN 80S - Undergraduate Seminar in Science, Technology, and Society (5)

An honors seminar for first year students on selected topics that examine the relationship between science, technology, and society. Precise focus of each seminar varies and is announced by the college.

Prerequisite: Preference given to Crown College students. Enrollment is restricted to first-year and sophomore students.

CRWN 85 - Visual Perception: A Window to Brain and Behavior (5)

Investigates visual perception as an example of the correlation of brain and behavior. Uses a multidisciplinary analysis of the optical, biochemical, and neural components of the visual pathway leading to the perception of form, color, etc. Discusses the applications of neuroscience in the social sciences, the humanities, engineering, and the arts.

Prerequisite: Enrollment is restricted to students in the Crown College or Cowell College first-year honors program.

CRWN 86 - Storytelling in a Digital Age (5)

Explores theories and practices of narrative form, subjectivity, political and social engagement, and identity. Students engage with a variety of methods and approaches to communicating effectively and reaching audiences in the modern digital arena. Students develop, produce, and share several digital stories using film, photo, audio, and mixed media methods. (Formerly offered as Professional Communication in a Digital Age.)

Prerequisite: Enrollment is restricted to College Scholars Students.

CRWN 87 - Understanding and Communicating the Science Behind Global Warming (5)

Provides tools to critically assess the current debate on the implications of global warming and to communicate the issues to the public effectively. Examines how questions are framed and addressed by scientists in general and how they are framed and addressed given our current understanding of the problem of global warming based on basic physics and statistical analyses of climate data. Includes practical assignments and guest lectures by local UCSC experts.

Prerequisite: Prerequisite(s): Enrollment in the College Scholars Program.

CRWN 88 - Computational Futurology: Use of Data Analysis for Predicting Human Behavior and Activity (5)

P. Rothman

Investigates statistical and computational methods for the prediction of human activity, both at the individual and at the collective level. Students learn to evaluate

and critique famous predictions, and consider the ethical and social implications of predictive technologies. Articulated around a creative group project to integrate concepts learned in the course.

Prerequisite: Enrollment is restricted to College Scholar Students.

CRWN 89 - Workshop in Computational Biology (5)

Designed to engage students with training in areas related to computational biology. Covers basic biological, statistical, and computational concepts needed for hands-on research; training students to read primary literature and do collaborative work in an interdisciplinary setting. Enrollment restricted to students with some background in programming, math or biology and by permission of instructor.

CRWN 90 - Start-up Entrepreneurship Academy (5)

Introduction to the basics of setting up a start-up company using the Lean Launchpad/NSF I-Corps model of instruction. Students learn principles of data collection, marketing processes, and resources needed for new companies. The class is articulated around the design of a business plan, in groups of 4-5 students coached by a successful entrepreneur, and culminates in a presentation. The market research for the project involves talking to at least 5 potential customers, partners, channels and/or related experts each week.

Prerequisite: Enrollment is restricted to College Scholar Students.

CRWN 91 - Marketing for Good (5)

Service-learning class that takes students through the process of creating a marketing plan for a real client. Begins with design and marketing fundamentals and the marketing brief. Teams are formed and assigned projects with local businesses or UCSC startups. Client needs are established through interviews. After a clear understanding of the problem is established, ideation occurs with solutions developed and executed. These may include creating branding, logo design, messaging, digital storytelling (through film, website, social media campaigns), interior design, and product design specification feedback and posters.

CRWN 92 - Social and Creative Entrepreneurship (5)

Helps students discover and develop their own business idea that does the world good. Examines leadership and provides tools to research community issues and to develop sustainable business models. Guest lecturers and project mentors introduce students to business and civil leaders.

CRWN 93 - Field Study (5)

Provides for individual programs of study sponsored by the college and performed off campus. Students should review plans with an appropriate fellow of the college. A proposal should be presented to the college academic preceptor no later than the seventh week of the

preceding quarter. Credit is granted by the sponsor upon approval of the work performed. Students submit petition to sponsoring agency.

CRWN 93F - Field Study (2)

Provides for individual field study in the vicinity of the campus under the direct supervision of a faculty sponsor. Students submit petition to sponsoring agency.

CRWN 95 - GetVirtual Business Assistance (5)

Community service-oriented class provides a supervised learning experience for students who deliver real solutions to local businesses while gaining valuable practical skills and an opportunity to integrate their academic coursework with community involvement. Teams are formed and businesses assigned while students are trained to do interviews, write proposals, project-manage, design websites, and marketing campaigns. No prerequisites are required and familiarity in the following areas is preferred: the lean startup method, the business model canvas, and customer discovery. May be repeated for credit.

CRWN 96 - Digital Theater Workshop: Theorizing Culture and the Future (5)

Teaches different interpretation tools to be applied to a selection of dramatic literature in discussions. Students integrate these skills and develop their creativity through mounting a production of a play which addresses the impact of technology in society.

CRWN 97A - Foundations of Applied Ethics and Values of Emerging Technologies (2)

Provides the foundational skills for actively participating in ethical discussions on the impact of emerging technologies and opportunities. Also designed to help develop the necessary skills for hands-on skills in teamwork, problem-solving, and communication. The course will consist of readings, lectures and presentations, participation in the discussion forum, a set of written assignments, and a group project. CRWN97A coordinates with CRWN97B, an internship at CAEVET, Crown Center for Applied Ethics and Values of Emerging Technologies.

CRWN 97B - Center for Applied Ethics and Values of Emerging Technologies (CAEVET) Internship (2)

Focuses on developing students' leadership skills that builds on Crown 97A, an introductory class to applied ethics. Interns choose from a list of showcase themes and developing activities to deepen their understanding of the selected topic and reflect on how they can help enact change. These include current events discussions, the generation of content for the center's website, interviewing leaders/influencers, and proposing an action-oriented activity or program to further the mission of the center. Crown 97 provides an intellectual community to support and provide feedback for each intern. Prerequisite(s): CRWN 97A. Enrollment is by interview and permission of the instructor.

CRWN 98 - Podcasting: Digital Storytelling (2)

Course walks students through the process of creating a podcast from concept to broadcast. Students' podcasts can be based on any research project or subject that they want. Class provides students with working knowledge of current trends in audio production and includes lessons on sound gathering using professional sound gear as well as cell phones, interviewing, script writing, audio editing and developing a "radio voice." Students watch each other's progress, learning to collaborate, problem-solve and take risks together. Finally, the class also examines the media and trains students to think critically about stories they consume.

Prerequisite: Prerequisite(s): CRWN 1 or by permission of the instructor.

CRWN 99F - Tutorial (2)

Various topics to be arranged between student and instructor. Students submit petition to sponsoring agency.

Upper-Division**CRWN 123 - Examining Our Life Through Writing (5)**

Writing-intensive seminar. Based on course readings and discussions, students write reflective response papers at the end of each class and weekly papers on their own lives and what they care most about. Intense class discussions, often started by students sharing their essays. Prerequisite(s): satisfaction of the Composition 1 requirement. Admission by permission of instructor after student reads lengthy syllabus, writes application, and interviews with instructor during faculty office hours.

CRWN 185 - Career and Internship Preparation (2)

For students preparing for an internship experience or career position. Students undertake career development as a continuous lifelong process: learn techniques for an effective job search, such as preparing a resume and cover letter, interviewing and networking skills; and learn how to more clearly articulate their future educational and professional goals.

CRWN 192 - Directed Student Teaching (5)

Teaching of a lower-division seminar by an upper-division student under faculty supervision. (See CRWN 42.)

CRWN 198 - Independent Field Study (5)

Provides for college-sponsored individual study programs off campus. Approval of student's faculty sponsor and college academic provost required.

CRWN 199 - Tutorial (5)

Various topics to be arranged between student and instructor. Students submit petition to sponsoring agency.

CRWN 199F - Tutorial (2)

Various topics to be arranged between student and instructor. Students submit petition to sponsoring agency.

CSE - COMPUTER SCIENCE AND ENGINEERING**Lower-Division****CSE 3 - Personal Computer Concepts: Software and Hardware (5)**

Provides an introduction to computers. Personal computing is emphasized, and students are introduced to word processing, spreadsheets, database management, graphics, and programming. Covers fundamentals of computing and current and future uses of computer technology, PC hardware, Windows operating system, applications software, networking and the Internet, and developments in the computer industry. Designed for students with little or no experience using computers. Students cannot receive credit for this course and Computer Science 2. (Formerly Computer Engineering 3.)

CSE 5J - Introduction to Programming in Java (5)

Introduces programming in Java for students who have no prior programming experience. Students learn programming and documentation skills, as well as algorithmic problem-solving, and programming methodologies. Introduces computers, compilers, and editors. Students write small to medium-sized programs. This course and CSE 5C and CSE 5P cover similar concepts, but use different programming languages. Because CSE 5J followed by CSE 11 is a two-quarter alternative to the accelerated course CSE 12A and CSE 12L, engineering majors and students planning on continuing the programming sequence are encouraged to take CSE 5J rather than CSE 5C or CSE 5P. Students may not receive credit for CSE 5J taken concurrently or subsequently to CSE 12A, CSE 12B, or Computer Engineering 13. (Formerly CMPS 5J.)

CSE 10 - Introduction to Computer Science (5)

An overview of the theory, foundations, and practice of computer science with emphasis on what computers can and cannot do, now and in the future. Topics include algorithms and data, correctness and efficiency of algorithms, hardware, programming languages, limitations of computation, applications, and social issues. No programming skills are required as a prerequisite. Major concepts and open problems in computer science are presented without reliance on sophisticated mathematical tools. Students cannot receive credit for this course after completing CSE 15. (Formerly CMPS 10.)

CSE 12 - Computer Systems and Assembly Language

and Lab (7)

Introduction to computer systems and assembly language and how computers compute in hardware and software. Topics include digital logic, number systems, data structures, compiling/assembly process, basics of the system software, and computer architecture. Course is 7 credits with integrated laboratories illustrating concepts covered in lecture. Note that CSE 12 assumes some programming experience. Students can show programming experience by taking one of the courses listed in the prerequisite list below or by taking the CSE python Test-out Exam:

<https://undergrad.soe.ucsc.edu/cse-20-testout-exam> (Formerly CSE 12 and CSE 12L)

Prerequisite: Prerequisite(s): CSE 5J, or CSE 20, or CSE 30, or BME 160, or equivalent.

CSE 13S - Computer Systems and C Programming (7)

Focuses on C programming, command line, shell programming, editors, debuggers, source code control, and other tools. Examines basic computer systems, algorithm design, and development, data types, and program structures. Develops understanding of process model, compile-link-execute build cycle, language-machine interface, memory, and data representation. Students cannot receive credit for both CSE 13S and CSE 13E. Course is 7 credits with integrated laboratory.

Prerequisite: Prerequisite(s): CSE 12 or BME 160.

CSE 16 - Applied Discrete Mathematics (5)

Introduction to applications of discrete mathematical systems. Topics include sets, functions, relations, graphs, predicate calculus, mathematical proof methods (induction, contraposition, contradiction), counting methods (permutations, combinations), and recurrences. Examples are drawn from computer science and computer engineering. Knowledge of computer programming is useful before taking this course. Students who do not have prior programming experience are strongly recommended to take CSE 20 or CSE 30 before taking this course.

Prerequisite: Prerequisite(s): MATH 19A or MATH 19B or MATH 11B or AM 11B or AM 15B or ECON 11B.

CSE 20 - Beginning Programming in Python (5)

Provides students with Python programming skills and the ability to design programs and read Python code. Topics include data types, control flow, methods and advanced functions, built-in data structures, and introduction to OOP. No prior programming experience is required. Students may not receive credit for CSE 20 after receiving credit for CSE 30. Students with prior programming experience (especially in Python) are encouraged to take CSE Testout Exam to be evaluated for their readiness to take CSE 30 directly: <https://undergrad.soe.ucsc.edu/cse-20-testout-exam>.

CSE 30 - Programming Abstractions: Python (7)

Introduction to software development in Python focusing on structuring software in terms of objects endowed with primitive operations. Introduces concepts and techniques via a sequence of concrete case studies. Coursework consists of programming assignments and a final examination. Note that CSE 30 assumes some Python experience, students trained in a different language should self-study Python to prepare for CSE 30. See CSE Testout Exam for resources and further information.

Prerequisite: Prerequisite(s): CSE 20 or BME 160; and MATH 3 or MATH 11A or MATH 19A or AM 3 or AM 11A or ECON 11A, or a score of 400 or higher on the mathematics placement examination (MPE).

CSE 40 - Machine Learning Basics: Data Analysis and Empirical Methods (5)

Introduction to the basic mathematical concepts and programming abstractions required for modern machine learning, data science, and empirical science. The mathematical foundations include basic probability, linear algebra, and optimization. The programming abstractions include data manipulation and visualization. The principles of empirical analysis, evaluation, critique and reproducibility are emphasized. Mathematical and programming abstractions are grounded in empirical studies including data-driven evidential reasoning, predictive modeling, and causal analysis.

Prerequisite: Prerequisite(s): MATH 19B or MATH 20B, and CSE 30.

CSE 80A - Universal Access: Disability, Technology, and Society (5)

Overview of human-centered technology and of its potential for increasing the quality of life and independence of disabled individuals. A substantial portion of the course is devoted to studying physical, psychological, and psychosocial aspects of disability. Topics include: diversity and integration, legislation, accessibility, and universal design. (Formerly Computer Engineering 80A.)

CSE 80L - Social Data Analytics and Visualization (5)

Course examines: social data analytics--veracity, consistency, uncertainty, volume; statistical computation--misuse, bias, dispersion, correlation, regressions, differential scales, normal distributions, factor and cluster analysis, extrapolation, inference, simple programming; visual representations--communication, critique and design of infographics; applications--environment, energy, economics, education, empowerment. (Formerly Computer Science 80L.)

CSE 80N - Introduction to Networking and the Internet

(5)

Introduction to the evolution, technological basis, and services of the Internet, with descriptions of its underlying communications structure, routing algorithms, peer-to-peer hierarchy, reliability, and packet switching. Network security, mail, multimedia and data compression issues, HTML, and digital images. Students who have completed CSE 150 cannot receive credit for this course. (Formerly Computer Engineering 80N.)

CSE 80S - Social Networks (5)

Introduction to social networks and game theory. Topics include the structure of social networks; the world wide web; the flow of information and behavior through networks; and the principles behind modern web search and search-ad placement. (Formerly Computer Science 17.)

Prerequisite: Prerequisite(s): MATH 3 or MATH 11A; or AM 3 or AM 6 or AM 11A or AM 15A; or ECON 11A; or score on math placement exam of 300 or higher.

CSE 94 - Group Tutorial (5)

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency.

CSE 94F - Group Tutorial (2)

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency.

CSE 99 - Tutorial (5)

Students submit petition to sponsoring agency.

CSE 99F - Tutorial (2)

Students submit petition to sponsoring agency.

Upper-Division

CSE 100 - Logic Design (5)

Boolean algebra, logic minimization, finite-state machine design, sequential circuits, common logic elements, programmable logic devices, and an introduction to system level design. The electrical behavior of circuits including three state outputs, propagation delay, logic levels, and fanout.

Prerequisite: Prerequisite(s): CSE 12; previous or concurrent enrollment in CSE 100L is required.

CSE 100L - Logic Design Laboratory (2)

Laboratory sequence illustrating topics covered in course 100. Two 2-hour laboratory sessions per week. Weekly laboratory assignments which require the use of the oscilloscopes, TTL circuits, computer-aided design and simulation tools, and programmable logic.

Prerequisite: Prerequisite(s): CSE 12; previous or concurrent enrollment in CSE 100 is required.

CSE 101 - Introduction to Data Structures and Algorithms (5)

Introduction to abstract data types and basics of algorithms. Linked lists, stacks, queues, hash tables, trees, heaps, and graphs will be covered. Students will also be taught how to derive big-Oh analysis of simple algorithms. All assignments will be in C/C++. (Formerly Computer Science 101 Algorithms and Abstract Data Types.)

Prerequisite: Prerequisite(s): CSE 12 or BME 160; CSE 13E or ECE 13 or CSE 13S; and CSE 16; and CSE 30; and MATH 11B or MATH 19B or MATH 20B or AM 11B.

CSE 102 - Introduction to Analysis of Algorithms (5)

Methods for the systematic construction and mathematical analysis of algorithms. Order notation, the RAM model of computation, lower bounds, and recurrence relations are covered. The algorithm design techniques include divide-and-conquer, branch and bound, and dynamic programming. Applications to combinatorial, graph, string, and geometric algorithms. (Formerly Computer Science 102.)

Prerequisite: Prerequisite(s): CSE 101.

CSE 103 - Computational Models (5)

Various representations for regular languages, context-free grammars, normal forms, simple parsing, pumping lemmas, Turing machines, the Church-Turing thesis, intractable problems, the P-NP question. (Formerly CMPS 130.)

Prerequisite: Prerequisite(s): CSE 101.

CSE 104 - Computability and Computational Complexity (5)

Turing machines, general phase-structure grammars, the Chomsky hierarchy, recursive functions, diagonalization, the Halting problem, computability and unsolvability, computational complexity, time and space bounds, NP-completeness with emphasis on reductions between problems from various areas. (Formerly CMPS 132.)

Prerequisite: Prerequisite(s): CSE 103.

CSE 106 - Applied Graph Theory and Algorithms (5)

Basic concepts and algorithms are reviewed including trees, Eulerian and Hamiltonian graphs, and graph transversal. Algorithms are explored to solve problems in connectivity, routing, matching, and embedding of graphs. Graph theory and algorithms are developed around applications in computer engineering. (Formerly Computer Engineering 177.)

Prerequisite: Prerequisite(s): CSE 101.

CSE 107 - Probability and Statistics for Engineers (5)

Introduction to fundamental tools of stochastic analysis. Probability, conditional probability; Bayes Theorem; random variables and transforms; independence; Bernoulli trials. Statistics, inference from limited data; outcomes of repeated experiments; applications to design; assessment of relative frequency and probability; law of large numbers; precision of measurements. Elements of stochastic processes, Poisson processes; Markov chains. Students cannot receive credit for this course and Applied Mathematics and Statistics 131. (Formerly Computer Engineering 107.)

Prerequisite: Prerequisite(s): CSE 16; and AM 30 or MATH 22 or MATH 23A.

CSE 108 - Algorithmic Foundations of Cryptography (5)

Focuses on some of the foundational aspects of modern cryptography, namely, private and public key cryptography, digital signatures, pseudorandom generators and functions, message authentication codes, hash functions, and random oracles. Course also connects the formal concepts with some real-world applications, like RA, SSL, and bitcoin, exposing students to general concepts of probability theory, number theory, and rigorous proofs. (Formerly Computer Science 118.)

Prerequisite: Prerequisite(s): CSE 101. Enrollment restricted to computer engineering and computer science majors.

CSE 110A - Fundamentals of Compiler Design I (5)

An introduction to the basic techniques used in compiler design. Topics include compiler structure, symbol tables, regular expressions and languages, finite automata, lexical analysis, context-free languages, LL(1), recursive descent, LALR(1), and LR(1) parsing; and attribute grammars as a model of syntax-directed translation. Students use compiler building tools to construct a working compiler. (Formerly Computer Science 104A.)

Prerequisite: Prerequisite(s): CSE 12 and CSE 101.

CSE 110B - Fundamentals of Compiler Design II (5)

Advanced study of compiler implementation. Topics include compiler structure back end, run-time environments, storage management, garbage collection, register allocation, code generation, basic blocks, control flow, data flow, local and global optimization, interpretation, and machine-code generation. Students may not receive credit for this course and CSE 211. Taught in conjunction with CSE 211. (Formerly Computer Science 104B.)

Prerequisite: Prerequisite(s): CSE 110A.

CSE 111 - Advanced Programming (5)

An introduction to object-oriented techniques of software development including data abstraction, inheritance, polymorphism, and object-oriented design. Extensive practice using a computer to solve problems, including construction of graphical user interfaces and a multithreaded client/server applications.

Prerequisite: Prerequisite(s): CSE 15 and CSE 15L; or CSE 13S and CMPM 35; or CSE 13E and CMPM 35; or ECE 13 and CMPM 35; or CSE 101.

CSE 112 - Comparative Programming Languages (5)

Covers several programming languages and compares styles, philosophy, and design principles. Principles underlying declarative, functional, and object-oriented programming styles are studied. Students write programs emphasizing each of these techniques. (Formerly Computer Science 112.)

Prerequisite: Prerequisite(s): CSE 101.

CSE 113 - Parallel and Concurrent Programming (5)

Introduction to parallel and concurrent programming. Topics include: types of parallel computers and programming platforms; design, implementation, and optimization of programs for parallel and multicore processors; basic and advanced programming techniques; performance analysis and load balancing; and selected parallel algorithms.

Prerequisite: Prerequisite(s): CSE 12 and CSE 101. CSE 120 recommended.

CSE 114A - Foundations of Programming Languages (5)

Problem solving emphasizing recursion, data abstraction, and higher-order functions. Introduction to types and type checking, modular programming, and reasoning about program correctness. (Formerly CSE 116, Introduction to Functional Programming.)

Prerequisite: Prerequisite(s): CSE 101.

CSE 114B - Functional Programming (5)

An in-depth study of the functional style of programming and functional abstraction, including the study of applicative functors and monads, and monadic parsers. (Formerly CSE 114.)

Prerequisite: Prerequisite(s): CSE 114A. Enrollment is restricted to junior and senior computer science majors.

CSE 115A - Introduction to Software Engineering (5)

Emphasizes the characteristics of well-engineered software systems. Topics include requirements analysis and specification, design, programming, verification and validation, maintenance, and project management. Practical and research methods are studied. Imparts an understanding of the steps used to effectively develop computer software. (Formerly Computer Science 115.)

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements and CSE 101 and CSE 130.

CSE 115B - Software Design Project (5)

Students in teams specify, design, construct, test, and document a complete software system in a specialized application domain. Class time is spent in technical discussions and ongoing design reviews. A formal presentation and demonstration of each project is required. An organizational meeting will be held during the preceding quarter. Projects may be drawn from industry and campus research groups. (Formerly Computer Science 116.)

Prerequisite: Prerequisite(s): CSE 115A.

CSE 115C - Software Design Project II (5)

Continuation of CSE 116. Students work in teams to develop, test, document, and deploy a substantial software project. Teams give a formal presentation and demonstration of each project. (Formerly Computer Science 117.)

Prerequisite: Prerequisite(s): CSE 115B.

CSE 115D - Software Design Project - Accelerated (5)

Accelerated version of CSE 115B and CSE 115C. Students work in teams to develop, test, document and deploy a substantial software project. Each team gives a formal presentation and demonstration of their project. Students cannot receive credit for both CSE 115D and any part of the 115B-115C sequence.

Prerequisite: Prerequisite(s): CSE 115A.

CSE 117 - Open Source Programming (5)

Teaches the principles of open source software development. By participating in diverse projects, students experience the process of developing software in a distributed, community-centric environment. Students learn about the tools, processes, and soft skills that are essential in this context.

Prerequisite: Prerequisite(s): CSE 101; and CSE 102 or CSE 111 or CSE 115A. Enrollment restricted to School of Engineering majors.

CSE 118 - Mobile Applications (5)

Introduces programming and application development for mobile devices. Covers the Android SDK and main programming platforms available on mobile devices, methodologies for developing native applications. Students build applications and learn about different Android application components such as Activities, Services, Broadcast Receivers, and Content Providers through course assignments. Course based on emulators and SDK tools, so ownership of a cell phone/tablet is not required for the course. (Formerly CMPS 121.)

Prerequisite: Prerequisite(s): CSE 101.

CSE 119 - Software for Society (5)

Provides experience with applying computing to social issues. Case studies on multiple issues. For example: privacy, copyright, voting, education, poverty, energy, activism. Team project in which students develop software to address a pre-identified need of a global or local non-profit. (Formerly Computer Science 119.)

Prerequisite: Prerequisite(s): CSE 101.

CSE 120 - Computer Architecture (5)

Introduction to computer architecture including examples of current approaches and the effect of technology and software. Computer performance evaluation, basic combinatorial and sequential digital components, different instruction set architectures with a focus on the MIPS ISA and RISC paradigm. Evolution of CPU microarchitecture from single-cycle to multi-cycle pipelines, with overview of super-scalar, multiple-issue and VLIW. Memory system, cache, virtual memory and relationship between memory and performance. Evolution of PC system architecture. May include advanced topics, such as parallel processing, MIMD, and SIMD.

Prerequisite: Prerequisite(s): CSE 12; and CSE 13E, or CSE 13S, or ECE 13, or CSE 15 and CSE 15L. CSE 16 recommended.

CSE 121 - Embedded System Design (7)

The design and use of microprocessor-based embedded systems. Covers microprocessor and microcontroller architecture, programming techniques, bus and memory organization, DMA, timing issues, interrupts, peripheral devices, serial and parallel communication, and interfacing to analog and digital systems. (Formerly Microprocessor System Design, and formerly offered as two courses, CMPE 121 and CMPE 121L.)

Prerequisite: Prerequisite(s): CSE 12, CSE 100, CSE 100L; and CSE 13E or CSE 13S or ECE 13 or CSE 15 and CSE 15L; and ECE 101, ECE 101L, PHYS 5C and PHYS 5N.

CSE 122 - Introduction to VLSI Digital System Design (5)

Introduces very large scale integrated (VLSI) custom integrated circuits. Topics include: semiconductor manufacturing, logic families, field-effect transistors (FETs), interconnect models, simulation, and circuits. Introduces the design flow from logic design to layout with a focus on high performance and low power. Students cannot receive credit for this course and CSE 222A. (Formerly Computer Engineering 122.)

Prerequisite: Prerequisite(s): CSE 100, CSE 100L, ECE 101, and ECE 101L.

CSE 123A - Engineering Design Project I (5)

First of a two-course sequence that is the culmination of the engineering program. Students apply knowledge

and skills gained in elective track to complete a major design project. Students complete research, specification, planning, and procurement for a substantial project. Includes technical discussions, design reviews, and formal presentations; engineering design cycle, engineering teams, and professional practices. Formal technical specification of the approved project is presented to faculty.

Prerequisite: Prerequisite(s): CSE 121; previous or concurrent enrollment in CSE 185E.

CSE 123B - Engineering Design Project II (7)

Second of two-course sequence in engineering system design. Students fully implement and test system designed and specified in CSE 123A. Formal written report, oral presentation, and demonstration of successful project to review panel of engineering faculty required.

Prerequisite: Prerequisite(s): CSE 123A, and CSE 185E or CSE 185S.

CSE 125 - Logic Design with Verilog (7)

Verilog digital logic design with emphasis on ASIC and FPGA design. Students design and verify large-scale systems. Assignments and project use the Verilog Hardware Description Language with emphasis on verification and high-frequency ASIC/FPGA targets. May be taught in conjunction with CSE 225. Students cannot receive credit for both courses.

Prerequisite: Prerequisite(s): CSE 100 and CSE 100L and CSE 120.

CSE 129A - Capstone Project I (2)

First of a three-course sequence in which students apply knowledge and skills gained in elective track to complete a major design project. In this first course, students complete the specification and planning for a substantial project. Topics covered: engineering design cycle, engineering teams, and professional practices. (Formerly Computer Engineering 129A.)

Prerequisite: Prerequisite(s): previous or concurrent enrollment in courses CSE 121 and CSE 121L. Enrollment is restricted to bioengineering, biomolecular engineering and bioinformatics, computer engineering, and robotics engineering majors.

CSE 129B - Capstone Project II (5)

Second of a three-course sequence in which students apply knowledge and skills gained in elective track to complete a major design project. In this second course, students complete the research and procurement for a substantial project and a preliminary implementation. Prerequisite(s): CSE 121, CSE 121L, and CSE 129A. Previous or concurrent enrollment in CSE 185. Enrollment by permission of instructor.

CSE 129C - Capstone Project III (5)

Third of a three-course sequence in which students apply knowledge and skills gained in elective track to complete a major design project. In this third course, students work in teams to complete the project specified and advanced in the first two courses. A formal written report, oral presentation, and demonstration of the successful project to a review panel of engineering faculty is required. Prerequisite(s): CSE 129B and CSE 185. Enrollment by permission of instructor.

CSE 130 - Principles of Computer Systems Design (5)

Covers the principles governing computer-systems design and complexity; familiarity with memory, storage, and networking; concurrency and synchronization; layering (abstraction and modularity); naming; client-server and virtualized system models; and performance. Requires significant programming projects demonstrating mastery of these concepts.

Prerequisite: Prerequisite(s): CSE 12; and CSE 101, or CSE 15 and CSE 15L; and knowledge of C programming language.

CSE 132 - Computer Security (5)

Introduction to computer security (including selected topics in network security). Access control. Security in programming languages. Basic cryptography. Security protocols. (Formerly CMPS 122.)

Prerequisite: Prerequisite(s): CSE 130 or CSE 131 or permission of instructor. Enrollment restricted to School of Engineering majors.

CSE 134 - Embedded Operating Systems (5)

Detailed exploration of the internal design of an embedded operating systems kernel. Covers kernel structure and organization, device drivers, I/O systems, file systems, memory management, and security. Students complete significant programming projects that extend or modify existing operating systems. (Formerly Computer Engineering 114.)

Prerequisite: Prerequisite(s): CSE 120 and CSE 130.

CSE 138 - Distributed Systems (5)

Covers topics in distributed computing including communication, naming, synchronization, consistency and replication, fault tolerance, and security. Examples drawn from peer-to-peer systems, online gaming, the World Wide Web; other systems also used to illustrate approaches to these topics. Students implement simple distributed systems over the course of the quarter. (Formerly CMPS 128, Distributed Systems: File Sharing, Online Gaming, and More.)

Prerequisite: Prerequisite(s): CSE 130 or CSE 131.

CSE 140 - Artificial Intelligence (5)

Introduction to the contemporary concepts and techniques of artificial intelligence, including any or all

of: machine perception and inference, machine learning, optimization problems, computational methods and models of search, game playing and theorem proving. Emphasis may be on any formal method of perceiving, learning, reasoning, and problem solving which proves to be effective. This includes both symbolic and neural network approaches to artificial intelligence. Issues discussed include symbolic versus nonsymbolic methods, local versus global methods, hierarchical organization and control, and brain modeling versus engineering approaches. Lisp or Prolog may be introduced. Involves one major project or regular programming assignments. (Formerly CMPS 140.)

Prerequisite: Prerequisite(s): CSE 101.

CSE 142 - Machine Learning (5)

Introduction to machine learning algorithms and their applications. Topics include classification learning, density estimation and Bayesian learning regression, and online learning. Provides introduction to standard learning methods such as neural networks, decision trees, boosting, and nearest neighbor techniques. (Formerly CMPS 142.)

Prerequisite: Prerequisite(s): CSE 101; and AM 30, or MATH 22, or MATH 23A; and STAT 131 or CSE 107.

CSE 143 - Introduction to Natural Language Processing (5)

Introduces the theory and practice of natural language processing (NLP)--the creation of computer programs that can understand, generate, and learn natural language. Introduces the three major subfields of NLP: syntax (the structure of a sentence); semantics (the explicit meaning of a single sentence); and pragmatics (the implicit meaning of a sentence when it is used in a specific discourse). Projects focus on the techniques useful for a particular application area, alternating in different years. Project application areas include information extraction, narrative understanding, sentiment analysis, dialogue systems, and question answering. (Formerly CMPS 143.)

Prerequisite: Prerequisite(s): CSE 101, and CSE 107 or STAT 131. Python competence equivalent to CSE 30 is highly recommended.

CSE 144 - Applied Machine Learning (5)

Provides a practical and project-oriented introduction to machine learning, with an emphasis on neural networks and deep learning. Starts with a discussion of the foundational pieces of statistical inference, then introduces the basic elements of machine learning: loss functions and gradient descent. Using these, presents logistic regression, or one-layer networks, and then moves on to more complex models: deep neural networks, convolutional networks for image recognition, and recurrent networks and LSTM for temporal and sequence data. Also covers the basics of dataset preparation and visualization and the performance characterization of the models created.

Includes weekly homework and a final project that can be done in groups. (Formerly CMPS 144.)

Prerequisite: Prerequisite(s): CSE 101. Enrollment is restricted to juniors and seniors.

CSE 145 - Introduction to Data Mining (5)

Covers the techniques, algorithms, and applications of data mining, including data preprocessing, data exploration, classification, clustering, mining text, and sequential and social data. (Formerly TIM 145.)

Prerequisite: Prerequisite(s): CSE 15 and CSE 15L or CSE 30 or CSE 13S; and AM 30 or MATH 22 or MATH 23A; and STAT 5 or CSE 107 or STAT 131; and AM 10 or MATH 21; and CSE 16 or ECON 113. Enrollment restricted to juniors and seniors. Graduate students by permission of instructor.

CSE 146 - Ethics and Algorithms (5)

Provides an introduction to data-driven and algorithmic decision making, and ethical frameworks for evaluating automated systems. Emphasis on algorithmic literacy, critical analysis, and fundamental limitations of automated decision making. Covers concepts including predictive and causal modeling. Discusses bias, fairness, interpretability, privacy, and accountability. Finally, discusses notions of autonomy and algorithmic auditing.

Prerequisite: Prerequisite(s): CSE 101; and CSE 107 or STAT 131. CSE 142 and CSE 140 are recommended.

CSE 150 - Introduction to Computer Networks (7)

Addresses issues arising in organizing communications among autonomous computers. Network models and conceptual layers; Internet-working; characteristics of transmission media; switching techniques (packet switching, circuit switching, cell switching); medium access control (MAC) protocols and local area networks; error-control strategies and link-level protocols; routing algorithms for bridges and routers; congestion control mechanisms; transport protocols; application of concepts to practical wireless and wireline networks and standard protocol architectures. Lab component provides students with hands-on experience in computer networks. Students who have completed CSE 80N can take this course for credit.

Prerequisite: Prerequisite(s): CSE 16 and CSE 12; and CSE 30, or CSE 15 and CSE 15L.

CSE 151 - Advanced Computer Networks (5)

Provides an in-depth coverage of fundamental topics introduced in course 150 including routing, transport, and internetworking. Also introduces advanced concepts not covered in CSE 150 including wireless, application-layer services, security, etc. (Formerly Computer Engineering 151.)

Prerequisite: Prerequisite(s): CSE 150. Concurrent enrollment in CSE 151L is required.

CSE 151L - Advanced Computer Networks Laboratory (2)

Laboratory illustrating the concepts covered in CSE 151: provides students with hands-on experience in computer networks. (Formerly Computer Engineering 151L.)

Prerequisite: Prerequisite(s): CSE 150 and CSE 150L. Concurrent enrollment in CSE 151 is required.

CSE 152 - Principles of Computer Communication (5)

Course focuses on the design and analysis of protocols for computer communication. Topics include: the safety, liveliness, and performance of communication protocols for medium access control (MAC); link control; routing and switching; multicasting; and end-to-end transport. Students cannot receive credit for this course and CSE 250B.

Prerequisite: Prerequisite(s): CSE 107, CSE 150, and CSE 150L.

CSE 156 - Network Programming (5)

Methods and tools used for network programming. Topics include: operating system (OS) support for network protocols; inter-process communication (IPC) facilities, such as pipes, sockets, and remote procedure call (RPC); design of client and server sides of network applications; network security; and programming projects. (Formerly Computer Engineering 156.)

Prerequisite: Prerequisites: CSE 150, CSE 150L and CSE 101. Concurrent enrollment in course CSE 156L is required.

CSE 156L - Network Programming Laboratory (2)

Laboratory sequence illustrating concepts taught in CSE 156. Students learn use of network programming tools and methods via programming exercises. (Formerly Computer Engineering 156L.)

Prerequisite: Prerequisites: CSE 150, CSE 150L, and CSE 101. Concurrent enrollment in CSE 156 is required.

CSE 157 - Internet of Things (7)

Introduces the key concepts and techniques in the design of Internet of Things (IoT). Topics include dominant architectures and protocols for IoT, wireless infrastructure for IoT, hardware and software development methodologies, embedded software design for IoT, cloud software for IoT, and network and system security. Students work in teams on a project to design, prototype, and test a complete IoT system.

Prerequisite: Prerequisite(s): CSE 121 and CSE 121L and CSE 150 and CSE 150L.

CSE 160 - Introduction to Computer Graphics (7)

Introduces techniques of modeling, transformation, and rendering for computer-generated imagery. Topics:

2D/3D primitives, projections, matrix composition, and shading algorithms. Programming assignments and major project required. Students cannot receive credit for both this course and CSE 260 in quarters when they are offered concurrently. Mastery of materials in the prerequisite courses will be verified with a quiz or assignment during the first two weeks of the course. Lab component will help with gaining additional competence with a number of important software development tools, graphics libraries, and graphical user interfaces. Topics include OpenGL, WebGL, rubberbanding, picking, sliders, buttons, dialog, event handling, double buffering, lighting, shading, materials, and textures. The topic list may be updated to reflect technological changes. (Formerly Computer Science 160.)

Prerequisite: Prerequisite(s): CSE 101 and MATH 21 or AM 10.

CSE 161 - Introduction to Data Visualization (5)

Concepts and methods for data analysis, information and scientific visualization, and effective communication of technical data. Topics include: mathematical foundations; scalar, vector, and tensor field visualization; multivariate visualization; and tree and graph visualizations. Applications are drawn from social-network analysis; environmental and space science; and medical imaging. Evaluation based on examinations, programming exercises, and a project. (Formerly CMPS 161.)

Prerequisite: Prerequisite(s): CSE 160 or equivalent. Concurrent enrollment in CSE 161L is required.

CSE 161L - Data Visualization Laboratory (2)

Complements CSE 161. Students gain additional competence with a number of important software development tools and techniques. Included are Paraview, Visualization Toolkit (VTK), and Insight Toolkit (ITK). Students get hands-on experience with designing transfer functions, isosurfacing, direct volume rendering, vector-field visualization techniques, as well as methods for dealing with non-spatial data. (Formerly CMPS 161L.)

Prerequisite: Concurrent enrollment in CSE 161 is required.

CSE 162 - Advanced Computer Graphics and Animation (5)

Covers concepts and methods for modeling and rendering static and dynamic scenes. Topics include: mathematical foundations (e.g., splines and numerical integration; global illumination models; texture mapping; morphing; physically based animation; behavioral animations; and procedural animations. Evaluation based on examinations, programming exercises, and a project. (Formerly CMPS 162.)

Prerequisite: Prerequisite(s): CSE 160 or equivalent. Concurrent enrollment in CSE 162L is required.

CSE 162L - Advanced Computer Graphics and Animation Laboratory (2)

Complements CSE 162. Students gain additional competence in a hands-on computational laboratory setting. Representative examples include topics, such as interactive curve and surface design; shaders for advanced effects; crowd and behavioral animation; experiments with particle systems; facial animation; and motion and planning. (Formerly CMPS 162L.)

Prerequisite: Prerequisite(s): concurrent enrollment in CSE 162 is required.

CSE 163 - Data Programming for Visualization (5)

Presents the basics of open-source programming tools to perform data analysis and create interactive visualizations and maps for the web, data integrity and scraping, statistical computation, simple and novel visualizations, and geomapping. The examples are drawn from social science, public policy, and data journalism. (Formerly CMPS 165.)

Prerequisite: Prerequisite(s): CSE 101.

CSE 164 - Computer Vision (5)

Introduces both the basic computer vision concepts and the advanced deep learning methods for computer vision. Topics include fundamentals of image formation, camera imaging geometry, early-/mid-/high-level vision, basics of machine learning and convolutional neural networks for vision.

Prerequisite: Prerequisite(s): CSE 144.

CSE 165 - Human-Computer Interaction (5)

Theory and hands-on practice to understand what makes user interfaces usable and accessible to diverse individuals. Covers human senses and memory and their design implications, requirement solicitation, user-centered design and prototyping techniques, and expert and user evaluations. Interdisciplinary course for social science and engineering majors. Students cannot receive credit for this course and CSE 265 or DANM 231. (Formerly Computer Engineering 131.)

Prerequisite: Prerequisite(s): CSE 15.

CSE 167 - Mobile Sensing and Interaction (5)

Provides hands-on knowledge and experience with modern mobile computing platforms for sensing and interactions tasks. Students learn how to create usable applications on a sensor-laden, mobile computing platform with adequate level of user interface.

Prerequisite: Prerequisite(s): CSE 13S; or CSE 13E or ECE 13; or CSE 15 and CSE 15L; and PHYS 5A or PHYS 6A; and AM 10 or MATH 21.

CSE 168 - Introduction to Augmented Reality and

Virtual Reality (7)

Covers the concepts and methods needed to develop augmented reality (AR) and virtual reality (VR) applications. Topics include 3D modeling, graphics rendering, image compositing, occlusion handling, sensors, computer vision and image analysis, toolkits for AR, different display options, dynamics, interaction, and navigation. Prerequisite(s): CSE 160 and CSE 160L. Some knowledge of mobile platforms (e.g., CSE 118 or CSE 167) is helpful, but not required. Enrollment is by instructor permission. Enrollment is restricted to juniors and seniors. (Formerly CMPS 168.)

CSE 180 - Database Systems I (5)

Introduction to the concepts, approaches, tools, and methodology of database design. Covers the entity-relationship model, the relational model, relational algebra, relational calculus, commercial languages (such as SQL and QBE), functional dependencies, normal forms, and design theory. Other topics may include knowledge-bases, constraint databases, and alternative database models. Students that have taken and passed CSE 182 may not take CSE 180 for credit. (Formerly CMPS 180.)

Prerequisite: Prerequisite(s): CSE 101.

CSE 181 - Database Systems II (5)

Introduction to the architecture and implementation of database systems. Topics covered include data storage, tree and hash indexes, storage management, query evaluation and optimization, transaction management, concurrency control, recovery, and XML data management. (Formerly CMPS 181.)

Prerequisite: Prerequisite(s): CSE 180.

CSE 182 - Introduction to Database Management Systems (5)

Concepts, approaches, tools, and methodology of database design. Topics include the entity-relationship model; the relational data model; normal forms; commercial languages such as SQL (SQL constraints, SQL triggers, and update languages); query-by-example (QBE); XML data model, and XML query language (XQuery); as well as relational database-management support for XML and object-relational features in database-management systems. Involves a database - application development project. Students that have taken and passed CSE 180 cannot receive credit for CSE 182.

Prerequisite: Prerequisite(s): CSE 15 and CSE 15L or CSE 13E or CSE 13S or ECE 13. Course intended for non-majors; computer science majors should enroll in CSE 180.

CSE 183 - Web Applications (5)

The World-Wide Web is one of the main mechanisms by which computer applications are delivered to users. This course introduces the design of Web applications.

Students learn the main technologies involved, and build web applications as part of homework assignments and group class projects. (Formerly CMPS 183.)

Prerequisite: Prerequisite(s): CSE 15 and CSE 15L, or CMPM 35, or CSE 101.

CSE 184 - Data Wrangling and Web Scraping (5)

Python basics; data extraction from CSV, JSON, XML, Excel, PDF, encoded text files; data cleaning, finding duplicates, missing data, fuzzy matching; data exploration, joining, aggregating, separating, correlation, clustering; web scraping, APIs, scraping data from social media, open data network. (Formerly CMPS 184.)

Prerequisite: Prerequisite(s): CSE 101.

CSE 185E - Technical Writing for Computer Science and Engineering (5)

Writing by engineers and computer scientists to technical audiences. Writing exercises include: cover letter and resume for job application, tutorial writing, grant proposal, document specification, literature review, and a final technical report. Two oral presentations are also required, an in-class presentation and a poster presentation. Students also receive instruction in the use of UC library and journal database resources, and in the writing of a statement of purpose for graduate school application. Also offered as CSE 185S. (Formerly Computer Engineering 185, Technical Writing for Computer Engineers.)

Prerequisite: Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements; and CSE 12 or CSE 15 or CSE 30 or BME 160 or by permission of the instructor. Enrollment is restricted to computer engineering, bioengineering, bioinformatics, biomolecular engineering and bioinformatics, or network and digital technology majors. Crosslisted as: Prerequisite(s): CSE 101, one additional upper-division CSE course, and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to computer science majors, or by permission of the instructor. .

CSE 186 - Full Stack Web Development I (5)

Examines current uses of the World Wide Web for delivery of the sophisticated interactive applications used daily. Web applications offer several advantages over traditional, locally installable binaries including heterogeneous deployment, instantaneous access, continuous updates, and the possibility of collaboration at scale. These full stack web applications are typically more complex than their traditional counterparts, requiring the seamless integrating of numerous related technologies if end users are to have a productive experience and the system is to remain robust, performant, and secure.

Prerequisite: Prerequisite(s): CSE 15 and CSE 15L, or CSE 30, or CSE 101. Enrollment is restricted to juniors and seniors majoring in computer engineering, computer science, and computer game design.

CSE 191 - Computer Science and Technology Seminar (2)

Weekly talks by industry experts, university researchers, field practitioners, and video presentations provide an in-depth exposure to a specific or a broad area of computer science and technology. Topics include emerging ideas, opportunities, challenges, and future of the industry. (Formerly CMPS 191.)

CSE 192 - Supervised Student Teaching/Tutoring (5)

Students hold tutoring hours, run a lab, or lead discussion section in conjunction with a regularly offered course and under close supervision by the course's instructor. Weekly meetings with a regular faculty member to discuss teaching techniques, pedagogy, sensitivity to students' needs, maintaining a comfortable learning environment, and strategies for handling difficult situations. Students submit a report on their teaching experience. Enrollment by permission of instructor and restricted to sophomores, juniors, and seniors. (Formerly CMPS 192.)

CSE 192F - Supervised Student Teaching/Tutoring (2)

Students hold tutoring hours, run a lab, or lead discussion section in conjunction with a regularly offered course and under close supervision by the course's instructor. Weekly meetings with a regular faculty member to discuss teaching techniques, pedagogy, sensitivity to students' needs, maintaining a comfortable learning environment, and strategies for handling difficult situations. Students submit a report on their teaching experience. Enrollment by permission of instructor and restricted to sophomores, juniors, and seniors. (Formerly CMPS 192F.)

CSE 193 - Field Study (5)

Provides for individual programs of study with specific academic objectives carried out under the direction of a faculty member of the Computer Engineering Department and a willing sponsor at the field site using resources not normally available on campus. Credit is based on the presentation of evidence of achieving the objectives by submitting a written and oral presentation. May not be repeated for credit. Students submit petition to sponsoring agency.

CSE 193F - Field Study (2)

Provides for individual programs of study with specific academic objectives carried out under the direction of a faculty member of the Computer Engineering Department and a willing sponsor at the field site using resources not normally available on campus. Credit is based on the presentation of evidence of achieving the objectives by submitting a written and oral presentation.

May not be repeated for credit. Students submit petition to sponsoring agency.

CSE 194 - Group Tutorial (5)

A program of independent study arranged between a group of students and a faculty member. Students submit petition to sponsoring agency.

CSE 194F - Group Tutorial (2)

A program of independent study arranged between a group of students and a faculty member. Students submit petition to sponsoring agency.

CSE 195 - Senior Thesis Research (5)

Students submit petition to sponsoring agency. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Computer Engineering majors, CSE 123A or CSE 129A.

CSE 195F - Senior Thesis Research (2)

Students submit petition to sponsoring agency. Consent of instructor required. Prerequisite: CSE 123A.

CSE 198 - Individual Study or Research (5)

Students submit petition to sponsoring agency.

CSE 198F - Individual Study or Research (2)

Students submit petition to sponsoring agency.

CSE 199 - Tutorial (5)

For fourth-year students majoring in computer engineering. Students submit petition to sponsoring agency.

CSE 199F - Tutorial (2)

For fourth-year students majoring in computer engineering. Students submit petition to sponsoring agency.

Graduate

CSE 200 - Research and Teaching in Computer Science and Engineering (3)

Basic teaching techniques for teaching assistants, including responsibilities and rights of teaching assistants, resource materials, computer security, leading discussion or lab sessions, presentation techniques, maintaining class records, electronic handling of homework, and grading. The course examines research and professional training, including use of the library and online databases, technical typesetting, writing journal and conference papers, publishing in computer science and computer engineering, giving talks in seminars and conferences, and ethical issues in science and engineering. Required for all teaching assistants. Formerly CMPS 200 and CMPE 200.)

Prerequisite: Enrollment is restricted to graduate students.

CSE 201 - Analysis of Algorithms (5)

Rigorous analysis of the time and space requirements of important algorithms, including worst case, average case, and amortized analysis. Techniques include order-notation, recurrence relations, information-theoretic lower bounds, adversary arguments. Analysis of the key data structures: trees, hash tables, balanced tree schemes, priority queues, Fibonacci and binomial heaps. Algorithmic paradigms such as divide and conquer, dynamic programming, union-find with path compression, augmenting paths. Selected advanced algorithms. Introduction to NP-completeness. (Formerly Computer Science 201.)

Prerequisite: Enrollment is restricted to graduate students; undergraduate students may enroll in this course if they have completed CSE 102 or CSE 106 and have the consent of the instructor.

CSE 202 - Combinatorial Algorithms (5)

Fundamental combinatorial algorithms, graph algorithms, flow problems, matching problems, linear programming, integer programming, NP-completeness, approximation algorithms for optimization problems. (Formerly Computer Science 211.)

Prerequisite: Prerequisite(s): CSE 201.

CSE 204 - Computational Models and Complexity (5)

Finite automata and regular expressions, universal models of computation, computability and unsolvability, relations between complexity classes, hierarchy theorems, reductions, complete problems for the major complexity classes (L, NL, P, NP, PSPACE). Other topics may include complexity of counting and enumeration problems, complexity of approximation, randomized complexity classes. (Formerly Computer Science 210.)

Prerequisite: Prerequisite(s): CSE 201.

CSE 205 - Logic in Computer Science (5)

The applications and uses of formal systems to computer science. Covers the syntax and semantics of propositional logic and first-order logic, normal forms, soundness and completeness theorems, Herbrand's theorem, unification and resolution, foundations of logic programming, automated theorem proving. Other topics may include deductive databases, database query languages, nonmonotonic reasoning. (Formerly Computer Science 217.)

Prerequisite: Enrollment is restricted to graduate students.

CSE 207 - Graph Algorithms (5)

Explores graph theory and algorithms for solving problems in engineering. A review of basic graph

concepts and algorithms is followed by topics in network flow, partitioning, spectral analysis of graphs, graph isomorphism, and intractability. (Formerly Computer Engineering 277.)

Prerequisite: Prerequisite(s): CSE 101 and CSE 102; or CSE 106; or CSE 201; or equivalent. Enrollment is restricted to graduate students.

CSE 210A - Programming Languages (5)

Covers current issues in programming languages. Language topics include object oriented, concurrent, functional, and logic programming, and other programmable applications such as symbolic manipulators and simulation. (Formerly Computer Science 203.)

Prerequisite: Enrollment is restricted to graduate students; undergraduate students may enroll for this course if they have completed CSE 112 and have the consent of the instructor.

CSE 210B - Advanced Programming Languages (5)

Covers issues in the design, implementation, analysis, and specification of programming languages. Topics include formal semantics (including operational, axiomatic, and denotational semantics), advanced type systems, program analysis (including abstract interpretation and model checking), specification, and verification. (Formerly Computer Science 253.)

Prerequisite: Prerequisite(s): CSE 210A or equivalent.

CSE 211 - Compiler Design (5)

Advanced study of compiler implementation. Topics include compiler structure back end, run-time environments, storage management, garbage collection, register allocation, code generation, basic blocks, control flow, data flow, local and global optimization, interpretation, machine code generation. Students may not receive credit for this course and CSE 110B. Taught in conjunction with CSE 110B. (Formerly Computer Science 204.)

Prerequisite: Prerequisite(s): CSE 110A or equivalent. Enrollment is restricted to graduate students.

CSE 212A - Software Engineering (5)

Introduction to the general principles of software engineering. Covers current and classical topics from both practical and theoretical viewpoints. Topics include software evolution, project management, software inspections, design methods, requirements analysis and specification, software testing, maintenance, software implementation, human interfaces, and software engineering experimentation. (Formerly CMPS 276.)

Prerequisite: Enrollment is restricted to graduate students; undergraduates may enroll in this course if they have completed CSE 115A.

CSE 212B - Software Reuse and Component-Based Software Engineering (5)

Detailed study of interlocking business, organizational, and technical issues in large-scale software reuse and component-based software engineering. Topics include architecture, design for reuse, domain engineering, model-driven development, domain-specific kits, components, frameworks, software agents, generators, problem-oriented languages, library design, reuse tools, patterns, and aspects. Assumes prior exposure to software engineering topics. (Formerly Computer Science 279.)

Prerequisite: Prerequisite(s): CSE 212A or consent of instructor. Enrollment is restricted to graduate students.

CSE 214 - Principles of Database Systems (5)

Advanced course on principles of database systems. Main topics include overview of the relational data model and relational query languages; recursive queries, datalog, and fixed-points; query processing and optimization; database design, dependencies, normal forms, and the chase procedure. Additional topics may include information integration, complex objects, semistructured data, and XML. (Formerly Computer Science 277.)

Prerequisite: Prerequisite(s): CSE 201 or equivalent or consent of instructor. Enrollment is restricted to graduate students.

CSE 215 - Design and Implementation of Database Systems (5)

Advanced course in implementation techniques for database systems. For students who wish to do research in databases or to learn more about large-scale data processing. Topics include: indexing of complex data; techniques for high-volume concurrency control; query processing and optimization; database recovery; parallel database system architectures; database systems for streaming data; approximate query answering. Additional topics may include: self-managing database systems; advanced query optimization techniques; and query processing techniques for semi-structured data. (Formerly Computer Science 278.)

Prerequisite: Prerequisite(s): CSE 181 (or equivalent) or consent of instructor. Enrollment is restricted to graduate students.

CSE 216 - Formal Methods (5)

Mathematical techniques for analyzing systems to prove rigorous guarantees about their behavior. Fundamental algorithms for and advanced topics in modeling, specification, verification, correct-by-construction synthesis, and testing. Applications to hardware/software design, cybersecurity, robotics, machine learning. Course includes a final project.

Prerequisite: Prerequisite(s): CSE 103 or equivalent recommended, but not required. Enrollment is restricted

to graduate students; undergraduates may enroll by permission of instructor.

CSE 220 - Computer Architecture (5)

Provides a thorough and fundamental treatment of the art of computer architecture. Topics include concepts of von Neumann architectures, methods of evaluating CPU performance, instruction-set design and examples, compiler issues, instruction pipelining, superscalar processors, methods for reduction of branch penalty, memory hierarchies, I/O systems, floating-point arithmetic, and current issues in parallel processing. (Formerly CMPE 202.)

Prerequisite: Enrollment is restricted to graduate students; undergraduates may enroll if they have completed CSE 120 and with consent of instructor. A basic knowledge of computer architecture, similar to the content of CSE 120, is recommended.

CSE 221 - Advanced Microprocessor Design (5)

Introduction to latest advances in computer architecture. Focuses on processor core design. Topics include simultaneous multithreading, thread level speculation, trace caches, novel out-of-order mechanisms, and energy-efficient processor core designs. Final project is modification/enhancement of an out-of-order processor on an FPGA development system. (Formerly Computer Engineering 221.)

Prerequisite: Prerequisite(s): CSE 220; and CSE 125, CSE 225, or equivalent Verilog experience. Concurrent enrollment in CSE 221L is required. Enrollment restricted to graduate students.

CSE 221L - Advanced Microprocessor Design Laboratory (3)

Laboratory sequence illustrating topics covered in course 221. (Formerly Computer Engineering 221L.)

Prerequisite: Prerequisite(s): CSE 220; and CSE 125, CSE 225, or equivalent Verilog experience. Concurrent enrollment in CSE 221 is required. Enrollment restricted to graduate students.

CSE 222A - VLSI Digital System Design (5)

Advanced Very Large Scale Integrated (VLSI) custom integrated circuits. Topics include: semiconductors; field-effect transistors (FETs); circuits; and interconnect simulation, along with advanced material on manufacturability, variability, short-channel devices, and non-volatile memories. Students cannot receive credit for this course and CSE 122. (Formerly Computer Engineering 222.)

Prerequisite: Prerequisite(s): CSE 122 or equivalent.

CSE 222B - VLSI System-on-a-Chip Design (5)

Design methodologies for Application Specific Integrated Circuits (ASICs). Topics include: behavioral specification; logic synthesis; standard-cell libraries;

advanced timing analysis; and physical design automation tools. Familiarizes students with real-world tools during the design of a small system-on-a-chip project. Students are encouraged to fabricate and test their chips in an independent study. (Formerly Computer Engineering 223.)

Prerequisite: Prerequisite(s): CSE 222A or permission of instructor. Enrollment is restricted to graduate students.

CSE 225 - Introduction to ASIC Systems Design (7)

Verilog digital logic design with emphasis on ASIC and FPGA design. Students design and verify large-scale systems. Assignments and project use the Verilog Hardware Description Language with emphasis on verification and high-frequency ASIC/FPGA targets. Course may be taught in conjunction with CSE 125.

Prerequisite: Prerequisite(s): CSE 120 or CSE 220. Enrollment is restricted to graduate students; undergraduates may enroll with permission of instructor. Students with hardware background should consult instructor for permission to enroll.

CSE 226 - Advanced Parallel Processing (5)

Introduction to programming advanced parallel computer architecture. Topics may include: SIMD massively parallel processor arrays; streaming parallel coprocessors, such as graphics cards used for general-purpose processing (GPGPU); or other hybrid MIMD/SIMD architectures. Course has programming lab component, a project, and student presentation on related topics. (Formerly Computer Engineering 220.)

Prerequisite: Enrollment is restricted to graduate students; undergraduates may enroll with permission of instructor.

CSE 229 - Field-Programmable Gate Arrays Computer-Assisted Design (5)

Design methods for Field-Programmable Gate Arrays (FPGAs), including algorithms for technology mapping, routability estimation, placement, and routing. The relationship between FPGA architectures and their computer-aided design tools. Course project involves the modification and analysis of an FPGA tool. (Formerly Computer Engineering 229.)

Prerequisite: Enrollment is restricted to graduate students or by consent of instructor. CSE 100, CSE 125, CSE 222A, CSE 225, or other digital design experience recommended.

CSE 231 - Advanced Operating Systems (5)

A detailed study of the issues involved in operating systems design and implementation. Readings cover current research topics and systems of historical significance. Topics include (but are not restricted to) process and memory management, protection, security, synchronization, performance evaluation, file systems, distributed systems. (Formerly Computer Science 221.)

Prerequisite: Enrollment is restricted to graduate students; undergraduates by interview only.

CSE 232 - Distributed Systems (5)

Overview of research topics in distributed computer systems. Topics may include communication paradigms, process management, naming, synchronization and coordination, consistency and replication, fault tolerance, and security. Examples include distributed operating systems, distributed file and object systems, distributed document systems, and peer-to-peer systems. (Formerly Computer Science 232.)

Prerequisite: Enrollment is restricted to graduate students.

CSE 233 - Advanced Computer Security (5)

Overview of research topics in computer and network security. Topics may include cryptographic operations, security properties and policies, authentication and access control, attacks on computer systems and defenses against them, security in programming languages, and network protocols for security. (Formerly CMPS 223.)

Prerequisite: Enrollment is restricted to graduate students or consent of instructor.

CSE 234 - Understanding Cryptography (5)

Cryptography has become ubiquitous, from light bulbs to atomic weapons. This course provides both a comprehensive introduction to applied cryptography and an additional focus on the human issues caused by bad implementations, bad processes, and broken algorithms. Knowledge of C Programming, Linux, and Virtual machines is required. (Formerly Computer Engineering 236 and Computer Science 236.)

Prerequisite: Prerequisite(s): CSE 201. Enrollment is restricted to graduate students.

CSE 235 - Cyber-Physical Systems Security (5)

Cyber-physical systems now permeate our lives; they include autonomous vehicles, the Internet of things, and modern control of our critical infrastructure such as the power grid. Learning about the threats against these systems and the possible defenses is essential for computer security practitioners. In this course, students read and analyze the latest published research in this area, and work on projects to address new problems.

Prerequisite: Enrollment is restricted to graduate students.

CSE 237 - Storage Systems (5)

Topics include storage devices, storage architectures, local file systems, high-performance file systems, and next-generation storage devices and architectures; covers issues of performance, reliability, scalability,

robustness, and security. (Formerly Computer Science 229.)

Prerequisite: Enrollment is restricted to graduate students.

CSE 240 - Artificial Intelligence (5)

Prepares students for doing research in artificial intelligence. Major topics covered are search and heuristics, knowledge representation, planning, deduction and inference, reinforcement learning, associative pattern retrieval, and adaptive search. Discussion includes current research issues in AI problem-solving methods. Individualized projects. (Formerly Computer Science 240.)

CSE 241 - Knowledge Engineering (5)

Introduction to the acquisition, representation, and application of knowledge in expert systems. Topics include production systems, backward and forward chaining, dependency-directed backtracking, reasoning with uncertainty, certainty factors, fuzzy systems, knowledge representation (rules, frames, and semantic nets), inference engines, and metaknowledge. Discussion includes current research issues in adaptive expert systems. Involves one major project. Undergraduates may enroll in this course if they have completed CSE 140. (Formerly Computer Science 241.)

CSE 242 - Machine Learning (5)

Introduction to machine learning algorithms. Covers learning models from fields of statistical decision theory and pattern recognition, artificial intelligence, and theoretical computer science. Topics include classification learning and the Probably Approximately Correct (PAC) learning framework, density estimation and Bayesian learning, EM, regression, and online learning. Provides an introduction to standard learning methods such as neural networks, decision trees, boosting, nearest neighbor, and support vector machines. Requirements include one major experimental learning project or theoretical paper. Students may not receive credit for both this course and CSE 142. (Formerly CMPS 242.)

Prerequisite: Enrollment is restricted to graduate students in the computer science and engineering, computer engineering and computer science master's programs; and students in the following doctoral programs: computer science and engineering, computer engineering, computer science, applied mathematics, applied mathematics and statistics, biomolecular engineering and bioinformatics, electrical and computer engineering, electrical engineering, statistical science, and technology information management. Others may enroll by permission of the instructor.

CSE 243 - Data Mining (5)

Covers the principles, algorithms, and applications of data mining, including mining sequential data, structured data, stream data, text data, spatiotemporal

data, biomedical data, and other forms of complex data. Formerly TIM 245.)

Prerequisite: Enrollment is restricted to graduate students.

CSE 244A - Foundations of Deep Learning (5)

Provides foundations of deep learning algorithms and principles. Topics include neural networks, deep learning principles, deep learning architectures such as convolutional neural networks and recurrent neural networks, autoencoders, generative adversarial networks, and reinforcement learning. (CSE 244A and CSE 244B formerly offered as one course, CSE 244.)

Prerequisite: Prerequisite(s): CSE 201 and familiarity with basic machine learning concepts. Enrollment is restricted to computer science and engineering graduate students.

CSE 244B - Machine Learning for Natural Language Processing (5)

Introduction to machine learning models and algorithms for Natural Language Processing. Covers deep learning approaches and traditional machine learning models. Topics include an introduction to standard neural network learning methods such as feed-forward neural networks, recurrent neural networks, convolutional neural networks, and encoder-decoder models with applications to natural language processing problems such as utterance classification and sequence tagging. Requirements include a midterm, final, programming assignments, and a project. (CSE 244A and CSE 244B formerly offered as one course, CSE 244.)

Prerequisite: Prerequisite: CSE 244A.

CSE 245 - Computational Models of Discourse and Dialogue (5)

Focuses on classic and current theories and research topics in the computational modeling of discourse and dialogue, with applications to human-computer dialogue interactions; dialogue interaction in computer games and interactive story systems; and processing of human-to-human conversational and dialogue-like language such as e-mails. Topics vary depending on the current research of the instructor(s) and the interests of the students. Students read theoretical and technical papers from journals and conference proceedings and present class lectures. A research project is required.

Prerequisite: Enrollment is restricted to graduate students. Undergraduates may enroll with permission of instructor.

CSE 246 - Responsible Data Science (5)

Graduate course covering basics of data science literacy and data science ethics. Topics include algorithmic discrimination, fairness, interpretability, privacy, and reproducibility. Key statistical topics such as generalization, causality, curse of dimensionality, and sampling bias are covered.

Prerequisite: Enrollment is restricted to graduate students.

CSE 247 - Projects in Artificial Intelligence (5)

Overview of artificial intelligence (AI) and machine learning (ML) and principles, implementation and deployment pipeline, and approaches in solving domain-related problems. Topics covered through direct instruction, invited guest speakers, reviews of state-of-art research papers, and a team project. Students are given an opportunity to work on a quarter-long AI/ML project to be counted toward their master's degree project requirements. Enrollment is by instructor consent. Prior experience in machine learning and deep learning is required. (Formerly AI: Problem Solving and Intelligent Search.)

CSE 248 - Foundations of Data Science (5)

Examines the mathematical and algorithmic foundations of data science including high dimensional data, probabilistic inequalities, dimensionality reduction, correlation detection, streaming algorithms, and clustering. (Formerly Computer Science 218.)

Prerequisite: Prerequisite(s): CSE 201. Enrollment is restricted to graduate students.

CSE 249 - Large-Scale Web Analytics and Machine Learning (5)

Provides a systematic methodology and corresponding set of methods and analytical tools in stochastic models; reinforcement learning; stochastic (neuro-)dynamic programming; Bayesian graphical models; inference; and social networks used for web analytics and machine learning to achieve business intelligence (BI) and support research and applications in computer science, computer engineering, and electrical engineering, applied mathematics and statistics, business, management, and economics. Includes exposure to Hadoop for large-scale computation. Students should have solid background in probability equivalent to statistics, stochastic methods, calculus, (and preferably) stochastic processes and optimization, or mathematical maturity and exposure to business intelligence and algorithms. (Formerly TIM 251.)

Prerequisite: Prerequisite(s): CSE 107 or STAT 131 or permission of instructor. Enrollment is restricted to graduate students.

CSE 250A - Computer Networks (5)

Issues resulting from organizing communication among autonomous computers. Includes network models and switching techniques; medium access control protocols and local area networks; error control and retransmission strategies; routing algorithms and protocols; congestion control mechanisms and end-to-end protocols; application-level protocols; and application of concepts to wireless and wireline networks, with emphasis on the Internet. (Formerly Computer Engineering 252A.)

Prerequisite: Enrollment is restricted to graduate students.

CSE 250B - Principles of Computer Communication (5)

Focuses on the design and analysis of protocols for computer communication. Topics include: the safety, liveliness, and performance of communication protocols for medium access control (MAC); link control; routing and switching; multicasting; and end-to-end transport. Students cannot receive credit for this course and CSE 152. (Formerly CMPE 252B.)

Prerequisite: Prerequisite(s): CSE 250A. Enrollment is restricted to graduate students.

CSE 250C - High Speed Computer Networks (5)

Fiber-optic technology; fiber-optic link design; network protocol concepts; coding and error control; high-speed local area and metropolitan area networks; gigabit networks; error and congestion control; photonic networks; research topics. (Formerly Computer Engineering 254.)

Prerequisite: Prerequisite(s): CSE 250B.

CSE 253 - Network Security (5)

Fundamental mechanisms for network security and their application in widely deployed protocols. In-depth treatment of security mechanism at the data-link, network, and transport layers for both wired and wireless networks. Covers mechanisms for privacy and integrity, and methods for intrusion detection. (Formerly CMPE 253.)

Prerequisite: Prerequisite(s): CSE 250A and CSE 201. Enrollment restricted to graduate students.

CSE 257 - Wireless and Mobile Networks (5)

An interdisciplinary course on wireless communication and mobile computing. Covers the physical aspects of wireless communication but emphasizes higher protocol layers. Topics include cellular networks, packet radio and ad hoc networks, wireless transport protocols, security, and application-level issues. (Formerly Computer Engineering 257.)

Prerequisite: Prerequisite(s): CSE 250A or permission of instructor.

CSE 259 - Sensor Networks (5)

Focuses on the networking aspects of sensor networks: protocols at the various layers and how they answer the specific requirements posed by these networks (e.g., data driven, energy efficient, etc.) and their applications (monitoring, tracking, etc.). Explores how physical layer and hardware issues may influence protocol design. (Formerly Computer Engineering 259.)

Prerequisite: Prerequisite(s): CSE 250A. CSE 257 is recommended as a prerequisite.

CSE 260 - Computer Graphics (5)

Introduces current research and techniques of modeling, 2D/3D transformation, matrix composition, shading algorithms, and rendering to obtain computer-generated imagery. Programming assignments and major project required. Students cannot receive credit for both this course and CSE 160. (Formerly Computer Science 260.)

Prerequisite: Enrollment is restricted to graduate students; undergraduates by interview only.

CSE 261 - Advanced Visualization (5)

Covers advanced topics in visualization, e.g., tensor-field visualization, uncertainty visualization, information visualization. Topics vary with differing offerings of the course. Course includes lectures, exam, research paper reading/presentation, and projects. Final project is expected to be at a sufficiently advanced level for submission to a conference. Students work individually or in pairs. (Formerly Computer Science 261.)

Prerequisite: Enrollment is restricted to graduate students.

CSE 262 - Computer Animation (5)

An in-depth treatment of computer animation, including its origins in conventional animation, 2-D animation, inbetweening, motion control, morphing, graphical motion editors, animation languages, motion blur, simulation of articulated body motion, real-time animation, and special-purpose animation hardware. (Formerly Computer Science 262.)

Prerequisite: Enrollment is restricted to graduate students.

CSE 263 - Data Driven Discovery and Visualization (5)

Explores high-quality interdisciplinary research using socio-economic data and software available on the Internet, and data curation, computation, and visualization to strengthen scientific inquiry to bear on large-scale societal problems. Applications include inequality, poverty, water, energy, environment, health, education, and democracy. Enrollment restricted to graduate students. Enrollment by instructor consent. (Formerly Computer Science 263.)

CSE 264 - Computer Vision (5)

Introduces general concepts in computer vision, with an emphasis on geometric 3D reconstruction. Topics include radiometry, photometry, projective geometry, geometric camera model, epipolar geometry, stereo depth reconstruction, corner and edge features, point descriptors and matching, and optical flow. (Formerly Computer Engineering 264.)

Prerequisite: Enrollment is restricted to graduate students. Undergraduate students who are interested in enrolling should meet with the instructor first.

CSE 265 - Human-Computer Interaction (5)

Theory and hands-on practice to understand what makes user interfaces usable and accessible to diverse individuals. Covers human senses and memory and their design implications, requirement solicitation, user-centered design and prototyping techniques, and expert and user evaluations. Individual research project. Interdisciplinary course for art, social science and engineering graduate students. Students cannot receive credit for this course and CSE 165.

Prerequisite: Enrollment is restricted to graduate students.

CSE 272 - Information Retrieval (5)

Course covers major topics of information retrieval including: characteristics and representation of text, several important retrieval and ranking models, content recommendation and classification; distributed or federated search, AI semantics and dialog for information access; human factors and interfaces; and evaluation, and domain-specific applications. A research project is required. (Formerly TIM 260.)

Prerequisite: Enrollment is restricted to graduate students. Undergraduates may enroll with permission of instructor.

CSE 276 - Optimization Theory and Applications (5)

A first graduate course in optimization with an emphasis on problems arising in management and engineering applications. Objectives are to become experts in problem formulation, comfortable with software for solving these problems, and familiar with analytical methods behind these solver technologies. (Formerly TIM 206.)

Prerequisite: Prerequisite(s): calculus and linear algebra. Enrollment is restricted to graduate students.

CSE 277 - Random Process Models in Engineering (5)

A first graduate course in stochastic process modeling and analysis with an emphasis on applications in technology management, information systems design, and engineering. (Formerly TIM 207.)

Prerequisite: Enrollment is restricted to graduate students. Prerequisite: CSE 107 or other undergraduate probability course recommended.

CSE 279 - Data Mining and Business Analytics in Knowledge Services (5)

Provides students with systematic methodology and analytical tools in data and text mining and business analytics. Also provides an integrated perspective and examines use of these methods in the field of knowledge services, such as online marketing, sponsored search, health care, financial services, recommender systems, etc. Includes training in the basic elements of stochastic optimization and other algorithmic approaches, such as stochastic dynamic

programming, statistics, constrained optimization, and machine learning with exposure to software tools. These methods enable firms to achieve rapid, effective, and profitable optimization of knowledge-services management. (Formerly TIM 209.)

Prerequisite: Enrollment is restricted to graduate students. Students are expected to have undergraduate preparation in probability and statistics. Undergraduates may enroll with instructor approval.

CSE 280A - Seminar in Computer Science and Engineering (2)

Weekly seminar covering topics of current research in computer science. Enrollment by permission of instructor. (Formerly CMPS 280A, Seminar in Computer Science Research.)

CSE 280D - Seminar in Database Systems (2)

Covers advanced research topics from the recent literature in database systems and related fields. Involves presentations from UCSC students and faculty, and guest talks from researchers in industry and other academic institutions. Enrollment by permission of instructor. (Formerly 280D.)

CSE 280F - Seminar on Software Engineering (2)

Weekly seminar covering topics of current research in software engineering. (Formerly CMPS 280G.)

Prerequisite: Prerequisite(s): Enrollment is restricted to graduate students.

CSE 280G - VLSI/CAD Seminar (2)

Weekly seminar on advanced topics in VLSI and computer-aided design (CAD). Students present and discuss modern issues in semiconductor design, fabrication, and CAD. Frequent guest speakers present pertinent results from industry and academia. (Formerly Computer Engineering 280G.)

CSE 280H - Seminar in Human Computation Systems (2)

Covers advanced topics and current research in the general area of human computation. Material is drawn from several disciplines that involve or deal with human computation, including computer vision, human-computer interaction, databases, and machine learning. The course comprises presentations from faculty, enrolled students, and external visitors. (Formerly CMPS 280H.)

Prerequisite: Enrollment is restricted to graduate students.

CSE 280I - Seminar on Information Retrieval and Knowledge Management (2)

Seminar series discussing advanced topics in information retrieval and knowledge management. Current research and literature are presented during each meeting. (Formerly 280I.)

Prerequisite: Enrollment is restricted to graduate students.

CSE 280J - Seminar on Computer Graphics (2)

Weekly seminar covering topics of current research in computer graphics. Enrollment restricted to graduate students and by permission of instructor. (Formerly CMPS 280J.)

CSE 280K - Sales and Marketing for Technologists and Engineers (2)

Perspective on the theory, plus examples, and tools useful to technologists and engineers for successfully guiding and supporting sales and marketing endeavors and, thereby, ensuring funding, staffing, product appeal, positive customer relationships, and marketplace success. (Formerly TIM 280M.)

CSE 280L - Seminar on Logic in Computer Science (2)

Covers advanced research topics from the recent literature in the uses of logic in computer science with particular emphasis on the applications of logic to the representation and the management of data. Involves presentations from UCSC students and faculty, and guest talks from researchers in other academic institutions or industrial research labs. Enrollment is by permission of the instructor and is restricted to graduate students. (Formerly CMPS 280L.)

CSE 280M - Seminar on Machine Learning (2)

Weekly seminar covering topics of current interest in machine learning. Enrollment is by permission of the instructor. Enrollment is restricted to graduate students. (Formerly CMPS 280M.)

CSE 280N - Seminar on Networks (2)

Weekly seminar series covering topics of current research in networks and networked systems. Current research work and literature in these areas are discussed. Prerequisite(s): permission of instructor. Enrollment is restricted to graduate students. (Formerly Computer Engineering 280N.)

CSE 280O - Seminar in Applied Programming Languages (2)

Covers current research in language-based approaches to security, distributed systems, databases, and formal verification. Students read and present papers from academic journals and conferences.

Prerequisite: Enrollment is restricted to graduate students, or by permission of the instructor.

CSE 280P - Seminar on Parallel Processing (2)

Weekly seminar series covering topics of current research in parallel systems, architectures, and algorithms. Current research work and literature in these areas are discussed. (Formerly Computer Engineering 280P.)

Prerequisite: Enrollment is restricted to graduate students.

CSE 280S - Seminar on Computer Systems (2)

Weekly seminar series covering topics of current research in computer systems. Enrollment by permission of instructor. (Formerly CMPS 280S AND CMPE 280S.)

CSE 280T - Seminar on New Technologies (2)

Weekly seminar series in which distinguished speakers from industry, universities, and government discuss current developments in networking and computer technology. The emphasis is on open research questions that may lead to collaborative work with faculty and graduate students. (Formerly Computer Engineering 280T.)

CSE 280V - Seminar on Computer Vision (2)

Weekly graduate-level seminar series discussing advanced topics in computer vision and image analysis. Current research and literature presented during each meeting. Enrollment is by permission of the instructor. Enrollment is restricted to graduate students. (Formerly Computer Engineering 280V.)

CSE 280X - Seminar in Distributed Systems (2)

Covers advanced research topics from the recent literature in distributed systems and related fields. Involves presentations from UCSC students and faculty. Enrollment is restricted to graduate students and by permission of the instructor.

CSE 280Z - Seminar in Natural Language Processing and Dialogue (2)

Covers advanced topics and current research in natural language processing. Focuses on student presentations and seminar participation. Enrollment is restricted to graduate students. Enrollment is by permission of the instructor. (Formerly CMPS 280Z.)

CSE 285 - Technical Writing for Engineering Graduates (5)

Writing skills development for graduate engineers. Students produce a major writing project with many subtasks. Exercises includes fellowship application; mathematical and algorithmic description; use of tables and graphs; experiment description; and producing technical web sites, presentations, and posters. Enrollment is restricted to graduate students in biomolecular engineering, computer science and engineering, computer science, and electrical and computer engineering and by permission of the instructor. (Formerly CMPE 285.)

CSE 290A - Topics in Algorithms and Complexity Theory: Probabilistic Algorithms and Average Case

Analysis (5)

Graduate seminar in algorithms and complexity theory on topics from recently published research journal articles and conference proceedings. Topics vary from year to year depending on the current research of the instructor(s) and interests of students. Students read technical papers from relevant journals and conference proceedings and present class lectures. Guest lectures may supplement the student presentations. A research project and/or paper may be required. (Formerly Computer Science 290A.)

Prerequisite: Enrollment is restricted to graduate students.

CSE 290C - Advanced Topics in Machine Learning (5)

In-depth study of current research topics in machine learning. Topics vary from year to year but include multi-class learning with boosting and SUM algorithms, belief nets, independent component analysis, MCMC sampling, and advanced clustering methods. Students read and present research papers; theoretical homework in addition to a research project. (Formerly Computer Science 290C.)

Prerequisite: Prerequisite(s): CSE 242.

CSE 290D - Neural Computation (5)

An introduction to the design and analysis of neural network algorithms. Concentrates on large artificial neural networks and their applications in pattern recognition, signal processing, and forecasting and control. Topics include Hopfield and Boltzmann machines, perceptions, multilayer feed forward nets, and multilayer recurrent networks. (Formerly Computer Science 290D.)

Prerequisite: Enrollment is restricted to graduate students.

CSE 290E - Object-Oriented Programming Methodology (5)

Object-oriented programming methodology is the application of abstract-data types and polymorphism to coding solution. Topics geared to beginning thesis research in this field. (Formerly Computer Science 290E.)

Prerequisite: Prerequisite(s): CSE 201 and CSE 210A. Enrollment is restricted to graduate students.

CSE 290F - Applications of Combinatorics (5)

Combinatorial mathematics, including summation methods, working with binomial coefficients, combinatorial sequences (Fibonacci, Stirling, Eulerian, Harmonic, Bernoulli numbers), generating functions and their uses, Bernoulli processes, and other topics in discrete probability. Oriented toward problem solving, applications mainly to computer science, but also physics. (Formerly Computer Science 290F.)

Prerequisite: Prerequisite(s): CSE 16 and AM 10. Enrollment is restricted to graduate students and upper-division undergraduates.

CSE 290G - Topics in Software Engineering (5)

Research seminar on current topics in software engineering. Topics vary from year to year depending on the current research of the instructor(s) and interests of students. Students read technical papers from relevant journals and conference proceedings. Synthesis and understanding of materials is demonstrated by a required research project. (Formerly Computer Science 290G.)

Prerequisite: Prerequisite(s): CSE 212A recommended. Enrollment is restricted to graduate students; undergraduates may enroll with permission of instructor.

CSE 290H - Topics in Database Systems (5)

Focuses on current research topics in database systems. Different offerings cover different topics depending on current research of instructor(s) and the interests of students. Students read technical papers from journals and conference proceedings and present class lectures. A research project is required. (Formerly Computer Science 290H.)

Prerequisite: Prerequisite(s): CSE 180 (or equivalent) or CSE 214 or consent of instructor. Enrollment is restricted to graduate students.

CSE 290J - Advanced Topics in Computer Graphics and Visual Computing (5)

A graduate seminar in computer graphics on topics from recently published research journal articles and conference proceedings. Topics vary from year to year depending on interests of students. Primary areas of interest are likely to be scientific visualization, modeling, rendering, scattered data techniques, wavelets, and color and vision models. Students read technical papers and present class lectures. Guest lecturers supplement the student presentations. A research project is required. (Formerly Computer Science 290B.)

CSE 290K - Advanced Topics in Natural Language Processing (5)

Teaches participants about current methods and directions in active areas of Natural Language Processing research and applications. Students perform independent research and hone skills with state-of-the-art NLP tools and techniques.

Prerequisite: Enrollment is restricted to computer science and engineering, computer engineering, computer science, and technology management graduate students.

CSE 290L - Topics in Crowdsourcing and Collaboration

(5)

Explores the foundations of crowdsourcing and computer-mediated collaboration. Covers the algorithmic and statistical foundations of crowdsourcing, introducing and analyzing algorithms, and experimenting with concrete systems. Also, provides an introduction to computational systems for mediating user interaction and collaboration. (Formerly Computer Science 290L.)

Prerequisite: Enrollment is restricted to graduate students.

CSE 290M - Topics in Parallel Computation (5)

Investigates selected topics in applied parallel computation. Topics may include numerical methods, artificial intelligence and machine learning algorithms, graphics and image processing, systolic algorithms, and the interplay between hardware and algorithms. Students are encouraged to investigate and discuss the parallelization of their own research. (Formerly Computer Engineering 290M.)

Prerequisite: Enrollment is restricted to graduate students.

CSE 290N - Topics in Computer Performance (5)

Selected topics of current interest in the area of computer system performance. Subjects may include aspects of large systems, performability, computer networks, storage subsystems, and nontraditional approaches and are subject to periodic revision. (Formerly Computer Engineering 290N.)

Prerequisite: Enrollment is restricted to graduate students.

CSE 290O - Algorithmic Foundations of Convex Optimization (5)

Focuses on some of the foundational aspects of convex and its relationship to modern machine learning. Discusses positive results--how can you solve convex optimization problems--and negative ones with statements like This family of problems is too hard to be solved in reasonable time. Course is divided into three parts, each exploring a different aspect of convex optimization: 1) algorithmic frameworks; 2) Oracle complexities; 3) the power of randomness. Through this course students are exposed to general concepts of convex geometry, learning theory, and rigorous proofs. (formerly CMPS 290O.)

Prerequisite: Prerequisite(s): CSE 201 and CSE 242. Enrollment is restricted to computer engineering and computer science graduate students.

CSE 290P - Data Privacy Via Machine Learning, and Back (5)

Helps students achieve both expository knowledge and expertise in the field of data privacy. Focuses on fundamental techniques used in designing privacy-

preserving, machine-learning systems in both academia and in the industry. Students are expected to read and understand recent research papers in the topic. (Formerly Computer Science 290P.)

Prerequisite: Prerequisite(s): CSE 201 and CSE 242 or equivalent. Enrollment is restricted to graduate students.

CSE 290Q - Topics in Programming Languages (5)

Current research topics on computer programming languages. Topics vary year to year. Students read papers from current conferences and journals, and present class lectures. A research project is required. (Formerly Computer Science 290Q.)

Prerequisite: Prerequisite(s): CSE 210A. Enrollment is restricted to graduate students.

CSE 290S - Advanced Topics in Computer Systems (5)

Focuses on current research topics in computer systems. Topics vary from year to year depending on the current research of the instructor(s) and the interests of the students. Students read technical papers from current journals and conference proceedings, and present class lectures. A research project is required. (Formerly Computer Science 290S.)

Prerequisite: Prerequisite(s): CSE 231 recommended. Enrollment is restricted to graduate students; qualified undergraduates may enroll with instructor's consent.

CSE 290T - Topics in Computing for Society (5)

Current research topics on computer technology that is intentionally targeted to benefiting society. Topics vary year to year. Students read papers from current conferences and journals, and present class lectures. A research project is required. (Formerly Computer Science 290T.)

Prerequisite: Enrollment is restricted to graduate students.

CSE 290X - Cryptography and Computer Security (5)

Research seminar on encryption and related technologies. Topics include theory of codes, random sequences and generators, public key cryptosystems, private key cyphers, key exchange protocols, quantum computing and cryptography. Major project required. Prerequisite: interview with instructor. (Formerly Computer Science 290X.)

CSE 293 - Advanced Topics in Computer Science & Engineering (5)

A graduate seminar on a research topic in computer engineering which varies according to instructor. Possible topics include, but are not limited to, communication networks, data compression, special-purpose architectures, computer arithmetic, software reliability and reusability, systolic arrays. (Formerly Computer Engineering 293.)

CSE 296 - Masters Project (2)

Independent completion of a masters project under faculty supervision. Students submit petition to sponsoring agency.

CSE 297A - Individual Study or Research (5)

Independent study or research under faculty supervision. Although this course may be repeated for credit, not every degree program will accept a repeated course towards degree requirements. Students submit petition to sponsoring agency.

CSE 297B - Individual Study or Research (10)

Independent study or research under faculty supervision. Although this course may be repeated for credit, not every degree program will accept a repeated course towards degree requirements. Students submit petition to sponsoring agency.

CSE 297C - Individual Study or Research (15)

Independent study or research under faculty supervision. Although this course may be repeated for credit, not every degree program will accept a repeated course towards degree requirements. Students submit petition to sponsoring agency.

CSE 297F - Independent Study or Research (2)

Independent study or research under faculty supervision. Although this course may be repeated for credit, not every degree program will accept a repeated course toward degree requirements.

CSE 299A - Thesis Research (5)

Thesis research conducted under faculty supervision. Although the course may be repeated for credit, not every degree program will accept a repeated course towards degree requirements. Students submit petition to sponsoring agency.

CSE 299B - Thesis Research (10)

Thesis research conducted under faculty supervision. Although the course may be repeated for credit, not every degree program will accept a repeated course towards degree requirements. Students submit petition to sponsoring agency.

CSE 299C - Thesis Research (15)

Thesis research conducted under faculty supervision. Although the course may be repeated for credit, not every degree program will accept a repeated course towards degree requirements. Students submit petition to sponsoring agency.

CSE 299F - Thesis Research (2)

Independent study or research under faculty supervision. Enrollment is restricted to graduate students. Recommended for part-time students. Students submit petition to sponsoring agency.

CSP - COASTAL SCIENCE AND POLICY

Graduate

CSP 200 - Natural Sciences for Coastal Sustainability (5)

Provides a basic foundation in the natural sciences including the environment (atmosphere, land, water, sea), species populations, ecosystems and biodiversity, and their relevance to sustainability issues of the coastal zone.

Prerequisite: Prerequisite(s): concurrent enrollment in CSP 210 and CSP 220. Enrollment is restricted to graduate students in the coastal science and policy program, or by permission of the instructor.

CSP 210 - Social Sciences for Coastal Sustainability (5)

Provides a basic foundation in the social sciences, through systematic study of communities, institutions, and entire societies. Examines the relevance of sociological theory, social interactions and relationships, social inequality, and social change to sustainability issues of the coastal zone.

Prerequisite: Prerequisite(s): concurrent enrollment in CSP 200 and CSP 220. Enrollment is restricted to graduate students in the coastal science and policy program, or by permission of the instructor.

CSP 220 - Economics for Coastal Sustainability (5)

Builds a foundation of economic concepts pertaining to the environment and explores tools for environmental valuation. Investigates the role for government action related to the environment, including estimation of costs and benefits for regulations and related policies.

Prerequisite: Prerequisite(s): concurrent enrollment in CSP 200 and CSP 210. Enrollment is restricted to graduate students in the coastal science and policy program, or by permission of the instructor.

CSP 230 - Integrated Problem-Based Discussion (0)

Focusing on a series of case studies, this discussion section demonstrates means and values of integrating across the natural and social sciences and economics disciplines in developing solutions to coastal sustainability.

Prerequisite: Prerequisite(s): Concurrent enrollment in CSP 200, CSP 210, and CSP 220. Enrollment restricted to coastal science and policy graduate students.

CSP 231A - CSP Year 1 Capstone Planning & Design Fall (2)

Students learn and apply methods for designing scalable solutions to complex problems, focusing on sustainability challenges and opportunities in coastal areas. Sessions primarily involve peer-review and feedback on student progress in planning their

individual Coastal Science and Policy (CSP) capstone project. The capstone project must engage with a real-world partner(s) on a scalable opportunity for solving a critical problem in coastal areas (from land to sea). Faculty lead mini-lectures as needed. Course stresses learning-by-doing: weekly assignments have students work outside of class on steps or skills in the design process and then the student shares their work in the following class to gain peer insights. Students should expect to do the reading and a substantial assignment each week BEFORE the class session meets.

Prerequisite: Enrollment restricted to Coastal Science and Policy M.S. students; and to Ph.D. students who have declared the Coastal Science and Policy Designated Emphasis by permission.

CSP 231B - CSP Year 1 Capstone Planning & Design Winter (2)

Picks up where the fall capstone planning seminar ended. Students continue designing capstone project for pursuing a scalable solution to a complex and pressing coastal sustainability problem. Winter focus is learning and applying strategies and methods to: (a) co-create a capstone project with a non-academic partner in the government, non-governmental or private sector; and (b) develop and submit successful funding proposals for the project. Methods learned apply broadly to collaborative, solutions-oriented work that may be pursued after graduation. Weekly assignments mean working outside of class on steps or skills for co-creating and fundraising with partners and then sharing work for peer-review in class in the next week. Expect to do the reading and weekly assignments before each week's seminar session. Instructor provides separate instructions for weekly assignments.

Prerequisite: Enrollment restricted to Coastal Science and Policy M.S. students; and to Ph.D. students who have declared the Coastal Science and Policy Designated Emphasis by permission.

CSP 244 - Adaptation and Planning (5)

Introduces students to conceptual frameworks for developing solutions to coastal sustainability problems, and drawing on knowledge and skills gained in previous coastal science and policy courses to perform an integrated assessment of a coastal sustainability problem. This class is offered for Satisfactory/Unsatisfactory grading only.

Prerequisite: Enrollment restricted to coastal science and policy graduate students.

CSP 281A - Hacking for Oceans—Lean Design Methods (5)

One-quarter graduate-level class in which multidisciplinary student teams of four address problem or challenges provided by real-world sponsors or identified by student groups. Teams learn how to apply the Lean Launchpad and Lean Startup methodologies to discover and validate customer needs and to continually

build prototypes to test whether they understood the problem and solution. Weekly assignments involve working outside of class on steps or skills in the design process and then sharing it for peer-review in class. Involves reading and a substantial assignment each week before the next week's session on that topic. Course is held concurrently with an undergraduate course. Graduate students are required to submit an additional culminating report such as a funding proposal to support next steps in their team's solution, a critical analysis of the Lean Design Method, or a policy analysis regarding scalable adoption of the solution. Enrollment is by instructor consent. Application and interview in winter quarter for spring quarter course is required.

CSP 281B - Fisheries Ecology (2)

Provides overview of current topics in fisheries ecology and fisheries management. Students learn about basic ecological concepts as they apply to fisheries management systems. Specific topics include: fisheries systems, alternative management controls, history of fisheries management, whether fisheries are sustainable, fisheries-induced evolution, fisheries bioeconomics, population structure and portfolio effects, and ecosystem-based fisheries management. The course aims to provide students with an overview of topics in fisheries ecology through a combination of lectures, current literature, and case studies. Students explore controversies and hot topics in fisheries science through discussion and review of relevant literature. Enrollment is by permission of the instructor. Enrollment is intended for juniors, seniors, and graduate students in the programs of Coastal Science and Policy, Environmental Studies, Ecology and Evolutionary Biology, Ocean Sciences, and Science Communication. There are no formal prerequisites, but undergraduate students are strongly encouraged to contact the instructor regarding prior coursework.

CSP 290A - Coastal Science and Policy Capstone Project (10)

First of three independent research courses during which students work closely with partner institutions and faculty co-mentors to generate alternative, interdisciplinary-based solutions to coastal sustainability problems. Provides experience in a real-world, collaborative, problem-solving environment. This class is offered for Satisfactory/Unsatisfactory grading only.

Prerequisite: Prerequisite(s): Concurrent enrollment in CSP 291. Enrollment restricted to coastal science and policy graduate students.

CSP 290B - Coastal Science and Policy Capstone Project (10)

Second of three independent research courses during which students work closely with partner institutions and faculty co-mentors to generate alternative, interdisciplinary-based solutions to coastal

sustainability problems. Provides experience in a real-world, collaborative, problem-solving environment. Offered for Satisfactory/Unsatisfactory grading only.

Prerequisite: Prerequisite(s): Concurrent enrollment in CSP 291. Enrollment restricted to coastal science and policy graduate students.

CSP 290C - Coastal Science and Policy Capstone Project (10)

Third of three independent research courses during which students work closely with partner institutions and faculty co-mentors to generate alternative, interdisciplinary-based solutions to coastal sustainability problems. Provides experience in a real-world, collaborative, problem-solving environment. Offered for Satisfactory/Unsatisfactory grading only.

Prerequisite: Prerequisite(s): Concurrent enrollment in CSP 291. Enrollment restricted to coastal science and policy graduate students.

CSP 291 - Coastal Science and Policy Capstone Seminar (2)

Concurrent with year-long capstone project. Students share the background, challenges, and successes they experience in their capstone projects. Provides students with a broader exposure to real-world, collaborative, problem-solving of coastal sustainability issues. Offered for Satisfactory/Unsatisfactory grading only.

Prerequisite: Corequisite(s): CSP 290A, CSP 290B, or CSP 290C. Enrollment is restricted to coastal science and policy graduate students.

CSP 292 - Special Topics in Coastal Science and Policy (2)

Seminar in which students present, discuss, and gain feedback on a current special topic in the interdisciplinary arena of coastal science and policy. The special topic can involve identification of current problems, relevant research and practice, and/or design of solutions in coastal science and policy.

Prerequisite: Enrollment is restricted to graduate students.

CSP 297 - Independent Study in Coastal Science and Policy (5)

Independent study and research under faculty supervision. The student, guided by a faculty member, pursues in-depth learning about a specific coastal science and policy problem, opportunity or solution. Students submit petition to sponsoring agency. Enrollment is restricted to graduate students.

DANM - DIGITAL ARTS AND

NEW MEDIA

Upper-Division

DANM 130 - Embodiment in New Media Art (5)

Engages the topic of embodiment within new media art theory and practice. Focus is on embodiment within performance, time-based, electronic, and new media arts practice. Students produce a final paper and artistic project on the topic. Lower-division undergraduates may enroll with permission of instructor.

Prerequisite: Enrollment restricted to juniors and seniors.

DANM 132 - Literary Games: The Intersection of Writing and Play (5)

Hands-on course surveying the thriving micro-genres in the neutral zone between games and literature. Students read, play, and author stories that couldn't exist on a printed page. Interactive fiction, algorithmic poetry, and brand-new experiments.

DANM 133 - Introduction to Electronics and Physical Computing (5)

Introduces electronics using the open-source Arduino platform. Learn how to build interactive circuits through hands-on tutorials. In a workshop environment, students acquire the technical skills required to create electronic artwork. No previous experience required.

DANM 134 - Hacking for Artists: Experimenting with Digital Media (5)

Hacking is the modification, reconfiguration, and reuse of computer code or hardware to create new functionality. Course encourages a hands-on approach to digital-media creation including the basics of computer programming and hacking techniques. No programming experience required.

DANM 135 - Kinematics: Motion and Machine Art (5)

Explores the history of machines. Kinetic art is presented including: animatronic puppetry, balance mobiles, light compositions, logic and mechanical art, interactive sculpture, and resonance cymatics. Students utilize automation techniques to create art projects using a modular set of gears, linkages, cams, belts, and springs. Discussion of technological advances in the field of kinetic art and its impact on society.

DANM 136 - Mapmaking for Environmental Activism (5)

Introduces the basic principles of geographic analysis and visual communication through mapmaking. Projects focus on environmental issues, and class discusses best practices for distributing information and communicating ideas.

DANM 138 - Procession: Where Sculpture Meets

Costumes Meets Performance (5)

Teaches techniques to animate sculptures, such as wearables/body art, mobility, puppetry, sound, light, or projection. Covers building techniques and how to incorporate individual creativity in a collaborative setting to create a common theme for the procession.

DANM 140 - Introduction to 3D Printing, Laser Cutting, and More (5)

Learn to design functional objects, sculpture, and other digitally inspired forms in a variety of 3-D applications (Cinema 4-D, Maya, AutoCad, Rhino, SketchUp), then produce those models as physical objects with a variety of rapid prototyping methods including additive 3-D printing, CNC milling, vacuum forming, and laser cutting.

DANM 141 - Introduction to Soft Interaction: Fiber Arts and Reactive Technologies (5)

Students learn to create interactive artwork through the combination of fiber arts and reactive technology. Course explores electronic art that is worn or touched, and discovers new developments in eTextiles that allow for this interaction.

DANM 143 - Projects in Ecological Art (5)

By investigating topics related to water in California, students produce works of digital and new media art that engage with environmental issues and the local community.

DANM 144 - Surveillance and Digital Design (5)

How can we understand surveillance through a digital arts lens? What are the connections between surveillance and race, gender, sexuality, and class? How can we challenge oppressive surveillance policies in creative ways? In this interdisciplinary course students critically engage with the topic of surveillance by interacting with important scholarship and artworks in digital arts and surveillance studies. Knowledge on the subject deepened through class discussions, submission of written reflections, and group creative responses to the course content.

DANM 146 - Game Design in Participatory Performance (5)

Students get a grounding in the fundamentals of game design and character driven performance. Meetings focus on a combination of understanding current practice across various styles of interactivity, and practice of participatory performance culminating in a short group performance with participatory elements.

DANM 147 - Introduction to Queer Game Studies (5)

Examines writing about Queer games—both academic and non-academic—as well as contemporary Queer games. Students write an essay that synthesizes Queer theory and game studies and also answer a few short questions about each reading. A midterm draft of the

game and a final prototype are required, as well as a post-mortem as a final paper. Throughout the course, students gain experience in looking critically at pieces of digital media art, creating short video games, and reading Queer theory as well as game studies writing.

DANM 148 - Introduction to Game Prototyping (5)

Introductory course on the process of game prototyping. By playing seminal works made by oppressed creators in the industry, and performing close readings of their mechanics, students build games literacy and learn how to use free and low-cost tools to make personal, fluid work. Engages in the creation of games on a weekly basis, while thinking about the political, artistic, and cultural values the work embodies. Throughout this process, students discuss different models of prototyping, iterate on game design procedure, and reflect deeply on their finished work.

DANM 149 - Intro to Games Culture (5)

Survey course on game communities. Games are a globally entrenched medium, with communities of players gathering together both online and offline. Students map how different communities navigate status and mastery, study online fan groups, and document their interactions to gain a better understanding of the dynamics at play. Investigates how marginalized communities can be left behind in the search for mastery, and as a class students create tools for intervening in our own communities when exclusionary trends are seen.

DANM 199 - Tutorial (5)

Independent digital arts and new media research project under the guidance of a digital arts and new media faculty member or other faculty. Students submit petition to sponsoring agency. Enrollment restricted to juniors and seniors.

DANM 199F - Tutorial (2)

Independent digital arts and new media research project under the guidance of a digital arts and new media faculty member or other faculty. Students submit petition to sponsoring agency.

Graduate**DANM 201 - Recent Methods and Approaches to Digital Arts and Culture (5)**

Students examine methods and approaches to research and writing in digital art and new media, while exploring key theories concerning technology, art, and culture. Focus is on the interaction between digital technologies and socio/cultural formations.

Prerequisite: Enrollment is restricted to graduate students.

DANM 202 - Dialogues and Questions in Digital Arts

and Culture (5)

Students engage in dialogues at the intersection of theory and practice with the goal of producing a pre-thesis proposal and essay. Readings and seminar discussions inform the development of project proposals and essays, which theoretically contextualize students' work.

Prerequisite: Enrollment is restricted to graduate students.

DANM 203 - Professional Development for the Arts (5)

A professional art practices practicum that focuses on researching opportunities and developing practical strategies and skills to ensure success outside an academic environment.

Prerequisite: Enrollment is restricted to graduate students.

DANM 210 - Project Design Studio (5)

Students work on the design of individual projects by developing project proposals, budgets, proof of concept design documents and/or prototypes and exploring tools, technologies, programming languages, hardware, software, and electronics techniques relevant to their projects.

Prerequisite: Enrollment is restricted to graduate students.

DANM 211 - Critique (5)

First-year digital arts and new media graduate students are required to present work-in-progress based on the projects developed in earlier courses and during the current quarter in individual studio critiques with the instructor as well as in group critiques.

Prerequisite: Enrollment is restricted to graduate students.

DANM 212 - Thesis Proposal (0)

First-year digital art and new media graduate students work on the development and completion of their thesis-project proposal and abstract under the supervision of the program chair and their thesis committees.

Prerequisite: Enrollment is restricted to DANM students.

DANM 215 - MFA Exhibition Production (5)

Second-year digital arts and new media graduate students work with faculty curator/coordinator to develop thesis projects specifically for the group exhibition context. Students contribute to exhibition design and collateral materials while studying the unique presentation and curatorial challenges of new media.

Prerequisite: Enrollment is restricted to graduate students.

DANM 216 - Digital Bodies (5)

Explores the appearance, form, and theoretical status of the human body/political subject in online art. Focuses on representations of race and gender, family resemblances, and local communities, as well as the political and colonial metaphors of spatial interaction operating on the World Wide Web. Visual representations of bodies that take the form of avatars, advertising, robots, and anime studied in their contextual usage.

Prerequisite: Enrollment is restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor.

DANM 219 - Introduction to Electronics for Artmaking (5)

Intensive introduction to electronic devices used in artmaking, providing hands-on experience with sensors, motors, switches, gears, lights, simple circuits, microprocessors, and hardware storage devices to create kinetic and interactive works of art. Students are billed a materials fee of \$118.

Prerequisite: Enrollment is restricted to graduate students.

DANM 220 - Introduction to Programming for the Arts (5)

Covers aspects of computer programming necessary for digital art projects. Students learn to manipulate digital media using program control for installations, presentations, and the Internet. No prior programming experience required.

Prerequisite: Enrollment is restricted to graduate students.

DANM 221 - Mathematics and the Arts (5)

Examines the role of mathematics in the arts since the computer revolution with an emphasis on chaos, fractals, and symmetry. Covers abstract animation and algorithmic music, including the history of leading innovators and techniques from 1950 to the present. Student projects explore the creative process today using cutting-edge technologies.

Prerequisite: Enrollment is restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor.

DANM 227 - Projected Light in Performance (5)

Exploration of projected light in performance and art. The history of lighting as art is covered in a hands-on demystifying format from the shadow of a bare light bulb to the latest in automated and projection equipment and techniques.

Prerequisite: Enrollment is restricted to graduate students. Juniors and seniors may enroll with permission of instructor.

DANM 233 - The Object as Interface (5)

Combination theory and studio-based exploration into the role of the object in real and virtual space. Provides a broad conceptual and theoretical examination of issues relating to object-making on a physical and dematerialized plane.

Prerequisite: Enrollment is restricted to graduate students.

DANM 241B - Modern Art: Cubism to Pop (5)

A history of the visual arts from the 1910s to the 1960s beginning in Europe and moving to the United States. Follows key movements of modern art while emphasizing the social, political, and philosophical events that inform it. Students cannot receive credit for this course and HAVC 141B.

Prerequisite: Enrollment is restricted to graduate students in digital arts new media, film, music, social documentation, theater, or visual studies.

DANM 250A - Collaborative Research Project Group: Art and Science (5)

Three-quarter, collaborative-research, project group encompasses a range of faculty-initiated projects that investigate new methods in art and science collaboration to solve real-world problems and produce outcomes of substantial artistic and scientific value.

Prerequisite: Enrollment is restricted to graduate students.

DANM 250B - Collaborative Research Project Group: Socially Engaged Art (5)

Three-quarter, collaborative-research, project group encompasses a range of faculty-initiated projects that join digital methods with community-media activism to facilitate a culture of participation and social engagement.

Prerequisite: Enrollment is restricted to graduate students.

DANM 250C - Collaborative Research Project Group: Performance and Embodiment (5)

Three-quarter, collaborative-research, project group encompasses a range of faculty-initiated projects that investigate performance and embodied experience as profound sources of understanding and communication, pushing the limits of human identity, affect, empathy, and expression.

Prerequisite: Enrollment is restricted to graduate students.

DANM 250E - Collaborative Research Project Group:

Experimental Play (5)

Three-quarter, collaborative-research, project group encompasses a range of faculty-initiated projects that investigate computer games and related forms to engage audiences, make arguments, tell stories, and shape social space through creation of new games and through reading and playing related works.

Prerequisite: Enrollment is restricted to graduate students.

DANM 250F - Film, Moving Image Installation, and Curatorial Lab (5)

Workshop investigating moving and still images to create visual and sonic languages for production, exhibition and installation. Core faculty Mark Nash and Isaac Julien invite students to participate in ongoing projects as well as present and discuss their own work. Established artists, film makers and curators are also invited to present their work to the group. (Formerly offered as Research Group: Isaac Julien Studio Lab.)

Prerequisite: Enrollment is restricted to graduate students. Crosslisted as: Enrollment is restricted to graduate students.

DANM 250G - Research Group: Isaac Julien Studio Lab - London Quarter (15)

Research group course focusing on research and production of Isaac Julien's and Mark Nash's moving image and curatorial projects. Course takes place in the Isaac Julien Studio in London. Students encouraged to develop and prototype their own projects and thesis work. Course includes case studies, workshops, guest speakers, seminar discussions, and site visits. Outside of class students work on independent projects, as well as projects in the Isaac Julien Lab alongside staff. Enrollment is by instructor permission and open to DANM graduate students and graduate and Ph.D. students in other project groups or programs upon application.

DANM 250I - Interdisciplinary Arts Production Lab (5)

The IAPL is open to musicians, visual artists, programmers, designers, writers, dancers, actors, or artists of any discipline. The course/lab addresses various topics regarding interdisciplinary, cross-cultural, and multimedia practices, including performance practices, collaborative art-making, improvisation and listening, music and video performance software, networked performance, distribution, and online broadcasting. Each Interdisciplinary Arts Production Lab series involves the creation and development of special project and artworks that are presented either at the end of the term or at the conclusion of the academic year.

DANM 254I - Empirical Approaches to Art Information

(5)

Reading and practice in empirical methods, as applied to the study of music, visual art, multimedia production, and performance arts. Topics include semiotics, critiques of empiricism, cultural determinants and contingents of perception, the psychophysics of information, sensory perception (visual and auditory), memory, pattern recognition, and awareness. Students apply existing knowledge in the cognitive sciences to a developing creative project, or develop and conduct new experiments.

Prerequisite: Enrollment is restricted to graduate students.

DANM 280 - Seminar in Digital Arts and New Media (5)

Weekly seminar covering topics of current research in digital arts and new media. Focuses on student presentations and seminar participation.

Prerequisite: Enrollment is restricted to graduate students.

DANM 281 - Special Topics in Digital Arts and New Media (5)

This hybrid theory/practice course examines the social implications of emerging technologies and cultural practices, with a focus on how artists and other producers engage with them in a critical manner that reveals their inner logics and/or deploys them for alternative purposes.

Prerequisite: Enrollment is restricted to graduate students; juniors and seniors may enroll by permission of the instructor.

DANM 297 - Independent Study (5)

Independent digital arts and new media research project under the guidance of a digital arts and new media faculty member or other faculty with approval of adviser. Project includes readings, research, and a written report. Students submit petition to sponsoring agency. Enrollment is restricted to graduate students. Maximum 10 credits.

DANM 297G - Independent Study (3)

Independent digital arts and new media research project under the guidance of a digital arts and new media faculty member or other faculty with approval of adviser. Students submit petition to sponsoring agency. Enrollment is restricted to graduate students. May be repeated for a maximum 6 credits.

DANM 299 - Thesis Research (5)

Students carry out a master's of fine arts thesis in digital arts and new media research, under the guidance of a thesis committee. The thesis will be an arts project with digital documentation accompanied by a written paper discussing the student's preparatory research as well as

the theoretical significance of the project. Enrollment is restricted to graduate students. Maximum 10 credits.

EART - EARTH SCIENCES

Lower-Division

EART 1 - Oceanography (5)

An introduction to the physical environment of the ocean. Origin and evolution of ocean basins; sea-floor morphology; origin, distribution, historical record, and economic significance of marine sediments; ocean currents, waves, tides, and changing sea level; beaches, shorelines, and coastal processes; marine resources, pollution, and human impacts on the oceans. Students may also enroll in and receive credit for OCEA 1.

EART 2 - Earth Catastrophes (5)

The role of catastrophic processes in shaping Earth and the environment in which we live. The physical processes causing earthquakes, volcanic eruptions, tsunamis, floods, windstorms, landslides, and meteorite impacts will be described, along with the role played by these rapid processes in the geological and biological evolution of the planet. Interdisciplinary approaches to understanding these phenomena will be discussed. The entire time scale from formation of the universe to the present Earth system will be considered.

EART 3 - Geology of National Parks (5)

Geologic concepts and processes responsible for shaping our national parks including mountain building, volcanic and earthquake activity, sedimentation, weathering, erosion, and glaciation. An understanding of how geology impacts our lives is emphasized. Appropriate for both science and non-science majors who wish to enhance their knowledge, enjoyment, and appreciation of our national parks.

EART 5 - California Geology (5)

An introduction to physical geology emphasizing the minerals, rocks, volcanoes, mountains, faults, and earthquakes of California. In-class field trips to study the caves, rocks, and landforms of the campus and the Monterey Bay area. Discussion-1 hour. Concurrent enrollment in EART 5L is required for majors and minors.

EART 5L - California Geology Laboratory (1)

Laboratory sequence illustrating topics covered in course 5 with particular emphasis on rock and mineral identification and map interpretation. Field trip. Laboratory three hours.

EART 7 - The History of Life (5)

An examination of the major events in the history of life, from the origin of life approximately four billion years ago, to the wave of extinctions that has decimated

plants and animals around the globe over the past 30,000 years.

EART 8 - Planetary Discovery (5)

A sweeping tour of planets, satellites, and small bodies in and out of the solar system. Focuses on major scientific results from telescopes and spacecraft missions. Topics include planetary system architecture, planetary atmosphere, surface and interior, planetary formation and evolution, astrobiology, extra-solar planets. Open to all students.

EART 10 - Geologic Principles (5)

Introduction to the scientific study of Earth, the materials composing it, and the processes shaping it. Topics include minerals and rocks, Earth's internal structure, plate tectonics, earthquakes and volcanoes, oceans and the atmosphere, the formation of landscapes and global change. A one-day, optional field trip is included. Concurrent enrollment in EART 10L is required for majors and minors.

EART 10L - Geologic Principles Laboratory (1)

Laboratory sequence illustrating topics covered in course 10, with particular emphasis on rock and mineral identification and map interpretation. Laboratory 3 hours. In-lab field trips.

EART 11 - Earthquakes (5)

Causes and effects of earthquakes. How do we measure, mitigate, and try to predict earthquakes? Plate motion, frictional faulting, earthquake triggering, wave propagation, earthquake damage, related hazards, and other social effects. Hazard reduction through earthquake forecasting and earthquake-resistant design. Class includes one full day weekend field trip to local faults. Advanced algebra and high school geometry recommended.

EART 12 - Introduction to Weather and Climate (5)

Many meteorological phenomena are familiar to us: clouds, fog, rain, snow, wind, lightning, and severe storms. Climate is the sum of weather over long periods and is changing (e.g., greenhouse warming, ozone depletion, urban smog) due to mankind's activities. Conceptual understanding of how and why the present-day atmosphere behaves as it does and how this may change in the future is the primary goal of this course.

EART 15 - Science as a Colonial Practice (5)

Critical examination of the relationship between colonialism and science from the 19th century to today. Reexamines stories on the history of science through a critical feminist and postcolonial framework. In particular, students focus on the role of science in creating ideas of racial categories and hierarchies; ideas that were used to justify colonialist and imperialist endeavors. Ultimately, course turns to decolonizing methods in science, exploring modes of resistance to dominant scientific narratives.

EART 20 - Environmental Geology (5)

Introduction to aspects of geology which affect and are affected by humans. Addresses a broad range of topics including resource management, geologic hazards, air and water issues, population and land use, energy costs and effectiveness, and global change, all from a unique geological/environmental perspective. Lectures include strategies for mitigating these issues. Includes a one-day field trip. Concurrent enrollment in 20L required for majors and minors.

EART 20L - Environmental Geology Laboratory (1)

Laboratory sequence illustrating topics covered in course 20, with emphasis on rock and mineral identification, geologic hazard assessment, geologic resource management, and land use planning. In-lab field trip. Laboratory 3 hours.

EART 30 - Water in the Environment (5)

Broadly explores how components of the water cycle (precipitation, evapotranspiration, streamflow, groundwater) influence the structure of different environments as well as the communities, cultures, and people within these environments.

EART 32 - The Science of Cooking (5)

Investigates principles of physics and chemistry as they apply to cooking. Students cook different dishes weekly to both illustrate these principles and to understand how ingredients, technique, and science intersect to make the food that is eaten all around the world. By the end of the course, students will have made recipes that represent a diversity of global cooking traditions. Access to a kitchen and basic cooking equipment is required, and rudimentary cooking skills and kitchen safety knowledge are assumed.

EART 66 - Natural History of Dinosaurs (5)

Explores the origin, evolution, and extinction of dinosaurs with emphasis on paleobiology and paleoecology. Covers fundamental paleontological and evolutionary principles, dinosaur anatomy and behavior, the hot-blooded/cold-blooded debate, dinosaur-bird relationships, diversity, and exploits of the great dinosaur hunters. One and a half hour of discussion each week. (Formerly EART 65.)

EART 96 - Earth Sciences Orientation (2)

Practical, evidence-based strategies for maximizing learning, developing a sense of belonging, and building your identity in Earth and planetary sciences studies. This course can be taken for Pass/No Pass grading only. (Formerly Academic Success Skills.)

Prerequisite: Enrollment is restricted to first-year proposed Earth sciences majors.

EART 98 - Earth Sciences Internship (5)

A supervised learning experience involving practical application of lower division Earth sciences knowledge while working with approved companies, governmental agencies, or research organizations. Students consult weekly with supervising faculty and prepare a final report of their work, to be evaluated both by the sponsoring agency and the faculty supervisor. Consult sponsoring agency for enrollment criteria; after instruction on resume preparation and interview skills, student must interview and be selected for internship by approved sponsoring organizations.

EART 99 - Tutorial (5)

Students submit petition to sponsoring agency.

Upper-Division**EART 100 - Vertebrate Paleontology (5)**

Introduction to vertebrate history, with an emphasis on vertebrate relationships and the co-evolution of organisms and environments. Specific topics include vertebrate origins, systematics and classification, adaptive revolutions, mass extinctions, and the rise and fall of dinosaurs.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements and EART 5 or EART 10 or EART 20 or BIOE 20C, or ANTH 1. Concurrent enrollment in EART 100L is required.

EART 100L - Vertebrate Paleontology Laboratory (2)

Comparative anatomy and functional morphology of vertebrates, and preservation of vertebrate hard parts, using modern and fossil specimens. Laboratory three hours and one 1-day field trip.

Prerequisite: Concurrent enrollment in EART 100 is required.

EART 101 - Invertebrate Paleobiology (5)

An introduction to paleobiology; the use of fossil evidence to pose and solve evolutionary and geologic questions.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements and EART 5 or EART 10 or EART 20 or BIOE 20C or ANTH 1. Concurrent enrollment in EART 101L is required.

EART 101L - Invertebrate Paleobiology Laboratory (1)

Systematics, ecology, and evolutionary history of the major groups of fossil-forming animals. Laboratory 3 hours and one 1-day field trip.

Prerequisite: Concurrent enrollment in EART 101 is required.

EART 102 - Marine Geology (5)

Geology of the marine environment. Topics include controls on the types, origin, and distribution of marine sediments; geology of oceanic crust; evolution of continental margins and plate boundaries; introduction to paleoceanography. Discussion: 1 hour. Students cannot receive credit for this course and OCEA 280.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and EART 5 or EART 10 or EART 20 or BIOE 20C.

EART 104 - Geologic Hazards (5)

The recognition, evaluation, and mitigation of geologic hazards: earthquakes and faulting, tsunamis, volcanism, landslides and mass movements, and flooding.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and EART 10 and EART 10L; or EART 5 and EART 5L; or EART 20 and EART 20L.

EART 105 - Coastal Geology (5)

An investigation of the evolution, morphology, and processes in the coastal zone including the terrestrial (marine terraces, dunes, estuaries, sea cliffs) and marine (beaches, continental shelves, sea level changes, shoreline erosion and protection, waves, tides) components and their interaction. Laboratory: 3 hours.

Prerequisite: Prerequisite(s): EART 5 or EART 10 or EART 20.

EART 106 - Coasts in Crisis (5)

Comprehensive assessment of the impacts that the human population is having on the coastal zone globally and the diverse ways in which geologic processes and coastal hazards impact human settlement and development in the coastal zone.

EART 107 - Remote Sensing of the Environment (5)

Introduction to geographic information systems (GIS) and remote sensing (RS) as valuable tools in the study of geology. Covers application of GIS/RS to study of surface processes, including landslides, hydrologic basins, coastal erosion, modern floods, volcanic activity and surface deformation.

Prerequisite: Prerequisite(s): EART 5 or EART 10 or EART 20.

EART 109 - Elements of Field Geology (5)

Basic tools and techniques used in geologic fieldwork. Preparation, analysis, and interpretation of geologic maps. Nine to 10 days of weekend field trips required, including a six-day geologic mapping exercise. Laboratory: 3 hours. Recommended for courses EART 120, EART 130, EART 150, and required for EART188A-EART 188B. May not be taken concurrently with EART 120, EART 150, or EART 188.

Prerequisite: Prerequisite(s): Satisfaction of the Entry Level Writing and Composition requirements, and EART 5 or EART 10 or EART 20; and EART 5L or EART 10L or EART 20L; or by permission of instructor. Concurrent enrollment in EART 109L is required. Enrollment is restricted to majors and minors in Earth and planetary sciences and the combined majors with anthropology and environmental studies.

EART 109L - Field Geology Laboratory (2)

Laboratory exercises essential to the successful completion of fieldwork required in course 109. Topics include topographic maps, Brunton compass, rock identification and description, geologic map analysis, structure section construction, and landslide recognition.

Prerequisite: Concurrent enrollment in EART 109 is required. Enrollment is restricted to Earth sciences majors and minors and the combined majors with anthropology and environmental studies or by permission of instructor.

EART 110A - Evolution of the Earth (7)

Investigation of the processes and mechanisms that have produced the present Earth system, with an emphasis on the temporal evolution of the earth from the Archean to the present. Specific topics covered include cyclicity in Earth processes and the evolution of, and interplay between the planet's crust, atmosphere, hydrosphere, and biosphere.

Prerequisite: Prerequisite(s): EART 5 or EART 10 or EART 20, and EART 5L or EART 10L or EART 20L, and MATH 11A or MATH 19A or AM 15A.

EART 110B - Earth as a Chemical System (5)

The chemical properties of Earth materials and the chemical processes by which the planet has evolved to its present state. Specific topics covered include properties of minerals; the genesis of igneous, metamorphic, and sedimentary rocks; and the linkage between the solid Earth and the hydrosphere. Enrollment is permitted by permission code with equivalent or exceptional background, or if enrolled concurrently in CHEM 1B.

Prerequisite: Prerequisite(s): EART 5 or EART 10 or EART 20, and EART 5L or EART 10L or EART 20L, and CHEM 1B.

EART 110C - The Dynamic Earth (5)

Physical processes occurring in the interior of the earth, at its surface and in the oceans and atmospheres including plate tectonics, structural deformation of rocks, and material and heat transport.

Prerequisite: Prerequisite(s): EART 5 or EART 10 or EART 20, and EART 5L or EART 10L or EART 20L; and MATH 11B or MATH 19B; and PHYS 6A or PHYS 5A.

EART 110M - Earth as a Chemical System Laboratory (2)

Laboratory sequence illustrating topics covered in course 110B. Emphasizes identification of the major rock-forming minerals and common rock types; principles of basic crystallography.

Prerequisite: Prerequisite(s): concurrent enrollment in EART 110B.

EART 110N - The Dynamic Earth Laboratory (2)

Laboratory sequence illustrating topics covered in course 110C.

Prerequisite: Prerequisite(s): concurrent enrollment in EART 110C.

EART 111 - Mathematics in the Earth Sciences (5)

Series and sequences, vectors, 3D analytic geometry, partial differentiation, matrix algebra, and differential equations with applications in the Earth sciences. Topics include matrix manipulation, systems of linear equations, least-squares, Taylor series, gradients, optimization, analytic and numerical solutions to differential equations.

Prerequisite: Prerequisite(s): EART 5 or EART 10 or EART 20, and MATH 11B or MATH 19B or AM 15B.

EART 112 - Geophysical Data Science (5)

Introduction to coding through fitting and modelling data. General linear models and spectral analysis introduced with applications to environmental and geophysical data. Introduction to MATLAB included.

Prerequisite: Prerequisite(s): MATH 21 or AM 10; plus one of the following series: MATH 19A and MATH 19B (strongly preferred); or MATH 11A and MATH 11B; or AM 15A and AM 15B.

EART 116 - Hydrology (5)

Introduces processes involving water on and near Earth's surface, including meteorology, water properties, surface flows in streams and runoff, flood analysis, ground water, water budgets, sediment transport, erosion, and water quality. Problem set and laboratory each week. Laboratory/field: 3 hours.

Prerequisite: Prerequisite(s): EART 5 or EART 10 or EART 20; and MATH 11A or MATH 19A or AM 15A; and PHYS 6A and PHYS 6L, or PHYS 5A and PHYS 5L, or by permission of the instructor. EART 5L or EART 10L or EART 20L and PHYS 6B and PHYS 6M are recommended. Enrollment is restricted to majors and minors in Earth sciences and the combined majors with anthropology and environmental studies, and to majors in environmental sciences.

EART 118 - Seismotectonics (5)

Earthquakes and their relationship to plate tectonics. Topics include seismological analysis of earthquake

faulting, types of seismic waves, seismicity distributions, thermal and rheological structure of plates, and seismic investigation of plate dynamics.

Prerequisite: Prerequisite(s): EART 5 or EART 10 or EART 20; and MATH 11B or MATH 19B; and PHYS 5A or PHYS 6A.

EART 119A - Introduction to Scientific Programming (5)

Introduction to programming for Earth and environmental scientists. Course assumes no prior programming experience. Develops useful Python skills for prospective scientists, rather than cover all aspects of the computer language. (Formerly EART 119.)

Prerequisite: Prerequisite(s): MATH 19A or MATH 11A or MATH 20A and EART 5 or EART 10 or EART 20.

EART 119B - Advanced Scientific Programming (5)

Advanced programming course designed to cover the basic software design workflow in the context of scientific computing, including specific topics such as using Linux, cloud computing, version control, numerical simulation, computer vision, and machine learning. Learners should bring basic Python experience (e.g., prerequisite EART119A) or significant programming experience in another language. The final project has learners collaborate on developing a scientific computing project, collaboratively implement the project with git version control and then deploy the repository for computation on the UCSC Hummingbird cluster or in the cloud. Taught in conjunction with EART 219. Students cannot receive credit for this course and EART 219.

Prerequisite: Prerequisite(s): EART119A or other programming experience by instructor permission. Enrollment is restricted to sophomores, juniors, and seniors.

EART 120 - Sedimentology and Stratigraphy (5)

Stratigraphic principles used in classifying sedimentary rocks. Fundamentals of sedimentary mechanics. Analysis and interpretation of facies and depositional systems. Introduction to seismic facies and basin analysis. Course includes three Sunday field exercises.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and EART 110A. EART 110B is recommended as preparation. May not be taken concurrently with EART 109.

EART 120L - Sedimentology and Stratigraphy Laboratory (2)

Laboratory sequence illustrating topics in course 120, including sedimentary petrology, sedimentary structures, sequence stratigraphy, and geohistory analysis.

Prerequisite: Prerequisite(s): concurrent enrollment in EART 120.

EART 121 - The Atmosphere (5)

Course focuses on understanding basic atmospheric weather and climate phenomena starting from the fundamentals of physics and chemistry. Using this approach, covers topics such as atmospheric circulation, precipitation, clouds, storms, urban and regional air quality, atmospheric aerosols, and climate and global change.

Prerequisite: Prerequisite(s): MATH 11B or MATH 19B or AM 15B; and CHEM 1A; and PHYS 5B or PHYS 6B.

EART 124 - Modeling Earth's Climate (5)

A hands-on course in climate modeling with emphasis on computer programming (Python) exercises. Topics include the physical laws governing climate, the hierarchy of model complexity, parameterizations, using models for prediction versus understanding, and application to past and future Earth climates.

Prerequisite: Prerequisite(s): MATH 11B or MATH 19B and PHYS 6B or PHYS 5B.

EART 125 - Statistics and Data Analysis in the Geosciences (5)

Project-based introduction to analytical methods, such as univariate and multivariate statistics, cluster analysis and ordination, and maximum likelihood estimation, using a conceptual approach. Introduction to analysis and programming using the R software package. Students cannot receive credit for this course and EART 225.

EART 126 - Geomechanics (5)

An integration of rock mechanics, geophysics, fluid flow, and geology to quantify stress state in the subsurface. Covers a range of topics including: basic constitutive laws for stress and strain, tectonic stress fields, the effects of fluids on rock and fault strength, natural and human-induced hydrofracture, human-induced seismicity, fault, drilling techniques for determining subsurface physical rock properties, and fault zones drilling.

Prerequisite: Prerequisite(s): PHYS 5A or PHYS 6A, and EART 110B.

EART 127 - Measuring Earth's 4.5 Billion-Year History (5)

Introduces the methodology for measuring the timing of events in Earth's past. Topics include: radiogenic and stable isotopes, chemostratigraphy and paleomagnetism. Case studies focus on reconstructing the timing of major extinction and climatic events in Earth's history. Students cannot receive credit for this course and EART 127.

Prerequisite: Prerequisite(s): EART 110B.

EART 128 - Isotopes: Fundamentals and Applications in Earth and Marine Sciences (5)

Explores the fundamentals and concepts of stable, radiogenic, and cosmogenic isotope chemistry with applications relevant to Earth, marine, and biological sciences.

Prerequisite: Prerequisite(s): EART 110B or permission of instructor.

EART 129 - Global Change (5)

Covers the science of past and future climate change. Topics include: drivers of radiative forcing; carbon cycle; climate history of Earth; climate feedbacks; detection and attribution of climate change; climate change responses, impacts, adaptation, and mitigation.

Prerequisite: Prerequisite(s): MATH 11B and CHEM 1C. Enrollment is restricted to environmental sciences majors and Earth sciences majors.

EART 130 - Igneous and Metamorphic Petrology (5)

Introduction to the relationship between tectonic environments and the genesis of rock assemblages, primarily igneous and metamorphic. Examples from California and elsewhere are used to illustrate petrogenetic processes and characteristic petrologic features of rocks from all major tectonic settings.

Prerequisite: Prerequisite(s): EART 110B. Concurrent enrollment in EART 130L is required.

EART 130L - Igneous and Metamorphic Petrology Laboratory (2)

An introduction to optical mineralogy and the petrography of igneous rocks.

Prerequisite: Prerequisite(s): EART 110B. Concurrent enrollment in EART 130 is required.

EART 131 - Sea Level Change (5)

From the origin of the oceans to the modern climate crisis, this course aims to explore sea-level change over a wide range of timescales. The course links a series of solid Earth processes, such as mantle convection, viscoelastic deformation, and plate tectonics, to the past climate record. Students investigate how these processes contribute to our understanding of past, present, and future changes in sea level and climate.

Prerequisite: Prerequisite(s): EART 5 or EART 10 or EART 20; and MATH 11A or MATH 19A or MATH 20A; and PHYS 5A or PHYS 6A.

EART 134 - Thermochemistry of Geologic Systems (5)

Introduction to the thermodynamic and kinetic principles with a strong emphasis on applications to Earth materials. Implications for phase equilibria, geothermometry/geobarometry, element partitioning,

and physical properties of minerals, magmas, and solutions.

Prerequisite: Prerequisite(s): EART 110B.

EART 140 - Geomorphology (5)

An introduction to the evolution of the Earth's landscape, with emphasis on the processes responsible. Review of climatic and tectonic forcing followed by detailed discussion of weathering, glaciers, hillslopes, wind, rivers, and coastal processes with emphasis on their geographic distribution. One single day and one three-day field trip.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements and EART 110A. Concurrent enrollment in EART 140L is required.

EART 140L - Geomorphology Laboratory (2)

Laboratory sequence illustrating topics covered in course 140. These extensive laboratory exercises emphasize the quantification of the geomorphic processes and forms, and on the writing of concise summaries of the science in the form of abstracts.

Prerequisite: Prerequisite(s): Concurrent enrollment in EART 140 is required.

EART 142 - Engineering Geology for Environmental Scientists (5)

Introduction to the formation, composition, and classification of soils; the chemical interaction of soil and groundwater; and basic soil mechanics: stress-strain behavior, effective stress concept, consolidation, soil testing methods. Applications to problems including slope stability, landslides, liquefaction, subsidence, soil creep, debris flows. Laboratory: 3 hours.

Prerequisite: Prerequisite(s): EART 5 or EART 10 or EART 20; and MATH 11A or MATH 19A or AM 15A.

EART 146 - Groundwater (5)

Explores saturated and unsaturated fluid flow below Earth's surface, well hydraulics, and resource evaluation and development, flow simulation, field techniques, geochemistry, and contaminant transport and remediation. Weekly reading and problem sets, midterm and final exams, and a final paper.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; and EART 5 or EART 10 or EART 20; and MATH 11A or MATH 19A or MATH 20A; and PHYS 6A and PHYS 6L or PHYS 5A and PHYS 5L (PHYS 6B and PHYS 6M recommended); and CHEM 1A, or by permission of the instructor. Enrollment is restricted to majors and minors in Earth sciences, the combined majors with anthropology and environmental studies, and the environmental sciences major. Concurrent enrollment in EART 146L is required.

EART 146L - Groundwater Laboratory (2)

A sequence of exercises that provide hands-on learning and exploration of topics covered in course EART 146, including laboratory experiments, analytical and numerical simulation, and field methods. Two field trips: one during a normal lab time (three hours); one all-day trip on a weekend.

Prerequisite: Prerequisite(s): Concurrent enrollment in EART 146 is required.

EART 148 - Glaciology (5)

Introduction to the role of snow and ice in the dynamics of the earth surface system. Snow deposition and metamorphosis. Heat and mass balance at snow and ice surfaces. Flow of glaciers, ice sheets, and sea ice. Methods of climate reconstruction. Ice age theories.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and EART 5 or EART 10 or EART 20; and MATH 11A or MATH 19A or AM 15A.

EART 150 - Structural Geology (5)

Principles and methods of analysis of brittle and ductily deformed rocks. Includes descriptions of structures, field analysis of structures, and mechanics of deformation. Three day-long field trips on weekends.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and EART 110A or EART 110B; EART 109 recommended; concurrent enrollment in EART 150L is required.

EART 150L - Structural Geology Laboratory (2)

Structural analysis of faults, folds, and maps. Use of stereographic projections. Cross section construction and balancing from field data.

Prerequisite: Concurrent enrollment in EART 150 is required.

EART 152 - Tectonics (5)

The processes, techniques, and interpretations involved in the study of active crustal movements; constraints from plate tectonics; horizontal and vertical motions and rates; geodesy, including GPS; stress measurement; image interpretation; fault system analysis; paleoseismicity; fluid effects. Examples from the circum-Pacific. Laboratory-3 hours. Students cannot receive credit for this course and course 207. Students are billed a materials fee.

Prerequisite: Prerequisite(s): EART 10 or EART 5 or EART 20; and EART 10L or EART 5L or EART 20L; and PHYS 5A or PHYS 6A or equivalent per instructor permission.

EART 160 - Planetary Science (5)

Broad introduction to planetary science. Topics include the fundamental characteristics of solar system bodies;

space exploration of these bodies; formation and evolution of surfaces, atmospheres and interiors of planets, satellites and small bodies.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and MATH 11B or MATH 19B or AM 15B; and PHYS 5A or PHYS 6A.

EART 162 - Planetary Interiors (5)

The chemical and thermal structure and evolution of silicate planet interiors. Topics include equation of state of mantle and core materials, thermal history of the mantle and core, dynamics of mantle convection, geophysical determination of interior structure. Students cannot receive credit for this course and EART 262.

Prerequisite: Prerequisite(s): EART 160 or PHYS 116A.

EART 163 - Planetary Surfaces (5)

Comparative study of surfaces and atmospheres of planetary bodies in solar system, focusing on comparative planetology and geophysical processes at work, including differentiation, impact cratering, tectonics, volcanism, and geomorphic evolution. Explores terrestrial planets, giant planets and their moons. Students cannot receive credit for this course and EART 263.

Prerequisite: Prerequisite(s): EART 160 or PHYS 116A.

EART 164 - Planetary Atmospheres (5)

A quantitative study of the origin, chemistry, dynamics, and observations of the atmospheres of terrestrial and gas-giant planets. Students cannot receive credit for this course and EART 264.

Prerequisite: Prerequisite(s): EART 160 or PHYS 116A.

EART 165 - History and Geochemistry of the Solar System (5)

Introduces solar system history and geochemistry. Observation methods and tools discussed include major and trace element geochemistry, geothermometry, radiogenic and stable isotopes. Solar system reconstructed through the examination of meteorites from different parent bodies. Taught in conjunction with EART 268. Students cannot receive credit for this course and EART 268.

EART 172 - Geophysical Fluid Dynamics (5)

Introduces fluid motion influenced by rotation. Topics include the Coriolis force, geostrophic flow, potential vorticity, the shallow water model, quasigeostrophic approximation, planetary waves, Ekman theory, thermal wind, models of the large-scale oceanic and atmospheric circulation, and equatorial dynamics.

Taught in conjunction with EART 272. Students cannot receive credit for this course and EART 272.

Prerequisite: Prerequisite(s): PHYS 107 or AM 107; MATH 22 or MATH 23B recommended.

EART 189A - Geographic Information Systems with Applications in Earth Sciences (5)

Introduces Geographic Information Systems (GIS) for geologic mapping and interpretation. Students gain experience with satellite, air photo, and digital elevation model (DEM) interpretation, and research the geology, tectonics, paleontology, and stratigraphy for field sites in eastern California. Prerequisite(s): EART 109, EART 109L, EART 110A, and EART 110. Enrollment is restricted to Earth sciences majors, and combined Earth sciences/environmental studies majors. Enrollment via an application.

EART 189B - Summer Field Study (5)

Students spend three weeks in this field course on advanced geologic mapping acquiring and analyzing original data and then another 11 days refining their interpretations. Emphasis is on geologic mapping, stratigraphy, structure and tectonic analysis, and petrology. Students are billed a fee of \$1,000. Prerequisite(s): EART 109, EART 109L, EART 110A, EART 110L, EART 110B, EART 110M, and EART 189A and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to Earth sciences and combined Earth sciences/environmental studies majors. Enrollment via an application.

EART 190 - Earth Sciences Mentorship (1)

Faculty research activity, analytic facilities, and career counseling in three separate Earth sciences laboratories are offered with varied formats including field trips, discussions, and equipment demonstrations. Three different faculty participate in each offering.

Prerequisite: Enrollment is restricted to Earth sciences, Earth sciences/anthropology, and environmental studies/Earth sciences majors.

EART 191 - Earth Sciences Capstone Seminar (5)

In-depth exploration of a topic within the Earth sciences. Involves at least one research paper. Topics vary quarterly; consult the current course listings. (Formerly EART 191A, Climate Change Science and Policy.)

Prerequisite: Prerequisite(s): Satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior majors in Earth sciences and the combined major with anthropology. Enrollment is by application with selection based on appropriate background and academic performance and by consent of the instructor.

EART 191B - Planetary Capstone (5)

Examines a crosscutting topic in planetary sciences (e.g., volcanism) to satisfy the senior capstone requirement. Students are assessed on the basis of an oral presentation and a written report in which a synthetic review is present.

Prerequisite: Prerequisite(s): EART 160, and EART 111 or MATH 22. Enrollment is restricted to seniors and graduate students.

EART 191C - Practical Geophysics (5)

Hands-on practice analyzing real-life observational data including earthquake catalogs, seismograms, gravity, and GPS data. Emphasis on data collection, and access and manipulation skills. Introduction to MATLAB programming included. Students cannot receive credit for this course and EART 266.

Prerequisite: Prerequisite(s): EART 112 or EART 119; and EART 110C, and satisfaction of the Entry Level Writing and Composition requirements.

EART 191D - Practical Geochemistry (5)

Provides hands-on experience to geochemical instrumentation with a focus on data collection. Practical labs apply sample imaging, isotopic major- and trace-element measurements to natural samples. Laboratory sessions are supported by instruction, geochemistry, and Earth science. Students will investigate a new Earth science problem using new samples "unknowns". Students and faculty instructor will explore scientific literature relevant to this new topic. (Formerly EART 135L.)

Prerequisite: Prerequisite(s): EART 5, or EART 10, or EART 20. EART 110B is recommended. Enrollment is restricted to majors and minors in Earth sciences and the combined majors with anthropology and environmental studies.

EART 194F - Education Capstone (2)

Students write a paper on a lesson plan developed after their CalTeach internship courses. This independent study is supervised by Earth and planetary sciences faculty or ocean sciences faculty, as well as a member of the CalTeach staff or Education Department.

Prerequisite: Prerequisite(s): EDUC 185C and EDUC 185L. Enrollment is restricted to Earth and planetary sciences majors with a concentration in science education.

EART 195 - Senior Thesis (5)

Students submit petition to sponsoring agency. Enrollment is restricted to seniors. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements.

EART 196B - Tutoring Earth Sciences in the University

(5)

Students facilitate laboratory and field exercises in conjunction with faculty and teaching assistants in various Earth sciences courses. May not count toward upper-division major requirements. Approval of sponsoring agency; interview, and selection by primary instructor of specific courses required.

EART 196C - Tutoring Earth Sciences in the University (2)

Students facilitate laboratory and field exercises in conjunction with faculty and teaching assistants in various Earth sciences courses. May not count toward upper-division major requirements. Approval of sponsoring agency; interview, and selection by primary instructor of specific courses required. Enrollment restricted to Earth sciences, Earth sciences/anthropology, and environmental studies/Earth sciences majors.

EART 198 - Earth Sciences Internship (5)

A supervised learning experience involving practical application of Earth sciences through working with approved companies, governmental agencies, or research organizations. Students consult weekly with supervising faculty and prepare a final report of their work. Consult sponsoring agency for enrollment criteria. After instruction on resume preparation and interview skills, students must interview and be selected for internship by approved sponsoring organizations. Enrollment is restricted to Earth sciences, Earth sciences/anthropology, and environmental studies/Earth sciences majors.

EART 198F - Earth Sciences Internship (2)

A supervised learning experience involving practical application of Earth sciences through working with approved companies, governmental agencies, or research organizations. Students consult weekly with supervising faculty and prepare a final report of their work. May not be counted toward upper-division major requirements. Consult sponsoring agency for enrollment criteria. After instruction on resume preparation and interview skills, student must interview and be selected for internship by approved sponsoring organizations. Enrollment is restricted to Earth sciences, Earth sciences/anthropology, and environmental studies/Earth sciences majors.

EART 199 - Tutorial (5)

Introduction to research in laboratory, field, or theoretical subjects as an independent study. Students submit petition to sponsoring agency.

EART 199F - Tutorial (2)

Introduction to research in laboratory, field, or theoretical subjects as an independent study. May not be counted toward upper-division major requirements. Students submit petition to sponsoring agency.

Graduate

EART 203 - Introductory Teaching Seminar (1)

Intended for new Earth sciences graduate students. Focus on preparation, assessment, and feedback. Classroom techniques, organizational and time management strategies, practice teaching sessions specific to laboratory and/or science instruction. Required follow-up meetings to discuss practical teaching experience.

Prerequisite: Enrollment is restricted to graduate students.

EART 204 - Earth and Planetary Sciences Foundations (5)

Provides a comprehensive overview of key concepts, dominant paradigms, and research frontiers in Earth and planetary sciences in plenary talks by multiple faculty. Provides a required foundation course for all incoming students pursuing graduate degrees in Earth and planetary sciences.

Prerequisite: Enrollment is restricted to Earth sciences graduate students.

EART 206 - Great Papers in the Earth Sciences (5)

Exposure to the most important ideas in the Earth sciences through exploration of the primary literature. Seminal papers in different subdisciplines of the Earth sciences are read and analyzed to provide breadth and improve students' ability to think critically.

Prerequisite: Enrollment is restricted to Earth sciences graduate students.

EART 207 - Tectonics (5)

An overview of tectonic theory and processes for application to the Earth sciences. The course explores the primary tools of tectonic interpretation including plate kinematics, rheology, plate boundary dynamics, and the behavior of active fault systems. Taught in conjunction with EART 152. Students cannot receive credit for this course and EART 152.

Prerequisite: Prerequisite(s): graduate standing or permission of instructor.

EART 208 - Methods in Paleoclimatology (5)

Addresses methods used to reconstruct aspects of paleoclimates and paleoenvironments from the geologic record, focusing primarily on terrestrial records. Topics to be covered include dendrochronology and dendroclimatology, paleopalynology, paleobotany, ice cores, and paleosol studies. Lectures, discussions, and laboratory work.

Prerequisite: Enrollment is restricted to graduate students.

EART 219 - Advanced Scientific Programming (5)

Advanced programming course designed to cover the basic software design workflow in the context of scientific computing, including specific topics such as using Linux, cloud computing, version control, numerical simulation, computer vision, and machine learning. Learners should bring basic Python experience (e.g., prerequisite EART 119A) or significant programming experience in another language. The final project has learners collaborate on developing a scientific computing project, collaboratively implement the project with git version control and then deploy the repository for computation on the UCSC Hummingbird cluster or in the cloud. Taught in conjunction with EART 119B. Students cannot receive credit for this course and EART 119B.

Prerequisite: Enrollment is restricted to graduate students.

EART 220 - Ground Water Modeling (5)

Introduction to building and using models to solve hydrogeologic problems. Modeling methods include mainly analytical and finite-difference. Emphasis on using models rather than the details of their functioning, although some coding is required. Comfort with mathematical methods and computers expected. Course designed for graduate students, but available to qualified Earth science majors.

Prerequisite: Prerequisite(s): graduate standing or permission of instructor required. One year of calculus and courses in differential equations and basic hydrologic principles are recommended as preparation.

EART 225 - Statistics and Data Analysis in the Geosciences (5)

Using a conceptual approach, this course is a project-based introduction to analytical methods, such as univariate and multivariate statistics, cluster analysis and ordination, and maximum likelihood estimation. Introduces analysis and programming using the R software package. Students cannot receive credit for this course and EART 125.

Prerequisite: Enrollment is restricted to graduate students.

EART 227 - Measuring Earth's 4.5 Billion Year History (5)

Introduces the methodology for measuring the timing of events in Earth's past. Topics include: radiogenic and stable isotopes chemostratigraphy and paleomagnetism. Case studies focus on reconstructing the timing of major extinction and climatic events in Earth's history. Students cannot receive credit for this course and EART 127.

Prerequisite: Enrollment is restricted to graduate students.

EART 229 - Isotopic Methods in Environmental Science

(5)

Explores how natural variations in stable isotope ratios answer questions in ecology, paleobiology, and other environmental sciences. Format includes lectures by the instructor and student presentations on applications following literature-based research on each topic.

Prerequisite: Enrollment is restricted to graduate students.

EART 240 - Communicating Science (3)

Introduces inquiry-based instructional strategies for communicating a passion for science. These strategies, combined with content knowledge and enthusiasm for sharing it, equips college students to introduce science to K-8 students and teachers in local schools.

Prerequisite: Enrollment is restricted to graduate students.

EART 252 - Hydroclimatology (5)

An interdisciplinary investigation of the interaction between terrestrial systems and climate, with a focus on the cycling of water between atmosphere, land, and biosphere. Lecture topics include the global energy budget, atmospheric general circulation and climate, water balance, surface energy fluxes, watershed hydrology, modeling of terrestrial ecosystems, and climate-vegetation dynamics. Complementary discussions of the scientific literature provide perspective on how these systems affect and are affected by climate change.

Prerequisite: Enrollment is restricted to graduate students.

EART 254 - The Climate System (5)

Focuses on atmospheric and oceanic processes that are important within the Earth's climate system, especially those that operate on annual to centennial time scales. Format includes lectures by the instructors, paper readings, and discussion.

Prerequisite: Enrollment is restricted to graduate students.

EART 258 - Deep Time Paleoclimates (5)

Weekly lectures/readings/presentations focused on the key events in the long-term evolution of Earth's climate (i.e., before the Pliocene), including early Archean, faint, young-sun period; Proterozoic snowballs; Paleozoic glaciations and greenhouse events; the mid-Cretaceous oceanic anoxic events (OAEs); and Paleogene thermal maxima and glacial intervals. Considerable emphasis on evaluating the proxies of climate and mechanisms of climate change (e.g., greenhouse gasses, paleogeography).

Prerequisite: Enrollment is restricted to graduate students.

EART 262 - Planetary Interiors (5)

The chemical and thermal structure and evolution of silicate planet interiors. Topics include equation of state of mantle and core materials, thermal history of the mantle and core, dynamics of mantle convection, geophysical determination of interior structure. Students cannot receive credit for this course and EART 162.

Prerequisite: Enrollment is restricted to graduate students.

EART 263 - Planetary Surfaces (5)

Comparative study of surfaces of planetary bodies in our solar system, focusing on comparative planetology and geophysical processes at work, including differentiation; on-impact cratering; tectonics; volcanism and geomorphic evolution; and exobiology. Explores terrestrial planets, giant planets and their moons, and trans-Neptunian objects, focusing on modern exploration. Students cannot receive credit for this course and EART 163.

Prerequisite: Enrollment is restricted to graduate students.

EART 264 - Planetary Atmospheres (5)

Quantitative study of the origin, chemistry, dynamics, and observations of the atmospheres of terrestrial and gas giant planets. Students cannot receive credit for this course and EART 164.

Prerequisite: Enrollment is restricted to graduate students.

EART 265 - Order of Magnitude Estimation (5)

Practice in making rough estimates and leading-order approximations in physical and chemical processes.

Prerequisite: Enrollment is restricted to graduate students.

EART 266 - Geologic Signal Processing and Inverse Theory (5)

Theoretical and practical aspects of digital signal analysis including data sampling, spectral estimation, digital filtering, statistical estimation, correlation tools, and principle-component analysis. Emphasis on practical examples of geophysical time series. Multivariable calculus and linear algebra are required and used extensively in the course. Taught in conjunction with EART 191C. Students cannot receive credit for this course and EART 191C.

Prerequisite: Enrollment is restricted to graduate students.

EART 268 - History and Geochemistry of the Solar System (5)

Introduction of solar system history and geochemistry. Observation methods and tools discussed include major and trace element geochemistry, geothermometry,

radiogenic and stable isotopes. Course reconstructs solar system history through the examination of meteorites from different parent bodies. Students cannot receive credit for this course and EART 165.

Prerequisite: Enrollment is restricted to graduate students.

EART 270 - Global Seismology (5)

Introduction to quantitative earthquake and global Earth structure seismology. Topics include basic elasticity, wave characteristics, seismic ray theory, wave reflection, surface waves, normal modes, seismic instrumentation, application of seismic waves to reveal Earth structure and resulting models, representation of earthquake sources such as explosions and faulting, earthquake rupture scaling, modern methods of modeling seismic recordings to study source complexity, and an introduction to seismotectonics. Laboratory: 3 hours.

Prerequisite: Enrollment is restricted to graduate students.

EART 271 - Current Research Topics in Deep Earth Processes (5)

Students and instructor lead discussions of recent and significant publications in geophysics and chemistry of deep Earth. Articles structured around current theme of interest are selected by participants and approved by instructor. Emphasis on defining multidisciplinary significance of each article and its relationship to fundamental processes in deep Earth, including core and mantle. Designed for graduate students but available to qualified Earth sciences majors.

EART 272 - Geophysical Fluid Dynamics (5)

Introduces fluid motion influenced by rotation. Topics include the Coriolis force, geostrophic flow, potential vorticity, the shallow water model, quasigeostrophic approximation, planetary waves, Ekman theory, thermal wind, models of the large-scale oceanic and atmospheric circulation, and equatorial dynamics. Students cannot receive credit for this course and EART 172.

Prerequisite: Enrollment is restricted to graduate students. Crosslisted as: Enrollment is restricted to graduate students.

EART 273 - Earthquake Physics (5)

Why do earthquakes happen? Topics include friction, fracture, earthquake triggering, stress in the crust, observed source scalings, and seismicity statistics. Emphasis on observations and current research topics. (Formerly course 290J, Topics in Earthquake Physics.)

Prerequisite: Enrollment is restricted to graduate students and advanced undergraduates.

EART 274 - Crustal Deformation (5)

Advanced study of the deformation processes in the Earth's crust and upper mantle. Covers fundamental theories of stress and strain, brittle fracture, friction, ductile deformation and flow laws, earthquake processes, faults and shear zones, scaling lab-derived measurements to tectonic plate scale.

Prerequisite: Enrollment is restricted to graduate students.

EART 278A - Advanced Seismology (5)

Elastic wave propagation. Advanced topics in ray theory, WKBJ solutions in seismology, singularities and nonlinearities, surface wave theory, propagating matrices, normal modes, and inversion theory. Selected topics in time series analysis and seismic signal processing, seismic wave dispersion.

Prerequisite: Course is designed for graduate students but available to qualified Earth sciences majors. PHYS 110B and PHYS 116C are recommended as preparation. Enrollment is restricted to graduate students.

EART 280D - Short Course in Atmospheric/Climate Science (3)

Addresses specialized topics in atmospheric and/or climate science that are too narrow for a full (5-credit) format. Examples include: cloud physics; atmospheric boundary layer; aerosol physics and chemistry; atmospheric radiation; atmospheric thermodynamics.

Prerequisite: Enrollment is restricted to graduate students.

EART 290A - Hidden Curriculum (5)

Much of graduate education is focused on tangible and formal skill development surrounding research and teaching. This course focuses on the informal "hidden curriculum" in graduate school that can complement formal student learning to help individuals lead successful research careers.

Prerequisite: Enrollment is restricted to graduate students.

EART 290B - Topics in Glaciology (5)

Advanced review of the physics and chemistry of ice and snow. Mass and heat balance of ice masses. Motion of glaciers and ice sheets. Subglacial and englacial hydrology. Thermodynamics of ice masses and the linkage to climate.

Prerequisite: Enrollment is restricted to graduate students.

EART 290C - Topics in Geophysics (5)

Different problems and approaches will be stressed from year to year such as geotectonics,

paleomagnetism, or properties and processes in the mantle and core.

Prerequisite: Enrollment is restricted to graduate students; qualified Earth sciences majors by permission of instructor.

EART 290D - Petrology and Plate Tectonics (5)

Selected topics illustrating relationships between igneous and metamorphic rocks and plate tectonics are explored in detail. Designed for graduate students but available to qualified Earth sciences majors.

EART 290E - Topics in Planetary Science (5)

We examine one well-defined topic in planetary science, beginning with a summary of current knowledge and concluding with the latest research literature. Topics will vary from year to year and may include planetary collisions, terrestrial planets, origin of planetary systems, small bodies, the New Mars, and satellites of Jupiter. Achievement will be evaluated based on class participation, exams, and a research project.

Prerequisite: Open to undergraduate majors with permission of instructor. Enrollment is restricted to graduate students.

EART 290F - Topics in Coastal Processes (2)

Instructor and students lead discussions and make presentations on current research, problems, and publications in coastal processes. These topics include littoral drift, sediment transport and storage on the inner shelf, shoreline erosion/change and its documentation, and related issues.

Prerequisite: Enrollment is restricted to graduate students.

EART 290G - Topics in Global Tectonics (5)

Explores different problems of special interest in global tectonics with the approach of integrating marine and terrestrial geologic and geophysical information. Course designed for graduate students but available to qualified Earth sciences majors.

EART 290H - Topics in Hydrogeology (5)

Selected topics in groundwater, hydrothermal systems, and related subjects. Discussion of theoretical models, field and laboratory approaches, and recent research. Topics vary from year to year. Course designed for graduate students but available to qualified Earth sciences majors.

EART 290I - Topics in Geomorphology (5)

Discussion of journal articles focused on a theme in contemporary geomorphology. Topics include: coupling of climate; tectonics and landscape evolution; mechanics of bedrock river channels; fundamentals of fluvial gravel transport; and inference of tectonic rates and processes from analysis of topography.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll by permission of instructor.

EART 290J - Intersections of Geodynamics and Climate (5)

Reading seminar that focuses on current research aimed at understanding interactions between solid Earth geodynamics and components of the Earth's climate system. Focuses on three main solid Earth processes: (1) mantle convection and dynamic topography; (2) glacial isostatic adjustment; and (3) tectonics processes. Considers the ways that Earth's landscape, atmosphere, and cryosphere respond to these geodynamic processes and vice versa. Possible topics include past sea-level and ice sheet inferences, passive margin earthquakes and submarine landslides, river and landscape evolution, and marine-terminating glacier dynamics.

EART 290K - Paleontology Seminar (3)

Seminar discussion based on current readings in the literature around some topic in the history and evolution of life.

Prerequisite: Course designed for graduate students but available to qualified upper-division science students.

EART 290L - Topics in Climate Change (5)

Explores current issues and recent developments in the field of past, present, and future climate change. Topic is different each year, but focuses on the interaction between different components of Earth's environment and the effect of that interaction on climate change. Designed for graduate students but open to qualified undergraduates.

Prerequisite: Enrollment is restricted to graduate students.

EART 290M - Topics in Atmospheric Science (5)

Selected topics encompassing atmospheric physics and chemistry. Topics vary from year to year. Sample topics include: atmospheric physics, atmospheric chemistry, boundary layer meteorology, aerosol science, and atmospheric thermodynamics.

Prerequisite: Designed for graduate students, but qualified undergraduates may enroll with permission of instructor.

EART 290N - Topics in Mineral Physics (5)

Selected topics encompassing the physics and chemistry of Earth's interior, planetary physics, high-pressure experimental geophysics and material properties at high pressure and temperature. Topics vary from year to year.

Prerequisite: Enrollment is restricted to graduate students and qualified Earth sciences majors by permission of instructor.

EART 290O - Topics in Hydrology (5)

Selected topics in watershed hydrology and related subjects. Discussion journal articles focused on fundamental concepts, scientific breakthroughs, and innovative methods. Topics include: water storage, runoff generation and thresholds, hydrologic connectivity, and ecohydrology.

Prerequisite: Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of the instructor.

EART 290P - Interdisciplinary Topics in the Earth Sciences (5)

An understanding of the chemical and physical properties and processes in the earth is sought by integrating information from several subdisciplines in the Earth sciences. Topics vary from year to year, focusing on areas of active research. Course designed for graduate student but available to qualified Earth sciences majors.

Prerequisite: Prerequisite(s): graduate standing or permission of instructor. Course is designed for graduate student but available to qualified Earth sciences majors.

EART 290Q - Topics in Outer Solar System (5)

Exploration of the planets and satellites beyond the asteroid belt, with an emphasis on the underlying physical processes at work. Course includes lectures, computer practicals, and student presentations.

Prerequisite: Enrollment is restricted to graduate students.

EART 290R - Topics in the Chemistry and Physics of the Earth (5)

Explores problems and current research developments in the application of physics and chemistry to planetary interiors. Topics differ from year to year and include, but are not limited to, research related to the accretion, differentiation, evolution, and structure of the terrestrial planets. Course is designed for graduate students but available to qualified Earth sciences majors.

EART 290T - Current Research Topics in Paleooceanography and Paleoclimatology (5)

Students and instructor lead discussions of recent and significant problems in paleooceanography and paleoclimatology. Articles structured around current themes of interest are selected by the instructor. Emphasis on major climatic transitions or events which noticeably influenced evolution of biota. Course is designed for graduate students but available to qualified Earth sciences majors.

EART 290U - Topics in Thermochronology (5)

Surveys the use of thermochronometry to quantify the rates of tectonic processes. Topics include heat

conduction and diffusion; radioactive decay; analytical methods; and modeling of thermochronologic data. Seminars review seminal papers from the literature.

Prerequisite: Enrollment is restricted to graduate students.

EART 290X - Topics in Modeling Planetary Interiors (5)

Introduces computer modeling of thermal convection in planetary interiors. Students learn to write and run a basic computer code using spectral and finite-difference methods, then are shown how to improve the numerical method and physics. Basic computer programming experience is required (for example, in Fortran, C, IDL, or MATLAB).

Prerequisite: Course is designed for and enrollment restricted to graduate students, but available to qualified science majors.

EART 292 - Seminar (0)

Weekly seminar attended by faculty, graduate students, and upper-division undergraduate students.

EART 293 - Graduate Research Seminar (1)

Weekly seminar series covering a broad spectrum of topics in the Earth sciences. Graduate students give 15- to 20-minute oral presentations on current or anticipated research.

Prerequisite: Enrollment is restricted to graduate students.

EART 296 - Special Student Seminar (5)

Permission of instructor required.

EART 297A - Independent Study (5)

Permission of instructor required.

EART 297B - Independent Study (10)

Permission of instructor required.

EART 297C - Independent Study (15)

Permission of instructor required.

EART 298 - Earth Sciences Internship (5)

A supervised learning experience involving practical, graduate-level application of Earth sciences through working with approved companies, governmental agencies, or research organizations. Students consult weekly with supervising faculty and prepare a final report of their work. Consult sponsoring agency for enrollment criteria. After instruction on resume preparation and interview skills, students must interview and be selected for internship by approved sponsoring organizations.

EART 299A - Thesis Research (5)

Permission of instructor required.

EART 299B - Thesis Research (10)

Permission of instructor required.

EART 299C - Thesis Research (15)

Permission of instructor required.

ECE - ELECTRICAL AND COMPUTER ENGINEERING

Lower-Division

ECE 1 - Hands-On Computer Engineering (2)

Hands-on introduction to computer engineering practice and research, including computer hardware, robotics, and embedded systems. Encourages interaction with UCSC's School of Engineering community. Designed for students without previous background in computer engineering. (Formerly Computer Engineering 1.)

Prerequisite: Enrollment restricted to first-year students and sophomores.

ECE 8 - Robot Automation: Intelligence through Feedback Control (5)

Introduction to dynamical systems, feedback control, and robotics. Fundamental concepts in dynamical systems, modeling, stability analysis, robustness to uncertainty, feedback as it occurs naturally, and the design of feedback-control laws to engineer desirable static and dynamic response. Course includes an introduction to MATLAB and programming in MATLAB.

Prerequisite: Priority enrollment restricted to first-year students and sophomores.

ECE 9 - Statics and Mechanics of Materials (5)

Theory and application of statics and mechanics of materials for mechanical and biomechanical systems. Covers statics of particles; equilibrium of rigid bodies; free-body diagrams; analysis of structure; friction; concepts of stress and strain; axial loading; torsion and bending; and failure criteria. (Formerly Introduction to Statics, Dynamics, and Biomechanics.)

Prerequisite: Prerequisite(s): MATH 19A; and PHYS 5A and PHYS 5L or PHYS 6A and PHYS 6L; and AM 10 or MATH 21.

ECE 10 - Fundamentals of Robot Kinematics and Dynamics (5)

Covers the theory and application of mathematical models to analyze the kinematics and dynamics of robot mechanisms or their components using vector algebra, differential equations, and computer simulations; also covers robot vehicle kinematics, robot arm kinematics, and robot dynamics with computational examples and problems. Some basic programming skills and

familiarity with MATLAB are expected. (Formerly CMPE 10.)

Prerequisite: Prerequisite(s): ECE 9, and AM 20 or MATH 24.

ECE 11 - 3D Prototyping (5)

Introduces the basics of rapid prototyping for robotics design from limiting stresses to optimal design. Discusses fast prototyping methods, advantages, and disadvantages. Introduces CAD, CAD packages, 3D printing with different materials, and 3D scanning. (Formerly CMPE 11.)

Prerequisite: Prerequisite(s): previous or concurrent enrollment in ECE 9.

ECE 13 - Computer Systems and C Programming (7)

Computer Systems and C Programming is intended to bring students up to speed on programming small and large programs in C. Originally written in 1978, C remains the most popular programming language, and the most used one in terms of numbers of computer programs written in it. The course approaches C from an embedded paradigm, and all programming assignments are on a 32-bit embedded micro, the Microchip PIC32. Students learn how to program in C, how to write modular code, and some of the tips and tricks when dealing with an embedded micro. This is a programming class and students will write lots of code. Expect to spend at least 15-20 hours outside of class playing with the code to get things to work. (Formerly CSE 13E Embedded Systems and C Programming)

Prerequisite: Prerequisite(s): CSE 12. CSE 20 or CSE 30 (Python programming background) is recommended but not required. Programming experience in any other language is also acceptable.

ECE 30 - Engineering Principles of Electronics (5)

Suitable for sophomores pursuing computer science and engineering careers. Aims at deriving basic engineering principles directly from examples relevant to computing and electronics: 1) Newton's Laws and related fundamental mechanics; 2) basic thermodynamics and heat/energy transfer; 3) key electromagnetic principles, including Coulomb's Law, Gauss's Law, and basic circuit analysis using Kirchoff's Laws/Rules; and 4) Ray optics for fiber optic communications and camera electronics.

Prerequisite: Prerequisite(s): MATH 19B. Enrollment is restricted to computer engineering, computer science: computer game design, computer science, network and digital technology, and technology and information management majors and proposed majors; and to computer engineering, computer science, and technology and information management minors.

ECE 80B - Engineering Innovations for Medicine and Natural Science

es (5)

Introduces to a lay audience engineering innovations that have had an impact in medicine and biology. Course is designed for non-engineering majors, or pre-med students, as well as pre-engineering to provide a broad understanding of how technology has improved and keeps on improving healthcare.

ECE 80G - Creating and Financing a Sustainable Startup in the Global Economy (5)

Introduces students and prospective entrepreneurs to the ingredients required to successfully create and finance a sustainability-minded startup or nonprofit in the global economy. Emphasis is placed on ethical business practice, tools for understanding markets and supply chains, and building value for all stakeholders, including communities and the environment.

ECE 80H - Bending the Curve: Solutions to Climate Change (5)

Students examine the interconnectedness of natural and social systems as they evaluate, interpret, and debate evidence and explanations of climate change. Includes interviewing family members, friends, and professionals for a variety of divergent views on the climate change debate. Class sessions are devoted to student discussion of the course materials, including readings, take-home assignments and pre-recorded videos. The class culminates with a written proposal and group presentations of ideas for solutions, with the guidance of the instructor, addressing one of the "grand challenges" presented in the course with the goal of empowering students to emerge as critical thinkers and actors equipped with a solution-based mindset.

ECE 80E - Engineering Ethics (5)

Ethical theories, analysis, and their application to issues in the practice of engineering, such as safety and liability, professional responsibility to clients and employers, codes of ethics, legal obligations, environmental issues, and social issues. Emphasis on developing independent ethical analysis through the use of case studies. (Formerly CMPE 80E.)

ECE 80J - Renewable Energy Sources, Storage, and Smart Grids (5)

Introduces energy sources and storage with special emphasis on renewables as part of smart grids. Fundamental energy-conversion limits based on physics and existing source properties are studied. Various sources, such as solar, wind, hydropower, geothermal, tidal energy, and fuel cells are described. Electric vehicles, sustainable microgrids, and the integration to smart grids are studied. Finally, smart meters, demand response, the energy market, and policy are covered. Students cannot receive credit for this course and course 81J. (Formerly EE 80J.)

ECE 80S - Sustainability Engineering and Practice (5)

Topical introduction to principles and practices of sustainability engineering and ecological design with emphasis on implementation in society. Provides an understanding of basic scientific, engineering, and social principles in the design, deployment, and operation of resource-based human systems, and how they can be maintained for this and future generations. No specialized background in engineering, science, or social sciences is assumed. (Formerly EE 80S.)

ECE 80T - Modern Electronic Technology and How It Works (5)

Basic knowledge of electricity and how things work, how technology evolves, its impact on society and history, and basic technical literacy for the non-specialist. Broad overview of professional aspects of engineering and introduction and overview of basic systems and components. Topics include electrical power, radio, television, radar, computers, robots, telecommunications, and the Internet. (Formerly EE 80T.)

ECE 94 - Group Tutorial (5)

A means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency.

ECE 94F - Group Tutorial (2)

A means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency.

ECE 99 - Tutorial (5)

Students submit petition to sponsoring agency.

ECE 99F - Tutorial (2)

Students submit petition to sponsoring agency.

Upper-Division**ECE 101 - Introduction to Electronic Circuits (5)**

Introduction to the physical basis and mathematical models of electrical components and circuits. Topics include circuit theorems (Thevenin and Norton Equivalents, Superposition), constant and sinusoidal inputs, natural and forced response of linear circuits. Introduction to circuit/network design, maximum power transfer, analog filters, and circuit analysis using Matlab. Topics in elementary electronics including amplifiers and feedback. (Formerly EE 101.)

Prerequisite: Prerequisite(s): PHYS 5C and PHYS 5N; or PHYS 6C and PHYS 6N; and MATH 24 or previous or concurrent enrollment in AM 20. Concurrent enrollment in ECE 101L is required.

ECE 101L - Introduction to Electronic Circuits**Laboratory (2)**

Illustrates topics covered in ECE 101. One two-hour laboratory session per week.

Prerequisite: Prerequisite(s): PHYS 5C and PHYS 5N or PHYS 6C and PHYS 6N; and MATH 24 or previous or concurrent enrollment in AM 20. Concurrent enrollment in ECE 101 is required.

ECE 102 - Properties of Materials (5)

The fundamental electrical, optical, and magnetic properties of materials, with emphasis on metals and semiconductors: chemical bonds, crystal structures, elementary quantum mechanics, energy bands. Electrical and thermal conduction. Optical and magnetic properties. (Formerly EE 145.)

Prerequisite: Prerequisite(s): PHYS 5A and PHYS 5L, PHYS 5B and PHYS 5M, and PHYS 5C and PHYS 5N; or PHYS 6A and PHYS 6L, PHYS 6B and PHYS 6M, and PHYS 6C and PHYS 6N. Concurrent enrollment in ECE 102L is required.

ECE 102L - Properties of Materials Laboratory (2)

Laboratory sequence illustrating topics covered in course 145. One two-hour laboratory per week.

Prerequisite: Prerequisite(s): PHYS 5A and PHYS 5L, PHYS 5B and PHYS 5M, and PHYS 5C and PHYS 5N; or PHYS 6A and PHYS 6L, PHYS 6B and PHYS 6M, and PHYS 6C and PHYS 6N. Concurrent enrollment in ECE 102 is required.

ECE 103 - Signals and Systems (5)

Course covers the following topics: characterization and analysis of continuous-time signals and linear systems, time domain analysis using convolution, frequency domain analysis using the Fourier series and the Fourier transform, the Laplace transform, transfer functions and block diagrams, continuous-time filters, sampling of continuous time signals, examples of applications to communications and control systems. (Formerly EE 103.)

Prerequisite: Prerequisite(s): ECE 101 and ECE 101L; and AM 20 or MATH 24.

ECE 103L - Signals and Systems Laboratory (2)

Use and operation of spectrum analyzers; advanced signal analysis using oscilloscopes; measuring impulse response, step response, frequency response, and computer analysis of real signals. MATLAB programming is taught and used as a tool for signal analysis. Students are billed a materials fee. (Formerly EE 103L.)

Prerequisite: Prerequisite(s): ECE 101 and ECE 101L and AM 20 or MATH 24. Concurrent enrollment in ECE 103 is required.

ECE 104 - Bioelectronics (5)

Covers selected case studies in interfacing electronic devices with biological systems. from Galvani to neuronal stimulation and electroceuticals. These studies include: the squid giant axon, the pace maker, deep brain stimulation, organic bioelectronics, bionanoelectronics and optogenetics, bioenergetics, and bioprotonics electroceuticals. Students are assessed through weekly student papers on case studies and through a final presentation. (Formerly EE 104.)

Prerequisite: Enrollment is restricted to juniors, seniors, and graduate students.

ECE 115 - Introduction to Solid Mechanics (5)

Introduces the solid mechanics of materials. Topics include: stress and strain, torsion, bending of beams, shearing stresses in beams, compound stresses, principal stresses, deflections of beams, and statically indeterminate members and columns. (Formerly CMPE 115.)

Prerequisite: Prerequisite(s): ECE 9 and MATH 19B, and AM 10 or MATH 21.

ECE 118 - Introduction to Mechatronics (10)

Technologies involved in mechatronics (intelligent electro-mechanical systems) and techniques necessary to integrate these technologies into mechatronic systems. Topics include electronics (A/D, D/A converters, opamps, filters, power devices), software program design (event-driven programming, state machine-based design), DC and stepper motors, basic sensing, and basic mechanical design (machine elements and mechanical CAD). Combines lab component of structured assignments with a large and open-ended team project. Students who enrolled in this class will learn how to solve engineering problems using the C Programming Language. Cannot receive credit for this course and ECE 218.

Prerequisite: Prerequisite(s): ECE 101 and ECE 101L and CSE 100 and CSE 100L; and ECE 13 or CSE 13E. ECE 121 and ECE 167 are highly recommended (but not required).

ECE 121 - Microcontroller System Design (7)

Focus is on the design and use of microcontroller-based embedded systems, specifically addressing issues of low-level functionality, direct manipulation of input/output using various specialized peripheral sets, and multiple communications protocols. Covers timers, Input Capture, Output Compare, ADC, PWM, interrupts, bus and memory organization, DMA, SPI, I2C, device driver programming, serial packet communication, and clocking. Students enrolled in this class learn how to use the C programming language to solve engineering problems.

Prerequisite: Prerequisite(s): CSE 12; and ECE 13 or CSE 13E. Concurrent enrollment in ECE 101 and ECE 101L is required.

ECE 122A - Collaborative Sustainability Project Design (5)

This course is the first quarter of a three quarter series of courses that together comprise the IDEASS Program (Impact Designs: Engineering and Sustainability through Student Service), which provides students with opportunities to plan, implement, and evaluate interdisciplinary sustainable design projects in the built environment for the Monterey Bay Region. In fall quarter students are introduced to project topics and background information. In collaboration with an outside mentor project teams design, revise, and complete a project plan including project goals and deliverables, timeline of key activities and major milestones, stakeholder map, evaluation plan, and budget (as applicable). Students apply online; selected applicants complete in-person interviews. (Formerly EE 122A.)

ECE 122B - Collaborative Sustainability Project Implementation (5)

The second of a three-quarter sequence that together comprise the IDEASS Program (Impact Designs: Engineering and Sustainability through Student Service) which provides opportunities for students to plan, implement, and evaluate interdisciplinary sustainable-design projects in the built environment for the Monterey Bay Region. In winter quarter, project teams work collaboratively to implement the project plans approved during the fall quarter. Students participate in a weekly seminary series that includes guest lectures and field trips as well as workshops in project management, public speaking, writing skills, and other professional development. Prerequisite(s): ECE 122A. Students apply online; selected applicants complete in-person interviews. Enrollment is restricted to juniors and seniors. (Formerly EE 122B.)

ECE 122C - Collaborative Sustainability Project Implementation (5)

The third of a three-quarter sequence that together comprise the IDEASS Program (Impact Designs: Engineering and Sustainability through Student Service) which provides opportunities for students to plan, implement, and evaluate interdisciplinary sustainable-design projects in the built environment for the Monterey Bay Region. In spring quarter, project teams work collaboratively to continue implementation of project plans approved during the fall quarter, then evaluate projects impacts. Students participate in a weekly seminary series that includes guest lectures and field trips as well as workshops in project management, public speaking, writing skills, and other professional development. Students also work in the community on educational public outreach regarding project impacts. Prerequisite(s): ECE 122A. Students apply online; selected applicants complete in-person interviews.

Enrollment is restricted to juniors and seniors.
(Formerly EE 122C.)

ECE 129A - Capstone Project I (5)

First of a three-course sequence in which students apply knowledge and skills gained in elective track to complete a major design project. In this first course, students complete the specification and planning for a substantial project. Topics covered: engineering design cycle, engineering teams, and professional practices. (Formerly EE 129A.)

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements and CSE 100; enrollment restricted to senior Electrical Engineering and Robotics Engineering majors. Electrical Engineering majors must complete ECE 171; and ECE 157 or ECE 173 or ECE 118 or ECE 121. Robotics Engineering majors must complete ECE 118 and ECE 121.

ECE 129B - Capstone Project II (5)

Second of a three-course sequence in which students apply knowledge and skills gained in elective track to complete a major design project. In this second course, students complete the training, research, and procurement for a substantial project and a preliminary implementation.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements and ECE 129A. Enrollment is restricted to seniors.

ECE 129C - Capstone Project III (5)

Third of a three-course sequence in which students apply knowledge and skills gained in this elective track to complete a major design project. In this third course, students work in teams to complete the project specified and advance on the results of the work in the first two courses. A formal written report, oral presentation, and demonstration of the successful project to a review panel of engineering faculty is required.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements and ECE 129B. Enrollment is restricted to seniors.

ECE 130 - Introduction to Optoelectronics and Photonics (5)

Introduction to optics, photonics and optoelectronics, fiber optic devices and communication systems: Topics include: ray optics, electromagnetic optics, resonator optics, interaction between photons and atoms, dielectric waveguides and fibers, semiconductor light sources and detectors, modulators, amplifiers, switches, and optical fiber communication systems. Taught in conjunction with course 230. Students cannot receive credit for this course and ECE 230. (Formerly EE 130.)

Prerequisite: Prerequisite(s): PHYS 5B and PHYS 5C, or PHYS 6B and PHYS 6C; concurrent enrollment in PHYS 130L.

ECE 130L - Introduction to Optoelectronics Laboratory (1)

Includes a series of projects to provide hands-on experience needed for basic concepts and laboratory techniques of optical fiber technology.

Prerequisite: Prerequisite(s): PHYS 5L, PHYS 5M, and PHYS 5N, or PHYS 6L, PHYS 6M, and PHYS 6N; concurrent enrollment in ECE 130.

ECE 135 - Electromagnetic Fields and Waves (5)

Vector analysis. Electrostatic fields. Magnetostatic fields. Time-varying fields and Maxwell's equations. Plane waves. (Formerly EE 135.)

Prerequisite: Prerequisite(s): ECE 101 and ECE 101L; MATH 23B; and MATH 24 or AM 20. Students must concurrently enroll in ECE 135L.

ECE 135L - Electromagnetic Fields and Waves Laboratory (2)

Laboratory sequence illustrating topics in course 135. One two-hour laboratory session per week.

Prerequisite: Prerequisite(s): ECE 101 and ECE 101L; MATH 23B; and MATH 24 or AM 20. Students must concurrently enroll in ECE 135.

ECE 136 - Engineering Electromagnetics (5)

Course will cover electromagnetic wave propagation, transmission lines, waveguides, and antennas. (Formerly EE 136.)

Prerequisite: Prerequisite(s): ECE 135 and ECE 135L. Enrollment is restricted to School of Engineering and Division of Physical and Biological Sciences majors or permission of instructor.

ECE 141 - Feedback Control Systems (5)

Analysis and design of continuous linear feedback control systems. Essential principles and advantages of feedback. Design by root locus, frequency response, and state space methods and comparisons of these techniques. Applications. (Formerly CMPE 141 and EE 153.)

Prerequisite: Prerequisite(s): ECE 103. Enrollment is restricted to School of Engineering and Division of Physical and Biological Sciences majors, or by permission of instructor.

ECE 145 - Estimation and Introduction to Control of Stochastic Processes (5)

Provides practical knowledge of Kalman filtering and introduces control theory for stochastic processes. Selected topics include: state-space modeling; discrete- and continuous-time Kalman filter; smoothing; and applications in feedback control. Students learn through hands-on experience. Students cannot receive credit for this course and course 245. Enrollment by permission of instructor. (Formerly CMPE 145.)

ECE 149 - Introduction to Cyber-physical Systems (5)

Presents the basic concepts and tools for the study of cyber-physical systems, including modeling and analysis tools for continuous-time and discrete-time systems, finite state machines, stateflow, timed and hybrid automata, concurrency, invariants, linear temporal logic, verification, and numerical simulation. Students are guided on methods for simulation and encouraged to apply them to several applications. The course is self-contained. Students are expected to have a basic background in logic circuits, programming, the mathematical modeling of dynamical systems (ECE 8 is recommended), differential equations, linear algebra, and basic calculus. Knowledge of MATLAB/Simulink is useful. Students cannot receive credit for this course and ECE 249.

Prerequisite: Prerequisite(s): ECE 100 and ECE 100L or equivalent, and ECE 13 or CSE 13E or equivalent.

ECE 151 - Communications Systems (5)

An introduction to communication systems. Analysis and design of communication systems based on radio, transmission lines, and fiber optics. Topics include fundamentals of analog and digital signal transmission in the context of baseband communications, including concepts such as modulation and demodulation techniques, multiplexing and multiple access, channel loss, distortion, bandwidth, signal-to-noise ratios and error control. Digital communication concepts include an introduction to sampling and quantization, transmission coding and error control. (Formerly EE 151.)

Prerequisite: Prerequisite(s): ECE 103, ECE 101, and ECE 101L; and CSE 107 or STAT 131 or probability theory and random variables background. Enrollment is restricted to School of Engineering and Physical and Biological Sciences majors.

ECE 152 - Introduction to Wireless Communications (5)

Introduction to the principles of wireless communications systems. Wireless propagation channels and their impact on digital communications. Modulation techniques for wireless systems and their performance. Multi-antenna systems and diversity. Multicarrier and spread spectrum. Multi-access methods: FDMA, TDMA, CDMA. The structure of cellular systems. Students cannot receive credit for this course and course 252. (Formerly EE 152.)

Prerequisite: Prerequisite(s): CSE 107 and ECE 151, or by consent of instructor. Enrollment is restricted to juniors and seniors.

ECE 153 - Digital Signal Processing (5)

Introduction to the principles of signal processing, including discrete-time signals and systems, the z-transform, sampling of continuous-time signals, transform analysis of linear time-invariant systems, structures for discrete-time systems, the discrete Fourier

transform, computation of the discrete Fourier transform, and filter design techniques. Taught in conjunction with Electrical Engineering 250. Students cannot receive credit for this course and Electrical Engineering 250. (Formerly EE 153 and CMPE 153.)

Prerequisite: Prerequisite(s): ECE 103. Enrollment is restricted to School of Engineering and Division of Physical and Biological Sciences majors or permission of instructor.

ECE 157 - RF Hardware Design (5)

Engineering design cycle for wireless and RF systems: design, practical hardware implementation, and prototype. (Formerly EE 157.)

Prerequisite: Prerequisite(s): ECE 101 and ECE 101L, ECE 103, and ECE 171, and ECE 174; or consent of instructor. Concurrent enrollment in ECE 157L is required.

ECE 157L - RF Hardware Design Laboratory (2)

Laboratory to accompany course 157, emphasizing hardware-design practice and principles applies to RF apparatus. Students design and implement a substantial final project during the last half of the course. Students are billed a materials fee of \$112. (Formerly EE 157L.)

Prerequisite: Prerequisite(s): ECE 101 and ECE 101L, ECE 103, and ECE 171, and ECE 174; or consent of instructor. Concurrent enrollment in ECE 157 is required.

ECE 163 - Introduction to Small-Scale UAV Theory and Practice (7)

Technologies involved in the modeling and simulation of small-scale unmanned aerial vehicles (UAVs) with an emphasis on control applications, from low-level flight stabilization to higher level path planning and vision-based control. Topics include coordinate frames, aerodynamics, equations of motion, full non-linear simulation, linearized dynamics models and trim states, force and moment balances for steady flight, flight controls by successive loop closure, state space control, path planning and guidance, sensors and estimation. Students enrolled in this class learn how to use the Python programming language to solve engineering problems. Taught in conjunction with ECE 263. Students cannot receive credit for this course and ECE 263.

Prerequisite: Prerequisite(s): ECE 141 or ECE 241 or ECE 242; and CSE 30 or ECE 13 or CSE 13E or CSE 13S. ECE 121, ECE 167, and ECE 145 recommended but not required. Enrollment is restricted to sophomores, juniors and seniors.

ECE 167 - Sensing and Sensor Technologies (7)

Introduces fundamental issues in sensing of temperature, motion, sound, light, position, etc. Sensors are integrated into a digital system using filtering, amplification, and analog-to-digital conversion.

Advanced topics may include noise, temperature, and other sources of variability. Students who enrolled in this class will learn how to solve engineering problems using the C Programming Language.

Prerequisite: Prerequisite(s): CSE 13E or ECE 13; and ECE 103 and ECE 103L.

ECE 170 - Advanced Power Electronics (5)

Advanced topics in power electronics including SCR circuits, modulation techniques, multilevel power converters, active and current-source rectifiers, magnetic circuit design, state-space averaging, power converter controller design and stability. Taught in conjunction with ECE 270. Students cannot receive credit for this course and ECE 270.

Prerequisite: Prerequisites: ECE 177 or equivalent or instructor approval. Enrollment is restricted to seniors.

ECE 171 - Analog Electronics (5)

Introduction to (semiconductor) electronic devices. Conduction of electric currents in semiconductors, the semiconductor p-n junction, the transistor. Analysis and synthesis of linear and nonlinear electronic circuits containing diodes and transistors. Biasing, small signal models, frequency response, and feedback. Operational amplifiers and integrated circuits. (Formerly EE 171.)

Prerequisite: Prerequisite(s): ECE 101 and ECE 101L; previous or concurrent enrollment in ECE 171L is required.

ECE 171L - Analog Electronics Laboratory (2)

Laboratory sequence illustrating topics covered in course 171. One two-hour laboratory session per week.

Prerequisite: Prerequisite(s): ECE 101 and ECE 101L; previous or concurrent enrollment in ECE 171 is required.

ECE 172 - Advanced Analog Circuits (5)

Analog circuit design covering the basic amplifier configurations, current mirrors, differential amplifiers, frequency response, feedback amplifiers, noise, bandgap references, one- and two-stage operational amplifier design, feedback amplifier stability, switched capacitor circuits and optionally the fundamentals of digital-to-analog and analog-to-digital converters. Emphasis throughout will be on the development of approximate and intuitive methods for understanding and designing circuits. Cannot receive credit for this course and course 221. (Formerly EE 172.)

Prerequisite: Prerequisite(s): ECE 171.

ECE 173 - High-Speed Digital Design (7)

Studies of analog circuit principles relevant to high-speed digital design: signal propagation, crosstalk, and electromagnetic interference. Topics include electrical characteristics of digital circuits, interfacing different logic families, measurement techniques, distributed

circuits and transmission lines, ground planes and grounding, terminations, power systems, electromagnetic compatibility and noise suppression. Laboratory sequence illustrates fundamental lecture topics and includes completion of a final design project.

Prerequisite: Prerequisite(s): ECE 101 and ECE 101L and ECE 174, or by permission of the instructor. ECE 171 and ECE 121 are recommended.

ECE 174 - Introduction to EDA Tools for PCB Design (3)

Focus on EDA tools for design of printed-circuit boards. Elements of design flow covered: schematic capture and simulation to final PCB layout. Final project is required. Students are billed a materials fee.

Prerequisite: Prerequisite(s): ECE 101 and ECE 101L or consent of instructor.

ECE 175 - Energy Generation and Control (5)

Introduces electrical energy generation, sensing, and control, emphasizing the emerging smart grid. Topics include 3-phase AC power systems, voltage and transient stability, fault analysis, grid protection, power-flow analysis, economic dispatch, and high voltage DC distribution (HVDC). (Formerly EE 175.)

Prerequisite: Prerequisite(s): ECE 101. Concurrent enrollment in ECE 175L is required.

ECE 175L - Energy Generation and Control Laboratory (2)

Computer analysis and simulation of energy generation, components, power-flow analysis, systems, and control covering topics from course 195. Weekly computer simulations reinforce the concepts introduced in course 175. (Formerly EE 175L.)

Prerequisite: Prerequisite(s): ECE 101. Concurrent enrollment in ECE 175 is required.

ECE 176 - Energy Conservation and Control (5)

AC/DC electric-machine drives for speed/position control. Integrated discussion of electric machines, power electronics, and control systems. Computer simulations. Applications in electric transportation, hybrid-car technology, robotics, process control, and energy conservation. (Formerly EE 176.)

Prerequisite: Prerequisite(s): ECE 103 and ECE 171. Concurrent enrollment in ECE 176L is required.

ECE 176L - Energy Conversion and Control Laboratory (2)

Simulink-based simulations of electric machines/drives in applications such as energy conservation and motion control in robotics and electric vehicles. (Formerly EE 176L.)

Prerequisite: Prerequisite(s): ECE 103 and ECE 171. Concurrent enrollment in ECE 176 is required.

ECE 177 - Power Electronics (5)

Switch-mode power converter design and analysis. Non-switching power supplies. Electronic power-factor correction. Soft switching. Power-semiconductor devices. Use in energy conservation, renewable energy, lighting, and power transmission. (Formerly EE 177.)

Prerequisite: Prerequisite(s): ECE 103. Concurrent enrollment in ECE 177L is required.

ECE 177L - Power Electronics Laboratory (2)

Buck, boost, buck-boost, flyback, and forward converter design and control.

Prerequisite: Prerequisite(s): ECE 103. Concurrent enrollment in ECE 177 is required.

ECE 178 - Device Electronics (5)

This course reviews the fundamental principles, device's materials, and design and introduces the operation of several semiconductor devices. Topics include the motion of charge carriers in solids, equilibrium statistics, the electronic structure of solids, doping, the pn junction, the junction transistor, the Schottky diode, the field-effect transistor, the light-emitting diode, and the photodiode. (Formerly EE 178.)

Prerequisite: Prerequisite(s): ECE 102 and ECE 102L and ECE 171 and ECE 171L. Enrollment is restricted to School of Engineering and Division of Physical and Biological Sciences majors or permission of instructor.

ECE 179 - Decision Analysis in Management (5)

Presents decision tools/theory with a focus on investment, finance, management, technology, and policy. Often, irreversible decisions are made without enough information to analyze the possible consequences. Course uses systematic approaches to analyze these types of situations to enable rational decisions. (CSE 174.)

Prerequisite: Prerequisite(s): AM 30 or MATH 22 or MATH 23A; and ECON 113; and ECON 100A or ECON 100M. Enrollment is restricted to juniors and seniors.

ECE 180J - Advanced Renewable Energy Sources, Storage, and Smart Grids (5)

Provides a comprehensive overview of renewable energy, storage, and smart grids. Fundamental energy-conversion limits based on physics and existing material properties are discussed. Various sources and facilities, such as solar, wind, hydropower, geothermal, tidal energy, and fuel cells are described. Solar- and wind-site assessment, electric vehicles, as well as sustainable microgrids are also discussed. Finally, the latest research on smart grids and smart cities is introduced. Taught in conjunction with course 80J. Students who enroll in this class will learn how to use Matlab to solve engineering problems. (Formerly EE 180J.)

Prerequisite: Prerequisite(s): MATH 3 or AM 3 or STAT 5 or STAT 7.

ECE 181J - Renewable Energy Sources in Practice (7)

Provides a fundamental understanding of renewable energies in practice by experiencing them in a functional context. Students visit and evaluate renewable-energy facilities, such as wind power, solar energy, hydrogen storage, biofuel production, waste-water testing facilities, biomass, biodiesel, and biogas. This intensive one-month program allows students to carry out applied research in a real-life, industrial-scale, renewable-energy context. Prerequisite(s): course 80J or equivalent. Enrollment restricted to junior, senior, and graduate students and by permission of instructor. (Formerly EE 181J.)

ECE 183 - Special Topics in Electrical Engineering (5)

Topics vary with instructor. Sample topics include smart grids, bioelectronics, antennas, etc. Enrollment by instructor permission. Approval of undergraduate adviser required for credit as an upper-division elective. (Formerly EE 183.)

ECE 193 - Field Study (5)

Provides for individual programs of study with specific academic objectives carried out under the direction of a faculty member of the electrical engineering program and a willing sponsor at the field site and using resources not normally available on campus. Credit is based on the presentation of evidence of achieving the objectives by submitting a written and oral presentation. May not normally be repeated for credit.

ECE 193F - Field Study (2)

Provides for individual programs of study with specific academic objectives carried out under the direction of a faculty member of the electrical engineering program and a willing sponsor at the field site and using resources not normally available on campus. Credit is based on the presentation of evidence of achieving the objectives by submitting a written and oral presentation. May not normally be repeated for credit.

ECE 195 - Senior Thesis Research (5)

Individual directed study for upper-division undergraduates. Students submit petition to sponsoring agency. If using this course to replace the capstone design requirement (ECE 129A, ECE129B, ECE 129C), students must take ECE 129A. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements.

ECE 195F - Senior Thesis Research (2)

Prerequisite(s): petition on file with sponsoring agency. Students submit petition to sponsoring agency.

ECE 198 - Individual Study or Research (5)

Provides for department-sponsored individual study program off campus, for which faculty supervision is not in person, but by correspondence. Students submit petition to sponsoring agency.

ECE 198F - Independent Field Study (2)

Provides for department-sponsored individual study program off campus for which faculty supervision is not in person, but by correspondence. Students submit petition to sponsoring agency.

ECE 199 - Tutorial (5)

Individual directed study for upper-division undergraduates. Students submit petition to sponsoring agency.

ECE 199F - Tutorial (2)

Individual directed study for upper-division undergraduates. Students submit petition to sponsoring agency.

Graduate

ECE 200 - Research and Teaching in Electrical Engineering (3)

Basic teaching techniques for TAs: responsibilities and rights, resource materials, computer security, leading discussion or lab sessions, presentations techniques, maintaining class records, electronic handling of homework, and grading. Examines research and professional training: use of library and online databases, technical typesetting, writing journal and conference papers, publishing, giving talks, and ethical issues. (Formerly EE 200.)

Prerequisite: Enrollment is restricted to graduate students.

ECE 201 - Introduction to Nanotechnology (5)

Introduction to underlying principles of nanoscience and nanotechnology. Intended for multidisciplinary audience with a variety of backgrounds. Introduces scientific principles and laws relevant on the nanoscale. Discusses applications in engineering, physics, chemistry, and biology. (Formerly EE 211.)

Prerequisite: Prerequisite(s): ECE 102 or consent of instructor.

ECE 203 - Nanocharacterization of Materials (5)

Covers the many characterization techniques used to characterize materials from volumes less than one cubic micrometer, including the basic physics of each method, the methodology used to get quantitative

results, and the advantages and limitations of each technique. (Formerly EE 213.)

Prerequisite: Enrollment restricted to graduate students, or to undergraduates majoring in engineering or science by permission of instructor.

ECE 204 - Bioelectronics (5)

Covers selected case studies in interfacing electronic devices with biological systems from Galvani to neuronal stimulation and electroceuticals. Studies include: the squid giant axon, the pacemaker, deep-brain stimulation, organic bioelectronics, bionanoelectronics and optogenetics, bioenergetics, and bioprotonics electroceuticals. Students are assessed through weekly papers on case studies and through a final presentation. (Formerly EE 204.)

Prerequisite: Enrollment is restricted to graduate students.

ECE 205 - Fundamentals of Nanoelectronics (5)

Covers microscopic theory of electron transport in nanoelectronic devices and transistors. Topics include: ballistic transport; quantum conductance, NEGF-Landauer formalisms; molecular conductors; graphene and carbon nanotubes, quantum resonant tunneling devices; nanotransistors; and spintronics. (Formerly EE 218.)

Prerequisite: Prerequisite(s): ECE 201 or ECE 207. Enrollment is restricted to graduate students. Students with background in basic matrix algebra and MATLAB programming may enroll with permission of instructor.

ECE 207 - Nanomaterials and Nanometer-Scale Devices (5)

Materials controlled at nanometer-scale will revolutionize existing technologies. Course offers opportunities of learning materials that exhibit peculiar physical characteristics at the nanometer scales. Course also includes discussions of unique device architecture based on materials crafted at the nanometer scale. (Formerly EE 216.)

ECE 215 - Models of Robotic Manipulation (5)

Theory and application of mathematical models to analyze, design, and program serial kinematic chains (robot arms). Covers models of arbitrary articulated robotic or biological arms and their application to realistic arms and tasks, including the homogeneous coordinate model of positioning tasks; the forward and inverse kinematic models; the Jacobian matrix; trajectory generation; and dynamic models, including Newton-Euler and Lagrangian formulations. (Formerly CMPE 215.)

Prerequisite: Enrollment is restricted to graduate students; and to seniors who have taken ECE 141, and AM 10 or MATH 21; or by permission of instructor.

ECE 216 - Bio-Inspired Locomotion (5)

Presents the principles of biological locomotion and application to robotics problems. Students learn about effective movements in the biological world (slithering, walking, climbing, and flying); extract their underlying principles; and apply them creatively to robotics design. (Formerly CMPE 216.)

Prerequisite: Prerequisite(s): ECE 9 or equivalent. Enrollment is restricted to graduate students, and seniors by permission of instructor.

ECE 218 - Mechatronics (10)

Examines technologies involved in mechatronics (intelligent electro-mechanical systems) and techniques necessary to integrate these technologies. Topics include electronics (A/D, D/A converters, opamps, filters, power devices), software program design (event-driven programming, state machine-based design), DC and stepper motors, basic sensing, and basic mechanical design (machine elements and mechanical CAD). Students learn how to solve engineering problems using C Programming Language. Combines lab component of structured assignments with a large and open-ended team project. Students cannot receive credit for this course and ECE 118.

Prerequisite: Prerequisite(s): Enrollment is restricted to graduate students.

ECE 221 - Advanced Analog Integrated Circuits (5)

Analog integrated circuit design with emphasis on fundamentals of designing linear circuits using CMOS. Covers MOS devices and device modeling, current mirrors, op-amp design, op-amp compensation, comparators, multipliers, voltage references, sample-and-holds, noise, and an introduction to more complicated systems using these building blocks, such as phase locked loops and analog-to-digital converters. If time permits, integrated circuit layout issues and device/circuit fabrication. Students cannot receive credit for this course and ECE 172. (Formerly EE 221.)

Prerequisite: Prerequisite(s): course ECE 171 or equivalent; ECE 178 or equivalent recommended.

ECE 222 - High-Speed Low-Power Integrated Circuit Design (5)

Digital integrated circuit design covered with an emphasis on high-speed and low-power applications. Covers signaling techniques and circuits including transmitters and receivers, with emphasis on on-chip interconnect, timing fundamentals and timing circuits. Theoretical fundamentals of phase locked loops and design issues of implementation addressed. Course has a project design component. Interview to assess technical skills of student. Enrollment is restricted to electrical engineering and computer engineering graduate students. (Formerly EE 222.)

ECE 223 - Advanced Solid-State Devices (5)

Solid-state devices advance rapidly by employing new materials, new architecture, and new functional principles. Class offers opportunities to learn the latest advancements in solid-state devices (e.g., electronic, optoelectronic, photonic devices, and smart sensors) viewed from various scientific, technological, and engineering aspects, such as energy conversion and computation. (Formerly EE 223.)

ECE 224 - Device Electronics (5)

Reviews the fundamentals of semiconductors and then explores the structure, design, and operation of the most important and widely used semiconductor devices. Topics include the motion of charge carriers in solids, equilibrium statistics, the electronic structure of solids, doping, the pn junction, the junction transistor, the Schottky diode, field-effect transistor, the light-emitting diode, and the photodiode.

Prerequisite: Enrollment is restricted to graduate students.

ECE 225 - Semiconductor Processing and Bandgap Engineering (5)

Addresses principles of semiconductor processing with applications for semiconductor materials engineering, research, and development. The materials fabrication and processing topics include preparation of silicon, III-V compounds, and dielectric thin films, including thin film deposition techniques, diffusion, ion implantation, and standard device fabrication sequences. Applications of these processing principles for semiconductor materials engineering and bandgap engineering in semiconductor heterostructures are discussed for devices, such as LEDs, lasers, photoreceptors, modulators, and high-speed transistors.

Prerequisite: Enrollment is restricted to graduate students.

ECE 226 - CMOS Radio Frequency Integrated Circuit Design (5)

Covers narrowband and high-frequency techniques, noise, distortion, nonlinearities, low-noise amplifiers, power amplifiers, mixers, receivers, and transmitters for wireless communications. Topics are presented in the context of integrated designs in CMOS, but topics are fundamental and widely applicable. (Formerly EE 226.)

Prerequisite: Prerequisite(s): ECE 172 or ECE 221 or permission of instructor.

ECE 227 - Fundamentals of Semiconductor Physics (5)

Semiconductor physics is examined for advanced new materials and devices. Discusses how familiar concepts are extended to new electronics. Intended for students interested in electrical engineering, physics, and materials science applications. Good familiarity with

basic electromagnetism and quantum physics is assumed. (Formerly EE 227.)

Prerequisite: Enrollment is restricted to graduate students.

ECE 228 - Engineering of Thin Film Deposition (5)

Covers key processes to build a coherent picture of the deposition of thin films. Offers an opportunity to implement general computing resources in describing the formation of thin films. The deposition of thin films plays a key role in technology due to their unprecedented physical properties. Their deposition depends on such factors as thermodynamics in the deposition environment and kinetics on the solid surfaces where atoms are assembled; therefore, understanding the fundamental processes involved is important. (Formerly EE 217.)

Prerequisite: Students should have a background in solid-state materials that is equivalent to ECE 102. Enrollment is restricted to graduate students.

ECE 229 - Quantum Electronics (5)

Covers basic theory of interaction of electromagnetic radiation with resonant atomic transitions and density matrix treatment; and applications including Rabi oscillations, slow light; nonlinear optics; coherent radiation, and noise in photodetectors and lasers. (Formerly EE 232.)

Prerequisite: Prerequisite(s): ECE 231 or equivalent.

ECE 230 - Optical Fiber Communication (5)

Components and system design of optical fiber communication. Topics include step-index fibers, graded-index fibers, fiber modes, single-mode fibers, multimode fibers, dispersion, loss mechanisms, fiber fabrication, light-emission processes in semiconductors, light-emitting diodes, laser diodes, modulation response, source-fiber coupling, photodetectors, receivers, receiver noise and sensitivity, system design, power budget and rise-time budget, fiber-optic networks (FDDI, SONET, etc.), wavelength division multiplexing (WDM). Students cannot receive credit for this course and ECE 130. (Formerly EE 230.)

Prerequisite: Enrollment is restricted to graduate students.

ECE 231 - Optical Electronics (5)

Introduction to phenomena, devices, and applications of optoelectronics. Main emphasis is on optical properties of semiconductors and semiconductor lasers. (Formerly EE 231.)

Prerequisite: Prerequisite(s): ECE 102 and ECE 102L.

ECE 232 - Integrated Biophotonics (5)

Covers use of integrated optics for study of biological material; fluorescence spectroscopy, single molecule detection, optical tweezers, layered dielectric media,

hollow-core waveguides, photonic crystals, optofluidics, biophotonic systems, and applications. (Formerly EE 236.)

Prerequisite: Prerequisite(s): ECE 233 or equivalent. Enrollment is restricted to graduate students.

ECE 236 - Optics and Microscopy (5)

Covers the basic principles of optics and microscopy. Topics include geometrical optics, simple ray tracing, diffraction, Fourier optics, image formation in the human eye, the photographic camera, and different types of microscopes. Hands-on experience is provided in laboratories. Requires basic mathematics. (Formerly EE 266.)

Prerequisite: Enrollment is restricted to graduate students. Undergraduate students may enroll with permission of the instructor.

ECE 237 - Image Processing and Reconstruction (5)

Fundamental concepts in digital image processing and reconstruction. Continuous and discrete images; image acquisition, sampling. Linear transformations of images, convolution and superposition. Image enhancement and restoration, spatial and spectral filtering. Temporal image processing: change detection, image registration, motion estimation. Image reconstruction from incomplete data. Applications. (Formerly EE 264.)

Prerequisite: Prerequisite(s): ECE 153 or permission of instructor.

ECE 240 - Introduction to Linear Dynamical Systems (5)

Introduction to applied linear algebra and linear dynamical systems with applications to circuits, signal processing, communications, and control systems. Topics include the following: Least-squares approximations of over-determined equations and least-norm solutions of underdetermined equations. Symmetric matrices, matrix norm and singular value decomposition. Eigenvalues, left and right eigenvectors, and dynamical interpretation. Matrix exponential, stability, and asymptotic behavior. Multi-input multi-output systems, impulse and step matrices; convolution and transfer matrix descriptions. Control, reachability, state transfer, and least-norm inputs. Observability and least-squares state estimation. (Formerly CMPE 240.)

Prerequisite: Enrollment is restricted to graduate students; undergraduates may enroll if they have completed ECE 103 and AM 147.

ECE 241 - Introduction to Feedback Control Systems (5)

Graduate-level introduction to control of continuous linear systems using classical feedback techniques. Design of feedback controllers for command-following error, disturbance rejection, stability, and dynamic response specifications. Root locus and frequency response design techniques. Extensive use of Matlab for

computer-aided controller design. Course has concurrent lectures with ECE 141.

Prerequisite: Enrollment is restricted to graduate students.

ECE 242 - Applied Feedback Control (5)

Sequel to Electrical Engineering 154. After reviewing control design techniques examined in EE 154, this course explores state space control, discrete time control, and two case studies in control design. Students design and implement feedback controllers on an inverted pendulum experiment. (Formerly CMPE 242.)

Prerequisite: Prerequisite(s): ECE 141 or ECE 241. Enrollment is restricted to juniors, seniors, and graduate students.

ECE 243 - System Identification (5)

Course provides introduction to the construction of linear dynamical models from experimental data using parametric and non-parametric identification techniques. Theoretical and practical aspects of these techniques addressed. (Formerly CMPE 243.)

Prerequisite: Prerequisite(s): ECE 240, or by permission of instructor.

ECE 244 - Digital Control (5)

Teaches the design and analysis of digital control systems. The topics covered are discrete-time system modeling; z-transform; stability, controllability, and observability of discrete-time systems; various design approaches to control design in which sensor, computer hardware, actuation, communication, and user interface are part of the design. Note: knowledge of linear algebra, calculus, basic differential equations, Laplace transform, signals and systems, linear-system control theory, MATLAB, and the use of word-processing software are assumed. (Formerly CMPE 244.)

Prerequisite: Prerequisite(s): ECE 141 or ECE 241. Enrollment is restricted to graduate students, or by permission of the instructor.

ECE 245 - Estimation and Introduction to Control of Stochastic Processes (5)

Provides practical knowledge of Kalman filtering and introduces control theory for stochastic processes. Selected topics include: state-space modeling; discrete- and continuous-time Kalman filter; smoothing; and applications in feedback control. Students learn through hands-on experience. Students cannot receive credit for this course and course 145. (Formerly CMPE 245.)

Prerequisite: Prerequisite(s): ECE 240 or ECE 241. Knowledge of Matlab is expected. Enrollment is restricted to graduate students.

ECE 246 - Hybrid Dynamical Systems (5)

Examines the modeling and analysis of hybrid dynamical systems, including the modeling of hybrid

systems, the concept of solutions, Zeno behavior, equilibrium sets, stability, convergence, Lyapunov-based conditions, robustness, and simulation. Students are guided on methods for simulation and encouraged to apply them to several applications. (Formerly CMPE 246.)

Prerequisite: Prerequisite(s): ECE 241. Enrollment is restricted to graduate students.

ECE 249 - Introduction to Cyber-physical Systems (5)

Presents the basic concepts and tools for the study of cyber-physical systems, including modeling and analysis tools for continuous-time and discrete-time systems, finite state machines, stateflow, timed and hybrid automata, concurrency, invariants, linear temporal logic, verification, and numerical simulation. Students are guided on methods for simulation and encouraged to apply them to several applications. The course is self-contained. Students are expected to have a basic background in logic circuits, programming, the mathematical modeling of dynamical systems (ECE 8 is recommended), differential equations, linear algebra, and basic calculus. Knowledge of MATLAB/Simulink is useful. Students cannot receive credit for this course and ECE 149.

Prerequisite: Prerequisite(s): CSE 100 and CSE 100L or equivalent, and ECE 13 or CSE 13E or equivalent.

ECE 250 - Digital Signal Processing (5)

In-depth study of signal processing techniques, including discrete-time signals and systems, the z-transform, sampling of continuous-time signals, transform analysis of linear time-invariant systems, structures for discrete-time systems, the discrete Fourier transform, computation of the discrete Fourier transform, filter design techniques. Students cannot receive credit for this course and course 153. (Formerly EE 250.)

ECE 251 - Principles of Digital Communications (5)

A core course on digital communications theory. Provides an introduction to digital communication, including source coding, characterization of communication signals and systems, modulation and demodulation for the additive Gaussian channel, digital signaling, and over bandwidth constrained linear filter channels and over fading multipath channels. (Formerly EE 251.)

Prerequisite: Prerequisite(s): ECE 151 and ECE 153 and CSE 107.

ECE 252 - Wireless Communications (5)

In-depth study of the physical layer of wireless communications. Wireless propagation channels and their impact on digital communications. Modulation techniques for wireless systems and their performance. Multi-antenna systems and diversity. Multicarrier and spread spectrum. Multi-access methods: FDMA,

TDMA, CDMA. The structure of cellular systems. Students cannot receive credit for this course and course 152. (Formerly EE 252.)

Prerequisite: Prerequisite(s): ECE 251.

ECE 253 - Introduction to Information Theory (5)

An introduction to information theory including topics such as entropy, relative entropy, mutual information, asymptotic equipartition property, channel capacity, differential entropy, rate distortion theory, and universal source coding. (Formerly EE 253 and CMPS 250.)

Prerequisite: Enrollment is restricted to graduate students.

ECE 254 - Radar, Synthetic Aperture Radar, and ISAR (5)

Introduces radar signal processing, synthetic aperture radar (SAR), and inverse SAR (ISAR). Focuses on the fundamentals and design principles of modern radar systems. Students use hands-on computer simulations to build a strong background in radar sensor systems that can be applied to a variety of problems, such as medical imaging, ground-penetrating radar imaging for geophysical exploration, and the use of radar sensor systems for satellite-based SAR. (Formerly EE 288.)

Prerequisite: Prerequisite(s): ECE 153. Enrollment is restricted to juniors, seniors, and graduate students.

ECE 255 - Error Control Coding (5)

Covers the following topics: introduction to algebra; linear block code; cyclic codes; BCH code; RS codes; spectral domain study of codes; CRC; and product codes. (Formerly EE 261.)

ECE 256 - Statistical Signal Processing (5)

Covers fundamental approaches to designing optimal estimators and detectors of deterministic and random parameters and processes in noise, and includes analysis of their performance. Binary hypothesis testing: the Neyman-Pearson Theorem. Receiver operating characteristics. Deterministic versus random signals. Detection with unknown parameters. Optimal estimation of the unknown parameters: least square, maximum likelihood, Bayesian estimation. Will review the fundamental mathematical and statistical techniques employed. Many applications of the techniques are presented throughout the course. Note: While a review of probability and statistics is provided, this is not a basic course on this material. (Formerly EE 262.)

Prerequisite: Prerequisite(s): ECE 103 and CSE 107, or permission of instructor.

ECE 258 - Introduction to Inverse Problems (3)

Fundamental approaches and techniques in solving inverse problems in engineering and applied sciences, particularly in imaging. Initial emphasis on fundamental mathematical, numerical, and statistical formulations

and known solution methods. Sampling of applications presented from diverse set of areas (astronomical, medical and optical imaging, and geophysical exploration). (Formerly EE 265.)

Prerequisite: Enrollment is restricted to graduate students.

ECE 263 - Small-Scale UAV Theory and Practice (7)

Technologies involved in the modeling and simulation of small-scale unmanned aerial vehicles (UAVs) with an emphasis on control applications, from low-level flight stabilization to higher level path planning and vision-based control. Topics include coordinate frames, aerodynamics, equations of motion, full non-linear simulation, linearized dynamics models and trim states, force and moment balances for steady flight, flight controls by successive loop closure, state space control, path planning and guidance, sensors and estimation. Students enrolled in this class learn how to use the Python programming language to solve engineering problems. Students gain team leadership and project management skills. Taught in conjunction with ECE 163. Students cannot receive credit for this course and ECE 163.

Prerequisite: Prerequisites: Students should have an understanding of Feedback Controls and Programming (Python preferred). It is recommended but not required that students have a background in Sensors, Microcontrollers, Kalman Filtering, and Estimation. Enrollment is restricted to graduate students.

ECE 270 - Advanced Power Electronics (5)

Advanced topics in power electronics including SCR circuits, modulation techniques, multilevel power converters, active and current-source rectifiers, magnetic circuit design, state-space averaging, power converter controller design and stability. Taught in conjunction with ECE 170. Students cannot receive credit for this course and ECE 170.

Prerequisite: Prerequisites: Enrollment is restricted to graduate students.

ECE 275 - Energy Market, Policy, and Modeling (5)

The power industry is responsible for a large fraction of the U.S.'s emissions of SO₂, NO_x, and CO₂, as well as much other water, solid waste, and land impacts. Its large environmental as well as economic footprint make it a target of many environmental policies, as well as an inherently interesting sector to study. The recent development of energy and climate policy at the global, the U.S. federal, and state-level has made Energy & Climate Policy an intriguing and dynamic topic for both industries and academia. This course will present fundamental analytical tools (optimization and simulation) for modeling firm and market behavior for the energy sector, with a focus on electric power. However, these models can be used for planning investments in generation, transmission, and energy conservation, and for analysis of public policy.

Prerequisite: Enrollment is restricted to graduate students.

ECE 279 - Optimization and Control for Electric Power Systems (5)

Provides a comprehensive overview of power systems. Students learn how mathematical tools are used for the system planning and operation. Advanced topics include smart grids, electric vehicles and energy data analytics.

Prerequisite: Enrollment is restricted to graduate students. Undergraduates admitted with permission of the instructor.

ECE 280A - Current Topics in Applied Microscopy and Neuronal Imaging (2)

A weekly seminar to discuss current topics in applied microscopy and neuronal imaging. (Formerly EE 280A.)

Prerequisite: Enrollment is restricted to graduate students.

ECE 280B - Seminar on Integrated Bioelectronics (2)

Weekly seminar covering current research in integrated bioelectronics. Enrollment is by permission of the instructor and is restricted to students who have research in bioelectronics. (Formerly EE 280B.)

ECE 280C - Seminar on Control (2)

Weekly seminar series covering topics of current research in theory and application of control to engineering systems. Current research work and literature in these areas discussed. (Formerly CMPE 280C.)

Prerequisite: Enrollment is restricted to graduate students; undergraduates may enroll with permission of instructor.

ECE 280D - Graduate Research Seminar (2)

Weekly seminar series in topics of current research in information systems and technology management. Enrollment by permission of instructor. (Formerly TIM 280A.)

ECE 280N - Seminar on Nanophotonics and Lab-on-Chip Systems (2)

Weekly series covering current research in nanophotonics and lab-on-chip systems including nanoplasmonic biosensors; nanospectroscopy (Raman and vibrational mid-infrared spectroscopy); nanofabrication; nanophotonics devices for energy conversion and thermoplasmonics; acoustic fluids; and microfluidic integration. Current research work and recent literature are discussed. Enrollment is by permission of the instructor and restricted to graduate students. Sophomores, juniors, and seniors may enroll by permission of instructor. (Formerly EE 280N.)

ECE 280O - Seminar on Applied Optics (2)

Weekly seminar series covering topics of current research in applied optics, including integrated, quantum, nonlinear, and nano-optics. Current research work and literature in these areas are discussed. Enrollment by permission of instructor. (Formerly EE 280O.)

ECE 280Z - Seminar on Smart Grids and Data Analytics (2)

Weekly series covering state-of-the-art research in smart power grids, machine learning, communications, and signal processing. Current research works and recent literature are discussed. Enrollment is by permission of the instructor and is restricted to graduate students. Undergraduates may enroll by permission of the instructor. (Formerly EE 280Z.)

ECE 283 - Special Topics in Electrical and Computer Engineering (3)

Graduate seminar on a research topic in electrical engineering that varies with the particular instructor. Topics may include, but are not limited to, electromagnetics, antennas, electronics biotechnology, nanotechnology, signal processing, communications, VLSI, MEMS, and radio frequency. Enrollment is restricted to graduate students and consent of instructor. (Formerly EE 283.)

ECE 290 - ECE Graduate Seminar (2)

Leading speakers from academia and industry present their latest research.

Prerequisite: Enrollment is restricted to computer engineering, electrical engineering, and electrical and computer engineering graduate students.

ECE 291 - Tomorrow's Professors, Engineers, and Entrepreneurs (3)

The aim of this course is two-fold: (1) inform, motivate, and prepare graduate students for possible careers in academia and industry; (2) expose graduate students to the professional skills required for possible career options in engineering and science. Course is for Satisfactory/Unsatisfactory grade only. (Formerly EE 291, Tomorrow's Professors, Engineers, and Entrepreneurs.)

Prerequisite: Enrollment is restricted to graduate students.

ECE 293 - Advanced Topics in Electrical and Computer Engineering (5)

Graduate seminar on a research topic in electrical engineering that varies with the particular instructor. Typical topics include, but are not limited to, electromagnetics, antennas, electronics biotechnology, nanotechnology, signal processing, communications, VLSI, and MEMS. Prerequisite(s): Enrollment is by permission of the instructor and is restricted to graduate

students. In some quarters course will be taught in conjunction with ECE 183. (Formerly EE 293.)

ECE 296 - Master Project (5)

Master project conducted under faculty supervision. Petition on file with sponsor faculty.

ECE 297A - Independent Study or Research (5)

Independent study or research under faculty supervision. Students submit petition to sponsoring agency.

ECE 297B - Independent Study or Research (10)

Independent study or research under faculty supervision. Students submit petition to sponsoring agency.

ECE 297C - Independent Study or Research (15)

Independent study or research under faculty supervision. Students submit petition to sponsoring agency.

ECE 297F - Independent Study or Research (2)

Independent study or research under faculty supervision. Students submit petition to sponsoring agency.

ECE 299A - Thesis Research (5)

Thesis research conducted under faculty supervision. Students submit petition to sponsoring agency.

ECE 299B - Thesis Research (10)

Thesis research conducted under faculty supervision. Students submit petition to sponsoring agency.

ECE 299C - Thesis Research (15)

Thesis research conducted under faculty supervision. Students submit petition to sponsoring agency.

ECON - ECONOMICS

Lower-Division

ECON 1 - Introductory Microeconomics: Resource Allocation and Market Structure (5)

For all interested students as well as prospective economics majors. Examines how markets allocate resources in different kinds of economies. Topics include competitive markets, monopoly, financial markets, income distribution, market failures, the environment, and the role of government.

ECON 2 - Introductory Macroeconomics: Aggregate Economic Activity (5)

For all interested students and prospective economics majors. Examines how the overall level of national economic activity is determined, including output, employment, and inflation. Explores the roles of

monetary and fiscal policies in stabilizing the economy and promoting growth, with a focus on contemporary policy debates.

ECON 10A - Economics of Accounting (5)

Introduces students to fundamental accounting principles and practices. Key topics include reviewing the accounting cycle, preparing basic financial statements, and integrating data analysis tools to interpret and analyze financial statement data. Course improves students' financial literacy skills by illustrating how financial statements are used by external parties such as bankers, creditors, investors, and others who have a desire and/or need to learn more about the financial information of business organizations.

ECON 10B - Economics of Accounting (5)

Foundation of accounting course providing students with the concepts, practices, and tools for analyzing, planning, and making managerial accounting decisions for the future with an emphasis on performance measurement using various data analysis tools. Key topics include product and service costing, management decision-making and analysis, planning and controlling processes, CVP analysis, budgeting, variance analysis, and segment reporting.

Prerequisite: Prerequisite(s): ECON 10A.

ECON 20 - Economics for Non-Majors (5)

Designed for non-majors seeking a basic introduction to core economic concepts relevant for social and public policy decision making. Fundamental economic concepts illustrated through their application to a variety of public policy questions.

ECON 30 - Introduction to Entrepreneurship (5)

Provides an overview of the role and importance of entrepreneurship in the economy and society; a framework for approaching entrepreneurship and innovation; and exposure to the core competencies required of all entrepreneurs. The course incorporates case studies and speakers (often actual entrepreneurs) to provide context for the entrepreneurial topics covered in the course.

ECON 93 - Field Study (5)

Supervised fieldwork experience in an area connected with economics or business. Prerequisite(s): two of the following ECON 100A, ECON 100B, ECON 113. Enrollment restricted to juniors and seniors. Students submit petition to sponsoring agency and seek internship for approval by agency.

ECON 93F - Field Study (2)

Supervised fieldwork experience, in an area connected with economics or business. Prerequisite(s): two of the following ECON 100A, ECON 100B, ECON 113. Enrollment restricted to juniors and seniors. Students

submit petition to sponsoring agency and seek internship for approval by agency.

ECON 99 - Tutorial (5)

Upper-Division

ECON 100A - Intermediate Microeconomics (5)

Covers major theoretical issues arising in the study of resource allocation, the function of markets, consumer behavior, and the determination of price, output, and profits in competitive, monopolistic, and oligopolistic market structures. Also considers issues of welfare and public policy. Students cannot receive credit for this course and course 100M.

Prerequisite: Prerequisite(s): ECON 1 and ECON 2; and ECON 11B or AM 11B or MATH 22 or MATH 23A.

ECON 100B - Intermediate Macroeconomics (5)

Covers major theoretical issues arising in the study of income, employment, interest rates, and the price level. Examines the role of monetary and fiscal policy in economic stabilization. Also considers these issues as they relate to the global economy. Students cannot receive credit for this course and course 100N.

Prerequisite: Prerequisite(s): ECON 1 and ECON 2; and ECON 11B or AM 11B or MATH 22 or MATH 23A.

ECON 100M - Intermediate Microeconomics, Math Intensive (5)

Mathematically sophisticated version of course 100A. Provides analytically rigorous treatment of the subject using a calculus-intensive presentation of microeconomic theory. For specific topics, see course 100A. Students cannot receive credit for this course and course 100A.

Prerequisite: Prerequisite(s): ECON 1 and ECON 2; and ECON 11B or AM 11B or MATH 22 or MATH 23A.

ECON 100N - Intermediate Macroeconomics, Math Intensive (5)

Provides rigorous, mathematical-intensive treatment of topics covered in course 100B. Core is devoted to model-based analysis of questions in macroeconomics. Use of mathematical tools allows study of advanced topics and data-intensive applications. See course 100B for specific topics. Students cannot receive credit for this course and course 100B.

Prerequisite: Prerequisite(s): ECON 1 and ECON 2; and ECON 11B or AM 11B or MATH 22 or MATH 23A.

ECON 101 - Managerial Economics (5)

Analysis of the theory and practice of decision making in business firms, applying the concepts and techniques of microeconomics. Topics may include pricing schemes, non-price competition, internal organization of firms, incentive contracts, asymmetric information,

and game theory. Case studies are used to illustrate some topics.

Prerequisite: Prerequisite(s): ECON 100A or ECON 100M; and ECON 113.

ECON 104 - Is There Truth in Numbers: The Role of Statistics in Economics (5)

Applies the techniques of econometrics and experimental economics to the understanding of economics. A hands-on course where real economic data is used in an interactive way so that students develop the art of empirical analysis.

Prerequisite: Prerequisite(s): ECON 100A or ECON 100M; and ECON 113, and Entry Level Writing and Composition requirements.

ECON 105 - Topics in Macroeconomics (5)

Covers topics in macroeconomics. Course builds on the tools of macroeconomics developed in ECON 100B and ECON 100N to explore topical macroeconomic issues. Possible topics include economic growth, business cycles, financial crises, unemployment, inflation, inequality, and the global economy.

Prerequisite: Prerequisite(s): ECON 100B or ECON 100N; and ECON 113.

ECON 110 - Managerial Cost Accounting and Control (5)

Focuses on how cost data are used by managers in the planning and control of both private- and public-sector organizations. Specific topics include organization of the management and control function, use of cost data for the pricing of goods and services, the effect of cost systems on management performance, and capital budgeting.

Prerequisite: Prerequisite(s): ECON 10B.

ECON 111A - Intermediate Accounting I (5)

Principles, control, and theory of accounting for assets; accounting as an information system; measurement and determination of income. Projects involving spreadsheet software are required.

Prerequisite: Prerequisite(s): ECON 10B.

ECON 111B - Intermediate Accounting II (5)

Covers the principles, control, the theory of accounting for liabilities and property; plant and equipment, the preparation and analysis of investments, and review and analysis of bonds and leases.

Prerequisite: Prerequisite(s): ECON 111A..

ECON 111C - Intermediate Accounting III (5)

Covers the principles of control, the theory of accounting for pensions and income taxes; the determination of share-based compensation and

earnings per share, the calculation of shareholder's equity, and advanced topics in intermediate accounting.

Prerequisite: Prerequisite(s): ECON 111A.

ECON 112 - Auditing and Attestation (5)

For business management economics majors interested in careers that emphasize accounting, finance, or technology management. Also for students who intend to take the CPA exam. Covers audit techniques, risk analysis, and development of control structures for major financial processes including cash, investments, accounts receivable, inventories, accounts payable, debt, equity capital, and related information systems security.

Prerequisite: Prerequisite(s): ECON 10B.

ECON 113 - Introduction to Econometrics (5)

Practical methods for organizing and analyzing economic data, testing economic hypotheses, and measuring economic relationships. Regression analysis is the main empirical method, and basic statistical and probability theory is included. Students gain hands-on computer experience with an econometric software package.

Prerequisite: Prerequisite(s): ECON 1 and ECON 2; STAT 7 and STAT 7L or STAT 17 and STAT 17L; and one of the following: ECON 11B, AM 11B, MATH 22, or MATH 23A. ECON 100A or ECON 100B strongly recommended as preparation.

ECON 114 - Advanced Quantitative Methods (6)

Application of statistical methods to estimating and testing economic relationships, i.e., econometric techniques. Topics include the effects of misspecification, choice of functional form, serial correlation, heteroscedasticity, limited dependent variables, and simultaneous equations. Includes discussion of existing empirical work and econometric projects by students.

Prerequisite: Prerequisite(s): ECON 100A or ECON 100M, and ECON 113.

ECON 114L - Advanced Quantitative Methods Lab (2)

Laboratory component associated with course 114. Topics include learning the fundamentals of programming in R language and learning to implement the modes and methods taught in course 114 lectures.

Prerequisite: Prerequisite(s): ECON 100A or ECON 100M; and ECON 113; concurrent enrollment in ECON 114 is required.

ECON 115 - Introduction to Management Sciences (5)

The scientific study of management decision making. Topics include linear, integer, and non-linear programming. Special emphasis on a wide variety of practical applications, including production scheduling,

optimal transportation assignments, and optimal inventory policy.

Prerequisite: Prerequisite(s): ECON 100A or ECON 100M.

ECON 116 - Advanced Topics in Accounting and Ethics (5)

Covers topics in accounting and ethics. Builds a strong accounting foundation; develops critical thinking skills; and explores ethical standards in accounting, forensic accounting, international financial recording standards, and accounting for sustainability. Meets the California state educational ethics requirement for certified public accountant (CPA) licensure.

Prerequisite: Prerequisite(s): ECON 111A and ECON 111B. Enrollment is restricted to economics, business management economics, global economics, and the combined economics and environmental studies and mathematics majors.

ECON 117A - Income Tax Factors for Individuals (5)

Introduces federal taxation for individuals. Topics for study include taxable income, gross income exclusions and inclusions, capital gains, depreciation, business and itemized deductions, personal and dependency exemptions, passive activity losses, tax credits, and methods of accounting.

Prerequisite: Prerequisite(s): ECON 10A.

ECON 117B - Tax Factors of Business and Investment (5)

Focuses on various tax subjects providing a strong foundation in tax concepts and preparation for work in either public or corporate accounting. Topics include historical perspective of the U.S. tax system, introduction to estate and gift taxes, employment and self-employment taxes, tax concepts and laws, business expenses, capital recovery, tax credits, capital gains and losses, capital investments, and corporate operations.

Prerequisite: Prerequisite(s): ECON 10B.

ECON 119 - Advanced Accounting (5)

Accounting for business organizations; partnerships; government and non-profit organization funds; branches, consolidations, and installment sales. Projects involving spreadsheet software required.

Prerequisite: Prerequisite(s): ECON 111A or ECON 111B.

ECON 120 - Development Economics (5)

Studies the microeconomics of development. Topics may include health and nutrition, education, intra-household economics, formal and informal risk-coping mechanisms, savings, credit, agriculture, institutions, and service delivery and corruption. Focuses on empirical methods. Problem sets require statistical

software such as Stata. (Formerly Economic Development.)

Prerequisite: Prerequisite(s): ECON 1, ECON 2, and ECON 113.

ECON 121 - Economic Growth (5)

Studies economic growth from theoretical, empirical, and historical perspectives. Topics include: theories of economic growth and their empirical importance, technology and innovation, social institutions and growth, and competing explanations of the global distribution of wealth.

Prerequisite: Prerequisite(s): ECON 1, ECON 2, ECON 11A, and ECON 11B (or the equivalent); ECON 100B is strongly recommended.

ECON 124 - Machine Learning for Economists (5)

Introduction to machine learning from the perspective of economics. Students introduced to modern estimation methods for high-dimensional data, which is illustrated through applications to causal inference and prediction problems in economics, business, and related fields. Students gain experience working with these methods through programming assignments. Course focuses on methodology and its practical application and culminates in an empirical project in which students apply course concepts to real-world data.

Prerequisite: Prerequisite(s): ECON 113. Enrollment is restricted to economics, business management economics, global economics, and economics combined majors.

ECON 125 - Economic History of the U.S (5)

The development of the American economy from colonial times to the present, with emphasis on the interaction between institutional structure and economic development. Topics include the economics of slavery, the rise of big business, and the causes of the Great Depression.

Prerequisite: Prerequisite(s): ECON 1 and ECON 2. Related coursework in history also helpful. Enrollment is restricted to juniors and seniors.

ECON 126 - Why Economies Succeed or Fail: Lessons from Western and Japanese History (5)

Examines the emergence of capitalism and the world's first industrial revolution in Britain, continental Europe industrialization, Soviet economic growth and collapse, and the Japanese economic miracle. Asks about the historical sources of long-run economic development, stagnation, and decline. Draws lessons for current debates over free market versus more interventionist policies, economic reform in the former Communist nations, and economic rivalry between the U.S. and Japan.

Prerequisite: Prerequisite(s): ECON 1 and ECON 2. Related coursework in history also helpful. Enrollment is restricted to juniors and seniors.

ECON 128 - Poverty and Public Policy (5)

Studies the causes, consequences, and governmental response to urban poverty in the U.S. Topics include how public policy, the macroeconomy, race, gender, discrimination, marriage, fertility, child support, and crime affect and are affected by urban poverty. Emphasizes class discussion and research.

Prerequisite: Prerequisite(s): ECON 100A or ECON 100M; and ECON 113. Enrollment is restricted to economics, business management economics, global economics, legal studies, or economics combined majors.

ECON 130 - Money and Banking (5)

Examines the nature of money, financial intermediation, financial asset pricing, and markets; banking business and the banking industry; financial and banking crises, especially the 2007-09 crisis in the U.S. and abroad; the evolving nature of financial regulation and supervision of banking and financial institutions and markets; history and functions of the U.S. central bank (Federal Reserve); the role of the central bank in providing liquidity, credit, and creating money; central bank emergency lending in crises; institutional design of central banks and macroeconomic policy.

Prerequisite: Prerequisite(s): ECON 100B or ECON 100N; and ECON 113.

ECON 131 - International Financial Markets (5)

International financial management analyzes the key financial markets and instruments that facilitate trade and investment activity on a global scale. Inquiry spans two areas: (1) economic determinants of prices in international financial markets; and (2) decisions facing private individuals and enterprises, with topics including capital financing, investment, and risk management.

Prerequisite: Prerequisite(s): ECON 100A or ECON 100M; and ECON 100B or ECON 100N.

ECON 133 - Security Markets and Financial Institutions (5)

An examination of all major financial markets: equities, bonds, options, forwards, and futures. Uses modern financial theory, including asset pricing models such as CAPM and APT.

Prerequisite: Prerequisite(s): ECON 100A or ECON 100M, and ECON 113.

ECON 135 - Corporate Finance (5)

An analysis of financial policies of business enterprises. Topics include cash flow analysis, stock and bond

valuation, asset pricing models, capital budgeting, financial market institutions, and financial planning.

Prerequisite: Prerequisite(s): ECON 10A; and ECON 100A or ECON 100M; and ECON 113.

ECON 136 - Business Strategy (5)

The strategic management process, techniques for analyzing single-business and diversified companies, implementing strategy, organization, business planning, financial strategy, competitive analysis, entrepreneurial skills.

Prerequisite: Prerequisite(s): ECON 10A; and ECON 100A or ECON 100M.

ECON 138 - The Economics and Management of Technology and Innovation (5)

Examines the analytics of issues in technology and innovation, including cooperation in research and development (RD), standardization and compatibility, patents and intellectual property rights, and strategic management, using economic models and firm case studies.

Prerequisite: Prerequisite(s): ECON 100A or ECON 100M, or permission of instructor.

ECON 139A - The Economics of Electronic Commerce (5)

An analysis of the broad spectrum of issues affecting commercial uses of the Internet and the next-generation information infrastructure. Uses economics to examine market structure, pricing quality, intellectual property rights, security, electronic payments and currencies, and public policy implications.

Prerequisite: Prerequisite(s): ECON 100A or ECON 100M, or permission of instructor.

ECON 139B - E-Commerce Strategy (5)

Review of economic principles and trends in e-commerce, including online retailing of physical products, digital products and services, financial services, business-to-business transactions, e-business, and e-marketing. Business-to-business and business-to-consumer business models are explored both in terms of strategy and implementation. Topics include how and why successful companies deploy e-business strategies and how these evolve in fast-changing technological and business environments..

Prerequisite: Prerequisite(s): ECON 139A or ECON 161A.

ECON 140 - International Trade (5)

The theory of international production and trade. The effects of tariffs and quantitative trade restrictions; the nature of economic integration; multinational firms; effects of trade and protection on economic stability and welfare.

Prerequisite: Prerequisite(s): ECON 100A or ECON 100M.

ECON 141 - International Finance (5)

Topics include national accounting, balance of payments theories, parity conditions in international finance, exchange rate determination models, forward-looking financial instruments, international monetary systems, country interdependence and exchange rate regimes, international monetary integration, and Eurocurrency market.

Prerequisite: Prerequisite(s): ECON 100B or ECON 100N.

ECON 142 - Advanced Topics in International Economics (5)

Selected issues in contemporary international economics: theory, empirical evidence, and public policy. Seminar emphasizing discussion and individual research.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; and ECON 100A or ECON 100M; and ECON 100B or ECON 100N; and ECON 140 or ECON 141.

ECON 143 - Policy Issues in the International Economy (5)

Covers selected issues concerning the international economy. Topics include: U.S. competitiveness; U.S. trade policy; immigration; trade and the environment; developing countries; foreign investment; foreign exchange markets; and international economic institutions.

Prerequisite: Prerequisite(s): ECON 1 and ECON 2; and ECON 100A or ECON 100M.

ECON 148 - Latin American Economies (5)

This course is designed to familiarize students with the economic and business environment in Latin America.

Prerequisite: Prerequisite(s): ECON 1 and ECON 2.

ECON 149 - The Economies of East and Southeast Asia (5)

Examines the pattern of international trade, investment, and industrial structure in Asia. Examines competing explanations of rapid growth of Japan, Korea, and Taiwan; presents an overview of economic developments in China, Hong Kong, and Taiwan. Concludes with an analysis of high technology trade and multinationals in Asia in 2000 and beyond.

Prerequisite: Prerequisite(s): ECON 1 and ECON 2.

ECON 150 - Public Finance (5)

Economics of taxation, including incidence, equity issues, efficiency, and supply side effects. Close attention to taxes in the U.S. system and tax-reform

issues. Students cannot receive credit for this course and course 250.

Prerequisite: Prerequisite(s): ECON 100A or ECON 100M; and ECON 100B or ECON 100N.

ECON 156 - Health Economics and Policy (5)

Health economics theory and review of empirical studies how we value and produce health, including current topics. Studies the intersection of health and the environment, and the consequences of imperfect information for health and health policy. (Formerly offered as Health Care and Medical Economics.)

Prerequisite: Prerequisite(s): ECON 100A or ECON 100M; and ECON 113.

ECON 159 - The Economics of Organizations (5)

Uses an economic approach to shed light on questions such as why and how organizations are formed, and what consequences they may have on the adoption of different types of organizations for economic performance. Also emphasizes differences between the internal markets within organizations and market transactions.

Prerequisite: Prerequisite(s): ECON 100A or ECON 100M.

ECON 160A - Industrial Organization (5)

The structure and conduct of American industry with strong emphasis on the role of government, regulation, anti-trust, etc. The evolution of present-day industrial structure. The problems of overall concentration of industry and of monopoly power of firms. Pricing, output decisions, profits, and waste. Approaches include case study, theory, and statistics.

Prerequisite: Prerequisite(s): ECON 100A or ECON 100M.

ECON 160B - Government and Industry (5)

The influence of government regulation on industry and the allocation of resources is rigorously examined using theory and statistics. Areas of regulation include transportation and power, pollution and congestion, rent control, and liability insurance regulation. Both optimal and actual regulation are examined from the point of view of effectiveness, efficiency, social welfare, and re-distribution.

Prerequisite: Prerequisite(s): ECON 100A or ECON 100M.

ECON 161A - Marketing (5)

The evolution of markets and marketing; market structure; marketing cost and efficiency; public and private regulation; the development of marketing programs including decisions involving products, price, promotional distribution.

Prerequisite: Prerequisite(s): ECON 100A or ECON 100M.

ECON 161B - Marketing Research (5)

Prepares students to conduct market research and use it in solving real management problems. Students work with a company to solve marketing-based problems. Students conduct research, process data, and make a presentation to the company's management. Course work involves marketing, statistics, and communications; material is both qualitative and quantitative.

Prerequisite: Prerequisite(s): ECON 113 and ECON 161A.

ECON 162 - Legal Environment of Business (5)

A study of law and the legal process, emphasizing the nature and function of law within the U.S. federal system. Attention is given to the legal problems pertaining to contracts and related topics, business association, and the impact of law on business enterprise.

Prerequisite: Prerequisite(s): ECON 100A or ECON 100M.

ECON 164 - Economics and the Telecommunications Industry (5)

Covers the economics of the telecommunications industry including telephone, cellular telephone, and data communications. Particular emphasis on the Internet, satellite, paging, cable television, radio and television broadcasting. Examines the industry structure and implications of moving from a regulated environment to competition. Topics examined from a competitive strategic standpoint as well as public policy perspective.

Prerequisite: Prerequisite(s): ECON 100A or ECON 100M; and ECON 113.

ECON 165 - Economics as an Experimental Science (5)

The design, execution, and analysis of laboratory experiments in economics. Students study experimental methodology, critically survey the published literature, and design an experiment. Literature includes lab studies of investigations in auctions, markets, social choice theory, and game theory.

Prerequisite: Prerequisite(s): ECON 100A or ECON 100M.; and ECON 113.

ECON 166A - Game Theory and Applications I (5)

Introduces modern game theory, including applications in social science, biology, and engineering. Topics include extensive form, strategic form, mixed strategies, incomplete information, repeated games, evolutionary games, and simulation techniques.

Prerequisite: Prerequisite(s): STAT 5 or STAT 7 or ECON 113; and ECON 11B or AM 11B, or MATH

11B or MATH 19B. Enrollment is restricted to juniors and seniors.

ECON 166B - Game Theory and Applications II (5)

Explores research frontiers in game theory, emphasizing applications in social science, biology, and engineering. Each interdisciplinary team develops a topic, and presents it to the class in oral and written reports and demonstrations. Students must have shown a strong performance in course 166A or equivalent. Students cannot receive credit for this course and ECON 272, CSE 209, or BIOE 274.

Prerequisite: Prerequisite(s): ECON 166A or CSE 166A; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to juniors and seniors.

ECON 169 - Economic Analysis of the Law (5)

The application of the theories and methods of neoclassical economics to the central institutions of the legal system, including the common law doctrines of negligence, contract, and property; bankruptcy and corporate law; and civil, criminal, and administrative procedure.

Prerequisite: Prerequisite(s): ECON 100A or ECON 100M or permission of instructor.

ECON 170 - Environmental Economics (5)

Economic analysis of environmental issues. Environmental pollution and deterioration as social costs. Economic policy and institutions for environmental control. Influences of technology, economic growth, and population growth on environmental quality.

Prerequisite: Prerequisite(s): ECON 100A or ECON 100M; and ECON 113.

ECON 171 - Natural Resource Economics (5)

The application of economic analysis to the use of renewable and nonrenewable natural resources. Efficiency and distributional aspects of natural resource scarcity. Measurement of the benefits and costs. Optimal extraction or use policies. Common property and externalities. Government policies.

Prerequisite: Prerequisite(s): ECON 100A or ECON 100M.

ECON 175 - Energy Economics (5)

Applications of micro, welfare, and international economic theory and methodology to the energy field. Questions considered include optimal allocation of natural resources; pricing and investment; regulations and taxes; import and export control; redistributive policies.

Prerequisite: Prerequisite(s): ECON 100A or ECON 100M.

ECON 180 - Labor Economics (5)

A study of topics in modern labor economics with an emphasis on data analysis and econometrics. Topics include labor supply, labor demand, human capital, minimum wage, employment and wage discrimination, immigration, self-employment, earned income tax credit, and unemployment insurance.

Prerequisite: Prerequisite(s): ECON 100A or ECON 100M; and ECON 113.

ECON 183 - Women in the Economy (5)

Study of gender roles in economic life, past and present. Topics include occupational structure, human capital acquisition, income distribution, poverty, and wage differentials. The role of government in addressing economic gender differentials is examined.

Prerequisite: Prerequisite(s): ECON 100A or ECON 100M; and ECON 113 is strongly recommended.

ECON 186 - Mathematical Methods for Economic Analysis (5)

Presents mathematical methods commonly used in graduate-level economic analysis: basic matrix algebra, real analysis, functions, continuity concepts, differentiation, Taylor expansions, and implicit function theorem and optimization.

Prerequisite: Enrollment is restricted to applied economics and finance graduate students.

ECON 188 - Management in the Global Economy (5)

An overview of how firms do business in the global economy. The focus is on the motivations of firm behavior, but also explores the impact of corporate decision-making on national welfare. Includes a mix of business case studies, applied economic theory, and empirical applications.

Prerequisite: Prerequisite(s): ECON 113 and either ECON 100A or ECON 100M.

ECON 190 - Senior Proseminar (5)

Courses focus on problems of interest to advanced students of economics. They offer a flexible framework, so those interested in specific issues can read, present papers, and develop their ideas.

ECON 191 - Economics Teaching Practicum (5)

Each student serves as facilitator for small discussion group in connection with core economics courses. Facilitators complete course readings and meet with instructor as a group to discuss the teaching process. May not be counted toward upper-division major requirements.

ECON 192 - Directed Student Teaching (5)

Teaching of a lower-division seminar, course 42, under faculty supervision. May *not* be counted toward the

upper-division major requirements. Students submit petition to sponsoring agency.

ECON 193 - Field Study (5)

Provides for department-sponsored individual field study experience in an area connected with economics or business. Students work 12-14 internship hours per week. May not be counted toward the upper-division major requirements. Prerequisite(s): ECON 100A, ECON 100B, and ECON 113. Students submit petition to sponsoring agency.

ECON 193F - Field Study (2)

Provides for department-sponsored individual field study experience in an area connected with economics or business under the direct supervision of a faculty sponsor. Students work five-six hours internship hours per week. May not be counted toward the upper-division major requirements. Prerequisite(s): ECON 100A, ECON 100B and ECON 113. Students submit petition to sponsoring agency.

ECON 194 - Advanced Topics in Management (5)

Honors course providing detailed analysis of specialized topics in management. Possible topics include: venture capital, the financial services industry, e-business, behavioral finance, advanced consumer behavior, entrepreneurship, high-tech marketing, risk management, and option value approaches to business strategy. Students cannot receive credit for this course and ECON 194F. Prerequisite(s): ECON 100A or ECON 100M, ECON 100B or ECON 100N, and ECON 113. Enrollment is by permission of instructor, and review of performance in economics courses. Enrollment is restricted to senior and junior business management economics majors.

ECON 194B - Advanced Topics in Business and Professional Development (2)

Enhances students' marketability, strengthens verbal and written communication skills, teaches appropriate business etiquette, improves networking skills, and helps students determine how to become an integral part of an organization's intellectual capacity. Business professionals provide guest presentations.

Prerequisite: Enrollment is restricted to sophomores, juniors, and seniors economics, business management economics, global economics majors and combined majors with mathematics and environmental studies.

ECON 194F - Advanced Topics in Management and Finance (2)

Detailed analysis of specialized topics in management. Possible topics include: venture capital, the financial services industry, e-business, behavioral finance, advanced consumer behavior, entrepreneurship, high-tech marketing, risk management, and option value approaches to business strategy. Formerly, Advanced Topics in Management and Finance.

Prerequisite: Prerequisite(s): ECON 100A or ECON 100M; and ECON 113; ECON 133 or ECON 135 strongly recommended. Enrollment is restricted to senior and junior business management economics majors.

ECON 195 - Senior Thesis (5)

A supervised research project. If the project is of unusual scope, the course may be repeated for credit. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, students submit petition to sponsoring agency.

ECON 197 - Economic Rhetoric: Using Economic Theory and Empirical Evidence in Arguing Policy (5)

Economics students are expected to learn to effectively communicate economic theory and evidence relating to economic policy to audiences that do not have economics degrees. The skills to be learned are both written and oral communication. Students learn to present convincing policy arguments in position papers, executive summaries, and in oral presentation that may include charts and other means of communication.

Prerequisite: Prerequisite(s): Entry Level Writing & Composition requirement; one of the following: ECON 100A, ECON 100M, ECON 100B, ECON 100N, or ECON 113. Restricted to sophomore, junior, and senior economics, business-management economics, global economics and combined economics/math majors.

ECON 199 - Tutorial (5)

May be repeated for credit, but may be counted only once toward the upper-division major requirements. Undergraduates may not take graduate courses for credit as ECON 199. Students submit petition to sponsoring agency.

ECON 199F - Tutorial (2)

Specialized study with individual faculty. May not be applied toward the major requirements. Students submit petition to sponsoring agency.

Graduate

ECON 200 - Microeconomic Analysis (5)

Survey of partial equilibrium analysis, market distortions, consumer choice and production and trade theory, perfect and imperfect competition, price discrimination, and intertemporal choice theory.

Prerequisite: Enrollment is restricted to applied economics and finance graduate students.

ECON 201 - Applications in Microeconomics (5)

Applies concepts and tools developed in ECON 200 to problems encountered in private- and public-sector output and labor markets. The focus is empirical; topics include analysis of labor supply and labor demand and the role of government labor market policies, analysis

of pricing policies and regulation, estimation of the returns to schooling, estimation of demand and cost functions, and the role of unions in the economy. ECON 200 is strongly recommended as preparation.

Prerequisite: Enrollment is restricted to applied economics and finance graduate students.

ECON 202 - Macroeconomic Analysis (5)

Aggregate economic analysis: determinants of aggregate expenditures and output, the roles of monetary and fiscal policy, recent developments in macro theory; macro policy issues.

Prerequisite: Enrollment is restricted to applied economics and finance graduate students.

ECON 204A - Advanced Microeconomic Theory I (5)

Economic theory of individual and market behavior, including constrained optimization, duality, theory of the consumer, theory of the producer, dynamic optimization, behavior under uncertainty, intertemporal choice, asymmetric information, game theory, partial and general equilibrium, pure and applied welfare economics, public goods and externalities. ECON 204A, ECON 204B, and ECON 204C must be taken in sequence.

Prerequisite: Enrollment is restricted to Ph.D. students in economics or by permission of the instructor.

ECON 204B - Advanced Microeconomic Theory II (5)

Economic theory of individual and market behavior, including constrained optimization, duality, theory of the consumer, theory of the producer, dynamic optimization, behavior under uncertainty, intertemporal choice, asymmetric information, game theory, partial and general equilibrium, pure and applied welfare economics, public goods and externalities. Courses must be taken in sequence.

Prerequisite: Prerequisite(s): ECON 204A.

ECON 204C - Advanced Microeconomic Theory III (5)

Economic theory of individual and market behavior, including constrained optimization, duality, theory of the consumer, theory of the producer, dynamic optimization, behavior under uncertainty, intertemporal choice, asymmetric information, game theory, partial and general equilibrium, pure and applied welfare economics, public goods and externalities. Courses must be taken in sequence.

Prerequisite: Prerequisite(s): ECON 204B.

ECON 205A - Advanced Macroeconomic Theory I (5)

Modern macroeconomic theory: theories of growth and business cycle fluctuations; theories of household and firm behavior; models of financial markets and labor markets; recent developments in the analysis of macroeconomic policy. ECON 205A, ECON 205B, and ECON 205C must be taken in sequence.

Prerequisite: Enrollment is restricted to Ph.D. students in economics or by permission of instructor.

ECON 205B - Advanced Macroeconomic Theory II (5)

Modern macroeconomic theory: theories of growth and business cycle fluctuations; theories of household and firm behavior; models of financial markets and labor markets; recent developments in the analysis of macroeconomic policy. Courses must be taken in sequence.

Prerequisite: Prerequisite(s): ECON 205A.

ECON 205C - Advanced Macroeconomic Theory III (5)

Modern macroeconomic theory: theories of growth and business cycle fluctuations; theories of household and firm behavior; models of financial markets and labor markets; recent developments in the analysis of macroeconomic policy. Courses must be taken in sequence.

Prerequisite: Prerequisite(s): ECON 205B.

ECON 210A - Mathematical Methods for Economic Analysis (5)

Mathematical methods commonly used in economic analysis are discussed. Covers basic matrix algebra, real analysis, functions, continuity concepts, differentiation, Taylor expansion, implicit function theorem, and optimization. Prerequisite(s): qualifications as determined by instructor; inquire at department office.

ECON 210B - Mathematical Methods for Economic Analysis (5)

A course in introductory mathematical economics which covers standard optimization problems, difference and differential equations, optimal control theory, decisions under uncertainty, game theory, and stochastic calculus. ECON 210A or equivalent is strongly recommended as preparation.

ECON 211A - Advanced Econometrics I (5)

Introduces advanced econometric methods. Topics include probability theory, hypothesis testing, linear regression analysis, heteroscedasticity, serial correlation, instrumental variables, and panel data models.

Prerequisite: Enrollment is restricted to economics Ph.D. students or by permission of the instructor.

ECON 211B - Advanced Econometrics II (5)

Focuses on the use of econometric methods for causal inference. Research designs covered include: OLS regression, non-parametric regression, propensity score, panel models, synthetic control, instrumental variables, and regression discontinuity.

Prerequisite: Prerequisite(s): ECON 211A. Enrollment is restricted to graduate students.

ECON 211C - Advanced Econometrics III (5)

Covers the asymptotic theory of m-estimators, resampling methods, nonparametric estimation, and statistical (machine) learning methods commonly used in industry. Emphasis is on theory but students also have the chance to implement some of the methods on real datasets.

Prerequisite: Prerequisite(s): ECON 211A. Enrollment is restricted to graduate students.

ECON 212 - Empirical Project in Econometrics (2)

Empirical project or paper in econometrics to demonstrate student's ability to conduct applied econometric analysis. Ph.D. requirement to be completed by beginning of student's third year of study. Prerequisite(s): ECON 211A and ECON 211B.

ECON 216 - Applied Econometric Analysis I (5)

The use of statistical techniques for the testing of economic hypotheses and the estimation of parameters, with emphasis on regression analysis. Includes methods of dealing with serial correlation, errors in variables, multicollinearity, and heteroscedasticity. Experience with common statistical packages.

Prerequisite: Enrollment is restricted to applied economics and finance graduate students.

ECON 217 - Applied Econometric Analysis II (5)

Covers discrete and limited dependent variable models, nonparametric estimation methods, resampling methods, as well as statistical (machine) learning methods commonly used in industry. Students learn the theoretical foundations behind the methods and also how to apply them in practice.

Prerequisite: Enrollment is restricted to applied economics and finance graduate students.

ECON 220A - Development Economics I (5)

Studies the microeconomics of development. Topics may include health and nutrition, education, intra-household economics, formal and informal risk-coping mechanisms, savings, credit, agriculture, institutions, and service delivery, and corruption.

ECON 220B - Development Economics II (5)

Methodological class covering how to build a good theoretical model, how to derive a convincing test of a model, and how to structurally estimate a model. Examples drawn largely (though not exclusively) from the study of economic development.

ECON 221A - Advanced Methods in Macroeconomics I (5)

Covers major issues in monetary economics, focusing on the core theoretical models employed in monetary economics. Topics include: money in general equilibrium; money-in-the-utility function approaches;

cash-in-advance models; search-based models; welfare costs of inflation; optimal inflation tax; informational frictions in monetary economies; financial and credit frictions; nominal price and wage frictions; time-dependent and state-dependent models of price adjustment; and money in new Keynesian models.

Prerequisite: Prerequisite(s): ECON 205A, ECON 205B, and ECON 205C, or by permission of instructor. Enrollment is restricted to graduate students.

ECON 221B - Advanced Methods in Macroeconomics II (5)

Covers major issues in empirical macroeconomics, focusing on structural vector auto-regressions (VARs) and solution and estimation of dynamic stochastic general equilibrium (DSGE) models. Topics include: recursive identification; long-run restrictions; sign-restrictions; Bayesian estimation of DSGE models; model comparisons; non-linear solution methods for DSGE models; particle filters and other advanced topics related to empirical macroeconomics.

Prerequisite: Prerequisite(s): ECON 205A, ECON 205B, and ECON 205C, or by permission of instructor. Enrollment is restricted to graduate students.

ECON 221C - Advanced Methods in Macroeconomics (5)

Focuses on the use of disaggregated data on firms, establishments, workers, and households in macroeconomic research. Students learn about commonly used administrative records, survey data, quasi-experiments, etc., and their use to answer questions of interest to macroeconomists.

Prerequisite: Prerequisite(s): ECON 204C, ECON 205C, ECON 211C. Enrollment is restricted to economics graduate students.

ECON 231 - International Financial Management (5)

Equips students with the analytical tools they need to make informed financial decisions and manage the risks that businesses face in today's competitive global environment. Covers the fundamental theories and real-world examples in international financial markets.

Prerequisite: Prerequisite(s): ECON 233. Enrollment is restricted to graduate students in Applied Economics and Finance.

ECON 233 - Finance I (5)

Applications of economic analysis in private finance. Topics include risky choice and intertemporal choice theory, asset pricing models, efficient market hypotheses, market institutions, and derivative securities. ECON 200 is strongly recommended as preparation.

Prerequisite: Enrollment is restricted to applied economics and finance graduate students.

ECON 234 - Financial Institutions and Markets (5)

Examines various aspects of financial institutions and markets, with emphasis on financial stability and sustainability. Topics include the role banks and other financial intermediaries play in achieving ESG sustainability goals and minimizing systemic risks. The course also discusses the structure of financial regulation and its role in achieving stability and sustainability goals.

Prerequisite: Prerequisite(s): ECON 233.

ECON 235 - Corporate Finance (5)

Application of modern financial theory to corporate decision making. Topics covered include capital budgeting and the firm's investment decision, capital structure, dividend policies, and the implications of corporate governance for enterprise financial goals.

Prerequisite: Prerequisite(s): ECON 233.

ECON 236 - Financial Engineering (5)

This course surveys the financial risks faced by corporation, banks, and other financial institutions that arise from changes in interest rates, foreign exchange rates, commodity prices, and stock prices. It examines the characteristics, payoffs, and pricing of financial derivatives and other instruments for managing risk, including options, forwards, futures, swaps, structured notes, and asset-backed securities. Several cases will be used to illustrate how actual firms solve financial risk management problems.

Prerequisite: Prerequisite(s): ECON 233. Enrollment is restricted to applied economics and finance graduate students.

ECON 238 - Market Design: Theory and Pragmatics (5)

Surveys the principles of mechanism design and applies them to a variety of 21st Century markets, e.g., for energy, spectrum, finance, online ads, and predictions. Student teams develop new applications.

Prerequisite: Enrollment is restricted to graduate students.

ECON 239 - Current Topics in Finance (5)

Topics in finance selected by the instructor.

Prerequisite: Prerequisite(s): ECON 233.

ECON 240A - International Trade I (5)

The theory of international trade and commercial policy. Both traditional analyses and recent developments are covered. Topics include both normative and positive theoretical analyses, as well as empirical testing of theory.

Prerequisite: Enrollment is restricted to graduate students. ECON 204A, ECON 204B, and ECON 204C are strongly recommended as preparation.

ECON 240B - International Trade II (5)

The second quarter of a two-quarter sequence which focuses on advanced research topics in trade and its intersection with applied microeconomics. The course is theoretical and empirical, and designed to acquaint students with recent developments in the field. Research topics include: trade and development; political economy of trade policies; trade and labor markets; trade and environment; theories, determinants, and implications of foreign direct investments; economic geography; and spatial/urban economics.

Prerequisite: Prerequisite(s): ECON 240A.

ECON 241A - Advanced International Finance I (5)

Covers the foundations of international macroeconomics. Topics include international borrowing and lending, the role of international financial markets, exchange rate economics, wealth and income in open economies, and macroeconomic policy interdependence.

Prerequisite: Prerequisite(s): ECON 204C, and ECON 205C, and ECON 211C. Enrollment is restricted to graduate students.

ECON 241B - Advanced International Finance II (5)

Covers major topics in international finance and open economy macroeconomics, focusing on contemporary theoretical and empirical analysis. Topics include: international capital flows, financial crises, exchange rate economics, financial policy intervention, and fiscal and monetary policies in open economies.

ECON 241C - Advanced International Finance III (5)

Covers contemporary research topics in international macroeconomics and finance, including advances in both theoretical analysis and empirical methods. Specific topics on international macroeconomics, finance, and policy vary.

Prerequisite: Prerequisite(s): ECON 204C, ECON 205C, and ECON 211C. Enrollment is restricted to graduate students.

ECON 249A - International Trade and Development Policy I (5)

Focuses on a range of real-life issues in international trade and development. Topics include North American Free Trade Agreement (NAFTA), the semiconductor industry, the Boeing-Airbus aircraft trade problems, the World Trade Organization (WTO) and developing countries, U.S./Japan trade, trade and the environment, and U.S./China trade.

Prerequisite: Enrollment is restricted to graduate students.

ECON 249B - International Trade and Development

Policy II (5)

Emphasizes government policies to promote growth. Topics include the Washington Consensus, the East Asian model, and recent policy changes in East Asia, Latin America, Eastern Europe, and the former Soviet Union.

Prerequisite: Prerequisite(s): ECON 249A. Enrollment is restricted to graduate students.

ECON 250A - Applied Microeconomics I (5)

Theory of the role of public sector expenditures and taxes in market economies. Analyzes efficiency and equity arguments for government intervention. Topics include the role of public debt and deficits in economies, international effects of tax and spending policies, and economic theories of public sector decision making. ECON 204A and ECON 205A are strongly recommended as preparation. Students cannot receive credit for this course and ECON 150.

ECON 250B - Applied Microeconomics II (5)

Covers topics in applied microeconomics, including public, labor, education, environmental, and health. Discusses advanced econometric techniques used to establish causal identification. Students read and evaluate current research and develop an independent research agenda.

ECON 250C - Applied Microeconomics III (5)

Covers topics in applied microeconomics, with an emphasis on labor topics not covered in 250A and 250B. Students read and evaluate current research, discuss applications of advanced econometric techniques for causal identification, and develop an independent research agenda.

Prerequisite: Prerequisite(s): ECON 204C and ECON 211C. ECON 250A and ECON 250B are strongly recommended as preparation. Enrollment is restricted to economics Ph.D. students.

ECON 259A - Cost-Benefit Analysis (5)

Applications of economic analysis in public finance, largely from the revenue side: taxation. The issues considered include the effects of taxation on consumer welfare, consumption, labor, capital, production, growth. Course 200 is strongly recommended as preparation. Students cannot receive credit for this course and course 153.

ECON 259B - Public Policy Analysis (5)

Applications of welfare and microeconomic theory and methodology to the public expenditure question: cost-benefit. Effects of the taxes discussed in course 259A and sophisticated tools used in the face of these and other distortions with regard to measurement of benefits, costs, and the discount rate. Course 200 strongly recommended as preparation.

ECON 270 - Advanced Topics in Applied Microeconomics (5)

Advanced topics and current research in microeconomic theory and applications, including topics on decision theory, game theory, behavioral economics, and general equilibrium analysis.

ECON 272 - Evolutionary Game Theory (5)

Reviews static equilibrium concepts, games of incomplete information, and the traditional theory of dynamic games in discrete time. Develops recent evolutionary game models, including replicator and best reply dynamics, and applications to economics, computer science, and biology. Prerequisite(s): upper-division math courses in probability theory are strongly recommended. Cannot receive credit for this course and ECON 166B or CSE 166B.

ECON 274 - Macroeconomics Workshop (3)

For Ph.D. students in economics who are at the early stages of their research careers as well as for those who are engaged in dissertation work in macroeconomics and monetary economics. Students present original research in progress. (Formerly Workshop in Macroeconomics and Monetary Economics.)

Prerequisite: Prerequisite(s): ECON 204C, ECON 205C, and ECON 211C, or by consent of instructor. Enrollment is restricted to graduate students.

ECON 275 - Applied Microeconomics Workshop (3)

For Ph.D. students in economics who are at the early stages of their research careers as well as for those who are engaged in dissertation work in applied microeconomics or other empirical work. Students present original research in progress. (Formerly Workshop in Applied Microeconomics.)

Prerequisite: Prerequisite(s): ECON 204C, ECON 205C, and ECON 211C, or by consent of instructor. Enrollment is restricted to graduate students.

ECON 276 - Behavioral, Experimental, and Theoretical Economics Workshop (3)

For economics doctoral students who are at early stages of their research careers as well as those engaged in dissertation research in behavioral, experimental and theoretical economics using laboratory experiments and related techniques. Students present original research in progress. (Formerly offered as Workshop in Experimental Economics.)

Prerequisite: Prerequisite(s): ECON 204C, ECON 205C, and ECON 211C, or by consent of instructor. Enrollment is restricted to graduate students.

ECON 290 - Topics in International Economics (5)

Covers several advanced topics in the history of international economics, international trade, and international finance. Topics include imperfect

competition and trade, strategic trade policies, increasing returns, and the pattern of trade, economic geography, exchange rate target zones, and balance of payment crises. Topics vary from year to year. Courses 204A-ECON 204B-ECON 204C and ECON 205A-ECON 205B-ECON 205C are strongly recommended as preparation.

ECON 291 - Workshop in Applied Economics (5)

Experience in applied projects, report writing and presentation, drawing on previous coursework.

ECON 293 - Field Study (5)

Students will undertake analytical projects in public or private institutions. The material covered must be different from that of the thesis topic.

ECON 294A - Applied Economics and Finance Laboratory (2)

Practical experience in managing computerized data sets and running statistical packages. Covers STATA and R.

Prerequisite: Enrollment is restricted to applied economics and finance graduate students.

ECON 294B - Applied Economics and Finance Seminar (2)

Bi-weekly seminars designed to present students with current working applications in various fields of applied economics and finance.

Prerequisite: Enrollment is restricted to applied economics and finance graduate students.

ECON 294C - Economics Guest Seminar Series (1)

Bi-weekly seminars by visiting faculty and industry leaders who are experts in their fields provide in-depth insight on topics relevant to graduate students in economics.

Prerequisite: Enrollment is restricted to graduate students.

ECON 294D - Applied Economics Seminar (2)

Weekly seminar designed to present students with current working applications in various fields of applied economics.

Prerequisite: Enrollment is restricted to economics Ph.D. students.

ECON 295 - Directed Reading (5)

Reading in research area of student interest, with faculty supervision through weekly discussion. Students submit petition to sponsoring agency.

ECON 296A - Third Year Ph.D. Seminar (5)

Student presentations of literature and/or original research in areas of student research interest. Student discussion of presentations under faculty supervision.

Prerequisite: Prerequisite(s): ECON 204C, ECON 205C, ECON 211B, ECON 240A, ECON 240B, ECON 241A, and ECON 241B.

ECON 297A - Independent Study (5)

Independent study and research under faculty supervision. Students submit petition to sponsoring agency.

ECON 297B - Independent Study (10)

Independent study and research under faculty supervision. Students submit petition to sponsoring agency.

ECON 297C - Independent Study (15)

Independent study and research under faculty supervision. Students submit petition to sponsoring agency.

ECON 298A - Master's Thesis Research (5)

May be taken once to meet course requirements for the master's degree. Students submit petition to sponsoring agency.

ECON 298B - Master's Thesis Research (10)

May be taken once to meet course requirements for the master's degree. Students submit petition to sponsoring agency.

ECON 298C - Master's Thesis Research (15)

May be taken once to meet course requirements for the master's degree. Students submit petition to sponsoring agency.

ECON 299A - Doctoral Thesis Research (5)

Research toward Ph.D. dissertation under faculty supervision. Prerequisite(s): advancement to candidacy and students submit petition to sponsoring agency. (Formerly, course 298 Dissertation Research)

ECON 299B - Doctoral Thesis Research (10)

Research toward Ph.D. dissertation under faculty supervision. Prerequisite(s): advancement to candidacy and students submit petition to sponsoring agency. (Formerly, course 298 Dissertation Research)

ECON 299C - Doctoral Thesis Research (15)

Research toward Ph.D. dissertation under faculty supervision. Prerequisite(s): advancement to candidacy and students submit petition to sponsoring agency. (Formerly, course 298 Dissertation Research)

EDUC - EDUCATION

Lower-Division

EDUC 10 - Introduction to Learning (5)

Survey course exploring the foundational perspectives on learning, especially when considering learners from non-dominant communities, how those views of learning are reflected in what and how students learn in school and out of school, and how those views of learning can impact teaching practices.

EDUC 50A - CAL Teach 1: Science and Mathematics (2)

Introductory seminar exploring secondary students, teaching, and schools in the context of science and/or mathematics instruction. Concurrent participation in a secondary school internship required. Course material supports and enhances students' placement experiences. Prerequisite(s): Acceptance into CAL Teach and concurrent participation in a secondary school internship in a science or math classroom.

EDUC 50B - CAL Teach 1: Mathematics (2)

Introductory seminar exploring secondary students, teaching, and schools in the context of mathematics instruction. Concurrent participation in a secondary school internship required. Course material supports and enhances students' placement experiences. Prerequisite(s): Acceptance into CAL Teach and concurrent participation in a secondary school internship in a math classroom.

EDUC 50C - CAL Teach 1: Science (2)

Introductory seminar exploring secondary students, teaching, and schools in the context of science instruction. Concurrent participation in a secondary school internship required. Course material supports and enhances students' placement experiences. Prerequisite(s): Acceptance into CAL Teach and concurrent participation in a secondary school internship in a science classroom.

EDUC 60 - Schooling, Democracy, and Justice (5)

Survey course exploring the foundations of public education in the United States, including: the social and political forces within schools and school systems in the U.S. the history and formation of the system and the educational policies and practices in our culturally and linguistically diverse nation. (Formerly Introduction to Education: Learning, Schooling, and Society.)

EDUC 99 - Tutorial (5)

Students submit petition to sponsoring agency.

Upper-Division

EDUC 100A - Cal Teach 2: Science and Mathematics (2)

Examines students, schools, and science and/or mathematics instruction with emphasis on developing

an instructional project aligned with state-mandated content standards. Concurrent participation in a secondary school internship required. Course content supports and enhances students' internship experience.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; EDUC 50A, EDUC 50B, or EDUC 50C; and acceptance into the Cal Teach program. Enrollment is restricted to sophomores, juniors, and seniors.

EDUC 100B - Cal Teach 2: Mathematics (2)

Examines students, schools, and mathematics instruction with emphasis on developing an instructional project aligned with state-mandated content standards. Concurrent participation in a secondary school internship required. Course content supports and enhances students' internship experience.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; EDUC 50A, EDUC 50B, or EDUC 50C; and acceptance into the Cal Teach program. Enrollment is restricted to sophomores, juniors, and seniors.

EDUC 100C - Cal Teach 2: Science (2)

Examines students, schools, and science instruction with emphasis on developing an instructional project aligned with state-mandated content standards. Student must concurrently participate in a K-12 school internship. Concurrent participation in a secondary school internship required. Course content supports and enhances students' internship experience.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; EDUC 50A, EDUC 50B, or EDUC 50C; and acceptance into the Cal Teach program. Enrollment is restricted to sophomores, juniors, and seniors.

EDUC 102 - Education, Media, and Society (5)

Focusing on ways the media (both news and the entertainment industry) portrays schools, teachers, and students to the public, investigates the way society views education, the way education is presented in the media, and the way education is influenced by society.

Prerequisite: Enrollment is restricted to junior and senior education, democracy and justice majors; science education majors; STEM education minors; and education minors, or by permission of instructor.

EDUC 104 - Ethical Issues and Teaching (5)

Emphasizes a philosophical exploration of the moral complexities of teaching. Students read theoretical investigations of these complexities, and examine case studies that pose difficult moral questions and illuminate the dilemmas of everyday life in classrooms. Course is grounded in a dialogical approach to learning.

Prerequisite: Enrollment restricted to education or STEM minors, physics education majors, or students

with math education concentration or Earth sciences science education concentration, or biology B.A. bioeducation, or by permission of instructor.

EDUC 110 - Popular Education, Democracy, and Social Movements (5)

Explores the connections among conceptions of communicative action, education, social movements for justice, and the formation of democratic communities in the U.S. It situates 20th and 21st century popular education practices against the unrealized promise of U.S. public schooling and the struggles of disenfranchised and marginalized communities to make schools and learning serve their needs. Finally, the course outlines principles of popular education that have emerged from social movements and that can guide future efforts to embody forms of education that are practices of freedom, justice, and democracy

Prerequisite: Prerequisite(s): Entry-Level Writing and Composition requirements. EDUC 10 and EDUC 60. Enrollment is restricted to junior and senior education, democracy and justice majors, science education majors, STEM education minors, and education minors, or by permission of instructor.

EDUC 115 - K-12 Student Assessment (5)

Provides an overview of educational testing. Appropriate use and interpretation of standardized, classroom achievement and special needs assessments are examined. Issues on fair testing of diverse populations of students are discussed within each topic area.

Prerequisite: Enrollment restricted to education or STEM minors, physics education majors, or students with math education concentration or Earth sciences science education concentration, or biology B.A. bioeducation, or by permission of instructor.

EDUC 120 - The Arts in Schools: Aesthetic Education Theory and Practice (5)

Explores the historical legacy of the arts within education; considers aesthetic education as an inter-arts philosophical and practical endeavor; studies alternatives to the current situation of the arts in education; develops theory, curricula and methods necessary to teach the arts. Addresses both elementary and secondary teaching in the arts. Meets third-course requirements.

Prerequisite: Enrollment is restricted to junior and senior education minors; STEM education minors; education, democracy and justice majors; science education majors; or by permission of instructor.

EDUC 125 - Multicultural Children's Literature for Elementary Classrooms (5)

Offers opportunities for undergraduate and graduate students to learn about fundamental aspects of children's literature, increase their knowledge of range

and quality of children's literature, enhance their understanding of multicultural children's literature, and develop ways to integrate children's literature into elementary- and middle-school curriculum areas.

Prerequisite: Enrollment is restricted to junior and senior education democracy and justice majors, education minors, and STEM education minors, or by permission of instructor.

EDUC 126 - Foundations of Literacy Learning: Contemporary Perspectives (5)

Offers an overview of historical and contemporary perspectives regarding literacy learning in America. Using a socio-cultural lens and research findings to analyze instructional practices, it provides foundational knowledge for potential teachers and policy makers regarding literary education.

Prerequisite: Prerequisite(s): EDUC 60 and EDUC 180.

EDUC 128 - Immigrants and Education (5)

Research and theory on the education of immigrant students. Major topics include the Americanization movement and America's changing demography, identity maintenance and change, home-school relations, and educators' roles in meeting the needs of culturally and linguistically diverse student populations.

Prerequisite: Enrollment is restricted to education or STEM minors, physics education majors, or students with math education concentration or Earth sciences science education concentration, or biology B.A. bioeducation, or by permission of instructor.

EDUC 135 - Gender and Education (5)

Addresses the changing but continuing patterns of unequal expectations, opportunities, and treatment throughout the educational system for all students, female and male, who do not match a standard model of gender performance.

Prerequisite: Enrollment is restricted to education or STEM minors, physics education majors, or students with math education concentration or Earth sciences science education concentration, or biology B.A. bioeducation, or by permission of instructor.

EDUC 140 - Language, Diversity, and Learning (5)

Explores the intersection between language, diversity, and education to examine the education of youth who have been historically underserved by schools. Topics include dialect and register variation; language policy; and sociocultural perspectives on learning/teaching of language.

Prerequisite: Enrollment is restricted to education or STEM minors, physics education majors, or students with math education concentration or Earth sciences science education concentration, or biology B.A. bioeducation, or by permission of instructor.

EDUC 141 - Bilingualism and Schooling (5)

Introduces participants to issues related to the schooling of students who speak languages other than or in addition to English. Uses a multidisciplinary perspective to understand the circumstances these students face in schools and considers approaches and policies that best meet their needs.

Prerequisite: Enrollment is restricted to education or STEM minors, physics education majors, or students with math education concentration or Earth sciences science education concentration, or biology B.A. bioeducation, or by permission of instructor.

EDUC 160 - Issues in Educational Reform (5)

Explores a variety of perspectives on key educational policy issues including desegregation, bilingual education, affirmative action, charter schools, national and state curriculum standards, student assessment and the assessment and certification of teachers.

Prerequisite: Enrollment is restricted to education or STEM minors, physics education majors, or students with math education concentration or Earth sciences science education concentration, or biology B.A. bioeducation, or by permission of instructor.

EDUC 162 - Critical Youth Studies in Education (5)

Examines youth as a social construction, relation, and achievement to understand the everyday lives, experiences, learning, and education of youth. Explores the development, histories, cultures, politics, and resistance of youth in education, focusing on race, gender/sexuality, class, and their intersections.

Prerequisite: Enrollment restricted to junior and senior education minors.

EDUC 164 - Urban Education (5)

Focuses on urban schooling through critical readings, fieldwork, group projects, and extensive writing. Students explore how socialization, marginalization, and assimilation impede or support academic success, how class intersects with race, and how culture affects one's orientation to education.

Prerequisite: Enrollment restricted to education or STEM minors, physics education majors, or students with math education concentration or Earth sciences science education concentration, or biology B.A. bioeducation, or by permission of instructor.

EDUC 166 - Technology and Education (5)

Explores the history of technology in education from approximately 1950 to the present, addressing the interpersonal, epistemological, and pedagogical differences between digital and analog learning. Although no programming experience is required, participants will create an instructional application.

Prerequisite: Enrollment is restricted to junior and senior education minors, STEM education minors, education democracy and justice majors, science education majors, or by permission of instructor.

EDUC 173 - Seminar in Critical Pedagogy (5)

Philosophical and pedagogical exploration of relationships among oppression, power, society, education, and change. Examines how history, power, economics, and discrimination shape societal perspectives and schooling practices, and considers ways to transform education.

Prerequisite: Enrollment is restricted to education or STEM minors, physics education majors, or students with math education concentration or Earth sciences science education concentration, or biology B.A. bioeducation, or by permission of instructor.

EDUC 174 - Ethnographic Research in Schools and Communities (5)

Explores ethnographic research as an important path for future teachers in understanding how diverse communities provide and support schooling at all levels.

Prerequisite: Prerequisite(s): EDUC 60 and EDUC 180. Enrollment is restricted to junior and senior education or STEM minors or by permission of instructor.

EDUC 177 - Teaching Linguistically Diverse Students (5)

Examines equity issues in the learning and teaching of math and science in culturally and linguistically diverse school settings. Draws on multicultural, bilingual, and math/science education perspectives. Intended for undergraduate majors considering a K-12 teaching career. Satisfies an elective requirement for the minor in education program. Prior completion of EDUC 180 is advised. (Formerly Teaching Culturally and Linguistically Diverse Students Math and Science.)

Prerequisite: Enrollment is restricted to education or STEM minors, science education majors, or students with math education concentration, or by permission of instructor.

EDUC 178 - Special Topics in Education (5)

Taught on a rotating basis by various faculty members. The precise focus of each year's course will vary according to the instructor. Please contact the department for information on the current topic. Individual topics may be applied only once to the education minor, STEM minor or education major. (Formerly Advanced Educational Studies.)

Prerequisite: Enrollment is restricted to junior and senior education and STEM minors, education, democracy, and justice, science education, and sociology majors or by permission of instructor.

EDUC 180 - Introduction to Teaching (5)

Designed to encourage students to think about teaching in new ways. Assumptions about teaching and schooling are examined as well as considering what it takes to teach so that children learn and understand. Not a course in how to teach, but an opportunity to reconsider what teaching should try to accomplish and what kinds of learning teachers should foster. Practicum in the schools of 30 hours per quarter required.

Prerequisite: Prerequisite(s): Entry Level Writing and Composition requirements; and EDUC 60. Enrollment is restricted to junior and senior education, democracy and justice majors, science education majors, STEM education minors, and education minors, or by permission of instructor.

EDUC 181 - Race, Class, and Culture in Education (5)

Examines the schooling experience and educational attainment of racial/ethnic minority students in the U.S. Focuses primarily on domestic minorities. Addresses issues of variability between and within minority groups and the role of cultural, structural, and psychological factors in the educational attainment of these students.

Prerequisite: Enrollment is restricted to education or STEM minors, physics education majors, or students with math education concentration or Earth sciences science education concentration, or biology B.A. bioeducation, or by permission of instructor.

EDUC 182 - Social and Political Contexts of Teachers' Work (5)

Explores the social, cultural, historical, and policy context of teachers' work in the United States. Examines the historical evolution and development of the teaching profession, explores contemporary images of teachers, analyzes demographics of the teaching workforce, and investigates the sources of teacher motivation, satisfaction and frustration. In particular, students examine student, cultural, media, teacher and policy representations of teachers and their work. Whenever possible, students will engage with what teachers' themselves say about their work, rather than relying on second-hand accounts with the aim of building a picture of the complexity of teachers' work. (Formerly American Teacher.)

Prerequisite: Enrollment is restricted to junior and senior education or STEM minors, education, democracy and justice, science education, sociology, and critical race and ethnic studies majors, or by permission of instructor.

EDUC 183 - Children's Mathematical Thinking (5)

Provides an introduction to children's mathematical thinking and an overview of major themes, issues, and questions that researchers in mathematics education have studied in relation to children's mathematical thinking.

Prerequisite: Prerequisite(s): EDUC 60. Enrollment is restricted to education or STEM minors; physics education majors; students with math education concentration; Earth Sciences science education concentration; biology B.A. bioeducation; or by instructor permission.

EDUC 185B - Introduction to Mathematics Education (5)

Provides an introduction to principles and practices for mathematics education; examines how research on learning and teaching mathematics informs approaches to teaching mathematics; provides an introduction to national and state standards, mathematics curricula, and other current issues in mathematics education.

Prerequisite: Prerequisite(s): MATH 11A and MATH 11B, or MATH 19A and MATH 19B; or MATH 20A and MATH 20B; or AM 11A and AM 11B; or equivalent courses (by instructor approval); or by permission of the instructor.

EDUC 185C - Introduction to Teaching Science (5)

An introduction to the principles and practices for teaching science in secondary classrooms. Course examines theoretical and practical approaches to teaching science, provides an introduction to national and state standards and an overview of science curricula and current issues in science teaching.

Prerequisite: Enrollment is restricted to junior and senior education, democracy and justice majors, science education majors, STEM education minors, and education minors, or by permission of instructor.

EDUC 185L - Introduction to Teaching: Cal Teach 3 (3)

Supplements theoretical and practical introduction to the teaching of science or mathematics with subject-pedagogical approaches. Concurrent participation in an advanced Cal Teach internship provides context to apply theory and practical techniques. **Prerequisite(s):** satisfaction of the Entry Level Writing and Composition requirements; EDUC 50A, EDUC 50B, or EDUC 50C; EDUC 100A, EDUC 100B, or EDUC 100C; EDUC 185B or EDUC 185C. Enrollment restricted to juniors and seniors or education minors, or by permission of instructor.

EDUC 187 - Cognition and Instruction (5)

Addresses the question, How do people learn? by examining theories of learning and research on cognition, learning, and instruction.

Prerequisite: Enrollment is restricted to juniors, seniors, or education minors, or by permission of instructor.

EDUC 190 - Senior Seminar Capstone (5)

Senior seminars focus on advanced topics in education. The pedagogical goals vary by instructor but often emphasize at least one of the following: critical and analytical thinking, field research, advanced research

methods (qualitative or quantitative), or advanced theory. Satisfies senior capstone requirement.

Prerequisite: Prerequisite(s): Entry Level Writing and Composition requirements. EDUC 10 and EDUC 60; EDUC 110 or EDUC 180. Enrollment is restricted to education, democracy and justice majors, or by permission of instructor.

EDUC 194 - Group Projects (5)

Students submit petition to sponsoring agency.

EDUC 194F - Group Projects (2)

Students submit petition to sponsoring agency.

EDUC 197A - Cal Teach Special Project (1)

Work with K-12 students on science or math projects, ideally involving inquiry-based learning. Site supervision provided by a credentialed teacher. Project-dependent reading and writing assignments negotiated with instructor. Projects will be offered as available or initiated by student. Enrollment is by interview only. Prerequisite(s): EDUC 50A, EDUC 50B, or EDUC 50C. Enrollment is restricted to majors in the physical and biological sciences and majors in the school of engineering or by permission of instructor.

EDUC 197B - Cal Teach Special Project (2)

Work with K-12 students on science or math projects, ideally involving inquiry-based learning. Site supervision provided by a credentialed teacher. Project-dependent reading and writing assignments negotiated with instructor. Projects will be offered as available or initiated by student. Enrollment is by interview only. Prerequisite(s): EDUC 50A, EDUC 50B, or EDUC 50C. Enrollment is restricted to majors in the physical and biological sciences and majors in the school of engineering or by permission of instructor.

EDUC 197C - Cal Teach Special Project (3)

Work with K-12 students on science or math projects, ideally involving inquiry-based learning. Site supervision provided by a credentialed teacher. Project-dependent reading and writing assignments negotiated with instructor. Projects will be offered as available or initiated by student. Enrollment is by interview only. Prerequisite(s): course 50A, 50B, or 50C. Enrollment is restricted to majors in the physical and biological sciences and majors in the school of engineering or by permission of instructor.

EDUC 198 - Independent Field Study (5)

Students submit petition to sponsoring agency.

EDUC 198F - Independent Field Study (2)

Students submit petition to sponsoring agency.

EDUC 199 - Tutorial (5)

Students submit petition to sponsoring agency.

EDUC 199F - Tutorial (2)

Students submit petition to sponsoring agency.

Graduate

EDUC 200 - Beginning Student Teaching (5)

A required course that introduces students to the diverse cultural and linguistic settings of today's classrooms. Classroom practices, instructional strategies, and analysis are emphasized. First course in the student teaching placement series. Placements are used to examine and apply teaching methods while developing classroom management skills. Class meetings include discussion and demonstration of teaching methods.

Prerequisite: Enrollment is restricted to MA/credential students.

EDUC 201 - Intermediate Student Teaching (5)

Designed to provide students enrolled in the UCSC teacher education program a coherent, integrated, pre-professional experience in public school classrooms. Students assume part-time student teaching responsibilities totalling 14–16 hours per week under the direct supervision of an exemplary classroom teacher. Weekly seminars and ongoing supervision by department staff are required.

Prerequisite: Prerequisite(s): EDUC 200. Enrollment is restricted to MA/credential students.

EDUC 201A - Intermediate Student Teaching: Single Subject (5)

Provides advanced pre-professional experience for single subject teaching candidates who progressively assume full-time responsibility for public school student teaching beginning in winter quarter. Taken concurrently with EDUC 201. Weekly supervision and seminars with teacher supervisors are required.

Prerequisite: Prerequisite(s): EDUC 200. Enrollment is restricted to MA/credential students.

EDUC 202A - Advanced Student Teaching (5)

Designed for students who have extensive field and course experience in education, and who wish to qualify for the single-subject or multiple-subject teaching credential by undertaking a quarter of full-time, supervised student teaching.

Prerequisite: Prerequisite(s): EDUC 201. Enrollment is restricted to M.A./credential students.

EDUC 202B - Advanced Student Teaching (5)

Designed for students who have extensive field and course experience in education, and who wish to qualify for the single-subject or multiple-subject teaching credential by undertaking a quarter of full-time, supervised student teaching.

Prerequisite: Prerequisite(s): EDUC 201. Enrollment is restricted to M.A./credential students.

EDUC 202C - Advanced Student Teaching (5)

Designed for students who have extensive field and course experience in education, and who wish to qualify for the single-subject or multiple-subject teaching credential by undertaking a quarter of full-time, supervised student teaching.

Prerequisite: Prerequisite(s): EDUC 201. Enrollment is restricted to M.A./credential students.

EDUC 203 - Teaching English Language Development: Foundations, Approaches, and Strategies (5)

This course will help future educators develop a practical theory for teaching English as a second language in K-5 schools. Topics include the theoretical foundation for language acquisition; current trends and research in the field; the role of culture in teaching English learners; language assessment; and the design of instructional units. Also focuses on teaching social studies to English learners. Enrollment restricted to M.A./credential students.

Prerequisite: Enrollment is restricted to MA/credential students.

EDUC 204 - Methods of English Language Development: Single Subject (5)

Course helps future educators develop a practical theory for teaching English in the elementary and secondary schools to students who speak other languages. Topics include current trends in the field, language assessment, and the design of instructional units.

Prerequisite: Enrollment is restricted to MA/credential students.

EDUC 205 - Teaching, Learning, and Schooling in a Diverse Society (5)

Required for master's students in education other than those in an approved 4+1 pathway who have the option to waive the course; offered in summer. Three basic units comprise the subject matter: teaching/learning, with such topics as development, learning, pedagogy, and socialization theories; schooling, as the context of teaching/learning both in its existent structures and its reform movements; and the sociocultural context in which educational institutions exist, topics such as cultural and historical forces, political and economic condition, family, and community structures.

Prerequisite: Enrollment is restricted to MA/credential students.

EDUC 206 - Teaching, Learning, and Schooling: Single Subject (5)

Required for master's students in education; offered in summer. Three basic units comprise the subject matter: teaching/learning, with such topics as development,

learning, pedagogy, and socialization theories; schooling, as the context of teaching/learning both in its existent structures and its reform movements; and the sociocultural context in which educational institutions exist, including topics such as cultural and historical forces, political and economic conditions, family, and community structures.

Prerequisite: Enrollment is restricted to MA/credential students.

EDUC 207 - Social Foundations of Education (5)

Offered in summer. A sustained inquiry into the social, political, economic, and historical foundations of schools with an emphasis on community attitudes toward education. Student narratives of engagement and resistance will provide a basis for insights and interventions useful to educators.

Prerequisite: Enrollment is restricted to MA/credential students.

EDUC 208 - Portfolio Development (2)

Offered in summer. Provides student and faculty adviser with time to confer over the completion of the required portfolio.

Prerequisite: Enrollment is restricted to MA/credential students.

EDUC 210 - Health, Safety, and Community (2)

Offered in summer. Addresses the preparation of teachers for creating a supportive, healthy environment for student learning. Covers topics related to physical, emotional, and social health.

Prerequisite: Enrollment is restricted to MA/credential students.

EDUC 211 - Teaching Special Populations in the General Education Classroom (2)

Addresses the preparation of teachers for meeting needs of special populations within the general education setting. Covers basic knowledge, skills, and strategies. (Formerly Topics in Elementary Education: Teaching Special Populations.)

Prerequisite: Enrollment is restricted to MA/credential students.

EDUC 212A - Bilingualism and Bilinguality: History, Politics, Theory, and Practice (2)

Taught in Spanish. Prepares future bilingual teachers to be knowledgeable about history, politics, theory, and practices related to bilingual instructional programs. Topics: second-language acquisition, bilingual-program models, equity pedagogy.

Prerequisite: Enrollment is restricted to MA/credential students.

EDUC 212B - Bilingualism and Bilinguality: Language,

Literacy and Content Instruction (2)

Taught in Spanish. Prepares future bilingual teachers to teach language, literacy, and the content areas in ways that address the needs of culturally and linguistically diverse students. Topics: literacy in two languages; academic language; assessment.

Prerequisite: Enrollment is restricted to MA/credential students.

EDUC 212C - Bilingualism and Biliteracy: Community and School Partnerships (2)

Taught in Spanish. Provides opportunities for future bilingual teachers to develop culturally relevant practices that build collaboration between the school, students' families, and community. Topics: Latino culture and history, school-parent communication.

Prerequisite: Enrollment is restricted to MA/credential students.

EDUC 213 - Child and Adolescent Development for Educators (2)

Offered in summer. Addresses theories of child and adolescent development and how these theories apply to student success in school. Topics include: cognitive, social, emotional, and physical development, and how this knowledge influences decisions teachers make about instruction and their interaction with students.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 214 - Contemporary Issues in Education (2)

Addresses current issues in California's educational landscape. Potential topics include the teaching of LGBTQ curricula, understanding youth gang participation, the initiation of ethnic studies courses, school funding and school district budgets, and new technologies for student assessment.

Prerequisite: Enrollment is restricted to MA/Credential graduate students.

EDUC 217 - Topics in Elementary Education: Physical Education (2)

Examines pedagogical understanding in teaching physical education. Introduces candidates to theoretical and research basis in physical education and content standards and frameworks. Also investigates and presents instructional practices.

Prerequisite: Enrollment is restricted to MA/credential students.

EDUC 218 - Topics in Elementary Education: Visual Arts (2)

Examines pedagogical understanding in teaching visual arts. Introduces candidates to theoretical and research basis for teaching visual arts and content standards and

frameworks. Also investigates and presents instructional practices.

Prerequisite: Enrollment is restricted to MA/credential students.

EDUC 219 - Topics in Elementary Education: Performing Arts (2)

Examines pedagogical understanding in teaching performing arts. Introduces candidates to theoretical and research basis for teaching performing arts and content standards and frameworks. Also investigates and presents instructional practices.

Prerequisite: Enrollment is restricted to MA/credential students.

EDUC 220 - Reading and Language Arts for Elementary Classrooms (5)

This course provides both a theoretical and practical foundation for literacy instruction, emphasizing reading and language arts instruction in grades K–8. Interactive instruction and field experience will be used to examine curricula, methods, materials, and literacy evaluation.

Prerequisite: Enrollment is restricted to MA/credential students.

EDUC 221 - Science Learning and Teaching in Elementary Classrooms (5)

Examines constructivist and sociocultural approaches to the learning and teaching of science in elementary classrooms, including beliefs about the nature of science and theories of how children learn science. Provides a critical overview of curricula, instructional theories, and multiple approaches to teaching the big ideas in elementary science.

Prerequisite: Enrollment is restricted to MA/credential students.

EDUC 222 - Mathematics Learning and Teaching in Elementary Classrooms (5)

This course is required for the multiple subject credential. Examines constructivist and sociocultural approaches to the learning and teaching of mathematics in elementary classrooms, including the nature of mathematics and theories of how children learn mathematics. Provides an introduction to mathematics teaching standards and a critical overview of curricula, instructional theories, and multiple approaches to teaching the big ideas in elementary mathematics.

Prerequisite: Enrollment is restricted to MA/credential students.

EDUC 225 - Reading Across the Curriculum in Middle School and Secondary (5)

Provides a theoretical and practical foundation for teaching reading within content area instruction in middle school and secondary classrooms. Field experiences and interactive instruction will facilitate

learning about strategies, curricula, methods, materials, and observation. Intended for students pursuing a single subject credential.

Prerequisite: Enrollment is restricted to MA/credential students.

EDUC 226 - English Teaching: Theory and Curriculum (5)

Required for the single subject English credential student. Examines sociocultural approaches to the learning and teaching of English in secondary classrooms, including theories of how children learn English language, literature, and composition.

Prerequisite: Enrollment is restricted to MA/credential students.

EDUC 227 - English Teaching for Secondary Classrooms (5)

Prepares English single subject credential candidates for student teaching in winter and spring. Course focuses on developing curricula and strategies in the content area. Through classroom placements, students observe and apply techniques to develop curriculum units used in student teaching.

Prerequisite: Enrollment is restricted to MA/credential students.

EDUC 228 - Math Education: Research and Practice (5)

Examines research on the learning and teaching of mathematics. Topics include the nature of mathematics cognition and learning, how children learn mathematics, mathematical discourse, and perspectives on addressing diversity in mathematics classrooms. Course is required for M.A./credential students in secondary (single subject) mathematics and of Ph.D. students in mathematics education.

Prerequisite: Enrollment is restricted to MA/credential students.

EDUC 229 - Teaching Mathematics in the Secondary Classroom (5)

Examines constructivist and sociocultural approaches to teaching mathematics in the secondary classroom. Course will provide an introduction to mathematics teaching standards and a critical overview of curricula, instructional theories, and multiple approaches to teaching the big ideas in secondary mathematics. Required for mathematics secondary credential.

Prerequisite: Prerequisite(s): EDUC 228. Enrollment is restricted to MA/credential students.

EDUC 230 - Science Education: Research and Practice (5)

Examines theoretical approaches to the learning and teaching of science including the nature of scientific knowledge, theories of how children learn science, approaches to scientific discourse, and perspectives on

addressing diversity in science classrooms. Course is required for single subjects science credential.

Prerequisite: Enrollment is restricted to MA/credential students.

EDUC 231 - Teaching Science in the Secondary Classroom (5)

Examines constructivist and sociocultural approaches to teaching science in secondary classrooms. Course will provide a critical overview of curricula, instructional theories, and multiple approaches to teaching the big ideas in science.

Prerequisite: Enrollment is restricted to MA/credential students.

EDUC 232 - Social Science: Theory and Curriculum (5)

Required for the single subject social science credential student. Tracks both the implicit and explicit connections between theory and practice, illustrating that theory suggests best practice while practice informs theory-formation and testing.

Prerequisite: Enrollment is restricted to MA/credential students.

EDUC 233 - Social Science Teaching for Secondary Classrooms (5)

Prepares social science single subject credential candidates for student teaching in winter and spring. Course focuses on developing curricula and strategies in the content area. Through classroom placements, students observe and apply techniques to develop curriculum units that are used in student teaching.

Prerequisite: Enrollment is restricted to MA/credential students.

EDUC 235 - Introduction to Educational Inquiry (5)

Addresses foundational knowledge needed to understand and conduct educational inquiry and research. Topics include epistemology in the human sciences, philosophical foundations of modern research strategies, and general classes of research investigations in education.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 236 - Quantitative Research Methods (5)

Provides an introductory-level knowledge of quantitative research methods in educational settings. Students learn the foundations of quantitative data theory, general logic behind statistical inference, and specific methods of data analysis in educational contexts.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 237 - Qualitative Research Methods (5)

Graduate level introduction to qualitative methods, with special attention to ethnographic research on schooling. Moves from overview of different methods, through examination of selected studies, to discussion of issues in research design, data collection, analysis, and writing.

Prerequisite: Enrollment is restricted to graduate students; priority is given to graduate students in education.

EDUC 250 - Teaching and Teachers (5)

Examines the historical, socio-political, and research contours of the teaching profession. Investigates histories of teaching and teacher's work in the 19th and 20th centuries. Analyzes the contemporary era of teachers and teaching in the United States.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 251 - Analysis of Activity and Interaction in Educational Settings (5)

Analyzes topics, which vary systematically from year to year, including analysis of classroom interaction, video recording and transcription, coding and analysis of discourse data, and software programs for qualitative analysis.

Prerequisite: Prerequisite(s): EDUC 237. Enrollment is restricted to graduate students.

EDUC 252 - Hermeneutics of Education (5)

Investigates philosophical hermeneutics to deeply interrogate education. Addresses such questions as: What is hermeneutics? How is education an hermeneutic enterprise? How does knowing hermeneutics deepen the ability to engage in education research?

Prerequisite: Enrollment is restricted to graduate students.

EDUC 253 - Research Design in Mathematics and Science Education (5)

Examines multiple approaches to designing research studies in mathematics and science education. Introduces multiple types of research designs and principles used by education researchers examining mathematics/science learning and teaching.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 254 - Critical and Alternative Paradigms in Education Research (5)

Examines theoretical foundations of critical and alternative research paradigms commonly used in education, including critical ethnography, participatory research, counter-storytelling, and social-design

experiments. Examines critiques of qualitative/quantitative research from feminist and critical theory; surveys how such critiques have informed the development of new paradigms in education research; and explores the benefits and limits of selected alternative paradigms.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 255 - Intermediate Quantitative Methods (5)

Focuses on the applied statistical modeling and analysis of educational data (large-scale data sets), not on the mathematical foundations of science. Students learn to address quantitative research questions using general linear model (GLM) statistical methods. GLM includes regression analysis, analysis of variance (ANOVA), and analysis of covariance (ANCOVA). Students learn statistics by doing statistics.

Prerequisite: Prerequisite(s): introductory statistics course (EDUC 236 or equivalent). Enrollment is restricted to graduate students.

EDUC 256 - Intermediate Qualitative Analysis (5)

Emphasizes the analysis of qualitative data in education research and introduces interpretive analytical approaches for its use with empirical data, the use of coding software for ethnographic analysis, and video recording and transcription.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 260 - The Teacher and The School: An Investigation of Related Practice, Reform, and Research (5)

Explores empirical and theoretical interconnections between teachers and teaching on the one side, and schools as situated organizations on the other. The course examines these various interconnections in relation to contemporary educational research, practice, and policy reform.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 261 - Thinking and Learning (5)

Examines multiple theoretical perspectives on thinking, learning, and teaching; the development of the whole person in a variety of cultural contexts; the roles thinking, learning, and teaching play in that development; and how researchers' and educators' conceptions shape instruction.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 262 - Social and Cultural Context of Education (5)

Application of anthropological and sociological theories to study of education. Examines social, cultural, and

linguistic context of schooling with particular attention to role of race, class, culture, power, and language in influencing schooling outcomes.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 263 - Educational Reform (5)

Provides students with multiple analytic perspectives from which to examine important educational issues by analyzing political, historical, and philosophical origins of educational reform in the U.S. and internationally.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 264 - Research on Teacher Development and Teacher Education (5)

Addresses personal and professional development of teachers. Explores models of teacher education with specific attention to methods and processes by which teachers can be better prepared to work with culturally and linguistically diverse students.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 265 - Teacher as Educational Policy Maker (5)

Focuses on the role teachers play in making/implementing educational policy. Addresses how this topic is implicated in enhancing the educational opportunities available to students who, historically, have been underserved by schools.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 266 - Program Evaluation and Action Research in Educational Reform (5)

Overview of the purpose of and practice in program evaluations in a variety of contexts with a specific focus on educational settings. Students learn the techniques of program evaluation; the historical and theoretical context of program evaluations, including its relation to experimental research; and how action research can be used in conducting field-based evaluations. Students should be familiar with basic quantitative and qualitative methodologies.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 268 - Schools, Communities, and Families (5)

Examines the nexus of schools, communities, and families, and, in particular, how collaboration across institutional boundaries can facilitate school and community reform.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 271 - Theoretical Perspectives on Learning and

Using Literacy (5)

Examines theoretical perspectives, educational issues, and scholarship related to use and development of literacy among diverse populations, particularly those who have not fared well in U.S. schools.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 272 - Language in Education and Society (5)

Investigates discipline of sociolinguistics and explores actual ways in which sociolinguistics has become a useful lens for better understanding teaching, learning, and schooling. Conduct own sociolinguistic analyses of data collected for culminating project.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 273 - Language Acquisition, Bilingualism, and Education (5)

Foundations of first- and second-language acquisition and bilingualism with emphasis on implications for education in linguistically diverse settings. Topics include linguistic, cognitive, sociolinguistic, and sociocultural approaches to development of languages and the nature of individual and societal bilingualism.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 274 - Language and Power in Education (5)

Examines relationships between sociopolitical struggles and language/language practices. Students study ways in which Marxism, critical theory, and post structuralism have represented links between language and power, and investigate contemporary studies of language and power in education.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 276 - Theory and Practice of Writing (5)

Explores first and second language-writing theory, research, and practice, especially relating to language minority students and others considered academically under-prepared. Focuses on educational settings from pre-school settings including families and communities.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 277A - Second-year Doctoral Proseminar (2)

Three-quarter seminar supporting second-year doctoral students as they progress through their second year research project from proposal, through data collection and analysis, to final paper and presentation.

Prerequisite: Prerequisite(s): Enrollment is restricted to education doctoral students working on their second-year project.

EDUC 277B - Second-year Doctoral Proseminar (2)

Three-quarter seminar supporting second-year doctoral students as they progress through their second year research project from proposal, through data collection and analysis, to final paper and presentation.

Prerequisite: Prerequisite(s): Enrollment is restricted to education doctoral students working on their second-year project.

EDUC 277C - Second-year Doctoral Proseminar (2)

Three-quarter seminar supporting second-year doctoral students as they progress through their second-year research project from proposal, through data collection and analysis, to final paper and presentation.

Prerequisite: Prerequisite(s): Enrollment is restricted to education doctoral students working on their second-year project.

EDUC 278 - Critical Exploration of Reading Theory and Practice (5)

Doctoral seminar that examines historical and current research on reading processes and instructional practices. Intensive study of factors affecting the development of proficient, engaged, and reflective readers who can acquire new knowledge from text.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 279 - Directed Reading (5)

Directed reading that does not involve a final paper. Students submit a petition to the course-sponsoring agency. May be repeated for credit up to four times. Enrollment is restricted to graduate students.

EDUC 279F - Directed Reading (2)

Directed reading that does not involve a final paper. Students submit a petition to the course-sponsoring agency. May be repeated for credit up to four times. Enrollment is restricted to graduate students.

EDUC 280 - Language and Literacy Across Disciplines (5)

Considers and critiques conceptualizations of the language used for academic pursuits, from the early years of schooling to higher education. Focuses on implications for research and practice related to the education of students in linguistically diverse schools and societies.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 281 - Conceptual Change in Science and Mathematics (5)

Examines approaches in cognitive science, mathematics education, and science education to documenting student conceptions in science and mathematics,

defining conceptual change, and describing relationship between conceptual change and learning with understanding.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 282 - Informal Learning in Sciences and Mathematics (5)

Explores research on learning outside of school in multiple settings such as museums, after-school clubs, aquariums, workplaces, and homes. Readings draw from multiple fields and disciplines, including cognitive psychology, cognitive anthropology, cognitive science, education, museum education and evaluation, science, and mathematics education. Examine theoretical approaches to describing and understanding how people learn science and mathematics outside of school, empirical studies documenting learning in multiple non-school settings, and diversity issues in out-of-school settings.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 283 - Equity and Social Justice in Mathematics and Science Education (5)

Examines the theory, research, policy and practice of social justice and equity in mathematics and science education in local, national, and international contexts. Emphasizes the promotion of equity and critical mathematics and science literacy in schools and communities.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 284 - Gender in Mathematics and Science Education (5)

Explores basic aspects of gender in the fields of mathematics and science education. Discusses historical trends, current dilemmas, and how science and mathematics block or enable access for women.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 285 - Culture and Learning (5)

Examines multiple approaches to the study of the relation between culture and learning. Readings include historical and contemporary perspectives from cognitive science, cognitive anthropology, cross-cultural psychology, cultural psychology, and socio-cultural theories as frameworks for the study of culture and learning.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 286 - Research in STEM Education (5)

Focuses on particular issues of theoretical importance to research in mathematics and science education. Topics

vary from year to year. Particular issues in cognition, learning, teaching, curriculum, and assessment in mathematics and science education may be covered.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 287 - Issues in Educational Assessment (5)

Familiarizes students with the basic concepts of educational assessment and explores issues related to the design and implementation of educational assessment as well as the application of educational assessment in educational research.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 288 - Ethnographies of Education (5)

Offers opportunity to critique a range of book-length ethnographic studies of education focusing on relationship between culture, learning, and schooling in the U.S. with comparative studies from other countries.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 289 - School Organization (5)

Applies multiple perspectives drawn from organizational theory, highlighting important aspects of organization of schools, including their operational environment, instructional organization, and professional and bureaucratic dimensions.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 290 - CHAT and Educational Practice and Research (5)

Introduction to cultural-historical activity theory (CHAT) based on work of Vygotsky, Bakhtin, and contemporary developments of their ideas. Explores the utility of CHAT as a framework for thinking about educational practice and research.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 291 - Globalization and Transnationalism in Education (5)

Examines educational access and advancement in several nations affected by globalization, national policies, and localized identity and opportunity structures. Attention to language and cultural expectations relevant to research in international contexts and how this knowledge provides reflection on the American condition.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 292 - Ideology and Education (5)

Philosophical study of the theory of ideology from Marx to the present and how ideologies (racism, sexism, classism, linguisticism, abilityism) become embodied, reproduced, resisted, and transformed (and particularly the role of education therein).

Prerequisite: Enrollment is restricted to graduate students.

EDUC 293A - Research Apprenticeship (2)

Research apprenticeship under guidance of faculty member during first or second year of doctoral studies. May also be taken in the third year and beyond. Students submit petition to sponsoring agency. Enrollment restricted to graduate students.

EDUC 293B - Research Apprenticeship (5)

Research apprenticeship under guidance of faculty member during first or second year of doctoral studies. May also be taken in the third year and beyond. Students submit petition to sponsoring agency. Enrollment restricted to graduate students.

EDUC 294 - Second-Year Research Project (5)

Doctoral students work with faculty advisors to plan, carry out, and write up small independent research project during second year of graduate studies. Students submit petition to sponsoring agency. Enrollment restricted to graduate students.

EDUC 295 - Critical Perspectives on Education (5)

Investigates critical theories in education. Situates the themes against and within critical theory and philosophic foundations of Paulo Freire's theory of liberation education. Elaborates these themes within the discourses on critical race theory and education, and feminism and education.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 296 - Educational Policy and the Context of Teachers' Work (5)

Focuses on both the conceptual and methodological developments in the study of policy and on the research relation to the policy context of teachers' work.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 297 - Independent Study (5)

Students submit petition to sponsoring agency.

EDUC 297F - Independent Study (2)

Students submit petition to sponsoring agency.

EDUC 298 - TA Apprenticeship (2)

Students work with a faculty member who is teaching an undergraduate or MA/Credential course. Students will not be responsible for final grades, narrative evaluations, or holding discussion section. The expected course time commitment is limited to 2-3 hours per week, plus class meeting time. Students gain perspectives and practices of teaching undergraduate and graduate courses, working with the instructor on lesson planning, class instruction, and grading some student work.

Prerequisite: Enrollment is restricted to graduate students.

EDUC 299 - Thesis Research (5)

Students submit petition to sponsoring agency.

ENVS - ENVIRONMENTAL STUDIES

Lower-Division

ENVS 15 - Natural History of the UCSC Campus (2)

Introduces students to the range of natural species and communities occurring on the UCSC campus. All class time is spent outside, and each week a different area of campus is visited. Course 24 is recommended.

ENVS 17 - Curation of Natural History Collections (2)

Introduction and training in the skills needed to create, manage, and exhibit natural history collections, including plants, insects, fungi, birds, mammals, reptiles, and amphibians.

ENVS 18 - Natural History Illustration (5)

Students gain proficiency in illustration media, and acquire training in the essential skills needed to create natural-history inspired illustrations. Students create illustrations and paintings by studying organisms in the Norris Center for Natural History collections, as well as those living on and around campus. Some experience in basic drawing and/or natural-history sketching is recommended.

ENVS 19 - Topics in Natural History (3)

Students learn the fundamentals of organismal biology and ecology through observations in the field, museum specimens, and field journaling. Class focuses on a particular taxonomic group or natural community, such as reptiles, fungi, insects, coastal prairie, or chaparral. Enrollment by application. Please email envsadv@ucsc.edu for applications.

ENVS 23 - The Physical and Chemical Environment (5)

Provides an overview of the physical and chemical environment of planet Earth. Fundamental chemistry and physics is introduced in the process of learning

about Earth in a holistic way. The influence of human societies on the global environment is one focus of discussion. Earth's many spheres are explored first: the lithosphere; the atmosphere; the hydrosphere, and the ecosphere. Then global cycles of carbon, nitrogen, and several other elements are studied in the context of basic sciences and societal issues.

ENVS 24 - General Ecology (5)

Covers principles of ecology including limits to species abundances, evolutionary ecology, population dynamics, community interactions and patterns, and ecosystem patterns and dynamics.

Prerequisite: Prerequisite(s): AM 3 or AM 6, or MATH 3 or higher; or mathematics placement examination (MPE) score of 300 or higher; or AP Calculus AB exam score of 3 or higher; ENVS 23 recommended as prerequisite to this course.

ENVS 25 - Environmental Policy and Economics (5)

Introduces the policy and economic dimensions of some pressing environmental challenges. Case studies may include, biodiversity conservation, waste, water, climate change, and other topics to examine the drivers and policy responses to environmental problems and the trade-offs in different policy solutions.

ENVS 65 - Introduction to Fresh Water: Processes and Policy (5)

Introduction to freshwater resources from multiple scientific and policy perspectives. After a review of basic concepts, water issues affecting cities, farms, open space, and multiple-use landscapes are studied. Students cannot receive credit for this course if they have previously received credit for ENVS 165.

ENVS 80B - The Ecological Forecast for Global Warming (5)

A broad overview of the impacts of human activities on the global climate system. Topics include how climate affects the distribution of ecosystems, the influence of global climate change on biodiversity, ecosystem function, and consequences for the human enterprise.

ENVS 80C - Climate Change Science and Policy (5)

An interdisciplinary overview of the science and policy of global climate change. Topics include Earth system science, climate change impacts on the environment, climate change policy, and the future of climate change politics from the local to the global.

ENVS 80F - Introduction to Agroecology and Sustainable Food Systems (5)

Our current food system is unsustainable for the environment and unjust for the farmers, farmworkers, and consumers who depend on it. Course provides an interdisciplinary, experiential, and systems-focused introduction to agroecology and other approaches to advancing a more just and ecologically sustainable food

system. Students will come to understand agroecology as a science for understanding agricultural ecosystems, as a farming practice, and as a social movement to change the way we produce and distribute/access food. Course examines many topics—including biological fertility and pest management, seeds, livestock raising, and aquaculture—from the perspective of both the natural and social sciences, leaving students with a perspective that transcends any particular academic discipline. Students gain hands-on experience with farming research, production, and food distribution happening across the UCSC campus farm and food system.

ENVS 83 - Environmental Studies Internship (5)

A supervised off-campus learning experience related to environmental problem solving. Focuses on initial experiences in applied work and specific skill development. Students may be placed individually or with a team in government agencies, private organizations, citizen action groups.

ENVS 99 - Tutorial (5)

Directed reading, supervised research, and organized projects relating to environmental problems. May be repeated for credit with consent of the chairperson of Environmental Studies Department. Students submit petition to sponsoring agency.

ENVS 99F - Tutorial (2)

Provides for department-sponsored directed reading, supervised research, or organized project for lower-division students under the direct supervision of a faculty sponsor. May not be counted toward major requirements. Students submit petition to sponsoring agency.

Upper-Division

ENVS 100 - Ecology and Society (3)

Introduction to environmental issues in an interdisciplinary matrix. Focuses on three issues at the intersection of ecological questions and social institutions: agroecology and sustainable agriculture; population growth, economic growth, and environmental degradation; and biodiversity conservation and land management. Reviews the important roles of disciplinary abstraction and of the application of that knowledge to context-dependent explanations of environmental problems.

Prerequisite: Prerequisite(s): ENVS 23 or CHEM 1A; ENVS 24 or BIOE 20C; ENVS 25; and STAT 7 and STAT 7L, or ECON 113 or OCEA 90; and one from: ANTH 2, SOCY 1, SOCY 10, SOCY 15, PHIL 21, PHIL 22, PHIL 24, PHIL 28, or PHIL 80G. Concurrent enrollment in ENVS 100L is required.

ENVS 100L - Ecology and Society Writing Laboratory

(5)

Required writing lab accompanying course 100. Students are introduced to writing in different styles and for different audiences typical of the ecosystem-society interface. Course 100 writing assignments are developed, written, and revised in conjunction with the lab. W credit is granted only upon successful completion of ENVS 100.

Prerequisite: Prerequisite(s): Satisfaction of the Entry Level Writing and Composition requirements. Concurrent enrollment in ENVS 100 is required.

ENVS 104A - Introduction to Environmental Field Methods (5)

A course in the process of field research and monitoring, with emphasis on use of the scientific method; experimental design, data handling, statistical analysis and presentation; and basic field methodologies. Application of basic field skills, including habitat description; methods for sampling plants, animals, soils, water, and microclimate; and observational and manipulative techniques to address ecological, conservation, and management questions.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; concurrent enrollment in ENVS 104L and previous or concurrent enrollment in ENVS 100 and ENVS 100L is required, or by permission of instructor.

ENVS 104L - Field Methods Laboratory (2)

Students directly observe elements of natural history and ecological process; design and implement field studies based on lectures; deploy the methods discussed in lectures; and collect data to analyze, interpret, and report in written and oral forms.

Prerequisite: Concurrent enrollment in ENVS 104A is required.

ENVS 106A - Natural History of Birds (5)

The evolution, taxonomy, physiology, behavior, ecology, and management of birds. Lecture, discussion, field format. Birds observed in habitats including bay, marsh, meadow, and forest. Evaluations based on a field journal and examinations.

Prerequisite: Prerequisite(s): previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of instructor. ENVS 105 or BIOL 138 are recommended.

ENVS 106M - Natural History of Birds Laboratory (2)

A field course designed to complement ENVS 106A by providing students with the opportunity to gain direct experience in bird study. This includes participation in field exercises and trips to off-campus sites in the region.

Prerequisite: Prerequisite(s): Concurrent enrollment in ENVS 106A is required.

ENVS 107A - Natural History Field Quarter (5)

A 15-unit field course that uses California wild lands to develop skills of natural history observation and interpretation. Students gain the ability to identify plants, animals, vegetation types, and landscapes, as well as address the complex issues of preservation and management of these resources. Enrollment by interview. Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L; concurrent enrollment in ENVS 107B and ENVS 107C required. Students are billed a materials fee of \$800.

ENVS 107B - Natural History Field Quarter (5)

A 15-unit field course that uses California wild lands to develop skills of natural history observation and interpretation. Students gain the ability to identify plants, animals, vegetation types, and landscapes, as well as address the complex issues of preservation and management of these resources. Enrollment by interview. Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L; concurrent enrollment in courses ENVS 107A and ENVS 107C required.

ENVS 107C - Natural History Field Quarter (5)

A 15-unit field course that uses California wild lands to develop skills of natural history observation and interpretation. Students gain the ability to identify plants, animals, vegetation types, and landscapes, as well as address the complex issues of preservation and management of these resources. Enrollment by interview. Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L; concurrent enrollment in courses ENVS 107A and ENVS 107B required.

ENVS 108 - General Entomology (5)

Introduction to entomology including anatomy, physiology, systematics, evolution, behavior, and reproduction of the world's most diverse group of organisms. These topics are illustrated in several contexts, from the importance of insects as disease vectors to the historical and contemporary uses of insects by humans.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L required, or by permission of instructor.

ENVS 108L - General Entomology Laboratory (3)

Laboratory sections are devoted to the identification of insects. Individual collections representing 15 orders, sight identification of 60 families, and use of taxonomic keys for positive designations required.

Prerequisite: Concurrent enrollment in ENVS 108 is required.

ENVS 110 - Institutions, the Environment, and Economic Systems (5)

Debate about environmental policy is often couched in economic terms. Environmental issues have become questions of political economy, as they influence international and domestic policy and reflect on the functioning of the market system. Examines the assumptions and implications of alternative approaches to political economy, as these pertain to questions of environmental policy and political institutions.

Prerequisite: Prerequisite(s): previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 115A - Geographic Information Systems and Environmental Applications (5)

Introduction to geographic information systems (GIS) as the technology of processing spatial data, including input, storage and retrieval; manipulation and analysis; reporting and interpretation. Emphasizes GIS as a decision support system for environmental and social problem solving, using basic model building, experimental design, and database management. Taught in conjunction with ENVS 215A. Students cannot receive credit for this course and ENVS 215A.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 115L and ENVS 100 and ENVS 100L, or permission of instructor. Course in computer science, Earth science, math, or geography recommended.

ENVS 115B - Intermediate Geographic Information Systems (GIS) (5)

Evaluates advanced technologies of processing spatial data, spatial theory, and application to unique geographic problems, data manipulation and analysis, and reporting and interpretation. Emphasizes GIS as a decision-support system for environmental and social problem solving, using basic model building, experimental design, and database management. Taught in conjunction with ENVS 215B. Students cannot receive credit for this course and ENVS 215B.

Prerequisite: Prerequisite(s): ENVS 115A, ENVS 100, and ENVS 100L. A previous course in computer science, Earth science, mathematics, or geography is recommended.

ENVS 115C - Advanced Geographic Information Systems (5)

Explores more advanced training in spatial theory and methods and their application to unique geographic problems. Emphasis given to advanced aspects of spatial data analysis and building custom GIS solutions.

Prerequisite: Prerequisite(s): ENVS 115A and ENVS 115B. Enrollment is restricted to sophomores, juniors, and seniors.

ENVS 115L - Exercises in Geographic Information

Systems (2)

Exercises in Geographic Information Systems and Remote Sensing that demonstrate the development of digital geographic data. Students gain hands-on experience with developing datasets, using imagery to create GIS layers, performing spatial analysis, and utilizing GPS technology. Emphasis placed on environmental applications. Students cannot receive credit for this course and ENVS 215L.

Prerequisite: Concurrent enrollment in ENVS 115A required.

ENVS 120 - Conservation Biology (5)

Introduces biological and anthropogenic influences on the diversity and scarcity of organisms. Explores the mathematical models and research tools that provide the foundation for many conservation and management decisions regarding endangered and/or declining species. Topics explored in the context of various examples of conservation decision-making in the real world.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 121 - Landscape Ecology (5)

Investigates topics about the causes and consequences of spatial heterogeneity and pattern in natural- and human-dominated systems. This course provides a foundational understanding of how landscape pattern is generated and relates to populations, communities, and ecosystem processes.

Prerequisite: Prerequisite(s): previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of the instructor.

ENVS 122 - Tropical Ecology and Conservation (5)

An introduction to the ecological processes, principles, and players of tropical ecosystems, and to conservation issues facing tropical American forests. We will look at how tropical ecosystems work, roles of humans in shaping them, and current conservation opportunities and dilemmas.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 123 - Animal Ecology and Conservation (5)

Advanced course in animal ecology and conservation focusing on the ecology, behavior, biogeography, and evolution of vertebrates.

Prerequisite: Prerequisite(s): ENVS 120. Previous or concurrent enrollment in ENVS 100 and ENVS 100L; or by permission of instructor.

ENVS 129 - Integrated Pest Management (5)

Provides an extensive coverage of applied ecology, pest control technology, and the social, political, and economic factors regulating the ideologies and practice of pest management. Topics include agroecosystem design and population regulation of insects, weeds, vertebrates, and pathogens; field monitoring, chemical and biological control; economic thresholds, decision-making processes, and the role of agribusiness.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 129L - Integrated Pest Management Laboratory (2)

Field trips and field exercises that demonstrate the practice of integrated pest management techniques. Individual and group projects provide hands-on experience with field sampling techniques, pest identification, recognition of biological control agents, experimental design, interview techniques, data interpretation and field report writing.

Prerequisite: Prerequisite(s): concurrent enrollment in ENVS 129.

ENVS 130A - Agroecology and Sustainable Agriculture (5)

Ecological concepts and principles are applied to the design and management of sustainable agroecosystems. Alternatives for agriculture are discussed in terms of ecosystem structure and function. A weekly three-hour lab is required.

Prerequisite: Prerequisite(s): Concurrent enrollment in ENVS 130L and previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 130B - Justice and Sustainability in Agriculture (5)

Agricultural sustainability is examined as a complex set of interactions between ecological, social, and economic factors. Drawing case studies from U.S. agriculture, course examines the social justice implications of historical and current agri-food system dynamics. (Formerly Principles of Sustainable Agriculture.)

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 130C - Field Experiences in Agroecology and Sustainable Food (5)

Research and practice in agroecology and sustainable food systems. Students gain multidimensional understanding of agroecology through study at the UCSC farm, guest speakers, field trips, and interdisciplinary readings. Students participate in

research projects and learn about methods, and study design and statistical analysis. Students are billed a materials fee.

Prerequisite: Prerequisite(s): previous or concurrent enrollment in ENVS 100 and ENVS 100L.

ENVS 130L - Agroecology and Sustainable Agriculture Laboratory (2)

Laboratory and field exercises to train in the analysis of ecological processes in agricultural systems, with a focus on the quantification of ecological sustainability. Experimental design, analysis, and data interpretation are emphasized. Students are billed a materials fee.

Prerequisite: Concurrent enrollment in ENVS 130A is required.

ENVS 131 - Insect Ecology (5)

Advanced course in ecology featuring insect-plant interactions such as herbivory, pollination, and the effects of plants on insect population dynamics. Lectures emphasize current controversies in ecological theory and relate theory to application.

Prerequisite: Prerequisite(s): previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 133 - Agroecology Practicum (5)

Lectures and demonstrations are combined with field applications to give students direct experience and knowledge of sustainable agriculture and horticulture practices and principles. UCSC Farm and Garden are the living laboratories for testing agroecological principles. Emphasis is placed on small-farm systems. May be applied to major only once. Students are billed a materials fee.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 133B - Agroecology Practicum (6)

Lectures and demonstrations are combined with field applications to give students direct experience and knowledge of sustainable agriculture and horticulture practices and principles. UCSC Farm and Garden are the living laboratories for testing agroecological principles. Emphasis is placed on small-farm systems. May be applied to major only once.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 135 - Sustainable Aquaculture (5)

Current international and local aquaculture systems and science and practices needed to steer them toward sustainability. Critically looks at practices, analyzes environmental, social, economic, and human health

effects of sustainable systems. Includes UCSC Aquaculture lab, farm visits, private sector, guests.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L.

ENVS 138 - Field Ethnobotany (5)

Lectures, laboratory, and fieldwork examine field botany from a human ecology perspective. Students have the opportunity to learn the skills of field botany and plant identification through the study of plants that are of major significance for human cultures. The emphasis of field skills is on applications to sustainable management of natural resources.

Prerequisite: Prerequisite(s): ENVS 130A and ENVS 130L, or by permission of instructor. Concurrent enrollment in ENVS 138L required.

ENVS 140 - National Environmental Policy (5)

An overview of all major federal environmental policy domains. Analyzes political, social, economic, and other forces influencing federal (and some state) public policy responses to land use, natural resources, pollution, and conservation dilemmas.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 141 - Ecological Economics (5)

Application of economic analysis to natural resource policy and management. Topics include welfare economics, property rights and externalities, natural resource valuation, exhaustible and renewable resources, and sustainable development.

Prerequisite: Prerequisite(s): ECON 1 is strongly recommended as preparation. Previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 142 - Sustainable Energy (5)

Explores the renewable and fossil fuel energy resources, with an emphasis on interactions with food and water systems. Explores opportunities for improving efficiency, reducing pollution, and increasing access through technology advances, policy, and consumer decisions. (Formerly Energy Politics and Policy.)

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 143 - Sustainable Development: Economy, Policy, and Environment (5)

Considers whether and how global poverty can be alleviated without irreparably damaging the environment. Examines interactions among population, economic growth, poverty, global consumption ethos, property rights systems, global economy, state capacity, and environmental damage. Scrutinizes impact of

various developmental strategies adopted during the past 50 years on poverty, governance, and the environment.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 144 - Global Climate Change Politics (5)

Explores the central political questions surrounding global governance of climate change. Focuses on how climate change is governed within the United Nations system, and, in particular, explores issues of equity and justice in terms of how we address climate change.

Prerequisite: Prerequisite(s): Environmental Studies students, previous or concurrent enrollment in courses ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 145 - Green Cities (5)

Are cities an environmental savior or an engine of pollution? This course considers what makes a truly green city and analyzes innovative urban policies in areas such as energy, transportation, buildings, and waste management.

Prerequisite: Prerequisite(s): previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of the instructor.

ENVS 146 - Water Quality: Policy, Regulation, and Management (5)

Building on prior preparation, the course provides an in-depth examination of American water-quality policy, regulation and management. In addition to a detailed understanding of pollutant-discharge permitting, students learn about nonpoint source water pollution and its regulatory remedies.

Prerequisite: Prerequisite(s): ENVS 100 and ENVS 100L; and ENVS 140, ENVS 149, ENVS 150 or ENVS 165.

ENVS 147 - Global Environmental Justice (5)

Surveys topics in environmental justice and human rights around the world. Provides a comprehensive foundation for students interested in the global environmental justice concentration. The readings comprise survey articles on environmental justice and related fields, such as political ecology, gender studies, labor studies, science and technology studies, risk and disaster studies, and human rights, and span a number of disciplines, including history, geography, sociology, anthropology, politics, and law. Formerly offered as Environmental Inequality/Environmental Justice.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 149 - Environmental Law and Policy (5)

Surveys a wide range of topics in environmental law, including state and federal jurisdiction, administrative law, separation of powers, state and local land use regulation, public land and resource management, pollution control, and private rights and remedies. Students read a large number of judicial cases and other legal documents.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 150 - Coastal and Marine Policy (5)

Examines key legal, policy, and institutional frameworks that govern the use and stewardship of coastal and marine areas and resources. Primary focus is on the U.S., although attention is also devoted to international laws and institutions.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENV 100 and ENVS 100L, or by permission of instructor.

ENVS 151 - Environmental Assessment (5)

Introduction to California land use planning law and practice, and the theory, practice, and public policy aspects of environmental assessment, using the California Environmental Quality Act (CEQA) as a model. The National Environmental Policy Act (NEPA) and other environmental and planning legislation also considered. Covers elements of State law and regulations, environmental impact assessment requirements, and practical procedures for preparing and evaluating CEQA documents, with case studies that exemplify legal, regulatory and public policy and practice aspects of the assessment process.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 152 - International Environmental Politics (5)

Examines international law and politics through the lens of cooperation on transboundary environmental problems, ranging from acid rain to toxic chemicals to biodiversity loss and climate change, which have become pressing political concerns in our increasingly globalized economy.

Prerequisite: Prerequisite(s): previous or concurrent enrollment in courses ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 153 - Globalization and the Environment: Trade Complements and Conflicts (5)

Explores the relationship between international trade and environmental protection. Centrally, we will consider the question: are trade liberalization and environment protection antithetical or conducive? We

will use the theoretical literature on regime overlap to help us better consider this question.

Prerequisite: Prerequisite(s): previous or concurrent enrollment in courses ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 154 - Amazonian Cultures and Conservation (5)

Overview of human societies in the Amazon from both a historical and contemporary perspective. Topics include indigenous resource management, deforestation, conservation politics, culture, and economic change.

Prerequisite: Prerequisite(s): previous or concurrent enrollment in ENVS 100 and ENVS 100L, or permission of instructor.

ENVS 156 - Environmental Action Through Writing (5)

Guided practice in writing skills useful to environmental activists. Assignments emphasize thinking quickly, revising adeptly, researching resourcefully, and tempering powerful passions with careful arguments. Toward the development of effective individual voices, students read each other's drafts as well as the published work of established writers. Enrollment priority will be given to students who have not taken course 157.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements and previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 157 - Writing in the Natural Sciences (5)

Guided practice in writing effectively about science and natural history for a variety of audiences. Assignments emphasize reporting first-hand observations, explaining processes and phenomena, understanding scientific papers, and writing about scientific and technical subjects for a general audience. Enrollment priority will be given to students who have not taken course 156.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements and previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 158 - Political Ecology and Social Change (5)

The object is to provide a rigorous grounding in the method of political ecology and to demonstrate how this approach has been used in environmental analysis and problem solving by environmental social movements.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 159 - Nature Literature (5)

Introduction to 19th- and 20th-century American writers who have influenced our understanding of humans' place in the natural world. Readings include original works as well as biographical and critical texts.

Discussions, field trips, and writing assignments emphasize active learning.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 160 - Restoration Ecology (5)

A multidisciplinary overview of restoring degraded ecosystems. Among the topics addressed are linkages between ecological principles and restoration, planning and implementing restoration projects, evaluating restoration success, and case studies of restoration of specific ecosystem types. Participation in one work day is required.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 161A - Soils and Plant Nutrition (5)

Provides fundamentals of soils and plant nutrition. The physical, biological, and chemical components of soils are investigated in relation to their ecological functions, fertility to plants, and sustainable management.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 162 - Plant Physiological Ecology (5)

Describes how the environment affects plants through the linkages between water, energy, nutrients, photosynthesis, and plant growth. Demonstrates how plant recruitment, survival, and reproduction affect conservation and agriculture. Prior coursework in ecology and/or plant physiology is recommended.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 162L - Plant Physiological Ecology Laboratory (2)

Introduces techniques for the study of plant interactions with the physical environment. Examines the role of stress on energy budgets, water relations, photosynthesis, and reproductive allocation. Emphasizes experimental design, field techniques, and instrumentation during field trips to local chaparral and grassland ecosystems.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 163 - Plant Disease Ecology (5)

Introduction to ecological roles of plant diseases, including their importance in regulating plant population dynamics, community diversity, and system function in natural ecosystems; considerations of plant diseases in conservation ecology; and ecological

approaches to managing diseases in agroecosystems. Students cannot receive credit for this course and ENVS 263.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 163L - Plant Disease Ecology Lab (2)

Introduction to techniques for studying plant diseases, including detection, isolation, cultivation, and identification of important groups of plant pathogens, completing Koch's postulates; diseases assessment techniques; experimental manipulation of plant-pathogen systems; and basic epidemiological tools. One field trip required.

Prerequisite: Prerequisite(s): concurrent enrollment in ENVS 163 is required.

ENVS 164 - Projects and Practices in Soil Ecology (5)

Students learn soil ecological principles by carrying out inquiry-based projects and practices in land ecosystems (agroecosystems, forests and grasslands). UCSC reserves, farms, gardens, and greenhouses are the default living-laboratories for the course. The emphasis is on experiential learning of practical and technical skills in using soil methods.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of the instructor. Previous enrollment in ENVS 161A is recommended.

ENVS 165 - Sustainable Water Systems (5)

Concepts, vocabulary, and skills necessary to the analysis of freshwater issues are introduced from hydrology, ecology, law, economics, engineering, and other disciplines. The skills are then applied to case studies involving local, state, and international freshwater conflicts and crises. (Formerly Freshwater Issues and Policy.)

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 166 - Agroecosystem Analysis and Watershed Management (5)

Explores a range of approaches to examine agroecosystem function, watershed management, and concepts of sustainability. Uses a combination of lecture, demonstration, field work, and field trips to illustrate approaches to analysis of managed ecosystems behavior and the integration of biophysical and socio-political knowledge to aid in watershed management.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of instructor; and ENVS 130A or ENVS 130B or ENVS 129 or ENVS 133 or ENVS 160 or ENVS 167.

ENVS 167 - Freshwater and Wetland Ecology (5)

Field and lecture course teaches the physical and biological patterns and processes in freshwater and wetland systems, primarily focusing on Central Coast systems from headwaters to coastal marshes.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 167L - Freshwater and Wetland Ecology Lab (2)

Provides basic skills to assess chemical, biological, and physical characteristics of freshwater creeks, rivers, and wetlands. These skills are needed in environmental consulting, municipal agencies engaging in water management or impacts on water, and regulatory agencies. Relies on methods in geomorphology, biogeochemistry, hydrology, and field biology.

Prerequisite: Concurrent enrollment in ENVS 167 is required.

ENVS 168 - Biogeochemistry and the Global Environment (5)

Studies biogeochemical cycles and related environmental issues such as global environmental change, eutrophication, ecosystem degradation, and agricultural sustainability. Discusses transformation and movement of major nutrient elements in context of watershed ecology and societal implications. Students cannot receive credit for this course and ENVS 268.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L required, or by permission of instructor.

ENVS 169 - Climate Change Ecology (5)

Advanced topics in atmospheric science and ecological theory. Topics include impacts on biodiversity, carbon sequestration, sustainable agriculture, and innovative solutions.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L required, or by permission of instructor.

ENVS 170 - Agriculture and Climate Change (5)

Agriculture contributes to and is affected by climate change. Through lectures and field trips, this course covers the impacts on crops and livestock; climate adaptation strategies in the United States and internationally; and agricultural policy responses to climate change.

Prerequisite: Prerequisite(s): previous or concurrent enrollment in ENVS 100 and ENVS 100L.

ENVS 171 - Topics in Environmental Studies (5)

Readings and discussions of primary literature on a current environmental topic. Emphasizes experiential

learning and research. The topics vary; consult current course listings.

Prerequisite: Prerequisite(s): ENVS 100 and ENVS 100L, or by permission of the instructor.

ENVS 172 - Environmental Risks and Public Policy (5)

Introduces students to the dilemmas in public policy relating to the management of environmental risks, and discusses their underlying philosophical underpinnings. Explores emergent alternatives, such as the precautionary principle and alternatives assessment, and examines the relationship between experts and the lay public in public controversies.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 173 - An Introduction to World Environmental History (5)

Introduces students to some of the central issues in world environmental history such as: human attitudes toward the natural environment; the role of human societies, their institutions and technologies in changing the face of the earth; and the historical impact of environmental and developmental policies on race, class, and gender differences in a variety of human communities across the world.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 174 - Gender and the Environment (5)

As we collectively work to address environmental concerns—from climate change to wildfires to toxic pollution to distribution of land—gender is a critical social variable that must be addressed. Using the lens of gender, this course examines the linkages between environmental and social change. Beginning by conceptualizing sex, gender and the environment, this course explores key theoretical bodies including ecofeminism, feminist science studies, and queer ecologies. We also investigate the real-life applications of these concepts through consideration of how gender shapes environmental justice activism, rural livelihoods, and more. This course is highly reading and writing intensive.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of the instructor.

ENVS 176 - Vulnerability, Complex Systems, and Disasters (5)

Introduces students to the research on the relationship between vulnerability and disasters, and on complex systems including hazardous technologies. Explores perspectives on disasters in the literature on political ecology. Also examines relevant work of organizational

sociology, and related fields including normal accident and high reliability organizational theories.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of the instructor.

ENVS 177 - Teaching Environmental Education (5)

Designed for environmental studies majors interested in teaching environmental education in the K-12 school system. Students investigate incorporation of environmental education in the classroom; design an environmental education school project; and are placed in a school where they observe environmental education in practice.

Prerequisite: Prerequisite(s): previous or concurrent enrollment in courses ENVS 100 and ENVS 100L, or by permission of instructor.

ENVS 178 - Race and the Environment (5)

Introduces students to the entangled forces of coloniality, racism, and capitalism as they shape global environments, and vice-versa. Drawing on sources that center the expertises of Indigenous, Black, and Brown communities, class explores how racialization occurs through imperial violence to ecologies and their inhabitants. Studies long arcs of colonial science and power to understand how nature has been normalized as an object of ownership, extraction, pollution, and control. Students explore whose knowledge shapes environmental discourse, how discourse shapes material realities, and under what conditions science resists colonial habits of thought or enables them to flourish. Prerequisite(s): previous or concurrent enrollment in ENVS 100 and ENVS 100L, or by permission of the instructor.

ENVS 179 - Environmental Interpretation (5)

A field course in theory and practice of environmental interpretation in parks, museums, and school programs with special attention to local natural history and children. Students work to define their own interpretive philosophy, skills, and style. A background in natural history and/or experience working with children is recommended.

Prerequisite: Prerequisite(s): Previous or concurrent enrollment in ENVS 100 and ENVS 100L or by permission of instructor. Enrollment in ENVS 184 is highly recommended.

ENVS 183 - Environmental Studies Internship (5)

A supervised off-campus learning experience related to environmental problem solving. Students may work with government agencies, private organizations, citizen action groups, or in specialized apprenticeships on an individual or team basis. A significant, independently researched project is required. Internship intended for environmental studies majors. Prerequisite(s): previous or concurrent enrollment in

ENVS 100 and ENVS 100L, and by permission of instructor. Students submit petition to course sponsoring agency.

ENVS 183A - Senior Internship (5)

First quarter of two-quarter senior internship exit requirement. Supervised off-campus learning experience related to environmental problem-solving. Students may work with government agencies, private organizations, citizen action groups, or in specialized apprenticeships on an individual or team basis. Students submit petition to course-sponsoring agency.

Enrollment is restricted to environmental studies majors and the combined majors with Earth science, biology, and economics. Enrollment is by permission of instructor.

ENVS 183B - Senior Internship (5)

This course combines fieldwork at an off-campus agency and a comprehensive analytical paper produced for the agency. Equivalent to a thesis in terms of the depth and quality of the work expected. Prerequisite(s): ENVS 183A. Students submit petition to course-sponsoring agency. Enrollment is restricted to environmental studies majors and the combined majors with Earth sciences, biology, and economics.

ENVS 184 - Environmental Studies Internship (2)

Supervised learning experience related to environmental problem solving. Students may work with government agencies, private organizations, citizen action groups, or in specialized apprenticeships on an individual or team basis. This 2-credit internship puts students in the field and offers them the experience of practicing environmental problem solving. This internship experience focuses on specific skill development.

ENVS 189 - Environmental Studies Research Seminar (1)

Research seminars presented weekly throughout the year by environmental studies faculty, visiting scholars, and graduate students. Students discuss content and methodology of research presented following each seminar. Students write critiques of some seminars.

ENVS 190 - Capstone Course: Environmental Problem Solving (5)

A synthetic course that draws on the knowledge and skills students bring from other courses in the major. Focuses on written and oral individual and group projects in which students must take the initiative. Emphasizes developing skills critical for students in their future careers.

Prerequisite: Prerequisite(s): ENVS 100 and ENVS 100L; Entry Level Writing and Composition requirements. Enrollment is restricted to senior environmental studies majors, agroecology majors, and

the combined majors with Earth sciences, biology, and economics.

ENVS 191F - Community and Agroecology Seminar (2)

Interdisciplinary two-credit seminar designed for upper-division students who want to become involved in PICA (Program in Community and Agroecology) and to explore concepts of community and agroecology as they relate to sustainability. Also emphasizes development of leadership skills. Specific topics and readings change each quarter.

Prerequisite: Prerequisite(s): ENVS 91F, ENVS 130A, ENVS 130B, or ENVS 133, or equivalent experience.

ENVS 192 - Directed Student Teaching (5)

Teaching a lower-division seminar. (See ENVS 42.) Prerequisite(s): upper-division standing; permission of environmental studies faculty member and chairperson of department.

ENVS 194 - Teaching Environmental Studies (5)

This provides an opportunity to participate in the preparation and teaching of introductory environmental studies courses. Students will have significant responsibility in leading discussion sections. Students submit petition to sponsoring agency.

ENVS 194F - Teaching Environmental Studies (2)

Students facilitate discussions of course material in an introductory environmental studies course in conjunction with faculty and teaching assistants. May not count toward upper-division major requirements. Approval of the sponsoring agency and selection by the primary instructor of specific courses is required.

ENVS 195A - Senior Research (5)

First of a two-quarter senior thesis that results in drafting key thesis elements. Completion of this course does not satisfy the senior exit requirement.

Continuation into 195B is contingent upon instructor approval after satisfactory completion of this course. Prerequisite(s): Completion of ENVS 100 and ENVS 100L, and Entry Level Writing and Composition requirements.

ENVS 195B - Senior Thesis Group (5)

Individually supervised senior research that results in a senior thesis. Must meet regularly with faculty sponsor to discuss progress of the project, and to receive academic and technical guidance. Students must submit electronic copies of the completed research and write-up. Satisfies the senior comprehensive requirement. Prerequisite(s): Completion of ENVS 100 and ENVS 100L and ENVS 195A.

ENVS 196 - Senior Seminar (5)

Readings and discussions of primary literature on a current environmental studies topic. Field or literature-based research projects (individual or group) writing

multiple drafts resulting in a final paper. Topics vary yearly; consult current course listings. Satisfies senior comprehensive requirement. Prerequisite(s): ENVS 100 and ENVS 100L; Entry Level Writing and Composition requirements. Enrollment is by application with selection based on appropriate background and academic performance and by permission of instructor. Enrollment is restricted to senior environmental studies majors, agroecology majors, and the combined majors with Earth sciences, biology, and economics.

ENVS 199 - Tutorial (5)

Advanced directed reading, supervised research, and organized projects relating to environmental problems. May be repeated for credit with consent of the chair of environmental studies. Students submit petition to sponsoring agency. Prerequisite(s): prior or concurrent enrollment in ENVS 100 and ENVS 100L.

ENVS 199F - Tutorial (2)

Provides for department-sponsored directed reading, supervised research, or organized project under the direct supervision of a faculty sponsor. May not be counted toward major requirements. Students submit petition to sponsoring agency.

Graduate

ENVS 201A - Research Approaches in Environmental Studies (5)

The first course of a two-quarter sequence that explores the range of scholarly traditions that inform the kinds of research common to the Environmental Studies Department at UCSC.

Prerequisite: Enrollment is restricted to graduate students.

ENVS 201B - Environmental Studies In Practice (5)

The second course in a two-quarter sequence that is designed for beginning graduate students in environmental studies and in any other related field. Introduces interdisciplinary approaches of environmental studies and is an experiential, hands-on class focused on a specific environmental problem.

Prerequisite: Enrollment is restricted to graduate students.

ENVS 210 - Political Ecological Thought and Environment (5)

Provides an introduction to social scientific analyses of the relationships between capitalistic development and the environment in the late 20th century. It has a dual purpose: First, to develop a contemporary historical understanding and sensibility of how economic change, new institutional configurations, and world scale processes are shaping interactions with the environment. Second, to examine some recent political social theoretical perspectives on nature-society

relations and radical environmental and social movements.

Prerequisite: Enrollment is restricted to graduate students in environmental studies.

ENVS 215A - Geographic Information Systems and Environmental Applications (5)

Introduction to geographic information systems (GIS) as the technology of processing spatial data, including input, storage and retrieval; manipulation and analysis; reporting and interpretation. Emphasizes GIS as a decision support system for environmental and social problem solving, using basic model building, experimental design, and database management. Students cannot receive credit for this course and ENVS 115A.

Prerequisite: Concurrent enrollment in ENVS 215L is required. Enrollment is restricted to graduate students.

ENVS 215B - Intermediate Geographic Information Systems (5)

Evaluates advanced technologies of processing spatial data, spatial theory, and application to unique geographic problems, data manipulation and analysis, and reporting and interpretation. Emphasizes GIS as a decision-support system for environmental and social problem solving, using basic model building, experimental design, and database management. Taught in conjunction with ENVS 115B. Students cannot receive credit for this course and ENVS 115B.

Prerequisite: Prerequisite(s): ENVS 215A. Enrollment is restricted to graduate students.

ENVS 215L - Exercises in Geographic Information Systems (2)

Exercises in Geographic Information Systems and Remote Sensing that demonstrate the development of digital geographic data. Students gain hands-on experience with developing datasets, using imagery to create GIS layers, performing spatial analysis, and utilizing GPS technology. Emphasis placed on environmental applications. Students cannot receive credit for this course and ENVS 115L.

Prerequisite: Concurrent enrollment in ENVS 215A is required. Enrollment is restricted to environmental studies graduate students.

ENVS 220 - Conservation Biology (5)

The principles of conservation biology, including a review of the core disciplines of demography, population genetics, island biogeography, and community ecology and discussion of area and edge effects, population viability, and ecosystem issues related to the maintenance of biological diversity, especially in fragmented landscapes.

Prerequisite: Enrollment is restricted to environmental studies graduate students.

ENVS 230 - Agroecology and Sustainable Agriculture (5)

The application of ecological concepts and principles to the design and management of agricultural systems. The long-term goal of sustainable agroecosystems is examined in economic, social, and ecological contexts.

Prerequisite: Enrollment is restricted to environmental studies graduate students.

ENVS 235 - Social Theories of Nature (5)

Intensive reading and discussion seminar on the treatment of nature in social theory. Focuses on major recent works which examine nature in social theory, in themselves, and in the context of the intellectual history of development of disciplinary discourses about nature. Students write critical reviews of assigned books and a research paper situating a particular book within its intellectual tradition. Prerequisite(s): interview with instructor to determine preparedness.

ENVS 240 - Public Policy and Conservation (5)

Introduction to political and economic approaches to policy analysis, with particular reference to natural resource scarcity, property rights, and environmental conservation. Case studies apply economic and policy process concepts to the management of public lands, biodiversity, and renewable resources.

Prerequisite: Enrollment is restricted to environmental studies graduate students.

ENVS 247 - Regional Approaches to Environmental Policy (5)

A research seminar combining theoretical issues in democratic theory, political economy, and planning with emerging concepts of bioregionalism. The focus is on institutional, scientific, and political innovations in managing the environment. Students evaluate current and historical proposals to regionalize environmental policy in the U.S.

Prerequisite: Enrollment is restricted to environmental studies graduate students.

ENVS 250 - Coastal Governance (5)

Introduction to major theories of ocean and coastal governance, with emphasis on those that underlie current policy and management approaches. Students analyze local, state, national, and international laws and policies, considering interactions across scales, levels of social organization, and institutions.

Prerequisite: Enrollment is restricted to environmental studies graduate students.

ENVS 263 - Plant Disease Ecology (5)

Introduction to ecological roles of plant diseases, including their importance in regulating plant populations dynamics, community diversity and system function in natural ecosystems, considerations of plant

diseases in conservation ecology, and ecological approaches to managing diseases in agroecosystems. Students cannot receive credit for this course and ENVS 163.

Prerequisite: Prerequisite(s): one ecology course. Enrollment is restricted to graduate students.

ENVS 265 - Data Science for the Environment (5)

Data science is growing exponentially in size and quality, changing environmental scholarship and creating challenges of sifting, processing, and synthesizing large and diverse sources of information. In this course, students learn the fundamental practices of environmental informatics mainly using the R programming language. The workshop-style course is designed without requirement on prior experience in R. Includes environmental-related modules such as climate change, plant growth, animal predator-prey dynamics, overfishing and marine protected areas. Throughout the quarter, students use new hands-on skills to find an environmental-related topic, write a proposal, search for data, perform analyses, summarize results, and complete a final paper.

Prerequisite: Enrollment is restricted to graduate students.

ENVS 268 - Biogeochemistry and the Global Environment (5)

Studies biogeochemical cycles and related environmental issues such as global environmental change, eutrophication, ecosystem degradation, and agricultural sustainability. Discusses transformation and movement of major nutrient elements in context of watershed ecology and societal implications. Students cannot receive credit for this course and ENVS 168.

Prerequisite: Enrollment is restricted to environmental studies graduate students.

ENVS 271 - Valuing the Environment (5)

Intensive seminar examining the normative underpinnings of environmental values. Draws on tools from analytical, ethical, and political philosophy to develop normative arguments concerning environmental inequality and justice, environmental preservation, and risk evaluation. Involves team projects in which students develop cases on controversial contemporary issues such as biotechnology. Prerequisite(s): interview only. Enrollment restricted to graduate students.

ENVS 272 - Qualitative Field Methods (5)

Introduces qualitative research approaches in environmental studies. Focuses on philosophies of science, epistemological debates, and specific approaches to qualitative methods. Course components include: field safety, research ethics, human subjects, training, research design and sampling, field observation and ethnographies, key informants, field

notes, focus groups, oral histories, narrative research, archival research, questionnaires, discourse analysis, participatory research, and qualitative data analysis techniques.

Prerequisite: Enrollment is restricted to graduate students.

ENVS 280 - Advanced Topics in Environmental Studies (5)

Intensive research seminar, including reading and critique of primary research literature and research in progress. Topics vary and are announced in advance; students should consult with faculty prior to enrolling. Enrollment by permission of instructor. Enrollment restricted to graduate students.

ENVS 283 - Environmental Studies Internship (5)

Graduate level internship focuses on integrating interdisciplinary academic theory with practical, specialized experience in a professional setting. Course intended for environmental studies graduate students; students must complete paperwork and meet with coordinator prior to first day of instruction.

ENVS 290 - Interdisciplinary Research Seminar (2)

Research seminars presented weekly throughout the year by environmental studies and affiliated faculty, by visiting scholars, and by graduate students. Students discuss the content and methodology of research presented following each seminar.

Prerequisite: Enrollment is restricted to graduate students.

ENVS 290L - Graduate Research Seminar (2)

Graduate student presentations of doctoral research proposals, dissertation work-in-progress, grant applications, and conference papers. This weekly laboratory meeting seeks to develop professional skills, teach constructive criticism, and foster effective discussion among peers.

Prerequisite: Enrollment is restricted to graduate students.

ENVS 291 - Advanced Readings in Environmental Studies (3)

Focusing on a recently published volume or on a topic of current interest, this seminar requires a rigorous analysis of the principles and methods employed in the four core areas of the program: sustainable agriculture and agro-ecology; conservation biology; environmental policy analysis; and political economy.

Prerequisite: Enrollment is restricted to graduate students.

ENVS 291C - Advanced Readings in Risk and Public

Policy (3)

Advanced readings and research on environmental risk and public policy. Explores environmental decision making given the question of the burden of proof and scientific uncertainty and grapples, in an advanced manner, with emergent policy alternatives, such as the precautionary principle. Also offered as ENVS 281C for 5 credits.

Prerequisite: Prerequisite(s): ENVS 172 or equivalent work demonstrated by an interview. Enrollment is restricted to graduate students.

ENVS 291D - Advanced Readings in Tropical Ecology, Agriculture, and Development (3)

Analyzes recent publications in ecology, conservation, agroecology, and development in tropical and subtropical regions, particularly Latin America. Discussions place special emphasis on integration across natural and social science disciplines to address issues of sustainability in tropical regions.

Prerequisite: Enrollment is restricted to graduate students.

ENVS 291M - Advanced Readings in Biogeochemistry (3)

Course consists of three parts: fundamental biogeochemistry of the Earth, global cycles of nutrient elements, and societal and scientific issues of global change. Class activities include (1) presentation of summary statements based on reading assignments; (2) discussion of theories, concepts, methodologies, and applications; (3) computer simulation and modeling of elemental cycles using STELLA; and (4) integration of scientific information on global change with social issues by writing.

Prerequisite: Enrollment is restricted to graduate students.

ENVS 291P - Advanced Readings in Environmental History and Anthropology (3)

Course of readings systematically surveying the theoretical contributions of the disciplines of environmental history, historical ecology, environmental anthropology, and geography. After an overview of the evolution of 20th-century thought on the relationship between environment and culture as seen through the lenses of these disciplines, explores emerging research hybrids and new research frontiers.

Prerequisite: Enrollment is restricted to graduate students.

ENVS 292 - Topics in Research in Environmental Studies (2)

Seminar in which students give critically evaluated presentations regarding current research in environmental studies and issues in research design. Students should consult with faculty prior to enrolling.

Prerequisite: Enrollment is restricted to graduate students.

ENVS 297A - Independent Study (5)

Independent study and research under faculty supervision. Students submit petition to sponsoring agency.

ENVS 297B - Independent Study (10)

Independent study and research under faculty supervision. Students submit petition to sponsoring agency.

ENVS 297C - Independent Study (15)

Independent study and research under faculty supervision. Students submit petition to sponsoring agency.

ENVS 297F - Independent Study (2)

Independent study and research under faculty supervision. Intended to be taken in conjunction with a 5-credit course. Students submit petition to sponsoring agency.

ENVS 299A - Thesis Research (5)

Students submit petition to sponsoring agency.

ENVS 299B - Thesis Research (10)

Students submit petition to sponsoring agency.

ENVS 299C - Thesis Research (15)

Students submit petition to sponsoring agency.

ESCI - ENVIRONMENTAL SCIENCES

Lower-Division

ESCI 30 - Biological Principles of Environmental Sciences (5)

Introduction to biology and ecology for environmental sciences, focusing on the role of biological organisms within the Earth system. Topics span molecular/organismal interactions, such as photosynthesis and respiration, to global biogeochemical cycles including the role of microbes, net community production, and contaminant distributions.

Upper-Division

ESCI 100A - Introduction to Environmental Sciences (5)

Introduces fundamental concepts for quantitative analysis of environmental problems and their application to complex systems focusing on algebraic tools. Key concepts include box models, mass and energy balances (including chemical processes), turning

word problems into mathematical statements, and estimation. (Formerly Earth Sciences 114A.)

Prerequisite: Prerequisite(s): MATH 11A or MATH 19A, CHEM 1A, and PHYS 6A or PHYS 5A. Enrollment is restricted to environmental sciences majors.

ESCI 100B - Introduction to Environmental Processes (5)

Quantitative exploration of physical and chemical processes relevant to the environment and their applications to complex environmental systems. Focuses on calculus-based tools. Key concepts include fluid mechanics, heat transfer, mass transfer, particle mechanics, turbulence, and physicochemical processes.

Prerequisite: Prerequisite(s): ESCI 100A, and MATH 11B or MATH 19B, and CHEM 1C, and PHYS 6B or PHYS 5B. Enrollment is restricted to environmental sciences and Earth sciences majors.

ESCI 122 - Air Pollution (5)

Introduces students to the chemistry and physics of air pollution with primary emphasis on understanding the main types of air pollutants, from where they originate, how they are removed, how to control their sources, measurement techniques, and their health effects.

Prerequisite: Prerequisite(s): ESCI 100A or EART 110A.

ESCI 160 - Data Analysis in the Environmental Sciences (5)

Introduces data-analysis methods regularly encountered within environmental sciences. Students learn how to think about data, its uncertainty, how models and data are related and depend on underlying assumptions, and how to synthesize information contained in data.

Prerequisite: Prerequisite(s): MATH 11B or MATH 19B or equivalent. Enrollment is restricted to environmental sciences majors.

ESCI 167 - Applied Environmental Time Series Analysis (5)

Explores empirical approach to quantify and explain changes in the Earth system over time. With the complexity of the Earth system, and the challenge of making accurate and numerous observations, simple methods can be of limited usefulness. Course covers more advanced methods that are typically not included in introductory-level statistical courses. Students learn how to analyze time-series data and answer questions about the Earth system and acquire the theoretical basis of the statistical approaches, the experience at conducting analyses, and practice interpreting and discussing the results. This class is hands-on and utilizes a suite of observational datasets and outputs from Earth system models. Students cannot receive credit for this course and OCEA 267.

Prerequisite: Prerequisite(s): ESCI 160, EART 125, or OCEA 260/EART 260.

ESCI 191 - Capstone Seminar (5)

In-depth exploration of a topic within the environmental sciences. Involves at least one research paper. Topics vary quarterly; consult the current course listings.

Prerequisite(s): Entry Level Writing and Composition requirements; ESCI 100A and previous or concurrent enrollment in ESCI 100B. Enrollment is restricted to senior environmental sciences majors. Enrollment is by application with selection based on appropriate background and academic performance and by consent of the instructor. Satisfies the senior comprehensive requirement.

ESCI 195 - Senior Thesis (5)

Students complete their senior thesis research projects and submit their thesis in the form of a research paper that is appropriate for submission to a relevant journal or conference. Prerequisite(s): Entry Level Writing and Composition requirement. Enrollment is restricted to environmental sciences majors. Satisfies the senior comprehensive requirement. Students submit petition to sponsoring agency.

FILM - FILM AND DIGITAL MEDIA

Lower-Division

FILM 10 - Professional Topics in Film, Television, and Digital Media (2)

Taught by a working professional, lectures and workshop provide students with career-related information and insight into a specific profession in film, television, and digital media. Students research various aspects of a film, television, or digital media profession.

Prerequisite: Enrollment is restricted to proposed and declared film and digital media majors and minors.

FILM 20A - Introduction to Film Studies (5)

An introduction to the basic elements, range, and diversity of cinematic representation and expression. Aesthetic, theoretical, and critical issues are explored in the context of class screenings and critical readings. If space allows, restrictions may be lifted after priority enrollment.

Prerequisite: Enrollment is restricted to proposed and declared film and digital media majors and film and digital media minors. Students pursuing the minor may contact the instructor for a permission code.

FILM 20B - Introduction to Television Studies (5)

Introduction to the basic forms of televisual presentation, including differing narrative structure from movies and situation comedies to soap opera, plus

modes of direct discourse in news, advertising, sports, music, television, and other genres. Alternative forms and modes in electronic media, such as independent video art and documentary, public television, cable, and electronic networks are explored, with their potential for expressing cultural diversity set in relation to social, cultural, and political conditions. If space allows, restrictions may be lifted after priority enrollment.

Prerequisite: Enrollment is restricted to proposed and declared film and digital media majors and film and digital media minors. Students pursuing the minor may contact the instructor for a permission code.

FILM 20C - Introduction to Digital Media (5)

Introduces fundamental features of digital media and examines the immense visual, social, and psychological impact of the digital revolution on our culture. Topics include the concepts and forms of the digital hypertext interface, Internet, and web, and the impact of digital media on conceptions of the self, body, identity, and community. If space allows, restrictions may be lifted after priority enrollment.

Prerequisite: Enrollment is restricted to first-year, sophomore, and junior declared, proposed, and pre-film and digital media majors and film and digital media minors. Students pursuing the minor may contact the instructor for a permission code.

FILM 20P - Introduction to Production Technique (5)

Introduction to the production processes of visual/aural, time-based, creative work. Students work on a range of creative projects: performed, written, photographed, and created digitally. Assignments emphasize imaginative problem-solving, collaboration, visualization, and critical media literacy.

Prerequisite: Enrollment is restricted to proposed and declared film and digital media majors.

FILM 80A - The Film Experience (5)

Students learn to understand how films reach the public through a collaborative, industrial, and artistic practice; how films work in a narrative sense; how they construct meanings for viewers; and how their formal techniques construct different possibilities for meaning and interpretation.

FILM 80M - Understanding Media (5)

Introduces students to contemporary concerns, issues, and topics of media and media criticism. With an emphasis on visual analysis, students develop conceptual tools to think critically about photography, cinema, television, video, and print journalism.

FILM 80S - Special Topics in Film and Digital Media (5)

Study of selected aspects of film, television, and/or digital media. Includes weekly screenings and historical/theoretical readings.

FILM 80T - Technothrillers (5)

Examination of recent films classified as thrillers that approach technology (computers, robotics, biotech, the Internet, etc.) through suspense, anxiety, and paranoia. It will also address how technologically produced popular culture negotiates attitudes toward technological change.

FILM 80V - Video Games as Visual Culture (5)

Through aesthetic, medium-specific and critical theories of electronic games, course introduces histories, ideas, and debates that inform critical game studies. Themes include: games and cinema; race, class, gender, sexuality and representation; visual/cultural studies approaches; topical issues in games.

FILM 80X - Sex in the Cinema (5)

Examines the historical representation of sexual difference, orientation, and politics in film and video using cultural studies, political and economic historiography, and feminist and queer theory and paying special attention to intersections of U.S. political movements with filmmaking and reception.

Upper-Division**FILM 120 - Introduction to Media Theory (5)**

Explores media theory. May be organized thematically or chronologically. Selects from key debates and movements central to understanding media forms in relation to self, society, politics, and aesthetics.

Prerequisite: Prerequisite(s): FILM 20A. Enrollment is restricted to proposed and declared film and digital media majors.

FILM 130 - Silent Cinema (5)

Presents the development of silent film as a cultural form from the early period to the beginning of sound, addressing its historical evolution, technological development, aesthetic transformations, and varied cultural contexts. Usually offered in alternate academic years.

Prerequisite: Prerequisite(s): FILM 20A, satisfaction of the Entry Level Writing and Composition requirements.

FILM 132A - International Cinema to 1960 (5)

A survey of significant developments in narrative film outside Hollywood from the advent of sound technology to the late '50s. Differing inter/national contexts, theoretical movements, technological innovations, and major directors are studied. Usually offered alternate academic years.

Prerequisite: Prerequisite(s): FILM 20A, satisfaction of the Entry Level Writing and Composition requirements.

FILM 132B - International Cinema, 1960 to Present (5)

A survey of significant developments in narrative film outside Hollywood from 1960 to the present. Major film movements and directors from around the world are studied. Usually offered in alternate academic years.

Prerequisite: Prerequisite(s): FILM 20A, satisfaction of the Entry Level Writing and Composition requirements.

FILM 134A - American Film, 1930-1960 (5)

A survey of American narrative cinema from 1930 to 1960. Examines developments in film style, film technology, and the film industry in relation to American cultural history.

Prerequisite: Prerequisite(s): FILM 20A or FILM 20B, satisfaction of the Entry Level Writing and Composition requirements.

FILM 134B - American Film, 1960-Present (5)

A survey of American narrative cinema from 1960 to the present. Examines developments in film style, film technology, and the film industry in relation to American cultural history.

Prerequisite: Prerequisite(s): FILM 20A or FILM 20B; and satisfaction of the Entry Level Writing and Composition requirements.

FILM 136A - Experimental Film and Video (5)

A survey of various experimental styles and practices in film and video, addressing the historical developments of these media formats. The course situates experimental film and video work within the larger contexts of artistic traditions as well as networks of production and reception.

Prerequisite: Prerequisite(s): FILM 20A .

FILM 136B - History of Television (5)

Survey of the historical development of broadcast television from its origins to the present day phenomena of cable, satellite, and electronic networks. Examination of major genres, forms, and modes of production and consumption within cultural, social, and economic contexts. Offered every other year, alternating with FILM 136A.

Prerequisite: Prerequisite(s): FILM 20B.

FILM 136C - Visual Culture and Technology: History of New Media (5)

Explores the relationship between technology and change and surveys the history of various technologies of visual culture from print to computer based imagery and the Internet.

Prerequisite: Prerequisite(s): FILM 20C.

FILM 136D - Documentary Film and Video (5)

Explores the category of nonfiction through a historical and theoretical study of documentary in film and video. Addresses ethnographic film, Soviet and Griersonian documentary, cinema verite and/or other selected documentary texts and the issues of representation they raise. Students are billed a course materials fee.

Prerequisite: Prerequisite(s): FILM 20A or FILM 20B.

FILM 145 - Social Media Documentary Theory and Production (5)

Teaches social media documentary theory and production. Students review current scholarship around social media campaigns, cellphone footage as evidence, and the creation of original media to expand messages for social justice. Students shoot a body of source footage on their smart device and create a social media-based outreach strategy that could support future work for a grassroots initiative.

Prerequisite: Prerequisite(s): FILM 20P.

FILM 150 - Screenwriting (5)

Problems in writing for film and television are explored through the writing of original material and analysis of existing works. Various film genres, conventions, and styles, both fictional and nonfictional, are examined. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Admission by application; application materials available during the last three weeks of preceding quarter.

FILM 151 - Film Directing (5)

Workshop that explores the director's involvement in film and video production. Topics will include the manipulation of time and space, continuity, script planning and blocking, and working with actors and crew. Students will participate in group and individual exercises in pre-production and scene direction. Prerequisite(s): FILM 20A, FILM 20P, and/or FILM 170B are recommended. Admission by application; application materials available during the last three weeks of preceding quarter.

FILM 152 - Script Analysis (5)

Students analyze diverse narrative techniques, dramatic structures, and genre forms to understand the craft of screenwriting and prepare for their own creative writing and filmmaking. Students read finished scripts and view films.

Prerequisite: Prerequisite(s): FILM 120. Enrollment is restricted to proposed and declared film and digital media majors.

FILM 160 - Film Genres (5)

Concentrated study of films from one cinematic grouping with similar themes and narrative structures such as westerns, musicals, or science fiction, or a

comparative study of different genres. History, theory, and criticism of the genre are covered.

Prerequisite: Prerequisite(s): FILM 130, FILM 132A, FILM 132B, FILM 132C, FILM 134A or FILM 134B.

FILM 161B - Documentary Animation (5)

Examines the history, practice, and emergence of documentary animation in contemporary film, on the Web and as activist media with emphasis on the discourse central to social documentary, decolonial theory, and the politics of representation.

Prerequisite: Prerequisite(s): FILM 20A. Enrollment is restricted to juniors and seniors.

FILM 162 - Film Authors (5)

Intensive critical study of the work of one film auteur (director, screenwriter, actor, cinematographer). Themes, style, and structure are explored using various critical modes of analysis.

Prerequisite: Prerequisite(s): FILM 130, FILM 132A, FILM 132B, FILM 134A, or FILM 134B.

FILM 162F - Female Filmmakers (5)

Examines contributions that female and non-binary filmmakers have made to world cinema.

Prerequisite: Prerequisite(s): FILM 20A.

FILM 165A - Film, Video, and Gender (5)

A study of texts, theories, and issues of gender in film and/or video. Changing focus on one or more topics, including production and authorship, representation, reception, theories of identification, sexual preference, and related issues. Usually offered in alternate academic years.

Prerequisite: Prerequisite(s): FILM 20A or FILM 20B.

FILM 165B - Race on Screen (5)

Review of historical and critical tools to interpret representations of race on cinematic, television, and computer screens. Class will consider the place of race in theoretical and historical scholarship and examine the debates about race produced within and across film and digital media. Usually offered in alternate academic years.

Prerequisite: Prerequisite(s): FILM 20A or FILM 20B.

FILM 165C - Lesbian, Gay, and Queer Film and Video (5)

An overview of homosexuality and LGBT representations in American film. Explores the format and historical significance of New Queer Cinema. Recent independent queer film and video discussed. Topics include: authorship; spectatorship; genre and genre reappropriation; historical gender constructs; the art film; mainstream versus independent production; and the relationship of film to popular music.

Prerequisite: Enrollment is restricted to juniors, sophomores, and seniors.

FILM 165D - Asian Americans and Media (5)

Examines media representations about, as well as by, Asian Americans. Using critical essays on film theory, racial studies, feminist criticism, and independent cinema, students develop the skills necessary to conduct critical analysis of Asian Americans in film and television.

Prerequisite: Prerequisite(s): FILM 20A. Enrollment is restricted to sophomores, juniors, and seniors.

FILM 165E - Chicana/o Cinema, Video (5)

Examines emergence of Chicana/o cinema and video from a place of social displacement, resistance, and affirmation. Looks at Chicana/o representation and spectatorship as it pertains to ethnicity, class, gender, and the beginning of a new Chicana/o film aesthetic.

Prerequisite: Prerequisite(s): FILM 20A. Enrollment is restricted to sophomores, juniors, and seniors.

FILM 165G - Gender and Global Cinema (5)

Offers students historical and critical tools to investigate global film through the framework of gender. Focused in particular on contemporary film (from 1960 to present), the class is structured both chronologically and via national industries.

Prerequisite: Prerequisite(s): FILM 20A.

FILM 168 - National Cinema and Culture (5)

Study of a specific cinematic or other media tradition of a region, nation, language, diasporic collectivity or other unifying cultural entity. Not a survey, this course selects one focus or offers a comparative of cross-cultural framework.

Prerequisite: Prerequisite(s): FILM 130, FILM 132A, FILM 132B, or FILM 132C.

FILM 168A - Arab and North African Cinemas (5)

Introduction to the diverse cinemas of the Arabic-speaking world. By introducing a wide range of films and clips every week, the course gives students a historical grounding in cinema from across the region, paying attention to the interconnections and influences between films, filmmakers, and countries. While history and politics are considered to understand the films' contexts, attention is paid to form and aesthetics, too: one of the course aims is to illustrate that Arab films are more than just political or sociological texts, even if they are usually read that way in the United States.

Prerequisite: Prerequisite(s): FILM 132A or FILM 132B or permission of instructor.

FILM 168F - Francophone African Cinema (5)

Introduces students to the diverse cinema of French-speaking African nations and interrogates the role of empire and language in relation to cinema and decolonial politics. The course presents a wide array of films by Francophone (French-speaking) filmmakers from Africa, including some made by diasporic or itinerant filmmakers based in France. Film viewings and discussions of work from Morocco, Senegal, Cameroon, Mali, Burkina Faso, and other countries. Critically engages with debates around the meaning of francophonie in a contemporary context.

Prerequisite: Prerequisite(s): FILM 132A or FILM 132B or permission of the instructor.

FILM 168M - National Cinema and Culture: Morocco (5)

Faculty-led study abroad course taught in Rabat, Morocco. In-depth investigation of Moroccan cinema and culture, including literature and art. Includes visits and field trips around Morocco.

FILM 170A - Fundamentals of Digital Media Production (5)

Introduction to the conceptual and technical fundamentals of making digital media. Covers principles of digital image manipulation, basic web authoring, and interface design through projects that introduce production techniques and methods.

Prerequisite: Prerequisite(s): FILM 20C or CSE 101 or CSE 111.

FILM 170B - Fundamentals of Film and Video Production (5)

An introduction to the art and craft of making films and videos. Covers principles of cinematography, videography, editing, production planning, and lighting involving both production techniques and methods. Students are billed a course materials fee of \$190. Prerequisite(s): FILM 20A or FILM 20B and at least one upper-division film and digital media critical studies course. Admission by application; application materials available during the last three weeks of preceding quarter.

FILM 171A - Sound (5)

The cinematic equation equals images plus sound. What are sound-specific properties? What is the relationship between sound and image? Course examines these and other questions through the creation of audio and audiovisual pieces. Students are billed a course materials fee of \$161. Prerequisite(s): FILM 170A or FILM 170B. Admission by application; application materials available during the last three weeks of preceding quarter.

FILM 171C - Special Topics Workshop: Found Footage

(5)

Students consider the practice of transforming or recycling found images and other visual materials to create new meanings. In addition to assigned readings, screenings, and technical workshops, students produce creative found moving image projects and writing responding to course materials. Prerequisite(s): FILM 20A; priority given to students with digital editing experience. Enrollment is by instructor permission and application; application materials available during the last three weeks of preceding quarter.

FILM 171D - Social Information Spaces (5)

Investigates how information spaces can be designed to be inhabited, socially navigable spaces. Emphasizes the social navigation of information spaces, a set of techniques and ideas from computer-supported cooperative works, human-computer interaction, and architecture.

Prerequisite: Prerequisite(s): FILM 170A.

FILM 171F - Special Topics Workshop: Autobiographical Film (5)

Students explore autobiography as a filmmaking genre and practice, using experimental, fictionalized, documentary, and hybrid forms. Readings and screenings provide a theoretical context for production work. Topics include: strategies of (self) representation, reenactment, performance, portraiture, memoir, confession, and diaristic film. Students are billed a course materials fee of \$210. Prerequisite(s): FILM 170B. Admission by application; application materials available during the last three weeks of preceding quarter.

FILM 171S - Special Topics in Film and Digital Media Production (5)

Intermediate workshop-style production course which addresses diverse themes and approaches. Content changes quarterly according to faculty research interests and changing technologies/discourses in digital audiovisual production. Prerequisite(s): FILM 170B. Admission is by application; application materials are available during the last three weeks of the preceding quarter. Students are billed a materials fee of \$175.

FILM 172 - Narrative Video Workshop (5)

Intermediate workshop in film and video production concentrating on narrative production, development of critical standards, and technical methods. Topics include cinematography, sound, and non-linear digital editing techniques. Each student is responsible for the completion of short narratives from assignments. Students are billed a course materials fee of \$292. Prerequisite(s): FILM 170B. Admission by application; application materials available during the last three weeks of preceding quarter.

FILM 173 - Narrative Digital Media Workshop (5)

Analysis of cinematic codes and narrative structure through digital video, Internet and interactive multimedia projects. Required readings address contemporary research in narratology and hyper-media, exploring the potential of digital technology to reconfigure the role of both author and audience. Students billed a course materials fee of \$210.

Prerequisite: Prerequisite(s): FILM 170A.

FILM 175 - Documentary Video Workshop (5)

Workshop in documentary video production, development of critical standards, ethical issues, and technical methods. Each student is responsible for the completion of short documentaries from assignments. Students are billed a course materials fee of \$210. Prerequisite(s): FILM 170B. Admission by application; application materials available during the last three weeks of preceding quarter.

FILM 176 - Experimental Video Workshop (5)

Introductory workshop in video production (non-narrative, experimental). Topics include a survey of non-narrative experimental video from a historical/theoretical perspective and an introduction to videography, fundamentals of video editing, and sound. Students are billed a course materials fee of \$210. Prerequisite(s): FILM 170B. Admission by application; application materials available during the last three weeks of preceding quarter.

FILM 177 - Digital Media Workshop: Computer as Medium (5)

Introduction to the computer as a medium as well as a tool. Students explore art practice within digital imaging and information and communications environments through projects, readings, and screenings. Assignments may include designing virtual communities and/or interactive, multimedia web works.

Prerequisite: Prerequisite(s): FILM 170A.

FILM 178A - Personal Computers in Film and Video (5)

Introduction to the specific applications of computers for film and video. By using computer-generated, enhanced and imported graphics, animation, text, sound, and moving video, students create still and time-based works in a computer environment. Students are billed a course materials fee of \$147. Prerequisite(s): FILM 170A or FILM 170B. Admission by application; application materials available during the last three weeks of preceding quarter.

FILM 178B - Advanced Personal Computers in Film and Video (5)

Study of advanced computer tools in digital media, including exploration, creation, and manipulation of sound with the same level of complexity as required in

composing the moving image. Students produce a final project that demonstrates skills learned. Prerequisite(s): FILM 170A or FILM 170B. Admission by application; application materials available during the last three weeks of preceding quarter.

FILM 179A - Special Topics in Animation (5)

Provides opportunities to learn technical skills in animation while engaging in critical analysis of animation and design. Students are encouraged to pursue their personal artistic vision as well as to develop a collaborative and problem-solving mindset. Prerequisite(s): FILM 170A or FILM 170B.; Admission by application; application materials available during the last three weeks of the preceding quarter.

FILM 179B - Documentary Animation Workshop (5)

A project-based production seminar in documentary animation: students learn diverse animation styles and techniques, and apply them to a documentary-animation class project. FILM 161B and FILM 170A are strongly recommended as preparation (or equivalent background). Admission by application; application materials available during the last three weeks of the preceding quarter.

FILM 180 - Writing About Film, Television, and Digital Media (5)

Improves students' ability to write and edit, and invites students to explore different kinds of writing related to film, television, and digital media including historical, theoretical, cultural criticism, popular reviews, grant proposals, online forums, and publishing.

Prerequisite: Prerequisite(s): FILM 20A, FILM 20B, or FILM 20C. Enrollment is restricted to sophomore and junior film and digital media majors.

FILM 185D - Sound and Image in Theory and Criticism (5)

Explores theories and critiques of sound in culture and analyzes sound in relation to media images in film, video, and other media. Voice, noise, and music are addressed.

Prerequisite: Prerequisite(s): FILM 120.

FILM 185R - The Film Remake (5)

History and theory of the remake through case studies across cultural, gender, and genre boundaries. Examines changing cultural, social, stylistic, and technical values and explores notions of originality, repetition, homage, allusion, quotation, and intertextuality from Feuillade and Hitchcock to Raimi and Johnny To.

Prerequisite: Prerequisite(s): FILM 120, FILM 130, FILM 132A, FILM 132B, FILM 132C, FILM 134A or FILM 134B.

FILM 185S - Advanced Topics in Film Studies (5)

Study of a selected aspect of film history, theory, or criticism. Includes weekly screenings and historical/theoretical readings. Usually offered in alternate academic years with rotating topics.

Prerequisite: Prerequisite(s): FILM 120, FILM 130, FILM 132A, FILM 132B, FILM 132C, FILM 134A, or FILM 134B.

FILM 185X - EyeCandy Seminar (5)

Seminar and workshop on writing, producing, and publishing a journal. Students engage in assignments and exercises directly and indirectly related to the production of a web launch as well as a print copy of EyeCandy. Permission of instructor required based upon student's participation in EyeCandy in winter and spring quarters. Preference given to film and digital media majors and minors; others may apply based on qualifications and as space allows.

FILM 187 - Advanced Topics in Television Studies (5)

Study of a selected aspect of television history, television criticism, or national television. Includes weekly screenings and historical/theoretical readings. Usually offered in alternate academic years, with rotating topics.

Prerequisite: Prerequisite(s): FILM 20B. Enrollment is restricted to junior and senior film and digital media majors and minors.

FILM 189 - Advanced Topics in Digital and Electronic Media Studies (5)

Study of a selected aspect of digital and/or electronic media history and criticism. Topics can include virtual environments, electronic networks, video installations, computer games, and hyper-media. Usually offered in alternate academic years.

Prerequisite: Prerequisite(s): FILM 20C. Enrollment is restricted to junior and senior film and digital media majors and minors during priority enrollment; may be opened if space allows.

FILM 192 - Directed Student Teaching (5)

Teaching a lower-division course under faculty supervision (see FILM 42). Proposal supported by a faculty sponsor and department.

FILM 194A - Film Theory Seminar (5)

Advanced senior seminar examining classical and contemporary film theory and those theoretical paradigms and methods that have illuminated the medium: formalism, realism, structuralism, semiology, psychoanalysis, Marxism, feminism, and phenomenology. Primary texts are read.

Prerequisite: Prerequisite(s): FILM 120. Enrollment is restricted to senior film and digital media majors.

FILM 194B - Electronic Media Theory Seminar (5)

Study of the major theoretical approaches to electronic media and their critical application to texts from television, independent video art and documentary, and electronic networks. Readings include a range of theoretical approaches selected from semiotic, ideological, feminist, cultural studies, reception theory, postmodernist, and other critical traditions.

Prerequisite: Prerequisite(s): FILM 120. Enrollment is restricted to senior film and digital media majors.

FILM 194C - New Media Theory Seminar (5)

Study of theories of emerging genres of electronic culture, with emphasis on the discourse about computer-assisted and computer-generated forms of art and mass culture such as digital imagery, virtual environments, telematics, hyper- and multimedia, and electronic networks

Prerequisite: Prerequisite(s): FILM 120. Enrollment is restricted to senior film and digital media majors.

FILM 194D - Film History Seminar (5)

In-depth study of film history investigating developments in cinematic style, technological innovation, and industrial practice against the broad canvas of cultural history. Students will acquire the basic tools necessary to conduct informed film historical research.

Prerequisite: Prerequisite(s): FILM 120; and FILM 130 or FILM 134A or FILM 134B. Enrollment restricted to senior film and digital media majors.

FILM 194E - International Cinemas (5)

In-depth study of the history and theory of international cinemas with changing topics such as globalism and resistance, postcolonial theory, international productions and querying race, the national, and cinema.

Prerequisite: Prerequisite(s): FILM 120; and FILM 132A or FILM 132B or FILM 132C. Enrollment restricted to senior film and digital media majors.

FILM 194F - Film and the Other Arts (5)

Examines the use of artistic media within films and of films that thematically are about other media. What do other art forms allow for in terms of the story, the film's meaning, the gaze, and the spectator?

Prerequisite: Prerequisite(s): FILM 120. Enrollment restricted to senior film and digital media majors.

FILM 194G - New(s) Media (5)

Addresses the role of new media technologies in the production, distribution, and reception of the news, especially international news. Examines software and network technologies as amplifying, filtering, extending, and countering the forces of media.

Prerequisite: Prerequisite(s): FILM 120. Enrollment restricted to senior film and digital media majors.

FILM 194H - Ethics and Documentary Filmmaking (5)

Online senior seminar that addresses long-standing ethical dilemmas including filmmaker/participant relationships, ethical ethnographic filmmaking, and conversations regarding the role of social media and new media. Explores issues such as allyship, privilege, and insider/outsider responsibilities for filmmakers working with topics such as class, the environment, gender, feminism, race and sexuality.

Prerequisite: Prerequisite(s): FILM 120 and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior film and digital media majors.

FILM 194S - Special Topics Seminar (5)

Intensive research and writing on a changing topic chosen to demonstrate critical mastery in a specific area of film and digital media studies, for example, film adaptations and their literary sources, documentary/reality shows, or networked new media texts.

Prerequisite: Prerequisite(s): FILM 120. Enrollment restricted to senior film and digital media majors.

FILM 195 - Senior Thesis/Project (5)

An individually supervised course, with emphasis on independent research, to culminate in a senior thesis/project/production. Proposals should be submitted to adviser one quarter in advance. Petition required, approved by instructor and department; thesis petitions available in the department office.

FILM 196A - Senior Project in Narrative Production (5)

Students accomplish a range of production work focused on narrative production including script development, casting, and rehearsing to shooting and post-production work. Students are billed a course materials fee of \$292. Prerequisite(s): FILM 170B. Two production courses are recommended in addition to the prerequisite. Admission by application and instructor consent; application materials available during the last three weeks of preceding quarter. Enrollment is restricted to senior film and digital media majors. Students may apply a maximum of two times.

FILM 196B - Senior Project in Screenwriting (5)

Students write a full-length (75-100 pages) screenplay in this seminar while studying structural concepts and character development in selected films. Scheduling, outlining, pitching ideas, and critique are all part of the workshop format of the class. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; FILM 150 or another screenwriting course. Admission by application; application materials available during the last three

weeks of the preceding quarter. Enrollment is restricted to senior film and digital media majors.

FILM 196C - Senior Documentary Workshop (5)

Students are responsible for producing short documentaries (up to 12 minutes). In class, students discuss each other's work as well as view and discuss other documentary films. Students are billed a course materials fee of \$292. Prerequisite(s): FILM 170B. Two production courses are recommended in addition to the prerequisite. Admission by application and instructor consent; application materials available during the last three weeks of preceding quarter. Enrollment is restricted to senior film and digital media majors. Students may apply a maximum of two times.

FILM 197 - Senior Digital Media Workshop (5)

Incorporates independent projects using the computer as a medium as well as a tool. Students design and implement projects in digital imaging, information, and communications environments. Students' projects may include designing virtual communities, building collaborative networks, and/or interactive, multimedia web works. Admission by application; application materials available during the last three weeks of the preceding quarter. Enrollment is restricted to senior film and digital media majors.

FILM 198 - Independent Field Study (5)

Provides for department-sponsored individual study programs off campus for which faculty supervision is not in person (e.g., supervision is by correspondence). Students engaging in field study must complete application procedures for such study by the fifth week of the previous quarter. Field study may not be used to satisfy major requirements. Petition required, approved by instructor and department; petitions available in the department office.

FILM 198F - Independent Field Study (2)

Provides for department-sponsored individual study programs off campus for which faculty supervision is not in person (e.g., supervision is by correspondence). Students engaging in field study must complete application procedures for such study by the fifth week of the previous quarter. Field study may not be used to satisfy major requirements. Petition required, approved by instructor and department; petitions available in the department office.

FILM 199 - Tutorial (5)

Individual study in areas approved by sponsoring instructors. Tutorial may not be used to satisfy major requirements. Petition required, approved by instructor and department; petitions available in the department office.

FILM 199F - Tutorial (2)

Individual study in areas approved by sponsoring instructors. Tutorial may not be used to satisfy major

requirements. Petition required, approved by instructor and department; petitions available in the department office.

Graduate

FILM 200A - Introduction to Graduate Study (5)

Introduces graduate study in the critical practice of film and digital media. Conducted as a pro-seminar, with faculty presentations and discussion.

Prerequisite: Enrollment restricted to graduate students.

FILM 200B - Theory and Praxis of Film and Digital Media 1 (5)

Investigates methods for rhetorical production of written and visual/aural texts. Emphasizes questions about delineation between theory and practice, and provides groundwork in theories relevant to key areas in film, television, and digital media studies.

Prerequisite: Enrollment restricted to graduate students.

FILM 200C - Theory and Praxis of Film and Digital Media 2 (5)

Investigates methods for rhetorical production of written and visual/aural texts. Emphasizes interwoven practices of the artist/researcher/teacher, formal and expressive possibilities of hybridized research, and cultural issues raised by integrated methods of inquiry.

Prerequisite: Enrollment restricted to graduate students.

FILM 202 - Pedagogy in Film and Digital Media (2)

Prepares students for teaching assistantships and instructor roles. Topics include TAs'hips, designing inclusive course syllabi and lesson plans, active learning, teaching technologies, and classroom environment.

Prerequisite: Enrollment is restricted to graduate students.

FILM 203 - Professional Development in Film and Digital Media (3)

Prepares graduate students with professional skills in the discipline, such as CV writing, grants research and writing, public presentation, exhibition, publication, and job seeking.

Prerequisite: Enrollment is restricted to graduate students.

FILM 221 - Audio Arts and Methods (5)

Explores practices and ethics of listening, noticing and audio recording. Students gain expertise with microphones for field recording, studio set-ups, and digital audio editing software, and create original sound works of their own. The course entwines theory and practice, considering various approaches to audio arts across platforms and contexts such as broadcast,

podcast, installation, audio essay, performance, and art as social practice, as well as exploring strategies for sound design for audiovisual works.

Prerequisite: Enrollment is restricted to graduate students.

FILM 222 - Critical Methodologies in Film and Television (5)

Introduces graduate students to critical methodologies in media studies and offers sustained examination of theoretical approaches to media studies. Methodologies may include (but are not limited to) contemporary theory (semiotic, psychoanalytic, ideological), cultural studies, intertextuality, feminist film, and television theory.

Prerequisite: Enrollment restricted to graduate students.

FILM 223 - The Film/Video Essay (5)

Focuses on essayistic approaches to scholarship and production, emphasizing relationships between theory and praxis that this mode of production requires.

Prerequisite: Enrollment restricted to graduate students.

FILM 224 - Mediating Difference (5)

Considers theoretical and strategic, situated difference in the era of (semi-)colonialism, post-colonialism, and globalism, examining theoretical writing alongside media works on the topic.

Prerequisite: Enrollment restricted to graduate students.

FILM 225 - Software Studies (5)

Today, our lives are woven into vast software systems that facilitate our family communications, personal relations, jobs, and cultural, economic, political, and social institutions. Course examines these conditions of life and thought using insights from the arts and humanities.

Prerequisite: Enrollment restricted to graduate students.

FILM 226 - Queer Theory and Global Film and Media (5)

Examines queer subjectivities, practices, and theories in relation to globalization, transnationalism, and postcoloniality, focusing on film/media produced outside the United States. The course addresses representation and also uses queer theoretical work to engage wider contexts of film/media production, distribution, and exhibition.

Prerequisite: Enrollment restricted to graduate students.

FILM 227 - Representing Memory (5)

Studio-based hybrid practice/theory to explore problems of historical representation in film, video, and new media and engage with the production of new cinematic/visual forms that take on issues of personal, collective, and national memories.

Prerequisite: Enrollment is restricted to graduate students.

FILM 228 - Moving Image Archives and the Frontiers of Information (5)

Explores moving image archives in relation to social movements, technological change, and moving image use and reuse. Theories of memory, information, and technology provide a framework for discussions, site visits, and individual projects.

Prerequisite: Enrollment restricted to graduate students.

FILM 229 - Topics in Documentary Studies (5)

Examines the forms, discourses, and practices of documentary film, television, video, and other media in relation to cultural, social, and political history and theory. While the thematic focus varies from term to term, each edition of the course places critical thought and documentary work in conversation around issues central to forms of social knowledge and action.

Prerequisite: Enrollment restricted to graduate students.

FILM 230 - Expanded Documentary (5)

Students explore the aesthetic, political, and ethical dimension of new and expanded forms of documentary practice including: new media; database-driven, interactive documentary; participatory media; social media; and documentation-based art practices.

Prerequisite: Enrollment restricted to graduate students.

FILM 231 - Topics in Postcolonial Theories, Film, and Media (5)

Explores topics in postcolonial theories and film and media around themes such as colonialism, modernity, and institutions of cinema; colonial histories and national or transnational film and media; race, gender, sexuality and colonialism; the uneven implications, pitfalls, and possibilities of the term postcolonial in relation to film and media.

Prerequisite: Enrollment restricted to graduate students.

FILM 232 - Audiovisual Ethnography (5)

Students learn the technical and critical skills required for fieldwork-based ethnographic video and audio media production. The course is structured around cumulatively building filmmaking skills with an emphasis on critically informed nonfiction ethnographic observation.

Prerequisite: Enrollment restricted to film and digital media, anthropology, or social documentation graduate students.

FILM 234 - Toward an Ethics of New Media (5)

Investigates an ethics of new media. Using an intersectional approach, students read thematic units that consider issues of race, class, and gender as they

crosscut questions of advanced technological tools and their implementation in modern society.

Prerequisite: Enrollment restricted to graduate students.

FILM 235 - Feminist Media Histories (5)

Investigates feminist histories of film, radio, television, video, technology, playable media, and digital culture from the 19th century through the present day. Students learn varied historiographic methodologies and also engage in primary historical research.

Prerequisite: Enrollment restricted to graduate students.

FILM 236 - Making...in the Anthropocene (5)

Through readings and assignments, students explore the notions of making and the temporal context of the Anthropocene. Making is broadly defined as any creative production. The Anthropocene and climate change are studied as urgent and compelling context.

Prerequisite: Enrollment is restricted to graduate students.

FILM 237 - Graduate Critique (5)

Develops fluency in the languages of critical practice as expressed across media. Integrates critical and analytical writing about objects and experiences created by and through electronic and digital media with ongoing, student-driven critiques of audiovisual scholarship.

Prerequisite: Enrollment is restricted to film and digital media graduate students. Graduate students from other programs may enroll by permission of the instructor.

FILM 238 - The Politics of Information (5)

Explores the production and perception of information (news, stories, figures, identities, controversies, and complacencies). Students research, analyze, theorize, and define the scope of the politics of information, study the consequences of media(ted) knowledge, and propose possibilities for critical intervention and change.

Prerequisite: Enrollment is restricted to graduate students.

FILM 239 - Topics in Media Theory (5)

Explores advanced media theory and the methodologies of media analysis. Themes and issues to be drawn from media history; material, popular, or mass cultures; network and information theory; and intellectual, institutional, political, or cultural contexts.

Prerequisite: Enrollment is restricted to graduate students.

FILM 283 - New Media Art and Digital Culture (5)

A study of new media art in the context of digital culture. Electronic, digital and online technology art are set in critical relation to discourse on history, aesthetics,

hypermedia, the interface, hacks, embodiment, robotics, artificial life and other topics.

Prerequisite: Enrollment restricted to graduate students.

FILM 284 - Film, Culture, and Modernity (5)

Traces the rise of motion picture culture from the late 19th century through the end of the 1920s, looking at film's emerging visual and narrative grammar, its changing cultural status, and its engagement with shifting registers of class, ethnicity, gender, and sexuality.

Prerequisite: Enrollment restricted to graduate students.

FILM 295 - Directed Reading (5)

Directed reading that does not involve a term paper. Students submit petition to course-sponsoring agency. Enrollment restricted to graduate students.

FILM 296F - Independent Study (2)

Independent study with primary advisor for graduate students prior to advancing to candidacy.

FILM 297 - Independent Study (5)

Either study related to a course being taken or a totally independent study. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit.

FILM 297F - Independent Study (2)

Students submit petition to course-sponsoring agency. Enrollment restricted to graduate students.

FILM 299A - Thesis Research (5)

Students submit petition to course sponsoring agency. Enrollment restricted to graduate students.

FILM 299B - Thesis Research (10)

Students submit petition to course sponsoring agency. Enrollment restricted to graduate students.

FMST - FEMINIST STUDIES

Lower-Division

FMST 1 - Feminist Studies: An Introduction (5)

Introduces the core concepts underlying the interdisciplinary field-formation of feminist studies within multiple geopolitical contexts. Explores how feminist inquiry rethinks disciplinary assumptions and categories, and animates our engagement with culture, history, and society. Topics include: the social construction of gender; the gendered division of labor, production, and reproduction; intersections of gender, race, class, and ethnicity; and histories of sexuality.

FMST 10 - Feminisms of/and the Global South (5)

Explores feminist theories from domestic U.S. and global contexts in order to ask how interventions of women of color in the U.S. and of radical feminist movements in non-U.S. locations radically re-imagine feminist politics. Rather than focusing on feminist movements that represent different regions of the world, course examines feminist theory through multiple histories of colonialism, post-colonialism, and globalization.

FMST 12 - Podcasting: Feminist Files (5)

Introduces students to the basics of podcasting and guides students to become contributors to Feminist Files, a podcast that makes feminist scholarship and scholars accessible to the public. This course gives students the theoretical and practical framework to critique a variety of podcasts and engage in the podcast movement. Students learn how to conceptualize stories, research topics, interview guests, write scripts, host shows, records and edit audio. Students also build their collaboration skills by working in groups to produce segments.

Prerequisite: Prerequisite(s): Completion of at least one other lower-division feminist studies course.

FMST 13 - California Indian History (5)

California encompasses the nation's largest Native population and the state's policies create a complex political and legal structure. This course provides a history of early California in the 18th and 19th centuries and a review of the urban Indian experience in the 20th century. The first part sets the historical foundation and traces early California Indian history. The second part shifts to 20th-century urban Indian issues and the contemporary moment for California Indian peoples. Covers topics such as Indian labor exploitation, genocide, termination, relocation, and federal recognition.

FMST 14 - Popular Culture in South Asia (5)

Popular culture enables people to make sense of their modern selves and their place in the world. Focusing on South Asia, this course explores the region's rich and variegated popular culture forms, including film, music, television, the painted and printed image, and sport. It also investigates how the popular articulates with nation and global conjunctures and how it constructs hierarchies of class, gender, caste, and sexuality.

FMST 15 - Gender, Sexuality, and Transnational Migration Across the Americas (5)

Examines migration as a mode of inquiry into transnational practices across geographic locales and temporal zones. Analyzes migration in relation to the transnational formation of gender, race, and sexuality as well as processes of neocolonialism, the state, and globalization. Taught in conjunction with FMST 115.

FMST 16 - Media Histories--News and New Media (5)

The news is a set of narratives that produce, maintain, repair, and transform reality. Using three events that brought together old and new media, this course traces how the interaction of new media with news has changed how we make sense of the world around us and our place in it.

FMST 18 - Black Feminist Ethnographies (5)

Black feminist theoretical and methodological approaches to the dailliness of women's lives, which considers historical and contemporary Black feminist interventions and praxis that challenge ethnographic hegemony. Students revisit old and new debates to ponder questions of authority, genres, positionality, and citation politics.

FMST 19 - Black Feminisms: An Introduction (5)

Focuses on key issues, core concepts and debates foundational to Black feminisms. With some consideration from the Black diaspora, students examine processes of self-making from resistance to a history of violence, practices and strategies of creative survivalism, and the ongoing struggle to liberation.

FMST 20 - Feminism and Social Justice (5)

Examines, and critically analyzes, select post-World War II movements for social justice in the United States from feminist perspectives. Considers how those movements and their participants responded to issues of race, class, gender, and sexuality. A feminist, transnational, analytic framework is also developed to consider how those movements may have embraced, enhanced, or debilitated feminist formations in other parts of the world.

FMST 21 - Religion in American Politics and Culture (5)

Introduces dominant discourses about Christianity and Islam in the American public sphere, with particular attention paid to race, gender, sexuality, and class in thinking about religion. Visual and textual media, political commentary, and popular ethnographies are analyzed.

FMST 30 - Feminism and Science (5)

Explores questions of science and justice. Examines the nature of scientific practice, the culture of science, and the possibilities for the responsible practice of science. Rather than focusing on feminist critiques of science, the course examines how science and technology are changing our world and the workings of power.

FMST 31 - Disability Studies (5)

Introduces students to the key critical concepts, debates, and questions of practice in the emerging field of disability studies, with a focus on feminist and critical race approaches to disability.

FMST 40 - Sexuality and Globalization (5)

Examines the relationship between sexuality and the contemporary term globalization as a dense entanglement of processes that emerges from a history of U.S. empire. Sexuality cannot be separated from power struggles over the classification of bodies, territories, and questions of temporality. Examines how sexualized contact zones produce new knowledge, commerce, inequalities, possibilities, and identities.

FMST 41 - Trans Gender Bodies (5)

Draws from representations of transgender/transsexual people in popular, biomedical, and political contexts. Examines the impact of transgender lives on concepts of gender, identity, and technology. Engages with biological and sexological frameworks of sex/gender, trans experience, and social movements and theories.

Upper-Division**FMST 100 - Feminist Theories (5)**

Core course for feminist studies. Serves as an introduction to thinking theoretically about issues of feminism within multiple contexts and intellectual traditions. Sustained discussion of gender and its critical connections to productions of race, class, and sexuality. Focus will change each year.

Prerequisite: Enrollment is restricted to sophomores, juniors, and seniors.

FMST 102 - Feminist Critical Race Studies (5)

Working from the perspective that race is a cultural invention and racism is a political, economic, and social relation, investigates how race is produced as a meaningful and powerful social category, examines the effects of racism as a social relation, and argues for the necessity of combining feminist and critical race studies. By considering different historical periods and places, aims to equip students with the tools necessary to critically examine the production and reproduction of race and racism in the U.S.

Prerequisite: Prerequisite(s): one course from feminist studies. Enrollment is restricted to juniors and seniors.

FMST 105 - Feminist Methodologies (5)

Recommended for transfer students. Focuses on particular debates about feminist methodology. Specific methodological debates vary each year but might include feminist theorizing of experience, epistemology, situated knowledges, notions of truth and the real. Feminist methods may include transnational approaches, as well as queer, decolonial, postcolonial, and critical race methodologies. Enrollment is by permission of the instructor. (Formerly FMST 75.)

FMST 112 - Women and the Law (5)

Interdisciplinary approach to study of law in its relation to category women and production of gender. Considers

various materials including critical race theory, domestic case law and international instruments, representations of law, and writings by and on behalf of women living under different forms of legal control. Examines how law structures rights, offers protections, produces hierarchies, and sexualizes power relations in both public and intimate life.

Prerequisite: Enrollment is restricted to feminist studies, politics, legal studies, and Latin American and Latino studies/politics combined majors during first and second pass enrollment.

FMST 115 - Gender, Sexuality, and Transnational Migration Across the Americas (5)

Examines migration as a mode of inquiry into transnational practices across geographic locales and temporal zones. Analyzes migration in relation to the transnational formation of gender, race, and sexuality as well as processes of neocolonialism, the state, and globalization.

Prerequisite: Prerequisite(s): FMST 1, FMST 100, or FMST 145. Enrollment is restricted to sophomores, juniors, and seniors.

FMST 117 - Post Zora Interventions: Art, Activism and Anthropology (5)

This experimental course situates the pioneer and controversial ethnographer, novelist, and playwright Zora Neale Hurston as an avant-garde. Analyzing her influence on academics, activists and artists, students consider the complex ways anthropology functions as material (from the textual to the visual), a source of both inspiration and refusal. In the process of exploration, students critically ponder what constitutes an intervention in academia, on the streets, or in artistic settings?

FMST 119 - Indigenous Feminisms (5)

Explores issues central to Indigenous women's life experiences and Native feminist thought. Students consider the concerns and methodologies of Native feminisms—theories and actions that highlight how settler colonialism is a fundamentally gendered process. Engages in foundational discussions of Native feminisms, settler colonial theory, and feminist methodologies. Course content focuses on communities in settler states currently known as the U.S. and Canada. Covers topics such as reproductive justice, gendered violence, cultural reclamation, and rematriation.

FMST 120 - Transnational Feminisms (5)

Explores the emergence of transnational feminism through U.S. women of color and postcolonial feminism. Underscores the role of globalization, nationalism, and state formation in relation to feminist theorizing, activism, and labor across the Global South. In an attempt to understand the salience of inequalities, the course interrogates the continuation of feminist

critique that is attentive to the war on terror, neocolonialism, and empire.

Prerequisite: Prerequisite(s): FMST 1. Enrollment is restricted to sophomores, juniors, and seniors.

FMST 123 - Feminism and Cultural Production (5)

Explores relationship between feminism and culture. Topics will vary and include different forms of cultural production such as film and literature. Regional/national focus will also vary.

Prerequisite: Prerequisite(s): FMST 1. Enrollment is restricted to sophomores, juniors, and seniors.

FMST 124 - Technology, Science, and Race Across the Americas (5)

Examines new ways of understanding the body and race through the intersection of technology and science. Addresses how broader structures of power and the rise of new technological and scientific discoveries mediate power relations and alter how race, national boundaries, the body, and citizenship are normalized and contested from colonialism to the present. Course content may vary; themes may include: U.S. eugenics, I.Q. tests, patenting debates, sterilization, assisted reproduction, biometrics, and genetics across the Americas.

Prerequisite: Enrollment is restricted to sophomore, junior, and senior feminist studies majors.

FMST 125 - Race, Sex, and Technology (5)

Explores theories and case studies tied to race, gender, and technology. Covers the history of feminist and critical race analyses of technology as well as contemporary debates.

FMST 126 - Images, Power, and Politics: Methods in Visual and Textual Analysis (5)

Introduces the analysis of visual images and text with particular emphasis on feminist critical methodologies. Using case studies from photography, film, TV, advertising, and new media, students learn how to read and analyze culture.

Prerequisite: Enrollment is restricted to sophomore, junior, and senior feminist studies majors.

FMST 131 - The Politics of Matter and the Matter of Politics (5)

Considers how things--what we may think of as objects, matter, nature, technology, bodies--are constitutive elements of social and political life. What happens to the political as a category if we take this matter seriously?

Prerequisite: Prerequisite(s): FMST 1.

FMST 132 - Gender and Postcoloniality (5)

Postcolonial feminist studies. Explores how discourses of gender and sexuality shaped the policies and

ideologies of the historical processes of colonialism, the civilizing mission, and anticolonial nationalism.

Considers orientalism as a gendered discourse as well as colonial understandings of gender and sexuality in decolonialization. Explores Western media representations, literature, the law, and the place of gender in the current debate between cultural relativism and universalism. Provides an understanding of some key terms in postcolonial studies and an in-depth examination of the place of gender in these processes.

Prerequisite: Enrollment is restricted to juniors and seniors.

FMST 133 - Science and the Body (5)

Contemporary technoscientific practices, such as nano-, info-, and biotechnologies, are rapidly reworking what it means to be human. Course examines how both our understanding of the human and the very nature of the human are constituted through technoscientific practices.

Prerequisite: Prerequisite(s): FMST 1 and FMST 100. Enrollment is restricted to juniors and seniors.

FMST 135 - Topics in Science and Sexuality (5)

Introduces the multiple debates animating the linkages between science, race, and sexuality. Interrogates the interrelated, epistemological frameworks of science and sexuality/queer studies across a range of interdisciplinary and geopolitical locations.

Prerequisite: Prerequisite(s): FMST 100 or FMST 145. Enrollment is restricted to sophomores, juniors, and seniors.

FMST 136 - Organizing for Water Justice in California (5)

Investigates, imagines, and practices movement toward water justice in California using feminist, Indigenous, and critical race theory. The course includes collaborative projects with environmental justice organizers in the Central Valley, and offers new ways of thinking about water inequity and access through racial capitalism, settler colonialism, and critical theories of place.

FMST 139 - African American Women's History (5)

Considers African American women as central to understanding of U.S. history, focusing on everyday survival, resistance, and movements for social change. Discussion of critical theories for historical research, gender, and race. Emphasis on biography, cultural history, and documentary and archival research.

Prerequisite: Enrollment is restricted to sophomores, juniors, and seniors.

FMST 145 - Racial and Gender Formations in the U.S (5)

Introduces the defining issues surrounding racial and gender formations in the U.S. through an understanding

of the term women of color as an emergent, dynamic, and socio-political phenomenon. Interrogates organizing practices around women of color across multiple sites: film and media, globalization, representation, sexuality, historiography, and war, to name a select few.

FMST 150 - Mediating Desire (5)

From a foundation in semiotics, considers the ways race and gender are constructed, understood, performed, embraced, commodified, and exploited through representations. Uses representations of, by, and for the margins to engage theories of communication, identity, and representation. Creative final projects encouraged.

Prerequisite: Enrollment is restricted to sophomore, junior, and senior feminist studies majors or by permission of instructor.

FMST 175 - Gender and Sexualities in Latina/o America (5)

Advanced topics in gender and sexuality in Latin America and Latina/o studies. Analyzes role of power, race, coloniality, national and transnational processes in the production and analysis of genders and sexualities. Materials include memoir, fiction, ethnography, social documentary and history.

Prerequisite: Enrollment is restricted to sophomore, junior, and senior feminist studies majors or by permission of instructor.

FMST 188 - Topics in Feminist Studies (5)

Focuses on a particular topic in feminist theory. Topics vary each offering but might include theorizing the gendered subject, racializing gender, politics and feminism, the relationship between queer theory and feminism, transgender studies, women of color feminisms, postcolonial and decolonial feminisms, feminist science studies.

Prerequisite: Enrollment is restricted to sophomores, juniors, and seniors.

FMST 189 - Advanced Topics in Feminist Theory (5)

Focus on a particular problem in feminist theory. Problems vary each year but might include theorizing the gendered subject, racializing gender, the meeting points of psychoanalysis and social-political analysis in theorizing gender, the relationship between queer theory and feminist theory, postcolonial feminist theory.

Prerequisite: Prerequisite(s): FMST 100. Enrollment is restricted to juniors, seniors, and graduate students.

FMST 193 - Field Study (5)

Individual field study in the vicinity of the campus under the direct supervision of a faculty sponsor. Students submit petition to sponsoring agency.

FMST 193F - Field Study (2)

Individual field study in the vicinity of the campus under the direct supervision of a faculty sponsor. Students submit petition to sponsoring agency.

FMST 194A - Feminist Jurisprudence (5)

Approaches legal reasoning from a feminist and intersectional perspective with attention to structures and jurisdiction, case materials, and emerging international frameworks for gender justice. Designed to facilitate completion of a substantial research essay based in feminist legal philosophy.

Prerequisite: Prerequisite(s): FMST 1 and FMST 100; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior feminist studies majors.

FMST 194B - Queer/Feminist Historiography (5)

Providing for a critical examination of canonical formations in history and archives, this course proposes new ways of thinking about history from the point of view of those who have been marginalized or excluded by race, class, gender, or sexuality.

Prerequisite: Prerequisite(s): FMST 1 and FMST 100; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior feminist studies majors.

FMST 194C - Gender and Iconicity (5)

Examines icons and the processes through which an iconicity is constructed and circulated in its complexity. Icons and iconicities often link or articulate various ideologies, affects, and systems of thought into a potent symbol or a mythology. Icons constitute norms, but also disrupt them; icons could articulate new technologies, aesthetics and their representations of the self with purportedly older modes of being in the world, such as a transcendent belief in a god, a faith, etc.

Prerequisite: Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and FMST 1 and FMST 100. Enrollment restricted to senior feminist studies majors.

FMST 194D - Feminist Science Studies (5)

Examines different feminist approaches to understanding the nature of scientific practices. Particular attention paid to notions of evidence, methods, cultural and material constraints, and the heterogeneous nature of laboratory practices. Considers the ways in which gender, race, and sexuality are constructed by science and how they influence both scientific practices and conceptions of science. Also examines the feminist commitment to taking social factors into account without forfeiting the notion of objectivity.

Prerequisite: Prerequisite(s): FMST 1 and FMST 100; satisfaction of the Entry Level Writing and

Composition requirements. Enrollment is restricted to senior feminist studies majors.

FMST 194F - Chicana/Latina Cultural Production (5)

Traces the intersection between Chicana studies and Latin American studies through transnational forms of cultural production, imaginaries, and empowerment. Analysis of theories of cultural production and discussion of the political salience of culture as a site for resistance, critique, and creativity.

Prerequisite: Prerequisite(s): FMST 1 and FMST 100; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior feminist studies majors.

FMST 194G - Images of Africa (5)

Explores questions of colonialism, empire, race, gender, and geopolitics in the proliferating images--filmic, televisual, and media--of Africa in the United States. Facilitates the completion of a substantial research essay based on the study of popular culture.

Prerequisite: Prerequisite(s): FMST 1 and FMST 100; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior feminist studies majors.

FMST 194H - Michel Foucault: An Introduction (5)

French philosopher Michel Foucault's writings on modern forms of knowledge, power, and subjectivity provide a serious challenge to how we negotiate social oppression. Engages some of Foucault's most cited works, and grapples specifically with his primary claim that modern societies are marked less by freedom and autonomy than by discipline and docility.

Prerequisite: Prerequisite(s): FMST 1 and FMST 100; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior feminist studies majors.

FMST 194I - Feminist Oral History and Memoir (5)

Designed to train students in oral history and memoir writing. Emphasizes the specialness of transgressive voices; race, class, and sexuality, women's silence, erasure, censorship, and marginalization are addressed. The politics of memory, narratives, storytelling, and editorial judgment are considered.

Prerequisite: Prerequisite(s): FMST 1 and FMST 100; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior feminist studies majors.

FMST 194K - Black Diaspora (5)

Seminar focuses on the historical and subjective processes that produce the concept of an African or Black Diaspora. In narrative, film, and cultural studies, themes of slavery, exile, home, identity, alienation, colonialism, politics, and reinvention are explored.

Prerequisite: Prerequisite(s): FMST 1 and FMST 100; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior feminist studies majors.

FMST 194L - Comparative Settler Colonial Studies (5)

Discusses the characteristics of settler colonialism and the politics of comparison in the study of global settler colonialism. Looks at settler colonial state practice across multiple different sites, including Santa Cruz, as students craft their own research projects. (Formerly offered as Decoloniality, Feminism, and Science Studies.)

Prerequisite: Prerequisite(s): FMST 1 and FMST 100; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior feminist studies majors. Crosslisted as: Prerequisite(s): CRES 10 and CRES 100; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior critical race and ethnic studies majors.

FMST 194M - Empire and Sexuality (5)

Explores the production of sexualities, sexual identification, and gender differentiation within multiple contexts of colonialism, decolonization, and emerging neo-colonial global formations.

Prerequisite: Prerequisite(s): FMST 1 and FMST 100; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior feminist studies majors. Crosslisted as: Prerequisite(s): CRES 10 and CRES 100; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior critical race and ethnic studies majors.

FMST 194O - The Politics of Gender and Human Rights (5)

Examines human rights projects and discourses with a focus on the politics of gender, sexuality, race, and rights in the international sphere. Reading important human rights documents and theoretical writings, and addressing particular case studies, emphasizes the tensions between the ideals of the universal and the particular inherent in human rights law, activism, and humanitarianism.

Prerequisite: Prerequisite(s): FMST 1 and FMST 100; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior feminist studies majors. Crosslisted as: Prerequisite(s): CRES 10, CRES 100; satisfaction of the Entry Level Writing and Composition requirements.

FMST 194Q - Queer Diasporas (5)

Queer diaspora emerged from Third World/queer-of-color critique of queer theory and provides a framework for analyzing racializations, genders, and sexualities in colonial, developmental, and modernizing contexts.

Readings from anthropology, history, literature, and feminist and cultural studies.

Prerequisite: Prerequisite(s): FMST 1 and FMST 100; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior feminist studies majors. Crosslisted as: Prerequisite(s): CRES 10 and CRES 100. Enrollment restricted to critical race and ethnic studies majors.

FMST 194T - Transgender Studies (5)

Explores literature from the natural sciences, anthropology, history, cultural studies, and sociology. Provides theoretical approaches to complex questions in queer studies and geopolitics, and a framework for understanding embodiment, medical regulation, gender formation, the human/animal divide, etc.

Prerequisite: Prerequisite(s): FMST 1 and FMST 100; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior feminist studies majors.

FMST 194U - Touring War and Empire (5)

Senior seminar focusing on tourism, colonialism, and militarism. Considers case studies on tourism in colonial contexts and sites of U.S. empire across multiple geographies as students craft their projects, participate in writing workshops, and present research.

Prerequisite: Prerequisite(s): FMST 1 and FMST 100; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior feminist studies majors.

FMST 194V - Marxism and Feminism (5)

Explores critically the intersections and crisis points between feminism and Marxism as bodies of thought, theoretical formations, and forms of historical inquiry.

Prerequisite: Prerequisite(s): FMST 1 and FMST 100; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior feminist studies majors.

FMST 194W - Politics of Space, Time, and Matter (5)

Senior seminar focusing on questions of the politics of space, time, and matter. Readings informed by fields, such as indigenous studies, queer studies, afrofuturism, borderland studies, critical race studies, decolonial studies, disability studies, feminist science studies, and new materialisms.

Prerequisite: Prerequisite(s): FMST 1 and FMST 100; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior feminist studies majors.

FMST 195 - Senior Thesis or Project (5)

The senior thesis/project which satisfies the major requirement. Course is for independent research and writing. Prerequisite(s): satisfaction of the Entry Level

Writing and Composition requirements; students submit petition to sponsoring agency.

FMST 198 - Independent Field Study (5)

Provides for individual study program off campus for which faculty supervision is not in person. Students submit petition to sponsoring agency.

FMST 198F - Independent Field Study (2)

Provides for individual study program off campus for which faculty supervision is not in person. Students submit petition to sponsoring agency.

FMST 199 - Tutorial (5)

Individual directed study for upper-division undergraduates. Students submit petition to sponsoring agency.

FMST 199F - Tutorial (2)

Individual directed study for upper-division undergraduates. Students submit petition to sponsoring agency.

Graduate

FMST 200 - Feminist Theories (5)

Introductory required course for feminist studies graduate students. Covers major theorists, debates, and current questions as well as foundational texts through which feminist critiques have been grounded. Content changes with instructor.

Prerequisite: Enrollment is restricted to graduate students.

FMST 201 - Topics in Feminist Methodologies (5)

Explores feminist theorizing across disciplinary and cultural contexts for both methodology (theories about the research process) and epistemology (theories of knowledge). Goal is to orient students toward changes in organization of knowledge and provide them with different feminist methodologies in their pursuit of both an object of study and an epistemology.

Prerequisite: Enrollment is restricted to graduate students.

FMST 202 - Disciplining Knowledge/Graduate Research (5)

Prepares students to develop research skills and initiate their research projects. Students consider what is meant by feminist research and undertake designing and performing feminist research.

Prerequisite: Prerequisite(s): FMST 200 and FMST 201. Enrollment is restricted to graduate students.

FMST 203 - Feminist Pedagogies (5)

Examines feminist pedagogies as projects in transgressing traditional disciplinary boundaries.

Examines historical examples of alternative pedagogies and contemporary models for creating communities dedicated to social justice. Designed to assist graduate students develop teaching strategies in multiple fields.

Prerequisite: Enrollment is restricted to graduate students.

FMST 207 - Topics in Queer/Race Studies (5)

Explores the interrelated epistemological frameworks of critical race studies and queer studies. Through the study of a range of philosophical, scientific, literary, and cinematic texts, course historicizes and theorizes discourses of race and sexuality.

Prerequisite: Enrollment is restricted to graduate students.

FMST 208 - African(a) Genders and Sexualities (5)

Examines a number of classic and new critical texts in the field of African(a) Feminism and Sexuality. Focuses on how African(a) scholars have had to theorize genders and sexualities through an intersectional lens that takes into account questions of decoloniality and freedom. How might we rethink issues of oppression and domination in relationship to race, nation, sex, gender, and sexuality in the global Black world using the tools provided by Africa(a) scholars?

Prerequisite: Enrollment is restricted to graduate students.

FMST 209 - Comparative Empires: Gender, Slavery, Race (5)

Explores the interrelated, epistemological frameworks of race, slavery and gender across multiple Oceanic and imperial networks. Histories of empire and slavery have been over-determinedly tethered to singular histories of nation-states, temporalities and/or geopolitics. Bypassing the idea of slavery and/or empire as a stable or temporal concept, students are guided instead by an interdisciplinary and comparative framework, seeking more the robust vernaculars and geo-histories that found our current understandings of race, gender and sexuality.

Prerequisite: Enrollment is restricted to graduate students.

FMST 211 - Sexuality, Race, and Migration in the Americas (5)

Analyzes the ways transnational processes intersect with changing notions of gender, sexuality, and race. Examines processes such as tourism, the Internet, capitalism, and labor spanning Brazil, the Dominican Republic, and the United States.

Prerequisite: Enrollment is restricted to graduate students.

FMST 212 - Feminist Theory and the Law (5)

Interrogation of the relationship between law and its instantiating gendered categories, supported by feminist, queer, Marxist, critical race, and postcolonial theories. Topics include hypostasization of legal categories, the contest between domestic and international human rights frameworks, overlapping civil and communal codes, cultural explanations in the law, the law as text and archive, testimony and legal subjectivity.

Prerequisite: Enrollment is restricted to graduate students.

FMST 214 - Topics in Feminist Science Studies (5)

Graduate seminar on feminist science studies. Topics will vary and may include: the joint consideration of science studies and poststructuralist theory; the relationship between discursive practices and material phenomena; and the relationship between ontology, epistemology, and ethics.

Prerequisite: Enrollment is restricted to graduate students.

FMST 215 - Postcolonial and Postsocialist Transactional Analytics (5)

Addresses the intersection of the postcolonial and the postsocialist as theoretical ground. Considers how (neo)liberal ideologies about race, class, gender, secularism, and democracy are shaped by the intersection between postsocialist geopolitics and imperial legacies. (Formerly Postsocialism, Postcolonialism, Neoliberalism.)

Prerequisite: Enrollment is restricted to graduate students.

FMST 216 - Archives/Genders/Histories: An Introduction (5)

Explores the entanglements of archives, genders, and histories across a number of intellectual and imperial contexts. Approaches the concept of the archive to reflect on who counts as a historical and/or gendered subject and what are the ethics of representation that guide such archival formations. Draws on literature from philosophy, gender/sexuality studies, anthropology, history, and literary criticism.

Prerequisite: Enrollment is restricted to graduate students.

FMST 218 - Militarism and Tourism (5)

Positioning tourism and militarism as central sites of inquiry for feminist and ethnic studies, course draws from literature on colonialism and empire to illuminate how tourism functions and how tourists move, in sites of past and present warfare.

FMST 222 - Religion, Feminism, and Sexual Politics (5)

Focuses on the increasing importance of religion as a category of analysis in feminist theory. Addresses the relationship of religion, feminist politics, and activism in connection with nationalism, the family, sexuality, and geopolitics.

Prerequisite: Enrollment is restricted to graduate students.

FMST 232 - Topics in Postcolonial Studies (5)

Variable topics that could include postcolonial approaches to questions of epistemology and knowledge production, theories of nationalism and nation-state formation, subaltern historiography, analyses of modernization and developmental theory, postcolonial approaches to globalization, and transnationalism. Significant component of feminist contributions to these literatures.

Prerequisite: Enrollment is restricted to graduate students.

FMST 243 - Feminism, Race, and the Politics of Knowledge (5)

Course takes as its central topic the institutional politics of feminist and critical race knowledges in the post-1960s United States university. Considers these fields' complex and contradictory relation to disciplinarity, the university's primary or default mode of arranging and legitimizing knowledge formations.

Prerequisite: Enrollment is restricted to graduate students.

FMST 260 - Black Feminist Reconstruction (5)

Re-visions and extends Reconstruction from 1865-1920 from a black feminist standpoint. Topics include: redefining democracy; labor; literacy and education; suffrage; re-visioning sexuality; childbirth; parenting, etc. Analyzes traditional historiography and the methodological implications of the boundaries between history and fiction, and archival and oral traditions.

Prerequisite: Enrollment is restricted to graduate students.

FMST 270 - Anthropology at Its Interfaces with Feminist, Postcolonial, and Decolonial STS (5)

Focuses on generative interfaces within and at the edge of the anthropological discipline, in particular, the way ethnographies and fields are being reconfigured by feminist, postcolonial, and decolonial perspectives and methodologies in science and technology studies (STS).

Prerequisite: Enrollment is restricted to graduate students.

FMST 290 - Pedagogical Training (2)

First-year graduate students meet with the teaching assistant trainer for bi-weekly meetings covering

pedagogical approaches. Also includes class visits and shadowing. Enrollment is restricted to graduate students. (Formerly offered as First-Year Advising.)

FMST 291 - Advising (2)

Independent study formalizing the advisee-adviser relationship. Regular meetings to plan, assess, and monitor academic progress, and to evaluate coursework as necessary. May be used to develop general bibliography of background reading trajectory of study in preparation for the qualifying examination. Enrollment restricted to graduate students.

FMST 297A - Independent Study (5)

Independent study and research under faculty supervision. Students submit petition to sponsoring agency. Enrollment restricted to graduate students.

FMST 297B - Independent Study (10)

Independent study and research under faculty supervision. Students submit petition to sponsoring agency. Enrollment restricted to graduate students.

FMST 297F - Independent Study (2)

Independent study and research under faculty supervision. Students submit petition to sponsoring agency. Enrollment is restricted to graduate students.

FMST 299A - Thesis Research (5)

Prerequisite(s): advancement to candidacy. Enrollment restricted to graduate students.

FMST 299B - Thesis Research (10)
