2018-19 GENERAL CATALOG

The UCSC General Catalog is no longer available in print. Past years' catalogs are archived online in pdf format beginning with the 2003-04 edition. Printed catalogs prior to 2003-2004 are available in the Office of the Registrar.

Revised: 07/15/18
Welcome to UC Santa Cruz. This campus is an extraordinary place for students to pursue their interests and discover their passions.

Ranked among the top in the world for research influence, UC Santa Cruz is home to faculty whose pioneering work is recognized around the world; professors here are charting new directions and changing paradigms. For students—undergraduate and graduate—this means you will be learning from and working alongside people who are the best in their fields. You will be partnering with scholars, scientists, artists, and engineers whose own quest for knowledge is as alive today as when they were undergraduates.

And what a place to learn! This campus is one of the most beautiful in the country, with redwood forests, grassy meadows, and oak-studded hills affording unparalleled views of the Monterey Bay. The setting will inspire and renew you, and our campus facilities will support your intellectual and physical development.

When UCSC first welcomed students to campus in 1965, they were greeted by the motto of Cowell College: The pursuit of truth in the company of friends. That motto resonates today on a campus where faculty and staff are dedicated to student success. Our 10 residential colleges provide small living and learning communities that offer leadership opportunities, extracurricular activities, and social engagement, recognizing that these years are not solely about learning. Be sure to try new things, whether in student government, on the soccer field, or on the stage.

I welcome you to UC Santa Cruz and look forward to having you become a part of our story.

Sincerely,

GEORGE BLUMENTHAL

Chancellor

Revised: 07/15/18
This catalog contains the basic information about UC Santa Cruz. A complete list of academic programs and concentrations, both graduate and undergraduate, appears in the Fields of Study.

The next part of the catalog is divided into sections describing various aspects of the campus: undergraduate admission and financial information, the undergraduate academic program (including advising and support services), graduate education (including information on graduate student admission, expenses, and financial support), research programs and facilities, and the 10 residential colleges and student life.

The academic programs and courses offered at UC Santa Cruz are described in detail in the programs and courses section. The listings are alphabetical, with appropriate cross-references.

The University of California administration, and the Santa Cruz campus administrative staff appear in the administration section.

The catalog constitutes the campus's document of record. While every effort is made to ensure the correctness and timeliness of information contained in this catalog, changes are likely to occur after publication. On an ongoing basis, the university is examining ways to bring the greatest possible efficiency to the delivery of its programs and curricula. This process may result in changes in services, teaching and administrative staff, and curricula and courses that could not be reflected in this catalog, which was prepared well in advance of the 2018-19 academic year. Updates to course information are available in the quarterly Schedule of Classes and the Class Search. (Additional websites are referenced throughout this catalog. However, they are maintained by individual units and may not reflect approved general information, curricula, or course information.) In addition, several publications are available that include detailed information about specific subjects such as graduate programs, housing, and financial aid.

It is the responsibility of the individual student to become familiar with the announcements and regulations of the university that are printed in this catalog and other campus publications. The catalog is the document of record for major and program requirements. It is updated annually.

Revised: 07/15/18
The University of California opened its doors in 1869 with just 10 faculty members and 38 students, and it has since developed into one of the world's most distinguished university systems. Acclaimed for its research, scholarship, and dedication to undergraduate and graduate education, the UC system improves the lives of people in California and around the world through world-class educational opportunities, groundbreaking research, top-rated health care, and agricultural expertise.

Ten University of California campuses are located regionally throughout the state, and the system also includes five medical centers, three national laboratories, and more than 800 associated research institutes, laboratories, agricultural field stations, and extension centers.

The University of California includes more than 238,000 students and more than 190,000 faculty and staff. More than 1.7 million UC alumni live and work around the world. UC faculty have won 62 Nobel prizes and 67 National Medals of Science. UC academics include more than 580 members of the National Academy of Sciences and more than 500 members of the American Academy of Arts and Sciences.

Established in 1965, the University of California, Santa Cruz, is dedicated to excellence in undergraduate education, graduate studies, and research. Named to the 2017 US News & World Report top 50 Best Global Universities list, the campus has earned national and international recognition both for the impact of its research and for its long-established commitment to quality undergraduate instruction. UC Santa Cruz combines the facilities and resources of a world-class public research university with a distinctive undergraduate experience characterized by our college system. A strong program of general education is enhanced with opportunities for academic specialization and original research, and UC Santa Cruz also provides unparalleled opportunities for students to learn through hands-on experience. Strong commitments to environmental stewardship and community engagement are also central to the campus's core values.

Fall enrollment for the 2017-18 academic year was 19,457 students, of whom 1,880 were graduate students. UC Santa Cruz seeks and welcomes students, faculty, and staff of diverse ethnic and cultural experiences and is dedicated to enrolling a student body that reflects the state's ethnic and socioeconomic diversity. UC Santa Cruz is a Hispanic Serving Institution member of the Hispanic Association of Colleges and Universities, with approximately 28 percent of undergraduates identifying as Hispanic or Latino (fall 2017).

The UC Santa Cruz faculty includes two of the University of California's honored University Professors, 22 members of the American Academy of Arts and Sciences, 10 members of the National Academy of Sciences, and 34 members of the American Association for the Advancement of Science. Three faculty members, three bachelor's degree recipients, and two Ph.D. recipients have been named MacArthur Fellows. UCSC faculty and researchers regularly receive more than $100 million annually in external funding, with funding in contracts and grants totaling $686 million over the past 5 years.

The 10 residential colleges are supportive living and learning communities that characterize the UC Santa Cruz experience. All undergraduate students, whether they live in university housing or not, are affiliated with one of colleges. Self-contained and architecturally distinct, each college is a relatively small community of 30 to 110 faculty members and between 1,500 and 1,800 students, about half of whom live on campus. In addition to housing students in small-scale residential communities, each college provides academic support, organizes student activities, and sponsors events that enhance the intellectual and social life of the campus.

Each college has a distinctive quality derived from its core course and extracurricular programs and from its faculty fellows and their academic disciplines. However, all of the colleges are interdisciplinary, and all academic majors are open to students from all colleges. Detailed descriptions of the 10 colleges can be found in The Colleges section of the catalog.

Undergraduate education. The campus offers more than 65 undergraduate majors in the arts, engineering, humanities, physical and biological sciences, and social sciences—as well as interdisciplinary major programs and minors. A complete list of academic programs and concentrations appears on the Fields of Study chart, and detailed descriptions begin in the Programs and Courses section of the catalog.

The major and minor programs are administered by departments within the academic divisions. In most cases, departments are composed of faculty in the same field, but interdisciplinary programs draw on faculty from several fields.

Undergraduate education at UC Santa Cruz is focused on student success. The college core courses give first-year students a small-seminar experience,
The Humanities Institute is a hub for academic research, cross-discipline collaboration, and public engagement that oversees a range of topical centers, including the Center for Cultural Studies, the Center for Jewish Studies, the Center for Public Philosophy, the Linguistics Research Center, and the Dickens Project. Research enterprises within the arts benefit from the Arts Research Institute and the Center for Documentary Arts and Research, while the Institute of the Arts and Sciences emphasizes interdisciplinary exhibitions, events, and residency programs. The Center for Agroecology and Sustainable Food Systems, the Center for Integrated Spatial Research, the Chicano/Latino Research Center, and the Science & Justice Research Center provide pioneering directions for research in the social sciences.

Engineering at UC Santa Cruz has focused on strategic initiatives that include the UC Santa Cruz Genomics Institute, the Institute for the Biology of Stem Cells, the Center for Games and Playable Media, and the Center for Sustainable Energy and Power Systems. Beyond these organized research enterprises, UC Santa Cruz has a wide suite of investigator-driven research that spans the width and breadth of campus inquiry. For additional information see Resources for Learning and Research.

**Location and facilities.** The main UC Santa Cruz campus occupies 2,000 acres on the west side of the city of Santa Cruz, on Monterey Bay, about 75 miles south of San Francisco and 35 miles southwest of San José. Expansive meadows at the campus entrance gradually slope up to a redwood forest that covers most of the site. Each residential college is within easy access of the campus's central core, which includes library facilities, science laboratories, lecture halls, art studios, theater arts and music centers, a student union, and athletic facilities.

Although the campus is spread out over many acres of hilly terrain, its programs are accessible to people with mobility impairments (see Disability Resource Center).

The UC Santa Cruz Coastal Science Campus, located on the edge of the Monterey Bay National Marine Sanctuary, provides extensive research and education facilities focused on marine and environmental sciences.

**The city of Santa Cruz** is a well-known recreational area and center for the arts. Mild weather, miles of beaches, and many cultural opportunities combine to make Santa Cruz an enjoyable place to study and live.

**Accreditation.** The University of California, Santa Cruz, is accredited by the Accrediting Commission for Senior Colleges and Universities of the Western Association of Schools and Colleges (WASC), 985 Atlantic Avenue, Suite 100, Alameda, CA 94501, (510) 748-9001, an institutional accrediting body recognized by the Council for Higher Education and the U.S. Department of Education.

Specific degree programs at UC Santa Cruz are also accredited: The Engineering Accreditation...

**Combined majors.** In addition, students may complete a combined major leading to a B.A. degree in a number of designated fields. Combined majors currently available include those in Earth sciences/anthropology, economics/mathematics, environmental studies/biology, environmental studies/Earth sciences, environmental studies/economics, Latin American and Latino studies/politics, and Latin American and Latino studies/sociology. Students also have the option of pursuing a double major.

- c = concentration, or emphasis, within a program. Some programs give students the option of following a general course of study or selecting a concentration; other programs require students to choose a concentration. Consult the program on the page indicated.

1. A five-year contiguous bachelor’s/master’s pathway is available coordinating existing bachelor’s degrees in computer engineering, robotics engineering, electrical engineering, and computer science and the M.S. in computer engineering.

2. A five-year contiguous bachelor’s/master’s pathway is available coordinating the existing bachelor’s degree and master’s degree in computer science.

3. A Master of Fine Arts (M.F.A.) degree is awarded in digital arts and new media and social documentation.

4. Because California state law requires prospective teachers to earn a bachelor’s degree in an academic discipline other than education, no undergraduate major is offered. All teaching credentials are earned postbaccalaureate. UCSC offers the professional clear Cross-cultural, Language, and Academic Development (CLAD) (CLAD) and Bilingual Cross-Cultural, Language and Academic Development (BCLAD) multiple subjects credentials, which are used in self-contained elementary classrooms (K-6) where all subjects are taught by the same teacher. UCSC also offers the CLAD and BCLAD single subjects credentials, which are used in departmentalized settings where the teacher is responsible for one subject (7-12).

5. A five-year contiguous bachelor’s/master’s pathway is available coordinating the existing bachelor’s degree and master’s degree in linguistics.

6. An intensive major is also available.

7. A five-year contiguous bachelor’s/master’s pathway is available coordinating an existing bachelor’s degree from within the chemistry or biology programs (majors administered by the departments of MCD Biology, EE Biology, Chemistry and Biochemistry, and Biomolecular engineering) and the M.S. in microbiology and environmental toxicology.

8. A B.M. degree in music also available. A Doctor of Musical Arts (D.M.A.) degree in composition is also available.

9. A five year contiguous bachelor’s/master’s pathway is available coordinating the exiting bachelor’s and master’s degree in philosophy.

10. A five-year contiguous bachelor’s/master’s pathway is available coordinating the existing bachelor’s degree and master’s degree in physics. Students in the B.S./M.S. path can pursue concentrations in material and device physics, energy and the environment, computational physics, and medical biophysics.

11. A five-year contiguous bachelor’s/master’s pathway is available coordinating existing bachelor’s degrees in mathematics, computer science, robotics engineering, physics, applied physics, and applied physics (astrophysics) and the M.S. in scientific computing and applied mathematics.

12. A five-year contiguous bachelor’s/master’s pathway is available coordinating the biomolecular engineering and bioinformatics bachelor’s degree (bioinformatics concentration) with the master’s degree.
13. A five-year contiguous bachelor's/master's pathway is available coordinating the existing bachelor's and master's degree in mathematics.

**Degrees**

B.A. = Bachelor of Arts  
B.M. = Bachelor of Music  
B.S. = Bachelor of Science  
D.M.A. = Doctor of Musical Arts  
Ed.D = Doctor of Education  
M.A. = Master of Arts  
M.F.A. = Master of Fine Arts  
M.S. = Master of Science  
Ph.D. = Doctor of Philosophy
Undergraduate admission to the University of California is based on multiple academic factors, as well as on personal achievements. The university has minimum admission qualifications, which are the same for each of the UC campuses, but when the number of minimally qualified applicants exceeds a campus's capacity for admission, additional faculty-approved selection criteria are applied.

If you are considering applying to UC Santa Cruz, the Office of Admissions wants to help you learn more about the campus, its distinctive educational programs, and its selection process for both first-year and junior-level transfer applicants. For more information, see Undergraduate Admissions.

If you are able to visit the campus, you may wish to take a student-led tour. The Office of Admissions offers tours on weekdays, and reservations are required. See Campus Tours for information and tour reservations. You can also visit UC Santa Cruz through our Virtual Tour of the campus offered in multiple languages.

The Undergraduate Admissions Office also offers Transfer Information Sessions for junior-level transfer students. For session information and reservations, please see Transfer Information Sessions.

The University of California, Santa Cruz, continues to take positive steps to increase the diversity of the student population, including applicants coming from low socioeconomic backgrounds, students with disabilities, current members of the military, military veterans, and non-traditionally aged students. In addition, the campus welcomes students from throughout the U.S. and the world. The university does not discriminate on the basis of race, color, national origin, religion, sex, gender identity, pregnancy (pregnancy, childbirth, and medical conditions related to childbirth), disability, age, medical condition (cancer-related), ancestry, marital status, citizenship, sexual orientation, or status as a military veteran or special disabled veteran in admission to or participation in its programs, activities, or services.

Educational Opportunity Programs at UC Santa Cruz are designed to encourage students from educationally and/or economically disadvantaged backgrounds to succeed in their educational pursuits. For a description of these programs, see Educational Opportunity Programs.

Admission by Exception. Admission by Exception is granted to a very small percentage of applicants who do not meet UC requirements. Such factors as academic accomplishments in light of a person's life experiences and/or special circumstances, socioeconomic background, special talents and/or achievements, contributions to the community, and the applicant's answers to the Personal Insight Questions are taken into consideration.

Campus Safety. UC Santa Cruz campus crime statistics can be viewed in the annual Clery Report, available at the UC Santa Cruz Police Department website.

Graduation rates. The following graduation-rate information is listed in compliance with the 1990 Title I: Federal Right-to-Know Act, Section 103. Fifty-two percent of the students who entered as first-year students in 2013 graduated in four years; 71 percent of those who entered in 2012 graduated in five years; and 77 percent of those who entered in 2011 graduated in six years. These graduation rates are well above the national averages. Among the most recent entering cohorts, those who entered as first-year students took an average of 4.4 years to graduate, and students transferring to UCSC as juniors averaged 2.5 years.

In accord with the Education Amendments of 1976, Section 493A, more detailed information regarding retention is available at the Institutional Research website.

ADMISSION PROCEDURES

The University of California Application for Undergraduate Admission and Scholarships becomes available beginning August 1 for the following academic year. Students may access applications online.

In addition to the application, the above site includes a wealth of information for prospective UC students about undergraduate education, admission, financial aid, and various topics of interest.

APPLICATION FILING PERIODS

Applications for the fall quarter must be submitted during the month of November and applications for winter quarter admission are accepted only for transfer students in certain majors. Check the Office of Admissions in mid-June to see details on winter quarter admission. UCSC does not accept applications for spring quarter admission.

APPLICATION FEES

The application fee is $70 ($80 for international nonimmigrant applicants) to apply to one campus of the University of California. For each additional campus you select, you must pay an extra $70 fee ($80 for international nonimmigrant applicants). These fees are subject to change and are not refundable. The online application includes payment instructions.

FEE WAIVERS

The University of California will waive application fees for up to four campuses for certain students who otherwise would be unable to apply for admission. To qualify for the fee waiver, you must meet specific requirements related to your family income and size. The fee waiver is for U.S. citizens and permanent residents only. We encourage students who qualify for a fee waiver to take full advantage of the fee waiver by applying to the maximum of four UC campuses.

Students who qualify for fee waivers and who select more than four campuses must pay $70 for each additional choice. Methods of obtaining fee waivers are listed below.

An online fee waiver form is available to applicants when they apply. The application automatically determines if you are eligible for the fee waiver as soon as it is complete.

High school students: Use the College Board fee waiver. It is available from your school counselor.

EOPS community college students: If you are enrolled in Extended Opportunity Programs and Services (EOPS) at a California community college, obtain a fee waiver authorization from the EOPS Office.

ADMISSION AS A FIRST-YEAR STUDENT (FRESHMAN)

The university considers you a freshman applicant if you have graduated from high school and have not enrolled in a regular session at any college or university. If you attend a summer session immediately after graduating from high school, you are still a freshman applicant.

The admission and selection process to UC Santa Cruz reflects the academic rigor and preparation needed for admission to a major research institution. Meeting the minimum qualifications for the university does not guarantee you admission as a freshman. Students are encouraged to achieve well beyond the minimum qualifications to enhance their chances for selection.

UC Santa Cruz uses a holistic approach in selecting freshmen for admission. Applicants are thoroughly reviewed to determine the full spectrum of their academic and personal achievements, viewed in the context of their academic and personal opportunities. UCSC uses 14 faculty-approved criteria to determine an individualized, single score for each applicant.

Information regarding the admission and selection process for UC Santa Cruz can be accessed at admissions.ucsc.edu. This site provides information on the minimum qualifications for the University of California for both residents and nonresidents of California, including international students (see also Admission of Students from Outside California and Admission of International Students).

HIGH SCHOOL PREPARATION FOR UNIVERSITY WORK

Carefully planned high school coursework provides you with the best preparation for your undergraduate university studies, and allows for advanced preparation for your chosen field of study. Most important, students who master certain basic knowledge and skills in high school substantially increase their chances of success at the university. (Requirements for transfer students are explained in the Admission as a Transfer Student section.)

The basic foundation of UC qualifications is the completion of college preparatory courses required for admission (see “a–g” Subject Requirements below). However, you should take courses beyond the minimum levels in reading, writing, and mathematics in order to be adequately prepared for basic university courses that you may be expected to take freshman year.

A well-prepared student will have mastered the equivalent of four years of English composition and literature with a focus on expository writing four years of mathematics, including a precalculus course in the senior year; two to three years of a language other than English; two to three years of laboratory science; two or more years of history and social sciences; and one or more years of visual or performing arts.

You should also give careful thought to the general field of study, and perhaps the specific major, you want to pursue at the university. By making this decision in advance, you can plan to take additional courses in high school related to the field.

Subject Requirements

a. History/social science—two years required.

Two years of history/social science, including: one year of world or European history, cultures and geography (may be a single year-long course or two one-semester courses), and one year of U.S. history (or one-half year of U.S. history and one-half year of civics or American government).
Senior-Year (12th-Grade) Program. The senior year should be used to prepare you for your first year at the university and should include honors and advanced courses, as well as courses that will strengthen overall preparation. A challenging, successfully completed senior-year program is a natural bridge between high school and university coursework in the intended major. A strong senior program is one of the selection criteria used at UC Santa Cruz.

HIGH SCHOOL PROFICIENCY EXAMINATION

While the University of California expects all freshman applicants to have graduated from high school/secondary school, in lieu of the regular high school diploma (or its equivalent), the university will accept the following:

- Certificate of Proficiency, awarded by the State Board of Education upon successful completion of the California High School Proficiency Examination
- General Educational Development (GED) Certificate
- Proficiency tests from other states and other countries

TRANSFER CREDIT

Transfer credit may be granted to a freshman applicant for acceptable college courses taken while still in high school if an official transcript is received from the college where the coursework was completed.

Transfer credit is granted for specified College Board Advanced Placement Examinations completed with a score of 3, 4, or 5 and for specified International Baccalaureate Higher Level Exams completed with a score of 5, 6, or 7. A score of 30 or higher on the International Baccalaureate Diploma is also awarded transfer credit.

Transfer credit is granted for specified GCE and Hong Kong A-Level Examinations.

Students should be advised that college courses taken before or after attending UCSC may duplicate AP, IB, and/or A-Level Examinations. Additionally, exams may duplicate each other (for example, an AP or IB exam in the same subject area). If the student does duplicate an exam with another exam of the same subject content, and/or an exam with a college course, UCSC awards credit only once.

ADMISSION AS A TRANSFER STUDENT

The University of California defines a transfer applicant as a student who has been a registered student in a college or university, or in college-level extension classes following high school graduation. Summer session attended immediately following high...
school graduation is excluded in this determination. If you are a transfer applicant, you cannot disregard your college record and apply for admission as a freshman.

The admission and selection process for transfers to UC Santa Cruz reflects the academic rigor and preparation needed for admission to a major research institution. Meeting the minimum qualifications for the university does not guarantee you admission as a transfer student. It is expected that students will have completed the lower-division courses required by their intended major prior to transfer. See Major Preparation Selection Criteria for an annual listing of all majors that require specific courses/grades prior to transfer to UCSC.

Transfer applicants are thoroughly reviewed to determine their full spectrum of academic and personal achievements, including transfer coursework completed for their intended major. UCSC uses faculty-approved criteria to determine which transfer students will be selected for admission. UC Santa Cruz gives the highest priority to junior-level transfer students coming from California community colleges.

Information regarding the admission and selection process for UC Santa Cruz can be accessed at the Undergraduate Admissions website. This site provides information on the minimum qualifications for the University of California for students in California, in other states, and outside the U.S.

**UC SANTA CRUZ TRANSFER ADMISSION GUARANTEE (TAG) PROGRAM**

UC Santa Cruz’s TAG (Transfer Admission Guarantee) Program is designed for California community college transfer students at the junior level. The benefits of participating in UCSC TAG include informational mailings, and invitations to events. All California community colleges participate in the UC Santa Cruz TAG program.

The UC TAG application must be submitted online between September 1 and September 30 for the following fall quarter. UCSC accepts transfer admission agreements for fall quarter only. Further information may be found at Transfer Admission Guarantee (TAG) Program.

**UC TRANSFER ADMISSION PLANNER (TAP)**

The UC Transfer Admission Planner is an online tool designed to help prospective UC students transferring from California community colleges track and plan their coursework, including those students who are seeking a Transfer Admission Guarantee (TAG) with one of the seven participating UC campuses.

Further information may be found at UC Transfer Admission Planner.

**CREDIT FOR COURSES TAKEN ELSEWHERE**

The university gives unit credit to transfer students for courses they have completed at other accredited colleges and universities, including courses taken at recognized institutions outside of the U.S. To be accepted for credit, your courses must be comparable to those offered at the university, as determined by the UC Santa Cruz Admissions Office. The UC Santa Cruz department sponsoring your major decides which transfer courses may be used to satisfy major requirements.

A total of 70 semester units (105 quarter units) of lower-division credit toward a university degree may be earned at other colleges/universities. Only subject credit will be granted for courses taken in excess of that cap. Please note that credit from another University of California campus is exempt from this limitation.

Applicants will not be considered for admission if they have completed 90 semester units (135 quarter units) or more of UC–transferable upper-division and lower-division combined credit. If students have earned all of their credits as lower-division credits, they are not affected by this limit. All coursework completed at California community colleges is considered lower division. Advanced Placement (AP) or International Baccalaureate Higher Level (IBH) credit is permitted to exceed the 90-semester unit maximum by the number of AP or IBH units granted.

Opportunities to take courses at UC Santa Cruz as a nonmatriculated student are available through Summer Session, Open Campus/Concurrent Enrollment through UC Extension, and Intersegmental Cross-Enrollment.

**UC SANTA CRUZ TRANSFER SERVICES**

The Office of Admissions provides information to all students who wish to transfer to UC Santa Cruz. For prospective transfer students and their families, the Office of Admissions offers Transfer Information Sessions. Transfer Information Sessions are small-group meetings in which an Admissions adviser presents information about transfer admissions matters and transfer-related student services. Please note that pre-evaluations of transcripts are not available as part of the sessions. These sessions are designed for students who have not yet applied to UCSC. Students and their families may make reservations at Transfer Information Sessions.

Student-led guided tours take place year-round and also require advance reservations. Please see Undergraduate Admissions website to make a reservation.

In addition, UC Santa Cruz Admissions counselors visit many community colleges in California. Check with your counseling department or transfer center to determine whether a UCSC counselor will be visiting your community college.
Undergraduate Admission

The UC Santa Cruz Transfer Preparation Program (TPP) supports prospective transfer students from California community colleges and assists them in enrolling at UC Santa Cruz, as well as at other campuses. TPP Admissions representatives work most closely with students who are attending one of the 13 community colleges in the region to plan a successful transfer program, but will assist any California community college student who has questions.

The Transfer Preparation Program also collaborates with programs and initiatives that strengthen the transfer process and support individual students in making a successful transition to a four-year institution.

Further information may be found at Transfer Preparation Program.

ADMISSION OF U.S. STUDENTS FROM OUTSIDE CALIFORNIA

UC Santa Cruz welcomes students from across the U.S. to enhance our vibrant campus community. Out-of-state applicants must meet the same admission qualifications as California students, but with a higher GPA. Detailed information for UC Santa Cruz is provided at Out-of-State Students. Information for all 10 general campuses of the University of California can be viewed at University of California Admissions.

Students who are not California residents are assessed nonresident tuition in addition to educational and registration fees. Residency for fee purposes is determined after admission based on documentation provided in a Statement of Legal Residency. See California Residence for Tuition Purposes.

For more information about undergraduate out-of-state admissions, please see Out-of-State Students or email outofstateadmissions@ucsc.edu.

ADMISSION OF INTERNATIONAL STUDENTS

The University of California welcomes students from countries throughout the world to enhance our vibrant campus community. The academic credentials of applicants from other countries are evaluated by Admissions specialists in accordance with UC faculty-approved regulations governing admission.

UC Santa Cruz accepts applications from international students for the fall quarter, and students should begin application inquiries a year before the quarter of desired admission. Openings for the winter quarter may be limited. If you are interested in applying for winter, check with the Office of Admissions. For information, write to internationaladmissions@ucsc.edu or the Office of Admissions, University of California, Santa Cruz, 1156 High Street, Santa Cruz, CA 95064.

If your native language is not English, you must certify proficiency in English by one of the following methods: earning a score of 80 or higher on the Internet-based Test of English as a Foreign Language (a minimum score of 550 on the paper-based TOEFL), or earning a minimum score of 6.5 on the International English Language Testing System (IELTS) exam, earning a score of 560 or higher on the Writing section of the SAT, or completing two transferable English composition courses with grades of B or higher in a U.S. college or university.

A financial certificate and official academic records will be required if you are admitted to the university. Generally, nonimmigrant students must provide documentation that sufficient funds will be available to cover nonresident tuition, educational fees, and living expenses. The university does not offer need-based financial assistance to international students.

For more information about undergraduate international admissions, please see International Students or email internationaladmissions@ucsc.edu.

For information about services for international students, see the Global Engagement Office website.

READMISSION

If you are an undergraduate who wants to return to UC Santa Cruz after an absence of a portion of a quarter or more, you must file an Application for Readmission. The application form is available online at advising.ucsc.edu/student/read. The completed application should be filed with the Office of Admissions during the appropriate period:

<table>
<thead>
<tr>
<th>Quarter of Attendance</th>
<th>Application Filing Period</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fall quarter</td>
<td>November 1–April 1</td>
</tr>
<tr>
<td>Winter quarter</td>
<td>July 1–October 1</td>
</tr>
<tr>
<td>Spring quarter</td>
<td>October 1–January 2</td>
</tr>
</tbody>
</table>

Note: There is a $70 filing fee, which is nonrefundable and nontransferable. The filing fee will be billed to your student account; you are responsible for this fee even if you do not return to UCSC.

If during your absence you attended another UC campus, an official transcript must be submitted to the Office of Admissions before your application will be sent to your college for approval. If you attended another collegiate institution, your UC Santa Cruz college may require a transcript. If you left for health reasons, clearance from the Cowell Student Health Center is required. You must pay all outstanding bills owed to the university before you will be permitted to register.

ADMISSION TO SPECIAL CATEGORIES

Admission to either of the categories described below is at the sole discretion of UC Santa Cruz, and only
Undergraduate Admission

when enrollment allows. Students seeking their first undergraduate degrees have priority over students who have already earned an undergraduate degree. For information on applying for admission in the categories described below, please contact the Office of Admissions at admissions@ucsc.edu.

SECOND BACHELOR’S DEGREE

If your educational goals have changed substantially since receiving your bachelor’s degree, you may be eligible to pursue a second undergraduate degree at UC Santa Cruz. Applications from students interested in pursuing a second baccalaureate program will be considered as campus enrollment allows. Priority is given to applicants who have not yet had the opportunity to complete a bachelor’s degree.

You must meet regular university admission qualifications, and your experience or previous scholarship record must show potential for academic success in your proposed area of study. Additional selection criteria will be applied, and admission is subject to approval by the appropriate department.

For a second degree, you must fulfill major and residence requirements, as well as UC systemwide requirements in American History and Institutions and the Entry Level Writing Requirement. You must enroll for at least three quarters and are usually restricted to six quarters total.

LIMITED STATUS

If you have already completed an undergraduate degree and you have a particular reason to take specific undergraduate university classes, you may be eligible to enroll in a non-degree program as a limited-status student. Applications from students interested in limited-status enrollment are permitted as campus enrollment allows. Priority is given to applicants who have not yet had the opportunity to complete a bachelor’s degree.

Your proposed program of study must either prepare you for graduate or professional school or satisfy some definite educational need or interest. Participants generally enroll full-time for a specified period that does not exceed three quarters. You must meet regular university admission qualifications, and your experience or previous academic record must show potential for success in your proposed program. Additional selection criteria will be applied, and admission is subject to approval by the appropriate department.

The University of California, in accordance with applicable federal and state law and university policy, does not discriminate on the basis of race, color, national origin, religion, sex, gender, gender identity, gender expression, pregnancy, physical or mental disability, medical condition (cancer related or genetic characteristics), genetic information, ancestry, marital status, age, sexual orientation, citizenship, or service in the uniformed services. The university also prohibits sexual harassment.

This nondiscrimination policy covers admission, access, and treatment in University programs and activities.

Inquiries regarding the University’s student-related nondiscrimination policies may be directed to Conduct and Community Standards, (831) 459-1738, or email conduct@ucsc.edu.

Inquiries regarding the University’s affirmative action, equal employment opportunity, nondiscrimination, and harassment policies as they relate to student employment may be directed to the Office for Diversity, Equity, and Inclusion, (831) 459-3676 or email cbene@ucsc.edu.

Inquiries regarding the UC Policy on Sexual Violence and Sexual Harassment and UC Santa Cruz Procedures for Reporting and Responding to Reports of Sexual Violence and Sexual Harassment and/or any other violations of Title IX (sex/gender discrimination; harassment or discrimination based on sexual orientation, gender identity, gender expression, or pregnancy) may be directed to Title IX Officer Cherie Scricca, (831) 459-2462, or email cscricca@ucsc.edu.

Student inquiries regarding disability or disability accommodations may be addressed to the Director, Disability Resource Center, (831) 459-2089; or email drc@ucsc.edu.

Students with disabilities who are unable to resolve accommodation or discrimination concerns may contact the campus ADA Compliance Officer by phone, (831) 459-4380, or email ashish@ucsc.edu.

1. Pregnancy includes pregnancy, childbirth, and medical conditions related to pregnancy or childbirth.

2. Service in the uniformed services includes membership, application for membership, performance of service, application for service, or obligation for service in the uniformed services.

Revised: 07/15/18
IN EXPENSES

In determining the cost of attending UC Santa Cruz each quarter, students should consider both required fees and personal expenses. The figures below are provided to help you draw up a realistic personal budget. If you then conclude you will need financial assistance in order to attend UCSC, you should read the Financial Aid section below. Fees and additional financial information for graduate students appear in the Graduate Studies section. Tuition, fees, and other charges are subject to change without notice by the UC Regents. For the most current fee information, check Undergraduate Student Fees.

REQUIRED FEES

Required fees are due and payable before the start of each quarter. At the beginning of each quarter, you will need sufficient funds to cover tuition and fees, housing, books and supplies, and UC student health insurance (waivable). For many financial aid recipients who are enrolled at least half time, tuition and fees on the student account are paid automatically with approved student aid funds. If you are a financial aid recipient, please note that checks and direct deposits for scholarships, grants, and loans in excess of university charges are not available to you until after the first day of instruction each quarter.

The Student Services Fee funds student services that provide a supportive and enriching learning environment and that are complementary to, but not part of, the instructional program. Programs include, but are not limited to, services related to the physical and psychological health and well being of students; social and cultural activities and programs; services related to campus life; and educational and career support.

Tuition helps support student financial aid and related programs; administration; libraries; operation and maintenance of facilities; the university’s operating budget; and all costs related to instruction, including faculty salaries.

Santa Cruz Campus Fees help support a wide range of student services, including college and campuswide student government, extracurricular programs and recreation facilities, campus child care, community and public service projects, Educational Opportunity Programs and scholarships, and free-fare use of the local transit systems. Campus fees paid by graduate students are provided at Student Fees.

In addition, all students, including international students, are assessed a mandatory Health Insurance Premium. The Cowell Student Health Center provides the primary care services for the plan while a contracted insurance company provides major medical and hospitalization insurance. Dependent coverage is also available. Detailed information is available at the Health Center website or at the Student Health Insurance Office, (831) 459-2389.

Waivers from the mandatory health insurance premium are available if you can show that your private insurance provides coverage equal to or better than the student health insurance plan. Deadlines for applying for a waiver are listed in the Schedule of Classes.

Some courses charge an additional Course Materials Fee. These fees recover the cost of materials, supplies, equipment, and support services not covered by the normal instructional budget. The fees are reviewed and approved annually by the Miscellaneous and Course Materials Fee Advisory Committee. The list of specific courses charging fees in 2018–19 is available in the quarterly Schedule of Classes and on the web at Course Fees.

NONRESIDENT TUITION

If you are a resident of a state other than California or of another country, you must also pay nonresident tuition, the nonresident educational fee, and other required fees (university registration and Santa Cruz campus fees). The criteria for residency appear in Appendix A.

Non–U.S. citizens note: Regardless of how long you live in California, only U.S. citizens and holders of immigrant visas may become qualified for resident classification.

**Subject to change based on state appropriation and UC Board of Regent’s approval**

a) Undergraduates who are unable to maintain a full-time program of study because of employment responsibilities, family obligations, or health problems may be eligible for a 50 percent reduction in tuition. One quarter at $1,917; two quarters at $3,834.

b) Estimated personal expenses for students living off campus total $5,443 per quarter or $16,329 for three quarters. Estimated personal expenses for students living with family total $3,551 per quarter or $10,653 for three quarters.

**LATE FEES**

You may be assessed late fees if you fail to make university payments or enroll by the specified deadlines. For example, late fees are assessed on a graduated basis for each month there is an unpaid balance on your university account. Late fee amounts of $50 each are assessed for a late registration payment and/or late enrollment, $25 for a late housing payment, and $12.50 for miscellaneous fees. Deadlines are published in the Schedule of Classes, and they appear on the Statement of Account.

**ESTIMATED PERSONAL EXPENSES**

The figures given for estimated personal expenses are for a single undergraduate living on campus. Expenses will be higher for married students, students with children, and graduate students. The information is as current and as realistic as possible; however, expenses for students vary in accordance with lifestyles, priorities, and obligations.

**Room and board (in college residences).** Rates for room and board in the college residence halls depend on the type of accommodation and meal plan. The current rates may be found on the campus Housing Office website. The room and board amount of $15,384 in the Undergraduate Budget table above is the average cost for an on-campus student with the average meal plan and additional Flexi Dollars.

**Personal Expenses.** This budget item covers a broad range of expenses including clothing, laundry, personal grooming, recreation, and health maintenance. It also covers minimum expenses for modest travel to visit family.

**Rates are paid quarterly.** The rate ranges listed above do not cover periods of academic recess, nor does the budget above. Housing charges are normally payable at the beginning of each quarter. However, students may arrange with the Campus Housing Office to pay monthly.

**More detailed information** on room and board expenses for the individual colleges is available in the Undergraduate Housing Rates brochure distributed as part of the admission process or available from the Campus Housing Office, 104 Hahn Student Services Building, (831) 459-2394.

**FEE REFUNDS**

Students who cancel their registration before the first day of instruction in a given quarter are refunded all required fees minus a $10 service charge. New undergraduate students who cancel their registration before the first day of instruction are entitled to a refund of all required fees except the nonrefundable $250 undergraduate Statement of Intent to Register (SIR) Fee (applied toward the Student Services Fee).

Once the quarter has begun, students must petition for withdrawal. The percentage of fees refunded is determined by the effective date of the withdrawal,
Financial Aid

according to the schedule below. A student is not eligible for university services after the effective date of withdrawal.

A student entering the armed forces before the sixth week of the quarter is entitled to a full refund of the Student Services Fee—provided no course credit is received.

More detailed information on withdrawal and refund procedures is included in the quarterly Schedule of Classes and The Navigator, both online at the Registrar's website, and in the Graduate Student Handbook. Information on refunds of room and board charges is contained in the campus housing contract, provided to all applicants for on-campus housing. For more information on how withdrawing affects your financial aid, refer to the Financial Aid and Scholarship Office website at Financial Aid and Scholarships website.

* For new students, the nonrefundable $100 Undergraduate Statement of Intent to Register Fee is withheld from the University Registration Fee; the schedule of refunds applies to the balance of fees. Percentages listed (days 1–35 or days 1–42) should be applied individually to Nonresident Tuition, the Educational Fee, the University Registration Fee, and Santa Cruz campus fees. The Health Insurance Fee is nonrefundable.

---

**DEFERRED PAYMENT PLAN**

The Deferred Payment Plan (DPP) provides an alternative method of budgeting and paying registration fees. Fees not covered by scholarships, loans, or other financial aid, can be paid in monthly installments. Students have a choice of applying for a three-month plan for individual quarterly fees, or, at the beginning of the fall quarter only, for a nine-month plan to be used for the fall, winter, and spring quarters. A nonrefundable application fee of $25 for the three-month plan, or $60 for the nine-month plan, is billed to the student account upon receipt of the DPP application. Any student in good financial and academic standing may apply for DPP. Students receiving financial aid sufficient to cover registration fees in full are not eligible for this plan. For more information about how to apply for DPP, application deadlines, and campus policies regarding the program, contact the Office of Student Business Services, 203 Hahn Student Services Building, (831) 459-2107, email oarinfo@ucsc.edu, or visit the Student Business Services website.

**FINANCIAL AID**

The university maintains a robust financial aid program of grants, scholarships, loans, and part-time employment for undergraduate students who require
Financial Aid

financial assistance. The Financial Aid and Scholarships Office administers these resources to help bridge the gap between the cost of education and what parents and students can reasonably contribute.

If you are a dependent student, the contribution expected from you and your parents is determined through an analysis of your family’s financial strength, considering such variables as income, number of dependents, living expenses, and savings and investments (excluding your primary residence). Federal, state, and university policies and procedures are applied. The same analysis is used for married and independent students with the exception of parent information. The federal definition of an “independent student” is used to determine your dependency when you complete the Free Application for Federal Student Aid (FAFSA).

The UC Blue and Gold Opportunity Plan is a Financial Aid Initiative that ensures that undergraduate California residents whose families earn a total income less than $80,000, meet application deadlines, and who demonstrate enough financial need are guaranteed to receive gift aid from all sources to cover UC systemwide tuition and fees. Qualified students must be in their first four years of attendance (first two for transfer students).

No student will receive more scholarship and grant support than the calculated financial need. All sources of scholarship and grant awards (federal, state, institutional, and private sources, including outside agency scholarships) will count toward covering fees and meeting the Blue and Gold Opportunity Plan commitment. The majority of students who meet the income eligibility standard receive much more grant and scholarship funding than the plan covers.

In addition to the minimum funding under the Blue and Gold Opportunity Plan, undergraduates with sufficient financial need will receive additional grant support to help defray other educational expenses (e.g., books, living expenses, and transportation).

APPLICATION DEADLINES

The Free Application for Federal Student Aid (FAFSA) may be submitted online at the Federal Student Aid website or on or after Oct. 1 of the year prior to the academic year you wish to receive aid (e.g., Oct. 1, 2018 for applicants for fall 2019). Submit the FAFSA each year before the priority deadline of March 2 to be eligible for all types of aid. A “FAFSA on the Web Worksheet” is available at the same website to help you prepare for completing the FAFSA.

Students admitted for fall quarter will receive an estimated financial aid award in April. The Financial Aid and Scholarships Office may require additional documentation from applicants. These applicants will be sent an email instructing them to login to MyUCSC and view their “To Do List,” where required documents are requested (e.g., copies of student and parent tax returns or other forms). These documents must be received by the deadline on the “To Do List” for a student to be considered for all sources of aid administered by UC Santa Cruz. The deadline is June 2.

Conditional awards for admitted students may change as a result of the review of documentation. Applicants who submit verification documents after the deadlines will be considered for aid based on availability.

Students admitted for winter quarter must have submitted a FAFSA by their admission notification date. Items requested on your MyUCSC “To Do List” must be submitted by December 2. Award notifications will be made as soon as possible after you are admitted/readmitted and all requested financial aid documents are received.

TYPES OF AID

If you apply for financial aid and meet the application deadlines, you are considered for all types of aid described below. Based on your financial need, your financial aid package may include a combination of grants, scholarships, loans, and work opportunities.

GRANTS

- UC Santa Cruz Grants are awarded to students based on financial need.
- Cal Grant A & B (eligible California residents) are awarded by the California Student Aid Commission to California residents who meet eligibility requirements and who demonstrate financial need and academic achievement. In addition to submitting a FAFSA or Dream Application*, first time applicants must also complete and submit the Cal Grant GPA Verification Form no later than March 2. Cal Grant A and B awards pay Tuition and Student Services Fees at UC and were $12,638 for 2017-18. Cal Grant B Access awards are $1,670.

*Note: The passage of California Dream Acts—AB130 and AB131—extended eligibility for certain types of institutional and state aid to students, including undocumented students, who qualify for benefits under another California law—AB540—which exempts students from paying nonresident supplemental tuition. We refer to our students as “Dreamers” and encourage applying for financial aid using the CA Dream Application.

- Middle-Class Scholarship Grants are provided by the California Student Aid Commission to eligible California resident students with total family incomes under $171,000 and net assets less than $171,000. Grants are awarded on a sliding scale with a cap of 40 percent of systemwide tuition, after considering other forms of grant aid.
Financial Aid

- **Federal Pell Grants** are offered to eligible undergraduate students who demonstrate significant financial need based on the expected family contribution (EFC). Awards are variable depending upon the EFC; the maximum Pell Grant for 2018-19 is $6,095.

- **Federal Supplemental Educational Opportunity Grants** are awarded to undergraduate students who demonstrate significant financial need. These grants supplement the UC Santa Cruz Grant program. Students must meet application deadlines to be considered. The maximum award is $4,000.

SCHOLARSHIPS

- UC Santa Cruz Scholarships range from $250 to $10,000 per year. (The average award is about $1,500.) Funding comes from private donors, alumni, and the university. Entering UCSC students are considered for scholarships based on responses to scholarship questions on the UC Application for Undergraduate Admission. Your application essay will serve as your scholarship essay. Selected students are notified throughout the academic year. All continuing students are automatically considered for scholarships based on various factors including cumulative GPA.

- Regents Scholarships are the most prestigious merit scholarships awarded to undergraduates. Freshman Regent Scholars receive a total of $20,000 paid over four years. New junior transfers and continuing students selected in the junior year receive the Regents Scholarship for a total of $10,000 paid over two years. The scholarship amount varies for continuing students based on the year in college and year appointed.

- Other Scholarships: Some campus scholarships are restricted to students from particular geographic areas or family backgrounds, or are limited to students in particular majors, classes, or colleges. The donors have different reasons for giving, and their varied interests are reflected in the wide range of scholarships available. Merit and restricted scholarship awards range up to $5,000.

NEED-BASED LOANS

- Federal Perkins Loans are offered to first-year undergraduate students. Repayment begins nine months after a student falls below half time enrollment or graduates from the university. During repayment, the interest rate accrues at 5 percent annually.

- Federal Direct Subsidized Student Loans are funded by the federal government and can be borrowed up to the federal limits based on student status (please see Direct Loan Limit Chart below). Students pay an origination fee, 1.066 percent for loans accepted after September 30 for the 2017–18 academic year, which is deducted from the total accepted amount of the loan. Repayment begins six months after a student falls below half time enrollment. Interest rates for 2017–18 were fixed at 4.45 percent for undergraduate subsidized loans.

- CA Dream Loans are provided to eligible undocumented AB 540 undergraduates to help cover the cost of attending UC. The CA Dream loan program is funded by the state and UC, and aims to close that gap and provide eligible students with the opportunity to borrow student loans to help pay for their education. Repayment begins nine months after a student falls below half-time enrollment or graduates from the university. During repayment, the interest rate accrues at 5 percent annually.

NON-NEED-BASED LOANS

The following loans are available to both undergraduate and graduate students:

- **Federal Direct Unsubsidized Student Loans** are funded by the federal government and can be borrowed up to the federal limits based on student status (please see Direct Loan Limit Chart below). Unsubsidized loans are offered to students who do not demonstrate financial need or who have exhausted all need based aid. Interest accrues on unsubsidized loans from the date the loan is disbursed. The 2018–19 interest rates were fixed at 5.05 percent for undergraduate students and 6.6 percent for graduate students. The student pays an origination fee which is deducted from the total accepted amount of the loan. Students may begin repaying principal and interest on Federal Direct Unsubsidized Student Loans immediately, pay only interest immediately, or defer both principal and interest until they are no longer enrolled in school at least half time.

- **Federal Direct Parent Loans for Undergraduate Students (PLUS)**. Parents of dependent students can apply for a PLUS loan and may borrow up to the full cost of attendance as defined by the UCSC Financial Aid and Scholarships Office. Applicants must pass a modest credit check through the Department of Education for the loan to be approved. The 2018–19 interest rate after September 30 was fixed at 7.6 percent. Borrowers pay an origination fee of 4.248 percent that is deducted from the loan amount. Loan repayments begin 60 days after
Financial Aid

the last disbursement for the academic year (the last disbursement is typically the first day of spring quarter). Parents do have the option to defer payment, similar to the student's ability to defer on their Federal Direct loan above. See your loan servicer for more information.

Refers to students who answered "yes" to any dependency status question on the FAFSA. These loan limits also apply to dependent undergraduate students whose parents were denied a PLUS loan due to adverse credit history.

**OTHER LOANS**

The University of California develops and publishes lists of private lenders who offer the most favorable terms for UC borrowers. Lender lists may be found on UCSC’s Financial Aid and Scholarships website under Private Loans and are also available at www.elmselect.com.

**FEDERAL WORK-STUDY**

Federal Work-Study gives students who demonstrate financial need the opportunity to work part-time to earn money to help cover expenses while enrolled at UC Santa Cruz.

Some on-campus and community jobs are posted online at the Career Center website Career Center website. Not all campus jobs are posted with the Career Center. Another way to locate on-campus jobs is through networking. Examples include talking to students, staff, and faculty at your college, in your dorm and dining hall, and in the academic departments. The Career Center can help you with résumé writing and job-search strategies. Jobs are competitive, and this award does not guarantee a position.

**LOAN FORGIVENESS PROGRAMS**

The federal government will forgive all or part of a student loan under certain circumstances. Examples of these include performing volunteer work or military service and practicing medicine in certain communities. For a summary of such exemptions, visit the Federal Student Aid website.

**MORE INFORMATION**

For more information about applying for financial aid, rights and responsibilities, and document deadlines contact the Financial Aid and Scholarships Office at (831) 459-2963 or visit us at 205 Hahn Student Services Building.

**VETERANS BENEFIT SERVICES**

The Veterans Benefit Services staff in the Office of the Registrar serves as the VA Certifying Official and liaison with the U.S. Department of Veterans Affairs (VA) for students who as veterans, veterans’ dependents, or reservists receive education benefits. Students who are veterans or veterans’ dependents should contact the Veterans Benefit Services office as soon as they receive notification of admission to
Financial Aid

UCSC to ensure timely processing of their benefit claims.

The Veterans Benefit Services staff assists with the California Department of Veterans Affairs’ college fee-waiver program for dependents of veterans who have service-connected disabilities or who have died from service-related causes. California resident students may apply for the college fee-waiver program at their County Veterans Services Office. Claims for fee waivers should be presented to the university during the academic year for which the claim applies. Retroactive approval can be granted only in situations in which students applied for the exemption in a timely manner but approval was delayed by the VA’s processing of an original or reopened service-connected disability compensation claim. A copy of the initial denial letter and Disability Rating from the VA is required to document such circumstances.

Veterans Benefit Services is located at 190 Hahn Student Services Building. For more information, visit the Veterans Benefit Services website, call (831) 459-2709 or (831) 459-2910, or email vets_benefits@ucsc.edu.

During their transition to the university and while they are enrolled as UCSC students, military veteran students are provided a broad range of academic and support services by the Veterans Education Team Support (VETS) through Services for Transfer and Re-Entry Students (STARS). The Veterans Center is located at Kresge College right inside the entrance, off the main parking lot. Contact the VETS staff at (831) 459-1520, or send an email to vets@ucsc.edu, or visit the STARS website.

Revised: 07/15/18
PLANNING YOUR ACADEMIC PROGRAM

At UC Santa Cruz, the academic year is organized on the quarter system. Three quarters—fall, winter, and spring—constitute the regular academic year. Most UCSC courses are equivalent to 5 quarter credits and require approximately equal amounts of work: about 15 hours per week per course. You are normally expected to enroll in 15 credits each quarter; enrolling in a reduced or expanded course load requires special approval. If you maintain a B average at UCSC, you may enroll in more courses without special approval. For specific information on how courses are organized, see programs and courses.

You are normally expected to graduate in four years. To do so, you must pass an average of 45 credits per year, for a total of 180 credits. In order to complete certain majors with extensive course requirements, junior transfer students may need to spend more than two years at UC Santa Cruz.

The requirements for a bachelor’s degree are explained in the following section. Your adviser can help you plan a program that fulfills these requirements efficiently while meeting your own educational goals (see Advising: From Course Selection to Careers).

Here is what you can expect during four years at Santa Cruz:

During your freshman year, you complete your college core course and satisfy the Entry Level Writing Requirement. You also begin to take foundation courses for potential majors, along with courses that satisfy general education requirements.

If you are uncertain about your choice of major, you may intentionally explore different fields of study during your first two years at Santa Cruz by taking foundation courses that will help you both identify whether a major is a good fit for you and will satisfy prerequisites for declaring the major. You are expected to be declared in a major by the end of your second (sophomore) year; transfer students are expected to be declared in a major by the deadline in their second quarter at UCSC. Students interested in majors requiring heavy course prerequisites, such as music and most majors in the physical and biological sciences and engineering, should be certain they start the appropriate sequences in the first year; information is available through your major advising office.

During your junior and senior years at Santa Cruz, you concentrate on the upper-division requirements for your major and complete your comprehensive requirement, as well as complete your general education requirements. If you entered UCSC without having fulfilled the requirement in American history and institutions, you will need to do so before you graduate.

Transfer students should complete any lower-division requirements for their intended major that are offered at their current campus and should ensure they have completed any major preparation requirements for admission. Some students may also find it helpful to complete courses that fulfill campus general education requirements. The Office of Admissions can help you select appropriate courses, and you should also consult with your community college adviser.

GRADUATION REQUIREMENTS

To qualify for a bachelor’s degree, you must meet the following conditions, which are explained in more detail in the following sections:

- Earn a minimum of 180 credits, each with a grade of D minus or better (or Pass)
- Satisfy the university requirements in American history and institutions and in Entry Level Writing (English composition)
- Meet the UCSC residence requirement
- Satisfy each of the campus general education requirements with a course grade of Pass, C (2.0 grade point average), or better
- Satisfy requirements of your UCSC college
- Complete an approved major program, including its comprehensive requirement, with grades of Pass, C (2.0 GPA), or better in all courses satisfying major requirements. Some majors require grades higher than C to qualify to declare the major. In some majors, courses graded Pass may not be used to satisfy major requirements.
Undergraduate Academic Program

- Have an overall GPA of at least 2.0 in all letter-graded courses taken at UCSC and other University of California campuses.
- Have no more than 25 percent of your UCSC credits graded on a Pass/No Pass basis. This includes any credits completed in the Education Abroad Program or at another UC campus in an intercampus exchange program. Departments may require that some or all courses used to satisfy the major must be taken for a letter grade.

As a UC Santa Cruz student, you are responsible for selecting the courses necessary to fulfill graduation requirements and prepare for advanced study or a career. It is essential that you consult regularly with academic advisers about course selection.

Keep your own records, including not only records of your UCSC courses, grades, and progress, but also your transcripts from other institutions, admission test scores, transfer credit information, and performance evaluations.

Transfer students may be able to use some of the courses they completed at other schools to help meet the 180-credit requirement. (Semester-system credits can be multiplied by 1.5 to derive equivalent quarter-system credit.) The UCSC Office of Admissions determines which courses are transferable.

UNIVERSITY REQUIREMENTS

The UC Santa Cruz campus administers three requirements for graduation from the University of California: (1) American history and institutions, (2) Entry level writing requirement, and (3) UCSC residence. These requirements are described in detail below.

AMERICAN HISTORY AND INSTITUTIONS

Every candidate for a bachelor’s degree must demonstrate knowledge of American history and institutions. You may fulfill this requirement in one of the following ways:

- By achieving a score of 550 or higher on the SAT Subject Examination in U.S. History
- By achieving a score of 3, 4, or 5 on the College Board Advanced Placement Examination in U.S. History, or by achieving a score of 5, 6, or 7 on the IB History of the Americas Examination
- By satisfactorily completing a college-level course in U.S. history and institutions
- By certification of completion of the requirement on a transcript from an accredited California institution of higher education
- By completing an acceptable history or government course in high school that satisfies the subject requirement for admission to the university, described in Subject Requirements.

*Note: Alternatives for satisfying this requirement vary among the campuses of the University of California. If you plan to transfer to another UC campus, consult its general catalog for information on this point.

ENTRY LEVEL WRITING REQUIREMENT

Every candidate for a bachelor’s degree must demonstrate an acceptable level of ability in English composition. Before your fourth quarter of enrollment, you must fulfill this requirement in one of the following ways:

1. Score 680 or higher on the Writing section of the SAT Reasoning test.
2. Score 30 or higher on the ACT Combined English/Writing test, or 30 or higher on the ACT English Language Arts (ELA) test.
3. Score 3 or higher on the College Board Advanced Placement Examination in English (Language and Culture or Literature and Culture).
4. Score 5 or higher on the International Baccalaureate Higher Level Examination in English: Literature (formerly IB HL English A1).
5. Score 6 or higher on the International Baccalaureate Standard Level Examination in English (Language A).
6. Complete with a grade of C or better an acceptable college course in English composition worth 4 quarter or 3 semester credits.
7. Achieve a passing score on the UC Analytical Writing Placement Examination, given in the spring every year (freshmen who are admitted to UC will receive detailed information in April about the exam; nonresidents may take the exam during Fall Welcome Week).
8. Complete an appropriate English course at UC with a grade of C or better.

California high school seniors who have been admitted to UCSC must take the systemwide UC Analytical Writing Placement Examination, given in May, unless they have already satisfied the requirement. For additional information on fulfilling the requirement, see the Writing Department's program statement.

SENIOR RESIDENCE

Every candidate for a bachelor’s degree must be registered at UCSC for a minimum of three terms. In addition, of the final 45 quarter credits, 35 must be in regular courses of instruction taken as a registered student at UCSC (including during the summer session). Courses taken through University Extension or the Intercampus Visitor Program do not constitute...
regular courses and therefore do not satisfy residence requirements.

The credit requirement for residence is applied differently to students participating in the Education Abroad Program (EAP) and the University of California in Washington, D.C. (UCDC), program or the UC Center in Sacramento program. Students may satisfy the requirement in either of two ways. The first way is for students to complete 35 of their final 45 credits before leaving the Santa Cruz campus to participate in EAP, UCDC, or UC Center Sacramento. In this scenario, students do not have to return to Santa Cruz for any additional coursework after they have finished EAP or UCDC. The second way to fulfill the residence requirement is for students to complete 35 of their last 90 credits at the Santa Cruz campus, with a minimum of 12 credits completed at UCSC after their return from EAP, UCDC or UC Center Sacramento.

**GENERAL EDUCATION REQUIREMENTS**

The general education requirements are designed to introduce you to various kinds of information, reasons for learning, and approaches to acquiring knowledge, as well as to promote responsible use of what is learned. Obviously, general education requirements alone cannot achieve these ends. You are urged to look for as many opportunities as possible to gain a richer understanding of your own cultural heritage and social situation; insight into countries, societies, and eras besides your own; proficiency in another language; understanding of the nature of ethical and moral choice; and expanded knowledge of science and technology. The formal requirements described here should be considered foundations for exploration.

Complete List of Courses That Fulfill General Education Requirements by Course Title

Complete List of Courses That Fulfill General Education Requirements by Course Number

The general education requirements are meant to accomplish several goals:

- Provide students with a base of knowledge and skills that future learning can build on.
- Expose students to a broad range of disciplines and methodologies, to better prepare them for a world of complex problems and rapid changes.
- Enhance the abilities of students to approach problems in appropriately analytical ways.
- Prepare students to function as responsible and informed participants in civic life, considering pressing societal issues (such as the environment, the economy) productively and from a variety of perspectives.

Each area has a general education code associated with it, and only those courses carrying that code satisfy the requirement. The codes appear in the course descriptions in this catalog and in the "General Education" field on the MyUCSC Class Search page. See a list of courses that fulfill General Education requirements. The list is subject to change. Students should check the Schedule of Classes each quarter for the most up-to-date information. Students should review the requirements for their proposed or declared major(s) to ascertain whether some of their general education requirements will be fulfilled by completing their major. As a general rule, each course satisfies only one of the general education requirements.

Disciplinary Communication

*Students satisfy the Disciplinary Communication (DC) requirement by completing one to three upper-division courses required for their major, totaling a minimum of five credits and must be taken at UCSC. The DC requirement must be completed at UCSC—transfer courses do not apply to this requirement.

Cross-Cultural Analysis (CC code: one 5-credit course or equivalent). Courses that carry the CC GE designation aim to prepare students for a globalizing world, with increased interaction and integration among peoples, economies, and governments. These courses aim to encourage a broader and deeper understanding of cultures and societies outside the United States. Such courses might provide an in-depth examination of one culture, or one aspect of such culture (for example, art, music, history, language). Alternatively, these courses might aim to help students develop skills of cross-cultural comparison and analysis. A third option is courses that explore topics that are inherently cross-cultural such as international relations or the processes of economic globalization. Whatever the approach, these courses all aim to help students develop the openness and critical perspective necessary for cross-cultural understanding. Although themes of privilege and oppression are centrally relevant to the history and current experience of many cultures, such themes are not required to be addressed in cross-cultural awareness courses.

Ethnicity and Race (ER code: one 5-credit course or equivalent). Courses that carry the ER GE designation prepare students for a state and a world that are increasingly multiethnic and multiracial. Beyond familiarizing students with the culture and/or history of one or more ethnic or racial groups, these courses also aim to develop theoretical and practical understanding of questions such as (but not limited to):

1. how categories of ethnicity and race are constructed
2. the role that ethnicity and race can play in identity formation
3. how ethnicity and race have historically been used to justify forms of enforced inequality
4. contributions of people of various ethnicities to society and to political change

Whatever the approach, these courses are particularly concerned with how ethnicity and race may intersect with other categories such as gender, class, or sexual orientation, to shape self-understanding and patterns of human interaction. While such courses may often adopt an historical perspective on the issues they consider, they will provide a critical perspective on race/ethnicity relevant to the present.

Interpreting Arts and Media (IM code: one 5-credit course or equivalent). Courses that carry the IM GE designation explore the complex ways in which information of all kinds is represented by visual, auditory, or kinesthetic means, or through performance. Contemporary life bombards us with visual and auditory media, often in the form of advertising or advocacy. These courses build in-depth understanding of one or more forms of artistic media: that is, media in which non-textual materials play primary roles. They offer skills in the practice, analysis, interpretation, and/or history of one or more of these media, as well as the ability to analyze the means by which these media encode and convey information.

Mathematical and Formal Reasoning (MF code: one 5-credit course or equivalent). Courses that carry the MF GE designation emphasize university-level mathematics, computer programming, formal logic, or other material that stresses formal reasoning, formal model building, or the application of formal systems. These courses generally focus on one of the following:

1. mathematical reasoning and proof (at least MATH 3 pre-calculus or equivalent)
2. formal logic
3. computer programming
4. other formal systems (e.g., generative grammars, economic models, formal music theory)

Whichever particular approach is used, these classes aim to teach students to think with rigor and precision, using formal or mathematical models to teach the value of logical reasoning and dispassionate analysis.

Scientific Inquiry (SI code: one 5-credit course or equivalent). Courses that carry the SI GE designation teach students about the essential role of observation, hypothesis, experimentation and measurement in the physical, social, life, or technological sciences. Students should acquire key concepts, facts, and theories relevant to the scientific method. By the end of the course they should be able to articulate an understanding of the value of scientific thinking in relation to issues of societal importance. Such courses would allow students to acquire key concepts, facts, and theories relevant to the:

1. physical scientific method
2. social science aspect
3. life sciences
4. technological method

Statistical Reasoning (SR code: one 5-credit course or equivalent). Courses that carry the SR GE designation focus on developing skills in approaching quantitative data and statistical reasoning. These courses help students interpret quantitative claims and make judgments in situations of statistical uncertainty. Such courses might include topics such as:

1. ways of presenting and misrepresenting data
2. statistical inference
Textual Analysis and Interpretation (TA code: one 5-credit course or equivalent). Courses that carry the TA GE designation have as their primary methodology the interpretation or analysis of texts. The aim of these courses is to develop higher-order reading skills and to train students how to read attentively, to think critically and analytically, to produce and evaluate interpretations, to assess evidence, and to deploy it effectively in their own work. These abilities are not only necessary for academic success, but also for full participation in civic life at every level. Textual analysis is the examination of how and whether a piece of writing or speaking achieves its aims, whether these are rhetorical and persuasive or aesthetic. Such courses should pay substantial attention not only to what information a poem, political speech, or scientific essay conveys, but to how it goes about doing so (by mobilizing particular metaphors, through plain speaking, via flowery language, by calling on scientific authority, or other mechanism). Please note that close reading leading to summary does not on its own constitute textual analysis.

Perspectives (one 5-credit course or equivalent from any of the three following categories):

**Perspectives: Environmental Awareness (PE-E code).** Courses that carry the PE-E GE designation teach students about the complexity of particular ecosystems and/or people’s interactions with nature so that students will better understand the environmental issues and trade-offs that are likely to arise in their lifetimes. The interactions between people and the Earth’s environment are subtle, complex, and influenced by a variety of natural, scientific, economic, cultural, and political factors. Courses deal with one or more of the following topics:

1. The study of particular ecosystems or environments
2. Natural forces, processes, and their effect on ecosystems
3. Climates, climate models, and climate change
4. Evolution and adaptation to the environment
5. Bio-diversity and/or the robustness of nature and its feedback mechanisms
6. How cultures relate to their natural environments
7. Human efforts to create, preserve, and modify environments
8. Management of natural resources (such as fossil fuels, forests, and fisheries)
9. Issues of sustainability (such as sustainable agriculture or renewable energy)
10. Pollution and its effect on ecosystems
11. Ecological impacts of non-native species and other ecological disasters

**Perspectives: Human Behavior (PE-H code).** Courses that carry the PE-H GE designation help students to prepare for a world in which many of the most pressing challenges (such as genocide, environmental degradation, poverty) are impacted by human thoughts, decisions, or practices. As well, they provide a kind of “owner’s manual” for students to assist them in understanding themselves, their roles (for example, parent, partner, leader), and their social groups (family, workplace, neighborhood, nation). These courses impart specific knowledge about some aspect of individual human behavior or the operation of human groups. As well, they are likely to provide an introduction to one or more specific methodologies, such as ethnography, longitudinal analysis, or experimentation. A central aim, however, is to help students appreciate that better solutions to problems (whether global or personal) can often be found by incorporating information about how humans think, feel, and act.

**Perspectives: Technology and Society (PE-T code).** Courses that carry the PE-T GE designation focus on understanding technological advances, how they are developed, and their impacts on society. Imparting a basic understanding of the dynamic technological society in which we live is an essential goal of academic institutions. The study of technology helps satisfy the need of society for knowledgeable people able to understand, participate, and guide the rapid technological advances that play such a vital role in our world.

**Practice (one minimum 2-credit course from any of the three following categories):**

**Practice: Collaborative Endeavor (PR-E code).** Courses that carry the PR-E GE designation teach students strategies and techniques for working effectively in groups to produce a finished product. For example, students might learn specialized practical information, such as how to use change-management software to monitor and manage changes initiated by multiple group members. Alternatively, they might learn basic information about leadership, teamwork, and group functioning, which they can incorporate into their own group process. What is common to all courses that carry the PR-E general education requirement is that some instruction regarding the process of collaboration is provided in addition to instruction specific to the academic discipline and the products being produced. In other words, assigning group work is not sufficient; explicit instruction in techniques of collaboration is required.

**Practice: Creative Process (PR-C code).** Courses that carry the PR-C GE designation teach creative process and techniques in a context of individual or collaborative participation in the arts, including creative writing. For creative writing, students will publish an informal group collection or individual dossier of their successful writings. Courses may combine theory and experiment in the creation of a
new artwork, or new interpretation(s) of an existing artwork. Creative Process courses include studies in individual or group creativity or improvisation, and/or ensemble rehearsal and performance. Students who elect to satisfy this requirement will take at least two credits of individual or group creative work; however, the requirement may be satisfied within courses of greater than two credits. Where appropriate, sponsoring units may require a sequence of two or three 2-credit courses with the PR-C designation assigned to the final quarter. For sequences culminating in a semi-professional public performance, an audition at which students demonstrate aptitude and a foundation of skills will be required.

**Practice: Service Learning (PR-S code).** Courses that carry the PR-S GE designation provide supervised learning experiences where students reflect on, communicate, and integrate principles and theories from the classroom in real-world settings. Service learning provides students with an opportunity to integrate their academic coursework with community involvement. Students gain valuable practical skills while giving back to the community.

**Composition.** The general education writing requirements at UCSC consist of the Entry-Level Writing Requirement (ELWR), and Composition (C). Successful completion of College 1 and ELWR are prerequisites for students’ enrollment in the C course (Writing 2). Students must successfully complete Writing 2 before the seventh quarter of enrollment.

**Disciplinary Communication (DC) requirement.** The goal of this requirement is to ensure that students acquire the skills in writing and other forms of communication appropriate for their discipline. Students satisfy the DC requirement by completing 1 to 3 upper-division courses required for their major, totaling a minimum of 5 credits. The DC requirement must be taken at UCSC and is automatically fulfilled by the completion of major requirements.

---

**ADVANCED PLACEMENT AND INTERNATIONAL BACCALAUREATE EXAMINATIONS**

**Advanced Placement Exams (AP) and International Baccalaureate Higher Level Exams (IBH) Table**

The university grants credit for College Board Advanced Placement (AP) Examinations on which a student scores 3, 4, or 5 and for International Baccalaureate Higher Level (IBH) Examinations on which a student scores 5, 6, or 7. The university does not grant credit for IB standard or subsidiary level exams. Students completing the International Baccalaureate Diploma with a score of 30 or higher receive 30 quarter credits. The credit is applied toward the total credits required for graduation and toward the UCSC campuswide general education requirements, as indicated in the table on pages 29–30, Advanced Placement (AP)/International Baccalaureate Higher Level (IBH) Examinations. Students should be aware that AP, IB, and college-level courses will not be granted duplicate credit. In these cases, the university will award credit for only one.

**AP AND IBH EXAMINATION CREDIT TOWARD DEGREE REQUIREMENTS**

Certain departments also allow prospective majors to obtain waivers for prerequisite courses. In all cases, a student should contact the particular department to discuss his or her plans with an adviser. Please note that approval is not automatic; a petition must be filed with most departments.

**CREDIT FOR TRANSFER STUDENTS**

**GENERAL EDUCATION REQUIREMENTS**

Transfer students may apply courses taken at other institutions toward the lower-division general education requirements. The disciplinary communication course(s) (DC code) must be taken at UCSC.

If you are currently attending one of the California community colleges, see the ASSIST website, or consult with the UCSC Office of Admissions or your current counselor to determine which college courses satisfy UCSC general education requirements. Transfer students who have satisfied the general education or breadth requirements of another UC campus prior to transfer will be considered to have completed the UCSC general education requirements, with the exception of the DC requirement. Completion of the Intersegmental General Education Transfer Curriculum (IGETC) prior to enrollment at UCSC will also be accepted in lieu of the campus general education requirements, with the exception of the DC requirement.

**INTERSEMENTAL GENERAL EDUCATION TRANSFER CURRICULUM (IGETC)**

The Intersegmental General Education Transfer Curriculum (IGETC) is a series of courses that prospective California community college transfer students may complete to satisfy the lower-division breadth/general education requirements at any University of California or California State University (CSU) campus (see the IGETC table below). This curriculum is the result of an agreement by the University of California, the California State University, and the California community colleges, aimed at simplifying the transfer process for community college students. The IGETC is intended exclusively for California community college transfers and is not an option for continuing UCSC students (including students who transferred to UCSC without having completed IGETC before their
first quarter) or for students transferring from four-year colleges or universities.

Official certification for IGETC can only be obtained through a student's community college. Once the official certification is received, students who complete the IGETC prior to transfer are not required to satisfy the UCSC lower-division general education requirements. For students who are partially certified, meaning that they are only missing one or two courses for complete certification, you will be contacted by the Office of Admissions only after the official certification is received. Courses used to satisfy IGETC must be completed with a grade of C (2.0) or better. A grade of Credit or Pass may be used if the community college's policy states that it is equivalent to a grade of C (2.0) or better.

IGETC is not recommended for majors that require extensive course preparation, such as any major in the Jack Baskin School of Engineering or the Division of Physical and Biological Sciences.

You may not return to your previous institution to complete IGETC after entering a degree program at UC Santa Cruz. If you do not complete IGETC or partial IGETC prior to beginning at UC Santa Cruz, you are required to complete the UC Santa Cruz general education requirements.

One physical science course and one biological science course, at least one of which includes a laboratory.

6. Language Other Than English Proficiency Proficiency English
Proficiency equivalent to two years of high school in the same language.
(Not required of students transferring to CSU.)

| Total | 11 courses | 34 semester units or 45-57 quarter credits |

MAJOR REQUIREMENTS AND COURSE PREREQUISITES

Students who believe they have taken courses at other institutions that satisfy major requirements or UCSC course prerequisites should contact their major adviser for review.

COLLEGE REQUIREMENTS

You must fulfill the requirements of your college in addition to those of your major and of the university. Each college has established a core course, which all first-year students are required to complete. Students admitted as transfer students are exempt from the core course requirement but may take the course at their option on a space-available basis. College requirements are outlined below.

College Nine
- College Nine 1, Academic Literacy and Ethos: International and Global Perspectives

College Ten
- College Ten 1, Academic Literacy and Ethos: Social Justice and Community, fall quarter

Cowell
- Cowell 1, Academic Literacy and Ethos: Imagining Justice, fall quarter

Crown
- Crown 1, Academic Literacy and Ethos: Ethical and Societal Implications of Emerging Technologies, fall quarter

Kresge
- Kresge 1, Academic Literacy and Ethos: Reading Ourselves, Reading the World, fall quarter

Merrill
- Merrill 1, Academic Literacy and Ethos: Power and Representation, fall quarter

Oakes
Oakes 1, Academic Literacy and Ethos: Communicating Diversity for a Just Society, fall quarter

Porter

Porter 1, Academic Literacy and Ethos: Arts of Reading, fall quarter

Rachel Carson College

Carson 1, Academic Literacy and Ethos: Environment & Society, fall quarter.

Stevenson

Stevenson 1, Academic Literacy and Ethos: Self and Society, fall quarter
Stevenson 2, Self and Society 2, winter quarter

MAJOR AND MINOR REQUIREMENTS

To qualify for a bachelor's degree at UCSC, you must complete the minimum requirements for a major program, as well as satisfy university, campus, and college requirements.

At UCSC, you have the option of pursuing a single major, a double major, or a combined major. The minimum requirements for an established major program are set by the sponsoring department. (If you are a transfer student, the department will determine which of your transferable courses may be used to satisfy major requirements.) The major involves substantial work in the discipline and requires no fewer than 40 upper-division or graduate credits. Only courses in which you earn a grade of Pass, C (2.0 GPA), or better satisfy major or minor requirements.

ADDITIONAL MAJORS OR MINORS

To complete multiple majors and minors, you must fulfill all of the requirements for all majors and minors declared, including the comprehensive requirement for each major. In general, a single thesis may not be used for more than one major. You may count courses for more than one major or minor, as long as each major includes 40 upper-division credits not used to satisfy the minimum upper-division credits of any other major or minor, and each minor includes at least 25 upper-division credits not used to satisfy the minimum upper-division credits of any other major or minor.

The diploma of a student who has completed a double major in history and music, for example, would read “Bachelor of Arts with Majors in History and Music.”

DECLARING A MAJOR

The field of interest you indicate on your application to UCSC does not automatically place you in a major. You are advised to declare your major as soon as possible. You are required to declare a major before enrolling in the equivalent of your third year.* You will not be allowed to enroll in classes for the equivalent of your third year until you have declared a major. Be sure you are aware of all the necessary criteria for qualifying for the major. It is wise to apply for major status as soon as you feel sure of the field you wish to enter and have met qualification requirements (if any) for the major you wish to pursue. Junior transfer students must declare a major during their second quarter at UCSC by the deadline printed in the Academic and Administrative Calendar. You should determine the requirements for possible major choices as soon as possible because certain majors require substantial preparation, with many interlocking course sequences and qualifying grades in certain major foundation courses. If you intend to pursue such a major, you should start work toward it early in your undergraduate career, and review your progress toward qualification regularly. (Review majors that interest you in the Programs and Courses section.) Academic advisers can offer assistance in selecting courses appropriate to your individual needs.

*Note: This is the year you would become a junior given normal progress to degree. For example, if you transfer to UCSC as a beginning sophomore, it is your second year here.

COMPREHENSIVE REQUIREMENT

Every major at UCSC includes a senior exit requirement designed to integrate the knowledge and skills learned throughout the curriculum. This capstone requirement may be a senior thesis, senior seminar, comprehensive examination, or some other integrative experience designed for the major. Choices for satisfying this requirement are specified with the requirements for each major.

MINOR PROGRAMS

See Fields of Study for undergraduate minors currently offered at UC Santa Cruz. Completion of a minor is optional. If you wish, you may complete more than one minor.

The sponsoring department establishes the course requirements for a minor. The minor involves substantial work in the discipline and requires no fewer than 25 upper-division or graduate credits. The minor appears on your official transcript but not on your diploma.

ADDITIONAL MAJORS OR MINORS

To complete multiple majors and minors, you must fulfill all of the requirements for all majors and minors declared, including the comprehensive requirement for each major. In general, a single thesis may not be used for more than one major. You may count courses for more than one major or minor, as long as each major includes 40 upper-division credits not used to satisfy the minimum upper-division credits of any other major or minor, and each minor includes at least 25 upper-division credits not used to satisfy the minimum upper-division credits of any other major or minor.
The diploma of a student who has completed a double major in history and music, for example, would read “Bachelor of Arts with Majors in History and Music.”

**COMBINED MAJOR**

A combined major allows you to complete a course of study involving two disciplines offered as regular programs at UC Santa Cruz.

Examples of combined majors include environmental studies/economics and Latin American and Latino studies/politics. A combined major is designed by faculty representatives from both disciplines. In general, fewer courses are required than for a double major, and students complete the comprehensive requirements as specified for each combined major. Combined majors currently available are listed in the Footnotes in the *Fields of Study*.

The diploma of a student who has completed a combined major in environmental studies and economics, for example, would read “Bachelor of Arts with a Major in Environmental Studies/Economics.”

**INDIVIDUAL MAJOR**

Students may also work with three faculty members to define an individual major specific to his or her academic goals. Proposals for individual majors require considerable effort to develop, and students are advised to consider double major, combined major, and major/minor alternatives. College advising offices can provide information on the individual major proposal and approval process.

**CATALOG RIGHTS**

Effective for all undergraduates who entered in fall quarter 1993 or after, students may follow the degree requirements from either the UCSC General Catalog published at the time of entering UCSC or subsequent catalog(s). Students need not follow a catalog in its entirety but may elect to follow different catalog years for their college requirements, university and general education requirements, requirements of their major(s), and requirements of any minor(s). Catalog year will initially be set for the first year of enrollment at UCSC. Students may elect to follow requirements from other catalog year(s) when filing the Petition for Major/Minor Declaration. All requirements for graduation outlined in the catalog(s) selected must be met before graduation. Changing catalog year(s) is done by contacting your major adviser (for major or minor requirements) or your college adviser (for college, university, and general education requirements).

Students transferring from other collegiate institutions may elect to meet as graduation requirements one of the following:

- those in effect at the time of transfer to UCSC;
- those subsequently established; or
- those in effect when the student entered a previous collegiate institution, provided that entry was not more than three years prior to the time of transfer to UCSC.

Students who seek readmission to UCSC after a break in attendance greater than two years (six regular quarters) must adhere to the graduation requirements in effect at the time of readmission or those subsequently established. Students who entered prior to 1993 should see an adviser. Their catalog year(s) for graduation, whether the year they entered UCSC or subsequent year(s), will be decided at the discretion of their major department and/or their college.

**INSTITUTIONAL RESPONSIBILITY**

Undergraduate students who have made significant progress toward a degree in a specific major can assume that a degree will be granted if they meet all catalog degree requirements and maintain continuous enrollment and progress.

Should UCSC find it necessary to discontinue a specific major, every effort will be made to allow currently enrolled majors to complete their degrees within a reasonable period of time. This may include (1) movement to a similar or related degree track; (2) substitution of requirements; (3) development of an individual major proposal; or (4) completion of courses at another University of California campus through the Intercampus Visitor Program. Students with questions concerning this policy should contact their major and college advising offices.

In all cases, any financial obligations are the responsibility of the individual student involved.

**EVALUATING ACADEMIC PERFORMANCE**

UC Santa Cruz has one of the more comprehensive systems for evaluating students’ academic performance of any research university in the United States. The evaluation system consists of two major components: the assignment of a final grade in the course and an optional evaluation of your performance.

**EVALUATIONS**

Beginning fall 2010, undergraduate evaluations are at the option of the faculty. In each course for which you receive a grade of D or better (or P), an evaluation of your academic performance may be submitted. An evaluation may:

- Describe the strengths and weaknesses of your performance in the various areas of class activity (discussion, laboratory work, term papers, examinations)
- Assess your general understanding of the course content
- Recognize additional or particularly outstanding work

Evaluations may be used at UCSC in academic advising, reviewing scholarship applications, and
Undergraduate Academic Program

awarding Honors in the major. Evaluations are a permanent part of your academic record. All students may request transcripts either with or without evaluations.

GRADES

At the end of each course, you will receive one of the following grade notations:

A excellent
B good
C fair
D poor
F fail
P passing
NP not passing
I incomplete
IP in progress
W withdrawal

The grades of A, B, C, and D may be modified by a plus (+) or a minus (-). You will not receive credit for graduation in any course in which you receive a final grade of F or NP. The grades I and IP are temporary grades used in special circumstances. The final notation W indicates that you officially withdrew from the course before completing it.

GRADE POINTS

Grade points are assigned to a letter grade as follows:

4.0 = A+
4.0 = A
3.7 = A-
3.3 = B+
3.0 = B
2.7 = B-
2.3 = C+
2.0 = C
1.7 = C-
1.3 = D+
1.0 = D
0.7 = D-
0.0 = F

The grades P and NP are not included in calculating your GPA and so are not assigned grade points. Courses in which the interim grades I and IP are assigned earn no grade points or credit until the interim grade is replaced by a final letter grade.

GRADE POINT AVERAGE (GPA)

Undergraduates entering UCSC in fall 2001 and thereafter have a UCSC cumulative grade point average calculated from UCSC courses, courses taken through the Education Abroad Program, and courses taken at another UC campus as part of the Intercampus Visitor Program.

A grade point average is determined by dividing the number of grade points earned by the number of credits attempted for a letter grade. In calculating your UCSC GPA, the interim grades IP and I are not included in the computation because you do not earn those credits until they are replaced with a final grade. (However, when checking for whether you have satisfied the 2.0 UC GPA requirement for graduation, these interim grades are included and counted as courses with grade F [or NP]).

If you repeat a course in which you have received a C-, D+, D, D-, or F, only the last grade recorded shall be computed in your GPA for the first 15 credits of repeated work. After the 15 credit maximum is reached, the GPA will be based on all grades assigned and total credits attempted.

Undergraduates who entered UCSC for the first time in or after fall 1997 and before fall 2001 have a UCSC cumulative grade point average only if they have elected letter grades in at least two-thirds of the cumulative credits attempted. Undergraduates who entered UCSC prior to fall 1997 cannot have an official UCSC grade point average calculated.

PASS/NO PASS OPTION

Students in good academic standing may request to take specific courses on a Pass/No Pass basis. Students receive a P (Pass) for work that is performed at C level or better. Work performed at below a C level receives a notation of NP on the student's transcript, and no academic credit is awarded for the course. Requests for Pass/No Pass grading must be submitted and confirmed by the Grade Option deadline printed in the Academic and Administrative Calendar. If you request P/NP grading in a course and you are later placed on academic probation, your P/NP grading request will be canceled.

No more than 25 percent of the UCSC credits applied toward graduation may be graded on a Pass/No Pass basis. This includes any credits completed in the Education Abroad Program or on another UC campus in an intercampus exchange program. Students must be careful about the use of the Pass/No Pass option. Some courses may only be taken Pass/No Pass, and therefore count against the 25 percent Pass/No Pass limit. Several majors require all or most major requirements to be taken for a letter grade; read the major requirements section carefully before using the Pass/No Pass option for any course in a major you are considering.

INCOMPLETE

The notation I may be assigned when your work for a course is of passing quality but for which some specific required work has not been completed. You must make arrangements with the instructor before the end of the course in order to receive an Incomplete. To remove the Incomplete, you must submit the remaining coursework and file a petition by the deadline printed in the Academic and Administrative Calendar (generally the end of the
following quarter). If you do not meet the deadline, the Incomplete lapses to a No Pass or an F, depending on the grading option selected at the beginning of the quarter.

The notation IP (In Progress) is reserved for a single course extending over two or three terms of an academic year. The grade for such a course may be awarded at the end of the course and shall then be recorded as applying to each of the terms of the course. A student satisfactorily completing only one or two terms of a course extending over two or three terms of an academic year will be given grades for those terms. The grade option selected in the first quarter of the multiple-term sequence applies to all quarters of the sequence.

Grade changes (except for I and IP, as above) are allowed only to correct clerical or calculation errors by the instructor and must be submitted to the Office of the Registrar by the instructor in charge of the course within one year of the close of the quarter for which the original grade was submitted.

STUDENT RESPONSIBILITY

Students are responsible for using the Academic Information Systems (AIS) to set and confirm choices for grading options and for ensuring timely completion of all requirements. Students view their schedule at MyUCSC.

COURSE LOADS

The usual course load for UCSC undergraduates is 15 to 19 credits, most often as three 5-credit courses and associated laboratories and sections. After instruction begins, students with a UCSC GPA of 3.0 may enroll in up to 22 credits without special approval and may seek approval for higher loads from their college advising office. Students in their first quarter or with a lower GPA must seek approval from their college advising office for enrollment in more than 19 credits.

College approval is required to carry fewer than 15 credits.

ACADEMIC PROGRESS

Academic progress is a measure of the completion of courses with a D- or better, or Pass. Colleges monitor academic progress to ensure you are progressing toward your degree, which must be earned within 15 quarters of enrollment (five years).

Minimum progress is based on length of time at UCSC. The minimum acceptable progress is completion of 36 credits for each academic year, 12 credits for each additional full-time term, and four-fifths of credits attempted for each part-time term. Progress is measured cumulatively, not term by term. For example, a full-time student must complete 48 credits by the end of the first quarter of the second year.

If you do not maintain minimum progress, your college may require you to take higher course loads, complete Summer Session courses, or make other adjustments to your study plan.

A separate financial aid satisfactory academic progress policy (FASAP) defines the GPA and progress requirements for remaining eligible to receive financial aid. Information can be found on the Undergraduate Academic Progress and Financial Aid Information website.

ACADEMIC STANDING

Academic standing is a measure of performance in completed courses. You must maintain a 2.0 UCSC GPA in order to remain in good academic standing.

If your UCSC term or cumulative GPA falls below 2.0 at the end of any term, you will be placed on academic probation for the next term. You will need to work with your college and major advisers to determine the best way to return to good academic standing. Be sure to take full advantage of the many learning support services available at UCSC.

If your UCSC GPA for any term falls below 1.5, or if you are on academic probation and your cumulative GPA at the end of a term is below 2.0, you are also subject to disqualification. This means that your enrollment at UCSC may be barred for a specific period of time, or you may be disqualified indefinitely from attending the University of California. In many cases, a specific study plan can be developed with your college that will enable you to remain enrolled at UCSC.

For students who entered UCSC prior to fall 2001, academic standing and progress are calculated differently. Contact your college office or see The Navigator for more information.

A separate financial aid satisfactory academic progress policy (FASAP) defines the GPA and progress requirements for remaining eligible to receive financial aid. Information can be found on the Undergraduate Academic Progress and Financial Aid Information website.

MAXIMUM CREDITS AND YEARS

Students are expected to complete their degree objective(s) within four years, with maximum enrollment limits of at most 225 credits and five academic years (Advanced Placement and International Baccalaureate units are not counted). Upper-division transfer students are expected to complete their degree objective(s) within at most 135 UCSC credits and three academic years.

Colleges may make exceptions to the credit maximum for students in certain cases. Such exceptions are conditional on maintaining academic standing, minimal progress, and progress toward the degree objective(s).

Students in danger of exceeding the credit limit or the five-year or three-year limit may be required to modify their degree objective, such as by completing a major without a minor or double major, or
Undergraduate Academic Program

completing a related major with fewer course requirements.

REPEATING COURSES

Undergraduates may repeat courses in which they earn a C-, D+, D-, F, No Pass, or W. For an undergraduate to repeat a course more than once requires approval of the student’s college. A grade of W counts as an attempt. Courses in which a C-, D+, D-, or F is earned may not be repeated on a Pass/No Pass basis. Courses in which a grade of No Pass is earned may be repeated on the same basis or for a letter grade. For the first 15 credits of repeated courses, the original grade is excluded from the GPA, and only the grade from the repetition is used. After the 15-credit maximum is reached, all grades are included in the GPA. However, credit is not awarded more than once for the same course. The grade assigned each time the course is taken will be permanently recorded on the official transcript.

ACADEMIC INTEGRITY

The university is dedicated to the unhindered pursuit of knowledge and its free expression. It is essential that faculty and students pursue their academic work with the utmost integrity. This means that all academic work produced by an individual is the result of the sole effort of that individual and acknowledges the contributions of others explicitly. It is the responsibility of students and faculty to be absolutely clear about what constitutes plagiarism, cheating, or other violations of academic integrity. Violations of academic integrity by students result in both academic sanctions (e.g., failing the course) and disciplinary sanctions (e.g., suspension or dismissal). Consult the campus’s undergraduate academic misconduct policy for more information.

UNDERGRADUATE HONORS

UC Santa Cruz awards several honors for outstanding academic achievement.

Dean’s Honors

Students will be eligible for quarterly Dean’s Honors if they have earned a minimum of 15 units that quarter, of which at least 10 are graded, with a term grade point average (GPA) equal or higher than that required for University Honors at graduation in their group* for the current academic year. The notation “Dean’s Honors” will appear on the transcript.

*Note: GPA thresholds for Baskin School of Engineering majors are calculated separately from those of majors in all other divisions.

Honors at Graduation

Honors at graduation are awarded by the university and by the separate majors based on a review of their graduates’ academic records. In general, honors are limited to 15 percent of the graduating class. University Honors are based solely on the cumulative UC GPA. Faculty review of major honors may involve additional criteria.

University Honors

To be considered for University Honors at graduation, students must have completed 70 or more credits at the University of California and have attained in their group* a UC GPA that places them in the rankings as follows: Summa Cum Laude, top 2 percent; Magna Cum Laude, next 3 percent; Cum Laude, next 10 percent. Each year and for each group, the registrar will calculate the GPA thresholds required for these levels of University Honors, based on the GPAs of recent graduates. The notation “University Honors” will appear on the diploma and transcript.

* Note: GPA thresholds for Baskin School of Engineering majors are calculated separately from those of majors in all other divisions.

Honors in the Major

At graduation, the department sponsoring a student’s major program may confer Honors or Highest Honors in the major. This notation appears on the transcript as well as on the diploma. In general, no more than 15 percent of the graduation class in a major will be awarded Honors at graduation.

Deadlines

To ensure consideration for honors in the major, students should apply to graduate by the Registrar’s deadline.

Any student who has a reportable disciplinary sanction for a violation of academic integrity policies may be ineligible for any honors designation, at the discretion of the agency that awards the designation.

UNDERGRADUATE HONORS OPPORTUNITIES

College Scholars Program

The UC Santa Cruz College Scholars Program offers a congenial and stimulating academic home for a select group of well-prepared students at UC Santa Cruz. College Scholars Program students can expect to challenge themselves academically, find other students who are similarly motivated, and explore undergraduate research. This enriched program of study includes special courses, seminars, colloquia, and other events during each quarter of the academic year. College Scholars participate in demanding, small-scale, and research-oriented courses that catalyze creative thinking and offer a springboard to other undergraduate research opportunities.

Admission to the Fall Start cohort of the College Scholars Program is by invitation. A select group of UCSC applicants offered admission to the university will be invited to join the program, based on their record of academic achievement. Students at some colleges can also apply for the College Scholars Program after the fall of their first year (“Spring Start”). In this case, students will join the program during the spring research colloquium. Spring Start students are selected based on applications submitted through their college.

Honor Societies
Undergraduate Academic Program

Many UC Santa Cruz students are members of departmental, professional, local, and national honor societies whose goals are to recognize and improve scholastic standing in an area of interest. Among these are Phi Beta Kappa, the oldest national society that advances scholarship and recognizes excellence in the liberal arts and sciences; Tau Beta Pi, the engineering honor society that recognizes students of distinguished scholarship, exemplary character, and dedication to service; the Golden Key International Honour Society, which provides recognition and leadership opportunities to top-performing students; and Psi Chi, which encourages, stimulates, and maintains excellence in scholarship, and advances the science of psychology.

**Awards and Scholarships**

UC Santa Cruz has a variety of scholarship and award opportunities that are designed to reward, encourage, and assist students in pursuing academic excellence and leadership roles. Students can find such opportunities through their colleges, departments, divisions, and various external agencies.

UCSC provides support for students for a variety of prestigious scholarships and awards such as the Karl S. Pister Leadership Opportunity Award, Deans’ and Chancellor’s Awards, Steck Foundation Award, Koret Undergraduate Research Scholarships, Boren Scholarship, Donald A. Strauss Scholarship, Fulbright U.S. Student Program, Scholarship, Marshall Scholarship, and Rhodes Scholarship.

**TRANSCRIPTS**

Academic records are maintained by the Office of the Registrar, which will issue an official transcript only on your authorized request.

For information on ordering transcripts, please refer to Registrar's [Registrar's transcripts website](https://www.registrar.ucsc.edu/myrecord/transcripts).

If you have outstanding financial obligations to the university, a hold may be placed on your transcript. Students may access their unofficial transcript on [MyUCSC](https://my.ucsc.edu).

Transcripts for UCSC Extension courses should be requested from UCSC Extension Records, 3175 Bowers Ave., Santa Clara, CA 95054-3003, (408) 861-3700.

**PRIVACY OF RECORDS**

UCSC students are informed annually of the federal Family Educational Rights and Privacy Act (FERPA) and its provisions. This act, which the institution follows, was designed to protect the privacy of education records and to provide guidelines for the correction of inaccurate or misleading data through informal and formal hearings. Students also have the right to file complaints with the Family Educational Rights and Privacy Act Office concerning alleged failures by the institution to comply with the act.

UCSC policy explains in detail the procedures to be used by the institution for compliance with the provisions of the act. FERPA guidelines are available at [Privacy of Student Records](https://www.registrar.ucsc.edu/records/disclosure/index.html). The full text of the University of California policies applying to the Disclosure of Information from Student Records is online: registrar.ucsc.edu/records/disclosure/index.html.

Questions concerning the Family Educational Rights and Privacy Act may be referred to the Office of the Registrar, 190 Hahn Student Services Building.

---

**ADVISING: FROM COURSE SELECTION TO CAREERS**

**ACADEMIC ADVISING**

Academic advising at UC Santa Cruz aims to assist students in clarifying their educational goals and in developing academic plans to achieve them. The core of UCSC’s advising system is housed in the colleges and academic programs and is supplemented by advising and support services throughout the campus.

**College academic advisers** (some of whom are called “academic preceptors”) are generalist advisers who focus on orientation to the university, pre-major advising, academic success, and campuswide requirements such as general education and university requirements. Each college has an advising team that can provide you with individual and group advising and can refer you to resources and educational opportunities. You remain affiliated with your college advisers throughout your undergraduate career.

**Staff advisers in UCSC’s academic programs** (sometimes called “major advisers”) focus on areas related to a student’s major or minor. Major advisers can help you understand declaration and major requirements, and can assist you in planning a program of study. They can help you identify enrichment opportunities within the major and refer you to appropriate faculty advisers. Faculty advisers may serve as mentors in your field, recommending courses and helping you refine your educational goals. For transfer students and for students in many majors (such as those in the physical and biological sciences, engineering, and the arts), it is important to review information provided by major advisers prior to your first quarter on campus.

For help in assessing career interests and exploring and choosing career options, contact the [Career Center](https://www.ucsc.edu/career). The staff also can assist you with choosing a major, résumé preparation, interviewing skills, applying for an internship, and job-search strategies.

If you plan to go on to graduate school, consult with faculty in your major. Faculty advisers are the best people to ask about the quality of graduate programs in your field of interest. In addition, the Career Center offers advising and workshops on applying to graduate school.

If you intend to pursue graduate study in a field not offered as a major at UCSC, you can often prepare for
Undergraduate Academic Program

your intended program through one of the campus’s regular majors. You must plan your studies carefully, however, and advising will be especially important. The Career Center has information that will help prepare you for graduate and professional programs. The following are some fields in which UCSC alumni have pursued graduate study and successful careers:

- Business
- Conservation
- Film
- Finance
- Guidance and counseling
- Health fields
- High-tech industry
- Human resources
- Industrial and labor relations
- International relations
- Law
- Marketing
- Museum administration
- Public administration
- Urban planning

The Career Center includes advisers with specialized expertise in preparing for careers in medicine or another health-related field (including dentistry, nursing, nutrition, occupational therapy, optometry, osteopathic medicine, pharmacology, physical therapy, public health, and veterinary medicine), and in preparing for careers in law.

A number of programs provide additional academic and comprehensive support services to students with specific needs. Educational Opportunity Programs (EOP), Services for Transfer and Re-Entry Students (STARS), and the Disability Resource Center are described below. Counseling on personal and family issues is available through Counseling and Psychological Services. If you need assistance that is not listed in this section, consult The Navigator or check with your college advisers.

Your first step in accessing advising at UCSC is to attend Orientation.

ORTIENTATION

All new UC Santa Cruz students are expected to attend an on-campus orientation. Students who attend Orientation feel better prepared, encounter fewer problems, and receive priority fall class enrollment. Attending Orientation is one of the most important steps a new student takes in preparing for the transition to university life, providing the academic advising needed to make informed decisions about classes and majors, and the opportunity to get questions answered, and learn more about the university.

Orientation begins the process of academic advising and provides a comprehensive introduction to all aspects of UCSC. While at Orientation, students enroll in classes, learn to access campus resources, meet with college and department advisers, meet new and continuing students, learn about the many student organizations on campus, attend a resource fair, take a student ID picture, attend breakout sessions, and gain valuable student life information. Orientation is an indispensable resource that helps facilitate academic and personal success at the university.

Summer Orientation is held several times over the course of the summer and includes separate programs for first-year and transfer students, as well as a concurrent program for family members.

Fall Welcome Week, scheduled approximately five days prior to the beginning of fall quarter, is the next step in the orientation and advising process for new students entering fall quarter. It provides students with an opportunity to settle into life at UCSC, take advantage of important services, and continue their academic advising.

International Orientation is required for all international students regardless of residency status. The mandatory International Orientation program eases students’ transition to university life and introduces students to a research university’s academic expectations, UC level writing norms, campus resources, and the UCSC and Santa Cruz communities. International Orientation is scheduled prior to Welcome Week and the beginning of fall quarter.

Students make their reservations for Summer Orientation online through the UC Santa Cruz portal at MyUCSC.

Questions can be directed to the Office of Campus Orientation Programs at (831) 459-5468, or via email to orientation@ucsc.edu. Web: orientation.ucsc.edu.

CAREER CENTER

UC Santa Cruz graduates find success in many different career fields. Their superior education is the foundation for this success. The staff at the Career Center will help you link your educational experience to the world of work. The center provides a variety of employment and career-development services to help students obtain rewarding and successful careers.

Both undergraduate and graduate students are encouraged to visit the Career Center often throughout their time on campus. The first step is to meet with a career adviser to begin developing a focused career plan. Simply sign up online for an advising appointment through SlugQuest on the Career Center website. Advisers assist students in selecting majors, finding internships and part-time jobs, applying to graduate school, conducting a job search, and much more. Workshops offered by the Career Center include: Finding and Applying to Internships; Résumé and Cover Letter Writing; Applying to Graduate and Professional School; and special workshops on specific majors or career fields. Check out the Career Planning Guide for additional
career development activities suggested for students from first year through senior year.

Your college experience is likely to include a part-time job or internship in your area of interest. An internship is one of the best ways to gain practical work experience in your area of interest. The Career Center has hundreds of opportunities available. Off-campus and on-campus employment opportunities (both work-study and non-work-study) are posted on the Career Center’s website.

The Career Center’s website contains a wealth of material on career exploration, graduate and professional schools, job search, career fields, internships, and employers. One of the most exciting online resources is the Career Advice Network, which helps students connect with alumni in their field of interest who have a desire to assist other Slugs.

UC Santa Cruz students and alumni looking for full-time career opportunities need look no further than SlugQuest—an online site that lists job openings targeted to UCSC graduates. You may connect to SlugQuest on the Career Center website. Another way to obtain a career position is to participate in the On-Campus Interview Program. Recruiters visit campus every fall, winter, and spring to interview and hire students. The Career Center website has a list of participating companies.

The Career Center sponsors several major events every academic year. The Graduate and Professional School Fair brings representatives from the nation’s top universities to campus to share information about their advanced-degree programs. Job and internship fairs, which bring hiring companies to campus, take place multiple times each year. Students looking for a job or internship will want to arrive prepared with a great résumé. Other events include the Multicultural Career Conference, which brings students and alumni together to develop mentor relationships and explore careers.

The Career Center—located at the Bay Tree Building, Room 305, in Quarry Plaza—can be reached at (831) 459-4420. Office hours are 8 a.m. to 5 p.m.

EDUCATIONAL OPPORTUNITY PROGRAMS (EOP)

The Educational Opportunity Programs (EOP) provide a variety of academic and personal support designed to improve the retention and academic success of first-generation low-income and educationally disadvantaged college students. EOP helps ensure that these students successfully complete their undergraduate education and acquire the skills to prepare for graduate and professional school, as well as for future leadership roles. EOP offers the following programs.

Advising Programs and Services

EOP Advising programs and services are designed to facilitate personal growth and development with the goal of achieving academic and social integration, academic achievement, and exposure to opportunities beyond the baccalaureate degree. These programs and services include:

- Advising and counseling
- Personal counseling
- Referrals to resources, programs, and opportunities
- Peer advising

Bridge Program

The Bridge Program is a first-year experience program that supports and guides students in their transition from high school to the university. Participants are first-generation college students who may come from low-income backgrounds and under-resourced California high schools. The program is designed to prepare students for the academic rigors of the university by providing them with the tools and resources necessary to achieve academic excellence in their first year and throughout their undergraduate career.

Support Services for AB540 Students

AB540 Student Services provides a broad range of support services designed to address the needs of AB540 students. These services address the gaps that AB540 students face within the university and enhance student achievement. Services provided to students include mentoring, community-building events and programs, personal advising, and student-based support.

Textbook Lending Program

This program is designed to assist students in obtaining required textbooks that they would not be able to purchase on their own due to cost. To receive textbook assistance, students must demonstrate financial hardship and must have exhausted all other forms of financial aid available to them. This includes all forms of loans (subsidized and unsubsidized).

Pre-Graduate Programs

EOP also sponsors two pre-graduate programs designed to increase the placement of EOP students in professional and doctoral programs and to encourage the pursuit of academic careers.

- The Graduate Information Program (GIP) supports students seeking to pursue graduate and professional school education. Services include graduate and professional school advising; graduate school application and internship-related workshops; graduate school resource library and website; website to conferences and forums

- Pathways to Research (P2R) exposes undergraduate students to research opportunities and research-based graduate programs. With the assistance of their graduate mentor, participating students determine their short-term goals for the quarter and long-term goals for the school year related to exploration of and involvement in research. Students engage in
Undergraduate Academic Program

ACE is a nationally recognized academic support program that is designed to increase the diversity of students who earn bachelor’s degrees in science, technology, engineering, and mathematics (STEM). ACE offers active-learning problem solving sessions for selected mathematics and science courses.

The sessions provide a structured setting where students teach and learn from each other. An ACE session leader, who has an academic background in the subject, facilitates the problem solving sessions. Undergraduate co-leaders/peer mentors assist, bringing the student-to-teacher ratio to approximately 12:1. In addition to attending their ACE problem-solving sessions, students meet weekly with their peer mentor, who shares study strategies as well as opportunities for undergraduate teaching and research internships. ACE session leaders offer weekly office hours, as well as examination review sessions and academic and career planning. ACE students join a community of STEM scholars who are dedicated to academic excellence and success.

Applications are accepted quarterly for the upcoming term. Enrollment in ACE is limited and priority is given to EOP students who are planning to pursue a STEM major. For more information, visit the ACE website.

MULTICULTURAL ENGINEERING PROGRAM (MEP)

Also known as the MESA Engineering Program, MEP is the university-level component of Mathematics, Engineering, Science Achievement (MESA), a statewide program of the University of California Office of the President. At UC Santa Cruz, MEP is supported by the Baskin School of Engineering. Its goal is to promote the retention and graduation of a diverse population of students, especially those from groups that remain the most underrepresented in engineering studies.

MEP provides academic and personal support for engineering students who are first-generation college students, are the first in the family to pursue engineering or computer science studies, or are from a low-income (limited financial resources) or educationally disadvantaged background. MEP’s academic learning community supplements students’ undergraduate experience and encourages them to continue their education by attending graduate school. MEP has a strong support system and engages students’ full participation in a variety of services and activities. These include academic advising, personal counseling, tutorial services, drop-in assistance, individual and small-group study, study-skills workshops, peer-support networks, community-building activities, scholarships, and an engineering Summer Bridge program for a select group of entering first-year students.

MEP’s well-equipped study center and computer lab provides 24-hour access to computer workstations and printer, textbooks, individual lockers, and a place for students to gather and study. Students who have
participated in pre-university service programs (e.g., Early Academic Outreach, Talent Search, Puente, DEEP, Smith Scholastic Society) are encouraged to apply to MEP.

For further information, call (831) 459-2868, visit the MEP website, or drop by the School of Engineering Undergraduate Affairs Office, 231 Baskin Engineering Building.

SERVICES FOR TRANSFER AND RE-ENTRY STUDENTS (STARS)

Services for Transfer and Re-entry Students (STARS) offers a broad range of personal and academic support services for all transfer and re-entry students (undergraduates 25 years and older, graduate students 29 years and older), students who are parents regardless of age, and military veterans. These services include admissions information; orientations for new students; academic seminar courses; study skills workshops; tutorial services; informal academic advising; drop-in assistance; social, recreational, and cultural programs; scholarships; newsletters; and study centers with computer workstations. STARS also acts as a clearinghouse for information about campus and community resources for UCSC’s large transfer and re-entry student populations.

STARS is located at Kresge College, on the floor above the College Office. All current and prospective transfer and re-entry students are invited to visit. Hours are 9:00 a.m.-7:00 p.m., Monday through Thursday, and to 5:00 p.m. on Friday.

Veterans Education Team Support (VETS) is a STARS program for veterans returning to school. In this peer mentor program, veterans meet each other and receive assistance as they navigate admission and transition into university life. Ongoing personal and academic support and outreach to prospective students are also offered.

The Smith Renaissance Scholars Program, which helps current and former foster youths pursue their educational goals, is affiliated with STARS.

The Osher Lifelong Learning Institute at UCSC, a UC/community organization dedicated to continuing education, is also under the STARS umbrella. The organization hosts monthly meetings with university faculty, offers courses taught primarily by emeriti faculty, and coordinates a wide variety of peer-led interest groups.

The Retirees and Emeriti Center, located at STARS, provides a resource for faculty and staff of UC Santa Cruz as they transition to and engage in retirement.

For further information regarding all the STARS programs, call (831) 459-2552. For current programs and activities, visit the STARS website.

DISABILITY RESOURCE CENTER (DRC)

The campus accommodates students with disabilities and welcomes their attendance at UCSC. The Disability Resource Center (DRC) provides services such as disability-related advising, authorization for testing accommodations, conversion of print materials into alternative formats (audio, electronic, Braille), adaptive equipment loans, notetakers, sign language interpreters, real-time captioning services and referrals to appropriate campus or community resources.

The Disability Resource Center is located at 125 Hahn Student Services Building and can be reached by phone at (831) 459-2089, or via email at drc@ucsc.edu. More information is available on the Disability Resource Center website.

Campus access for people with mobility impairments. Visit the campus Americans with Disabilities Act website for more information about accessibility. The campus accommodates students with disabilities. The Disability Resource Center provides services for people with disabilities, including wheelchair-accessible ramps, modified rest rooms, and other facilities. If necessary, classes are rescheduled to meet accessibility needs.

Questions and concerns can be directed as follows:

- Education/program accessibility should be addressed to the director of the Disability Resource Center, at (831) 459-2089 (voice).
- Facility or transportation access should be directed to Facilities Access Coordinator (831) 459-3759 (voice).
- Computing access to the campus should be directed to IT Accessibility Coordinator (831) 459-2410.
- Accommodating job applicants or current employees with disabilities should be directed to (Disability Management Coordinator, Benefits Office (831) 459-4602 or Assistant Director for EEO, Office for Diversity, Equity, and Inclusion (831) 459-3676.

ROTC AND MILITARY AFFAIRS

UC Santa Cruz Air Force ROTC

Students interested in participating in Air Force Reserve Officer Training Corps (AFROTC) have the option of attending AFROTC classes at San José State University while taking other academic classes at UC Santa Cruz.

San José State University supports a wing of AFROTC with cadets from San José State University, Santa Clara University, Stanford University, UC Santa Cruz, and many local community colleges. The Air Force ROTC program is designed to provide instruction in leadership, management, and national security studies along with military education and training. This prepares the cadet for assignment to positions of responsibility and importance in the modern Air Force. Instruction is conducted on and off campus. This program offers all eligible students the opportunity to obtain an officer's commission in the
United States Air Force while earning their college degrees.

**Program Overview**

Our faculty brings a wealth of experience and diversity to the program. Instructors are Active Duty Air Force officers from various career areas and provide students with a first-rate academic education and military training experience. Each faculty member also acts as a student adviser to guide students through the program and help them reach the goal of an officer’s commission in the United States Air Force.

College students wishing to commission as an Air Force officer through ROTC may enroll in a three- or four-year program. Students attend Air Force ROTC classes along with other college courses and receive elective academic credit. AFROTC courses are sequenced by subject area for specific and logical reasons. Please see [http://www.sjsu.edu/afrotc/](http://www.sjsu.edu/afrotc/) for course information. After successfully completing all requirements, the cadets are commissioned as Air Force officers.

For information on the Air Force ROTC program, contact the Department of Aerospace Studies, AFROTC Det 045, One Washington Square, Industrial Studies Building, Room 214, San Jose State University, San Jose, CA, 95192-0051. Phone: (408) 924-2960. Email afrotc@sjsu.edu or visit the website: [http://www.sjsu.edu/afrotc/](http://www.sjsu.edu/afrotc/). Students may call or inquire about program prerequisites, scholarship availability, and class schedules at the Department of Aerospace Studies.

**UC Santa Cruz Army ROTC**

The Army ROTC (Reserve Officers’ Training Corps) is one of the best leadership courses in the country and can be part of your college curriculum. UC Santa Cruz students have the opportunity to take ROTC courses with cadets from other local campuses including Santa Clara University, Stanford, and San Jose State University. Cadets from UC Santa Cruz have flexible options to meet ROTC class requirements such as local classes on campus, shuttles to Santa Clara University, or by virtual attendance of classes at Santa Clara University through the Army’s online meeting application. During classes, leadership labs, physical training, and field training exercises, Army ROTC students will learn firsthand what it takes to lead others, motivate groups and conduct missions as an officer in the Army. Upon graduation from Army ROTC, students will earn the bar of a second lieutenant and be commissioned into the Active Army, Army Reserve or Army National Guard.

Army ROTC at Santa Clara University is a program that fosters the development of cadets’ academic, athletic, professional, and mental strengths. Students attend class and physical training for three hours each week, along with a Wednesday lab session that features hands-on instruction regarding Army operations and leadership situations. This program is ideally designed as a four-year process. Cadets spend their first two years familiarizing themselves with the Army, and in their third year they are expected to perform and improve as leaders in preparation for a summer leadership development camp at Ft. Knox, Kentucky. The fourth and final year of Army ROTC introduces cadets to the responsibilities of military staff, teaching them to plan, train, lead, and develop their junior cadets in preparation for their commission. A typical four-year education with Santa Clara University ROTC comes with a service obligation of four years in the Army.

Army ROTC also gives cadets the opportunity to gain further Army experience by earning appointments to Army training schools where they will parachute from airplanes or rappel from helicopters. In addition, cadets are allowed a single quarter of study abroad, as well as the opportunity to participate in Army-funded immersion trips to dozens of countries across the globe in the summer months.

Cadets who graduate from the program will compete for active duty and reserve positions across the Army. Active officers have a full-time position and serve for a minimum of four years. Reserve officers serve for eight years part-time in either the National Guard or Army Reserve.

For more information about ROTC opportunities and scholarships contact Mario Morales by email at mcmorales@scsu.edu or by phone at 408-554-6840, or visit the Army ROTC website at [http://www.scsu.edu/rotc/](http://www.scsu.edu/rotc/).

For more information regarding Army ROTC please visit the Army ROTC website at [http://www.goarmy.com/rotc.html](http://www.goarmy.com/rotc.html).

**UNDERGRADUATE RESEARCH**

At the best research universities, professors bring knowledge and creativity from their cutting-edge research into the classroom, integrating the canon of the discipline with its future directions. UC Santa Cruz takes this further with a special tradition of undergraduate research outside the classroom. UC Santa Cruz, its departments, and faculty offer undergraduates many ways to get involved in research and creative activities. These opportunities develop advanced skills and insights and provide an early introduction to the nature of graduate studies. Research projects can help students launch careers, secure admissions to top graduate schools, and truly make an impact on society.

Many majors incorporate research into their senior comprehensive requirement, with options or requirements of a senior thesis, capstone project, or other creative endeavor based on students’ individual research. Other opportunities for undergraduates include structured internships or research programs, joining ongoing faculty research or creative projects, or developing their own projects under faculty supervision. The following sections discuss a sampling of UCSC’s international education, field-study, and exchange programs, which enable
Undergraduate Academic Program

students to deeply enrich their undergraduate experience and education as they learn by doing. For additional information, see Undergraduate Research Opportunities.

UC LEADS

After being selected as UC LEADS Scholars, students begin a two-year program of scientific research and graduate school preparation guided by individual faculty mentors and program staff. Scholars are provided with an excellent opportunity to explore their discipline, experience a research environment, and improve their opportunities for future study in their chosen field. Each scholar is mentored by a member of the UC faculty who assists the student in designing a plan of research and enrichment activities tailored to his or her individual interests and academic goals. Scholars attend the annual statewide symposium, as well as are sponsored to participate in another STEM conference of their choice each year.

The UC LEADS program is headquartered in the STEM Diversity Programs office, along with MARC, IMSD and CAMP. To learn more about eligibility requirements and the UC LEADS program, visit the STEM Diversity Programs website or email STEM Diversity Programs Director Yulianna Ortega at yuli@ucsc.edu. The application will be available Dec. 1, 2016. The deadline for 2017-19 cohorts is Feb. 10, 2017.

CALIFORNIA ALLIANCE FOR MINORITY PARTICIPATION (CAMP)

CAMP is a statewide initiative that aims to support and retain underrepresented undergraduates to achieve their degrees in the biological sciences, physical sciences, mathematics, and engineering. By integrating research and undergraduate education, CAMP creates a cohesive set of experiences that fully prepares undergraduates for graduate studies. CAMP motivates participants through cooperative learning, internships, faculty mentored research, and travel to professional conferences.

The CAMP program is headquartered in the STEM Diversity Programs office along with MARC, IMSD and UC LEADS. To learn more about eligibility requirements and the CAMP program, visit the STEM Diversity Programs website or email STEM Diversity Programs Director Yulianna Ortega at yuli@ucsc.edu. The application will be available Dec. 1, 2016. The deadline for 2017-19 cohorts is Feb. 10, 2017.

INTERNATIONAL EDUCATION

The International Education Office (IEO) actively supports UCSC’s teaching, research, and service missions. IEO oversees UCSC Programs Abroad and International Scholar and Student Services (ISSS).

For further information, contact the International Education Office, 101 Classroom Unit Building, (831) 459-2858, email: ieo@ucsc.edu.

PROGRAMS ABROAD

UCSC Programs Abroad offers undergraduate and graduate students the opportunity to study through the University of California Education Abroad Program (UCEAP) on more than 350 programs in more than 40 countries as part of their regular UCSC academic program. The program serves students at all UC campuses and is administered by the University Office of the Education Abroad Program in Santa Barbara. Information is available at eap.ucop.edu.

Additionally, UCSC Programs Abroad assists students participating in study-abroad opportunities through UCSC directly, through other UC campuses, and through privately sponsored organizations. UCSC Programs Abroad seeks to bring these programs within reach of all students.

INTERNATIONAL SCHOLAR AND STUDENT SERVICES

The International Scholar and Student Services (ISSS) office provides immigration advising and advocacy as well as cultural and academic programming for UCSC’s growing global community. ISSS assists students, scholars, researchers, and faculty members in maintaining their legal status while in the United States, serving as UCSC’s official liaison to U.S. government agencies related to immigration matters. ISSS serves more than 1,000 international clients and their accompanying family members who come to the campus each year.

FULBRIGHT GRANTS FOR GRADUATE STUDY AND RESEARCH ABROAD

The International Education Office facilitates the Fulbright annual awards competition for the Graduate Study and Research Abroad Program for currently enrolled UCSC students.

KORET UNDERGRADUATE RESEARCH SCHOLARSHIPS

The Koret Scholars Program provides funding for a variety of undergraduate research projects and experiences. The program supports scholarships for undergraduate research projects with faculty and graduate student mentors, undergraduate and graduate student research internships with the Student Success Evaluation and Research Center, and expansion of the year-long College Scholars research development program. Visit the Koret Scholars Program website for more information.

FIELD AND EXCHANGE PROGRAMS

UCDC PROGRAM AT THE UC WASHINGTON CENTER
The UCDC Program supervises and supports students who pursue a quarter of academic study and internship work in the nation’s capital. Internship placements are geared toward student interests, including but not limited to government and public policy, science and the environment, education and the arts, advocacy and nonprofit organizations, law, and business and finance. Students live in the UC Washington Center with students from other UC campuses, which provides an intellectual and social community throughout the quarter.

The program is open through an application process to juniors and seniors (occasionally sophomores) in all majors. Students enroll for fall, winter, or spring quarter, earn 12 to 17 course credits, complete an internship, and continue to be registered as full-time students. Applicant selection is based on academic record, a written statement, letters of recommendation, and in some cases a personal interview. Financial-aid eligibility is maintained.

Interested students with strong academic records are encouraged to apply. For further information, visit the UCDC website or email the UCDC Coordinator at ucdc@ucsc.edu.

**INTERCAMPUS VISITOR PROGRAM**

UCS students may take advantage of educational opportunities at other campuses of the University of California through the Intercampus Visitor Program. This program enables you to take courses not available at Santa Cruz, to participate in special programs, or to study with distinguished faculty at other campuses.

To qualify for participation in this program, you must be in good standing after completing at least three quarters in residence at Santa Cruz. Each host campus establishes its own criteria for accepting students from other campuses as visitors. You must also have the approval of your college. Consult with your department about how courses taken at the host campus may apply to your major requirements.

Applications are available at the Intercampus Visitor Program website. Additional information is available from the special programs coordinator in the Office of the Registrar, (831) 459-4412. The application form contains a great deal of useful information about the program and how and when to file; please read it carefully. A nonrefundable application fee of $70 is due when the application is filed.

**CROSS-CAMPUS OR SIMULTANEOUS ENROLLMENT WITH OTHER UNIVERSITY OF CALIFORNIA CAMPUSES**

Undergraduate students enrolled at UCSC may enroll, without formal admission and without payment of additional university fees, in courses at another UC campus on a space-available basis at the discretion of the appropriate campus authorities on both campuses. Simultaneous enrollment refers to UC courses not offered through UC Online. Additional information about online UC courses is available through UC Online.

Currently registered students must meet all of the following requirements to be eligible to enroll in one class through the Cross-Campus and Simultaneous Enrollment Programs: completion of a minimum of 12 credits at UCSC as a matriculated student, be in good academic standing, and demonstrate appropriate academic preparation as determined by the host campus. Full-time students must be enrolled in at least ten credits at UCSC. University Part-Time students must be enrolled in at least five credits at UCSC and may enroll in up to ten credits total.

Information about Cross-Campus Enrollment is available through UC Online. Applications for Simultaneous Enrollment are available at the Office of the Registrar, 190 Hahn Student Services Building or online. For more information, call (831) 459-4412 or email registrar@ucsc.edu, or visit the website at Simultaneous Enrollment.

**PART-TIME PROGRAM**

If you are unable to attend the university full-time because of family obligations, employment responsibilities, or a medical condition, or you are in your final quarter before graduation, you may qualify for the Part-Time Program. This program enables students to pursue a bachelor’s degree part-time in any major offered at UC Santa Cruz. To participate, undergraduate students must file a Part-Time Program application by the appropriate deadline. Full-time students normally take three 5-credit courses per quarter; part-time students may enroll in a maximum of 10 credits.

Students approved for enrollment on a part-time basis pay the same fee as full-time students but pay only one-half of the tuition. Part-time nonresidents pay one-half of nonresident tuition. Financial aid awards may be affected by enrolling part-time. Students who use the part-time fee reduction may not also use the UC employee reduction. Part-Time Program applications are submitted online to the Office of the Registrar. For more information, call (831) 459-4412, or email registrar@ucsc.edu. More information is available on the Part-Time Program website.

**DOMESTIC EXCHANGE PROGRAMS**

UCSC has exchange programs with the University of New Hampshire (UNH) and the University of New Mexico (UNM). UNH is located near the New Hampshire seacoast in the picturesque colonial town of Durham, a little more than an hour from Boston, Massachusetts. UNM is located in Albuquerque, a city of approximately half a million population, situated on the banks of the Rio Grande. Both schools give students the opportunity for an educational experience in an entirely different environment.

While enrolled in the exchange program, students maintain their status at UCSC, and they are expected to return to complete their studies following...
Undergraduate Academic Program

enrollment at UNH or UNM. Both universities are on the semester system and students may participate in one semester or the entire academic year.

Participants are selected from among students who are in good academic standing. Successful applicants will be expected to confirm their participation at the beginning of spring quarter. Each department of study determines the applicability of UNH and UNM courses toward requirements for the major. Letter grades earned while at UNH and UNM will not be calculated into the UCSC GPA or the UC GPA. Further information is available from the exchange program coordinator in the Office of the Registrar, by phone at (831) 459-4412, and at the Domestic Exchange Programs website.

INTERSEGMENTAL CROSS-ENROLLMENT

This program permits a student who is currently enrolled in a California community college or a California State University campus and who meets certain eligibility criteria to enroll in one undergraduate course at UCSC each term, on a space-available basis. A student is qualified to participate in this program if he or she meets the following requirements:

- has completed at least one term at the home campus as a matriculated student and is enrolled in at least 6 credits at the home campus during the term in which he or she seeks to cross-enroll;
- has a grade point average of 2.0 for work completed;
- has paid tuition or fees required by the home campus for the academic term in which he or she seeks to cross-enroll;
- has appropriate academic preparation as determined by the host campus, consistent with the standard applied to currently enrolled students;
- is a California resident for tuition purposes at the home campus; and
- has not previously been admitted to and registered at UCSC.

Applications are available online. The application form contains a great deal of useful information about the program and how and when to file. Please read it carefully.

FIELD PROGRAMS AND INTERNSHIPS

Many UC Santa Cruz students complement their major programs with field experience or internships, which also provide opportunities to become involved in public service activities in the local community and throughout the world. Most of the field programs described below are open to students in a range of majors, although some are restricted to students pursuing a designated area of study. Students in all majors may apply for internships sponsored by the Career Center.

In addition to the off-campus placements provided by the programs described below, independent field study opportunities are available through some UCSC colleges and departments.

**Chancellor’s Undergraduate Internship Program (CUIP)**

The Chancellor’s Undergraduate Internship Program (CUIP) provides on-campus internships in programs and departments throughout UC Santa Cruz. Interns work with a mentor to develop personal and professional skills and take a leading role in producing projects. A two-unit leadership seminar class is required for fall, winter, and spring quarters. A scholarship of $8,200 is paid toward the intern’s registration fees for the academic year.

**Community Studies Field-Study Program**

Community Studies is the oldest interdisciplinary undergraduate degree program at UCSC. Its hallmarks are a focus on social justice and a distinctive pedagogy that integrates classroom learning and an extended six-month field study. Not only is the full-time field study a requirement of the major, it is the centerpiece of a core curriculum through which students prepare for, then immerse themselves in a setting where they participate in and analyze the social justice work of an organization. Upon return from field study, students integrate topical and experiential learning in a capstone project (usually a senior essay) that uses their field notes as a key source for analysis.

With the guidance of faculty and staff advisers, community studies students choose field placements related to one of the program’s areas of focus in economic justice and health justice. Placements have included community health clinics, women’s and feminist organizations, immigrant-rights centers, media and policy advocacy organizations, homeless resource and support groups, sustainable development projects, queer and transgender organizations, neighborhood or workers’ collectives, civil rights groups, community food security programs, legal clinics, community-based cultural organizations, programs for seniors, tenant or labor unions, HIV/AIDS advocacy groups, harm reduction programs, government agencies and the offices of elected officials, and many other organizations committed to working for social justice. As political, economic, cultural and technological landscapes shift, so do the needs and opportunities for social justice organizing. Throughout its history Community Studies has been noteworthy for being attuned and responsive to innovative in field-study opportunities in a changing world.

The practical experience gained from the six-month field study, combined with their topical learning, provides graduates with many choices. About half go on to graduate or professional study in education, urban studies, public health, public administration, social work, planning, law, policy studies, medicine, nursing, or academic disciplines like sociology, anthropology, and politics. Others enter the work
world directly, in many cases continuing with non-profit agencies like those in which they did their field study. Community Studies graduates are social entrepreneurs, community organizers, program directors, public officials, teachers, therapists, librarians, social workers, news directors, union officials, labor organizers, forest management consultants, reporters, youth workers, and artists. According to a recent alumni survey, almost 100 alumni have founded nonprofit social justice organizations, and many more have served on nonprofit boards and/or in executive director positions.

The field study program is open to Community Studies majors only. The entire major usually takes two years to complete. For more information, see the Community Studies website.

**Economics Field-Study Program**

The Economics Department offers its majors the opportunity to integrate their academic knowledge with career-related work. The field-study program places students in internships under the supervision of a faculty sponsor and a professional in the workplace. Students can select from a wide variety of field placements such as accounting firms, community nonprofits, government agencies, brokerage firms, marketing agencies, banks, and businesses in Santa Cruz and beyond. Students apply and prepare for field study a quarter in advance. Acceptance into the field-study program is determined by academic standing, class level, and successful completion of Economics 100A, 100B, and 113 (see Economics courses). Students may earn a maximum of 10 credits and complete up to two quarters in a field placement.

Along with the training and supervision by a professional in the workplace, students receive guidance from a faculty sponsor who directs their academic project. Completion of this project and the job supervisor’s evaluation of performance earn the student credit. Economics Field Study (Economics 193 or 198, see Economics courses) does not satisfy an upper-division requirement for the major and is available on a passing/not passing (P/NP) basis only.

Further information is available from the Economics Field Study Office, 402 Engineering 2 Bldg.; by phone at (831) 459-5028; or by email at econintern@ucsc.edu.

**Environmental Studies Field and Internship Program**

Open to all UCSC students, the Environmental Studies Field and Internship Program is an integral academic component of the environmental studies major, and it augments the research and professional development of undergraduate students (see Environmental Studies). Interns are placed, individually and in groups, in both on-campus and off-campus agencies, where their work often results in publications and resource documents, and in many cases serves as the primary basis for policy formation within a particular agency or organization.

Placements have included research for small businesses; learning all aspects of running an organic farm; writing policy documents for state agencies, nongovernmental organizations, and planning departments; assignments as natural history interpretive guides for state and national parks; and apprentice positions with consultants, architects, solar-energy designers, agroecologists, and teachers. Student intern placements are also obtainable working with coffee growers, teachers, and agricultural specialists in Costa Rica, Nicaragua, El Salvador, and Mexico.

Part- and full-time placements are available, and students may receive two to 15 course credits for their work. Each student’s placement is supervised by a team of supporters: a faculty adviser, field sponsor, and the internship coordinator. Students spend 12 to 15 hours each week on their assignments for every 5 credits they receive.

Internships and fieldwork are designed to complement a student’s coursework and are available for both lower- and upper-division credit. Often, the internship leads to a summer job or employment after graduation. Qualified environmental studies majors may undertake a senior internship to fulfill the department’s comprehensive requirement. In addition, internships provide a fieldwork component for some environmental studies courses. Undergraduates are also afforded ample opportunities to intern on faculty and graduate-student research projects.

Further information is available from the Environmental Studies Field and Internship Program Office, 491 Interdisciplinary Sciences Building, (831) 459-2104, email: ckoeln@ucsc.edu. More information is available at envs.ucsc.edu/internships.

**The Everett Program (formerly the Global Information Internship Program)**

The Everett Program is focused on connecting the university to community partners on a global scale. It supports social change using the tools of technology, social entrepreneurship, and research.

The Everett Program recruits highly motivated and innovative students who are committed to developing social enterprises and contributing to social justice and environmental sustainability movements at the global and local levels. The program consists of three quarters of rigorous classes, practical technology labs, and project labs. It empowers students to focus their passion for social change by teaching them how to research, plan, design, fund, implement, and evaluate projects in collaboration with community change agents, using information and communication tools. Students are supported and encouraged to participate in outside-of-class trainings, competitions, outside grants, and opportunities to connect with the Everett alumni network.

Everett-sponsored students have worked with Muslim feminists in Malaysia, coffee farmer co-ops in Central America, democracy-advocating NGOs in
Ghana, and aspiring high school students in Watsonville. For more information, see www.everettprogram.org. As managers of the program, past students who have become Everett Fellows also facilitate peer-to-peer technology and project labs throughout the year. These focus on training students in valuable skills such as participatory mapping, website and graphic design, digital video storytelling, social media campaigns, and robotic programming. The Everett Program’s year-long series is interdisciplinary and counts as an upper-division elective for several social science majors. It also serves as a foundation for the major and minor in global information and social enterprise studies (GISfES), which is sponsored by the Department of Sociology. For more information on the GISfES and Intensive Sociology major and minor, please see Sociology Department Majors and Minors.

Fieldwork in Education Programs

The M.A. in Education/California SB 2042 Preliminary Teacher Credential program provides students with necessary credential preparation for K–12 teaching in the California public schools. Preparation is offered for the Multiple Subject Preliminary credential (typically Grades K–6), and the Single Subject Preliminary credential (typically Grades 7–12) in the following subject areas: English, math, social science, and science. Credential students may also pursue a Bilingual Authorization in Spanish. Students pursuing the Education M.A./California Preliminary Credential must complete a three-quarter student teaching course sequence. Student teaching placements are restricted to enrolled students. The student-teaching sequence consists of five courses: Education 200, 201, 202A, 202B, and 202C. Fall and winter quarters of the sequence involve part-time placements in public schools in Santa Cruz County, Monterey County, and Santa Clara County. Spring quarter is a full-time experience in which student teachers take over full responsibility for the daily instructional program of the classroom in which they are placed. Substantial fieldwork in K–12 classrooms is also incorporated in other courses required for the teaching credential.

The minor in education is an undergraduate program in which students explore the history of educational thought and philosophy; the politics and economics of education, learning theory, and pedagogy; and issues of cultural and linguistic diversity related to schooling. As a part of the six-course minor sequence, students engage in field study in local schools through Education 180, Introduction to Teaching.

For more information, contact the Education Department, 1280 McHenry Library Building, (831) 459-4102, or education@ucsc.edu.

Health Sciences Internship Program

A requirement of the Human Biology major, the Health Sciences Internship Program offers students a unique opportunity for personal growth and professional development. Paired with a professional mentor, students spend one quarter interning in a health-related setting. Placement opportunities cover a broad range, from individual physicians to community clinics and hospitals, hospices, non-profits, and public health agencies. The Health Sciences Internship coordinator works with students to prepare them for their internship and maintains a list of appropriate placements. Junior and senior human biology majors only are eligible to apply. Applications are due two quarters in advance. For further information, contact the Health Sciences Internship Coordinator, Caroline Berger, at (831) 459-5647 or cmberger@ucsc.edu.

Latin American and Latino Studies Field-Study and Internship Opportunities

All Latin American and Latino Studies majors are strongly encouraged to undertake either (1) a field study in Latin America, the Caribbean, or a Latino/a community in the U.S.; or (2) formal academic study abroad through the UC Education Abroad Program (UCEAP). These paths are the best ways to improve language skills, explore the nature and direction of specific academic and career interests in relation to Latin American and Latino studies, and deepen cross-cultural understanding and relationships based on personal experience.

Field studies comprise independent, community-based study projects for academic credit, done under faculty sponsorship and arranged on an individual basis. Students can do full-time field study for one quarter for full academic credit, part-time field study scheduled in conjunction with formal coursework at UCSC, or field study as an extension of the UC Education Abroad Program (UCEAP). Projects vary widely, but students who want to develop a field-study proposal are expected to prepare for it by acquiring fluency in the appropriate language, prior cross-cultural experience, and upper-division coursework on the region and/or topic that is to be the focus of the study.

Students who wish to pursue a full-time field study are advised to speak with their faculty advisor to assess their eligibility and preparation, as well as to receive needed guidance, ideally a quarter or two in advance.

Many of the students who have done full-time field study have developed a senior thesis based on that work. Students who pursue a part-time field study are highly encouraged to discuss their plan with their faculty advisor as well.

Local opportunities for internships and field study in Latino/a communities on California’s Central Coast are numerous. Credit for up to three upper-division courses may be applied toward the major from field study; however, course credit from field study and study abroad combined may not exceed three upper-division courses. Students should check the Latin American and Latino Studies Department website for further information regarding the field-study process and course credit. A listing of local field-study programs and petition forms are available at the
Psychology Field-Study Program

The Psychology Field-Study Program provides qualified students an opportunity to integrate what they have learned in the classroom with direct service to a community agency. Each year, more than 200 students develop new skills and clarify personal and professional goals by working as interns in schools, criminal justice programs, and mental health and other social service agencies, where they are supervised by a professional within that organization. Psychology faculty members sponsor field-study students, helping them to synthesize their intern experience with psychology coursework and guiding them through an academic project. Junior and senior psychology majors in good academic standing are eligible to apply for this competitive program. There is a minimum commitment of two quarters. Interested students should attend an information meeting, held every quarter, for a general overview and application. The schedule for each quarter is posted at the start of instruction. For more information, visit the Psychology Field-Study Program website.

University of California Center Sacramento

The University of California Center Sacramento offers students a chance to spend a quarter fully immersed in legislative and/or community service programs in the state capital. Students intern a minimum of 24 hours per week in the Assembly, Senate, Governor’s Office, and with state agencies and nonprofit organizations. They also enroll in related courses taught at the UC Sacramento Center one block from the Capitol Building. Students live with other UC campus participants in a living and learning community. This opportunity is available to students from any major and is open to undergraduate and graduate students. For information, see the UCSC Career Center website.

The University of California Center Sacramento offers students a chance to spend a quarter fully immersed in legislative and/or community service programs in the state capital. Students intern a minimum of 24 hours per week in the Assembly, Senate, Governor’s Office, and with state agencies and nonprofit organizations. They also enroll in related courses taught at the UC Sacramento Center one block from the Capitol Building. Students live with other UC campus participants in a living and learning community. This opportunity is available to students from any major and is open to undergraduate and graduate students. For information, see the UCSC Career Center website.

UCSC Summer Session offers UCSC students a chance to accelerate progress toward their degrees and welcomes visitors from other colleges and universities as well as members of the community (including high school juniors and seniors). A broad range of 250 courses are taught by UCSC faculty, lecturers, and graduate students. Often significantly smaller in size than during the fall, winter, and spring quarters, Summer Session classes include major requirements and qualifying courses, lower- and upper-division courses, general education courses, and online courses. Most are five weeks long. Students may enroll in multiple classes in one or all of the sessions, with a maximum of 30 credits total. Tutoring, advising, and other academic and personal support is available, as are on-campus housing and dining, OPERS fitness center and outdoor recreation, campus employment, and more. Many course restrictions are lifted in summer, giving students new opportunities. Special summer-only programs include the Summer Academies for new fall admits and the renowned one-week Dickens Universe. Please visit summer.ucsc.edu for courses and details or email summers@ucsc.edu.

UCSC SILICON VALLEY EXTENSION

In April 2016, UCSC Extension opened its doors to the UC Santa Cruz Silicon Valley Campus. Located at 3175 Bowers Avenue in Santa Clara, the Silicon Valley Campus is a beautiful new facility outfitted with the latest educational technologies just a stone’s throw from the Santa Clara Square. UC Santa Cruz undergraduates and graduate students, as well as community members seeking continuing education, have their choice of certificate programs in more than 40 disciplines and services designed to meet the needs of Silicon Valley and greater Bay Area. UCSC Extension provides professional training that reflects the academic rigor of the University of California and the hands-on, roll-up-your-shirtsleeves practicality of Silicon Valley culture. Developed with guidance from key industry leaders and academic experts, UCSC Extension’s certificate programs match the demands of a wide range of industries, including engineering, business, education, bioscience, and environmental safety. The Silicon Valley Campus is also home to the University of California Scout program, graduate programs affiliated with UCSC’s Baskin School of Engineering, and an English language school designed to equip English language learners with the skills necessary to accelerate learning or take the next step in their careers.

Extension’s career-oriented programs cover the latest best practices, tools, and technologies in engineering and technology, business and management, applied and natural sciences, and education. While most certificates can be completed within one year, coursework is graded and substantial, typically involving lectures, readings, presentations, and final projects or examinations.
Undergraduate Academic Program

Extension also has a robust international department, English language program, and Optional Training Program (OPT), and offers F1 visa guidance and internship opportunities.

Regularly enrolled UCSC students may obtain degree credit for Extension courses numbered 1–299. Lower division courses are numbered 1–099, upper division offerings are 100–199, and graduate-level courses are 200–299. Upon submission of the Extension transcript to the Office of Admissions, the course credit may be applied toward a bachelor’s degree at UCSC. Many Extension courses are recognized for graduate degree credit by other universities (acceptance of course credit is based upon approval by the accepting university).

Students can study in a few different ways: in classrooms or labs at our Silicon Valley location; online, via our dynamic learning platform; and in hybrid courses, which offer a combination of classroom meetings and online learning. Many courses have both online and classroom sections available each quarter to ensure that students with commutes, jobs, and family obligations can find courses that fit their schedules.

Visit UCSC Extension or call (408) 861-3700 to enroll or to learn more about courses and programs.

OPEN CAMPUS/CONCURRENT ENROLLMENT

Concurrent Enrollment Through Extension is a cooperative arrangement between UC Santa Cruz and UCSC Silicon Valley Extension that enables members of the public to enroll in one or two regular UCSC undergraduate or graduate courses per quarter for credit. The program is administered by UCSC Silicon Valley Extension, and course credit granted appears on a UCSC Silicon Valley Extension transcript. Participants must meet certain criteria outlined in the Concurrent Enrollment application. An application fee is charged for each quarter of enrollment in addition to course fees. A first-time application filed at least one week prior to the first day of instruction for the quarter has a $65 fee; subsequent applications filed at least one week prior to the first day of instruction for the quarter have a $20 fee. Applications filed later than one week prior to the first day of instruction for the quarter have a $110 fee.

Concurrent Enrollment through Extension may be used as a path toward a part-time or full-time degree program or as a way of studying subjects of personal or occupational interest. Credit earned through this program may be used toward degree requirements, when applicable, if participants subsequently seek admission to the university and are accepted. Financial aid is not available to participants in the Concurrent Enrollment program.

For further information and to obtain an application packet, contact UCSC Silicon Valley Extension, 3175 Bowers Ave., Santa Clara, CA 95054, (408) 450-4920, or email opencampus@ucsc.edu.

Revised: 07/15/18
UC Santa Cruz offers graduate study in more than 40 academic fields. More than 800 graduate students are enrolled at the certificate, master’s, and doctoral levels. The small size of the UCSC graduate programs encourages close working relations between students and faculty in an informal atmosphere conducive to rapid learning and professional growth. Many graduate programs have interdisciplinary components, and students are encouraged to explore the conceptual connections between related fields as they acquire mastery in their areas of specialization. Research facilities at UCSC are excellent, and there are extensive opportunities for graduate students to engage in significant independent study and research (see Resources for Learning and Research). Graduate students are also encouraged to obtain teaching experience, primarily as supervised teaching assistants. They are highly valued members of the UCSC community, contributing substantially to the research and teaching conducted on the campus.

**DEGREES AND PROGRAMS**

The University of California, Santa Cruz, offers graduate programs leading to advanced degrees or certificates in the following areas:

PROGRAM DESCRIPTIONS

Descriptions of individual programs appear under the specific disciplines in the Programs and Courses section. Application materials for all programs are available online at the Division of Graduate Studies; applications for the upcoming academic year are available starting October 1 of the prior year.

A list of graduate programs with links to additional information is available at Academics. Inquiries about part-time study should be directed to the individual departments. If there are any problems with the online application process, please email gradadm@ucsc.edu.

ADMINISTRATION

At UC Santa Cruz, individual graduate programs are directed by the academic departments. Overall policy is determined by the Graduate Council, and coordination and record keeping for matters common to all graduate students—such as admission applications, fellowships, and advancement to candidacy—are the responsibility of the Division of Graduate Studies. The dean of graduate studies is the chief administrative officer. Graduate policies and other information can be found online in the Graduate Student Handbook.

CATALOG RIGHTS

Students matriculating in a given graduate program will select the UCSC General Catalog they will follow to meet their requirements. This can be either the one published the year they enter the program, or any subsequent catalog published prior to the year they are awarded the degree sought. Students who seek readmission after a break in attendance of more than two years (six regular quarters) must adhere to the graduation requirements in effect at the time of readmission or to those subsequently established for all portions of the degree requirements not already fulfilled. The readmitting program will determine which degree requirements remain to be fulfilled, and will communicate this information in the letter offering readmission. This determination constitutes a formal requirement for readmission to the program, and the student’s acceptance of readmission implies acceptance of the program’s written stipulation of remaining degree requirements. Should any student choose to follow catalog requirements for a year in which the catalog is not printed in hard copy, the requirements will include any online catalog update for that year. A student must follow the chosen catalog in its entirety, including both the individual degree program and general university requirements. General university requirements may be found in the Graduate Student Handbook.

EVALUATION OF PERFORMANCE

Graduate students are graded Satisfactory/Unsatisfactory (S/U) or, at student option, A, B, C, D, F. The grade A, B, or S is awarded for satisfactory work. A graduate student receiving a grade of C, D, or U will not be able to use the credit for that course to satisfy any course requirement for a graduate degree. Courses in which a graduate student receives a grade of C, D, F, or U may be repeated. Credits will be counted once, and the most recently earned grade will determine whether a degree requirement has been met. Repeating a course more than once requires the prior written approval of the dean of graduate studies.

Graduate student performance in all courses taken for credit at UC Santa Cruz may also be evaluated according to the Narrative Evaluation System. A narrative evaluation typically describes the nature and requirements of the course, the student's strengths and weaknesses in the various aspects of the course (e.g., discussion, laboratory work, term papers, and examinations), and the student's general understanding of the course content. Evaluations may be used by academic advisers and become part of the student's official academic record. Please also refer to the statement on Academic Integrity; Appendix F, Graduate Student–Faculty Adviser Relationship Guidelines; and Appendix O, Official University Policy on Academic Integrity for Graduate Students, published in the Student Policies and Regulations Handbook.

DIVERSITY-ENHANCEMENT PROGRAMS

The Eugene Cota-Robles Fellowship and the Dissertation-Year Fellowship are part of the University of California’s Academic Career Development Program.

The Eugene Cota-Robles Fellowship is a merit-based diversity-enhancement program that provides financial support for students from diverse backgrounds to pursue and successfully complete a graduate degree. This fellowship is awarded to
entering doctoral students who have overcome significant obstacles to achieve a baccalaureate-level degree, and whose economic, educational, or social background contributes to intellectual diversity of the graduate student population. Departments identify applicants from among their pool of admissions applications. Applicants should refer to the information under Financial Support in the application to gain a better understanding of this fellowship. Fellowship recipients must be U.S. citizens or permanent residents.

The Dissertation-Year Fellowship is available to continuing students who are advanced to candidacy. Enrolled students are assisted through formal and informal group orientations, individual advice about academic matters, financial aid, postdoctoral opportunities, and the provision of information about career planning, health care, and housing. Departments nominate applicants for this fellowship from among their qualified students. For information, see the Division of Graduate Studies website.

---

**EXCHANGE PROGRAM**

A graduate student in good standing at UC Santa Cruz who wishes to take advantage of educational opportunities available only at another campus of the University of California may become an intercampus exchange graduate student for a quarter or more. This program also permits students to take courses at more than one UC campus during the same quarter.

To participate in the program, a student must have the approval of his or her faculty adviser, the dean of the Division of Graduate Studies at UC Santa Cruz, and the graduate dean on the campus to be visited. Application forms may be obtained from the Division of Graduate Studies and should be submitted three weeks before the quarter in which the exchange begins.

---

**STUDENT LIFE**

The campus offers a variety of programs to enhance the quality of student life, all of which are available to graduate students. These include child care, sports and recreation, health services, cultural events, transportation services, and the UCSC Women’s Center. See Campus Life for information on these services and a description of the local community. See Disability Resource Center for services available to students with disabilities.

---

**COLLEGE AFFILIATION**

Graduate students at Santa Cruz have the opportunity to affiliate with one of the 10 colleges on campus (see college descriptions). Participation in the activities of a college may include taking an occasional meal there, living at the college, or participating in the college’s educational and preceptorial programs or in its extracurricular activities.

---

**GRADUATE STUDENT ASSOCIATION**

The Graduate Student Association (GSA) is an organization of all graduate students at UCSC. It seeks to advance the general welfare of the graduate student body and is responsible for promoting extracurricular activities on campus.

The Graduate Student Association advocates for graduate student interests with regard to tuition and fees, health insurance, transportation, housing, graduate student well-being, support for marginalized grad students, and other important issues. The GSA ensures graduate student representation on campus committees and works with the campus and UC administration to implement GSA goals. The GSA also works with statewide and UC-wide bodies to represent the UCSC graduate community beyond our campus.

Graduate students elect a GSA Council, which coordinates activities and their funding. The GSA awards research and travel grants to graduate students and also organizes and co-sponsors events for graduate students, including international graduate students and grads from historically marginalized communities.

The GSA is funded by student fees and operated by an executive board. Representatives from departments that offer graduate degrees make up the GSA Council. The council meets three times per quarter to strategize around and discuss issues that impact graduate students. For more information, contact the GSA website or email gsainfo@ucsc.edu.

---

**GRADUATE STUDENT COMMONS**

Located in the Quarry Plaza, the Graduate Student Commons (GSC) serves the needs and interests of graduate students at UCSC. It provides a comfortable and welcoming space, fostering graduate student interaction and a sense of community. The GSC is open 24 hours a day for all graduate students and graduate student groups to use the various study and meeting rooms.

Social events are sponsored by the Grad Commons to promote a sense of community and cohesion among graduate students across the various departments. Health and wellness activities are available to help graduate students relax from the stresses of TAing and research. The Graduate Student Commons also offers a wide range of professional development workshops each quarter to support graduate student success in academia and beyond. Visit the Graduate Student Commons website to learn about upcoming programming and ways to get involved.

---

**HOUSING**
Graduate Studies

As at all UC campuses, finding housing may be a challenge. Students who wish to reside on campus should submit their application as soon as possible. Likewise, students who wish to live off campus will want to start looking at available rentals and costs as soon as possible.

On-campus Graduate Student Housing for 82 individual students is located adjacent to “Science Hill,” home to many of UCSC’s academic facilities. Four students share a furnished apartment with four single bedrooms, living room, kitchen, dining room, and bathroom. Visit the Grad Housing website, or email gradhs@g.u-csc.edu.

Students with families may apply to live in Family Student Housing, a complex of two-bedroom unfurnished apartments. Located on the west side of campus, the 22-acre site is adjacent to a nature reserve and overlooks the Monterey Bay. Refer to the Family Student Housing website, or email fsh@ucsc.edu.

To assist students in locating living accommodations in the surrounding communities, the Community Rentals Office maintains a list of available rentals.

APPLICATION AND ADMISSION

APPLICATION DEADLINES

Students may apply for only one UCSC graduate program at a time. A list on the Graduate Studies website shows the date set by each program as the final deadline for submission of all documents. Please visit the Graduate Studies website for the most current information on applying to UCSC graduate programs. Application deadlines may be updated on or before applications open. The dates listed are the official deadlines, but students are strongly advised to submit applications well in advance of the deadline. If an application deadline falls on a weekend or holiday, there will not be staff available for assistance.

ADMISSION REQUIREMENTS

To be admitted with graduate status at UCSC, a student must have completed a bachelor’s degree or its equivalent from an accredited undergraduate institution of acceptable standing and demonstrate ability to pursue a program of study leading toward an advanced degree. Preparation must provide an adequate foundation for advanced study, as determined by the department for the program in which the student intends to enroll. If the bachelor’s degree is not in the same discipline as the graduate program, the student must have sufficient preparation in the intended area of study to undertake graduate-level work.

To apply for admission, application materials (including test scores, written materials, and any required supplemental materials) must be submitted before the deadline date to the Division of Graduate Studies. UC Santa Cruz requires that applicants complete an online application to be considered for admission to a graduate program. The application and the accompanying materials should be complete and accurate.

Specific questions regarding particular graduate programs should be directed to the program you are inquiring about; the list of graduate program contact information is available online.

Admission application. Applications for all programs are available online at the Graduate Studies website. The completed application is paid for online with either a credit card or e-check. This application fee is not refundable. Application fee waivers are available for cases of hardship, and fee exemptions are available for students who participated in approved grad-prep programs. International applicants are not eligible for fee waivers.

Graduate Record Examination (GRE) scores. If the applicant is applying for admission to a program that requires the GRE, the scores must be received by UC Santa Cruz Graduate Application Processing before the application deadline. It is strongly recommended that all applicants complete testing by November, since December test scores will not reach the division prior to most application deadlines.

The Educational Testing Service should be asked to forward the test scores directly to the division. UC Santa Cruz’s school code is 4860. Test results are electronically submitted to UC Santa Cruz Division of Graduate Studies four to six weeks after the exam has been taken. Please consult the Graduate Studies website to see which exams are required for each program.

Supplemental material. Many graduate programs have special application requirements, such as writing samples, portfolios, auditions, or personal interviews. The Graduate Studies or program website (or the website for the program to which the student is applying) should be consulted and all of the requirements specified should be fulfilled.

DUPLICATION OF HIGHER DEGREES

It is the policy of the UC Santa Cruz campus to prohibit the pursuit of duplicate advanced degrees. However, applicants may petition the graduate dean for an exception to this policy if the degree sought is in a field of study distinctly different from the field in which the original advanced degree was attained.

In order for a student who already holds the doctorate to be admitted or readmitted to work toward a second Ph.D.—or toward an academic master’s degree—each of the following conditions must be met:

- The applicant must petition the graduate dean in writing prior to the application deadline for the program in question.
Graduate Studies

• The department sponsoring the program to which admission is sought must support the applicant’s petition.
• The department must present the graduate dean with a clear and complete outline of the program required for the degree sought, and must explain the intellectual separateness of the proposed program from that completed by the applicant in attaining the earlier degree.
• The graduate dean will review all materials submitted and decide whether or not to admit the applicant, consulting with the Graduate Council when appropriate.

Admission to a professional master’s program after a Ph.D.—or to an academic master’s program after a professional doctorate—is not subject to these restrictions.

TRANSFER OF CREDIT
UC Santa Cruz does not automatically grant credit for graduate-level work undertaken at other universities. Each department determines credit transferability on an individual basis.

INTERNATIONAL APPLICANTS
Applicants from other countries must meet standard admission requirements and, upon admission, provide satisfactory evidence of financial support before they may obtain the necessary visa documents. Because it normally takes much longer to process international applications, such students are urged to apply as early as possible. Once the student has been formally admitted, a Certificate of Eligibility (I-20) will only be issued by the UC Santa Cruz International Student and Scholar Services when all requirements are satisfied. Please note that international students are eligible for neither need-based financial aid nor application fee waivers.

For those choosing to take the TOEFL, a minimum score on the paper-based TOEFL of 550, or 220 on the computer-based test, or 83 on the Internet-based test is required for admission. Chemistry and biochemistry, computer engineering, computer science, and electrical engineering require 570 on the paper-based test, 230 on the computer-based test, and 89 on the Internet-based test. Any international students who wish to be considered for teaching assistant opportunities must score a 26 or higher on the Spoken Word portion of the Internet-based test.

For those choosing to take the IELTS, our institution requires an overall band score of 7 or higher on the IELTS. An overall score of 8 from the IELTS test is required for all new international students who may serve as a Teaching Assistant at any time during their graduate career. UC Santa Cruz only accepts scores submitted electronically by the IELTS test center. No paper Test Report Forms will be accepted. An institutional code is NOT required. Please contact the test center where you took the test directly and request that your test scores be sent electronically using the IELTS system. All IELTS test centers worldwide are able to send scores electronically to our institution. For inquiries on test dates, fees, and preparation, please contact your nearest test center (see the IELTS website).

All official academic records must be issued in the original language and accompanied by English translations prepared by the issuing institution. If translations are not available from the institution itself, translations may be prepared by government or official translators. In order for translations to be acceptable, they must bear the stamp or seal of the issuing institution or government agency and the original signature of the translator. They must be complete and exact word-for-word translations of the original documents, not interpretations. Grades must not be converted to the American scale. Specially prepared English versions are not acceptable in place of documents issued in the original language. Once submitted, documents may not be borrowed, returned to you or sent elsewhere.

International applicants are not required to submit evidence of financial support until they have received formal admission to a graduate program. A Certificate of Eligibility (I-20) will not be issued by the UC Santa Cruz International Student and Scholar Services until all standard admissions requirements have been met and the UCSC Financial Certificate and supporting financial documents have been received and approved.

APPLICATION PROCESSING
The Division of Graduate Studies receives most application materials and creates a file for each applicant. Once the application is submitted online, it will be available to the appropriate department for review and recommendation. Applicants are admitted by the graduate dean following recommendations by the departments. Applicants will be notified by email whether or not they have been admitted for graduate study at UCSC after all reviews are complete. Under no circumstances will UCSC give out this information over the phone, in person, or by proxy. By a general agreement to which UC Santa Cruz and most graduate schools in the U.S. are signatories, applicants admitted to graduate schools have until April 15 to reply with their acceptance of fellowship offers. Any information about the completeness of the file can be found on the MyUCSC student portal once an application has been submitted. Specific questions about the evaluation of the application should be directed to the department to which you are applying.

FEES AND EXPENSES
Fees and expenses for graduate students are shown below. Tuition, fees, and other charges are subject to
change without notice by the Regents of the University of California. For current fee information, check registration fees.

### Graduate Student Fees, 2018-19

<table>
<thead>

<td>33,418.08</td>
</tr>
</tbody>
</table>

**Subject to change based on state appropriation and UC Board of Regent’s approval

(a) A limited number of Nonresident Tuition Fellowships are available. Please refer to the Financial Support section.

For information on fee refunds, see Finances.

Minimum annual expenses, including registration fees, for a single graduate student living on campus are estimated to be $44,539.08 per academic year. Students should not plan to undertake graduate study without assured funding, since outside employment in the Santa Cruz community can be difficult to obtain. An estimated sample student budget for the 2018-19 academic year is provided below. Non–California residents should add $15,102 in nonresident tuition and fees to the total.

### Graduate Student Budget, 2018-19

<td>$1,272.00</td>
</tr>
<tr>
<td>Personal</td>
<td>$2,310.00</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td><strong>$44,539.08</strong></td>
</tr>
</tbody>
</table>

(a) Estimated room and board for graduate students living with family is $5,622.

b) Expenses of owning a car and parking on campus are not included here. For parking fees, see Transportation and Parking Services.

c) Some graduate programs are also assessed a professional fee.

### REQUIRED FEES

Required fees are due and payable before the start of each quarter. These typically include tuition and fees, on-campus housing and meals if applicable, and campus health insurance if you do not secure a waiver. You will need sufficient funds to cover required fees and other personal expenses at the start of each term. For many financial aid recipients who are enrolled at least half time, tuition and fees on the student account are paid automatically with approved student aid funds. Financial aid recipients should note that fellowship, grant, and loan checks or bank deposits in excess of university charges are refunded to students via direct deposit or check, but are not available to you until the first week of instruction each quarter.

The **Student Services Fee** supports student services that provide a supportive and enriching learning environment and that are complementary to, but not part of, the instructional program. Programs include, but are not limited to, services related to the physical and psychological health and well being of students, social and cultural activities and programs, services related to campus life, and educational and career support.

**Tuition** helps support student financial aid and related programs; administration; libraries; operation and maintenance of plant; the university’s operating budget; and all costs related to instruction, including faculty salaries.

**Campus-Based Fees** help support a wide range of student services, including extracurricular programs, campus child care, community and public service projects, and free-fare use of the local transit systems.

In addition, all students are assessed a mandatory Health Insurance Premium. The Cowell Student Health Center provides primary care services for the plan, while a contracted insurance company provides major medical and hospitalization insurance. Dependent coverage is also available. Detailed information is on the UCSC Student Health Insurance website, or contact (831) 459-2389.

Waivers from the mandatory insurance fee are available for students who can show that their outside plan provides coverage equal to or better than the student health insurance plan. Deadlines for applying for a waiver are listed in the Schedule of Classes and the Graduate Student Handbook.
NONRESIDENT TUITION

A resident of a state other than California or of another country must also pay nonresident tuition. General criteria for residency are in Appendix A.

Non-U.S. citizens note: Regardless of how long you live in California, only U.S. citizens and holders of immigrant visas may become qualified for resident classification.

LATE FEES

Late fees may be assessed if a student fails to make university payments or enroll by the specified deadlines. Late fees are assessed on a graduated basis for each month there is an unpaid balance on your university account. Late fee amounts of $50 for each late registration payment and/or late enrollment and $25 for a late housing payment. Deadlines are published online in the Graduate Student Handbook and the Schedule of Classes, and they appear on the Statement of Account.

DEFERRED PAYMENT PLAN

See the information under undergraduate expenses.

FINANCIAL SUPPORT

The University of California, Santa Cruz, makes a strong effort to provide financial support to all graduate students who make normal progress in their program of studies. Certain kinds of support are awarded on the basis of academic merit, and others are granted on the basis of need. Students are encouraged to apply for both kinds of assistance by submitting the Free Application for Federal Student Aid (FAFSA). This form must be submitted after October 1 prior to the academic year for which you are requesting aid. The FAFSA may be filled out online and filed electronically at the FAFSA website.

To receive need-based support for the fall quarter, the FAFSA should be submitted no later than three weeks prior to the end of spring quarter of the year you are enrolled. Applications for student loans for each academic year will be accepted until April of that academic year. More detailed information about the application process and loans can be found at Financial Aid. Students may also visit the Financial Aid and Scholarships Office, 205 Hahn Student Services Building, or call (831) 459-2963.

Fellowships, Assistantships, Grants

Students who received Cal Grant A or B as undergraduates within the last 15 months may request a one-year extension from the California Student Aid Commission to attend a teacher credential program. Renewal of these awards requires the student to submit the FAFSA by March 2nd. In addition, the student must submit a Request for Teaching Program Benefits Form (Form G-44) to the California Student Aid Commission.

The federal Teacher Education Assistance for College and Higher Education (TEACH) Grant Program provides grants to students who intend to teach in a high-need field in a public/private elementary or secondary school that serves students from low-income families. The program at UCSC is for M.A. Education students. In exchange for receiving this grant, you must sign an Agreement to Serve and complete online counseling. This grant converts to a loan with retroactive interest if the Service Agreement is not fulfilled. More information and a fact sheet can be found at the Federal Student Aid TEACH Grants website.

Teaching Assistantships. For the 2018-19 academic year, half-time teaching assistantships provide a salary of $6,884 per quarter.

Graduate Student Researcher Internships. For the 2017-18 academic year, salaries for graduate student research positions ranged from $4,561 to $8,940 per quarter (depending on department) with state and federal taxes withheld from these amounts. The division and the UCSC Career Center can provide information about external graduate fellowships and grants.

STUDENT LOANS

Graduate students can qualify for federal student loans by completing the FAFSA. Graduate students are eligible for Unsubsidized and Graduate PLUS loan programs. For additional information, see the UCSC Financial Aid and Scholarships website.

LOAN FORGIVENESS PROGRAMS

The federal government will forgive all or part of a student loan under certain circumstances. This can include performing volunteer work or military service, or practicing medicine in certain communities. For a summary of such exemptions, visit the Federal Student Aid website.

GLOBAL ENGAGEMENT

The Global Engagement Office facilitates the exchange of people, ideas, and knowledge to support and promote the internationalization of the teaching, learning, and research at UC Santa Cruz. Global Engagement oversees UCSC Study Abroad and supports international students through the International Student and Scholar Services Program (ISSS). For further information, contact the Global Engagement Office: 101 Classroom Unit Building, (831) 459-2858, email: global@ucsc.edu.

INTERNATIONAL STUDENT AND SCHOLAR SERVICES (ISSS)

International Student and Scholar Services (ISSS) provides immigration advising and advocacy as well as cultural and academic programming for UCSC’s growing global community. ISSS assists students, scholars, researchers, and faculty members in maintaining their legal status while in the United States, serving as UCSC’s official liaison to U.S.
Graduate Studies

government agencies related to immigration matters. For information, see the ISSS website.

FULBRIGHT GRANTS FOR GRADUATE STUDY AND RESEARCH ABROAD

The Global Engagement Office facilitates the Fulbright annual awards competition for the Graduate Study and Research Abroad Program for currently enrolled UCSC students.

STUDY ABROAD

UCSC Study Abroad offers undergraduate and graduate students the opportunity to study through the University of California Education Abroad Program (UCEAP) as part of their regular UCSC academic program, with more than 400 programs in more than 40 countries. UCEAP serves students at all UC campuses. Study Abroad also assists students participating in study-abroad opportunities through UCSC directly, through other UC campuses, and through privately sponsored organizations. Study Abroad seeks to bring these programs within reach of all students.

Revised: 07/15/18
RESOURCES FOR LEARNING AND RESEARCH

2018-19 General Catalog

University Library | Computing Facilities and Technology Services | Natural Reserve System | Arts Division Research Centers and Institutes | Baskin School of Engineering Facilities | Humanities Division Research Programs-
- The Institute for Humanities Research (IHR) | Physical and Biological Sciences Research Programs and Centers | Social Science Division Research Centers and Institutes | Interdisciplinary and Systemwide Research Programs and Resources

UNIVERSITY LIBRARY

The UC Santa Cruz University Library supports the research and learning needs of the campus community from two locations: McHenry Library at the center of campus, and the Science and Engineering Library on “Science Hill.” The Library is a second home for many students, providing space for individual quiet study as well as reservable group study spaces. Each library’s Information Commons offers computer workstations, scanners, and printers as well as circulating laptop and Chromebook computers. McHenry Library hosts the Global Village Café, a perfect place to recharge during marathon study sessions.

The University Library provides access to a wide variety of scholarly resources. Access to eBooks, ejournals, and streaming media is available on campus and off, the latter via the campus’s Virtual Private Network. While the majority of the Library’s print materials are housed in open stacks and accessible to all faculty, students, and staff, the campus community also has access to millions of other books and journals through shared licensing and the Interlibrary Loan service.

The Reserves service lends copies of assigned class readings and media on a short-term basis so that all students can access the course materials they need to succeed.

Special Collections acquires and manages rare book and primary source collections that are accessible to students, faculty, and the general public. Holdings include a significant book collection including an unusually large number of artists’ books, fine press, and early printing, as well as over 500 archival collections, with particular strengths in 20th century photography, literature, art, music, and astronomy. The David Kirk Digital Scholarship Commons (DSC) at McHenry Library provides access to new work spaces and high-end computer software. The DSC invites all members of the UCSC community to build digital and web-based projects, collaborate on research, and experiment with innovative tools and methods.

Other important collections and services include:
- The Digital Collections website contains a growing treasury of digitized photographs, maps, artwork, oral history transcripts, and sound recordings, as well as “born digital” materials, focusing on the most rare and unique collections.
- The Video Game Lab at the Science and Engineering Library provides access to more than 2,000 games and 30 gaming consoles as well as books to support game design and studies.
- The Ask-A-Librarian service provides expert in-person and online research assistance.

For more information, see the University Library website.

COMPUTING FACILITIES AND TECHNOLOGY SERVICES

INFORMATION TECHNOLOGY SERVICES (ITS)

Information Technology Services (ITS) at UCSC provides a broad spectrum of IT-related resources, services, and support to students, faculty, and staff in the areas of computing, network, telephones, media services, information systems security, web, email, and instructional technology.

ITS operates the campus network, which interconnects computers, workstations, instructional computing labs, and computer-equipped classrooms with each other and the Internet. In addition, wireless access is available across campus. ITS also provides the campus with technical services and computer support through the ITS Support Center.

PURCHASING A COMPUTER?

If you are planning on buying a new computer, UCSC recommends purchasing a laptop with both wired and wireless network capability. The campus supports both PC and Mac computers. An excellent source for purchasing computers and computer products is the campus Bay Tree Bookstore, (831) 459-2082. Through university-negotiated contracts, pricing is almost always below outside market prices.

UCSC ACCOUNT (CRUZID) AND EMAIL

All students, faculty, and staff have a UCSC account called CruzID and a UCSC email account powered by Google. Your CruzID is part of your email address, e.g., cruzid@ucsc.edu. All official UC and UCSC communication is emailed to the @ucsc.edu address. In addition to email, CruzID gives individuals access to many campus systems and applications. More information is available at UCSC Email Services.
RESIDENTIAL NETWORK

ITS provides in-room Internet access (called ResNet) to students living on campus. Network services are available to undergraduate and graduate students living in university housing (except for the Camper Park). For assistance with network connections, contact ResNet at resnet@ucsc.edu or call (831) 459-HELP (4357).

COMPUTING LABS FOR DROP-IN USE AND ACADEMIC CLASSES

ITS manages 12 computer labs throughout the campus. These labs have more than 300 computers available for students to use that include PC, Mac, and Sun workstations. Wireless access is available in all labs. More extensive lab information, including hardware and software specifications and hours of operation, is available at the Computer Labs page.

ACADEMIC COURSE MATERIALS ON THE WEB

Canvas is the campus online course-management system used to create sophisticated web-based course materials to supplement, but not replace, classroom instruction. Canvas uses a web browser as the interface for the course.

Faculty using Canvas can incorporate a wide variety of tools in their course site, such as a course calendar, student conferencing system, electronic mail, group projects with student-created web pages, and quizzes. Outside of class time, students can use Canvas to view course materials, participate in web-based class discussions, collaborate on student group projects, and take quizzes.

DISABILITY ACCOMMODATIONS FOR INSTRUCTION

UCSC computing labs have common adaptive technologies—such as enlarged type for students with low vision and Dvorak keyboards for students with repetitive strain injuries. If you have a disability and require adaptive or assistive technology to use lab computers, library facilities, or other campus services, please contact the Disability Resource Center (DRC) so that they can coordinate services for you. You can also reach the DRC at (831) 459-2089 (voice), or (831) 459-4806 (TTY).

ITS SUPPORT CENTER FOR TECHNICAL AND COMPUTER HELP

The ITS Support Center is open to all students, staff, and faculty and provides general computer help, assistance with CruzID accounts and email, and other technical-support needs. The Support Center is located at 54 Kerr Hall and is open Monday through Friday from 8 a.m. to 5 p.m.

COMPUTING POLICIES

Individuals using UCSC computing services must comply with the University of California, state, and federal policies and laws. These policies define how ITS will approach security, how faculty, staff, and students are to approach security, and how certain situations will be handled.

NATURAL RESERVE SYSTEM (NRS)

The University of California administers 39 natural reserves throughout the state. UC Santa Cruz has responsibility for four—the Landels-Hill Big Creek Reserve, Fort Ord Natural Reserve, Año Nuevo Island, and Younger Lagoon Natural Reserve—in addition to UCSC’s own Campus Natural Reserve. The purpose of the NRS is to establish and maintain, for teaching and research, a system of natural areas that encompass diverse and undisturbed examples of California’s terrain, both aquatic and terrestrial. The reserves are open to all qualified individuals and institutions for scholarly work concerned with the natural environment. Such work usually deals with ecological topics or experimental studies in a natural setting.

At UCSC, the reserves play an important role in supporting experiential learning (course support, internships, and research support) for undergraduate students interested in the ecological, physical, and environmental sciences. The close proximity of two of the reserves (Campus Reserve and Younger Lagoon) makes it possible for faculty and students to walk out the classroom door and into a living laboratory and outdoor classroom. These two reserves serve over 3,500 students, dozens of courses across multiple disciplines, and 150 undergraduate internships each year.

Information about the reserves is available at the UC Santa Cruz Natural Reserves website. Information about the UC system’s NRS holdings and management is available at the University of California Natural Reserve System website. You may also contact the UCSC Natural Reserve director, c/o Environmental Studies Department, 467 Natural Sciences 2 Building, at (831) 459-4867, or by email at ghdayton@ucsc.edu.

ARTS DIVISION TEACHING, RESEARCH, AND PERFORMANCE FACILITIES
The Baskin School of Engineering is known for rigorous engineering research with a focus on engineering for social good. From data science, to life and health and cyber-physical systems, BSOE is shaped around the opportunities and challenges of the 21st century. Much of our research takes place in collaborative interdisciplinary centers and institutes, outfitted with modern equipment and instrumentation, and providing opportunities for graduate and undergraduate students to work side by side with world-class engineering faculty. Facilities and resources include class 100 clean rooms, nanofabrication equipment, modern microscopy facilities, ultrafast optics and single particle spectroscopy labs, an immersive virtual reality CAVE lab, modern gaming equipment, and one of the most advanced stem cell research facilities in the western United States.

UC Santa Cruz Genomics Institute
VLSI Design and Automation Group

Resources for learning and research in the Baskin School of Engineering are augmented by industry partnerships, both in Santa Cruz and Silicon Valley, and by labs and centers across the UC Santa Cruz campus.

HUMANITIES DIVISION

RESEARCH PROGRAMS

The Humanities Institute at UC Santa Cruz is a hub for academic research, cross-discipline collaboration, and public engagement. We incubate ideas and foster innovation by funding projects, centers, and research clusters that enable faculty and students to work on some of the biggest problems of our day.

The Institute is a source, resource, and force for humanities-based inquiry and engagement with world events. We’re passionate about expanding the field of humanities scholarship with digital tools and an interdisciplinary focus. And we believe strongly that the core subjects of the humanities—philosophy, history, language and literature—should be accessible to everyone. That’s why we’re committed to engaging with the broadest community possible—from first-generation undergraduate students, to local residents, to anyone interested in compelling ideas and making sense of this increasingly complex world.

As part of the University of California system, the Institute is able to leverage the resources of the finest public university system in the world. Part of what makes the UC system of universities great—and what makes us different from so many universities around the globe—is the central role of the humanities in our educational experience, not only in the curriculum, but also in the vibrant intellectual life of our campuses. Here at UC Santa Cruz, we possess an especially rich tradition of innovation, creativity, and collaboration in the humanities.

Centers include:

Center for Cultural Studies
Center for Jewish Studies
Resources for Learning and Research

Center for Public Philosophy
Center for the Study of Pacific War Memories
Center for World History
Dickens Project
Digital Humanities Initiative
Gail Project
Language of Conservation Project
Linguistics Research Center
Morton Marcus Poetry Reading
Nido de Lenguas
Shakespeare Workshop
Sikh and Punjabi Studies

Undergraduate students in the humanities actively participate in the work and the activities of the centers and projects above. In addition, The Humanities Institute gives out 10 research fellowships annually to undergraduate students working on humanities projects. The students’ work is showcased at the annual divisional award ceremony in the spring quarter.

University of California Observatories (UCO)

Revised: 07/15/18
UC Santa Cruz combines the resources of a world-class public research university with a distinctive undergraduate experience characterized by our college system. Each college is a vibrant living/learning community supported by faculty and staff who provide academic support, organize student activities, and sponsor events that enhance the intellectual and social life of the campus. The colleges are committed to fostering a nurturing and academically thriving environment for students of all backgrounds. Each college strives to promote the attributes of a diverse and multicultural community in its own unique way.

In order of founding, the colleges are Cowell, Stevenson, Crown, Merrill, Porter, Kresge, Oakes, Rachel Carson College, College Nine, and College Ten. Self-contained and architecturally distinct, each college is a relatively small community of 30 to 110 faculty members and between 1,500 and 1,800 students, about half of whom live on campus. Each college has its own housing, as well as academic and recreational programming, and each is an integral part of the larger campus. The colleges have their own academic emphases and cultural traditions, although each seeks faculty and students from a variety of disciplines to foster broad intellectual interests. The colleges play a primary role in academic advising and are the center of student life. Students graduate from their college. At the same time, all university academic programs, resources, and student services are open to students of every college.

All undergraduate students are affiliated with one of our 10 colleges, their home within the larger university. During the process of accepting the offer of admission, entering students are asked to list several colleges in order of preference; whenever possible, students are assigned to one of their preferred colleges. The information students need to rank their college preferences can come from a variety of sources—personal acquaintance, a campus visit, literature available from the colleges, campus websites, and the descriptions in this section of the catalog. Students also have the option to indicate "no preference," meaning they will be fine with any of our 10 colleges, and the Admissions Office will assign those students to one of the colleges.

**SIMILARITIES AND DIFFERENCES**

The colleges are small-scale residential communities, each providing an academically and socially supportive environment and offering special programs designed to help students transition to campus life, build a strong connection with the campus, and get the most out of their UCSC experience.

Each college provides academic advising as well as academic and general campus orientations to help you plan your academic program. College academic preceptors and advisers provide advice on general academic matters outside a student's major, including general education, choosing a major, and strategies for academic success. Psychological and personal counseling is also available in each college. The faculty, or fellows, of each college come from a variety of academic disciplines; many faculty have their offices in the colleges.

Each college offers a distinctive academic core course for entering frosh. The required course provides a significant bridge between academic and residential life, since all frosh, regardless of major, will be in the course, and most will be in residence as well. The colleges also offer selected courses in their area of interdisciplinary emphasis and host events and speakers that enhance this focus.

Architecturally distinct, each college was planned by a different architect who was encouraged to convey the distinct personality of that college through the design of its buildings and their placement in the natural environment. The particular style of housing varies among the colleges, ranging from residence halls, with a mix of shared and private rooms, to apartment-style housing, where students live together in small groups and may do some of their own cooking. Each college's residential program is a team effort. Live-in student and professional staff members provide orientation and support services, organize activities and events, provide referral information about academic or personal concerns, and assist with roommate problems.

**CHANGING COLLEGES**

Most students develop friendships and intellectual attachments within their affiliated college, and remain members of that college throughout their undergraduate years. Some students find that changing academic interests draw them to a different college. During specified filing periods, students may request a change of college with the approval of both college administrations.
COWELL COLLEGE

Cowell College inaugurated the Santa Cruz campus when it opened with a pioneer class of 600 students in 1965. The founding faculty shaped an educational program that challenged and enriched students through wide-ranging inquiry and disciplined study. Today, Cowell has more than 1,500 affiliated students and over 90 faculty fellows. Its motto—The Pursuit of Truth in the Company of Friends—expresses a continuing commitment to create a serious academic environment within a humane and broadly inclusive community. The college is named for the S. H. Cowell Foundation, which endowed the college at its founding.

ACADEMIC EMPHASES

The academic theme of the college encourages students to pursue their general and disciplinary study with attention to the values of liberal arts education: understanding one's individual perspectives by exploration of one's historical background and world context. Students affiliated with the college pursue majors from all departments on campus.

In satisfying their general education requirements, first-year Cowell students are required to take the Cowell core course in the fall term. The core course is taught in small seminar sections and seeks to develop critical reading, analytical writing, and seminar discussion skills by reading a selection of classic and contemporary texts focused on the theme of justice.

Enrichment courses are offered every term at the college, and priority is given to Cowell students. Some courses emphasize the development of skills such as public speaking or researching in library collections. Some courses take a broader perspective, examining the role of education in democracy or the epistemological bases of our judicial system.

The college also enriches the intellectual and cultural life of the campus by sponsoring events of various kinds: lectures and presentations by local faculty and visiting scholars, theatrical and musical performances, and forums and debates on topics of current interest.

Students who develop ideas for research, creative projects, community service, or internship experiences may apply to the college provost for financial support. The college also awards several annual scholarships and sponsors prizes for outstanding academic work.

The faculty fellows affiliated with the college represent all academic divisions (arts, engineering, humanities, physical and biological sciences, and social sciences). The faculty fellows guide the college academic programs and often contribute to the college-based advising system.

The college academic buildings house humanities faculty, with notable concentrations in philosophy, classics (study of ancient Greek and Latin language and civilization), and modern foreign languages, especially Chinese, French, Italian, Russian, German, and Japanese. Interdisciplinary faculty groups in visual and performance studies and in pre-and early-modern studies are centered at Cowell College.

COLLEGE SCHOLARS PROGRAM

Along with several other residential colleges, Cowell participates in the College Scholars Program. Some students begin by invitation in the fall. Others apply to start in the spring. In the spring of their first year, the spring-start scholars join the fall-start scholars in a special two-credit class together, which includes special lectures and dinners. The program continues with selected seminars in the second year.

COLLEGE COMMUNITY AND FACILITIES

Cowell’s seven residence halls and three apartment buildings are arranged in three quadrangles on a hillside overlooking the city of Santa Cruz and Monterey Bay. About 700 students are housed in the college. Most floors are mixed gender with all students sharing common lounges and other facilities, but single-gender floors are provided for those who prefer this arrangement. Apartments house continuing students, mostly juniors and seniors. The residential staff members facilitate diverse educational, social, and recreational programming to enhance the living and learning environment.

Arranged around the college’s central courtyard are the dining hall, the Page Smith Study Library, the Mary Holmes Fireside lounge, the cafe, and conference rooms and classrooms. The Cowell Press, where students can learn the fine technique of hand-operated letterpress printing, is a stone’s throw away from the plaza. Also nearby is the Eloise Pickard Smith Gallery, including the Ann Dizikes Annex.

Since the college’s founding, regularly scheduled College Nights in the dining hall have offered students, staff, and faculty a special meal and a rich mix of programs. Community life is enlivened by many other scheduled and impromptu intellectual, cultural, and social events.

The Student Senate meets weekly to discuss campus issues and student government. The Senate advises the college on the allocation of funds for student activities and programs. Members of the Senate are selected each year by lot, but any student may become a voting member by steady attendance at meetings. The college’s student groups, staff, and faculty work together to create a supportive community for students from all ethnic groups, all religious traditions, and all sexual orientations and to increase awareness of the many dimensions of diversity in the community.

For more information on the college, see the Cowell College website or call (831) 459-2253.

COWELL FELLOWS AND STAFF
The Colleges

Cowell College faculty fellows are listed on the college's faculty directory. College staff are listed on the college's staff page.

STEVENVSON COLLEGE

“We are Stevensonians; we are free agents of history and masters of our own destinies. Every one of us is important, and we cherish our differences as much as we cherish our shared values of love, chivalry, honesty, hard work, and responsibility.”

—Seung Kyun Joseph Mok, Stevenson Alumnus/Regents Scholar

Stevenson College is named after former statesman and U.S. Ambassador to the United Nations Adlai E. Stevenson. Our faculty, students, and staff take pride in intellectual critical inquiry, academic and civic leadership, and respect for students’ concerns about shared student governance, human rights, and social justice.

Stevenson College has a long-standing reputation for excellence in liberal education. The college strives to provide an academically, culturally, and socially supportive environment for all its members, fostering social responsibility and academic achievement. Stevenson alumni can be found in legal, political, educational, engineering, medical, computer and information sciences, business, and public administration careers, among others. Stevenson has brought to the campus distinguished individuals such as Senator George McGovern, Congresswoman Bella Abzug, Nobel Laureate Elie Wiesel, Chief of the Miwok Tribe Greg Sarris, Producer Lourdes Portillo, and Associate Director-Counsel Theodore M. Shaw of the NAACP Legal Defense and Educational Fund.

The college’s faculty and staff offer professional and personal service for the diverse needs of students. Faculty and staff assist students in all areas of their academic and social experience at Stevenson College, and are committed to instilling respect for the diverse backgrounds of Stevenson students.

ACADEMIC EMPHASES

- Faculty drawn from social sciences, humanities, and natural sciences
- Two-quarter frosh core course
- Writing assistants
- Junior Fellows Program

The faculty at Stevenson, drawn from a variety of disciplines in the social sciences, humanities, and physical and biological sciences, share a common concern for the study of social processes that shape modern society and determine the quality of our individual lives throughout various global regions and periods of world history. Linguistics, history, sociology, politics, psychology, biology, chemistry, and computer science are strongly represented in the college.

Stevenson distinguishes itself as the only college with a two-quarter core course intended to provide all first-year students with a common academic experience. The core course allows for more rigorous development of students’ critical, reading, and analytical skills. It provides a unique learning environment and a supportive intellectual community for all Stevenson first-year students. Those admitted as transfer students are exempt from the core course requirement but may take the core course at their option pending available space.

The Stevenson core course, Self and Society, enables students to examine the nature of the self and the relationship of the individual to society. It teaches foundational concepts for intellectual exploration and personal development within an academic community—analysis, critical thinking, metacognition, engagement with others across difference, and self-efficacy. In addition, the course fosters an intellectual commitment to the general philosophy that has helped to define Stevenson College since its inception: preservation of human dignity, the social cultivation of individual creativity and citizenship, and a belief in ethical responsibility. The core course reflects the college’s long-standing commitment to interdisciplinary and culturally diverse readings, while at the same time affording students an opportunity to develop research interests, to acquire greater understanding of the role of research universities in contemporary societies, and to acquire the requisite skills to engage in increasingly more sophisticated intellectual work while at UCSC.

Students have the opportunity to apply for funding for special research projects each quarter. Stevenson also provides several annual scholarships and service awards, including the Josh Alper Marines Memorial Award, the Michele Guard Memorial Scholarship, the Matthew Graviano Memorial Scholarship, the John Halverson Scholarship, Davis Art Makers Funding, the Sandor Callahan Scholarship Award, and the Robert Dodge Service Award.

The Stevenson College Junior Fellows Program offers juniors and seniors an opportunity to serve as instructors in Self and Society. Junior fellows, who must have completed outstanding work in Self and Society during their first year, undergo a rigorous application and selection process. Junior fellows (enrolled in Stevenson 120, Teaching Practicum) earn five course credits.

Stevenson provides writing assistance for all of its students. Stevenson Writing Assistantships are paid student positions open to juniors and seniors with excellent academic records.

COLLEGE COMMUNITY PROGRAMS

- College Nights
- Stevenson Student Council
- Social and Multicultural Programs/Activities
- Cultural Arts and Diversity Rainbow Theater
The Colleges

- Stevenson Finals Study Breaks at the Provost House

Stevenson holds regular College Nights, a long-held tradition where Stevenson faculty, staff, and students get together for a special, themed dinner followed by entertainment.

The Stevenson Student Council meets on Thursday evenings. This group is responsible for allocating college membership fees to student activities. The council also serves as a forum for the discussion of college and campuswide issues and appoints student representatives to college and campuswide committees.

FACILITIES

- Eight small residence halls, four of which are themed houses:
  - Outdoor Adventure House
  - Sustainability House
  - Diversity and Social Justice House
  - The Rosa Parks African American Theme House (R. PAATH)
- Three apartment buildings
- Stevenson Coffee House
- Wagstaff Fireside Lounge
- Writers' Center
- Stevenson Library
- Stevenson Event Center
- Silverman Conference Room
- Recreation room
- Stevenson Garden
- Stevenson Music Practice Rooms

Stevenson has a wide variety of facilities and activities to appeal to many tastes. The college, designed by San Francisco architect Joseph Esherick, has won many architectural awards. The buildings are situated amid redwood trees and sprawling lawns, and the main quad overlooks Monterey Bay. Stevenson is situated close to the campus bookstore, restaurants, McHenry Library, gym, and pool. There are eight small residence houses at the college providing a choice of single-gender or mixed-gender floors; each house accommodates about 90 undergraduates. The apartments provide space for continuing students. Nearby are a picnic area, playing fields, and a garden.

The Stevenson Coffee House, which has become the gathering place in the college, is a friendly and inviting spot to enjoy lunch or an espresso and pastry—indoors or out on the patio. It is the scene of lively conversation, occasional musical entertainment, and chess matches. Adjoining the Coffee House is the recreation room, with Ping-Pong, a pool table, and televisions. This area is also the site of much socializing and spontaneous group activity.

In contrast, the Stevenson Library is a striking building designed for quiet reading and study. The Wagstaff Fireside Lounge, a retreat for relaxed discussion, is also used for recitals, special lectures, meetings, and residence house activities. Art exhibits (both student and professional) are on display throughout the year in the lounge, library, and coffee house.

For more information on the college, see the Stevenson College website or call (831) 459-4930.

STEVENSON COLLEGE FELLOWS AND STAFF

Stevenson College faculty fellows are listed on the college’s faculty directory.

Stevenson College staff are listed on the college’s staff page.

CROWN COLLEGE

Crown College seeks to provide our students with a living and learning environment in which they can positively develop intellectually and socially. Crown is traditionally viewed as the "science college," and the majority of our affiliated faculty fellows teach in the STEM (Science, Technology, Engineering, and Math) fields. However, half of our students major in the social sciences, arts, and humanities.

Crown is located on a hilltop surrounded by a redwood forest. The core buildings consist of an administration office, dining commons, lounge spaces, study spaces, faculty offices, and classrooms built around a large patio and central fountain. The award-winning architecture with its white walls and high-pitched tiled roofs suggests a hillside Mediterranean village. The college's residential facilities house approximately 800 students. The facilities at Crown College were built through a partnership of public funds and a gift from the Crown Zellerbach Foundation.

ACADEMIC EMPHASES

From the time of its founding in 1967, issues pertaining to the role of science and technology in society have been a focus of special interest at Crown College. We approach these issues from an interdisciplinary perspective that recognizes the influence of social and cultural factors on the scientific enterprise, as well as the ways in which science and technology influence our society.

More recently, Crown is adding an entrepreneurship and innovation component through its partnership with the Center for Innovation and Entrepreneurial Development (CIED). This partnership includes co-sponsoring talks and slams as well as a summer class in entrepreneurship.

Crown College’s entering frosh enroll in our core course, Crown 1 (begins fall 2018), which explores the theme, Ethical and Societal Implications of Emerging Technologies. Students work individually, in small groups of four to five students, and in sections of 25 to 30 students, thereby modeling and embracing the diversity found across campus. The course looks at how technological revolutions happen, how they transform societies, and how these
changes in turn generate new ideological narratives. Deeper goals of this course include fostering a sense of belonging, and ensuring that our students achieve college-level reading, critical thinking, and effective communication skills.

A central component of the course is a group project, in which students place a technology of their choice in its societal context, while learning strategies for effective group work. The core course is enhanced through events such as the “Meet the Author” series, which gives students opportunities to meet notable writers and hear them speak in the intimacy of the provost house. We also organize a science fiction short story contest, and students are encouraged to attend and/or present at Crown's Social Fiction Conference, which features keynote speakers, movies, cosplay, debates, and presentations in a variety of formats around science fiction, fantasy, and gaming topics and how they are relevant to our current society.

Crown College emphasizes experiential learning and facilitates the establishment of internships with faculty fellows through advertising of individual projects and by providing funding to support them. Crown, in collaboration with Merrill College, offers a Leadership Development Program, which combines leadership theory with a variety of opportunities to connect theory to real-world experiences, including field studies and student leadership positions.

In addition, Crown College offers the College Scholars and the Science Learning Community programs. The College Scholars Program provides a congenial and challenging academic home for a select group of well-prepared students at UC Santa Cruz. This enriched program of study includes special courses, seminars, colloquia, and other events into the fall of the sophomore year. Admission to the College Scholars Program can be by invitation during the admissions process based on high school academic performance (early entry) or in winter of the freshman year based on academic potential shown during the first quarter at UCSC (late entry).

The Crown Science Learning Community (SLC) is an innovative program that provides extra support to first-year students who are interested in pursuing a major in the sciences or engineering. Students enrolled in this program live together, forming a supportive community that promotes collaborative learning and group problem solving. To facilitate this process, SLC students are placed in a special section of Chemistry 1A or Math 3 and participate in a residentially based study group. The program often acts as a bridge to the ACE Program in the physical and biological sciences and engineering.

Similar to the Science Learning Community, Crown’s Baskin Scholars Community focuses on underrepresented student success in engineering. Participants are housed together and receive tutoring, mentoring, and other assistance.

CROWN OFFERS A WIDE VARIETY OF RESIDENCE HALLS AND APARTMENTS

Crown offers two types of residential facilities: residence halls and apartments. Eight traditional residence halls each house approximately 80 students in single and triple rooms in a coed environment (single-gender bedrooms with all gender bathrooms) or on a few all-female floors. For students interested in living and learning in a special-

COLLEGE COMMUNITY AND FACILITIES

Crown sponsors a wide variety of co-curricular events spanning cultural, educational, and social areas of interest. One popular series is the Science/Public Affairs Tables, informal dinners at the Provost House offering students an opportunity to socialize with a faculty member outside the classroom and learn about their research interests. Students become involved in Crown life by both initiating and participating in a wide range of activities. Social activities vary each year according to the interests of students. Typical events include College Nights, themed dinners with special menus and entertainment that are open only to the Crown community; dances, including the Glow Dance and the Crown/Merrill Semi-Formal; and study breaks and stress relievers. Unique to Crown, and a collaboration between student and academic life, the Social Fiction Conference examines issues of social justice in the ever-changing context of science fiction, fantasy, gaming, and anime.

Outdoor activities organized by the student senate, the College Programs Office, or residential staff range from whale watching on the Monterey Bay to visiting the Exploratorium in San Francisco, and from backpacking to stargazing.

The Crown Student Senate (CSS), the elected student government at Crown, holds open weekly meetings to determine funding allocations for student activities and to discuss issues of concern to students and the college. CSS also sponsors events to entertain, including the very popular Casino Night.

At Crown College, we believe that the experience of living in our on-campus residence halls and apartments offers students not only support for their academic experiences, but also unique opportunities for learning about the concept of community. When college students feel connected to a community during their studies, they experience a smoother transition to university life, greater academic success, and higher satisfaction with their college experience. The Crown Residential Education team understands community not as a product we can deliver to our students, but as an experience that they are responsible for creating for and with each other. Even so, we do not ask our students to undertake this weighty task on their own. The Residential Education team partners with students, striving to be “good companions” on their journey by facilitating experiences that help them to cultivate and apply the knowledge, skills, and abilities needed to create, participate in, and lead caring and socially just communities.

Crown offers two types of residential facilities: residence halls and apartments. Eight traditional residence halls each house approximately 80 students in single and triple rooms in a coed environment (single-gender bedrooms with all gender bathrooms) or on a few all-female floors. For students interested in living and learning in a special-
interest environment, Crown provides the Gaming House, Outdoor Pursuits House, and College Scholars and Science Learning Communities.

The college also has apartments for approximately 270 continuing students. Like the residence halls, the apartments are built on a small scale. Each three-story building has two or three apartments per floor that house four to six students in a combination of single, double, and triple rooms and include a kitchen, living room, dining room, bathroom, and outside deck.

Other facilities in the college include the Crown Library study space; a computer laboratory with Mac workstations, which provides students with access to several kinds of systems and an array of applications and instructional software selected to support academic coursework; the Fireside Lounge with a piano and a television; and the Music Practice Room. The Crown-Merrill Community Room, with a television, pool table, foosball, and ping-pong table, provides an informal place to study or just visit with friends. Dining facilities boast continuous dining and Banana Joe’s take-out and quick mart.

For general information, call the College Office at (831) 459-2665 or visit the Crown College website. For residential information, call the Housing and Residential Education Office at (831) 459-5689.

CROWN FELLOWS AND STAFF

Crown College faculty fellows are listed on the college’s faculty directory. Crown College staff are listed in the college’s staff page.

MERRILL COLLEGE

Merrill College seeks to expand its students’ awareness of their own heritage and of the diversity of cultures around the world, past and present. Merrill faculty specialize in a number of different areas of study, concentrating especially on social theory, international affairs, and social change, and from a variety of disciplinary perspectives including history, the social sciences, literature, and foreign language study. The college makes a special effort to be a home for students from different cultural backgrounds and for international students; it presents unique opportunities to those who value multicultural perspectives.

Merrill houses the departments of politics, legal studies, and Latin American and Latino studies. It also hosts KZSC, the campus radio station; the Chicano Latino Research Center (CLRC); UCSC’s Cantú Queer Center; the student-run Pottery Co-op (the only one of its kind at UCSC); and the Ming Ong Computer Center, a computer facility with more than 40 personal computers.

COLLEGE THEME AND CORE COURSE

Cultural Identities and Global Consciousness is the ethos of Merrill College. This pairing signals the college’s commitment to drawing on the “funds of knowledge” brought by individual college members to the community of scholars, and a corresponding commitment to understanding these identities within a larger global context.

Merrill’s new core course is titled Academic Literacy and Ethos: Reading Ourselves, Reading the World. Like all college core classes, this course introduces students to analytical reading and critical thinking at the university level. It is the required first part of a larger program of study, the Academic Literacy Curriculum, which includes formal instruction in university-level writing. Core offers students a foundation for intellectual exploration and personal development as members of an academic community. It teaches reading and thinking processes essential to success at the university, and “habits of mind” that demystify academic work and promote independent, self-reflective, and collaborative participation in campus culture. It focuses on Analysis, Critical thinking, Metacognition, Engagement with others across difference, and Self-efficacy—“ACMES” for short—and assigns carefully chosen readings designed to teach these concepts.

Students also read a range of texts specific to Merrill’s intellectual traditions. These focus on historical or political flashpoints, particularly those illuminating social, cultural, and economic change in relationships between the developed and the developing world. Students read the daily New York Times, which provides an unfolding narrative about events around the world and offers a valuable opportunity for students to analyze how these events are represented for a U.S. audience. They also read selections from several book-length texts—recent readings have included Anne Fadiman’s The Spirit Catches You and You Fall Down, and Bryan Stevenson’s Just Mercy—and accompanying secondary literature. These works show individuals and groups dealing with critical issues of nationalism, globalization, war, economic underdevelopment, and social and gender differentials, and encourage students to examine critically their own underlying assumptions and positions. By closely examining these readings in discussion with others, students develop strategies for effectively engaging different kinds of texts, formulate their own analyses in relation to these readings, and share their ideas in course projects and seminar discussions. The course thus emphasizes skills central to intellectual life at the university: critical reading, analytical writing, and oral presentation of ideas.

Those admitted as transfer students are exempt from the core course requirement but may take it at their discretion if there is room.

OTHER COURSES AND ACADEMIC INITIATIVES

Merrill sponsors a variety of two-, three-, and five-credit courses on topics that change from year to year. A key characteristic of Merrill’s academic program from its founding has been the importance of experiencing the world, not just studying it. Thus Merrill’s academic programming focuses especially
on theory-backed experiential learning. For instance, our new leadership course, shared with Crown College, teaches the "social change" theory of leadership and leads to practical application in the form of Resident Assistantships for some students and off-campus internships for others. We also offer a field study practicum that teaches methods of responsible participant observation and helps students arrange internships in local agencies and organizations. An education-focused service-learning course, Classroom Connection, addresses current issues in educational theory and arranges for students to volunteer in local public schools. Merrill also provides experiential education in the academic world. Our paid Merrill Undergraduate Research Mentorships prepare advanced undergraduate students to pursue graduate studies and provide invaluable research experience and personal and professional development for Merrill students. We also encourage students to apply for college special projects funds and campus-backed research funds.

In keeping with Merrill’s spirit of community-mindedness, we now offer a Careers in Public Service course that features Merrill alumni as weekly speakers. Continuing the college’s long history of involvement with Africa studies, Merrill also offers a series of alumni-led courses that focus on Africa. Merrill offers an upper-division class on the research university for recent transfer students, and, for eligible first-year students, we participate in the College Scholars Program (a merging of the Honors and Challenge Programs), which provides a series of stimulating research-based opportunities (a speaker series, seminars, and research funding opportunities).

Recognizing the increasingly rigorous requirements for science majors, Merrill—in collaboration with the Academic Excellence Program—coordinates the Science Learning Community to support students majoring in the sciences. Students participating in the program enroll in small discussion sections that encourage a collaborative learning approach.

The Merrill Society, an alumni-led organization, helps support Merrill’s curriculum and cultural events.

COLLEGE COMMUNITY AND FACILITIES

At Merrill College, we believe that the experience of living in our on-campus residence halls and apartments offers students not only support for their academic experiences, but also unique opportunities for learning about the concept of community. When college students feel connected to a community during their studies, they experience a smoother transition to university life, greater academic success, and higher satisfaction with their college experience. The Merrill Residential Education team understands community not as a product we can deliver to our students, but an experience that they are responsible for creating for and with each other. Even so, we do not ask our students to undertake this weighty task on their own. The Residential Education team aims to partner with students, striving to be “good companions” on their journey by facilitating experiences that help them to cultivate and apply the knowledge, skills, and abilities needed to create, participate in, and lead caring and socially just communities.

Located on a hilltop between UCSC’s famed Chadwick Garden and Santa Cruz’s Pogonip parkland, Merrill’s recently renovated, award-winning buildings thread upward through the edge of a redwood forest. Four residence halls house approximately 600 students in two high-rise structures and two smaller buildings. The Merrill Residence Halls offer a coed environment (single-gender bedrooms with all gender bathrooms) as well as a few all-female floors and trans-inclusive housing options.

Glass curtain walls provide views from the A & B Buildings of the reconstructed college center and new restaurant building. Merrill’s plaza, complete with Vivas Organic Mexican Restaurant and a large lawn, makes excellent use of the ample sunshine and provides common space for students living in the residence halls and other housing options.

The apartments, located a short distance from the central area of the college, house approximately 200 continuing Merrill students. Grouped amid winding pathways and redwood trees, these three-story buildings have two or three apartments per floor. Each apartment houses four to six students in a combination of single, double, and triple rooms, and comes fully equipped with a kitchen and a bathroom, a large living area, and an outside deck. Residents of the apartment complex share a large community room, two laundry rooms, and plenty of outdoor space.

Facilities at Merrill include the Cultural Center, where large events (including “Merrill, the Musical” and the Crown/Merrill Semi-Formal) take place; the Baobab Lounge, which provides study space, informal gathering space, a piano, and a television; and Casa Latina and Merrill Academic Success (MAS), which provide Merrill students with quiet places to study. Finally, at the student-run pottery co-op, students can throw, fire, and glaze their pieces in the workshop space.

The physical facilities of Merrill College were provided through a partnership of public funds and gifts from the Charles E. Merrill Trust and the family of Ming Ong, a student in the 1980s.

For more information, visit the Merrill College website or call (831) 459-2144. For residential information, call the Housing and Residential Education Office at (831) 459-5689.

MERRILL COLLEGE FELLOWS AND STAFF

Merrill College faculty fellows are listed on the college’s faculty directory.
Merrill College staff are listed on the college's staff page.
PORTER COLLEGE

Porter College was founded in 1969 as the fifth of UC Santa Cruz's residential colleges and was later renamed in honor of a generous grant from the Porter-Sesnon family. Its mission is to foster achievement in all areas of study. Porter is especially dedicated to achievement in the arts, believing that creative inquiry is an essential part of a rigorous and broad-minded education, a flourishing society, and a happy life.

ACADEMIC EMPHASSES

The Porter campus is the administrative home of the Arts Division and the History of Art and Visual Culture Department, but Porter College faculty fellows hail from every academic division on campus and from many non-academic professions. All of them share the philosophy of education that the college's curriculum embodies: first, discover how to learn; then, learn by doing; and finally, let your learning make a difference in the world.

The Porter College curriculum encourages students to explore unusual topics and provocative ideas, to test and revise hypotheses about the meaning of their experiences, to learn from the failures that are an inevitable part of new learning and discovery, and to assume responsibility for the decisions they make in their studies.

The Porter core course, Academic Literacy and Ethos: Arts of Reading (Porter 1) teaches foundational concepts for intellectual exploration and personal development within an academic community—analysis, critical thinking, metacognition, engagement with others across difference, and self-efficacy. The course also engages Porter's intellectual tradition of investigating the contributions the arts and humanities make to a good life, a just society, and a flourishing world.

In addition to the core course, Porter offers a variety of smaller interdisciplinary seminars that combine historical and theoretical approaches to the arts, humanities, and sciences with practical experience conducting scholarly research and making creative work.

The college provides fellowship funds each year to talented students pursuing original research and creative projects.

COLLEGE COMMUNITY AND FACILITIES

The traditional residence halls and apartments play an important role in bringing the college community together. Students are encouraged to spend their beginning years in residence in the college, where housing is available for 1,300 students. The residence halls are divided into smaller units or "halls," with from 30 to 35 students sharing a wing and restroom facilities. Theme or hall options include Single Gender, LGBTQIA+, Gaming, and Substance-Free (just to name a few). The six-person apartments are reserved for upper-division students.

Porter College is also home to the Transfer Community at Porter, a transfer student living/learning community. All on-campus incoming transfer students reside at Porter regardless of their college affiliation. Special programs are designed to help new transfer students adapt to life at UCSC.

In addition to traditional classrooms, Porter has many specialized facilities, such as student art galleries, a study center, and a dining hall that converts to a theater space. Porter College also features a MakerSpace Co-op dedicated to promoting Porter's creativity, building community, and providing a constructive positive outlet. Additionally, the MakerSpace has tools and materials available to use for personal crafting projects or even class assignments. The Arts Instructional Computing Laboratories, located at Porter College, consist of two high-end labs oriented toward the arts.

Porter provides many opportunities for relaxation and recreation to balance the intellectual demands of a university education. The Residential Life and Activities Office staffs organize formal and informal events, including open-mic nights, dances, recreational activities, and the mural painting program.

Many students and faculty perform or exhibit their work at Porter. The Sesnon Gallery, the Porter/Kresge Dining Hall, the Quad, and the faculty gallery host a wide range of artistic, cultural, and academic events each year.

For more information, call (831) 459-2273 or visit the Porter College website.

PORTER COLLEGE FELLOWS AND STAFF

Porter College faculty fellows are listed on the college's faculty directory. Porter College staff are listed on the college's staff page.

KRESGE COLLEGE

Kresge was the sixth college to be built on the UCSC campus. The college was founded on principles of participatory democracy and experiential education, with a vision of profound social and individual empowerment within an active living and learning community. Its motto is Independence, Creativity, Community.

ACADEMIC EMPHASSES

Kresge's academic life is centered on the integration of living and learning in a community that values self-determination, consensus-building, intellectual freedom, sustainability, and justice. These principles take shape in a curriculum that emphasizes participatory learning, hands-on experience, and conscientious academic inquiry that transcends the walls of traditional classrooms. Ranging from agroecology to photography, writers' workshops to natural history, and journalism to service learning, Kresge's courses offer varied ways for Kresge students to fulfill GE requirements while broadening...
their educational experience in the company of
dedicated and imaginative faculty.

Kresge’s core course, Academic Literacy and Ethos: Power and Representation (Kresge 1), prepares
students for engagement with university discourse. Students read a selected range of contemporary
nonfiction and creative work in varied media, developing a practice of interpretation and dialogue
that serves as a model for future academic endeavors. Power and Representation emphasizes
texts that reflect on the struggles of individuals and communities to represent and constitute themselves
in the United States. In contemplating those struggles, students are encouraged to think beyond
easy answers, to express themselves clearly, to reflect on their own thinking and learning styles, and
to think critically about their place in a larger world of knowledge and experience. In addition to their
seminar meetings, all students in Kresge 1 meet periodically with academic mentors—fellow Kresge
students who model successful learning styles. The entire core cohort also meets five times during the
quarter for the required evening Plenary Series, guest lectures that deepen engagement on specific topics of
the course.

Kresge is a rich and multidimensional academic
community. Known as “the writers’ college.”

Kresge is home to City on a Hill Press, as well as the
Kresge Writing Center (a west-campus home of the
UCSC Writer’s Society, Matchbox Press, Red
Wheelbarrow, and the Creative Writing Archives).
The Common Ground Center at Kresge College
promotes social and environmental change through
undergraduate-focused action-education, research,
advocacy, and civic engagement. Our Service
Learning courses prepare students to become
innovators and activists, through community service
projects and grant-writing workshops that connect
students’ academic lives to the world outside the
university. Kresge College also hosts courses related
to our student cooperatives: the Kresge Garden Co-
coop, Music Co-op, and Food Co-op.

RESIDENTIAL LIFE

The architecturally renowned Kresge campus offers
apartments rather than residence halls. The Kresge
apartments attract students with a sense of
independence and community participation.

Distinctively designed, the apartments at Kresge
Proper are configured for five to nine people. Kitchen
and living areas look out onto the street, with other
rooms facing the surrounding redwood forest. J and K
Building’s three-person apartments are reserved for
continuing upper-division students. These two-
bedroom apartments have a kitchen and combination
dining and living area.

Kresge is home to the Writer’s House, a
living/learning community for students interested in
creative writing and journalism (regardless of
major), and the Ecovillage, a community for students
who want to actively create a new world based on
cooperation and sustainable living.

The Residential Life and College Programs staff at
Kresge work to bring students of similar interests
together academically and socially by designing fun
and unique programs based on student interest.
Programs that focus on celebrating the diversity of
the residential community, and on enhancing
academic success through music events, mural
painting, and food-centered events are common.

COMMUNITY LIFE

A wide variety of events and activities shape
community life at Kresge. Lectures, workshops,
dances, and concerts are a regular part of student life
at the college. The nature and tenor of these events
are a reflection of the diverse interests of students
and staff, who are committed to providing voice and
opportunity for all community members.

Students actively shape the college community
through participation in Kresge Parliament, an
openly structured student organization responsible
for voting the allocation of all college membership
fees in support of activities and events. Parliament
and Town Meetings also serve as a forum for the
discussion of college and campuswide issues with
college staff and faculty. Additionally, students can
get involved in the Kresge Multicultural Education
Committee (KMEC), Music Co-op, Food Co-op, Photo
Co-op, or the Kresge Garden.

TRANSFER STUDENTS

In recognition of the wealth of diversity that transfer
students bring to the community—in terms of culture
and experience—Kresge is the home of the STARS
program (Services for Transfer and Re-entry
Students). This is a staffed facility where students can
gather to relax, socialize, hold meetings, and obtain
campus information and resource support in a
central location regardless of college affiliation. The
resource center offers workshops, social evenings,
and special events tailored to meet the needs of
transfer students.

STARS also offers special advising workshops and
two- and three-credit courses designed to help
transfers in the process of entering the university and
moving forward in their careers.

FACILITIES

At the entrance to the college is the restful Piazzetta,
with a beautiful, architecturally designed fountain,
and the Kresge Garden, the largest student-run
garden on campus. Leading off from the Piazzetta are
STARS, the Seminar Room with a kitchen, the
Commuter Lounge, and a student lounge equipped
with television and DVD player. In addition to STARS,
as a unique facility on the campus, the Commuter
Lounge is a place for off-campus students who want
to use a kitchen, shower, or lockers while on campus.
Kresge’s Photo Lab Co-op is above the Piazzetta and
offers 24-hour accessibility to darkroom equipment.
Adjacent to the nearby meadow is an outdoor
basketball court. The college includes a study center with soaring ceilings and walls of glass overlooking the forest, which also houses a writing center, a computer lab equipped with PCs for student use, and a student-run Food Co-op, where organic produce is sold and working memberships are available. At the top of the college are the Town Hall, the Music Co-op, and the Owl’s Nest Cafe.

For more information, call (831) 459-2071 or visit the Kresge College website.

KRESGE COLLEGE FELLOWS AND FACULTY

Kresge College faculty fellows are listed on the college’s faculty directory. Kresge College staff are listed on the college's staff page.

OAKES COLLEGE

Oakes was founded in 1972 to provide high-quality education to students from diverse cultural and social backgrounds. Students, staff, and faculty associated with the college believe that learning takes place not only in the classroom, but also in residential settings. For that reason, they work hard to create a multicultural community whose members strive to achieve ambitious goals—including equal access to educational opportunity and freedom from oppression—while simultaneously affirming and celebrating their distinctive cultural backgrounds.

ACADEMIC EMPHASES

The Oakes College faculty represents a wealth of expertise from the natural sciences to the humanities, and we are proud to have some of the top scholars in the world among our faculty fellows. Our students major in nearly every discipline at UCSC—from economics and computer science, to theater arts and Latin American and Latino studies—and they are well supported by the depth and breadth of the Oakes College faculty and the extensive knowledge of our advising team. Oakes graduates have gone on to successful careers in fields such as medicine, law, education, medical research, and community service.

The Oakes core course, Communicating Diversity for a Just Society, is required of Oakes students. Most students take the course in their first year. The course examines individual and collective responses to issues of culture, gender, sexuality, race, and class. Those who are admitted as transfer students are exempt from the core course requirement but may take the core course at their option pending available space.

At Oakes College, we are committed to fostering student engagement and leadership within and beyond the classroom. To this end, we encourage students to develop the knowledge, skills, and cross-cultural understanding necessary to become active citizens and future leaders in their own communities, workplaces, and academic disciplines as well as in the larger U.S. society and the world as a whole. We also provide a range of resources and programs that will enable all students to succeed in their academic endeavors. Such resources include:

- The Learning Center and the Westside Writing Center at Oakes College provide space for study groups as well as tutoring and advising programs. Special assistance in writing and tutoring in a variety of subjects is offered to Oakes students and EOP students.
- The Oakes Computer Lab provides access to 20 PCs for Oakes students.
- Co-curricular programs like Oakes 4.0, Oakes Core Café, and the residential Science Community at Oakes College all offer living-learning opportunities to enhance student success and to provide students with unique opportunities for interacting with faculty in small group contexts.
- Community-based Advocacy and Research for Action (CARA), the Oakes Service Learning and Community Justice Program, brings together rigorous academic concepts with significant applied research and collaborative work on social issues on campus and off. Oakes 76 (Social Geography and Justice in Santa Cruz) is offered each spring. Oakes 151A and 151B (Community Literacies Seminar and Field Study supporting the Corre La Voz after-school program) are offered each quarter by application only. Oakes 153 (Community Mapping) is offered each winter, and is cross-listed with Community Studies. Topical projects seek to develop organization and inclusionary policies on housing issues, community gardens, the development of youth mentoring networks, and more. Oakes students may earn a CARA certificate by completing several courses before graduation.
- Student services at Oakes include academic advising and psychological counseling.

COLLEGE COMMUNITY AND FACILITIES

Oakes College, located on the west side of the UCSC campus, commands a sweeping view of Monterey Bay. Students may choose between apartment and residence hall living. The residence halls have attractive courtyards, and views of the ocean and the city of Santa Cruz. Students can also share an apartment-style living space, which includes a common living area and small kitchen. Full-time coordinators for residential education and neighborhood assistants help residents develop cooperative ways of living together. As one student put it, “Oakes is a community where people of many different backgrounds, interests, and goals form a friendly neighborhood. We share our cultures and adapt to the different lifestyles of our neighbors.” The residential program is designed to assist all students in integrating their academic and social lives. The residential staff host activities sponsored through its
wellness, academic success, leadership, and social justice and diversity committees.
The college staff seek to nurture and sustain a community in which mutual respect, understanding, and concern for others are the norm. Within that atmosphere of community expectations, students are also supported and encouraged to find room for their own creative personal expression.
The other facilities at Oakes further support the special programs of the college and provide recreational opportunities for the students. College facilities include the Learning Center, a multipurpose room for lectures, movies, and small theater productions; a college study center that is a quiet space for individual study, and a dining facility shared with Rachel Carson College. Adjacent to the Oakes Café is the Guzman Room, a social and group study space. Oakes is also home to the Underdome, a small outdoor basketball court great for friendly three-on-three competition. Additional recreational facilities located close to the college include tennis courts, a large recreational field, and an indoor basketball court.
Oakes is named after Roscoe and Margaret Oakes in recognition of their generous philanthropy through the San Francisco Foundation.
For further information, call (831) 459-2558 or visit the Oakes College website.

OAKES COLLEGE FELLOWS AND STAFF

Oakes College faculty fellows are listed on the college’s faculty directory.
Oakes College staff are listed on the college’s staff page.

RACHEL CARSON COLLEGE

Rachel Carson College is dedicated to environment and society, and the college has organized a vigorous intellectual life around this theme. The college examines environmental issues from multiple perspectives, through the social and natural sciences, engineering, public policy, and science and technology studies. Rachel Carson College offers students a sense of community and opportunities to augment academic work with a wide range of extracurricular activities. These include events such as Earth Week, sustainability internships, and a minor in sustainability studies.

Rachel Carson College students major in nearly every discipline offered at UCSC, while sharing a strong commitment to environmental stewardship. We teach our students and graduates to become environmentally aware green citizens, with the capacity to evaluate sustainability policies and strategies and with the skills needed for hands-on engagement in the many projects and activities that will be required to ensure the future of the planet and human civilization.

ACADEMIC EMPHASES

Rachel Carson College's academic classes focus on the theme of environment and society. The college sponsors a number of educational initiatives and courses aimed at furthering its theme and mission, as well as programs offering experiential learning for students. Carson 1 is the required first-year college core course, part of the Academic Literacy Curriculum that introduces students to critical and analytical reading at the university level. The core course is mandatory for all incoming frosh.
The core course focuses on the college theme through examination of California's environmental history and how the contemporary landscape has been shaped by capital, labor, technology, and politics. In addition, practicum internships, research projects, and a minor in sustainability studies all enable students to acquire skills that they can apply to their career at UC Santa Cruz, including service-learning work with campus and community-based agencies and organizations. Additional college courses include garden internships, academic and STEM preparation classes, student-facilitated classes in sustainability, a class on peregrine falcons, and a seminar on environment in film. For more information about academics in Rachel Carson College, see the college's website.

COLLEGE COMMUNITY AND FACILITIES

Rachel Carson College is located on a sunny, terraced hillside on the west side of the UCSC campus, offering a spectacular view of Monterey Bay and the coastline as well as the redwood-covered hills. The college is designed to encourage interaction among resident and commuter students, with outdoor spaces for relaxing and informal opportunities to socialize. These include small residence hall patios, grass quadrangles, and a large plaza—the heart of the college—where pedestrian traffic converges.

Adjacent to the college are recreational facilities that include the West Field House, tennis courts, basketball and sand volleyball courts, and playing fields. The Theater Arts and Music Centers, McHenry Library, and Porter and Oakes Colleges are a short walk from the college. Other parts of the university are easily accessible by foot, bicycle or frequent shuttle buses.

Rachel Carson College's facilities include an academic building that accommodates the college and faculty offices, the Sociology Department, associated research centers, classrooms, and a computer lab with printers. Approximately 500 students live in the college’s community of two-and three-story residence halls, which provide single, double, and triple rooms as well as suites. The residence halls include laundry facilities and lobbies that serve as living rooms—favorite places where residents gather to relax, watch television, and catch up on the news of the day. A number of these are themed residences that focus on special programming related to the respective theme. Another 300 students are housed
The colleges

in Rachel Carson College’s two-, three-, and four-bedroom apartments.

The college’s residential staff includes both coordinators for residential education, who are full-time live-in professionals, and undergraduate resident assistants. The residential staff plans a variety of educational and recreational events, including community barbecues, outdoor movies, and student-initiated events that celebrate the diversity of our community. More intimate gatherings include study breaks, coffee talks, and potlucks. The residential staff is available to ease the transition to college life, making the college a comfortable new home for our residents.

The Student Commons building contains the Student Life Office, the office of Rachel Carson College’s college programs coordinator, the office of the Student Environmental Center, and a large meeting room for student use. A study center is located across the plaza. The Rachel Carson College Café is a favorite haven and gathering place for students, faculty, staff, and other members of the campus community.

In conjunction with the student government and student organizations, the Rachel Carson College Student Programs Office plans social, multicultural, and educational events for the college community. Weekly programs including open mics, music, art shows, and guest speakers accommodate the diverse spectra of cultural and artistic interests of the students. College Night, a quarterly cultural event, provides an opportunity for students to learn about a variety of cultures through entertainment, education, and delicious cuisine. In addition, the Student Programs Office works closely with the Student Environmental Center to bring programs that educate and build long-lasting networks, which aim to address the environmental issues affecting our world today.

Above all, Rachel Carson College seeks to create a community of inclusion, in which each person is encouraged to share and explore beliefs, worldviews, values, and ideas in an atmosphere of mutual support and trust.

For more information, contact the college at (831) 459-2361, email housing@ucsc.edu, or visit the Rachel Carson College website.

RACHEL CARSON COLLEGE FELLOWS AND STAFF

Rachel Carson College faculty fellows are listed on the college’s faculty directory.

Rachel Carson College staff are listed on the college’s staff page.

COLLEGE NINE

“From climate change to inequality, the commonality of problems facing all of the planet’s inhabitants requires an understanding of our growing interconnections and interdependencies. In College Nine, we challenge students to grapple with complex, controversial and multi-scalar issues, for which there exist vastly differing opinions about the nature of problems and how to solve them. Becoming a global citizen requires critical thinking, cultural awareness, and effective communication, all skills our training provides to our students.”

—Flora Lu, College Nine Provost

ACADEMIC EMPHASES

College Nine’s theme of International and Global Perspectives emphasizes the causes and consequences of our increasingly interconnected world. Our academic and co-curricular programs analyze economic and cultural globalization, immigration, ethnic conflicts, genocide, and human rights, among other issues. Students interested in these issues either as their major focus or as part of their general education are invited to join the College Nine community.

CORE COURSE

In the first-quarter frosh core course, Academic Literacy and Ethos: International and Global Perspectives, students examine current issues pertinent to the college’s intellectual theme. This course challenges students to address what it means to be a global citizen, in recognition of our growing interconnections and interdependencies, and the fact that certain intractable problems cannot be addressed without large-scale collective action. Topics address issues such as globalization, inequities in wealth and poverty across the world, human rights, and regional conflicts. The seminar teaches foundational concepts for intellectual exploration and personal development within an academic community—analysis, critical thinking, metacognition, engagement with others across difference, and self-efficacy. The instructors work closely with each student throughout the quarter.

SPECIAL ACADEMIC AND CO-CURRICULAR PROGRAMS

Optional programs are available to involve College Nine students in academic and co-curricular activities beyond the first-quarter course. They are designed to promote students’ academic achievement and success by connecting them with faculty mentors and helping them pursue leadership experiences in particular contexts.

GLOBAL ACTION

In this workshop facilitated by peer instructors, students learn about current international and global issues through interactive exercises, small group discussions, and faculty presentations. Students will develop an “action plan” to raise awareness about one or more of these concerns and take practical steps to create positive change in the world.

COMMUNITY ENGAGEMENT AND EXPERIENTIAL LEARNING
“I liked how many opportunities we had to work with community members or interact with them. I also liked getting to work with other UCSC students. Doing hands-on work was my favorite; I was able to get a new perspective.”

“My favorite part of this experience was being pushed out of my comfort zone. The different tasks everyone was assigned or was willing to take on expanded my understanding of the community.”

These are just a couple of the reflections from College Nine and College Ten students who have participated in our many opportunities for experiential learning in collaboration with community partners. While these opportunities address pressing issues such as social, economic, and environmental injustice, it is often the case that our students benefit equally, if not more, from the experience of collaborating with local residents in projects that matter. For example, abstract academic concepts become more tangible, students expand their web of social connection, and skills such as teamwork and problem solving are heightened. Students reach outside of their comfort zone, have their assumptions challenged, and meet remarkable local heroes.

Our community engagement programs include Alternative Spring Break (ASB) in Watsonville, which centers on issues of food security, sovereignty, and justice. After getting to know each other at a retreat, discussing readings, and hearing from a panel of Watsonville leaders, ASB participants undertake five days of experiential learning with a variety of community partners (e.g., schools, artists, non-profits). After Spring Break, a final gathering is held for students to share their final projects.

PRAXIS is another way for College Nine and College Ten students to undertake monthly volunteer opportunities throughout Santa Cruz County and neighboring communities. During campus meetings, PRAXIS participants engage in discussion, reading, and reflection to increase their awareness and knowledge about key issues. Our courses prepare students in the topical and ethical aspects of community engagement for global citizenship.

STUDENTS AS TEACHERS AND MENTORS

College Nine students have special opportunities to become course assistants, tutors, and student mentors for course credit. Students gain independent experience as teachers leading their own discussion sections of a College Nine course. They receive close supervision that emphasizes a collaborative approach to developing and enhancing teaching, communication, and leadership skills. The College Nine academic advisers can also direct students to other opportunities for student teaching and peer-mentoring programs on campus. These are excellent opportunities to work closely with a faculty member and to develop skills as a teacher and a leader.

PRACTICAL ACTIVISM: TOOLS FOR LOCAL AND GLOBAL CHANGE

The annual Practical Activism Conference is a daylong, student-led event featuring keynote speakers, ten workshops, various on- and off-campus organizations, performances, and a variety of hands-on activism activities. Students gain valuable leadership and organizing skills through developing and planning this exceptional program, which involves collaboration among faculty, staff, and the local community. Visit practicalactivism.ucsc.edu for more information.

COMMUNITY GARDEN CLASS

In cooperation with the work of the Community Garden Club, this course explores such topics as collaborative garden design, community gardening best practices, building regenerative social and ecological systems, sustainability, and food justice, while also offering hands-on experience in the Colleges Nine and Ten Community Garden.

EDUCATION ABROAD

The UC Education Abroad Program places students at a university in another country for one or more quarters. Studying abroad can be a valuable way to expand one’s understanding of the world. Given the international focus at College Nine, students are encouraged (but not required) to develop a second language or to study abroad.

RESEARCH OPPORTUNITIES

The faculty at UC Santa Cruz are highly ranked for the quality of their research. College Nine students are encouraged to take advantage of the many excellent opportunities available to work closely with faculty as research apprentices. Students will find many internship, independent study, or senior thesis programs in the departments of most majors. The College Nine academic advising teams (including preceptor and provost) will help link students with these programs.

COLLEGE NINE PATHWAYS TO DISTINCTION

Another feature of College Nine is that qualified students may graduate with College Nine Distinction. This recognition is intended to serve as an incentive for students to pursue activities that are especially apt to help them succeed in college and beyond. Two pathways are possible:

- Research and Scholarship. In this pathway, students pursue research with faculty by completing three quarters (15 credits) of work on a senior thesis or a research internship. Students may be recognized with College Nine Distinction if they do a thesis or a research internship in their major on a topic related to international or global issues.
- Language and Culture. Students who enroll in at least three quarters (15 credits) in either Education Abroad or a foreign language (or a combination) may qualify for College Nine Distinction.
COLLEGE COMMUNITY

Founded in 2000, College Nine is one of the newest colleges at UCSC. College Nine creates an integrated living and learning environment through engaging academic and extracurricular programs focusing on the theme of International and Global Perspectives. Students and staff collaborate to develop an array of programs exploring the many aspects of the college’s theme. Some of the programs include faculty presentations, guest speakers, conferences, debates, films, arts events, and interactive workshops. These programs unite community members in an atmosphere of mutual respect, in which important contemporary and controversial issues are discussed.

COLLEGE NIGHTS

College Nights are community programs that feature a special dinner menu, entertainment, and activities that relate to the college theme of International and Global Perspectives. College Nights provide an opportunity to gather as a community several times a quarter to enjoy a meal and share conversations. Planned by students and staff, past College Nights have focused on Earth Day and sustainability, music and dance from around the world, and global popular culture. College Nights are held in the Dining Commons and are open to all College Nine students, staff, and faculty.

STUDENT GOVERNMENT

The College Nine Student Senate serves as the student government for College Nine and represents its students to the college and campus administrations and to the Student Union Assembly (SUA), the campuswide student governance board. The Senate appoints students to campus and college committees, consults with college administration on policy development, and provides monetary support to student organizations.

INTERNATIONAL LIVING CENTER

The International Living Center (ILC) at College Nine offers a unique living environment fostering understanding, cooperation, and friendship among upper-division students from different nations, cultures, and backgrounds. Half of the residents are students from the United States, and the other half are students from various countries around the world. Students reside in the Colleges Nine and Ten Apartments. Based out of the International Living Center, the International Affairs Group (IAG) offers all Colleges Nine and Ten community members the opportunity to engage in lively discussions about important current international issues with one another through guest speakers, film, literature, media, and personal experience.

IFLOOR

The iFloor is a mix of international first-year students and U.S. first-year students who apply to live in this intentional intercultural community housed within the College Nine residence halls. This unique community offers residents opportunities to make meaningful, lifelong friendships and connections that extend beyond borders.

CO-CURRICULAR PROGRAMS AND OPPORTUNITIES

Getting involved in co-curricular activities is a predictor of college success. Not only do college activities help students make friends, they foster leadership and group cooperation skills. There are many opportunities at College Nine for student involvement. These include the following groups as well as many other programs, activities, and clubs.

GLOBAL LEADERSHIP DEVELOPMENT (GLAD)

GLAD meets weekly throughout the fall quarter and provides a wide range of exercises, guest speakers, and programs designed to foster and develop participants’ efficacy as world citizens and leaders of College Nine.

CREATE

CREATE (Cultural Resources to Educate and to Empower) offers a community at College Nine for students of color to find support and empowerment through mentorship and friendship.

COMMUNITY GARDEN

The Community Garden Club meets weekly to discuss sustainability issues, integrate the themes of our colleges into the garden design and practice, and work together on soil preparation, planting, and harvesting. Members of the Garden Club learn about opportunities to work with our sister garden at Calabasas Elementary School in Watsonville.

INTERCULTURAL COMMUNITY WEEKEND

This two-day retreat provides international and U.S. students from diverse backgrounds the opportunity to explore various components of intercultural communication. Through a series of structured exercises and small-group discussions, students share perspectives on intercultural issues, values orientation, and cross-cultural communication. The goal of the workshop is to build community and friendship between international and U.S. students as well as to increase students’ understanding of the complexity of communicating across cultures.

PHYSICAL SURROUNDINGS

College Nine is situated in a redwood grove next to the Social Sciences 1 and 2 Buildings near the heart of campus. One of the campus’s Instructional Computing Labs is conveniently located in the Social Sciences 1 Building. A nature preserve serves as College Nine’s “backyard.” College Nine students have immediate access to hiking, running, and mountain bike trails in the adjacent forest. Residence halls offer approximately 600 single and triple bedrooms. These fully furnished residence halls include adjacent student study spaces, recreational areas, and Internet connections. In
addition, there is a state-of-the-art dining hall with an adjoining multipurpose room and recreation lounge for both College Nine and College Ten. College Nine and College Ten also house approximately 400 upper-division students in apartments, with single, double, and triple bedrooms. All apartments have full kitchens, living rooms, bathrooms, and Internet connections. Ground-floor apartments have decks, and most upper apartments have private balconies. For more information about academic or general college programs, call (831) 459-5034, email 910capc@ucsc.edu, or visit the College Nine website.

COLLEGE NINE FELLOWS AND STAFF
College Nine faculty fellows are listed on the college’s faculty directory. College Nine staff are listed on the college’s staff page.

COLLEGE TEN

“Understanding the contemporary United States requires knowledge of histories and social theories that address concepts including racialized and gendered social hierarchies, the construction of marginalization and difference, the impacts of class differentials, and many manifestations of unequal power relationships. A flourishing society that progresses toward more social and environmental justice depends on informed, critical, and empathetic people willing to make the efforts necessary to create social change. At College Ten, we strive toward the goals of analyzing, embodying, and implementing ideas that help our students become knowledgeable and critical social actors who recognize and practice the principle that all people possess equal intrinsic worth.”

—Flora Lu, College Ten Provost

ACADEMIC EMPHASES

College Ten’s theme of Social Justice and Community addresses a range of social problems and their impacts on society. In particular, the academic and co-curricular programs consider the injustices that many people confront in their lives, and possible policies for addressing social, political, and economic inequalities. In addition, the college provides students with opportunities to make their own positive contributions to social change through community involvement or scholarly research.

CORE COURSE

In the first-quarter frosh core course, Academic Literacy and Ethos: Social Justice and Community, students examine current issues pertinent to the college’s intellectual theme. The college curriculum explores the causes and consequences of social injustice in several ways. Students examine the roots of prejudice, discrimination, and violence directed toward groups based on their ethnicity, skin color, gender, sexual orientation, religious beliefs, or political views. They also consider the causes and consequences of economic inequality both within the United States and around the world. In addition to articulation with the college theme, the seminar teaches foundational concepts for intellectual exploration and personal development within an academic community—analysis, critical thinking, metacognition, engagement with others across difference, and self-efficacy. The instructors work closely with each student throughout the quarter.

SPECIAL ACADEMIC AND CO-CURRICULAR PROGRAMS

Optional programs are available to involve College Ten students in academic and co-curricular activities beyond the first-quarter core course. They are designed to promote students’ academic achievement and success by connecting them with faculty mentors and helping them pursue leadership experiences in particular contexts.

SOCIAL JUSTICE ISSUES WORKSHOP

College Ten students have the option of enrolling in the Social Justice Issues Workshop in winter quarter. This two-credit course meets once per week and can be taken in addition to a regular 15-credit academic load. The workshop offers a small, dynamic learning community in which members explore important issues of personal and cultural identity; social, political, and environmental concerns; and community-mindedness. The class emphasizes small-group experiential learning through structured exercises and group activities, and also includes discussions, film presentations, and guest speakers.

COMMUNITY ENGAGEMENT AND EXPERIENTIAL LEARNING

“I liked how many opportunities we had to work with community members or interact with them. I also liked getting to work with other UCSC students. Doing hands-on work was my favorite; I was able to get a new perspective.”

“My favorite part of this experience was being pushed out of my comfort zone. The different tasks everyone was assigned or was willing to take on expanded my understanding of the community.”

These are just a couple of the reflections from College Nine and College Ten students who have participated in our many opportunities for experiential learning in collaboration with community partners. While these opportunities address pressing issues such as social, economic, and environmental injustice, it is often the case that our students benefit equally, if not more, from the experience of collaborating with local residents in projects that matter. For example, abstract academic concepts become more tangible, student expand their web of social connection, and skills such as teamwork and problem solving are heightened. Students reach outside of their comfort
zone, have their assumptions challenged, and meet remarkable local heroes.

Our community engagement programs include Alternative Spring Break (ASB) in Watsonville, which centers on issues of food security, sovereignty, and justice. After getting to know each other at a retreat, discussing readings, and hearing from a panel of Watsonville leaders, ASB participants undertake five days of experiential learning with a variety of community partners (e.g., schools, artists, nonprofits). After Spring Break, a final gathering is held for students to share their final projects.

PRAXIS is another way for College Nine and College Ten students to undertake monthly volunteer opportunities throughout Santa Cruz County and neighboring communities. During campus meetings, PRAXIS participants engage in discussion, reading, and reflection to increase their awareness and knowledge about key issues. Our courses prepare students in the topical and ethical aspects of community engagement for global citizenship.

PRACTICAL ACTIVISM: TOOLS FOR LOCAL AND GLOBAL CHANGE

The annual Practical Activism Conference is a daylong, student-led event featuring keynote speakers, 10 workshops, various on-and off-campus organizations, performances, and a variety of hands-on activism activities. Students gain valuable leadership and organizing skills through developing and planning this exceptional program, which involves collaboration among faculty, staff, and the local community. Visit practicalactivism.ucsc.edu for more information.

COMMUNITY GARDEN CLASS

In cooperation with the work of the Community Garden Club, this course explores such topics as collaborative garden design, community gardening best practices, building regenerative social and ecological systems, sustainability, and food justice, while also offering hands-on experience in the Colleges Nine and Ten Community Garden.

STUDENTS AS TEACHERS AND MENTORS

College Ten students have special opportunities to become course assistants, tutors, and student mentors for course credit. Students gain independent experience as teachers, leading their own discussion sections of a College Ten course. They receive close supervision that emphasizes a collaborative approach to developing and enhancing teaching, communication, and leadership skills. The College Ten academic advisers can also direct students to other opportunities for student teaching and peer-mentoring programs on campus. These are excellent opportunities to work closely with a faculty member and to develop skills as a teacher and a leader.

RESEARCH OPPORTUNITIES

The faculty at UC Santa Cruz are highly ranked for the quality of their research. College Ten students are encouraged to take advantage of the many excellent opportunities available to work closely with faculty as research apprentices. Students will find many internship, independent study, or senior thesis programs in the departments of most majors. The College Ten academic advising teams (including preceptor and provost) will help link students with these programs.

COLLEGE TEN PATHWAYS TO DISTINCTION

Students are recognized with College Ten Distinction upon successful completion of three quarters (15 credits) of experiential coursework in Service and Leadership and/or Research and Scholarship focused on social justice and diversity issues. Applicable College Ten courses and research opportunities with faculty can fulfill the criteria for distinction. This recognition is intended to serve as an incentive for students to pursue activities that are apt to help them succeed in college and beyond.

COLLEGE COMMUNITY

Founded in 2002, College Ten is the newest college at UCSC. College Ten creates an integrated living-and-learning environment through engaging academic and extracurricular programs focusing on the theme of Social Justice and Community. Students and staff collaborate to develop an array of programs exploring the many aspects of social justice. Some of the programs include faculty presentations, guest speakers, debates, films, arts events, and interactive workshops. These programs unite community members in an atmosphere of mutual respect, in which contemporary and controversial issues are discussed.

COLLEGE NIGHTS

College Nights are community programs that feature a special dinner menu, entertainment, and activities that relate to the college theme of Social Justice and Community. College Nights provide an opportunity to gather as a community several times a quarter to enjoy a meal and share conversations. Planned by students and staff, past College Nights have focused on Earth Day and sustainability, music and dance from around the world, and global popular culture. College Nights are held in the Dining Commons and open to all College Ten students, staff, and faculty.

STUDENT GOVERNMENT

The College Ten Student Senate serves as the student government for College Ten and represents its students to the college and campus administrations and to the Student Union Assembly (SUA), the campuswide governance board. The Senate appoints students to campus and college committees, consults with college administration on policy development, and provides monetary support to student organizations.
**RUMI’S FIELD**

Named after a renowned peace-seeking Sufi poet, Rumi’s Field offers a space for students who wish to learn, live, and interact using the skills of Nonviolent Communication and exploring social justice through the lens of nonviolence. Nonviolent Communication (NVC) strengthens one’s ability to inspire empathy from others and respond compassionately even under difficult circumstances. This mixed community of College Ten first-year and continuing students offers the opportunity to engage in dialog and resolve conflict using NVC consciousness as a tool for personal and societal transformation.

**CO-CURRICULAR PROGRAMS AND OPPORTUNITIES**

Getting involved in co-curricular activities is a predictor of college success. Not only do college activities help students make friends, they foster leadership and group cooperation skills. There are many opportunities at College Ten for student involvement. These include the following groups as well as many other programs, activities, and clubs.

**CREATE**

CREATE (Cultural Resources to Educate and to Empower) offers a community at College Ten for students of color to find support and empowerment through mentorship and friendship.

**ENGAGE**

ENGAGE (Explore New Growth and Gain Experience) offers students the opportunity to explore and develop their own beliefs, values, and feelings about current issues and social concerns. Students gain leadership skills through collaborating on a community action project, and develop relationships and experience to become leaders in the College Ten community. ENGAGE meets weekly throughout fall quarter.

**MULTICULTURAL COMMUNITY WEEKEND**

This two-day retreat provides students from diverse backgrounds the opportunity to explore aspects of social justice, diversity, and community through a series of exercises and discussions (both structured and informal). Participants explore issues impacting our individual identities (e.g., race, class, gender, sexual orientation, ability, religion), increase their understanding of the complexities of communicating across diverse experiences and backgrounds, build communication skills, and share in celebrating and deconstructing the diversity of our community. Students apply for this opportunity in the fall.

**TERRY FREITAS CAFÉ**

Located at College Ten, the Terry Freitas Café is a student-run lounge with a long legacy as a favorite gathering place among students. It is open daily for social justice performances, music, and social interaction. Café student baristas serve coffee and various snacks for a small donation. The café is named after former UCSC student Terry Freitas, who dedicated his life to making the world a more socially just place.

**COMMUNITY GARDEN**

The Community Garden Club meets weekly to discuss sustainability issues, integrate the themes of our colleges into the garden design and practice, and work together on soil preparation, planting, and harvesting. Members of the Garden Club learn about opportunities to work with our sister garden at Calabasas Elementary School in Watsonville.

**PHYSICAL SURROUNDINGS**

College Ten is situated in a redwood grove next to the Social Sciences 1 and 2 Buildings near the heart of campus. One of the campus’s Instructional Computing Labs is conveniently located in Social Sciences 1. A nature preserve serves as College Ten’s “backyard.” College Ten students have immediate access to hiking, running, and mountain bike trails in the adjacent forest.

Residence halls offer approximately 600 single and triple bedrooms. These fully furnished residence halls include student study spaces, recreational areas, and Internet connections. In addition, there is a state-of-the-art dining hall with an adjoining game room and Freitas Café, a coffee lounge for both Colleges Nine and Ten. Colleges Ten and Nine also house approximately 400 upper-division students in apartments, with single, double, and triple bedrooms. All apartments have full kitchens, living rooms, bathrooms, and Internet connections. Ground-floor apartments have decks, and most upper apartments have private balconies.

For more information about academic or general college programs, call (831) 459-5034, email 910capc@ucsc.edu, or visit the College Ten website.

**COLLEGE TEN FELLOWS AND STAFF**

College Ten faculty fellows are listed on the college’s faculty directory. College Ten staff are listed on the college’s staff page.

Revised: 07/15/18
STUDENT LIFE

2018-19 General Catalog

Campus life is all about learning, discussion, and debate; meeting people from diverse backgrounds; making new and lasting friendships; attending cultural celebrations and artistic and musical performances; and getting involved with student organizations and clubs. UCSC provides a wealth of opportunity for personal growth within the context of a rich and meaningful academic experience. Students live, study, and socialize with others from their college as well as with students from the other colleges. UCSC’s colleges (see The Colleges) and various campus units provide a wide range of student services to respond to individual needs, interests, and levels of personal development. In addition, students can take advantage of the campus’s stunning natural setting, the friendly and engaging local community, and easy access to the Monterey and San Francisco Bay areas.

SANTA CRUZ COMMUNITY

Located on the northern tip of Monterey Bay, Santa Cruz is famous for its Mediterranean climate, forested state parks, and miles of scenic beaches. Recreational opportunities abound—hiking through redwood forests, bicycling along mountain roads, and surfing, sailing, and scuba diving. The Santa Cruz Mountains are minutes away; the majestic Sierra Nevada is a four-hour drive to the east.

The metropolitan centers of the San Francisco Bay Area are easily accessible. By car, Berkeley and San Francisco are less than two hours from campus. San José, Monterey, and Carmel are one hour away.

The city of Santa Cruz, with a population of about 60,000, was originally founded as a Spanish mission. Santa Cruz is a small community with cosmopolitan appeal and a strong awareness of environmental and political issues.

HOUSING

At UC Santa Cruz, students are housed in small-scale residential communities, which provide close-knit living environments within the larger university. Each community provides an academically and socially supportive environment and offers special programs designed to help students transition to campus life, build a strong connection with the campus, and get the most out of their UCSC experience. A space in university housing is guaranteed to all new undergraduate students entering in the fall quarter who submit all forms and required fees by stated deadlines.

After accepting the UC Santa Cruz offer of admission, all undergraduate students become affiliated with one of our 10 colleges. Once affiliated with a college, all students are sent information about the housing options available, and instructions for completing the online housing application/contract process. The housing options available to you will differ depending on whether you are a freshman or a transfer student—though all students have access to campus dining facilities. Housing application periods open in mid-May for new freshmen and mid-June for new transfers entering in the fall.

COLLEGE RESIDENCES

The colleges differ in academic focus, environment, location, architecture, and programs offered. However, all 10 colleges are dynamic, engaging learning communities that offer opportunities for students to help build and shape their experiences. Freshmen are generally assigned to live in residence halls at their college, except at Kresge College, which has all apartments. Residence hall floors are typically shared by 15 to 50 students and have common bathrooms. Students can request to live in a mixed-gender (students of any gender live on the same floor or apartment, though bedrooms are single-gender) or single-gender (students of a single gender live on the same floor or apartment) area. Room assignments allowing transgender and gender-nonconforming students and their allies to live together in the same room regardless of gender or legal gender are also available by request. Apartments, typically shared by four to seven students, have common living/dining rooms, kitchens, and bathrooms, and a combination of shared and private bedrooms. Each community provides accessible housing for students with disabilities. Incoming transfer students reside at the Transfer Community, or the University Town Center, regardless of college affiliation.

A variety of theme-housing options are available for those who are interested. Based on academic pursuits, hobbies, individual backgrounds, and lifestyle preferences, these options serve to complement a student’s experience in residence.

Each college’s residential program is a team effort. Live-in student and professional staff members provide orientation and support services, organize activities and events, provide referral information about academic or personal concerns, and assist with roommate problems.

All students living in campus residence halls (including the transfer community) have a meal plan included in their housing contract. Meal plans are optional for apartment residents. Students with meal plans may use their student ID cards to access any of the dining halls on campus. Meal plans include Flexi Dollars (a dollar-for-dollar exchange for “food dollars” that can be used at college coffee shops, campus restaurants, and all dining halls). Additional Flexi Dollars may be added to any meal plan. More
information on the colleges, including videos, can be found here and at the Housing website.

REDWOOD GROVE

Located on the west side of campus, the Redwood Grove apartments are an extension of the transfer community at Porter College, and provide an apartment living environment for a limited number of incoming transfer students. Each apartment has private and shared bedrooms, a living room, kitchen, dining room, and bathroom. Information is available at Redwood Grove and by email at redwoodgrove@ucsc.edu.

THE VILLAGE

Located in the Lower Quarry, The Village is a unique community for continuing students. Each of the 17 houses features nine single bedrooms, three bathrooms, and a kitchenette. A meal plan is optional. A manager’s apartment, office, laundry facility, community kitchen, and community lounge are located on site. Information is available at The Village and by email at village@ucsc.edu.

UNIVERSITY TOWN CENTER

The University Town Center, located at the corner of Pacific and Cathcart in downtown Santa Cruz, houses continuing and transfer students in two- and three-person studio apartments. A meal plan is optional. Information is available at UTC and by email at utc@ucsc.edu.

FAMILY STUDENT HOUSING

Family Student Housing has apartments for students and their families. Students must reside with at least one eligible family member on a permanent, full-time basis. Eligible family members include children, a spouse or adult partner, a parent, or a sibling. The apartments are unfurnished, and each has two bedrooms, a bathroom, a small study, a combined living/dining area, and a kitchen. Several apartments are accessible to people with mobility impairments. Also, see information on child care and youth programs, below. Information is available at Family Student Housing, and by email at fsh@ucsc.edu.

CAMPER PARK

A 42-space Camper Park is located on the north side of campus and includes university-owned single-occupant recreational vehicles that are rented to students. The park includes a community building with rest rooms, showers and laundry facilities, and a lounge/study room. Information is available at Camper Park and by email at camperpark@ucsc.edu.

GRADUATE STUDENT HOUSING

Conveniently located adjacent to "Science Hill," home to many of UCSC’s main academic facilities, each apartment offers four single bedrooms, a living room, kitchen, dining room, and bathroom. Ground floor apartments have decks, while upper apartments have private balconies. Information is available at grad housing and by email at gradhsg@ucsc.edu.

CAMPUS HOUSING OFFICE

The Housing Office is responsible for the application and contract records for all single students living in campus residence halls and apartments, The Village, University Town Center, and Graduate Student Housing. Advisers are available on a drop-in basis to assist students with any questions regarding housing contract policies and procedures, housing and dining charges, payment plan options, meal plans, and more. Location: 104 Hahn Student Services Building (8 a.m. to 5 p.m., Monday through Friday). Information is available at housing and by email at housing@ucsc.edu.

COMMUNITY RENTALS OFFICE

Students interested in finding their own accommodations in the off-campus community are encouraged to use the resources available through the UCSC Community Rentals Office. Community Rentals maintains online rental listings to assist students in locating rental housing and serves as an information and advising resource. Location: 104 Hahn Student Services (8 a.m. to 5 p.m., Monday through Friday). Information is available at community rentals and by email at communityrentals@ucsc.edu.

THE OFFICE OF PHYSICAL EDUCATION, RECREATION AND SPORTS (OPERS)

Physical education classes and the recreation, sports, and fitness programs offered by OPERS provide a variety of interesting and challenging activities in which you are invited to participate. The emphasis is on opportunities to develop knowledge, skills, and habits related to wellness that last through a lifetime of enjoyable physical and recreational activity.

You can obtain further information about the programs described below from the Office of Physical Education, Recreation, and Sports located at the East Field House, (831) 459-2531. See OPERS.

PHYSICAL EDUCATION COURSES

Physical Education offers students an opportunity to learn and improve skills in a variety of areas while gaining knowledge about the relationship between fitness and wellness. With these experiences, students are more equipped to make important choices leading to healthy lifestyles.

Regularly scheduled courses, which carry no academic credit but are recorded on your transcript, are available in a broad range of physical activities (see Physical Education). Many classes are small, and all offer expert instruction and welcoming environments. Students may enroll in as many courses as they desire and are permitted to repeat
any course. While many of the courses are for students at the beginning level, some are designed for the more advanced student. Subjects offered include swimming, scuba, sailing, rowing, kayaking, basketball, racquetball, tennis, volleyball, ballet, folk dance, jazz dance, modern dance, fencing, soccer, tai chi chuan, strength training, fitness and conditioning, yoga, aikido, and more. See the Physical Education website for more information.

**INTRAMURAL SPORTS**

Intramural Sports offers a wide collection of recreational and competitive activities designed to encourage participation for all eligible people to play on campus. The program prides itself on sportsmanship, inclusion, and justice. Intramurals are structured for different skill levels and are conducted in a safe, supervised environment. You do not need to be an experienced athlete to play! Intramural Sports are open to all UC Santa Cruz students, faculty, staff, and alumni or community members with current memberships. Intramural Sports are a fun way to play, meet friends, learn new sports, test physical ability, and relieve the stress of daily routines. Most activities allow you to select the days and times you play, as well as the people on your team. See the Intramural Sports website for more information.

**SPORTS CLUBS**

UCSC Sports Clubs are split into two separate categories: Competitive Sports Clubs and Recreational Sports Clubs. Competitive Sports Clubs compete against other universities in sanctioned leagues, tournaments and matches. Non-Competitive Sports Clubs either have two or less competitions per year or their focus is entirely at the recreational level. See the OPERS website for more information.

**INTERCOLLEGIATE ATHLETICS**

UC Santa Cruz offers the only National Collegiate Athletic Association (NCAA) Division III program in the UC system. As a Division III member, the program offers no scholarships or grants in aid that are based on athletic ability. UCSC sponsors the following intercollegiate sports: men’s and women’s basketball, soccer, swimming and diving, tennis, volleyball, cross country, track, and women’s golf. For information on teams, rosters, schedules, and the Slug Booster Club, see Go Slugs.

**RECREATION PROGRAM**

The Recreation Program is designed to provide the UCSC community with an opportunity to gain skills, have fun, be challenged, and make personal connections through outdoor, recreational, and hands-on learning experiences. We offer a wide range of courses that provide opportunities for beginners as well as more experienced participants. You can expect well-organized classes, activities, and informal teaching. Be prepared to be active and involved. Courses are led by recreation instructors and UCSC student leaders. Student leaders make up the foundation of the Recreation Program, bringing experience and enthusiasm to the programs they lead.

The Equipment Rental Center offers recreational equipment including surfboards, wetsuits, and high-quality backpacking and camping gear. If you are interested in planning your own outing, contact the Recreation Program Office for assistance. The office also provides bicycle licensing and offers a free weekly drop-in bicycle maintenance program. Open recreation hours are scheduled quarterly; you are strongly encouraged to use the facilities. Sports equipment may be borrowed without charge. See the Recreation Program Office for assistance. The office also provides bicycle licensing and offers a free weekly drop-in bicycle maintenance program. Open recreation hours are scheduled quarterly; you are strongly encouraged to use the facilities. Sports equipment may be borrowed without charge. See the Recreation Calendar for activities offered, and see the Recreation website for more information.

**BANANA SLUG MASCOT**

The Banana Slug, a bright yellow indigenous gastropod found in the campus’s redwood forest, was the unofficial mascot for UCSC’s coed teams beginning in the university’s early years. In 1981, when some campus teams wanted more organized participation in extramural competition, UCSC joined Division III of the NCAA. Since the application required an official team name, UCSC’s then-chancellor polled the student players, and out of this small group emerged a consensus for a new moniker—the sea lions. It was a choice that the chancellor considered more dignified and suitable to serious play than the Banana Slugs. But the new name did not find favor with the majority of students, who continued to root for the Slugs even after a sea lion was painted in the middle of the basketball floor. After five years of dealing with the two-mascot problem, an overwhelming pro-Slug straw vote by students in 1986 convinced the chancellor to make the lowly but beloved Banana Slug UCSC’s official mascot.

**FACILITIES**

To make it convenient for you to utilize campus physical education, recreation, and sports facilities, field houses are located on the east and west sides of the campus. Both the East Field House and the West Field House offer a gymnasium, tennis courts, outdoor basketball and volleyball courts, and locker rooms. The East Field House also has the Wellness Center, which offers two floors of cardiovascular and strength-training equipment, a dance studio, the martial arts room, handball/racquetball courts, 50-meter swimming pool, half-mile jogging path, and sports fields. An outdoor strength-training and cardiovascular-fitness court is located near the east jogging track. In addition, personal training and drop-in fitness classes are offered through FitLife. More information is available on the FitLife website.

The UCSC Community Boating Center is located on FF Dock at the Santa Cruz Small Craft Harbor. The boating program offers PE instruction as well as a boating club with boat usage for students and
community members alike. Boating courses are offered for dinghies, 24’–32’ keel boats, sea kayaks, and rowing shells. See boating.

**SUSTAINABLE LIVING CENTER PROGRAMS**

Program in Community and Agroecology (PICA), an academic program of the Environmental Studies Department, is an experiential living/learning program at UCSC. Students use agroecology principles in the maintenance of a half-acre organic garden, work together to develop community projects, and share in the many aspects of sustainable living—by harvesting, cooking, and eating healthy food grown organically right next to their rooms. Through a unique collaboration that integrates classroom instruction and community-based experience, PICA has become a model experiential learning program that allows students to practice sustainability at a hands-on level. All UCSC students are invited to come and participate in PICA activities such as sustainability workshops and garden workdays. For further information, please visit the PICA website.

**On-campus living at PICA.** The PICA residential program offers students an alternative to traditional on-campus living. At the Village in the Lower Quarry, students from across academic disciplines come together to create a sustainable living environment on campus. PICA residents grow organic food at the nearby Foundational Roots Garden, come together to share in weekly community meals, and manage a Village-wide composting program. This living/learning experience allows students a way to link healthy communities with healthy food systems.

**Friends of CAN (FoCAN)** is a UCSC student organization affiliated with the Community Agroecology Network (CAN), a nonprofit organization that works with partner communities in rural Mexico and Central America to develop self-sufficiency and sustainable farming practices. CAN promotes integrated approaches to sustainable community development as a means to sustain rural livelihoods and environments through three programs: Action Education, Trade Innovations, and Action Research Initiatives. CAN’s Field Study opportunities, intercultural exchanges, research, and the annual Agroecology Shortcourse inspire action for environmental sustainability and social justice.

**Field Studies.** The CAN Field Study program provides college students and recent graduates the opportunity to live and learn in rural Mexico and Central America. It offers students a realistic first step in doing international work that focuses on environmental sustainability and social justice. In developing close relationships with a rural community and working with them on a project, students come to understand the complexity and satisfaction of engaging meaningfully in international community development. CAN also offers local internship and volunteer opportunities to students interested in engaging with community projects connected to CAN’s international partners in Mexico and Central America.

Together PICA and FoCAN facilitate hands-on learning activities that engage students with all aspects of a sustainable food system—from growing organic food that supports local communities to conscious consumerism on a global level.

**STUDENT-RUN COOPERATIVES**

**KRESGE FOOD CO-OP**

Mission statement: “We are a group of students whose goal is to run a natural food store through consensus decision-making and group responsibility. We embrace cooperation as our tool for social change. We are not for profit; we are for collective power. As a cooperative business we seek to educate all members of the community, including ourselves. We use our buying power to reflect our ideals regarding ecological, social, and political issues. For this reason we carry healthful, locally based, cruelty-free, organic products. We focus on products that are good for the earth, the people who produce them, and the people who consume them. Open to all, we provide a space where good food and revolutionary action meet at the checkout line.” See the Kresge Food Co-op website or contact the group at kresgenaturalfoodscoop@gmail.com for more information.

**BIKE CO-OP**

The Bike Co-op is student owned and operated, run cooperatively, and nonprofit. Whether you need to purchase a bike, repair a bike, or want to learn, the co-op can accommodate your needs. People are encouraged to attend meetings, learn more about cooperatives, and get involved. The Bike Co-op is located at the Redwood Building, next to the Student Union.

**TRANSPORTATION AND PARKING SERVICES (TAPS)**

Transportation and Parking Services (TAPS) provides and manages access to the UC Santa Cruz campus, with a focus on sustainable transportation methods. By providing alternatives to bringing a car to campus, TAPS helps reduce the demand for on-campus parking, reduce greenhouse gas emissions, and mitigate the impacts of travel on the surrounding community. These efforts support the Campus Sustainability Plan, and are one of the reasons that UC Santa Cruz regularly ranks as one of the “greenest” colleges in the nation.

To support these efforts, parking for undergraduate students is either prohibited or extremely limited. Freshman and sophomore students who live on campus are not eligible to purchase parking permits. Those who are eligible to purchase permits (juniors
and seniors who live on campus, as well as all commuting students) may apply for a permit; however, due to the limited number of parking spaces on campus, there is no guarantee of actually being able to purchase one. Historically, permits have sold out before the start of fall quarter, and have only been available through an appeals process for the remainder of the academic year. (Those with a documentable need for a parking permit, such as job or family responsibilities, or health-related needs, may use the appeal process to request a permit.)

Off-campus parking options are also extremely limited, and typically sold out before classes begin in fall quarter. If you will be living on campus, and are not eligible to purchase an on-campus parking permit, you should not expect to be able to park your vehicle anywhere nearby.

For additional information, visit the TAPS website.

**TRANSPORTATION OPTIONS**

**Airports and Long-Distance Bus Service:** The nearest commercial airport is in San José, approximately 35 miles from Santa Cruz. The San Francisco Airport is about 70 miles from campus. Both airports are accessible by commercial van and limousine services. Santa Cruz is also served by commercial bus lines on a regularly scheduled basis.

**Campus Transit:** On-campus buses and paratransit services are provided on a no-fare basis; these services are supported by the mandatory Student Transit Fee. TAPS buses operate on campus from approx. 7:30 a.m. to 11:30 p.m. Monday through Friday, and from 6:00 p.m. to 11:30 p.m. on weekends. TAPS also operates a Night Owl service to transport UCSC affiliates between the campus and downtown Santa Cruz. The Night Owl operates until 2:30 a.m. on Friday and Saturday.

**Metro Buses:** Santa Cruz Metro Transit District is the bus service provider for Santa Cruz County. Metro operates more than 25 bus routes throughout the county, including five routes to and from UC Santa Cruz, and one route between the main UCSC campus and the Coastal Science Campus (CSC). UCSC students can ride Metro buses throughout the county by showing a student ID card with a current quarter validation sticker; no additional fare is required to ride.

**Bike Program:** TAPS offers a variety of programs to support those who choose bicycles as their main mode of travel, including over 3,500 bike-rack spaces, bike "fix-it" stations, quarterly bike helmet giveaways and morning bike shuttles that run from an off-campus location up to campus. Popular bike services include the Bike Library, which lends bikes for free on a quarterly basis, free weekly bike maintenance clinics, and free bike skills classes.

**Car Sharing:** Zipcar is a membership-based car share program that allows students 18 and over to rent cars on campus on an hourly or daily basis. Use fees start at $5.50 per hour and include all vehicle fees, gas, insurance, mileage, and reserved parking on campus. Members have access 24 hours per day to 24 vehicles—18 on campus and 7 at other nearby Santa Cruz locations. For detailed information, visit the campus Zipcar website.

**Ridematching:** Zimride is a social networking ridematching program exclusive to the UCSC community. You can find someone to share your regular commute or one-time trip through Zimride, even if you don’t have a car—just post the ride you need. If you have a car, you can share your Zipcar trip with others and save on costs. For more information, see the Zimride website.

**Walking:** UC Santa Cruz is one of the most beautiful campuses in the world, and the best way to experience it is on foot! Walking is the single most sustainable means of getting around (and often the most direct way, as well) so be sure to bring a pair of sturdy walking shoes. A walking map of the campus is provided to all new students.

**STUDENT HEALTH SERVICES**

Located on McLaughlin Drive across from Colleges Nine and Ten, the Student Health Center provides quality health care focused on the particular needs of students. All registered students can access the Student Health Center and can always have a consultation with a nurse. Care is provided by board-certified physicians, nurse practitioners, and physician assistants. Students can be seen by appointment or, in cases of illness or injury, on the same day at the Same Day Clinic. In case of emergencies, either during the day or after normal operating hours, please call 911.

In addition, the Student Health Center offers counseling and psychiatry services, nutritional counseling, health promotion, X-ray, laboratory, optometry, and pharmacy services on site. The center is open weekdays during the regular academic year. For summer services and hours, or for additional information, visit the Student Health Center website or email healthcenter@ucsc.edu.

**STUDENT HEALTH INSURANCE**

To ensure that emergencies and other health care costs do not interfere with a student's education, all University of California students are mandated by the UC Regents to carry health insurance. A comprehensive and affordable program specifically designed for students is available through the university via the University of California Student Health Insurance Plan (UC SHIP). All students are automatically enrolled in UC SHIP and billed quarterly through their student account, unless they choose to waive this coverage by providing proof of suitable insurance annually by the specified deadlines. For detailed information regarding insurance coverage and the waiver process, see Billing and Insurance Information page on the Student Health Center website. The Student Health Center only accepts UC SHIP, not any other health insurance plans.
For students who successfully waive UC SHIP, it is recommended that students and families consider adding CruzCare, which provides access to the Student Health Center for illnesses and injuries and covers in-house laboratory tests and X-rays, for a quarterly flat fee. Fees will be assessed for most visits for students without UC SHIP or CruzCare.

IMMUNIZATION AND TUBERCULOSIS SCREENING REQUIREMENTS

UC-wide, all incoming UC students, (frosh, graduate, transfer, and returning) are required to obtain specific vaccines and tuberculosis (TB) screening before coming to campus. Compliance with this requirement will be tracked by student’s submission of an online Immunization form and TB Risk screening. These forms must be submitted securely online at student health. Failure to complete this process will result in an enrollment hold. For more information about UCSC Student Health Services and the UC-wide immunization requirements, please visit the Student Health Center website.

STUDENT HEALTH OUTREACH AND PROMOTION (SHOP)

SHOP is UC Santa Cruz’s destination for information, conversation, and self-exploration. It’s the place for students to go to learn about health and wellness in a safe, non-judgmental environment.

SHOP provides opportunities for students to explore and enhance their health and wellness as they pursue their academic goals. SHOP offers information, education, resources, and support on issues related to alcohol and other drugs, sexually transmitted infections and sexual health and other concerns relevant to college students. All UCSC students are welcome and encouraged to drop in and speak with SHOP’s professional and student staff. Students can get involved with SHOP by becoming peer educators, HIV test counselors, volunteers for the Condom Co-op, and/or CUIP interns.

ALCOHOL AND OTHER DRUG (AOD) EDUCATION

SHOP empowers students to reduce risks related to substance use/abuse. Students can meet with staff confidentially to discuss their personal AOD involvement, discuss concerns about friends or family members, obtain educational materials, participate in workshops, and access resources for students in recovery. Educators provide formal and informal sessions and workshops for students, college residential staff, and other campus groups. For information call (831) 459-1417 or visit the SHOP website. NOTE: In January 2014, UC Santa Cruz implemented a campuswide smoke and tobacco-free policy.

HIV AND OTHER SEXUALLY TRANSMITTED INFECTION (STI) PREVENTION

SHOP offers many resources for promoting sexual health, including:

- Free, anonymous HIV testing with Orasure (no needles) provided by student peer test counselors. Results in 20 minutes.
- The Condom Co-op, selling safer sex supplies at reduced cost.
- The Birth Control Patrol—make an appointment with a peer to choose a contraceptive option.
- Workshops, activities, and events.
- Sexual health questions? Speak to a SHOP staff person.

SHOP is located at the Student Health Center. For more information, visit the SHOP website, call (831) 459-3772, or email shop@ucsc.edu.

CAMPUS ADVOCACY, RESOURCES AND EDUCATION (CARE)

Campus Advocacy, Resources and Education (CARE) provides support, advocacy, resources, and violence prevention education to the UC Santa Cruz community. We respond to the needs of students, staff, and faculty impacted by sexual assault, dating/domestic violence, and stalking by providing confidential advocacy services. CARE services are survivor-centered and trauma-informed.

To request an appointment with a confidential CARE Advocate, email care@ucsc.edu or call 831-502-CARE (2273).

CARE also works collaboratively with students, faculty, and staff to educate the campus community about the vital role that each of us has in preventing violence and creating a culture of consent and respect. We supervise a peer prevention education program for students covering topics including:

- How to support survivors
- Reporting options
- Healthy communication and relationships
- Bystander intervention skills
- Media literacy

CARE is located at Kresge 714, near the Owl’s Nest Cafe. Find us online at CARE, or follow us on Facebook by searching “UCSC CARE.”

COUNSELING AND PSYCHOLOGICAL SERVICES (CAPS)

Counseling and Psychological Services (CAPS) offers a range of professional services to undergraduate and graduate students seeking help with personal concerns. We provide assistance for students with academic and personal stress, relationship and family issues, drug and alcohol problems, psychological problems, and crisis situations. Psychiatry services include diagnostic evaluations or prescribing of
AARCC works collaboratively with various campus units/departments and in the surrounding community to enhance cultural and ethnic diversity initiatives on the UCSC campus. AARCC is located on the third floor of the Bay Tree Building in Quarry Plaza, and is open Monday through Friday from 10 a.m. to 5 p.m. For more information, call (831) 459-3207, email aarcc@ucsc.edu, or visit the AARCC website.

AMERICAN INDIAN RESOURCE CENTER (AIRC)
The American Indian Resource Center (AIRC) works in collaboration with other resource centers, faculty, staff, students, and organizations such as the Student Alliance of North American Indians (SANAI), the University of California American Indian Counselors/Recruiters Association, the Amah Mutsun Tribal Band of California Indians, as well as the indigenous tribal community leaders of the region to develop co-curricular programming, cultural activities, and events that assist public understanding of native peoples. Invested in creating a campus climate that supports all students, the center provides leadership development, internship opportunities, mentoring, and personal and academic advising. The AIRC is located on the third floor of the Bay Tree Building in Quarry Plaza. For more information, call (831) 459-2881, email airc@ucsc.edu, or visit the AIRC website.

ASIAN AMERICAN/PACIFIC ISLANDER RESOURCE CENTER (AA/PIRC)
The Asian American Pacific Islander Resource Center (AA/PIRC), established in 1999, provides and enhances opportunities for developing leadership, building a stronger sense of community on campus, and linking students to community service opportunities. AA/PIRC offers education and dialogue on issues affecting Asian American/Pacific Islanders with the goal of addressing students’ multiple and diverse academic, social, cultural, and other co-curricular needs. Students can also gain leadership experience through the AA/PIRC Internship, volunteering, and/or participating in student programs.

AA/PIRC is located on the third floor of the Bay Tree Building at the Ethnic Resource Centers. Add your email address to AA/PIRC’s listserv to receive campus and community announcements. For more information, call (831) 459-5349; email aapirc@ucsc.edu; or visit the AA/PIRC website.

CHICANO LATINO RESOURCE CENTER (EL CENTRO)
The Chicano Latino Resource Center (El Centro) is a hub of organized activities and resources that support Chicana/o/x and Latina/o/x student transition, retention, and academic advancement at the university. Through collaborative efforts with campus partners, students can participate in a host of activities that encourage intellectual growth,
leadership development, preparation for graduate or professional school, and career options. El Centro encourages and supports student and community development through cultural and educational programming. Annual programs include the following: Bienvenida—New Student Welcome Program; Día de los Muertos; Pachanga; Cesar Chavez Convocation; dialogue on academic, social, cultural, and personal issues that affect the Chicano and Latinx communities; and a weekly online newsletter; CHISME E-News. El Centro offers student internships that support leadership-skills development, while students help to organize events and activities. For more information or to schedule an appointment, call (831) 459-5806 or email elcentro@ucsc.edu, or visit El Centro.

CANTÚ QUEER CENTER

The Cantú Queer Center at UC Santa Cruz provides an open, inclusive, intersectional, and welcoming space, promoting education about all genders and sexualities, and empowering self-exploration of these identities. We serve as a resource to LGBTQIA students by providing opportunities for leadership and personal development and through programs and services that work to eliminate heterosexism, bi-phobia, and gender-identity oppression. We strive to develop an atmosphere of acceptance and well-being from which the campus community can fulfill the academic mission of the university.

Besides the Cantú Queer Center, there are two queer spaces on campus tucked within Mchenry Library: the GLBTI Reading Room on the 4th Floor, and the Gloria Anzaldua Reading Room on the 3rd Floor. Both spaces have beautiful displays that will make you feel at home. You can drop by and use these rooms if they are available or reserve them for individual or group use.

The Cantú Queer Center is open Monday through Friday; usual hours are 9 a.m. to 5 p.m. You can reach the center at (831) 459-2468 or via email at queer@ucsc.edu. The Cantú Queer Center website provides an overview.

WOMEN’S CENTER

The Women’s Center is devoted to helping students maximize their academic and personal success at UCSC. The center is a student-run resource center that creates and sponsors student-oriented programs, workshops, writing collectives, film screenings, and discussions throughout the academic year. Topics addressed include women’s leadership and empowerment, gender and sexuality, race and culture, health and wellness, reproductive rights, advocacy to end sexual violence, and much more. Center staff are available as a resource for on- or off-campus referrals and informal advising.

All students are encouraged to get involved in the center’s annual events, which include Sister Solidarity: Women’s Heritage Month, Take Back The Night, and more. Other opportunities for involvement include volunteering and work-study paid internships. The center is the ideal space to study, take a break from classes, check out a book from the lending library, and connect with the women’s community.

The Women’s Center is located at the Cardiff House, an historic farmhouse near the Carriage House in the lower campus. Center hours are Monday through Friday, 9:00 a.m. to 5:00 p.m. For more information, please contact (831) 459-2072, email women@ucsc.edu, or visit the Women’s Center website.

THE STUDENT UNION

The Student Union is a student-governed facility where students can study, take a break and lounge, meet friends, play pool, use computers, or watch television. Located in the Quarry Plaza across from the Bay Tree Bookstore, the Student Union complements college facilities by providing a centrally located place for social, recreational, and educational gatherings for all students and members of the campus community.

The Student Union is also home to the campuswide student governing body (Student Union Assembly) and to student organizations, the Bike Co-op, Engaging Education, and Student Organization Advising and Resources (SOAR).

The Union is open Monday through Thursday 9 a.m. to 9 p.m., Friday 9 a.m. to 6 p.m. The Union is closed holidays and quarter breaks. For more information, call (831) 459-3167.

STUDENT ACTIVITIES

CAMPUSWIDE STUDENT ACTIVITIES: SOMECA

SOMECA brings together three dynamic areas of campuswide student engagement: Student Organization Advising and Resources (SOAR), Student Media, and Cultural Arts and Diversity. The organizations and programs of SOMECA offer students a place of self-discovery. SOMECA’s professional and experienced staff offers mentorship, leadership training, organizational development advising, and project management to all students. Visit the SOMECA website for more information.

STUDENT ORGANIZATION ADVISING AND RESOURCES (SOAR)

UCSC offers the student body over 180 student-initiated organizations including academic, cultural, environmental, political, professional, religious, service, and Greek-letter organizations. Students who are actively involved in a student organization gain valuable and transformative leadership skills ranging from conflict mediation to project planning.

Student organizations create a number of events from general body meetings to well-established major scale programming. For example, student leaders host high school students to encourage and support their entrance into college. Others produce
major campuswide events to raise funds for cancer research and local community nonprofits. Performing arts organizations perform at conferences and competitions across the country. Student leaders gain real-world experience grounded in the knowledge, values, and skills necessary for navigating the global workplace and engage in dynamic civic participation.

Student organization membership is open to all UCSC students. Learn more at the Student Organization Advising and Resources (SOAR) office. Contact SOAR at (831) 459-2934, email soar@ucsc.edu, or visit the SOAR website. SOAR is located on the second floor of the Student Union.

STUDENT MEDIA

Student Media at UC Santa Cruz include print publications and broadcast organizations. Every year, hundreds of students enrich their educational experience through internships, academic credit, fellowships, and employment opportunities with media organizations.

The award-winning student newspaper of record, City on a Hill Press, covers campus and local news, sports, music, and offers art reviews and commentary. Fish Rap Live! provides an alternative forum for free expression of ideas, humorous coverage of local and campus events, and personal journalism. TWANAS, the Communities of Color and Native American Students Press Collective, publishes a news magazine that broadens awareness of perspectives of color in the campus community. Other campus magazines include the critical film journal, EyeCandy; Leviathan Jewish Journal; Scientific Slug, which blends coverage of research on campus with science-focused art and poetry; Fruitcake, which looks at life through the lens of graphics and cartoons; the philosophy journal, Kalopsia; and Gaia, which focuses on environmental issues. Annual literary journals include Chinquapin, Red Wheelbarrow, ALAY, and Matchbox.

Artistic, narrative, experimental, documentary, news, and public-service film and video are produced by broadcast organizations, including the Film Production Coalition, On the Spot, Slugworks Animation, Banana Slug Network, and others. Students from all disciplines are encouraged to participate.

To contact student media organizations, call the Student Media Center at (831) 459-2840 or SCTV at (831) 459-5360. Visit the Student Media website for links to print, radio, and broadcast organizations.

CULTURAL ARTS AND DIVERSITY (CAD)

Cultural Arts and Diversity (CAD) strives to enhance the cultural climate of UCSC and its surrounding community by celebrating diversity. CAD fosters the spirit of unity between cultures by providing students with outlets for the creative talents of various cultures through theater, lectures, presentations, and productions. By promoting access to resources and services that support these endeavors, CAD strives to provide cultural awareness and diversity, build collaborative partnerships and community outreach, enhance retention and recruitment efforts, and provide opportunities for leadership and educational development. The Cultural Arts and Diversity Center promotes the following programs:

- African American Theater Arts Troupe
- Rainbow Theater
- Rainbow/African American Theater Arts Troupe Outreach
- Classes offered through Theater Arts and Stevenson College

Contact the CAD Office at (831) 459-1861 or visit the CAD website.

UC SANTA CRUZ AND SYSTEMWIDE STUDENT GOVERNANCE

UC Santa Cruz offers a wide variety of opportunities to participate in university governance at the college, campus, systemwide, and national levels. Regardless of what level you choose, participating in student government provides a wonderful opportunity to practice leadership skills, meet others who share your interests, and learn a great deal about yourself and the university.

STUDENT UNION ASSEMBLY

The Student Union Assembly (SUA) is the undergraduate advocacy organization and the official student voice of UC Santa Cruz. It comprises three representatives from each college government; six elected officers (president, vice president of external affairs, vice president of internal affairs, vice president of academic affairs, and vice president of diversity and inclusion); and one appointed representative from each of the following student organizations that represent historically underrepresented people within the UC system: African/Black Student Alliance; Asian Pacific Islander Student Alliance; Queer Student Union; Movimiento Estudiantil Chicano/a de Aztlan; Student Alliance of North American Indians; and Ethnic Student Organization Council. The SUA also provides paid part-time internship opportunities for students. These internships include, but are not limited to, field organizers, treasurers, outreach and publicity, and strategy and planning.

The SUA conducts open meetings every Tuesday at 8 p.m. throughout the academic year. Students interested in advocacy, activism, and politics, as well as those concerned with their own and their friends’ lives, are invited to get involved. The assembly operates via issue-specific campaigns and around general campus concerns. In the past, the SUA has formed campaigns around fighting fee hikes, defending affirmative action, saving financial aid on a national and state level, striving for reasonable campus growth, and reforming UC Regents’ procedures. Current issues include fighting to make a
UC education affordable, fighting to stop balancing budgets on the backs of students, fighting for the rights of UC workers, and working with community groups because UCSC students are also Santa Cruz residents. The SUA also works with the UC Student Association and the United States Student Association on systemwide, statewide, and national issues. For more information, visit the SUA website.

**SYSTEMWIDE STUDENT GOVERNMENT: UCSA**

The UC Student Association (UCSA) is the statewide association of graduate and undergraduate student governments from the 10 UC campuses. UCSA is the officially recognized voice of the students to the UC Board of Regents, various UC administrative offices, and the UC Office of the President. Issues covered by UCSA include UC fees and financial aid, comprehensive admissions policies, and academic policies, as well as broader issues of social responsibility such as environmental concerns and civil rights.

The SUA office provides grassroots membership and support for the two main UCSA offices in Oakland and Sacramento. The campus office organizes students to run the grassroots campaigns that are adopted each summer during the UCSA Congress. At this session, delegates from the 10 UC campuses come together and choose the critical issues to be worked on for the next year. Issues in the past have included voter registration drives, letter-writing campaigns on particular UC issues, and increases in financial aid. UCSA provides a thorough introduction to UC politics and student representation. Students may also serve on systemwide committees through UCSA and gain a wide knowledge of the entire UC system through their service.

Two officers help to coordinate UCSA activities on our campus. The Student Union Assembly vice president of external affairs (VPE) is the official representative to the UCSA Board of Directors. This position has voting rights for UCSC, is the primary contact regarding all UCSA issues, and coordinates all lobbying of UCSA and local, state, and federal governments on behalf of UCSC students. The organizing director (OD) coordinates with the VPE to effectively run the grassroots campaigns that are sponsored by UCSA each year. These positions are elected for one-year terms during spring quarter every year.

The Student Union Assembly’s VPE may be contacted at suavpe@ucsc.edu.

**COLLEGE STUDENT GOVERNMENTS**

Each college has its own student government, encouraging students to participate in program development and implementation, as well as determining where college membership fees should be allocated. Student governments give students a voice at the college and with the campuswide student government. Like the colleges themselves, each college governing body has its own character, structure, and meeting times and dates. For information, contact the programs coordinator at your college.

**THE GRADUATE STUDENT ASSOCIATION (GSA)**

The Graduate Student Association (GSA) advocates for graduate student interests with regard to tuition and fees, health insurance, transportation, housing, graduate student well-being, support for marginalized grad students, and other important issues. The GSA ensures graduate student representation on campus committees and works with the campus and UC administration to implement GSA Council goals. The GSA also works with state- and UC-wide bodies to represent the UCSC graduate community beyond our campus. The GSA awards research and travel grants to graduate students in order to provide funding for professional development, cover the cost of supplies, subscriptions, and books needed for research, and to assist with funding travel for conferences, research, and workshops. The GSA also organizes and co-sponsors events for graduate students, including international grads and grads from historically marginalized communities.

The GSA is funded by student fees and operated by an Executive Board. Representatives from departments that offer graduate degrees make up the GSA Council. The Council meets three times per quarter to strategize around and discuss issues that impact graduate students. For more information, contact the GSA website or email gsainfo@ucsc.edu.

**STUDENT REPRESENTATION ON CAMPUSWIDE COMMITTEES**

Serving on a campus advisory committee is a recognized channel for student involvement in the university's decision-making processes. Advisory committees composed of faculty, staff, and student representatives are established to develop and recommend policies on a wide range of topics. Each year the Student Committee on Committees (composed of one student appointed by each college and chaired by the Vice President of Internal Affairs of the Student Union Assembly) nominates more than 100 students to serve on over 50 administrative and Academic Senate committees. For information about the selection process, see the Student Union Assembly website.

**COMMUNITY SERVICE OPPORTUNITIES**

Community service is a vital part of the university’s mission. It is possible for individual students, as well as campuswide student organizations, to develop service projects that link the university with the broader Santa Cruz community. With the financial support of the campus’ Community Service Project funding, students have aided local groups such as Students Toward Achievement in Writing Success, the Strange Queer Youth Conference, and the Walnut Avenue Women’s Center.
The Student Volunteer Center, located in the Dean of Students Office at Hahn Student Services, connects students with local volunteer opportunities based on skills and interest. Volunteer opportunities range from aiding youth and elderly to addressing homelessness and environmental issues. The Student Volunteer Center also sponsors events for the campus community where students can volunteer their time.

For more information about service opportunities, see the Student Volunteer Center website, call (831) 459-3363, or email volunteer@ucsc.edu.

CAMPUS CULTURAL PROGRAMS

Throughout the year, UCSC offers frequent and varied cultural opportunities. Students, faculty, and staff may participate as audience members, performers, or behind-the-scenes support crew. The considerable range of offerings includes art exhibits, lectures, films, concerts, recitals, and dance and drama presentations. Programs vary from single performances to weeklong cultural celebrations. The colleges host a number of events, and the departments frequently engage speakers of particular academic interest to address the campus community or present lecture-demonstrations.

The Arts Division serves as a gateway to the entire university, presenting high-quality research and work by faculty, students, and guest artists. Art exhibitions, film screenings, digital arts presentations, music recitals, as well as theater, dance, and music presentations, are offered in conjunction with the academic programs. The Arts Division also offers regular public lectures and colloquia to introduce audiences to professional practitioners and scholars in the traditional and digital arts.

In addition to attending Arts Division activities, UCSC students are invited to participate in a wide variety of division activities that are open to all UCSC students. Join an Indonesian gamelan ensemble, sing in the UCSC Concert Choir, play in the UCSC Orchestra, or audition for a theater or dance production.

For up-to-date information about cultural offerings from the Arts Division, contact the Arts Division Events Office at (831) 459-2787 and visit online at arts.ucsc.edu and on Facebook.

BAY TREE BOOKSTORE

UCS’ Bay Tree Bookstore is located in the Quarry Plaza complex in the center of campus, at the intersection of Hagar Drive and Steinhart Way. The bookstore serves as the campus resource for UCSC course materials, including new and used course books and customized faculty publications; general reading and reference books; a wide variety of school and personal supplies (including computers and computer supplies); and many other items such as residence hall living needs, small appliances, backpacks, UCSC emblematic apparel, art supplies, posters, gifts, greeting cards, testing supplies, and academic regalia. Services include online reservations for course materials, textbook rentals, student debit accounts, special ordering of books, book buyback services, fax services, passport processing, and limited check cashing. The bookstore also houses the campus’s convenience store (the Express Store), Student ID Card Services, and a self-service postal kiosk. For more information, call (831) 459-4544, or see the Bay Tree Bookstore website.

CHILD CARE AND EARLY EDUCATION SERVICES

Child Care and Early Education Services offers programs for children of students currently enrolled in classes at UCSC. Our center is located on campus near the West Entrance in Family Student Housing. Free or low-cost tuition rates are available for students who meet the eligibility requirements for subsidized care (please see the Eligibility for State Funding Chart at child care). All meals are included in the program (breakfast, lunch, and afternoon snack).

Our programs are dedicated to providing the highest quality developmental care possible in a secure, homelike environment characterized by warmth, affection, and support. The classrooms stress the importance of meeting children’s needs in all areas of development: social, emotional, physical, cognitive and creative. Our program emphasizes nature-based learning incorporating the beautiful UCSC campus environment; garden activities, outdoor play, all supporting a S.T.E.M. curriculum.

Programs are open to all children without regard to religion, color, ethnicity, gender, and physical or mental ability. All of our centers are located in the Family Student Housing Complex. Each center is open most days during the academic year from September through June, and closed during the summer months, administrative and university holidays, and staff development days. In addition, Early Education Services will run a modified program during the summer months. All of the child care spaces are provided for children of student families only. The majority of the spaces are reserved for students who meet the qualifications for subsidized care. Fee-for-service spaces at a below market rate may be available for student families whose income exceeds state-subsidy requirements.

Information about programs, fees, and applications is available at child care and at the Early Education Services Office in the Community Building at Family Student Housing; at (831) 459-2967, or by email at earlyeducation@ucsc.edu.

INFANT-TODDLER CENTER

The Infant-Toddler Center serves children ages 11 to 36 months. Small groups, low child-to-adult ratios, and primary caregivers ensure consistent and nurturing care. The hours of operation are 7:30 a.m. to 5:30 p.m.

PRESCHOOL CENTER
Student Life

The preschool classroom serves children from three years of age until they enter transitional kindergarten. The classroom provides small groups with low child-to-adult ratios, and an environment that supports a stimulating and rich curriculum that helps prepare children for kindergarten. The hours of operation are 7:30 a.m. to 5:30 p.m.

SCHOOL AGE CENTER

The School Age Program provides an after-school recreation program for children during the academic year. The program provides developmentally appropriate arts and crafts, life skills and sports activities, occasional community outings and quiet time for homework. The hours of operation are 12:30 p.m. to 5:30 p.m. for kindergarteners; and 2:30 p.m. to 5:30 p.m. on Mondays, Tuesdays, Thursdays, and Fridays for 2nd through 5th graders. On Wednesdays (public school minimum days), care is available from 12:30 p.m. to 5:30 p.m. for all school-age children. Extended care is available on a sign-up basis on some Santa Cruz City Schools closure days (university closure days excluded).

UC SANTA CRUZ ALUMNI PROGRAMS

Once a banana slug, always a banana slug! From the moment students step on campus they become part of the UC Santa Cruz community for life—transforming from students to alumni.

The UC Santa Cruz Alumni community is over 100,000 strong—a network of dynamic, innovative, successful, philanthropic, and world-changing individuals around the world. UC Santa Cruz alumni are part of the 1.7 million University of California alumni living and working around the globe as leaders and contributors in our communities, businesses, and culture. UC Santa Cruz alumni are advocates, volunteers, supporters, friends, and ambassadors for their alma mater.

Opportunities abound for alumni to stay involved in the UC Santa Cruz community through networking, mentoring, attending events, volunteering, and engaging in philanthropic opportunities. Alumni stay connected through online alumni networks and social media. Programs like the Career Advice Network (CAN) and the annual Multicultural Career Conference create opportunities for alumni to mentor students toward success.

UC Santa Cruz Alumni programs are governed by the Alumni Council, an elected board of alumni volunteers. The Alumni Council seeks to build a robust connection between students and alumni, connect alumni where their passions are the strongest, and to strengthen the alumni network throughout the UC Santa Cruz community for personal and professional advancement. The alumni network supports students and alumni through the pivotal moments in life.

UC Santa Cruz Alumni promotes excellence through scholarships and awards. Alumni support student scholarships each year, including the Alumni Association Scholarship, College Service Award, Graduate Student Awards, and Leadership Service Awards Alumni enrich campus and college intellectual life and recognize and celebrate notable members of the UC Santa Cruz community by presenting two annual awards each year, the Alumni Achievement Award and Outstanding Staff Award, and by publishing articles about notable alumni in UC Santa Cruz publications. For information visit the UC Santa Cruz Alumni website.

UNIVERSITY INTERFAITH COUNCIL

The University Interfaith Council (UIC) seeks to integrate spirituality with academic life and to promote tolerance, peace, and understanding of all faiths and spiritual traditions. The UIC is open to all religious groups. Programs include celebrations and interfaith gatherings; educational events, including religious study courses; community service; worship/meditation; and spiritual care and counseling for students, faculty, and staff. The UIC strengthens a campuswide sense of spirituality and increases awareness of options for spiritual life on campus. For more information on University Interfaith Council events and discussion boards, visit the UIC website.

Revised: 07/15/18
The academic programs offered at UC Santa Cruz are described in detail in this section. Curricula, courses, and degrees listed in this catalog are subject to change through normal academic channels. New proposals and changes are initiated by the relevant departments, divisions, or colleges and approved by the appropriate academic dean and by the Committee on Educational Policy or the Graduate Council. The designations F (fall), W (winter), S (spring), or Summer that appear at the end of each course indicate the intentions of the academic units; however, on occasion, the actual scheduling of classes may change. For changes and additions to courses listed in this catalog, consult the Schedule of Classes and the Class Search published each quarter and available on the web. The Office of the Registrar also provides detailed information on its website.

COURSE CREDIT

Unless otherwise specified in the course description, each course earns 5 quarter credits. Therefore, regardless of course format or scheduling, each course makes approximately equal demands on enrolled students.

All physical education courses are noncredit. Other noncredit courses include certain graduate seminars. Laboratory courses, music courses involving individual lessons or ensemble participation, as well as some special-interest seminars and individual studies courses carry less than 5 credits and are designated accordingly.

The normal UCSC undergraduate program of study is three 5-credit courses per quarter or equivalent. In 12 quarters at UCSC, most students complete 180 credits. With a college’s approval, a student may be allowed to vary the course load. See also Part-Time Program.

COURSE NUMBERING

Undergraduate courses are classified as lower division or upper division. Lower-division courses (numbered 1–99) are designed for first-year and sophomore students but may be taken by more advanced students. Upper-division courses (numbered 100–199) are designed for junior and senior students but are open to first-year and sophomore students who have sufficient background and the consent of the instructor in charge.

Graduate courses (numbered 200–299) are either restricted to graduate students or open only to students who can show the instructor that they have completed sufficient upper-division coursework basic to the subject matter of the course.

FOOTNOTES

Courses marked with an asterisk (*) will not be offered in the 2018-19 academic year. Courses marked with a dagger (†) will be offered, with the quarter as yet to be determined.

GENERAL EDUCATION CODES

The general education codes that appear in some course descriptions are explained in the section on general education requirements.

COURSE FORMAT

Most courses at UCSC are taught as lectures or, when the class is small enough for considerable discussion, as seminars. A large number of courses require enrollment in a secondary discussion section scheduled at a different time from the primary course. Sometimes there is laboratory or fieldwork associated with a course.

Occasionally, a student may wish to do an individual project as part of the work for a course. UCSC instructors are usually quite willing to consider and evaluate such work, time permitting.

PREREQUISITE POLICY

When applicable, prerequisites are listed in this catalog within the course description for each course. There are many courses that meet general education requirements and do not require a prerequisite. Prerequisites come in many forms—for example, specific courses, placement examinations, or “satisfaction of the Entry Level Writing and Composition requirement” for writing courses. Some course descriptions also specify that students must be declared majors or seniors in order to enroll. Other course descriptions recommend the appropriate background for a course—for example, “ability to use algebra and solve problems.” Questions concerning prerequisites should be directed to the instructor of the course or the respective department office. Students who have not met all prerequisites may be excluded from a course. Alternatively, the instructor or a department adviser may waive the prerequisite based on demonstrated competence or equivalent academic experience.

CLASS SIZE
Programs and Courses

A student's class level plays a large part in how many small classes are available. Introductory classes tend to be large, although they are usually accompanied by required small sections or laboratories. Many small classes have prerequisite courses that enroll large numbers of students. Also, certain large classes fulfill campuswide general education requirements. First-year students experience at least one small seminar in conjunction with the college core course, and they are likely to experience an increasing proportion of small classes as they progress to senior status.

INDIVIDUAL STUDY

Especially in the upper division, students are encouraged to devise special courses to pursue independently, under the guidance of faculty members. A study plan should be discussed with a faculty member in the general subject area of interest. This faculty member will ultimately be responsible for evaluating the work done. The study plan must also be approved by the course sponsoring agency; it should be noted that not all proposed plans are accepted.

FIELD STUDY

Independent, off-campus field study is available through many departments. It is handled in much the same way as individual study. In addition, there are several established field programs that offer a variety of full- or part-time, off-campus, field placements as part of the regular program of academic study. For more information on these programs, see Field and Exchange Programs in the Undergraduate Academics section.

APPRENTICE TEACHING

An upper-division or graduate student may apply for approval to teach an undergraduate seminar of his or her own design. The seminar is supervised by a faculty member and carries normal academic credit for the students and the apprentice teacher. Interested students should initiate a proposal with a faculty member in the appropriate subject area.

CREDIT BY PETITION

Regularly enrolled students may obtain full academic credit for a course by challenging the course. Challenging the course entails passing an examination or completing an appropriate body of work supervised by a regular instructor for the course. The petition for such credit must be approved by the instructor of the course, the chair of the department offering the course (or provost, if it is a course offered by a college), and the provost of the student’s college. Some courses are not considered appropriate for credit by petition.

For foreign language students, credit by petition may not be used by students whose language ability greatly exceeds the course level proposed for challenge. Petitions for credit for levels 4 and 5 cannot be filed in the same quarter. Contact the Language Program, 239 Cowell, 459-2054, for more information.

AUDITING OF CLASSES

Instructors may permit nonenrolled students to attend their classes when space is available after all students who wish to enroll officially have done so. An instructor is not obligated to devote time to the work of students who are not officially enrolled in the class.

Revised: 07/15/18
PROGRAM DESCRIPTION

The Department of Languages and Applied Linguistics offers a series of courses in Academic English (ACEN) designed specifically for students whose native language is not English, and who would benefit academically by improving their English language skills. The main objective of these courses is to raise the linguistic, academic, and cultural competence of international students who are currently pursuing various majors at UCSC. The ACEN courses help students develop and refine their knowledge of English usage, advanced grammar, vocabulary and idiomatic expressions, while at the same time developing their listening, oral communication, and academic reading and writing skills. The specific content of each course varies per quarter, and thus, none of the courses are prerequisites to the others.

ACADEMIC ENGLISH FACULTY AND PROFESSIONAL INTERESTS

ASSISTANT PROFESSOR

Don Miller
Corpus linguistics, L2 academic literacy—particularly academic vocabulary—development, corpus-informed EAP materials and curriculum development and pedagogy

ACADEMIC ENGLISH COURSES

UPPER-DIVISION COURSES

110A. Advanced Academic English 1.
Students develop an academic vocabulary and successful reading strategies in English in order to understand high-level academic texts. Students also practice pronunciation and apply the rules of grammar to written and spoken academic language through weekly oral presentations and written assignments. Enrollment by instructor consent only. Enrollment is restricted to international students. The Staff

110B. Advanced Academic English 2.
Students continue to develop an academic vocabulary (e.g., collocations, idiomatic expressions), which is a significant contributor to successful academic reading and writing. Students also practice complex sentence structures in written and spoken language through weekly oral presentations and written assignments. Enrollment is by instructor consent only. Enrollment is restricted to international students. The Staff

110C. Advanced Grammar in Context.
Students continue to develop an academic vocabulary, and practice reading and writing complex sentences in English with a high level of grammatical and stylistic accuracy. Students also increase their oral fluency and pragmatic skills and their awareness of second-language learning. Enrollment by instructor consent only. Enrollment is restricted to international students. The Staff

Students also continue to increase their oral fluency, pragmatic skills, and awareness of second-language learning. Enrollment is by instructor consent only. Enrollment is restricted to international students. The Staff

Revised: 07/15/18
Anthropology is the study of people throughout the world and through time. Because it covers a wide range of topics—biological evolution, material remains of the past, and the world that humans create through their ideas and practices in present-day societies—anthropology is an especially integrative discipline. The anthropology program at UCSC offers courses that reflect the diversity of the field.

- Cultural anthropology explores the everyday lives, beliefs, activities, and movements of people, objects, and ideas in diverse societies. Cultural anthropology courses examine such topics as race and ethnicity, medicine, health, science, gender, sexuality, environment, religion, law, popular culture, politics, economics, and institutions.
- Archaeology uses the material evidence of human activities to understand past human lives. Archaeology at UCSC focuses on past people’s interactions with one another at the local level and within their wider social and ecological contexts. Faculty research areas include the pre-colonial and early post-colonial history of Africa, Mesoamerica, the Caribbean, and western North America.
- Biological anthropology traces the human journey from its beginnings in Africa over five million years ago. Biological anthropology courses look at fossil evidence, evolutionary theory, human variation, and the behavior of primate relatives in order to analyze biological, social, and cultural changes over time. Biological anthropology at UCSC has a methodological emphasis in innovative approaches to human and non-human primate ecology and diversity founded on our expertise in genomics, isotope biochemistry, as well as human osteology.

UCSC students have the opportunity to do independent library and field research in cultural anthropology, archaeology, and biological anthropology. Laboratory courses in archaeology and biological anthropology offer practical experience in the analysis of biological and cultural materials. In cultural anthropology courses, students learn to carry out anthropological research through interviews, participant observation, surveys, the collection of oral histories, analysis of textual, visual, and aural materials, and the interpretation of archival materials.

Because anthropology is concerned with understanding human interaction, it is a useful major for anyone planning a career that involves working with people, especially those from diverse cultures. Some UCSC anthropology graduates are in social work, many are in teaching, and others pursue careers in law, city planning, politics, medicine, public health, cultural resource management, and journalism. Students intending to specialize in anthropology usually go on to graduate school because professional employment in the field almost always demands an advanced degree.

A combined major in Anthropology and Earth and Planetary Sciences, leading to a bachelor of arts (B.A.) degree, is also offered; for that program description, see Earth and Planetary Sciences.

Most anthropology faculty have their offices in Social Sciences 1 Building. Social Sciences 1 also houses laboratories for archaeology and biological anthropology where space is provided for laboratory and individual studies courses and for collections of human and non-human mammalian skeletal material, a variety of archaeological artifacts, and collaborative workspaces for cultural anthropology research.

The Anthropology Society, a campus club, is open to all students interested in anthropology. The Anthropology Colloquium series showcases guest speakers and gives faculty and students an opportunity to discuss new approaches to anthropological questions. Students and faculty interested in archaeology also gather informally at the Archaeology/Biological Anthropology Lunch forum to share information on fieldwork and employment opportunities.

**BACHELOR OF ARTS (B.A.) IN ANTHROPOLOGY**

The anthropology B.A. incorporates the three anthropological subfields of anthropological archaeology, cultural anthropology, and biological anthropology, while providing undergraduates with a solid grounding in theory and methods. Students do not declare an emphasis or concentration within the anthropology major. All students therefore are general anthropology majors and complete the same requirements. However, students can choose to take additional courses in a specific area of anthropology while completing the upper-division anthropology electives required for the major, or by choosing to take courses above and beyond what is required for the major.

**PROGRAM LEARNING OUTCOMES**

A student who graduates with a B.A. in Anthropology has the following knowledge and skills.

**CORE CONCEPTS IN ANTHROPOLOGY**
Anthropology
The student demonstrates understanding of the core concepts in three primary subfields of anthropology: cultural anthropology, archaeology, and biological anthropology.

KNOWLEDGE OF CULTURAL DIFFERENCES
The student demonstrates knowledge of cultural variation and the diversity of perspectives, practices, and beliefs found within each culture and across cultures.

INTEGRATION OF SUBFIELDS
The student integrates cultural, biological, and archaeological perspectives on human bodies, behavior, materialities, and institutions.

WRITTEN COMMUNICATION
The student demonstrates the ability to write clearly by formulating well-organized arguments that are grounded in supporting evidence while countering evidence that contradicts the student’s claims.

ORAL COMMUNICATION
The student is able to organize ideas and information and articulate them effectively.

RESEARCH AND ANALYTICAL SKILLS
The student demonstrates knowledge of the basic steps involved in scholarly research, including locating and critically evaluating scholarly and other information sources relevant to the chosen topic. The student can recognize and demonstrate a basic understanding of research methods used in the various subfields of anthropology, including—but not limited to—participant observation, thick description, laboratory and field analysis, and interviewing.

UNDERSTANDING OF LONG-TERM CHANGES IN HUMAN BEHAVIOR AND CONDITIONS IN DEEP TIME
The student has a grasp of long-term changes in the conditions that have shaped humans and the environments they inhabit.

DECLARATION OF THE MAJOR
In order to qualify for the major, students must have received a “C” or better in at least one lower-division anthropology course (ANTH 1, 2, or 3) and have either received a “C” or better in a second lower-division anthropology course or be enrolled in a second lower-division anthropology course at the time of declaration.

HONORS
The Anthropology Department awards honors in the major and highest honors in the major based on a ranked departmental grade point average (GPA) that is calculated using all upper-division courses taken in the major with the exception that only one independent-study course can be used in this calculation. For students who have taken multiple independent-study courses in the department, the independent-study course that has the highest grade is used for the calculation. Approximately 15 percent of the graduating class is considered for honors based on their ranked departmental GPA through the quarter before graduation. The criteria for awarding highest honors in the major are overall superlative performance in the major (top 5 percent of ranked departmental GPA) and general breadth of excellence across the subfields of anthropology. Receiving honors on the senior comprehensive requirement is also considered as a factor in awarding highest honors, but is not always determinative.

ADVISING
For more information regarding department policies, please consult the Undergraduate Coordinator at the Anthropology Department office, 361 Social Sciences 1 Building.

All majors, including double majors, must prepare a program of study in consultation with a member of the Anthropology Department. The Anthropology Department urges students to seek faculty advice early in planning for the major. Faculty hold regular office hours weekly and encourage students to come in to talk about their program, or coursework, and career and professional advising. Students planning to pursue graduate training should plan course schedules in close consultation with faculty advisers.

PEER ADVISERS
The Anthropology Department has instituted a peer adviser program as a supplement to academic advising offered by faculty members. The peer advisers are juniors and seniors who have been trained to help students with questions and general guidance through the anthropology major. Peer advisers hold regularly scheduled office hours in the department office.

UNDERGRADUATE HANDBOOK
All undergraduate majors should obtain a copy of the Anthropology Department undergraduate handbook from the department website. It outlines information on department procedures and requirements, program planning, independent study, faculty interests, and campus resources for anthropology majors.

REQUIREMENTS OF THE B.A. MAJOR
To graduate with an anthropology major, students must successfully complete the following courses:

THREE LOWER-DIVISION COURSES
ANTH 1: Introduction to Biological Anthropology
ANTH 2: Introduction to Cultural Anthropology
ANTH 3: Introduction to Archaeology

For information on receiving credit for lower-division coursework taken at other institutions, see the section Transfer Credit Toward Major/Minor Requirements.

TEN UPPER-DIVISION COURSES
Anthropology

**Five core courses** (for course offerings, see the section Courses in Anthropology by Category):
- one course in archaeology
- one course in biological, medical or environmental anthropology
- one course in regional specialization
- one course in sociocultural anthropology
- one course in anthropological theory

Students may not substitute coursework from another program or institution for core courses.

**Four anthropology electives** (any additional upper-division anthropology courses)

Two-credit courses do not count toward the 10 upper-division courses required for the major. Only one 5-credit individual studies course (197, 198, or 199) may be counted toward the 10 required upper-division courses. Theory courses can only be counted toward the theory requirement or an upper-division elective. See the section on Transfer Credit Toward Major/Minor Requirements for information on receiving credit for upper-division coursework taken at other institutions to be applied toward electives.

Students who are given permission to take a graduate seminar in anthropology may use the course to satisfy an upper division elective.

**One senior comprehensive requirement**, which can be satisfied in **one of two ways**:
- Senior Seminar (usually courses numbered ANTH 194 or 196)
- Senior Thesis, (requires enrollment in ANTH 195S or ANTH 195A/B/C)

**SENIOR COMPREHENSIVE REQUIREMENT FOR B.A.**

Students can fulfill the senior comprehensive requirement in anthropology either by passing a senior seminar (194/196-series course) or by writing an acceptable independent senior thesis (195S or 195A/B/C).

Senior seminars are small, writing-intensive classes focusing on advanced topics in anthropology. The prerequisite for admission to a senior seminar is successful completion of courses 1, 2, and 3; senior seminars are restricted to senior anthropology majors.

Students considering an independent thesis must arrange for the sponsorship and support of a faculty member before beginning research. An independent senior thesis (not written within a senior seminar) should be based on original research and reflect the student’s understanding of fundamental theories and issues in anthropology. The thesis should be comparable in content, style, and length (generally 25–30 pages) to a professional journal article in its subfield. Students who wish to complete the senior comprehensive requirement through and independent thesis will enroll in a section of ANTH 195S supervised by their thesis sponsor or ANTH 195A/B/C series.

**DISCIPLINARY COMMUNICATION (DC) REQUIREMENT FOR B.A.**

Students of every major must satisfy that major’s upper-division Disciplinary Communication (DC) requirement. Anthropology’s DC requirement aims especially at cultivating high-level skills in critical and ethnographic writing. To satisfy the DC requirement students must complete a senior seminar (194/196-series course) or complete an independent senior thesis (195A/B/C or 195S), following the guidelines of the senior comprehensive requirement.

**ANTHROPOLOGY MAJOR PLANNERS**

The following are two sample academic plans: (1) a four-year plan for frosh students as preparation for the anthropology B.A. major and (2) a two-year plan for transfer students for the anthropology B.A. major.

**Four-Year Plan**

<table>
<thead>
<tr>
<th>Year</th>

**TRANSFER STUDENTS**

If possible, transfer students should complete lower-division requirements for the major before coming to UC Santa Cruz by taking courses equivalent to courses 1, 2, and 3. Department policy also allows students to petition up to 10 quarter credits (equivalent to two UC
Anthropology

Santa Cruz courses) of upper-division transfer credit toward the major elective requirements. Any courses completed at the community college level are not considered to be upper-division courses. Transfer students should bring an unofficial copy of all pertinent transcripts to the undergraduate adviser in the department office (361 Social Sciences 1 Building) as soon as possible after reaching campus so that prerequisites can be verified and course enrollment can proceed smoothly.

TRANSFER CREDIT TOWARD MAJOR/MINOR REQUIREMENTS

Students may transfer courses equivalent to ANTH 1, 2, and 3 from California community colleges with existing articulation agreements (www.assist.org).

Students may also petition to transfer courses equivalent to ANTH 1, 2, and 3 from other community colleges or from four-year institutions.

Students may petition up to 10 quarter credits (equivalent to two UC Santa Cruz courses) of upper-division transfer credit toward the elective requirements under the following circumstances:

- A student has taken an upper-division anthropology course at another four-year university (including courses taken through EAP) and wants to petition for the course to count toward the anthropology major or minor elective.
- A student was enrolled in an accredited Field School Program and wants to petition for the course to count toward the anthropology elective requirements.

"FREE QUARTER" FOR TRANSFER STUDENTS WITH UNARTICULATED, LOWER-DIVISION COURSES

Any student who has taken a course analogous to ANTH 1, 2, or 3 will be issued a permission code by the Undergraduate Adviser for courses listing ANTH 1, 2, or 3 as a prerequisite (provided the class has not reached maximum enrollment) in their first quarter at UC Santa Cruz. Students must provide unofficial transcripts as evidence that they have completed courses analogous to ANTH 1, 2, or 3.

If the student fails to petition for a course substitution during their first quarter, they must receive instructor permission to enroll in courses with ANTH 1, 2, or 3 as prerequisites thereafter until the prerequisite is satisfied either by taking the class or approved course substitution petition.

MINOR IN ANTHROPOLOGY

The UCSC minor in anthropology has a total of 10 courses required: three lower-division and seven upper-division courses. There is no theory course or senior comprehensive requirement for the minor in anthropology.

THREE LOWER-DIVISION COURSES

- ANTH 1: Introduction to Biological Anthropology
- ANTH 2: Introduction to Cultural Anthropology
- ANTH 3: Introduction to Archaeology

SEVEN UPPER-DIVISION COURSES

- one course in archaeology
- one course in biological, medical, or environmental anthropology
- one course in regional specialization
- one course in sociocultural anthropology
- three anthropology electives (any additional upper-division anthropology courses, no independent study courses)

Independent study courses cannot be used toward completion of the minor.

For more information regarding department policies, please consult the undergraduate adviser at the Anthropology Department office, 361 Social Sciences 1 Building. A handbook on the anthropology program is available on the anthropology website.

COURSES IN ANTHROPOLOGY BY CATEGORY

ANTHROPOLOGICAL THEORY CORE COURSES

Note: Each course may only be used to satisfy a single major requirement. Courses cannot be double-counted for requirements within the anthropology major. Students may not substitute coursework from another program or institution for core course requirements.

100 History and Theory of Biological Anthropology
150 Communicating Anthropology
152 Survey of Cultural Anthropological Theory
170 History of Archaeological Theory

SOCIOCULTURAL ANTHROPOLOGY CORE COURSES

Note: Each course may only be used to satisfy a single major requirement. Courses cannot be double-counted for requirements within the anthropology major. Students may not substitute coursework from another program or institution for core course requirements. Not all of these courses are offered each year.

119 Indigenous Visual Culture
125 Magic, Science, and Religion
129 Other Globalizations: Cultures and Histories of Interconnection
131 Women in Cross-Cultural Perspective
134 Medical Anthropology
135A Cities
136 The Biology of Everyday Life
137 Consuming Culture
138 Political Anthropology
139 Language and Culture
141 Developing Countries
142 Anthropology of Law
143 Performance and Power
144 Anthropology of Poverty and Welfare
145X Special Topics in Socio-Cultural Anthropology
Anthropology

146 Anthropology and the Environment
147 Anthropology and the Anthropocene
148 Gender and Global Development
149 Anthropology of Activism
151 Workshop in Ethnography
157 Modernity and Its Others
158 Feminist Ethnographies
159 Race and Anthropology
160 Reproduction and Population Politics
161 The Anthropology of Food
163 Kinship

REGIONAL SPECIALIZATION CORE COURSES

Note: Each course may only be used to satisfy a single major requirement. Courses cannot be double-counted for requirements within the anthropology major. Students may not substitute coursework from another program or institution for core requirements. Not all of these courses are offered each year.

130A Anthropology of Africa
130C Politics and Culture in China
130E Culture and Politics of Island Southeast Asia
130F African Diasporas in the Americas
130H Ethnography of Russia and Eastern Europe
130I Cultures of India
130L Ethnographies of Latin America
130M Inside Mexico
130O Native Feminisms, Gender, and Settler Colonialism
130P Ethnography of Southern Cone Chile And Argentina
130T Anthropological Approaches to Islam
130U Central America
130V Ethnography of Russia
130W Ethnography of Eastern Europe
130X Special Topics in Ethnography
175A African Archaeology
175B African Archaeology: Development
175C African Diaspora Archaeology
176A North American Archeology
176B Meso american Archaeology
176C Archaeology of the American Southwest
176D Colonial Encounters in the Americas
176E Archaeology of the Pacific Northwest
176F California Archaeology

ARCHAEOLOGY CORE COURSES

Note: Each course may only be used to satisfy a single major requirement. Courses cannot be double-counted for requirements within the anthropology major. Students may not substitute coursework from another program or institution for core requirements. Not all of these courses are offered each year.

171 Materials and Methods in Historical Archaeology
172 Archaeological Research Design
173 Origins of Farming
174 Origins of Complex Societies
175A African Archaeology
175B African Archaeology: Development
175C African Diaspora Archaeology
176A North American Archeology
176B Meso-American Archaeology
176C Archaeology and the American Southwest
176D Colonial Encounters in the Americas
176E Archaeology of the Pacific Northwest
176F California Archaeology
176G Historical Archaeology: A Global Perspective
176H Slavery in The Atlantic World: Historical and Archaeological Perspectives
178/180L Ceramic Analysis in Archaeology with Laboratory
181X Special Topics in Archaeology
182A Lithic Technology
184 Zooarchaeology
185 Osteology of Mammals, Birds, and Fish
187 Cultural Heritage in Colonial Contexts
187B Cultural Resource Management
189 Archaeology Field Course

BIOLOGICAL/MEDICAL/ENVIRONMENTAL ANTHROPOLOGY CORE COURSES

Note: Each course may only be used to satisfy a single major requirement. Courses cannot be double-counted for requirements within the anthropology major. Students may not substitute coursework from another program or institution for core requirements. Not all of these courses are offered each year.

100 History and Theory of Biological Anthropology
101 Human Evolution
104 Human Variation and Adaptation
105 Human Paleopathology
106 Primate Behavior and Ecology
108 Neanderthals
111 Human Ecology
190X Special Topics in Biological Anthropology

MEDICAL ANTHROPOLOGY

Note: Not all of these courses are offered each year.

134 Medical Anthropology
136 The Biology of Everyday Life

ENVIRONMENTAL ANTHROPOLOGY

Note: Not all of these courses are offered each year.

146 Anthropology and the Environment
147 Anthropology and the Anthropocene

ANTHROPOLOGY AT-LARGE COURSES

Note: Not all of these courses are offered each year. Anthropology At-Large courses may be used as electives for completing upper-division course requirements. These courses do not count as anthropological theory, sociocultural anthropology, regional specialization, or biological anthropology and archaeology courses.

110A Public Life and Contemporary Issues
110B From Indiana Jones to Stonehenge: Archaeology as Pop Culture
110C California Pasts
110D Anthropology of Global Environmental Change
110F Evolution of Human Diet
110H Acoustic Culture
Anthropology
110K  Culture though Food
110L  Decolonizing Methodologies
110O  Postcolonial Britain and France
110P  India and Indian Diaspora Through Film
110Q  Queer Sexuality in Black Popular Culture
110S  Evolution of Democracy
110T  Motherhood in American Culture
110W  Land and Waterscapes Entropology
110V  Virtual Values: The Cultural Politics of Information Technology

LABORATORY METHODS COURSES

Note: Not all of these courses are offered each year. These courses are designed for students interested in pursuing graduate research or careers that require specialized training in laboratory methods.

BIOLOGICAL ANTHROPOLOGY LABORATORY METHODS

Note: Not all of these courses are offered each year. The biological anthropology laboratory methods courses may be used to satisfy upper-division electives. These courses do not count toward the anthropological theory, sociocultural anthropology, regional specialization, or biological/medical/environmental anthropology core requirements.

102A  Human Skeletal Biology
103/103L  Forensic Anthropology
103B  Forensic Anthropology and Bioarchaeology
107A  Methods and Research in Molecular Anthropology
107B  Methods and Research in Stable Isotope Ecology

ARCHAEOLOGY LABORATORY METHODS

Note: Not all of these courses are offered each year. Archaeology laboratory methods courses may be used to satisfy the archaeology core requirement or upper-division electives.

171  Materials and Methods in Historical Archaeology
180/180L  Ceramic Analysis in Archaeology with Laboratory
182A  Lithic Technology
184/184L  Zooarchaeology with Laboratory
185  Osteology of Mammals, Birds, and Fish

SENIOR SEMINARS

Note: Not all of these courses are offered each year.

194A  Anthropology of Dead Persons
194B  Chimpanzees: Biology, Behavior and Evolution
194C  Feminist Anthropology
194F  Memory
194H  Paleoanthropology
194I  Consumption and Consumerism
194K  Reading Ethnographies
194L  Archaeology of the African Diaspora
194M  Medical Anthropology
194N  Comparison of Cultures
194O  Masculinities
194S  The Anthropology of Sound
194T  Poverty and Inequality
194U  Environmental Anthropology: Nature, Culture, Politics
194X  Women in Politics: A Third World Perspective
194Z  Emerging Worlds
196D  Food and Medicine
196F  The Anthropology of Things: Gift, Sign, Commodity, Tool
196H  Global History and the Longue Durée
196I  Imagining America
196K  Settler Colonialism
196L  Archaeology of the American Southwest
196M  Modernity and Its Others
196P  Disability and Difference
196R  Design Anthropology
196T  Archaeology of Technology
196U  Historical Anthropology
196W  Anthropology of Weather and Exposure

GRADUATE PROGRAM

The anthropology doctoral program at UCSC consists of three tracks: cultural anthropology, anthropological archaeology, and biological anthropology.

Although applicants are accepted only for the doctor of philosophy (Ph.D.) program, students may obtain a master of arts (M.A.) degree after fulfilling specific requirements during the first two years.

The theme of emerging worlds—culture and power after progress—unites the research interests of faculty in the cultural anthropology graduate program.

Our concentration on “emerging worlds” and on the construction of anthropological knowledge is especially well suited for drawing together diverse scholars and specialists in challenging and enriching conversations. Rather than reproduce the boundaries among the traditional subfields of anthropology, we explore how recombination of these approaches can elucidate specific anthropological problems.

The Ph.D. program in anthropological archaeology focuses on the pre-colonial and early post-colonial history of Africa, Mesoamerica, the Caribbean, and western North America. It is distinctive in insisting that theories of power, production and exchange, human ecology, gender, ethnicity, and technological practice be explored through rigorous laboratory and field research methods.

The Ph.D. program in biological anthropology has a methodological emphasis in innovative approaches to human and non-human primate ecology and diversity founded on our expertise in genomics and isotope biochemistry, as well as a longstanding expertise in skeletal biology and its application in bioarchaeology and forensic anthropology.

ANTHROPOLOGY PH.D.
REQUIREMENTS

Both the department and the university define the major requirements for each stage of study. The first year of the program is geared toward giving students a theoretical foundation so that they may begin to formulate ideas for a research project. All graduate
Anthropology students are expected to be in residence (on campus) during their first year in the program. At the end of the first year, students will submit a portfolio of substantive work to their first-year committee.

CULTURAL TRACK REQUIREMENTS

Students are expected to pass a first-year review and have advanced to Ph.D. candidacy by the end of their third year. In order to advance to candidacy in cultural anthropology, students must complete:

CORE COURSES

Must be completed in fall/winter of the first year in the program.*
200A   Cultural Core Course
200B   Cultural Core Course

* ANTH 252, Survey of Cultural Anthropology, is recommended if the student comes from a non-anthropological background.

ETHNOGRAPHIC WRITING REQUIREMENT

This requirement may be completed by passing Ethnographic Practice, (ANTH 208A) or, upon approval from the department, through an independent research project in which the student engages in research based on participant observation or other ethnographic methodology and in which the student adequately translates that research experience into a written text.

THREE ADDITIONAL CULTURAL ANTHROPOLOGY GRADUATE SEMINARS

Grant Writing (ANTH 228), Colloquia (ANTH 292), Independent Study (ANTH 297/299), and tutorials do not count toward this requirement. Tutorials that are taught in conjunction with undergraduate courses do not count toward this requirement.

Note: Not all of these courses are offered each year.
208C   Design Anthropology
219   Religion, State, Secularities
220   Cartographies of Culture
224   Anthropology of Secularism
225   The Anthropology of Things: Sign, Gift, Commodity, Tool
229   Constructing Regions
233   Politics of Nature
234   Feminist Anthropology
235   Language and Culture
238   Advanced Topics in Cultural Anthropology
241   Social Justice
247   Critical Perspectives on Nutrition
248   Shadowy Dealings: Anthropology of Finance, Money, And Law
249   Ecological Discourses
253   Advanced Cultural Anthropological Theory
254   Medicine and Culture
255   Regulating Religion/Sex
258   Experimental Cultures
259   Race in Theory and Ethnography
262   Documenting Cultures
267A   Science and Justice: Experiments in Collaboration
267B   Science and Justice Research Seminar
268A   Rethinking Capitalism
268B   Rethinking Capitalism
269   Global History and the Longue Durée

COMPLETE LANGUAGE REQUIREMENT

PASS THE QUALIFYING EXAMINATION

ARCHAEOLOGY TRACK REQUIREMENTS

Students are expected to pass a first-year review and have advanced to Ph.D. candidacy by the end of their third year. In order to advance to candidacy in archaeology, students must complete:

TWO CORE THEORY COURSES

Must be completed during first year in the program.
270A   Archaeology Graduate Core Course: History of Archaeological Theory
270B   Archaeology Graduate Core Course: Current Directions in Archaeological Theory

TWO RESEARCH METHODS/LABORATORY COURSES

Student may substitute courses in another department with adviser approval.
202A   Skeletal Biology
203B   Forensics and Bioarchaeology
207A   Methods and Research in Molecular Anthropolgy
207B   Methods and Research in Isotopic Analysis
280/280L  Ceramic Analysis/Ceramic Analysis Laboratory
285   Osteology of Mammals, Birds, Fish

TWO COURSES ON THE ARCHAEOLOGY OF A GEOGRAPHICAL, TEMPORAL, OR TOPICAL AREA

Student may substitute courses in another department with adviser approval.
275A   Seminar on Early African Archaeology
275B   Tutorial in Archaeology of African American Complex Societies
276A   Advanced Topics in North American Archaeology
276B   Mesoamerican Archaeology
277   Advanced Topics in Archaeology
273   Advanced Topics in Origins of Farming
274   Advanced Topics in Archaeology of Complex Societies

TWO ADDITIONAL GRADUATE SEMINARS

Students may substitute a graduate seminar in cultural or biological anthropology or in another department with adviser approval. Tutorials that are taught in conjunction with undergraduate courses do not count toward this requirement.
225   The Anthropology of Things: Sign, Gift, Commodity, Tool
279   Feminism and Gender in Archaeology
282   Household Archaeology
Anthropology

ONE COURSE IN GRANT WRITING OR RESEARCH DESIGN
228 Grant Writing (Cultural Anthropology)
272 Advanced Archaeological Research Design

QUANTITATIVE METHODS REQUIREMENT
Students in the Archaeology PhD track must demonstrate competency in statistical or computational analysis techniques appropriate to their specific dissertation research projects and professional goals. Plans for gaining and demonstrating this competency should be developed as part of the first year review for each student, in consultation with their adviser and first year committee and with the approval of the department. This competency must be demonstrated and approved by the department prior to taking the qualifying exam and advancing to candidacy.

TWO LABORATORY APPRENTICESHIPS
298 Advanced Lab Apprenticeship

COMPLETE LANGUAGE REQUIREMENT

PASS THE QUALIFYING EXAMINATION

BIOLOGICAL ANTHROPOLOGY TRACK REQUIREMENTS
Students are expected to pass a first-year review and have advanced to Ph.D. candidacy by the end of their third year. In order to advance to candidacy in biological anthropology, students must complete:

CORE COURSE
Must be completed in Fall/Winter of first year in program.
295A Scientific Method

ECOLOGY AND EVOLUTIONARY THEORY REQUIREMENT
Students in the biological anthropology Ph.D. track must demonstrate competency in ecology and evolutionary theory appropriate to their specific dissertation research projects and professional goals. Plans for gaining and demonstrating this competency should be developed during the first quarter in the program, in consultation with their adviser. This competency must be demonstrated and approved by the department by the end of the first year.

ONE ADVANCED ANTHROPOLOGICAL METHODS AND RESEARCH COURSE
Must be completed during first year.
202A Human Skeletal Biology
203B Forensics and Bioarchaeology
207A Methods and Research in Molecular Anthropology
207B Methods and Research in Isotopic Analysis

ONE ADDITIONAL ADVANCED METHODS AND RESEARCH COURSE
Must be completed by the end of the second year. Student may substitute courses in another department with adviser approval.

ONE GRADUATE SEMINAR IN ARCHAEOLOGY OR CULTURAL ANTHROPOLOGY

Tutorials that are taught in conjunction with undergraduate courses do not count toward this requirement.

Must be completed by the end of the second year.

QUANTITATIVE OR COMPUTATIONAL REQUIREMENT
Students in the biological anthropology Ph.D. track must demonstrate competency in statistical or computational analysis techniques appropriate to their specific dissertation research projects and professional goals. Plans for gaining and demonstrating this competency should be developed as part of the first year review for each student, in consultation with their adviser and first-year committee and with the approval of the department. This competency must be demonstrated and approved by the department prior to taking the qualifying exam and advancing to candidacy.

NINE QUARTERS OF ADVANCED READING IN BIOLOGICAL ANTHROPOLOGY
Students are expected to enroll in ANTH 294R, Advanced Readings in Biological Anthropology, every quarter prior to advancing to candidacy.

TWO LABORATORY APPRENTICESHIPS
Students are required to enroll in ANTH 298, Advanced Laboratory Apprenticeship, or equivalent in another department.

SIX QUARTERS OF METHODS IN BIOLOGICAL ANTHROPOLOGY
Students are expected to enroll in ANTH 216, Methods in Biological Anthropology, in every quarter prior to advancing to candidacy starting their second year.

NINE QUARTERS OF SEMINAR SERIES
Students are required to attend at least 8 talks per quarter in the Anthropology Colloquia, Arch-BioAnth Lunch Series, EEB Seminar Series, or EPS Seminar Series.

COMPREHENSIVE EXAM
This must be completed prior to the end of the second year. Students must demonstrate knowledge in Ecological and Evolutionary Theory, expertise in at least two subfields of Biological Anthropology, and sufficient background in either Archaeology or Cultural Anthropology, especially Medical or Environmental Anthropology. The exam format is a written essay and a two-hour oral exam.

Students may satisfy both the oral and written requirement with a manuscript (worthy of submission to a professional journal) based on a research project undertaken in the second year with adviser approval.
Anthropology
They have to be first author of this manuscript in order to satisfy the requirement.

TWO QUARTERS AS TEACHING ASSISTANT
PRESENTATION OF A SEMINAR ON PROPOSED RESEARCH
COMPLETE THE LANGUAGE REQUIREMENT
PASS THE QUALIFYING EXAM

REQUIRED FOR ALL ANTHROPOLOGY PH.D. STUDENTS

LANGUAGE REQUIREMENT
The foreign language requirement must be fulfilled before taking the qualifying examination. A qualifying examination cannot be scheduled until the requirement has been met.

It is the responsibility of each graduate student to work with their adviser to identify the language competencies necessary for fieldwork and scholarship and to initiate study toward meeting these needs. To meet the language requirement, competency in one language must be formally demonstrated. Each student’s adviser will recommend how this requirement should be met, as well as what additional skills should be sought. Generally accepted ways of meeting the language requirement include:

- Passing a standardized test at a predetermined level
- Taking and passing a translation examination administered by an appropriate member of the UCSC faculty or an outside assessor approved by the adviser
- Taking and passing a series of language courses at a specified advanced level at UCSC or elsewhere, again, to be determined in consultation with the adviser

In some cases, the language in which a relevant scholarly literature exists will be the logical language of examination. In other cases, the language in which fieldwork will be conducted will be the most logical language for examination.

In the case of non-native English speakers who plan to undertake research in their own native language, English can meet the foreign language requirement. In the case of English native speakers who plan to do research in their native language, the requirement should be met by another language relevant to the field research or scholarly resources.

QUALIFYING EXAMINATION
The qualifying examination consists of two parts: a written file and a three-hour oral examination with the Qualifying Examination (QE) Committee during which the student presents and discusses the file.

For cultural track students, the file includes:

1. A theoretically focused dissertation research prospectus (approximately 18-25 pages, double-spaced, actual length to be determined by the QE Committee).
2. Two field statements on two anthropological topics selected and developed in consultation with the QE committee. Field statements typically review fields of literature that have (a) an area/regional focus and (b) a thematic/theoretical focus (approximately 18-25 pages, double-spaced, each; actual length to be determined by the QE committee).

For archaeology track students, the file includes:

1. A theoretically-focused dissertation research prospectus (approximately 18-25 pages, double-spaced, actual length to be determined by the QE Committee).
2. Three field statements reviewing literature of 18-25 pages each on (a) a geographic cultural area, (b) a set of research methods, and (c) a theoretical tradition or theme.

For biological anthropology track students, the file includes:

1. A theoretically-focused dissertation research prospectus (approximately 18-25 pages, double-spaced, actual length to be determined by the QE Committee).

DISSERTATION
Ph.D. candidates must prepare and submit a dissertation that is based on original research and meets the requirements of their dissertation reading committee.

RESIDENCY REQUIREMENT
In accordance with Senate Regulation 686, the minimum residence requirement for the Ph.D. degree is six terms, three of which must be spent in residence at the University of California, Santa Cruz campus.

Residence is established by the satisfactory completion of one course per term.

GOOD ACADEMIC STANDING AND PROBATION
A duly registered graduate student is considered to be in good standing so long as the student’s department determines that he or she is making satisfactory progress toward a terminal degree. The department and the graduate dean review the academic progress of each continuing graduate student annually.

If the Anthropology Department deems a student’s work unsatisfactory, he or she may be placed on probation. A student whose academic progress has been found unsatisfactory in two successive annual reviews will be subject to dismissal from the university.

Recommended probation for a student states:

3. Reason why (failed X class, etc.)
4. Steps that must be taken to restore satisfactory academic standing
Anthropology

5. The timeline for completion of the required work

The letter to the student will state that the failure to meet any one of the requirements may result in dismissal. No action for dismissal is taken until and unless the department recommends dismissal.

A student who has completed 12 or more quarters of full-time work in the same graduate program without advancing to candidacy for the Ph.D. is not considered to be making satisfactory progress. In such cases, the student will be recommended for dismissal or placed on probation until advancement is achieved. A student advanced to candidacy for more than nine quarters who has yet to complete his or her Ph.D. is not considered to be making satisfactory academic progress. Consult the Graduate Student Handbook for more information about academic progress, probation, dismissal, and the appeal process.

---

DESIGNATED EMPHASIS

COMMITTEE COMPOSITION

One member of the student's qualifying examination committee must be a faculty member of the anthropology department. In addition, one member of the anthropology department must serve on the student's doctoral thesis committee.

COURSE REQUIREMENTS

The student must take four graduate courses in anthropology, one of which must be a graduate seminar. An independent study with a faculty member of the Anthropology Department may count as only one of the four courses. Grant Writing (ANTH 228) may not be counted toward these requirements. Tutorials that are taught in conjunction with undergraduate courses do not count toward these requirements.

WRITING REQUIREMENTS

At the time of the qualifying examination, the student must submit to the Anthropology Department a full statement, up to five pages, summarizing the pre-qualifying examination work done in anthropology (courses, papers, research projects, independent studies) and characterizing how that work and the dissertation to follow draw from and contribute to anthropological and ethnographic inquiry. The dissertation research will normally include a fieldwork component.

In the quarter in which the student announces candidacy for graduation, the faculty member from the anthropology department serving on the student's doctoral thesis committee will evaluate the depth of engagement with anthropology displayed in the doctoral thesis and decide whether the thesis fulfills the requirement to contribute to anthropological and ethnographic inquiry.

---

ANTHROPOLOGY FACULTY AND PROFESSIONAL INTERESTS

PROFESSOR

Donald Brenneis
Linguistic anthropology, folklore, legal anthropology, ethnomusicology, overseas Indians, South Asia, disputing and dispute management, legal language, bureaucratic institutions, knowledge production, improvisation

Melissa L. Caldwell
Poverty and public health; welfare, charity, and assistance; food and consumption; gardens, nature, and landscapes; religion; socialism and postsocialism; Russia, the former Soviet Union, and Eastern Europe

Nancy N. Chen
Medical anthropology, food and nutrition, mental health, global health, visual anthropology, Asian American film and identity, China

Alison Galloway
Skeletal biology, forensic anthropology, human variation, history and ethics of physical anthropology, reproductive energetics and aging

Judith A. Habicht-Mauche
Precontact and Colonial contact North America; Southwest and Southern Plains; social networks and cross-cultural interaction; migration; community and identity formation; ceramic production and exchange; technology as cultural practice; archaeometry and ceramic materials analysis

Renya Ramirez
Native American studies, Indian identity, Native Americans and anthropology, urban Indians, Native American women, cultural citizenship, expressive culture, and anti-racist education

Anna Tsing
Culture and politics; feminist theory; globalization; multi-species anthropology; social landscapes and forest ethnoecologies; multi-sited ethnography; Indonesia, Southeast Asia, and the U.S.

ASSOCIATE PROFESSOR

Mark Anderson
Racial formation, diaspora, nationalism, transnationalism, culture and power; Latin America, African diaspora

Lars Fehren-Schmitz
Palaeogenetics/anthropological genetics, human evolutionary ecology, evolutionary demography, gene-culture coevolution, migration theories, population history of the Americas, archaeology of South America

Mayanthi Fernando
Religion and secularism; anthropology of Islam; gender and sexuality; human/nonhuman relations, multiculturalism/pluralism; modernity and its "Others"; ethnography and ethics; colonial and post-colonial France/Europe; theory and methods in the study of religion

Andrew Salvador Mathews
Environmental anthropology, science and technology studies, conservation and development, climate change,
Anthropology
environmental history, Mexico, Latin America, Italy, natural history, historical ecology, ethnoecology

J. Cameron Monroe
Historical archaeology, complex societies, political economy, architecture and landscape, Africa and the African diaspora

Megan Moodie
Feminist theory, reproductive politics, development, legal identities, affirmative action, ethnographic methods, narrative, literature, utopias and other postsocialist/postcolonial imaginaries, connected histories and the longue durée, South Asia, Eastern Europe

ASSISTANT PROFESSOR

Chelsea Blackmore
Pre-Columbian archaeology (Mesoamerican focus), identity formation, complex societies, class and state formation, gender, feminist/queer theory

Jon Daehnke
Archaeology of the North American Pacific Coast, cultural heritage politics and law, contemporary Native American politics, human-environment interaction, landscape and place, collaborative methodologies, NAGPRA implementation and compliance, public representations of heritage and memory

Nidhi Mahajan
Shadow economies, political economy, seafarers, dhow trade, Indian Ocean, East Africa, South Asia, maritime commerce, insecurity, sovereignty, political anthropology, historical anthropology

Vicky M. Oelze
Diet and ecology of extant great apes, prehistoric humans and fossil hominins; reconstruction of habitat use and mobility in apes and prehistoric humans; isotope (carbon, nitrogen, sulphur, strontium, oxygen) trace-element biochemistry, chimpanzee tool use and termite-predation defense strategies

Tsim Schneider
Anthropological archaeology, culture contact and colonialism, Spanish missions, borderlands, landscape and place, social memory, lithics, indigenous archaeology, California and North America

Savannah Shange-Binion
Abolition, blackness and antiblackness, social movements, late liberal statecraft, multiracial coalition, gentrification, anthropology of education, queer theory, femme gender, ethnographic ethics, California and North America

Jerry Zee
Environmental anthropology, feminist science studies, cultural and political anthropology of China; political ecology, meteorology and atmospheres, governance, engineering, aesthetics

PROFESSOR EMERITI

May N. Diaz, Emerita
Shelly Errington, Emerita
Diane Gifford-Gonzalez, Emerita
Susan Harding, Emerita
Diane K. Lewis, Emerita
Daniel T. Linger, Emeritus
Carolyn Martin Shaw, Emerita
Olga Nájera-Ramírez, Emerita
Lisa Rosel, Emerita
Triloki N. Pandey, Emeritus
Richard R. Randolph, Emeritus
Stuart A. Schlegel, Emeritus
Adrienne L. Zihlman, Emerita

LECTURER

Guillermo Delgado-P., Emeritus
Latin America; comparative indigeneity; indigenous property rights; cultures of the sacred; anthropology of the environment/land-waterscapes; Quechua/Andean linguistics, mining, labor history; alternative/electronic journalism; anthropology in the developing world; interethnicity; urbanization; social movements; culture theory

Annapurna Pandey
Globalization and development, women’s entrepreneurship and political leadership in India, South Asia; women’s political and religious lives and their representation in film, media and literature dealing with India and Indian diaspora; filmmaking on the experiences of the diasporic Odias in California

Alejandra Kramer
Women and politics, political anthropology, feminist anthropology and theory, gender and politics, ethnographic methods, power and culture, media and culture, Latin America—Southern Cone

Jay S. Reti
Paleolithic archaeology, lithic analysis, Oldowan technology, cultural evolution, cultural transmission, archaeological method and theory, hominin behavioral evolution, experimental archaeology, flintknapping

Jude Todd, Emerita
Indigenous American world views; permaculture; culturally prescribed attitudes toward water and soil; chemical-industry influences on government, university research, and popular belief systems; transgenerational epigenetic inheritance

Adjunct Assistant Professor

Susan Kuzminsky
Skeletal biology, bioarchaeology, forensic anthropology, virtual 3D anthropology, skeletal correlates of human behavior (paleodiet, health, nutrition, social identity, activities), human evolutionary biology, ancient human dispersals, NAGPRA compliance, human rights, non-destructive research methods, peopling of the Americas, Pacific Rim, prehistory of California, Chile, and Peru

PROFESSOR

Raoul Birnbaum (History of Art and Visual Culture)
Buddhist studies, especially Chinese practices from
Anthropology

medieval times to the present; religion and visual culture in China

John Brown Childs, Emeritus (Sociology)

Jeffrey Bury (Environmental Studies)

Political ecology; sustainable development; Latin American studies; international relations; institutional dimensions of natural resource conservation in the global south; extractive industries; climate change; new models of conservation

James T. Clifford, Emeritus (History of Consciousness)

Carolyn Dean (History of Art and Visual Culture)

Cultural histories of the native Americas and colonial Latin America

A. Russell Flegal, Emeritus (Microbiology and Environmental Toxicology)

Stephen R. Gliessman, Emeritus (Environmental Studies)

Donna Haraway, Emerita (History of Consciousness)

Paul Koch (Earth Sciences)

Isotope biogeochemistry, vertebrate paleontology

Flora Lu (Environmental Studies)

Ecological anthropology, human behavioral ecology, Amazon rainforest, indigenous peoples, conservation, Ecuador, culture change, market integration, indigenous resource management, political ecology, environmental justice

Marc Mangel, Emeritus (Applied Mathematics and Statistics)

S. Ravi Rajan (Environmental Studies)

Environmental justice and human rights, environmental history and ethics, risk and disaster studies, environment and development conflicts in the global south

Patricia Zavella, Emerita (Latin American and Latino Studies)

ASSOCIATE PROFESSOR

Richard “Ed” Green (Biomolecular Engineering)

Genomics, computational molecular biology, genome assembly, human evolutionary genetics, ancient DNA, high-throughput sequencing, mRNA-processing and alternative splicing

Irene E Lusztig (Film and Digital Media)

Film and video production, experimental ethnography and essayistic nonfiction; representations of historical memory; archives, propaganda and training films; feminist film practices; medical film; autobiographical filmmaking; interactive documentary; editing

Marcia Ochoa (Feminist Studies)

Gender and sexuality, race and ethnicity, Latina/o studies, media and cultural studies, ethnography of media, feminism, queer theory, geography, multimedia production, graphic design, colonialism and modernity, Latin American studies—Colombia and Venezuela

ASSISTANT PROFESSOR

Elaine A. Sullivan (History)

Pharaonic Period Egypt; Greek and Roman Egypt; women and gender; material culture; ritual landscape; 3D modeling; Digital Humanities and the use of emerging technologies in studying the ancient world

ANTHROPOLOGY COURSES

<table>
<thead>
<tr>
<th>LOWER-DIVISION COURSES</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Introduction to Biological Anthropology. F</td>
</tr>
<tr>
<td>Study of evolution illustrated by Pleistocene hominin fossils and variation in living human groups. Behavior and evolution of primates examined as they contribute to the understanding of human evolution. Required for all anthropology majors. (Formerly Introduction to Human Evolution.) (General Education Code(s): SL) J. Reti</td>
</tr>
<tr>
<td>2. Introduction to Cultural Anthropology. W</td>
</tr>
<tr>
<td>A number of different peoples are studied and a variety of approaches to the nature of the culture and to the study of specific cultures presented. Required for all anthropology majors. (General Education Code(s): CC) M. Anderson</td>
</tr>
<tr>
<td>3. Introduction to Archaeology. S</td>
</tr>
<tr>
<td>Overview of ways of learning about the human past beyond the scope of written history. Reviews development of archaeology, fundamental methods and theories, and archaeology's contribution to understanding human origins, the emergence of farming, and the origins of complex societies. (General Education Code(s): SL) J. Daehnke</td>
</tr>
<tr>
<td>42. Student-Directed Seminar.</td>
</tr>
<tr>
<td>Seminars taught by upper-division students under faculty supervision. (See course 192.) The Staff</td>
</tr>
<tr>
<td>81J. Introduction to Visual Culture Lab (2 credits). *</td>
</tr>
<tr>
<td>Optional digital photography lab. Students learn to compose shots, download photos, resize them, and put them into a meaningful sequence. Concurrent enrollment in Anthropology 80J required. Enrollment limited to 36. The Staff</td>
</tr>
<tr>
<td>82. Culture and Dance of Bollywood (2 credits). *</td>
</tr>
<tr>
<td>Devoted to the culture and dance of Bollywood, a popular genre of film representation of cultures and peoples of India. The course combines both theory and practice by showing films on selected themes and having students learn this dance style and music. (General Education Code(s): PR-C) A. Pandey</td>
</tr>
<tr>
<td>93. Field Study. F, W, S</td>
</tr>
<tr>
<td>Supervised research or organized projects on anthropological topics for lower-division students. Conducted either on or off campus.</td>
</tr>
</tbody>
</table>
Anthropology
Students submit petition to sponsoring agency. May be repeated for credit. The Staff

97. Laboratory Safety Practicum (2 credits). F,W,S
Covers laboratory health and safety and standard operating procedures within the anthropology laboratories. Prepares students for future laboratory research activities while providing support of laboratory administration, collections management, and laboratory course demonstration needs. Enrollment by application. Enrollment limited to 25. May be repeated for credit. The Staff

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

UPPER-DIVISION COURSES

100. History and Theory of Biological Anthropology. S
Provides an historical overview from the 18th century to the present of race, ape-human relationships, and human nature. Emergence of an evolutionary framework and of fossil, genetic, and primate information becomes the basis for reformulating ideas about human biology within anthropology. Prerequisite(s): courses 1, 2, and 3 and satisfaction of the Entry Level Writing and Composition requirements. (General Education Code(s): TA.) J. Reti

101. Human Evolution. W
Study of human evolution covering the last five million years. Examines the fossil evidence and emphasizes the reconstruction of behavior from the paleontological and anatomical evidence. Prerequisite(s): course 1. J. Reti

102A. Human Skeletal Biology. F,W
Presents basic human osteology allowing students to identify skeletal material by element. Emphasizes the dynamic nature of bone by integrating anatomy with a discussion of bone physiology within the context of the human life cycle. Prerequisite(s): course 1. Enrollment limited to 16. J. Reti, A. Galloway

103. Forensic Anthropology. S
Covers the basic analysis of human skeletal remains for the medicolegal profession. Assessment of age, sex, ancestry, and general physical characteristics, trauma, and disease are discussed. Addresses the legal responsibilities of the anthropologist. Online lectures with in-class discussion sections, quizzes, and exams. Prerequisite(s): course 102A. Enrollment is restricted to juniors and seniors. J. Reti

103B. Forensic Anthropology and Bioarchaeology. *
Introduces the analysis of human remains from forensic or archaeological contexts. Covers the whole range of morphological, morphometric, histological, genetic, and biochemical methods applied in bone-based anthropological analyses. Prerequisite(s): course 102A. Enrollment by permission of instructor. Enrollment limited to 25. The Staff

104. Human Variation and Adaptation. F
Explores the major environmental factors (temperature, altitude, diet, and disease); how they are perceived by the human body; the physiological, micro- and macroanatomical responses; and how behavior and culture can modify the impact of these stresses. Course 1 is highly recommended as preparation. (Formerly Human Adaptability.) (General Education Code(s): ER.) L. Fehren-Schmitz

105. Human Paleopathology. *
Examines paleopathology beginning with ancient hominid populations and proceeding to modern populations. Uses both the skeletal evidence and historical documentation when available. Considers evolutionary, cultural, and biological factors. Topics include: osteological diagnosis of infectious disease; trauma; nutritional deficiencies; dental disease; and developmental defects. Prerequisite(s): course 1; course 102A recommended. The Staff

106. Primate Behavior and Ecology. S
The nature of primate social systems and social bonds is examined in the light of evolutionary and ecological concepts. Students cannot receive credit for this course and course 206. Prerequisite(s): course 1. V. Oelze

107A. Methods and Research in Molecular Anthropology. W
Introduces the molecular analyses of anthropological questions and explores the intersection of genetics and anthropology. Covers the basic principles of molecular and population genetics as they relate to the study of humans. Prerequisite(s): courses 1 and 104. Course 102A is recommended. Enrollment by permission of instructor. (Formerly course 107.) Enrollment limited to 15. L. Fehren-Schmitz

107B. Methods and Research in Stable Isotope Ecology. S
This combination of lectures, readings, discussions, and hands-on laboratory experience provides a comprehensive overview of stable isotope research to reconstruct diet and mobility. Discover the wide application of isotopic research in biological anthropology, bioarcheology, primatology and forensics. Prerequisite(s): course 101 or 104 or 106 or 107 or 110F. Enrollment limited to 15. (General Education Code(s): PE-H.) V. Oelze

108. Neanderthals. S
Homo sapiens neanderthalensis (neanderthals), once considered brutish, are increasingly seen as behaviorally modern. This course uses primary academic research to explore the social behaviors, technology, anatomy, and genetics of neanderthals, gaining a holistic understanding of our closest ancestor. Prerequisite(s): course 1. J. Reti

109. Evolution of Sex. *
Provides a physical anthropology understanding of the evolution of sex. Focuses on genetics and the alterations in allele associations that take place as a result of sexual processes. Prerequisite(s): course 1.
Anthropology

The Staff

110A. Public Life and Contemporary Issues. W
How can cultural anthropology help us to understand current events unfolding locally, nationally, and globally? Students learn how to "read" newspapers differently—that is, through the lens of cultural analysis. The world of everyday politics and society, as it unfolds in debates happening right now, forms the topical substance of the course. (Formerly course 4.) (General Education Code(s): IM.) A. Kramer

110B. From Indiana Jones to Stonehenge: Archaeology as Popular Culture. W
Addresses the "meaning" of archaeology as generated in television, movies, literature, newspapers, and even National Geographic. Students engage with several case-studies illustrating how archaeology is portrayed in popular culture. (General Education Code(s): IM.) C. Blackmore

110C. California Pasts. *
This course is structured around four critical moments—missionization, Rancho-Era, Gold Rush, and World War II—through the eyes of the ethnic and racial minorities who experienced them. Special attention is given to oral, archival, and archaeological sources which reveal California’s multiethnic pasts. (General Education Code(s): ER.) T. Schneider

110D. Tourism Imaginaries and Encounters. *
Explores anthropological approaches to the study of tourism, in particular themes of authenticity, "othering," visual economies, development, identity politics, alternative tourisms, and material culture with reference to history, power, and location. (General Education Code(s): PE-H.) The Staff

110E. Anthropology of Global Environmental Change. *
Introduces anthropological and historical approaches to environmental change and globalization. Key themes include: capitalism and industrialization, environmental politics, global culture, and relations between humans and other species. (General Education Code(s): PE-E.) The Staff

110F. Evolution of Human Diet. F
Presents the evolution of human diet and subsistence from a biological anthropological perspective. Covers the key hypothesis and methodologies related to diet, from our early fossil ancestors up to agriculture and animal husbandry. (Formerly Biocultural Approaches to Food.) (General Education Code(s): PE-H.) V. Oelze

110G. Barrio Popular Culture. *
Introduces students to a broad sampling of verbal and nonverbal forms of Mexican folklore. Concentrates on experiencing these forms through texts, film, and if possible, performances. Attention to how these forms have been used by scholars to comment on Mexican culture is an underlying theme. Knowledge of Spanish is useful but not required. (Formerly course 80G.) (General Education Code(s): CC.) The Staff

110H. Acoustic Culture. *
Explores relationships between culture and the acoustic worlds, including environmental, verbal, and musical, which humans inhabit. How can paying attention to cultures of listening and sound-making help us think about cultural life and experience in new ways? (Formerly course 80H.) (General Education Code(s): CC.) D. Brennies

110I. Cultures of Sustainability and Social Justice. F
Brings together diverse forms of cultural knowledge and complexities of everyday life to illuminate longstanding concerns of sustainability and justice. Investigates multiple theories of sustainable development as well as tools, techniques, and contexts for ecological integrity, economic security, empowerment, responsibility and social well-being characteristic of sustainable communities. Case studies are drawn from around the world highlighting the work of Right Livelihood Award Laureates in tandem with UC faculty. (General Education Code(s): PE-E.) D. Shaw

110K. Culture Through Food. *
Examines anthropology of food and politics of eating. Cultural and social uses of food in rituals of solidarity or fasting, identities and meanings of food for individuals, and consumption in the global context are key components of study. (General Education Code(s): C.C.) N. Chen

110L. Decolonizing Methodologies. F
Delves into the implications of indigenous research, with themes such as self-determination and healing. At the intersection of indigenous peoples and institutional research, the course covers contexts of research conceptualizations, designs, and implications of participants and their communities. (General Education Code(s): C.C.) K. Hernandez

110M. Relating to Animals, Plants, and Things. *
Anthropological investigations of the relations between people and non-humans—animals, plants, and things. Analysis includes the place of animals in mid-century anthropology; Marxist-inspired, biography-of-things approaches; symbolic approaches; calls to take non-humans seriously; and questioning what lies in "the human." (General Education Code(s): PE-H.) J. Nyquist

110N. Anthropology of Food. *
Focuses on social institutions around the world that shape food and its meanings; how people use food to organize their worlds; and production, sharing, or consumption of food as a political or meaningful act. (General Education Code(s): PE-H.) The Staff

110O. Postcolonial Britain and France. S
Transdisciplinary examination of the politics and culture of postcolonial Britain and France. Topics include: immigration from South Asia, Africa, and the Caribbean; racism and antiracism; minority difference and citizenship practices; and the emergence of
Anthropology

Islam as a major category of identity and difference. (Also offered as History 181A. Students cannot receive credit for both courses.) (General Education Code(s): IM.) M. Kramer

110P. India and Indian Diaspora through Film. S
Explores several themes of relevance in contemporary India and Indian diaspora, concentrating on anthropological research and various documentary and popular Bollywood films. Through films and ethnographies, students analyze the nature of anthropological contributions to the study of Indian societies. (Formerly course 80P.) (General Education Code(s): CC.) A. Pandey

110Q. Queer Sexuality in Black Popular Culture. F
From Janet Mock to Young M.A., queerness has become hypervisible in Black popular culture—but at what cost? Using music, television, and social media as central texts, students investigate the intersections of sexuality, gender, and race in public life. (Also offered as Feminist Studies 110Q. Students cannot receive credit for both courses.) (General Education Code(s): IM.) S. Shange-Binion

110R. Discourses in American Religions and Their Role in Public Life. *
Introduces dominant discourses about major American religions and their role in public life, with particular attention to intersecting differences, such as race, sex/gender, and disability, and to shifting religious/political boundaries. Visual and textual media, political commentary, and popular ethnographies are analyzed. (General Education Code(s): IM.) D. Rutherford, S. Harding

110T. Motherhood in American Culture. W
Examines the “culture wars” around motherhood in the United States with a focus on the political mobilization of normative ideas about the correct way to mother, from the moment of conception on. Special attention is given to the historical construction of deviant motherhood among marginalized groups. (Formerly course 80T.) (General Education Code(s): ER.) M. Moodie

110U. Anthropology of Science. *
Examines science and technology through an anthropological lens, focusing on ethnographic studies of scientific practice and relations between science and society. Looks at studies theorizing core scientific elements and focuses on qualitative, empirically based studies of scientific practice. (General Education Code(s): PE-H.) J. Nyquist

110V. Virtual Values: The Cultural Politics of Information Technology. F
Examines social, political, and cultural implications of technology, with an emphasis on information technology and its relationship to capitalism in the U.S. Draws on theories of capitalism and technology, commodities and affective labor, ethnographies of technological workplaces, and other histories. (General Education Code(s): PE-T.) C. Kao

110W. Land and Waterscapes Entropology. W
Establishes anthropological interconnections of emergent worlds where environmental matters, social justice, and human survival interrelate. Focuses on anti-essential nature and waterscape ethnographies in which different pluricultures revalidate local understandings as ways of contesting increasing forms of land and water privatization. (General Education Code(s): PE-E.) G. Delgado-P

110Y. The Hands That Feed Us: Labor in Food Systems. *
Recent critiques of food studies and food activism point out two gaping holes: a lack of attention to labor and limited action beyond individual consumption. This course addresses both pitfalls by centering food workers as the agents at the heart of contemporary cuisines, landscapes, and food systems. (General Education Code(s): ER.) The Staff

110Z. Archaeology of Expression. *
Examines globally diverse archaeological examples under the lens of anthropology, including rock art, woven materials, ceramic pottery, sculpture, and the body. (Formerly course 80T.) (General Education Code(s): IM.) C. Liwosz

111. Human Ecology. *
Reviews the environmental, physiological, behavioral, and cultural ways that humans interact with their physical surroundings. The effects of human culture on the environment and of the environment on the shape of human culture is emphasized. L. Fehren-Schmitz

112. Life Cycles. *
Examines the human life cycle using an evolutionary framework. Examines key aspects of the human life stages using findings and concepts from developmental biology, physiology, nutrition, evolutionary ecology, and life-history theory. Prerequisite(s): course 1. The Staff

113. Tutoring Writing in Anthropology (2 credits). F
Trains students to tutor writing in undergraduate anthropology courses; supports and guides them during the quarter they are tutoring. Enrollment by interview only. Prerequisite(s): satisfaction of the Composition requirement. The Staff

119. Indigenous Visual Culture. *
Examines the relationship between visual cultures and indigenous peoples. First, class discusses what is visual anthropology. Second, class examines the relationship between museums and indigenous peoples. Third, class examines ethnographic photography and indigenous uses of photography. Fourth, class
Anthropology examines the uses of ethnographic film, and then its relationship to indigenous peoples. Finally, class examines indigenous uses of film. R. Ramirez

120. Culture in Film. *
Introduces current and historical issues in visual anthropology, using film as a medium with which to represent culture. Raises questions about visual representation and advocacy in the context of global inequalities. Prerequisite(s): course 2 or 80J or Film 20A or 20B, or History of Art and Visual Culture 10D, 10E, 10F or 10G. (General Education Code(s): IM.) The Staff

120L. Culture in Film Laboratory (2 credits). *
This lab in video production is to train students in Culture in Film. The video lab, through lectures, demonstrations, hands-on instruction, and review of students’ work will enable students enrolled in Culture in Film to learn the fundamentals of film/video pre-production, production, and post-production skills. Portfolio review prior to enrollment and concurrent enrollment in course 120 required. Enrollment limited to 15. The Staff

121. Socialism. *
Ethnography-based course that examines the social worlds of socialism, with particular focus on state socialism. Topics include: social problems that inspired socialist movements; implementation and experience of socialism in daily life; and significance of class, race, nation, science, technology, rationality. M. Caldwell

122. Postsocialism. *
Examines the demise of socialist systems. Addresses the political, social, cultural, and economic experiences of everyday life that led to that demise, what new social inequalities have arisen since, and how citizens use the socialist past to critique the present. L. Rofel

123. Psychological Anthropology. *
An introduction to some of the central theoretical issues in psychological anthropology. Psychoanalytic, cognitive, and relativist perspectives on the link between person and society are discussed and compared. Prerequisite(s): course 2. D. Linger

124. Anthropology of Religion. *
Study of the phenomenon of religion as manifested in ethnographic literature, with special attention to traditional and recent modes of analysis of religious behavior. Special topics include myth, religious healing, witchcraft and sorcery, ritual, and millenarian movements. The Staff

125. Magic, Science, and Religion. W
With a theoretical understanding of the concepts of magic, science, and religion, students draw on ethnographies of these practices to critique distinctions between them and critically analyze the understanding of these categories and their relation in the modern world. (General Education Code(s): PE-H.) A. Pandey

126. Sexuality and Society in Cross-Cultural Perspective. *
The meaning and social processes associated with sexuality in selected societies. Examination of variations in sexual expressions and control of sexuality, and in economic and political organizations, highlights the interrelationship of sex and society. Prerequisite(s): course 2. The Staff

127. Ethnographies of Capitalism. *
Challenges approaches to capitalism that treat it as socioeconomic relations separable from "culture." Readings include ethnographies demonstrating the inextricability of cultural meanings from capitalist practices. Topics include capitalism’s relationship to colonialism, nationalism, socialism, gender, and the commodification of aesthetics. L. Rofel

128. Contemporary American Evangelical Cultures. *
Study of contemporary, American, born-again Protestant discourse using ethnographic materials and interpretive theories. Topics include biblical literalism, Christian conversion and self-fabulation, charismatic gifts, preaching, sacrificial giving, prosperity theology, apocalypticism, creationism, pro-family and pro-life rhetoric, and televangelism. (Formerly Born-Again Religion and Culture.) S. Harding

129. Other Globalizations: Cultures and Histories of Interconnection. S
The history of social and cultural interconnections at a global scale. Anthropological approaches to the study of cultural encounter are used to investigate topics such as trade, religion, and citizenship and to evaluate shifting concepts of civilization and barbarism. Prerequisite(s): course 2. N. Mahajan

130. Ethnographic Area Studies.

130A. Anthropology of Africa. F
Survey of sub-Saharan societies. Analysis of principles of social organization and factors of cultural unity of selected western, eastern, central, and southern African peoples. (Formerly Peoples and Cultures of Africa) (General Education Code(s): CC.) S. Shange-Binion

130B. Brazil. *
Examines Brazilian culture and its link to interpersonal relationships, religion, politics, and psychological experience. Prerequisite(s): course 2. (General Education Code(s): CC.) The Staff

130C. Politics and Culture in China. F
Joins substantive information “about” Chinese society and culture with debates in social theory and rethinks conventional wisdom about colonialism and modernity. Topics include representations of “Chineseness,” class revolution, Chinese diaspora, popular culture,
Anthropology

family and kinship, nationalism, history/memory, race and gender. (General Education Code(s): CC.) J. Zee

130E. Culture and Politics of Island Southeast Asia. * Southeast Asia includes a variety of societies exhibiting many ecological adaptations, religions, marriage systems, and experiences with colonial powers. Case studies of particular societies, chosen to reveal variety, are examined comparatively. Emphasis on religion and social organization. Prerequisite(s): course 2. (General Education Code(s): CC.) M. Caldwell

130I. Cultures of India. W An examination of anthropological studies of tribal, rural, and urban cultures of India and a look at changes taking place in India. Prerequisite(s): course 2. (General Education Code(s): CC.) A. Pandey

130J. Politics and Statemaking in Latin America. * Introduction to ethnohistory and political anthropology of one or more Latin American countries: Typically Mexico and one other country. Students explore how contested concepts such as indigeneity, nation or state come to gain credibility and are deployed in contemporary politics. (General Education Code(s): CC.) A. Mathews

130L. Ethnographies of Latin America. F A broad introduction to issues and areas of cultural production and transformation in the Caribbean, Mexico, and Central and South America. Colonial, neocolonial, class, ethnic, gender, religious, ecological, and political relations intersect as represented in ethnographies and film. Prerequisite(s): course 2. (General Education Code(s): CC.) G. Delgado-P

130M. Inside Mexico. * Examines various communities within the Republic of Mexico as represented in ethnographic texts and other forms of cultural production, particularly music and dance. Emphasis on the interplay between the concept of regionalism and national identity. Previous course work in Mexican culture and/or history strongly recommended. Some reading in Spanish is required. (General Education Code(s): CC.) The Staff

130O. Native Feminisms, Gender, and Settler Colonialism. W Covers Native feminisms, gender, settler colonialism, and ethnography. Students read ethnographies that intervene in Native feminisms and its possibilities. Focuses on ethnographies in the U.S., including Native men and masculinities in Hawaii. (General Education Code(s): ER.) R. Ramirez

130P. Ethnography of Southern Cone Chile and Argentina. * Chile and Argentina, although both established within Spanish colonization and physically close, have dissimilar histories and culture. We explore areas of friction and overlap that shaped different peoples, institutions, cultural identities, and histories in countries that share a particular history. (General Education Code(s): ER.) A. Kramer

130T. Religion and Politics in the Muslim World. * Analyzes post-colonial
forms of Islam, with particular attention to Muslim societies and cultures in the Middle East, North Africa, and Europe. Emphasizes the relationship between power, knowledge, and representation in anthropological approaches to Islam and Muslims. (Formerly Anthropological Approaches to Islam.) (General Education Code(s): ER.)  M. Fernando

130U. Central America. *
Draws on political, economic, and anthropological perspectives to analyze the key role of transnationalism and neoliberalism in contemporary Central America. Key topics include: the aftermath of revolutions; labor and gender; indigenous movements and multiculturalism; and transnational migration and governance.  M. Anderson

130V. Ethnography of Russia. *
Examines daily life in Russia and affiliated formerly Soviet Republics through historical and cultural comparison. Topics include: socialist and postsocialist daily life; 20th- and 21st-century Russian empire building; cultural politics; economic systems; state-citizen relations; citizenship regimes; labor and leisure; and religion.  M. Caldwell

130W. Ethnography of Eastern Europe. *
Examines daily life in Eastern Europe, especially how residents in this region have navigated the transition from state socialism to accession to the European Union. Topics include: the legacies of state socialism; cultural politics; new economies; consumption; the European Union; new forms of governance; and political activism.  M. Caldwell

130X. Special Topics in Ethnography. *
This course on special topics in ethnography will be taught on a rotating basis by various faculty members. Precise focus of each year's courses will vary according to the instructor and will be announced by the department. Prerequisite(s): course 2. May be repeated for credit.  The Staff

131. Women in Cross-Cultural Perspective. S *
Examines the diversity of women's as well as men's roles, experiences, and self-conceptions in a number of societies to explore how women and men shape, and are shaped by, particular forms of social life. Prerequisite(s): course 2. R. Ramirez

131H. Russian-Language Readings Course: Readings in Anthropology of Russia (2 credits). *
Contemporary topics and readings in anthropology of Russia and the former Soviet Union. All readings, films, and other materials are in Russian. Discussions are in English. Accompanies course 130H, Ethnography of Russia and Eastern Europe. Prerequisite(s): course 130H and proof of Russian proficiency in reading and writing. Enrollment by permission of instructor. Enrollment limited to 10.  M. Caldwell

132. Photography and Anthropology. *
Moving historically from woodcuts and paintings to the World Wide Web, but emphasizing the invention and development of documentary photography, this course explores the world of images depicting society and culture. Major theoretical approaches to "reading" pictures will be emphasized, and students must produce a final project incorporating visual images. Prerequisite(s): course 2 or History of Art and Visual Culture 10D or 10E or 10F or 10G or Art 30. (General Education Code(s): IM.)  The Staff

132L. Photography and Anthropology Laboratory (2 credits). *
This still photography lab trains students in the basic operations and techniques of the camera and the creation of a set of still photographs to use for social documentation. It includes lectures, demonstrations, hands-on instruction, and a continuous review of the students' work in progress. It does not include darkroom work. Concurrent enrollment in course 132 is required. Enrollment is restricted to anthropology majors. Enrollment limited to 30.  The Staff

133. Narratives of the Popular. *
Addresses the increasing importance of popular culture as the terrain upon which to address issues of culture and power. Emphasizes an ethnographic approach to popular culture as sociocultural phenomena. Students learn about a variety of activities including television and film viewing, music, fashion, photography, postcards, comic books, and urban spatial relations and architecture.  S. Harding

134. Medical Anthropology: An Introduction. W *
Cross-cultural study of health, disease, and illness behavior from ecological and ethnomedical perspectives. Implications for biomedical health care policy. Students cannot receive credit for this course and course 254. Prerequisite(s): course 2.  S. Contreras

135A. Cities. *
Examines cities from an anthropological perspective. Reviews pertinent social scientific literature of the 19th and early 20th centuries. Surveys the concepts and methods used by contemporary anthropologists to investigate urban phenomena.  N. Chen

136. The Biology of Everyday Life. *
Addresses cross-cultural attitudes to the human body and its everyday biological concerns: sleeping, eating, breathing, sex, and...
137. Consuming Culture. *
Explores consumption as a cultural form. Beginning with theories of capitalism and exchange, it then focuses on sites and modes of consumption and display such as department stores, museums and zoos, advertisements and photography, cultural tourism. M. Caldwell

138. Political Anthropology. *
The ideas, in selected non-Western societies, about the nature of power, order, social cohesion, and the political organization of these societies. (Also offered as Legal Studies 138. Students cannot receive credit for both courses.) The Staff

139. Language and Culture. F
Examination of language system and language use in relationship to cultural contexts of communication in Western and non-Western societies. Topics include the Sapir-Whorf linguistic relativity hypothesis; linguistic constructions of gender; speech variation in relation to class, ethnicity, and national identity; and the emergence of self in communicative acts. Prerequisite(s): course 2 or any other Anthropology course. D. Brenneis

140. Art, Artists, Artifacts. *
Studies the ways of interpreting non-Western art, both in the context of the Western art world and in the context of the societies that produced the art forms. The Staff

141. Anthropology of Developing Countries: Environment, Water, Entropy. *
Focuses on developing countries, those countries experiencing fast deruralization and ecological crises. Students learn the reach of entropic interconnectiveness given the fact that forms of inequality organize the system. Readings illustrate the theories and methods anthropologists use to approximate cultural realities to readers, scholars, and activists. Prerequisite(s): course 2. G. Delgado-P

142. Anthropology of Law. *
An ethnographically informed consideration of law, dispute management, and social control in a range of societies including the contemporary U.S. Topics include conflict management processes, theories of justice, legal discourse, and relations among local, national, and transnational legal systems. (Also offered as Legal Studies 142. Students cannot receive credit for both courses.) Enrollment is restricted to anthropology and legal studies majors. D. Brenneis

143. Performance and Power. W
Explores relationships between power and performance forms and media, both "traditional" and emergent. Links aesthetics with politics, and recent transcultural exchanges with local circumstances and consequences. Prerequisite(s): course 2. D. Brenneis

144. Anthropology of Poverty and Welfare. *
Examines phenomena of poverty and welfare in cross-cultural perspective with an emphasis on critical ethnographies and social analyses of social pathologies, economic systems, and community. Topics include informal economies, labor, household systems, social support networks, and public policies. M. Caldwell

145X. Special Topics in Socio-Cultural Anthropology. *
Taught annually on a rotating basis by faculty members. Each year’s topic varies by instructor and is announced by the department. Prerequisite(s): course 2. May be repeated for credit. The Staff

146. Anthropology and the Environment. F
Examines recent approaches to study of nature and the environment. Considers historical relationship between nature, science, and colonial expansion as well as key issues of contemporary environmental concern: conservation, environmental justice, and social movements. Students cannot receive credit for this course and course 246.

Prerequisite(s): course 2. (General Education Code(s): PE-E.) J. Zee

147. Anthropology and the Anthropocene. S
Looks at how humans have lived with their environments in other times and places; the long-distance transfers of humans and other animals, as well as plants and microorganisms; and how we can best live in the Anthropocene. Prerequisite(s): course 2. (General Education Code(s): PE-E.) A. Mathews

148. Gender and Global Development. *
Uses the critical tools of feminist theory and cultural anthropology to look at how global development discourses and institutions mobilize, reinforce, and challenge systems of gender-based inequality. Topics include non-governmental organizations (NGOs), development practice, microcredit, and technocrat cultures. (Formerly Gender and Development.) (Also offered as Feminist Studies 148. Students cannot receive credit for both courses.) M. Moodie

149. Anthropology of Activism. S
Examining activism from an anthropological perspective, students look at beliefs, ideals, and practices of social movements and those involved in them. Taking a procedural approach, course focuses on how things happen in unexpected ways, and examines activism as a collective matter. (General Education Code(s): ER) L. Rofel

150. Communicating Anthropology. F
Encourages anthropology majors to explore different means of communicating anthropology with much attention to individual writing and presentation skills. Intensive work on library research; recognizing, comparing, and making arguments; and analyzing ethnographies, articles, reviews, and films. Prerequisite(s): two of the following courses: 1, 2, or 3; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to sophomore and junior
151. Workshop in Ethnography. S
Through demonstration, practice, and participation, acquire skills in collecting and analyzing cultural data. Work with members of other cultures and with each other to learn to identify significant cultural patterns. Lectures and readings provide added perspective and a theoretical base. Prerequisite(s): course 2. Enrollment limited to 20. A. Kramer

152. Survey of Cultural Anthropological Theory. W
Major figures, ideas, and writings in 19th- and 20th-century cultural anthropology surveyed. Students cannot receive credit for this course and course 252. Prerequisite(s): course 2 and satisfaction of the Entry Level Writing and Composition requirements; enrollment is restricted to anthropology majors. (General Education Code(s): TA.) M. Caldwell

153. Medicine and Colonialism. *
Addresses the overlapping relationship between medicine and colonialism in the 19th century, with attention to post-colonial theory and contemporary studies of post-colonial medical pluralism in the 20th century. Prerequisite(s): courses 2 and 134. The Staff

154. Multimedia Ethnography. *
Students learn the fundamentals of photography or video production and audio recording in order to create mini-ethnographies. Prerequisite(s): courses 1, 2, and 3. Concurrent enrollment in course 154L is required. Enrollment restricted to anthropology majors. (General Education Code(s): PE-C.) The Staff

154L. Multimedia Laboratory (2 credits). *
Designed to instruct in aesthetics and technical production of a short digital slideshow. Using iMovie3 editing program, produce a digital slideshow incorporating sound (narration, music, and sound effects) and still images. Concurrent enrollment in course 154 required. The Staff

157. Modernity and Its Others. *
Beginning with the conquest of the Americas, considers how Western thinkers have explained seemingly "irrational" ways of being and thinking (like witchcraft, human sacrifice, and bodily mutilation), and asks how we interpret beliefs and practices radically different from our own. M. Fernando

158. Feminist Ethnographies. F
Considers the relationship between anthropology and feminism. Provides historical perspective on gender inequalities in the discipline as well as the emergence of feminist anthropology. Students read and engage with examples of feminist ethnography form a variety of regions and subfields. A. Kramer

159. Race and Anthropology. *
Examines concept of race in anthropology. Begins with histories of race in anthropology; turns to contemporary analysis of racism, identity formation, and diaspora; and concludes with current debates on the validity of "race" as an object of analysis. (General Education Code(s): ER.) M. Anderson

160. Reproductive and Population Politics. *
Examines reproductive and population politics across the globe, with a focus on feminist and ethnographic analyses of the stakes of various actors, from states to religious bodies to non-governmental organizations, in questions of who reproduces and in what circumstances. M. Moodie

161. The Anthropology of Food. *
Critically examines food as a fundamental aspect of social and cultural life and key concept in the development of anthropological theory and methods. Topics include: power relationships; community building; exchange and reciprocity; symbolism; cultural rules and rituals; globalization; and memory. (General Education Code(s): PE-H.) M. Caldwell

162. Anthropology of Displaced Persons. *
Examines the causes, consequences, forms, and experiences of human movement, displacement, and abandonment. Topics include: migration, refugees, forced displacement, environmental displacement, tourism, transnational communities, and other displaced populations. M. Caldwell

163. Kinship. *
Provides a critical survey of debates, old and new, in the study of kinship. Readings range from classical treatments to recent reformulations that use kinship as a lens for exploring intimacy, memory, futurity, embodiment, commodification, and power. Students cannot receive credit for this course and course 263. D. Rutherford

164. The Anthropology of Dance. *
An intense reading seminar which critically reviews anthropological works in dance ethnography and dance theory. Recommended for anthropology majors. Prerequisite(s): course 2. Enrollment limited to 25. O. Najera Ramirez

166. States, Bureaucracies, and Other Cosmological Propositions. *
Investigates the cosmologies of states and bureaucracies and the practices through which officials or rulers seek to produce order, knowledge, or stability. Looks at paperwork, nationalist and court rituals, practices of mapping and classification, forms of citizenship. A. Mathews

170. History of Archaeological Theory. F
Historical review of prehistoric archaeology from antiquarianism to the present. Emphasis on development of archaeological theory and its relation to evolutionary and anthropological theory. Students cannot receive credit for this course and course 270. Prerequisite(s): course 3; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to anthropology and Earth sciences/anthropology combined majors. Recommended for juniors. (General Education
171. Materials and Methods in Historical Archaeology. *
In this intensive, hands-on course, students learn the step-by-step processes involved in conducting laboratory research on historic artifacts. Students study the ins and outs of analyzing, cataloging, and dating historic artifacts. Enrollment limited to 20. C. Blackmore

172. Archaeological Research Design. *
Develops practical skills for connecting archaeological theory and methods to grant writing, final reports and presentations. Examines elements of good research design, including the logic of scientific inquiry, ethics, project conceptualization, measurement, sampling, data analysis, and effective writing. Prerequisite(s): course 3. Enrollment is restricted to anthropology majors. Enrollment limited to 20. (General Education Code(s): PR-E.) J. Habicht Mauche

173. Origins of Farming. *
Survey of the ecological and archaeological evidence for the origins of plant and animal domestication in Africa, Eurasia, and the Americas. Discussion will center on the preconditions of this drastic alteration in human ecology and its consequences in transforming human societies. Open to nonmajors. Students cannot receive credit for this course and course 273. Enrollment is restricted to juniors and seniors. The Staff

174. Origins of Complex Societies. S
Deals with evidence and theories concerning the origins of complex society; the transition from egalitarian, foraging societies to the hierarchical, economically specialized societies often referred to as "civilizations." Focuses on both Old World and New World cultures. Students cannot receive credit for this course and course 174. Prerequisite(s): course 3. C. Blackmore

175A. Early African Archaeology. *
Archaeological history of Africa from the first 2.5 million-year-old artifacts to the emergence of African pastoralism and farming. Disciplinary models and assumptions critically examined in their historic and political contexts. Students cannot receive credit for this course and course 275A. (Formerly African Archaeology: 2.5 Million BP to Farming.) Prerequisite(s): course 3 or by permission of instructor. Enrollment is restricted to junior and senior anthropology and Earth sciences/anthropology combined majors. Enrollment limited to 20. C. Blackmore

175B. African Complex Societies. *
Introduces the evolution of African kingdoms and states from the emergence of farming communities to initial contact with Europe. Particular attention paid to the origins of social inequality and the evolution of centralized polities. Students cannot receive credit for this course and Anthropology 275B. Prerequisite(s): course 3; course 175A strong recommended. J. Monroe

176A. North American Archaeology. S
Development of Native cultures in North America. Topics include peopling of the New World, early foragers, spread of agriculture and complex societies in the Southwest and Eastern Woodlands, and review of cultural developments in the West and Far North. Prerequisite(s): course 3 or consent of instructor. J. Habicht Mauche

176B. Meso-American Archaeology. *
Review of the archaeological and ethnohistorical evidence for the origins and development of pre-Columbian civilizations in Meso-America including the Olmec, Maya, Zapotec, Mixtec Teotihuacan, Toltec, Tarascan, and Aztec. Prerequisite(s): course 3. C. Blackmore

176C. Archaeology of the American Southwest. *
Outlines the development of native cultures in the American Southwest from Paleo-Indian times (Ca. 11,500 B.C.) through early European contact (ca. A.D. 1600). Topics include the greater environment; early foraging culture; the development of agriculture and village life; the emergence and decline of regional alliances; abandonment and reorganization; and changes in social organization, external relations, and trade. Prerequisite(s): courses 3 and 176A. J. Habicht Mauche

176D. Colonial Encounters in the Americas. *
Uses archaeological case studies to explore processes of cultural confrontation, resistance, and transformation among Native American groups in the wake of European colonial expansion in the Western Hemisphere during the late 15th through mid-19th centuries. Prerequisite(s): courses 2 and 3. (General Education Code(s): ER.) J. Habicht Mauche

176E. Archaeology of the Pacific Northwest. *
Explores some of the important issues surrounding the anthropological and archaeological study of the Pacific Northwest Coast--a roughly 1,800-kilometer-long shoreline that stretches from Yakutat Bay in Alaska to Cape Mendocino in California. Prerequisite(s): course 3. J. Daehnke

176F. California Archaeology. W
Introduces the Native peoples of California from an archaeological perspective. Covering the past 13,000 years, a variety of geographic and temporal settings are examined as well as current research in California archaeology. Prerequisite(s): course 3. T. Schneider

178. Historical Archaeology: A Global Perspective. *
Introduces the archaeology of European colonialism and the early-modern world. Topics include historical archaeological methods; the nature of European colonial expansion in New and Old Worlds; culture contact and change; and power and resistance in colonial
179. Slavery in the Atlantic World: Historical and Archaeological Perspectives. F
Explores the African diaspora resulting from the transatlantic slave trade, drawing on methodologies from two academic disciplines--history and archaeology. Examines key questions about the slave system, using an array of source materials, both written documents and artifacts. (Also offered as History 158C. Students cannot receive credit for both courses.) Enrollment is restricted to history, anthropology, and critical race and ethnic studies majors and minors during first-pass enrollment; open to all students at the start of second-pass enrollment. (General Education Code(s): PR-E) G. O’Malley, J. Monroe

180. Ceramic Analysis in Archaeology. F
Focuses on theories and techniques used by archaeologists to bridge the gap between the recovery of ceramic materials and their interpretation within cultural contexts. Topics include the origins of pottery, production methods, classification and typology, seriation, functional analysis, materials analysis and description, organization of production, trade, and the analysis of style. Students are billed a course materials fee. Students cannot receive credit for this course and course 280. Prerequisite(s): course 3. Concurrent enrollment in course 180 required. Enrollment is restricted to anthropology majors. J. Habicht Mauche

180L. Ceramic Analysis Laboratory (2 credits). F
Practicum in ceramic materials analysis and description. Students perform material experiments in materials selection and processing, hand-building techniques, and open-pit firing. Demonstrations of standard techniques of attribute analysis and the mineralogical and chemical characterization of ceramic materials are presented. Students cannot receive credit for this course and course 280L. Prerequisite(s): course 3. Concurrent enrollment in course 180 required. Enrollment is restricted to anthropology majors. Enrollment limited to 16. J. Habicht Mauche

181X. Special Topics in Archaeology. *
Taught annually on a rotating basis by various faculty members. Precise focus of each year’s course varies according to the instructor and is announced by the department. Prerequisite(s): course 3. May be repeated for credit. J. Habicht Mauche

182A. Lithic Technology. W
Introduction to lithic and ceramic analysis in archaeology. Includes lab analysis, discussions of classification and typology, and exploration of the concept of style as it relates to ceramics and lithics in archaeology. Prerequisite(s): course 3. Enrollment limited to 20. J. Reti

184. Zooarchaeology. *
Lectures and seminar on archaeological faunal analysis. Topics include mammalian evolution and osteology, vertebrate taphonomy, reconstruction of human diet from faunal remains, foraging strategy theory, data collection and management, and methods of quantitative analysis. Students cannot receive credit for this course and course 284. Prerequisite(s): course 3; concurrent enrollment in course 184L is required. The Staff

184L. Zooarchaeology Laboratory (2 credits). *
Practical laboratory in archaeological analysis, with demonstrations and exercises on human-caused modifications to animal bones and non-human modifications to animal bones. Prerequisite(s): course 3 and concurrent enrollment in course 184. Enrollment is restricted to anthropology majors and combined Earth sciences/anthropology majors. Enrollment limited to 45. The Staff

185. Osteology of Mammals, Birds, and Fish. *
Practicum in archaeological faunal analysis. Students learn to identify bones of all larger mammal species of central California plus selected bird and fish species. Students cannot receive credit for this course and course 285. Prerequisite(s): courses 184 or 102 or Biology 138/L or Earth Sciences 100 or Environmental Studies 105/L, and permission of instructor. Enrollment limited to 16. The Staff

187. Cultural Heritage in Colonial Contexts. *
Critical examination of the definitions of “cultural heritage,” its development as a concept, and the various laws, charters, and conventions that shape our management of the past in the present. The focus is on heritage in comparative colonial contexts. J. Daehnke

187B. Cultural Resource Management. *
Explores how the past is “managed” or cared for in the present, especially in the context of the United States. Prerequisite(s): course 3. Enrollment limited to 20. J. Daehnke

188. Practicum in Archaeology (2 credits). *
Introduces practical skills in archaeological materials identification of stone, shell, bone, and other materials; curation, and database management. Students receive entry-level training with once-weekly class meetings and 5 hours per week of hands-on instruction. Prerequisite(s): courses 1, 2, and 3. Enrollment limited to 10. May be repeated for credit. The Staff

189. Archaeology Field Methods. S
Lecture, laboratory, and fieldwork sessions on archaeological field methods including survey, mapping, excavation, record and database maintenance, artifact accessioning, curation, and analysis on the UCSC campus. Students attend lectures/laboratories two evenings each week and do fieldwork all day on Saturdays. Enrollment by instructor consent. Prerequisite(s):
190X. Special topics in Biological Anthropology. *
Taught annually on a rotating basis by various faculty members. Precise focus of each year's course varies according to the instructor and is announced by the department. (Formerly Special topics in Archaeology-Physical Anthropology.) Prerequisite(s): course 1. May be repeated for credit. The Staff

192. Directed Student Teaching. *
Teaching of a lower-division seminar under faculty supervision. (See course 42.) Students submit petition to sponsoring agency. The Staff

193. Field Study. *
Students submit petition to sponsoring agency. The Staff

194. Senior Seminar.

194A. Anthropology of Dead Persons. F
Explores the cultural meanings of dead bodies and dead persons, including memorialization; the body in the United States legal system; cadavers in education and research; dead persons in mass disasters and human-rights cases; and repatriation of the dead. Prerequisite(s): Satisfaction of the Entry Level Writing and Composition requirements, and courses 1, 2, and 3. Enrollment restricted to senior anthropology and Earth sciences/Anthropology combined majors. Enrollment limited to 20. A. Galloway

194B. Chimpanzees: Biology, Behavior, and Evolution. *
Explores studies on wild and captive chimpanzees with reference to other apes and humans. Topics include sociality, tool using, locomotion, traditions, and life history; social and physical dimensions of growth and development; language studies, genetics, and applications to human evolution. Prerequisite(s): courses 1, 2, and 3; satisfaction of the Entry Level Writing and Composition requirement. Enrollment restricted to senior anthropology majors. Enrollment limited to 20.

194C. Feminist Anthropology. S
Considers feminist perspectives on the human past, archaeologists' perspectives on feminist theory, and the impact of gender, feminist, and critical social theory on archaeology as a profession. Students cannot receive credit for this course and course 279. Prerequisite(s): courses 1, 2, and 3, and satisfaction of the Entry Level Writing and Composition requirement. Enrollment restricted to senior anthropology and Earth sciences/Anthropology combined majors. Enrollment limited to 20. C. Blackmore

194D. Tribes/Castes/Women. *
Examines historical constructions and contemporary deployments of the categories that have structured popular and anthropological understandings of social life in South Asia, particularly those of "tribe," caste," and "women." Students gain familiarity with the mobilization of these categories in contemporary political movements across India. Prerequisite(s): courses 1, 2, and 3.

194E. Belief. *
Focuses on problems and opportunities raised by the concept of belief. Students work to develop an anthropological understanding of belief as practiced, then put it to use in analyzing episodes from the NPR series "This I Believe." Prerequisite(s): courses 1, 2, and 3 and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors. Enrollment limited to 20. D. Rutherford

194F. Memory.
Intensive and fast-paced seminar focusing on theoretical and ethnographic studies of memory as a means for dealing with the past. Examines how ordinary people and societies have coped with the past through acts of selective remembering and forgetting. Prerequisite(s): courses 1, 2, and 3; satisfaction of the Entry Level Writing and Composition requirement. Enrollment is restricted to senior anthropology majors. Enrollment limited to 20. M. Caldwell

194G. Politics and Secularism. *
Examines secularism as political doctrine and practice of government. Topics include: transformation of religion by secularization; forms of inclusion/exclusion enacted by secularism; relationship between secularism and colonial rule. Case studies drawn from Europe, South

194H. Evolution.

Anthropology

Asia, United States, and the Middle East. Prerequisite(s): courses 1, 2, and 3; and satisfaction of the Entry Level Writing and Composition requirements; enrollment is restricted to senior anthropology majors. Enrollment limited to 20. M. Fernando

194H. Paleoanthropology. F
Detailed overview of the evidence for the origin and evolution of humans with emphasis on reconstructing the paleobiology of extinct hominids. Discussion of individual groups of ancient hominids from the Miocene apes to anatomically modern humans. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 1, 2, and 3. Enrollment is restricted to senior anthropology and Earth sciences/Anthropology combined majors. Enrollment limited to 20. J. Reti

194I. Consumption and Consumerism. *
Investigates cultural analysis of consumer society, commodities, and consumer practices. Students develop their own research projects. Themes include: critiques of consumer society; symbolic analysis of goods; consumption as resistance, anthropologies of marketing, culture jamming; consumption and (post) colonialism. Prerequisite(s): courses 1, 2, and 3; satisfaction of the Entry Level Writing and Composition requirement. Enrollment is restricted to senior anthropology majors. Enrollment limited to 20. M. Anderson

194J. Histories of Forests and Other Wild Places. *
"Wild Nature" has a history. This class offers tools for understanding the social and natural construction of wild nature. We will learn to "read" rural landscapes--ethnographically, biologically, historically, creatively, and politically. Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors. Enrollment limited to 20. A. Tsing

194K. Reading Ethnographies. *
Explores issues in the representation of culture through reading and discussing ethnographies. Recent experimental ethnographies open topics including the relation between fieldwork and writing, textual strategies, and the politics of ethnographic writing and research. Prerequisite(s): courses 1, 2, and 3; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors. Enrollment limited to 20. M. Fernando

194L. Archaeology of the African Diaspora. *
Senior seminar on African diaspora archaeology. Draws on archaeological, historical, and anthropological perspectives to examine the cultural, social, economic, and political lives of Africans and their descendants in the New World and West Africa from the 15th through 19th centuries. Prerequisite(s): courses 1, 2, 3 and an upper division course in archaeology; satisfaction of the Entry Level Writing and Composition requirement. Enrollment is restricted to senior anthropology majors. Enrollment limited to 20. M. Pandey

194M. Medical Anthropology. S
Focuses on critical issues in the social sciences of health and healing. Designed for students pursuing graduate work in medical anthropology and/or public health. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 1, 2, 3, and 134. Enrollment is restricted to senior anthropology majors. Enrollment limited to 20. N. Chen

194N. Comparison of Cultures. *
Seminar for upper-division students interested in theories and methodology of social and cultural anthropology. Devoted to critical discussion of different methods of comparison practiced in anthropology. Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements; courses 1, 2, and 3. Enrollment is restricted to senior anthropology majors. Enrollment limited to 20. T. Pandey

194O. Masculinities. *
Consider the social construction of men and masculinities in a variety of ethnohistorical contexts as well as the unique contribution enabled by anthropological methods, particularly ethnographic fieldwork, to the study of gender and power. Prerequisite(s): courses 1, 2, and 3 and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors. Enrollment limited to 20. M. Moodie

194P. Space, Place, and Culture. *
Examines ways anthropologists have
Anthropology studied relationships between space, place, and culture. Covers early formulations acknowledging people in different cultural contexts ascribe particular meanings to places and to the concept of space and then traces the ways these questions have come to the fore in more recent scholarship. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors. Enrollment limited to 20.

194Q. Race, Ethnicity, Nation. *
Provides students with theoretical and methodological approaches to studying the relationships between race, ethnicity, and nation, with a comparative focus on the United States, Latin America, and Europe. Students use ethnographic methods and/or discourse analysis to develop individual research projects. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and courses 1 and 2 and 3. Enrollment is restricted to senior anthropology majors. Enrollment limited to 20.

194R. Religion, Gender, Sexuality. *
Examines religion in relation to gender and sexuality. Examines how gender, sexuality, and religion intersect in notions of civilization, progress, and modernity in the contemporary and colonial periods. Particular attention paid to Islam, Christianity, and Hinduism. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and courses 1 and 2 and 3. Enrollment is restricted to senior anthropology majors. Enrollment limited to 20.

194S. Hearing Culture: The Anthropology of Sound. F
Explores relationships between culture and acoustic worlds--environmental, verbal, and musical--within which we live. How sound is shaped by human belief and practice and the role sound plays in cultural and social life, both past and present. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 1, 2, and 3. Enrollment is restricted to senior anthropology majors. Enrollment limited to 20.

194T. Poverty and Inequality. *
Through ethnographies about homelessness, food deprivation, and unemployment, examines the institutions through which poverty is recognized, the systems of morality shaping debates about need and appropriate behavior, and the effects of community responses to poverty. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 1, 2, and 3. Enrollment is restricted to senior anthropology majors. Enrollment limited to 20.

194U. Environmental Anthropology: Nature, Culture, Politics. S
Presents key readings in environmental anthropology focusing on environmental conflicts. Students guided in developing research paper on a society environment topic of their choice. Class is writing intensive with in-class discussion and final presentations. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors. Enrollment limited to 20.

194V. Picturing Cultures. *
A historical, analytical, and practical exploration of the uses of still and moving pictures in ethnographic representations, research, and production. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 1, 2, and 3; and course 80J, 120, 132, or 154. Enrollment is restricted to senior anthropology majors. Enrollment limited to 20.

194W. The Anthropology of Social Movements. *
Focuses on the anthropology of social movements, especially the impact that global capital provokes on peripheral Latin American societies and the ways these respond through the organizing of social movements validating alternative worldviews that coalesce around issues pertaining to indigeneity, the environment, gender, and concepts of human dignity. Prerequisite(s): courses 1, 2, and 3, and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors. Enrollment limited to 20.

194X. Women in Politics: A Third World Perspective. S
Focuses cross-culturally on the status of women in the Third World and their formal and informal
Anthropology

participation in politics.
Also discussed are organized efforts, through participation in both national and autonomous movements, for women’s rights. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 1, 2, and 3. Enrollment is restricted to senior anthropology majors. Enrollment limited to 20. A. Pandey

194Y. Archaeologies of Space and Landscape. *
Examines contemporary archaeological perspectives on space and landscape. Focuses on how archaeology can contribute to an appreciation of the economic, cultural, and political factors that shape human perception, use, and construction of the physical world. Prerequisite(s): courses 1, 2, and 3, and an upper-division archaeology course; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors. Enrollment limited to 20. J. Monroe

194Z. Emerging Worlds. *
Addresses encounters and contact zones between cultures that give rise to "emerging worlds." "Emerging worlds" refers to the cultural heterogeneity and diversity created within world-making networks, geographies, innovations, and meanings, moving us beyond ideas about vanishing, autonomous cultures. Prerequisite(s): courses 1, 2, and 3, and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors. Enrollment limited to 20. L. Rofel

195A. Senior Thesis Seminar. F
Covers the basics like the planning and organization of research; writing research proposals; the publication and presentation of scientific research results; the recapitulation of laboratory methods; and intensification of specific recent research discussions in anthropology. Prerequisite(s): courses 1 and 107, and either course 101, or course 104, or course 105. Enrollment is restricted to senior anthropology majors and by permission of the instructor. Students cannot receive credit for this course and course 295A.
Enrollment limited to 10. L. Fehren-Schmitz

195B. Senior Thesis Research (3 credits). W
Students conduct the research projects they proposed in course 195A. Students have weekly group meetings with the research supervisor. Prerequisite(s): course 195A. Enrollment is restricted to senior anthropology majors. Enrollment limited to 10. L. Fehren-Schmitz

195C. Senior Thesis Capstone (3 credits). S
Students finalize their research projects and write their thesis in the form of a research paper that is in publishable form so it can be submitted to a relevant journal or conference. Prerequisite(s): course 195B. Enrollment is restricted to senior anthropology majors. Enrollment limited to 10. L. Fehren-Schmitz

195S. Senior Thesis. F,W,S
Produce a quality research paper focusing on an anthropological topic of interest to you and that builds upon your experience in the major. Develop effective writing strategies and research skills to assist in professional development. Prerequisite(s): Satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to anthropology majors. Enrollment is by permission of the instructor. Enrollment limited to 10. J. Daehne

196C. Traveling Cultures. *
Considers why traveling cultures have posed a threat, often met with violence, to regimes of rule, particularly modern nation-states. Also explores the unique problems that conducting research with mobile communities poses for the ethnographer. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 1, 2, and 3. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. M. Moodie

196D. Food and Medicine. *
Examines the intersections of food, medicine, and culture with special focus on nutrition, cultural knowledge, industrial foodways, genetically modified organisms (GMOs), ethnopharmacology, food safety, and biosecurity. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; and courses 1, 2, and 3. Enrollment limited to 20. N. Chen

196E. Pastoralists Past and Present. *
Senior seminar treating the history and modern situation of the world’s herding peoples. Readings draw on ethnographic, historical, archaeological, and ecological literatures. Students are coached in writing a 25-page research paper on a topic related to this theme. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; and courses 1, 2, and 3. Enrollment is restricted to senior anthropology majors. Enrollment limited to 20. The Staff

196F. The Anthropology of Things: Gift, Sign, Commodity, Tool. *
Examines some approaches used by anthropologists and other thinkers to bring things into focus: as gifts, signs, commodities, and tools. Explores whether, by taking things seriously, anthropologists might learn to be empirical in new ways. Students cannot receive credit for this course and course 225. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; and courses 1, 2, and 3. Enrollment is restricted to senior anthropology majors.
multiple views of history come into public representation and politics of cultural memory in the Explores sites of heritage and the 196I.

'Hard Problems.' *
Emerging anthropological approaches to global history, with an eye to historical frameworks of 500 years or more. Course requires engagement with advanced theoretical concepts and challenging historical texts. Intensive seminar format. Students cannot receive credit for this course and course 269. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; and courses 1, 2, and 3. Enrollment is restricted to senior anthropology majors. Enrollment limited to 20. M. Moodie

196J. Imagining America. *
Explores sites of heritage and the politics of cultural memory in the American context. Focuses on public representation and interpretation at places where multiple views of history come into conflict. Prerequisite(s): courses 1, 2, and 3 and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors. Enrollment limited to 20. J. Daehnke

196K. Settler Colonialism. W
Provides seniors in anthropology a capstone experience. Settler colonialism is an all-encompassing, land-centered project that revolves around the elimination of the Native. This course revolves around a series of ethnographies and histories about settler colonialism. Prerequisite(s): courses 1, 2, and 3 and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors. Enrollment limited to 16. R. Ramirez

196L. Archaeology of the American Southwest. *
Outlines the development of native cultures in the American Southwest from Paleo-Indian times (ca. 11,500 B.C.) through early European Contact (ca. A.D. 1600). Prerequisite(s): courses 1, 2, and 3 and satisfaction of the Entry Level Writing and Composition requirements. Course 178 is strongly recommended. Enrollment is restricted to senior anthropology and Earth sciences/Anthropology combined majors. Enrollment limited to 20. J. Habicht Mauche

196M. Modernity and its Others. *
Examines how Western modernity has interpreted various forms of radical difference, beginning with the 15th-century conquest of the New World. Considers historical and contemporary examples of how Western thinkers have explained "irrational" beliefs and practices (e.g., witchcraft, human sacrifice, devil-worship). Prerequisite(s): courses 1, 2, and 3; and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology majors. Enrollment limited to 20. J. Habicht Mauche

196N. Historical Anthropology. F
Provides seniors in anthropology a capstone experience. Involves critical engagement with archaeological, ethnohistorical, ethnographic, and oral line of evidence to evaluate the outcomes of indigenous people's interactions with

196O. Design Anthropology. S
Senior seminar introduces students to principles, approaches, methods, and professional dimensions of design anthropology. Emphasizes collaborative methods and development of new methods for ethnographic research, analysis, and communication. Through a quarter-long research project, students develop professional skills and portfolio materials. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to senior anthropology majors and is by permission. Students cannot receive credit for this course and course 208C. Enrollment limited to 16. M. Caldwell

196P. Disability and Difference. *
Challenges limiting conceptions of what it means to be human in a range of arenas, from our understandings of culture to our conceptions of built space to our assumptions about citizenship, asking why disability makes people nervous. Prerequisite(s): courses 1, 2, and 3; and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior Anthropology majors. Enrollment limited to 16. D. Rutherford
Anthropology
with different forms of missionary, settler, and mercantile colonialism. Prerequisite(s): courses 1, 2, and 3, and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior anthropology and Earth sciences/Anthropology combined majors. Enrollment limited to 20. T. Schneider

196W. Anthropology of Weather and Exposure. W
Students discuss how differing approaches to weather and exposure generate different approaches to culture, science, and politics; identify key moments in cultural anthropology's engagement with environmental and climactic questions; and delineate new areas of research. Prerequisite(s): courses 1, 2, and 3. Satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior Anthropology majors. Enrollment limited to 20. J. Zee

197. Laboratory Tutorial. F,W,S
Independent laboratory research on selected topics in archeology and physical anthropology. Interview with appropriate instructor required. May be repeated for credit. The Staff

197F. Laboratory Tutorial (2 credits). F,W,S
Independent laboratory research on selected topics in archeology and physical anthropology. Interview with appropriate instructor required. Enrollment restricted to anthropology majors. May be repeated for credit. The Staff

198. Independent Field Study. F,W,S
Off-campus field study. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

198G. Independent Field Study (3 credits). F,W,S
Off-campus field study. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

199. Tutorial. F,W,S
Students submit petition to sponsoring agency. May be repeated for credit. The Staff

<tbody>
<tr>
<td><strong>200. Theoretical Foundations of Physical Anthropological Research.</strong> *</td>
</tr>
<tr>
<td>Provides historical and theoretical foundation of physical anthropology. Grounds students in the changing frameworks and perspectives during the last 150 years regarding questions in human biology, evolution, nature, and culture, by examining texts and scientific journals. Enrollment is restricted to graduate students. Enrollment limited to 15. The Staff</td>
</tr>
</tbody>
</table>

200A. Cultural Graduate Core Course (10 credits). F
Introduces history, ethnography, and theory of cultural anthropology with emphasis on awareness of construction of anthropological canon and areas of conflict within it, leading up to contemporary debates on a variety of issues. Two-term course: students must enroll in both quarters. (Formerly Core Graduate Course.) Enrollment is restricted to anthropology graduate students. Enrollment limited to 12. M. Anderson

200B. Cultural Graduate Core Course. W
Introduces history, ethnography, and theory of cultural anthropology with emphasis on awareness of construction of anthropological canon and areas of conflict within it, leading up to contemporary debates on a variety of issues. Multiple-term course; students must enroll in both quarters to receive academic credit. (Formerly Core Graduate Course.) Enrollment is restricted to anthropology graduate students. Enrollment limited to 12. D. Brenneis

201. Human Evolution. *  |
Provides an overview of the first five million years of human evolution and a framework for studying evolution and reconstructing the human past. Emphasizes that all lines of evidence must be included: hominin fossils, archaeology, paleoecology, and molecular data. Enrollment is restricted to graduate students. Enrollment limited to 15. The Staff

202A. Skeletal Biology. *
Focuses on human skeletal biology, the identification of elements, physiology of hard tissue formation, growth, and maintenance. Students are required to show competence in skeletal identification to pass this class. Prerequisite(s): course 102A or permission of instructor. Enrollment is restricted to graduate students. Enrollment limited to 5. The Staff

206. Primate Behavior. *  |
An overview of primate evolution and review of the major groups of primates in terms of their ecological, locomotor, dietary, and social adaptations. Theoretical frameworks, such as behavioral ecology, sexual selection, and life history, are evaluated from long-term studies of primate behavior. Students cannot receive credit for this course and course 106. Enrollment is restricted to graduate students. Enrollment limited to 15. The Staff

208A. Ethnographic Practice. S
Introduces graduate students to the practice of fieldwork. Students design and carry out a quarter-long research project exploring a range of methods and producing an analytical case study. Readings and discussion emphasize both methodological critique and successful implementation. Enrollment is restricted to anthropology graduate students. Enrollment limited to 15. M. Moodie

208C. Design Anthropology. *  |
Introduces the principles, approaches, methods, and professional dimensions of design anthropology. Emphasis is on collaborative methods and development of new methods for ethnographic research, analysis, and communication. Through a quarter-long research project, students develop non-academic professional skills, including portfolio materials. Students cannot receive credit for this course and course 196R. Open to second-year graduate students and higher (first-year students are required to take 208A). M. Caldwell
208L. Video Laboratory (2 credits). *
Provides students with hands-on training with a variety of audiovisual equipment. Through lectures, demonstrations, hands-on field exercises, and review of students’ media exercises, students learn the fundamentals of photography, video production, and audio recording in the field. Concurrent enrollment in course 208A is required; enrollment is restricted to anthropology graduate students. Enrollment limited to 15. *The Staff

210R. Religion in American Politics and Culture. *
Introduces dominant discourses about major American religions and their role in public life with particular attention to intersecting differences, such as race, sex/gender, and disability and to shifting religious/political boundaries. Visual and textual media, political commentary, and popular ethnographies are analyzed. Enrollment restricted to graduate students. Enrollment limited to 15. *N. Chen

211. Human Ecology. *
Reviews environmental, physiological, behavioral, and cultural ways that humans interact with their physical surroundings. Effects of human culture on the environment, and of the environment on the shape of human culture will be emphasized. Enrollment is restricted to graduate students. Enrollment limited to 15. *D. Rutherford, S. Harding

212. The Human Life Cycle. *
Examines the human life cycle using an evolutionary framework. Examines key aspects of the human life stages using findings and concepts from developmental biology, physiology, nutrition, evolutionary ecology, and life history theory. These stages include: gestation, infancy, childhood, juvenile and adolescent periods, and senescence. Each stage of the life cycle is compared and contrasted with the developmental life of nonhuman primates and mammals. Other related topics include developmental plasticity and epigenetics. Enrollment restricted to graduate students. Enrollment limited to 15. *The Staff

214. Culture and Power. *
Takes the many strands of scholarship on power relations between individuals within the context of institutions and conceptualizes how individuals come to exist through power relations, and how power is fundamental to social being. Enrollment is restricted to graduate students. Enrollment limited to 15. May be repeated for credit. *L. Fehren-Schmitz

Deepens students’ understanding of methods applied in biological anthropology research. (Formerly Methods in Physical Anthropology.) Enrollment is restricted to graduate students. Enrollment limited to 15. May be repeated for credit. *L. Fehren-Schmitz

219. Religions, States, Secularities. *
Examines theories and case studies at the intersection of religion, states, and secularity. Topics include: secularism as a political doctrine; state and social regulation of religion and religious normativity; secular cultural practices; and lines of secular/religious entanglement and conflict. Enrollment is restricted to graduate students. Enrollment limited to 15. *S. Harding

220. Cartographies of Culture. *
Examines, theoretically and ethnographically, how societies and their cultures are created and reified through spatializing practices, including border-making, mapping, landscape aesthetics, globalization, time/history/memory, movement, and other locating activities. Enrollment is restricted to graduate students. Enrollment limited to 15. *M. Caldwell

225. The Anthropology of Things: Sign, Gift, Commodity, Tool. *
Examines some approaches used by anthropologists and other thinkers to bring things into focus: as gifts, signs, commodities, and tools. Explores whether, by taking things seriously, anthropologists might learn to be empirical in new ways. Students cannot receive credit for this course and course 196F. Enrollment is restricted to graduate students. Enrollment limited to 15. *J. Habicht Mauche

228. Grant Writing. F
Devoted entirely to writing grant proposals. Students either work on their graduate education fellowships or their doctoral dissertation grants or both. Reading materials consist of granting agency documents plus examples of successful applications. Enrollment is restricted to anthropology graduate students. Enrollment limited to 15. May be repeated for credit. *N. Chen

229. Constructing Regions. W
Discusses centrality of the idea of "regions" in studies of culture, the history of "locating" social theory, and debates about area studies. Students develop area of transregional bibliographies. Primarily for second- or third-year anthropology graduate students reading "area" literatures. Enrollment is restricted to graduate students. Enrollment limited to 15. *J. Zee

230. Bodies, Images, Screens. *
Visuality as epistemology, image-consumption, and the political and representational possibilities stemming from digitization and the World Wide Web are increasingly important issues in the humane sciences. Offers historical and critical background and the possibility of hands-on practice using visual material in current research. (Formerly Photography and Image Culture.) Enrollment is restricted to graduate students. Enrollment limited to 15. *The Staff

231. Intimacy and Affective Labor. *
Examines recent work on the role of intimacy and affective labor in value production, political mobilization, and transnational capital linkages. Special attention given to how these terms are invoked to answer
Anthropology
methodological and narrative concerns in ethnographic writing. Enrollment is restricted to graduate students. Enrollment limited to 15.
M. Moodie

232. Bodies, Knowledge, Practice. *
Contemporary social theory and science both focus on bodies as critical sites of inquiry and the production of knowledge. Explores these theoretical intersections and constructions of the body with new ethnographic works. Questions how race, gender, and culture are inscribed through bodily practice, imagery, and phenomenology. Enrollment restricted to graduate students. Enrollment limited to 15.
N. Chen

233. Politics of Nature. *
Advanced graduate seminar in environmental anthropology and science and technology studies, focusing on how nature is produced in the modern world and what political and practical significance this has in different contexts. Enrollment restricted to graduate students. Enrollment limited to 15.
A. Mathews

234. Feminist Anthropology. *
Examines how feminist anthropology creates its objects of knowledge by focusing on questions of method and representation. The class reads across these traditional objects—women and gender, for example—to highlight the epistemological and political stakes of feminist work in anthropology. Enrollment is restricted to graduate students. Enrollment limited to 15.
M. Moodie

235. Language and Culture. *
An examination of language system and language use in relationship to cultural contexts of communication in Western and non-Western societies. Also examines the complex role which linguistic inquiry and models have played in broader theories of culture. Enrollment is restricted to graduate students. Enrollment limited to 15.
D. Brenneis

238. Advanced Topics in Cultural Anthropology. *
Advanced topics in cultural anthropology. Current topics in anthropological theory and ethnography taught on a rotating basis by various faculty members. Precise focus of each seminar varies and will be announced by the department. Enrollment is restricted to graduate students. Enrollment limited to 15. The Staff

241. Social Justice. *
Explores theoretical and methodological issues in the field of social justice with an emphasis on ethnographic analysis. Topics include: rights, obligations, justice, equality, compensation, and ethics. Enrollment is restricted to graduate students. Enrollment limited to 15.
M. Caldwell

243. Cultures of Capitalism. *
Introduction to selected themes in political economy, stressing the work of Marx. Topics include the development of capitalism, colonialism, dependency, world systems, state formation, class consciousness, commodity fetishism, the nature of late capitalism, post-modernism, and the aesthetics of mass culture. Through political economy's interlocutors, raises questions about gender, race and ethnicity, and post-structuralist critiques. Enrollment is restricted to graduate students. Enrollment limited to 15.
L. Rofel

246. Advanced Readings in Environmental Anthropology. *
Survey of history and topics of contemporary interest in environmental anthropology, including political ecology, environmental history, ethnoecology, and multi-species anthropology. Additional advanced readings on contemporary environmental anthropology research. Students cannot receive credit for this course and course 146. Enrollment is restricted to Anthropology graduate students or by permission of the instructor. Enrollment limited to 15.
A. Mathews

247. Critical Perspectives on Nutrition. *
Examines emerging critiques on the science, communication, and practice of nutrition using multidisciplinary approaches. Special attention is given to the effects of modern nutrition. Enrollment is restricted to graduate students. Enrollment limited to 15.
J. Guthman

248. Shadowy Dealings: Anthropology of Finance, Money, and Law. F
Moves from a brief introduction to classic economic anthropology to recent work on histories of money and capitalism and cultures of financial markets, of accounting, and of legal and illegal trading practices. Enrollment is restricted to graduate students. Enrollment limited to 15.
N. Mahajan

249. Ecological Discourses. *
Explores narratives of nature and their practical consequences in contests over "wild places" and their resources. Readings focus on the histories of forests and on analytic frameworks—ecology, social history, interpretation, cultural studies—with which to investigate competing constructions of the environment. Enrollment is restricted to graduate students. Enrollment limited to 15.
A. Tsing

252. Survey of Cultural Anthropological Theory. W
Major figures, ideas, and writing in 19th- and 20th-century cultural anthropology surveyed. Students cannot receive credit for this course and course 152. Enrollment is restricted to graduate students. Enrollment limited to 15.
M. Caldwell

253. Advanced Cultural Theory. *
Examines cultural anthropology’s interdisciplinary practices of knowledge formation at an advanced level. Drawing on various types of theoretical texts, the course elaborates on the relationship between culture and power, taking up different themes each time it is taught. Enrollment is restricted to graduate students. Enrollment limited to 15.
M. Anderson

254. Medicine and Culture. *
Surveys medicine cross-culturally,
Anthropology with particular focus on power, tradition, and theories of embodiment. Students cannot receive credit for this course and course 134. Enrollment is restricted to graduate students. Enrollment limited to 15. The Staff

255. Regulating Religion/Sex.* First examines the regulation of religion and the normalization of sex/sexuality as parallel modalities of secular rule in the production of modern citizens and subjects. Ultimately inquires into the relationship between "proper" religion and "proper" sexuality in secular state formations. (Formerly course 259.) Enrollment is restricted to graduate students. Enrollment limited to 15. M. Fernando

258. Experimental Cultures.* Addresses the use of experiments in anthropological research, theory, and writing. Enrollment is restricted to graduate students. Enrollment limited to 15. M. Moodie

259. Race in Theory and Ethnography.* Explores theoretical and methodological approaches to the cross-cultural study of "race," with an emphasis on historical and ethnographic analysis. Main approaches considered include Foucauldian, Gramscian, diaspora theory, and the everyday poetics and politics of race. (Formerly course 246.) Enrollment is restricted to graduate students. Enrollment limited to 15. M. Anderson

260. Anthropology of Freedom.* Examines conceptualizations and practices of freedom across geographical space and historical time. Readings drawn from Greek philosophy, Islamic, Christian, and Buddhist religious traditions. Enlightenment philosophy, liberal and neo-thought, and contemporary ethnographies. Enrollment is restricted to graduate students. M. Fernando

261. Replication, Mimesis, and Fakery.* Replicas, copies, and fakes anchored conceptually by the authentic/original enable the marketing of cultural commodities like arts and crafts, especially since the advent of photography. Course explores these commercial and signifying processes in the global art and culture market. Enrollment is restricted to graduate students. Enrollment limited to 15. The Staff

262. Documenting Cultures.* Follows the history of film and ethnography, media and methodology into the birth of cinema and anthropology in the early 20th century. Students learn theories of representation and media, conduct ethnographic research, and prepare a short film. Enrollment is restricted to graduate students. Enrollment limited to 15. The Staff

263. Kinship.* Provides a critical survey of debates, old and new, in the study of kinship. Readings range from classical treatments to recent reformulations that use kinship as a lens for exploring intimacy, memory, futurity, embodiment, commodification, and power. Students cannot receive credit for this course and course 163. Enrollment is restricted to graduate students. Enrollment limited to 15. D. Rutherford

267A. Science and Justice: Experiments in Collaboration.* Considers the practical and epistemological necessity of collaborative research in the development of new sciences and technologies that are attentive to questions of ethics and justice. Enrollment is by permission of instructor. Enrollment is restricted to graduate students. (Also offered as Feminist Studies 268A. Students cannot receive credit for both courses.) Enrollment limited to 15. J. Reardon

267B. Science and Justice Research Seminar.* Provides in-depth instruction in conducting collaborative interdisciplinary research. Students produce a final research project that explores how this training might generate research that is more responsive to the links between questions of knowledge and questions of justice. Prerequisite(s): Sociology 268A, Biomolecular Engineering 268A, Feminist Studies 268A, or Anthropology 267A. Enrollment is by permission of instructor. Enrollment is restricted to graduate students. (Also offered as Biomolecular Engineering 268B. Students cannot receive credit for both courses.) Enrollment limited to 15. The Staff

268A. Rethinking Capitalism. W
Readings include works by speakers at UCSC's "Rethinking Capitalism Initiative." Topics are: (1) financialization versus commodification (how options-theory has changed capitalism); (2) material markets (how this theory performs); and (3) valuation and contingency (how economies make worlds). (Also offered as History of Consciousness 268A. Students cannot receive credit for both courses.) Enrollment is restricted to graduate students. Enrollment limited to 15. R. Meister

268B. Rethinking Capitalism.* Course 268A addressed changes in the theory and practice of capitalism as derivatives markets have become increasingly central to it. This course, which can be regarded as either background or sequel, concerns questions that surround recent debates about derivatives from the standpoint of broader developments in law, culture, politics, ethics, ontology, and theology. What would it mean to see questions of contingency and value as a challenge to late-modern understandings of these modes of thought? (Also offered as History of Consciousness 268A. Students cannot receive credit for both courses.) Enrollment is restricted to graduate students. Enrollment limited to 15. R. Meister

269. Global History and the Longue Durée.* Emerging anthropological approaches to global history. Considers both 500-year and much longer historical frameworks. For the former, the evidence of documents, both European and non-European, is particularly important. For the latter,
270. History of Archaeology. *
Historical review of prehistoric archaeology from antiquarianism to the present. Emphasis on the development of archaeological theory, its relation to evolutionary and anthropological theory, and themes ongoing over time. Students cannot receive credit for this course and course 170. Enrollment is restricted to graduate students. Enrollment limited to 15. J. Monroe

270A. Archaeology Graduate Core Course: History of Archaeological Theory. F
Historical overview of archaeology, concentrating on archaeological practice in the English-speaking world from the late 19th through the 21st Centuries. Emphasis is on development of archaeological theory in its social context; its relation to evolutionary and anthropological theory; and themes ongoing over time. Students cannot receive credit for this course and course 270. Enrollment is restricted to graduate students. Enrollment limited to 15. J. Habicht Mauche

270B. Current Directions in Archaeological Theory. W
Provides an in-depth understanding of current trends in archaeological thought, and enables students to place issues of archaeological interpretation into broader historical and theoretical frameworks. This course is a follow-up to course 270, but not a substitute. Prerequisite(s): course 270A. Enrollment is restricted to graduate students. Enrollment limited to 15. J. Habicht Mauche

272. Advanced Archaeological Research. F
Introduces graduate students to archaeological research design. Topics include: middle range theory; multistage research strategies; sampling strategies and appropriate field methodology; and issues specific to particular scales of archaeological analysis (artifact, household, site, region). Enrollment is restricted to graduate students. Enrollment limited to 15. C. Blackmore

273. Origins of Farming. *
Survey of the ecological and archaeological evidence for the origins of plant and animal domestication in Africa, Eurasia, and the Americas. Discussion will center on the preconditions of this drastic alteration in human ecology and its consequences in transforming human societies. Students cannot receive credit for this course and course 173. Enrollment is restricted to graduate students. Enrollment limited to 15. The Staff

274. Origins of Complex Societies. *
The origins of complex society: the transition from egalitarian foraging societies to the hierarchical, economically specialized societies often referred to as "states" or "civilizations." Focuses on both Old World and New World cultures. Students may not receive credit for this course and course 174. Enrollment is restricted to graduate students. Enrollment limited to 15. C. Blackmore

275A. Seminar on Early African Archaeology. *
Tutorial on archaeology of Africa, from 2.5 million years ago to emergence of African pastoralism and farming. Weekly examination of disciplinary models and assumptions in historic context, emphasizing overarching themes in prehistoric archaeology. Students cannot receive credit for this course and course 175A. (Formerly Tutorial on African Archaeology.) Enrollment is restricted to graduate students or by consent of instructor. Enrollment limited to 15. The Staff

275B. Tutorial in Archaeology of African Complex Societies. *
Graduate tutorial on the archaeology of precolonial African kingdoms and states. Particular attention paid toward the origins of social inequality and the evolution of centralized politics. Students cannot receive credit for this course and course 175B. Prerequisite(s): Enrollment is restricted to graduate students. Enrollment limited to 15. J. Monroe

276A. Advanced Topics in North American Archaeology. S
In-depth examination of development of Native cultures in North America from end of last ice age to time of European contact. Focuses on specific regional trajectories and problems of social change. Enrollment is restricted to graduate students. Enrollment limited to 15. J. Habicht Mauche

276B. Mesoamerican Archaeology. *
Examines the pre-Columbian cultures of Mesoamerica and reviews the archaeological and ethnohistorical evidence related to the origins and development of cultures including the Olmec, Maya, Zapotec, Mixtec, and Aztec. Students cannot receive credit for this course and course 176B. Enrollment is restricted to graduate students. Enrollment limited to 15. C. Blackmore

278. Tutorial on Historical Archaeology. *
Tutorial on archaeology of European colonialism and the early-modern world. Focuses on the nature of European colonial expansion in New and Old Worlds; culture contact and change; and power and resistance in colonial societies. Students cannot receive credit for this course and course 178. Enrollment is restricted to graduate students. Enrollment limited to 15. The Staff

279. Feminism and Gender in Archaeology. *
Considers feminist perspectives on the human past; archaeologists’ perspectives on feminist theory; and the impact of gender, feminist, and critical social theory on the archaeological profession. Students cannot receive credit for this course and course 179. Enrollment is restricted to graduate students. Enrollment limited to 15. C. Blackmore

280. Advanced Ceramic Analysis. F
Anthropology
Advanced graduate seminar that focuses on techniques and theories used to bridge the gap between the recovery of ceramic remains from archaeological contexts and their interpretation with respect to various anthropological issues and problems. Students cannot receive credit for this course and course 180. Enrollment is restricted to graduate students. Concurrent enrollment in Anthropology 280L is required. Enrollment limited to 5. J. Habicht Mauche

280L. Advanced Ceramic Analysis Laboratory (2 credits). F
Emphasizes advanced techniques of ceramic analysis, including materials selection and processing, hand-building, and open-pit firings. Standard techniques for describing and measuring formal and technological attributes of pottery also presented. Students cannot receive credit for this course and course 180L. Enrollment is restricted to graduate students. Concurrent enrollment in Anthropology 280 is required. Enrollment limited to 5. J. Habicht Mauche

282. Household Archaeology. *
Explores the theoretical and methodological challenges faced by archaeologists excavating ancient households. Students examine the social, economic, and political characteristics of households and investigate how they intersect and support the social and physical aspects of communities. Enrollment is restricted to graduate students. Enrollment limited to 15. C. Blackmore

284. Tutorial in Zooarchaeology. *
Lectures and seminar on archaeological faunal analysis. Topics include: mammalian evolution and osteology; vertebrate taphonomy; reconstruction of human diet from faunal remains; foraging strategy theory; data collection and management; and methods of quantitative analysis. Students cannot receive credit for this course and course 184. (Formerly Zooarchaeological Research Design.) Enrollment is restricted to graduate students. The Staff

285. Osteology of Mammals, Birds, and Fish. *
Practicum in vertebrate osteology, covering all larger mammal species of central California, plus selected bird and fish species, and topics in evolution and ecology of selected taxa. Students cannot receive credit for this course and course 185. Enrollment is restricted to graduate students. Enrollment limited to 15. The Staff

287. Advanced Topics in Archaeology. S
A graduate seminar on advanced theoretical or methodological topics pertinent to advanced graduate student and faculty interests. Enrollment is restricted to graduate students or by consent of instructor.

Enrollment limited to 12. J. Habicht Mauche

287A. Advanced Topics: Indigenous Archaeology. *
Traces the development of indigenous archaeology primarily in North America. Topics include: the Native American Graves Protection and Repatriation Act (NAGPRA) and issues of cultural patrimony; postcolonialism; decolonizing methodologies; community-based research; oral sources and other ways of knowing the past; and future directions. Enrollment is restricted to graduate students. Enrollment limited to 10. T. Schneider

292. Graduate Colloquium (2 credits). F,W,S
Designed to offer an institutionalized mechanism for the presentation of research papers and teaching efforts by faculty and advanced graduate students. Enrollment is restricted to graduate students. May be repeated for credit. The Staff

294R. Advanced Readings in Biological Anthropology. F,W,S
Introduces literature relevant to students’ research emphases and allows for discussion of new scientific publications. (Formerly Graduate Readings in Behavioral Ecology.) Enrollment is restricted to graduate students. May be repeated for credit. V. Oelze

295A. Scientific Method: Biological Anthropology. F
The first core course of the Biological Anthropology Graduate Program. Students learn the principles and methods by which research projects in biological anthropology are devised and executed. Students cannot receive credit for this course and course 195A. Enrollment is restricted to graduate students. L. Fehren-Schmitz

297. Independent Study. F,W,S
Students submit petition to sponsoring agency. The Staff

298. Advanced Laboratory Apprenticeship. F,W,S
Supervised tutorial in specialized analytic methods in archaeology or physical anthropology. Students collaborate on laboratory research with a departmental mentor or, with advisor’s consent, with researchers on or off campus, preparing a manuscript for publication or an extensive literature review. Permission of instructor required. Enrollment restricted to graduate students. May be repeated for credit. The Staff

Prerequisite(s): petition on file with sponsoring agency. The Staff

*Not offered in 2018-19

Revised: 07/15/18
PROGRAM DESCRIPTION

Applied linguistics is an interdisciplinary field that seeks to understand how languages are learned (first and second language acquisition), how more than one language is represented and accessed in the mind of the individual (bilingualism), the ways in which language and society intersect (sociolinguistics), how people from different cultural and linguistic backgrounds interact (intercultural communication), and the methods and principles of language teaching (pedagogy).

The major in applied linguistics and multilingualism is designed for students who wish to pursue the study of a particular language (e.g., Chinese, French, German, Italian, Japanese, or Spanish), and at the same time, gain an in-depth understanding of language use in bilingual and multilingual settings. Coursework for the major presupposes some familiarity with theoretical linguistics, and thus majors are required to take three foundational courses offered in the Linguistics Department (LING 50; LING 101; LING 111 or 112).

Since applied linguistics is integrally connected to other disciplines such as cognitive and developmental psychology, education, anthropology, and sociology, students have the option of taking some elective courses in these areas. Finally, majors are encouraged to pursue the study of more than one language in order to reflect on and enhance their understanding of the process of second language acquisition.

PROGRAM LEARNING OUTCOMES

Graduates from the applied linguistics and multilingualism studies bachelor of arts program should be able to demonstrate:

- **Proficiency in a second language**. Students who successfully complete the applied linguistics major will reach an Intermediate-high level of proficiency in their second language (L2) as described in the scale of the American Council of Teachers of Foreign Languages (ACTFL). Speakers who complete additional course work through study abroad (an aspect of the major that is very much encouraged) may reach the advanced level in their L2.

- **Understanding contexts and processes of (second) language acquisition**. Students will develop an in-depth understanding of processes of and issues relating to the acquisition of more than one language, bilingualism and multilingualism, including social, psycholinguistic and metalinguistic aspects of these processes.

- **Understanding the role and use of language in society**. Students will gain an in-depth understanding of social aspects of bilingualism and multilingualism, and issues of language in social contexts. Students will also develop an understanding of how different disciplines work together to make sense of human communication in multilingual contexts.

- **Research skills**. Students will develop the receptive and productive skills necessary for becoming members of this community of practice. Specifically, they will develop the disciplinary skills to summarize, interpret and critique both quantitative and qualitative research studies in applied linguistics. Through this process, students will develop the ability to engage in independent reading of scientific texts and research articles, to design basic research projects as well as to collect, analyze and write about applied linguistic data.

STUDY ABROAD

The Office of International Education (OIE) sponsors programs of study. Students who wish to major in applied linguistics and multilingualism are strongly encouraged to study abroad. For a list of current programs and requirements, visit their website.

Students who participate in EAP may petition to apply up to three courses (up to 15 upper-division credits) from EAP toward the major.

DECLARING THE MAJOR IN APPLIED LINGUISTICS AND MULTILINGUALISM

To declare the major, students must have completed level 4 of a non-English language (e.g., Chinese 4, French 4, Japanese 4) with a grade of B- or better.

REQUIREMENTS FOR THE MAJOR

**LANGUAGE STUDY: COMPLETION OF LEVEL 6 IS REQUIRED**

There are a total of 60 credits (50 upper-division and 10 lower-division) required for the applied linguistics and multilingualism major. See below for a breakdown of the credit requirements.
Applied Linguistics and Multilingualism

FOUNDATION COURSES (20 CREDITS TOTAL)

- Applied Linguistics 80, Introduction to Applied Linguistics (5 credits)
- Linguistics 50, Introduction to Linguistics (5 credits)
- Linguistics 101, Phonology 1 (5 credits)
- Linguistics 111, Syntactic Structures, or Linguistics 112, Syntax 1 (5 credits)

CORE COURSE (5 CREDITS TOTAL)

- Applied Linguistics 101, Second Language Acquisition

ADVANCED LANGUAGE PROFICIENCY COURSES (10 CREDITS TOTAL)

- Students must take a minimum of two upper-division, 5-credit courses in the student’s target language (Chinese, French, German, Italian, Japanese, or Spanish). The complete Advanced Language Proficiency course list is posted on the department’s web page. Students may petition to have other 5-credit, upper-division courses offered in the student’s target language count toward the Advanced Language Proficiency requirement.

ELECTIVES (20 CREDITS TOTAL)

- Four upper-division (5-credit) electives from the following list are required, at least three of which must be APLX courses. Additional courses can be considered, pending approval by the APLX faculty director.
  ANTH 139, 143
  APLX 102, 112, 113, 115, 116, 135
  EDUC 141
  LING 117, 120, 154, 155, 157, 181, 182, 183, 186, 187
  LIT 101, 102
  PSYCH 105, 120D, 124, 125, 137
  SOC 142, 143

CAPSTONE REQUIREMENT (5 CREDITS TOTAL)

In their senior year, applied linguistics and multilingualism majors must satisfy the senior exit requirement with Applied Linguistics 190, Senior Research Seminar

DISCIPLINARY COMMUNICATION (DC) REQUIREMENT

The Disciplinary Communication requirement (DC) is satisfied by successfully completing Applied Linguistics 190.

The following planner assumes that transfer students admitted to UCSC in the fall term place into Level 4 of language study upon arrival at UCSC. See further information about transfer student preparation in the next section.
should be able to complete the applied linguistics and multilingualism major in normative time as long as they place into language Level 4 (Level 5 for students entering UC Santa Cruz in the winter term) upon arrival at UCSC. While it is not a condition of admission, students from California community colleges may complete the Intersegmental General Education Transfer Curriculum (IGETC) in preparation for transfer to UC Santa Cruz.

LANGUAGES AND APPLIED LINGUISTICS FACULTY AND PROFESSIONAL INTERESTS

**PROFESSOR**

**Shigeko Okamoto**
Sociolinguistics, discourse analysis, pragmatics, language and gender, foreign language pedagogy, Japanese linguistics

**Zsusanna Abrams**
Applied linguistics, language pedagogy, second language acquisition, intercultural communication, discourse analysis, computer-mediated communication

**Eve Zyzik**
Second language acquisition, heritage languages, Spanish linguistics, cognitive and usage-based theory, language pedagogy, content-based instruction

**ASSOCIATE PROFESSOR**

**Mark Amengual**
Bilingualism, acoustic phonetics, psycholinguistics, second language acquisition, Spanish and Romance linguistics

**Bryan Donaldson**
Word order variation in second-language French, medieval French and medieval Occitan through the lens of information structure, discourse analysis, and sociolinguistics

**ASSISTANT PROFESSOR**

**Donald P. Miller**
Corpus linguistics, L2 academic literacy—particularly academic vocabulary—development, corpus-informed EAP materials and curriculum development and pedagogy

LANGUAGES AND APPLIED LINGUISTICS COURSES

**LOWER-DIVISION COURSES**

**80. Introduction to Applied Linguistics. F**
Introduces the field of applied linguistics, learning about language acquisition, use, and teaching in multilingual contexts from multiple disciplinary perspectives. Also, introduces research models that examine psycholinguistic, sociolinguistic, and/or educational aspects of multilingualism. Enrollment limited to 40. (General Education Code(s): PE-H.) The Staff, S. Okamoto, M. Amengual, Z. Abrams, B. Donaldson, E. Zyzik

**99. Tutorial. F,W,S**
Students submit petition to sponsoring agency. May be repeated for credit. The Staff

**99F. Tutorial (2 credits). F,W,S**
Students submit petition to sponsoring agency. May be repeated for credit. The Staff

**UPPER-DIVISION COURSES**

**101. Second-Language Acquisition. W**
Introduces the field of second-language acquisition. Topics include contexts of acquisition, the impact of individual differences, and basic methods of data collection and analysis. Prerequisite(s): course 80 or linguistics 50. Enrollment limited to 40. The Staff, E. Zyzik, D. Miller, B. Donaldson, M. Amengual, Z. Abrams

**102. Bilingualism. W**
An overview of bilingualism. Focuses on bilingualism as an individual phenomenon (i.e., how two languages develop and are represented in the minds of individual speakers), and as a social one (i.e., how do bilinguals interact in a community and how does this context of language contact shape their linguistic identity). Prerequisite(s): course 80 or linguistics 50. Enrollment limited to 40. The Staff, M. Amengual, E. Zyzik

**103. Second Language Speech. ***
Examines themes related to the acquisition of L2 phonetics and phonology, including theories and models of L2 speech learning; phonetics and phonology in L2 acquisition; as well as the training effects on L2 pronunciation. Prerequisite(s): course 80 or Linguistics 50. The Staff

**112. Language and Gender. ***
Examines the relationship between language and gender. Topics include: gender differences in speech; linguistic gender norms and stereotypes; gender and the construction of identity in discourse; sexuality and language; sexism in language; social, educational, and political implications. (Formerly Languages 112.) S. Okamoto, The Staff

**113. Inter-Cultural Communication. F**
Examines intercultural communication and miscommunication between individuals and speech communities, both within North
Applied Linguistics and Multilingualism

American and global contexts. Through discourse and analytic approaches, students explore cultural stereotypes and interactional expectations, among other issues, that influence the outcome of intercultural communication. (Formerly Languages 113, Cross-Cultural Communication and Miscommunication.) Enrollment is restricted to juniors and seniors. Enrollment limited to 25. (General Education Code(s): CC.) Z. Abrams, The Staff

115. Language and Power. S
Examines the relationship between language and power. Explores the ways in which national languages, regional and social dialects, and specific phonological morphosyntactic, or lexical features come to be associated with particular social meanings and contribute to creating social inequality. Prerequisite(s): course 80. Enrollment is restricted to sophomores, juniors, and seniors. Enrollment limited to 25. The Staff, Z. Abrams, S. Okamoto

Familiarizes students with the methods and theoretical assumptions behind discourse analytic approaches to the study of language. Examines language used in specific contexts. Topics include: genres, registers; discourse organization; discourse grammar; interaction; conversation; pragmatics; and social practice. Prerequisite(s): Linguistics 50 or by consent of the instructor. Enrollment is restricted to juniors and seniors. B. Donaldson, The Staff

135. Second Language Teaching. S
Introduces the theories of second-language acquisition and their connection to second-language teaching. Students develop cutting-edge teaching and testing materials, and engage with current scholarship on language instruction. Prerequisite(s): at least one year of college-level study of a foreign language, or its equivalent. Enrollment restricted to juniors and seniors, and by permission of instructor. Students cannot receive credit for this course and course 235. Enrollment limited to 20. E. Zyzik, D. Miller, Z. Abrams

136. Second Language Assessment. *
Introduces the fundamentals of second-language testing by presenting theories, key concepts, and practical applications in language assessment. Throughout the course, students develop their own assessment portfolios, creating materials they can use in their post-BA career. Prerequisite(s): course 135 or by permission of the instructor. The Staff

190. Research Seminar in Applied Linguistics. S
Prepares students to conduct research in applied linguistics. Students evaluate published studies that represent both quantitative and qualitative methods. Prerequisite(s): courses 80 and 101; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to seniors. S. Okamoto, E. Zyzik, M. Amengual, B. Donaldson, Z. Abrams

199. Tutorial. F,W,S
Students submit petition to sponsoring agency. May be repeated for credit. The Staff

199F. Tutorial (2 credits). F,W,S
Students submit petition to sponsoring agency. May be repeated for credit. The Staff

GRADUATE COURSES

235. Second Language Teaching. S
Helps novice instructors learn about the theory and practice of language teaching and learning. Focuses on current methods used in communicatively oriented classrooms. Topics include: listening comprehension, grammar, vocabulary, reading, writing, and testing/assessment. Students cannot receive credit for this course and course 135. (Formerly Language Studies 201.) Enrollment is restricted to graduate students. Enrollment limited to 20. The Staff, Z. Abrams, E. Zyzik

* Not offered in 2018-19

Revised: 07/15/2018
PROGRAM DESCRIPTION

The Art Department offers an integrated program of study in theory and practice exploring the power of visual communication for personal expression and public interaction. The department provides students with the means to pursue this exploration through courses that provide the practical hands-on learning skills for art production in a variety of media within the contexts of critical thinking and broad-based social perspectives.

The art program at UC Santa Cruz is composed of courses in drawing, animation, painting, photography, sculpture, print media, intermedia, critical theory, electronic art, public art, environmental art, social art practice, and interactive technologies. Baskin visual arts studios provide world-class facilities for art production in these areas. The Art Department is committed to pursuing a continuing dialogue about what constitutes basic preparation in the arts while offering students experience in established practices, new genres, and new technologies.

Students graduating with a major in art may become professional artists or pursue careers in such diverse areas as arts administration, arts management, museum education, art direction, communication design, web design, digital imaging, curating, art education, multi-media specialist, industry consultant, model maker, and publishing. Many students who want to teach at the college level continue their education in graduate school.

ART UNDERGRADUATE PROGRAM
LEARNING OUTCOMES

Students who earn a Bachelor of Arts (B.A.) in Art will gain the skills, knowledge, and understanding that will enable them to:

- demonstrate proficiency in a range of techniques and media;
- demonstrate the ability to imagine, create, and resolve a work of art;
- demonstrate communication through familiarity with and ability to analyze, both verbally and in writing, issues and forms of contemporary art with a clear understanding of historical precedents; and
- demonstrate critical thinking through the ability to articulate an insightful response and analysis of a work of art in order to participate in discussions and studio critiques.

DECLARATION OF THE ART MAJOR—FROSH

Students may apply for admission to the art major after completing two of the following: Art 10D, Art 10E, or Art 10F. While completing this lower-division coursework, it is critical that each student meet with a faculty adviser regarding the student’s potential to proceed to the major level.

DECLARATION OF THE ART MAJOR—JUNIOR TRANSFER

Junior transfer students must pass a portfolio review in early April and be admitted to UC Santa Cruz to declare the art major. Acceptance to UCSC does not guarantee admittance to the major, nor does passing the portfolio review guarantee that UCSC will accept the student to the university. Transfer students must identify themselves as potential art majors when applying to UCSC in order to receive information on the portfolio review deadlines and the materials required for the review. If a student is admitted to UCSC and does not pass the Art Department portfolio review, it is imperative that this student pursue another major upon admittance. Students will be notified of the results of the review before they need to submit their Statement of Intent to register for UCSC. Students who have not completed three courses articulated to courses in the Art 20 series (in three different media) before portfolio review are rarely selected. It is also highly recommended that junior transfers take history of art and visual culture courses at the community college, including one in Western art and culture and one in non-Western art and culture.

REQUIREMENTS OF THE ART MAJOR

The minimum requirements for art majors who were admitted to UC Santa Cruz in their frosh year are completion of nine lower-division and eight upper-division courses and satisfaction of the senior comprehensive requirement. Junior transfer students complete seven lower-division and eight upper-division courses and their senior comprehensive requirement. A maximum of three courses total from outside the Art Department (including UC Education Abroad Program (EAP) courses) may be substituted for regular art courses with the approval of a major adviser. In courses taken outside the UC Santa Cruz Art
Art

Department, students must have received a grade of C or higher. Students plan their course of study in consultation with a faculty adviser.

LOWER-DIVISION REQUIREMENTS

Students complete nine courses as follows:

The Foundation (15 credits required; two of the 10 series are waived for junior transfers)
• 10D, 2D Foundation
• 10E, 3D Foundation
• 10F, 4D Foundation

Introduction to Contemporary Art Practice (15 credits required; junior transfers should complete at community college)
Frosh complete three courses from the following:
• 20G, Introduction to Print Media and Drawing
• 20H, Introduction to Sculpture and Public Art
• 20I, Introduction to Photography
• 20J, Introduction to Drawing and Painting
• 20K, Introduction to Digital Media
• 20L, Introduction to Drawing

Digital Tools (5 credits required)
• 80T, Digital Tools for Contemporary Art Practice

Critical Theory and Historical Context (10 credits required)
Students complete two courses from History of Art and Visual Culture (HAVC): one in Western art and culture and one in non-Western art and culture.

Note: Students may use Advanced Placement (AP) in Art History in lieu of the Western-emphasis history of art and visual culture requirement.

UPPER-DIVISION REQUIREMENTS

Students complete eight courses as follows:

Studio Work (35 credits required)
• Seven upper-division (100+ numbered) studio courses (of which Art 190B may be one)

For junior transfers it is strongly recommended that one of the upper-division studios be Art 194, Forms and Ideas, taken in the junior year.

SENIOR CAPSTONE/COMPREHENSIVE REQUIREMENT

• 190A, Writing for Artists (meets the Disciplinary Communication requirement for the Art B.A.); and

One of the following options:
1. Completing Art 190B: Senior Project; or
2. Presenting an exhibition and, by appointment, meeting with a faculty member for review and critique of the exhibition; or
3. Submitting a portfolio and, by appointment, meeting with a faculty member for review and critique of the portfolio.

Senior majors should meet with their faculty adviser about this requirement.

A total of 85 credits are required for the Art B.A.; students are advised to plan in advance if they are interested in the program. Some requisite courses may be offered during Summer Session.

The last three quarters of coursework for the major must be completed in residence at UC Santa Cruz.

ART MAJOR PLANNER (INCOMING FROSH)

The following is a recommended academic plan for students to complete during their first two years as preparation for the art major.

<table>
<thead>
<tr>
<th>Year</th>

<td>-----------</td>
</tr>
<tr>
<td>UD studio</td>
<td>UD studio</td>
<td>or ART 190B</td>
<td></td>
</tr>
</tbody>
</table>

† Only one of the three 10 series courses is required for junior transfers.

*Courses from history of art and visual culture (one with a Western emphasis, one with a non-Western emphasis). It is highly recommended that junior transfers take history of art and visual culture courses at the community college. Western emphasis courses are listed as “Europe and the Americas,” all others are non-Western on assist.org.

**DISCIPLINARY COMMUNICATION (DC) REQUIREMENT**

- Students of every major must satisfy that major’s upper-division Disciplinary Communication (DC) requirement. The DC requirement in art is satisfied by completing Art 190A, Writing for Artists.

**COMPREHENSIVE REQUIREMENT**

- All art majors satisfy the capstone/comprehensive requirement with 190A, Writing for Artists; and
- One of the following options:
  1. Completing Art 190B: Senior Project; or
  2. Presenting an exhibition and, by appointment, meeting with a faculty member for review and critique of the exhibition; or
  3. Submitting a portfolio and, by appointment, meeting with a faculty member for review and critique of the portfolio.

Senior majors should meet with their faculty adviser about this requirement.

**STUDY ABROAD**

The UC Education Abroad Program (EAP) offers students the opportunity for study abroad. Art majors may participate in EAP in their junior year. Art students may not go abroad in their senior year because the last three quarters of coursework must be in residence at UC Santa Cruz. When considering attending EAP, the student should be mindful that only three courses may be substituted in the art major and each must receive a grade of B or better.

**MATERIALS FEE**

Art students should be aware of the materials fee required for some studio courses. The fee is billed to the student’s account for specific course materials purchased by the Art Department through the university. Fees generally range from $15 to $175 per course. Students may incur additional expense purchasing individual supplies.

**ART FACULTY AND PROFESSIONAL INTERESTS**

**PROFESSOR**

- Patrick Aherne, Emeritus
- Joyce Brodsky, Emerita
- Doyle Foreman, Emeritus
- Frank Galuszka, Emeritus
- Dee Hibbert-Jones
  Public art, sculpture, documentary film, animation
- Fred A. Hunnicutt, Emeritus
- Jimin Lee
  Etching, lithography, monoprinting, book arts, ukiyo-e

ART COURSES

LOWER-DIVISION COURSES

Introduces general education students and prospective majors to theory and practice of art and contemporary discourse surrounding it. Courses expose students to both art discourse and art making through large lecture sections that meet twice a week and smaller studio sections that meet twice a week. Students must register for both lecture and studio sections. The Staff

10D. 2D Foundation. W
Introduces students to the fundamental principles of two-dimensional art and design and focuses on analyzing the concepts of line, color shape, value, space, form, unity, balance, scale, proportion, texture, and emphasis to be used to express complex ideas. This course is a hybrid studio/lecture. Students are billed for a materials fee. (General Education Code(s): IM.) E. Martinez Leal

10E. 3D Foundation. F
Introduces students to the fundamental principles of three-dimensional art and design through basic concepts, techniques, and technical practice. Focuses on three-dimensional art and the design fundamentals of sculpture, public art, architecture, and the industrial-design process and production. This course is a hybrid studio/lecture. Students are billed for a materials fee. (General Education Code(s): IM.) W. Hibbert-Jones

10F. 4D Foundation. S
Introduces students to the fundamental principles of four-dimensional/time-based art and design through basic concepts, techniques, and technical practices. Computers and video, photo, sound, and lighting equipment are used to create short-form, time-based work. This course is a hybrid studio/lecture. (General Education Code(s): IM.) E. Anderson

20. Introduction to Contemporary Art.
Introduces basic conceptual and practical tools for specific art practices. Instruction consists of studio sections that meet twice a week incorporating theory, practice, technique, and critiques. The Staff

20G. Introduction to Print Media and Drawing. W,S
Introduces the methods, materials, and history of printmaking and drawing as a tool for creative exploration. Understanding and development of concepts and skills are achieved through a series of lectures, studio demonstrations and practice, assignments, and critiques. Students are billed for a materials fee. Prerequisite(s): courses 10D, 10E, and 10F. Enrollment is restricted to proposed art and art majors. (General Education Code(s): PR-C.) E. Martinez Leal, J. Lee

20H. Introduction to Sculpture and Public Art. W,S
Introduces sculpture and art in public space. The course is composed of lectures, readings, discussions, studio assignments, and demonstrations. Students are billed for a materials fee. Prerequisite(s): courses 10D, 10E, and 10F. Enrollment is restricted to proposed art and art majors. (General Education Code(s): PR-C.) L. Palmer, J. Parker

20I. Introduction to Photography. F,W
Introduces basic skills and conceptual development in photography and related digital media through image-making in the field, on the web, and in laboratories, through readings, discussions, and critiques. Students are billed for a materials fee. Prerequisite(s): two courses from Art 10D, 10E, or 10F. Enrollment is restricted to proposed art and art majors. (General Education Code(s): PR-C.) K. Karlic, The Staff

20J. Introduction to Drawing and Painting. F,W,S
Introduces the material practices of painting in combination with the formal vocabulary of the visual arts. A discussion of values, form, color, and figure/ground relationships enters into each class. Students are billed for a materials fee. Prerequisite(s): two courses from Art 10D, 10E, or 10F. Enrollment is restricted to proposed art and art majors. (General Education Code(s): PR-C.) M. Gwyn, The Staff

20K. Introduction to New Media and Digital Artmaking. F
Introduces digital and new media art practice. Explores the use of the computer as tool and medium. Provides a hands-on introduction to the fundamentals of graphics; digital-image acquisition and manipulation; video; web design; and computer programming. Lectures, readings, and discussions examine the history of technology art form and technology's relationship to contemporary culture. Students are billed for a materials fee. Prerequisite(s): two courses from Art 10D, 10E, or 10F. Enrollment is restricted to proposed art and art majors. (General Education Code(s): PR-C.) Y. Harris, E. Anderson

42. Student-Directed Seminar. *
Seminars taught by upper-division students under faculty supervision. Does not fulfill major requirement. (See course 192.) The Staff

80. Artists and Ideas.
Introduces general education students, prospective majors, and art majors to art forms and critical ideas that have shaped artistic practice focusing on the work of contemporary artists, including current faculty in the Art Department. The Staff

80B. Environmental Art. S
Examines ways artists engage, interact, and comment upon ecology and nature in their artworks by examining environmental art from the 1960s to the present. (General Education Code(s): PE-E.) E. Stephens

80D. Introduction to Photography. F,S
Art

Introductory course for beginners. Various techniques examined and assigned in specific exercises. Work on projects using color film; this is a non-darkroom course. Examples given of photography from 1826 to the present. Balances historical study and practice through assigned homework exercises. Students must provide their own camera, preferably one with a manual setting. No phone cameras allowed. Students are billed a materials fee. (General Education Code(s): IM.) K. Karlíc, K. Perry

80F. Introduction to Issues in Digital Media. F
Digital media was positioned as a radical new social and creative medium in the 1980s and 1990s. The ensuing decades have seen this area become ubiquitous mass media with structural inequalities, centralized ownership, environmental damage, and precarious labor conditions. At the same time, it has become the language of our time and remains a site of creativity and intervention and offers opportunities for social changes. This course provides an introduction to key issues in this area through the lens of race and ethnicity. (General Education Code(s): ER.) K. Gillette

80T. Digital Tools for Contemporary Art Practice. W
Introduces the digital tools and mediums available to contemporary art practices. Tools are explored from a historical and theoretical context and from a technical perspective through hands-on tutorials. A variety of artworks that use digital mediums are also examined. Covers photo and vector editors, sound and video editing, basic 3D modeling, and images and interactions generated by code. Students should have basic computer literacy. (General Education Code(s): PE-T.) J. Parker, K. Gillette

80X. Ars Erotica: Sexual Imagery in Culture and Art. W
What is sexually explicit imagery all about? Is it art, porn, trash, political hot potato, or hot commodity? This course enables students to critically explore these questions and more in an academic setting. (General Education Code(s): PE-H.) E. Stephens, The Staff

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

UPPER-DIVISION COURSES

101. Introduction to Computer Programming for the Arts. S
Combines an introduction to computer programming for beginners with special topics that are essential for the digital arts. Basic concepts of programming are developed in the JavaScript language and applied to digital arts media, such as algorithmically generated still images and animations in two and three dimensions, sound art, and music composition. Presentation of digital artwork in the theater and via the web are covered in detail. (General Education Code(s): MF.) W. Modes

102. Interactive Arts. *
Physical computing examines bodily sound, movement, and other physical phenomena as an interface to a computer or microcomputer. Students investigate electronics and devices for use in interactive art-making to create sculptural or installation-based projects. Students receive hands-on experience working with sensors, motors, switches, gears, lights, circuits, and hardware store devices to create kinetic and interactive works of art, programming and interface design. Students are billed a materials fee. Prerequisite(s): Three courses from: Art 15, 20G, 20H, 20I, 20J, 20K, 20L and 26 or by permission of instructor. Enrollment is restricted to art majors. May be repeated for credit. E. Anderson, The Staff

104. Digital Video. *
An exploration of the video medium including production using the digital video format. Digital video cameras will be used to produce digital source material to be manipulated in a non-linear digital editing system. Image manipulation, effects, and editing will be explored. A variety of video structures, theories, concepts, and forms will be examined through production, discussions, and viewing students' and artists' work. Prerequisite(s): Three courses from: Art 15, 20G, 20H, 20I, 20J, 20K, 20L, and 26 or by permission of instructor. Enrollment is restricted to art majors. May be repeated for credit. E. Anderson, The Staff

106A. 2D Animation. *
Introduces animation techniques, practices, history, and theories. Students learn techniques and process in 2D, stop-motion, and digital animation. Projects teach students the workflow of animating including script development, storyboarding, frame-by-frame animation, animatic, digital, and post-production. Students are required to research artists, both historical and contemporary, working in the field of animation and to be able to discuss the work. The course teaches theoretical and historical perspectives on animation and requires students to develop a critical analysis and vocabulary. (Formerly Introduction to 2D Animation). Prerequisite(s): Three courses from: Art 15, 20G, 20H, 20I, 20J, 20K, 20L, and 26. Enrollment is restricted to art majors. May be repeated for credit.
Art

The Staff

106C. Stop Motion Animation. F
Introduction to imagining, producing, and creating stop motion animations. Includes hands-on work in storyboarding, drawing and paper-based animation, pixilation, animation of everyday objects, and Claymation with basic characters and sets. Historical and contemporary animations will be viewed in class to inspire animation ideas, aesthetics, and practices. Students are billed a materials fee. Prerequisite(s): One course from: Art 15, 20G, 20H, 20I, 20J, 20K, 20L, 26; or by permission of instructor. Enrollment is restricted to art majors. May be repeated for credit. E. Anderson

106E. 3D Modeling and Animation. W
Independent and collaborative creative projects using advanced computer methods. May include networking projects, virtual representations, interactive multimedia, installation, performance, 3D modeling and animation, or robotics. Emphasis on advanced critical and experimental approaches to computers as a unique art medium, and contemporary research issues. Students are required to enroll in scheduled lab section. Students are billed for a materials fee. (Formerly Introduction to 3D Modeling and Animation.) Prerequisite(s): Three courses from: Art 15, 20G, 20H, 20I, 20J, 20K, 20L, 26; or by permission of instructor. Enrollment is restricted to art majors. May be repeated for credit. E. Anderson

110. Intermediate/Advanced Drawing. *
Work moves toward individual directions in drawing. A variety of media are explored. Each student is expected to do 150 hours of drawing over the quarter. Students are billed a materials fee. Prerequisite(s): One course from Art 15, 20G, 20J, 20L, 111, 112, 119; and two from Art 20H, 20I, 20K, or 26; or by permission of instructor. Enrollment is restricted to art majors. May be repeated for credit. M. Gwyn

111. Figure Drawing. *
Focuses on drawing from the human figure and exploring the figure for the purpose of personal expression and social communication. Intended for the intermediate/advanced drawing student. Students are billed a materials fee. Prerequisite(s): One course from Art 15, 20G, 20J, 20L, 110, 112, 119; and two from Art 20H, 20I, 20K, or 26; or by permission of instructor. Enrollment is restricted to art majors. May be repeated for credit. The Staff

112. Mixed Media Works on Paper. *
This course stresses alternative drawing processes, techniques, and materials. Intended for the intermediate or advanced student. Students are billed a materials fee. Prerequisite(s): One course from Art 15, 20G, 20J, 20L, 110, 111, 119; and two from Art 20H, 20I, 20K, or 26; or by permission of instructor. Enrollment is restricted to art majors. May be repeated for credit. M. Gwyn

119. Special Topics in Drawing. W
Special topics in drawing as announced. Students are billed a materials fee. Prerequisite(s): One course from Art 15, 20G, 20J, 20L, 110, 111, 112; and two from Art 20H, 20I, 20K, or 26; or by permission of instructor. Enrollment is restricted to art majors. May be repeated for credit. The Staff, M. Gwyn, F. Galuszka

120. Intermedia. *
Explorations of the role of an artist as someone who integrates a variety of media to explore conscious subject matter. Emphasis on contemporary art forms that incorporate scores, mapping, found objects, time-based elements, and interactivity. Students are billed a materials fee. (Formerly Introduction to Intermedia.) Prerequisite(s): One course from Art 20H, 121, 122, 124, 125, 129, 172, 180B, 183, 188, or 189; and two non-sculpture/intermedia/public art lower-division studios from Art 15, 20G, 20I, 20J, 20K, 20L, or 26. Restricted to art majors. May be repeated for credit. E. Stephens, The Staff

121. Intermedia II. *
Investigation in combining media, materials, and forms to explore a variety of contemporary art practices. Students develop their projects thematically throughout the quarter. Assignments encourage experimentation with time and motion, text and images, collaboration, installation, performance, and interactivity. Discussions, reading handouts, and critiques further the development of perceptual and conceptual skills. Skill workshops introduce new techniques. Students are billed a materials fee. Prerequisite(s): Art 120. Enrollment is restricted to art majors. May be repeated for credit. (General Education Code(s): PR-C.) The Staff

122. Intermedia: Conceptual and Process-Oriented Approaches. *
Special subjects to be offered by regular staff or visiting artists as announced. Students are billed a materials fee. Prerequisite(s): One course from Art 20H, 120, 121, 124, 125, 129, 172, 180B, 183, 188, or 189; and two non-sculpture/intermedia/public art lower-division studios from Art 15, 20G, 20I, 20J, 20K, 20L, or 26. Restricted to art majors. May be repeated for credit. The Staff

124. Material Metaphor: Creating Meaning in Form. *
Workshops introduce further
investigation of materials and techniques. Students explore diverse methods of visual communication through a series of projects that require individual research and collaborative efforts. Students are encouraged to develop projects according to their motivation, expertise, and self-assessment. Emphasis placed on contemporary studio practices of installation, students will integrate a variety of materials and metaphor within the architectural and environmental space. Students are billed a materials fee.

Prerequisite(s): One course from Art 20H, 120 121, 122, 125, 129, 172, 180B, 183, 188, or 189; and two non-sculpture/intermedia/public art lower-division studios from Art 15, 20G, 20I, 20J, 20K, 20L, or 26. Restricted to art majors. May be repeated for credit. E. Stephens

129. Special Topics in Intermedia.*
Exploring interactive strategies for making art. Projects experiment with combining forms and mediums to engage an audience. Students are billed a materials fee.
Prerequisite(s): One course from Art 20H, 120, 121, 122, 124, 125, 172, 180B, 183, 188, or 189; and two non-sculpture/intermedia/public art lower-division studios from Art 15, 20G, 20I, 20J, 20K, 20L, or 26. Restricted to art majors. May be repeated for credit. E. Stephens, The Staff

130. Intermediate/Advanced Painting, F
Continuation of the development of a basic foundation in painting with emphasis on the development of individual, experimental procedures. A foundation in drawing is recommended. Students are billed a materials fee.
Prerequisite(s): One from Art 20J, 20L, 133, 137, 138, or 139; and two non-painting lower-division studios from Art 15, 20G, 20H, 20I, 20K, or 26. A foundation in drawing is recommended. Enrollment is restricted to art majors. May be repeated for credit. M. Gwyn

133. Abstract Painting, W
Exploration of abstract painting through studio work, lectures, and critiques with emphasis on progressive abstraction, minimalism, op art, and abstract expressionism as well as other 20th-century and 21st-century forms. A foundation in drawing is recommended. Students are billed a materials fee. Prerequisite(s): One from Art 20J, 20L, 130, 137, 138, or 139; and two non-painting lower-division studios from Art 15, 20G, 20H, 20I, 20K, or 26. Enrollment is restricted to art majors. May be repeated for credit. I. Pines, The Staff

137. Outdoor Painter’s Project, S
Explores contemporary landscape through the practice of plein air painting. Observational plein air painting will provide the foundation for the class. Instruction includes technical instruction in materials and technique as well as conceptual material. Student may work with oils, alkyds, or acrylic on panels, paper, or canvas.
Prerequisite(s): One from Art 20J, 20L, 130, 133, 138, or 139; and two non-painting lower-division studios from Art 15, 20G, 20H, 20I, 20K, or 26. Enrollment is restricted to art majors. May be repeated for credit. P. Loftus

138. Facture and Meaning, S
Explores the materials and history of painting through lectures, demonstrations, and practice in oils, egg tempera, distemper, and Flashe paint. Students participate in group practices and also work independently on projects designed by them in consultation with the instructor. A foundation in drawing is recommended. Students are billed for a materials fee.
Prerequisite(s): One from Art 20J, 20L, 130, 133, 137, or 139; and two non-painting lower-division studios from Art 15, 20G, 20H, 20I, 20K, 20L, or 26. Enrollment is restricted to art majors. May be repeated for credit. M. Gwyn

139. Special Topics in Painting, W
Special studies in painting as announced. A foundation in drawing is recommended. Students are billed a materials fee.
Prerequisite(s): One from Art 20J, 20L, 130, 133, 137, or 138; and two non-painting lower-division studios from Art 15, 20G, 20H, 20I, 20K, 20L, or 26. Enrollment is restricted to art majors. May be repeated for credit. M. Gwyn, The Staff
143T. Design Concept Development. *
Students develop an advanced design project related to theatrical production, apparel or housewares, marketing collateral, packaging or product development, or any related fields. Students address research and development, materials sourcing, budgeting, fabrication, and portfolio-quality presentation materials. Prerequisite(s): Theater Arts 10; or two courses from ART 10D, 10E, and 10F. Enrollment is by permission of the instructor. Theater Arts 106 is recommended as preparation. (Also offered as Theater Arts 103. Students cannot receive credit for both courses.) B. Baron

146T. Digital Illustration. *
Introduces digital rendering techniques using the Adobe Creative Suite. Using Adobe Creative Suite, students solve design problems. Enrollment by permission of the instructor. Application form available from baron@ucsc.edu. (Also offered as Theater Arts 106. Students cannot receive credit for both courses.) Enrollment limited to 30. B. Baron

147T. Design Studio: Costume. *
Students learn advanced principles and theory of costume design, and apply these toward a large project for theatrical/film production or for character design for animation and gaming. Students are billed a materials fee. (Also offered as Theater Arts 117. Students cannot receive credit for both courses.) Enrollment limited to 30. May be repeated for credit. (General Education Code(s): IM) B. Baron

150. Darkroom Practices. F
Students concentrate on darkroom practices and explore visual ideas, directing their work toward individualized goals. Required work includes making photographic prints, reading historical and theoretical works, and examination of photographs. Students are billed a materials fee. Prerequisite(s): One course from Art 20I, 151, 156, 158, or 159; and two non-photography lower-division art studios from Art 15, 20G, 20H, 20J, 20K, 20L, or 26. Enrollment is restricted to art majors. May be repeated for credit. K. Karlic, The Staff

151. Digital Photography. *
Introduction to basic theories behind the digital production, manipulation, and output of photographic images. Through readings and production, students address major issues specific to working with images in an increasingly digital environment. Students are billed a materials fee. Prerequisite(s): One course from Art 20I, 150, 156, 158, or 159; and two non-photography lower-division art studios from Art 15, 20G, 20H, 20J, 20K, 20L, or 26. Enrollment is restricted to art majors. May be repeated for credit. K. Karlic, K. Perry

156. Project Development in Photography. F,W
Concentrate on photographic project development, developing analytical skills designed to help direct students’ own photographic ideas. Helps students create a conceptual theoretical framework through image-making in the field and studio, through critique and discussion, through readings, and by studying the work of artists. Students are billed a materials fee. Prerequisite(s): One course from Art 20I; and two non-photography lower-division art studios from Art 15, 20G, 20H, 20J, 20K, 20L, or 26. Enrollment is restricted to art majors. May be repeated for credit. The Staff, K. Karlic, K. Perry

158. Advanced Photography. S
Students produce a portfolio of photographs, read historical and theoretical works, and study photographs and other art works. Students are billed a materials fee. Prerequisite(s): Art 156; and one course from Art 150, 151, or 159. Enrollment is restricted to art majors. May be repeated for credit. K. Karlic, The Staff

159. Special Topics in Photography. W
Special studies in photography, concentrating on specific subject matter or media. Topics may include documentary photography, landscape, alternative processes, or mixed media. Students are billed a materials fee. Prerequisite(s): Art 150 or 156. Enrollment is restricted to art majors. May be repeated for credit. K. Karlic, K. Perry

160B. Mono/Mixed Media Printmaking. *
Introduces the contemporary monotype, monoprint, and mixed media print processes facilitating a crossover between painting, drawing, and printmaking. Through lectures, demonstrations, and discussions on topics and class assignments, students will expand their creative possibilities in this exciting medium. Students are billed a materials fee. Prerequisites: One course from Art 20G, 26, 161B, 162A, 162B, 163A, 163B, 164A, 165, 168, or 169; and two non-print lower-division media studios from Art 15, 20H, 20I, 20J, 20K, or 20L. Enrollment is restricted to art majors. May be repeated for credit. J. Lee

161B. Relief/Mixed Media Printmaking. *
Explores traditional, contemporary, and experimental processes, issues, and concepts of relief and mono/mixed media printmaking. Students gain in-depth information and working knowledge to specialize individual ideas and build artistic development through varieties of class activities. Prerequisites: One course from Art 20G, 26, 160B, 162A, 162B, 163A, 163B, 164A, 165, 168, or 169; and two non-print lower-division media studios from Art 15, 20H, 20I, 20J, 20K, or 20L. Enrollment is restricted to art majors. May be repeated for credit. J. Lee, The Staff

162A. Intaglio I. F
Introduces students to various methods used in making intaglio prints. Encourages individual artistic growth of imagery and technique through assignments designed to explore the medium. Includes discussion and critique of work with equal emphasis on technique and concept. Students are billed a materials fee. Prerequisites: One course from Art 20G, 26, 160B, 161B, 162B, 163A, 163B, 164A, 165, 168, or 169; and two non-print lower-division media studios from Art 15, 20H, 20I, 20J, 20K, or 20L. Enrollment is restricted to art majors. May be repeated for credit.
164A. Screenprinting. S
Introduces water-based screen printing. Students are introduced to processes including basic equipment, printing techniques, printing papers, stenciling processes, and photographic and digital techniques. Emphasis is on continued development of content and aesthetic awareness through the possibilities of screen printing. Students are billed a materials fee. Prerequisites: One course from Art 20G, 26, 160B, 161B, 162A, 162B, 163A, 163B, 164A, 165, or 169; and two non-print lower-division media studios from Art 15, 20H, 20I, 20J, 20K, or 20L. Enrollment is restricted to art majors. May be repeated for credit. E. Martinez Leal

165. Print Media in Visual Communication. S
Explores a unique approach reviewing the printed images in visual communications. A wide blend of traditional and cutting-edge print media processes with an interdisciplinary focus will be taught for conceptualizing, producing, and presenting the printed image. Students are billed a materials fee. Prerequisite(s): one course from Art 160B, 161B, 162A, 162B, 163A, 163B, 164A, 168, or 169. Enrollment is restricted to art majors. May be repeated for credit. E. Martinez Leal

166. Art of Bookmaking. S
Introduction to production of small edition books and multiples utilizing sequential visual imaging, narrative content, and mixed media in bookmaking. Provides instruction in conceptualizing, producing, and distributing printed artists’ multiples. Ideas encouraged within a broad range of possibilities via the format of artists’ books. Students are billed a materials fee. Prerequisite(s): Three courses from: Art 15, 20G, 20H, 20I, 20J, 20K, 20L, or 26 or by permission of instructor. Enrollment is restricted to art majors. May be repeated for credit. K. Perry

168. Photo-Based Printmaking. W
Intermediate/advanced studio course exploring the processes, history, and the recent developments in contemporary photomechanical printmaking. Through experimentation and research students learn how to utilize photographic imagery, blending them in multiple layers and colors, thereby facilitating articulation of their conceptual foundations. Students are billed a materials fee. Prerequisites: One course from Art 20G, 26, 160B, 161B, 162A, 162B, 163A, 163B, 164A, 165, or 169; and two non-print lower-division media studios from Art 15, 20H, 20I, 20J, 20K, or 20L. Enrollment is restricted to art majors. May be repeated for credit. E. Martinez Leal

172. Public Art: Memory, Landscape, and Artist as Activist. W
In-depth exploration of art in the public sphere. Students build an understanding of public art sparked by practical experience designing and developing projects. Theoretical aspects of contemporary public art, and an introduction to the range of current public art practices will be introduced through readings, lectures, and artist’s talks. The combination of practical hands-on technique and theoretical ideology will enable students to fully develop their own project within the class. Students are billed a materials fee. Enrollment is restricted to juniors and seniors. May be repeated for credit. J. Leanos, W. Hibbert-Jones

180B. Sculpture II. F,W
More advanced fabrication techniques in sculpture using wood, metal, industrial, and other materials. Techniques include carpentry and woodshop skills, and an introduction to sculptural forms, processes, and ideas. Demonstrations, slide lectures, and critical discussion of work help develop technical and conceptual skills. Students are billed a materials fee. Prerequisite(s): One course from Art 20H, 120, 121, 122, 124, 125, 129, 172, 183, 188, or 189; and two non-sculpture/intermedia/public art

183. Metal Fabrication. *
Focus on teaching intermediate to advanced students the processes and techniques of direct metal fabrication for contemporary sculpture and design. Explores a range of welding, cutting, and forming techniques and processes through demonstrations, slide lectures, field trips, and studio time. Demonstrations, slide lectures, and critical discussion of work help develop technical and conceptual skills. Students are billed a materials fee. Prerequisite(s): One course from Art 20H, 120, 121, 122, 124, 125, 129, 172, 180B, 188, or 189; and two non-sculpture/intermedia/public art lower-division studios from Art 15, 20G, 20I, 20J, 20K, 20L, or 26. Restricted to art majors. May be repeated for credit. The Staff

184. 3D Art and Design: Laser Cutting and CNC Routing. F,S
Emphasizes the conceptual aspects of 3D art and design using the laser cutter to prototype and experiment with construction methods and materials to create, represent, with construction methods and materials used to develop assignments. The course is structured around assignments that develop critical thinking, individual industry, research skills, creative expressiveness, and class participation. Students are billed a materials fee. (Formerly 3D Art and Design Studio 2.) One course from Art 20H, 20K, 101, 102, 103, 107, 108, 180B, 183, 184, or 188; and two courses from Art 15, 20G, 20I, 20J, 20L, or 26. Enrollment is restricted to art majors. May be repeated for credit. J. Parker, D. Hemenway

188. Intermediate to Advanced Sculpture (Foundry). F,S
This intermediate/advanced course provides the information and facilities necessary to express ideas through the indirect process of metal casting. The "lost wax" method is used to manifest ideas in sculpture. Lectures and demonstrations are combined with work time in class. Students generate sculpture forms in wax then gate, invest, weld, chase, patina, and present at least one finished piece. Students are billed a materials fee. May be repeated for credit. Prerequisite(s): One course from Art 20H, 120, 121, 122, 124, 125, 129, 172, 180B, 183, or 189; and two non-sculpture/intermedia/public art lower-division studios from Art 15, 20G, 20I, 20J, 20K, 20L, or 26. Restricted to art majors. May be repeated for credit. S. Monaghan, The Staff

189. Special Topics in Sculpture. F
Special topics in sculpture as announced, concentrating on specific aspects of subject matter and media. Students are billed a materials fee. Prerequisite(s): One course from Art 20H, 120, 121, 122, 124, 125, 129, 179, 180B, 183, or 188; and two non-sculpture/intermedia/public art lower-division studios from Art 15, 20G, 20I, 20J, 20K, 20L, or 26. Restricted to art majors. May be repeated for credit. L. Palmer, W. Hibbert-Jones

190A. Writing for Artists. W
Provides practice in using writing as a tool to support creative work--to generate ideas, to critically analyze and interpret artworks, and to communicate clearly with others about one’s own work. Lectures, discussions, and visiting artist talks introduce and explore contemporary art contexts, ideas, discourses, artworks, artists, and practices to build students’ capacities to place their work in the world. Readings introduce and unfold ideas for discussion, and provide examples of writing formats and purposes as they relate to art practice. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to junior and senior art majors. (General Education Code(s): PE-T.) L. Palmer

190B. Senior Project. S
Advanced senior art majors create and complete a senior project to fulfill their comprehensive graduation requirement. Focuses on a weekly lecture, studio work, peer critique, and professional practices such as the documentation and exhibition of work. Students are billed for a materials fee. Enrollment is restricted to senior art majors. W. Hibbert-Jones, L. Palmer, E. Stephens

191. Teaching Apprenticeship. F,W,S
Designed for art majors at the upper-division level. Each student assists in a lower-division art course under the direct supervision of a faculty member. Students assist in technical instruction, critiques, and class discussions. May not be repeated for credit. Does not count toward upper-division major requirements. Enrollment restricted to art majors. The Staff

192. Directed Student Teaching. F,W,S
Teaching of a lower-division seminar under faculty supervision. (See course 42.) Students should have upper-division standing with a proposal supported by a faculty member willing to supervise. Students submit petition to sponsoring agency. Enrollment
limited to 5. *The Staff*

**193. Field Study. F,W,S**
Supervised off-campus study conducted under the immediate and direct guidance of a faculty supervisor. To be used primarily by upper-division students doing part-time off-campus study. Students submit petition to sponsoring agency. Petitions may be obtained in the Art Department Office. May be repeated for credit. *The Staff*

**194. Forms and Ideas. F**
A non-media specific class introducing a range of contemporary visual practices, contexts, issues, forms, and UCSC resources of use to artists, emphasizing relationships between material, form, meaning and between private expression, public communication, and systems of exchange. Students are billed a materials fee. Enrollment is restricted to junior and senior art majors. Strongly recommended for junior transfer art majors. *L. Palmer*

**196. Independent Senior Project. F,W,S**
Student will concentrate on completing work for comprehensive exhibition under the direction of his or her art adviser, with help from other faculty as needed. Students submit petition to sponsoring agency. (Formerly Senior Project.) May be repeated for credit. *The Staff*

**197. Individual Study. F,W,S**
Individual study in areas approved by sponsoring instructors. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

**198. Independent Field Study. F,W,S**
Provides for department-sponsored independent study programs off campus for which faculty supervision is not in person (e.g., supervision is by correspondence). Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

**199. Tutorial. F,W,S**
Individual study in areas approved by sponsoring instructors. Students submit petition to sponsoring agency. Students are billed a materials fee. May be repeated for credit. *The Staff*

*Not offered in 2018-19*

Revised: 07/15/18
PROGRAM DESCRIPTION

The Art and Design: Games and Playable Media (AGPM) Bachelor of Arts (B.A.) degree at UCSC focuses on the creation of novel game systems, spaces, and configurations that can produce broad ranges of player experiences, for a wide variety of purposes. It does this through:

- courses in related theory, history, and critical interpretation;
- courses that take a practice-based approach to experimental game creation;
- courses that provide a foundation in working with game media forms;
- courses that provide a foundation in working with game technical materials.

This degree complements the Computer Science: Computer Game Design (CGD) Bachelor of Science (B.S.), which focuses particularly on the technical materials. The B.A. focuses more on experience design (in particular) as well as on history, theory, and media creation—while still taking advantage of courses developed for the B.S. and creating a shared community with those students.

Students in the AGPM major learn to understand game design as an art in and of itself, positioned within the context of a number of more disciplinary approaches. Furthermore, students understand game design as a practice of creation, within a much larger and deeper social and historical context.

The AGPM B.A. in the Arts Division ensures that students have the needed programming skills, and equally importantly, that they meld such technical skills with critical and historical understanding, which is essential for the production of socially conscious, inclusive, and emotionally engaging games.

Upper-division studio courses require coursework to be completed on computers. All students in the B.A. program are strongly encouraged to own a laptop computer. This expense is separate from the cost of tuition and other fees.

While pursuing coursework in the major, all students are encouraged to build portfolios that showcase their growing body of work, with an emphasis on material from courses such as ARTG 80I, CMPM 80K, and ARTG 120, and CMPM 120.

Students who earn a B.A. in Art and Design: Games and Playable Media gain the skills, knowledge, and understanding that enable them to:

**Program Learning Outcome (PLO) 1:** Demonstrate understanding of the connections between technical commitments and game system design, on one hand, and player experience and cultural communication goals, on the other.

**PLO 2:** Demonstrate the ability to define, develop, and communicate artistically innovative game ideas—situated historically and employing the methods of multiple art practices.

**PLO 3:** Demonstrate the ability to design and build a technical system in response to an artistic goal for audience experience that employs a fundamental understanding of algorithms and data structures.

**PLO 4:** Demonstrate an understanding of game history and interpretation sufficient to do independent research on a topic, identify relevant games and secondary literature, think critically about a particular games-related topic, and make a convincing, research-based argument about games.

**PLO 5:** Demonstrate the ability to collaboratively plan, organize, and execute complex, team-oriented projects, using appropriate communication and coordination techniques.

**PLO 6:** Demonstrate the ability to effectively use techniques for understanding how players experience a game system, and to compare this with a project’s artistic goals—then successfully iterate and revise project shape, scope, and function based on external feedback and personal/team constraints.

DECLARATION OF THE MAJOR

Prior to declaring the AGPM major, students must complete the following four Major Qualification courses with a grade of C or better:

1. ARTG 80H, History of Digital Games (PE-T)
2. ARTG 80I, Foundations of Play (PE-H)
3. CMPM 80K, Foundations of Video Game Design
4. CMPS 12B/M, Introduction to Data Structures/Laboratory

**Note:** CMPS 12B/M has computer science and mathematics prerequisites that are not considered in the major declaration process. Grades in these courses are not considered for qualification.

Students receiving a C-, D+, D, D-, F or NP in one of the major qualification courses or associated labs may only declare once they have passed the same or equivalent
Art and Design: Games and Playable Media

course or lab with a grade of C or better. Students who receive more than one grade of C-, D+, D, D-, F or NP in the major qualification courses can only declare the major through the portfolio appeal process. Students need to complete these major qualification courses early in their studies so that the petition to major status is accomplished by the end of their sophomore year.

MAJOR QUALIFICATION BY PORTFOLIO APPEAL

The program faculty will conduct a quarterly review of portfolios for students who have passed the four major qualification courses and associated laboratory, and wish to enter the major, but obtained more than one grade of C-, D+, D, D-, F or NP across all the classes. The portfolio consists of a written statement and a link to an online portfolio of supporting materials, sent via email to the AGPM undergraduate adviser. The written statement should answer the following questions:

• Why do you want to pursue this major, specifically?
• What kinds of games have inspired you?
• What kinds of games do you wish to make?
• How does your work demonstrate this intent?

The online portfolio may include:

• Samples of fine art drawing and painting of characters, environments and objects for game design ideas
• Storyboards that communicate a narrative or user experience flow
• Prototypes (paper or digital) that demonstrate knowledge of how games are constructed and how game designs work
• Completed games (digital or non-digital) that can be experienced directly

The objective of the review is to admit students who demonstrate, as evidenced in their portfolio and statement, that their intentions and achievements are most compatible with the mission, standards, goals, and specializations of the AGPM B.A. The faculty is looking for vitality, commitment, resilience and skill, or signs of potential for the development of these things. For more guidance on what makes a successful portfolio, see the program website.

Remaining courses and concerns about time to degree are also taken into consideration. Within 15 days of this review, the adviser will notify the students, the Arts Division, college, and the Office of the Registrar of faculty’s decision.

MAJOR REQUIREMENTS

The AGPM major requires a minimum of six lower-division and 13 upper-division courses in residence and satisfaction of the senior comprehensive requirement.

1. FOUNDATIONAL COURSES

Complete the following four courses:
ARTG 80H, History of Digital Games (PE-T)
ARTG 80I, Foundations of Play (PE-H)
CMPS 12B/M, Introduction to Data Structures/Laboratory

Note: CMPS 12B/M has Computer Science and Mathematics prerequisites.

2. ARTS REQUIREMENTS AND ELECTIVES

Check with course home departments and General Catalog for availability, prerequisites, or enrollment restrictions.

Complete this one Film and Digital Media course:
FILM 80V, Video Games as Visual Culture (PE-T)

Complete one History of Art and Visual Culture course from the following:
HAVC 24, Southeast Asia Visual Culture (CC, IH, A, E)
HAVC 30, Introduction to European Visual Culture (IM)
HAVC 41, Modern Art in Context (IM)
HAVC 43, History of Modern Architecture (IM)
HAVC 44, Designing California: Architecture, Design, and Environment (PE-E)
HAVC 45, Photography Now (IM)
HAVC 46, Intro. to U.S. Art and Visual Culture (ER)
HAVC 49, A Short History of the Digital (PE-T)
HAVC 60, Indigenous American Visual Culture (ER, A, E)
HAVC 118, Art of the Contemporary African Diaspora (ER)
HAVC 124E, Southeast Asian-American Visual Culture (ER)
HAVC 135B, German Art, 1905–1945 (IM)
HAVC 135H, Topics in European and Euro-American Visual Culture (IM)
HAVC 140A, America in Art (IM)
HAVC 140C, Race and American Visual Arts (ER)
HAVC 140D, Chicano/Chicana Art: 1970–Present (ER)
HAVC 140P, Pop Culture as High Art (IM)
HAVC 141A, Modern Art: Realism to Cubism (IM)
HAVC 141B, Death, Desire, and Modernity (formerly Modern Art: Cubism to Pop) (IM)
HAVC 141C, Modern Art: Pop to Present (IM)
HAVC 141E, Histories of Photography (IM)
HAVC 141F, The Camera and the Body (IM)
HAVC 141H, Media History and Theory (IM)
HAVC 141I, Environments, Installations, Sites (IM)
HAVC 141J, Critical Issues in Contemporary Art and Visual Culture (IM)
HAVC 141K, Activist Art Since 1960: Art, Technology, Activism (IM)
Art and Design: Games and Playable Media
HAVC 141M, Contemporary Documentary Art (PE-T)
HAVC 141N, Deconstructing Data (PE-T)
HAVC 141O, Contemporary Documentary Arts (PE-T)
HAVC 141P, Networks and Natures (PE-E)
HAVC 142, Contemporary Art and Ecology (PE-T)
HAVC 143A, Latin American Modern Architecture (CC)
HAVC 143C, History of Urban Design (IM)
HAVC 143E, History of Design: The Objects of Technology, 1850–Present (PE-T)
HAVC 143G, After Utopia: Architecture and the City, 1968–Present (PE-E)

Complete one lower-division course from the following:
Check with the Art Department and the General Catalog for restrictions or prerequisites on art courses.
ART 10D, 2D Foundation (IM)
ART 10E, 3D Foundation (IM)
ART 10F, 4D Foundation (IM)
ARTG 80G, Visual Communication and Interaction Design (IM)
MUSC 1C, University Concert Choir (PR-E)
MUSC 2, University Orchestra (PR-E)
MUSC 3, Large Jazz Ensemble
MUSC 5A, West Javanese Gamelan Ensemble: Beginning (PR-C)
MUSC 5B, West Javanese Gamelan Ensemble: Intermediate (PR-C)
MUSC 5C, West Javanese Gamelan Ensemble: Advanced (PR-C)
MUSC 6, Classical Guitar Ensemble
MUSC 8A, Beginning Balinese Gamelan (PR-C)
MUSC 8B, Advanced Balinese Gamelan (PR-C)
MUSC 9, Wind Ensemble (PR-C)
MUSC 10, Eurasian Ensemble (PR-C)
THEA 14, Drawing (PR-C)
THEA 15, Special Topics in Textiles (PR-C)
THEA 17, Costume Construction (PR-C)
THEA 18c, Drafting—Computer Aided
THEA 19, Design Studio: Lighting Studio A (PR-C)
THEA 20, Introductory Studies in Acting (IM)
THEA 21A, Acting Studio IA: Psychological Realism
THEA 22, Indonesian Dance and Drama (CC—Cross Cultural)
THEA 30, Introduction to Dance Theory and Technique (PR-C)
THEA 31C, The Dance Experience (PR-C)
THEA 33C, Dance Studio I
THEA 36, Introduction to Dance Composition (PR-C)
THEA 37, African Dance (PR-C)
THEA 40, Introduction to Directing (IM)
THEA 50, Fundamentals of Theater Production
THEA 80Z, Indian Dance (CC)

3. GAME DESIGN REQUIREMENTS
Complete all the following courses:
CMPM 120, Game Development Experience (PR-E—Practice: Collaborative Endeavor)
ARTG 120, Game Design Experience (PR-E)
ARTG 170, Game Design Studio I (DC)
ARTG 171, Game Design Studio II (7 credits)
ARTG 172, Game Design Studio III (7 credits)

4. MEDIA CREATION ELECTIVES
Check with course home departments and catalog for availability, prerequisites, or enrollment restrictions.
ART courses may have restrictions or prerequisites.
FILM courses have prerequisites and/or require an application, and are generally restricted to Film and Digital Media majors. MUSC courses are restricted to students in the electronic music minor, who will fulfill all of their media creation electives through the courses required for that minor.
Complete three courses from the following:
ART 101, Introduction to Computer Programming for the Arts
ART 102, Interactive Arts
ART 103, Physical Computing: Installation and Sculpture
ART 104, Digital Video
ART 106A, Introduction to 2D Animation
ART 106E, Introduction to 3D Modeling and Animation
ART 108, New Media and Social Practice Arismaking
ARTG 118, Digital Drawing and Painting for Game Design (may be repeated for credit)
ARTG 129, Special Topics in Game Design (may be repeated for credit)
CMPM 150, Creating Digital Audio
DANM 140, Introduction to 3D Printing, Laser-cutting and More (PR-C, also offered as Art 105)
FILM 170A, Introduction to Digital Media Production (PR-C)*
FILM 171D, Social Information Spaces**
FILM 173, Narrative Digital Media Workshop**
FILM 177, Digital Media Workshop, Computer as Medium**
FILM 179A, Special Topics in Animation***
FILM 179B, Documentary Animation Workshop***
FILM 189, Advanced Topics in Digital and Electronic Media Studies*
MUSC 123, Electronic Sound Synthesis
MUSC 124, Intermediate Electronic Sound Synthesis
MUSC 125, Advanced Electronic Sound Synthesis
MUSC 167, Workshop in Electronic Music
THEA 104, Multimedia Authoring
THEA 106, Digital Illustration
THEA 114, Design Studio: Sound (PR-C)
### 5. GAME DESIGN/HUMAN-COMPUTER INTERACTION ELECTIVES

CMPM and CMPS courses may have restrictions or prerequisites.
Complete four of the following:
- CMPM 131, User Experience for Interactive Media
- CMPM 146, Game AI
- CMPM 148, Interactive Storytelling
- CMPM 176, Game Systems
- CMPM 177, Creative Strategies for Designing Interactive Media
- CMPM 178, Human-Centered Design Research (PR-C)
- CMPM 179, Game Design Practicum (PR-C, also offered as ARTG 179, may be repeated for credit)
- CMPS 121, Mobile Applications
- CMPS 183, Web Applications

### DISCIPLINARY COMMUNICATION (DC) REQUIREMENT

Students of every major must satisfy that major’s upper-division disciplinary communication (DC) requirement. The DC requirement in Art and Design: Games and Playable Media is satisfied by completing ARTG 170.

### COMPREHENSIVE REQUIREMENT

Students satisfy the senior comprehensive requirement by receiving a passing grade in all three courses of the game design studio sequence (ARTG 170, 171, and 172). This sequence will meet in collaboration with CMPM 170, 171, and 172.

### ART AND DESIGN: GAMES AND PLAYABLE MEDIA MAJOR PLANNER

The following is a recommended academic plan for students to complete during their first two years as preparation for the AGPM major.

### ART AND DESIGN: GAMES AND PLAYABLE MEDIA B.A. PLANNER

^ The prerequisite for CMPS 11 can be satisfied in any of the following ways: successfully passing MATH 3, MATH 11A, MATH 19A, AMS 3, AMS 11A, ECON 11A, or a score of 400 or higher on the mathematics placement examination.
* ARTG 120 and CMPM 120 May be taken in spring or summer quarter (if offered in summer).
**ARTG 80G, while not a requirement for the AGPM BA, is recommended for providing useful knowledge for the major.

### TRANSFER STUDENTS

In preparation for transfer to AGPM, students are required to demonstrate proficiency in programming, visual art, and game design.

### REQUIREMENTS

Minimum grade of C (2.0) in courses articulated to UCSC’s Computer Science 12B/M, Introduction to Data Structures/Lab
Minimum grade of C (2.0) in two courses articulated to courses in the following list:
ART 15, Introduction to Drawing
Any course in the ART 20 series
ARTG 80G, Visual Communication and Interaction Design (IM)
ARTG 80H, History of Digital Games (PE-T)
ARTG 80I, Foundations of Play (PE-H)
CMPM 25, Introduction to 3D Modeling
CMPM 26, Introduction to 3D Animation
CMPM 80K, Foundations of Video Game Design
FILM 20P, Introduction to Production Technique
MUSC 1C, University Concert Choir (PR-E)
MUSC 2, University Orchestra (PR-E)
MUSC 3, Large Jazz Ensemble
MUSC 5A, West Javanese Gamelan Ensemble: Beginning (PR-C)
MUSC 5B, West Javanese Gamelan Ensemble: Intermediate (PR-C)
MUSC 5C, West Javanese Gamelan Ensemble: Advanced (PR-C)
MUSC 6, Classical Guitar Ensemble
MUSC 8A, Beginning Balinese Gamelan (PR-C)
MUSC 8B, Advanced Balinese Gamelan
MUSC 9, Wind Ensemble (PR-C)
MUSC 10, Eurasian Ensemble (PR-C)
THEA 10, Introduction to Theater Design and Technology
THEA 14, Drawing (PR-C)
THEA 15, Special Topics in Textiles (PR-C)
THEA 17, Costume Construction (PR-C)
THEA 18, Drafting for Theatrical Production
THEA 19, Design Studio: Lighting Studio A (PR-C)
THEA 20, Introductory Studies in Acting (IM)
THEA 21A, Acting Studio IA: Psychological Realism
THEA 22, Indonesian Dance and Drama (CC—Cross Cultural)
THEA 30, Introduction to Dance Theory and Technique (PR-C)
THEA 31C, The Dance Experience (PR-C)
THEA 33C, Dance Studio I
THEA 36, Introduction to Dance Composition (PR-C)
THEA 37, African Dance (PR-C)
THEA 40, Introduction to Directing (IM)
THEA 50, Fundamentals of Theater Production
THEA 80Z, Indian Dance (CC)

Students are highly encouraged to complete the Intersegmental General Education Transfer Curriculum (IGETC) to satisfy all UCSC General Education requirements.

If a student is denied admission because they do not meet the requirements above, they may appeal the decision to Admissions. As part of their appeal process, students are required to submit an online portfolio and written statement as described in the “Major Qualification by Portfolio Appeal” section above.

Transfer students who meet the requirements above and receive IGETC certification will be able to complete the major in two years as shown in the academic plan below. Because of the number of credits required by the B.A., transfer students who have General Education requirements remaining may need to take summer session courses and/or additional courses over the academic year to allow graduation in two years. If a student meets the requirements but cannot complete IGETC, taking community college courses that are articulated for credit with courses in the “Foundational Courses” and lower-division “Arts Requirements and Electives” courses listed above is recommended.

Transfer students are strongly advised to attend a UCSC Summer Orientation session for transfer students. Transfer students should consult with an AGPM academic adviser prior to enrolling in classes to determine their status and to begin the declaration of major process as soon as possible.

The following is a recommended academic plan for junior transfer students:

**ADDITIONAL SUGGESTED COURSES**

**APPEALS**
ART AND DESIGN: GAMES AND PLAYABLE MEDIA FACULTY AND PROFESSIONAL INTERESTS

Robin Hunicke, Associate Professor, Art and Design: Games and Playable Media (AGPM)
Experimental & user-centered game design, games & learning, games & social impact, building sustainable & deliberately developmental creative cultures, supporting diversity & innovation for arts entrepreneurship

Elizabeth Swensen, Assistant Professor, AGPM
Games as personal narrative, games and learning, games and social impact, dynamics of language and identity through play

Jim Whitehead, Professor, Computational Media
Generative methods, procedural content generation, level design in computer games, software engineering, software analytics, software evolution, software bug prediction

Katherine Isbister, Professor, Computational Media
Games and human computer interactions, games and emotion, game user research, game character design, human-centered design

Michael Mateas, Professor, Computer Science
Artificial Intelligence (AI) for art and entertainment, game AI, AI and creativity, AI-based interactive storytelling, autonomous characters

Soraya Murray, Associate Professor, Film and Digital Media
Contemporary visual culture and representation including: new media art, film, photography, games; theories of art and globalization; cultural studies

Susana Ruiz, Assistant Professor, Film and Digital Media
Game and transmedia design; games and playful systems as expressions of activism and art; history and practice of animation; participatory culture; social art practice; non-fiction storytelling and expanded documentary; theory/practice hybridity; Theatre of the Oppressed; critical and liberatory pedagogy; worldbuilding

Sri Kurniawan, Professor, Computational Media
Human-computer interaction, human factors and ergonomics, accessibility, assistive technology, usability, virtual reality, human-centered design

ART AND DESIGN: GAMES AND PLAYABLE MEDIA COURSES

LOWER-DIVISION COURSES

80G. Visual Communication and Interaction Design. F
Survey of the basics of visual communication and interaction design, focusing on communicating designs of interactive systems. Covers techniques from a breadth of visual communication traditions; how to choose, use, and innovate; and how to structure dialogue around them. Students are billed a materials fee. (General Education Code(s): IM.) M. Viana Neto, The Staff

80H. History of Digital Games. F,W,S
Surveys the history of digital games from open “university games” through the home console, PC, and contemporary platforms, and on to “indie” and art games. Throughout, the course locates connections between technology, marketing, and play culture. (Formerly Art 80H.) (General Education Code(s): PE-T.) (F) m. cardenas, (W) A. Darke

80I. Foundations of Play. F,S
Understanding the foundations of play through reading influential texts; in-class lectures and activities; designing and “playtesting” games; and the ethnographies of players in the physical world. Students are billed a materials fee. (Formerly Art 80I.) (General Education Code(s): PE-H.) (F) E. Swensen, (S) A. Darke

120. Game Design Experience. S
Teaches the concrete skills associated with making a digital game, from start to finish. Activities include establishing a team, concepting, storyboarding, prototyping, producing, and testing a game for release. Students are organized into groups and work together to create and produce a playable game. Students are billed a materials fee. Prerequisite(s): courses 80H or 80I; and Computer Science 12B and 12M and Computational Media 80K and Film and Digital Media 80V. Concurrent enrollment in Computational Media 120 is required. (General Education Code(s): PR-E.) E. Swensen

UPPER-DIVISION COURSES

118. Digital Drawing/Painting for Game Design. F,W,S
Supports students working as artists in an interdisciplinary collaboration with project teams led by senior students in computer game design (the yearlong Computer Science 170 series). Instruction includes techniques, tools, and concepts of drawing and painting in a digital environment oriented toward the context of computer games. Coursework is composed of projects to develop individual ideas and skills, as well as offering productively engaged participation in a collaborative game-design team. Students are billed a materials fee. Enrollment restricted to art and art design: computer game design majors; admission by permission of the instructor. (Formerly Art 118.) May be repeated for credit. E. Gregor

129. Special Topics in Game
Art and Design: Games and Playable Media

176. Game Design Collaborative (2 credits). W,S
Supports students who are collaborating with the ARTG/CMPM 170-series teams on the creation of their capstone game projects. Enrollment is restricted to students who are working with senior game-design project groups, and by permission of the instructor. May be repeated for credit. R. Hunicke, The Staff

179. Game Design Practicum.
Provides the opportunity to practice the creation of novel computer games. Students learn a new game-making technology, then create three games using this technology. (Also offered as Computational Media 179. Students cannot receive credit for both courses.) Prerequisite(s): course 120. May be repeated for credit. (General Education Code(s): PR-C.) The Staff

199. Tutorial. F,W,S
Individual study in areas approved by sponsoring instructors. Tutorial may not be used to satisfy major requirements. Petition required, approved by instructor and department; petitions available on the program website. May be repeated for credit. The Staff

199F. Tutorial (2 credits). F,W,S
Individual study in areas approved by sponsoring instructors. Tutorial may not be used to satisfy major requirements. Petition required, approved by instructor and department; petitions available on the program website. May be repeated for credit. The Staff

* Not offered in 2018-19
Revised: 07/15/18
PROGRAM DESCRIPTION

The Arts Division offers both creative and critical studies of art and culture at the undergraduate and graduate level. The division is committed to building our students’ capacity for creative and critical thinking. Instruction in the arts inspires and develops the skills needed for individual and collaborative creative thought, analysis, and action within and beyond the university. Our faculty consists of artists, performers, historians, critics, makers, and theorists working across the arts in a global context.

Undergraduate education in the arts includes bachelor of arts (B.A.) programs in art, art and design: games and playable media, film and digital media, history of art and visual culture, music, and theater arts, and a bachelor of music (B.M.) in music. There are also several minors offered in film and digital media, history of art and visual culture, electronic music, jazz music, theater arts, and dance.

Established graduate programs include the interdisciplinary digital arts and new media master of fine arts (M.F.A.) program, the social documentation master of arts (M.F.A.), the music master of arts (M.A.), and the theater arts master of arts (M.A.). Doctoral programs include the music composition doctor of musical arts (D.M.A.), and Ph.D. programs in music, visual studies, and film and digital media.

The Arts Division provides students with access to quality research, work and maker spaces, including a digital-arts research facility with two experimental media labs, along with a state-of-the-art music recital hall, practice rooms, electronic music studios, and recording facilities, four theaters for dramatic productions, filmmaking studios and editing suites, surround-sound screening theaters, drama and dance studios, painting and printmaking studios, a foundry (unique to the U.C. system), photography and computer laboratories, and specialized lecture and seminar classrooms. McHenry Library houses an extensive collection of books and periodicals on the arts, as well as an analog and digital slide collection, music scores and recordings, and one of the largest collections of films and DVDs in the University of California system. Exhibition space in the arts includes galleries for students, faculty, and visiting artists to show their work. The Sesnon Gallery presents curated exhibitions to the university community and the general public. The Institute of the Arts and Sciences, a focus for interdisciplinary creative work, exhibitions, conferences, symposia, and seminars offers a robust schedule of programming.

Other Division Highlights: The Theater Arts Department offers a wide variety of performances in four venues, ranging from faculty-directed productions of classics and musicals on our Mainstage to intimate student-created productions in our century-old converted barn. The Dean’s Lecture Series invites innovative leaders and scholars to present on selected topics of interest to the campus community. Student work is regularly broadcast on SCTV, and Eyecandy, a student-run magazine and blog, publishes student critique on film, television, and digital media. The Music Department hosts an annual festival of contemporary music, April in Santa Cruz, and an opera in the spring quarter of each year, and presents a variety of solo and ensemble concert programs throughout the year. The History of Art and Visual Culture Department hosts a series of speakers and seminars each year on rotating topics that are supported by the Patricia and Rowland Rebele Endowed Chair. The Art Department sponsors regularly scheduled public presentations as well as quarterly open studios and a print and photo sale in the spring. The Digital Arts and New Media M.F.A. program regularly sponsors digital arts events, such as festivals, symposia, visiting speakers, and exhibitions of student work, both on- and off-campus, culminating in an annual exhibition of graduate thesis research each spring.

For more information about specific programs in the arts, please visit catalog listings and web sites for Art, Digital Arts and New Media, Games and Playable Media, Film and Digital Media, History of Art and Visual Culture, Music, and Theater Arts.

Revised: 07/15/18
PROGRAM DESCRIPTION

The science of astronomy has the universe as its domain. Galaxies, stars, planets, and an ever-increasing variety of phenomena observed from ground- and space-based observatories are among the objects of study. Areas of special interest at UCSC include cosmology, the formation and evolution of planets, stars, and galaxies, high-energy astrophysics, active galaxies, supernovae and nucleosynthesis, exoplanets, interstellar medium, intergalactic medium, solar system dynamics, and all aspects of observational optical and infrared astronomy. Astronomers use concepts from and contribute to the development of many other scientific disciplines, including optics, mechanics, relativity, atomic and nuclear physics, applied mathematics, chemistry, geology, and meteorology. The interdisciplinary nature of astronomy, including its historical and philosophical elements, makes its study valuable to those planning careers in a variety of fields.

The Astronomy and Astrophysics Department offers a broad undergraduate curriculum that fulfills the needs of students seeking a general education but also enables students wishing to obtain a minor or major in astrophysics to study the subject in greater depth.

The graduate program is intended for those with a professional interest in the subject. The interests of the faculty embrace a wide range of both theoretical and observational aspects of astronomy. Current research and course offerings include our solar system and other planetary systems, stellar structure and evolution, stellar spectroscopy, the interstellar medium, galactic structure, active galaxies and quasars, cosmology, general relativity and gravitational radiation, the origin of the elements, optical and infrared astronomy, high-energy astrophysics, and advanced astronomical instrumentation.

Graduate students have access to state-of-the-art instrument development and data reduction technology, the UCO/Lick Observatory computer network, and an on-campus supercomputer dedicated to astrophysical computation. Graduate students may conduct supervised research using selected telescopic facilities of the Lick Observatory on Mount Hamilton, 55 miles from Santa Cruz. The 10-meter Keck Telescope in Hawaii, the world’s largest, is administered from the UCSC campus and is used for frontier research by UC astronomers.

UNDERGRADUATE COURSES

Instruction in astronomy for undergraduates at UCSC is designed to meet the needs of several groups of students.

Courses 1, 2, 3, 4, 5, 6, 7, and 8 provide a general survey of the universe as now understood from historical and modern observations, and are offered for those not specializing in a scientific discipline. Course 1 is a non-mathematical introduction to the universe. Course 1 and Course 6 on exploring our solar system in the space age, satisfy the Scientific Inquiry (SI) general education (GE) requirement. Courses 2-5 and Course 7 provide an introduction, with the use of basic mathematics, to a diverse array of modern astronomy, covering planets, stars, the formation of the universe, and black holes, and satisfy the Mathematical and Formal Reasons (MF) general education requirement. Course 8 explores the universe with astronomical data and satisfies the Statistical Reasoning (SR) GE.

Courses 12, 13, 15, 16, and 18, emphasize basic physical laws and theories as applied to astronomy. Taken together, these classes provide a survey of modern astronomy for students with some facility in mathematics. Taken separately, these courses provide an in-depth introduction to particular fields within astronomy. These courses are designed for students intending to major in a scientific subject, although qualified nonscience majors may enroll. A good high school background in mathematics and physics is required. These courses satisfy the MF GE.

Prior or concurrent enrollment in a basic calculus course (Mathematics 11A or 19A) and a basic physics course (Physics 5A/L or 6A/L) is helpful but not required.

Finally, a more thorough quantitative treatment of selected topics in astronomy and astrophysics at the upper-division level is provided by courses 111, 112, 113, 117, and 118. Prior completion of coursework in calculus of several variables (Mathematics 22 or 23A-B) and Physics 5B/M or 6B/M and 5D is required for these advanced courses. Course 119 is an introduction to modern scientific computing with a focus on astrophysics problems.

ASTROPHYSICS MINOR

For undergraduate students having a particular interest in the subject, a minor in astronomy and astrophysics is offered. Most students who minor in astronomy and astrophysics are majors in another science, though majors in other fields are also possible.

INTRODUCTORY REQUIREMENTS

Calculus: Mathematics 19A and 19B, or Mathematics 20A and 20B
Astronomy and Astrophysics

Advanced Calculus: Vector Calculus Mathematics 23A
Physics: Physics 5A/L, 5B/M, 5C/N, and 5D; or
Physics 6A/L, 6B/M, 6C/N, and 5D

ADVANCED REQUIREMENTS

Modern Physics: Physics 102
Four upper-division astronomy electives chosen from the following:
Astronomy 111, Order-of-Magnitude Astrophysics
Astronomy 112, Physics of Stars
Astronomy 113, Introduction to Cosmology
Astronomy 117, High Energy Astrophysics
Astronomy 118, Physics of Planetary Systems
Astronomy 119, Introduction to Scientific Computing
Physics 129, Nuclear and Particle Astrophysics
Physics 133, Intermediate Laboratory
Astronomy 136, Advanced Astronomy Laboratory
Astronomy 171, General Relativity, Black Holes, and Cosmology

ASTROPHYSICS MAJOR

The UCSC major in astrophysics is administered by the Physics Department and combines a core physics major with advanced electives in astrophysics, an astrophysics laboratory course, and senior thesis work on a topic in astrophysics. It is a rigorous program designed to prepare students for a broad range of technical careers or for entry into graduate or professional programs. A full description of the major can be found in the Physics Department section of this catalog.

PREPARATION FOR GRADUATE WORK IN ASTROPHYSICS

The UCSC graduate program in astronomy and astrophysics is designed for Ph.D. students seeking a professional career in teaching and research. In view of the thorough preparation in mathematics and physics required for graduate study, most entering astronomy graduate students major in physics or astrophysics as undergraduates.

The suggested minimum requirements for admission to graduate standing at UCSC include the following undergraduate courses:

**Basic physics.** Mechanics, wave motion, sound, light, electricity and magnetism, thermodynamics, atomic physics, and quantum mechanics (Physics 5A, 5B, 5C, and 5D).

**Basic mathematics.** Calculus (Mathematics 19A-B and 23A-B or equivalent) and statistics (Applied Mathematics and Statistics 5).

**Intermediate-level physics.** Mechanics (Physics 105); electricity, magnetism, and optics (Physics 110A-B); mathematical methods in physics (Physics 116A-B-C); nuclear and particle physics (Physics 129); and quantum mechanics (Physics 139A-B).

Intermediate-level mathematics. Linear algebra (Mathematics 21), complex analysis (Mathematics 103), and ordinary and partial differential equations (Mathematics 106 and 107).

GRADUATE PROGRAM

Graduate instruction is built upon a two-year cycle of 11 one-quarter courses in astronomy and physics that are required of all students.

Seven courses are specifically required:
Astronomy 202, Radiative Processes
Astronomy 204, Astrophysical Flows
Astronomy 205, Introduction to Astronomical Research and Teaching
Astronomy 212, Dynamical Astronomy
Astronomy 220A, Stellar Structure and Evolution
Astronomy 230, Diffuse Matter in Space
Astronomy 233, Physical Cosmology

Four additional courses are chosen from the list of electives given below. In addition, students must fulfill the following requirements:

- Students must meet at least quarterly with an assigned adviser.
- Each student must also be a teaching assistant for at least two quarters.
- By the time of the annual Board Review, which occurs in July at the end of their second academic year, students must:
  - Complete one quarter of independent study with a faculty member and give a department talk on that work.
  - Pass a preliminary examination based on course material, relevant physics, and general astronomical knowledge.
  - Submit one lead-author paper to a refereed journal that is based on research conducted at UCSC. By the time of the Board Review, second-year students are expected to either (1) have submitted a paper for publication to a refereed journal; or (2) submit to the Board Review a complete first draft of such a paper and a detailed plan for completion. If the student pursues option (2), he or she is expected to submit the paper for publication by the first day of the fall quarter, and provide the electronic submission acknowledgement for the paper to the chair of the graduate advising committee. If the student does not complete this requirement, he or she will meet with his or her adviser, the graduate advising committee chair, and the department chair before the first faculty meeting of the fall quarter, in order to discuss the status of the paper. The faculty at that meeting will then make a recommendation whether the student should be granted an extension to the next Board Review, and the full faculty will then vote on whether to grant an extension.

By the end of the third year, students must complete a qualifying examination that presents and defends a proposed thesis topic.

After passing the board review based on the above-mentioned requirements and the qualifying
examination, students pursue independent research leading to the doctoral dissertation. Upon completion of the Ph.D. dissertation, students must pass an oral dissertation defense. A completed draft of the thesis must be submitted to the dissertation committee at least two weeks before the date of the defense, and the defense itself must occur at least two weeks before the campus deadline for thesis submissions in that quarter. Exceptions to this policy will be granted only under exceptional circumstances and must be approved by the department chair, associate chair, and the department graduate advising committee.

The department has established five years as the normative time to degree. Normative times is the elapsed calendar time, in years, that, under normal circumstances, will be needed to complete all requirements for the Ph.D. A one-year extension may be granted if funding is available. Funding support will not, in general, be provided beyond six years. Exceptions for extension beyond six years will be granted only for exceptional extenuating circumstances, and will be decided upon by the department chair, associate chair, and the department graduate advising committee.

Electives (four required) may be drawn from this list:
- Astronomy 207, Future Directions/Future Missions
- Astronomy 214, Special Topics in Cosmology
- Astronomy 220B, Star Formation
- Astronomy 220C, Advanced Stages of Stellar Evolution and Nucleosynthesis
- Astronomy 222, Planetary Formation and Evolution
- Astronomy 223, Planetary Physics
- Astronomy 225, High-Energy Astrophysics
- Astronomy 231, Diffuse Gas In and Between Galaxies
- Astronomy 234, Statistical Techniques in Astronomy
- Astronomy 235, Numerical Techniques
- Astronomy 237, Accretion Processes
- Astronomy 240A, Galactic and Extragalactic Stellar Systems
- Astronomy 240B, High Redshift Galaxies
- Astronomy 257, Modern Astronomical Techniques
- Astronomy 260, Instrumentation for Astronomy
- Astronomy 289, Adaptive Optics and Its Applications
- Physics/Astronomy 224, Particle Astrophysics and Cosmology
- Physics/Astronomy 226, General Relativity
- Earth and Planetary Sciences 262, Planetary Interiors
- Earth and Planetary Sciences 263, Planetary Surfaces
- Earth and Planetary Sciences 264, Planetary Atmospheres
- Earth and Planetary Sciences 265, Order of Magnitude Estimation
- Earth and Planetary Sciences 275, Magnetohydrodynamics
- Applied Mathematics and Statistics 206, Bayesian Statistics
- Applied Mathematics and Statistics 212A, Applied Mathematical Methods I
- Applied Mathematics and Statistics 213, Numerical Solution of Differential Equations
- Applied Mathematics and Statistics 214, Applied Dynamical Systems
- Applied Mathematics and Statistics 217, Introduction to Fluid Dynamics
- Physics 210, Classical Mechanics
- Physics 215, Introduction to Non-Relativistic Quantum Mechanics
- Physics 216, Advanced Topics in Non-Relativistic Quantum Mechanics
- Physics 217, Quantum Field Theory I
- Physics 218, Quantum Field Theory II
- Physics 227, Advanced Fluid Dynamics

---

**ASTRONOMY AND ASTROPHYSICS FACULTY AND PROFESSIONAL INTERESTS**

**PROFESSOR**

**George R. Blumenthal**  
Cosmology, galaxy formation, high-energy astrophysics

**Frank D. Drake, Emeritus**  
John Faulkner, Emeritus

**Jonathan Fortney**  
Planetary atmospheres and interiors, extrasolar planets

**Douglas N. C. Lin**  
Fluid dynamics, star formation, galactic structure, planetary systems, accretion disks, extra-solar planets

**Piero Madau**  
Cosmology, high-energy astrophysics

**Bruce H. Margon, Emeritus**

---

**ASSOCIATE PROFESSOR**

**Ruth Murray-Clay**  
Extrasolar planets, formation and evolution of planetary systems, gravitational dynamics, atmospheric evolution, the Kuiper belt, protoplanetary disks

**Brant Robertson**  
Galaxy formation, dark matter, hydrodynamics, numerical simulation methodologies

---

**William G. Mathews, Emeritus Research Professor**

**Enrico Ramirez-Ruiz**  
Stellar explosions, jet and accretion physics, compact binaries and gravitational waves

**Stanford E. Woosley, Emeritus**
Ryan Foley
Transient astrophysics, cosmology, survey science and big data

Alexie Leauthaud
Cosmology, galaxy formation, weak gravitational lensing

Andrew Skemer
Extrasolar planets, brown dwarfs, astronomical instrumentation, adaptive optics

Peter H. Bodenheimer, Emeritus
Dynamics of star clusters, ages of star clusters, chemical enrichment history of the galaxy, observations of interacting galaxies

Jean P. Brodie
Extragalactic globular clusters, galaxy formation, near-field cosmology

Harland W. Epps, Emeritus
Dynamics of star clusters, ages of star clusters, chemical enrichment history of the galaxy, observations of interacting galaxies

Sandra M. Faber, Emeritus
Puragra (Raja) GuhaThakurta

Harland W. Epps, Emeritus

Burton F. Jones, Emeritus
David C. Koo, Emeritus

Claire E. Max, Professor and Director of UC Observatories
Adaptive optics observations of nearby merging galaxies, new adaptive optics technologies

Joseph S. Miller, Emeritus
J. Xavier Prochaska
Damped Lyα systems in quasars, Lyman limit systems, stellar abundances, thick disk imaging of our galaxy

Constance Rockosi
Galactic structure, stellar populations, CCD detectors, astronomical instrumentation

Graeme H. Smith
Stellar populations, chromospheric activity among late-type stars

Tesla Jeltema
Cosmology, observational high energy astrophysics, particle astrophysics; research focuses on observational cosmology and particle astrophysics, including constraints on the nature of dark matter and dark energy and studies of the evolution of galaxies; formation and evolution of large-scale structure in the universe using observations covering a broad wavelength range and numerical simulations

Donald Gavel, Emeritus
Brad Holden
Design, development, and oversight of UC Astronomy Data Center (all data obtained by UC astronomers at the Lick and Keck Observatories), early evolution of elliptical galaxies

Robert Kibrick, Emeritus
Drew Phillips
Extragalactic star-formation, gas-phase abundances, galaxy kinematics, and galaxy formation and evolutions; development of astronomical optics and instrumentation

Annie Cavanagh, Emeritus

Anthony N. Aguirre (Physics)
Cosmology of the very early universe, inflation and the global structure of cosmological models, gravitation and black holes, foundations of quantum mechanics and statistical mechanics, information theory

Ion Iorgov (Earth and Planetary Sciences)
Planetary interiors, paleomagnetism

Nic Brummel (Applied Mathematics and Statistics)
Fluid dynamics, magnetohydrodynamics, numerical simulations of geophysical and astrophysical dynamics, especially solar interior physics, supercomputing

Pascale Garaud (Applied Mathematics and Statistics)
Astrophysical and geophysical fluid dynamics, magnetohydrodynamics, analytical and numerical solutions of partial differential equations related to these phenomena

Francis Nimmo (Earth and Planetary Sciences)
Icy satellites, accretion, Mars, planetary geophysics

Michael J. Bolte
Dynamics of star clusters, ages of star clusters, chemical enrichment history of the galaxy, observations of interacting galaxies

Nicolas Brummell (Applied Mathematics and Statistics)
Fluid dynamics, magnetohydrodynamics, numerical simulations of geophysical and astrophysical dynamics, especially solar interior physics, supercomputing

Pascale Garaud (Applied Mathematics and Statistics)
Astrophysical and geophysical fluid dynamics, magnetohydrodynamics, analytical and numerical solutions of partial differential equations related to these phenomena

Stefano Profumo (Physics)
Theory of particle physics and particle astrophysics

Steven Ritz (Physics)
Particle physics and astrophysics

David M. Smith (Physics)
High-energy astrophysics; X-ray and gamma-ray detectors and instrumentation; solar, terrestrial, and planetary sources of gamma radiation

Joe Wambsganss (Physics)
Cosmology, the nature of dark matter and dark energy, large scale structure of the universe, galaxy formation and evolution, and use of machine learning for these topics

Stefano Profumo (Physics)
Theory of particle physics and particle astrophysics

Steven Ritz (Physics)
Particle physics and astrophysics

David M. Smith (Physics)
High-energy astrophysics; X-ray and gamma-ray detectors and instrumentation; solar, terrestrial, and planetary sources of gamma radiation

Robert Kibrick, Emeritus
Drew Phillips
Extragalactic star-formation, gas-phase abundances, galaxy kinematics, and galaxy formation and evolutions; development of astronomical optics and instrumentation

Richard Stover
Development and construction of state-of-the-art detector systems for instruments at Lick Observatory and the Keck Observatory
## LOWER-DIVISION COURSES

1. **Introduction to the Cosmos.**
   
   F,W
   
   Overview of the main ideas in our current view of the universe and how these ideas originated. Galaxies, quasars, stars, black holes, and planets. Students cannot receive credit for this course and course 2. (General Education Code(s): SL.) *P. Guha Thakurta*

2. **Overview of the Universe.**
   
   F,W,S
   
   An overview of the main ideas in our current view of the universe, and how they originated. Galaxies, quasars, stars, pulsars, and planets. Intended primarily for nonscience majors interested in a one-quarter survey of classical and modern astronomy. (General Education Code(s): MF.) *P. Guha Thakurta, C. Rockosi, J. Brodie, M. Bolte*

3. **Introductory Astronomy: Planetary Systems.**
   
   S
   
   Properties of the solar system and other planetary systems. Topics include the Sun, solar system exploration, the physical nature of the Earth and the other planets, comets and asteroids, the origin of the solar system, the possibility of life on other worlds, planet formation, and the discovery and characterization of planets beyond the solar system. Intended for nonscience majors. Courses 3, 4, and 5 are independent and may be taken separately or sequentially. (Formerly Introductory Astronomy: The Solar System.) (General Education Code(s): MF.) *J. Fortney, D. Lin*

4. **Introductory Astronomy: The Stars.**
   
   * 
   
   Stellar evolution: observed properties of stars, internal structure of stars, stages of a star’s life including stellar births, white dwarfs, supernovae, pulsars, neutron stars, and black holes. Planet and constellation identification. Intended for nonscience majors. Courses 3, 4, and 5 are independent and may be taken separately or sequentially. (General Education Code(s): MF.) *C. Rockosi*

5. **Introductory Astronomy: The Formation and Evolution of the Universe.**
   
   F,W
   
   The universe explained. Fundamental concepts of modern cosmology (Big Bang, dark matter, curved space, black holes, star and galaxy formation), the basic physics underlying them, and their scientific development. Intended for nonscience majors. Courses 3, 4, and 5 are independent and may be taken separately. (General Education Code(s): MF.) *M. Bolte, B. Robertson, J. Brodie*

6. **The Space-Age Solar System.**
   
   W
   
   Scientific study of the Moon, Earth, Mercury, Venus, and Mars by the space program; history of rocket development; the Apollo program and exploration of the Moon; unmanned spacecraft studies of the terrestrial planets; scientific theories of planetary surfaces and atmospheres. Intended for nonscience majors. (Formerly course 80A.) (General Education Code(s): SL.) *G. Smith*

7. **Black Holes.**
   
   S
   
   Examines the nature of black holes, including their creation and evolution; evidence for their existence from astronomical observations; and the role of black holes in the evolution of the universe. Also examines current ideas about the nature of space, time, and gravity. (General Education Code(s): MF.) *The Staff*

8. **Exploring the Universe with Astronomical Data.**
   
   F
   
   Introduces how we use observational data to learn about stars, galaxies, planets, and cosmology. Covers astronomical data and experimental design and basic physics and statistical techniques, such as model fitting, regression, significance tests, and error estimation. (General Education Code(s): SR.) *C. Rockosi*

9A. **Introduction to Research in Physics and Astrophysics (2 credits).**
   
   W
   
   Introduction to research for first-year students interested in physics and astrophysics. Students complete projects in small groups with scientists. Introduces techniques for collaboration; science writing; physics careers. Continuing course spanning two quarters. Enrollment is restricted to first-year proposed astrophysics and physics majors and by permission of the instructor. (Also offered as Physics 9A. Students cannot receive credit for both courses.) *R. Murray-Clay*

9B. **Introduction to Research in Physics and Astrophysics (3 credits).**
   
   S
   
   Introduction to research for first-year students interested in physics and astrophysics. Students complete projects in small groups with scientists. Introduces techniques for collaboration; science writing; physics careers. Continuing course spanning two quarters. Prerequisite(s): course 9A. Enrollment is restricted to first-year proposed astrophysics and physics (astrophysics) majors and by permission of the instructor. (Also offered as Physics 9B. Students cannot receive credit for both courses.) (General Education Code(s): PR-E.) *R. Murray-Clay*

12. **Stars and Stellar Evolution.**
    
    S
    
    An introduction to the observational facts and physical theory pertaining to stars. Topics include the observed properties of stars and the physics underlying those properties; stellar atmospheres; stellar structure and evolution. Intended for science majors and qualified non-science majors. Knowledge of high school physics and an understanding of mathematics at the Mathematics 2 level required. (General Education Code(s): MF.) *R. Foley*

13. **Galaxies, Cosmology, and High Energy Astrophysics.**
    
    * 
    
    Introduction to modern cosmology and extragalactic astronomy. Topics include the origin of the universe, Big Bang cosmology, expansion of...
the universe, dark matter and dark energy, properties of galaxies and active galactic nuclei, and very energetic phenomena in our own and other galaxies. Intended for science majors and qualified non-science majors. Knowledge of high school physics and an understanding of mathematics at the Math 2 level required. (General Education Code(s): MF.) The Staff

15. Dead Stars and Black Holes. * Course is primarily concerned with the structure, formation, and astrophysical manifestations of compact objects, such as white dwarfs, neutron stars, and black holes, and the astronomical evidence for their existence. Intended for science majors and qualified non-science majors. Knowledge of high school physics and an understanding of mathematics at the Math 2 level required. (General Education Code(s): MF.) E. Ramirez-Ruiz

16. Astrobiology: Life in the Universe. * Topics include the detection of extrasolar planets, planet formation, stellar evolution and properties of Mars, the exploration of our solar system and the search for life within it, and the evolution of life on Earth. Intended for science majors and qualified non-science majors. Knowledge of high school physics and an understanding of mathematics at the Math 2 level required. Enrollment limited to 50. (General Education Code(s): MF.) The Staff

### UPPER-DIVISION COURSES

#### 111. Order-of-Magnitude Astrophysics. F
Examines the most basic and direct connection between physics and astrophysics in order to derive a better understanding of astrophysical phenomena from first principles to the extent possible. Prerequisite(s): Mathematics 22 or 23A; Physics 5B or 6B; and Physics 101A or previous or concurrent enrollment in Physics 102. Enrollment limited to 25. E. Ramirez-Ruiz

#### 112. Physics of Stars. S The leading observational facts about stars as interpreted by current theories of stellar structure and evolution. Spectroscopy, abundances of the elements, nucleosynthesis, stellar atmospheres, stellar populations. Final stages of evolution, including white dwarfs, neutron stars, supernovae. Prerequisite(s): Mathematics 22 or 23A, Physics 5B or 6B, and Physics 101A or Physics 102 J. Fortney, R. Foley

#### 113. Introduction to Cosmology. W Physical examination of our evolving universe: the Big Bang model; simple aspects of general relativity; particle physics in the early universe; production of various background radiations; production of elements; tests of geometry of the universe; dark energy and dark matter; and formation and evolution of galaxies and large-scale structure. (Formerly "Physical Cosmology.") Prerequisite(s): Mathematics 22 or 23A, Physics 5B or 6B, and Physics 101A or 102. P. Madau

#### 118. Physics of Planetary Systems. W Determination of the physical properties of the solar system, its individual planets, and extrasolar planetary systems through ground-based and space-based observations, laboratory measurements, and theory. Theories of the origin and evolution of planets and planetary systems. Prerequisite(s): Mathematics 22 or 23A, and Physics 5B or 6B. J. Fortney

#### 119. Introduction to Scientific Computing. F,S Introduction to solving scientific problems using computers. A series of simple problems from Earth sciences, physics, and astronomy are solved using a user-friendly scientific programming language (Python/SciPy). (Also offered as Earth Sciences 119. Students cannot receive credit for both courses.) Prerequisite(s): Mathematics 11A or 19A or 20A or Applied Mathematics or Statistics 15A. The Staff

#### 135. Astrophysics Advanced Laboratory. * Introduction to the techniques of modern observational astrophysics at optical and radio wavelengths through hands-on experiments. Offered in some academic years as a multiple-term course: 135A in fall and 135B in winter, depending on astronomical conditions. (Also offered as Physics 135. Students cannot receive credit for both courses.) Prerequisite(s): Physics 133 and at least one astronomy course. Enrollment is restricted to physics (astrophysics) majors. Intended primarily for juniors and seniors majoring or minoring in astrophysics. G. Brown

#### 135A. Astrophysics Advanced Laboratory (3 credits). F Introduction to techniques of modern observational astrophysics at optical and radio wavelengths through hands-on experiments. Intended primarily for juniors and seniors majoring or minoring in astrophysics. Offered in some academic years as single-term course 135 in fall, depending on astronomical conditions. (Also offered as Physics 135A. Students cannot receive credit for both courses.) Prerequisite(s): Physics 133 and at least one astronomy
course. Enrollment is restricted to physics (astrophysics) majors. G. Brown

135B. Astrophysics Advanced Laboratory (2 credits). W
Introduction to techniques of modern observational astrophysics at optical and radio wavelengths through hands-on experiments. Intended primarily for juniors and seniors majoring or minoring in astrophysics. Offered in some academic years as single-term course 135 in fall, depending on astronomical conditions. (Also offered as Physics 135B. Students cannot receive credit for both courses.) Prerequisite(s): course 135A. Enrollment is restricted to physics (astrophysics) majors. G. Brown

136. Advanced Astronomy Laboratory. S
Introduces the techniques of modern observational astrophysics at optical wavelengths through hands-on experiments and use of remote observatories. Students develop the skills and experience to pursue original research. Course is time-intensive and research-oriented. (Formerly Physics 136.) Prerequisite(s): Earth Sciences 119 and Physics 133. Enrollment is restricted to junior and senior astrophysics majors. Enrollment limited to 12. A. Skemer, J. Prochaska

171. General Relativity, Black Holes, and Cosmology. F
Special relativity is reviewed. Curved space-time, including the metric and geodesics, are illustrated with simple examples. The Einstein equations are solved for cases of high symmetry. Black-hole physics and cosmology are discussed, including recent developments. (Also offered as Physics 171. Students cannot receive credit for both courses.) Prerequisite(s): courses 105, 110A, 110B, and 116A-B. A. Aguirre, H. Haber

199. Tutorial. F,W,S
May be repeated for credit. The Staff

GRADUATE COURSES

202. Radiative Processes. *
Survey of radiative processes of astrophysical importance from radio waves to gamma rays. The interaction of radiation with matter: radiative transfer, emission, and absorption. Thermal and non-thermal processes, including bremsstrahlung, synchrotron radiation, and Compton scattering. Radiation in plasmas. (Formerly Electromagnetism and Plasma Physics.) B. Robertson, E. Ramirez-Ruiz

204. Astrophysical Flows. *
Explores how physical conditions in astrophysical objects can be diagnosed from their spectra. Discussion topics include how energy flows determine the thermal state of radiating objects and how the physics of radiative transfer can explain the emergent spectral characteristics of stars, accretion disks, Lyman-alpha clouds, and microwave background. (Formerly 204A Physics of Astrophysics I and 204B Physics of Astrophysics II.) Enrollment is restricted to graduate students. The Staff

205. Introduction to Astronomical Research and Teaching. F
Lectures and seminar-style course intended to integrate new graduate students into the department; to introduce students to the research and interests of department faculty; and to expose graduate students to teaching skills and classroom techniques. (Formerly Introduction to Astronomical Research.) Enrollment is restricted to graduate students. G. Smith

207. Future Directions/Future Missions. *
Examines possible key science goals for the next decade, such as planet detection, galaxy formation, and “dark energy” cosmology; the means for addressing these goals, such as new space missions and/or ground-based facilities; and the political, technical, and scientific constraints on such research. Looks at the role of the Decadel Survey. Examines a few existing programs (DEEP, ALMA, SNAP, NGST) as examples. Enrollment is restricted to graduate students. G. Illingworth

212. Dynamical Astronomy. W
Surveys dynamical processes in astrophysical systems on scales ranging from the planetary to the cosmological, stability and evolution of planetary orbits, scattering processes and the few-body problem, processes in stellar clusters, spiral structure and galactic dynamics, galactic collisions, and evolution of large-scale structure. Enrollment is restricted to graduate students. R. Murray-Clay

214. Special Topics in Galactic and Extragalactic Astronomy. *
Survey of some principal areas of research on the origin and growth of cosmic structures and galaxies: the "dark ages;" 21cm tomography; first galaxies; first stars and seed black holes; reionization and chemical enrichment of the intergalactic medium; the assembly of massive galaxies; quasi-stellar sources; interactions of massive black holes with their environment; extragalactic background radiation; numerical simulations and the nature of the dark matter; the dark halo of the Milky Way. (Formerly Special Topics in Cosmology) Enrollment is restricted to graduate students. A. Leauthaud, P. Madau

220A. Stellar Structure and Evolution. F
Survey of stellar structure and evolution. Physical properties of stellar material. Convective and radiative energy transport. Stellar models and evolutionary tracks through all phases. Brown dwarfs and giant planets. Comparison with observations. Enrollment is restricted to graduate students. J. Fortney, R. Foley

220B. Star Formation. *
Theory and observations of star formation. Observational techniques used to study star formation, particularly millimeter line and continuum observations, and infrared, visible, and UV star-formation tracers. Physics of giant molecular clouds and galaxy-scale star formation. Gravitational instability, collapse, and fragmentation. Pre-main sequence stellar evolution. Protostellar accretion disks and jets. Radiative feedback and HII regions. (Formerly Star and Planet Formation) Prerequisite(s): course 220A. The Staff
Astronomy and Astrophysics

220C. Advanced Stages of Stellar Evolution and Nucleosynthesis. S
The evolution of massive stars beyond helium burning, properties of white dwarf stars; physics and observations of novae, supernovae, and other high energy stellar phenomena; nuclear systematics and reaction rates; the origin and production of all the chemical elements. Prerequisite(s): course 220A. Enrollment is restricted to graduate students. The Staff

222. Planetary Formation and Evolution. W
Theory and observations of protoplanetary disks. Origin and evolution of the solar nebula. Formation and evolution of the terrestrial planets and the giant planets. (Formerly Planetary Science) Enrollment is restricted to graduate students. D. Lin

223. Planetary Physics. *
Survey of interiors, atmospheres, thermal evolution, and magnetospheres of planets, with focus on the astronomical perspective. Course covers exoplanets and solar system planets, both giant and terrestrial, with attention to current and future observations. Enrollment is restricted to graduate students. J. Fortney

224. Particle Astrophysics and Cosmology. *
Particle physics and cosmology of the very early universe: thermodynamics and thermal history; out-of-equilibrium phenomena (e.g., WIMPs freeze-out, neutrino cosmology, Big Bang nucleosynthesis, recombination); baryogenesis; inflation; topological defects. High-energy astrophysical processes: overview of cosmic ray and gamma ray astrophysics; radiative and inelastic processes; astroparticle acceleration mechanisms; magnetic fields and cosmic ray transport; radiation-energy density of the universe; ultrahigh-energy cosmic rays; dark-matter models; and detection techniques. (Formerly Origin and Evolution of the Universe.) (Also offered as Physics 224. Students cannot receive credit for both courses.) Enrollment is restricted to graduate students. A. Aguirre

225. High-Energy Astrophysics. *
High-energy astrophysics and the final stages of stellar evolution: supernovae, binary stars, accretion disks, pulsars; extragalactic radio sources; active galactic nuclei; black holes. (Formerly Physics of Compact Objects) E. Ramirez-Ruiz

226. General Relativity. W
Develops the formalism of Einstein's general relativity, including solar system tests, gravitational waves, cosmology, and black holes. (Also offered as Physics 226. Students cannot receive credit for both courses.) Enrollment is restricted to graduate students. S. Profumo, A. Aguirre

230. Diffuse Matter in Space. *
Fundamental physical theory of gaseous nebulae and the interstellar medium. Ionization, thermal balance, theory and observation of emission spectra. Interstellar absorption lines, extinction by interstellar dust. Ultraviolet, optical, infrared, and radio spectra of gaseous nebulae. The Staff

231. Diffuse Gas In and In Between Galaxies. *
Examines the observational data and theoretical concepts related to the interstellar medium (gas inside galaxies); intracluster medium (gas in between galaxies in clusters); and intergalactic medium (gas in between field galaxies). Emphasizes on the inferred physical conditions of this gas and its implications for cosmology and processes of galaxy formation. Enrollment is restricted to graduate students. J. Prochaska

233. Physical Cosmology. S
Survey of modern physical cosmology, including Newtonian cosmology, curved space-times, observational tests of cosmology, the early universe, inflation, nucleosynthesis, dark matter, and the formation of structure in the universe. B. Robertson, P. Madau

234. Statistical Techniques in Astronomy. S
Introduces probability and statistics in data analysis with emphasis on astronomical applications. Topics include probability, Bayes' theorem, statistics, error analysis, correlation, hypothesis testing, parameter estimation, surveys, time-series analysis, surface distributions, and image processing. Students learn to identify the appropriate statistical technique to apply to an astronomical problem and develop a portfolio of analytic and computational techniques that they can apply to their own research. Enrollment is restricted to graduate students. A. Skemer

235. Numerical Techniques. *
Gives students a theoretical and practical grounding in the use of numerical methods and simulations for solving astrophysical problems. Topics include N-body, SPH and grid-based hydro methods as well as stellar evolution and radiation transport techniques. Enrollment is restricted to graduate students. The Staff

237. Accretion Processes. *
Theories of spherical accretion, structure and stability of steady-state accretion disks, and the evolution of time-dependent accretion disks. Applications of these theories to the formation of the solar system as well as the structure and evolution of dwarf novae and X-ray sources are emphasized. D. Lin

240A. Galactic and Extragalactic Stellar Systems. F
Structure and evolutionary histories of nearby galaxies. Stellar populations, galactic dynamics, dark matter, galactic structure and mass distributions. Peculiar galaxies and starbursting galaxies. Structure and content of the Milky Way. Evolution of density perturbations in the early universe. Hierarchical clustering model for galaxy formation and evolution. The Staff

240B. High Redshift Galaxies. *
Galaxy formation and evolution from observations of intermediate-to-high redshift galaxies (z 0.5-5). Complements and builds on 240A. Cluster galaxies and field galaxies. Foundation from classic papers on distant galaxies. Recent discoveries from IR and sub-mm measurements. Impact of AGNs and QSOs. Overview of modeling approaches. Identify theoretical and
Astronomy and Astrophysics

observational issues. Enrollment is restricted to graduate students. G. Illingworth

257. Modern Astronomical Techniques. *
Covers physical, mathematical, and practical methods of modern astronomical observations at all wavelengths at a level that prepares students to comprehend published data and to plan their own observations. Topics include: noise sources and astrophysical backgrounds; coordinate systems; filter systems; the physical basis of coherent and incoherent photon detectors; astronomical optics and aberrations; design and use of imaging and spectroscopic instruments; antenna theory; aperture synthesis and image reconstruction techniques; and further topics at the discretion of the instructor. Familiarity with UNIX, computer programming, and completion of Physics 116C is strongly recommended as well as at least one upper-division course in astronomy. Designed for graduate students; available to qualified undergraduate astrophysics majors by instructor permission. M. Bolte

260. Instrumentation for Astronomy. *
An introduction to astronomical instrumentation for infrared and visible wavelengths. Topics include instrument requirements imposed by dust, atmosphere, and telescope; optical, mechanical, and structural design principles and components; electronic and software instrument control. Imaging cameras and spectrographs are described. Offered in alternate academic years. Enrollment is restricted to graduate students. C. Rockosi

289. Adaptive Optics and Its Application. W
Introduction to adaptive optics and its astronomical applications. Topics include effects of atmospheric turbulence on astronomical images, basic principles of feedback control, wavefront sensors and correctors, laser guide stars, how to analyze and optimize performance of adaptive optics systems, and techniques for utilizing current and future systems for astronomical observations. Enrollment is restricted to graduate students. C. Max

292. Seminar (no credit). F,W,S
Seminar attended by faculty, graduate students, and upper-division undergraduate students. The Staff

293. Current Literature in Astrophysics (2 credits). F,W,S
Training for following daily progress in astrophysical research to keep pace with the rapidly evolving scientific field. Students learn how to select and read interesting papers (that span a wide range of topics) efficiently and how to summarize their key results. Students have an opportunity to practice presentation skills in an informal group discussion setting. Enrollment is restricted to graduate students. May be repeated for credit. The Staff

297. Independent Study. F,W,S
Independent study or research for graduate students who have not yet begun work on their theses. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. The Staff

Students submit petition to sponsoring agency. The Staff

* Not offered in 2018-19

Revised: 07/15/18
PROGRAM DESCRIPTION

Research at the macromolecular, molecular, and atomic levels is revolutionizing our understanding of the fundamental processes of life. Students interested in joining this search are best prepared by undertaking coursework in biology, chemistry, physics, mathematics, and computer science. The undergraduate major in Biochemistry and Molecular Biology (BMB) is offered by faculty who are actively engaged in research on biological systems.

Students who declare the BMB major earn a bachelor of science (B.S.) degree. The BMB major constitutes an integrated curriculum of basic instruction in biology, chemistry, mathematics, and physics, followed by the opportunity to pursue advanced study in specialized areas of interest. In modern, well-equipped laboratories, distinguished faculty are engaged in frontline research at UCSC. The Department of Chemistry and Biochemistry and the Department of Molecular, Cell, and Developmental Biology each host a very active seminar series in which internationally recognized scientists present their current research findings. Advanced BMB undergraduates are encouraged to attend.

The BMB program features close faculty-student interaction, stimulating learning environments, and opportunities for independent research and study. Students majoring in BMB are encouraged to become involved in research under the guidance of a faculty sponsor. Many students participating in this aspect of the program have made important contributions to the scientific literature.

Given the wide scope and interdisciplinary nature of this program, a considerable degree of flexibility has been incorporated into the major. All prospective majors should see the BMB academic adviser in the Chemistry and Biochemistry Department Office as early as possible. Junior transfer students or others with questions should consult the program website. A double major of BMB with the biological sciences majors or chemistry is not permitted. No minor is offered.

PROGRAM LEARNING OUTCOMES

Learning outcomes summarize the most important knowledge, skills, abilities, and attitudes that students are expected to develop over the course of their studies. The program learning outcomes clearly communicate the faculty's expectations to students, provide a framework for faculty evaluation of the curriculum based on empirical data, and help improve and measure the impact of implemented changes.

Students graduating with a B.S. in biochemistry and molecular biology should be able to:

1. demonstrate mastery of a broad set of chemical knowledge concerning the fundamentals in the basic areas of the discipline (organic, inorganic, analytical, physical, and biochemistry);
2. solve area-specific problems by identifying the essential parts of a problem, formulating a strategy for solving the problem, applying appropriate techniques to arrive at a solution, test the correctness of the solution, and interpret their results;
3. use modern library search tools to locate and retrieve scientific information about a topic, chemical, chemical technique, or an issue relating to chemistry, going beyond textbooks, common handbooks, and general online resources, such as Wikipedia;
4. know and follow the proper procedures and regulations for safe handling and use of chemicals;
5. understand the objective of their chemical experiments, properly carry out the experiments, and appropriately record and analyze the results;
6. use computers in data acquisition and processing, and use available software as a tool in data analysis;
7. use standard laboratory equipment, modern instrumentation, and classical techniques to carry out experiments;
8. communicate the concepts and results of their laboratory experiments through effective writing and/or oral communication using the discipline standards for reporting and citation; and
9. collaborate effectively as part of a team to solve problems, debate different points of view, and interact productively with a diverse group of team members.

LETTER GRADE POLICY

For all students entering UCSC in fall 2001 and later, all courses used to satisfy any of the major requirements must be taken for a letter grade.

DECLARATION OF THE BIOCHEMISTRY AND MOLECULAR BIOLOGY MAJOR
BIOCHEMISTRY AND MOLECULAR BIOLOGY QUALIFICATION POLICY

To qualify to declare the Biochemistry and Molecular Biology major, students must complete the following five qualification courses, or their equivalents, with a grade of C (2.0) or better and with a cumulative grade point average (GPA) of 2.50 or greater:

- Chemistry 1B, General Chemistry
- Chemistry 1C, General Chemistry
- Chemistry 8A, Organic Chemistry
- Biology (BIOL) 20A, Cell and Molecular Biology

and in one of the following calculus courses:
- Mathematics 11A, Calculus with Applications
- Mathematics 19A, Calculus for Science, Engineering, and Mathematics

Note that since Chemistry 1A is prerequisite for Chemistry 1C, students must also complete Chemistry 1A with a grade of C or better. Transfer students must have a full year of general chemistry.

When calculating GPA to determine qualification:

- All courses must be taken for a letter grade, see Letter Grade Policy.
- For courses required to qualify for the major that have been satisfied with Advanced Placement credit based on an AP examination score (See Admissions AP Chart), students may substitute a grade of A for each course when calculating their GPA.
- Students with two or more grades of NP, C-, D+, D, D-, or F in courses required to qualify for the major are not eligible to declare.

Students who are informed that they are not eligible to declare the major may appeal by submitting a letter to the Biochemistry and Molecular Biology program chair within 15 days from the date the notification was sent. Within 15 days of receipt of the appeal, the Biochemistry and Molecular Biology program chair will notify the student and their affiliated college of the decision. For more information about the appeal process, see the Appeal Process at the Chemistry Department website.

TRANSFER STUDENTS

The Biochemistry and Molecular Biology program welcomes applications from community college students who are prepared to enter the program at the junior level.

To be considered for admission to UCSC as a biochemistry and molecular biology major, transfer students must pass equivalents of the following courses with a cumulative GPA of 2.50 or higher:

- Chemistry 1A, General Chemistry
- Chemistry 1B, General Chemistry
- Chemistry 1C, General Chemistry
- Chemistry 8A, Organic Chemistry
- Biology (BIOL) 20A, Cell and Molecular Biology

and in one of the following calculus courses:
- Mathematics 11A, Calculus with Applications
- Mathematics 19A, Calculus for Science, Engineering, and Mathematics

For more information on qualifying for the major as a transfer applicant, visit the Chemistry Department website.

In addition to the required transfer admissions courses, we strongly recommend that all transfer students complete the equivalent of CHEM 8B, prior to transfer, to be able to take BIOC 100A in the fall. Students who wish to graduate in two years after coming to UCSC should also complete the equivalents of the following preparatory courses prior to transfer:

- Biology (BIOE) 20B, Development and Physiology
- Mathematics 11B, Calculus with Applications or MATH 19B, Calculus for Science, Engineering, and Mathematics
- Chemistry 8L and 8M, Organic Chemistry with Laboratory
- Mathematics 22, Introduction to Calculus of Several Variables

The biochemistry major also requires one year of calculus-based physics with lab and one term of statistics before graduation from UCSC. You can complete these courses at your community college if your schedule allows, but you can also complete them after transfer without negatively affecting your competitiveness for admission to UCSC.

Students who complete only the minimal introductory coursework prior to transfer may take longer to complete their degree. More information on transfer pathways for chemistry at the University of California may be found here.

Students planning to transfer to UCSC as a biochemistry and molecular biology major from a California community college should reference assist.org to determine which courses are equivalent to these required courses.

California community college students who are prepared for their major and achieve a certain GPA may be eligible for a transfer admissions guarantee (TAG); more information here.

PROGRAM PLANNING NOTES

Students who do not begin the lower-division requirements during their first year and who do not complete the organic chemistry requirements by the end of their second year will have difficulty completing the program within four years. The BMB academic adviser works closely with students interested in pursuing the major to ensure that they begin the program immediately and follow the appropriate steps toward completion.

It is strongly recommended that students avail themselves of the opportunities to obtain firsthand research experience through either independent study or senior thesis research.
Biochemistry and Molecular Biology

A number of graduate courses in Biochemistry and Molecular Biology are offered by the molecular, cell, and developmental biology (MCDB), and chemistry and biochemistry departments. Advanced undergraduates possessing the necessary prerequisites may take one or more of these courses with the consent of the instructor.

**REQUIREMENTS FOR THE B.S. DEGREE**

**LOWER-DIVISION REQUIREMENTS**

**General Chemistry:** Chemistry 1A, 1B/M, and 1C/N

**Calculus:** Mathematics 11A, 11B, and 22; or Mathematics 19A, 19B, and 22

**Statistics:** Applied Mathematics and Statistics 5 or 7/L

**Introductory Biology:** Biology (BIOL) 20A and Biology (BIOE) 20B

**Organic Chemistry:** Chemistry 8A/L and 8B/M

**Physics:** Physics 5A/L, 5B/M, and 5C/N; or 6A/L, 6B/M, and 6C/N

**UPPER-DIVISION REQUIREMENTS**

**Biochemistry and Molecular Biology:** Biochemistry and Molecular Biology (BIOC) 100A, 100B, and 100C and Biology (BIOL) 101L

**Genetics:** Biology (BIOL) 105

**Cell Biology:** Biology (BIOL) 110

**Eukaryotic Molecular Biology:** Biology (BIOL) 115

**Physical Chemistry:** Chemistry 163A and 163B

One of the following laboratory courses (Senior Exit Lab):

- Biochemistry and Molecular Biology (BIOC) 110L, Advanced Biochemistry Laboratory
- Biology (BIOL) 100L, Biochemistry Laboratory
- Biology (BIOL) 103L, Toxic RNA Lab II
- Biology (BIOL) 105L, Eukaryotic Genetics Laboratory
- Biology (BIOL) 109L, Yeast Molecular Genetics Laboratory
- Biology (BIOL) 110L, Cell Biology Laboratory
- Biology (BIOL) 115L, Eukaryotic Molecular Biology Laboratory
- Biology (BIOL) 121L, Environmental Phage Biology Laboratory
- Biology (BIOL) 186L, Undergraduate Research in MCD Biology
- Microbiology and Environmental Toxicology (METX) 119L, Microbiology Laboratory

**DISCIPLINARY COMMUNICATION (DC) REQUIREMENT**

Students of every major must satisfy that major’s upper-division Disciplinary Communication (DC) requirement. The DC requirement in Biochemistry and Molecular Biology is satisfied by completing one of the following courses: BIOC 110L, BIOL 100L, 103L, 105L, 109L, 110L, 115L, 121L, 186L, or METX 119L. The DC requirement must be satisfied at UCSC and may not be transferred from another institution.

**BIOCHEMISTRY AND MOLECULAR BIOLOGY PLANNER**

This is the ideal academic plan for those pursuing the biochemistry and molecular biology B.S. major. If needed, this plan can be arranged differently.

**COURSE SUBSTITUTION/TRANSFER CREDIT POLICY**

At least half of the upper-division courses (numbered 100–199) required for any biochemistry and molecular biology major must be taken through the chemistry or biology programs at UCSC, not as transfer credits from another department or institution. Students are advised to contact the Chemistry and Biochemistry Department undergraduate adviser before enrolling in numerous
Biochemistry and Molecular Biology

upper-division courses at other institutions. For more information on transferring courses to UCSC, please consult the Chemistry and Biochemistry Department website.

COMPREHENSIVE REQUIREMENT

Students must satisfy the comprehensive requirement by receiving a passing letter grade in any of the Senior Exit Labs listed in the previous section. In addition, students are encouraged to complete a senior thesis or a senior essay (see Chemistry and Biochemistry for more information).

MATERIALS FEE

Biochemistry and Molecular Biology students should be aware of the materials fee required for some laboratory courses. The fee is billed to the student’s account for specific laboratory materials purchased through the university. Fees generally range from $18 to $75 per course. Students may incur additional expenses purchasing individual supplies.

HONORS IN THE MAJOR

Honors in the majors are awarded to graduating students whose academic performance demonstrates excellence at a GPA of 3.5 or above. Highest honors are awarded to those students whose performance demonstrates the highest level of excellence and results in a GPA of 3.8 or above.

BIOCHEMISTRY AND MOLECULAR BIOLOGY FACULTY AND PROFESSIONAL INTERESTS

James Ackman, Assistant Professor, Molecular, Cell, and Developmental Biology
Brain circuit structure and function

Roger W. Anderson, Emeritus, Chemistry and Biochemistry

Manuel Ares Jr., Professor, Molecular, Cell, and Developmental Biology
Regulation of RNA processing, structure, function, and evolution of RNA-based systems

Joshua Arribere, Assistant Professor, Molecular, Cell, and Developmental Biology
Cell and Developmental Biology Cellular quality control of gene expression

Alexander Ayzner, Assistant Professor, Chemistry and Biochemistry
Experimental physical chemistry; organic semiconductors; molecular spectroscopy; electron transfer dynamics; X-ray scattering and spectroscopy

Ilan Benjamin, Professor, Chemistry and Biochemistry
Theoretical chemistry, molecular dynamics of chemical reactions in liquids and at interfaces

Claude F. Bernasconi, Emeritus, Chemistry and Biochemistry

Needhi Bhalla, Associate Professor, Molecular, Cell, and Developmental Biology
Meiotic chromosome dynamics

Hinrich Boeger, Professor, Molecular, Cell, and Developmental Biology
Chromatin dynamics and transcriptional regulation

Roberto A. Bogomolni, Emeritus, Chemistry and Biochemistry

Rebecca Braslau, Professor, Chemistry and Biochemistry
Synthetic organic chemistry: new synthetic methodologies using free radicals; nitroxides, nitroxide mediated “living” polymerizations: design and functionalization of tailored polymers for biomedical applications and nanotechnology, profluorescent nitroxides as sensors, synthetically modified polymers, development of non-migratory plasticizers

Susan Carpenter, Assistant Professor, Molecular, Cell and Developmental Biology
Long noncoding RNA and innate immunity

Bin Chen, Professor, Molecular, Cell, and Developmental Biology
Mammalian brain development

Shaowei Chen, Professor, Chemistry and Biochemistry
Synthesis, characterization, and manipulation of novel functional nanomaterials (metals and semiconductors); surface engineering of nanoparticles; nanoscale electron transfer; applications in fuel cells, photocatalysis, photovoltaics, and nano optoelectronics.

Philip O. Crews, Research Professor, Chemistry and Biochemistry

Ólöf Einarsdóttir, Professor, Chemistry and Biochemistry
Time-resolved spectroscopy; biophysics and bioenergetics; heme-copper oxidases; electron transfer and ligand binding; application of photolabile NO and O2 donors; molecular dynamics simulations of ligand access channels in heme-copper oxidases

David Feldheim, Professor, Molecular, Cell, and Developmental Biology
Developmental neuroscience

Grant Hartzog, Professor, Molecular, Cell, and Developmental Biology
Biochemistry, genetics, chromatin and transcriptional regulation

Lindsay Hinck, Professor, Molecular, Cell, and Developmental Biology
Cellular interactions during organogenesis and tumorigenesis

Theodore R. Holman, Professor, Chemistry and Biochemistry
Biochemistry and bioinorganic chemistry; lipoxygenase enzymology, protein engineering, inhibitor discovery,
Biochemistry and Molecular Biology

computer inhibitor design, mass spectroscopy, electron paramagnetic resonance

**Timothy Johnstone, Chemistry and Biochemistry**
Medicinal bioinorganic chemistry; nanoparticle drug delivery to treat cancer and infectious diseases; carbon monoxide poisoning antidotes; synthetic inorganic chemistry; small-molecule X-ray crystallography

**Melissa Jurica, Professor, Molecular, Cell, and Developmental Biology**
Structure and function of human splicing machinery

**Rohinton T. Kamakaka, Professor, Molecular, Cell, and Developmental Biology**
Nuclear organization, Chromatin domains, Epigenetic gene regulation and Insulators

**Douglas R. Kellogg, Professor, Molecular, Cell, and Developmental Biology**
Control of cell growth and size

**David S. Kliger, Research Professor, Chemistry and Biochemistry**
Time-resolved laser spectroscopy, biophysics, studies of visual transduction, protein function, and protein folding

**Joseph P. Konopelski, Professor, Chemistry and Biochemistry**
Synthetic organic chemistry; heterocyclic chemistry, bioorganic chemistry

**Jeremy Lee, Teaching Professor, Molecular, Cell, and Developmental Biology**
Molecular biology education and curriculum development; Drosophila models of neurodegeneration

**Yat Li, Associate Professor, Chemistry and Biochemistry**
Experimental physical chemistry, materials chemistry, nanomaterials, nanoscale photonics and electronics, energy conversion

**R.Scott Lokey, Professor, Chemistry and Biochemistry**
Organic chemistry; combinatorial synthesis, biotechnology, molecular cell biology

**John MacMillan, Professor, Chemistry and Biochemistry**
Natural products chemistry, chemical biology, structural elucidation, cancer biology, microbial natural products

**Pradip Mascharak, Professor, Chemistry and Biochemistry**
Bioinorganic chemistry, design of antitumor drugs, modeling of active sites of metalloenzymes, design of catalysts for hydrocarbon oxidation, studies on intermediates in non-heme oxygenase chemistry, design of NO-donors for photodynamic therapy

**Glenn L. Millhauser, Professor, Chemistry and Biochemistry**
Electron paramagnetic resonance; nuclear magnetic resonance, protein structure and function, peptide synthesis, prions, melanocortin signaling

**Scott R. Oliver, Professor, Chemistry and Biochemistry**
Materials chemistry: nanoporous inorganic and metal-organic materials for environmental cleanup of water, desulfurization of fuel and biomaterials

**Carrie Partch, Associate Professor, Chemistry and Biochemistry**
Biochemistry and biophysics, nuclear magnetic resonance spectroscopy; molecular mechanism of circadian rhythmicity

**Yuan Ping, Assistant Professor, Chemistry and Biochemistry**
Theoretical and computational materials chemistry; solar energy conversion; electronic, optical and carrier transport properties of transition metal oxides and nanomaterials; heterogeneous catalysts; solid/liquid interfaces

**Jevgenij Raskatov, Assistant Professor, Chemistry and Biochemistry**
Chemical biology, organic chemistry, molecular modeling, chemotherapy, inflammation

**Michael Rexach, Professor, Molecular, Cell, and Developmental Biology**
Structure and function of nuclear pore complex, nuclear transport

**Seth M. Rubin, Professor, Chemistry and Biochemistry**
Biomolecular mechanisms of cell-cycle regulation and cancer; structural biology and biochemistry; macromolecular x-ray crystallography; nuclear magnetic resonance

**Jeremy Sanford, Associate Professor, Molecular, Cell, and Developmental Biology**
Genomic analysis of protein-RNA interactions

**Nikolaos Sgourakis, Assistant Professor, Chemistry and Biochemistry**
Modeling protein complexes from sparse NMR data; hybrid methods in structural biology; antigen processing and presentation; viral immune regulation mechanisms

**Bakthan Singaram, Professor, Chemistry and Biochemistry**
Organic synthesis, organoborane chemistry, heterocyclic chemistry, organometallic chemistry, asymmetric synthesis, biosensors, and natural products chemistry

**Michael Stone, Associate Professor, Chemistry and Biochemistry**
Molecular basis of telomere length and telomerase-related diseases; biophysical characterization of nucleic acid-associated molecular motors; development of novel approaches for imaging enzymes in cells
Biochemistry and Molecular Biology

Susan Strome, Professor, Molecular, Cell, and Developmental Biology
Epigenetic regulation of germ cells in C. elegans

William T. Sullivan, Professor, Molecular, Cell, and Developmental Biology
Cell cycle, cytoskeleton, and host-pathogen interactions

Eugene Switkes, Emeritus, Chemistry and Biochemistry

John W. Tamkun, Professor, Molecular, Cell, and Developmental Biology
Transcriptional regulation, molecular genetics of Drosophila development, regulation of gene expression

Zhu Wang, Assistant Professor, Molecular, Cell, and Developmental Biology
Prostate development and cancer, tissue stem cell

Jordan Ward, Assistant Professor, Molecular, Cell, and Developmental Biology
Probing C. elegans development, cellular differentiation, and parasitic disease

W. Todd Wipke, Emeritus, Chemistry and Biochemistry

Alan M. Zahler, Professor, Molecular, Cell, and Developmental Biology
Alternative pre-mRNA splicing and small RNA function

Jin Z. Zhang, Professor, Chemistry and Biochemistry
Design, synthesis, characterization, and application of nanomaterials, including semiconductors, metals, and metal oxides; ultrafast dynamics and laser spectroscopy; cancer diagnosis and therapy; solar energy conversion; surface-enhanced Raman spectroscopy (SERS).

Martha C. Zúñiga, Professor, Molecular, Cell, and Developmental Biology
Negative selection of autoreactive T cells in the thymus and in peripheral lymphoid organs, immunological tolerance to epithelial antigens, MHC transfer between keratinocytes and dendritic cells

Yi Zuo, Professor, Molecular, Cell, and Developmental Biology
Synaptic plasticity in learning and memory

---

BIOCHEMISTRY AND MOLECULAR BIOLOGY COURSES

UPPER-DIVISION COURSES

100A. Biochemistry and Molecular Biology. F
Fundamentals of molecular biology, structure and function of nucleic acids, and protein structure. Designed for students preparing for research careers in biochemistry and molecular biology. Lecture: 3-1/2 hours; discussion: 1-1/4 hours. Prerequisite(s): Chemistry 8B or 108B; and Biology 20A. M. Stone

100B. Biochemistry and Molecular Biology. W
Covers principles of protein function from ligand binding and enzyme mechanism, kinetics and regulation to membrane composition and membrane protein function. Lecture: 3-1/2 hours; discussion: 1-1/4 hours. (Formerly Biochemistry.) Prerequisite(s): course 100A C. Partch

100C. Biochemistry and Molecular Biology. S
Biochemistry: intermediary metabolism and bioenergetics. How enzymatically catalyzed reactions are organized and regulated; how energy from molecules is extracted for chemical work. Lecture: 3-1/2 hours; discussion: 1-1/4 hours. (Formerly Biochemistry.) Prerequisite(s): course 100B The Staff

110L. Advanced Biochemistry Laboratory. F,S
An introduction to the major techniques used in the isolation and characterization of biological components. Laboratory: 8 hours; lecture: 1-3/4 hours. Students are billed a materials fee. Prerequisite(s): course 100B and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to chemistry majors in the biochemistry concentration. Other majors by permission. O. Einarsdottir

Revised: 07/15/2018
UNDERGRADUATE PROGRAM DESCRIPTION

The Department of Ecology and Evolutionary Biology (EEB) is devoted to the study of ecological and evolutionary processes across marine, terrestrial, and freshwater environments. The past 30 years have seen several revolutions in our understanding of how the biological world works. Advances in both analytical and genetic methods have given us a far more sophisticated understanding of the complexities of ecological and evolutionary processes in the natural world. Biologists at UCSC have played and will continue to play an important part in these advances, and the campus programs offer unique educational opportunities in biology that feature small class sizes, field studies, and extensive faculty-student interactions.

Class offerings and student research opportunities leverage the varied natural environments in the Monterey Bay region, throughout the western US, and in more distant locations such as Africa, Europe, Mexico, Tahiti, Australia, and the Far East. This emphasis on field and laboratory studies is the hallmark of undergraduate majors. Within this context they address not only basic ecological and evolutionary processes, but also the application of this knowledge to advance environmental, conservation and sustainability science.

An outstanding group of faculty, each with a vigorous, internationally recognized research program, is available to teach courses in their specialties as well as core courses for the major. Areas of research strength within the department include plant biology, animal behavior, physiology, evolution, ecology, and marine biology. UCSC is unique in the UC system in providing exceptional opportunities for undergraduate research, allowing students to interact one-on-one with faculty and other researchers in a laboratory or field setting. Students may plan a program that leads to one of several bachelor of arts (B.A.) and bachelor of science (B.S.) degrees. Students may choose from the following major options:

- Biology B.A.
- Ecology and Evolution B.S.
- Marine Biology B.S.
- Plant Sciences B.S.
- Environmental Studies/Biology combined major B.A. (administered by the Environmental Studies Department).

Advanced undergraduates, with the guidance of faculty mentors, have access to extensive departmental laboratories, including state-of-the-art genetics, physiology, and marine science facilities, for independent research. Fieldwork draws on a remarkable variety of terrestrial habitats, as well as ready access to Monterey Bay and the open Pacific. Terrestrial studies are supported by the UCSC reserve on campus, an arboretum, greenhouse facility, and vehicles to transport students to field sites off campus. Freshwater studies have access to a number of coastal tributaries and laboratory facilities at Long Marine Laboratory. Marine studies are supported by the Long Marine Laboratory with running seawater facilities, a boating program, and an AAUS accredited SCUBA diving program for underwater classes and research. Año Nuevo Island, north of Santa Cruz, is the site of extensive behavioral studies of marine mammals. In addition to coursework, there is an array of opportunities for directed independent study that enables majors to enhance their upper-division programs to reflect and strengthen their own interests and goals in the sciences.

PROGRAM LEARNING OUTCOMES

The undergraduate curriculum offered by the Department of Ecology and Evolutionary Biology (EEB) is designed to ensure that all students declared in any EEB sponsored major will achieve the following seven program learning outcomes.

1. Students will demonstrate broad-based knowledge of the fundamentals of ecology, behavior, evolution and physiology and the relationships among these disciplines.

2. Students will demonstrate skills in the observation and experimental study of organisms, using both field-based and laboratory-based approaches.

3. Students will demonstrate skills in identifying, accessing, comprehending and synthesizing scientific information, including interpretation of the primary scientific literature. This includes understanding key questions and hypotheses, interpreting results and conclusions, and evaluating quality through critique.

4. Students will demonstrate the ability to conceive and execute independent scientific research, including developing their own questions and hypotheses, designing an appropriate theoretical or empirical/experimental approach, executing that approach, and analyzing and interpreting data.
5. Students will demonstrate an ability to understand and apply fundamental quantitative skills, including models and statistical analyses, so as to properly interpret published research and apply such skills in their own research.
6. Students will demonstrate the ability to communicate original scientific work in the form of a scientific paper, as well as in oral or poster presentations.
7. Students will exhibit strong teamwork and problem solving skills. They will demonstrate the ability to make arguments from evidence and work together to find optimal solutions.

**PREREQUISITES**

The introductory biology sequence is prerequisite to virtually all upper-division biology courses. BIOL 20A (offered by the Molecular, Cell, and Developmental Biology Department) has a prerequisite of Chemistry 1A. Therefore, it is essential for students to start chemistry as soon as possible. Students who have not taken Chemistry 1A may begin the introductory sequence with BIOE 20C. The entire introductory biology sequence should be taken the first and second year, concurrently with or following the general chemistry sequence. We also strongly recommend completing the lower-division physics requirements early in your academic career.

An online mathematics placement is required to enroll in a mathematics course. Students are expected to take this examination and are encouraged to work in the learning modules until they place into calculus. For more information see the [mathematics placement website](#).

Advanced Placement (AP) course equivalencies can be used to fulfill prerequisites.

**LETTER GRADE POLICY**

All courses used to satisfy any major requirement must be taken for a letter grade.

**MAJOR QUALIFICATION POLICY**

Ecology and evolutionary biology has a qualification policy that applies to the following majors:
- Biology B.A.
- Ecology and Evolution B.S.
- Marine Biology B.S.
- Plant Sciences B.S.

**DETERMINING QUALIFICATION**

All courses must be taken for a letter grade. The following qualification courses, or their equivalents, must be completed with a grade of C (2.0) or better:

- Chemistry 1A, General Chemistry
- Chemistry 1B, General Chemistry
- BIOL 20A, Cell and Molecular Biology
- BIOE 20B, Development and Physiology
- BIOE 20C, Ecology and Evolution

Additionally, students declaring the ecology and evolution B.S. major, the marine biology B.S. major, or the plant sciences B.S. major must complete one of the following calculus courses offered by the Mathematics Department:
- Mathematics 11A, Calculus with Applications
- Mathematics 19A, Calculus for Science, Engineering, and Mathematics

Students with one grade of NP, C-, D+, D, D-, or F in one of the qualification courses are eligible to declare after successfully repeating the same or an equivalent course with a grade of C (2.0) or better.

Students with two or more grades of NP, C-, D+, D, D-, or F in the qualification courses are not eligible to declare. Mathematics courses will not be included in this calculation.

Students with AP credit for any of the qualification course(s) are eligible to declare after successfully completing the remaining qualification courses. Consult with an EEB undergraduate adviser when requesting to declare the major after the campus declaration deadline.

Students who are not eligible to declare the major may appeal this decision after they have successfully completed the qualification courses by submitting an appeal letter to EEB undergraduate advising. Within 15 days of receipt of the appeal, the department will notify the student and college of the decision. For more information about the appeal process, see the [appeal process website](#).

For information on qualifying for the environmental studies/biology combined major, please see Environmental Studies in this catalog.

**TRANSFER STUDENTS**

To be considered for admission to UCSC as a proposed major in ecology and evolutionary biology (B.S.), marine biology, plant sciences, or biology (B.A.), transfer students must pass equivalents of the following preparatory courses with a C (2.0) or better prior to transfer:

- BIOL 20A, Cell and Molecular Biology
- BIOE 20B, Development and Physiology
- BIOE 20C, Ecology and Evolution
- Chemistry 1A, General Chemistry
- Chemistry 1B, General Chemistry
- For all programs except the biology B.A., one of the following calculus courses:
  - Mathematics 11A, Calculus with Applications
  - Mathematics 19A, Calculus for Science, Engineering, and Mathematics

More information on qualifying for the major as a transfer applicant is [here](#).

While it is not required for UC Santa Cruz admission, transfer students are strongly encouraged to complete equivalents of the complete general chemistry series, a second quarter of calculus, and the physics series (PHYS 6A/L, plus 6B or 6C) prior to transfer. Students who
transfer without having completed this additional recommended introductory coursework may require more than two years to complete the major requirements. Additional transfer preparation information is here. Prospective transfer students should review the transfer information here.

DECLARING A MAJOR

Students may submit a petition to declare after successful completion of the qualification policy courses. Students who are enrolled in their final qualification policy course(s) may submit the petition, but will not be declared until grades have been posted. Information on major declaration can be found here.

DOUBLE MAJOR IN THE BIOLOGICAL SCIENCES

Students interested in pursuing multiple majors within the biological sciences may not declare any combination of Biology (B.A., B.S., or minor), Ecology and Evolution B.S., Marine Biology B.S., Plant Sciences B.S., or Environmental Studies/Biology B.A. combined major.

GENERAL BIOLOGY BACHELOR OF ARTS MAJOR

The general biology bachelor of arts major permits flexibility, but demands careful attention to a student's own interests and plans. Each student should select courses on the basis of up-to-date information in consultation with a biology faculty adviser whose interests reflect the student's interests.

GENERAL BIOLOGY B.A. MAJOR REQUIREMENTS

LOWER-DIVISION REQUIREMENTS

Introductory Biology: BIOL 20A, BIOE 20B, and 20C
General Chemistry: Chemistry 1A and 1B
Statistics: Applied Mathematics and Statistics 5 or 7/L
Physics: Physics 1 or Physics 6A or Physics 7A

UPPER-DIVISION REQUIREMENTS

A total of eight upper-division biology courses, as follows:
Three core courses:
  Genetics: BIOL 105
  Ecology: BIOE 107
  Evolution: BIOE 109
One of the following anatomy or physiology courses:
  BIOE 131/L, Animal Physiology/Laboratory
  (Laboratory optional)
  BIOE 133/L, Exercise Physiology/Laboratory
  BIOE 134/L, Comparative Vertebrate

ELECTIVES

Four additional electives chosen from the following:
Four additional electives chosen from BIOE courses numbered 100-179 and
BIOL 100, Biochemistry
BIOL 101/L, Molecular Biology/Laboratory
BIOL 110, Cell Biology
BIOL 111, Immunology
BIOL 113, Endocrinology
BIOL 115, Eukaryotic Molecular Biology
BIOL 120, Development
BIOL 125, Introduction to Neuroscience
Microbiology and Environmental Toxicology 119, Microbiology
Microbiology and Environmental Toxicology 119L, Microbiology Laboratory
Some of these electives may have prerequisites that do not satisfy major or minor requirements.

DISCIPLINARY COMMUNICATION (DC) REQUIREMENT

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement for the biology bachelor of arts degree is satisfied by completing two of the following Ecology and Evolutionary Biology courses: BIOE 108, 114/L, 117, 120/L, 122/L, 127/L, 128L, 129/L, 137, 141L, 145, 145L, 150L 151B, 153C, 158L, 159A, 161L, 171, 172/L. For 2-credit laboratory courses taken concurrently with 5-credit lectures, both courses must be passed to receive one half of the DC requirement.

GENERAL BIOLOGY B.A. SAMPLE PLANNERS

Frosh sample planner
Transfer student sample planner
For information on the general biology minor, see Biology B.S. and Minor.

ECOLOGY AND EVOLUTION MAJOR

The ecology and evolution major provides students with interdisciplinary skills necessary for understanding and solving complex problems in ecology, evolution, behavior, and physiology. While some of these disciplines focus on molecular or chemical mechanisms, they all address questions on larger spatial and temporal scales that can be applied to important environmental problems, including genetic
Students majoring in ecology and evolution will receive a B.S. degree based on an integrated series of courses providing breadth in fundamental areas of biology and allied sciences that enhance understanding of evolutionary and ecological processes. The capstone of this curriculum is a suite of field courses providing students unique opportunities to learn and conduct research in a host of ecological systems. Students are encouraged to take field courses in their areas of specialization. Other opportunities include participation in research projects with faculty sponsors and the intensive Education Abroad Programs (UCEAP) in Costa Rica (tropical biology) and Australia (marine sciences).

**ECOLOGY AND EVOLUTION B.S. MAJOR REQUIREMENTS**

**LOWER-DIVISION REQUIREMENTS**

**Introductory Biology:** BIOL 20A, BIOE 20B, and BIOE 20C
**General Chemistry:** Chemistry 1A, 1B and 1C/N
**Calculus:** Mathematics 11A and B or 19A and B
**Biostatistics:** Applied Mathematics and Statistics 7/L
**Physics:** Physics 7A/6L and 7B recommended, or Physics 6A/L and 6B, or Physics 6A/L and 6C

**UPPER-DIVISION REQUIREMENTS**

A total of eleven upper-division courses; two must include laboratory or fieldwork. Courses appearing in more than one category can fulfill only one requirement.

Three upper-division core courses:
**Genetics:** BIOL 105
**Ecology:** BIOE 107
**Evolution:** BIOE 109

One of the following physiology courses:
**BIOE 131/L, Animal Physiology/Laboratory (lab optional)**
**BIOE 133/L, Exercise Physiology/Laboratory**
**BIOE 134/L, Comparative Vertebrate Anatomy/Laboratory**
**BIOE 135/L, Plant Physiology/Laboratory**

One of the following organism courses:
**BIOE 112/L, Ornithology/Ornithology Field Studies**
**BIOE 114/L, Herpetology/Field Methods in Herpetological Research**
**BIOE 117/L, Systematic Botany of Flowering Plants/Laboratory**
**BIOE 120/L, Marine Botany/Laboratory**
**BIOE 122/L, Invertebrate Zoology/Laboratory**
**BIOE 124/L, Mammalogy/Laboratory**
**BIOE 127/L, Ichthyology/Laboratory**
**BIOE 129/L, Biology of Marine Mammals/Laboratory (lab required)**

**ELECTIVE LIST FOR ECOLOGY AND EVOLUTION MAJOR**

Three topical electives chosen from the following:
**BIOE 108, Marine Ecology**
**BIOE 112/L, Ornithology/Ornithology Field Studies**
**BIOE 114/L, Herpetology/Field Methods in Herpetological Research**
**BIOE 117/L, Systematic Botany/Laboratory**
**BIOE 118, Plant and Society: The Biology of Food, Shelter, and Medicine**
**BIOE 120/L, Marine Botany/Laboratory**
**BIOE 122/L, Invertebrate Zoology/Laboratory**
**BIOE 124/L, Mammalogy/Laboratory**
**BIOE 125 Ecosystems of California**
**BIOE 127/L, Ichthyology/Laboratory**
**BIOE 128/L, Large Marine Vertebrates Field Course**
**BIOE 129/L, Biology of Marine Mammals/Laboratory (lab optional)**
**BIOE 131/L, Animal Physiology/Laboratory (lab optional)**
**BIOE 133/L, Exercise Physiology/Laboratory**
**BIOE 134/L, Comparative Vertebrate Physiology/Laboratory**
**BIOE 135/L, Plant Physiology/Laboratory**
**BIOE 137/L, Molecular Ecology/Laboratory**
**BIOE 140, Behavioral Ecology**
**BIOE 141L, Behavioral Ecology Field Course**
**BIOE 145, Plant Ecology**
**BIOE 145L, Field Methods in Plant Ecology**
**BIOE 147, Community Ecology**
**BIOE 148A, Quantitative Ecology**
**BIOE 148B Quantitative Methods in Ecology and Evolution**
**BIOE 149, Disease Ecology**
**BIOE 150, Ecological Field Methods**
**BIOE 150L, Ecological Field Methods Laboratory**
**BIOE 151A, B, C, and D, Ecology and Conservation in Practice**
**BIOE 153A, B, and C, Arctic Ecology**
**BIOE 155, Freshwater Ecology**
**BIOE 155L, Freshwater Ecology Laboratory**
**BIOE 158L, Marine Ecology Laboratory**
**BIOE 159A, B, C, and D, Marine Ecology Field Quarter**
**BIOE 161, Kelp Forest Ecology**
**BIOE 161L, Kelp Forest Ecology Laboratory**
**BIOE 163/L, Ecology of Reefs, Mangroves, and Seagrasses/Laboratory**
**BIOE 165, Marine Conservation Biology**
**BIOE 172/L, Population Genetics/Laboratory**
**BIOL 100, Biochemistry**
**BIOL 101/L, Molecular Biology/Laboratory**
**BIOL 110, Cell Biology**
**BIOL 115, Eukaryotic Molecular Biology**
**BIOL 120, Development**
**Environmental Studies 125, Ecosystems of California**
**Microbiology and Environmental Toxicology 119, Microbiology**
**Microbiology and Environmental Toxicology 119L, Microbiology Laboratory**
**Ocean Sciences 118, Marine Microbial Ecology**

Three general electives chosen from the following:

**Biological Sciences-EEB**

Any upper-division BIOE course numbered 100-179 of 5 or more credits

**Biological Sciences-MCDB**
Any 5 credits of undergraduate research (BIOE 183W, 183L, 193, 193F, or 195)
or

**Environmental Studies**

Environmental Studies 183, Environmental Studies Internship (5 credits)

**DISCIPLINARY COMMUNICATION (DC) REQUIREMENT**

Students of every major must satisfy that major’s upper-division Disciplinary Communication (DC) requirement. The DC requirement in ecology and evolution is satisfied by completing two of the following Ecology and Evolutionary Biology courses: BIOE 108, 114/L, 117, 120/L, 122/L, 127/L, 128L, 129/L, 137, 141L, 145, 145L, 150L, 151B, 153C, 158L, 159A, 161L, 171, 172/L. For 2-credit laboratory courses taken concurrently with 5-credit lectures, both courses must be passed to receive one half of the DC requirement.

**ECOLOGY AND EVOLUTION B.S. SAMPLE PLANNERS**

[Frosh sample planners.](#)
[Transfer student sample planners.](#)

## MARINE BIOLOGY MAJOR

UCSC is situated within five miles of Monterey Bay and its great diversity of coastal marine ecosystems; nature reserves; and state, federal, and private marine research institutions and resource management agencies. These resources, combined with on-campus computing and analytical facilities and the Long Marine Laboratory, make UCSC an exceptional campus for the study of marine biology and its application to coastal conservation and management. Descriptions of nearby environments, institutions, and facilities are available through the [Ecology and Evolutionary Biology Department](#) website.

The marine biology major is designed to introduce students to marine organisms and the biological and physical processes that affect these organisms, their populations, and their coastal and oceanic ecosystems. The emphasis is on basic principles that help in understanding the processes that shape life in marine environments. The marine biology major is a demanding program that offers a B.S. degree and requires several more courses than the general biology B.A. major.

## MARINE BIOLOGY B.S. MAJOR REQUIREMENTS

### LOWER-DIVISION REQUIREMENTS

- Introductory Biology: BIOL 20A, BIOE 20B and BIOE 20C
- General Chemistry: Chemistry 1A, 1B and 1C/N
- Calculus: Mathematics 11A and B or 19A and B
Biology: Ecology and Evolutionary Biology

Biostatistics: Applied Mathematics and Statistics 7/L
Physics: Physics 7A/6L and 7B recommended, or Physics 6A/L and 6B, or Physics 6A/L and 6C

UPPER-DIVISION REQUIREMENTS

A total of 11 upper-division courses; two must include laboratory or field work. Courses appearing in more than one category can fulfill only one requirement.

Two core courses:
Genetics: BIOL 105
Evolution: BIOE 109

One ecology course:
BIOE 107, Ecology
BIOE 108, Marine Ecology

One marine-environment course:
Ocean Sciences 101, Marine Environment
Ocean Sciences 130, Biological Oceanography

One marine course:
BIOE 120/L, Marine Botany/Laboratory
BIOE 122/L, Invertebrate Zoology/Laboratory
BIOE 127/L, Ichthyology/Laboratory
BIOE 129/L, Biology of Marine Mammals/Laboratory (lab optional)

Elective list for Marine Biology Major
Three topical electives chosen from the following:
BIOE 108, Marine Ecology
BIOE 120/L, Marine Botany/Laboratory
BIOE 122/L, Invertebrate Zoology/Laboratory
BIOE 127/L, Ichthyology/Laboratory
BIOE 128L, Large Marine Vertebrates Field Course
BIOE 129/L, Biology of Marine Mammals/Laboratory (lab optional)
BIOE 155, Freshwater Ecology
BIOE 155L, Freshwater Ecology Laboratory
BIOE 158L, Marine Ecology Laboratory
BIOE 159ABCD, Marine Ecology Field Quarter
BIOE 161, Kelp Forest Ecology
BIOE 161L, Kelp Forest Ecology Laboratory
BIOE 163/L, Ecology of Reefs, Mangroves, and Seagrasses/Laboratory
BIOE 165, Marine Conservation Biology
Earth and Planetary Sciences 102, Marine Geology
Earth and Planetary Sciences 105, Coastal Geology
Ocean Sciences 118, Marine Microbial Ecology
Ocean Sciences 130, Biological Oceanography

Three general electives chosen from the following:

Biological Sciences-EEB
Any upper-division BIOE course numbered 100-179 of 5 or more credits

Biological Sciences-MCDB
BIOL 100, Biochemistry
BIOL 101/L, Molecular Biology/Laboratory
BIOL 110, Cell Biology
BIOL 115, Eukaryotic Molecular Biology
BIOL 120, Development

Earth and Planetary Sciences
Earth and Planetary Sciences 100/L, Vertebrate Paleontology
Earth and Planetary Sciences 101/L, Invertebrate Paleontology

Paleobiology/Laboratory
Earth and Planetary Sciences 102, Marine Geology
Earth and Planetary Sciences 105, Coastal Geology

Economics
Economics 166A, Game Theory and Applications I
Economics 166B, Game Theory and Applications II

Environmental Studies (enrollment by permission of instructor)
Environmental Studies 104A/L, Introduction to Environmental Field Methods/Laboratory
Environmental Studies 107ABC, Natural History Field Quarter
Environmental Studies 108, General Entomology
Environmental Studies 115A/L, GIS and Environmental Applications/Exercises in GIS
Environmental Studies 120, Conservation Biology
Environmental Studies 122, Tropical Ecology and Conservation
Environmental Studies 123, Animal Ecology and Conservation
Environmental Studies 129, Integrated Pest Management
Environmental Studies 130A/L, Agroecology and Sustainable Agriculture/Laboratory
Environmental Studies 130B, Principles of Sustainable Agriculture
Environmental Studies 131, Insect Ecology
Environmental Studies 160, Restoration Ecology
Environmental Studies 161A, Soils and Plant Nutrition
Environmental Studies 162, Plant Physiological Ecology
Environmental Studies 163, Plant Disease Ecology
Environmental Studies 167, Freshwater and Wetland Ecology
Environmental Studies 168, Biochemistry and the Global Environment

Microbiology and Environmental Toxicology
Microbiology and Environmental Toxicology 119, Microbiology
Microbiology and Environmental Toxicology 119L, Microbiology Laboratory

Ocean Sciences
Ocean Sciences 118, Marine Microbial Ecology
Ocean Sciences 130, Biological Oceanography

Psychology
Psychology 123, Behavioral Neuroscience
Some of these electives may have prerequisites that do not satisfy major or minor requirements.
One of the following may also be used as an upper-division general elective:

Biological Sciences-EEB
Any 5 credits of undergraduate research (BIOE 183W, 183L, 193, 193F, or 195)
or

Environmental Studies
Environmental Studies 183, Environmental Studies Internship (5 credits)
DISCIPLINARY COMMUNICATION (DC) REQUIREMENT

Students of every major must satisfy that major’s upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in marine biology is satisfied by completing two of the following Ecology and Evolutionary Biology courses: BIOE 108, 114/L, 117, 120/L, 122/L, 127/L, 128L, 129/L, 137, 141L, 145, 145L, 150L, 151B, 153C, 158L, 159A, 161L, 171, 172/L. For 2-credit laboratory courses taken concurrently with 5-credit lectures, both courses must be passed to receive one half of the DC requirement.

MARINE BIOLOGY B.S. SAMPLE PLANNERS

Frosh sample planners.
Transfer student sample planners.

PLANT SCIENCES MAJOR

UC Santa Cruz has a strong program in the plant sciences (sometimes called botany). UCSC resources that support the plant sciences major include state-of-the-art greenhouse facilities, natural ecosystems right on the campus from coastal wetlands to redwood forests, the collections of the UCSC Arboretum, and the Center for Agroecology and Sustainable Food Systems (including the UCSC Farm and Garden).

The plant sciences major is designed for students with an interest in plant biology and its associated curricular fields such as plant ecology, plant physiology, plant pathology, plant genetics, soils, and applied plant sciences. After completion of the core courses, students can proceed in one of several directions depending on their interests. For example, a more in-depth study of physiology and evolution courses can serve as preparation for work in biotechnology or plant breeding; further studies in plant ecology, tropical ecology, or restoration ecology can lead to careers in resource ecology and management or biodiversity exploration; upper-division training in agroecology can lead to careers in agriculture or food systems. There are many opportunities for internships both on the UC Santa Cruz campus and in the greater community.

PLANT SCIENCES B.S. MAJOR REQUIREMENTS

LOWER-DIVISION REQUIREMENTS

Introductory Biology: BIOL 20A, BIOE 20B and 20C
General Chemistry: Chemistry 1A, 1B and 1C/N
Calculus: Mathematics 11A and B or 19A and B
Biostatistics: Applied Mathematics and Statistics 7/L
Physics: Physics 7A/6L and 7B (recommended), or Physics 6A/L and 6B, or Physics 6A/L and 6C

UPPER-DIVISION REQUIREMENTS

A total of 11 upper-division courses; two of which must include laboratory or fieldwork. Courses appearing in more than one category can fulfill only one requirement.

Three core courses:
Genetics: BIOL 105
Ecology: BIOE 107
Evolution: BIOE 109

One plant physiology course from the following:
BIOE 135/L, Plant Physiology/Laboratory

Environmental Studies 162, Plant Physiological Ecology

One botany course from the following:
BIOE 117/L, Systematic Botany/Laboratory
BIOE 120/L, Marine Botany/Laboratory

Three topical electives chosen from the following:

Biological Sciences-EEB

BIOE 117/L, Systematic Botany/Laboratory
BIOE 118, Plant and Society: The Biology of Food, Shelter, and Medicine
BIOE 120/L, Marine Botany/Laboratory
BIOE 125 Ecosystems of California
BIOE 135/L, Plant Physiology/Laboratory

Environmental Studies 162, Plant Physiological Ecology

Environmental Studies 163, Plant Disease Ecology

Environmental Studies 161A, Soils and Plant Nutrition

Environmental Studies 162, Plant Physiological Ecology

Environmental Studies 163, Plant Disease Ecology

Three general electives chosen from the following:

Biological Sciences-EEB

Any upper-division BIOE course numbered 100-179 of 5 or more credits

Biological Sciences-MCDB
Biology: Ecology and Evolutionary Biology

BIOL 100, Biochemistry
BIOL 101/L, Molecular Biology/Laboratory
BIOL 110, Cell Biology
BIOL 115, Eukaryotic Molecular Biology
BIOL 120, Development

Earth and Planetary Sciences
Earth and Planetary Sciences 100/L, Vertebrate Paleontology
Earth and Planetary Sciences 101/L, Invertebrate Paleobiology/Laboratory
Earth and Planetary Sciences 102, Marine Geology
Earth and Planetary Sciences 105, Coastal Geology

Economics
Economics 166A, Game Theory and Applications I
Economics 166B, Game Theory and Applications II

Environmental Studies (enrollment by permission of instructor)
Environmental Studies 104A/L, Introduction to Environmental Field Methods/Laboratory
Environmental Studies 107ABC, Natural History Field Quarter
Environmental Studies 108, General Entomology/Laboratory
Environmental Studies 115A/L, GIS and Environmental Applications/Exercises in GIS
Environmental Studies 120, Conservation Biology
Environmental Studies 122, Tropical Ecology and Conservation
Environmental Studies 123, Animal Ecology and Conservation
Environmental Studies 129, Integrated Pest Management
Environmental Studies 130A/L, Agroecology and Sustainable Agriculture/Laboratory
Environmental Studies 130B, Principles of Sustainable Agriculture
Environmental Studies 131, Insect Ecology
Environmental Studies 160, Restoration Ecology
Environmental Studies 161A, Soils and Plant Nutrition
Environmental Studies 162, Plant Physiological Ecology
Environmental Studies 163, Plant Disease Ecology
Environmental Studies 167, Freshwater and Wetland Ecology
Environmental Studies 168, Biochemistry and the Global Environment

Microbiology and Environmental Toxicology
Microbiology and Environmental Toxicology 119, Microbiology
Microbiology and Environmental Toxicology 119L, Microbiology Laboratory

Ocean Sciences
Ocean Sciences 118, Marine Microbial Ecology
Ocean Sciences 130, Biological Oceanography

Psychology
Psychology 123, Behavioral Neuroscience
Some of these electives may have prerequisites that do not satisfy major or minor requirements.
One of the following may also be used as an upper-division general elective:

Biological Sciences-EEB

Any 5 credits of undergraduate research (BIOE 183W, 183L, 193, 193F, or 195)
or

Environmental Studies
Environmental Studies 183, Environmental Studies Internship (5 credits)

DISCIPLINARY COMMUNICATION (DC) REQUIREMENT

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in plant sciences is satisfied by completing two of the following Ecology and Evolutionary Biology courses: BIOE 108, 114/L, 117, 120/L, 122/L, 127/L, 128L, 129/L, 137, 141L, 145, 145L, 150L 151B, 153C, 158L, 159A, 161L, 171, 172/L. For 2-credit laboratory courses taken concurrently with 5-credit lectures, both courses must be passed to receive one half of the DC requirement.

PLANT SCIENCES B.S. SAMPLE PLANNERS

Frosh sample planners.
Transfer student sample planners.

COMPREHENSIVE REQUIREMENT

All majors in the biological sciences require completion of a comprehensive requirement. This requirement can be satisfied in one of the following ways:

- receiving a passing grade in an independent research course, or field/laboratory course listed below;
- completing a senior thesis;
- achieving a graduate record examination (GRE) score at or above the 50th percentile on the biology subject test or the biochemistry, cell, and molecular biology subject test. Reports of GRE scores must be submitted to the EEB undergraduate advising office before the last day of the graduating quarter;
- obtaining a medical college admission test (MCAT) score at or above the 50th percentile on the biological sciences section. Reports of MCAT scores must be submitted to the EEB undergraduate advising office before the last day of the graduating quarter.

Comprehensive courses offered by Ecology and Evolutionary Biology
BIOE 112L, Ornithology Field Studies
BIOE 114L, Field Methods in Herpetological Research
BIOE 117L, Systematic Botany of Flowering Plants Laboratory
BIOE 120L, Marine Botany Laboratory
BIOE 122L, Invertebrate Zoology Laboratory
BIOE 124L, Mammalogy Laboratory
BIOE 127L, Ichthyology Laboratory
BIOE 128L, Large Marine Vertebrates Field Course
BIOE 129L, Biology of Marine Mammals Laboratory
BIOE 131L, Animal Physiology Laboratory
Biology: Ecology and Evolutionary Biology

BIOE 133L, Exercise Physiology Laboratory
BIOE 134L, Comparative Vertebrate Anatomy Laboratory
BIOE 135L, Plant Physiology Laboratory
BIOE 137L, Molecular Ecology Laboratory
BIOE 141L, Behavioral Ecology Field Course
BIOE 145L, Field Methods in Plant Ecology
BIOE 150L, Ecological Field Methods
BIOE 151ABCD, Ecology and Conservation in Practice
BIOE 153ABC, Arctic Ecology
BIOE 155L, Freshwater Ecology Laboratory
BIOE 158L, Marine Ecology Laboratory
BIOE 159ABCD, Marine Ecology Field Quarter
BIOE 161L, Kelp Forest Ecology Laboratory
BIOE 163L, Ecology of Reefs, Mangroves, and Seagrasses Laboratory
BIOE 172L, Population Genetics Laboratory
BIOE 183W, Undergraduate Research in EEB

Comprehensive courses offered by Molecular, Cell and Developmental Biology

BIOL 100L, Biochemistry Laboratory
BIOL 105L, Eukaryotic Genetics Laboratory
BIOL 109L, Yeast Molecular Genetics Laboratory
BIOL 110L, Cell Biology Laboratory
BIOL 115L, Eukaryotic Molecular Biology Laboratory
BIOL 120L, Developmental Biology Laboratory
BIOL 121L, Environmental Phage Biology Laboratory
BIOL 178L, Protocols in Stem Cell Biology
BIOL 186L, Undergraduate Research in MCD Biology
BIOL 186R, Undergraduate Research in MCD Biology
BIOL 189, Health Sciences Internship

Comprehensive courses offered in other departments

Biochemistry and Molecular Biology 110L, Advanced Biochemistry Laboratory
Microbiology and Environmental Toxicology 119L, Microbiology Laboratory

HONORS

Honors in the biological sciences majors are awarded to graduating students whose academic performance demonstrates excellence at a grade point average (GPA) of 3.5 or above. Highest honors are awarded to those students whose performance demonstrates the highest level of excellence and results in a GPA of 3.8 or above.

COURSE SUBSTITUTION/TRANSFER CREDIT POLICY

To discuss the process for a course substitution, contact an EEB undergraduate adviser.

At least half of the upper-division courses (numbered 100–179) required for each major must be taken in EEB at UC Santa Cruz not as transfer credits from another department or institution.

Transfer students are advised to contact an EEB undergraduate adviser before enrolling in numerous upper-division courses at other institutions. For more information on transferring courses to UCSC, please consult the Transfer Student website. Additional information for transfer students is provided above in the “Transfer Students” section.

Only one upper-division course requirement may be met with a research-based independent study or graduate-level UCSC biology course.

ACADEMIC ADVISING

Academic advising is available at the EEB undergraduate advising office. The undergraduate webpages contain advice and information pertinent to students’ most frequently voiced questions. Each student should review the information posted on the website; for further assistance, contact an EEB undergraduate adviser.

EDUCATION ABROAD OPPORTUNITIES

The UC Education Abroad Program (UCEAP) offers qualified students unique opportunities to broaden their educational horizons. The EEB Department encourages interested students to participate. It is possible to satisfy major requirements abroad and graduate on time; consult with an EEB undergraduate adviser early in the planning process.

Many programs are in English-speaking countries or use English for advanced courses. Many programs offer small classes, extensive laboratories, and/or field research experience.

There are excellent programs in Costa Rica, Australia, New Zealand, the United Kingdom, Denmark, and Germany, among others. The Costa Rica Tropical Biology Program is of note to students interested in tropical biology and ecology. Held spring and fall quarters at the Monteverde research station, this program gives students experience with hands-on field research and offers a homestay program. The University of Queensland (Australia) offers an intensive, full-semester marine science program, which includes stays at research stations on the Great Barrier Reef and in sheltered mangrove and seagrass habitats near Brisbane.

Students interested in study abroad need to get an early start on their introductory requirements, including chemistry, mathematics, and biology and must declare their major prior to going abroad. Visit the UCEAP office as soon as possible to begin planning and seek advice and approval for your UCEAP plan from an EEB undergraduate adviser prior to participation in UCEAP.

GRADUATE PROGRAM DESCRIPTION

The ecology and evolutionary biology (EEB) graduate program at UC Santa Cruz reflects the remarkable local and global diversity of species and environments studied by the EEB faculty and students. The vision of the EEB graduate program is to provide a nurturing, creative, and intellectual environment conducive to the development of world-class scientists. The EEB
graduate program encourages close working relations between students and faculty in an informal atmosphere advantageous to rapid learning and professional growth. Interdisciplinary collaborations with oceanographers, geologists, mathematicians, environmental and conservation biologists, toxicologists, and others enable students to explore the conceptual connections between related fields as they acquire mastery in their areas of specialization.

The graduate program in EEB at UC Santa Cruz is one of the premier EEB programs in the country. UCSC graduate students in EEB regularly win prestigious research fellowships and awards for their presentations at international meetings in addition to publishing their work in the best journals of their fields. Students take advantage of local field sites and state-of-the-art departmental laboratories, more than two-thirds of the EEB faculty also participate in field studies throughout the world, especially in Africa, Latin America, Antarctica, the Arctic, and around the Pacific Rim. Research in EEB comprises four core areas: ecology, evolutionary biology, physiology, and behavior.

---

**DEGREE REQUIREMENTS**

**CORE COURSES**

BIOE 200A, Scientific Skills  
BIOE 200B, Advanced Organismal Biology  
BIOE 279, Evolutionary Ecology  
BIOE 293, Readings in Ecology and Evolution (or equivalent)  
BIOE 294, Ecology, Evolutionary Biology Seminar  
(taken each quarter when in residence)  
BIOE 295, Advanced Ecology and Evolutionary Biology Seminar (may substitute for BIOE 293)

**PH.D. REQUIREMENTS**

All curricular requirements are aimed at preparing students for timely and successful completion of a doctoral dissertation. The Ph.D. curriculum in EEB includes six stages: 1) required coursework, 2) the comprehensive examination, 3) the qualifying examination, 4) two quarters of teaching experience, 5) submission of at least one paper for publication, 6) the research, writing, and defense of the dissertation.

Ph.D. students must take BIOE 200A and 200B in the fall of the first year, and BIOE 279 in the winter of the first year. Two quarters of BIOE 293 are taken in the winter and spring of the first year. In addition, two quarters of BIOE 295 or two additional quarters of BIOE 293 should be completed by the end of the second year.

**MASTER OF ARTS (M.A.) REQUIREMENTS**

All curricular requirements are aimed at preparing students for timely and successful completion of a master thesis. The M.A. curriculum in EEB includes two stages: 1) required coursework, 2) the research, writing, and defense of the master thesis. M.A. students must take BIOE 200A, BIOE 200B, BIOE 279, and two quarters of BIOE 293 (or one quarter of 293 and one quarter of 295) within their first two years.

Ph.D. students must take BIOE 200A and 200B in the fall of the first year, and BIOE 279 in the winter of the first year. Two quarters of BIOE 293 are taken in the winter and spring of the first year. In addition, two quarters of BIOE 295 or two additional quarters of BIOE 293 should be completed by the end of the second year. All students must be enrolled in at least 15 credits per quarter, unless on approved part-time status. The minimum number of credits for the master's degree is 35 of which no more than 15 credits from upper-division undergraduate courses may be used as part the student's coursework.

The master research project is identified by students and requires approval from the students' masters reading committee in the fall of the second year. The master thesis manuscript is submitted to the students' masters reading committee, defended in a closed oral examination, and presented in a departmental seminar. At least one chapter of the dissertation must be submitted to a refereed journal for publication as a final program requirement before receipt of the Ph.D.

Deadlines at each stage must be confirmed with the graduate program coordinator.

To receive a designated emphasis in ecology and evolutionary biology (EEB), graduate students must...
complete the following requirements, in addition to the degree requirements for the doctorate in their home department:

1. Identify a designated graduate adviser from among the faculty of the EEB department, who commits to serve on the qualifying examination committee and on the Ph.D. dissertation reading committee.
2. Once a designated graduate adviser has been identified, file intent to complete the designated emphasis in EEB with the EEB Department graduate program coordinator.
3. Take the following EEB core courses (required for all EEB graduate students):
   - BIOE 200A, Scientific Skills
   - BIOE 200B, Advanced Organismal Biology
   - BIOE 279, Evolutionary Ecology

4. Enroll in BIOE 294 and attend all EEB Department seminars for one quarter.
5. Enroll in EEB adviser’s BIOE 281 and attend their laboratory group seminars for one quarter.
6. Take at least two other EEB graduate courses.

In all, students are required to complete at least 20 credits of EEB coursework. Courses taken to fulfill program requirements within the home department will not count toward the designated emphasis program’s required coursework.

ECOLOGY AND EVOLUTIONARY BIOLOGY LECTURERS

Baldo Marinovic ♦ ♦ ♦

ADJUNCTS

Claudio Campagna (Ecology and Evolutionary Biology; Marine conservation; species conservation, philosophical aspects of nature conservation

Steven Haddock (Ecology and Evolutionary Biology; MBARI) Bioluminescence, biodiversity and molecular phylogenetics of deep-sea and open ocean gelatinous zooplankton

Elliott Hazen (NOAA/NMFS/SWFSC; Adjunct Faculty, Duke University Marine Lab) Marine ecology, birds and mammals, conservation biology: focusing on predator-prey dynamics and their response to environmental variability and global change

Joseph Merz (Ecology and Evolutionary Biology; Cramer Fish Sciences) Relationships between aquatic species and their environments and the effects of anthropogenic influences on those relationships.

Stephan B. Munch (NOAA Southwest Fisheries Science Center, Stony Brook University) Population and ecosystem dynamics, contemporary evolution of life histories, transgenerational thermal plasticity

Devon Pearse (Ecology and Evolutionary Biology; NOAA Fisheries Service’s; Southwest Fisheries Science Center) Evolutionary and ecological genetics, conservation biology

Martin Quigley (UC Santa Cruz Arboretum) Landscape ecology, botany, horticulture

Luiz Rocha (California Academy of Sciences) Fish ecology, systematics and evolution

Bernie Tershy (Ecology and Evolutionary Biology) Ecology and conservation of seabirds and island ecosystems

M. Tim Tinker (Ecology and Evolutionary Biology; Western Ecological Research Center, USGS) Foraging ecology and demography of the southern sea otter

Kerstin Wasson (Ecology and Evolutionary Biology; Elkhorn Slough National Estuarine Research Reserve) Evolutionary ecology, invasion biology, conservation science

AFFILIATES

Russell Corbett-Detig (Biomolecular Engineering) Population genomics and functional consequences of natural selection; the evolution of chromosomal inversion polymorphism, intra-specific epistasis, and genome-wide patterns of natural selection

Greg Gilbert (Environmental Studies) Disease ecology, conservation biology, tropical forest ecology, microbial ecology

Karen D. Holl (Environmental Studies) Restoration ecology, conservation biology, landscape ecology

Paul L. Koch (Earth Sciences) Isotope biogeochemistry, vertebrate paleontology

Raphael Kudela (Ocean Sciences) Ecological modeling and remote sensing, satellite oceanography, phytoplankton ecology and harmful algal blooms

Michael Loik (Environmental Studies) Plant physiological ecology, climate change ecology, biometeorology, ecohydrology

Marc Mangel (Applied Mathematics and Statistics) Mathematical modeling of biological phenomena, especially the evolutionary ecology of growth, aging and longevity; quantitative issues in fishery management; mathematical and computational aspects of disease

Christopher Wilmers (Environmental Studies) Population and community ecology; wildlife conservation; predator-prey dynamics; climate change impacts on biodiversity.

Jonathan Zehr (Ocean Sciences) Aquatic microbial ecology, biological oceanography

DEPARTMENTAL AFFILIATED RESEARCHERS

Winifred Frick (Ecology and Evolutionary Biology) Population ecology, conservation biology, ecology and behavior of bats

BIOLOGY: ECOLOGY AND EVOLUTIONARY BIOLOGY COURSES

LOWER-DIVISION COURSES

20B. Development and Physiology. F,W,S Topics in morphology, physiology, development, genetics, and endocrinology selected to exemplify current issues and perspectives in organismic biology. Prerequisite(s): BIOL 20A. R. Dunkin

20C. Ecology and Evolution. F,W,S Introduction to ecology and evolution covering principles of evolution at the molecular, organismal, and population levels. Evolutionary topics include genetic and phenotypic variation, natural selection, adaptation, speciation, and macroevolution. Also covers behavioral, population, and community ecology including applied ecological issues. B. Marinovic

75. Scientific Diving Certification (2 credits). S Prerequisite for course 161/L, Kelp
Forest Ecology, and all research diving performed under the auspices of UCSC or other academic institutions. Course work includes lectures and scuba diving. Topics include subtidal sampling techniques, navigation, low visibility diving, search and recovery, rescues, small boat use, oxygen administration for divers, technical blue water deep diving, physics, and physiology. Apply online at http://www2.ucsc.edu/sci-diving.

Students are billed a course materials fee that covers costs for equipment use, materials, and transportation. Prerequisite(s): skill level equal to Advanced Scuba Diver Certification, pass scuba physical, provide own scuba gear, be certified in CPR and First Aid; and interview: pass swim test and scuba skills test. Enrollment limited to 16. S. Clabuesch

80S. Lies, Damn Lies, and Statistics. * Probability and statistics underlie much of our everyday experience and, as such, there is a fundamental need for an understanding of the use, and misuse, of statistics. This course is taught through case studies based in biology, politics, economics, crime, education, disease, conservation, and other fields of interest. For example, does a change in crime rate really affect your probability of being a victim of a crime? The goal is to provide all students with sufficient understanding probability and statistics to determine if everyday and often sensationalistic reporting of "statistical" results is meaningful. (General Education Code(s): SR.) P. Raimondi

82. Introduction to Field Research and Conservation (2 credits). F,W,S
A field-based course with overnight and day trips to regionally diverse areas throughout Central California. Field trips and lectures familiarize students with a wide variety of topics in the ecological, conservation, and environmental science as well as natural-resource management. Enrollment is by instructor permission. Students are billed a materials fee. Enrollment limited to 28. The Staff

85. Natural History of the UCSC Natural Reserves. * Lectures and field trips familiarize students with the flora and fauna of the UCSC Natural Reserves. Field trips focus on surveying and identifying vertebrates and plants at each UCSC Natural Reserve (Fort Ord, Campus Reserve, Big Creek, Younger Lagoon, and Ano Nuevo). (General Education Code(s): PE-E.) The Staff

95. Seymour Center Docent Training (2 credits). W
Taught as a series of seminars, course provides a survey of marine sciences and the role of scientific research in understanding and conserving the world's oceans. Topics include: marine biology, ecology, conservation, coastal geology, and climate change. This series is intended to prepare students to interpret research and inform the public by leading tours at the Seymour Marine Discovery Center at the Long Marine Lab. Enrollment is by application and interview. (General Education Code(s): PR-S.) The Staff

Individual, directed study for undergraduates. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

UPPER-DIVISION COURSES

Focuses on physiological, behavioral, and population ecology, and on linking ecological processes to evolution. It includes basic principles, experimental approaches, concepts of modeling, and applications to ecological problems. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; BIOL 20A, BIOE 20B, and BIOL 20C; BIOL 105. (F) K. Kay, (W) G. Bernardi, (S) G. Pogson

112. Ornithology. *
Introduction to the evolution, ecology, behavior, and natural history of birds, using exemplary case histories to illustrate key concepts in evolution, ecology, and behavior. Prerequisite(s): BIOE 107, BIOE 109, or BIOE 140. Concurrent enrollment in BIOE 112L is required. B. Lyon

112L. Ornithology Field Studies (2 credits). *
Field trips introduce students to field identification skills and field investigation of census, foraging behavior, migration, social behavior, and communication. Examination of specimens in the laboratory will be used to highlight the diversity and taxonomy of birds. Students are billed a materials fee. Some field trips may require students to provide their own transportation. Prerequisite(s): BIOE 107, BIOE 109, or BIOE 140. Concurrent enrollment in BIOE 112 is required. B. Lyon

114. Herpetology. *
Lectures introduce students to evolution, development, physiology, behavior, ecology, and life history of reptiles and amphibians. The materials integrate with conceptual and theoretical issues of ecology, evolution, physiology, and behavior. Prerequisite(s): BIOE 107, BIOE 109, BIOE 110, or BIOE 140. Concurrent enrollment in BIOE 114L is required. B. Sinervo
114L. Field Methods in Herpetological Research (2 credits). *
Field trips introduce students to natural history, censusing techniques, physiological ecology, and behavioral analysis of reptiles and amphibians. Laboratories introduce students to techniques for analyzing behavior and physiology. Field studies culminate with a group project in a natural setting. Some field trips may be held on weekends due to weather considerations. Some field trips may require students to provide their own transportation, some transportation will be provided by UCSC. Students are billed a materials fee. Prerequisite(s): BIOE 107, 109, 110, or 140. Concurrent enrollment in BIOE 114 is required. B. Sinervo

117. Systematic Botany of Flowering Plants. W
An examination of the taxonomy and evolution of flowering plants. Special topics include phylogenetics and cladistics, plant species concepts, and modern methods of systematic research. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C, and satisfaction of the Entry Level Writing and Composition requirements. Must be taken concurrently with BIOE 117L. K. Kay

117L. Systematic Botany of Flowering Plants Laboratory (2 credits). W
Weekly laboratory concerned primarily with California flora and plant families. Several field trips. Students are billed a materials fee. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. Must be taken concurrently with BIOE 117L. K. Kay

118. Plants and Society: the Biology of Food, Shelter, and Medicine. S
Introduces plant biology as it affects human society. Topics include the origins of agriculture, the morphology and chemistry of food plants, the material uses of plant products, the biology of medicinal plants, and plant diversity and bioprospecting. Prerequisite(s): BIOL 20A and BIOE 20B and BIOE 20C; or ENVS 23 and ENVS 24. J. Pittermann

120. Marine Botany. S
An introduction to the biology of marine algae, fungi, and angiosperms with regard to form and function. Major boreal, temperate, and tropical marine plant communities. Lecture format. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C, and satisfaction of the Entry Level Writing and Composition requirements. Must be taken concurrently with BIOE 120L. The Staff

120L. Marine Botany Laboratory (2 credits). S
One laboratory weekly and several field trips. Focuses on marine algae, fungi, and angiosperms. Students are billed a materials fee. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C, and satisfaction of the Entry Level Writing and Composition requirements. Must be taken concurrently with BIOE 120. The Staff

122. Invertebrate Zoology. W
An examination of invertebrates and their habitats. Lecture format. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C and satisfaction of the Entry Level Writing and Composition requirements. Must be taken concurrently with course 122L. B. Marinovic

122L. Invertebrate Zoology Laboratory (2 credits). W
An examination of invertebrates and their habitats. Weekly laboratories or field trips. Students are billed a materials fee. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C, and satisfaction of the Entry Level Writing and Composition requirements. Must be taken concurrently with BIOE 122. B. Marinovic

124. Mammalogy. F
Introduces the biology of mammals, including their classification, evolution, behavior, reproductive strategies, and general ecology. Examines the diagnostic traits of mammals; provides a survey of the living orders along with their diagnostic features, physiological and behavioral specializations, and adaptations. Prerequisite(s): BIOL 20A and BIOE 20B and 20C. Concurrent enrollment in course 124L is required. The Staff

124L. Mammalogy Laboratory (2 credits). F
Focuses on the identification of mammals and their specific traits. Exercises provide hands-on experience at identifying mammal orders, families, and species. Field trip provides students with field techniques in mammalogy. Prerequisite(s): BIOL 20A; and BIOE 20B and 20C. Concurrent enrollment in course 124 is required. The Staff

125. Ecosystems of California. W,S
A survey of the diversity, structure, and functioning of California's ecosystems through time and the ways they have influenced and responded to human activities and stewardship. Topics include: ecosystem drivers such as climate, soils, and land-use history; human and ecological prehistory; comparative marine, freshwater, and terrestrial ecosystem dynamics; and managed ecosystems such as range, fisheries, and agriculture. (Also offered as Environmental Studies 125. Students cannot receive credit for both courses.) Prerequisite(s): course 20C. Enrollment is restricted to ecology and evolution, marine biology, plant sciences, and biology B.A. majors. (General Education Code(s): PE-E.) The Staff

127. Ichthyology. *
An introduction to the biology of jawless, cartilaginous, and bony fishes— their classification, evolution, form, physiology, and ecology. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C, and satisfaction of the Entry Level Writing and Composition requirements. Must be taken concurrently with BIOE 127L. G. Bernardi

127L. Ichthyology Laboratory (2 credits). *
One laboratory session a week and several field trips to study the biology of fish. Students are billed a materials fee. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C, and satisfaction of the Entry Level Writing and Composition requirements. Must be taken concurrently with BIOE 127. G. Bernardi
128L. Large Marine Vertebrates Field Course. S
Lectures combined on fieldwork with large marine vertebrates in the laboratory and lectures with large marine vertebrates in the field (Monterey Bay, Ano Nuevo). Fieldwork familiarizes students with research methods, study design, and statistical approaches for research on large marine vertebrates (seals, birds, fish, and sharks). Research includes: animal tracking; physiology; behavior; foraging ecology; and energetics. Prerequisite(s): BIOL 20A and BIOE 20B and BIOE 20C, and satisfaction of the Entry Level Writing and Composition requirements. Students are billed a materials fee. Enrollment limited to 24. D. Costa, P. Robinson

129. Biology of Marine Mammals. S
A survey of cetaceans, pinnipeds, sirenians, and sea otters, including natural history, systematics, physiology, behavior, anatomy, and conservation. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C; and satisfaction of the Entry Level Writing and Composition requirements. BIOL 110 is recommended. D. Costa

129L. Biology of Marine Mammals Laboratory (2 credits). S
Covers the basics of marine mammal taxonomy, anatomy, and field methods with an emphasis on local field identification and understanding of local species. Will include field trips to Long Marine Lab, Ano Nuevo, and Monterey Bay. Students are billed a materials fee. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. Must be taken concurrently with BIOE 129. D. Costa

131L. Animal Physiology Laboratory (2 credits). W
Experiments conducted with primary focus on quantitative physiological principles of organ systems and intact organisms. Students cannot receive credit for this course and course 130L. Students are billed a materials fee. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. Concurrent enrollment in BIOE 131L is required. R. Mehta, T. Williams

131. Animal Physiology. W
Principles and concepts underlying the function of tissues and organ systems in animals with emphasis on vertebrate systems. Students cannot receive credit for this course and BIOL 130. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. R. Mehta, T. Williams

133. Exercise Physiology. * An advanced-level course concerning physiological and biochemical processes associated with human performance. Emphasis is on the integration of organ systems for exercise. Topics include metabolism and fuel utilization, cardiovascular and respiratory dynamics during activity, and the effects of training. Requires a good understanding of basic physiological function and anatomy. Prerequisite(s): BIOL 20A, BIOE 20B and 20C. BIOE 131 recommended. Concurrent enrollment in BIOE 133L is required. T. Williams

133L. Exercise Physiology Laboratory (2 credits). * An introduction to basic measurement techniques used in assessing the physiological response of humans to exercise. Sessions cover oxygen consumption, respiratory rate, and heart rate monitoring during aerobic and anaerobic activity. Students are billed a materials fee. Prerequisite(s): BIOL 20A, and BIOE 20B and 20C. BIOE 131 recommended. Concurrent enrollment in BIOE 133L is required. T. Williams

134. Comparative Vertebrate Anatomy. S
Course focuses on vertebrate form and function: an integration of physiology and biomechanics. Topics include: the physiology and biomechanics underlying vertebrate locomotion; vertebrate feeding; and the morphological changes associated with different locomotion and feeding strategies through evolutionary time. Prerequisite(s): BIOL 20A and BIOE 20B and BIOE 20C. Concurrent enrollment in BIOE 134L is required. R. Mehta

134L. Comparative Vertebrate Anatomy Laboratory (2 credits). S
Course focuses on the gross dissections all major clades of vertebrates: development, form, and diversity of organ systems and basic principles of evolution; vertebrate classification; and functional morphology, with emphasis on feeding and locomotion. Anatomical dissections integrated with the associated lecture material focusing on biomechanics, form, and function. Students are billed for a materials fee. Prerequisite(s): BIOL 20A and BIOE 20B and BIOE 20C. Concurrent enrollment in BIOE 134 is required. R. Mehta

135. Plant Physiology. F
Cellular and organismal functions important in the life of green plants. Prerequisite(s): BIOL 20A and BIOE 20B and 20C; concurrent enrollment in course 135L is required. J. Pittermann

135L. Plant Physiology Laboratory (2 credits). F Weekly laboratory concerning the cellular and organismal functions of green plants. Students are billed a materials fee. Prerequisite(s): BIOL 20A and BIOE 20B and BIOE 20C; concurrent enrollment in course 135F. J. Pittermann

136. Environmental Physiology. F
Explores how an organism’s physiology interacts with its environment including molecular to whole organism-level processes. How do animals thrive in the most diverse regions of Earth and why are some more vulnerable to change than others? Prerequisite(s): BIOL 20A and BIOE 20B and BIOE 20C. (General Education Code(s): SL) R. Dunkin

137. Molecular Ecology. *
This combination lecture/laboratory course explores the use of molecular (DNA and/or protein) data in ecological and conservation research. Topics covered include data collection; marker choice; estimating genetic diversity and population structure;
the inference of mating systems; and environmental genomics. Prerequisite(s): courses 20B and 20C and BIOL 20A and BIOL 105, and satisfaction of the Entry Level Writing and Composition requirements. Concurrent enrollment in course 137L is required. Enrollment limited to 24. B. Shapiro

137L. Molecular Ecology Laboratory (2 credits). *
This combination lecture/laboratory course explores the use of molecular (DNA and/or protein) data in ecological and conservation research. Topics covered include data collection; marker choice; estimating genetic diversity and population structure; the inference of mating systems; and environmental genomics. Prerequisite(s): courses 20B and 20C and BIOL 20A and BIOL 105. Concurrent enrollment in course 137L is required. Enrollment limited to 24. B. Shapiro

140. Behavioral Ecology. F
An introduction to social and reproductive behavior. Emphasis on studies of vertebrates in their natural habitat. Ideas concerning the evolution of social behavior, mating systems, and individual reproductive strategies. Case histories of well-studied animals that illustrate key principles in courtship and mating, parental behavior, and food-getting behavior. Prerequisite(s): BIOL 20A, BIOL 20B, and BIOL 20C. B. Sinervo

141L. Behavioral Ecology Field Course. W
A field-based course introducing students to concepts and methods for studying behavioral ecology in nature. Students will conduct observations and field experiments on various local model organisms including elephant seals, hummingbirds, sparrows, lizards, ants, bees, frogs, and salamanders. Students are billed a materials fee. Prerequisite(s): BIOL 107 or BIOL 140 or BIOL 110; and satisfaction of the Entry Level Writing and Composition requirements. Enrollment limited to 25. B. Sinervo, B. Lyon

145. Plant Ecology. F
An exploration of the ecology of plant form, function, distribution, abundance, and diversity. Topics include plant adaptations to environmental conditions, life history variation, competition, reproductive ecology, herbivory, and patterns of diversity. Lecture with discussions of original papers and independent field project. Students cannot receive credit for this course and course 245. Prerequisite(s): BIOL 20A, BIOL 20B, and BIOL 20C, and satisfaction of the Entry Level Writing and Composition requirements. BIOL 107 is recommended. I. Parker

145L. Field Methods in Plant Ecology. F
Hands-on exploration of the concepts and techniques of plant ecology. A combination of lab, greenhouse, and field-based exercises (irrespective of weather conditions). Statistical analysis and scientific writing. One required weekend field trip. Students cannot receive credit for this course and course 245L. Students are billed a materials fee. Prerequisite(s): BIOL 20A, BIOL 20B, and BIOL 20C, and satisfaction of the Entry Level Writing and Composition requirements. Concurrent enrollment in BIOL 145 is required. BIOL 107 is recommended. I. Parker

147. Community Ecology. S
Develops the major themes of community biology: structure, trophic dynamics, succession, complex interactions among species, herbivory, evolution and coevolution. Uses case histories of well-studied marine and terrestrial systems. Students cannot receive credit for this course and course 247. Prerequisite(s): BIOL 107, 108, 145, 155 or 159A; or Environmental Studies 24 by permission of instructor. L. Fox

148A. Quantitative Ecology. *
Incorporates building mathematical models and fitting them to data to answer questions in ecology and evolution. Includes learning to write computer code to simulate models and analyze data. Topics include models of population and evolutionary dynamics, and species interactions and behavior. Students cannot receive credit for this course and course 248A. Prerequisite(s): course 107 and by permission of instructor. (General Education Code(s): MF.) A. Kilpatrick

148B. Quantitative Methods in Ecology and Evolution. W
Advanced methods for building mathematical models and fitting them to data to answer questions in ecology and evolution both mathematically and by writing computer code. Topics include: population dynamics and management, evolutionary and life-history theory, and behavior and game theory. Students cannot receive credit for this course and course 248B. Prerequisite(s): mathematical and and programming background. Enrollment is by permission of the instructor. (General Education Code(s): MF.) S. Alonzo

149. Disease Ecology. S
Focuses on the ecological and evolutionary processes that drive the transmission of pathogens between hosts; the impact of disease on host populations; and what causes the emergence of an infectious disease. Includes theoretical framework, description of field techniques, and discussion of wildlife and human diseases including malaria, West Nile virus, Lyme disease, HIV, avian influenza (bird flu), Chikungunya, tuberculosis, chytridiomycosis, and Ebola. Prerequisite(s): BIOL 20A, and BIOE 20B and 20C and 107. A. Kilpatrick

150. Ecological Field Methods. *
Lectures and laboratory computer exercises designed to familiarize students with research methods, study design, statistical approaches, and analysis tools for ecological research. Students cannot receive credit for this course and Environmental Studies 104A. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C; concurrent enrollment in BIOE 150L is required. BIOE 107, 108, 140, or 147 recommended. Enrollment limited to 25. D. Croll

150L. Ecological Field Methods Laboratory. *
Field-oriented course in the study
of animal ecology and behavioral ecology. Combines overview of methodologies and approaches to field research with practical field studies. Students are billed a materials fee. Prerequisite(s): BIOL 20A, BIOL 20B, and BIOL 20C, and satisfaction of the Entry Level Writing and Composition requirements. Concurrent enrollment in BIOE 150 is required. BIOE 107, 108, 140, or 147 recommended. Enrollment limited to 25.  D. Croll

151A. Ecology and Conservation in Practice Supercourse: Ecological Field Methods. S

An intensive, on-site learning experience in terrestrial field ecology and conservation, using the University of California Natural Reserves and other natural areas. Students study advance concepts in ecology, conservation, and field methods for four weeks, then experience total immersion in field research at the UC Natural Reserves and other natural areas. Lectures, field experiments, writing assignments, and computer exercises familiarize students with research methods, study design, statistical approaches, and analytical tools for ecological research. Students complete and communicate the results of short field projects in ecology, learn the natural history of the flora and fauna of California, and plan and execute a significant, independent field-research study at the end of the quarter. Enrollment is by application. Prerequisite(s): BIOL 20A, BIOL 20B, BIOL 20C or ENVS 23, 24, 100; and AMS 7 and 7L. Concurrent enrollment in BIOE 151B-C-D or ENVS 109A-C-D is required. Satisfies the senior exit requirement for biological sciences majors and satisfies the senior exit requirement for environmental studies majors by prior approval. Students cannot receive credit for this course and BIOE 150, 150L, ENVS 104A or 196A. (Also offered as Environmental Studies 109B. Students cannot receive credit for both courses.)  G. Dayton, D. Croll

151B. Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory. S

Field-oriented course in ecological research. Combines overview of methodologies and approaches to field research with practical field studies. Students complete field projects in ecology and also learn the natural history of the flora and fauna of California. Students are billed a materials fee. Enrollment is by application. Prerequisite(s): BIOL 20A, BIOL 20B, BIOL 20C or ENVS 23, 24, 100; and AMS 7 and 7L; satisfaction of the Entry Level Writing and Composition requirements. Concurrent enrollment in BIOE 151A-C-D or ENVS 109A-C-D is required. Satisfies the senior exit requirement for biological sciences majors and satisfies the senior exit requirement for environmental studies majors by prior approval. Students cannot receive credit for this course and BIOE 150, 150L, ENVS 104A or 196A. (Also offered as Environmental Studies 109B. Students cannot receive credit for both courses.)  G. Dayton, D. Croll

151C. Ecology and Conservation in Practice Supercourse: Functions and Processes of Terrestrial Ecosystems. S

From lectures and discussion of terrestrial community and ecosystem ecology, students work individually or in small groups to present an idea for a project, review relevant literature, develop a research question/hypothesis, design and perform an experiment, collect and analyze data, and write a report. The instructor evaluates the feasibility of each student's project before it begins. Enrollment is by application. Prerequisite(s): BIOL 20A, BIOL 20B, BIOL 20C or ENVS 23, 24, 100; and AMS 7 and 7L. Concurrent enrollment in BIOE 151B-C-D or ENVS 109B-C-D is required. Satisfies the senior exit requirement for biological sciences majors and satisfies the senior exit requirement for environmental studies majors by prior approval. Students cannot receive credit for this course and BIOE 150, 150L, ENVS 104A or 196A. (Also offered as Environmental Studies 109D. Students cannot receive credit for both courses.)  G. Dayton, D. Croll

151D. Ecology and Conservation in Practice Supercourse:

Conservation in Practice (4 credits). S

Focuses on current issues in environmental and conservation biology and the emerging field methods used to address them. From field-oriented lectures about current issues in environmental and conservation biology, students pursue research project as individuals and small groups to develop hands-on experience with field skills in conservation research and resource management. Enrollment is by application. Prerequisite(s): BIOL 20A, BIOL 20B, BIOL 20C or ENVS 23, 24, 100; and AMS 7 and 7L. Concurrent enrollment in BIOE 151A-B-C or ENVS 109A-B-C required. Satisfies the senior exit requirement for biological sciences majors and satisfies the senior exit requirement for environmental studies majors by prior approval. Students cannot receive credit for this course and BIOE 150, 150L, ENVS 104A or 196A. (Also offered as Environmental Studies 109D. Students cannot receive credit for both courses.)  G. Dayton, D. Croll

153A. Introduction to Arctic Ecology. *

Field-intensive course comprised of weekly classes in preparation for the field component. Focuses on issues relevant to the ecology of arctic regions including arctic ecology, arctic geology and paleontology, and arctic environmental change. Students are charged a materials fee. Enrollment is by permission of the instructor. Prerequisite(s): BIOL 20A, and BIOL 20B and 20C; and concurrent enrollment BIOE 153B and 153C. Enrollment limited to 12. B. Shapiro

153B. Arctic Ecology. *

Field-intensive course focusing on issues relevant to the ecology of the arctic regions. Explores the changing arctic environment through lectures and hands-on research during an 18-day camping trip transecting the subarctic boreal forest to the high Arctic. Enrollment is by permission of the instructor. Prerequisite(s): BIOL 20A, and BIOL 20B and 20C; and concurrent enrollment BIOE 153A and 153C. Enrollment limited to 12.  B. Shapiro
153C. Disciplinary Communication for Biologists. * Writing-intensive course focusing on developing skills in scientific communication with an emphasis on communicating issues relevant to the ecology of arctic regions. Communication products are developed during an 18-day camping trip in the Arctic. Enrollment is by permission of the instructor. Prerequisite(s): BIOL 20A, and BIOE 20B and 20C; and satisfaction of the Entry Level Writing and Composition requirements; and concurrent enrollment BIOE 153A and 153B. Enrollment limited to 12. B. Shapiro

155. Freshwater Ecology. F Provides an overview of the physical, chemical, and biological processes that characterize inland waters such as lakes, streams, rivers, and wetlands. Also addresses relationships between humans and freshwater, and discusses these challenges in conservation. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. E. Palkovacs

155L. Freshwater Ecology Laboratory. * Field and laboratory study of the ecology of freshwater systems including lakes, streams, and estuaries. Students gain experience sampling and identifying freshwater organisms, designing and analyzing ecological experiments, and writing scientific reports. Students are billed a materials fee. Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C and BIOE 155. Enrollment limited to 24. E. Palkovacs

158L. Marine Ecology Laboratory. * Supervised individual research projects in experimental marine biology. Students carry out a complete research project, including (1) the formation of hypotheses; (2) the design and implementation of experiments; (3) collection, analysis, and interpretation of data; and (4) write-up of an oral presentation. Students are billed a materials fee. Prerequisite(s): BIOE 108; satisfaction of the Entry Level Writing and Composition requirements. P. Raimondi, K. Kroeker

159A. Marine Ecology Field Quarter: Marine Ecology with Laboratory. F Total immersion in marine ecology for very motivated students. Students develop a research project during first five weeks on campus and then spend five weeks of immersion in directed research without distraction in isolated locations off campus (past locations include the Gulf of California in Mexico and Moorea in French Polynesia). Not available through University Extension. No other courses may be taken during this quarter. Students must sign a contract agreeing to standards of behavior outlined in the UCSC Rule Book and by the instructors. Students are billed a materials, transportation (not airfare), and room and board fee. Paradigms and designs in marine ecology. A review of the paradigms that have shaped our understanding of marine ecology and analysis and discussion of experiments with these paradigms. Students carry out a complete research project, including the formation of hypotheses; the design and implementation of experiments; the collection, analysis, and interpretation of data; and the write-up and oral presentation of results. Admission by interview during previous winter quarter. BIOE 159A, 159B, 159C, and 159D are equivalent to BIOE 127, 127L, 108, and 158L for major requirements. Prerequisite(s): BIOE 159A, 159B, 159C, and 159D must be taken concurrently. Enrollment limited to 26. G. Bernardi, P. Raimondi, S. Alonzo

159B. Marine Ecology Field Quarter: Ichthyology with Laboratory. F An introduction to the biology of jawless, cartilaginous, and bony fishes—their classification, evolution, form, physiology, and ecology. Admission by interview during previous winter quarter. BIOE 159A, 159B, 159C, and 159D are equivalent to BIOE 127, 127L, 108, and 158L for major requirements. Prerequisite(s): by

159C. Marine Ecology Field Quarter: Methods in Field Ecology. * Students learn quantitative methods for field experiments and surveys. Emphasis will be on marine environments, but there will also be exposure to terrestrial systems. This is the lecture component to course 159D. No text is required for this course; instead, readings from the current literature will be assigned. Students are evaluated on written independent field project proposals and class participation. Admission by interview during previous winter quarter. BIOE 159A, 159B, 159C, and 159D are equivalent to BIOE 127, 127L, 108, and 158L for major requirements. BIOE 159A, 159B, 159C, and 159D must be taken concurrently. Enrollment limited to 26. G. Bernardi, P. Raimondi, S. Alonzo

159D. Marine Ecology Field Quarter: Methods in Field Ecology Laboratory. F This is the laboratory portion of course 159C. Students carry out independent field projects under the supervision of course instructors. All work is done during the 5-6 week off-campus portion of course 159. Students are evaluated on field techniques, the final write-up of their independent field projects, and class participation. Admission by interview during previous winter quarter. BIOE 159A, 159B, 159C, and 159D are equivalent to BIOE 127, 127L, 108, and 158L for major requirements. BIOE 159A, 159B, 159C, and 159D must be taken concurrently. Enrollment limited to 26. G. Bernardi, P. Raimondi, S. Alonzo

161. Kelp Forest Ecology. * Study of organization of kelp forests as models for examining biological communities. The physical and biotic factors responsible for community organization of kelp forests are explored using original literature and data collected in BIOE 161L. Class meets once a full morning each week. Prerequisite(s): by
163L. Ecology of Reefs, Mangroves, and Seagrasses. W
Integrated treatment of coral reefs, sea grasses, and mangroves emphasizing interactions and processes through time. Major topics: biological and geological history, biogeography, evolution and ecology of dominant organisms, biodiversity, community and ecosystem ecology, geology, biogeochemistry, global change, human impacts. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. Concurrent enrollment in BIOE 163L is required. D. Potts

165. Marine Conservation Biology. F
Initially undertakes an in-depth comparison of the biology and conservation of marine versus terrestrial ecosystems. With this foundation, course examines marine biodiversity loss resulting from overexploitation, habitat loss, species introduction, and pollution, with particular emphasis on the resulting trophic cascades, biodiversity losses, and climate change. Students cannot receive credit for this course and Environmental Studies 120. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C; OCEA 101 recommended. D. Potts

166. Kelp Forest Ecology Laboratory. *
Fieldwork using SCUBA to quantitatively and qualitatively examine the abundance and distribution of organisms in kelp forests, with additional laboratory work. Culminates with a directed individual research project. Class meets one full morning each week. Students are billed a materials fee. Admission by interview. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C; satisfaction of the Entry Level Writing and Composition requirements; BIOE 161 must be taken concurrently; BIOE 107, 120/L, 122/L are recommended. Students must pass the University Research Diving Certification (contact the Diving Safety Officer, Institute of Marine Sciences, for further information). Enrollment limited to 24. M. Carr, P. Raimondi

161. Ecology of Reefs, Mangroves, and Seagrasses. W
Integrated treatment of coral reefs, sea grasses, and mangroves emphasizing interactions and processes through time. Major topics: biological and geological history, biogeography, evolution and ecology of dominant organisms, biodiversity, community and ecosystem ecology, geology, biogeochemistry, global change, human impacts. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. Concurrent enrollment in BIOE 163L is required. D. Potts

172L. Population Genetics Laboratory (2 credits). F
A companion course to 172 Population Genetics that applies the theory developed in that course to related disciplines including conservation biology, ecology, agriculture, and population biology. Original scientific literature relating to the theory developed in BIOE 172 is read, and applied problem sets are solved by the students. Students cannot receive credit for this course and BIOE 272L. Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C, and BIOE 105, and satisfaction of the Entry Level Writing and Composition requirements. Concurrent enrollment in BIOE 172 is required. G. Pogson

182F. Exploring Research in EEB (2 credits). F,W,S
Provides undergraduate students with exposure to research in the laboratory of an Ecology and Evolutionary Biology (EEB) faculty member, affiliate, or adjunct. Students are not expected to do independent research but rather to assist in laboratory or field research projects under the supervision of the faculty mentor or appointed researcher. Prerequisite(s): Undergraduate research contract on file with the department. If supervised by different faculty or researchers, may be repeated for credit. May be repeated for credit. The Staff

183L. Undergraduate Research in EEB (3 credits). F,W,S
Designed to ensure that students are intellectually engaged in the planning or implementation of a supervised or independent research project, achieve a fundamental understanding of implementing the scientific method, and develop their scientific writing and presentation skills. Prerequisite(s): concurrent enrollment in course 183W and an Undergraduate Research Contract on file with the department. The Staff

183W. Undergraduate Research in EEB--Writing (2 credits). F,W,S
Working in coordination with an Ecology and Evolutionary Biology (EEB) faculty member, affiliate or adjunct, students develop and write a formal research proposal or
report and give a presentation on their research project. Includes weekly class meetings focused on the philosophy of science, basic statistics, library searches, inputting data, creating graphs, and preparing results for publication, posters, and talks. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; and course 107, 108, or 109; and an undergraduate research contract on file with the department. (F) L. Fox, (W) M. Carr; (S) D. Potts

188. Introduction to Science Writing.*
A rigorous examination and practice of the skills involved in writing articles about science, health, technology, and the environment for the general public. Covers the essential elements of news writing and explanatory journalism, including developing a story idea, interviewing scientists, fact checking, composition, and editing of multiple drafts about scientific research. (Also offered as Science Communication 160. Students cannot receive credit for both courses.) Prerequisite(s): satisfaction of the Entry Level Writing and C1, C2 requirements. Enrollment is restricted to junior and senior biological sciences majors. Enrollment limited to 18. R. Irion

193. Independent Research in EEB. F,W,S
Continued undergraduate research on a project sponsored by an Ecology and Evolutionary Biology (EEB) faculty member, affiliate, or adjunct. Students are graded on the quality of their research and meeting the terms of their undergraduate research contract. Prerequisites: course 183W and an undergraduate research contract on file with the department. May be repeated for credit. The Staff

193F. Independent Research in EEB (2 credits). F,W,S
Continued undergraduate research on a project sponsored by an Ecology and Evolutionary Biology (EEB) faculty member, affiliate, or adjunct. Students are graded on the quality of their research and meeting the terms of their undergraduate research contract.

Prerequisites: course 183W and an undergraduate research contract on file with the department. May be repeated for credit. The Staff

An individually supervised course, with emphasis on independent research. Students required to submit a senior thesis. Enrollment is restricted to majors in biology, ecology and evolution, marine biology, plant sciences, and the combined major with environmental studies. Students submit petition to sponsoring agency. The Staff

198F. Independent Field Study (2 credits). F,W,S
Provides for two credits of independent field study (a) by means other than the usual supervision in person, or (b) when the student is doing all or most of the coursework off campus. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

199. Tutorial. F,W,S
Reading, discussion, written reports, and laboratory research on selected biological topics, using facilities normally available on campus. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

199F. Tutorial (2 credits). F,W,S
Two-credit Tutorial. Reading, discussion, written reports, and laboratory research on selected biological topics, using facilities normally available on campus. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

200A. Scientific Skills. F
Exposes graduate students to teaching skills, understanding the scientific method, searching and organizing literature, grant proposal and scientific writing, data management and presentation, and scientific speaking. Students are evaluated on their participation and the quality of a written research proposal. Enrollment is restricted to graduate students. M. Carr

200B. Advanced Organismal Biology. F
Consists of lectures focusing on pivotal topics in ecology and evolution. Relevant background material is developed followed by a critical analysis of readings from the primary literature. Designed to give graduate (and advanced undergraduate) students direct contact with the major areas of research that are currently at the forefront of organismal biology. Enrollment is restricted to graduate students. S. Alonzo, A. Kilpatrick, D. Costa

208. Marine Ecology. W
Paradigms and designs in marine ecology. A review of the paradigms that have shaped our understanding of marine ecology; analysis and discussion of experiments with these paradigms. Students cannot receive credit for this course and course 108. Enrollment is restricted to graduate students. M. Carr, K. Kroeker

245. Plant Ecology. F
An exploration of the ecology of plant form, function, distribution, abundance, and diversity. Topics include plant adaptations to environmental conditions, life history variation, competition, reproductive ecology, herbivory, and patterns of diversity. Lecture with discussions of original papers and independent field project. Students cannot receive credit for this course and course 145. Prerequisite(s): BIOE 107 or ENVS 24 or permission of instructor. Enrollment is restricted to graduate students. I. Parker

245L. Field Methods in Plant Ecology Laboratory. *
Hands-on exploration of the concepts and techniques of plant ecology. A combination of lab, greenhouse, and field-based exercises (irrespective of weather conditions), statistical analysis, and scientific writing. One required weekend field trip. Students cannot receive credit for this course and course 145L. Enrollment is restricted to graduate students. Enrollment limited to 2. I. Parker
Develops the major themes of community ecology: structure, trophic dynamics, succession, complex interactions among species, herbivory, evolution, and coevolution. Uses case histories of well-studied marine and terrestrial systems. Students cannot receive credit for this course and course 147. Enrollment is restricted to graduate students. L. Fox

248A. Quantitative Ecology. *
Incorporates building mathematical models and fitting them to data to answer questions in ecology and evolution. Includes learning to write computer code to simulate models and analyze data. Topics include models of population and evolutionary dynamics, and species interactions and behavior. Students cannot receive credit for this course and course 148A. Enrollment is restricted to graduate students. A. Kilpatrick

248B. Quantitative Methods in Ecology and Evolution. W
Advanced methods for building mathematical models and fitting them to data to answer questions in ecology and evolution both mathematically and by writing computer code. Topics include: population dynamics and management, evolution and life-history theory, and behavior and game theory. Students cannot receive credit for this course and course 148B. Prerequisite(s): course 148A or 248A. Enrollment is restricted to graduate students. Enrollment is by permission of the instructor. S. Alonzo

258L. Experimental Marine Ecology. *
Supervised individual research projects in experimental marine biology. Students carry out a complete research project, including (1) the formation of hypotheses, (2) the design and implementation of experiments, (3) collection, analysis, and interpretation of data, and (4) the write-up of an oral presentation. Prerequisite(s): BIOE 208; and interview to assess ability to carry out field project. Enrollment limited to 20. P. Raimondi, K. Kroeker

262. Facilitating Change in

Coastal Science Policy. S
Skills-based course in effective leadership and communication, including stakeholder engagement, facilitation, conflict resolution, team building, and introduction to project management. Communication training includes identifying audiences and objectives (public, philanthropy, policymakers, managers, scientist practitioners) and leveraging non-traditional communication platforms. Enrollment is by application and restricted to graduate students. (Also offered as Coastal Science and Policy 245. Students cannot receive credit for both courses.) Enrollment limited to 16. K. Kroeker

271. Disciplinary Communication for Biologists. *
Writing-intensive course focusing on developing skills in scientific communication, with an emphasis on communicating issues relevant to ecologists and evolutionary biologists. This courses presents the norms and standards of scientific communication spanning multiple genres. Students cannot receive credit for this course and course 171. Enrollment is restricted to graduate students. B. Shapiro

272. Population Genetics. F
Basic population genetics and selected topics are covered including genetics of speciation, tempo and mode of evolution, genetics of social behavior, natural selection in human populations, and the impact of molecular studies on evolutionary theory. Students cannot receive credit for this course and Biology 172. Concurrent enrollment in BIOE 272L is required. Enrollment is restricted to graduate students. G. Pogson

272L. Population Genetics Laboratory (2 credits). F
A companion course to 272. Population Genetics that applies the theory developed in that course to related disciplines including conservation biology, ecology, agriculture, and population biology. Original scientific literature relating to the theory developed in course 272 is read, and applied problem sets are solved by the students. Students cannot receive credit for this course and course 172L. Must be taken concurrently with BIOE 272. Enrollment is restricted to graduate students. G. Pogson

274. Evolutionary Game Theory. *
Reviews static equilibrium concepts, games of incomplete information, and the traditional theory of dynamic games in discrete time. Develops recent evolutionary game models, including replicator and best reply dynamics, and applications to economics, computer science, and biology. Prerequisite(s): upper-division math courses in probability theory are strongly recommended. Cannot receive credit for this course and Economics 166B or Computer Science 166B. (Also offered as Computer Science 272. Students cannot receive credit for both courses.) The Staff

279. Evolutionary Ecology. W
Analysis of the ways in which ongoing evolution and coevolution shape the ecological structure and dynamics of populations, species, and species interactions across geographic landscapes. Enrollment is restricted to graduate students. J. Thompson

281A. Topics in Basic and Applied Marine Ecology. F,W,S
Seminar focusing on concepts in basic and applied ecology. Structure rotates quarterly between graduate student research and readings of journal articles and textbooks. Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor. M. Carr

281B. Topics in Molecular Evolution (2 credits). F,W,S
A discussion of current research and literature review on the subject of molecular evolution. Primary focus on recent results on molecular systematics and molecular population genetics. Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. G. Bernardi

281C. Topics in Physiological Ecology. F,W,S
An intensive seminar focusing on the interaction between physiological constraint and life...
281D. Topics in Global Change Ecology. F,W,S
Focuses on fundamental concepts in global-change ecology, with emphasis on coastal and marine ecosystems and issues of sustainability. The seminar is devoted to reading and evaluating current and classic literature and discussing graduate student research. Enrollment is restricted to graduate students. Enrollment limited to 15. May be repeated for credit. D. Costa

281E. Topics in Freshwater Ecology. F
Current topics in freshwater ecology, eco-evolutionary dynamics, fisheries, and fish ecology. Enrollment is restricted to graduate students. Qualified undergraduates may enroll with permission from instructor. Enrollment limited to 18. May be repeated for credit. E. Palkovacs

281F. Ecological Research Topics. F,W,S
Intensive research and discussions on plant-animal interactions. All students undertake a research project and meet weekly with the faculty sponsor to monitor progress. The group meets weekly to discuss experimental design and analysis, specific problems related to the students' research, relevant research papers, or manuscripts that the group members are writing. Each student gives a formal presentation of research plans or progress each quarter. Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. L. Fox

281G. Topics in Sexual Selection and Social Behavior. F,W,S
Discussion of current topics, research, and methods in sexual selection and social behavior focusing on theoretical and empirical research and links between evolution and ecology. Students present and discuss their research, read and discuss current and classic literature, or read and discuss methods used in the field. Enrollment is restricted to graduate students. Qualified undergraduates may enroll by permission of the instructor. Enrollment limited to 18. May be repeated for credit. S. Alonzo

281H. Topics in Comparative Marine Physiology. F,W,S
Intensive seminar on selected topics in marine physiology. Students present results from their own research and discuss recent advances from the literature. Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. R. Mehta

Selected topics in population biology and disease ecology. Students present results from their own research and discuss recent advances from the literature. (Formerly "Topics in Plant Population and Disease Ecology") Enrollment is restricted to graduate students; qualified undergraduates may enroll by permission of instructor. Enrollment limited to 18. May be repeated for credit. A. Kilpatrick

281J. Topics in Plant Evolution. F,W,S
Intensive seminar on selected topics in plant evolution. Students present results from their own research and discuss recent advances from the literature. Enrollment is restricted to graduate students; qualified undergraduates may enroll by permission of instructor. Enrollment limited to 18. May be repeated for credit. K. Kay

281K. Topics in Behavioral and Evolutionary Ecology. F,W,S
An intensive seminar on selected topics in behavioral and evolutionary ecology. Students are expected to discuss the current literature and present literature reviews, research proposals, and preliminary results from their ongoing research. Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. B. Lyon

281N. Topics in Marine Vertebrate Ecology. F,W,S
Seminar on the ecology of marine vertebrates. Topics vary from the factors that explain the distribution of marine predators to island biogeography and the ecosystem effects of introduced vertebrates on islands. Enrollment is restricted to graduate students. Enrollment limited to 12. May be repeated for credit. D. Croll

281O. Topics in Plant-Water Relations. F,W,S
Intensive seminar focusing on fundamental and evolutionary concepts in plant-water relations. Students present results from their own research and discuss recent advances from the literature. Enrollment is restricted to graduate students; qualified undergraduates may enroll by permission of instructor. Enrollment limited to 18. May be repeated for credit. J. Pittermann

An intensive seminar on selected topics in plant ecology and population biology. Students present results from their own research and discuss recent advances from the literature. Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission from instructor. Enrollment limited to 12. May be repeated for credit. J. Parker

281Q. Topics in Molecular Evolutionary Genetics. F,W,S
An intensive seminar on selected topics in molecular evolutionary genetics. Students are required to present results from their own research projects, present a critical review paper at least once during the quarter, and submit a written research proposal. Enrollment is restricted to graduate students; qualified undergraduate students may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. G. Pogson
281R. Topics in Marine Ecology and Evolutionary Biology. F,W,S
An intensive seminar series focusing on fundamental concepts in marine ecology. Emphasis changes quarter to quarter. At least one quarter per year is devoted to discussion of graduate student research. Other quarters involve reading and evaluating current and classic literature on marine ecology and evolutionary biology. Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. B. Sinervo

281W. Topics in Exercise and Environmental Physiology. F,W
A weekly seminar discussion on current research and techniques in mammalian exercise and environmental physiology. Areas covered include locomotor physiology, exercise testing and cardiovascular monitoring, and biomechanics. Oral presentation of ongoing research or current literature required from each student. Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. T. Williams

286. Experimental Design and Data Analysis. F
Focuses on problems and designs in ecology and population biology. Topics include experimental design; exploratory data analysis; hands-on statistics; and graphical theory. Structured around a statistical analysis and graphics program to teach students to design surveys and experiments and analyze data. Previous work in statistics strongly recommended. (Also offered as Coastal Science and Policy 241. Students cannot receive credit for both courses.) Concurrent enrollment in course 286 is required. Enrollment is restricted to graduate students. P. Raimondi

286L. Experimental Design and Data Analysis Lab (2 credits). F
Lab will focus on hands-on statistical problem solving, graphical presentations and experimental design issues. (Also offered as Coastal Science and Policy 241L. Students cannot receive credit for both courses.) Concurrent enrollment in course 286 is required. Enrollment is restricted to graduate students. P. Raimondi

287. Ethics, Nature, and Natural Selection. *
Explores the role, if any, that Darwinian theory and evolutionary biology should have on ethical theory. Topics range from classic work, including Darwin and classic expositors, to influential contemporary work on natural selection, in light of the best philosophical literature. (Also offered as Philosophy 246. Students cannot receive credit for both courses.) Enrollment is restricted to graduate students. Enrollment limited to 20. May be repeated for credit. D. Guevara, C. Campagna

293. Readings in Ecology and Evolution (2 credits). W,S
Weekly readings and discussions of recent research papers in ecology, evolution, and related topics from organismal biology. Enrollment is restricted to graduate students. May be repeated for credit. (W) J. Thompson, (S) B. Lyon

Selected topics of current interest to ecologists and evolutionary biologists presented by weekly guest speakers. Enrollment is restricted to graduate students. (F) B. Sinervo, (W) T. Williams, (S) D. Potts

Course consists of extended weekly meetings organized around an advanced theme in theoretical or applied evolutionary biology, ecology, physiology, behavior, or other aspect of organismal biology. Course is targeted at students who have reached a professional level of expertise in their field and advanced master students. Enrollment is limited to 24. The Staff

297. Independent Study. F,W,S
Independent study for graduate students who have not yet settled on a research area for their thesis. Students submit petition to sponsoring agency. The Staff

Students submit petition to sponsoring agency. The Staff

* Not offered in 2018-19

Revised: 07/15/18
UNDERGRADUATE PROGRAM DESCRIPTION

This is an extraordinary time to be involved in biomedical research. New technologies are rapidly changing our understanding of the molecular and cellular basis of life, with dramatic implications for how we treat human disease. Members of the Department of Molecular, Cell, and Developmental Biology, along with affiliated faculty in the departments of Biomolecular Engineering, Chemistry and Biochemistry, Microbiology and Environmental Toxicology, and Physics, are participating in an extraordinary revolution in biomedical science. A broad spectrum of cutting-edge research tools are being employed to tackle problems in key areas that include: the structural and functional role of RNA in regulation of gene expression; chromatin biology and epigenetic control of genes; the cell biology of the cytoskeleton and the cell cycle; decisions controlling embryogenesis and organ development; and developmental neurobiology. The insights generated by this basic research enable new strategies for treatments of aging disorders, birth defects, neurological diseases, cancer and other human ailments. The department offers a spectrum of courses that reflect the exciting new developments and directions in these fields, and trains students to participate in these exciting fields.

Students may plan a program that leads to one of several Bachelor of Science (B.S.) degrees. Students may choose from the following major options:

- Biology B.S.
- Human biology B.S.
- Molecular, cell, and developmental biology B.S.
- Neuroscience B.S.

Students may choose from one minor option:

- Biology minor

Advanced undergraduates, with the guidance of faculty mentors, have access to extensive departmental laboratory facilities for independent research. Many students take advantage of the numerous opportunities with local physicians, health care providers and biotech companies to gain experience in a real world setting. This array of opportunities for directed independent study enables biological science majors to enhance their upper-division programs to reflect and strengthen their own interests and goals.

PREREQUISITES

Due to the demanding nature of the majors, students must begin their science coursework as early as possible. CHEM 1A, 1B and 1C, and BIOL 20A, BIOE 20B, and BIOL 20L must be taken during the first and second years in order for students to qualify for admission to MCD biology-sponsored majors (see below). Students are strongly encouraged to take AMS 5 or AMS 7/L and begin, if not complete, other requirements including calculus. For an overview of prerequisites and getting started in the major, please visit our website.

An online mathematics placement examination is required to enroll in a math course. Biological science majors are expected to take this examination and are encouraged to work in the learning modules until they place into calculus. For more information see the mathematics placement website.

Students intending to major in human biology should take the Spanish placement examination, offered by the language program, to determine the level at which they should begin the Spanish sequence.

LETTER GRADE POLICY

For all students entering UCSC in fall 2001 and later, all courses used to satisfy any of the major requirements must be taken for a letter grade.

MAJOR QUALIFICATION POLICY

The Department of Molecular Cell and Developmental Biology has a qualification policy that applies to the biology B.S., molecular, cell and developmental biology B.S., and neuroscience B.S. majors.

To qualify for any of these majors, students must pass (with a grade of C or better) the following courses or their equivalents:

- Chemistry and Biochemistry 1A, General Chemistry
- Chemistry and Biochemistry 1B, General Chemistry
- Chemistry and Biochemistry 1C, General Chemistry
- Biology: Molecular, Cell, and Developmental Biology (BIOL) 20A, Cell and Molecular Biology
- Biology: Molecular, Cell, and Developmental Biology (BIOL) 20L, Introductory Biology Laboratory
- Biology: Ecology and Evolutionary Biology (BIOE) 20B, Development and Physiology
- Biology: Molecular, Cell, and Developmental Biology (BIOL) 20L, Introductory Biology Laboratory

All qualification courses must be completed by the campus major declaration deadline.

Students with two or more grades of NP, C-, D+, D, D-, or F in the policy courses are not qualified to declare. When assessing qualification:

- All courses must be taken for a letter grade, see Letter Grade Policy.
Biology: Molecular, Cell, and Developmental Biology

- Students with AP credit for Biology: Molecular, Cell, and Developmental Biology (BIOL) 20A, Biology: Ecology and Evolutionary Biology (BIOE) 20B, and/or Chemistry and Biochemistry 1A need only pass the remaining qualification policy courses.
- Students with grades of I or IP in any of the policy courses will not be eligible to declare until a grade has been assigned.
- Every student who satisfies the major qualification requirements and who petitions to declare the major by the campus major declaration deadline (i.e., before enrolling in their 3rd year or the equivalent) will be admitted to the major. Students enrolled in their final qualification policy course at the major declaration deadline may submit the petition, but will not be declared until satisfactory grades have been posted. Students who satisfy the major admission requirements, but who petition to declare the major after the campus major declaration deadline will be considered on a case-by-case basis for admission to the major; admission is not guaranteed.

Students who are informed that they are not eligible to declare the major may appeal this decision by submitting a letter to the Molecular Cell and Developmental Biology Faculty Adviser within 15 days from the date the notification was mailed. Within 15 days of receipt of the appeal, the department will notify the student and their college of the decision. For more information about the appeal process is here.

TRANSFER STUDENTS

MCD Biology encourages applications from transfer students in the biological sciences. In fall 2012 the department established a Major Qualification Policy that limits access to the program to those students who have successfully completed a subset of foundational coursework. Transfer students are held to similar criteria when being assessed for admission to UCSC as an MCD-sponsored major.

More information on qualifying for the major as a transfer applicant is here.

In addition to the required coursework for admission, students should complete courses equivalent to the calculus, general chemistry, and introductory biology requirements for the major they wish to pursue. Students who transfer without having completed the prerequisite coursework may have difficulty enrolling in courses and may require more than two years to complete their MCD-sponsored degree. More complete information on preparing to transfer as an MCD major is here.

Prospective transfer students should review the transfer information here.

DOUBLE MAJOR IN THE BIOLOGICAL SCIENCES

Students interested in pursuing multiple majors within the biological sciences may NOT declare the following combination of majors:
- Biology (B.A., B.S., or minor) AND any other biological sciences major
- Any combination of the following: Human Biology; Molecular, Cell and Developmental Biology; Neuroscience; or Biochemistry and Molecular Biology

Should a student choose to double major, they must qualify for and complete the Disciplinary Communication and comprehensive requirements for each of the majors.

BIOLOGY B.S. MAJOR REQUIREMENTS
Biology has entered into an exciting new era in which phenomena that once seemed insoluble mysteries—such as embryonic development, the functions of the brain, and the dynamics of ecosystems—are now yielding their secrets as the technology to study them becomes more and more sophisticated. From molecular biology, with its potential to revolutionize medicine and agriculture, to ecology, with its lessons for the sustainable management of the environment, biologists are fully engaged in meeting the challenges of the future, helping to improve the quality of human life and to preserve habitats and biodiversity. Thus, it is no wonder that biology is at the heart of many of today’s most pressing intellectual and social concerns.

The Biology B.S. degree program gives students a rigorous education in modern biology, while allowing a student the opportunity to select from a wide array of upper-division elective courses offered by the departments of Molecular, Cell, and Developmental Biology and Ecology and Evolutionary Biology.

PROGRAM LEARNING OUTCOMES

Students who successfully complete the Biology major will be able to:

- Demonstrate knowledge of how biochemistry, genetics and molecular biology are used to elucidate both the function of cells and their organization into tissues,
- Recognize that biology has a basis in chemistry, physics, and mathematics,
- Describe how scientific method is used to explain natural phenomena,
- Use effective oral and written language skills to communicate scientific data and ideas,
- Understand safe laboratory practices and perform basic molecular biology techniques
- Generate hypotheses, evaluate data, and design experiments to investigate a scientific problem, and
- Present broad knowledge in biochemistry, genetics, evolutionary biology, cell biology, developmental biology, physiology and ecology.

LOWER-DIVISION REQUIREMENTS

**Introductory Biology:** BIOL 20A, BIOE 20B and 20C, and BIOL 20L (BIOL 20L is waived for junior transfer students)

**General Chemistry:** Chemistry 1A, 1B and 1C/N

**Organic Chemistry:** Chemistry 8A/L and 8B

**Calculus:** Mathematics 11A-B or 19A-B

**Statistics:** Applied Mathematics and Statistics 5 or 7/L

**Physics:** Physics 6A/L, and 6B or 6C; or Physics 7A/B and 6L. (Note: Physics 7A/B and 6L may not satisfy the physics prerequisite for admission to all medical schools; be sure to check the requirements at all schools where you wish to apply.)

UPPER-DIVISION REQUIREMENTS

Biochemistry and Molecular Biology: BIOL 100 and 101 (9 credits); or BIOC 100A, 100B, and 100C* (15 credits)

Molecular Biology Laboratory: BIOL 101L or BIOL 102L

Genetics: BIOL 105

Cell Biology: BIOL 110

Ecology: BIOE 107

Evolution: BIOE 109

Students must complete three additional upper-division electives (5-7 credits each) chosen from below. (Note that some of the following courses fulfill the DC requirement):

- BIOL 111A, Immunology I
- BIOL 114, Cancer Cell Biology
- BIOL 115, Eukaryotic Molecular Biology
- BIOL 120, Developmental Biology
- BIOL 125, Introduction to Neuroscience
- BIOL 130, Human Physiology
- BIOC 100C, Biochemistry*
- BIE 108, Marine Ecology
- BIE 112/L, Ornithology/Laboratory
- BIE 114/L, Herpetology/Laboratory
- BIE 117/L, Systematic Botany/Laboratory
- BIE 120/L, Marine Botany/Laboratory
- BIE 122/L, Invertebrate Zoology/Laboratory
- BIE 124/L, Mammalogy/Laboratory
- BIE 127/L, Ichthyology/Laboratory
- BIE 129/L, Marine Mammals
- BIE 131, Animal Physiology
- BIE 133/L, Exercise Physiology/Laboratory
- BIE 134/L, Comparative Vertebrate Anatomy/Laboratory
- BIE 135/L, Plant Physiology/Laboratory
- BIE 137/L, Molecular Ecology/Laboratory
- BIE 140, Behavioral Ecology
- BIE 145, Plant Ecology
- BIE 147, Community Ecology
- BIE 148, Quantitative Ecology
- BIE 149, Disease Ecology
- BIE 172/L, Population Genetics/Laboratory
- BIE 155, Freshwater Ecology
- BIE 161, Kelp Forest Ecology
- BIE 163/L, Ecology of Reefs, Mangroves, and Seagrasses/Laboratory
- BIE 165, Marine Conservation Biology
- Microbiology and Environmental Toxicology (METX) 119, Microbiology
- Microbiology and Environmental Toxicology (METX) 135/L, Human Anatomy/Laboratory

*Students who complete the BIOC 100ABC sequence can use BIOC 100C to satisfy an upper-division elective.

Laboratory requirement: Students must complete two upper-division courses that include regular laboratory or fieldwork: BIOL 101L or 102L and one additional laboratory (L) course. If the additional laboratory course is BIOL 103L, 105L, 109L, 115L, 120L or 121L, it will also satisfy the Disciplinary Communication requirement.

DISCIPLINARY COMMUNICATION (DC) REQUIREMENT

Students of every major must satisfy that major’s upper-division Disciplinary Communication (DC) Requirement. The DC requirement in the biology
bachelor of sciences degree can be satisfied either by completing two BIOE lab courses or by completing one 5-credit BIOL lab. For the BIOE option, choose two Ecology and Evolutionary Biology courses from this group: BIOE 108, 114/L, 117, 120/L, 122/L, 127/L, 128L, 129/L, 137, 141L, 145, 145L, 150L, 151B, 153C, 158L, 159A, 161L, 171, 172/L. For 2-credit BIOE lab courses taken concurrently with 5-credit lectures, both courses must be passed to receive one half of the DC requirement. For the BIOL option, choose one course from this group: BIOL 103L, 105L, 109L, 115L, 120L, 121L.

COMPREHENSIVE REQUIREMENT

All majors have a comprehensive requirement. For the Biology B.S., this requirement can be satisfied by receiving a passing grade in a laboratory or field course (any upper-division BIOE or BIOL course identified with an "L").

HUMAN BIOLOGY B.S. MAJOR REQUIREMENTS

LOWER-DIVISION REQUIREMENTS

Introductory Biology: BIOL 20A, BIOE 20B and BIOL 20L (BIOL 20L is waived for junior transfer students)

General Chemistry: Chemistry 1A, 1B/M and 1C/N

Organic Chemistry: Chemistry 8A/L and 8B/M (Note: Chemistry 109 is also recommended for pre-med students)

Calculus: Mathematics 11A-B or 19A-B

Statistics: Applied Mathematics and Statistics 5 or 7/L

Physics: Physics 6A/L, and 6B or 6C; or Physics 7A/B and 6L. (Note: Physics 7A/B and 6L may not satisfy the Physics prerequisite for admission to all medical schools; be sure to check the requirements at all schools where you wish to apply.)

UPPER-DIVISION REQUIREMENTS

Five core courses:

Biochemistry and Molecular Biology: BIOL 100 and 101 (8 credits); or BIOC 100A, 100B, and 100C* (15 credits)

Genetics: BIOL 105

Cell Biology: BIOL 110

Human Physiology with Laboratory: BIOL 130/L

Ten credits of upper-division electives chosen from the following:

BIOL 100C, Biochemistry*

BIOE 133/L Exercise Physiology

BIOL 111A, Immunology I

BIOL 111B, Immunology II

BIOL 112, Virology

BIOL 114, Cancer Cell Biology

BIOL 115, Eukaryotic Molecular Biology

BIOL 116, Advanced Topics in Cell Biology (3 credits)

BIOL 117, Neglected Tropical Diseases (3 credits)

BIOL 120, Developmental Biology

BIOL 125, Introduction to Neuroscience

BIOL 126, Advanced Molecular Neuroscience

BIOL 127, Mechanisms of Neurodegenerative Disease

BIOL 128, Developmental Neurobiology

BIOL 188, A Life in Medicine (3 credits)

Biomolecular Engineering 130, Genomes

Biomolecular Engineering 155, Biotechnology and Drug Development

Biomolecular Engineering 178, Stem Cell Biology

Community Studies 163, Health Care Inequalities

Microbiology and Environmental Toxicology 119, Microbiology

Microbiology and Environmental Toxicology, 135/L, Anatomy of the Human Body/Laboratory

Physics 180, Biophysics

*Students who complete the BIOC 100A/B/C sequence can use BIOC 100C to satisfy an upper-division elective.

PROGRAM LEARNING OUTCOMES

Students who successfully complete the human biology major will be able to:

- Demonstrate knowledge of how biochemistry, genetics and molecular biology are used to elucidate both the function of cells and their organization into tissues;
- Recognize that biology has a basis in chemistry, physics, and mathematics;
- Describe how scientific method is used to explain natural phenomena;
- Use effective oral and written language skills to communicate scientific data and ideas;
- Understand safe laboratory practices, perform basic molecular biology techniques, generate hypotheses and evaluate data;
- Achieve fluency in Spanish and an understanding of how cultural differences can affect health care delivery;
- Refine a career-related and/or postgraduate goal through internship experience; and
- Present advanced knowledge in the specialized field of human physiology.

HUMAN BIOLOGY MAJOR

The B.S. major in human biology is designed for students interested in careers in healthcare or biomedical research. Medical and professional school admissions requirements vary; students should verify that their coursework will satisfy the admissions requirements of the programs to which they plan to apply. Students are required to take introductory biology and laboratory (BIOL 20L), genetics, biochemistry, cell biology, human physiology with laboratory and one additional course directly relevant to human health. As a unique feature of this program, students must also fulfill Spanish-language and healthcare internship requirements.
Internship Requirement: BIOL 189 and 189W, Health Sciences Internship. The student must participate in a community health-care service activity approved by the health sciences internship coordinator. Credit may be earned over multiple quarters.

Language Requirement: Spanish 1-4 or the equivalent and one quarter of Spanish for health-care workers (Spanish 5M).

DISCIPLINARY COMMUNICATION (DC) REQUIREMENT

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in human biology is satisfied by completing courses BIOL 130L, Human Physiology Laboratory, and BIOL 189, Health Sciences Internship and BIOL 189W, Disciplinary Communication: Human Biology.

COMPREHENSIVE REQUIREMENT

All majors have a comprehensive requirement. For the Human Biology B.S., this requirement can be satisfied by receiving a passing grade in the Health Sciences Internship, BIOL 189.

HUMAN BIOLOGY B.S. SAMPLE PLANNERS

Frosh sample planners. Transfer students sample planners.

MOLECULAR, CELL, AND DEVELOPMENTAL BIOLOGY MAJOR

The molecular, cell, and developmental (MCD) biology major is designed to prepare students for rigorous graduate programs in biomedical research, medical and other healthcare professional programs, for careers in the biotechnology industry. This major is more structured than the general biology major and requires that students pay careful attention to the prerequisites required for upper-division biology courses.

PROGRAM LEARNING OUTCOMES

Students who successfully complete the MCD major will be able to:

- Use effective oral and written language skills to communicate scientific data and ideas;
- Understand safe laboratory practices and perform basic molecular biology techniques;
- Generate hypotheses, evaluate data, and design experiments to investigate a scientific problem; and
- Present advanced knowledge in the specialized fields of molecular and cell biology.

MOLECULAR, CELL, AND DEVELOPMENTAL BIOLOGY B.S. MAJOR REQUIREMENTS

LOWER-DIVISION REQUIREMENTS

Introductory Biology: BIOL 20A, BIOE 20B, BIOL 20L, and BIOE 20C. (BIOL 20L is waived for junior transfer students.)

General Chemistry: Chemistry 1A, 1B and 1C/N

Organic Chemistry: Chemistry 8A/L and 8B

Calculus: Mathematics 11A-B or 19A-B

Statistics: Applied Mathematics and Statistics 5 or 7/L

Physics: 6A/L, and 6B or 6C; or Physics 7A/B and 6L. (Note: Physics 7A/B and 6L may not satisfy the Physics prerequisite for admission to all medical schools; be sure to check the requirements at all schools where you wish to apply.)

UPPER-DIVISION REQUIREMENTS

Five core courses:

Biochemistry and Molecular Biology: BIOL 100 and 101 (8 credits); or BIOC 100A, 100B, and 100C* (15 credits)

Molecular Biology Laboratory: BIOL 101L or BIOL 102L

Genetics: BIOL 105

Cell Biology: BIOL 110

At least 15 credits of elective courses from the following list:

BIOL 111A, Immunology I
BIOL 111B, Immunology II
BIOL 112, Virology
BIOL 114, Cancer Cell Biology
BIOL 115, Eukaryotic Molecular Biology
BIOL 116, Advanced Topics in Cell Biology (3 credits)
BIOL 117, Global Health and Neglected Diseases (3 credits)
BIOL 120, Developmental Biology
BIOL 125, Introduction to Neuroscience
BIOL 126, Advanced Molecular Neuroscience
BIOL 127, Neurodegenerative Disease
BIOL 128, Developmental Neurobiology
BIOL 130, Human Physiology
BIOL 178L, Protocols in Stem Cell Biology
BIOC 100C, Biochemistry*
BIOE 109, Evolution
BIOE 135/L, Plant Physiology/Laboratory
Biomolecular Engineering 110, Computational Biology Tools
Biomolecular Engineering 130, Genomes
Biomolecular Engineering 155, Biotechnology and Drug Development
Biology: Molecular, Cell, and Developmental Biology

Biomolecular Engineering 160/L, Research Programming for Biologists and Biochemists/Laboratory
Biomolecular Engineering 178, Stem Cell Biology Microbiology and Environmental Toxicology 119, Microbiology Physics 180, Biophysics

*Students who complete the BIOC 100ABC sequence can use BIOC 100C to satisfy an upper-division elective.

One of the following laboratory courses:
BIOL 100L, Biochemistry Laboratory
BIOL 103L, Toxic RNA Laboratory
BIOL 105L, Eukaryotic Genetics Laboratory
BIOL 109L, Yeast Molecular Genetics Laboratory
BIOL 115L, Eukaryotic Molecular Biology Laboratory
BIOL 120L, Development Laboratory
BIOL 121L, Environmental Phage Biology Laboratory
BIOL 186L, Undergraduate Research in MCD Biology Microbiology and Environmental Toxicology 119L, Microbiology Laboratory

DISCIPLINARY COMMUNICATION (DC) REQUIREMENT

Students of every major must satisfy that major’s upper-division Disciplinary Communication (DC) requirement. The DC requirement in molecular, cell, and developmental biology is satisfied by completing one of the following courses: BIOL 100L, 103L, 105L, 109L, 115L, 120L, 121L, 186L; or Microbiology and Environmental Toxicology 119L.

COMPREHENSIVE REQUIREMENT

All majors have a comprehensive requirement. For the MCD Biology B.S., this requirement can be satisfied by receiving a passing grade in an independent research laboratory: BIOL 100L, 103L, 105L, 109L, 115L, 120L, 121L, 186L; or Microbiology and Environmental Toxicology 119L.

MOLECULAR, CELL, AND DEVELOPMENTAL BIOLOGY B.S. SAMPLE PLANNERS

Frosh sample planners.
Transfer student sample planners.

NEUROSCIENCE MAJOR

Neuroscience, the study of the nervous system and behavior of animals, is a frontier area in biology, touching psychology on the one hand and computer science on the other. The neuroscience major provides students with rigorous preparation for graduate studies and research in the field of neuroscience.

PROGRAM LEARNING OUTCOMES

Students who successfully complete the Neuroscience major will be able to:

- Demonstrate knowledge of how biochemistry, genetics and molecular biology are used to elucidate both the function of cells and their organization into tissues.
- Recognize that biology has a basis in chemistry, physics, and mathematics.
- Describe how scientific method is used to explain natural phenomena.
- Use effective oral and written language skills to communicate scientific data and ideas.
- Understand safe laboratory practices and perform basic molecular biology techniques.
- Generate hypotheses, evaluate data, and design experiments to investigate a scientific problem.
- Present advanced knowledge in the specialized field of neuroscience.

NEUROSCIENCE B.S. MAJOR REQUIREMENTS

LOWER-DIVISION REQUIREMENTS

Introductory Biology: BIOL 20A, BIOE 20B, BIOL 20L and BIOE 20C (BIOL 20L is waived for junior transfer students.)
General Chemistry: Chemistry 1A, 1B and 1C/N
Organic Chemistry: Chemistry 8A/L and 8B
Calculus: Mathematics 11A-B or 19 A-B
Statistics: Applied Mathematics and Statistics 5 or 7/L
Physics: Physics 6A/L and 6C, or may take 7A- B and 6 L (Note: Physics 7A/B and 6L may not satisfy the Physics prerequisite for admission to all medical schools; be sure to check the requirements at all schools where you wish to apply.)

UPPER-DIVISION REQUIREMENTS

Seven core courses:
Biochemistry and Molecular Biology: BIOL 100 and 101 (8 credits); or BIOC 100A, 100B, and 100C* (15 credits)
Molecular Biology Laboratory: BIOL 101L or BIOL 102L
Genetics: BIOL 105
Cell Biology: BIOL 110
Neuroscience: BIOL 125
Advanced Neuroscience: BIOL 126

Two of the following electives (only one of which may be a 3-credit course: BIOL 116 or BIOL 117):
BIOE 131/L, Animal Physiology/Laboratory
BIOE 140, Behavioral Ecology
BIOL 111A, Immunology I
BIOL 111B, Immunology II
BIOL 114, Cancer Cell Biology
BIOL 115, Eukaryotic Molecular Biology
BIOL 116, Advanced Topics in Cell Biology (3 credits)
BIOL 117, Global Health and Neglected Diseases (3 credits)
BIOL 120, Developmental Biology
BIOL 127, Mechanisms of Neurodegenerative Disease
BIOL 128, Developmental Neurobiology
BIOL 130, Human Physiology
BIOL 178L, Protocols in Stem Cell Biology
BIOC 100C, Biochemistry*
Biomolecular Engineering 110, Computational Biology Tools
Biomolecular Engineering 130, Genomes Biomolecular Engineering 155, Biotechnology and Drug Development
Biomolecular Engineering 160/L, Research Programming for Biologists and Biochemists/Laboratory
Biomolecular Engineering 178, Stem Cell Biology
Physics 180, Biophysics
Psychology 121, Perception
Psychology 123, Behavioral Neuroscience

*Students who complete the BIOC 100ABC sequence can use BIOC 100C to satisfy an upper-division elective.

One of the following laboratory electives:
- BIOE 141L, Behavioral Ecology Field Course
- BIOL 100L, Biochemistry Laboratory
- BIOL 103L, Toxic RNA Laboratory II
- BIOL 105L, Eukaryotic Genetics Laboratory
- BIOL 109L, Yeast Genetics Laboratory
- BIOL 115L, Eukaryotic Molecular Genetics Laboratory
- BIOL 120L, Development Laboratory
- BIOL 121L, Environmental Phage Biology Laboratory
- BIOL 186L, Undergraduate Research in MCD Biology

DISCIPLINARY COMMUNICATION (DC) REQUIREMENT

Students of every major must satisfy that major’s upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in neuroscience is satisfied by completing one of the following: BIOE 141L, BIOL 100L, 103L, 105L, 109L, 115L, 120L, 121L, 186L.

COMPREHENSIVE REQUIREMENT

All majors require a comprehensive requirement. For the Neuroscience B.S., this requirement can be satisfied by receiving a passing grade in an independent research laboratory: BIOE 141L, BIOL 100L, 103L, 105L, 109L, 115L, 120L, 121L, 186L.

NEUROSCIENCE B.S. SAMPLE PLANNERS

Frosh sample planners.
Transfer students sample planners.

BIOLOGY MINOR REQUIREMENTS

The biology minor is designed to incorporate elements of both EEB and MCD disciplines.

LOWER-DIVISION REQUIREMENTS

**Introductory Biology:** BIOL 20A, BIOE 20B, BIOL 20L and BIOE 20C
**Introductory Chemistry:** CHEM 1A, CHEM 1B, CHEM 1C
**Organic Chemistry:** CHEM 8A

UPPER-DIVISION REQUIREMENTS

BIOL 100 Biochemistry
BIOL 105 Genetics
BIOE 107 Ecology
BIOE 109 Evolution

Students must complete one upper-division biology elective (5-7 credits) chosen from Biological Sciences-EEB courses (BIOE) or Biological Sciences-MCDB courses (BIOL) numbered 100-181.

There is no senior comprehensive requirement for the biology minor. Please contact Molecular, Cell, and Developmental Biology undergraduate advisers for further information.

HONORS

Honors in the majors are awarded to graduating students whose academic performance demonstrates excellence at a grade point average (GPA) of 3.5 or above. Highest honors are awarded to those students whose performance demonstrates the highest level of excellence and results in a GPA of 3.8 or above.

MEDICAL AND PROFESSIONAL SCHOOL ADMISSION

Medical and professional school admissions requirements vary; students should verify that their coursework will satisfy the admissions requirements of the programs to which they plan to apply.

COURSE SUBSTITUTION/TRANSFER CREDIT POLICY

At least half of the upper-division courses (numbered 100–190) required for each major must be taken through the biological sciences program at UCSC, not as transfer credits from another department or institution. Transfer students are advised to contact a department adviser before enrolling in numerous upper-division courses at other institutions. For more information on transferring courses to UCSC, please consult the undergraduate website.

Students who wish to receive credit toward the major for different courses taken either at UCSC or at another institution should contact a department adviser.

EDUCATION ABROAD OPPORTUNITIES

The UC Education Abroad Program (EAP) offers qualified students unique opportunities to broaden their educational horizons. The MCD Department encourages interested students to participate. Many programs are in English-speaking countries or use English for advanced courses. Many programs offer
small classes, extensive laboratories, and/or field research experience. Students interested in study abroad need to get an early start on their basic science requirements, including chemistry, mathematics, and introductory biology and must declare their major prior to applying to go abroad. Visit the EAP office as soon as possible to begin planning; you must seek advice about your EAP plan for major courses at UCSC from a department adviser and/or faculty adviser and receive their approval for your plans.

---

**ACADEMIC ADVISING**

Academic advising is available at the Molecular, Cell, and Developmental Biology office. Students should take full advantage of this opportunity and should keep in frequent touch with the advisers to stay informed about late announcements of courses, changes in scheduling, and opportunities for special study. For additional advice and information please see the [undergraduate website](#).

---

**GRADUATE PROGRAM DESCRIPTION**

The program in Molecular, Cell, and Developmental (MCD) biology (courses BIOL) leads to either the doctor of philosophy (Ph.D.) or the Master of Arts (M.A.) and is designed to prepare students for careers in research, teaching, and biotechnology. Current research in MCD biology focuses on such topics as the structure and function of RNA, gene expression, chromatin structure, epigenetics, cell signaling, cell division, development, nerve cell function, and stem cell biology.

---

**PH.D. PROGRAM**

Ph.D. students complete the graduate core courses, BIOL 200A, 200B, and 200C, and 200D in the first year. Students are required to participate in laboratory research meetings and departmental seminar series (BIOL 291/292) every quarter. First-year Ph.D. students complete three six-week laboratory rotations. Students choose their rotation laboratories in consultation with the Graduate Advisory Committee. The laboratory rotations give students a chance to learn about the diverse fields and methods of inquiry and to interact with members of the department. At the end of each rotation, students present a short talk or present a poster to the department on their rotation project. At the end of winter quarter, students consult with rotation faculty to identify a permanent thesis laboratory.

Second-year Ph.D. students are required to submit a written proposal on their thesis research. The oral component of the qualifying examination, taken in spring quarter of the second year, is an oral examination on the proposal. The examining committee is comprised of three internal reviewers and one external reviewer. Once the qualifying examination is passed and prior to her/his department seminar, a student, with her/his faculty adviser, selects a thesis committee to help guide the student’s thesis research. This committee monitors the student’s progress and ultimately approves the final draft of the student’s dissertation. The student must meet with the thesis committee at least once a year after passing the qualifying examination.

A student is advanced to candidacy following presentation of her/his research to the department in a seminar. A passing evaluation requires demonstration of a good understanding of their project and background knowledge, and a clear presentation of their questions or hypotheses, tests of those, and progress to date. This presentation takes place no later than spring of the third year.

Ph.D. students must take an ethics course (BIOL 289) and two approved advanced graduate electives, in addition to the core courses.

**PH.D. REQUIREMENTS**

- Complete the graduate core courses:
  - BIOL 200A, Critical Analysis of Scientific Literature
  - BIOL 200B, Advanced Molecular Biology
  - BIOL 200C, Advanced Cell Biology
  - BIOL 200D, Advanced Developmental Biology
- Complete BIOL 289, Practice of Science
- Enroll in the seminar series each quarter, BIOL 291 and 292
- Complete an oral qualifying examination
- Present an advancement to candidacy seminar
- Complete two advanced graduate elective courses (see the list below)
- Meet yearly with a thesis committee after the qualifying examination
- Complete two quarters of service as a teaching assistant
- Complete thesis research resulting in peer-reviewed publications and a dissertation on original and significant work
- Present the thesis defense in a departmental seminar

---

**M.A. PROGRAM**

Students apply to the master’s degree program through the same portal as for the Ph.D. degree program. While the M.A. is research intensive, master’s students do not do research rotations; they must identify a research adviser prior to the training period. Students are required to participate in laboratory research meetings and departmental seminar series every quarter.

**M.A. REQUIREMENTS**

- Complete the graduate core course:
  - BIOL 200A, Critical Analysis of Scientific Literature (to be completed in the first year)
- Complete BIOL 289, Practice of Science
- Enroll in the seminar series each quarter, BIOL 291 and 292
Complete two approved advanced electives (list below). The two electives may be completed in either the first or second year.

Write a master’s thesis based on original research. (A scholarly dissertation of the literature and progress on research project. A peer-reviewed publication is not required for graduation.)

Present a thesis defense in a departmental seminar. The student will present their research project in a public venue such as a departmental seminar or one of the research clubs (RNA club, chromatin club, neuroscience club etc.).

**APPROVED GRADUATE ELECTIVES (PH.D. AND M.A. STUDENTS COMPLETE TWO)**

*Students who have had no or very little statistics should audit or take AMS 7 (5 credits) and perhaps also AMS 7L (2 credits) to learn the basics, before taking one of the graduate-level courses.

** Students who take Chemistry 230, Grant Writing and participate in the Professional Development Program (PDP) may count only one of those studies as a graduate elective.

**BIOLOGY: MOLECULAR, CELL, AND DEVELOPMENTAL BIOLOGY FACULTY AND PROFESSIONAL INTERESTS**

**PROFESSOR**

**James Ackman**  
Brain circuit structure and function

**Manuel Ares Jr.**  
Regulation of RNA processing; structure, function and evolution of RNA-based systems

**Joshua Arribere**  
Cellular quality control of gene expression

**Needhi Bhalla**  
Meiotic chromosome dynamics

**Hinrich Boeger**  
Chromatin dynamics and transcriptional regulation

**Susan Carpenter**  
Long noncoding RNA and innate immunity

**Bin Chen**  
Mammalian brain development

**David Feldheim**  
Developmental neuroscience

**Grant Hartzog**  
Biochemistry, genetics, chromatin and transcriptional regulation

**Lindsay Hinck**  
Breast development and cancer, cell biology, development

**Melissa Jurica**  
Structure and function of human splicing machinery

**Rohinton T. Kamakaka**  
Nuclear organization, chromatin domains, epigenetic gene regulation and insulators

**Douglas R. Kellogg**  
Control of cell growth and size

**Eui Seok Kim**  
Connectivity, function, development, and genetic identity of neural circuits
Biology: Molecular, Cell, and Developmental Biology

Jeremy Lee
Molecular biology education and curriculum development; Drosophila models of neurodegeneration

Michael Rexach
Structure and function of nuclear pore complex, nuclear transport

Jeremy Sanford
Genomic analysis of protein-RNA interactions

William M. Saxton
Cytoskeletal motors and active transport processes

Upasna Sharma
Epigenetics, RNA, chromatin and transcriptional regulation, reproduction genomics

Susan Strome
Epigenetic regulation of germ cells in C. elegans

William T. Sullivan
Cell cycle, cytoskeleton, and host-pathogen interactions

John W. Tamkun
Transcriptional regulation, molecular genetics of Drosophila development, regulation of gene expression

Olena Morozova Vaske
Genomics of pediatric cancers and rare diseases

Jordan Ward
Probing C. elegans development, cellular differentiation, and parasitic disease

Zhu Wang
Prostate development and cancer, tissue stem cells

RESEARCH FACULTY

Harry Noller
Ribosome structure and function; mechanisms of protein synthesis

MOLECULAR, CELL, AND DEVELOPMENTAL BIOLOGY EMERITUS FACULTY

Barry Bowman
Charles Daniel
Robert Edgar
Jerry F. Feldman
Robert A. Ludwig
Kivie Moldave
Clifton A. Poodry
Lincoln Taiz

Frank J. Talamantes
Howard H. Wang

MOLECULAR, CELL, AND DEVELOPMENTAL BIOLOGY LECTURERS

Giulia Ruben
Jimmy Shanks
Scott Vahradian

Victoria Auerbach-Stone (Microbiology and Environmental Toxicology)
Interactions between bacterial pathogens and the innate immune system

Rebecca Dubois (Biomolecular Engineering)
Protein engineering, structural biology, X-ray crystallography, virology, vaccines, antibody therapeutics, antiviral drugs

Camilla Forsberg (Biomolecular Engineering)
Hematopoietic stem cells, stem cell fate decisions, transcriptional regulation, chromatin, epigenetics, blood and immune cell development, hematopoietic cell transplantation and trafficking, genetic engineering, bioengineering

Richard “Ed” Green (Biomolecular Engineering)
Genomics, computational molecular biology, genome assembly, human evolutionary genetics, ancient DNA, high-throughput sequencing, mRNA-processing and alternative splicing

David Haussler (Biomolecular Engineering)
Bioinformatics, genomics, computational genomic data analysis, molecular evolution and comparative genomics, genomic and clinical data sharing and standards, cancer genomics, neurodevelopment, stem cell research, immunogenomics, information theory, pattern recognition, machine learning, artificial intelligence, information theory, theoretical computer science

Scott Lokey (Chemistry and Biochemistry)
Organic chemistry; combinatorial synthesis, biotechnology, molecular cell biology

Todd M. Lowe (Biomolecular Engineering)
Experimental and computation genomics, ncRNA gene finders, DNA microarrays to study the biology of Archaea

Karen Ottemann (Microbiology and Environmental Toxicology)
Environmental responses of pathogenic bacteria

Carrie Partch (Chemistry and Biochemistry)
Biochemistry and biophysics, nuclear magnetic resonance spectroscopy; molecular mechanism of circadian rhythmicity

Seth Rubin (Chemistry and Biochemistry)
Biomolecular mechanisms of cell-cycle regulation and cancer; structural biology and biochemistry; macromolecular x-ray crystallography; nuclear magnetic resonance
Biology: Molecular, Cell, and Developmental Biology

William G. Scott (Chemistry and Biochemistry)
Structure and function of RNA, proteins, and their complexes

Beth Shapiro (Ecology and Evolutionary Biology)
Evolutionary and molecular ecology, ancient DNA, genomics, pathogen evolution

Alexander Sher (Physics)
Development of experimental techniques for the study of neural function

Michael Stone (Chemistry and Biochemistry)
Single-molecule Biophysics and Enzymology; Structure, function, and assembly of the telomerase ribonucleoprotein, Fluorescence Resonance Energy Transfer (FRET), optical/magnetic trapping, sub-diffraction optical imaging of telomeres and the nucleus

Fitnat Yildiz (Microbiology and Environmental Toxicology)
Microbiology, molecular genetics, genomics; the mechanism of persistence of survival of Vibrio cholerae

---

BIOLOGY: MOLECULAR, CELL, AND DEVELOPMENTAL BIOLOGY
COURSES

LOWER-DIVISION COURSES

15. Undergraduate Research Reports (1 credit). F,W
Undergraduate students who work in faculty research laboratories present the results of their projects. Organized by the Minority Undergraduate Research Program and the Minority Access to Research Careers Program. Designed for students with membership in the above-mentioned programs. Prerequisite(s): qualifications as determined by instructor at first class meeting. May be repeated for credit. M. Jurica, A. Zahler

20A. Cell and Molecular Biology. F,W,S
Introduction to biochemistry, cell biology, molecular biology, and genetics. Prerequisite(s): Chemistry 1A; students with a chemistry AP score of 4 or higher who wish to start their biology coursework prior to completing the Chemistry 1A, may enroll by permission of the instructor. (General Education Code(s): IN.) M. Rexach, J. Tamkun

20L. Experimental Biology Laboratory (2 credits), F,W,S
Provides biology majors with the theory and practice of experimental biology. A wide range of concepts and techniques used in the modern laboratory are included in the exercises. Designed to satisfy the introductory biology lab requirement of many medical and professional schools. Students are billed a materials fee. Prerequisite(s): BIOL 20A and previous or concurrent enrollment in BIOE 20B. Enrollment is restricted to human biology and health sciences majors; other majors by permission. Enrollment limited to 20. The Staff

80A. Female Physiology and Gynecology. S
Biochemical, medical, social, and clinical aspects of the female body. Emphasis will be on biological-chemical interactions in the female organs. Topics include female anatomy, cell physiology, endocrine functions, sexuality and intimacy, sexually transmitted diseases, puberty, pregnancy, menopause, birth control, abortion, immunity, cancer. (General Education Code(s): SI.) The Staff

80E. Evolution, *
Introduction to Darwinian evolution including how the theory was devised and a discussion of other theories proposed at the time. Explores the facts and evidence of evolutionary processes and the insights they provide in biological diversity, consequences of extinction, and emergence of new diseases. Includes a discussion of evolution and spirituality. (General Education Code(s): SI.) The Staff

86. Research Deconstruction: MCD Biology (3 credits). S
Explores scientific principles and logic through research seminars in molecular, cellular, and developmental biology. Additional topics may include diseases, stem cell biology, and other medically relevant areas in biomedical research. Prerequisite(s): Mathematics 3 or equivalent (i.e., mathematics placement examination score), and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to first-year, sophomore, and junior students. Enrollment is by permission of the instructor. Enrollment limited to 30. (S) G. Hartzog

An interdisciplinary, multicultural, and historical perspective of medicine focused primarily upon therapy and practice to achieve better understanding of the scope, practice, and limits or medicine. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment limited to 30. (General Education Code(s): SI.) (S) G. Hartzog

UPPER-DIVISION COURSES

100. Biochemistry. F,W
An introduction to biochemistry including biochemical molecules, protein structure and function, membranes, bioenergetics, and regulation of biosynthesis. Provides students with basic essentials of modern biochemistry and the background needed for upper-division biology courses. Students who plan to do advanced work in biochemistry and molecular biology should take the
Biochemistry and Molecular Biology 100 series directly. Students cannot receive credit for this course after they have completed any two courses from the BIOC 100A, 100B, and 100C sequence. Prerequisite(s): BIOL 20A and BIOE 20B; and CHEM 108A or CHEM 8A or 112A. J. Sanford, D. Kellogg

100L. Biochemistry Laboratory. *
Basic techniques and principles of introductory biochemistry including isolation and characterization of a natural product, manipulation of proteins and nucleic acids to demonstrate basic physical and chemical properties; and characterization of enzyme substrate interactions. Students are billed a materials fee. Enrollment is restricted to biological sciences and affiliated majors and biology minors. Non-majors may enroll by permission of the instructor. Prerequisite(s): BIOL 100 or BIOC 100A; and BIOL 20L or BIOL 101L or BIOL 102L; and satisfaction of the Entry Level Writing and Composition requirements. Enrollment limited to 20. The Staff

101. Molecular Biology (3 credits). W,S
Covers the basic molecular mechanism of DNA replication and transcription, protein synthesis, and gene regulation in bacterial and eukaryotic organisms. The experimental techniques used to determine these mechanisms are emphasized. Unless students have already passed course 20L, they are strongly encouraged to enroll in course 101L. Prerequisite(s): BIOL 100 or BIOC 100A. C. Vollmers, M. Jurica

101L. Molecular Biology Laboratory (2 credits). W,S
Laboratory course providing hands-on experience with, and covering conceptual background in, fundamental techniques in molecular biology and biochemistry, including DNA cloning, PCR, restriction digest, gel electrophoresis, protein isolation, protein quantification, protein immunoblot (Western) analysis, and use of online bioinformatics tools. Students are billed a materials fee. Previous or concurrent enrollment in BIOL 101 or BIOC 100A required. Students cannot receive credit for this course and BIOL 102L.

102L. Toxic RNA Laboratory I (3 credits). F,S
Introduces hypothesis-driven laboratory research. Students create models of a unique uncharacterized disease causing mutation and determine how it impacts the process of pre-mRNA splicing. An understanding of introductory molecular biology and genetics is required. Students are billed a materials fee. Prerequisite(s): BIOL 20A and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to sophomores, junior, and senior biological sciences and affiliated majors. Enrollment is by application and permission of the instructor. Enrollment limited to 25. (General Education Code(s): PR-E.) J. Sanford

103L. Toxic RNA Laboratory II. W
Introduces hypothesis-driven laboratory research. Students create models of a unique, uncharacterized, disease-causing mutation and determine how it impacts the process of pre-mRNA splicing. An understanding of introductory molecular biology and genetics is required. Prerequisite(s): BIOL 102L and satisfaction of the Entry Level Writing and Composition is requirements. Enrollment is restricted to sophomores, juniors, and seniors majoring in biology, molecular, cell, and developmental biology, neuroscience, human biology, and biochemistry and molecular biology. Enrollment is by application and permission of the instructor. Enrollment limited to 25. J. Sanford

105. Genetics. F,W,S
Mendelian and molecular genetics; mechanisms of heredity, mutation, recombination, and gene action. Prerequisite(s): BIOL 20A and BIOE 20B. S. Strome, N. Bhalla, J. Lee

105L. Eukaryotic Genetics Laboratory. S
Classical and newly developed molecular-genetic techniques used to explore genetic variation in wild populations of the fruit fly Drosophila melanogaster. Topics include Mendelian fundamentals, mapping, design of genetic screens, bio-informatic and database analysis, genetic enhancers, and population genetics. Students are billed a materials fee. Enrollment is restricted to biological sciences and affiliated majors; biology minors; non-majors by instructor permission. Prerequisite(s): BIOL 100 or BIOC 100A; BIOL 101L or BIOL 102L; BIOL 105; satisfaction of Entry Level Writing and Composition Requirements. Enrollment limited to 20. The Staff

109L. Yeast Molecular Genetics Laboratory. F,W,S
Using budding yeast as an experimental organism, this laboratory provides practical experience in classic and modern molecular biology and in genetic and epigenetic methods, and develops strong scientific communication skills. Topics include mendelian genetics, linkage, gene replacement, chromatin immunoprecipitation and epigenetics. Students are billed a materials fee. Enrollment is restricted to biological sciences and affiliated majors; biology minors. Non-majors enroll by instructor permission. Prerequisite(s): BIOL 100 or BIOC 100A; and BIOL 100K or BIOL 101L or BIOL 102L; and BIOL 105; satisfaction of Entry Level Writing and Composition requirements. Enrollment limited to 20. The Staff

110. Cell Biology. F,S
Covers the structure, organization, and function of eukaryotic cells. Topics include biological membranes, organelles, protein and vesicular trafficking, cellular interactions, the cytoskeleton, and signal transduction. Requires a good understanding of basic biochemistry and molecular
110L. Cell Biology Laboratory. ** Fundamental aspects of cell biology explored through experimentation in a modern laboratory setting. Research topics include the structure and function of biological membranes; intracellular transport and organelle biogenesis; the cell cycle; and the cytoskeleton. Students are billed a materials fee. Enrollment is restricted to biological sciences and affiliated majors; biology minors. Non-majors enroll by instructor permission. Prerequisite(s): BIOL 100 or BIOL 100A, and BIOL 100K or BIOL 20L or BIOL 101L, and previous or concurrent enrollment in BIOL 110. Satisfaction of the Entry Level Writing and Composition requirements. Enrollment limited to 16. The Staff

111. Immunology. ** Immune systems—their manifestations and mechanisms of action. Prerequisite(s): BIOL 20A, BIOE 20B, BIOL 105, and BIOL 110. The Staff

111A. Immunology I. ** Principles and concepts of the innate and adaptive immune systems, with emphasis on mechanisms of action and molecular and cellular networks. The development, differentiation, and maturation of cells of the immune system are also discussed. Prerequisite(s): courses BIOE 20B, and BIOL 20A, 105, and 110. S. Carpenter

111B. Immunology II. ** The immune system in health and disease, including failures of host immune-defense mechanisms, allergy and hypersensitivity, autoimmunity, transplantation biology, the immune response to tumors, immune-system interactions with pathogens, and manipulation of the immune response. Prerequisite(s): BIOL 111A. M. Zuniga

112. Virology (3 credits). W Principles of virology illustrated through study of specific examples. Topics include: viral genome organization, viral assembly, virus-host interactions, genetic diversity of viruses, viral ecology, and the epidemiology of viral diseases. Prerequisite(s): BIOL 101 and 110 and consent of instructor. Enrollment limited to 25. M. Zuniga

114. Cancer Cell Biology. S Focuses on the molecular and cellular mechanisms behind cancer. Topics covered include oncogenes, tumor suppressor genes, cell growth genes, checkpoint genes, telomeres, and apoptosis. Students will gain experience in reading the primary scientific literature. Prerequisite(s): BIOL 110 or 115. (General Education Code(s): TA.) A. Zahler

115. Eukaryotic Molecular Biology. S Covers eukaryotic gene and genome organization; DNA, RNA, and protein synthesis; regulation of gene expression; chromosome structure and organization; and the application of recombinant DNA technology to the study of these topics. Prerequisite(s): BIOL 101 or BIOL 100A; and BIOL 105; and BIOL 101L or 102L. Enrollment restricted to biological sciences and affiliated majors, non-majors by permission of instructor. H. Boeger

115L. Eukaryotic Molecular Biology Laboratory. F,W,S A laboratory designed to provide students with direct training in basic molecular techniques. Each laboratory is a separate module which together builds to allow cloning, isolation, and identification of a nucleic acid sequence from scratch. Students cannot receive credit for this course and course 187L or 287L. Students are billed a materials fee. Restricted to molecular, cell and developmental biology majors and affiliated majors; biology minors; other majors by permission. Prerequisite(s): BIOL 100 or BIOL 100A; and BIOL 20L or BIOL 101L or BIOL 102L; satisfaction of the Entry Level Writing and Composition Requirements; and previous or concurrent enrollment in BIOL 101 or 115. Enrollment limited to 20. The Staff

116. Advanced Topics in Cell Biology (3 credits). S Advanced course in cell biology featuring small-classroom discussion of topics related to the structure and function of cells and their organelles. Emphasis is given to experimental strategies used in cell biology research. Requires discussion of scientific literature and student-led presentations. Prerequisite(s): BIOL 110. Enrollment is restricted to senior human biology, molecular, cell, and developmental biology, and neuroscience majors. Other majors by permission of instructor. Enrollment limited to 30. M. Rexach

117. Global Health and Neglected Diseases (3 credits). W Neglected tropical diseases afflict more than 1 billion of the poorest individuals on the planet. This course covers the molecular basis and pathology of the most prevalent neglected diseases and emerging strategies to combat these diseases. (Formerly Neglected Tropical Diseases.) Prerequisite(s): BIOL 110. Enrollment is restricted to senior human biology, molecular, cell, and developmental biology, and neuroscience majors. Other majors by permission of instructor. Enrollment limited to 30. W. Sullivan

120. Developmental Biology. W A description and analysis of selected developmental events in the life cycle of animals. Experimental approaches to understanding mechanisms are emphasized. (Formerly Development.) Prerequisite(s): BIOL 110. Z. Wang

120L. Development Laboratory. W Experimental studies of animal development using a variety of locally obtainable organisms. Approximately eight hours weekly, but it will often be necessary to monitor continuing experiments throughout the week. Students are billed a materials fee. Enrollment
is restricted to biological sciences and affiliated majors; biology minors; other majors by permission. Prerequisite(s): BIOL 100 or BIOC 100A; and BIOL 100K or BIOL 20L or BIOL 101L; satisfaction of the Entry Level Writing and Composition requirements. Previous or concurrent enrollment in BIOL 120 is required. J. Lee

121L. Environmental Phage Biology Laboratory. S
Introduction to hypothesis-driven laboratory research. Students isolate a unique bacteriophage and characterize its structure and genome. An understanding of molecular biology and basic genetics is required. Students are billed a materials fee. Prerequisite(s): BIOL 100 or BIOC 100A; and BIOL 100K; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to biological sciences and affiliated majors with sophomore standing or higher. Enrollment is by application and permission of instructor. Enrollment limited to 20. The Staff

125. Introduction to Neuroscience. F
The structure and function of the nervous system. Topics include elementary electrical principles, biophysics and physiology of single nerve and muscle cells, signal transduction at synapses, development of the nervous system, and neural basis of behavior. Requires a good understanding of basic biochemistry, cell biology, and molecular biology. Prerequisite(s): BIOL 20A, BIOC 20B; and BIOL 101 or BIOC 100A; previous or concurrent enrollment in BIOL 110 is required. J. Ackman

126. Advanced Molecular Neuroscience. S
Explores in detail cellular and molecular events that underlay the function of the nervous system. Topics include neural development, axon guidance and regeneration, advanced electrical principles (synaptic transmission through a variety of receptors), synaptic plasticity, learning and memory, as well as several neural disorders. Students cannot receive credit for this course and course 226. Prerequisite(s): BIOL 125. Enrollment is restricted to neuroscience majors and proposed majors. (General Education Code(s): TA.) Y. Zuo, D. Feldheim

127. Mechanisms of Neurodegenerative Disease. S
Focuses on cellular and molecular processes that underlie neurodegenerative diseases. Includes lectures, student oral presentations, discussions, a term paper, and exams. Prerequisite(s): BIOL 110. (General Education Code(s): TA.) W. Saxton

128. Developmental Neurobiology. W
Covers the principles of nervous-system development from the molecular control of development, cell-cell interactions, to the role of experience in influencing brain structure and function. Students cannot receive credit for this course and course 228. Prerequisite(s): BIOL 110 and 125. Enrollment is restricted to juniors and seniors. B. Chen

130. Human Physiology. F,W
Function, organization, and regulation of the major organ systems of humans, with emphasis on integration among systems. Students cannot receive credit for this course and course 131. Prerequisite(s): BIOL 110. The Staff

130L. Human Physiology Laboratory (2 credits). F,W
Examines fundamental principles of systemic physiology focusing on the human. Students cannot receive credit for this course and BIOC 131L. Students are billed a materials fee. Enrollment is restricted to biological sciences and affiliated majors; biology minors; other majors by permission. Prerequisite(s): Satisfaction of Entry Level Writing and Composition requirements; BIOL 110; previous or concurrent enrollment in BIOL130 is required. The Staff

140. The RNA World. F
This active-learning course explores the origins, evolution, and functions of ribonucleic acid (RNA), including ribozymes, ribosomes, IRNAs, spliceosomes, riboswitches, messenger RNA, microRNAs, snRNAs, snoRNAs, and other guide RNAs, CRISPR, long noncoding RNAs, retrotransposons, and RNA viruses. Prerequisite(s): BIOL 105 or BME 105, and BIOL 101. Enrollment limited to 90. The Staff

178L. Protocols in Stem Cell Biology. *
Provides hands-on experience in embryonic stem cell culture methods and techniques. Students grow and passage mouse embryonic stem (mES) cells and perform established protocols that differentiate mES cells into cardiac muscle cells and neurons. Enrollment is restricted to biological sciences and affiliated majors; biology minors; non-majors by permission. Prerequisite(s): BIOL 100 or BIOC 100A; and BIOL 100K; satisfaction of the Entry Level Writing and Composition requirements; previous or concurrent enrollment in course 178. Enrollment limited to 16. The Staff

186F. Undergraduate Research in MCD Biology (2 credits). F,W,S
Supervised undergraduate research in laboratory of an MCD biology faculty member accompanied by weekly lectures on ethical and practical scientific issues. Topics include: laboratory safety; the scientific method; the collection, treatment, and presentation of data; critical evaluation of scientific literature; scientific misconduct; and peer review. Career issues, including how to apply for admission to graduate and professional schools, are also discussed. Prerequisite(s): BIOL 100 or BIOC 100A; and BIOL 20L or BIOL 101L or BIOL 102L; and previous completion of the Disciplinary Communication requirement. Each enrolled student must have a committed MCD faculty sponsor by the first class meeting. Enrollment is restricted to biology and affiliated majors. May be repeated for credit. M. Rexach,
Students explore healthcare from the perspectives of both clinicians and patients. The class focuses on medicine's cognitive, emotional, and spiritual elements, with the goal of understanding the rewards and costs of healthcare practice. (Formerly Life in Healthcare.) Enrollment is restricted to junior and senior human biology majors, and others by permission of instructor. Enrollment limited to 30. (General Education Code(s): PR-E.) The Staff

189. Health Sciences Internship (3 credits). F,W,S
Structured off-campus learning experience providing experience and pre-professional mentoring in a variety of health-related settings. Interns are trained and supervised by a professional at their placement and receive academic guidance from their faculty sponsor. Students spend 8 hours per week at their placement, participate in required class meetings on campus, and keep a reflective journal. Enrollment is by application. Students interview with health sciences internship coordinator; applications are due one quarter in advance to the Health Sciences Internship Office. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; concurrent enrollment in course 189W is required. Enrollment is restricted to human biology majors. L. Hinck, M. Rexach, M. Zuniga

Office. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Previous or concurrent enrollment in course 189 is required. Enrollment is restricted to human biology majors. L. Hinck, M. Rexach, M. Zuniga

191. ACE Program Service Learning (2 credits). F
Students participate in training and development to co-facilitate collaborative learning in ACE chemistry discussion sections and midterm/exam review sessions. Students are role models for students pursuing science- and math-intensive majors. Prerequisite(s): Prior participation in ACE; good academic standing; no non-passing grades in prior quarter. Enrollment is restricted to sophomores, juniors, and seniors. (Formerly course 182.) Enrollment limited to 10. (General Education Code(s): PR-S.) The Staff

An individually supervised course, with emphasis on independent research, to culminate in a senior thesis. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

198. Independent Field Study. F,W,S
Provides for individual programs of study (a) by means other than the usual supervision in person, or (b) when the student is doing all or most of the coursework off campus. With permission of the department, may be repeated for credit, or two or three courses taken concurrently. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

188. A Life in Medicine (3 credits). F

Y. Zuo, H. Boeger

186L. Undergraduate Research in MCD Biology. F,W,S
Supervised undergraduate research in laboratory of an MCD biology faculty member accompanied by weekly lectures on ethical and practical scientific issues. Topics include: laboratory safety; the scientific method; the collection, treatment, and presentation of data; critical evaluation of scientific literature; scientific misconduct; and peer review. Career issues, including how to apply for admission to graduate and professional schools, are also discussed. Prerequisite(s): Entry Level Writing and Composition requirements; BIOL 100 or BIOC 100A; and BIOL 20L or BIOL 101L or BIOL 102L. Each enrolled student must have a committed MCD faculty sponsor by the first class meeting. Enrollment is restricted to biology and affiliated majors. M. Rexach, Y. Zuo, H. Boeger

186R. Undergraduate Research in MCD Biology. F,W,S
Supervised undergraduate research in the laboratory of an MCD biology faculty member accompanied by weekly lectures on practical scientific issues. Topics include: laboratory safety; the scientific method; the collection, treatment, and presentation of data; critical evaluation of scientific literature; ethics and scientific misconduct; and peer review. Career issues, including how to apply for admission to graduate and professional schools, are discussed. Students cannot receive credit for this course and course 186L. Prerequisite(s): BIOL 100 or BIOC 100A; and BIOL 20L or BIOL 101L or BIOL 102L; and previous completion of the Disciplinary Communication requirement. Each enrolled student must have a committed MCD faculty sponsor by the first class. Enrollment is restricted to MCD Biology-affiliated majors. May be repeated for credit. M. Rexach, Y. Zuo, H. Boeger

Writing-intensive course offered in conjunction with the health sciences internship. Weekly class meetings include academic guidance and mentoring as well as discussion of the mechanisms and conventions of academic writing about health and health care. Students complete multiple writing assignments, culminating in a term paper in the format of a scholarly article. Enrollment is by application. Students interview with the health-sciences internship coordinator; applications are due one quarter in advance to the Health Care Sciences Internship
199. Tutorial. F,W,S
Reading, discussion, written reports, and laboratory research on selected biological topics, using facilities normally available on campus. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

199F. Tutorial (2 credits). F,W,S
Two-credit Tutorial. Reading, discussion, written reports, and laboratory research on selected biological topics, using facilities normally available on campus. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

GRADUATE COURSES

200A. Critical Analysis of Scientific Literature. F
Development of critical thinking skills via discussion of research articles on a broad range of topics. Prepares students to critically evaluate research publications, and improves their ability to organize effective oral presentations and to evaluate the oral presentations of other scientists. Enrollment is restricted to graduate students in MCD biology, or by permission of instructor. Enrollment limited to 20. J. Sanford, J. Tamkun

200B. Advanced Molecular Biology. W
An in-depth coverage of the structure, function, and synthesis of DNA, RNA, and proteins. Discussion of the roles of macromolecules in the regulation of information in the cell. Prerequisite(s): Enrollment is restricted to graduate students. A. Zahler, H. Boeger, M. Jurica

200C. Advanced Cell Biology. S
An in-depth coverage of topics in cellular and subcellular organization, structure, and function in plants and animals. Emphasis on current research problems. Prerequisite(s): BIOL 200B. Enrollment is restricted to graduate students. D. Kellogg, N. Bhalla, W. Saxton

200D. Developmental Biology. S
Key topics in developmental biology, including developmental genetics, epigenetics, stem cell biology, and developmental neurobiology. Lectures are accompanied by critical analysis and discussion of recent publications. Enrollment is restricted to graduate students in MCD biology, or by permission of instructor. Enrollment limited to 20. S. Strome, Z. Wang, B. Chen

201. RNA Processing. *
An advanced graduate-level course on biological aspects of RNA function and processing in eukaryotes. Lectures and discussions will be developed using the current literature. Prerequisite(s): BIOL 200B or permission of instructor. Enrollment is restricted to graduate students. Enrollment limited to 15. M. Jurica, M. Ares

203. Ribosomes and Translation. *
Covers the field of ribosome research in depth, including the structure and function of ribosomes and the molecular mechanisms of protein synthesis. Begins with historical review of the ribosome field and proceeds to the most recent findings. Focus is on central questions: (1) How is the mechanism of the aminoacyl-tRNA selection determined? (2) What is "accommodation"? (3) What is the mechanism of peptide bond formation (peptidyl transferase)? (4) What is the mechanism of translocation? (5) What are the mechnistic roles of the ribosome and translation factor EF-G in translocation? (6) To what extent is the mechanism of translation determined by RNA? (7) Why is RNA so well suited for the ribosome? (8) How did translation evolve from an RNA world? Prerequisite(s): BIOL 100A, BIOL 200B or permission of instructor. Enrollment is restricted to graduate students. The Staff

204. Chromatin. *
Eukaryotic DNA is complexed with histones to form chromatin. This course focuses on the ways in which chromatin influences and is manipulated to regulate gene expression. Prerequisite(s): BIOL 105 and BIOL 115; undergrads by permission of instructor. Enrollment is restricted to graduate students. Enrollment limited to 15. J. Tamkun, G. Hartzog

205. Epigenetics. *
In-depth coverage of epigenetics focusing on how alterations in chromatin structure and DNA methylation establish and maintain heritable states of gene expression. Lectures are supplemented with critical discussion of recent publications. Prerequisite(s): BIOL 105 and BIOL 115, or permission of instructor. Enrollment is restricted to graduate students. Enrollment limited to 20. S. Strome, J. Tamkun

206. Introduction to Stem Cell Biology. *
Fundamental concepts, experimental approaches, and current advances in stem cell biology, with consideration of key ethical issues. Topics include: self-renewal and differentiation; the microenvironment; epigenetics; cell-cycle regulation; and how basic research translates to medical therapeutics. Ethical, moral, and political issues surrounding stem cell research are discussed with lectures from philosophy and other relevant disciplines. Enrollment is restricted to graduate students. Enrollment limited to 15. W. Sullivan

Provides students with hands-on experience in embryonic stem cell culture methods. Enrollment is restricted to graduate students; qualified undergraduates may enroll by permission of instructor. Enrollment limited to 10. Y. Zuo, D. Feldheim

208. Cellular Signaling Mechanisms. *
All eukaryotic cells utilize intricate signaling pathways to control such diverse events as cell-cell communication, cell division, and changes in cell morphology. This course covers the molecular basis of these cellular signaling pathways, focusing on the most current research. Prerequisite(s): BIOL 105, BIOL 110, and BIOL 115. Enrollment is restricted to seniors and graduate students. Enrollment limited to 15. D.
Biology: Molecular, Cell, and Developmental Biology

Kellogg

214. Advances in Cancer Biology. *
Provides students with knowledge of the latest concepts in cancer biology and cancer therapeutics, and a general appreciation of the rapid advances being made in this area of biomedicine. Prerequisite(s): course 200B or by permission of instructor. Enrollment is restricted to graduate students. Enrollment limited to 10. Y. Zuo

215. Applied Statistics for Molecular, Cell, and Developmental Biology. *
For experimental biologists: focuses on resolving practical statistical issues typically encountered in molecular, cellular, and developmental biology lab research. No prior experience in statistics or programming is necessary. Enrollment is restricted to graduate students in molecular, cellular, and developmental biology. Enrollment limited to 20. The Staff

217. Influence of Environment and Experience on Brain Development. W
How environmental factors (animals' experiences, environmental toxins, etc.) affect the formation of neuronal circuits and brain function. Lectures and discussions use current literature. Prerequisite(s): courses 200A, 200B, 200C, and 200D, or by permission of the instructor. Enrollment is restricted to graduate students, Enrollment limited to 10. Y. Zuo, D. Smith

226. Advanced Molecular Neuroscience. S
Basis of neural behavior at the cellular, molecular and system levels. First half of course focuses on cellular, molecular, and developmental aspects of the nervous system and covers two sensory systems: olfaction and auditory. Last half of course concerns higher-level functions of the nervous system, such as processing and integrating information. Discusses human diseases and disorders. Enrollment is restricted to graduate students. Y.

Zuo

228. Developmental Neurobiology. W
Covers the principles of nervous-system development from the molecular control of development, and cell-cell interactions, to the role of experience in influencing brain structure and function. Students cannot receive credit for this course and course 128. Enrollment is restricted to graduate students and by permission of the instructor. B. Chen

280A. Topics in Research on Molecular Genetics of Yeast (2 credits). F,W,S
Intensive research seminar on the structure and function of the gene expression machinery in the simple eukaryote Saccharomyces cerevisiae and its relationship to the human gene expression machinery. Enrollment is restricted to graduate students; qualified undergraduates may enroll with approval of instructor. May be repeated for credit. M. Ares

280B. Chromatin Structure and Transcriptional Regulation (2 credits). F,W,S
Weekly seminar on structure and gene regulatory function of chromatin. Discusses research of participants and relevant scientific literature. Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. H. Boeger

280C. Mammalian Brain Development (2 credits). F,W,S
Seminar covers research into the development of the mammalian brain. Enrollment is restricted to graduate students; undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. B. Chen

280D. RNA Processing (2 credits). F,W,S
A discussion of current research and literature concerning the regulation of precursor messenger RNA processing. Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. A. Zahler

280E. Meiotic Chromosome Dynamics (2 credits). F,W,S
Intensive course on the molecular mechanisms underlying homolog pairing, synapses, and recombination; and how they are regulated, coordinated, and monitored to ensure accurate meiotic chromosome segregation. Enrollment is restricted to graduate students; undergraduates may enroll with permission of instructor. May be repeated for credit. N. Bhalla

280F. Development of Vertebrate Neural Connections (2 credits). F,W,S
Intensive research seminar on molecular mechanisms by which neural connections are established during mouse development. Special focus on topographic maps and role of Eph receptors and ephrins in this process. Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. D. Feldheim

280G. Physiology of the Developing Brain (2 credits). F,W,S
Research seminar covering circuit structure and function in the developing brain. Enrollment is restricted to graduate students; undergraduates may enroll by permission of the instructor. Enrollment limited to 10. May be repeated for credit. J. Ackman

280H. Topics on Research into Chromatin and Transcription (2 credits). F,W,S
Seminar covering research into the effects of chromatin on transcription in yeast. Enrollment is restricted to graduate students; undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. G. Hartzog

280I. Epigenetic Gene Silencing and Insulators (2 credits). F,W,S
Intensive course on molecular mechanisms by which insulator
elements regulate epigenetic gene silencing. Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. R. Kamakaka

280J. Structures of Macromolecular Complexes (2 credits). F,W,S
Focuses on structure and function of the spliceosome using electron microscopy and x-ray crystallography. Participants present results from their own research and relevant journal articles. Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. S. Carpenter

280O. Topics in Bacterial Pathogenesis (2 credits). F,W,S
Intensive seminar focusing on mechanisms of bacterial pathogenesis of the ulcer-causing bacterium Helicobacter pylori. Participants are required to present results from their own research and relevant journal articles. (Also offered as Microbiol & Environ Toxicology 281O. Students cannot receive credit for both courses.) Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 20. May be repeated for credit. K. Ottemann

280P. Quality Control in Gene Expression (2 credits). F,W,S
Intensive, discussion-based course concerning ongoing research in quality control and gene expression via analysis of published and unpublished observations and theories. Enrollment is restricted to graduate students. Enrollment limited to 10. May be repeated for credit. J. Arribere

280Q. Cell Biology of Oocytes, Embryos, and Neurons (2 credits). F,W,S
Weekly seminar and round-table discussion about research problems and recent advances in molecular motor proteins, cytoskeletons, and the control of force-producing processes. Each participant reports recent advances in their field from current literature, their own primary research questions, current approaches to answering those questions, and their research progress. Enrollment is restricted to graduate students; undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. S. Strome

Intense weekly seminar on the mechanisms of gene regulation, focusing on C. elegans and human parasitic nematodes. Enrollment is restricted to graduate students; qualified undergraduates may enroll with the permission of the instructor. Enrollment limited to 10. May be repeated for credit. J. Ward

280S. Chromatin and RNA Regulation in C. elegans (2 credits). F,W,S
Intensive research seminar about regulators of chromatin organization; the composition and function of germ granules; and the roles of both levels of regulation in germline development in C. elegans. Participants present their research results and report on related journal articles. Enrollment is restricted to graduate students; undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. S. Strome

An intensive seminar concerning the molecular genetics of Drosophila. Recent research is discussed weekly, with an emphasis on gene regulation and development. Students present their own research or critical reviews of recent articles at least once during the quarter. Enrollment is restricted to graduate students. Qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. J. Tamkun

Involves a two-hour weekly meeting in which the students discuss topics concerning the cell cycle, early embryonic development, and the cytoskeleton. These discussions critically evaluate ongoing research in this area. Material is drawn from student research and recently published journal articles. Students
are also expected to meet individually with the instructor two hours weekly. In addition to a three–five page research proposal, each student gives two one-hour oral presentations. Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *W. Sullivan*

**280W. Membrane Proteins (2 credits).** F
Seminar on recent research on membrane proteins, with an emphasis on ion-pumping ATPase. Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 20. May be repeated for credit. *B. Bowman*

**280Y. Activity–Dependent Synaptic Plasticity (2 credits).** F,W,S
Research seminar covering the regulation of synaptic plasticity in the mammalian nervous system, focusing on how the activity regulates the structural and functional dynamics of synapses. Enrollment is restricted to graduate students; undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *Y. Zuo*

**280Z. Prostate Development and Cancer Biology (2 credits).** F,W,S
Weekly research seminar covering gene regulation, cellular interactions, and stem cell behaviors in mammalian prostate development and prostate cancer progression. Enrollment is restricted to graduate students; undergraduates may enroll by the permission of the instructor. Enrollment limited to 10. May be repeated for credit. *Z. Wang*

**288. Teaching Assistant Training (2 credits).** F
Prepares graduate students to help teach university science courses. Weekly class sessions include activities and interactive discussions of diverse modes of learning, diverse ways of teaching, peer instruction, assessment of learning, equity and inclusion, and professional ethics. Students also visit an active learning class and an active learning discussion section at UCSC, then write evaluations of the teaching strategies used in those classes. Enrollment is restricted to graduate students. *S. Strome, M. Jurica*

**289. Practice of Science.** W
Examination of ethical and practical scientific issues, including the collection and treatment of data, attribution of credit, plagiarism, fraud, and peer review. Career issues, including how to apply for grants and positions in industry or academia, will be discussed. Prerequisite(s): BIOL 200A, BIOL 200B, and BIOL 200C or permission of instructor. Enrollment is restricted to graduate students; undergraduates may enroll with permission of the instructor. Enrollment limited to 20. *W. Saxton*

**290. Career Planning (2 credits).** W
An important goal of graduate programs is to train students for diverse careers. Exposes molecular cell and developmental biology graduate students to diverse career options and helps them develop individual development plans to target their graduate training to their selected career goals. Enrollment is restricted to graduate students. *N. Bhalla*

**291. Molecular, Cellular, and Developmental Biology Seminar (2 credits).** F,W,S
Topics of current interest in molecular, cellular, and developmental biology are presented weekly by graduate students, faculty, and guest speakers. Enrollment restricted to graduate students. Enrollment limited to 60. May be repeated for credit. *D. Feldheim*

**292. MCD Seminar (no credit).** F,W,S
Various topics by weekly guest speakers. Enrollment restricted to graduate students. *D. Feldheim*

**296. Laboratory Research in Molecular, Cell, and Developmental Biology.** F,W,S
Independent laboratory research in molecular, cellular, and developmental biology. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

**299. Thesis Research.** F,W,S
Students submit petition to sponsoring agency. *The Staff*

* Not offered in 2018-19

PROGRAM DESCRIPTION

Chemistry is central to modern science. Ultimately, most phenomena in biology, medicine, materials, engineering, geology, and the environmental sciences can be described in terms of the chemical and physical behavior of atoms and molecules. Because of the wide appeal and utility of chemistry, UCSC offers comprehensive lower-division courses in introductory and organic chemistry, differing in emphasis and style, to meet diverse needs. Students should also note the numerous upper-division course offerings and select those most suitable to their academic interests. The curriculum in chemistry exposes the student to the principal areas of modern chemistry, including organic, inorganic, physical, materials, analytical, and biochemistry. The curriculum is designed to meet the needs of students who plan to graduate with a bachelor of arts (B.A.) or bachelor of science (B.S.) degree, as well as those who wish to pursue an advanced degree. The UCSC chemistry B.A. or B.S. graduate is well prepared to pursue a career in chemistry or related field. Research in chemistry at UCSC is closely interwoven with graduate and undergraduate education. The chemistry and biochemistry research program is highly active at the graduate level, and faculty also encourage undergraduates to become involved in research. Research leads to academic credit in Chemistry 195A-B-C, Senior Research; or in Chemistry 199, Independent Study. There are also opportunities for interdisciplinary research combining chemistry with a wide range of sciences, for example, biology, physics, geology, ocean sciences, microbiology and environmental toxicology. At UCSC, it is not uncommon for students to become co-authors of original work published in research journals. Chemistry and biochemistry faculty and approximately 100 graduate students and 15-20 postdoctoral fellows are housed in the Physical Sciences Building near the Science and Engineering Library. The department maintains and constantly expands cutting-edge facilities that enable scientists to carry out their research such as the Chemical Screening Center, Macromolecular Structure Function Core Facility, Mass Spectrometry, NMR Facility, and X-Ray Facility. The Science and Engineering Library has an excellent collection of current journals and reference works, as well as access to earlier volumes of all the major journals. Many of these are subscribed to online. Additional source material can be readily and rapidly obtained on interlibrary loan.

A degree in chemistry opens the door to a wide variety of academic careers. Some UCSC graduates are working as industry researchers in electronic materials, biotechnology, medicinal chemistry, pharmacy, or laser technology. Others have entered government service as research chemists in the Food and Drug Administration, the Environmental Protection Agency, DOD, DOE or law enforcement crime laboratories. Fields such as patent law, commercial development, and scientific writing are open to graduates. Many chemistry majors go on to university graduate programs across the nation to prepare for careers in academia, government, or industry. The degree in chemistry also provides a strong disciplinary background in preparation for a career in the important and much needed area of science teaching in high school. A major in chemistry is also an excellent beginning for one of the many opportunities in the health sciences. The UCSC Chemistry and Biochemistry Department offers both B.S. and B.A. degree programs. The B.S. degree should be the choice if a student is interested in getting a job in industry immediately after receiving his or her college degree. The B.S. program also provides a good background for graduate work in chemistry. The B.A. program has fewer requirements and should be considered by students who wish to take more science courses outside of chemistry to enter an interdisciplinary area. Examples might be chemical oceanography, geochemistry, chemical physics, environmental chemistry, or health sciences. The B.A. might also be a good choice for students who wish to become high school teachers. For either degree, the courses stress the fundamentals of chemistry and allow students to pursue independent research. A minor in chemistry is also offered for those who wish to have a strong complementary program in chemistry while majoring in another area of study.

PROGRAM LEARNING OUTCOMES

Learning outcomes summarize the most important knowledge, skills, abilities, and attitudes that students are expected to develop over the course of their studies. The program learning outcomes clearly communicate the faculty’s expectations to students, provide a framework for faculty evaluation of the curriculum based on empirical data, and help improve and measure the impact of implemented changes. Students graduating with a B.S. or B.A. in chemistry or a B.S. in biochemistry and molecular biology should be able to:

1. demonstrate mastery of a broad set of chemical knowledge concerning the fundamentals in the
basic areas of the discipline (organic, inorganic, analytical, physical, and biochemistry);
2. solve area-specific problems by identifying the essential parts of a problem, formulating a strategy for solving the problem, applying appropriate techniques to arrive at a solution, test the correctness of the solution, and interpret their results;
3. use modern library search tools (such as SciFinder, PubMed, or Web of Science) to locate and retrieve scientific information about a topic, chemical, chemical technique, or an issue relating to chemistry, going beyond textbooks, common handbooks and general online resources, such as Wikipedia;
4. know and follow the proper procedures and regulations for safe handling and use of chemicals;
5. understand the objective of their chemical experiments, properly carry out the experiments, and appropriately record and analyze the results;
6. use computers in data acquisition and processing, and use available software as a tool in data analysis;
7. use standard laboratory equipment, modern instrumentation, and classical techniques to carry out experiments;
8. communicate the concepts and results of their laboratory experiments through effective writing and/or oral communication using the discipline standards for reporting and citation; and
9. collaborate effectively as part of a team to solve problems, debate different points of view, and interact productively with a diverse group of team members.

HIGH SCHOOL PREPARATION
Prospective chemistry majors should have a solid foundation in high school mathematics; familiarity with algebra, logarithms, trigonometry, and analytic geometry is particularly required. Students taking chemistry at UCSC begin with Chemistry 1A or 1B, both of which require a strong background in high school chemistry.

PREREQUISITES
Prior to enrollment in the general chemistry sequence, CHEM 1A, CHEM 1B, and CHEM 1C, students are encouraged to take the Chemistry Assessment Examination. For information about the assessment, visit the Chemistry Self-Assessment website.

LETTER GRADE POLICY
For all students entering UCSC in fall 2014 and later, all courses used to satisfy degree requirements in any of the chemistry and biochemistry majors or minor, must be taken for a letter grade.

MAJOR QUALIFICATION POLICY
The Department of Chemistry and Biochemistry has a qualification policy that applies to the following majors:

Chemistry BS
Chemistry BS with Biochemistry concentration
Chemistry BS with Environmental Chemistry concentration
Chemistry BA
To declare any of the above majors, students must complete the following six qualification courses, or their equivalents, each with a grade of C (2.0) or better with a cumulative grade point average (GPA) of 2.50 or greater:
Chemistry 1A, General Chemistry
Chemistry 1B, General Chemistry
Chemistry 1C, General Chemistry
Mathematics 11A and 11B, Calculus with Applications or Mathematics 19A and 19B, Calculus for Science, Engineering, and Mathematics
Mathematics 22, Introduction to Calculus of Several Variables
When determining qualification to declare the major:
• All courses must be taken for a letter grade.
• For courses required to qualify for the major that have been satisfied with AP credit based on an AP examination score of 5 (for Chemistry 1A), and an AP Calculus BC examination score of 4 or 5 (for Mathematics 11A or 19A), students may substitute a grade of A for each course when calculating their cumulative GPA.
• Students with two or more grades of NP, C-, D+, D, D-, or F in courses required to qualify for the major are not eligible to declare.

Students who are informed that they are not eligible to declare the major may appeal this decision by submitting a letter to the department chair within 15 days from the date the notification was mailed. Within 15 days of receipt of the appeal, the department will notify the student and the college of the decision. For more information about the appeal process see the Appeal Process information at the Chemistry and Biochemistry Department website.

TRANSFER STUDENTS
The Chemistry and Biochemistry Department welcomes applications from community college students who are prepared to enter as junior-level chemistry majors. To be considered for admission to UCSC as any of the chemistry majors, transfer students must pass equivalents of the following courses with a cumulative GPA of 2.50 or higher:
• Chemistry 1A, General Chemistry
• Chemistry 1B, General Chemistry
• Chemistry 1C, General Chemistry
• Mathematics 11A and 11B, Calculus with Application, or Mathematics 19A and 19B, Calculus for Science, Engineering, and Mathematics
• Mathematics 22, Introduction to Calculus of Several Variables
For more information on qualifying for the major as a transfer applicant, see the Transfer Students webpage. In addition to the required transfer admissions courses, we strongly recommend that all transfer students complete equivalents of the following preparatory courses prior to transfer:

- Chemistry 8A/L, Organic Chemistry with Laboratory
- Chemistry 8B/M, Organic Chemistry with Laboratory
- Physics 6A/L, Introductory Physics I with Laboratory
- Physics 6B/M, Introductory Physics II with Laboratory
- Physics 6C/N, Introductory Physics III with Laboratory
- Mathematics 21, Linear Algebra, or Mathematics 24, Differential Equations (Chemistry B.S. only)

Students who complete only the minimal introductory coursework prior to transfer may take longer to complete their degree. For more information about transfer pathways for chemistry, see the University of California website.

Students planning to transfer to UCSC as a chemistry major from a California community college should reference assist.org to determine which courses are equivalent to these required courses. California community college students who are prepared for their major and achieve a certain GPA may be eligible for a transfer admissions guarantee (TAG); for more information, see the TAG website.

---

REQUIREMENTS FOR THE CHEMISTRY B.A. DEGREE

The requirements for the Bachelor of Arts (B.A.) in chemistry have been kept to a minimum so that students may tailor their program to their own purposes, for example, to pursue a double major, to complete major requirements late in their college career, or to concentrate on a specific branch of chemistry. The minimum requirements (including prerequisites) constitute 54 percent of a student’s total undergraduate program; consequently, there is ample time to explore and discover other interests within the university. To plan wisely, students are advised to refer to each course description for a detailed listing of prerequisites. Students who decide they want a professional career in chemistry are advised to meet with the chemistry undergraduate faculty adviser.

---

LOWER-DIVISION REQUIREMENTS

General Chemistry: Chemistry 1A, 1B/M, and 1C/N
Calculus: Mathematics 11A and 11B, or Mathematics 19A and 19B
Multivariable Calculus: Mathematics 22
Physics: Physics 5A/L, 5B/M, and 5C/N; or Physics 6A/L, 6B/M, and 6C/N

---

UPPER-DIVISION REQUIREMENTS

Intermediate Organic Chemistry: Chemistry 110/L
Inorganic Chemistry: Chemistry 151A/L
Physical Chemistry: Chemistry 163A, 163B, and 164
One of the following laboratory courses:
Chemistry 146A, Advanced Laboratory in Organic Chemistry
Chemistry 146B, Advanced Laboratory in Inorganic Chemistry
Chemistry 146C, Advanced Laboratory in Physical Chemistry

Students currently conducting senior thesis research are strongly encouraged to choose an advanced laboratory in the Chemistry 146 series that is outside their research area.

---

ELECTIVE(S)

At least one from the following:
Chemistry 103, Biochemistry
Chemistry 122, Principle of Instrumental Analysis
Chemistry 143, Organic Chemical Structure and Reactions
Chemistry 151B, Chemistry of Main Element Groups
Chemistry 156C, Materials Chemistry or 268 Solid State and Materials Chemistry
Chemistry 163C, Kinetic Theory and Reaction Kinetics, Statistical Mechanics, Spectroscopic Applications
Chemistry 169, Chemistry and Biology of Drug Design and Discovery
Biochemistry and Molecular Biology 100A, Biochemistry and Molecular Biology
Biochemistry and Molecular Biology 100B, Biochemistry and Molecular Biology
Biochemistry and Molecular Biology 100C, Biochemistry and Molecular Biology

Ocean Sciences 120, Aquatic Chemistry: Principles and Applications
Ocean Sciences 121, Aqueous Geochemistry
Ocean Sciences 220, Chemical Oceanography
Physics 180, Biophysics

---

DISCIPLINARY COMMUNICATION (DC) REQUIREMENT

Students of every major must satisfy that major’s upper-division Disciplinary Communication (DC) Requirement. The DC Requirement for the bachelor of arts degree in chemistry is satisfied by completing Chemistry 151L, Inorganic Chemistry Laboratory, and one of Chemistry 146A, 146B, or 146C.
This is the ideal academic plan for chemistry B.A. majors. If needed, the plan can be arranged differently.

**ELECTIVE(S)**

At least two from the following list:
- Chemistry 122, Principles of Instrument Analysis*
- Chemistry 143, Organic Chemical Structure and Reactions
- Chemistry 151B, Chemistry of the Main Element Groups
- Chemistry 156C, Materials Chemistry or 268, Solid State and Materials Chemistry
- Chemistry 169, Chemistry and Biology of Drug Design and Discovery
- Chemistry 171, Chemical Biology
- Biochemistry and Molecular Biology 100A, Biochemistry and Molecular Biology**
- Biochemistry and Molecular Biology 100B, Biochemistry and Molecular Biology**
- Biochemistry and Molecular Biology 100C, Biochemistry and Molecular Biology**
- Microbiology and Environmental Toxicology 101, Sources and Fates of Pollutants
- Microbiology and Environmental Toxicology 102, Cellular and Organismal Toxicology
- Ocean Sciences 120, Aquatic Chemistry: Principles and Applications
- Ocean Sciences 121, Aquatic Chemistry: Principles and Applications
- Ocean Sciences 220, Chemical Oceanography
- Physics 180, Biophysics

*To receive certification from the American Chemical Society, you must complete Chemistry 122; see additional information below.

**Students who plan to do advanced work in biochemistry and molecular biology should take the Biochemistry and Molecular Biology (BIOC) 100 series. Completing the series will fulfill the requirement of Chemistry 103 (Biochemistry) plus fulfill one elective.

**DISCIPLINARY COMMUNICATION (DC) REQUIREMENT**

Students of every major must satisfy that major’s upper-division Disciplinary Communication (DC) Requirement. The DC Requirement for the Bachelor of Science (B.S.) degree in chemistry is satisfied by completing Chemistry 151L, Inorganic Chemistry Laboratory, and one of Chemistry 146A, 146B, or 146C.
Chemistry and Biochemistry

This is the ideal academic plan for those pursuing the chemistry B.S. major. If needed, this plan can be arranged differently.

*Chemistry 194, Senior Essay or Thesis: The Senior Essay; or Chemistry A-B-C, Senior Thesis, should be completed to satisfy the senior comprehensive requirement.

**Chemistry 146A is offered in fall quarter; Chemistry 146B or C is offered in spring.

CHEMISTRY B.S. DEGREE WITH BIOCHEMISTRY CONCENTRATION

The biochemistry concentration is designed for students who intend to pursue a career in biochemistry or in a related field such as biotechnology, and it provides an exceptionally rigorous chemistry emphasis.

LOWER-DIVISION REQUIREMENTS

General Chemistry: Chemistry 1A, 1B/M, 1C/N
Calculus: Mathematics 11A and 11B, or Mathematics 19A and 19B
Multivariable Calculus: Mathematics 22
Advanced Mathematics: Applied Mathematics and Statistics 10, or Mathematics 21, or Mathematics 24
Introductory Biology: Molecular, Cellular and Developmental Biology (BIOL) 20A, and Ecology and Evolutionary Biology (BIOE) 20B
Physics: Physics 5A/L, 5B/M, and 5C/N; or Physics 6A/L, 6B/M, and 6C/N
Organic Chemistry: Chemistry 8A/L and 8B/M

UPPER-DIVISION REQUIREMENTS

Intermediate Organic Chemistry: Chemistry 110/L
Inorganic Chemistry: Chemistry 151A/L
Biochemistry: Biochemistry and Molecular Biology 100A-B-C and 110L

Physical Chemistry: Chemistry 163A, 163B, and 163C

DISCIPLINARY COMMUNICATION (DC) REQUIREMENT

Students of every major must satisfy that major’s upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in chemistry with a biochemistry concentration is satisfied by completing Chemistry 151L, Inorganic Chemistry Laboratory, and Biochemistry and Molecular Biology 110L, Advanced Biochemistry Laboratory.

CHEMISTRY MAJOR B.S. WITH BIOCHEMISTRY CONCENTRATION PLANNER

This is the most general academic plan for this major. If needed, the plan can be rearranged.

BIOCHEMISTRY AND MOLECULAR BIOLOGY B.S.

See the biochemistry and molecular biology program description and major requirements.

CHEMISTRY B.S. DEGREE WITH ENVIRONMENTAL CHEMISTRY CONCENTRATION

A concentration within the biology, chemistry and biochemistry, and Earth sciences disciplines, collectively identified as the environmental sciences program, is offered. Students will develop a core
Chemistry and Biochemistry

competence suitable for pursuing graduate work in the environmental chemistry area or in graduate environmental sciences programs.

LOWER-DIVISION REQUIREMENTS

General Chemistry: Chemistry 1A, 1B/M, and 1C/N
Introductory Biology: Molecular, Cell, and Developmental Biology (Biol) 20A, and Ecology and Evolutionary Biology (Bioe) 20B
Geology: Earth Sciences 20/L, 10/L, or 5/L
Environmental Policy and Economics: Environmental Studies 25
Calculus: Mathematics 11A and 11B, or Mathematics 19A and 19B
Multivariable Calculus: Mathematics 22
Physics: Physics 5A/L, 5B/M, and 5C/N; or Physics 6A/L, 6B/M, and 6C/N
Organic Chemistry: Chemistry 8A/L and 8B/M

UPPER-DIVISION REQUIREMENTS

Environmental Toxology: Microbiology and Environmental Toxology 101 or 102
Biochemistry: Chemistry 103
Intermediate Organic Chemistry: Chemistry 110/L
Instrumental Analysis: Chemistry 122
Inorganic Chemistry: Chemistry 151A/L
Physical Chemistry: Chemistry 163A, 163B, and 164
Earth Sciences: Earth Sciences 110B/M
Ocean Sciences: Ocean Sciences 120 or 220 (Ocean Sciences 220 must be taken for a letter grade) or Ocean Sciences 121
One of the following laboratory courses:
Chemistry 146A, Advanced Laboratory in Organic Chemistry
Chemistry 146B, Advanced Laboratory in Inorganic Chemistry
Chemistry 146C, Advanced Laboratory in Physical Chemistry
Students currently conducting senior thesis research are strongly encouraged to choose an advanced laboratory in the Chemistry 146-series that is outside their research area.

DISCIPLINARY COMMUNICATION (DC) REQUIREMENT

Students of every major must satisfy that major’s upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in chemistry with an environmental chemistry concentration is satisfied by completing Chemistry 151L, Inorganic Chemistry Laboratory, and one of Chemistry 146A, 146B, or 146C.

CHEMISTRY MAJOR B.S. WITH ENVIRONMENTAL CHEMISTRY PLANNER

*Chemistry 194, Senior Essay or Thesis: The Senior Essay; or Chemistry 195 A-B-C, Senior Thesis, should be completed to satisfy the senior comprehensive requirement.

REQUIREMENTS FOR THE MINOR

The course requirements for the minor are the same as for the B.A. degree with the following exceptions:

- The exclusion of Chemistry 146A, 146B, 146C, 151A/151L, and 164
- Two chemistry upper-division electives versus one required for the B.A. The Department of Chemistry and Biochemistry may approve appropriate substitutions for one of the upper-division electives from other departments to satisfy this requirement as long as the credits are not used to satisfy minimum credits of any other major.
- No senior comprehensive requirement

COURSE SUBSTITUTION/TRANSFER CREDIT POLICY

At least half of the upper-division courses (numbered 100–199) required for any chemistry major must be taken through the chemistry program at UCSC, not as transfer credits from another department or institution. Transfer students are advised to contact the department undergraduate adviser before enrolling in
any upper-division courses at other institutions to verify articulation. For more information on transferring courses to UCSC, please consult the Transfer Preparation website.

Chemistry 199, Independent Study Course, may not be taken more than once per quarter and may be repeated no more than three times during an undergraduate career.

COMPREHENSIVE REQUIREMENT

The comprehensive requirement is a part of all UCSC degrees. In the Department of Chemistry and Biochemistry, there are two options for satisfying this requirement:

**Senior thesis:** A senior research project based on original experimental or theoretical research (Chemistry 195A, 195B, 195C, Senior Research). At the conclusion of the project, the student submits a formal research paper to the faculty sponsor for review and a revision process. Students arrange for a faculty sponsor by consulting with a relevant faculty member within the chemistry and biochemistry or the biochemistry and molecular biology major programs. In some cases, faculty outside these major programs (for example, in biology, ocean sciences, microbiology and environmental toxicology, or Earth sciences) may be an appropriate sponsor. Students who select a sponsor outside the chemistry or the biochemistry and molecular biology major programs should have the title and description of the proposed thesis reviewed by the Department of Chemistry and Biochemistry undergraduate faculty adviser. Students, usually working in the laboratory of the faculty sponsor, acquire experimental and/or theoretical research experience and skills in the laboratory as well as instruction in the writing of a research paper. Students are expected to make satisfactory academic progress and be in good academic standing while they take Chemistry 195 courses. Students who achieve excellence in both research and thesis may be awarded honors in the thesis upon graduation. Students are encouraged to apply for research funding opportunities on campus and external to the campus at [Undergraduate Research Opportunities website](#).

**Senior essay:** An essay based on literature research (Chemistry 194, Senior Essay). Students find a faculty sponsor and agree in advance on an appropriate topic of interest and a format. The student submits a draft essay to the sponsor for the revision process. Students arrange for a faculty sponsor by consulting with a relevant faculty member within the chemistry and biochemistry major program. In some cases, faculty outside these major programs (for example, in biology, ocean sciences, microbiology and environmental toxicology, or Earth sciences) may be an appropriate sponsor. Students who select a sponsor outside the chemistry and biochemistry major program should have the title and description of the proposed essay reviewed by the Department of Chemistry and Biochemistry undergraduate faculty sponsor. Students acquire experience and skills in scientific literature research as well as in the writing of a research paper.

ADVISING

The chemistry and biochemistry adviser provides counsel to undergraduate majors. Students are encouraged to seek out advising and assistance in planning their academic career to ensure completion of their major in a timely manner. For assistance with advising, please refer to the Chemistry and Biochemistry advising website.

MATERIALS FEE

Chemistry students should be aware of the materials fee required for some courses. The fee is billed to the student's account for specific laboratory materials purchased by the Chemistry and Biochemistry Department through the university. Fees generally range from $18 to $75 per course. Students may incur additional expense for individual supplies.

PROGRAM FOR STUDENTS OF THE HEALTH SCIENCES

Students intending to enter medical, dental, or another health science professional school can satisfy entrance requirements with a major program in chemistry supplemented with further courses, especially in biology, as specified by the admissions requirements of the school where they intend to apply. Students are urged to contact the Career Center for assistance with the application process.

AMERICAN CHEMICAL SOCIETY CERTIFICATION

The American Chemical Society (ACS) recognizes certain undergraduate programs, including those of UCSC, to be of such quality as to entitle graduates to become ACS members immediately upon graduation. Graduates must be individually certified to the ACS by the Chemistry and Biochemistry Department chair if they have satisfactorily completed an approved program of study. ACS certification standards are rigorous; a graduate who has met them carries a distinction that is well recognized in the profession. Broadly speaking, ACS certification requirements are satisfied by completing Chemistry 122 as an elective and graduating with a Chemistry B.S. (biochemistry concentration excluded). A year of study in a major modern foreign language is recommended. More information is available from the Chemistry and Biochemistry undergraduate adviser.

HONORS IN THE MAJOR

Honors in the Chemistry major requires a 3.5 or higher GPA in all chemistry courses; highest honors requires a 3.8 or higher GPA in all chemistry courses for the major. Students may also receive honors for a senior research thesis.
The Department of Chemistry and Biochemistry offers three graduate degrees: the Doctor of Philosophy (Ph.D.), a thesis Master of Science (M.S.), and a coursework M.S. The Ph.D. and thesis M.S. programs are designed to help students develop into independent scholars while pursuing the excitement of scientific research in a personal, supportive environment. Both the Ph.D. and the research M.S. programs prepare students for careers in academia, industry, government laboratories, and other settings requiring an advanced education in chemistry and related disciplines. The coursework M.S. does not require research and is suited to future teachers and others wishing to update or broaden their chemical expertise. Approximately 100 graduate students are currently enrolled in the graduate program.

Within the Ph.D. program students have the flexibility to design a course of study focused on personal research interests, and at the same time are expected to maintain the high intellectual standards associated with the doctoral degree. Research options include biochemistry, physical chemistry, biophysical chemistry, inorganic chemistry, bioinorganic chemistry, materials chemistry, physical-organic chemistry, and bioorganic chemistry. Some research groups are interdisciplinary and are involved in two or more of these areas.

Collaborative research efforts are encouraged, both intra- and inter-departmentally. The interdisciplinary Center for Biomolecular Science and Engineering emphasizes bioinformatics, nanotechnology, and computational approaches to chemistry. Biochemists join geneticists, computer scientists, and biologists in the Center for the Molecular Biology of RNA. The Program in Biomedical Sciences and Engineering fosters interdisciplinary research between the Chemistry and Biochemistry Department and the Departments of Molecular, Cell and Development Biology; Microbiology and Environmental Toxicology; and Biomolecular Science and Engineering.

Before beginning coursework, Ph.D. students take attainment examinations to confirm their level of preparation in four areas: organic, inorganic, physical, and biochemistry. First-year students take Chemistry 292 and 296 and enroll in core courses and electives related to their specialization. Graduate instruction is based on a two-year cycle of three core courses and two elective courses. Core courses are Chemistry 200A, B, and C for biochemistry and biophysical chemistry; Chemistry 151B, 234 and one of the 256 series or 268 for inorganic and bioinorganic chemistry; Chemistry 242 A-B-C for organic chemistry; and Chemistry 261, 262, and 263 for physical chemistry. Students select a research adviser and research committee by May 1 of the first year. The Ph.D. candidate’s research committee meets formally with the student to evaluate research progress at least once a year. Students are expected to finish all Ph.D. requirements in five to six years.

The Department of Chemistry and Biochemistry invites well-known researchers from outside UC Santa Cruz to share and discuss their current research. Visiting speakers from other universities and government or industrial research labs expose students to advances at the frontiers of chemical research, offering the opportunity for personal contact with leading scientists. All Ph.D. and thesis M.S. students are required to enroll in the Chemistry 291, Research Seminar, until they have advanced to candidacy.

Teaching assistantships provide both financial support and the opportunity to put into practice the required pedagogical training offered in Chemistry 296 (presentation techniques, discussion strategies, laboratory teaching skills, laboratory safety procedures, and time management). Doctoral students may also be supported as graduate-student researchers.

**PH.D. REQUIREMENTS**

- Pass three out of four attainment examinations and meet any deficiencies as directed by spring of the first year.
- Take Chemistry 292 and 296 in fall of the first year.
- Take Chemistry 291, Research Seminar every quarter until advanced to candidacy.
- Select an adviser and nominate members of the research committee by the end of the fourth week of April of the first year. A change in membership of the research committee must be approved by the graduate director.
- Biochemistry, inorganic and physical chemistry students present a second-year seminar on a topic of current interest in published research outside the candidate’s own research area with the approval of the committee chair. Organic chemistry students will present a research proposal within the candidates own research area with the understanding that their actual PhD research may be different and will be subject to the approval of their adviser.
- Serve as a teaching assistant (TA) for at least three quarters in the first two years, before attempting the Ph.D. oral qualifying examination.
- Pass a total of five core and elective lecture courses (25 credits). At least four of these courses must be offered by the Chemistry and Biochemistry Department and at least four must be at the graduate (200) level with the exception of Chemistry 151B for inorganic and organic students.
- By the end of the seventh quarter (typically fall of the third year), pass the Ph.D. oral qualifying examination before an examining committee consisting of three research committee members plus one outside member approved by the graduate dean. The Ph.D. candidate presents (a) a summary of current research results and future directions, and (b) an original research proposal on a chemistry or biochemistry topic unrelated or partially related to the candidate’s current thesis research. The latter must be approved by committee prior to the oral examination.
- Nominate members of the Dissertation Reading Committee (DRC).
Chemistry and Biochemistry

- After advancing to candidacy, submit a research prospectus (outline of dissertation chapters) and meet with the DRC to review research progress annually.
- Submit written dissertation based on original research to the DRC for tentative approval at least one month before presenting a dissertation seminar (further details and instructions on this stage may be found in the graduate student handbook).
- Present and defend the dissertation seminar.
- Submit the written dissertation to the Division of Graduate Studies.

The average time to degree is five and one-quarter years. Ph.D. candidates are expected to complete research and write the dissertation within nine quarters after advancing to candidacy following a successful Ph.D. oral qualifying examination. Financial support is not available after 18 quarters in the graduate program.

For both Ph.D. and M.S. students, the standard course load is three courses per quarter, or a total of 15 credits per quarter.

M.S. REQUIREMENTS: RESEARCH

THESIS PATH

- Pass three out of four attainment examinations in the first year.
- Take Chemistry 292.
- Take Chemistry 296 if working as teaching assistant (TA) at any time.
- Take Chemistry 291 each quarter.
- Select an adviser and nominate members of the research committee by May 1 in the first year.
- Pass at least five chemistry and biochemistry lecture courses, of which at least three must be graduate (200) level or 151B.
- Conduct original laboratory research.
- Capstone requirement: write a thesis based on original research.

M.S. REQUIREMENTS: COURSEWORK

PATH

- Pass three out of four attainment examinations in the first year.
- Take Chemistry 296 if working as teaching assistant (TA) at any time.
- Take nine courses offered by the Department of Chemistry and Biochemistry as described below.
- At least seven lecture courses in three of the four sub-disciplines: organic, inorganic, physical chemistry and biochemistry. At least four must be graduate level (200 or above); up to three may be upper division undergraduate level (100-199), excluding courses used to meet the attainment requirement (103, 143, 151A, 163ABC)
- Two seminars (Chemistry 291, 292 or 296) or independent study (297A) or additional lecture courses. Chemistry 291 may be repeated.
- Capstone requirement: present a seminar on a topic of current interest in published research.

PH.D. PROGRAM IN BIOMEDICAL SCIENCES AND ENGINEERING

The Department of Chemistry and Biochemistry participates in the graduate Program in Biomedical Science and Engineering (PBSE) through its administration of the Chemical Biology, Biochemistry and Biophysics (CB3) training track. Sixty-one faculty members, who come primarily from the Departments of Molecular, Cell, and Developmental Biology; Biomolecular Engineering; Chemistry and Biochemistry; and Microbiology and Environmental Toxicology offer an unusual breadth of expertise and exceptional opportunities in interdisciplinary graduate research training. When students apply to the PBSE they indicate interest in one of four training tracks:

- Biomolecular engineering and bioinformatics (BMEB)
- Chemical biology, biochemistry and biophysics (CB3)
- Microbial biology and pathogenesis (MICRO)
- Molecular, cell and developmental biology (MCD)

The Ph.D. track in chemical biology, biochemistry and biophysics (CB3) provides students with the opportunity to carry out cutting-edge research at the interface between biology and chemistry. The training program emphasizes analysis of molecular structure and mechanism as well as the use of organic chemistry to address biological questions. Interdisciplinary research is encouraged and supported by a diverse group of faculty.

After successful completion of all of the Ph.D. requirements, students in this track will be awarded a Ph.D. degree in chemistry from the Department of Chemistry and Biochemistry.

CB3 first-year students participate in three, seven-week laboratory rotations, while undertaking rigorous coursework that emphasizes critical evaluation of scientific models and experimental results. The program provides the flexibility to craft an individual curriculum that specifically suits the needs of the student's research interests. Second-year students take oral qualifying examinations and initiate independent research projects that ultimately lead to their dissertation. Advanced graduate students work under the direct supervision of faculty members in a highly interactive, collaborative research environment. All students participate in a variety of seminars, advanced special-topics courses, and research group meetings designed to provide continuing learning opportunities.

PH.D. REQUIREMENTS–CB3 TRACK

REQUIRED COURSEWORK
Chemistry and Biochemistry

- Chemistry 200A, Advanced Biochemistry, Biophysical Methods (fall)
- Chemistry 296, Teaching Chemistry (fall)
- Biology: Molecular, Cell, and Developmental Biology 200B, Advanced Molecular Biology (winter)
- Chemistry 200B, Advanced Biochemistry, Protein Structure and Function (winter)
- Biology: Molecular, Cell, and Developmental Biology 289, Practice of Science (second year)

In addition to these courses, CB3 Ph.D. students are required to take at least three additional graduate-level lecture courses by the end of the third year. A list of approved elective courses is available on the PBSE-CB3 website.

Students also enroll in Chemistry 291 (weekly research seminars) until they advance to candidacy.

LABORATORY ROTATIONS

First-year students do three, seven-week rotations during fall and winter quarters in the laboratory of three PBSE-affiliated faculty members. Performance in each rotation is graded as satisfactory/unsatisfactory. At the end of each rotation period, students will present on their project either with a short talk or poster presentation.

TEACHING ASSISTANT

Serve as a TA for a minimum of two quarters. Students must meet this requirement before advancing to candidacy.

ORAL QUALIFYING EXAMINATION

Pass the Ph.D. oral qualifying examination before an examining committee by the end of the student's sixth quarter. Students must demonstrate an expertise in the area of discipline that has been specified for the examination and be able to produce an acceptable plan for their dissertation.

Upon passing that examination, the Dissertation Reading Committee (DRC) is formed. The committee comprises the adviser plus two members of the CB3 track.

THIRD-YEAR TALK

Students present a public seminar that is based on their dissertation research in the spring quarter of their third year.

ADVANCE TO CANDIDACY

After successfully completing the third year talk and all other requirements have been completed, the student will advance to candidacy.

All students must meet with their dissertation advisory committee each year until completion of the thesis.

DISSERTATION

The final requirement for the Ph.D. degree is acceptance of the student's dissertation under the rules of the Academic Senate. A three-member dissertation advisory committee (DRC), headed by the student's research adviser, evaluates the dissertation for the department.

Students are required to give a public talk before their final submission on the principal results of their research.

CHEMISTRY AND BIOCHEMISTRY FACULTY AND PROFESSIONAL INTERESTS

PROFESSOR

Ilan Benjamin
Theoretical chemistry, molecular dynamics of chemical reactions in liquids and at interfaces

Rebecca Braslau
Synthetic organic chemistry: new synthetic methodologies using free radicals; nitroxides, nitroxide mediated "living" polymerizations: design and functionalization of tailored polymers for biomedical applications and nanotechnology, profluorescent nitroxides as sensors, synthetically modified polymers, development of non-migratory plasticizers

Shaowei Chen
Synthesis, characterization, and manipulation of novel functional nanomaterials (metals and semiconductors); surface engineering of nanoparticles; nanoscale electron transfer; applications in fuel cells, photocatalysis, photovoltaics, and nano optoelectronics

Ólöf Einarsdóttir
Time-resolved spectroscopy; biophysics and bioenergetics; heme-copper oxidases; electron transfer and ligand binding; application of photolabile NO and O2 donors; molecular dynamics simulations of ligand access channels in heme-copper oxidases

Theodore R. Holman
Biochemistry and bioinorganic chemistry; lipoxygenase enzymology, protein engineering, inhibitor discovery, computer inhibitor design, mass spectroscopy, electron paramagnetic resonance

Joseph P. Konopelski
Synthetic organic chemistry; heterocyclic chemistry, bioorganic chemistry

Yat Li
Experimental physical chemistry, nanomaterials, energy conversion and storage, microbial fuel cell technology

R. Scott Lokey
Organic chemistry; combinatorial synthesis, biotechnology, molecular cell biology
**John MacMillan**  
Natural products chemistry, chemical biology, structural elucidation, cancer biology, microbial natural products

**Pradip Mascharak**  
Bioinorganic chemistry, design of antitumor drugs, modeling of active sites of metalloenzymes, design of catalysts for hydrocarbon oxidation, studies on intermediates in non-heme oxygenase chemistry, design of NO-donors for photodynamic therapy

**Glenn L. Millhauser**  
Electron paramagnetic resonance; nuclear magnetic resonance, protein structure and function, peptide synthesis, prions, melanocortin signaling

**Scott R. Oliver**  
Materials chemistry: nanoporous inorganic and metal-organic materials for environmental cleanup of water, desulfurization of fuel and biomaterials

**Seth M. Rubin**  
Biomolecular mechanisms of cell-cycle regulation and cancer; structural biology and biochemistry; macromolecular x-ray crystallography; nuclear magnetic resonance

**William G. Scott**  
Structure and function of RNA, proteins, and their complexes, origin of life

**Bakthan Singaram**  
Organic synthesis, organoborane chemistry, heterocyclic chemistry, organometallic chemistry, asymmetric synthesis, biosensors, and natural products chemistry

**Jin Z. Zhang**  
Design, synthesis, characterization, and application of nanomaterials, including semiconductors, metals, and metal oxides; ultrafast dynamics and laser spectroscopy; cancer diagnosis and therapy; solar energy conversion; surface-enhanced Raman spectroscopy (SERS)

**Carrie Partch**  
Biochemistry and biophysics, nuclear magnetic resonance spectroscopy; molecular mechanism of circadian rhythmicity

**Michael Stone**  
Molecular basis of telomere length and telomerase-related diseases; biophysical characterization of nucleic acid-associated molecular motors; development of novel approaches for imaging enzymes in cells

**Alexander Ayzner**  
Experimental physical chemistry; organic semiconductors; molecular spectroscopy; electron transfer dynamics; X-ray scattering and spectroscopy

**Alegra Eroy-Reveles**  
Chemistry education; developing engaging and supportive learning environments for large enrollment general chemistry courses; developing interventions that increase the performance and retention of historically underrepresented students in STEM courses and majors

**Timothy Johnstone**  
Medical bioinorganic chemistry; nanoparticle drug delivery to treat cancer and infectious diseases; carbon monoxide poisoning antidotes; synthetic inorganic chemistry; small-molecule X-ray crystallography

**Yuan Ping**  
Theoretical and computational materials chemistry; solar energy conversion; electronic, optical and carrier transport properties of transition metal oxides and nanomaterials; heterogeneous catalysts; solid/liquid interfaces

**Jevgenij Raskatov**  
Chemical biology, organic chemistry, molecular modeling, chemotherapy, inflammation

**Nikolaos Sgourakis**  
Modeling protein complexes from sparse NMR data; hybrid methods in structural biology; antigen processing and presentation; viral immune regulation mechanisms

**Philip O. Crews**  
Marine natural products chemistry, bioorganic chemistry, organic structural analysis by NMR, natural products of marine macro- and microorganisms

**David S. Kliger**  
Time-resolved laser spectroscopy, biophysics, studies of visual transduction, protein function, and protein folding

**Roger W. Anderson**  
Design of anti-reflection graded refractive index coatings for solar energy collection, achromatic focusing of molecules with external electric fields, discrete orthogonal polynomials in molecular collision theory, and semiclassical asymptotic analysis of Racah and Hahn polynomials

**Frank C. Andrews**

**Claude F. Bernasconi**  
Kinetic studies of fast reactions, organic reaction mechanisms, acid-base catalysis, proton transfers, nucleophilic reactions, organometallic reactions, ab initio molecular orbital calculations

**Roberto A. Bogomolni**  
Biophysical chemistry, photobiology, light energy conversion and signal transduction in biological systems

**Joseph F. Bunnett**  
Physical organic chemistry, with special attention to mechanisms of aromatic nucleophilic substitution

**Thomas W. Schleich**  
Biomedical magnetic resonance spectroscopy, magnetic resonance imaging, nuclear magnetic resonance spectroscopy, biophysical chemistry
Eugene Switkes  
Quantum theory applied to problems in chemistry and biochemistry; visual information processing, spatial vision, color vision  
Stanley M. Williamson  
W. Todd Wipke  
Molecular engineering for drug discovery; computational chemistry in improving cancer chemotherapy, solar energy conversion, and continuous glucose monitoring

---

**CHEMISTRY AND BIOCHEMISTRY COURSES**

### LOWER-DIVISION COURSES

**1A. General Chemistry, F,W,S**  
An integrated study of general chemistry. Covers a range of topics including the atomic structure of matter; molecules; chemical reactions; acids and bases; gases; and equilibria in the gas and liquid phase. Students are expected to use algebra to solve problems. General Chemistry is articulated in a full-year series. Partial transfer credit is not allowed for the A,B,C series. Prerequisite(s): Previous or concurrent enrollment in MATH 3 (or equivalent), or a mathematics placement score of 300 or higher; taking the online chemistry self-assessment exam is strongly recommended. (General Education Code(s): SL)  
*P. Weiss, S. Rubin, A. Eroy-Reveles*

**1B. General Chemistry, F,W,S**  
An integrated study of general chemistry. Coverage includes quantum mechanics; the hydrogen atom; many-electron atoms and chemical periodicity; elementary covalent bonding; transition metals; and chemical kinetics. Prerequisite(s): Strong high-school level chemistry is strongly recommended; taking the online chemistry self-assessment examination is strongly recommended. Concurrent enrollment in course 1M is recommended. General Chemistry is articulated in a full-year series. Partial transfer credit is not allowed for the A,B,C series.  
*P. Weiss, W. Scott, A. Eroy-Reveles*

**1C. General Chemistry. F,W,S**  
Laboratory sequence illustrating important experimental techniques. Students are billed a non-refundable fee.  
*P. Weiss, W. Scott, A. Eroy-Reveles*

---

Greg L. Hura (Lawrence Berkeley National Laboratory)  
Mechanisms of biological macromolecules inspire nanoscale engineering strategies and provide insights into disease; biochemistry and biophysics  
Thomas Webb (SRI Biosciences)  
Medicinal and synthetic chemistry, drug design, pharmacophore methods, natural product analogs, enzymes for organic synthesis and drug discovery, anticancer and antiviral drug discovery, spliceosome chemical biology, and new therapeutic targets in cancer  

---

**AFFILIATES**

**Phillip Berman** (Biomolecular Engineering)  
Drug development vaccines, AIDS, monoclonal antibody therapeutics, immunology, molecular cell/biology, recombinant protein production (commercial scale)  
**Manel Camps** (Microbiology and Environmental Toxicology)  
Molecular mechanisms of reactive DNA methylation toxicity  
**Donald R. Smith** (Microbiology and Environmental Toxicology)  
Neurotoxicity, cellular and organismal responses to environmental toxins  
**Holger Schmidt** (Electrical Engineering)  
Optofluidics, atom photonics, hollow-core photonics for biomedicine and quantum optics, nanomagnetism, nanomagneto-optics, single-particle spectroscopy, ultrafast optics
Chemistry and Biochemistry

materials fee. Prerequisite(s): Previous or concurrent enrollment in course 1B is required. R. Roland

1N. General Chemistry Laboratory (2 credits). F,W,S Laboratory sequence illustrating topics covered in courses 1B-1C, respectively, and important experimental techniques. Students are billed a materials fee. Prerequisite(s): courses 1B and 1C. C. Binder, R. Lokey

8A. Organic Chemistry. F,W Introduces organic chemistry, with an emphasis on bonding and reactivity of organic compounds. (Formerly course 108A.) Prerequisite(s): courses 1B and 1C. C. Binder, R. Lokey

8B. Organic Chemistry. W,S Introduction to organic chemistry, with an emphasis on reactivity and synthesis of organic compounds. (Formerly course 108B.) Prerequisite(s): course 8A or 108A. R. Braslau, B. Singaram

8L. Organic Chemistry Laboratory (2 credits). F,W Laboratory experience in organic chemistry associated with course 8A. Designed to introduce the student to the many techniques associated with organic chemistry while affording an opportunity to explore the concepts discussed in the lecture material. Laboratory: 4 hours, lecture: 1-1/4 hours. Students are billed a materials fee. (Formerly course 108L.) Prerequisite(s): courses 1C and 1N and previous or concurrent enrollment in 8A or 108A is required. C. Binder

8M. Organic Chemistry Laboratory (2 credits). W,S Laboratory experience in organic chemistry associated with course 8B. Designed to introduce the student to the many techniques associated with organic chemistry while affording an opportunity to explore the concepts discussed in the lecture material. Laboratory: 4 hours, lecture: 1-1/4 hours. Students are billed a materials fee. (Formerly course 108M.) Prerequisite(s): courses 8A and 8L and previous or concurrent enrollment in 8B or 108B is required. C. Binder

99. Tutorial. F,W,S Students submit petition to sponsoring agency. May be repeated for credit. The Staff

99F. Tutorial (2 credits). F,W,S Students submit petition to sponsoring agency. May be repeated for credit. The Staff

UPPER-DIVISION COURSES

103. Biochemistry. S Introduction to biochemistry including biochemical molecules, protein structure and function, membranes, bioenergetics, and regulation of biosynthesis. Provides students with basic essentials of modern biochemistry. Students who plan to do advanced work in biochemistry and molecular biology should take the Biochemistry and Molecular Biology (BIOC) 100 series. Students cannot receive credit for this course after they have completed any two courses from the BIOC 100A, 100B, and 100C sequence. Prerequisite(s): course 8B or 108B. N. Sgourakis

109. Intermediate Organic Chemistry and Applications to Biology (3 credits). S Integrated study of fundamental organic chemistry, with emphasis on materials especially relevant to biological sciences. Prerequisite(s): course 8B or 108B or equivalent. C. Binder

110. Intermediate Organic Chemistry with Emphasis on Synthesis and Analytical Methods. S An intermediate study of organic chemistry, including synthetic methods, reaction mechanisms, and application of synthetic chemistry techniques. Prerequisite(s): course 8B or 108B. Enrollment is restricted to chemistry majors, minors and proposed majors. J. Raskatov

110L. Intermediate Organic Chemistry Laboratory (2 credits). S Laboratory experience in organic chemistry and associated principles. Experiments involve the preparation, purification, characterization, and identification of organic compounds, and make use of modern as well as classical techniques. Students are billed a materials fee. Prerequisite(s): course 8M or 108M and previous or concurrent enrollment in course 110. C. Binder

122. Principles of Instrumental Analysis. F A laboratory course designed to develop familiarity with techniques and instrumentation used in analytical chemistry, emphasizing determination of trace inorganic species. Primary emphasis on applications utilizing the absorption or emission of electromagnetic radiation and on voltammetry. Topics include molecular UV-visible absorption and fluorescence spectrometry; atomic absorption, emission and fluorescence spectrometry; and various forms of voltammetry. Lecture: 2 hours; laboratory: 8 hours. Students are billed a materials fee. Prerequisite(s): course 110 and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to senior chemistry (B.S.) majors. S. Oliver

143. Organic Chemical Structure and Reactions. F Advanced topics such as the chemistry of terpenes, steroids, synthetic polymers, alkaloids, reactive intermediates, and reaction mechanisms are treated. Lecture: 4 hours. Prerequisite(s): course 110. B. Singaram

146A. Advanced Laboratory in Organic Chemistry (3 credits). F Exposes students to advanced laboratory techniques in organic chemistry. Designed for students without previous research background in organic chemistry. Experiments carry a research-like format and cover the areas of natural products and reaction chemistry. Modern methods of organic analysis are emphasized including chromatographic methods and organic structure determination by spectroscopy. Laboratory: 8 hours. Students billed a materials fee. Prerequisite(s): courses 110/L; satisfaction of Entry
Chemistry and Biochemistry

Level Writing and Composition requirements. Enrollment is restricted to chemistry majors. Minors by permission of instructor. Enrollment limited to 16. C. Binder

146B. Advanced Laboratory in Inorganic Chemistry (3 credits). S
Designed to expose students to advanced synthetic and spectroscopic techniques in inorganic chemistry. Examples include anaerobic manipulations, characterization of inorganic materials through spectral assignments and synthesis of coordination and organometallic complexes. Lecture: 1-1/4 hours; laboratory: 8 hours. Students billed a materials fee. Prerequisite(s): courses 151A/L; 163A; satisfaction of Entry Level Writing and Composition requirements. Enrollment restricted to chemistry majors. Minors by permission of instructor. T. Holman

146C. Advanced Laboratory in Physical Chemistry (3 credits). S
Provides advanced laboratory experience in the areas of nanomaterial synthesis and characterization; spectroscopy; fabrication and measurements energy-conversion devices; and soft lithography techniques and instrumentation. Lecture: 1-1/4 hours; laboratory: 4 hours. Students are billed a materials fee. Prerequisite(s): courses 163B and 164; satisfaction of Entry Level Writing and Composition requirements. Enrollment restricted to chemistry majors. Minors by permission of instructor. Enrollment limited to 20. Y. Li

151A. Chemistry of Metals. W
Fundamental topics of inorganic chemistry are presented at the level of the standard texts of field. Special emphasis is given to maintain breadth in the areas of metallic, nonmetallic, and biological aspects of inorganic chemistry. Lecture: 3-1/2 hours; discussion: 1-1/4 hours. Prerequisite(s): course 8B and 8M or 108B and 108M and course 151A. Concurrent enrollment in course 151L is required. T. Holman

151B. Chemistry of the Main Group Elements. S
Fundamental aspects of inorganic chemistry of main group elements are discussed. The emphasis is placed on the chemistry of nontransition elements including noble gases and halogens. In addition, students are exposed to the concepts of extended structures, new materials, and solid-state chemistry. Lecture: 3-3/4 hours. Prerequisite(s): courses 8B and 8M and 163A. Recommended for chemistry majors. S. Oliver

151L. Inorganic Chemistry Laboratory (2 credits). W
Laboratory experience in inorganic chemistry. Experiments involve the preparation, purification, and characterization of inorganic compounds. In addition, experiments are designed to illustrate fundamental principles in inorganic chemistry and are coordinated with lectures in course 151A. Laboratory: 4 hours per week. Laboratory lecture: 1 1/4 hours per week. Students are billed a materials fee. Prerequisite(s): courses 8B and 8M or 108B and 108M and 163A. Concurrent enrollment in course 151A is required. T. Holman

156C. Materials Chemistry. W
Advanced topics in inorganic chemistry and an introduction to solid-state chemistry. Synthesis and structure of materials discussed as well as their influence on properties for modern devices and applications. Recent developments in area of material science also explored. Taught in conjunction with course 256C. (Formerly Advanced Topics in Inorganic Chemistry.) Prerequisite(s): course 151A. Enrollment is restricted to seniors. S. Oliver

163A. Quantum Mechanics and Basic Spectroscopy. F
A detailed introduction to quantum theory and the application of wave mechanics to problems of atomic structure, bonding in molecules, and fundamentals of spectroscopy. Prerequisite(s): courses 1B and 1C, Physics 5A-B-C or 6A-B-C and Mathematics 22 or 23B. Physics 6C can be taken concurrently. Y. Ping

163B. Chemical Thermodynamics. W
Fundamentals of thermodynamics and applications to chemical and biochemical equilibria. (Formerly Thermodynamics and Kinetic Theory.) Prerequisite(s): courses 1B and 1C, Physics 6A or 5A, and Math 22 or 23B. A. Ayzner

163C. Kinetic Theory and Reaction Kinetics, Statistical Mechanics, Spectroscopic Applications. S
Introduction to statistical mechanics, kinetic theory, and reaction kinetics and topics in spectroscopy. Prerequisite(s): courses 163A and 163B. A. Ayzner

164. Physical Chemistry Laboratory. W
Provides laboratory experience and data analysis in the areas of thermodynamics, kinetics, and spectroscopy. Lecture: 1.75 hours; experimental laboratory: 4 hours; computer laboratory: 2 hours. Students are billed a materials fee. Prerequisite(s): courses 1B and 1C; and Physics 5A and Physics 5B and Physics 5C, or Physics 6A and Physics 6B and Physics 6C; and Mathematics 22 or Mathematics 23B. Course 163A is recommended. Y. Li

169. Chemistry and Biology of Drug Design and Discovery. S
An overview of the central elements of drug discovery, including target selection and validation; computational or virtual screening; high-throughput screening; fragment-based methods; and pharmacokinetics. Prerequisite(s): course 103 or Biochemistry 100A. R. Lokey

Lectures and case studies explore principles and approaches in drug discovery and development, emphasizing concepts in pharmacology; medicinal chemistry; and genomics- and bioinformatics-based approaches to drug discovery to illustrate pathways from discovery through development for clinical use. Cannot receive credit for this course and course 270. (Formerly Frontiers in Drug Action and Discovery.) (Also offered as Biomolecular Engineering 170. Students cannot receive credit for both courses.)
**171. Chemical Biology. W** Covers methods and techniques for the field of chemical biology. Brings together methods in chemistry, biochemistry, and genetics to study the interaction of small molecules with biological systems. Students cannot receive credit for this course and course CHEM 271. Prerequisite(s): courses 103 and 143. Enrollment is restricted to junior and senior chemistry and biochemistry majors and minors. J. MacMillan

**182. ACE Program Service Learning (2 credits). F** Students participate in training and development to co-facilitate collaborative learning in ACE chemistry discussion sections and midterm/exam review sessions. Students are role models for students pursuing science- and math-intensive majors. Prerequisite(s): Prior participation in ACE; good academic standing; no non-passing grades in prior quarter. Enrollment is restricted to sophomores, juniors, and seniors. Enrollment limited to 10. (General Education Code(s): PR-S) The Staff

**184. Senior Essay. F,W,S** An individually supervised course with emphasis on reviewing the current scientific literature. Students are required to submit a summary and a critique of a scientific paper in the form of a senior essay. Students submit a petition to the sponsoring agency. This course may not be repeated for credit. The Staff

**195B. Senior Research. F,W,S** An individually supervised course with emphasis on independent research. Multiple-term course extending over two or three quarters; the grade and evaluation submitted for the final quarter apply to all previous quarters. Students submit petition to sponsoring agency; may not be repeated for credit. The Staff

**195C. Senior Thesis. F,W,S** An individually supervised course with emphasis on independent research. Multiple-term course extending over two or three quarters; the grade and evaluation submitted for the final quarter apply to all previous quarters. Students submit petition to sponsoring agency; may not be repeated for credit. (Formerly Senior Research.) The Staff

**199. Tutorial. F,W,S** Students submit petition to sponsoring agency. May be repeated for credit. The Staff

**199F. Tutorial (2 credits). F,W,S** Students submit petition to sponsoring agency. May be repeated for credit. The Staff

**GRADUATE COURSES**

**200A. Advanced Biochemistry: Biophysical Methods. F** An introduction to the theory, principles, and practical application of biophysical methods to the study of biomolecules, especially proteins and nucleic acids. Emphasis on spectroscopic techniques. Topics include magnetic resonance, optical spectroscopy, fast reaction techniques, crystallography, and mass spectrometry. W. Scott

**200B. Advanced Biochemistry: Macromolecular Structure and Function. W** A detailed discussion of nucleic acid and protein chemistry, ranging from the structure, thermodynamics, and folding to the relationship between structure and function, and encompassing the methods used to determine such information. (Formerly Advanced Biochemistry: Protein Structure and Function.) N. Sgourakis

**200C. Advanced Biochemistry: Enzyme Mechanisms and Kinetics. * F** A study of enzyme kinetics, mechanisms, and factors involved in enzymic catalysis. Lecture: 3-1/2 hours. (Formerly course 231, Enzyme Mechanisms and Kinetics.) W. Scott

**230. Grant Writing in Biomedical Research. S** Introduces the fundamentals of grant writing in biomedical research, including best practices for presentation of data and communication of research findings. Students write and peer-edit most components of the NIH Ruth L. Kirschstein F31 predoctoral fellowship. Course is designed for students in their second year or later of graduate study. Enrollment is restricted to graduate students. Enrollment limited to 16. C. Partch

**234. Bioinorganic Chemistry. F** The role played by transition metals in biological systems is discussed through application of the principles of coordination chemistry and inorganic spectroscopy. Topics include metalloproteins involved in oxygen binding, iron storage, biological redox reactions, and nitrogen fixation, as well as metal complexes of nucleic acids. Lecture: 4 hours. Prerequisite(s): courses 151A/L, 163A; and Biochemistry and Molecular Biology 100A. P. Mascharak

**238. Topics in Biophysical Chemistry. * S** A discussion of the application of selected topics in biophysical chemistry to contemporary problems in biochemistry and molecular biology. Lecture: 3-1/2 hours. The Staff

**242A. Modern Physical Organic Chemistry. W** Covers molecular structure and bonding, strain, and non-covalent binding forces. Other topics include acid-base chemistry, kinetics, thermodynamics, catalysis, organic reactions and mechanism, and quantum mechanical approaches to the analysis of organic molecules. Enrollment is restricted to seniors who have taken course 143, and
graduate students. J. Raskatov

242B. Modern Synthetic Methods in Organic Chemistry. F
Presents concepts in bond formation, conformation, selectivity, and stereocontrol in modern organic synthesis. Focuses on understanding reaction mechanisms. Culminates with strategy in designing multi-step synthesis of complex targets. Enrollment is restricted to seniors who have taken course 143, and graduate students. R. Braslau

Presents strategies in organic structure elucidation, including nuclear magnetic resonance (NMR) and mass spectrometry. Provides theory and practical elements of structure elucidation and modern analytical methods for organic molecules. Enrollment restricted to seniors who have taken course 143, and graduate students. J. MacMillan

244. Organic Free Radical Chemistry. *
Explores organic free radicals. Fundamental principles in physical chemistry provide an understanding of free-radical transformations in organic synthesis, polymerization, and some examples of free radicals in biology. For students who have a firm grounding in organic chemistry. Enrollment is restricted to graduate students. Enrollment limited to 20. R. Braslau

246. Advanced Topics in Organic Chemistry. *
A graduate course covering advanced topics in organic chemistry. Topics vary from year to year. The Staff

255. Biotechnology and Drug Development. *
Recommended for students interested in careers in the biopharmaceutical industry. Focuses on recombinant DNA technology and the drug-development process, including discovery research; preclinical testing; clinical trials; and regulatory review, as well as manufacturing and production considerations. Students may not receive credit for this course and Biomolecular Engineering 155 and Biology 179. (Also offered as Biomolecular Engineering 255. Students cannot receive credit for both courses.) Enrollment is restricted to graduate students. Enrollment limited to 15. P. Berman

256A. Advanced Topics in Inorganic Chemistry. *
Advanced topics in inorganic chemistry are presented. Topics covered vary from year to year, and are announced in advance. Possible topics include A) organometallic chemistry; B) structural methods in inorganic chemistry; C) solid-state chemistry. Prerequisite(s): courses 151A/L and 146B or graduate standing. S. Oliver

256B. Advanced Topics in Inorganic Chemistry. *
Advanced topics in inorganic chemistry are presented. Topics covered vary from year to year, and are announced in advance. Possible topics include A) organometallic chemistry; B) structural methods in inorganic chemistry; C) solid-state chemistry. Prerequisite(s): courses 151A/L and 146B or graduate standing. T. Holman

256C. Advanced Topics in Inorganic Chemistry. W
Advanced topics in inorganic chemistry are presented. Topics covered vary from year to year, and are announced in advance. Possible topics include A) organometallic chemistry; B) structural methods in inorganic chemistry; C) solid-state chemistry. Prerequisite(s): courses 151A/L and 146B or graduate standing. S. Oliver

256D. X-ray Crystallography. S
Course in chemical crystallography focuses on the needs of small-molecule, single-crystal diffraction studies. Includes diffraction theory, space-group analysis, data collection, structure solution, and refinement. Practical component: use of diffraction equipment and solution/refinement software. Enrollment is restricted to graduate students and seniors who have taken courses 151A, 151L, and 163A. T. Johnstone

261. Foundations of Spectroscopy. S
The basic theory of time-dependent processes is covered at an advanced level. The interaction of electromagnetic radiation and matter is described using both semiclassical and quantum field formulations. A variety of modern spectroscopic techniques are discussed both in terms of the basic processes and their use in the elucidation of chemical structure and dynamics. Enrollment is restricted to chemistry graduate students or previous enrollment in course 163A. J. Zhang

262. Statistical Mechanics. W
Theory and concepts of statistical mechanics with applications to ideal gases, condensed systems, phase transition, and non-equilibrium thermodynamics. Lecture: 3-1/2 hours. Enrollment is restricted to chemistry graduate students or previous enrollment in course 163A. I. Benjamin

263. Quantum Mechanics. S
A rigorous introductory course: the Schrödinger equation, operator formalism, matrix mechanics, angular momentum, and spin. Perturbation and other approximate methods. Applications to atomic and molecular problems. Lecture: 3-1/2 hours. Enrollment is restricted to chemistry graduate students or previous enrollment in Chemistry 162A and Physics 116A and Physics 116B. Y. Ping

265. Computer Simulation in Statistical Mechanics. *
A detailed introduction of the use of computer simulation methods in physical and biophysical chemistry. Includes review of thermodynamics and statistical mechanics, molecular mechanics, molecular dynamics, and Monte-Carlo methods. Applications to liquid structure, reaction dynamics, and protein dynamics. I. Benjamin

266. Advanced Topics in Physical Chemistry. *
A graduate course covering advanced topics in physical chemistry. Topics vary from year to year. The Staff

266A. Lasers and Their Chemical Applications. *
Introduces the basic theoretical principles of lasers and laser light. Various types of lasers and selected applications to chemistry are discussed. The use of lasers in photochemistry, spectroscopy, chemical kinetics, and chemical analysis is considered. Lecture: 3-1/2 hours. Prerequisite(s): course 163A and Physics 114A-B. May be repeated for credit. The Staff

268. Solid State and Materials Chemistry. *
Topics include synthesis of solid-state materials and their characterization using experimental techniques: XRD, TEM spectroscopy, NMR, and their applications in technologies. Emphasis on new materials, e.g., polymer, biopolymers, nanomaterials, organic/inorganic composites, ceramics, superconductors, electronic, magnetic, and opto-electronic materials. Enrollment is restricted to chemistry graduate students or students previously enrolled in courses 163A and 163B. Y. Li

269. Electrochemistry. F
Designed to introduce basic principles and applications of electrochemistry to students at upper undergraduate and lower graduate levels in various fields including analytical, physical, and materials chemistry. Enrollment is restricted to seniors and graduate students. S. Chen

270. Drug Action and Development. *
Lectures and case studies explore principles and approaches in drug discovery and development, emphasizing concepts in pharmacology; medicinal chemistry; and genomics- and bioinformatics-based approaches to drug discovery to illustrate pathways from discovery through development for clinical use. Cannot receive credit for this course and course 170. (Formerly Frontiers in Drug Action and Discovery.) (Also offered as Biomolecular Engineering 270. Students cannot receive credit for both courses.) Enrollment is restricted to graduate students. The Staff

271. Chemical Biology.
Methods and techniques for the field of chemical biology. Brings together methods in chemistry, biochemistry, and genetics to study the interaction of small molecules with biological systems. Students cannot receive credit for this course and course 171. Enrollment is restricted to chemistry graduate students. J. Konopelski

274. Proseminar in Synthetic and Polymer Chemistry. F,W,S
Weekly meetings devoted to study of synthetic organic chemistry and controlled polymer design for applications in nanotechnology. Topics drawn from current literature and research interests of participants. May be repeated for credit. R. Braslau

275. Proseminar in Biological Inorganic Chemistry. F,W,S
Weekly meetings devoted to biological inorganic chemistry and biochemistry. Topics are drawn from current literature. Papers and reviews are discussed, and participants give short seminars on their research interests. May be repeated for credit. T. Holman

276. Proseminar in Materials Chemistry. F,W,S
Weekly meetings devoted to materials and inorganic research. Topics are drawn from current literature. Papers and reviews are discussed. Participants also give short seminars on topics of their research interests. May be repeated for credit. S. Oliver

Weekly meetings devoted to the study of asymmetric and/or enantio-selective synthesis of optically active organic compounds of biological and medicinal significance. Topics drawn from the current literature and the research interests of the participants. Enrollment is restricted to graduate students. May be repeated for credit. B. Singaram

Weekly meetings devoted to the study of synthetic organic chemistry. Topics drawn from the current literature and the research interests of the participants. Enrollment is restricted to graduate students. May be repeated for credit. J. Konopelski

A detailed study of molecular mechanisms of light energy conversion and light-signal transduction processes in biological systems. Student participation in critical discussion of current literature examples are emphasized. Two-hour lecture and two-hour seminar weekly. Enrollment is restricted to graduate students. May be repeated for credit. R. Bogomolni

286. Proseminar in Natural Products Chemistry. F,W,S
Weekly meetings devoted to the study of natural products. Topics drawn from the current literature and research interests of the participants. Enrollment is restricted to graduate students. May be repeated for credit. P. Crews

288. Proseminar in Bioinorganic Chemistry. F,W,S
Weekly meetings devoted to inorganic and bioinorganic research. Topics are drawn from current literature. Papers and reviews are discussed. Participants also give short seminars on topics of their research interests. May be repeated for credit. P. Mascharak

A weekly chemistry and biochemistry seminar series covering recent developments and current research, led by experts from other institutions, as well as local speakers. Open to chemistry and biochemistry graduate students. Enrollment is restricted to graduate students. May be repeated for credit. Y. Li

292. Seminar (2 credits). F
Enrollment restrictions: graduate standing or approval of the graduate adviser. T. Johnstone

296. Teaching Chemistry (2 credits). F
University-level pedagogy in chemistry; examines the role of
Chemistry and Biochemistry

preparation, assessment, and feedback in teaching chemistry discussion and laboratory sections. Effective classroom techniques and organizational strategies discussed; oral presentations analyzed critically. Required of entering chemistry graduate students. Enrollment is restricted to chemistry graduate students.

Enrollment limited to 21. R. Roland

297. Independent Study. F,W,S
A topic will be studied with faculty tutorial assistance to satisfy a need for the student when a regular course is not available. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

Students submit petition to sponsoring agency. The Staff

* Not offered in 2018-19
Revised: 07/15/18
Students interested in learning Chinese may enroll in language courses from beginning to advanced levels and should do so early in their careers at UCSC. Only those with no prior experience with the language may enroll in Chinese 1, which is only offered fall quarter. Heritage learners and those with prior instruction are required to take a placement exam. Students interested in combining their language study with their major focus may choose from a major or minor in language studies or linguistics, a minor in East Asian studies through the History Department, an individual major in East Asian studies through their college, or a global economics major.

The sequence of lower-division courses 1-6 is aimed at enabling students to gain proficiency in aural comprehension, speaking, reading, and writing skills. Instruction takes place mostly in Chinese from the second half of the first quarter. Upper-level courses include Chinese 103, Language and Society; Chinese 104, Readings in Chinese Literature; Chinese 105, Readings in Chinese History; Chinese 107, Introduction to Classical Chinese Prose; and Chinese 108, Introduction to Classical Poetry.

Information about this topic can be found under Department of Languages and Applied Linguistics.

Students may apply to study intensive Chinese language at universities—in Taipei, Hong Kong, or Beijing—for periods ranging from a summer up to a full year through the Office of International Education (OIE). Courses taken abroad can, with approval of an adviser, be applied to major requirements. For a list of current programs and requirements, visit the Global Engagement website. For information on credit applied to a major, please contact the appropriate department.

**CHINESE FACULTY AND PROFESSIONAL INTERESTS**

**PROFESSOR**

Christopher L. Connery (Chinese Literature)
World literature and cultural studies, globalism and geographical thought, the 1960s, Marxism, pre-modern and modern Chinese cultural studies, cultural revolution

**LECTURER**

David L. Keenan
Chinese language, fiction, and history

Ting-Ting Wu
Sociolinguistics, Chinese novels, learning styles and teaching methodology for non-heritage speakers

**CHINESE COURSES**

**LOWER-DIVISION COURSES**

1. **First-Year Chinese. F**
   Instruction in elementary spoken and written Chinese (Mandarin), beginning with the sounds of Chinese and their representation in the pinyin romanization system. Conversation, structural analysis, and an introduction to character texts. The first-year sequence (1-2-3) begins only in the fall quarter. Students interested in learning Chinese who are uncertain about where they should enter the sequence should meet with the instructor prior to the first class meeting. (Formerly Instruction in the Chinese (Mandarin) Language.)

The Staff

2. **First-Year Chinese. W**
   Continuation of Chinese 1, which assumes that students are familiar both with the pinyin romanization system and approximately 150 basic characters. (Formerly Instruction in the Chinese (Mandarin) Language.)

Prerequisite(s): course 1 or by consent of instructor.

The Staff
3. First-Year Chinese. S
Continuation of Chinese 2, which assumes that students are familiar both with the pinyin romanization system and approximately 300 basic characters. (Formerly Instruction in the Chinese (Mandarin) Language.) Prerequisite(s): course 2 or by consent of instructor. The Staff

4. Second-Year Chinese. F
Instruction in intermediate spoken and written Chinese (Mandarin). Conversation, composition, and the reading of modern texts. The second-year sequence (4-5-6) begins only in the fall quarter. (Formerly Intermediate Chinese (Mandarin).) Prerequisite(s): course 3 or by consent of instructor. The Staff

4H. Accelerated Chinese for Heritage Speakers. *
Intensive instruction in spoken and written Chinese for heritage students whose limited proficiency in Mandarin or limited familiarity with characters requires an accelerated review of the sounds, sentence patterns, and basic vocabulary before joining the Chinese sequence above the elementary level. Students who successfully complete Chinese 4H proceed to Chinese 5. Enrollment by instructor consent. The Staff

5. Second-Year Chinese. W
Continuation of Chinese 4. Conversation, composition, and the reading of modern texts. (Formerly Intermediate Chinese (Mandarin).) Prerequisite(s): course 4 or 4H or by consent of instructor. The Staff

5H. Accelerated Chinese for Heritage Speakers. *
Intensive instruction in spoken and written Chinese for heritage students whose limited proficiency in Mandarin or limited familiarity with characters requires an accelerated review of the sounds, sentence patterns, and basic vocabulary before joining the Chinese sequence above the elementary level. Students who successfully complete Chinese 5H proceed to Chinese 6. Prerequisite(s): Course 4H or by consent of instructor. The Staff

Continuation of Chinese 5. Conversation, composition, and the reading of modern texts. (Formerly Intermediate Chinese (Mandarin).) Prerequisite(s): course 5 or 5H or by consent of instructor. (General Education Code(s): CC) The Staff

94. Group Tutorial. F,W,S
Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

99F. Tutorial (2 credits). F,W,S
Students submit petition to sponsoring agency. May be repeated for credit. The Staff

103. Advanced Chinese: Language and Society. F
Designed to enhance the students' ability to understand, analyze, and discuss authentic Chinese reading materials. Chinese linguistic and cultural aspects are introduced. (Formerly Advanced Chinese.) Prerequisite(s): course 6 or by consent of instructor. (General Education Code(s): TA) The Staff

104. Advanced Chinese: Readings in Literature. *
Close readings in Chinese vernacular literature of recognized merit from contemporary and modern writers as well as from models from the traditional period. Student are introduced to the basic critical issues, in Chinese, relating to narrative and drama, revealed by the works under discussion. Prerequisite(s): course 103 or 105 or 107 or 108; or by consent of instructor. (General Education Code(s): TA) The Staff

105. Advanced Chinese: Readings in History. *
Offers an appreciation of some of the central issues in Chinese history as defined by Chinese historians of the 20th century. Through readings of graduated difficulty, the vocabulary, style, and form of modern Chinese historical writing are introduced. Prerequisite(s): course 103 or 104 or 107 or 108; or by consent of instructor. (General Education Code(s): TA) The Staff

107. Introduction to Classical Chinese Prose. W
Introduces the grammar and lexicon of classical Chinese and the language of China's pre-modern canonical writings in philosophy, religion, history, music, visual art, and literature. Reading from the Han and pre-Han era is featured. (Formerly Introduction to Classical Chinese.) Prerequisite(s): course 103 or 104 or 105 or 108; or by consent of instructor. Enrollment limited to 25. (General Education Code(s): TA) The Staff

108. Introduction to Classical Chinese Poetry. S
Introduces the grammar and lexicon of classical Chinese and the language of China's pre-modern canonical writings in philosophy, religion, history, music, visual art, and literature. Classical poetry and lyrics are featured. Prerequisite(s): course 103 or 104 or 105 or 107; or by consent of instructor. (General Education Code(s): TA) The Staff

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. The Staff
194. Group Tutorial. **F,W,S**

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

* Not offered in 2018-19

Revised: 07/15/18
“Classics” is a traditional designation for the study of the literature, history, and culture of ancient Greece and Rome. Classical studies at UCSC is an interdisciplinary field; while all students are required to learn Latin and/or ancient Greek, and to take upper-division courses in Greek and Latin literature, the major also includes courses in history, the history of art and visual culture, archaeology, linguistics, literature, philosophy, politics, religious studies, and theater arts. Students are encouraged to study the literary and material artifacts of Greece and Rome within the larger context of ancient Mediterranean and Near Eastern cultures.

The classical studies program offers an opportunity to work in small classes with a dedicated teaching faculty and excellent fellow students. Classical studies is an excellent preparation for further study in a wide variety of graduate and professional programs including history, art history, comparative literature, English, philosophy, law, education, and publishing.

The basic requirements for the classical studies major allow a variety of emphases and concentrations, and the major accommodates students with primary interests not only in ancient literature, but also in the ancient history of the Mediterranean, ancient art, archaeology, religion, philosophy, and politics. For example, students with an interest in contemporary philosophy and political theory might want to concentrate in Greek, taking upper-division courses in Greek, history, philosophy, and politics. Students with an interest in European literature might want to concentrate in Latin, taking upper-division courses in Latin, history, and literature in translation. Students planning on pursuing a classics degree at the Ph.D. level should concentrate most of their coursework in the Greek and Latin languages themselves.

Classical studies is administered by the Department of History. For additional information on curriculum and advising, see the classical studies website.

**Program Learning Outcomes**

**Language**

Competition in one or more ancient languages. At present offerings include Greek and Latin (full curriculum offered yearly). Majors have also taken Biblical Hebrew and Hieroglyphics (offered less often).

**Interdisciplinary Exposure**

Familiarity with one or more of the disciplinary approaches represented by the faculty in the program, as well as other relevant approaches in the division and the university. Courses at present credited for the major include (but are not limited to) offerings in: history, literature, philosophy, archaeology, art history, and theater arts. For the skills and outcomes fostered by these disciplines see the reports of the relevant departments.

**Collaboration**

Provide constructive and effective critiques of each other's work.

**Research, Critical Reading, Writing**

Gather and engage critically with primary sources.

Evaluate competing interpretations and multiple narratives.

Compile a bibliography.

Present clear and compelling arguments, based on critical analysis of diverse historical sources, and effectively communicate your interpretations in written essays and/or other media.

**Scope and Thematic**

Through completion of a combination of courses, become familiar with the ancient cultures of:

- the western Mediterranean.
- the eastern Mediterranean.
- the Near East.

Comparative study: whether of diverse ancient cultures or of ancient and later cultures

Reception: ancient culture as understood by later traditions

**Requirements for the Major**

A prerequisite for the classical studies major is the lower-division sequence in elementary Greek or Latin language (Greek 1 and 2 or Latin 1 and 2, or the equivalent). A minimum of 47 upper-division units must be completed within the classical studies major course requirements. The major requires a total of 10 courses plus a senior comprehensive examination and must include the following:

- one lower-division survey of ancient history or literature in translation;
- three upper-division courses in Greek (LIT 184A-Z) or Latin literature (LIT 186A-Z);
six additional approved upper-division courses (which may include additional courses in Greek or Latin literature);

- enrollment in a 2-credit comprehensive examination preparatory course, Classical Studies (CLST) 197F, is required in the same quarter that the senior comprehensive examination will be given. The preparatory course will be taken with the chair of the student's examination committee.

**Comprehensive Requirement.** Classical studies majors are required to pass a senior comprehensive examination. Each student shall identify a minimum of two classical studies faculty members to serve on the examination committee, one of which shall be designated as the committee chair. Please consult the classical studies website for a more detailed description of this requirement.

**Disciplinary Communication (DC) Requirement.** Students of every major must satisfy that major’s upper-division Disciplinary Communication (DC) requirement. The DC requirement in classical studies is satisfied by completing two upper-division courses in Greek literature or Latin literature from the following list:

- Greek Literature: LIT 184B, 184C, 184D, 184E
- Latin Literature: LIT 186B, 186C, 186D.

**Honors in the Classical Studies Major.** All students who announce candidacy during the academic year are reviewed for honors or highest honors in the major. The classical studies faculty advisers determine honors based upon courses applied toward the classical studies major. Performance in courses taken elsewhere and being transferred toward the major will be considered when applicable. The minimum standard applied is excellence in most courses for honors, and excellence in all courses for highest honors. Summer, fall, and winter graduates will be reviewed at the end of each of their respective quarters. Spring graduates will be reviewed as of the spring announcement of candidacy deadline.

**REQUIREMENTS FOR THE MINOR**

A minor in classical studies requires the lower-division sequence in elementary Greek or Latin language (Greek 1 and 2 or Latin 1 and 2, or the equivalent) and LIT 184A, Introduction to Greek Literature, or LIT 186A, Introduction to Latin Literature, plus any four of the upper-division courses listed as satisfying the classical studies major requirements.

**CLASSICAL STUDIES FACULTY AND PROFESSIONAL INTERESTS**

- Medieval visual culture, with emphasis on Byzantium and its periphery; manuscript illumination, Marian cult and iconography; ancient Greek and Roman visual culture; Islamic visual culture; gender studies
- Mary-Kay Gamel, Professor of Literature, Emerita
- Gildas Hamel, Security of Employment Lecturer of History, Emeritus
- Charles W. Hedrick Jr., Professor of History
- John P. Lynch, Professor of Literature, Emeritus
- Dean Mathiowetz, Associate Professor of Politics
- Ancient political thought, philosophies of language and affect, early-modern and late-modern political economy
- Gary B. Miles, Professor of History, Emeritus
- Daniel L. Selden, Professor of Literature
- Afroasiatic languages and literatures, Greek and Latin,
Classical Studies

Hellenistic culture, the classical tradition, history of criticism, literary theory

Elaine Sullivan, Assistant Professor of History
Pharaonic Period Egypt; Greek and Roman Egypt; women and gender; material culture; ritual landscape; 3D modeling; Digital Humanities and the use of emerging technologies in studying the ancient world

Revised: 07/15/18
GRADUATE PROGRAM DESCRIPTION

Students in the University of California, Santa Cruz’s Coastal Science and Policy Program (CSP) will develop a range of skills, interdisciplinary knowledge, and transdisciplinary approaches pertinent to creating real-world solutions to current and emerging concerns for coastal sustainability. At the core of the program, students will take courses focused on understanding and applying concepts of sustainability that include environmental, social, economic and legal dimensions. In addition, students will participate in communication, technical, and leadership skill development workshops. With this backbone, students will participate in solutions-based courses, internships, and a capstone project executed in one-on-one collaboration with partners in business, governmental agencies and non-governmental organizations. With this backbone, students will participate in solutions-based courses, internships, and a capstone project executed in one-on-one collaboration with partners in business, governmental agencies and non-governmental organizations. With this combination of focused courses, skill set development, and practical experience, graduates will be well prepared and highly competitive for the diverse job opportunities in the growing fields of coastal science and policy. Although the focus of most material will be coastal or marine, the principles and practices learned by the students will be applicable in any geographical location or sector.

The program will focus on practical training to provide integrated solutions to social and ecological challenges via three interconnected nodes that leverage UCSC’s existing leadership in coastal sustainability:

- Conserving biodiversity, ecosystem processes, and human well-being,
- Mitigating hazards to nature and society, fostering societal adaptation, and
- Maintaining security of marine, terrestrial, and freshwater food, water, and energy systems.

PREPARATION FOR GRADUATE WORK IN COASTAL SCIENCE AND POLICY

Students admitted to the Master of Science (M.S.) in Coastal Science and Policy program will have completed a bachelor's degree at a four-year university in a field relevant to coastal sustainability. Relevant fields are diverse and include the natural sciences (e.g., biology, earth sciences, chemistry, oceanography), social sciences (e.g., economics or business, human ecology, political science, sociology), interdisciplinary programs (e.g., environmental studies and sciences) and engineering. Specific additional requirements prior to admission, regardless of undergraduate major and/or minors, include at least one course each in writing, and statistics, as well as at least one course each in at least two of three emphasis areas: biological sciences, physical sciences, and the social sciences, including policy and economics. We anticipate that competitive applicants to the program will have additional experience, through some combination of coursework, internships, jobs and research, in the environmental field.

MASTER OF SCIENCE IN COASTAL SCIENCE AND POLICY REQUIREMENTS

The master’s degree in coastal science and policy is a Plan II (capstone project) degree.

CORE COURSES

The M.S. program will include a core set of three foundational (CSP 200, Natural Science for Coastal Sustainability; CSP 210, Social Science for Coastal Sustainability; CSP 220, Economics for Coastal Sustainability) and six developmental (CSP 230, Integrated Problem-based Discussion; CSP 241/BIOE 286, Experimental Design and Data Analysis; CSP 242/ENVS 240, Public Policy and Conservation; CSP 243, Coastal Governance; CSP 244, Adaptation and Planning; CSP 245/BIOE 262, Facilitating Change in Coastal Science and Policy) required courses that cut across multiple disciplines and will be taught by core faculty, partner practitioner-scientists, and specialist trainers. The core sequence serves many objectives, including creating and maintaining a strong program community, teaching core skills and topics, preparing for and building on the summer internship training, linking new and returning trainees, and generating a lively, ongoing set of intellectual conversations to explore, define, and pursue transformative contributions to conservation and sustainability science. In order to assure a strong interdisciplinary approach, courses will be taught by natural and social science faculty. In addition, all coursework will be solutions-based.

ELECTIVE COURSE

M.S. students will also take one additional elective course their first year. The elective will be drawn from courses currently offered across the UCSC campus. The selection of an elective course will be made in consultation with the student’s faculty adviser, with the goal of broadening disciplinary knowledge. For example, incoming students with an undergraduate degree in the natural sciences (e.g., ecology) may be expected to take a graduate or upper-division undergraduate social sciences course (e.g., politics, economics).

SUMMER INTERNSHIP
During the summer at the end of their first year, M.S. students will be required to participate in an intensive summer internship program. This internship will consist of placements in partner agency, nongovernmental organization, or industry projects to provide trainees with practical awareness in the conservation and sustainability science field and give them firsthand immersion in the processes involved in implementing scientific knowledge and innovations as components of solutions to the complex challenge of domestic or international coastal sustainability. Internship projects will be required to include: 1) a real concern of the institutional partner, 2) research, solutions development, and implementation, and 3) strong interdisciplinary elements. A faculty adviser will oversee the internship. It is the intention that, in collaboration with institutional partners and CSP advisers, students’ capstone projects will emerge from this summer internship experience.

**CAPSTONE PROJECT**

In the second year students will develop and implement a capstone project by enrolling in and fulfilling the requirements for CSP 290, Coastal Science and Policy Capstone Project (10 credits/quarter). This project will be developed in collaboration with institutional partners and CSP faculty and is intended to: a) address a real concern of the institutional partner, and b) include research, solutions development, and implementation, and be strongly interdisciplinary in nature. A faculty adviser team consisting of a socio-economic faculty and natural science faculty will oversee the capstone project. In the final quarter (spring, year 2) students will provide a written and oral presentation of the project to CSP students, faculty and institutional partners. The final presentations will be required to address both the socio-economic and natural science elements of the selected project.

**CAPSTONE PROJECT SEMINAR**

Each quarter of the second year, students will enroll in CSP 291, Coastal Science and Policy Capstone Seminar (2 credits/quarter). This seminar will serve as a forum, led by an interdisciplinary team of social/natural science faculty, for students to discuss current topics and approaches in sustainability science as well as an opportunity for students to present issues, topics, and proposals relevant to their capstone projects. Students enrolled in this course will provide oral and written peer review of other students’ projects and presentations.

**COASTAL SCIENCE AND POLICY FACULTY AND PROFESSIONAL INTERESTS**

**PROFESSOR**

- **Mark Carr**
  Marine conservation and ecology, marine and coastal conservation policy

- **Donald Croll**
  Marine conservation biology, marine vertebrate ecology

- **Daniel Press**
  Environmental policy and regulation, sustainable food systems

- **Pete Raimondi**
  Design of conservation and restoration projects, marine ecology, experimental design and statistics

- **Erika Zavaleta**
  Conservation biology, global change effects on ecosystems, climate change adaptation

**ASSOCIATE PROFESSOR**

- **Elliot Campbell**
  Policy and governance, Earth sciences, agroecology, global biogeochemical cycles

**ASSISTANT PROFESSOR**

- **Anne Kapuscinski**
  Sustainability science and policy

- **Kristy Kroeker**
  Climate change ecology, coastal management and policy

- **Kathy Seto**
  Policy and governance

- **Jeremy West**
  Public policy and environmental sustainability

- **Suzanne Alonzo** (Ecology and Evolutionare Biology)
  Ecological modeling and statistics, behavioral ecology, resource management

- **Jeff Bury** (Environmental Studies)
  Natural and social system transformation, political economy of climate change

- **Daniel Costa** (Ecology and Evolutionare Biology)
  Physiological ecology, ecosystem-based management
Lindsey Dillon (Sociology)  
Urban environments and social justice

Christopher A. Edwards (Ocean Sciences)  
Ocean modeling, ecosystem processes, marine population connectivity

James Estes (Ecology and Evolutionary Biology)  
Marine ecology, food web ecology, marine conservation and management

Andrew T. Fisher (Earth and Planetary Sciences)  
Earth and ocean sciences, hydrogeology, managed aquifer recharge systems

Greg Gilbert (Environmental Studies)  
Applied evolutionary ecology: species interactions and conservation in tropical and temperate ecosystems

David Gordon (Politics)  
Social sciences, global coordination, non-traditional modes of collective action, governance outcomes

Gary Griggs (Earth and Planetary Sciences)  
Coastal geology, shoreline and beach dynamics

Karen Holl (Environmental Studies)  
Restoration ecology, design of coastal habitat and international forest restoration, landscape ecology

Sikina Jinnah (Politics)  
Policy and governance, environmental governance, climate engineering governance

Marm Kilpatrick (Ecology and Evolutionary Biology)  
Disease ecology, population biology, conservation biology, mathematical ecology

Paul Koch (Earth and Planetary Sciences)  
Stable isotope biogeochemistry, climate change

Raphael Kudela (Ocean Sciences)  
Earth and ocean sciences, nutrient loading, harmful algae, water quality

Eric Palkovacs (Ecology and Evolutionary Biology)  
Conservation biology, freshwater ecology, invasion biology

Ingrid Parker (Ecology and Evolutionary Biology)  
Basic and applied evolutionary ecology of plant-insect mutualisms and plant-pathogen interactions

Adina Payton (Earth and Planetary Sciences, Ocean Sciences)  
Earth sciences, biogeochemistry, chemical oceanography, paleoceanography

Chris Wilmers (Environmental Studies)  
Population and community ecology, wildlife conservation, ecological modeling, marine-terrestrial food webs

COASTAL SCIENCE AND POLICY MANAGEMENT COURSES

GRADUATE COURSES

200. Natural Sciences for Coastal Sustainability. F  
Provides a basic foundation in the natural sciences including the environment (atmosphere, land, water, sea), species populations, ecosystems and biodiversity, and their relevance to sustainability issues of the coastal zone. Prerequisite(s): concurrent enrollment in courses 210 and 220. Enrollment is restricted to graduate students in the coastal science and policy program, or by permission of the instructor. Enrollment limited to 10. The Staff

220. Economics for Coastal Sustainability. F  
Builds a foundation of economic concepts pertaining to the environment and explores tools for environmental valuation. Investigates the role for government action related to the environment, including estimation of costs and benefits for regulations and related policies. Prerequisite(s): concurrent enrollment in courses 200 and 210. Enrollment is restricted to graduate students in the coastal science and policy program, or by permission of the instructor. Enrollment limited to 10. J. West

230. Integrated Problem-Based Discussion (no credit). F  
Focusing on a series of case studies, this discussion section demonstrates means and values of integrating across the natural and social sciences and economics disciplines in developing solutions to coastal sustainability. Prerequisite(s): Concurrent enrollment in courses 200, 210, and 220. Enrollment restricted to coastal science and policy graduate students. The Staff

241. Experimental Design and Data Analysis. F  
Focuses on problems and designs in ecology and population biology. Topics include experimental design; exploratory data analysis; hands-on statistics; and graphical theory. Structured around a statistical analysis and graphics program to teach students to design surveys and experiments and analyze data. Previous work in statistics strongly recommended. (Also offered as Biology:Ecology & Evolutionary 286. Students cannot receive credit for both courses.) Prerequisite(s): Current enrollment in course 241L. Enrollment is restricted to coastal science and policy graduate students. P. Raimondi

241L. Experimental Design and Data Analysis Lab (2 credits). F  
Lab will focuses on hands-on statistical problem solving, graphical presentations and experimental design issues. (Also offered as Biology:Ecology & Evolutionary 286L. Students cannot receive credit for both courses.) Prerequisite(s): Current enrollment
Coastal Science and Policy

in course 241. Enrollment is restricted to coastal science and policy graduate students. P. Raimondi

242. Public Policy and Conservation. W
Introduction to political and economic approaches to policy analysis, with particular reference to natural resource scarcity, property rights, and environmental conservation. Case studies apply economic and policy process concepts to the management of public lands, biodiversity, and renewable resources. (Also offered as Environmental Studies 240. Students cannot receive credit for both courses.) Enrollment is restricted to coastal science and policy graduate students. D. Press

243. Coastal Governance. W
Introduction to major theories of ocean and coastal governance, with emphasis on those that underlie current policy and management approaches. Students analyze local, state, national, and international laws and policies, considering interactions across scales, levels of social organization, and institutions. Taught in conjunction with ENVS 150. Students cannot receive credit for this course and for ENVS 150. (Also offered as Environmental Studies 250. Students cannot receive credit for both courses.) Enrollment is restricted to coastal science and policy graduate students. K. Seto

244. Adaptation and Planning. S
Introduces students to conceptual frameworks for developing solutions to coastal sustainability problems, and drawing on knowledge and skills gained in previous coastal science and policy courses to perform an integrated assessment of a coastal sustainability problem. Enrollment restricted to coastal science and policy graduate students. The Staff

245. Facilitating Change in Coastal Science Policy. S
Skills-based course in effective leadership and communication, including stakeholder engagement, facilitation, conflict resolution, team building, and introduction to project management. Communication training includes identifying audiences and objectives (public, philanthropy, policymakers, managers, scientist practitioners) and leveraging non-traditional communication platforms. Enrollment is by application and restricted to graduate students. (Also offered as Biology:Ecology & Evolutionary 262. Students cannot receive credit for both courses.) Enrollment limited to 16. K. Kroeker

280A. Coastal Science and Policy Capstone Project (10 credits). F
First of three independent research courses during which students work closely with partner institutions and faculty co-mentors to generate alternative, interdisciplinary-based solutions to coastal sustainability problems. Provides experience in a real-world, collaborative, problem-solving environment. Prerequisite(s): Concurrent enrollment in course 291. Enrollment restricted to coastal science and policy graduate students. Enrollment limited to 10. E. Zavaleta, M. Carr, D. Croll

280B. Coastal Science and Policy Capstone Project (10 credits). W
Second of three independent research courses during which students work closely with partner institutions and faculty co-mentors to generate alternative, interdisciplinary-based solutions to coastal sustainability problems. Provides experience in a real-world, collaborative, problem-solving environment. Prerequisite(s): Concurrent enrollment in course 291. Enrollment restricted to coastal science and policy graduate students. Enrollment limited to 10. E. Zavaleta, M. Carr, D. Croll

280C. Coastal Science and Policy Capstone Project (10 credits). S
Third of three independent research courses during which students work closely with partner institutions and faculty co-mentors to generate alternative, interdisciplinary-based solutions to coastal sustainability problems. Provides experience in a real-world, collaborative, problem-solving environment. Prerequisite(s): Concurrent enrollment in course 291. Enrollment restricted to coastal science and policy graduate students. Enrollment limited to 10. E. Zavaleta, M. Carr, D. Croll

290A. Coastal Science and Policy Capstone Seminar (2 credits). F, W, S
Concurrent with year-long capstone project. Students share the background, challenges and successes they experience in their capstone projects. Provides students with a broader exposure to real-world, collaborative, problem-solving of coastal sustainability issues. Corequisite(s): course 290. Enrollment is restricted to coastal science and policy graduate students. Enrollment limited to 10. May be repeated for credit. E. Zavaleta, M. Carr, D. Croll

Revised: 07/15/18
Cognitive science focuses on achieving a scientific understanding of how human cognition works. Its subject matter encompasses cognitive functions (such as memory and perception), the structure and use of human language, the evolution of the mind, artificial intelligence, and more.

The cognitive science degree provides a strong grounding in the principles of cognition through courses in cognitive psychology, and, in addition, provides breadth in the interdisciplinary aspects of cognitive science such as anthropology, linguistics, biology, philosophy, and computer science. Graduates will be well prepared for advanced training in research fields of cognitive psychology and cognitive neuroscience, technology industries such as human-computer interaction, and health fields, such as the treatment of brain disorders.

The cognitive science major is intended for students wishing to enter doctor of philosophy (Ph.D.) programs in cognitive psychology, cognitive science, or cognitive neuroscience to pursue careers in research; enter the field of public health to work with individuals with neurological disorders or learning disabilities; to enter the field of human-computer interaction design; or pursue other related careers.

Students who complete the cognitive science major should demonstrate competency in:

- **Application of knowledge with critical thinking skills.** Students should be able to use critical thinking to evaluate and interpret evidence, and to apply cognitive science concepts, theories, and research findings to individual, social, and cultural issues.
- **Application of research methods with values and integrity.** Students should be able to apply basic research methods in cognitive science, with sensitivity to ethical principles.
- **Communication skills.** Students should be able to demonstrate effective communication skills following professional conventions in cognitive science appropriate to purpose and context.
- **Awareness of methodological and theoretical diversity.** Students should be able to understand the complexities of cognition using neural, embodied, social, and/or technological approaches.

Students who are not prepared to begin the calculus requirement should take preparatory courses offered by the mathematics and applied mathematics departments, including pre-calculus.

Students may petition to declare the cognitive science major once they have completed the lower-division requirements. For students to be admitted to the major, they must have a 2.80 or higher cumulative GPA in the lower-division requirements and receive a C or better in each of the courses. Transfer students may substitute equivalent courses from other institutions. Students not meeting the grade requirements in the lower-division courses may take any of the listed alternatives as substitutions; the department will use the highest grade to compute GPA.

Students who are informed that they are not eligible to declare the major may appeal this decision by submitting a letter to the department chair within 15 days from the date the notification was mailed. Within 15 days of receipt of the appeal, the department will notify the student, college, and Office of the Registrar of the decision.

Junior transfer students should express an interest in cognitive science on their UC Santa Cruz application for admission.

It is expected that prospective transfer students will have completed most, if not all, of the lower-division requirements. The lower-division requirements include Math 11A (or equivalent), PSYC 2 (or equivalent) and the computer programming requirement, are required. It is recommended that Psychology 20 is completed prior to transfer, but this is not required. In order to declare the major, transfer students must meet the GPA requirement described in the Major Qualification Requirements section above.

Students who want to fulfill requirements with courses taken at other colleges must petition for the substitution of their transfer courses at an orientation session or at an appointment with the department adviser. Psychology 100, Research Methods in Psychology, must be taken at UCSC. Students planning to transfer to UCSC should check with the advising
Transfer students are strongly encouraged to speak with an academic adviser at the Psychology Department office prior to enrolling in classes in order to determine their status and begin the actual declaration of major process.

REQUIREMENTS FOR THE COGNITIVE SCIENCE MAJOR

The undergraduate degree program in cognitive science is a program offering a course of study leading to the bachelor of science (B.S.) degree. Fifteen courses (77 credits) are required. Because some courses have additional prerequisites, students should read the descriptions of courses carefully, noting the prerequisites for courses of interest to them.

LOWER-DIVISION REQUIREMENTS

Introduction to Cognition (one of PSYC 20A or 20B)
Statistics (one of PSYC 2, AMS 5 or AMS 7/L)
Calculus (one of AMS 11A, MATH 11A, 19A or 20A)
Computer Programming (one of CMPE 13/L, CMPS 5C, 5J, 5P, 12A)

UPPER-DIVISION REQUIREMENTS

Students must complete 11 courses toward the major after completing the lower-division requirements. At least eight of these must be upper-division courses (a minimum of 42 credits). These must include Psychology 100, three upper-division core courses and three upper-division cognitive psychology electives, as described below. Students must also complete four interdisciplinary electives in other departments, which may or may not be upper-division. Students must ensure that one of the interdisciplinary electives is an upper-division course.

Psychology 100, Research Methods in Psychology (7 credits)

CORE COURSES

Students must complete a course from three of the following areas:
Perception (Psychology 120 or 121)
Neuroscience (Psychology 123)
Language (Psychology 125)
Memory (Psychology 129)

COGNITIVE PSYCHOLOGY ELECTIVES

Students must complete three additional upper-division Psychology courses from the following list. One of the core courses that is not used to satisfy the core courses requirement may be used to satisfy this requirement. One of these cognitive electives must be a Cognitive Senior Seminar as designated by the asterisks below. Any of Psychology 120-138 (i.e., the Cognitive Series) Psychology 104, Development in Infancy
Psychology 105, Children's Thinking
Psychology 116, Communication Technologies, Culture, and Human Development
Psychology 119E, The World of Babies *
Psychology 119F, Language Development *
Psychology 119P, Children and Technology *
Psychology 139B, Consciousness *
Psychology 139D, Modeling Human Performance *
Psychology 139F, Psychology and Evolutionary Theory *
Psychology 139G, Conversations *
Psychology 139H, Weird Science *
Psychology 139j, Forgetting *
Psychology 139K, Face Recognition *
Psychology 139L, Illusions *
Psychology 139M, Human-Robot Interaction *
Psychology 179F, The Path to a Science of Dreaming *
Psychology 181, Psychological Data Analysis
Psychology 194B, Advanced Cognitive Research
Psychology 195A, Senior Thesis
Psychology 204-252, graduate cognitive courses, by petition
* denotes Senior Seminar

INTERDISCIPLINARY ELECTIVES

Students must complete four interdisciplinary electives from lists of courses pre-approved by the Psychology Department, one of which must be upper-division. The electives fall into four groups: Evolution; Artificial Intelligence and Human-Computer Interaction; Linguistics; Philosophy. Three of the four electives must be selected from the same group. Students are responsible for planning their course of study to complete any necessary prerequisites for electives they wish to take. Possible sequences of interdisciplinary courses, including prerequisites, are given below.

GROUP 1: EVOLUTION

Anthropology 1, 100, 101, 104, 105, 106, 109, 112, 139 (also listed in Group 3), 173, 174, 175A, 184/L, 194B, 194H, Biology: Ecology and Evolutionary Biology 20C, 109, 124/L, 129/L, 140, 141L, 147, 172/L, Biology: Molecular, Cell, and Developmental Biology 80E, 105, 120, 125, Philosophy 127 (also listed in Group 4), 190F (also listed in Group 4)

GROUP 2: ARTIFICIAL INTELLIGENCE AND HUMAN-COMPUTER INTERACTION

Computer Engineering 8, 9, 80A, 80U, 131, 161, 167/L; Computer Science 17, 80B, 80J, 80V, 132, 140; Computational Media 20, 80K, 146, 148; Music 80L

Note: The upper-division School of Engineering courses in this section have additional prerequisites that are not listed here.

Note: The lower-division computer science courses in this section are not being offered at present.
GROUP 3: LINGUISTICS
Anthropology 139 (also listed in Group 1), Linguistics 50, 53, 80C, 80D, 101, 102, 105, 107, 111 (formerly Linguistics 55), 112 (formerly Linguistics 52), 113, 116, 117, 124, 125, 140, 151, 152, 155, 157, 158

GROUP 4: PHILOSOPHY
Philosophy 9, 11, 80S, 100B (formerly Philosophy 93), 100C (formerly Philosophy 94), 121, 123, 125, 127, (also listed in Group 1), 133, 135, 190 (by petition)

COMPREHENSIVE REQUIREMENT
UCSC requires that every student satisfy a senior exit/comprehensive requirement prior to graduation. Cognitive Science students will satisfy this requirement by receiving a passing grade in a senior seminar (PSYC 139A-M, or 119E, or 119F, or 119P, or 179F).

DISCIPLINARY COMMUNICATION (DC) REQUIREMENT
Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in cognitive science is satisfied by completing Psychology 100, Research Methods in Psychology, and the Senior Seminar requirement.

HONORS
Honors in the cognitive science major are awarded to graduating seniors whose UCSC GPA is a 3.6 or higher in psychology courses (1-189).
Highest honors in the major are reserved for students who meet the honors criteria as well as successful completion of a senior thesis, or whose UCSC GPA is a 3.9 or higher in psychology courses (1-189).

COGNITIVE SCIENCE COURSE PLANNERS
Following are two recommended academic plans for students to complete the Cognitive Science major. Plan 1 assumes typical curriculum selections. Plan 2 assumes the maximum number of prerequisites.

<table>

Revised: 07/15/18
COLLEGE NINE COURSES

LOWER-DIVISION COURSES

1. Academic Literacy and Ethos: International and Global Perspectives. F
Teaches foundational concepts for intellectual exploration and personal development within an academic community: analysis, critical thinking, metacognition, engagement with others across difference, and self-efficacy. Addresses large-scale political, cultural, and economic issues to inform global citizenship. Enrollment is restricted to first-year college members. Enrollment limited to 30. The Staff

70. Colleges Nine and Ten Community Garden (2 credits). F
Students in this course design and build a new community garden at Colleges Nine and Ten. Students engage in a collaborative design process with campus stakeholders; learn hands-on skills and community gardening best practices; and build regenerative social and ecological systems. Enrollment is restricted to first-year College Nine and College Ten members. May be repeated for credit. L. Beckett

85. Global Action (2 credits). W
Workshop facilitated by peer instructors. Students learn about current international and global issues through interactive exercises, small-group discussions, and faculty presentations. Students develop an "action plan" to raise awareness about one or more of these concerns and take practical steps to create positive change in the world. Enrollment is restricted to College Nine members during priority enrollment only. Enrollment limited to 30. E. Ramsden

86. College Leadership Development (2 credits). S
Students newly appointed into leadership positions at College Nine explore the concept of leadership relating to the college's theme of International and Global Perspectives. Prerequisite(s): current College Nine student leader; permission of instructor. Enrollment limited to 30. (General Education Code(s): PR-E.) M. Hutton

90. Intercultural Understanding (2 credits). F
Provides an opportunity to enhance the intercultural experience, increase cultural competency, promote further understanding, and examine the various trends facing a uniquely diverse community. Geared toward U.S. and international students affiliated with the International Living Center. Enrollment by instructor permission. Enrollment limited to 50. M. Hutton

91. Global Issues Colloquium (1 credit). S
Weekly colloquium on global issues with different topical focus each quarter. Presentations by UCSC faculty and invited speakers. Students must attend class, read an assigned article, and write a one-page synopsis. Enrollment is restricted to College Nine members. Enrollment limited to 50. May be repeated for credit. D. Lau

UPPER-DIVISION COURSES

105. Researching Food Sovereignty. *
Students engage in individual and collective research projects on transformational food systems in the United States and abroad. Readings look at the current global food system and grassroots responses to food and environmental crises. Enrollment is restricted to junior and senior College Nine and College Ten members during priority enrollment only. Enrollment limited to 20. The Staff

106. Israel and Palestine: Pathways to a Deeper Understanding (2 credits). *
Explores, and seeks to provide a deeper understanding of, the Israeli-Palestinian conflict through materials and guest speakers that offer varying perspectives. Self-reflection and structured communication facilitate the positive exchange of ideas and views. Enrollment by permission of instructor. The Staff

Introduces the Model United Nations. Students learn parliamentary procedure and U.N. protocols, as well as how to research and present position papers to the general assembly. Students learn resolution writing, alliance building, and persuasive speech. (Formerly course 112, Model United Nations: A Group Seminar) Enrollment limited to 35. May be repeated for credit. The Staff

112B. Model United Nations Part B: International Crises (2 credits). *
Students are assigned a country to represent in the U.N. Three international crises allow students...
to present position papers, make speeches, and debate the issues. Prerequisite(s): course 112A. May be repeated for credit. The Staff

120. Practical Activism Conference Planning and Development (2 credits). F Offers an applied experience of collaborative planning, production, and leadership. Students plan workshops and other event components; conduct outreach and publicity; and address all aspects of educational event planning. Enrollment restricted to members of the spring volunteer Practical Activism planning group. Enrollment by permission of the instructor. May be repeated for credit. (General Education Code(s): PR-E.) W. Baxter

191. Teaching Global Action. W Undergraduates at upper-division level participate in teaching discussion groups for College Nine 85 (W). Prerequisite(s): permission of instructor: essay describing interest in becoming course assistant, copies of evaluations, and letter of recommendation from faculty member and/or college staff member. Enrollment is restricted to College Nine juniors and seniors. E. Ramsden

199. Tutorial. F,W,S Individual directed study for upper-division college members with college-affiliated faculty. Students must submit petition with one of the college academic advisers with accompanying letter from faculty adviser. Approval of provost required. Enrollment is restricted to upper-division College Nine members. May be repeated for credit. The Staff

* Not offered in 2018-19

Revised: 07/15/18
PROGRAM DESCRIPTION

For college description and list of faculty, see Colleges.

COLLEGE TEN COURSES

LOWER-DIVISION COURSES

1. Academic Literacy and Ethos: Social Justice and Community. F
   Teaches foundational concepts for intellectual exploration and personal development within an academic community: analysis, critical thinking, metacognition, engagement with others across difference, and self-efficacy. Reflects our college theme of Social Justice and Community, addressing topics such as identity formation, inequality, and environmental injustice. Enrollment is restricted to first-year college members. Enrollment limited to 30. The Staff

60. I Couldn’t Imagine Myself Anywhere Else: Understanding UCSC Undergraduate Narratives. F
   Research seminar for Spring Start students interested in qualitative analysis of personal narratives of UCSC undergraduates to explore themes of identity formation, educational equity, and social justice. Enrollment is restricted to first-year college members. Enrollment limited to 20. (General Education Code(s): PR-E.) R. Majzler

85. Social Justice Issues Workshop (2 credits). W
   Series of presentations, films, and workshops that address personal and cultural identity and examine social, cultural, political, environmental, and other justice concerns. Enrollment is restricted to College Ten members during priority enrollment only. Enrollment limited to 20. W. Baxter

86. College Leadership Development (2 credits). S
   Students newly appointed into leadership positions at College Ten explore the concept of leadership relating to the college’s theme of Social Justice and Community. Prerequisite(s): current College Ten student leader; permission of instructor. Enrollment limited to 30. (General Education Code(s): PR-E.) M. Hutton

92. Social Justice Issues Colloquium (1 credit). *
   Weekly colloquium on social justice issues with a different topical focus each quarter. Presentations by UCSC faculty and invited speakers. Students must attend class, read an assigned article or book chapter(s) on the week’s topic, and write a one-page synopsis. May be repeated for credit. The Staff

95. Social Justice and Nonviolent Communication (Rumi’s Field Living-Learning Community) (1 credit). F
   Rumi’s Field Nonviolent Communication Living-Learning Community operates in a spirit of cooperation, compassion, and goodwill. Students living on Rumi’s Field enroll in this course in fall to explore the relevance of nonviolence to the pursuit of social justice. Restricted to residents of the Rumi’s Field. (Formerly Nonviolent Communication [Living-Learning Community]) Enrollment limited to 25. May be repeated for credit. The Staff

UPPER-DIVISION COURSES

105. The Making and Influencing of Environmental Policy. *
   Explores how environmental policy is made and influenced. Students learn about key contemporary environmental issues and the forces at play in determining environmental policy outcomes. Focuses on skills that enable citizens to impact environmental policy. (Formerly The Making and Influencing of Nuclear Policy.) Enrollment is restricted to sophomore, junior, and seniors. Enrollment limited to 35. (General Education Code(s): PE-E.) The Staff

106. Expressive Arts for Social Justice (2 credits). S
   Students explore their own creative output in order to inspire community dialogue around social justice issues. Open to those who identify as artists as well as those who do not. Interested students must attend an information session and commit to expectations. Preference is given to College Nine and College Ten members. (General Education Code(s): PR-C.) W. Baxter, The Staff

   Fosters a deeper intellectual engagement with the theme of College Ten through the design and
implementation of community-based research projects developed in close consultation with community partners. Students gain methodological, teamwork, and critical-thinking skills while furthering social justice.

Prerequisite(s): College Nine 85, or College Ten 85, or equivalent. Enrollment is restricted to College Nine and College Ten members and by permission of instructor. Enrollment is limited to 20. May be repeated for credit. (General Education Code(s): PR-E.) The Staff

120. Practical Activism Conference Planning and Development (2 credits). F Offers an applied experience of collaborative planning, production, and leadership. Students plan workshops and other event components; conduct outreach and publicity; and address all aspects of educational event planning. Enrollment is restricted to members of the spring volunteer Practical Activism planning group. Enrollment is by permission of the instructor. May be repeated for credit. (General Education Code(s): PR-E.) W. Baxter

125A. Transcommunal Peace Making (2 credits). W Explores the theoretical tenets and applications of Transcommunality, an outgrowth of the principles of Kingian non-violence, which works toward peace, tolerance, and mutual respect across difference and diversity. UCSC students connect with the Cemanahuac Cultural group, a multi-ethnic and multi-racial gathering of incarcerated men who are "warriors for peace" within and outside the prison community. Three meetings will be held at the Correctional Training Facility (CTF) in Soledad, California. Enrollment is restricted to junior and senior College Ten members. Enrollment limited to 12. J. Childs

125B. Transcommunal Peace Making (2 credits). W Explores the principles of community, guided by established texts, for inmates at the Correctional Training Facility (CTF) in Soledad, California. Covers the theoretical tenets and applications of Transcommunality, an outgrowth of the principles of Kingian non-violence. Three joint meetings will be held with UCSC students enrolled in the parallel course 125A. Enrollment is restricted to junior and senior College Ten members. Enrollment limited to 24. J. Childs

135. Social Justice, Institutions, and Power. F Course facilitates critical analysis of cultural and political institutions that shape identity-related struggles including LGBTQ+ issues, religious freedom, class inequality, and race and ethnicity. Uses an interdisciplinary approach to focus on analysis and activism, culminating in a class project to disseminate knowledge and promote activism. Prerequisite(s): College Ten 85, or College Nine 85, or equivalent. Enrollment is restricted to junior and senior College Ten and College Nine members. Enrollment limited to 30. Satisfies American History and Institutions Requirement. L. Beckett

191. Teaching Social Justice. W Undergraduates at upper-division level participate in teaching discussion groups for College Ten 85 (W). Prerequisite(s): permission of instructor: essay describing interest in becoming course assistant, copies of evaluations, and letter of recommendation from faculty member and/or college staff member. Enrollment is restricted to College Ten juniors and seniors. W. Baxter

194. Group Tutorial. F,W,S Independent study through which a group of students explores a particular topic in consultation with an instructor. Prerequisite(s): Course 91 or 105 recommended. Students submit petition to sponsoring agency. Enrollment limited to 15. May be repeated for credit. The Staff

194F. Group Tutorial (2 credits). F,W,S Independent study through which a group of students explores a particular topic in consultation with an instructor. Prerequisite(s): Course 91 or 105 recommended. Students submit petition to sponsoring agency. Enrollment limited to 15. May be repeated for credit. The Staff

199. Tutorial. F,W,S Individual directed study for upper-division college members with college-affiliated faculty. Students must submit petition with one of the college academic advisers with accompanying letter from faculty adviser. Approval of provost required. Enrollment is restricted to upper-division College Ten members. May be repeated for credit. The Staff

199F. Tutorial (2 credits). F,W,S Individual directed study for upper-division college members with college-affiliated faculty. Students must submit petition with one of the college academic advisers with accompanying letter from faculty adviser. Approval of provost required. Enrollment is restricted to upper-division College Ten members. May be repeated for credit. The Staff

* Not offered in 2018-19

Revised 07/15/18
PROGRAM DESCRIPTION

Founded in 1969, community studies is the oldest interdisciplinary program at UCSC. The longstanding hallmarks of community studies are its focus on social justice and its distinctive pedagogy integrating classroom learning and extended field study. Community studies was a national pioneer in the field of experiential education and its civic engagement model has been emulated widely. Community studies was also a pioneer in addressing principles of social justice, specifically inequities arising from race, class and gender dynamics in society at large, and in critically assessing strategies for achieving social change.

The undergraduate major offers highly motivated and focused students the opportunity to pursue a rigorous course of study combining on- and off-campus learning. On campus, students complete a core curriculum enabling them to identify, analyze, and help construct strategies for social justice movements, nonprofit sector advocacy, public policy making, and social enterprise. The core curriculum works in tandem with topical coursework that develops expertise in specific domains of social science scholarship related to the student's field studies. Off campus, students commit to spending six months immersed in a setting where they participate in and analyze the social justice work of an organization, with a goal of making a meaningful contribution to the organization's mission. Students work independently but with active guidance from both campus faculty and an on-site supervisor from the field study organization.

The undergraduate core curriculum begins with the development of skills in social analysis and field observation/participation while deepening students' knowledge of specific histories and theoretical perspectives essential to the study of communities and social transformation. Next, through the six-month full-time field study, students engage with specific communities through residence and participation in an organization with a focused social justice mission. This intensive and extended field study immersion is a distinguishing feature of the community studies major. Finally, students return to campus to analyze their field study experience and its relation to their ongoing classroom-based learning. The major culminates with a senior capstone integrating academic coursework, field study analysis, and original writing.

With the guidance of faculty and staff advisers, community studies students choose field placements related to the program's areas of focus in health justice and economic justice. In the past, placements have been arranged with community health clinics, women's and feminist organizations, immigrant-rights centers, media advocacy organizations, homeless resource and support groups, sustainable development projects, queer and transgender organizations, neighborhood or workers' collectives, civil rights groups, community food security programs, legal clinics, community-based cultural organizations, programs for seniors, tenant or labor unions, tenant organizing projects, HIV/AIDS advocacy groups, housing rights advocates, harm reduction programs, government agencies and the offices of elected officials, and still other organizations committed to and working for social justice. As political, economic, cultural and technological landscapes shift, so do the needs and opportunities for social justice organizing. It is a dynamic world and throughout its history Community Studies has been noteworthy for being attuned and responsive to innovative field study opportunities.

Community studies alumni have pursued a wide variety of professional careers in health care, K-12 education, public policy, social work, urban planning, higher education, and law. According to a 2005 alumni survey, almost 100 alumni have founded non-profit social justice organizations and many more have served on non-profit boards and/or in executive director positions. The phrase “we are everywhere” is an apt description of the contribution community studies alumni have made to society over the past half century.

PROGRAM OVERVIEW

Community studies is a major with a sequential core curriculum. This means that core curriculum courses must be completed in a specific order:

<table>
<thead>
<tr>
<th>Fall Quarter</th>
<th>CMMU 10, Introduction to Community Activism</th>
</tr>
</thead>
<tbody>
<tr>
<td>Winter (pre-field study)</td>
<td>CMMU 101, Communities, Social Movements, and the Third Sector</td>
</tr>
<tr>
<td>Spring</td>
<td>CMMU 102, Preparation for Field Study</td>
</tr>
<tr>
<td>Summer/Fall</td>
<td>CMMU 105, Full-time Field Study (15 credits per quarter)</td>
</tr>
<tr>
<td>Winter (post-field study)</td>
<td>CMMU 107, Analysis of Field Study</td>
</tr>
</tbody>
</table>

In addition to the core curriculum, students must successfully complete three topical courses to develop expertise in health justice and economic justice. Students are required to take all three topical courses prior to their field study.
A list of approved topical courses will be posted in the program office and updated regularly on the program website.

## Suggested Major Planning Table

<table>
<thead>
<tr>
<th></th>
<th>Fall</th>
<th>Winter</th>
<th>Spring</th>
<th>Summer</th>
</tr>
</thead>
<tbody>
<tr>
<td>1st (frosh)</td>
<td>CMMU 10</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>2nd (soph)</td>
<td>Topical course 1</td>
<td>Topical course 2</td>
<td></td>
<td></td>
</tr>
<tr>
<td>3rd (junior)</td>
<td>Topical course 3</td>
<td>CMMU 101</td>
<td>CMMU 102</td>
<td>CMMU 105 (15 credits)</td>
</tr>
<tr>
<td>4th (senior)</td>
<td>CMMU 105 (15 credits)</td>
<td>CMMU 107</td>
<td>CMMU 195 (optional)</td>
<td></td>
</tr>
</tbody>
</table>

If CMMU 10 is not taken in the fall of the first year, it can be taken one year later. Likewise, the topical courses need not be taken in the quarters indicated as long as they are completed before CMMU 105. Finally, students who start the major late can still complete the major as long as they have at least two years, as shown in the transfer planner (below).

## Transfer Students

The Community Studies program can easily accommodate students who transfer to UCSC for the fall quarter.

Transfer students will find it helpful to complete courses that satisfy campus general education requirements before arriving at UCSC. Those who plan to major in community studies will find it useful to obtain a background in politics, sociology, psychology, anthropology, or community action and service. During their first quarter at UC Santa Cruz, transfer students should prepare a program of study and meet with the community studies student advisor in the program office to discuss the focus of their academic plan and field study plans.

## Sample Transfer Planner

<table>
<thead>
<tr>
<th></th>
<th>Fall</th>
<th>Winter</th>
<th>Spring</th>
<th>Summer</th>
</tr>
</thead>
<tbody>
<tr>
<td>3rd (junior)</td>
<td>CMMU 10</td>
<td>CMMU 101</td>
<td>CMMU 102</td>
<td>CMMU 105 (15 credits)</td>
</tr>
<tr>
<td></td>
<td>Topical course 1</td>
<td>Topical course 2</td>
<td>Topical course 3</td>
<td></td>
</tr>
</tbody>
</table>

## Declaring the Major

Students qualify to declare the community studies major by satisfactorily completing CMMU 10, Introduction to Community Activism, and at least one upper division topical course from the approved list of courses. Satisfactory completion is defined by a grade of C or better in both major qualifying courses. Major qualification courses must be taken for a letter grade. Students must declare prior to enrolling in CMMU 102, Preparation for Field Study.

As part of the declaration process, students meet with the program director and/or staff adviser to review their academic plan for the major, including discussion of field study possibilities and appropriate courses to meet topical requirements. Students must submit their approved academic plan and declaration petition to the community studies staff adviser. Changes to the student’s academic plan must be approved by the program director.

## Major Course Requirements

Satisfactory completion of all major course requirements is defined by a grade of C or higher. All courses in the major must be taken for a letter grade.

### Community Studies Core Curriculum Courses

**10, Introduction to Community Activism**

This course introduces students to different approaches to community activism including charity, volunteering, labor and community organizing, non-violent resistance, non-profit sector involvement, and media advocacy.

**101, Communities, Social Movements, and the Third Sector**

This course critically engages with concepts central to the major including constructions of community and the institutionalization of social movements in third-sector organizations. It is designed to deepen students’ understanding of the opportunities and obstacles embedded in various avenues of social action such as charity, community organizing and public sector advocacy.

**102, Preparation for Field Study**

This course examines participatory and other social-research methods including participant observation, conducting interviews, writing ethnographic field notes, and collecting descriptive data. Students receive practical experience with developing research questions, methods, and writing field notes. The course also addresses ethical and logistical issues of community-based research. The final project is a literature review completed in partial satisfaction of the
Community Studies

disciplinary communication (DC) general education requirement (explained below).

105, Full-Time Field Study
During the full-time, six-month field study, students are enrolled at UCSC and receive full-time university credit. Students are required to submit field notes and analytical essays during the field study. Students are guided by a campus faculty adviser and on-site organization supervisor.

107, Analysis of Field Materials
This course is designed for students returning from their full-time field study and has two related goals: (1) to help students, both individually and collectively, analyze and gain perspective on their field experiences; and (2) to facilitate completion of the senior capstone requirement. Students work with their field material to develop findings and arguments and connect those to relevant theoretical literature(s). Then, in a series of discussion forums, they use their analyses to confront those issues that most forcefully challenge social justice work in the contemporary moment. The written work of 107 completes the DC requirement.

Topical Requirements
Students must complete three upper-division courses on topics related to health justice and economic justice from available approved courses listed below. The program director also may approve other courses as appropriate. Topical courses are an essential component of the community studies major because they define the focus of students’ overall academic plan and their work on full-time field study. The topical courses also permit students to work across academic disciplines by learning from community studies affiliate faculty. Note that not all topical courses are offered every academic year. Check the program website for current academic year offerings.

TOPICAL COURSES

Community Studies
CMMU 132, American Cities and Social Change
CMMU 133, Making California: Landscapes, People, Politics, Economy
CMMU 134, No Place Like Home
CMMU 141, Political Economy of Inequality
CMMU 143, Walmart Nation
CMMU 145, Global Capitalism: A History of the Present
CMMU 149, Political Economy of Food and Agriculture
CMMU 156, Politics of Food and Health
CMMU 157, Ageism and Activism
CMMU 160, Public Health
CMMU 161, Gender Health and Justice
CMMU 162, Community Gardens and Social Change
CMMU 163, Health Care Inequalities
CMMU 164, Health Justice in Conflict
CMMU 186, Food and Agriculture Social Movements
CMMU 186, Agriculture, Food and Social Justice

Anthropology
ANTH 134, Medical Anthropology: An Introduction
ANTH 136, Biology of Everyday Life
ANTH 153, Medicine and Colonialism
ANTH 194P, Space, Place, and Culture

Education
EDUC 135, Gender and Education
EDUC 173, Seminar in Critical Pedagogy
EDUC 181, Race, Class, and Culture in Education

Environmental Studies
ENVS 130B, Principals of Sustainable Agriculture
ENVS 158, Political Ecology and Social Change

History of Art and Visual Culture
HAVC 141K, Activist Art Since 1960: Art, Technology, Activism
HAVC 141O, Sex, Lies, Surveillance: Contemporary Documentary Arts
HAVC 142, Contemporary Art and Ecology

History
HIS 115A, U.S. Labor History to 1919
HIS 115B, U.S. Labor History 1919-present
HIS 123, Immigrants/Immigration in U.S. History
HIS 190S, Women and Social Movements in the U.S.

Latin American and Latino Studies
LALS 166, Latino Families in Transition
LALS 175, Migration, Gender, and Health

Oakes
OAKS 153, Community Mapping

Politics
POLI 120C, State and Capitalism in American Political Development
POLI 122, Politics, Labor, and Markets in the U.S.

DISCIPLINARY COMMUNICATION (DC) REQUIREMENT

Students of every major must satisfy that major’s upper-division DC requirement. The community studies program’s model of experiential pedagogy relies heavily on writing instruction to develop students’ analytical, reflexive, and communication skills. As stated, although students in the major develop disciplinary writing skills throughout the core curriculum, they fulfill the DC requirement with course 102 and course 107.

SENIOR CAPSTONE REQUIREMENT

In addition to the full-time field study, another distinctive feature of the major is the emphasis placed on the capstone. Each student must fulfill this requirement, either through a senior essay, a senior thesis or a student-directed seminar. For a thesis or student-directed seminar, the student must work directly with a faculty adviser, usually for two quarters.

Senior Essay: All students complete a senior essay that incorporates field study observations and contextualizes their findings historically and theoretically. Most students pursue this capstone option. The minimum length is 25 pages, plus bibliography. The senior essay is completed entirely in course 107, Analysis of Field Materials.

Senior Thesis: Outstanding students may choose to complete a senior thesis, which is comprised of field-study observations, historical and theoretical contextualizations of the field study, and deeper analysis of the social justice issues and histories at the heart of the field study. The thesis also involves post-field-study research; typical length is 40–50 pages, including bibliography. The senior essay completed during course 107 will become the foundation for the thesis, whether as a template to be elaborated or as one or more chapters of the completed thesis. Students electing to write a senior thesis must have a faculty thesis adviser and under direction of the adviser, may enroll in CMMU 195(A,B,C) for variable units in order to complete the thesis.

Student-Directed Seminar (SDS): The SDS capstone option is reserved for exceptional students. Under the direction of a faculty adviser, the student develops and teaches a Community Studies 42 course related to the student’s field study and academic coursework and submits a seminar completion report. Student-directed seminars need advance planning; a proposal for the SDS must be completed before beginning the field study.

HONORS IN THE MAJOR

Honors in the community studies major are awarded to graduating seniors whose performance, including coursework, field study, and the senior capstone, is judged by a faculty committee to have achieved excellence. Highest honors in the major are reserved for students with consistently outstanding academic performance.

PROGRAM LEARNING OUTCOMES

Community studies identifies eight Program Learning Outcomes (PLOs) that together capture exciting cross currents within the major. The PLOs combine classroom and experiential learning related to the social justice domains of health and economic inequality. They also enumerate expectations for student achievement in social science research and writing and communication skills within a diverse society.

CRITICAL THINKING

Students earning a B.A. in community studies will be able to:
1. demonstrate deep knowledge of the history, causes, and contemporary manifestations of specific social justice issues related to health and economic inequality;
2. deconstruct institutional power residing in private enterprise, government, the media, and/or the non-profit sector;
3. analyze how communities attempt to overcome problems associated with inequality, cultural stigma, prejudice, and discrimination;
4. articulate research questions, methods, and findings appropriate to social science inquiry; and
5. demonstrate analytical writing ability that effectively integrates theoretical and experiential knowledge about social justice.

COMMUNITY ENGAGEMENT

Students earning a B.A. in community studies will be able to:
1. identify, analyze, and help to construct strategies for social change through participation in the social justice work of an organization;
2. exhibit ethnographic observation skills by maintaining a regular record of detailed field notes;
3. demonstrate effective communication with the diverse constituencies involved in social justice work.

COMMUNITY STUDIES COURSES

LOWER-DIVISION COURSES

10. Introduction to Community Activism. F
Surveys different strategies of community activism including charity, volunteering, labor and community organizing, and recently emerging global activism with goal of demonstrating how certain strategies challenge existing social relations and arrangements while others typically (and often by design) reproduce them. L. Lopez

30. Numbers and Social Justice. *
Relates simple lessons of quantitative thinking to topical materials that are accessible and relevant to working for justice and social change. Students learn practical techniques to distinguish credible statistical evidence from misleading statistical claims. (Formerly Numbers for Social Justice.) Enrollment limited to 50. (General Education Code(s): SR.) A. Steiner

42. Student-Directed Seminar. F,W,S
Seminars taught by upper-division or graduate students under faculty supervision. (See course 192.) The Staff

Individual directed study for lower-division undergraduates. May be repeated for credit. The Staff

99F. Tutorial (2 credits). F,W,S
Individual directed study for lower-division undergraduates. May be repeated for credit. The Staff

UPPER-DIVISION COURSES

101. Communities, Social Movements, and the Third Sector. W
Engages with crosscutting ideas and concepts central to the major including constructions of community in social-change efforts and the institutionalization of social movements in third-sector organizations. Deepens students’ understanding of the opportunities and obstacles embedded in various avenues of social action. Enrollment is restricted to sophomore, junior, and senior community studies majors and proposed majors. M. Pudup

102. Preparation for Field Studies. S
A practicum to prepare students for field study. Course must be successfully completed prior to the six-month field study. Prerequisite(s): course 10; course 101; satisfaction of the Entry Level Writing and Composition requirements; submission of the signed Goals and Objectives form; and completion of the declaration of major process. Enrollment restricted to community studies majors. A. Steiner

103. Field Study Practicum (2 credits). S
A practicum in social change work in which the students works for a social change organization on a part-time basis. Concurrent enrollment in course 102 is required. A. Steiner

105A. Field Study. F
Full-time independent field study in an approved off-campus setting with onsite supervision by the sponsoring organization and regular distanced supervision by campus faculty. Enrollment is restricted to community studies majors upon completion of the required preparatory coursework. Prerequisite(s): course 102. (Formerly course 198, Independent Field Study.) May be repeated for credit. (General Education Code(s): PR-S.) A. Steiner

105B. Field Study. F
Full-time independent field study in an approved off-campus setting with onsite supervision by the sponsoring organization and regular distanced supervision by campus faculty. Enrollment is restricted to community studies majors upon completion of the required preparatory coursework. Prerequisite(s): course 102. (Formerly course 198, Independent Field Study.) May be repeated for credit. (General Education Code(s): PR-S.) A. Steiner

105C. Field Study. F
Full-time independent field study in an approved off-campus setting with onsite supervision by the sponsoring organization and regular distanced supervision by campus faculty. Enrollment is restricted to community studies majors upon completion of the required preparatory coursework. Prerequisite(s): course 102. (Formerly course 198, Independent Field Study.) May be repeated for credit. (General Education Code(s): PR-S.) A. Steiner

107. Analysis of Field Materials. W
A seminar for students who have completed a full-time field study. Devoted to the systematic analysis of field materials, integrating appropriate concepts and relevant literature, as well as utilizing the experience of other students. (Formerly course 194.) Prerequisite(s): satisfaction of the
Entry Level Writing and Composition requirements, course 198. Enrollment is restricted to community studies majors. The Staff

132. American Cities and Social Change. F
Examines the historical development of and contemporary conditions within U.S. cities by focusing on social and economic restructurings of cities, cultural and political transformations, and spatial reorganizations of the urban landscape. Goal is understanding the changing nature of urban experience. M. Pudup

133. Making California: Landscapes, People, Politics, Economy. *
Examines key moments in the development of California to provide understanding of the challenges and opportunities facing California today. Particular focus is given to abiding tensions around wealth and poverty, opportunity and exclusion, and progressive and conservative politics. J. Guthman

134. No Place Like Home. *
Examines the class and race dynamics of the housing market and public policy, asking what kinds of housing get built, where it gets built, and for whom it is (or is not) built—and, crucially, why. Questions how homelessness became normalized in contemporary society. Enrollment limited to 30. M. Pudup

141. Political Economy of Inequality. W
Examines how markets operate within the political economy of contemporary capitalism to generate myriad and often chronic forms of economic and social inequality in the United States. Explores different approaches to addressing inequality within the multi-faceted economic justice movement. (Formerly Economic Justice.) Enrollment is restricted to community studies majors and proposed majors during First Pass enrollment. M. Pudup

143. Wal-Mart Nation. *
Examines origins and growth of Wal-Mart stores as powerful guides to understanding dynamics of contemporary global political economy and, relatedly, the changing fortunes of global social classes. M. Pudup

Provides an overview of the history of capitalism in order to understand current crises within the global political economy. Gives particular attention to the origin, character, and consequences of neoliberalism. (Formerly Globalization and Its Discontents.) The Staff

149. Political Economy of Food and Agriculture. F
Examines key concepts in agrarian political economy; the historical development of the world food system; and a selection of contemporary issues related to food production, consumption, distribution, and regulation. (General Education Code(s): PE-E.) J. Guthman

151. Sex, Race, and Globalization. *
Examines globalization by attending to shaping forces of sexuality, gender, and race. Foreground Third World feminist theories, social movements. Topics include sexual and racial dynamics of "free trade" and labor fragmentation; global sex trades; HIV/AIDS politics in the South and North; transnational LGBT/queer politics. The Staff

156. Politics of Food and Health. S
Critically examines contemporary debates about market and policy approaches to improve nutrition and dietary health and to address issues, such as food insecurity, obesity, and malnutrition. (Formerly Politics of Obesity.) (General Education Code(s): PE-H.) J. Guthman

157. Ageism and Activism. *
Introduces students to gerontology, the study of aging. Taking a multidisciplinary approach, critically examines the theories, stereotypes, and realities of worldwide demographic transition and considers the many interesting implications for organizing social and personal life. A. Steiner

160. Public Health. *
Examination of community activism to address health issues: examples are drawn from a range of concerns, e.g., environmental racism, prison conditions, feminist health matters, the AIDS epidemic, violence, and alcoholism. Special attention is given to the social frameworks of health and to the utilization of social and political strategies for improving community well-being. Enrollment is restricted to community studies majors and proposed majors during First Pass enrollment. Enrollment limited to 60. The Staff

161. Gender Health and Justice. F
Critically examines concrete aspects of health in U.S. social and political contexts, emphasizing how gendered interpretations and practices construct and affect health equity and the practices of health care. (Formerly Women’s Health Activism.) A. Steiner

162. Community Gardens and Social Change. *
Examines history, theory, and practice of community gardening, emphasizing contemporary garden projects using the transformative power of direct contact with nature to effect social change. Aims include understanding the nonprofit sector’s response to social problems with novel programs and practices. M. Pudup

163. Health Care Inequalities. W
Examines system and non-system that is American health care with special attention to inequalities in access, financing, and quality of care. Covers concepts such as equality, fairness, and need as well as community organizing and community building for health. Enrollment is restricted to community studies majors and proposed majors during First Pass enrollment. A. Steiner

164. Health Justice in Conflict. *
Explores three case studies to address critical themes of healthcare inequalities in the context of conflict: the legal battle of Ecuadorians against Texaco/Chevron; the struggle of “comfort women” during World War II; and chemical saturation in
186. Food and Agriculture Social Movements.*
Examines the primary ways in which activists are attempting to resist, provide alternatives to, and/or transform aspects of the food system using social and environmental justice frameworks to evaluate such activism. Topics explored include organic farming, food charity, fair trade, relocalization, and farmworker organizing. Enrollment is by permission of instructor. (Formerly Agriculture, Food, and Social Justice.) The Staff

189. Methods of Teaching Community Studies. F,W,S
Each student serves as a facilitator for small discussion groups in connection with core community studies courses. Facilitators complete course readings and meet with instructor as a group to discuss the teaching process. May not be counted toward upper-division major requirements. Prerequisite(s): prior course work in the major. The Staff

191. Student Volunteer Internship (3 credits). F,W,S
Course bridges Santa Cruz and university communities through students organizing volunteer opportunities and charitable events. Students contribute 10 hours per week on and off campus, including outreach, event-planning, and database maintenance; supplemented by reading and biweekly discussions. Enrollment is by permission of instructor after application and interview. Enrollment limited to 15. (General Education Code(s): PR-S.) A. Steiner

192. Directed Student Teaching. F,W,S
Teaching of a lower-division seminar, course 42, under faculty supervision. Students submit petition to sponsoring agency. Approval by the Committee on Educational Policy the prior quarter. The Staff

193. Field Study. F,W,S
Supervised work in a community-based setting conducted under the guidance of a faculty member.

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

193F. Field Study (2 credits). F,W,S
Supervised work in a community-based setting conducted under the guidance of a faculty member. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

193G. Field Study (3 credits). F,W,S
Supervised work in a community-based setting conducted under the guidance of a faculty member. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

195A. Senior Thesis. F,W,S
Individual study with a faculty member to complete the senior thesis. The Staff

195B. Senior Thesis. F,W,S
Individual study with a faculty member to complete the senior thesis. The Staff

195C. Senior Thesis. F,W,S
Individual study with a faculty member to complete the senior thesis. The Staff

199. Tutorial. F,W,S
Advanced directed reading and research for the serious student. May be repeated for credit. The Staff

199F. Tutorial (2 credits). F,W,S
Advanced directed reading and research for the serious student. May be repeated for credit. The Staff

GRADUATE COURSES

297. Independent Study. F,W,S
Either study related to a course being taken or a totally independent study. Designed for graduate students. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

* Not offered in 2018-19

PROGRAM DESCRIPTION

For college description and list of faculty, see Colleges.

COWELL COLLEGE COURSES

LOWER-DIVISION COURSES

1. Academic Literacy and Ethos: Imagining Justice. F
Teaches foundational concepts for intellectual exploration and personal development within an academic community: analysis, critical thinking, metacognition, engagement with others across difference, and self-efficacy. Examines the emergence and development of key concepts of justice including procedures, rights, and reparation. Enrollment is restricted to first-year college members. Enrollment limited to 30. A. Christy

12. Public Speaking. W
This introductory level seminar is designed to reduce anxiety and increase competence and confidence in a variety of public speaking situations. While providing some theory, this seminar emphasizes the practice of composing and delivering speeches, including formal, informal, and extemporaneous occasions. Enrollment is restricted to college members during priority enrollment. Enrollment limited to 30. C. Carlstroem

39. Brain, Mind, and Consciousness. W
An interdisciplinary introduction to the study of the brain, mind, and consciousness. Topics include the philosophy of mind, neuroscience, cognition, and social psychology, and their applications in fields such as health science, technology, and social development. The Staff

40. Near-Death Experiences:
Overview of the financial responsibilities that young adults take on after college. Topics include: taxes, budgeting, student loans, credit, and investing in the stock market. Ubiquitous terms, such as 401(k), are defined, and financial principles are used to develop a framework for personal financial decision-making. Enrollment limited to 30. P. Kelly

42. Student-Directed Seminar.
Seminars taught by upper-division students under faculty supervision. (See course 192.) The Staff

42B. Student-Directed Seminar: The Politics of Sexuality. S
Examines the sexual crisis in the United States by looking through various policy choices and political ideologies that inform the current way of thinking about and policing sexuality. Students apply a critical lens to sexual norms and gain an understanding of how societal beliefs can influence policy and culture. Enrollment limited to 40. D. Mathiowetz

50. Library Skills for the Digital Age (2 credits).
Intended to enhance students’ skills in using the most powerful learning tool in any university: the library. Topics: organization of the library; how to begin researching; search engine and database use; judging the quality of sources; using sources responsibly. Disciplinary focus changes from quarter to quarter. Enrollment is restricted to first-year and sophomore college members, or by permission of instructor. Enrollment limited to 22. The Staff

61. Critical Journeys (2 credits). *
For publication in a Cowell literary journal, students substantively revise one of their fall quarter essays by studying a major work that influences, acknowledges, or further clarifies a required reading of the Cowell core course. Prerequisite(s): course 80A or 80B; enrollment is restricted to college members. Enrollment limited to 20. J. Wilson, C. Carlstroem

64. Social Justice: Issues and Debates (2 credits). *
Focused followup on social justice topics and readings introduced in the Cowell core course. Allows first-year students to pursue social justice themes in greater depth. Students must have previously taken a Cowell core course (or equivalent). Enrollment is restricted to first-year students. Enrollment limited to 20. The Staff

65. Meaning, Paradox, and Love. S
Mary Holmes--legendary founding faculty member of UCSC, keen observer, painter of mythic images, and profound thinker--had a visionary’s insight into the mysteries of love, paradox, and meaning. This course explores her art, teaching, and wisdom. (Formerly Love and Wisdom.) Enrollment limited to 25. (General Education Code(s): IM.) A. Somekh
70A. Introduction to Book Arts. F
Students learn techniques of bookbinding, construction, and design, and fundamentals of letterpress printing. Enrollment is by permission of instructor. Students are billed a materials fee. (Formerly Bookbinding.)
Enrollment limited to 10. G. Young

70B. Intermediate Book Arts. W
Learn fundamental skills in fine letterpress printing, including hand typesetting and instruction in the operation of printing presses. Basic typography explored as students design and print a small edition of a selected text. Students are billed a materials fee. (Formerly Printing I: Elements of Printing.)
Prerequisite(s): course 70A or by permission of instructor.
Enrollment limited to 12. G. Young

70C. Advanced Book Arts. S
Students learn fundamental skills in fine letterpress printing, including hand typesetting and instruction in the operation of printing presses. Basic typography explored as students design and print a small edition of a selected text. Students are billed a materials fee. (Formerly Printing II: Typography and Book Design.)
Prerequisite(s): course 70B or by instructor permission.
Enrollment limited to 12. May be repeated for credit. G. Young

78. Children, Technology, and Development.*
First-year honors seminar focusing on current research and theory related to children and technology. Attention is given to the gaps between public opinion about the impact of technology on children and the actual evidence regarding such impacts. Topics may include how use of digital devices may influence children’s thinking; how children learn to use new technologies; computer gaming and aggression; and how children’s social development may be influenced by social media and other technology. Enrollment is restricted to College Scholar students. Enrollment limited to 23. (General Education Code(s): PE-T.) M. Callanan

82. Good vs. Good. W
Explores the world of philanthropy. Examines the different models of philanthropy to evaluate its strengths and weaknesses. Also examines what drives philanthropists to give. Enrollment by permission and restricted to College Scholar students. (General Education Code(s): PE-H.) F. Crosby

A comparison of three great modern cities, with emphasis on their roles as incubators of new forms of art, spectacle, and entertainment; the specters of alienation, poverty, and crime during periods of explosive growth; and immigration and diversity as sources of cultural dynamism. Enrollment is restricted to Cowell and Crown Honors students. Enrollment limited to 30. (General Education Code(s): CC.) B. Thompson

84. Chinese Approaches to Human Values.*
Through study of primary sources in translation, considers a range of classic Chinese approaches to basic reflective questions about human experience, with special focus on issues of justice, social engagement, and meaning and authenticity in everyday life. Enrollment is restricted to Cowell and Crown Honors students. Enrollment limited to 28. (General Education Code(s): CC.) R. Birnbaum

85. Introduction to Chinese Writing Systems.*
Gateway course illuminating the operation of the writing systems of greater China. Intended for students who are curious about the world’s longest continually used symbol set as well as for those who may be considering a serious commitment to learning the language. D. Keenan

86. Leading Social Change (2 credits). S
Offers students the knowledge and skills required to lead diverse teams. Topics include the social-change model of leadership and principles of collaboration. Geared toward Cowell and Stevenson Residential Assistants, but students interested in the topics may take the course with permission from the instructor. (Also offered as Stevenson College 86. Students cannot receive credit for both courses.) May be repeated for credit. (General Education Code(s): PR-E.) The Staff

87. The History of Time. *
Examines the history of temporality or the human experience of time. Theoretical readings and primary sources are used to explore the ways that humans have related to the past, present, and future. Course focuses on research and writing methods. Enrollment is restricted to College Scholar students. Enrollment limited to 22. (General Education Code(s): CC.) M. O’Hara

89. Faculty Research Colloquium (2 credits). S
Introduction of UCSC as a research university, our notable researchers, and their work. Weekly discussions with UCSC faculty from a variety of disciplines. Enrollment is restricted to participants in the first-year scholars program. M. O’Hara

93. Field Study. F,W,S
Various topics to be arranged. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

93F. Field Study (2 credits). F,W,S
Various topics to be arranged. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

94. Group Tutorial. F,W,S
A program of independent study arranged between a group of students and a faculty instructor. Students submit petition to sponsoring agency. Enrollment limited to 10. May be repeated for credit. The Staff

94F. Group Tutorial (2 credits). F,W,S
A program of independent study arranged between a group of students and a faculty instructor. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

Various topics to be arranged. Students submit petition to
110. Introduction to Mock Trial (2 credits). F
Introduces Mock Trial, which is open to all students. Covers the basics of argumentation, cross and direct examinations, permissible evidence, witness testimony, and courtroom protocol. Special emphasis is on public speaking. Students write speeches for opening and closing arguments and create questions for witnesses. Students must read the Mock Trial handbook for examples and strategies. Each student has an opportunity for public speaking and creating a coherent legal argument. Enrollment is restricted to college members. May be repeated for credit. D. Robertson

111. Mock Trial Workshop (2 credits). F,W,S
Reserved for the Mock Trial team to practice arguments and refine techniques for the competition nationwide. Students drilled on the case from both the perspective of the defense and of the offense.

Introduces the Model United Nations through discussion of contemporary issues. Students learn parliamentary procedures and U.N. protocols, as well as how to work collaboratively to research and to present position papers. Students learn resolution writing, alliance building, and persuasive speech. (Also offered as Carson College 122. Students cannot receive credit for both courses.) Enrollment limited to 35. May be repeated for credit. (General Education Code(s): PR-E.) D. Robertson

126. The Trajectory of Justice in America. S
Is democracy a reality or a perception? Though we live in a democracy, some privileged constituencies influence the government behind a veil. The central question is "Does the United States operate in ways consistent with its constitution?" (Formerly "The Trajectory of Justice in America: Eight Cases that Changed the U.S.") Enrollment is restricted to juniors and seniors. May be repeated for credit. D. Sheehan

158A. Special Topics: Oral History. *
Introduction to the art and science of conducting and oral history. Readings include books that offer both theoretical and practical insights. Students conduct interviews and construct oral histories, focusing on the alumni of Cowell College. Enrollment restricted to sophomore, junior, and senior college members. Enrollment limited to 25. The Staff

158B. Life Development (2 credits). *
Visits from alumni form the centerpiece of this course. In teams, students study the lives and the issues of the visitors. The aim is to reflect on the meaning of education in adult development. Prerequisite(s): course 80A or 80B. Enrollment is restricted to sophomore, junior, and senior Cowell College members. Enrollment limited to 40. F. Crosby

161A. Bards to Bloggers: Literature and Technology in Transhistorical Focus. *
Through study of ancient and contemporary forms (epics to e-literature), students study the connections that have tied literary reading and writing to specific technologies, including memory, the alphabet, pens, printing, radio,
computing, the Internet, and handheld devices. Enrollment is restricted to junior and senior college members. Enrollment limited to 20. D. Shemek

161Y. Modern Ancient Drama. * Studies 20th- and 21st-century productions and adaptations of ancient Greek and Roman drama in theater, dance, music, and film, including Stravinsky, Graham, Pasolini, and Taymor. Discusses artists’ goals, the sociopolitical context, ideas of authenticity and audience response. (Also offered as Theater Arts 161Y. Students cannot receive credit for both courses.) Enrollment limited to 30. The Staff

165. Fundraising Practicum (3 credits). W Covers the fundamental skills, ethics, and practices of crowd-sourced fundraising in the liberal arts. Students build a project portfolio that includes mission statement, donor-cultivation tools, and action reports. Enrollment is by permission of the instructor. Meet with the instructor to verify enrollment in a Giving Day campaign with liberal arts focus. (Also offered as Humanities 165. Students cannot receive credit for both courses.) Enrollment limited to 28. A. Christy

168. Social Change (2 credits). F,W,S How do you change the world, working alone and in concert with others? To find out, students work in groups with specific community partners who, in turn, help place students in social-change organizations in Santa Cruz County. Enrollment is restricted to college members. May be repeated for credit. (General Education Code(s): PR-S.) D. Baldini

170F. Freedom and Race. S Interrogates the relationship between freedom and race in our current political moment by looking to historical and theoretical models that inform the present. Considers how race operates in legal, scientific, and visual discourses to shape individual and collective freedoms. Enrollment limited to 25. (General Education Code(s): ER.) V. Zablotsky, A. Moore, B. Cave-LaCoste

184A. Leadership and Institution Building (2 credits). F Through lectures by senior administrators and student consensus-and-recommendation teams, students learn how leaders work with constituent groups, build cooperation, and develop implementation plans in an institution such as the University of California, specifically, UC Santa Cruz. Enrollment is restricted to undergraduates accepted in the Chancellor’s Undergraduate Internship Program. Students submit applications winter quarter for the following academic year. Enrollment limited to 40. (General Education Code(s): PR-S.) T. Thorpe

184B. Leadership and Institution Building (2 credits). W Through lectures by senior administrators and student consensus-and-recommendation teams, students learn how leaders work with constituent groups, build cooperation, and develop implementation plans in an institution such as the University of California, specifically, UC Santa Cruz. Enrollment is restricted to undergraduates accepted in the Chancellor’s Undergraduate Internship Program. Students submit applications winter quarter for the following academic year. Enrollment limited to 40. (General Education Code(s): PR-S.) T. Thorpe

184C. Leadership and Institution Building (2 credits). S Through lectures by senior administrators and student consensus-and-recommendation teams, students learn how leaders work with constituent groups, build cooperation, and develop implementation plans in an institution such as the University of California, specifically, UC Santa Cruz. Enrollment is restricted to undergraduates accepted in the Chancellor’s Undergraduate Internship Program. Students submit applications winter quarter for the following academic year. Enrollment limited to 40. (General Education Code(s): PR-S.) T. Thorpe

192. Directed Student Teaching. * Teaching of a lower-division seminar under faculty supervision. (See course 42.) Upper-division standing required and a proposal supported by a faculty member willing to supervise. The Staff

193. Field Study. F,W,S Program of study arranged between a group of students and an instructor, which may involve work with an off-campus or non-departmental agency (e.g., internship or field work). Interview only; prior arrangement with instructor. Enrollment is restricted to juniors and seniors. May be repeated for credit. The Staff

193F. Field Study (2 credits). F,W,S Program of study arranged between a group of students and an instructor, which may involve work with an off-campus or non-departmental agency (e.g., internship or field work). Interview only; prior arrangement with instructor. Enrollment is restricted to juniors and seniors. May be repeated for credit. The Staff

194. Group Tutorial. F,W,S A program of independent study arranged between a group of students and an instructor. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

194F. Group Tutorial (2 credits). F,W,S A program of independent study arranged between a group of students and an instructor. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

195. Senior Thesis. F,W,S Students submit petition to sponsoring agency. The Staff

198. Independent Field Study. F,W,S Provides for college-sponsored individual study programs off campus, for which faculty supervision is not in person (e.g., supervision is by correspondence.) Up to three such courses may be taken for credit in any one quarter. Approval of student’s adviser, certification of adequate preparation, and approval by
Cowell College

provost required. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S
Various topics to be arranged. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S
Various topics to be arranged. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

* Not offered in 2018-19

Revised: 07/15/18
PROGRAM DESCRIPTION

Critical Race and Ethnic Studies (CRES) majors develop a deep understanding of how race and other modalities of power have structured human life in the past and the present. Students acquire an understanding of the historical production of race and ethnicity in the United States and across the globe. They learn how the contours of race and racism have changed over time and, concomitantly, how individuals and groups have experienced these phenomena in constantly morphing ways. Students examine present-day racial/ethnic ideologies such as multiculturalism, colorblindness, and postracialism as well as contemporary social phenomena such as changing working conditions, new migration patterns, and emergent cultural expressions. Students also explore the ways that race and ethnicity have developed in concert with gender, sexuality, class, indigeneity, citizenship, and other modalities of power and lived identity.

CRES majors make critical use of methods and concepts from different academic disciplines as a means of better understanding historical and contemporary social phenomena and problems. In the process, they learn to recognize both the limits and the value of established knowledge production practices. The configuration of the major allows students flexibility at the upper division to design a course of study that enables a general understanding of a range of issues of intellectual and professional interest and/or a deeper understanding of a key area of focus.

Through their immersion in a program of study that is multidisciplinary, comparative, and transnational in scope, CRES majors develop a critical, situated perspective on the rights, responsibilities, and privileges of being a citizen of the United States or residing in its borders in the 21st century. CRES also helps students develop skills in critical thinking, comparative analysis, the application of social theory, research, communication, and writing so that they can act effectively in an ever-changing, complicated, and culturally diverse world.

PROGRAM LEARNING OUTCOMES

Students who complete the CRES major should emerge with the following skills, competencies, and knowledge:

CRITICAL FRAMEWORKS

- Demonstrate a critical perspective on institutional power and knowledge.

COMMUNICATION

- Demonstrate ability to account for other people’s arguments, to formulate one’s own arguments, and to locate both arguments in the larger context of the field.
- Demonstrate ability to formulate an argument in alternative media, such as speech, audiovisual, digital, and other forms of non-written communication.
- Demonstrate writing effective in the interdisciplinary field.

RESEARCH

- Demonstrate ability to design and implement a collaborative research project.
- Demonstrate ability to design and implement an independent research project.

COMMUNITY COLLABORATION, ENGAGEMENT, AND ACTIVISM

- Demonstrate an understanding of the issues, ethics, and methods surrounding activist, collaborative, and community-based research projects.
- Demonstrate an understanding of collaborative knowledge that effectively integrates theoretical and experiential thinking about social justice.

REQUIREMENTS FOR THE MAJOR

To apply for the major, students must have completed CRES 10, with a C or better, in order to declare the major. Junior transfer students and students in exceptional circumstances may substitute an equivalent course with the program director’s or undergraduate director’s approval. This allows transfer students to complete the major in two years. All students must submit a proposed Petition for Major/Minor Declaration to the program adviser that meets the major requirements in a coherent manner. Students are urged to submit their major declaration no later than the third quarter of their sophomore year or, in the case of transfer students, no later than the first quarter of their junior year. The major declaration should reflect a commitment to take CRES 100 and 101 at the next possible opportunity.

COURSE REQUIREMENTS
To graduate with a major in CRES, a student is required to complete 10 courses with the approval of the program.

One lower-division foundation course: CRES 10, Critical Race and Ethnic Studies: An Introduction

Nine upper-division CRES-related courses, including the following:

- Two upper-division foundation courses: CRES 100, Comparative Theories of Race and Ethnicity, and CRES 101, Research Methods and Writing in Critical Race and Ethnic Studies
  - Students may petition to substitute a department-based, community-engagement course or social-movements course for CRES 101.
- At least six upper-division electives offered by other departments from the list of CRES-approved courses.
  - At least two electives must be from the list of designated courses focusing on phenomena outside of the U.S. or on transnational or hemispheric subjects.
  - At least two academic departments must be represented in the elective coursework.
  - Students are encouraged to take more than the minimum number of elective courses. They may craft an elective distribution from several areas of specific research and career interests. Or, they may wish to take a number of elective courses in a particular area to develop expertise in it. For example, they may wish to focus on a social group (e.g., members of the African Diaspora), on a discipline (e.g., history), on a social phenomenon (e.g., social movements), or on a methodological or theoretical orientation (e.g., theories of race, gender and sexuality.)
- A capstone research seminar: CRES 190, Senior Seminar

Students are encouraged to supplement their upper-division coursework with language study, internships, and individual or group independent studies. Students may petition to have up to 10 credits of such activities substituted for upper-division elective requirements, so long as these activities serve, or do not interfere with, the breadth requirements.

**DISCIPLINARY COMMUNICATION (DC) REQUIREMENT**

Students of every major must satisfy that major’s upper-division Disciplinary Communication (DC) requirement. The DC requirement in CRES is satisfied by completing CRES 190.

**HONORS**

CRES awards honors and highest honors in the major. At the end of each quarter, a faculty committee meets to review graduating students’ files. Students are considered for honors and highest honors based on their cumulative GPA, calculated from grades earned in coursework and the senior exit requirement undertaken for completion of the major. For honors, students must earn a minimum GPA of 3.70 in the relevant courses, while for highest honors, the GPA must be 3.90 or higher. Writing a thesis is not a requirement for receiving honors or highest honors.

---

### SAMPLE STUDENT PLANNERS

#### FOUR-YEAR SAMPLE ACADEMIC PLAN FOR CRES MAJOR (FROSH)

 Students must have satisfied the English language and writing requirement (ELWR) and have completed the C1 requirement in order to enroll in course 10. Students who place into C2 in their first fall quarter may enroll in course 10 in their first fall quarter.

#### TWO-YEAR SAMPLE ACADEMIC PLAN FOR CRES MAJOR (TRANSFER STUDENTS)

Transfer students should complete their general education (GE) requirements or IGETC before enrolling at UCSC, but this is not a requirement to complete the major within two years of transferring. The CRES major consists of 10 courses, allowing transfer students to complete about two CRES courses per quarter along with additional units to complete the required 180 units for graduation.

**Graduate Program**

**Designated Emphasis**

**Requirements for the Designated Emphasis**

Graduate students from other departments may obtain a designated emphasis in CRES by completing the following requirements in addition to the requirements for the doctorate in their home department:

- The student must have a designated graduate adviser from the CRES program principal or affiliated faculty. The student must meet with this CRES adviser to develop a coherent plan for meeting the requirements for the designated emphasis, preferably before the end of the student's first year. This plan must be approved by the CRES program director.

- A member of the CRES principal or affiliate faculty (usually the CRES graduate adviser) must serve on the student's qualifying examination committee and on the student’s dissertation committee.

- The student must prepare a significant piece of scholarly writing in the area of CRES. This writing may take the form of a substantial seminar paper, a master's essay, or a portion of the doctoral dissertation. The student’s CRES adviser will determine whether a particular piece of writing meets this requirement.

- The student must take four relevant graduate seminars taught by CRES program faculty. One relevant graduate seminar taught by non-program faculty may be counted with the approval of the CRES adviser. The adviser may also approve the substitution of an individual or group independent study addressing a set of readings or focused on research and writing for one of the four required graduate courses. The specific courses used must reflect a coherent plan of study that embodies both breadth and focus.

Students pursuing the designated emphasis are encouraged to serve as a teaching assistant for at least one CRES core or elective course. CRES faculty are encouraged to appoint CRES designated emphasis students as teaching assistants when possible and appropriate.

**Proposing and Obtaining the Designated Emphasis**

Once a plan for meeting the requirements is agreed upon, the student should complete the application, obtain the CRES adviser’s and program director’s signatures, and submit the application to the CRES administrative office. The request for the designated emphasis must originate in the degree-granting department.

Once the requirements have been met, the student submits relevant documentation to the CRES administrative office for final approval by the CRES director. At a minimum, the student should submit copies of the qualifying examination and/or Dissertation Committee Nomination forms and a note from the adviser confirming that the writing sample and proposed courses have been completed. If the proposed courses have changed, an explanation of the changes should be included.

The CRES administrative office will notify the student and the home department of approval for the designated emphasis.

**Critical Race and Ethnic Studies Faculty and Professional Interests**

### Principal Faculty

**Neel Ahuja, Feminist Studies**
Postcolonial feminist science studies, critical race theory, Asian American transnationalism, disability, species, environment

**Neda Atanasoski, Feminist Studies**
Race and technology; cultural studies; critical race and ethnic studies; postsocialism; human rights and humanitarianism; war and nationalism; religion and secularism

**Vilashini Cooppan, Literature**
Postcolonial studies; comparative and world literature; literatures of slavery and diaspora; globalization studies; cultural theory of race and ethnicity

**Christine Hong, Literature**
Asian American literature and cultural criticism; African American literature and black freedom studies; Korean diasporic cultural production; Pacific Rim studies; postcolonial theory; critical race theory; human rights discourse; law and literature; narrative theory; film and visual studies

**Steven McKay, Sociology**
Work and labor markets; globalization and social change; political sociology; race; masculinity; migration; ethnography/qualitative methods

**Nick Mitchell, Feminist Studies**
Black feminist thought and praxis; critical theory; critical university studies; epistemology and discipline formation; feminist theory; intellectual history

**Marcia Ochoa, Feminist Studies**
Gender and sexuality, race and ethnicity, Latina/o studies, media and cultural studies, ethnography of media, feminism, queer theory, geography, multimedia production, graphic design, colonialism and modernity, Latin American studies—Colombia and Venezuela, social documentation

**Juan Poblete, Literature**
Latin(o) American literatures; transnational/global cultures (literature, radio, film); Latin(o) American
cultural studies; 19th-century studies; the history of reading practices

**Eric Porter, History/History of Consciousness**
Black cultural and intellectual history; U.S. cultural history and cultural studies; critical race and ethnic studies; jazz and popular music studies; urban studies

**Felicity Amaya Schaeffer, Feminist Studies**
Transnational feminisms; sexuality and migration, technology, and race; intimacy and globalization; Latin American/Latino studies; border studies; Chicana/o studies; biometrics and security studies

**Ronaldo Wilson, Literature**
20th-century and contemporary African American literature; poetry; contemporary American poetry and poetics; Black visual culture; recent experimental writers and artists

**Karen Yamashita, Literature**
History and anthropology of Japanese immigration to Brazil; Asian American literature; modern fiction; playwriting

**Alice Yang, History**
Historical memory, Asian American history, gender history, race and ethnicity, 20th-century U.S., oral history

♦ ♦ ♦

**Mark Anderson, Anthropology**
Racial formation, diaspora, nationalism, transnationalism, culture and power; Latin America, African diaspora

**David Anthony, History**
African and African American history, art, music, literature, and cinema; eastern and southern Africa; African languages; Indian Ocean world; African and African American linkages; Islamic civilization; African diaspora studies; world history

**Bettina Aptheker, Feminist Studies**
Feminist oral history and memoir; feminist pedagogy; African American feminist history; queer studies; feminist Jewish studies; feminist critical race studies

**Anjali Arondekar, Feminist Studies**
South Asian studies, colonial historiography; feminist theories; queer theory; critical race studies; 19th-century interdisciplinary studies

**Gabriela Arredondo, Latin American and Latina/o Studies**
Latina/o studies; Chicana/o history; U.S. immigration histories; U.S. social and cultural history; critical race and ethnicity theories; Chicana and Mexican feminisms; “borderlands” studies; history of modern Mexico

**Noriko Aso, History**
Japanese social, intellectual, and cultural history, material culture, colonialism, nationalism, gender, race and ethnicity

**Karen Bassi, Literature**
Greek and Latin literatures; gender; literary and cultural theory; pre- and early modern studies; historiography; visual and performance studies

**Dorian Bell, Literature**
Nineteenth- and 20th-century French literature and intellectual history; histories of empire and anti-Semitism; literature and science; film studies; digital humanities

**Julie Bettie, Sociology**
Gender, race/ethnicity, sexuality, and cultural politics; cultural theory; erotic labor and sexual commerce; critical qualitative methodologies

**David Brundage, History**
American immigration history, with particular focus on the Irish in America and on transnational immigrant politics; U.S. labor and social history; modern Irish history

**Christopher Chen, Literature**
Twentieth- and 21st-century African American literature; Asian American literature; 20th and 21st-century US multiethnic poetry and poetics; comparative ethnic literary studies; literary formalisms and comparative racialization; contemporary experimental poetics and political theory

**Nancy Chen, Anthropology**
Medical anthropology, visual anthropology, urban anthropology, Asian American identity, mental health, food, China

**Alan Christy, History**
Early modern and modern Japan; history of social sciences, colonialism, nationalism

**Christopher Connery, Literature**
World literature and cultural studies; globalization and geographical thought; the 1960s; Marxism; pre-modern and modern Chinese cultural studies; cultural revolution

**Cynthia Cruz, Education**
Feminist ethnography; community-based learning; decolonial pedagogies; LGBTQ street youth; women of color thought; cultural studies and education

**Jon Daehnke, Anthropology**
Archaeology of the North American Pacific Coast, cultural heritage politics and law, contemporary Native American politics, human-environment interaction, landscape and place, collaborative methodologies, NAGPRA implementation and compliance, public representations of heritage and memory

**Grace Peña Delgado, History**
Chicano/a History; Mexico-US-Canadian Borderlands; Latino/a Studies; Asian and Asian American Studies; Immigration; Gender and Sexuality; Modern Mexico and Latin America

**Gina Dent, Feminist Studies**
Africana literary and cultural studies, legal theory, popular culture

**Jennifer Derr, History**
Colonial and Post-colonial Middle Eastern history; Egypt; agricultural and environmental history; Ottoman history; spatial politics; African history; Islamic history

**Nathaniel Deutsch, History**
Modern Jewish history; Eastern European Jewish culture; ethnography, Hasidism; history of religions

**Maria Elena Diaz, History**
Atlantic world, Colonial Latin America and the Caribbean, Cuba; social and cultural, global and local
Critical Race and Ethnic Studies

histories; colonialism, slavery and freedom, race/ethnicity, gender and class; legal, political, popular, and religious culture

Sylvana Falcón, Latin American and Latina/o Studies
Human rights activism, racism/antiracism, globalization, gender, transnational feminism, contemporary Peru

Adrián Félix, Latin American and Latina/o Studies
International migration; Mexico-U.S. migration; migrant transnationalism; racial/ethnic politics and identity; politics of citizenship; Latino politics

Dana Frank, History
Late 19th- and 20th-century U.S. social history; women's, labor, and working-class history; race and ethnicity modern Honduras; U.S. history in transnational perspective

Carla Freccero, Literature
Renaissance studies; French and Italian language and literature; early modern studies; postcolonial theories and literature; contemporary feminist theories and politics; queer theory; U.S. popular culture; posthumanism; animal studies

Rosa-Linda Fregoso, Latin American and Latina/o Studies
Human rights, feminism, and violence studies; critical and cultural theories; decolonial and intercultural feminist studies; media and visual studies

Hiroshi Fukurai, Sociology
Citizen participation in the justice system, international law, race and inequality, East Asian law and politics, military and justice, and advanced quantitative methods

K.C. Fung, Economics
International trade and finance, WTO, foreign direct investment, global environmental economics, and Asia/Pacific economies

Susan Gillman, Literature
Nineteenth-century American literature and culture; theories of culture, race, and gender; world literature and cultural studies

Jennifer González, History of Art and Visual Culture
Contemporary theories of visual culture, semiotics, critical museum studies, photography, public and activist art in the U.S.

Herman Gray, Sociology
Cultural studies, media and television studies, black cultural politics, social theory

Kirsten Silva Gruesz, Literature
Transnational Americas studies; Chicano/Latino literatures and cultures; 19th-century U.S. and Latin American literature; poetry; history of the book; reading and literacy; bilingualism

Lisbeth Haas, History
U.S.-Mexico borderlands and border studies, Chicano and Native American history; visual culture in the colonial Americas; California; historical memory, theory, and historical methodology

Karlton Hester, Music
Premeditated, electroacoustic, and spontaneous composition; flutes, saxophones, and interdisciplinary performance; improvisational and Afrocentric music theory, analysis and history. Artistic Director, Global African Music and Arts Festival/Symposium; UCSC/ISIM International Improvisation Festival/Conference

Catherine Jones, History
U.S. civil war and Reconstruction; slavery and emancipation; the American South; history of children; history of education; women and gender

L.S. Kim, Film and Digital Media
Television history and theory, racial discourse, feminist criticism, Asian-American cultural theory and production, industrial practices and social change in both mainstream Hollywood and alternative media

Norma Klahn, Professor Emerita, Literature

Regina Langhout, Psychology
School-community-university collaboration; how schooling and neighborhood experiences are informed by social class, race, and gender; young people and empowerment; participatory action research

Kimberly Lau, Literature
Feminist theory; fairy tale studies; virtual worlds; social fictions; discourse analysis and ethnographic methods

Amy Lonetree, History
Indigenous history; museum studies; memory and history; Native American cultural production; public history; and Ho-Chunk tribal history

Boreth Ly, History of Art and Visual Culture
Visual cultures of Southeast Asia and its diaspora: religions and materiality, theory of visual narrative, the politics of cultural translation; (post) colonial and cultural studies; issues of gender, sexuality, race, and trauma

David Marriott, History of Consciousness
Poetics, black cultural studies, literary and psychoanalytic theory, visual culture studies, black cultural theory and philosophies of race, caribbean modernism, Fanon studies

Marc Matera, History
Britain and the British Empire; Modern Europe; world history; Atlantic World; western Africa; African diaspora studies; colonialism; race/ethnicity, gender, and sexuality

Madhavi Murty, Feminist Studies
Post-reform India and political economy, neoliberalism and nationalism, popular culture in South Asia, media studies, cultural studies, Black cultural studies and transnational race

Matthew O’Hara, History
Colonial and modern Latin America; Mexico; religion; race, ethnicity, and identity; political culture; history of time
Critical Race and Ethnic Studies

Greg O'Malley, History
Slavery and the slave trade; the colonial Americas; the Atlantic World; race, ethnicity, and encounters; Native American history; revolutionary America

Catherine Ramírez, Latin American and Latina/o Studies
United States cultural history, with a focus on immigration and assimilation; theories of citizenship; Latino literature; comparative ethnic studies; feminist and gender studies; cultural studies

Jennifer Reardon, Sociology
Science studies; sociology of science, technology, and medicine; feminist theory; race/ethnicity/gender/sexuality/class; biology and society

Cecilia Rivas, Latin American and Latina/o Studies
Transnationalism; media and communication; post-racialism; multiculturalism; colorblindness, intersectionality; feminism; gender; sexuality; class; nationalism; apartheid and post-Apartheid South Africa; South African literature; immigration and assimilation; theories of citizenship; feminist and gender studies; cultural studies

Vanita Seth, Politics
Early modern and modern political theory, feminist theory, cultural history, race politics, postcolonial theory

Savannah Shange, Anthropology
Abolition, blackness and antiblackness, social movements, late liberal statecraft, multiracial coalition, gentrification, anthropology of education, queer theory, femme gender, ethnographic ethics, California and North America

Nirvikar Singh, Economics
Industrial organization, political economy, economic development, technology and innovation, South Asian immigrants in the U.S., Indian economy, Sikhs and the Punjab

Marlene Tromp, Literature
Social justice, particularly gender, racial, and economic justice; marginal cultures; violence against women; racially-motivated violence; the law; economics; social ethics; critical theory; 19th-century literature and culture

Yiman Wang, Film and Digital Media
Theory of difference; film history and theory; colonial/semi-colonial/postcolonial/postsocialist modes of media production and exchange; border-crossing film remakes; silent cinema; translation theory and cinema; acting theory/practice and ethnic star studies with focus on Anna May Wong; transnational connections and ramifications of Chinese cinema and documentary; fan culture; East Asian cinemas; critical animal studies and moving images

Lewis Watts, Professor Emeritus, Art
Marilyn Westerkamp, History
Colonial and revolutionary America; the Atlantic World; early modern cultural and religious history; U.S. religious history; gender studies; history of the body

Pat Zavella, Latin American and Latina/o Studies
Transnational migration by Mexicans, poverty, family, sexuality, labor, social networks, feminist studies, Chicana/o-Latina/o studies, ethnographic research methods

CRITICAL RACE AND ETHNIC STUDIES COURSES

LOWER-DIVISION COURSES

Examines the concept of race, followed by an investigation of colorblindness, multiculturalism, and post-racialism. Race and ethnicity are examined as historically formulated in relationship to the concepts of gender, sexuality, class, nationalism, indigeneity, citizenship, immigration, and inequality.
Prerequisite(s): Satisfaction of the Entry Level Writing and C1 requirements. (General Education Code(s): ER) N. Mitchell

70S. Introduction to the Sikhs (2 credits). *
Introduces the Sikh community, including origins, history, belief system, and contemporary issues.

Other topics include: Sikh music, art, literature, and aspects of Sikh society. Attention paid to the Sikh diaspora in the United States and in California in particular, including comparative perspectives with other minority communities. (Formerly Humanities 70S.) N. Singh

94F. Group Tutorial (2 credits). F,W,S
A program of independent study arranged between a group of students and a faculty instructor.

UNDER-DIVISION COURSES

Students submit petition to sponsoring agency. Enrollment is restricted to critical race and ethnic studies majors. May be repeated for credit. The Staff

100. Comparative Theories of Race and Ethnicity. W
Examines race and ethnicity as categories of lived identity intersecting with gender, sexuality, class, and culture; historical discourses of difference underlying social inequalities and movements to redress those inequalities; and concepts critical to...
Critical Race and Ethnic Studies

the understanding and reshaping of power and privilege.
Prerequisite(s): course 10 and satisfaction of the Entry Level and Composition requirements.
(General Education Code(s): ER.) N. Ahuja

101. Research Methods and Writing in Critical Race and Ethnic Studies. *
Examines how scholars and activists produce knowledge in critical race and ethnic studies. Interrogates key terms to build a foundation and literacy in research methods. The course is project-based; and requires work on a team.
Prerequisite(s): course 10 and satisfaction of the Entry Level Writing and Composition requirements. The Staff

110Q. Queer Sexuality in Black Popular Culture. F
From Janet Mock to Young M.A., queerness has become hypervisible in Black popular culture—but at what cost? Using music, television, and social media as central texts, students investigate the intersections of sexuality, gender, and race in public life. (Also offered as Feminist Studies 110Q. Students cannot receive credit for both courses.) (General Education Code(s): IM.) The Staff

140A. Africa: How to Make a Continent. *
Introduces the histories of exploration, museum collection, and photography that shape historical and contemporary ideas about race, culture, and place in Africa. (Also offered as History of Consciousness 140A. Students cannot receive credit for both courses.) (General Education Code(s): CC.) A. De Morais

185A. Race, Gender, and Science. *
Examines how science as epistemology and its accompanying practices participate in, create, and are created by understandings of race, gender, sexuality, and nation. Enrollment is restricted to critical race and ethnic studies majors.
Other majors by permission. The Staff

190. Senior Seminar. W
Required research seminar for Critical Race and Ethnic Studies majors in which students write a substantial research paper or a series of short papers. May be organized around a specific theme at the instructor's discretion.
Prerequisite(s): courses 10 and 100, and satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to junior and senior CRES majors Enrollment limited to 25. N. Ahuja

192. Directed Student Teaching. F,W,S
Teaching of a lower-division seminar by an upper-division student under faculty supervision. (See course 42.) The Staff

Group tutorial, led by a faculty member, that focuses on various problems within critical race and ethnic studies. Topics to be chosen by the instructor and undergraduate student participants. Enrollment restricted to critical race and ethnic studies majors. May be repeated for credit. The Staff

199. Tutorial. S
Students submit a petition to the sponsoring agency. May be repeated for credit. The Staff

199F. Tutorial (2 credits). F,W,S
Individual study in areas approved by sponsoring instructors. May not be counted toward upper-division major requirements. Student submits petition to sponsoring agency. Enrollment is restricted to critical race and ethnic studies majors. May be repeated for credit. The Staff

GRADUATE COURSES

243. Feminism, Race, and the Politics of Knowledge. *
Course takes as its central topic the institutional politics of feminist and critical race knowledges in the post-1960s United States university. Considers these fields’ complex and contradictory relation to disciplinarity, the university’s primary or default mode of arranging and legitimizing knowledge formations. (Also offered as Feminist Studies 243. Students cannot receive credit for both courses.) Enrollment is restricted to graduate students. N. Mitchell

* Not offered in 2018-19

PROGRAM DESCRIPTION

For college description and list of faculty, see colleges.

CROWN COURSES

LOWER-DIVISION COURSES

1. Academic Literacy and Ethos: Ethical and Societal Implications of Emerging Technologies. F
Teaches foundational concepts for intellectual exploration and personal development within an academic community: analysis, critical thinking, metacognition, engagement with others across difference, and self-efficacy. Examines how technological revolutions happen, how they transform societies, and how these changes generate new ideological narratives. Enrollment is restricted to first-year college members. Enrollment limited to 30. The Staff

31. Crown College Student Leadership in Action Seminar (2 credits). *
Focuses on developing and establishing leadership skills and styles for new leaders at Crown College. Explores communication styles, group dynamics, community development, programming, moral development and conflict resolution concepts and strategies. Applies theory to action. Enrollment limited to college members and by permission of instructor. The Staff

38. Leadership for Social Change (2 credits). S
Students in this course explore and discuss the applicability of the Social Change Model of Leadership Development (Wagner, 1996) within the immediate UCSC, Crown College, and Merrill College communities. Students draw connections between concepts of leadership, community development, and community service. Enrollment is by permission of the instructor. Students must have a leadership role (e.g., R.A., student government) with Crown College or Merrill College. (Also offered as Merrill College 38. Students cannot receive credit for both courses.) Enrollment limited to 25. (General Education Code(s): PR-E.) D. Demarco

60. The Environment on Film: Rhetoric of Ecocriticism. *
Examines the overt as well as the subtle cinematic elements that depict, ponder, and persuade concerning issues of the environment and the role of humans regarding nature, animals, and the human-made landscape. Enrollment is restricted to college members during priority enrollment. Enrollment limited to 24. (General Education Code(s): IM.) The Staff

70. Introduction to Broadcast Media: Radio (3 credits). F,W,S
Comprehensive history of noncommercial radio as a mass-communication medium. Course also serves as an introduction to UCSC’s radio station KZSC-FM and broadcasting. Through lectures, hands-on instruction, and written assignments, students learn the fundamentals of program presentation and audio production. Prerequisite(s): After completing 20 hours of orientation volunteering at KZSC, students apply to the instructor. Enrollment is by permission of the instructor. Concurrent enrollment in course 70L is required. Enrollment limited to 20. N. Miljkovic

70L. Broadcast Production: Radio (2 credits).
Practical application of technical and creative skills in the KZSC studios. Production of audio content and promotional materials for broadcast. Critical evaluation in a workshop setting. Assignments require original research, professional writing, and the operation of complex technology. Prerequisite(s): After completing 20 hours of orientation volunteering at KZSC, students apply to the instructor. Enrollment is by permission of the instructor. Concurrent enrollment in course 70L is required. Enrollment limited to 20. N. Miljkovic

28. Crown Student Leadership Development Seminar (2 credits). *
Explore leadership as it relates to student development at Crown College. Examine how values, ethics, involvement, identity, and theory affect leadership in a variety of content areas. Evaluate student’s leadership strengths to determine objectives for improvement. The Staff

3L. Precalculus Academy Lab (2 credits). F,W
Students use worksheets designed to help them solve problems by thinking critically, and participate in answering project-based questions relevant to the themes of their college core courses. Prerequisite(s): Mathematics 2 or placement (MP) score of 200 or higher. Concurrent enrollment in Mathematics 3 is required. Enrollment is restricted to Merrill and Crown college members. Enrollment is by permission of the instructor. (Also offered as Merrill College 3L. Students cannot receive credit for both courses.) Enrollment limited to 40. May be repeated for credit. N. Bhattacharya

29. Crown Student Leadership Development Seminar (2 credits). *

3L. Precalculus Academy Lab (2 credits). F,W
Students use worksheets designed to help them solve problems by thinking critically, and participate in answering project-based questions relevant to the themes of their college core courses. Prerequisite(s): Mathematics 2 or placement (MP) score of 200 or higher. Concurrent enrollment in Mathematics 3 is required. Enrollment is restricted to Merrill and Crown college members. Enrollment is by permission of the instructor. (Also offered as Merrill College 3L. Students cannot receive credit for both courses.) Enrollment limited to 40. May be repeated for credit. N. Bhattacharya

28. Crown Student Leadership Development Seminar (2 credits). *
Explore leadership as it relates to student development at Crown College. Examine how values, ethics, involvement, identity, and theory affect leadership in a variety of content areas. Evaluate student’s leadership strengths to determine objectives for improvement. The Staff

31. Crown College Student Leadership in Action Seminar (2 credits). *
Focuses on developing and establishing leadership skills and styles for new leaders at Crown College. Explores communication styles, group dynamics, community development, programming, moral development and conflict resolution concepts and strategies. Applies theory to action. Enrollment limited to college members and by permission of instructor. The Staff

38. Leadership for Social Change (2 credits). S
Students in this course explore and discuss the applicability of the Social Change Model of Leadership Development (Wagner, 1996) within the immediate UCSC, Crown College, and Merrill College communities. Students draw connections between concepts of leadership, community development, and community service. Enrollment is by permission of the instructor. Students must have a leadership role (e.g., R.A., student government) with Crown College or Merrill College. (Also offered as Merrill College 38. Students cannot receive credit for both courses.) Enrollment limited to 25. (General Education Code(s): PR-E.) D. Demarco
is required. Enrollment limited to 20. (General Education Code(s): PR-S.) K. Rozendal, M. Camps

80F. Science Fictions. * Examines how science fictions have imagined better and worse worlds, social relations, and identities by using science and technology. Students read novels and short stories from the 19th Century to the present and discuss and debate questions of justice, freedom, difference, and identity. (Formerly "Seminar in Science Fiction.") Prerequisite(s): satisfaction of the Entry Level Writing and C1 requirements. Enrollment limited to 22. (General Education Code(s): TA) The Staff

80J. Cyborg Society: Myths, Realities, Choices. * Examines content and methodologies of the emerging field of cyborgology. Includes social studies of science, anthropology, sociology, philosophy, politics, art, biology, and informatics. Enrollment limited to 25. (General Education Code(s): PE-T.) C. Gray

80L. Food Safety and Environmental Quality: The Complexities of a Safe Salad. * In recent years, outbreaks of foodborne illness have alarmed farmers and consumers alike. This course examines the complexities of ensuring food safety in the complex natural, economic, and social settings that characterize U.S. food-production systems. Enrollment limited to 24. (General Education Code(s): PR-E.) The Staff

80S. Undergraduate Seminar in Science, Technology, and Society. * An honors seminar for first-year students on selected topics that examine the relationship between science, technology, and society. Precise focus of each seminar varies and is announced by the college. Preference given to Crown College students. Enrollment is restricted to first-year and sophomore students. Enrollment limited to 20. The Staff

85. Visual Perception: A Window to Brain and Behavior. * Investigates visual perception as an example of the correlation of brain and behavior. Uses a multidisciplinary analysis of the optical, biochemical, and neural components of the visual pathway leading to the perception of form, color, etc. Discusses the applications of neuroscience in the social sciences, the humanities, engineering, and the arts. Enrollment is restricted to students in the Crown College or Cowell College first-year honors program. Enrollment limited to 25. (General Education Code(s): SI) E. Switkes

86. Professional Communication in a Digital Age. F Provides advanced training in communication strategies. Students learn to combine narrative theory with digital technologies to achieve effective communication in a variety of contexts including social media, instructional information, and product design. These elements will be integrated into an individual and a group project. Enrollment is restricted to College Scholars Students. Enrollment limited to 30. (General Education Code(s): PR-C.) The Staff

87. Understanding and Communicating the Science Behind Global Warming. * Provides tools to critically assess the current debate on the implications of global warming and to communicate the issues to the public effectively. Examines how questions are framed and addressed by scientists in general and how they are framed and addressed given our current understanding of the problem of global warming based on basic physics and statistical analyses of climate data. Includes practical assignments and guest lectures by local UCSC experts. Prerequisite(s): Enrollment in the College Scholars Program. Enrollment limited to 24. (General Education Code(s): SR) C. Gaskell

88. Computational Futurology: Use of Data Analysis for Predicting Human Behavior and Activity. F Investigates statistical and computational methods for the prediction of human activity, both at the individual and at the collective level. Students learn to evaluate and critique famous predictions, and consider the ethical and social implications of predictive technologies. Articulated around a creative group project to integrate concepts learned in the course. Enrollment is restricted to College Scholar Students. (General Education Code(s): SR.) The Staff

90. Start-up Entrepreneurship Academy. F Introduction to the basics of setting up a start-up company using the Lean Launchpad/NSF I-Corps model of instruction. Students learn principles of data collection, marketing processes, and resources needed for new companies. The class is articulated around the design of a business plan, in groups of 4-5 students coached by a successful entrepreneur, and culminates in a presentation. The market research for the project involves talking to at least 5 potential customers, partners, channels and/or related experts each week. (Formerly, "Summer Entrepreneurship Academy: Discovering and Launching a Business"). Enrollment is restricted to College Scholar Students. Enrollment limited to 40. (General Education Code(s): PR-E.) N. Miljkovic, S. Carter

92. Social and Creative Entrepreneurship. F, S Helps students discover and develop their own business idea that does the world good. Examines leadership and provides tools to research community issues and to develop sustainable business models. Guest lecturers and project mentors introduce students to business and civil leaders. Enrollment limited to 28. (General Education Code(s): PE-H.) N. Miljkovic

93. Field Study. F, W, S Provides for individual programs of study sponsored by the college and performed off campus. Students should review plans with an appropriate fellow of the college. A proposal should be presented to the college academic preceptor no later than the seventh week of the preceding quarter. Credit is granted by the sponsor upon approval of the work performed. Students submit
petition to sponsoring agency. May be repeated for credit. *The Staff*

**93F. Field Study (2 credits). F,W,S**
Provides for individual field study in the vicinity of the campus under the direct supervision of a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

**99F. Tutorial (2 credits). F,W,S**
Various topics to be arranged between student and instructor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

---

**UPPER-DIVISION COURSES**

**123. Examining Our Life Through Writing.** *
Writing-intensive seminar. Based on course readings and discussions, students write reflective response papers at the end of each class and weekly papers on their own lives and what they care most about. Intense class discussions, often started by students sharing their essays. Prerequisite(s): satisfaction of the Composition 1 requirement. Admission by permission of instructor after student reads lengthy syllabus, writes application, and interviews with instructor during faculty office hours. (Formerly Science and Human Values) F. Andrews

**185. Career and Internship Preparation (2 credits). F,W,S**
For students preparing for an internship experience or career position. Students undertake career development as a continuous lifelong process: learn techniques for an effective job search, such as preparing a resume and cover letter, interviewing and networking skills; and learn how to more clearly articulate their future educational and professional goals. Enrollment limited to 40. C. Hall

**191. Student Practicum. F,W,S**
The student learns teaching skills by working with a faculty member in a Crown College course. Activities include facilitating discussions, helping students improve skills, and modeling leadership. The student must have demonstrated excellent performance in the course in which he/she will be assisting to be considered. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment is by interview only. Enrollment limited to 1. *The Staff*

**192. Directed Student Teaching.**
Teaching of a lower-division seminar by an upper-division student under faculty supervision. (See course 42.) *The Staff*

**198. Independent Field Study. F,W,S**
Provides for college-sponsored individual study programs off campus. Approval of student’s faculty sponsor and college academic provost required. *The Staff*

**199. Tutorial. F,W,S**
Various topics to be arranged between student and instructor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

**199F. Tutorial (2 credits). F,W,S**
Various topics to be arranged between student and instructor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

* Not offered in 2018-19
Revised: 07/15/18
NEW TECHNOLOGIES have profoundly changed contemporary culture and inevitably altered the role of the arts in society. The Digital Arts and New Media (DANM) Master of Fine Arts (M.F.A.) Program serves as a center for the development and study of digital media and the cultures that they have helped create. Faculty and students are drawn from a variety of backgrounds, such as the arts, computer engineering, humanities, the sciences, and social sciences, to pursue interdisciplinary artistic and scholarly research and production in the context of a broad examination of digital arts and cultures.

The Digital Arts and New Media M.F.A. Program is a two-year program organized into four interdependent and equally important pursuits:

New Praxis—The term “praxis” has many meanings, which include “translating ideas into action” and “action and reflection upon the world in order to change it.” New Praxis in DANM is comprised of “critique” and “practicum” which provide students with both the practical training and critical dialogue necessary to pursue their own individual goals as artists and cultural practitioners.

Studies—DANM “studies” include required core seminars that allow students first to explore an array of recent methods and approaches in digital arts and culture, and then to pursue the construction of specific genealogies and theories with a sustained focus on a particular topic, by engaging in various dialogues at the intersection of theory and practice while developing their thesis project and paper.

Collaborative Research—Students and faculty engage in research collaborations resulting in publications and exhibitions in one of four possible focused research areas: mechatronics, participatory culture, performative technologies, and playable media described below.

MECHATRONICS

Mechatronics is the functional integration of mechanical, electronic, and information technologies. In DANM this framework may be employed for the development and production of physical, systems-based artwork that incorporates elements of robotics, motion control, software engineering, and hardware design. DANM mechatronics research involves the use of a variety of media including video, performance, and sculpture for the creation of complex, kinetic, audio-visual systems for the exploration of temporality, materiality, experience, and perception.

PARTICIPATORY CULTURE

Participatory culture studies and research efforts explore the role of information and communication technologies in the current shift from “top-down” culture to a culture of participation and social engagement. Within the social register, the human/computer interface acts as both a boundary and a bridge. Participatory culture research in DANM encompasses a range of projects in social computing and community-media activism which involve the design of new technologies to address social problems and facilitate broader participation in culture and politics.

PERFORMATIVE TECHNOLOGIES

Research in performative technologies explores new methods for combining media and technology to create the visual, aural, and connective material of performance. DANM performance research generates new public and performative spaces where digital media, communication networks, and interactive systems may be fused with lighting, movement, and stage and sound design to create real-time shared multimedia experiences for audiences and performers at both local and remote locations. Ongoing projects in this area may include work in telematics; performance-driven, real-time graphics; algorithmic composition of sound and image; computer vision and motion capture; and studies of ritual, performativity, embodiment, interactivity, and subjectivity.

PLAYABLE MEDIA

Playable media research explores the potential of computational systems for the creation of new media forms that invite and structure play. This group works to understand and create new ways for computer games and related forms to engage audiences, make arguments, tell stories, and shape social space. Ongoing playable-media work combines game-design and artificial-intelligence research with writing, art, and media authoring.

Prospective students are asked to identify their choice of research group in their application and statement of purpose. Admissions are tied to DANM project group foci. New students are admitted into a specific project group based on the quality and relevance of the student’s prior work and expertise to the group project in their chosen area of focus. Students collaborate on faculty-initiated and -directed research projects. This work is intended to provide the student with the opportunity to learn collaborative and practical research methodologies, and to participate in a professional-level research project. The collaborative-
Digital Arts and New Media

project group experience is intended to inform, but not necessarily contribute to, the student's thesis project. Pedagogy—DANM trains future arts academics through practical experience. Students are awarded teaching assistantships as part of their overall support package as well as opportunities to assist faculty in workshops.

REQUIREMENTS

The DANM M.F.A. Program requires 72 credits of academic course work. In the first year, students generally take three courses each term—one course in each of the program areas, New Praxis, Studies, and Collaborative Research. In the second year, students primarily take elective courses, work with their thesis committees, and pursue independent and directed research leading to the completion of the thesis project and paper.

NEW PRAXIS

New Praxis in DANM is comprised of “critique” and “practicum.” Students are required to take seven new praxis courses over two years and have the option to take two new praxis electives.

NEW PRAXIS—YEAR ONE

Practicum—This area of praxis is designed to allow students to develop the conceptual, technical, and practical skills they need to successfully complete projects that realize their own individual goals as digital media artists.

DANM 210—First-year students are required to take a Project Design Studio in the first quarter. This course guides the development of students' individual studio practice, particularly in relation to the transition to digital media.

Electronic and programming requirements—First-year students also take basic courses in electronics and programming. Students with prior experience in programming and/or electronics should discuss their background with the instructor and their adviser to determine if the course is needed or if an alternative course should be taken to fulfill this credit requirement. Students seeking an alternative means to fulfill this requirement may choose to:

- serve as assistants in workshops for beginning students;
- take electronics or programming electives offered in computer engineering; or
- enroll in independent studies, as approved by their adviser.

Critique—This area of praxis is designed to allow students to present their own work and review the work of their fellow students as a means of engaging in the critical dialogue necessary to pursue their own individual goals as digital media artists. First-year students are required to present work-in-progress based on the projects developed in the project-design course in both individual studio and group critiques, and participate in group critique discussion.

During the spring quarter, first-year students identify and engage a thesis committee under the supervision of the program director.

NEW PRAXIS—YEAR TWO

Practicum—During the fall quarter, second-year students work on the development of their thesis project proposal and abstract under the supervision of their thesis committee. Second-year students are encouraged to take practice-based electives and independent studies that facilitate the development of their thesis projects.

DANM 299—In the winter and spring quarters, second-year students enroll in a minimum of 10 credits of independent thesis research which is supervised by one or more members of their thesis committee.

DANM 215—Students work with faculty curator/coordinator on development of thesis projects specifically for the group exhibition context. Students contribute to development of exhibition design and collateral materials, while studying the unique presentation and curatorial challenges of new media.

STUDIES

Students are required to take three core seminars over two years and have the option to take two studies electives.

STUDIES—YEAR ONE

DANM 201 Recent Methods and Approaches to Digital Arts and Culture—In this seminar students examine an array of methods and approaches to research and writing in digital media art and culture and explore key theories concerning digital media and cultures.

DANM 202 Dialogues and Questions in Digital Arts and Culture—A pre-thesis course in which students engage in dialogues at the intersection of theory and practice with the goal of producing a pre-thesis proposal and preparatory essay. Readings and seminar discussions will inform the development of pre-thesis project proposals and essays.

STUDIES—YEAR TWO

DANM 203 Professional Development in the Arts—Designed as a professional art practices practicum, this course is focused on researching opportunities and developing practical strategies and skills to ensure success outside of an academic environment.

Elective—Students may choose to take an elective offered by the program or elect to take an elective from a broad array of graduate courses offered on campus with the approval of their adviser.

COLLABORATIVE RESEARCH

Students participate in a three-quarter-long, collaborative-research project group in one of four possible DANM research focus areas, which takes place in the winter and spring quarters of the first year. In the second year, students continue with the final quarter of their project group (fall). This work is intended to
Digital Arts and New Media provide the student with the opportunity to learn collaborative and practical research methodologies, and to participate in a professional-level research project.

**THESIS REQUIREMENT**
Students are required to complete a thesis project and written paper under the supervision of their thesis committee. The thesis will be an arts project with digital documentation accompanied by a written paper. Thesis projects may be individual or collaborative and are expected to grow out of the research pursued in the project during the three quarters prior as well as work developed in new praxis courses. Each student will be expected to complete a 20- to 30-page paper discussing the student's preparatory research as well as the theoretical significance of the project. In the case of collaborative projects, each student will be required to submit his or her own paper. During the thesis year, students will make at least two progress presentations to their thesis committee. The chair of the three-person committee will be a full associate professor and DANM faculty member. A completed thesis project and paper must be submitted to and approved by the thesis committee before the degree can be awarded.

**APPLICATIONS**
Prospective students in the Digital Arts and New Media program will have a foundation in the arts with some demonstrated interest in technology or a foundation in technology with demonstrated background in the arts. Many, but not all, entering students will have completed a Bachelor of Arts (B.A.) program in one or more of the arts disciplines (art or art history, film, multimedia, music, theater, video, etc.) or a Bachelor of Science (B.S.) program in computer science or computer or electrical engineering. Other successful applicants will have a B.A. or B.S. in another field but will be able to show substantial achievement in the arts, in technology, or in digital arts.

In certain cases, students who demonstrate excellent potential for the program but lack proficiency in a “cross discipline” will be admitted to the program with the understanding that they will take courses during their first two quarters of study to make up that deficiency. An arts student lacking sufficient programming experience, for example, will be expected to take one or two programming courses in their first two quarters in addition to the DANM program requirements.

Students will apply online through the Division of Graduate Studies website between October and January for the following fall quarter. In addition to submitting an online application, students will be expected to submit an online portfolio. Further information can be found at the Division of Graduate Studies website.

**DIGITAL ARTS AND NEW MEDIA FACULTY AND PROFESSIONAL INTERESTS**

**PROFESSOR**

**Sharon A. Daniel, Professor, Film and Digital Media**
New media and interactive documentary; social, economic, environmental and criminal justice; socially engaged art; community-based public art in information and communications environments; social and political aspects of information design; documentary forms and ethics

**David Dunn, Assistant Professor, Music**
Sound art and design, music and the environment, acoustic ecology, compositional linguistics, live electro-acoustic performance, composition, bio-acoustic research, history of electronic music practice, art and science, audio engineering and location recording

**Jennifer A. González, Professor, History of Art and Visual Culture**
Contemporary theories of visual culture, semiotics, critical museum studies, photography, public and activist art in the U.S.

**Robin Hunicke, Associate Professor, Art and Design: Games and Playable Media**
Game design

**Susana Ruiz, Assistant Professor, Film and Digital Media**
Game and transmedia design; games as expressions of activism and art; animation; participatory culture; social art practice; non-fiction storytelling; theory/practice hybridity; animation; Theatre of the Oppressed; critical and liberatory pedagogy; expanded documentary; interaction design; worldbuilding

**Warren Sack, Professor, Film and Digital Media**
Software design and media theory

**Elizabeth Swensen, Assistant Professor, Art and Design: Games and Playable Media**
Games as personal narrative, games and learning, games and social impact, dynamics of language and identity through play

**Noah Wardrip-Fruin, Professor, Computational Media**
Digital media, computer games, electronic literature, software studies

**Marianne Weems, Professor, Theater Arts**
Directing, crossmedia performance, mediaturgy, applying contemporary critical theories to conceptual practice

**AFFILIATE FACULTY AND PROFESSIONAL INTERESTS**

**Ralph H. Abraham, Professor Emeritus, Mathematics**

**Elliot W. Anderson, Associate Professor, Art**
Electronic art, digital art and new media
Digital Arts and New Media

Lawrence Andrews, Associate Professor, Film and Digital Media
Film and video production, documentary, installation and media art, sound, animation

Neda Atanasoski, Professor, Feminist Studies
Race and technology; cultural studies; critical race and ethnic studies; postsocialism; human rights and humanitarianism; war and nationalism; religion and secularism

Brandin Baron-Nusbaum, Associate Professor, Theater Arts
Costume design, design history, digital illustration and graphic design

Amy C. Beal, Professor, Music
American music, 20th-century music, experimental and improvisatory performance practices, postwar and Cold War culture, German new music festivals and radio stations, piano performance, contemporary music ensemble

James H. Bierman, Professor, Theater Arts (Drama)
Playwriting, theater history and literature, classical and Renaissance drama, Chicano theater, digital media

Benjamin L. Carson, Associate Professor, Music
Theories of consciousness and cognition, rhythm perception, Schoenberg, history of compositional method, subjectivity and identity

Christopher Connery, Professor, Literature
World literature and cultural studies, globalization and geographical thought, the 1960s, Marxism, pre-modern and modern Chinese cultural studies, cultural revolution

E.G. Crichton, Professor Emerita, Art

Kate Edmunds, Professor, Theater Arts
Set design for theater, dance, opera and film; drafting and drawing for the designer; model-making and color theory; Broadway musicals

Amy C. Beal, Professor, Music
American music, 20th-century music, experimental and improvisatory performance practices, postwar and Cold War culture, German new music festivals and radio stations, piano performance, contemporary music ensemble

Irene Gustafson, Associate Professor, Film and Digital Media
Documentary theory and practice, experimental film/video, gender and queer studies, animal studies

Yolande Harris, Lecturer, Art

Newton Harrison, Professor Emeritus, Arts Division

Dee Hibbert-Jones, Professor, Art
Public art, sculpture, documentary film, animation

Katherine Isbister, Professor, Computational Media
Games and human interaction, games and emotion, game user research, game character design, human-centered design, research through design, social wearables, haptics for self-regulation

Kimberly Jannarone, Professor, Theater Arts (Drama)
Directing, performance history, dramatic criticism, modernism

Sri Kurniawan, Professor, Computational Media
Human-computer interaction, human factors and ergonomics, accessibility, assistive technology, usability, virtual reality, human-centered design

John Jota Leanos, Associate Professor, Social Documentation
Documentary animation, social documentation, social art practice, community arts, Chicana/o art and culture, new media, critical media studies, cultural studies, documentary photography, installation art, public art and interventionist art practice

Irene Lusztig, Associate Professor, Film and Digital Media
Film and video production, experimental ethnography and essayistic nonfiction; representations of historical memory; archives, propaganda and training films; feminist film practices; medical film; autobiographical filmmaking; interactive documentary; editing

Michael J. Mateas, Professor, Computational Media
Artificial Intelligence (AI) for art and entertainment, game AI, AI and creativity, AI-based interactive storytelling, autonomous characters

Margaret E. Morse, Professor Emerita, Film and Digital Media
Soraya Murray, Associate Professor, Film and Digital Media

B. Ruby Rich, Professor, Social Documentation and Film and Digital Media
Visual culture studies including contemporary art, film, and electronic games; critical game studies; new media art, theory, and criticism; theories of technology and globalization; history of art and technology; science fiction (utopia/dystopia/apocalypse/technothriller); representations of otherness/race/class/gender/sexuality

Jennifer Parker, Professor, Art
Sculpture, digital art and new media, art | science

Larry Polansky, Professor, Music
Composition, post-tonal theory, algorithmic music, American music, tuning theory, contemporary music, ensemble performance and performance practice, acoustic and electric guitar music, music editing and publishing, interdisciplinary collaboration, music and scientific research

B. Ruby Rich, Professor, Social Documentation and Film and Digital Media
Documentary film and video, post-9/11 culture, new queer cinema, feminist film history, Latin American and Latin/a cinema, U.S. independent film and video, the essay film, the politics of film festival proliferation and the marketing of foreign films in the U.S.

Ed Shanken, Associate Professor, Arts Division
The entwinement of art, science and technology, with a focus on experimental new media art and visual culture

Elizabeth Stephens, Professor, Art
Performance art, film, environmental art, writing

Mircea Teodorescu, Associate Professor, Computer Engineering
Dynamics, vibrations, contact mechanics, biomechanics

Gustavo Vazquez, Professor, Film and Digital Media
Film and video production, documentary and experimental cross-cultural experiences in film

Jim Whitehead, Professor, Computational Media
Generative methods, procedural content generation, level design in computer games, software engineering, software analytics, software evolution, software bug prediction
199. Tutorial. F,W,S
Independent digital arts and new media research project under the guidance of a digital arts and new media faculty member or other faculty. Students submit petition to sponsoring agency. Enrollment restricted to juniors and seniors. May be repeated for credit. The Staff

199F. Tutorial (2 credits). F,W,S
Independent digital arts and new media research project under the guidance of a digital arts and new media faculty member or other faculty. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

201. Recent Methods and Approaches to Digital Arts and Culture. W
Students examine methods and approaches to research and writing in digital art and new media, while exploring key theories concerning technology, art, and culture. Focus is on the interaction between digital technologies and socio/cultural formations. Enrollment is restricted to graduate students. m. cardenas

202. Dialogues and Questions in Digital Arts and Culture. S
Students engage in dialogues at the intersection of theory and practice with the goal of producing a pre-thesis proposal and essay. Readings and seminar discussions inform the development of project proposals and essays, which theoretically contextualize students’ work. (Formerly Digital Arts and New Media 203.) (Also offered as Music 254Q. Students cannot receive credit for both courses.) Enrollment is restricted to graduate students. W. Sack

203. Professional Development for the Arts. S
A professional art practices practicum that focuses on researching opportunities and developing practical strategies and skills to ensure success outside an academic environment. (Formerly Frameworks and Arguments in Digital Arts and Culture.) Enrollment is restricted to graduate students. The Staff

210. Project Design Studio. F
Students work on the design of individual projects by developing project proposals, budgets, “proof of concept” design documents and/or prototypes and exploring tools, technologies, programming languages, hardware, software, and electronics techniques relevant to their projects. Enrollment is restricted to graduate students. M. Weems

211. Critique. W
First-year digital arts and new media graduate students are required to present work-in-progress based on the projects developed in earlier courses and during the current quarter in individual studio critiques with the instructor as well as in group critiques. Enrollment is restricted to graduate students. Enrollment limited to 18. J. Gonzalez

212. Thesis Proposal (no credit). S
First-year digital art and new media graduate students work on the development and completion of their thesis-project proposal and abstract under the supervision of the program chair and their thesis committees. Enrollment is restricted to DANM students. R. Hunicke

215. MFA Exhibition Production. W
Second-year digital arts and new media graduate students work with faculty curator/coordinator to develop thesis projects specifically for the group exhibition context. Students contribute to exhibition design and collateral materials while studying the unique presentation and curatorial challenges of new media.

Enrollment is restricted to graduate students. The Staff

216. Digital Bodies. *

217. Computer-Assisted Composition. *
Study of techniques of algorithmic and computer-assisted composition in a variety of contemporary idioms. Topics may include stochastic methods, generative grammars, search strategies, and the construction of abstract compositional designs and spaces. Final project for course involves students formulating and algorithmically implementing their own theoretical assumptions and compositional strategies. (Also offered as Music 206B. Students cannot receive credit for both courses.) Enrollment is restricted to graduate students. L. Polansky

219. Introduction to Electronics for Artmaking. F
Intensive introduction to electronic devices used in artmaking, providing hands-on experience with sensors, motors, switches, gears, lights, simple circuits, microprocessors, and hardware storage devices to create kinetic and interactive works of art.

Students are billed a materials fee. Enrollment is restricted to graduate students. The Staff

220. Introduction to Programming for the Arts. F
Covers aspects of computer programming necessary for digital art projects. Students learn to manipulate digital media using program control for installations, presentations, and the Internet. No
Digital Arts and New Media

prior programming experience required. Enrollment is restricted to graduate students. The Staff

221. Mathematics and the Arts. *
Examines the role of mathematics in the arts since the computer revolution with an emphasis on chaos, fractals, and symmetry. Covers abstract animation and algorithmic music, including the history of leading innovators and techniques from 1950 to the present. Student projects explore the creative process today using cutting-edge technologies. Enrollment is restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 20. R. Abraham

227. Projected Light in Performance. *
Exploration of projected light in performance and art. The history of lighting as art is covered in a hands-on demystifying format from the shadow of a bare light bulb to the latest in automated and projection equipment and techniques. Enrollment is restricted to graduate students. Juniors and seniors may enroll with permission of instructor. Enrollment limited to 20. D. Cuthbert

231. Human-Computer Interaction. *
Theory and hands-on practice to understand what makes user interfaces usable and accessible to diverse individuals. Covers human senses and memory and their design implications, requirement solicitation, user-centered design and prototyping techniques, and expert and user evaluations. Individual research project. Interdisciplinary course for art, social science and engineering graduate students. Students cannot receive credit for this course and course 131. (Also offered as Computer Engineering 231. Students cannot receive credit for both courses.) Enrollment is restricted to graduate students. S. Kurniawan

233. The Object as Interface. *
Combination theory and studio-based exploration into the role of the object in real and virtual space. Provides a broad conceptual and theoretical examination of issues relating to object-making on a physical and dematerialized plane. Enrollment is restricted to graduate students. Enrollment limited to 15. W. Hibbert-Jones

241B. Modern Art: Cubism to Pop. S
A history of the visual arts from the 1910s to the 1960s beginning in Europe and moving to the United States. Follows key movements of modern art while emphasizing the social, political, and philosophical events that inform it. Students cannot receive credit for this course and History of Arts and Visual Culture 141B. Enrollment is restricted to graduate students in digital arts new media, film, music, social documentation, theater, or visual studies. J. Gonzalez

250A. Collaborative Research Project Group: Art and Science. F
Three-quarter, collaborative-research, project group encompasses a range of faculty-initiated projects that investigate new methods in art and science collaboration to solve real-world problems and produce outcomes of substantial artistic and scientific value. (Formerly Collaborative Research Project Group: Mechatronics.) Enrollment is restricted to graduate students. Enrollment limited to 8. May be repeated for credit. D. Dunn

250B. Collaborative Research Project Group: Socially Engaged Art. F
Three-quarter, collaborative-research, project group encompasses a range of faculty-initiated projects that join digital methods with community-media activism to facilitate a culture of participation and social engagement. (Formerly Collaborative Research Project Group: Participatory Culture.) Enrollment is restricted to graduate students. Enrollment limited to 8. May be repeated for credit. S. Daniel

250C. Collaborative Research Project Group: Performance and Embodiment. *
Three-quarter, collaborative-research, project group encompasses a range of faculty-initiated projects that investigate performance and embodied experience as profound sources of understanding and communication, pushing the limits of human identity, affect, empathy, and expression. (Formerly Collaborative Research Project Group: Performative Technologies.) Enrollment is restricted to graduate students. Enrollment limited to 8. May be repeated for credit. The Staff

250D. Playable Media. S
Focuses on media, such as computer games, that invite and structure play. Work includes building and critiquing a series of prototypes; studying major examples in the field; and discussing both theoretical and practice-oriented texts. Enrollment by permission of instructor. Enrollment restricted to graduate students. (Formerly Computer Science 290J.) (Also offered as Computational Media 290J. Students cannot receive credit for both courses.) May be repeated for credit. N. Wardrip-Fruin

250E. Collaborative Research Project Group: Experimental Play. F,W
Three-quarter, collaborative-research, project group encompasses a range of faculty-initiated projects that investigate computer games and related forms to engage audiences, make arguments, tell stories, and shape social space through creation of new games and through reading and playing related works. (Formerly Games and Playable Media.) Enrollment limited to 8. May be repeated for credit. (F) S. Ruiz, (W) E. Swensen

254I. Empirical Approaches to Art Information. *
Reading and practice in empirical methods, as applied to the study of music, visual art, multimedia production, and performance arts. Topics include semiotics, critiques of empiricism, cultural determinants and contingents of perception, the psychophysics of information, sensory perception (visual and auditory), memory, pattern recognition, and awareness. Students apply existing knowledge
Digital Arts and New Media

in the cognitive sciences to develop creative project, or conduct new experiments. (Also offered as Music 254I. Students cannot receive credit for both courses.) Enrollment is restricted to graduate students. Enrollment limited to 17. May be repeated for credit. B. Carson

254L. John Cage: Innovation, Collaboration, and Performance Technologies. *
In-depth examination of John Cage’s interdisciplinary work, his pioneering activity in live electronic technology, and his influence in current multimedia creativity. Approximately one-half of the seminar is devoted to student research and creative projects and reflect Cage’s legacy. (Also offered as Music 254L. Students cannot receive credit for both courses.) Enrollment is restricted to juniors, seniors, and graduate students. Upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 12. The Staff

267. Workshop in Computer Music and Visualization (2 credits). W
Graduate-level techniques and procedures of computer music composition and visualization. Practical experience in the UCSC electronic music studio with computer composition systems and software, including visualization and interactive performance systems. Extensive exploration of music and interactive graphic programs such as Max/MSP/Jitter. Enrollment is by permission of instructor; appropriate graduate experience required. Enrollment is restricted to graduate students. (Also offered as Music 267. Students cannot receive credit for both courses.) Enrollment limited to 12. May be repeated for credit. D. Dunn

281. Special Topics in Digital Arts and New Media. *
This hybrid theory/practice course examines the social implications of emerging technologies and cultural practices, with a focus on how artists and other producers engage with them in a critical manner that reveals their inner logics and/or deploys them for alternative purposes. Enrollment is restricted to graduate students; juniors and seniors may enroll by permission of the instructor. Enrollment limited to 25. May be repeated for credit. The Staff

290P. Topics in Computational Cinematography. *
Focuses on discussion of recent advances in visual storytelling in graphical environments. Major topics covered are: intelligent camera control, shot-compositions, lighting design, interactive storytelling, and computational techniques associated with these applications. Class consists of in-class discussions and student presentations of research papers and a final student project. (Formerly Computer Science 290P.) (Also offered as Computational Media 290P. Students cannot receive credit for both courses.) The Staff

297. Independent Study. F,W,S
Independent digital arts and new media research project under the guidance of a digital arts and new media faculty member or other faculty with approval of adviser. Project includes readings, research, and a written report. Students submit petition to sponsoring agency. Enrollment is restricted to graduate students. Maximum 10 credits. May be repeated for credit. The Staff

297G. Independent Study (3 credits). F,W,S
Independent digital arts and new media research project under the guidance of a digital arts and new media faculty member or other faculty with approval of adviser. Students submit petition to sponsoring agency. Enrollment is restricted to graduate students. May be repeated for a maximum 6 credits. May be repeated for credit. The Staff

Students carry out a master’s of fine arts thesis in digital arts and new media research, under the guidance of a thesis committee. The thesis will be an arts project with digital documentation accompanied by a written paper discussing the student’s preparatory research as well as the theoretical significance of the project. Enrollment is restricted to graduate students. Maximum 10 credits. May be repeated for credit. The Staff

* Not offered in 2018-19
Revised: 07/15/18
The Earth and Planetary Sciences Department teaches and conducts research in a wide array of topics. We seek to answer questions such as:

- How did the Earth form? How has it evolved since then?
- What makes up the interior of the Earth? How were Earth’s ocean and atmosphere generated, and how have they changed through time?
- What is the history of life on Earth? What are the causes and effects of past mass extinctions?
- How do mountains form? What causes earthquakes? What causes island chains to form? What controls the evolution of glaciers? How do we prevent coastal erosion? How well can we predict tsunamis?
- What has Earth’s climate been like in the past? How will climate change in the future? What changes are likely in Earth’s atmospheric properties?
- What controls the supply and quality of our freshwater resources?
- How are other planets in our solar system different from Earth? How did they evolve to their present state?
- How have the impacts of asteroids on Earth and other planets affected their evolution?

A variety of methods and tools are used to help us address these questions. Geologists examine rocks and geologic formations in order to understand the processes that control their formation and evolution. Geochemists and mineralogists examine the chemical and mineral composition of rocks, sediments, and fossils using a variety of sophisticated analytical instruments. Geophysicists use seismometers to not only record earthquakes, but also to learn about the deeper parts of the Earth, which are studied in tandem using high-pressure experiments. Environmental scientists collect samples of the atmosphere, rivers, lakes, and the oceans, sometimes requiring the use of aircraft and ships. Spacecraft have visited and explored all of the planets in our solar system. Space-based satellites have provided a massive amount of data about Earth over the past few decades. Scientists from all disciplines use computer models to help them understand these complex systems.

The Department of Earth and Planetary Sciences offers a number of degrees that teach undergraduate students the knowledge and skills necessary to address these and many other questions. Along with the standard Earth sciences major, we offer degrees with concentrations in environmental geology, geology, ocean sciences, and planetary sciences. We also offer combined majors with environmental studies and anthropology. A minor in Earth sciences is also available. We offer courses across a wide range of topics, allowing students to tailor the curriculum to their interests. Courses are comprised of not only classroom lectures, but frequently field trips, laboratories, and computer exercises are involved. Many related courses are offered by other departments such as Ocean Sciences, Microbiology and Environmental Toxicology, Environmental Studies, Biological Sciences, Chemistry and Biochemistry, and Astronomy and Astrophysics. The university capstone requirement is often fulfilled by attending the departmental field camp, or by completing a senior research thesis, but other choices are also possible.

Graduates of our department continue on to a variety of careers, such as:

- Business and industry
- Geological and environmental consulting
- Governmental agencies at the federal, state, and local level
- Non-profit organizations
- Research at universities, governmental research institutions, or other scientific agencies
- Graduate/professional school in areas such as science, engineering, teaching, law, public health, business

For more information about the people in the department, their areas of interest, departmental facilities, contact e-mails and phone numbers, and how to apply to join our department as an undergraduate or graduate student, please see our website.

ACADEMIC ADVISING

A student who wants to become an Earth sciences major should contact the Earth and Planetary Sciences Department undergraduate staff adviser as soon as possible. Students will submit a declaration of major petition, and are recommended to meet with the undergraduate adviser to plan his or her program in detail. Relevant courses taken at UCSC or other institutions may be substituted for degree requirements by approved petition. Please see the undergraduate adviser for the substitution petition form and more information about this process.

BACHELOR OF SCIENCE DEGREE

The bachelor of science (B.S.) program is designed for students who intend to pursue professional careers in Earth and planetary sciences, engineering, policy, law, teaching, or business or who otherwise desire the broad, quantitative training available at UCSC. In addition to providing comprehensive preparation in the
Earth and Planetary Sciences

basic physical sciences, and particular breadth and depth in Earth and planetary sciences, the curriculum is structured to prepare students for the competitive graduate school and career marketplace.

The core of the major includes calculus, physics, chemistry, and a group of comprehensive Earth and planetary sciences courses. For the standard B.S., students then select at least six additional courses from a diverse list of upper-division electives, with at least two that involve significant laboratory or field data acquisition and analysis. These electives, often in combination with additional upper-division courses from this and related departments, provide the student with expertise in one or more subdisciplines within Earth sciences.

Elective distributions can be designed to emphasize earthquake and faulting studies, Earth surface processes, Earth system sciences, geologic hazards, geology, crustal and deep-Earth geophysics, marine geophysics, and water resources. Four formal concentrations, all with specific course requirements and leading to an Earth and planetary sciences B.S., are available: geology, environmental geology, ocean sciences, and planetary sciences. A senior comprehensive experience (senior thesis, geologic field camp, or intensive capstone course) is required of all majors.

**QUALIFYING FOR THE MAJOR**

We recommend that you consult with the department’s undergraduate staff adviser to discuss options for degree concentrations and coursework priorities before you start the process of officially declaring your major. To declare the Earth sciences majors (including all concentrations within the major), a student must complete (with a minimum grade of C) one of the following introductory courses in physical geology:

- EART 5, California Geology
- EART 10, Geologic Principles
- EART 20, Environmental Geology

Transfer students may take an approved substitution for one of the above courses.

Students who qualify start the declaration process by submitting a petition to the department staff adviser.

**TRANSFER STUDENTS**

The Earth and Planetary Sciences Department welcomes applications from community college students who are prepared to enter as junior-level Earth science majors. Transfer students planning to major in Earth and planetary sciences are strongly recommended to complete all lower-division mathematics and science pre-requisites appropriate to their concentration of interest.

For example, students planning to major in Earth sciences with a Planetary Science Concentration are encouraged to complete the equivalents to the following courses (including the associated laboratory components):

- Chemistry (CHEM) 1A, General Chemistry

**LETTER GRADE POLICY**

All courses used to satisfy requirements for any of the Earth and planetary science majors must be taken for a letter grade with the exception of the following courses, which may be taken Pass/No Pass: EART 195 Senior Thesis, EART 198 Internship, EART 199 Tutorial. Combined majors (Earth sciences/anthropology and Earth sciences/environmental studies) are currently exempt from this policy.

**DISCIPLINARY COMMUNICATION (DC) REQUIREMENT**

Students of every major must satisfy that major’s upper-division Disciplinary Communication (DC) general education requirement. All majors described below require students to complete a minimum of two (2) courses from the list of courses that in combination satisfies the DC general education requirement. Courses taken to satisfy the DC requirement may also satisfy upper-division elective or senior comprehensive requirements. Consult one of the Earth and Planetary Sciences advisers for the most up-to-date list of scheduled classes. Currently the list (subject to change) consists of:

- EART 100, Vertebrate Paleontology
- EART 101, Invertebrate Paleobiology
- EART 102, Marine Geology
- EART 104, Geologic Hazards
- EART 109, Field Geology
- EART 120, Sedimentology and Stratigraphy
- EART 140, Geomorphology
- EART 146, Ground Water
- EART 148, Glaciology
- EART 150, Structural Geology
- EART 160, Planetary Science
EART 189B, Summer Field Internship
EART 191A, Climate Change Science and Policy
EART 195, Senior Thesis

Students in the combined Earth Sciences/Anthropology major may, in addition choose their courses to satisfy the DC requirement from the following Anthropology (ANTH) offerings: ANTH 100, 170, 194B, 194L, and 194Y.

COMPREHENSIVE REQUIREMENT (B.S.) FOR EARTH SCIENCE, ENVIRONMENTAL GEOLOGY, PLANETARY, AND OCEAN SCIENCE CONCENTRATIONS

All students must satisfy the senior comprehensive requirement. To do so, each student in these majors must complete one of the following options:

1) Satisfactory completion of EART 189A, Summer Field Internship, and EART 189B, GIS with Applications in the Earth Sciences.

2) Satisfactory completion of a senior thesis, which must include a significant element of independent research or original work and can only be undertaken after an agreement is obtained from a faculty member to supervise it (at least three quarters in advance of completion). Students may take EART 199, Independent Study, as part of performing the research for their senior thesis. It is required that each student enroll in and pass EART 195, Senior Thesis, in the academic quarter during which they complete their thesis.

3) Satisfactory completion of one of the following course offerings: EART 191A, Climate Change and Policy (was EART 191); EART 191B, Planetary Science Capstone (was EART 193); and EART 191C, Geophysical Capstone (was EART 112). Other capstone courses in the 191 series may also be added in the future.

4) Other options such as external field/research experiences may be suitable by permission of the faculty adviser. Please meet with an adviser if you have an idea to propose.

The intent of this requirement is to synthesize knowledge and skills from a student’s undergraduate career. Therefore, prior to completing an activity to satisfy the Senior Comprehensive Requirement, students should have already completed EART 110A, one of EART 110B or EART 110C, and three other upper-division courses that fulfill major requirements. Students should consult an adviser if they have any questions about the timing of their proposed Comprehensive Requirement activity.

COMPREHENSIVE REQUIREMENT (B.S.) FOR GEOLOGY CONCENTRATION

All students must satisfy the senior comprehensive requirement. To do so, each student in the Geology Concentration must complete EART 189A, Summer Field Internship, and EART 189B, GIS with Applications in the Earth Sciences.

The intent of this requirement is to synthesize knowledge and skills from a student’s undergraduate career and to provide the instructional hours in the field needed to prepare students for the California Professional Geologist licensing requirements. Therefore, prior to completing an activity to satisfy the Senior Comprehensive Requirement, students should have already completed EART 110A, one of EART 110B or EART 110C, and three other upper-division courses that fulfill major requirements. Students should consult an adviser if they have any questions about the timing of their proposed Comprehensive Requirement activity.

REQUIREMENTS FOR THE STANDARD EARTH SCIENCES MAJOR (B.S.)

REQUIRED LOWER-DIVISION COURSES

CHEM 1A, 1B/M, and 1C/N
MATH 11A and 11B or 19A and 19B, or Applied Mathematics and Statistics (AMS) 15A and 15B; and MATH 22 or 23A, or EART 111
PHYS 6A/L and 6B/M
EART 5/L, or 10/L, or 20/L

REQUIRED UPPER-DIVISION COURSES

EART 110A and EART 110L, EART 110B and EART 110M, and EART 110C and EART 110N

At least six elective courses (5+ credits each) from upper-division Earth sciences or ocean sciences offerings must be completed. EART 198 may not be used to satisfy this requirement.

Two or more of the upper-division electives must be selected from courses with an intensive field/laboratory/data analysis component. The following courses satisfy this requirement:

EART 107, 109, 112, 116, 119, 120, 125, 130, 140, 142, 146, 148, 150, 189A, 189B.

Note: Courses used to satisfy the senior comprehensive requirement cannot also be used to fulfill the upper-division elective requirement.

Two or more courses must also be completed in from the list of courses that satisfy the DC requirement, as described above.

Students also complete the senior comprehensive requirement as described above.

Students are encouraged to take more than the minimum number of elective courses and may craft an elective distribution from many areas of specific research and career interests. The following are examples of suggested elective distributions that develop expertise in important areas (an asterisk (*) indicates that the course satisfies the laboratory or field data acquisition/analysis requirement).

Earth system sciences. Focuses on terrestrial, marine, and atmospheric processes and their relations through time; may include paleoclimatic and paleoenvironmental dynamics, global change issues, and surface geological processes such as weathering,
erosion, and hydrology: EART 100/L, 101/L, 102, 107, 109/L*, 116*, 119*, 120/L*, 121, 124, 125, 128, 129, 148*, 191A, 208, OCEA 102, 120

Earthquake and faulting studies. Focuses on crustal deformation and faulting processes and related phenomena such as plate motions, earthquakes, and stress in the lithosphere: EART 109/L*, 118, 119*, 150/L*, 162, 168*, 172

Geologic hazards. Focuses on Earth processes that impact society, including earthquakes, volcanoes, coastal erosion, and landslides: EART 104, 105, 106, 107, 109/L*, 116*, 118, 140/L*, 142*, 146*

Geology. Emphasizes a traditional broad background with field skills, rock genesis and interpretation, and structural relations: EART 109/L*, 120/L*, 127, 130/L*, 134, 140/L*, 150/L*

Geophysics. Develops breadth in geophysical techniques, composition and structure of Earth’s deep interior, and gravitational and magnetic fields: EART 118, 119*, 150/L*, 160, 162, 168*, 172

Marine geophysics. Emphasizes a breadth of geological and geophysical background for continuing study of the processes involved in the growth, evolution, and destruction of the ocean floor and margins: EART 107, 146*, 150/L*, 152, 168*

Surface processes. Emphasizes understanding the fluxes of energy, water, mass, and chemicals within and across Earth’s surface and the relations to climatic and tectonic forcing processes: EART 107, 109/L*, 116*, 119*, 120/L*, 127, 128, 140/L*, 142*, 146*, 148*, 163, Microbiology and Environmental Toxicology (METX) 144

Water resources. Focuses on water resources quality and quantity and relations between climate and water in and on the crust: EART 105, 106, 109/L*, 116*, 119*, 121, 140/L*, 142*, 146*, 148*, METX 144, OCEA 120

STANDARD EARTH SCIENCES B.S. MAJOR PLANNER

Students planning a professional career in the Earth and planetary sciences should take more than the minimum number of courses required for the major if possible. Four-year students have ample flexibility to take additional electives if they begin with the required courses in their second year. Junior transfers also have flexibility if they have taken most of their preparatory courses in calculus, chemistry, and physics before entry. Further advice can be obtained from the undergraduate adviser and from faculty members.

SAMPLE FOUR-YEAR PLANNER

2nd (soph) EART 110A/L* MATH 23A or EART 111 EART 110B/M* PHYS 6A/L PHYS 6B/M

3rd (junior) EART elective EART elective EART 110C/N EART elective

4th (senior) EART elective (sr thesis only) EART 199† EART elective (sr thesis only) EART 199† EART 189A* or senior thesis (EART 195)†

*Students who wish to complete their capstone with EART 189A/ EART 189B should be aware that the following courses are prerequisites: EART 109 and EART 109L, EART 110A and EART 110L, and EART 110B and EART 110M. Students must also complete EART 189B in summer to fulfill the summer field capstone.

†Students expecting to write a senior thesis for their comprehensive requirement are required to contact the department at least three quarters before graduation to identify the intended project and faculty adviser. Senior theses usually require at least two or three quarters for completion.

SAMPLE TRANSFER (TWO-YEAR) PLANNER

This planner assumes that students have completed all lower-division requirements other than PHYS 6A and PHYS 6L, PHYS 6B and PHYS 6M, and advanced math.

1st (junior) EART 111 EART 110A/L PHYS 6A/L EART 110B/M PHYS 6B/M EART 189A* EART 195†

2nd (senior) EART elective EART elective (Sr thesis only) EART 199† EART elective EART elective (Sr thesis only) EART 199† EART elective EART elective (Sr thesis only) EART 195†

*Students who wish to complete their capstone with EART 189A/ EART 189B should be aware that the following courses are prerequisites: EART 109 and EART 109L, EART 110A and EART 110L, and EART 110B and EART 110M. Students must also complete EART 189B in summer to fulfill the summer field capstone.

†Students expecting to write a senior thesis for their comprehensive requirement are required to contact the department at least three quarters before graduation to identify the intended project and faculty adviser. Senior theses usually require at least two or three quarters for completion.
REQUIREMENTS FOR THE EARTH SCIENCES MAJOR WITH CONCENTRATION IN GEOLOGY (B.S.)

REQUIRED LOWER-DIVISION COURSES
CHEM 1A, 1B/M and 1C/N
MATH 11A-B or 19A-B, or AMS 15A-B; and MATH 22 or 23A, or EART 111
PHYS 6A/L and 6B/M
EART 5/L, or 10/L, or 20/L

REQUIRED UPPER-DIVISION COURSES
EART 109/L, 110A/L, 110B/M, and 110C/N
At least two courses from the following list of Earth Sciences offerings: 120/L, 130/L, 140/L and 150/L.
At least three additional elective courses (5+ credits each) from upper-division Earth sciences or ocean sciences offerings must be completed. EART 198 and 199 may not be used to satisfy this requirement.
Two or more courses must also be completed in from the list of courses that satisfy the DC requirement, as described above.
Students are required to complete Earth Sciences 189A and 189B to satisfy their senior comprehensive requirement.

Note: Courses used to satisfy the senior comprehensive requirement cannot also be used to fulfill the upper-division elective requirement.
Students are encouraged to take more than the minimum number of elective courses and may craft an elective distribution from many areas of specific research and career interests.

EARTH SCIENCES (GEOLOGY) B.S.
MAJOR PLANNER
Students planning a professional career in the Earth and planetary sciences should take more than the minimum number of courses required for the major if possible. Four-year students have ample flexibility to take additional electives if they begin with the required courses in their second year. Junior transfers also have flexibility if they have taken most of their preparatory courses in calculus, chemistry, and physics before entry. Further advice can be obtained from the undergraduate adviser and from faculty members.

EARTH SCIENCES MAJOR WITH CONCENTRATION IN ENVIRONMENTAL GEOLOGY (B.S.)
The environmental geology concentration is designed to provide quantitative preparation for career pathways involving interdisciplinary study of the environment with a geological emphasis. Additional biology and environmental studies courses are required for this concentration along with other distributions of upper-division requirements and electives.

REQUIRED LOWER-DIVISION COURSES
EART 20/L or 10/L or 5/L
Environmental Studies (ENVS) 25
Biology: Ecology and Evolutionary Biology (BIOE) BIOE 20C

PHYS 6A/L and 6B/M
### REQUIRED UPPER-DIVISION COURSES

Earth Sciences 110A/L and 110B/M

At least four elective courses (5+ credits each) from upper-division Earth sciences or ocean sciences courses must be completed. Earth Sciences 198 may not be used to satisfy this requirement.

At least two courses must be completed from the list of courses that satisfy the DC requirement. See above for the full list.

Two additional upper-division electives, preferably with environmental topics from biology, chemistry, Earth and planetary sciences, environmental studies, environmental toxicology, or ocean sciences. Courses may simultaneously satisfy both the upper-division elective and DC requirements. Earth Sciences 198 may not be used to satisfy this requirement.

Students also complete a senior comprehensive requirement from the list described above.

*Students who wish to complete their capstone with EART 189A/ EART 189B should be aware that the following courses are prerequisites: EART 109 and EART 109L, EART 110A and EART 110L, and EART 110B and EART 110M. Students must also complete EART 189B in summer to fulfill the summer field capstone.

† Students expecting to write a senior thesis for their comprehensive requirement are required to contact the department at least three quarters before graduation to identify the intended project and faculty adviser. Senior theses usually require at least two or three quarters for completion.

### EARTH SCIENCES MAJOR WITH CONCENTRATION IN OCEAN SCIENCES (B.S.)

The ocean sciences concentration is intended to provide quantitative preparation for career pathways that include oceanography and biogeochemistry. Additional biology and chemistry courses are required for this concentration along with other distributions of upper-division requirements and electives.

**REQUIRED LOWER-DIVISION COURSES**

- EART 5/L or 10/L, or 20/L
- BIOE 20C
- CHEM 1A, 1B/M and 1C/N
- MATH 11A and 11B or 19A and 19B, or AMS 15A and 15B
- MATH 22 or 23A or EART 111
- PHYS 6A/L and 6B/M

**REQUIRED UPPER-DIVISION COURSES**

At least four elective courses (5+ credits each) chosen from upper-division Earth Sciences or Ocean Sciences courses must be completed. EART 198 and 199 may not be used to satisfy this requirement. Choosing from the following list is recommended, but not mandatory:

At least two courses must be completed from the list of courses that satisfy the DC requirement. See above for the full list.

**SAMPLE TWO-YEAR PLANNER**

This planner assumes that students have completed all lower-division requirements other PHYS 6A and PHYS 6L, PHYS 6B and PHYS 6M, and ENVS 25.
Earth and Planetary Sciences

Students also complete a comprehensive requirement from the list described above. For those choosing a thesis, a topic emphasizing ocean sciences is recommended.

*Students who wish to complete their capstone with EART 189A/ EART 189B should be aware that the following courses are prerequisites: EART 109 and EART 109L, EART 110A and EART 110L, and EART 110B and EART 110M. Students must also complete EART 189B in summer to fulfill the summer field capstone.

† Students expecting to write a senior thesis for their comprehensive requirement are required to contact the department at least three quarters before graduation to identify the intended project and faculty adviser. Senior theses usually require at least two or three quarters for completion.

**EARTH SCIENCES MAJOR WITH CONCENTRATION IN PLANETARY SCIENCES (B.S.)**

The planetary sciences concentration is designed to provide students with a quantitative background appropriate for career pathways in the interdisciplinary study of planets and their satellites. The upper-division elective courses can be tailored for students interested in planetary interiors, atmospheres, and/or surfaces.

**REQUIRED LOWER-DIVISION COURSES**

- EART 10/L (preferred). or 5/L, or 20/L
- CHEM 1A, 1B/M, and 1C/N
- MATH 19A and 19B (preferred) or 11A and 11B, or AMS 15A and 15B
- MATH 22; or 23A; or EART 111

**REQUIRED UPPER-DIVISION COURSES**

- EART 110A/L, 110B/M, 110C/N, 119, 160, 190
- One elective from the following Earth Sciences courses: 162, 163, 164
- At least three electives (5+ credits each) from upper-division Earth Sciences, Ocean Sciences, Astronomy (ASTR) 112 or ASTR 118, or MATH 130 must be completed. EART 198 may not be used to satisfy this requirement. Choosing from the following list is recommended but not mandatory: EART 107, 109/L, 116, 121, 128, 130/L, 140/L, 148, 150/L, 152, 162, 163, 164, 172, 209, 210; (ASTR) 112, 118; MATH 130.

At least two courses must be completed from the list of courses that satisfy the DC requirement. See above for the full list.

Students also complete the comprehensive requirement from the list described above. For those choosing a thesis, a topic emphasizing planetary sciences is recommended.

### COMBINED MAJOR IN ENVIRONMENTAL STUDIES/Earth Sciences (B.A.)

The combined major in environmental studies and Earth sciences is designed to provide enhanced exposure to geological concepts and processes for students emphasizing environmental policy and social science topics. Students are advised to plan carefully and to contact academic advisers in both the Environmental Studies and Earth and Planetary Sciences Departments early if they have questions. For the requirements of the combined environmental studies/Earth sciences bachelor of arts (B.A.) degree, see the [environmental studies program description](#).

### COMBINED MAJOR IN Earth Sciences/Anthropology (B.A.)

The Earth sciences/anthropology combined major is intended for students with interests in Earth sciences and the laboratory-based aspect of anthropology. These include anthropology students interested in archaeology or paleoanthropology who desire more intensive training in natural sciences and Earth sciences students interested in paleobiology or archaeology. The combined major provides a rigorous training in both anthropology and Earth sciences and will permit students to enter graduate programs in Earth sciences, archaeology, or paleoanthropology. The combined major has a significantly different set of cognate science and required lower- and upper-division courses than the standard major; therefore, students are advised to plan carefully and to contact academic advisers in the Earth and Planetary Sciences and Anthropology Departments early if they have questions.

### REQUIRED LOWER-DIVISION COURSES

- ANTH 1, 2, and 3
- EART 5/L, or 10/L, or 20/L
- MATH 11A and 11B, 19A and 19B
- Five lower-division science courses (plus laboratories) chosen from the following:
  - BIOL 20A, BIOE 20B, BIOE 20C
  - CHEM 1A, 1B/M, 1C/N
  - PHYS 6A/L, 6B/M

### REQUIRED UPPER-DIVISION COURSES

- EART 110A/L
Earth and Planetary Sciences

At least three elective courses (5+ credits) from upper-division Earth Sciences offerings must be completed. EART 198 and 199 may not be used to satisfy this requirement.

Any four five- to seven-credit upper-division electives listed under the Anthropology Department’s Physical Anthropology and Archaeology Courses subdivision.

At least two courses that are part of the DC requirement must be completed as part of the required upper-division courses. Earth Sciences courses that are part of the DC curriculum are: 100, 101, 102, 104, 109, 120, 125, 140, 146, 148, 150, 160, 189B, 191A, 195; Anthropology courses are: 100, 170, 194B, 194L, and 194Y). Courses may simultaneously satisfy both the DC requirement and the upper-division Earth Sciences or Anthropology elective requirement.

COMPREHENSIVE REQUIREMENT

One of the following:
Satisfactory completion of Anthropology 194-series (any senior seminar in physical anthropology or archaeology).

Satisfactory completion of EART 189A and 189B*, Geographic Information Systems with Applications in Earth Sciences and Summer Field Internship.

Satisfactory completion of a senior thesis (EART 195) with faculty readers from both departments, which must include a significant element of independent research or original work and can only be undertaken after agreement is obtained from faculty members to supervise it (at least three quarters in advance of completion).

Satisfactory completion of a 5-credit internship (EART 198) under the guidance of an on-site supervisor, with coordination and prior approval of the Earth and Planetary Science Department’s internship director. The project must include a comprehensive final written report.

* EART 189A and 189B has as prerequisites EART 109/L, 110A/L, and 110B/M.

* Students who wish to complete their capstone with EART 189A/ EART 189B should be aware that the following courses are prerequisites: EART 109 and 109L, EART 110A and 110L, and EART 110B and 110M. Students must also complete EART 189B in summer to fulfill the summer field capstone.

† Students expecting to write a senior thesis for their comprehensive requirement are required to contact the department at least three quarters before graduation to identify the intended project and faculty adviser. Senior theses usually require at least two or three quarters for completion.

HONORS

Honors in the major (all concentrations) and in the combined major with anthropology are determined by a review of grades (typically 3.50 or above) at the time a student applies for graduation. A faculty committee makes the decision based on the quality of all coursework, but especially in the courses required for the major. Extra coursework or independent study as well as more intensive or rigorous coursework and the quality of a capstone project may also be taken into consideration. Honors in the combined major with environmental studies are evaluated by the Environmental Studies Department. Highest honors may also be awarded in exceptional cases when a
student's overall grade point average (GPA) is above 3.75 and performance in the senior capstone requirement is equally outstanding. The department reserves the right to withhold honors and highest honors based on other criteria, such as an incident of academic dishonesty.

Honors on the senior thesis are determined independently of major honors, and must be approved by two faculty readers.

---

### KEYS TO SUCCESS IN THE MAJOR

Achieving success in the Earth Sciences major is strongly correlated with successfully taking the required foundation classes and their associated 2-credit laboratories, Earth 110A/L, Evolution of the Earth; Earth 110B/M, Earth as a Chemical System.

If you are unsuccessful in passing your first attempt at these classes, past experience suggests that you might have difficulty successfully completing this major. We strongly recommend that you seek advising from the department or your college adviser. Two failures of one of these required gateway classes (or associated lab) are likely to preclude completion of the major.

---

### EPS PROGRAM LEARNING OUTCOMES

Students graduating with a B.S. in Earth and planetary sciences (all concentrations) should be able to:

1. understand the processes governing the properties and evolution of Earth's interior and surface;
2. identify rocks and minerals, and describe their connection to geologic processes;
3. utilize algebraic mathematical tools to quantitatively address questions in the geosciences; and
4. write in a clear, organized, and logical fashion using disciplinary standards for reporting and citation.

See the table below for a summary of the courses involved in the introduction, development, and assessment of each Program Learning Outcome (PLO). The table summarizes program learning outcomes and the courses where they are introduced/developed (D) and assessed (A).

---

### MINOR REQUIREMENTS

Students can earn a minor in Earth sciences by taking Earth Sciences 5/L or 10/L or 20/L and five upper-division Earth sciences courses. Courses offering fewer than 5 credits (such as Earth Sciences 190 or 2-credit laboratories and independent studies) may not be counted toward the minor requirements, although additional coursework is always encouraged.

---

### GRADUATE PROGRAM

The graduate program in the Earth and Planetary Sciences Department is designed to prepare students for research, industry, consulting, teaching, and numerous other career paths, including business and law. The aim is to develop habits of critical analysis and thorough documentation; skills in quantitative field, computational, and/or laboratory research; and proficiency in one or more fields of research. The fundamental requirements for admission to the program are substantial evidence of superior scholarship, dedication and determination to do quality work, and aptitude for original research. Preparation in the basic sciences equivalent to the requirements for the Earth sciences bachelor's degree at UCSC is expected and, for non-undergraduate Earth sciences majors, achieving breadth of knowledge across the Earth and planetary sciences is expected. Excellent scholars from other disciplines, including chemistry, physics, engineering, biology, or astronomy are both eligible and encouraged to apply. Gaps in knowledge can be made up through coursework. Prospective students are required to take the Graduate Record Examination (GRE) General Test and have the scores sent electronically to the UCSC Division of Graduate Studies. Applicants from countries where English is not
the primary language must take either the Test of English as a Foreign Language (TOEFL) or the International English Language Testing System (IELTS) test.

UCSC awards both the Master of Science (M.S.) and the Doctor of Philosophy (Ph.D.) degrees. The M.S. degree may be the terminal degree for some seeking careers in industry, government, and teaching at the secondary level. It may also be an initial step toward the Ph.D. degree, in which the student gains knowledge and confidence in carrying out and completing a more complex scientific project.

GRADUATE PROGRAM IN EARTH SCIENCES

**Plan 1 Thesis M.S. Track.** In their first year, all thesis-track graduate students register for courses 203, Introductory Teaching Seminar; 204, Earth and Planetary Sciences Foundation; 206, Great Papers in the Earth Sciences; and, in consultation with the graduate advising committee, choose at least one subject course focusing on specific Earth and planetary sciences content and one course focusing on quantitative analysis (from a list in the EPS Graduate Handbook). In subsequent years, all students participate in course 293, Graduate Research Seminar. Other course requirements are tailored to the individual student’s academic background, professional experience, and plans for research. Master’s degree students must take a minimum of 35 quarter units of graduate and upper-division undergraduate courses (at least 20 of which are graduate-level and not including Earth Science 297, Independent Research) including the courses mentioned above. It is recommended that all thesis-track graduate students attain some teaching experience while at UCSC.

Before the start of fall quarter, each first-year thesis track student must meet with their faculty adviser to determine a customized course list designed to improve breadth and enable research goals. Immediately afterwards, a meeting is scheduled with the graduate program director to finalize and approve this initial discussion with a written study plan. Yearly academic review meetings with the primary adviser will then reassess the student’s progress in completing these courses and independent research.

The M.S. thesis is a scholarly contribution consisting of results of an original research project by the student. Students are strongly encouraged to prepare their results for publication in the peer-reviewed literature. The M.S. thesis must be completed by the end of the third year after entering the program, and students are strongly encouraged to complete their thesis earlier and to present the results of this work publicly.

**Plan 2 Coursework M.S. Track.** The coursework M.S. track is a professional program designed to allow students to increase their breadth, quantitative depth, or emphasis on a particular specialty; to provide the student with a stronger background toward competition for jobs or an enhancement of skills for current employment (e.g., K–14 teaching); and to allow students from other disciplines (e.g., biology, physics, chemistry, mathematics, environmental studies) to acquire advanced training in Earth and planetary sciences. Prior to the first quarter of study, students meet with their faculty adviser to develop a study plan of at least nine 5-credit courses, and a statement of objectives. Of these courses, only one can be from the EART 280-290 series, and at least 20 credits must come from graduate courses numbered 200-279. One of the nine courses can be an independent study involving a focused research project. It is expected that the course plan will comprise a minimum of 45 quarter credits at the graduate-level and quantitative, upper-division,
undergraduate-level elective courses. The course plan must be approved by the graduate representative. Coursework M.S. students are required to fulfill one of the following capstone options: a substantial review/research manuscript or a comprehensive oral examination based on their coursework. There is no foreign-language requirement for either the M.S. or Ph.D. degree other than demonstrated proficiency in English.

Details regarding admission to graduate standing, financial aid, examinations, and the requirements for the Master of Science and Doctor of Philosophy degrees are available from the Earth and Planetary Sciences Department graduate studies webpage. Additional details can be found at the UCSC Division of Graduate Studies.

EARTH AND PLANETARY SCIENCES COURSES

LOWER-DIVISION COURSES

1. Oceanography. S
An introduction to the physical environment of the ocean. Origin and evolution of ocean basins; seafloor morphology; origin, distribution, historical record, and economic significance of marine sediments; ocean currents, waves, tides, and changing sea level; beaches, shorelines, and coastal processes; marine resources, pollution, and human impacts on the oceans. Students may also enroll in and receive credit for Ocean Sciences 1. (General Education Code(s): PE-E.) G. Griggs

2. Earth Catastrophes. F
The role of catastrophic processes in shaping Earth and the environment in which we live. The physical processes causing earthquakes, volcanic eruptions, tsunamis, floods, windstorms, landslides, and meteorite impacts will be described, along with the role played by these rapid processes in the geological and biological evolution of the planet. Interdisciplinary approaches to understanding these phenomena will be discussed. The entire time scale from formation of the universe to the present Earth system will be considered. (General Education Code(s): SL) T. Lay

3. Geology of National Parks. W
Geologic concepts and processes responsible for shaping our national parks including mountain building, volcanic and earthquake activity, sedimentation, weathering, erosion, and glaciation. An understanding of how geology impacts our lives is emphasized. Appropriate for both science and non-science majors who wish to enhance their knowledge, enjoyment, and appreciation of our national parks. (General Education Code(s): SL) S. Schwartz

5. California Geology. F
An introduction to physical geology emphasizing the minerals, rocks, volcanoes, mountains, faults, and earthquakes of California. In-class field trips to study the caves, rocks, and landforms of the campus and the Monterey Bay area. Discussion-1 hour. Concurrent enrollment in 5L is required for majors and minors. (General Education Code(s): SL) E. Knittle

5L. California Geology Laboratory (1 credit). F
Laboratory sequence illustrating topics covered in course 5 with particular emphasis on rock and mineral identification and map interpretation. Field trip. Laboratory three hours. Students are billed a materials fee. E. Knittle

7. The History of Life. *
An examination of the major events in the history of life, from the origin of life approximately four billion years ago, to the wave of extinctions that has decimated plants and animals around the globe over the past 30,000 years. (General Education Code(s): SL) M. Clapham

8. Planetary Discovery. F
A sweeping tour of planets, satellites, and small bodies in and out of the solar system. Foci on major scientific results from telescopes and spacecraft missions. Topics include planetary system architecture, planetary atmosphere, surface and interior, planetary formation and evolution, astrobiology, extra-solar planets. Open to all students. (General Education Code(s): SL) X. Zhang

9. Earth History and Global Change. *
Over the past 4.5 billion years, planet Earth has evolved in exciting ways. Environments, climates, and life forms have come and gone in fascinating combinations. Course examines changing physical, biological, and climatological conditions through geologic time, beginning with the evolution of the Earth through changes leading to the current state of the planet, and considers prospects for Earth’s future. (General Education Code(s): PE-E.) The Staff

10. Geologic Principles. W
Introduction to the scientific study of Earth, the materials composing it, and the processes shaping it. Topics include minerals and rocks, Earth’s internal structure, plate tectonics, earthquakes and volcanoes, oceans and the atmosphere, the formation of landscapes and global change. A one-day, optional field trip is included. Concurrent enrollment in 10L is required for majors and minors. (General Education Code(s): SL) T. Blackburn, A. Fisher

10L. Geologic Principles Laboratory (1 credit). W
Laboratory sequence illustrating topics covered in course 10, with particular emphasis on rock and mineral identification and map interpretation. Laboratory 3 hours. In-lab field trips. Students are billed a materials fee. T. Blackburn, A. Fisher

**11. Earthquakes.**
Causes and effects of earthquakes. How do we measure, mitigate, and try to predict earthquakes? Plate motion, frictional faulting, earthquake triggering, wave propagation, earthquake damage, related hazards, and other social effects. Hazard reduction through earthquake forecasting and earthquake-resistant design. Class includes one full day weekend field trip to local faults. Advanced algebra and high school geometry recommended. Students are billed a materials fee. (General Education Code(s): SI.) The Staff

**12. Introduction to Weather and Climate.**
Many meteorological phenomena are familiar to us: clouds, fog, rain, snow, wind, lightning, and severe storms. Climate is the sum of weather over long periods and is changing (e.g., greenhouse warming, ozone depletion, urban smog) due to mankind's activities. Conceptual understanding of how and why the present-day atmosphere behaves as it does and how this may change in the future is the primary goal of this course. (General Education Code(s): SR.) N. Feld

**20L. Environmental Geology Laboratory (1 credit).** S
Laboratory sequence illustrating topics covered in course 20, with emphasis on rock and mineral identification, geologic hazard assessment, geologic resource management, and land use planning. In-lab field trip. Laboratory 3 hours. Students are billed a materials fee. S. Tulaczyk

**65. Natural History of Dinosaurs.**
Explores the origin, evolution, and extinction of dinosaurs with emphasis on paleobiology and paleoecology. Covers fundamental paleontological and evolutionary principles, dinosaur anatomy and behavior, the hot-blooded/cold-blooded debate, dinosaur-bird relationships, diversity, and exploits of the great dinosaur hunters. One and a half hour of discussion each week. (General Education Code(s): SI.) H. Schwartz

**81B. Fundamentals of Environmental Science.**
Addresses major issues in physical and biological environmental sciences and provides tools to critically evaluate, debate, and make informed choices regarding one's own impact on the environment. Topics include: climate change, water resources, air pollution, evolution, ecology (from populations to ecosystems), and conservation. Quantitative problem solving is an integral part of this course. (Also offered as Carson College 81B. Students cannot receive credit for both courses.) (General Education Code(s): MF.) L. Fox, P. Chuang

**96. Academic Success Skills (2 credits).** F,W,S
Practical, evidence-based strategies for maximizing learning in the Earth and planetary sciences. Introduces how learning occurs in the brain and how you can use those principles to optimize reading, note-taking, problem-solving, and studying. Enrollment is by permission of the instructor. May be repeated for credit. M. Clapham

**98. Earth Sciences Internship.** F,W,S
A supervised learning experience involving practical application of lower division Earth sciences knowledge while working with approved companies, governmental agencies, or research organizations. Students consult weekly with supervising faculty and prepare a final report of their work, to be evaluated both by the sponsoring agency and the faculty supervisor. Consult sponsoring agency for enrollment criteria; after instruction on resume preparation and interview skills, student must interview and be selected for internship by approved sponsoring organizations. May be repeated for credit. The Staff

---

**UPPER-DIVISION COURSES**

**100. Vertebrate Paleontology.** W
Introduction to vertebrate history, with an emphasis on vertebrate relationships and the co-evolution of organisms and environments. Specific topics include vertebrate origins, systematics and classification, adaptive revolutions, mass extinctions, and the rise and fall of dinosaurs. Students are billed a materials fee. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements and course 5 or 10 or 20 or Biology 20C, or Anthropology 1. Concurrent enrollment in course 100L is required. H. Schwartz

**100L. Vertebrate Paleontology Laboratory (2 credits).** W
Comparative anatomy and functional morphology of vertebrates, and preservation of vertebrate hard parts, using modern and fossil specimens. Laboratory three hours and one 1-day field trip. Concurrent enrollment in course 100 is required. H. Schwartz

**101. Invertebrate Paleobiology.** F
An introduction to paleobiology; the use of fossil evidence to pose and solve evolutionary and geologic questions. Students are billed a materials fee. (Formerly The Fossil
101L. Invertebrate Paleobiology Laboratory (1 credit). F
Systematics, ecology, and evolutionary history of the major groups of fossil-forming animals. Laboratory 3 hours and one 1-day field trip. (Formerly The Fossil Record Laboratory.) Concurrent enrollment in course 101 is required. M. Clapham

102. Marine Geology. *
Geology of the marine environment. Topics include controls on the types, origin, and distribution of marine sediments; geology of oceanic crust; evolution of continental margins and plate boundaries; introduction to paleoceanography. Discussion: 1 hour. Students cannot receive credit for this course and Ocean Sciences 280. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and course 5 or 10 or 20 or Biology 20C. A. Clapham

104. Geologic Hazards. F
The recognition, evaluation, and mitigation of geologic hazards: earthquakes and faulting, tsunamis, volcanism, landslides and mass movements, and flooding. Students are billed a materials fee. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and course 10/L or 5/L or 20/L. S Schwartz

105. Coastal Geology. F
An investigation of the evolution, morphology, and processes in the coastal zone including the terrestrial (marine terraces, dunes, estuaries, sea cliffs) and marine (beaches, continental shelves, sea level changes, shoreline erosion and protection, waves, tides) components and their interaction. Laboratory: 3 hours. Students are billed a materials fee. Prerequisite(s): course 5 or 10 or 20. G. Griggs

106. Coasts in Crisis. W
Comprehensive assessment of the impacts that the human population is having on the coastal zone globally and the diverse ways in which geologic processes and coastal hazards impact human settlement and development in the coastal zone. (General Education Code(s): PE-E) G. Griggs

Introduction to geographic information systems (GIS) and remote sensing (RS) as valuable tools in the study of geology. Covers application of GIS/RS to study of surface processes, including landslides, hydrologic basins, coastal erosion, modern floods, volcanic activity and surface deformation. Prerequisite(s): course 5 or 10 or 20. Enrollment limited to 36. The Staff

109. Elements of Field Geology. F,S
Basic tools and techniques used in geologic fieldwork. Preparation, analysis, and interpretation of geologic maps. Nine to 10 days of weekend field trips required, including a six-day geologic mapping exercise. Laboratory: 3 hours. Recommended for courses 120, 130, 150, and required for 188A-B. May not be taken concurrently with course 120, 150, or 188. Students are billed a materials fee. Enrollment is restricted to majors and minors in Earth and planetary sciences and the combined majors with anthropology and environmental studies. Prerequisite(s): Satisfaction of the Entry Level Writing and Composition requirements, course 5 or 10 or 20, and 5L or 10L or 20L, or by permission of instructor. Concurrent enrollment in 109L is required. Enrollment limited to 25. (F) H. Schwartz, (S) The Staff

109L. Field Geology Laboratory (2 credits). F,S
Laboratory exercises essential to the successful completion of fieldwork required in course 109. Topics include topographic maps, Brunton compass, rock identification and description, geologic map analysis, structure section "construction," and landslide recognition. Concurrent enrollment in course 109 is required. Enrollment is restricted to majors and minors in Earth and planetary sciences and the combined majors with anthropology and environmental studies or by permission of instructor. Enrollment limited to 25. (General Education Code(s): PR-E) (F) H. Schwartz, (S) The Staff

110A. Evolution of the Earth. F
Investigation of the processes and mechanisms that have produced the present Earth system, with an emphasis on the temporal evolution of the earth from the Archean to the present. Specific topics covered include cyclicity in Earth processes and the evolution of, and interplay between the planet's crust, atmosphere, hydrosphere, and biosphere. Prerequisite(s): courses 5 or 10 or 20, and 5L or 10L or 20L, and Mathematics 11A or Mathematics 19A or Applied Mathematics and Statistics 15A. (General Education Code(s): PE-E) Q. Williams, J. Zachos

110B. Earth as a Chemical System. W
The chemical properties of Earth materials and the chemical processes by which the planet has evolved to its present state. Specific topics covered include properties of minerals; the genesis of igneous, metamorphic, and sedimentary rocks; and the linkage between the solid Earth and the hydrosphere. Enrollment is permitted by permission code with equivalent or exceptional background, or if enrolled concurrently in Chemistry 1B. Prerequisite(s): courses 5, or 10, or 20, and 5L, or 10L, or 20L, and Chemistry 1B. E. Knittle

110C. The Dynamic Earth. S
Physical processes occurring in the interior of the earth, at its surface and in the oceans and atmospheres including plate tectonics, structural deformation of rocks, and material and heat transport. Students are billed a materials fee. Prerequisite(s): course 5 or 10 or 20; and 5L or 10L or 20L; and course 111 or Mathematics 22 or 23A; and Physics 6A or 5A. I. Garrick-Bethell
Earth and Planetary Sciences

110L. Evolution of the Earth Laboratory (2 credits). F
Laboratory sequence illustrating topics covered in course 110A. Emphasis is on quantifying and evaluating different phenomena related to thermal, tectonic, climatic, and evolutionary processes. Prerequisite(s): concurrent enrollment in course 110A. (General Education Code(s): PR-E.) Q. Williams, J. Zachos

110M. Earth as a Chemical System Laboratory (2 credits). W
Laboratory sequence illustrating topics covered in course 110B. Emphasizes identification of the major rock-forming minerals and common rock types; principles of basic crystallography. Prerequisite(s): concurrent enrollment in course 110B. E. Knittle

110N. The Dynamic Earth Laboratory (2 credits). S
Laboratory sequence illustrating topics covered in course 110C. Prerequisite(s): concurrent enrollment in course 110C. I. Garrick-Bethell

111. Mathematics in the Earth Sciences. F
Series and sequences, vectors, 3D analytic geometry, partial differentiation, matrix algebra, and differential equations with applications in the Earth sciences. Topics include matrix manipulation, systems of linear equations, least-squares, Taylor series, gradients, optimization, analytic and numerical solutions to differential equations. Prerequisite(s): courses 5 or 10 or 20, and Mathematics 11B or Mathematics 19B or Applied Mathematics and Statistics 15B. W. Nimmo

118. Seismotectonics. W
Earthquakes and their relationship to plate tectonics. Topics include seismological analysis of earthquake faulting, types of seismic waves, seismicity distributions, thermal and rheological structure of plates, and seismic investigation of plate dynamics. Prerequisite(s): course 5 or 10 or 20; Mathematics 11B or 19B; and Physics 5A or 6A. T. Lay

119. Introduction to Scientific Computing. F,S
Introduction to solving scientific problems using computers. A series of simple problems from Earth sciences, physics, and astronomy are solved using a user-friendly scientific programming language (Python/SciPy). (Also offered as Astronomy and Astrophysics 119. Students cannot receive credit for both courses.) Prerequisite(s): Mathematics 11A or 19A or 20A or Applied Mathematics or Statistics 15A. J. Prochaska

120. Sedimentology and Stratigraphy. S
Stratigraphic principles used in classifying sedimentary rocks. Fundamentals of sedimentary mechanics. Analysis and interpretation of facies and depositional systems. Introduction to seismic facies and basin analysis. Course includes three Sunday field exercises. Students are billed a materials fee. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and course 110A. Course 110B is recommended as preparation. May not be taken concurrently with course 109. M. Clapham

120L. Sedimentology and Stratigraphy Laboratory (2 credits). S
Laboratory sequence illustrating topics in course 120, including sedimentary petrology, sedimentary structures, sequence stratigraphy, and geohistory analysis. Prerequisite(s): concurrent enrollment in course 120. M. Clapham

121. The Atmosphere. *
Course focuses on understanding basic atmospheric weather and climate phenomena starting from the fundamentals of physics and chemistry. Using this approach, covers topics such as atmospheric circulation, precipitation, clouds, storms, urban and regional air quality, atmospheric aerosols, and climate and global change. Students are billed a materials fee. Prerequisite(s): Mathematics 11B or Mathematics 19B or Applied Mathematics and Statistics 15B, and Chemistry 1A, and Physics 5B or 6B. P. Chuang

124. Modeling Earth’s Climate. S
A hands-on course in climate modeling with emphasis on computer programming (Python) exercises. Topics include the physical laws governing climate, the hierarchy of model complexity, parameterizations, using models for prediction versus understanding, and application to past and future Earth climates. Prerequisite(s): Mathematics 11B or 19B and Physics 6B or 5B. N. Feldl

125. Statistics and Data Analysis in the Geosciences. W
Project-based introduction to analytical methods, such as univariate and multivariate statistics, cluster analysis and ordination, and maximum likelihood estimation, using a conceptual approach. Introduction to analysis and programming using the R software package. Students cannot receive credit for this course and course 225. (General Education Code(s): SR.) M. Clapham

127. Measuring Earth’s 4.5 Billion-Year History. *
Introduces the methodology for measuring the timing of events in Earth’s past. Topics include: radiogenic and stable isotopes, chemostratigraphy and paleomagnetism. Case studies focus on reconstructing the timing of
major extinction and climatic events in Earth's history. (Formerly Radiogenic Isotopes.) Prerequisite(s): course 110B. T. Blackburn, J. Zachos

128. Isotopes: Fundamentals and Applications in Earth and Marine Sciences. *
Explores the fundamentals and concepts of stable, radiogenic, and cosmogenic isotope chemistry with applications relevant to Earth, marine, and biological sciences. Prerequisite(s): course 110B or permission of instructor. J. Zachos

129. Global Change. *
Covers the science of past and future climate change. Topics include: drivers of radiative forcing; carbon cycle; climate history of Earth; climate feedbacks; detection and attribution of climate change; climate change responses, impacts, adaptation, and mitigation. Prerequisite(s): Mathematics 11B and Chemistry 1C. Enrollment is restricted to environmental studies majors and Earth sciences majors. P. Chuang

130. Igneous and Metamorphic Petrology. *
Introduction to the relationship between tectonic environments and the genesis of rock assemblages, primarily igneous and metamorphic. Examples from California and elsewhere are used to illustrate petrogenetic processes and characteristic petrologic features of rocks from all major tectonic settings. Prerequisite(s): course 110B. Concurrent enrollment in course 130L is required. E. Knittle

130L. Igneous and Metamorphic Petrology Laboratory (2 credits). *
An introduction to optical mineralogy and the petrography of igneous rocks. (Formerly Magmas and Volcanos Laboratory.) Prerequisite(s): course 110B. Concurrent enrollment in 130 is required. E. Knittle

134. Thermochemistry of Geologic Systems. *
Introduction to the thermodynamic and kinetic principles with a strong emphasis on applications to Earth materials. Implications for phase equilibria, geothermometry/geobarometry, element partitioning, and physical properties of minerals, magmas, and solutions. Prerequisite(s): course 110B. Q. Williams

135L. Practical Geochemistry. F
Provides hands-on exposure to geochemical instrumentation with a focus on data collection. Practical labs apply sample imaging, isotopic major- and trace-element measurements to natural samples. Laboratory sessions are supported by instruction, geochemistry, and Earth science. Prerequisite(s): course 5, or 10, or 20. Course 110B is recommended. Enrollment is restricted to majors and minors in Earth sciences and the combined majors with anthropology and environmental studies. Enrollment limited to 12. M. Telus, T. Blackburn

140. Geomorphology. W
An introduction to the evolution of the Earth's landscape, with emphasis on the processes responsible. Review of climatic and tectonic forcing followed by detailed discussion of weathering, glaciers, hillslopes, wind, rivers, and coastal processes with emphasis on their geographic distribution. One single day and one three-day field trip. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements and course 110A. Concurrent enrollment in 140L is required. N. Finnegan

140L. Geomorphology Laboratory (2 credits). W
Laboratory sequence illustrating topics covered in course 140. These extensive laboratory exercises emphasize the quantification of the geomorphic processes and forms, and on the writing of concise summaries of the science in the form of abstracts. Students are billed a materials fee. Prerequisite(s): Concurrent enrollment in course 140 is required. N. Finnegan

142. Engineering Geology for Environmental Scientists. W
Introduction to the formation, composition, and classification of soils; the chemical interaction of soil and groundwater; and basic soil mechanics: stress-strain behavior, effective stress concept, consolidation, soil testing methods. Applications to problems including slope stability, landslides, liquefaction, subsidence, soil creep, debris flows. Laboratory: 3 hours. Students are billed a materials fee. Prerequisite(s): course 5 or 10 or 20; Mathematics 11A or Mathematics 19A or Applied Mathematics or Statistics 15A. S. Tulaczyk

146. Groundwater. *
Explores saturated and unsaturated fluid flow below Earth's surface, well hydraulics, and recourse evaluation and development. Introduces modeling, field techniques, geochemistry, and contaminant transport and remediation. Problem set and laboratory each week; final paper. Laboratory: 3 hours. Students are billed a materials fee. Alternates annually with course 116. Enrollment is restricted to majors and minors in Earth and planetary sciences and the combined majors with anthropology and environmental studies. Course 5L or 10L or 20L and Physics 6B/M are recommended as preparation. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; and course 5 or 10 or 20; and Mathematics 11A or 19A or AMS 15A; and Physics 6A/L (Physics 6B/M recommended); and Chemistry 1A, or by permission of the instructor. A. Fisher

148. Glaciology. *
Introduction to the role of snow and ice in the dynamics of the earth surface system. Snow deposition and metamorphism. Heat and mass balance at snow and ice surfaces. Flow of glaciers, ice sheets, and sea ice. Methods of climate reconstruction. Ice age theories. Students are billed a materials fee. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and courses 5 or 10 or 20; and Mathematics 11A or Mathematics 19A or Applied Mathematics or Statistics 15A. S. Tulaczyk

150. Structural Geology. F
Principles and methods of analysis of brittle and ductile deformed rocks. Includes descriptions of structures, field analysis of structures, and mechanics of deformation. Three day-long field trips on weekends. Students are billed a materials fee.

Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and course 110A or 110B; course 109 recommended; concurrent enrollment in course 150L is required. J. Hourigan

150L. Structural Geology Laboratory (2 credits). F
Structural analysis of faults, folds, and maps. Use of stereographic projections. Cross section construction and balancing from field data. Concurrent enrollment in course 150 is required. J. Hourigan

152. Tectonics. W
The processes, techniques, and interpretations involved in the study of active crustal movements; constraints from plate tectonics; horizontal and vertical motions and rates; geodesy, including GPS; stress measurement; image interpretation; fault system analysis; paleoseismicity; fluid effects. Examples from the circum-Pacific. Laboratory-3 hours. Students cannot receive credit for this course and course 207. Students are billed a materials fee. Prerequisite(s): course 10 or 5 or 20 and 10L or 5L or 20L, and Physics 5A or 6A or equivalent per instructor permission. J. Hourigan

160. Planetary Science. F
Broad introduction to planetary science. Topics include the fundamental characteristics of solar system bodies; space exploration of these bodies; formation and evolution of surfaces, atmospheres and interiors of planets, satellites and small bodies. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and Mathematics 11B or Mathematics 19B or Applied Mathematics and Statistics 15B; and Physics 5A or 6A. I. Garrick-Bethell

162. Planetary Interiors. *
The chemical and thermal structure and evolution of silicate planet interiors. Topics include equation of state of mantle and core materials, thermal history of the mantle and core, dynamics of mantle convection, geophysical determination of interior structure. Students cannot receive credit for this course and course 262.

Prerequisite(s): course 160; and course 111 or Mathematics 22 or 23A; and Physics 5C or 6C. I. Garrick-Bethell

163. Planetary Surfaces. *
Comparative study of surfaces and atmospheres of planetary bodies in solar system, focusing on comparative planetology and geophysical processes at work, including differentiation, impact cratering, tectonics, volcanism, and geomorphic evolution. Explores terrestrial planets, giant planets and their moons. Students cannot receive credit for this course and course 263. Prerequisite(s): course 160. W. Nimmo

164. Planetary Atmospheres. W
A quantitative study of the origin, chemistry, dynamics, and observations of the atmospheres of terrestrial and gas-giant planets. Students cannot receive credit for this course and course 264.

Prerequisite(s): course 160. X. Zhang

165. History and Geochemistry of the Solar System. S
Introduces solar system history and geochemistry. Observation methods and tools discussed include major and trace element geochemistry, geothermometry, radiogenic and stable isotopes. Solar system reconstructed through the examination of meteorites from different parent bodies.

Prerequisite(s): course 110B. M. Telus, T. Blackburn

172. Geophysical Fluid Dynamics. *
Introduces fluid motion influenced by rotation. Topics include the Coriolis force, geostrophic flow, potential vorticity, the shallow water model, quasigeostrophic approximation, planetary waves, Ekman theory, thermal wind, models of the large-scale oceanic and atmospheric circulation, and equatorial dynamics. Taught in conjunction with course 272.

Students cannot receive credit for this course and course 272. (Also offered as Ocean Sciences 172. Students cannot receive credit for both courses.) Prerequisite(s): Physics 107 or Applied Mathematics and Statistics 107; Mathematics 22 or 23B recommended. C. Edwards

188A. Summer Field Internship. S
Three weeks of summer field study in geologically complex regions in the White-Inyo Mountains of eastern California. Activities include geologic field mapping on topographic and photographic base maps, stratigraphy, petrology, and structure analysis. A fee is required for participation. Contact sponsoring agency for details. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 109/L, 110A/L, and 110B/M. Enrollment is restricted to Earth sciences majors. Concurrent enrollment in course 188B is required. Interview only via application filed with department. (General Education Code(s): PR-E.) H. Schwartz

188B. Geographic Information Systems with Applications to the Earth Sciences. S
Introduction to basic principles of geographic information systems (GIS). Visualization of earthscapes with applications to problem-solving in the Earth sciences. Laboratory exercises in loading, manipulation, and interpretation of data sets. Field investigations of phenomena visualized in laboratory, including geological description, interpretation, and written report preparation. Lecture and laboratory portions of course occur during spring quarter. Field investigations and report-writing occur in the summer following spring quarter. A fee is required for participation. Contact sponsoring agency for details. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 109/L, 110A/L, and 110B/M. Enrollment is restricted to Earth sciences majors. Concurrent enrollment in course 188A is required. Interview only via application filed with department. Enrollment limited to 25. N.
190. Earth Sciences Mentorship (1 credit). *  
Faculty research activity, analytic facilities, and career counseling in three separate Earth sciences laboratories are offered with varied formats including field trips, discussions, and equipment demonstrations. Three different faculty participate in each offering. Enrollment is restricted to Earth sciences, Earth sciences/anthropology, and environmental studies/Earth sciences majors. Enrollment limited to 25. May be repeated for credit. The Staff

191A. Climate Change Science and Policy. *  
Explores the scientific basis of current and pending climate change, and the state of climate policy issues in California, the nation, and the world. Work includes foundational lectures on both public policy and climate science; additional guest lectures from policy makers, politicians, and scientists. Students are introduced to and become familiar with addressing climate-change issues from both policy and scientific perspectives; research papers and public presentations are required activities. (Formerly course 191.) Prerequisite(s): Satisfactory completion of the Entry Level Writing and Composition requirements. Enrollment is restricted to seniors majors in Earth sciences and the combined major with anthropology.

191B. Planetary Capstone. W  
Examines a crosscutting topic in planetary sciences (e.g., volcanism) to satisfy the senior capstone requirement. Students are assessed on the basis of an oral presentation and a written report in which a synthetic review is present. (Formerly course 193.) Prerequisite(s): course 160, and course 111 or Mathematics 22. Enrollment is restricted to seniors and graduate students. 

191C. Practical Geophysics. W  
Hands-on practice analyzing real-life observational data including earthquake catalogs, seismograms, gravity, and GPS data. Emphasis on data collection, and access and manipulation skills. Introduction to MATLAB programming included. Students cannot receive credit for this course and course 266. (Formerly course 112.) Prerequisite(s): course 110C. E. Brodsky

194F. Education Capstone (2 credits). F,W,S  
Students write a paper on a lesson plan developed after their CalTeach internship courses. This independent study is supervised by Earth and planetary sciences faculty or ocean sciences faculty, as well as a member of the CalTeach staff or Education Department. Prerequisite(s): Education 185C and 185L. Enrollment is restricted to Earth and planetary sciences majors with a concentration in science education. The Staff

Students submit petition to sponsoring agency. Enrollment is restricted to seniors. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. May be repeated for credit. The Staff

196B. Tutoring Earth Sciences in the University. F,W,S  
Students facilitate laboratory and field exercises in conjunction with faculty and teaching assistants in various Earth sciences courses. May not count toward upper-division major requirements. Approval of sponsoring agency; interview, and selection by primary instructor of specific courses required. (Formerly Teaching Earth Sciences in the University.) The Staff

196C. Tutoring Earth Sciences in the University (2 credits). F,W,S  
Students facilitate laboratory and field exercises in conjunction with faculty and teaching assistants in various Earth sciences courses. May not count toward upper-division major requirements. Approval of sponsoring agency; interview, and selection by primary instructor of specific courses required. Enrollment restricted to Earth sciences, Earth sciences/anthropology, and environmental studies/Earth sciences majors. (Formerly Teaching Earth Sciences in the University.) May be repeated for credit. The Staff

198F. Earth Sciences Internship (2 credits). F,W,S  
A supervised learning experience involving practical application of Earth sciences through working with approved companies, governmental agencies, or research organizations. Students consult weekly with supervising faculty and prepare a final report of their work. Consult sponsoring agency for enrollment criteria. After instruction on resume preparation and interview skills, students must interview and be selected for internship by approved sponsoring organizations. Enrollment is restricted to Earth sciences, Earth sciences/anthropology, and environmental studies/Earth sciences majors. May be repeated for credit. The Staff
199. Tutorial. F,W,S
Introduction to research in laboratory, field, or theoretical subjects as an independent study. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

199F. Tutorial (2 credits). F,W,S
Introduction to research in laboratory, field, or theoretical subjects as an independent study. May not be counted toward upper-division major requirements. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

GRADUATE COURSES

203. Introductory Teaching Seminar (1 credit). F
Intended for new Earth sciences graduate students. Focus on preparation, assessment, and feedback. Classroom techniques, organizational and time management strategies, practice teaching sessions specific to laboratory and/or science instruction. Required follow-up meetings to discuss practical teaching experience. Enrollment is restricted to graduate students. The Staff

204. Earth and Planetary Sciences Foundations. F
Provides a comprehensive overview of key concepts, dominant paradigms, and research frontiers in Earth and planetary sciences in plenary talks by multiple faculty. Provides a required foundation course for all incoming students pursuing graduate degrees in Earth and planetary sciences. Students are billed a materials fee. Enrollment is restricted to Earth sciences graduate students. The Staff

206. Great Papers in the Earth Sciences. W
Exposure to the most important ideas in the Earth sciences through exploration of the primary literature. Seminal papers in different subdisciplines of the Earth sciences are read and analyzed to provide breadth and improve students’ ability to think critically. Enrollment is restricted to Earth sciences graduate students. T. Blackburn, Q. Williams

207. Tectonics. W
An overview of tectonic theory and processes for application to the Earth sciences. The course explores the primary tools of tectonic interpretation including plate kinematics, rheology, plate boundary dynamics, and the behavior of active fault systems. Taught in conjunction with course 152. Students cannot receive credit for this course and course 152. Prerequisite(s): graduate standing or permission of instructor. J. Hourigan

208. Methods in Paleoclimatology. *
Addresses methods used to reconstruct aspects of paleoenvironments and paleoenvironments from the geologic record, focusing primarily on terrestrial records. Topics to be covered include dendrochronology and dendroclimatology, paleopalynology, paleobotany, ice cores, and paleosol studies. Lectures, discussions, and laboratory work. Enrollment is restricted to graduate students. The Staff

210. Overview of Stellar and Planetary Formation and Evolution. *
Overview of current understanding of star and planet formation and evolution. Examines our solar system in the context of the galactic planetary census. Provides a uniform introduction to astronomy and Earth science planetary students. Enrollment is restricted to graduate students. The Staff

213. Biogeochemical Cycles. F
Overview of biogeochemical cycles, present and past, and geochemical models. Topics include: marine, terrestrial, and global views of the carbon, nitrogen, phosphorus, silicon, sulfur, and oxygen cycles, and the evolution of these cycles and Earth’s redox balance through geologic time. (Also offered as Ocean Sciences 213. Students cannot receive credit for both courses.) Enrollment is restricted to graduate students. Upper-division undergraduates may enroll with instructor approval. College-level chemistry and an upper-division course in at least one relevant discipline are recommended. M. Delaney

220. Ground Water Modeling. *
Introduction to building and using models to solve hydrogeologic problems. Modeling methods include mainly analytical and finite-difference. Emphasis on using models rather than the details of their functioning, although some coding is required. Comfort with mathematical methods and computers expected. Course designed for graduate students, but available to qualified Earth science majors. Prerequisite(s): graduate standing or permission of instructor required. One year of calculus and courses in differential equations and basic hydrologic principles are recommended as preparation. A. Fisher

225. Statistics and Data Analysis in the Geosciences. W
Using a conceptual approach, this course is a project-based introduction to analytical methods, such as univariate and multivariate statistics, cluster analysis and ordination, and maximum likelihood estimation. Introduces analysis and programming using the R software package. Students cannot receive credit for both this course and course 125. Enrollment is restricted to graduate students. M. Clapham

227. Measuring Earth’s 4.5 Billion Year History. *
Introduces the methodology for measuring the timing of events in Earth’s past. Topics include: radiogenic and stable isotopes, geochemistry and paleomagnetism. Case studies focus on reconstructing the timing of major extinction and climatic events in Earth’s history. Students cannot receive credit for both this course and course 127. Enrollment is restricted to graduate students. T. Blackburn, J. Zachos.
Earth and Planetary Sciences

229. Isotopic Methods in Environmental Science. * Explores how natural variations in stable isotope ratios answer questions in ecology, paleobiology, and other environmental sciences. Format includes lectures by the instructor and student presentations on applications following literature-based research on each topic. Enrollment is restricted to graduate students. P. Koch

240. Communicating Science (3 credits). * Introduces inquiry-based instructional strategies for communicating a passion for science. These strategies, combined with content knowledge and enthusiasm for sharing it, equips college students to introduce science to K-8 students and teachers in local schools. Enrollment is restricted to graduate students. A. Paytan

254. The Climate System. S Focuses on atmospheric and oceanic processes that are important within the Earth’s climate system, especially those that operate on annual to centennial time scales. Format includes lectures by the instructors, paper readings, and discussion. Enrollment is restricted to graduate students. P. Chuang, A. Ravelo

258. Deep Time Paleoclimates. * Weekly lectures/readings/presentations focused on the key events in the long-term evolution of Earth’s climate (i.e., before the Pliocene), including early Archean, faint, young-sun period; Proterozoic snowballs; Paleozoic glaciations and greenhouse events; the mid-Cretaceous oceanic anoxic events (OAEs); and Paleogene thermal maxima and glacial intervals. Considerable emphasis on evaluating the proxies of climate and mechanisms of climate change (e.g., greenhouse gasses, paleogeography). Enrollment is restricted to graduate students. J. Zachos

260. Introductory Data Analysis

in the Ocean and Earth Sciences. W
Introduces data analysis methods regularly encountered within the ocean and earth sciences. Topics include: error propagation, least squares analysis, data interpolation methods, empirical orthogonal functions, and Monte Carlo methods applied to problems drawn from oceanographic and earth sciences datasets. Introduces and uses a high-level computing and visualization package, MATLAB. Student project consists of analysis of the student’s own dataset. (Also offered as Ocean Sciences 260. Students cannot receive credit for both courses.) Prerequisite(s): previous course in ocean or earth sciences is recommended. Enrollment is restricted to graduate students; undergraduates with permission of instructor. C. Edwards

262. Planetary Interiors. * The chemical and thermal structure and evolution of silicate planet interiors. Topics include equation of state of mantle and core materials, thermal history of the mantle and core, dynamics of mantle convection, geophysical determination of interior structure. Students cannot receive credit for this course and course 162. Enrollment is restricted to graduate students. I. Garrick-Bethell

263. Planetary Surfaces. * Comparative study of surfaces of planetary bodies in our solar system, focusing on comparative planetology and geophysical processes at work, including differentiation; on-impact cratering; tectonics; volcanism and geomorphic evolution; and exobiology. Explores terrestrial planets, giant planets and their moons, and trans-Neptunian objects, focusing on modern exploration. Students cannot receive credit for this course and course 163. Enrollment is restricted to graduate students. W. Nimmo

264. Planetary Atmospheres. * Quantitative study of the origin, chemistry, dynamics, and observations of the atmospheres of terrestrial and gas giant planets. Students cannot receive credit for this course and course 164.

Enrollment is restricted to graduate students. X. Zhang

265. Order of Magnitude Estimation. W Practice in making rough estimates and leading-order approximations in physical and chemical processes. Enrollment is restricted to graduate students. W. Nimmo, P. Chuang

266. Geologic Signal Processing and Inverse Theory. * Theoretical and practical aspects of digital signal analysis including data sampling, spectral estimation, digital filtering, statistical estimation, correlation tools, and principle-component analysis. Emphasis on practical examples of geophysical time series. Multivariable calculus and linear algebra are required and used extensively in the course. Taught in conjunction with course 191C. Students cannot receive credit for this course and course 191C. Enrollment is restricted to graduate students. May be repeated for credit. E. Brodsky

270. Global Seismology. * Introduction to quantitative earthquake and global Earth structure seismology. Topics include basic elasticity, wave characteristics, seismic ray theory, wave reflection, surface waves, normal modes, seismic instrumentation, application of seismic waves to reveal Earth structure and resulting models, representation of earthquake sources such as explosions and faulting, earthquake rupture scaling, modern methods of modeling seismic recordings to study source complexity, and an introduction to seismotectonics. Laboratory: 3 hours. Enrollment is restricted to graduate students. T. Lay

271. Current Research Topics in Deep Earth Processes. ** Students and instructor lead discussions of recent and significant publications in geophysics and chemistry of deep Earth. Articles structured around current theme of interest are selected by participants and approved by instructor. Emphasis on defining multidisciplinary significance of
each article and its relationship to fundamental processes in deep Earth, including core and mantle. Designed for graduate students but available to qualified Earth sciences majors. May be repeated for credit. T. Lay

272. Geophysical Fluid Dynamics. * Introduces fluid motion influenced by rotation. Topics include the Coriolis force, geostrophic flow, potential vorticity, the shallow water model, quasigeostrophic approximation, planetary waves, Ekman theory, thermal wind, models of the large-scale oceanic and atmospheric circulation, and equatorial dynamics. Students cannot receive credit for this course and course 172. (Also offered as Ocean Sciences 272. Students cannot receive credit for both courses.) Physics 227 is recommended as preparation. Enrollment is restricted to graduate students. C. Edwards

273. Earthquake Physics. S Why do earthquakes happen? Topics include friction, fracture, earthquake triggering, stress in the crust, observed source scalings, and seismicity statistics. Emphasis on observations and current research topics. (Formerly course 290J, Topics in Earthquake Physics.) Enrollment is restricted to graduate students and advanced undergraduates. E. Brodsky

275. Magnetohydrodynamics. * Studies the interaction of fluid motion and magnetic fields in electrically conducting fluids, with applications in many natural and man-made flows ranging from, for example, planetary physics and astrophysics to industrial metallurgical engineering. (Also offered as Applied Math and Statistics 275. Students cannot receive credit for both courses.) Prerequisite(s): Applied Mathematics and Statistics 107 or 217. Applied Mathematics and Statistics 227 suggested. Enrollment is restricted to graduate students. The Staff

278A. Advanced Seismology. F Elastic wave propagation. Advanced topics in ray theory, WKBJ solutions in seismology, singularities and nonlinearities, surface wave theory, propagating matrices, normal modes, and inversion theory. Selected topics in time series analysis and seismic signal processing, seismic wave dispersion. Course is designed for graduate students but available to qualified Earth sciences majors. Physics 110B and 114B are recommended as preparation. Enrollment is restricted to graduate students. May be repeated for credit. T. Lay

280D. Short Course in Atmospheric/Climate Science (3 credits). ** Addresses specialized topics in atmospheric and/or climate science that are too narrow for a full (5-credit) format. Examples include: cloud physics; atmospheric boundary layer; aerosol physics and chemistry; atmospheric radiation; atmospheric thermodynamics. Enrollment is restricted to graduate students. May be repeated for credit. P. Chuang

290. Proseminar. Special topics offered from time to time by visiting professors or staff members. May be repeated for credit. The Staff

290B. Topics in Glaciology. F Advanced review of the physics and chemistry of ice and snow. Mass and heat balance of ice masses. Motion of glaciers and ice sheets. Subglacial and englacial hydrology. Thermodynamics of ice masses and the linkage to climate. Enrollment is restricted to graduate students. May be repeated for credit. S. Tulaczyk

290C. Topics in Geophysics. F Different problems and approaches will be stressed from year to year such as geotectonics, paleomagnetism, or properties and processes in the mantle and core. Enrollment is restricted to graduate students; qualified Earth sciences majors by permission of instructor. I. Garrick-Bethell

290D. Petrology and Plate Tectonics. * Selected topics illustrating relationships between igneous and metamorphic rocks and plate tectonics are explored in detail. Designed for graduate students but available to qualified Earth sciences majors. May be repeated for credit. A. Fisher

290E. Topics in Planetary Science. $ We examine one well-defined topic in planetary science, beginning with a summary of current knowledge and concluding with the latest research literature. Topics will vary from year to year and may include planetary collisions, terrestrial planets, origin of planetary systems, small bodies, the New Mars, and satellites of Jupiter. Achievement will be evaluated based on class participation, exams, and a research project. Open to undergraduate majors with permission of instructor. Enrollment is restricted to graduate students. May be repeated for credit. M. Telus, X. Zhang

290F. Topics in Coastal Processes (2 credits). W,S Instructor and students lead discussions and make presentations on current research, problems, and publications in coastal processes. These topics include littoral drift, sediment transport and storage on the inner shelf, shoreline erosion/change and its documentation, and related issues. Enrollment is restricted to graduate students. May be repeated for credit. G. Griggs

290G. Topics in Global Tectonics. * Explores different problems of special interest in global tectonics with the approach of integrating marine and terrestrial geologic and geophysical information. Course designed for graduate students but available to qualified Earth sciences majors. May be repeated for credit. E. Silver

290H. Topics in Hydrogeology. * Selected topics in groundwater, hydrothermal systems, and related subjects. Discussion of theoretical models, field and laboratory approaches, and recent research. Topics vary from year to year. Course designed for graduate students but available to qualified Earth sciences majors. May be repeated for credit. A. Fisher
Earth and Planetary Sciences

290I. Topics in Geomorphology. S
Discussion of journal articles focused on a theme in contemporary geomorphology. Topics include: coupling of climate; tectonics and landscape evolution; mechanics of bedrock river channels; fundamentals of fluvial gravel transport; and inference of tectonic rates and processes from analysis of topography. Enrollment is restricted to graduate students; qualified undergraduates may enroll by permission of instructor. May be repeated for credit. E. Knittle

290K. Paleontology Seminar (3 credits). *
Seminar discussion based on current readings in the literature around some topic in the history and evolution of life. Course designed for graduate students but available to qualified upper-division science students. May be repeated for credit. M. Clapham, P. Koch

290L. Topics in Climate Change. *
Explores current issues and recent developments in the field of past, present, and future climate change. Topic is different each year, but focuses on the interaction between different components of Earth's environment and the effect of that interaction on climate change. Designed for graduate students but open to qualified undergraduates. Enrollment is restricted to graduate students. May be repeated for credit. The Staff

290M. Topics in Atmospheric Science.*
Selected topics encompassing atmospheric physics and chemistry. Topics vary from year to year. Sample topics include: atmospheric physics, atmospheric chemistry, boundary layer meteorology, aerosol science, and atmospheric thermodynamics. (Formerly Topics in Atmospheric Chemistry.) Designed for graduate students, but qualified undergraduates may enroll with permission of instructor. May be repeated for credit. N. Feldl

290N. Topics in Mineral Physics. *
Selected topics encompassing the physics and chemistry of Earth's interior, planetary physics, high-pressure experimental geophysics and material properties at high pressure and temperature. Topics vary from year to year. Enrollment is restricted to graduate students and qualified Earth sciences majors by permission of instructor. May be repeated for credit. N. Finnegan

290P. Interdisciplinary Topics in the Earth Sciences. S
An understanding of the chemical and physical properties and processes in the earth is sought by integrating information from several subdisciplines in the Earth sciences. Topics vary from year to year, focusing on areas of active research. Course designed for graduate student but available to qualified Earth sciences majors. Prerequisite(s): graduate standing or permission of instructor. Course is designed for graduate student but available to qualified Earth sciences majors. May be repeated for credit. S. Schwartz

290Q. Topics in Outer Solar System. *
Exploration of the planets and satellites beyond the asteroid belt, with an emphasis on the underlying physical processes at work. Course includes lectures, computer practicals, and student presentations. Enrollment is restricted to graduate students. May be repeated for credit. W. Nimmo

290R. Topics in the Chemistry and Physics of the Earth. *
Explores problems and current research developments in the application of physics and chemistry to planetary interiors. Topics differ from year to year and include, but are not limited to, research related to the accretion, differentiation, evolution, and structure of the terrestrial planets. Course is designed for graduate students but available to qualified Earth sciences majors. May be repeated for credit. Q. Williams

290T. Current Research Topics in Paleoceanography and Paleoclimatology. W
Students and instructor lead discussions of recent and significant problems in paleoceanography and paleoclimatology. Articles structured around current themes of interest are selected by the instructor. Emphasis on major climatic transitions or events which noticeably influenced evolution of biota. Course is designed for graduate students but available to qualified Earth sciences majors. J. Zachos

290U. Topics in Thermochronology. *
Surveys the use of thermochronometry to quantify the rates of tectonic processes. Topics include heat conduction and diffusion; radioactive decay; analytical methods; and modeling of thermochronologic data. Seminars review seminal papers from the literature. Enrollment is restricted to graduate students. Enrollment limited to 20. J. Hourigan

290X. Topics in Modeling Planetary Interiors.*
Introduces computer modeling of thermal convection in planetary interiors. Students learn to write and run a basic computer code using spectral and finite-difference methods, then are shown how to improve the numerical method and physics. Basic computer programming experience is required (for example, in Fortran, C, IDL, or MATLAB). Course is designed for and enrollment restricted to graduate students but available to qualified science majors. May be repeated for credit. G. Glatzmaier

292. Seminar (no credit). F,W,S
Weekly seminar attended by faculty, graduate students, and upper-division undergraduate students. J. Zachos

293. Graduate Research Seminar (1 credit). S
Weekly seminar series covering a broad spectrum of topics in the Earth sciences. Graduate students give 15- to 20-minute oral presentations on current or anticipated research. Enrollment is restricted to graduate students. May be repeated for credit. J. Zachos

296. Special Student Seminar. F,W,S
Permission of instructor required. The Staff
Earth and Planetary Sciences

297. Independent Study. F,W,S
Permission of instructor required.
*The Staff*

298. Earth Sciences Internship. F,W,S
A supervised learning experience involving practical, graduate-level application of Earth sciences through working with approved companies, governmental agencies, or research organizations. Students consult weekly with supervising faculty and prepare a final report of their work. Consult sponsoring agency for enrollment criteria. After instruction on resume preparation and interview skills, students must interview and be selected for internship by approved sponsoring organizations. *The Staff*

Permission of instructor required.
*The Staff*

* Not offered in 2018-19

Revised: 07/15/18
East Asian studies addresses the three societies of China, Japan, and Korea in northeast Asia. We recognize that they compose a meaningful regional designation that contains a diverse range of peoples, languages, and cultures. Linked by centuries of common use of the Chinese writing system, a shared textual canon, general principles of statecraft, and the continual circulation of people and goods, the three societies nevertheless also possess distinctive languages, histories, and social identities, making it necessary to explore each society in its own right.

In recognition of this diversity within the common bonds, East Asian studies at UCSC encourages students to explore East Asia in both depth and breadth. Building first upon developing language skills in Chinese or Japanese, students also begin their studies in one of two historical surveys—History 40A, Early Modern East Asia, or History 40B, The Making of Modern East Asia—which explore the broad regional forces that contextualize each society’s particular trajectory. From these foundations, students are encouraged to investigate a broad range of questions pertinent to each society in classes across the university, including anthropology, economics, education, feminist studies, film and digital media, history, history of art and visual culture, languages, linguistics, literature, music, politics, sociology, and theater arts.

The East Asian studies minor is administered by the Department of History. For additional information on curriculum and advising, go to the East Asian studies website.

**REQUIREMENTS FOR THE MINOR**

**Language.** All East Asian studies minors are expected to gain proficiency in Chinese or Japanese language. Students with prior knowledge of Chinese or Japanese are required to complete a language placement exam. Instructions for the placement exam can be found on the Languages and Applied Linguistics website. Students without prior knowledge of Chinese or Japanese should enroll in beginning Chinese (CHIN 1) or Japanese (JAPN 1) no later than fall quarter of the sophomore year. Students may also pursue study abroad opportunities as a way of acquiring Chinese or Japanese language instruction (see below).

All East Asian studies minors are required to complete at least two upper-division courses in Chinese or Japanese language instruction. Additional upper-division offerings in Chinese or Japanese language instruction may be applied to the upper-division electives requirements (see below).

**Core Courses.** One required core course: History 40A, Early Modern East Asia, or History 40B, The Making of Modern East Asia.

**Upper-Division Electives.** Three additional upper-division courses from the East Asian studies curriculum, one of which may be an individual study (course 199).

A minimum of 25 upper-division credits must be completed within the East Asian studies minor course requirements.

**STUDY ABROAD**

Because the minor is designed to support the integration of language training with exploration of East Asian societies, we strongly endorse participation in one of the many education abroad programs available for UC students in East Asia where language skills acquired at the university are put to practical use in daily life and research. At present, there are UC Education Abroad Programs in China, Japan, Hong Kong, Korea, and Taiwan. All students interested in studying abroad should meet with the East Asian Studies director prior to their departure. Students who participate in study abroad are required to complete a language placement exam upon their return.

Instructions for the placement exam can be found on the Languages and Applied Linguistics website. For more information on the program, see the UC Education Abroad Program (UCEAP) websites: the UCSC Global Engagement website, and the UC system-wide website.
EAST ASIAN STUDIES FACULTY AND PROFESSIONAL INTERESTS

ASSOCIATED FACULTY

Noriko Aso, Associate Professor of History
Japanese social, intellectual, and cultural history, material culture, colonialism, nationalism, gender, race and ethnicity

Raoul Birnbaum, Professor of History of Art and Visual Culture
Buddhist studies, especially Chinese practices from medieval times to the present; religion and visual culture in China

Nancy Chen, Professor of Anthropology
Medical anthropology, visual anthropology, urban anthropology, Asian American identity, mental health, food, China

Alan Christy, Associate Professor of History
Early modern and modern Japan; history of social sciences, colonialism, nationalism; Okinawa

Christopher Connery, Professor of Literature
World literature and cultural studies; globalization and geographical thought; the 1960s; Marxism; pre-modern and modern Chinese cultural studies; cultural revolution

Sakae Fujita, Continuing Lecturer of Languages
Foreign language education, drama in education

Hiroshi Fukurai, Professor of Sociology
Citizen participation in law, race and the law, indigenous approach to international law, decolonialism, Japan and East Asia, advanced quantitative methods, survey research

K.C. Fung, Professor of Economics
International trade and finance, WTO, foreign direct investment, global environmental economics, and Asia/Pacific economies

Per Gjerde, Professor Emeritus of Psychology
Urban education; international comparative education; the impact of economics, culture and politics on educational attitudes and expectations of immigrants; marginalized youth; schooling and society in Japan, China, India, the U.K., and the U.S.A.; sociology of education

Gail B. Hershatter, Professor of History
Modern Chinese social and cultural history; labor history; gender history; history of sexuality; feminist theory; history, memory, and nostalgia

Christine Hong, Assistant Professor of Literature
Asian American literature and cultural criticism; African American literature and black freedom studies; Korean diasporic cultural production; Pacific Rim studies; postcolonial theory; critical race theory; human rights discourse; law and literature; narrative theory; film and visual studies

Emily Honig, Professor of History
Gender, sexuality and ethnicity in modern China; comparative labor and urban history

Minghui Hu, Associate Professor of History
Early Modern China; Chinese intellectual history; history of science, technology, and environment in China

Junko Ito, Professor of Linguistics
Phonology, morphology, Germanic languages, Japanese

Stacy Kamehiro, Associate Professor of History of Art and Visual Culture
Visual cultures of Oceania; colonial cultures; visual culture and identity; gender studies; museums and collecting; material culture

Hi Kyung Kim, Associate Professor of Music
Composition, theory, contemporary music, analysis, orchestration, Korean music, world music composition, Founder and Artistic Director, Pacific Rim Music Festival

David Keenan, Continuing Lecturer of Languages
Chinese language, fiction, and history

L.S. Kim, Associate Professor of Film and Digital Media
Television history and theory, racial discourse, feminist criticism, Asian-American cultural theory and production, industrial practices and social change in both mainstream Hollywood and alternative media

Paul Lubek, Professor Emeritus of Sociology
Citizen participation in law, race and the law, indigenous approach to international law, decolonialism, Japan and East Asia, advanced quantitative methods, survey research

Boreth Ly, Associate Professor of History of Art and Visual Culture
Visual cultures of Southeast Asia and its diaspora: religions and materiality, theory of visual narrative, the politics of cultural translation; (post) colonial and cultural studies; issues of gender, sexuality, race, and trauma

Shigeko Okamoto, Professor of Languages
Sociolinguistics, discourse analysis, pragmatics, language and gender, foreign language pedagogy, Japanese linguistics

Benjamin Read, Associate Professor of Politics
Comparative politics with special interest in the politics of China; theories of associations and social networks; communist and post-communist states; political participation and collective action

Lisa Rofel, Professor of Anthropology
Critical theory, anthropology of modernity, popular/public culture, gender and sexuality, queer theory, transnational capitalism, postcolonial and transnational feminism, China

Dana Y. Takagi, Professor of Sociology
Social inequality, affect, religion, race, quantitative analysis

Yiman Wang, Associate Professor of Film and Digital Media
Theory of difference; film history and theory; colonial/semi-colonial/postcolonial/postsocialist modes of media production and exchange; border-crossing film remakes; silent cinema; translation theory and cinema; acting theory/practice and ethnic star studies with focus on Anna May Wong; transnational
connections and ramifications of Chinese cinema and documentary; fan culture; East Asian cinemas

Rob Wilson, Professor of Literature
Transnational and postcolonial literatures, especially as located and transformed in Asia/Pacific; cultural-political emergences as posited against empires of globalization; cultural poetics of America in the Pacific and Oceania; the sublime, Longinus to Hiroshima; poetics of experimental writing, especially poetry; the poetry and cultural poetics of Bob Dylan; Beat beatitude, social and literary, from Jesus to Juliana Spahr et al; San Francisco as Global City, with its literature read as archive of vision and critique; Pacific Rim cities from Hong Kong and Seoul to Taipei, Kaohsiung, Shanghai, Honolulu, San Francisco, and Los Angeles

Karen Yamashita, Professor of Literature
History and anthropology of Japanese immigration to Brazil; Asian American literature; modern fiction; playwriting

Alice Yang, Associate Professor of History
Historical memory, Asian American history, gender history, race and ethnicity, 20th-century U.S., oral history
An understanding of economics is a vital component of
a liberal arts education and a necessity for anyone
interested in how the economic system actually works.
Subject areas include business, environmental policy,
economic development, immigration, educational
reform, international competitiveness and trade,
economic inequality, and transformations in the global
economy.

The programs offered by the UC Santa Cruz Economics
Department are designed to acquaint students with a
broad range of economic issues and with the tools
economists use. The department offers the following
majors:

• Economics B.A.
• Business management economics B.A.
• Global economics B.A.

The department also offers the following combined
majors:

• Economics/Mathematics B.A.
• Environmental studies/Economics B.A.
• A minor in economics is also available.

The economics curriculum begins at the introductory
level; no specific high school preparation is required.
All economics majors study a substantial core of
economic theory and mathematical and statistical
methods, and then choose among a wide variety of
upper-division electives.

Economics majors may combine their upper-division
elective choices in a variety of ways to achieve
specialization in a number of possible areas, including
environmental economics, public policy, political
economy, international economics, economic
development, and quantitative methods.

All classes included for major qualification
determination must be taken for a letter grade. If
students have not taken a letter grade, they must appeal
by submitting a letter to the Economics Department.

Students are encouraged to apply to the major as soon
as they have satisfactorily completed these three
courses. Students who have a combined grade-point
average (GPA) of 2.8 or better in Economics 1, 2, and
the first calculus course will qualify upon applying.

Students receiving a grade of NP, C-, D+, D, D-, or F in
one of the courses required for qualification to the
major may only declare once they have passed the same
or equivalent course with a grade of C or better.

Students who receive two grades of NP, C-, D+, D, D-, or
F in the qualification courses are not eligible to declare
the major.

Equivalent courses may be taken at other universities
or community colleges. Students should check on
assist.org to determine whether a transfer course is
designated as equivalent to Economics 1, 2 or the first
required calculus course. Transfer students are strongly
encouraged to ask the department to review such
courses prior to matriculation at UCSC, since an offer of
admission to UCSC does not automatically imply
admission to the economics major.

Students can receive course credit for Advanced
Placement (AP) examinations in Micro (ECON 1), Macro
(ECON 2), Statistics (Applied Mathematics and Statistics
[AMS] 5) and the first calculus class toward major
qualification criteria according to the AP chart.

The Economics Department uses the AP score
internally to determine whether students meet the 2.8
required GPA to qualify for the major. A score of 5 on
the AP exam counts as an “A”, a score of 4 counts as a
“B” and a score of 3 on the BC calculus counts as a “C”.

Please consult with an adviser if you have questions.
Students may petition for admission to the major by
filing the Petition for Major/Minor Declaration and the
UCSC Academic Planning form and by supplying
evidence of their grades in the three pre-major courses.

Students who have a GPA lower than 2.8 in Economics
1, 2, and the calculus course are not eligible to declare
an economics major. Students who are not eligible to

Economics

declare the major may appeal this decision by submitting a letter of appeal to the department within 15 days of the denial of the declaration. Within 15 days of the receipt of the appeal, the department will notify the student, college and Office of the Registrar of the decision. Please check the department web site (http://economics.ucsc.edu) for further information on declaring a major or appealing ineligibility.

CORE REQUIREMENTS FOR ALL ECONOMICS MAJORS

Economics 1 and 2, 11A, 11B, 100A (or 100M), 100B (or 100N), and 113, and Applied Mathematics and Statistics 5 or equivalent courses are required for all economics majors and are prerequisites for most upper-division courses. Students are urged to complete these courses as early as possible. Students who are committed to the major early in their academic career, should plan to complete at least Economics 1, 2, 11A, 11B, and preferably 100A, 100B, and 113 by the end of their sophomore year. Students are also encouraged to choose the letter grade option when taking these courses.

MATHEMATICS AND STATISTICS CONTENT REQUIREMENT

Mathematics Content: Successful completion of one of the calculus sequences below is required for all economics majors, and must be taken before enrollment in Economics 100A (or 100M), 100B (or 100N), and 113. Students are advised to complete the mathematics courses as early as possible in their academic career. Students may complete the mathematics requirement for the majors in one of the following ways:

- Economics/Applied Mathematics and Statistics 11A and 11B
- Mathematics 11A, 11B, and 22 (or 23A by petition via the Mathematics Department)
- Mathematics 19A, 19B, and 23A or 22
- Students may also complete the mathematics requirement by taking Mathematics 11A or 19A and then Economics/Applied Mathematics and Statistics 11B.

Students planning to pursue graduate work in economics or business should seriously consider more intensive mathematical training; consult an adviser for guidance.

Statistics Content: One course from the following:

- Applied Mathematics and Statistics 5, Statistics
- Applied Mathematics and Statistics 7, Statistical Methods for Biological, Environmental and Health Sciences
- Computer Engineering 7, Statistical Reasoning in the Age of the Internet

Transfer students interested in the combined economics/mathematics major are encouraged to complete as many lower-division mathematics and statistics courses as they can prior to transferring. The courses need to be equivalent to Mathematics 19A, 19B, 22 or 23A, and 23B.

COMPREHENSIVE REQUIREMENT

The comprehensive requirement for the economics major and the combined economics/mathematics major is satisfied by passing the following intermediate core courses with grades of C or better here at UCSC: Economics 100A or 100M, and 100B or 100N, and 113. Students may elect to complete a senior thesis with consent of an instructor in addition to completing the intermediate core courses.

DISCIPLINARY COMMUNICATION (DC) REQUIREMENT

All undergraduate majors must satisfy the campus' disciplinary communication (DC) requirement. The DC requirement in economics is satisfied by completing Economics 104, Is There Truth in Numbers: The Role of Statistics in Economics; or Economics 197, Economic Rhetoric. Students in the combined economics/mathematics major may also satisfy the requirement by completing Mathematics 100, Mathematical Proof, and either Mathematics 194, Senior Seminar, or Mathematics 195, Senior Thesis.

INDEPENDENT STUDY

Students are encouraged to petition for independent study on topics of special interest to them. Economics 199, Tutorial, may be used as only one of the upper-division courses required for the major or minor.

FIELD-STUDY PROGRAM

The Economics Department offers its majors the opportunity to integrate their academic knowledge with career-related work. The field-study program places students in internships under the supervision of a faculty sponsor and a professional at the workplace. Students can select from a wide variety of field placements such as accounting firms, community nonprofits, government agencies, brokerage firms, marketing agencies, banks, and businesses in Santa Cruz and beyond. Students apply for field study a quarter in advance. Participation in the field-study program requires at least junior standing, completion of courses 100A (or 100M), 100B (or 100N), and 113 as well as good academic standing. Students may earn a maximum of 10 academic credits and complete up to two quarters in a field placement. A field study requires 12 hours per week spent working on internship duties and completion of an academic project supervised by a faculty sponsor. Time spent toward the academic requirements set by the faculty sponsor is not included in the 12 hours spent at the field placement.

Along with the training and supervision by a professional at the workplace, students receive guidance from a faculty sponsor who directs their academic project. Students earn credit through the
completion of this project and the job supervisor’s evaluation of performance. Economics field-study courses (193 and 198) do not satisfy any upper-division requirements for the major and are available as Pass/No Pass only.

Interested students should make an appointment or stop by the Economics Department at 401 Engineering 2; or e-mail econintern@ucsc.edu.

### TRANSFER STUDENTS

A student transferring to UCSC may fulfill some of the requirements for the major by completing equivalent courses, with a grade of C or better, at another recognized institution. Please refer to the section on Admission to the Major and Minor for specific admission requirements for the Economics majors.

Students should check on assist.org for already established equivalency agreements between UC and the California community colleges. For courses not already articulated through assist.org, transfer students must present their transfer credit summary (available on the student portal) and course syllabi or descriptions to an Economics Department adviser. The department approves courses applicable for economics prerequisites and major requirements.

All transfer students must complete the three-course senior comprehensive requirement (and the DC requirement as stated previously) at UCSC. Economics and global economics majors must take at least two of their upper-division economics electives at UCSC. Business management economics majors must take at least three of their upper-division economics electives at UCSC, one of which must be 101, 133, or 135. Courses taken for credit elsewhere may not be repeated for credit here.

### COMBINED MAJORS

The Economics Department offers the following combined majors: economics/mathematics and environmental studies/economics. Requirements for these majors may be reviewed under their separate entries in this catalog.

### PROGRAM LEARNING OUTCOMES

Program learning outcomes for economics, economics and mathematics, business management economics, and global economics majors:

1. **Critical Thinking Skills:** Students are expected to be able to apply economic analysis to everyday problems in real world situations, to understand current events and evaluate specific policy proposals, and to evaluate the role played by assumptions in arguments that reach different conclusions to a specific economic or policy problem.

2. **Quantitative Reasoning Skills:** Students are expected to understand how to use empirical evidence to evaluate the validity of an economic argument, use statistical methodology, interpret statistical results, and conduct appropriate statistical analysis of data.

3. **Problem-Solving Skills:** Students are expected to be able to solve problems that have clear solutions and to address problems that do not have clear answers and explain conditions under which these solutions may be correct.

4. **Specialized Knowledge and Application of Skills:** Students are expected to develop critical and quantitative thinking skills specific to business and accounting.

5. **Communication Skills:** Students are expected to be able to communicate effectively in written, oral, and graphical form about specific issues, and to formulate well-organized written arguments that state assumptions and hypotheses supported by evidence.

### ECONOMICS PROGRAM DESCRIPTION

Economics studies how individuals, firms, governments, and other organizations within our society make choices, and how these choices affect the society’s use of its available resources. Economists study a wide range of questions such as: How do individuals make decisions in the face of uncertainty? What are the causes of the Great Recession of 2009? Why do Europeans work fewer hours than Americans? Why have health care and education costs risen so much? What are the consequences of government deficits? Why has the gap between rich and poor in many countries risen? Why have some poor countries grown faster than many rich countries in recent years?

Economics majors study a substantive core of theory and mathematical and statistical methods that aid in addressing these questions. This required core can be combined with electives that emphasize specialized areas such as international economics, finance, public policy, applied microeconomics, law and economics, economic development, quantitative methods, macroeconomics, game theory and behavioral economics. A focus on core theory as well as mathematical and quantitative tools provides a foundation for graduate studies in economics. Selecting a range of electives to sample the broad domain of economics offers an excellent background for students who plan to enter careers in the private sector, in public service, the non-profit sector or to attend law school or other professional schools.

### ECONOMICS MAJOR REQUIREMENTS

Students who major in economics are required to take the following courses:

1. Introductory Microeconomics: Resource Allocation and Market Structure
2. Introductory Macroeconomics: Aggregate Economic Activity
11A, Mathematical Methods for Economists I (or equivalent)
11B, Mathematical Methods for Economists II (or equivalent)
Economics

100A (or 100M), Intermediate Microeconomics
100B (or 100N), Intermediate Macroeconomics
113, Introduction to Econometrics
197, Economic Rhetoric or 104, Is There Truth in Numbers: The Role of Statistics in Economics
AMS 5, Statistics or AMS 7/L Statistical Methods for the Biological, Environmental, and Health Sciences or Computer Engineering (CMPE) 7, Statistical Reasoning in the Age of the Internet

and four additional upper-division economics courses, at least three of which must be selected from the following:

105, Topics in Macroeconomics
114/L, Advanced Quantitative Methods
120, Economic Development
121, Economic Growth
125, Economic History of the U.S.
126, Why Economies Succeed or Fail
128, Poverty and Public Policy
130, Money and Banking
131*, International Financial Markets
133*, Security Markets and Financial Institutions 135*, Corporate Finance
140, International Trade
141, International Finance
142, Advanced Topics in International Finance
143, Policy Issues in the International Economy
148, Latin American Economies
149, The Economics of East and Southeast Asia
150, Public Finance
156, Health Care and Medical Economics
159, The Economics of Organizations
160A, Industrial Organization
160B, Government and Industry
165, Economics as an Experimental Science
166A, Game Theory and Applications I
166B, Game Theory and Applications II
169, Economic Analysis of the Law
170, Environmental Economics
171, Natural Resource Economics
175, Energy Economics
180, Labor Economics
183, Women in the Economy
190, Senior Proseminar

* Students can count one of these three courses toward the minimum of three economics electives.

Courses 191, 192, 193, 193F, 198, and 198F may not be used to meet major requirements. Either course 195 or 199 may be used to fill one of the four upper-division elective major requirements. Other electives are listed under the Business Management Economics program description.

MINOR REQUIREMENTS

Students earn a minor in economics by completing the following requirements:

1, Introductory Microeconomics: Resource Allocation and Market Structure
2, Introductory Macroeconomics: Aggregate Economic Activity
11A, Mathematical Methods for Economists I (or equivalent)
11B, Mathematical Methods for Economists II (or equivalent)
100A (or 100M), Intermediate Microeconomics
100B (or 100N), Intermediate Macroeconomics
113, Introduction to Econometrics
AMS 5, Statistics or AMS 7/L Statistical Methods for the Biological, Environmental, and Health Sciences or CMPE 7, Statistical Reasoning in the Age of the Internet

Three additional upper-division economics electives.

BUSINESS MANAGEMENT ECONOMICS PROGRAM DESCRIPTION

The business management economics major provides students who are interested in careers in business or management with a foundation in economics and a selection of applied fields related to business management. This course of study prepares students for entrance into the business world or admission to graduate programs—either the master’s program in applied economics and finance at UCSC or graduate programs in business and management at other universities.

The program provides a business and management education embedded within a broader economics and liberal arts context and is closely related to the economics and global economics majors and the technology and information management major.

This major has several important elements. First, it combines the strong analytic approach of economics with the technical aspects of management. Second, it recognizes that computing is intrinsic to business and is an essential skill for those who wish to enter this field. Students in this major gain knowledge about using computing as a tool of analysis for economic, statistical, and financial data. Third, the major offers field placements (arranged with the economics advisers) which provide an excellent way to apply students’ academic knowledge of economics, business, and management to issues and problems in the real world; they provide marketable skills as well as important job contacts.

In cooperation with the UC Education Abroad Program (UCEAP), opportunities are available for students to take some business courses (taught in English) in many countries in Europe and Asia. Students should ask the Economics Department for additional information about these programs.

Students who are committed to the major early in their academic career should plan to complete Economics 1, 2, 10A, 10B, 11A, 11B and preferably 100A, 100B, and 113 no later than the end of their sophomore year.

BUSINESS MANAGEMENT ECONOMICS MAJOR REQUIREMENTS
Economics

Introductory and core requirements. Students who major in business management economics are required to take the following courses:

1. Introductory Microeconomics: Resource Allocation and Market Structure
2. Introductory Macroeconomics: Aggregate Economic Activity
10A, Economics of Accounting (or equivalent, see under General Requirements)
10B, Economics of Accounting (or equivalent, see under General Requirements)
11A, Mathematical Methods for Economists I (or equivalent)
11B, Mathematical Methods for Economists II (or equivalent)
100A (or 100M), Intermediate Microeconomics
100B (or 100N), Intermediate Macroeconomics
113, Introduction to Econometrics
197, Economic Rhetoric or 104, Is There Truth in Numbers: The Role of Statistics in Economics
AMS 5, Statistics or AMS 7/L Statistical Methods for the Biological, Environmental, and Health Sciences or CMPE 7, Statistical Reasoning in the Age of the Internet

Computer literacy requirement. Students must complete a minimum of two courses from the following list (with department approval, a student may substitute other computing courses):

Computer Engineering
12/L, Computer Systems and Assembly Language 80N, Introduction to Networking and the Internet

Computer Science
10, Introduction to Computer Science
12A/L, Introduction to Programming
5C, Introduction to Programming in C++
5J, Introduction to Programming in Java
5P, Introduction to Programming in Python
80B, Systems and Simulation

Technology and Information Management
50, Business Information Systems
58, Systems Analysis and Design

Note: Students with no prior programming experience are encouraged to take Computer Science 5J and Computer Science 10 rather than Computer Science 12A/L.

Upper-division electives. Students are required to take five additional courses: four in business management and one other economics elective. Students must choose four courses from the following list; at least one of the four must be a course designated with an asterisk (*).

*101, Managerial Economics
110, Managerial Cost Accounting and Control
111A, Intermediate Accounting I
111B, Intermediate Accounting II
111C, Intermediate Accounting III
112, Auditing and Attestation
115, Introduction to Management Sciences
117A, Tax Factors for Individuals
117B, Tax Factors for Business and Investment
119, Advanced Accounting
#130, Money and Banking
131, International Financial Markets
*133, Security Markets and Financial Institutions
*135, Corporate Finance
136, Business Strategy
138, The Economics and Management of Technology and Innovation
139A, Economics of Electronic Commerce
139B, E-Commerce Strategy
#159, The Economics of Organizations
#160A, Industrial Organization
#160B, Government and Industry
161A, Marketing
161B, Marketing Research
164, Economics and the Telecommunications Industry
188, Management in the Global Economy
194, Advanced Topics in Management

# Students can use one of these courses as either a business management elective or an economics elective, but the course cannot be counted twice.

Global economics is an economics major focusing on global issues with an interdisciplinary element. It is designed to prepare students to understand and participate in the global economy; the program aims to deepen the student’s knowledge of economics within a culturally and linguistically diverse world. The major is particularly useful to students contemplating careers at home or overseas in international relations, in international business, or with international organizations. Hence the major requires overseas study, regional area study, and second-language proficiency in addition to the basic economics requirements and additional emphasis in international economics.

GLOBAL ECONOMICS PROGRAM DESCRIPTION

Global economics is an economics major focusing on global issues with an interdisciplinary element. It is designed to prepare students to understand and participate in the global economy; the program aims to deepen the student’s knowledge of economics within a culturally and linguistically diverse world. The major is particularly useful to students contemplating careers at home or overseas in international relations, in international business, or with international organizations. Hence the major requires overseas study, regional area study, and second-language proficiency in addition to the basic economics requirements and additional emphasis in international economics.

GLOBAL ECONOMICS MAJOR REQUIREMENTS

Introductory and core requirements. Students who major in global economics are required to take the following courses:

1. Introductory Microeconomics: Resource Allocation and Market Structure
2. Introductory Macroeconomics: Aggregate Economic Activity
11A, Mathematical Methods for Economists (or
Students are strongly recommended to complete courses 100A (or 100M), 100B (or 100N), and 113 prior to study abroad. In addition, majors must have language study, area study, and overseas study, as described below.

Courses 191, 192, 193, 193F, 198 and 198F may not be used to meet major requirements. Either course 195 or 199 may be used to fill one of the four elective upper-division major requirements.

**Additional upper-division requirements.** Four additional upper-division courses are required.

At least one of the four courses must be selected from the following three:
120, Economic Development
140, International Trade
141, International Finance

In addition, two more courses must be taken from either the list above or the list below. The fourth course may be any other upper-division economics course.

Please see the entire economics course list.

**Economics**

120, Economic Development
121, Economic Growth
126, Why Economies Succeed or Fail: Lessons from Western and Japanese History
131, International Financial Markets
140, International Trade
141, International Finance
142, Advanced Topics in International Economics
143, Policy Issues in the International Economy
148, Latin American Economies
149, The Economies of East and Southeast Asia
188, Management in the Global Economy

The global economics major has three additional elements:

1. **Foreign Language Study:** The global economics major requires a foreign language since students who plan to work in the larger world must have fluency in a language other than English. This language should be relevant to their regional area of interest. Students can meet this requirement by completing two years of university-level language courses or by demonstrating an equivalent level of competence through a recognized language test.

2. **Area Study:** The major requires students to take two additional courses selected from the offerings of departments other than economics in order to learn about the history, political economy, or culture of some other part of the world. These can be lower- or upper-division courses; the courses should focus on the area of the student’s language study and overseas study. The Economics Department provides a list of approved courses; substitute courses are welcomed when they are part of the student’s overseas program or from other UCSC departments, but must be approved by the adviser for the global economics major.

3. **Study Abroad:** All students are required to spend at least one term abroad in an approved course of study in their regional area of concentration; students may also choose a year-long program. Typically, a student will do this through the UC Education Abroad Program (UCEAP). Numerous overseas study sites are available through UCEAP. Students desiring to fulfill their required study abroad through UCEAP must apply directly to the UCEAP office for the selected program and are subject to the admission requirements determined by UCEAP. In countries and at universities where UCEAP programs are not available, students may make their own arrangements for study with the permission of the director of the program. Students may use the time abroad to further their language study, to meet the area study course requirements, to meet some of the upper-division economics course requirements, or to take courses unrelated to the major. Students who are not accepted to an overseas program or who cannot meet the language or area course requirements are advised to complete the general economics major as an alternative.

---

**COMBINED ECONOMICS/MATHEMATICS PROGRAM DESCRIPTION**

The major in economics and mathematics is designed to meet the needs of undergraduate students who plan to pursue doctoral study in economics or business, or who wish to pursue a career as an actuary or other professional requiring a sophisticated understanding of economics and mathematics. The major combines the main undergraduate content of both economics and mathematics within a programmatic structure that joins the two disciplines. It provides a coursework combination required to prepare for an economics doctoral (Ph.D.) program, or for a group of technically demanding professional careers.

**ECONOMICS/MATHEMATICS MAJOR REQUIREMENTS**

**ECONOMICS REQUIRED COURSES**

1, Introductory Microeconomics: Resource Allocation and Market Structure
2, Introductory Macroeconomics: Aggregate Economic Activity
100A (or 100M), Intermediate Microeconomics
100B (or 100N), Intermediate Macroeconomics
113, Introduction to Econometrics
Economics

DC REQUIREMENT (SEE STATEMENT UNDER GENERAL REQUIREMENTS)

Applied Mathematics and Statistics 5, Statistics; or
Applied Mathematics and Statistics 7/L, Statistical Methods for the Biological, Environmental, and Health Sciences; or Computer Engineering 7, Statistical Reasoning in the Age of the Internet

ECONOMICS ELECTIVE COURSES

(choose three from the following list)
101, Managerial Economics
114/L, Advanced Quantitative Methods
115, Introduction to Management Sciences
120, Economic Development
121, Economic Growth
125, Economic History of the U.S.
126, Why Economies Succeed or Fail
128, Poverty and Public Policy
130, Money and Banking
131, International Financial Markets
133, Security Markets and Financial Institutions
135, Corporate Finance
136, Business Strategy
138, Economics and Management of Technology and Innovation
139A, Economics of Electronic Commerce
139B, E-Commerce Strategy
140, International Trade
141, International Finance
142, Advanced Topics in International Finance
148, Latin American Economies
149, The Economies of East and Southeast Asia
150, Public Finance
156, Health Care and Medical Economics
159, The Economics of Organizations
160A, Industrial Organization
160B, Government and Industry
161A, Marketing
164, Economics and the Telecommunications Industry
165, Economics as an Experimental Science
166A, Game Theory and Applications I
166B, Game Theory and Applications II
169, Economic Analysis of the Law
170, Environmental Economics
171, Natural Resource Economics
175, Energy Economics
180, Labor Economics
183, Women in the Economy
188, Management in the Global Economy

MATHEMATICS REQUIRED COURSES

Mathematics 19A, Calculus for Science, Engineering, and Mathematics
Mathematics 19B, Calculus for Science, Engineering, and Mathematics
Mathematics 21, Linear Algebra
Mathematics 22, Calculus of Several Variables or 23A and 23B, Multivariable Calculus
Mathematics 100, Mathematical Proof
Mathematics 105A, Real Analysis

MATHEMATICS ELECTIVES

(choose two from the following list)
Mathematics 105B, Real Analysis
Mathematics 106, Systems of Ordinary Differential Equations
Mathematics 107, Partial Differential Equations
Mathematics 114, Introduction to Financial Mathematics
Mathematics 117, Advanced Linear Algebra
Mathematics 124, Introduction to Topology
Mathematics 145/L, Chaos Theory
Mathematics 194, Senior Seminar
Mathematics 195, Senior Thesis
AMS 114, Introduction to Dynamical Systems
AMS 131, Introduction to Probability Theory
AMS 132, Statistical Inference
AMS 147, Computational Methods and Applications

*Students in the combined economics/mathematics major may also satisfy the DC requirement by completing Mathematics 100, Mathematical Proof, and either Mathematics 194, Senior Seminar; or Mathematics 195, Senior Thesis

ADDITIONAL PREPARATION FOR THE MAJOR

Students interested in the combined major must meet a minimum GPA requirement in Economics 1 and 2 (and the first calculus course). Transfer students should check assist.org for agreements with California community colleges about economics and mathematics courses. Students who have met all articulations before transferring will need at least six economics and four to five mathematics classes at UCSC to complete the major.

HONORS IN THE MAJOR

The Economics Department considers for honors and highest honors students who have completed a major program with superior or exceptional work. Honors decisions are made by the department’s Honors and Scholarship Committee.

At the end of each quarter, faculty teaching the upper-division core courses submit to the department a list of students in their respective classes whose performance is at the honors level. At the time of graduation, all students who received an honors designation in one or more of these courses are reviewed by the department’s honor committee. The faculty committee looks for a record of excellence in courses offered towards the major, with a strong performance in the upper-division core (theory and econometrics—courses 100A/M, 100B/N, and 113) being a necessary condition for honors. Although a GPA is not computed for the economics courses, in general highest honors are awarded to students who have received a grade of at least an “A” throughout their economics program. Honors are awarded to students who have no more than two courses with grades of less than an “A-.” Students who have completed a portion of the major at another institution may be asked to submit a transcript for evaluation.
Students interested in being reviewed for honors may request that the department conduct a review, and such requests are always granted. In general, honors have been awarded to between 10 and 15 percent of each year’s graduating class.

GRADUATE PROGRAMS

MASTER’S PROGRAM IN APPLIED ECONOMICS AND FINANCE

The master of science (M.S.) program in applied economics and finance is designed for students who want analytical graduate training that prepares them for careers in business, government, international and domestic banking, consulting firms, and nonprofit organizations. The program is unique in its focus on graduate-level economics training for practical applications and its emphasis on communication skills.

The curriculum stresses the application of microeconomic and macroeconomic concepts, statistical techniques, finding and using data sources, working out substantial practical applications, developing writing and reporting skills, and presenting material orally before an audience. The program differs from typical master of business administration (M.B.A.) programs by preparing students to meet the increasing technical demands of private- and public-sector employers through comprehensive coursework in economic analysis.

Past graduates of this program have gone on to successful careers in the private and public sectors with placements at a diverse range of companies and institutions, including Cisco Systems, SoFi, Seagate Technology, Google, Sony Computer Entertainment, Plantronics, Wells Fargo, all of the big four accounting firms, McKesson Corp., Pepsi Corp., Visa, Square Trade, the California Franchise Tax Board, Guardian News (U.K.), Blue Cross, the World Bank, Stanford University, and the Bank of Japan. Other graduates have gone on to earn Ph.D.s in economics.

COURSES AND PROGRAM REQUIREMENTS

M.S. students are required to take the following classes starting in the fall quarter of the academic year they enroll in the program. Students may also take additional classes if they desire.

<table>
<thead>
<tr>
<th>Courses and Program Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Fall</strong></td>
</tr>
<tr>
<td>200 Microeconomic Analysis</td>
</tr>
<tr>
<td>233 Finance</td>
</tr>
</tbody>
</table>

216 Applied Econometric Analysis
294A Applied Economics and Finance Lab
294A Applied Economics and Finance Lab
294B Applied Economics and Finance Seminar

294B Applied Economics and Finance Seminar
*Note: M.S. students are strongly encouraged to enroll in Econ 186, a pre-fall math course, which is highly beneficial to students’ success in the program. Econ 186 is offered as an accelerated short course before the start of fall quarter.

ELECTIVES

Students may satisfy the elective requirements by taking approved courses within the Economics Department or from another discipline. The department has assembled a list of pre-approved master’s electives (curricular offerings are subject to change annually). Students will need to file a departmental petition for review and approval of courses that are not on the pre-approved elective list.

PRE-APPROVED M.S. ELECTIVES (PLEASE NOTE COURSES ARE NOT OFFERED EVERY QUARTER OR EVERY YEAR)

Economics
111A-B-C, Intermediate Accounting (with permission of instructor)
188, Management in the Global Economy
211C, Ph.D. Time Series (with permission of instructor)
220A, Ph.D. Development Economics (with permission of instructor)
231, International Financial Markets
235, Corporate Finance
238, Market Design, Theory and Pragmatics (with permission of instructor)
250A, Ph.D. Public and Applied EconomicsI (with permission of instructor)
259B, Public Policy Analysis

Applied Mathematics and Statistics
AMS 206, Classical and Bayesian Inference
AMS 206B, Intermediate Bayesian Inference
AMS 207, Intermediate Bayesian Statistical Modeling
AMS 216, Stochastic Differential Equations
AMS 245, Spatial Statistics
AMS 256, Linear Statistical Models

Environmental Studies
ENVS 140, National Environmental Policy

Computer Science
CMPS 5P, Introduction to Programming in Python
CMPS 101, Algorithms and Abstract Data Types
CMPS 102, Introduction to Analysis of Algorithms
CMPS 109, Advanced Programming (with permission of instructor)
PH.D. PROGRAM IN ECONOMICS

The Ph.D. program in economics provides students with training in modern microeconomics, macroeconomics, and econometrics, combined with specialized training in the fields of international finance, international trade, economic development, monetary economics, applied microeconomics, experimental economics, and other areas.

COURSES AND PROGRAM REQUIREMENTS

First-year Ph.D. students are required to take Economics 210B and the three sequences: Economics 204A-B-C, Advanced Micro Theory I-II-III; Economics 205A-B-C, Advanced Macroeconomic Theory I-II-III; and Economics 211A-B-C, Advanced Econometrics I-II-III. In late June each year, first-year students take two written preliminary exams; one each in Micro and Macro. Students who do not pass the exam may attempt the exam again in September. Students who fail the exams twice are not allowed to continue in the program.

Ph.D. students are required to complete two field sequences, and take 30 units of coursework in the second year. Only two courses per topic are needed to satisfy one sequence. Students may choose one of the following sequences: International Trade I-II (240A-B), Advanced International Finance I-II-III (241A-B-C), Development Economics I-II (220A-B), Advanced Monetary Economics I-II/Advanced Macroeconomics (221A-B, 271), Public and Applied Economics I-II (250A-B), and Experimental Economics (238, 270, 272; note that 238 and 272 are offered in alternate years). Students are required to submit a second-year field paper which is due on August 31, just before the start of the third year. The graduate handbook of the department details the evaluation procedure for the field papers.

Third-year Ph.D. students must attempt and pass the Oral Qualifying Exam by the end of the winter quarter. In addition, students must enroll in a workshop focused on advanced topics in their field of interest: Economics 274, Economics 275, or Economics 276. Students who do not pass the exam may attempt the exam again in September. Students who fail the exam twice are not allowed to continue in the program. In their fourth and fifth years, students are focused on their dissertation research and enroll in Economics 299, Dissertation Research (10 credits), and a workshop focused on advanced topics in their field of interest: Economics 274, Economics 275, or Economics 276.

All graduate courses must be taken for letter grade with the exception of Economics 210B, 274, 275, 275 and courses numbered 293 and higher. Only courses with a letter grade of B- or higher can be counted toward the degree requirements.

PH.D. COURSES AND PROGRAM REQUIREMENTS

First Year
204A-B-C, Advanced Microeconomic Theory (I, II, III; fall, winter, spring respectively)
205A-B-C, Advanced Macroeconomic Theory (I, II, III; fall, winter, spring respectively)
211A-B-C, Advanced Econometrics (I, II, III; fall, winter, spring respectively)
210B, Mathematical Methods for Economic Analysis (pre-fall)
Microeconomic and macroeconomic preliminary examinations.

Second Year*
Complete 30 units of coursework and complete two field sequences.
220A-B, Development Economics (I, II)
221A-B, 271, Advanced Monetary Economics (I, II) / Advanced Macroeconomics
Economics

240A-B, Advanced International Trade (I, II)
241A-B-C, International Finance (I, II, III)
250A-B, Public and Applied Economics (I, II)
238, 270, 272, Behavioral and Experimental Economics

Second year field paper: due on August 31 after the second year.

*Not all field sequences are necessarily offered every year or in the same quarter each year.

Third Year

274, Workshop in Macroeconomics; Econ 275: Workshop in Microeconomics; Econ 276: Workshop in Experimental Economics
299, Dissertation Research

Qualifying examination (QE)

Fourth Year and Beyond

274, Workshop in Macroeconomics
275, Workshop in Microeconomics
276, Workshop in Experimental Economics
299, Dissertation Research

Based on university policy, course requirements are satisfied by a letter grade of B or better or a grade of S (satisfactory). A letter grade of C in a course is not satisfactory for meeting a course requirement for the Ph.D. program.

QUALIFYING EXAMINATION

Advancement to candidacy for the Ph.D. degree requires completion with satisfactory grades or better of the required coursework, preliminary examinations, the field paper, and the oral examination. The oral examination is taken after all other requirements have been completed. A student cannot advance to candidacy before clearing any incomplete grades from their record. Students are expected to complete the oral qualifying examination (QE) during the fall quarter of their third year.

DISSERTATION

The final requirement for the Ph.D. degree is acceptance of the student’s dissertation under the rules of the Academic Senate. A three-member dissertation advisory committee, headed by the student's research adviser, evaluates the dissertation for the department. The dissertation advisory committee must be approved by both the economics Ph.D. committee and the Graduate Division. The committee may require a formal public defense of the dissertation.

---

ECONOMICS FACULTY AND PROFESSIONAL INTERESTS

PROFESSOR

Carlos E. Dobkin
Public health, public policy, and applied econometrics

Robert W. Fairlie
Labor economics, public economics, entrepreneurship, education

Daniel Friedman
Microeconomic theory, experimental/behavioral economics, evolution and learning, financial markets

K.C. Fung
International trade and finance, economies of China and Japan, WTO, foreign direct investment, global environmental economics, and Asia/Pacific economies and economics of Silicon Valley

Michael M. Hutchison
International finance, open economy macroeconomics, emerging markets, European and Asian economies

Laura Giuliano
Labor economics, education, public policy, applied econometrics

Kenneth Kletzer
International economics, macroeconomics, development economics

Nirvikar Singh
Industrial organization, political economy, economic development, technology and innovation, South Asian immigrants in the U.S., Indian economy, Sikhs and the Punjab

Carl E. Walsh
Monetary theory and policy, macroeconomics

ASSOCIATE PROFESSOR

Donald A. Wittman
Economic theory, politics, law

Justin G. Marion
Public economics, empirical industrial organization

Jonathan Robinson
Development economics

Alan Spearot
International trade; industrial organization, applied econometrics

Assistant Professor

Eric Aldrich
Financial econometrics, finance, computational economics and macroeconomics

George Bulman
Applied public and labor, economics of education

Weishi Gu
Macroeconomics, international economics

Chenyue Hu
International economics, macroeconomics, financial economics

Natalia Lazzati
Microeconomic theory, industrial organization, econometrics, experimental economics

Jessie Li
Econometrics, machine learning

Kristian Lopez-Vargas
Behavioral economics, experimental economics, microeconomic theory
Economics

Hikaru Saijo
Macroeconomics, applied econometrics

Brenda Samaniego de la Parra
Applied macroeconomics, labor economics, development economics, and firm dynamics.

Ajay Shenoy
Development economics, economic growth, macroeconomics, political economy

Alonso Villacorta
Macroeconomics, finance

Jeremy West
Applied microeconomics, public economics, energy/environmental economics

LECTURER

James Costain
Macroeconomics, monetary economics, labor markets, game theory

Julie Hupton Gonzalez
Environmental economics and policy, natural resource economics and policy, microeconomics, energy economics, managerial economics

Kevin Jones
Cost accounting, financial accounting, government and not-for-profit managerial accounting, corporate governance and audit

Thomas Moschetti
Taxation of business and investment transactions, corporate tax and individual tax, financial accounting and managerial accounting

Kai Pommerenke
Entrepreneurship and e-commerce; corporate finance, investments, financial engineering, and Chartered Financial Analyst examination

EMERITI

Robert F. Adams, Emeritus
Joshua Aizenman, Emeritus
Yin-Wong Cheung, Emeritus
Michael P. Dooley, Emeritus
Bernard Elbaum, Emeritus
Mary Flannery, Emerita Lecturer
Ronald E. Grieson, Emeritus
John W. Isbister, Emeritus
David E. Kaun, Emeritus
Lori G. Kletzer, Emerita
Jacob B. Michaelson, Emeritus
Robert J. Shepherd, Emeritus Senior Lecturer

Yihsu Chen, Associate Professor of Technology Management
Economics and policy in energy, water resources and transportation sector

Adam Millard-Ball, Associate Professor of Environmental Studies
Transportation planning and policy, environmental economics, urban sustainability, climate change policy

John T. Musacchio, Professor of Technology Management
Control, analysis, and pricing of communications networks; applications of game theory in networking; wireless ad-hoc networks; and management of technology

Yi Zhang, Professor of Technology Management
Information retrieval, knowledge management, natural language processing, machine learning

ECONOMICS COURSES

LOWER-DIVISION COURSES

For all interested students as well as prospective economics majors. Examines how markets allocate resources in different kinds of economies. Topics include competitive markets, monopoly, financial markets, income distribution, market failures, the environment, and the role of government. (General Education Code(s): PE-H.) The Staff

For all interested students and prospective economics majors. Examines how the overall level of national economic activity is determined, including output, employment, and inflation. Explores the roles of monetary and fiscal policies in stabilizing the economy and promoting growth, with a focus on contemporary policy debates. (General Education Code(s): PE-H.) The Staff

10A. Economics of Accounting. F,W
Introduction to accounting principles and practice; preparation and analysis of financial statements; study of internal control procedures. Courses 10A and 10B satisfy the Accounting 1A-B requirement at UC Berkeley. The Staff

10B. Economics of Accounting. W,S
Managerial accounting emphasizing analysis and control; accounting for corporations; introduction to taxation, budgeting, and equity/debt financing; management decision making. Courses 10A and 10B satisfy the Accounting 1A-B requirement at UC Berkeley. Prerequisite(s): course 10A. The Staff

11A. Mathematical Methods for Economists I. F,W,S
Introduction to mathematical tools and reasoning, with applications to economics. Topics are drawn from differential calculus in one variable and include limits, continuity,
entrepreneurship and the economy.

Importance of entrepreneurship.

Code(s): PE-H.

Questions. (General Education to a variety of public policy. Fundamental economic concepts public policy decision making. basic introduction to core economic 30.

Designed for non-majors seeking a

Economists II.

F, W, S

Differential calculus and single

are drawn from multivariable

applications to economics. Topics

tools and reasoning, with
determination of price, output, and

allocation, the function of markets,

consumer behavior, and the
determination of price, output, and

profits in competitive, monopolistic,

and oligopolistic market structures.

Also considers issues of welfare and

public policy. Students cannot receive credit for this course and course 100A. Prerequisite(s): courses 1; 2; and 11B or Applied Mathematics and Statistics 11B or Mathematics 22 or 23A. The Staff

100M. Intermediate Microeconomics, Math Intensive.

Mathematically sophisticated version of course 100A. Provides analytically rigorous treatment of the subject using a calculus-intensive presentation of microeconomic theory. For specific topics, see course 100A. Students cannot receive credit for this course and course 100A. Prerequisite(s): courses 1; 2; and 11B or Applied Mathematics and Statistics 11B, or Mathematics 22 or 23A. The Staff

100N. Intermediate Macroeconomics, Math Intensive.

Provides rigorous, mathematical-intensive treatment of topics covered in course 100B. Core is devoted to model-based analysis of questions in macroeconomics. Use of mathematical tools allows study of advanced topics and data-intensive applications. See course 100B for specific topics. Students cannot receive credit for this course and course 100B. Prerequisite(s): courses 1; 2; and 11B or Applied Mathematics and Statistics 11B, or Mathematics 22 or 23A. The Staff

20. Economics for Non-Majors. F

Designed for non-majors seeking a basic introduction to core economic concepts relevant for social and public policy decision making. Fundamental economic concepts illustrated through their application to a variety of public policy questions. (General Education Code(s): PE-H.) The Staff

30. Introduction to Entrepreneurship. *

Provides an overview of the role and importance of entrepreneurship in the economy and society; a framework for approaching entrepreneurship and innovation; and exposure to the core competencies required of all entrepreneurs. The course incorporates case studies and speakers (often actual entrepreneurs) to provide context for the entrepreneurial topics covered in the course. The Staff

42. Student-Directed Seminar. *

Seminars taught by upper-division students under faculty supervision. (See course 192.) The Staff

93. Field Study. F, W, S

Supervised fieldwork experience, off campus, in an area connected with economics or business. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

93F. Field Study (2 credits). F, W, S

Supervised off-campus fieldwork experience in an area connected with economics or business. Prerequisite(s): permission of instructor; students submit petition to sponsoring agency. The Staff

May be repeated for credit. The Staff

UPPER-DIVISION COURSES

100A. Intermediate Microeconomics. F, W, S

Covers major theoretical issues arising in the study of resource allocation, the function of markets, consumer behavior, and the determination of price, output, and profits in competitive, monopolistic, and oligopolistic market structures. Also considers issues of welfare and public policy. Students cannot receive credit for this course and course 100M. Prerequisite(s): courses 1; 2; and 11B or Applied Mathematics and Statistics 11B or Mathematics 22 or 23A. The Staff

100B. Intermediate Macroeconomics. F, W, S

Covers major theoretical issues arising in the study of income, employment, interest rates, and the price level. Examines the role of monetary and fiscal policy in economic stabilization. Also considers these issues as they relate to the global economy. Students cannot receive credit for this course and course 100N. Prerequisite(s): courses 1; 2; and 11B or Applied Mathematics and Statistics 11B or Mathematics 22 or 23A. The Staff

101. Managerial Economics. W

Analysis of the theory and practice of decision making in business firms, applying the concepts and techniques of microeconomics. Topics may include pricing schemes, non-price competition, internal organization of firms, incentive contracts, asymmetric information, and game theory. Case studies are used to illustrate some topics. Prerequisite(s): courses 100A or 100M, and 113. The Staff

104. Is There Truth in Numbers: The Role of Statistics in Economics. W, S

Applies the techniques of econometrics and experimental economics to the understanding of economics. A "hands-on" course where real economic data is used in an interactive way so that students develop the art of empirical analysis. Prerequisite(s): courses
105. Topics in Macroeconomics. F
A seminar in advanced macroeconomics focusing on a selection of theoretical issues. Emphasis is on detailed modeling and analysis of macroeconomic processes. (Formerly Topics in Macroeconomic Theory.) Prerequisite(s): course 100B or 100N, and 113. The Staff

110. Managerial Cost Accounting and Control. S
Focuses on how cost data are used by managers in the planning and control of both private- and public-sector organizations. Specific topics include organization of the management and control function, use of cost data for the pricing of goods and services, the effect of cost systems on management performance, and capital budgeting. Prerequisite(s): course 10B. The Staff

111A. Intermediate Accounting I. F
Principles, control, and theory of accounting for assets; accounting as an information system; measurement and determination of income. Projects involving spreadsheet software are required. Prerequisite(s): course 10B. The Staff

111B. Intermediate Accounting II. W
Covers the principles, control, the theory of accounting for liabilities and property; plant and equipment, the preparation and analysis of investments; and review and analysis of bonds and leases. Prerequisite(s): course 111A.. The Staff

111C. Intermediate Accounting III. S
Covers the principles of control, the theory of accounting for pensions and income taxes; the determination of share-based compensation and earnings per share, the calculation of shareholder’s equity, and advanced topics in intermediate accounting. Prerequisite(s): course 111A.. The Staff

112. Auditing and Attestation. W
For business management economics majors interested in careers that emphasize accounting, finance, or technology management. Also for students who intend to take the CPA exam. Covers audit techniques, risk analysis, and development of control structures for major financial processes including cash, investments, accounts receivable, inventories, accounts payable, debt, equity capital, and related information systems security. Prerequisite(s): course 10B. The Staff

113. Introduction to Econometrics. F,W,S
Practical methods for organizing and analyzing economic data, testing economic hypotheses, and measuring economic relationships. Regression analysis is the main empirical method, and basic statistical and probability theory is included. Students gain hands-on computer experience with an econometric software package. Students cannot receive credit for this course and Applied Mathematics and Statistics 113. Prerequisite(s): courses 1 and 2; Applied Mathematics and Statistics 5 or 7; and one of the following: course 11B, Applied Mathematics and Statistics 11B, Mathematics 22, or Mathematics 23A. Courses 100A or 100B strongly recommended as preparation. (General Education Code(s): SR.) The Staff

114. Advanced Quantitative Methods. W
Application of statistical methods to estimating and testing economic relationships, i.e., econometric techniques. Topics include the effects of misspecification, choice of functional form, serial correlation, heteroscedasticity, limited dependent variables, and simultaneous equations. Includes discussion of existing empirical work and econometric projects by students. Prerequisite(s): courses 100A or 100M, and 113; concurrent enrollment in course 114L. The Staff

114L. Advanced Quantitative Methods (2 credits). W
Laboratory component associated with course 114. Topics include learning the fundamentals of programming in R language and learning to implement the modes and methods taught in course 114 lectures. Prerequisite(s): courses 100A or 100M, and 113; concurrent enrollment in course 114. The Staff

115. Introduction to Management Sciences. F
The scientific study of management decision making. Topics include linear, integer, and non-linear programming. Special emphasis on a wide variety of practical applications, including production scheduling, optimal transportation assignments, and optimal inventory policy. Prerequisite(s): course 100A or 100M. The Staff

116. Advanced Topics in Accounting and Ethics. S
Covers topics in accounting and ethics. Builds a strong accounting foundation; develops critical thinking skills; and explores ethical standards in accounting, forensic accounting, international financial recording standards, and accounting for sustainability. Meets the California state educational ethics requirement for certified public accountant (CPA) licensure. Prerequisite(s): courses 111A and 111B. Enrollment is restricted to economics, business management economics, global economics, and the combined economics and environmental studies and mathematics majors. (General Education Code(s): PE-H.) The Staff

117A. Income Tax Factors of Business for Individuals. W
Introduces federal taxation for individuals. Topics for study include taxable income, gross income exclusions and inclusions, capital gains, depreciation, business and itemized deductions, personal and dependency exemptions, passive activity losses, tax credits, and methods of accounting. Prerequisite(s): course 10B. The Staff

117B. Tax Factors of Business and Investment. F
Focuses on various tax subjects providing a strong foundation in tax concepts and preparation for work in either public or corporate accounting. Topics include
historical perspective of the U.S. tax system, introduction to estate and gift taxes, employment and self-employment taxes, tax concepts and laws, business expenses, capital recovery, tax credits, capital gains and losses, capital investments, and corporate operations. (Formerly course 117.) Prerequisite(s): course 10B. The Staff

119. Advanced Accounting. F,S
Accounting for business organizations; partnerships; government and non-profit organization funds; branches, consolidations, and installment sales. Projects involving spreadsheet software required. Prerequisite(s): courses 111A or 111B. The Staff

120. Development Economics. W
Studies the microeconomics of development. Topics may include health and nutrition, education, intra-household economics, formal and informal risk-coping mechanisms, savings, credit, agriculture, institutions, and service delivery and corruption. Focuses on empirical methods. Problem sets require statistical software such as Stata. (Formerly Economic Development.) Prerequisite(s): courses 1, 2, and 113. The Staff

121. Economic Growth. S
Studies economic growth from theoretical, empirical, and historical perspectives. Topics include: theories of economic growth and their empirical importance, technology and innovation, social institutions and growth, and competing explanations of the global distribution of wealth. Prerequisite(s): courses 1, 2, 11A, and 11B (or the equivalent); course 100B is strongly recommended. The Staff

125. Economic History of the U.S. S
The development of the American economy from colonial times to the present, with emphasis on the interaction between institutional structure and economic development. Topics include the economics of slavery, the rise of big business, and the causes of the Great Depression. Prerequisite(s): courses 1 and 2. Related coursework in history also helpful. Enrollment is restricted to juniors and seniors. The Staff

126. Why Economies Succeed or Fail: Lessons from Western and Japanese History. F
Examines the emergence of capitalism and the world’s first industrial revolution in Britain, continental Europe industrialization, Soviet economic growth and collapse, and the Japanese economic miracle. Asks about the historical sources of long-run economic development, stagnation, and decline. Draws lessons for current debates over free market versus more interventionist policies, economic reform in the former Communist nations, and economic rivalry between the U.S. and Japan. Prerequisite(s): courses 1 and 2. Related coursework in history also helpful. Enrollment is restricted to juniors and seniors. The Staff

128. Poverty and Public Policy. W
Studies the causes, consequences, and governmental response to urban poverty in the U.S. Topics include how public policy, the macroeconomy, race, gender, discrimination, marriage, fertility, child support, and crime affect and are affected by urban poverty. Emphasizes class discussion and research. (Also offered as Legal Studies 128. Students cannot receive credit for both courses.) Prerequisite(s): courses 100A or 100M; and course 113. Enrollment is restricted to economics combined majors. The Staff

130. Money and Banking. F
Examines the nature of money, financial intermediation, financial asset pricing, and markets; banking business and the banking industry; financial and banking crises, especially the 2007-09 crisis in the U.S. and abroad; the evolving nature of financial regulation and supervision of banking and financial institutions and markets; history and functions of the U.S. central bank (Federal Reserve); the role of the central bank in providing liquidity, credit, and creating money; central bank emergency lending in crises; institutional design of central banks and macroeconomic policy. Prerequisite(s): courses 100B or 100N, and 113. The Staff

International financial management analyzes the key financial markets and instruments that facilitate trade and investment activity on a global scale. Inquiry spans two areas: (1) economic determinants of prices in international financial markets; and (2) decisions facing private individuals and enterprises, with topics including capital financing, investment, and risk management. Prerequisite(s): courses 100A or 100M, and 100B or 100N. The Staff

An examination of all major financial markets: equities, bonds, options, forwards, and futures. Uses modern financial theory, including asset pricing models such as CAPM and APT. Prerequisite(s): courses 100A or 100M, and 113. The Staff

135. Corporate Finance. W
An analysis of financial policies of business enterprises. Topics include cash flow analysis, stock and bond valuation, asset pricing models, capital budgeting, financial market institutions, and financial planning. Prerequisite(s): courses 10A, 100A or 100M, and 113. The Staff

The strategic management process, techniques for analyzing single-business and diversified companies, implementing strategy, organization, business planning, financial strategy, competitive analysis, entrepreneurial skills. Prerequisite(s): courses 10A and either 100A or 100M. The Staff

138. The Economics and Management of Technology and Innovation. W
Examines the analytics of issues in technology and innovation, including cooperation in research and development (R&D), standardization and compatibility, patents and intellectual property rights, and strategic management,
Economics

using economic models and firm case studies. Prerequisite(s): course 100A or 100M, or permission of instructor. The Staff

139A. The Economics of Electronic Commerce. W
An analysis of the broad spectrum of issues affecting commercial uses of the Internet and the next-generation information infrastructure. Uses economics to examine market structure, pricing quality, intellectual property rights, security, electronic payments and currencies, and public policy implications. Prerequisite(s): course 100A or 100M, or permission of instructor. The Staff

139B. E-Commerce Strategy. S
Review of economic principles and trends in e-commerce, including online retailing of physical products, digital products and services, financial services, business-to-business transactions, e-business, and e-marketing. Business-to-business and business-to-consumer business models are explored both in terms of strategy and implementation. Topics include how and why successful companies deploy e-business strategies and how these evolve in fast-changing technological and business environments. Prerequisite(s): course 139A or 161A. N. Singh, S. Owen

140. International Trade. F
The theory of international production and trade. The effects of tariffs and quantitative trade restrictions; the nature of economic integration; multinational firms; effects of trade and protection on economic stability and welfare. Prerequisite(s): course 100A or 100M. The Staff

141. International Finance. S
Topics include national accounting, balance of payments theories, parity conditions in international finance, exchange rate determination models, forward-looking financial instruments, international monetary systems, country interdependence and exchange rate regimes, international monetary integration, and Eurocurrency market. Prerequisite(s): course 100B or

100N. The Staff

142. Advanced Topics in International Economics.
Selected issues in contemporary international economics: theory, empirical evidence, and public policy. Seminar emphasizing discussion and individual research. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, courses 100A or 100M, and 100B or 100N, and 140 or 141. The Staff

143. Policy Issues in the International Economy. F
Covers selected issues concerning the international economy. Topics include: U.S. competitiveness; U.S. trade policy; immigration; trade and the environment; developing countries; foreign investment; foreign exchange markets; and international economic institutions. Prerequisite(s): courses 1, 2, and 100A or 100M. The Staff

148. Latin American Economies. This course is designed to familiarize students with the economic and business environment in Latin America. Prerequisite(s): courses 1 and 2. The Staff

149. The Economies of East and Southeast Asia. Examines the pattern of international trade, investment, and industrial structure in Asia. Examines competing explanations of rapid growth of Japan, Korea, and Taiwan; presents an overview of economic developments in China, Hong Kong, and Taiwan. Concludes with an analysis of high technology trade and multinationals in Asia in 2000 and beyond. Prerequisite(s): courses 1 and 2. The Staff

150. Public Finance. S
Economics of taxation, including incidence, equity issues, efficiency, and supply side effects. Close attention to taxes in the U.S. system and tax-reform issues. Students cannot receive credit for this course and course 250. Prerequisite(s): course 100A or 100M, and course 100B or 100N. The Staff

156. Health Care and Medical Economics.*

Health economics theory and review of studies of the health industry, including current topics. Focuses on the structure of the U.S. health care system, including analysis of health policy issues. Relationship to models of perfect competition and efforts at reform. Prerequisite(s): courses 100A or 100M and 113. The Staff

159. The Economics of Organizations.*
Uses an economic approach to shed light on questions such as why and how organizations are formed, and what consequences they may have on the adoption of different types of organizations for economic performance. Also emphasizes differences between the "internal markets" within organizations and market transactions. Prerequisite(s): course 100A or 100M. The Staff

160A. Industrial Organization. W
The structure and conduct of American industry with strong emphasis on the role of government, regulation, anti-trust, etc. The evolution of present-day industrial structure. The problems of overall concentration of industry and of monopoly power of firms. Pricing, output decisions, profits, and waste. Approaches include case study, theory, and statistics. (Also offered as Legal Studies 160A. Students cannot receive credit for both courses.) Prerequisite(s): course 100A or 100M. The Staff

160B. Government and Industry. The influence of government regulation on industry and the allocation of resources is rigorously examined using theory and statistics. Areas of regulation include transportation and power, pollution and congestion, rent control, and liability insurance regulation. Both optimal and actual regulation are examined from the point of view of effectiveness, efficiency, social welfare, and redistribution. Prerequisite(s): course 100A or 100M. The Staff

161A. Marketing. F
The evolution of markets and marketing; market structure; marketing cost and efficiency; public and private regulation; the
development of marketing programs including decisions involving products, price, promotional distribution. (Formerly course 161.) Prerequisite(s): course 100A or 100M. The Staff

161B. Marketing Research. * Prepares students to conduct market research and use it in solving real management problems. Students work with a company to solve marketing-based problems. Students conduct research, process data, and make a presentation to the company's management. Course work involves marketing, statistics, and communications; material is both qualitative and quantitative. Prerequisite(s): courses 113 and 161A. The Staff

162. Legal Environment of Business. * A study of law and the legal process, emphasizing the nature and function of law within the U.S. federal system. Attention is given to the legal problems pertaining to contracts and related topics, business association, and the impact of law on business enterprise. (Also offered as Legal Studies 162. Students cannot receive credit for both courses.) Prerequisite(s): course 100A or 100M. The Staff

164. Economics and the Telecommunications Industry. * Covers the economics of the telecommunications industry including telephone, cellular telephone, and data communications. Particular emphasis on the Internet, satellite, paging, cable television, radio and television broadcasting. Examines the industry structure and implications of moving from a regulated environment to competition. Topics examined from a competitive strategic standpoint as well as public policy perspective. Prerequisite(s): courses 100A or 100M, and 113. The Staff

165. Economics as an Experimental Science. * The design, execution, and analysis of laboratory experiments in economics. Students study experimental methodology, critically survey the published literature, and design an experiment. Literature includes lab studies of investigations in auctions, markets, social choice theory, and game theory. Prerequisite(s): course 100A or 100M, and course 113. Enrollment limited to 40. The Staff

166A. Game Theory and Applications I. F Introduces modern game theory, including applications in social science, biology, and engineering. Topics include extensive form, strategic form, mixed strategies, incomplete information, repeated games, evolutionary games, and simulation techniques. (Also offered as Technology & Info Management 166A. Students cannot receive credit for both courses.) Prerequisite(s): Applied Mathematics and Statistics 5 or 7 or Economics 113; and Economics 11B, Applied Mathematics and Statistics 11B, or Mathematics 11B or 19B. Enrollment is restricted to juniors and seniors. Enrollment limited to 100. J. Musacchio

166B. Game Theory and Applications II. Explores research frontiers in game theory, emphasizing applications in social science, biology, and engineering. Each interdisciplinary team develops a topic, and presents it to the class in oral and written reports and demonstrations. Students must have shown a strong performance in course 166A or equivalent. Students cannot receive credit for this course and Economics 272, Computer Science 272, or Biology: Ecology and Evolutionary 274. (Also offered as Computer Science 166B. Students cannot receive credit for both courses.) Prerequisite(s): course 166A or Computer Science 166A; satisfaction of the Entry Level Writing and Composition requirements. Enrollment is restricted to juniors and seniors. Enrollment limited to 40. The Staff

169. Economic Analysis of the Law. S The application of the theories and methods of neoclassical economics to the central institutions of the legal system, including the common law doctrines of negligence, contract, and property; bankruptcy and corporate law; and civil, criminal, and administrative procedure. (Also offered as Legal Studies 169. Students cannot receive credit for both courses.) Prerequisite(s): course 100A or 100M or permission of instructor. The Staff

170. Environmental Economics. F Economic analysis of environmental issues. Environmental pollution and deterioration as social costs. Economic policy and institutions for environmental control. Influences of technology, economic growth, and population growth on environmental quality. Prerequisite(s): course 100A or 100M, and 113. The Staff

171. Natural Resource Economics. W The application of economic analysis to the use of renewable and nonrenewable natural resources. Efficiency and distributional aspects of natural resource scarcity. Measurement of the benefits and costs. Optimal extraction or use policies. Common property and externalities. Government policies. Prerequisite(s): course 100A or 100M. The Staff

175. Energy Economics. * Applications of micro, welfare, and international economic theory and methodology to the energy field. Questions considered include optimal allocation of natural resources; pricing and investment; regulations and taxes; import and export control; redistributional policies. Prerequisite(s): course 100A or 100M. The Staff

180. Labor Economics. F A study of topics in modern labor economics with an emphasis on data analysis and econometrics. Topics include labor supply, labor demand, human capital, minimum wage, employment and wage discrimination, immigration, self-employment, earned income tax credit, and unemployment insurance. Prerequisite(s): course 100A or 100M; and course 113. The Staff

183. Women in the Economy. * Study of gender roles in economic
life, past and present. Topics include occupational structure, human capital acquisition, income distribution, poverty, and wage differentials. The role of government in addressing economic gender differentials is examined. (Also offered as Legal Studies 183. Students cannot receive credit for both courses.) Prerequisite(s): course 100A or 100M; course 113 is strongly recommended. The Staff

186. Mathematical Methods for Economic Analysis. F
Presents mathematical methods commonly used in graduate-level economic analysis: basic matrix algebra, real analysis, functions, continuity concepts, differentiation, Taylor expansions, and implicit function theorem and optimization. Enrollment is restricted to applied economics and finance graduate students. The Staff

188. Management in the Global Economy.*
An overview of how firms do business in the global economy. The focus is on the motivations of firm behavior, but also explores the impact of corporate decision-making on national welfare. Includes a mix of business case studies, applied economic theory, and empirical applications. Prerequisite(s): course 113 and either course 100A or 100M. The Staff

190. Senior Proseminar.*
Courses focus on problems of interest to advanced students of economics. They offer a flexible framework, so those interested in specific issues can read, present papers, and develop their ideas. The Staff

191. Economics Teaching Practicum. F,W,S
Each student serves as facilitator for small discussion group in connection with core economics courses. Facilitators complete course readings and meet with instructor as a group to discuss the teaching process. May not be counted toward upper-division major requirements. The Staff

192. Directed Student Teaching. F,W,S
Teaching of a lower-division seminar, course 42, under faculty supervision. May not be counted toward the upper-division major requirements. Students submit petition to sponsoring agency. The Staff

193. Field Study. F,W,S
Provides for department-sponsored individual field study in the vicinity of the campus under the direct supervision of a faculty sponsor (in contrast to course 198 where faculty supervision is by correspondence). May not be counted toward the upper-division major requirements. Students submit petition to sponsoring agency. May be repeated for credit. (General Education Code(s): PR-S.) The Staff

193F. Field Study (2 credits).
Provides for department-sponsored individual field study in the vicinity of the campus under the direct supervision of a faculty sponsor. May not be counted toward the upper-division major requirements. Students spend six hours per week at job site. Students submit petition to sponsoring agency. May be repeated for credit. (General Education Code(s): PR-S.) The Staff

194. Advanced Topics in Management.*
Honors course providing detailed analysis of specialized topics in management. Possible topics include: venture capital, the financial services industry, e-business, behavioral finance, advanced consumer behavior, entrepreneurship, high-tech marketing, risk management, and option value approaches to business strategy. Students cannot receive credit for this course and course 194F. Prerequisite(s): courses 100A or 100M, 100B or 100N, and 113. Enrollment is by permission of instructor, and review of performance in economics courses. Enrollment is restricted to senior and junior business management economics majors. Enrollment limited to 30. The Staff

194B. Advanced Topics in Business and Professional Development (2 credits). S
Enhances students’ marketability, strengthens verbal and written communication skills, teaches appropriate business etiquette, improves networking skills, and helps students determine how to become an integral part of an organization’s intellectual capacity. Business professionals provide guest presentations. Enrollment is restricted to sophomores, juniors, and seniors economics, business management economics, global economics majors and combined majors with mathematics and environmental studies. The Staff

194F. Advanced Topics in Management and Finance (2 credits). S
Detailed analysis of specialized topics in management. Possible topics include: venture capital, the financial services industry, e-business, behavioral finance, advanced consumer behavior, entrepreneurship, high-tech marketing, risk management, and option value approaches to business strategy. Formerly, Advanced Topics in Management and Finance. Prerequisite(s): courses 100A or 100M, and 113; courses 133 or 135 strongly recommended. Enrollment is restricted to senior and junior business management economics majors. Enrollment limited to 30. The Staff

A supervised research project. If the project is of unusual scope, the course may be repeated for credit. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, students submit petition to sponsoring agency. The Staff

Economics students are expected to learn to effectively communicate economic theory and evidence relating to economic policy to audiences that do not have economics degrees. The skills to be learned are both written and oral communication. Students learn to present convincing policy arguments in position papers,
executive summaries, and in oral presentation that may include charts and other means of communication. Prerequisite(s): Entry Level Writing & Composition requirement; one of the following courses: 100A, 100M, 100B, 100N, or 113. Restricted to sophomore, junior, senior economics, business-management economics, global economics and combined economics/math majors. The Staff

198. Independent Field Study. F, W, S Provides for department-sponsored individual study program off campus for which faculty supervision is not in-person, but by correspondence. May not be counted toward the upper-division major requirements. Students submit petition to sponsoring agency. May be repeated for credit. (General Education Code(s): PR-S.) The Staff

198F. Independent Field Study (2 credits). F, W, S Provides for department-sponsored individual study program off campus for which faculty supervision is not in person, but by correspondence. May not be counted toward the upper-division major requirements. Students spend six hours per week at the job site. Students submit petition to sponsoring agency. May be repeated for credit. (General Education Code(s): PR-S.) The Staff

199. Tutorial. F, W, S May be repeated for credit, but may be counted only once toward the upper-division major requirements. Undergraduates may not take graduate courses for credit as 199. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

199F. Tutorial (2 credits). F, W, S Specialized study with individual faculty. May not be applied toward the major requirements. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

---

**GRADUATE COURSES**

200. Microeconomic Analysis. F Survey of partial equilibrium analysis, market distortions, consumer choice and production and trade theory, perfect and imperfect competition, price discrimination, and intertemporal choice theory. Enrollment is restricted to applied economics and finance graduate students. The Staff

201. Applications in Microeconomics. S Applies concepts and tools developed in course 200 to problems encountered in private- and public-sector output and labor markets. The focus is empirical; topics include analysis of labor supply and labor demand and the role of government labor market policies, analysis of pricing policies and regulation, estimation of the returns to schooling, estimation of demand and cost functions, and the role of unions in the economy. Course 200 is strongly recommended as preparation. Enrollment is restricted to applied economics and finance graduate students. The Staff

202. Macroeconomic Analysis. W Aggregate economic analysis: determinants of aggregate expenditures and output, the roles of monetary and fiscal policy, recent developments in macro theory, macro policy issues. Enrollment is restricted to applied economics and finance graduate students. The Staff

204A. Advanced Microeconomic Theory I. F Economic theory of individual and market behavior, including constrained optimization, duality, theory of the consumer, theory of the producer, dynamic optimization, behavior under uncertainty, intertemporal choice, asymmetric information, game theory, partial and general equilibrium, pure and applied welfare economics, public goods and externalities. Courses must be taken in sequence. (Formerly Advanced Microeconomic Theory.) Prerequisite(s): course 204B. The Staff

204B. Advanced Microeconomic Theory II. W Economic theory of individual and market behavior, including constrained optimization, duality, theory of the consumer, theory of the producer, dynamic optimization, behavior under uncertainty, intertemporal choice, asymmetric information, game theory, partial and general equilibrium, pure and applied welfare economics, public goods and externalities. Courses must be taken in sequence. (Formerly Advanced Microeconomic Theory.) Prerequisite(s): course 204A. The Staff

204C. Advanced Microeconomic Theory III. S Economic theory of individual and market behavior, including constrained optimization, duality, theory of the consumer, theory of the producer, dynamic optimization, behavior under uncertainty, intertemporal choice, asymmetric information, game theory, partial and general equilibrium, pure and applied welfare economics, public goods and externalities. Courses must be taken in sequence. (Formerly Advanced Microeconomic Theory.) Prerequisite(s): course 204B. The Staff

205A. Advanced Macroeconomic Theory I. F Modern macroeconomic theory: theories of growth and business cycle fluctuations; theories of household and firm behavior; models of financial markets and labor markets; recent developments in the analysis of macroeconomic policy. Courses 205A, 205B, and 205C must be taken in sequence. (Formerly Advanced Macroeconomic Theory.) Enrollment is restricted to Ph.D. students in economics or by permission of instructor. The Staff

205B. Advanced Macroeconomic Theory II. W Modern macroeconomic theory: theories of growth and business cycle fluctuations; theories of household and firm behavior; models of financial markets and labor markets; recent developments in the analysis of macroeconomic
Economics

policy. Courses must be taken in sequence. (Formerly Advanced Macroeconomic Theory.)
Prerequisite(s): course 205A. The Staff

205C. Advanced Macroeconomic Theory III. S
Modern macroeconomic theory: theories of growth and business cycle fluctuations; theories of household and firm behavior; models of financial markets and labor markets; recent developments in the analysis of macroeconomic policy. Courses must be taken in sequence. (Formerly Advanced Macroeconomic Theory.)
Prerequisite(s): course 205B. The Staff

210A. Mathematical Methods for Economic Analysis. *
Mathematical methods commonly used in economic analysis are discussed. Covers basic matrix algebra, real analysis, functions, continuity concepts, differentiation, Taylor expansion, implicit function theorem, and optimization. Prerequisite(s): qualifications as determined by instructor; inquire at department office. The Staff

210B. Mathematical Methods for Economic Analysis. F
A course in introductory mathematical economics which covers standard optimization problems, difference and differential equations, optimal control theory, decisions under uncertainty, game theory, and stochastic calculus. Course 210A or equivalent is strongly recommended as preparation. The Staff

211A. Advanced Econometrics I. F
Introduces advanced econometric methods. Topics include probability theory, hypothesis testing, linear regression analysis, heteroskedasticity, serial correlation, instrumental variables, and panel data models. (Formerly Advanced Econometrics.)
Enrollment is restricted to economics Ph.D. students or by permission of the instructor. The Staff

211B. Advanced Econometrics II. W
Focuses on the use of econometric methods for causal inference. Research designs covered include: OLS regression, non-parametric regression, propensity score, panel models, synthetic control, instrumental variables, and regression discontinuity. (Formerly Advanced Econometrics.)
Prerequisite(s): course 211A. Enrollment is restricted to graduate students. The Staff

211C. Advanced Econometrics III. S
Covers foundational time series analysis for economics. Topics include: linear time series models, numerical estimation, forecasting, vector autoregression models, the Kalman filter, unit roots, and cointegration. (Formerly Topics in Empirical Research.)
Prerequisite(s): course 211B. Enrollment is restricted to graduate students. The Staff

212. Empirical Project in Econometrics (2 credits). *
Empirical project or paper in econometrics to demonstrate student's ability to conduct applied econometric analysis. Ph.D. requirement to be completed by beginning of student's third year of study. Prerequisite(s): courses 211A and 211B. May be repeated for credit. The Staff

216. Applied Econometric Analysis I. F
The use of statistical techniques for the testing of economic hypotheses and the estimation of parameters, with emphasis on regression analysis. Includes methods of dealing with serial correlation, errors in variables, multicollinearity, and heteroscedasticity. Experience with common statistical packages. Enrollment is restricted to applied economics and finance graduate students. The Staff

217. Applied Econometric Analysis II. W
Focuses on the application of advanced econometric and time series techniques to economic issues. Computer assignments and empirical applications are used to discuss and illustrate the practical aspects of simultaneous equation systems, nonlinear models, qualitative response models, time series model specification, unit root test, and cointegration analysis. Course 216 is strongly recommended as preparation. Enrollment is restricted to applied economics and finance graduate students. The Staff

220A. Development Economics I. F
Studies the microeconomics of development. Topics may include health and nutrition, education, intra-household economics, formal and informal risk-coping mechanisms, savings, credit, agriculture, institutions, and service delivery, and corruption. (Formerly Development Economics: Theory and Cases.) The Staff

220B. Development Economics II. W
Methodological class covering how to build a good theoretical model, how to derive a convincing test of a model, and how to structurally estimate a model. Examples drawn largely (though not exclusively) from the study of economic development. (Formerly Development Economics: Theory and Cases.) The Staff

221A. Advanced Monetary Economics I. F
Covers major issues in monetary economics, focusing on the core theoretical models employed in monetary economics. Topics include: money in general equilibrium; money-in-the-utility function approaches; cash-in-advance models; search-based models; welfare costs of inflation; optimal inflation tax; informational frictions in monetary economies; financial and credit frictions; nominal price and wage frictions; time-dependent and state-dependent models of price adjustment; and money in new Keynesian models. Prerequisite(s): course 205 A-B-C, or by permission of instructor. Enrollment is restricted to graduate students. The Staff

221B. Advanced Monetary Economics II. S
Covers major issues in monetary economics, focusing on the core
lessons for design and implementation of monetary policies. Topics include welfare-based policy objectives; optimal policy under discretion; optimal commitment policies; model dynamic stochastic general equilibrium (DSGE) for policy analysis; open economy models for monetary policy analysis; learning; model uncertainty and policy design; empirical evidence on the channels of monetary policy transmission; monetary policy operating procedures; zero nominal interest-rate bound; international transmission of monetary policy; policy and asset prices. Prerequisite(s): course 205 A-B-C, or by permission of instructor. Enrollment is restricted to graduate students. The Staff

231. International Financial Management. W
Equips students with the analytical tools they need to make informed financial decisions and manage the risks that businesses face in today’s competitive global environment. Covers the fundamental theories and real-world examples in international financial markets. Prerequisite(s): course 233. Enrollment is restricted to graduate students in Applied Economics and Finance. C. Hu

233. Finance I. F
Applications of economic analysis in private finance. Topics include risky choice and intertemporal choice theory, asset pricing models, efficient market hypotheses, market institutions, and derivative securities. Course 200 is strongly recommended as preparation. Enrollment is restricted to applied economics and finance graduate students. The Staff

234. Financial Institutions and Markets. *
This course examines the evolving microstructure of financial markets, instruments, and institutions. Topics include the role of banks and other financial intermediaries and the trading practices for domestic and international financial instruments, including equity, debts, futures, and options. Prerequisite(s): course 233. The Staff

235. Corporate Finance. S
Application of modern financial theory to corporate decision making. Topics covered include capital budgeting and the firm’s investment decision, capital structure, dividend policies, and the implications of corporate governance for enterprise financial goals. Prerequisite(s): course 233. The Staff

236. Financial Engineering. S
This course surveys the financial risks faced by corporation, banks, and other financial institutions that arise from changes in interest rates, foreign exchange rates, commodity prices, and stock prices. It examines the characteristics, payoffs, and pricing of financial derivatives and other instruments for managing risk, including options, forwards, futures, swaps, structured notes, and asset-backed securities. Several cases will be used to illustrate how actual firms solve financial risk management problems. Prerequisite(s): course 233. Enrollment is restricted to applied economics and finance graduate students. The Staff

238. Market Design: Theory and Pragmatcis. *
Surveys the principles of mechanism design and applies them to a variety of 21st Century markets, e.g., for energy, spectrum, finance, online ads, and predictions. Student teams develop new applications. Enrollment is restricted to graduate students. D. Friedman

239. Current Topics in Finance. *
Topics in finance selected by the instructor. Prerequisite(s): course 233. The Staff

240A. International Trade I. W
The theory of international trade and commercial policy. Both traditional analyses and recent developments are covered. Topics include both normative and positive theoretical analyses, as well as empirical testing of theory. (Formerly Advanced International Trade Theory I.) Enrollment is restricted to graduate students. Courses 204A-B-C are strongly recommended as preparation. The Staff

240B. International Trade II. *
The second quarter of a two-quarter sequence which focuses on advanced research topics in trade and its intersection with applied microeconomics. The course is theoretical and empirical, and designed to acquaint students with recent developments in the field. Research topics include: trade and development; political economy of trade policies; trade and labor markets; trade and environment; theories, determinants, and implications of foreign direct investments; economic geography; and spatial/urban economics. (Formerly Advanced International Trade Theory II.) Prerequisite(s): course 240A. The Staff

241A. Advanced International Finance I. F
Covers the foundations of international macroeconomics. Topics include international borrowing and lending, the role of international financial markets, exchange rate economics, wealth and income in open economies, and macroeconomic policy interdependence. The Staff

241B. Advanced International Finance II. W
Covers major topics in international finance and open economy macroeconomics, focusing on contemporary theoretical and empirical analysis. Topics include: international capital flows, financial crises, exchange rate economics, financial policy intervention, and fiscal and monetary policies in open economies. The Staff

241C. Advanced International Finance III. S
Covers contemporary research topics in international macroeconomics and finance, including advances in both theoretical analysis and empirical methods. Specific topics on international macroeconomics, finance, and policy vary. Courses 202 and 203 or 205A-B-C strongly recommended as preparation. The Staff

249A. International Trade and Development Policy I. *
Focuses on a range of real-life issues in international trade and development. Topics include North American Free Trade Agreement (NAFTA), the semiconductor industry, the Boeing-Airbus aircraft trade problems, the World Trade Organization (WTO) and developing countries, U.S./Japan trade, trade and the environment, and U.S./China trade. Enrollment is restricted to graduate students. The Staff

249B. International Trade and Development Policy II. *
Emphasizes government policies to promote growth. Topics include the "Washington Consensus," the East Asian "model," and recent policy changes in East Asia, Latin America, Eastern Europe, and the former Soviet Union. Prerequisite(s): course 249A. Enrollment is restricted to graduate students. The Staff

250A. Public and Applied Economics I. F
Theory of the role of public sector expenditures and taxes in market economies. Analyzes efficiency and equity arguments for government intervention. Topics include the role of public debt and deficits in economies, international effects of tax and spending policies, and economic theories of public sector decision making. Courses 204A and 205A are strongly recommended as preparation. Students cannot receive credit for this course and course 150. (Formerly course 250, Advanced Public Finance.) The Staff

250B. Public and Applied Economics II. W
Covers topics in applied microeconomics, including public, labor, education, environmental, and health. Discusses advanced econometric techniques used to establish causal identification. Students read and evaluate current research and develop an independent research agenda. (Formerly course 273, Advanced Applied Microeconomics.) The Staff

259A. Cost-Benefit Analysis. *
Applications of economic analysis in public finance, largely from the revenue side: taxation. The issues considered include the effects of taxation on consumer welfare, consumption, labor, capital, production, growth. Course 200 is strongly recommended as preparation. Students cannot receive credit for this course and course 153. The Staff

259B. Public Policy Analysis. W
Applications of welfare and microeconomic theory and methodology to the public expenditure question: cost-benefit. Effects of the taxes discussed in course 259A and sophisticated tools used in the face of these and other distortions with regard to measurement of benefits, costs, and the discount rate. Course 200 strongly recommended as preparation. The Staff

270. Advanced Topics in Applied Microeconomics. S
Advanced topics and current research in microeconomic theory and applications, including topics on decision theory, game theory, behavioral economics, and general equilibrium analysis. The Staff

271. Advanced Topics in Macroeconomic Theory. W
Advanced topics and current research in macroeconomic theory, including DSGE models, empirical issues, and optimal policy analysis. Prerequisite(s): courses 204A-B-C, 205A-B-C, and 211A-B-C are strongly recommended as preparation. The Staff

272. Evolutionary Game Theory. *
Reviews static equilibrium concepts, games of incomplete information, and the traditional theory of dynamic games in discrete time. Develops recent evolutionary game models, including replicator and best reply dynamics, and applications to economics, computer science, and biology. Prerequisite(s): upper-division math courses in probability theory are strongly recommended. Cannot receive credit for this course and Economics 166B or Computer Science 166B. (Also offered as Computer Science 272. Students cannot receive credit for both courses.) The Staff

274. Workshop in Macroeconomics and Monetary Economics (3 credits). F,W,S
For Ph.D. students in economics who are at the early stages of their research careers as well as for those who are engaged in dissertation work in macroeconomics and monetary economics. Topics vary from quarter to quarter depending on the interests of participants. Prerequisite(s): courses 205A, 205B, and 205C, or by consent of instructor. Enrollment is restricted to graduate students. May be repeated for credit. The Staff

275. Workshop in Applied Microeconomics (3 credits). F,W,S
For Ph.D. students in economics who are at the early stages of their research careers as well as for those who are engaged in dissertation work in applied microeconomics or other empirical work. Topics vary from quarter to quarter depending on the interests of participants. Enrollment is restricted to graduate students. May be repeated for credit. The Staff

276. Workshop in Experimental Economics (3 credits). F,W,S
For economics doctoral students who are at early stages of their research careers as well as those engaged in dissertation research using laboratory experiments and related techniques. Topics vary from quarter to quarter depending on the interest of participants. Enrollment is by permission of instructor. May be repeated for credit. D. Friedman

290. Topics in International Economics. *
Covers several advanced topics in the history of international economics, international trade, and international finance. Topics include imperfect competition and trade, strategic trade policies, increasing returns, and the pattern of trade, economic geography, exchange rate target zones, and balance of payment crises. Topics vary from year to year. Courses 204A-B-C and 205A-B-C are strongly recommended as preparation. The Staff

291. Workshop in Applied Economics. *
Experience in applied projects,
report writing and presentation, drawing on previous coursework. The Staff

293. Field Study. F,W,S
Students will undertake analytical projects in public or private institutions. The material covered must be different from that of the thesis topic. The Staff

294A. Applied Economics and Finance Laboratory (2 credits). F,W
Practical experience in managing computerized data sets and running statistical packages. Covers STATA and R. (Formerly Applied Economics Laboratory.) Enrollment is restricted to applied economics and finance graduate students. May be repeated for credit. The Staff

Bi-weekly seminars designed to present students with current working applications in various fields of applied economics and finance. (Formerly Applied Economics Seminar.) Enrollment is restricted to applied economics and finance graduate students. May be repeated for credit. The Staff

294C. Economics Guest Seminar Series (1 credit). *
Bi-weekly seminars by visiting faculty and industry leaders who are experts in their fields provide in-depth insight on topics relevant to graduate students in economics. Enrollment is restricted to graduate students. The Staff

294D. Applied Economics Seminar (2 credits). *
Weekly seminar designed to present students with current working applications in various fields of applied economics. Enrollment is restricted to economics Ph.D. students. The Staff

295. Directed Reading. F,W,S
Reading in research area of student interest, with faculty supervision through weekly discussion. Students submit petition to sponsoring agency. (Formerly course 295A.) May be repeated for credit. The Staff

296A. Third Year Ph.D. Seminar. *
Student presentations of literature and/or original research in areas of student research interest. Student discussion of presentations under faculty supervision. Prerequisite(s): courses 204C, 205C, 211B, 240A, 240B, 241A, and 241B are required preparation. The Staff

297. Independent Study. F,W,S
Independent study and research under faculty supervision. Students submit petition to sponsoring agency. The Staff

298A. Master's Thesis Research. F
May be taken once to meet course requirements for the master's degree. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

298B. Master's Thesis Research (10 credits). W
May be taken once to meet course requirements for the master's degree. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

Research toward Ph.D. dissertation under faculty supervision. Prerequisite(s): advancement to candidacy and students submit petition to sponsoring agency. (Formerly, course 298 Dissertation Research) May be repeated for credit. The Staff

Research toward Ph.D. dissertation under faculty supervision. Prerequisite(s): advancement to candidacy and students submit petition to sponsoring agency. (Formerly, course 298 Dissertation Research) May be repeated for credit. The Staff

Research toward Ph.D. dissertation under faculty supervision. Prerequisite(s): advancement to candidacy and students submit petition to sponsoring agency. (Formerly, course 298 Dissertation Research) May be repeated for credit. The Staff

* Not offered in 2018-19

Revised: 07/15/18
PROGRAM DESCRIPTION

The purpose of the Education Department’s instructional programs is to prepare all students—both undergraduates and graduates—to engage in the analysis and integration of educational theory, research, and practice for an increasingly diverse society. Our commitment is built around four interrelated domains: 1) schools, families, and communities; 2) teacher education and teacher development; 3) language, literacy, and learning; and 4) mathematics and science education. Foundational to our programs is an acknowledgment of the social, cultural, and political contexts in which all aspects of education occur.

The Education Department offers a doctor of philosophy (Ph.D.) program for students who have exemplary academic preparation as well as experience working in educational settings. We offer a master’s level/teaching credential (MA/C) teacher-preparation program. And we have two vibrant undergraduate education minor tracks that serve more than 300 undergraduates each year.

MINORS IN EDUCATION

The UCSC undergraduate courses in education engage students in histories of educational thought and philosophy, the politics and economics of education, multiple approaches to learning theory and teaching pedagogy, and contemporary issues of cultural and linguistic diversity in education.

Because an academic major in teaching is not permitted in the state of California, UCSC instead offers two minors in education for students who are considering a career in teaching or who hold a more general interest in educational studies. Please note that the minors in education do not provide a California Teaching Credential. Additionally, please note that the UCSC teaching credential program is a graduate program and coursework taken in the minor cannot be substituted for credential requirements.

GENERAL MINOR IN EDUCATION

The general minor in education consists of six courses totaling 30 credits:
- Education 60, Introduction to Education
- Education 180, Introduction to Teaching*
- Four upper-division elective education courses (courses numbered Education 102-187). (Please refer to the Education Department’s website for a list of approved upper-division courses being offered during the current academic year.
- Declared minors have priority enrollment for upper-division education courses. Upper-division electives may be taken before Education 180.

To be eligible to declare the general minor in education, students must have:
- Attended an Education Minor Workshop
- Completed or be enrolled in Education 60, Introduction to Education
- Successfully declared a major.

*EDUC 180, background checks (Live Scan Fingerprinting) and Mandated Reporter training are required of all participants prior to the first day of instruction. The department will contact enrolled students with information about how to complete these items. DO NOT REQUEST LIVE SCAN SERVICE FOR EDUC 180 WITHOUT COMMUNICATING with the education undergraduate adviser for further information.

To officially declare a general minor in education, students must bring from their major department a completed Petition for Major/Minor Declaration and UCSC Academic Planning Form to the Education Department’s undergraduate adviser. Students pursuing a minor in education should meet with the Education Department’s undergraduate adviser as early as possible. The adviser will assist students in completing the Petition for a Major/Minor Declaration and the UCSC Academic Planning Form.

For specific instructions about how to declare a minor in education and for the current Drop-in Advising Schedule, please refer to the Education Department’s website. For other inquiries, please contact the undergraduate adviser by sending an e-mail to education@ucsc.edu.

SCIENCE, TECHNOLOGY, ENGINEERING, AND MATHEMATICS (STEM) EDUCATION MINOR

The STEM minor specifically serves students in STEM majors who are considering careers in secondary mathematics or science teaching. The STEM minor in education consists of eight courses, totaling 32 credits and including ~75 hours of classroom field placements:
- EDUC 50 (A, B or C) CalTeach 1: Science and/or Mathematics (2 credits)
- EDUC 60, Introduction to Education (5 credits)
- EDUC 100 (A, B or C) Cal Teach 2: Science and/or Mathematics (2 credits)
EDUC 185B, Introduction to Mathematics Education, or 185C, Introduction to Teaching Science (5 credits)
EDUC 185L, Introduction to Teaching: Cal Teach 3 (3 credits)

One upper-division education course addressing cultural and linguistic diversity (e.g., EDUC 125, 128, 135, 140, 141, 164, 170, 171, 177, or 181).

Two upper-division education courses (courses numbered EDUC 102-187). Please refer to the Education Department’s website for a list of approved upper-division courses being offered during the current academic year.

Students pursuing the STEM education minor should meet with the Cal Teach staff as early as possible. Entry into EDUC 50 is by application only, and interested students must submit an application to the Cal Teach program (see the Cal Teach website or e-mail calteach@ucsc.edu). Entry into EDUC 100 and EDUC 185L is contingent upon successful completion of previous Cal Teach internships and sufficient university-level science or mathematics coursework.

---

**GRADUATE PROGRAMS**

**MASTER OF ARTS IN EDUCATION AND CALIFORNIA TEACHER CREDENTIAL PROGRAM**

The master of arts (M.A.) in education and California teacher credential program prepare prospective teachers to work with California's culturally and linguistically diverse student population. Students in this program earn a master's degree and are eligible to apply for a Preliminary California Credential upon completing a five-quarter program comprised of two summers and one academic year. Graduates of the program are prepared to teach English language learners enrolled in K–12 public schools. The program also offers the Bilingual Authorization (in Spanish) for learners enrolled in K–12 public schools. The program are prepared to teach English language

Students who complete the program are eligible to apply for a California Preliminary Multiple Subjects Teaching Credential or a California Preliminary Single Subject Teaching Credential (as well as a Foundational Level Mathematics Credential). The Multiple Subjects Teaching Credential authorizes the holder to teach in a K–6, self-contained public school classroom, where all subjects are taught by the same teacher. The Single Subject Teaching Credential authorizes the holder to teach in his/her credential subject area in a 6-12 departmentalized classroom setting within a public school system. The Foundational Level Mathematics credential allows candidates to teach middle school mathematics and some high school mathematics (including general mathematics, algebra, geometry, probability and statistics, and consumer mathematics). The UCSC single-subject, teacher-credential program offers the following subject areas: mathematics, English, social science, and science. Programs of study are subject to change. Please note that students are not admitted into the program for a stand-alone Master of Arts in Education or a stand-alone credential. Additionally, holders of a previously issued California or out-of-state credential are not eligible for admission to the program.

Because program requirements are authorized by statutes and regulated by a state entity, the California Commission on Teacher Credentialing program requirements must be responsive to new legislation and regulatory policies. Admission requirements and programs of study referred to are subject to change to comply with regulatory mandates.

---

**PREREQUISITE ADMISSION REQUIREMENTS**

All candidates for the M.A./Credential program must have preparation in the following areas:

- A course, or equivalent experience, that addresses cultural and linguistic diversity. The following UCSC undergraduate education courses are examples of courses that meet this requirement: 128, Immigrants and Education; 141, Bilingualism and Schooling; 164, Urban Education; 181, Race, Class, and Culture in Education. (Additional education undergraduate courses that satisfy this requirement are listed on the Education Department's website.) Other courses offered outside the Education Department may be acceptable however, outside coursework cannot be preapproved, by the department. When applying to the program note your outside coursework in your statement of purpose along with an explanation as to how your coursework addresses cultural and linguistic diversity.

A documented field experience with children or youth in an educational setting at the general age level which the candidate aspires to teach. Experiences such as directed observation, substitute teaching, school tutoring, work in after-school programs, camp counseling, instructional aide, or the equivalent are acceptable experiences. When applying to the program, please describe your field experience in the designated area of the application titled Statement of Purpose.

**APPLICATION SELECTION CRITERIA**

Admission to the program is competitive. Candidates for admission are selected, in part, on the following criteria:

**ACADEMIC RECORD**

College coursework is evaluated with attention to content and grades or narrative evaluations. The appropriateness of courses taken for the credential sought is also taken into consideration. For the multiple subjects credential, students should have an extensive breadth of courses in the core subject areas taught in elementary school—mathematics, science, social science, and English. For the single subject credential, students should have an extensive body of coursework in the content area.
STATEMENT OF PURPOSE, WRITING SAMPLE, LETTERS OF RECOMMENDATION, PERSONAL HISTORY, AND RÉSUMÉ

Information provided in these documents is used in the selection of candidates. All documents must be submitted by the application deadline.

The Statement of Purpose should discuss the following:

- an explanation of why you want to become a teacher
- how your experience has contributed to your motivation and potential to be an educational leader
- a description of your experiences related to youth, cultural and linguistic diversity, and community involvement

Writing Sample:

- a sample of your writing (no more than 10 pages)
- a research-based paper is preferred, for example, a paper written on an educational topic or a paper written in your content area
- alternatively, applicants may choose to write a brief piece specifically for this application

Letters of Recommendation:

- three letters of recommendation are required
- at least one letter should be written by university faculty who can address the applicant’s academic merit and subject area expertise, and at least one letter written by someone in the field who has observed the applicant’s work with children or youth in the applicable general age-group for the credential you are seeking through the UCSC Credential Program.
- it is recommended that these letters are current and address your qualifications in the following areas: academic performance and subject-area expertise field work with youth experience in culturally and linguistically diverse settings and with student populations who have traditionally been underserved in schools and classrooms

Personal History:

- write a statement (approximately two to five pages) explaining how your personal history has influenced your decision to apply to this graduate program

Résumé:

- a résumé that includes an employment history; any relevant volunteer or community work, especially in schools and/or with children; and experiences in multicultural and multilingual settings
- include information on languages (other than English) in which you have competence

Bilingual Authorization Essay (Bilingual Authorization applicants only):

- candidates must submit an essay in Spanish as described in the online application

ADMISSION REQUIREMENTS

TESTING

All required examinations must be met by the stated deadlines.

CALIFORNIA BASIC SKILLS REQUIREMENT

All admitted applicants must verify completion of the California Basic Educational Skills requirement and submit a passing-status verification by June 1 in order to enroll in the program. However, applicants are strongly encouraged to complete this requirement prior to applying to the program. Exam registration confirmations and/or exam score reports must be submitted at the time of application via the online application.

Information on the options for completing this requirement can be found in the following California Commission on Teacher Credentialing Information Leaflet c1667.

SUBJECT-MATTER COMPETENCE

California state law mandates that all teachers provide evidence of their subject-matter knowledge (state requirement and subject to change).

Admitted Multiple Subject applicants must submit verification of having passed the California Subject Examinations for Teachers (CSET): Multiple Subjects Subtests I-III by June 10 prior to enrollment in the program. However, it is highly recommended that documentation of passing CSET scores be submitted with the application. Multiple Subject applicants must pass each section of the CSET; no coursework or "waiver" program can substitute for passing CSET scores.

Deadline to complete this requirement: June 10 of each year prior to enrollment into the program. However, applicants are encouraged to complete this requirement prior to applying to the program. Exam registration confirmations and/or exam score reports must be submitted at the time of application via the online application.

Additional information can be found at the CSET Registration website.

SINGLE SUBJECT

The California Subject Examinations for Teachers (CSET), or verification of an approved subject matter program from the applicant’s undergraduate institution is required. Admitted applicants must submit verification of having passed the CSET examination for their subject (e.g., mathematics), or confirmation of 100 percent completion of an approved subject matter program.

Deadline to complete this requirement: June 10 of each year prior to enrollment into the program. However, applicants are encouraged to complete this requirement prior to applying to the program. Exam registration confirmations and/or exam score reports must be submitted at the time of application via the online application. Additional information can be found at the CSET Registration website.
CERTIFICATE OF CLEARANCE

In accordance with Education Code Section 44320(b), each credential candidate for an initial credential, prior to admission to any credential program, must have their fingerprints cleared by the Federal Bureau of Investigations and the California Department of Justice and obtain a Certificate of Clearance from the California Commission on Teacher Credentialing.

To comply with this regulation, the UCSC Education Department requires all applicants to provide evidence of obtaining their clearance as part of their application for admission to the credential program. Applicants are required to upload a copy of their Certificate of Clearance within their program application by the January 15 application deadline.

Detailed instructions for obtaining a Certificate of Clearance including the required LiveScan fingerprinting form LS-41 can be found on the commission’s website.

NOTE: A U.S. Government-issued social security number is required to apply for a Certificate of Clearance and the fingerprinting process.

Applicants who hold a valid (non-expired) Emergency 30-Day Substitute Teaching Permit are not required to reapply for a Certificate of Clearance. Please submit verification of your valid Emergency Permit with your program application by the January 15 application deadline.

Out-of-state/international applicants must contact the UCSC Education Department for further instructions: education@ucsc.edu.

Applicants should be aware that a criminal conviction on their record may preclude them from obtaining a Certificate of Clearance.

PROGRAM AND STATE OF CALIFORNIA REQUIREMENTS (NOT REQUIRED FOR INITIAL ADMISSION TO THE PROGRAM)

These requirements may be met prior to or while enrolled in the program, but they must be met to be eligible for a California teaching credential.

U.S. CONSTITUTION REQUIREMENT

A course on the U.S. Constitution (or completion of an examination offered by the Education Department to enrolled students) is required. UCSC-approved courses that meet this requirement are Politics 20, American Politics; Politics/Legal Studies 111, Constitutional Law; Politics 120A, Congress, President, and the Court in American Politics; and History 10A, United States History to 1877.

Admitted applicants must submit verification of completing the U.S. Constitution Requirement prior to completing the final quarter of the M.A./Credential program.

PRELIMINARY TECHNOLOGY (LEVEL 1) REQUIREMENT

All candidates for their credential must fulfill the requirements for Level 1 technology skills which includes general and specialized skills in the use of computers in educational settings.

UCSC students meet this requirement in one of two ways:

- Option 1: Pass the CSET Preliminary Educational Technology Subsets I & II, (CSET test codes 133 & 134). For more information, see the Technology Subsets I & II information on the CSET website.
- Option 2: Pass the UCSC approved course offered through the UCSC Extension Program, XSC209, Technology in Schools, Introduction (online format).

Admitted applicants must submit verification of completing the Level 1 Technology Requirement prior to completing the final quarter of the M.A./Credential program.

READING INSTRUCTION COMPETENCE ASSESSMENT (RICA)

Multiple Subjects candidates are required—prior to completion of the program and in order to be recommended for a preliminary credential—to pass the RICA examination. The RICA measures the knowledge, skills, and abilities essential to offer effective reading instruction to K–12 students. For more information on the RICA examination, see the RICA examination information on the CSET website.

Candidates should not take this examination prior to completing course Education 220.

Admitted applicants must submit verification of having passed the RICA prior to completing the final quarter of the M.A./Credential program.

CPR

A certified cardiopulmonary resuscitation (CPR) course (infant, child, and adult) must be completed and valid upon application for the credential.

Admitted applicants must submit verification of obtaining certification in Infant/Child/Adult CPR prior to completing the final quarter of the M.A./Credential program.

TUBERCULOSIS (TB) TEST

All K-12 schools require anyone working with children to be tested for TB. You can get tested through the UCSC Student Health Center (831-459-2500 to make an appointment) or your private doctor. A copy of your official results must be turned into the Education Department before the end of the first summer quarter.

BILINGUAL AUTHORIZATION CANDIDATES

1. CSET—Spanish Language and Culture of Emphasis Requirements

   The CSET LOTE (Spanish) Subtest III (CSET test code 147) and CSET LOTE (Spanish) Subtest V (CSET test code 258) (Culture of Emphasis) are required. Admitted applicants must submit
Education

verification of having passed the examination prior to completing the final quarter of the M.A./Credential program. Additional testing information can be found at the CSET Registration website.

2. Three-page essay in Spanish
Bilingual Program applicants will be required to submit a three-page essay in Spanish with their application to the M.A./Credential Program. The essay should address topical questions listed on the Education M.A. Supplemental Application contained within the online UCSC Graduate School Application.

STUDENT TEACHING

The successful development of teaching skills in the classrooms is the culmination of a teacher education program. Therefore, candidates must demonstrate, by the end of their program, teaching competence in the classroom. Credentialed public school teachers are responsible for the nurturing of children and youth. Therefore, teaching credential candidates must consistently display conduct befitting the profession. To this end, the candidate must be able to cope with the demands and responsibilities of teaching as outlined below:

- Meet university and program requirements and deadlines (including school expectations during field experiences).
- Plan ahead to anticipate the transportation needs and potential demands of student teaching.
- Be able to adapt to institutional and/or professional expectations and policies.
- Relate appropriately to children, parents, and school staff.
- Demonstrate sensitivity to the social, cultural, and economic context of the school environment.
- Adhere to school expectations for dress, appearance, and personal hygiene.

Candidates whose professional behavior does not meet these minimal standards may be recommended for dismissal from the program.

Beginning Student Teaching, which begins in August during the Summer Bridge between the university summer and fall quarters, constitutes the first classroom observation experience for students in the program, and continues through most of fall quarter. Student teachers are in their classroom placements from 10–14 hours a week depending on the school site schedule. To enroll in this course, students must have a Certificate of Clearance issued and on file with the California Commission on Teacher Credentialing. Intermediate and advanced student teaching begins late fall and continues through winter and spring, until the end of the academic year in June. Student teachers are placed with cooperating teachers in local schools throughout Santa Cruz County and beyond. Students are in the classroom placements 14 or more hours a week in winter quarter leading toward full time in the classroom by spring quarter. They gradually assume responsibility for preparation, instruction, and evaluation of the class during this period. Supervisors of teacher education give ongoing and frequent support to students in their classroom placements and in seminars at UCSC. Multiple Subject candidates obtain classroom experience in both primary and intermediate grades. Single Subject candidates obtain classroom experience in middle school/junior high and high school.

Admission to course 201 and 201A, Intermediate Student Teaching, and courses 202A-B-C, Advanced Student Teaching, is based on an assessment of academic performance, experience, leadership, and initiative shown in public school placements and required courses taken earlier in the program. Please note that passing the CSET examination is a requirement for Advanced Student Teaching. Students who have not completed the CSET requirement prior to winter quarter will be asked to take a leave of absence from the program.

CAPSTONE REQUIREMENTS

Students will complete a capstone portfolio, which includes a teaching performance assessment and reflective papers. Prompts for these assignments may vary from year to year as they reflect the most current California state credentialing requirements.

MULTIPLE SUBJECT COURSE REQUIREMENTS

200 Applied Classroom Analysis and Methods: Beginning Student Teaching
201 Intermediate Student Teaching
202A-B-C Advanced Student Teaching
203 Methods of English Language Development
205 Teaching, Learning, and Schooling
207 Social Foundations of Education
208 Portfolio Development
210 Creating Supportive, Healthy Environments for Student Learning
211 Teaching Special Populations
212A-B-C (Bilingual Authorization students only) Bilingualism and Biliteracy
217 Topics in Elementary Education: Physical Education
218 Topics in Elementary Education: Visual Arts
219 Topics in Elementary Education: Performing Arts
220 Reading and Language Arts for Elementary Classrooms
221 Science Learning and Teaching in Elementary Classrooms
222 Mathematics Learning and Teaching in Elementary Classrooms

SINGLE SUBJECT COURSE REQUIREMENTS

200 Applied Classroom Analysis and Methods: Beginning Student Teaching
201 Intermediate Student Teaching
201A Intermediate Student Teaching; Single Subject
202A-B-C Advanced Student Teaching
Education

204 Methods of English Language Development
206 Teaching, Learning, and Schooling
207 Social Foundations of Education
208 Portfolio Development
210 Creating Supportive, Healthy Environments for Student Learning
211 Teaching Special Populations
212A-B-C (Bilingual Authorization students only) Bilingualism and Biliteracy
225 Reading Across the Curriculum in Middle School and Secondary
Single Subject Credential students enroll in the two methods courses related to their subject area:
226 English Teaching: Theory and Curriculum
227 English Teaching for Secondary Classrooms
228 Math Education: Research and Practice
229 Teaching Mathematics in the Secondary Classroom
230 Science Education: Research and Practice
231 Teaching Science in the Secondary Classroom
232 Social Science: Theory and Curriculum
233 Social Science Teaching for Secondary Classrooms

FOR FURTHER INFORMATION

Please contact the department by email to education@ucsc.edu, or view the Education Department's home page where potential applicants can obtain full details about the programs.

PH.D. IN EDUCATION

OVERVIEW

The goal of the Ph.D. in education is to support graduate students in becoming creative scholars who engage in research focused on the educational needs of students from linguistic and cultural groups that have historically not fared well in our nation's public schools. To achieve this goal, this program provides students with grounding in the varieties of interdisciplinary theorizing, research methods, and applications needed to advance the study of learning and teaching for diverse student populations. The courses and research experiences are closely related to practice in K-12 classrooms and informal settings. Students in this interdisciplinary program apply tools and perspectives from education, anthropology, linguistics, philosophy, psychology, sociology, cognitive science, and cultural historical activity theory. The program integrates theory and practice to examine learning and teaching within the multiple contexts of classroom, school, family, and community. Graduates of this program will be qualified to teach and to conduct the kinds of educational research demanded by tenure-track positions in research and regional universities. Graduates may also work in non-university based institutions that focus on teacher professional development, curriculum development, and related areas of educational research and development. Together with his or her faculty adviser, each student develops an integrated program of study that includes advanced coursework, seminars, and electives. Students learn through an apprenticeship model in which they develop expertise through active participation in research. Courses may be taken in other departments, when appropriate.

PH.D. ADMISSIONS GUIDELINES

The minimum GPA established by the University of California for admission to graduate school is 3.0. In general, the Ph.D. in education program looks for potential excellence in graduate students, whether this manifests itself in a high GPA, strong letters of recommendation, a high Graduate Record Examination (GRE) score, or a strong Statement of Purpose. Applicants will be evaluated on their individual merits and also with regard to how well their proposed doctoral research can be supported by the existing resources of the program.

ADMISSION REQUIREMENTS

- Bachelor's degree, or its equivalent, from an accepted university prior to the quarter for which admission is sought
- 3.0 GPA or above
- Official GRE scores taken within the last five years
- Experience working with culturally and linguistically diverse students and/or communities
- Statement of Purpose
- Personal History Statement
- A writing sample, preferably in education or a related field. The sample can be a term paper, a field report, a research proposal, or an essay written especially for the application
- Official transcripts from all colleges/universities attended after high school
- Three current recommendation letters specifying potential for academic or scholarly work
- Current résumé
- Application fee
- International applicants must take the Test of English as a Foreign Language (TOEFL) or the International English Language Testing System (IELTS) test. A minimum score of 550 on the TOEFL (paper), 220 on the TOEFL (computer), or 83 on the Internet-based test is required for admission. For those choosing to take the IELTS, a minimum overall score of 7 is required. The program follows Graduate Division guidelines when considering TOEFL waivers.

Prior to completing your application, we highly recommend a personal (in person or on the phone) interview with at least one of our faculty members. Please contact an education faculty member whose research interest is similar to your own (for
descriptions of faculty research, please visit the Education Department website).  

PROGRAM REQUIREMENTS

During the first two years of study, all students are expected to enroll in a set of required courses, including foundational courses, methodology courses, and elective courses. The student and his/her faculty adviser will determine the overall program of study, depending on the student’s preparation, interests, and plans. The program encourages interdisciplinary study.

To achieve Ph.D. candidacy, students are expected to pass an annual review of their written work, maintain satisfactory academic progress, complete all required courses, attend department colloquia, complete a second-year research project, complete a TAship or teaching internship, pass a qualifying examination (QE), and meet the specific requirements of the Division of Graduate Studies.

The QE is intended to assess a student’s depth and breadth of knowledge in his or her areas of concentration and his/her competence to do extended dissertation-level research. Normally taken near the end of the third year of enrollment, the QE consists of both written and oral components. For the written portion, the student prepares three papers, two of which advance a position based on a review of related research, theoretical framework, or research design/methods; the third is a dissertation prospectus. The student presents and defends his/her work at the oral examination.

A dissertation based on substantive original research is required. After the dissertation has been completed, students must defend the dissertation in an oral examination.

COURSE REQUIREMENTS AND SEQUENCING

The following courses constitute the minimum requirements: four foundational courses, five research methods courses, four elective courses, one additional course in any category, a second-year project independent study, and a research apprenticeship. Incoming students consult with their faculty advisers about the current course offerings to determine the order in which they will complete required courses. Students are encouraged to take courses beyond the minimum required; in consultation with their advisers, students will determine the full set of research methods and elective courses they will complete based on their intellectual interests and professional goals. All required courses must be completed prior to advancement to candidacy.

Courses required before advancing to candidacy:

• EDUC 235, Introduction to Educational Inquiry
• EDUC 236, Quantitative Research Methods
• EDUC 237, Qualitative Research Methods
• EDUC 250, Teaching and Teachers
• EDUC 255, Intermediate Quantitative Methods
• EDUC 256, Intermediate Qualitative Analysis
• EDUC 261, Thinking and Learning

And four electives, two of which must be from the list below:

• EDUC 262, Social and Cultural Context of Education
• EDUC 272, Language in Education and Society
• EDUC 263, Educational Reform
• EDUC 264, Research on Teacher Development and Teacher Education
• EDUC 268, Schools, Communities, and Families
• EDUC 280, Language and Literacy across disciplines
• EDUC 286, Research in STEM Education
• EDUC 295, Critical Perspectives on Education

One additional course from any category.

And

• EDUC 293, Research Apprenticeship
• EDUC 294, Second-Year Project Independent Study

The following may also be counted toward meeting elective requirements:

3. M.A. course in Education with additional readings and assignments (one maximum to count toward the four electives)
4. Graduate courses in other departments
5. Independent Study or Research Apprenticeship (EDUC 293)
6. Undergraduate upper-division course with additional readings and assignments (one maximum undergraduate upper-division course to count toward the four electives)

REQUIREMENTS FOR THE M.A. DEGREE

Although applications for a master’s degree independent of the Ph.D. program are not accepted, students in the Ph.D. program may obtain a M.A. degree after successfully completing a minimum of six quarters residency, a total of 75 course credits (including 4 foundational courses, 5 research methods courses, at least 4 elective courses, a minimum of two from the Education Electives list, one more course from any category, a 5-credit course for the second-year research project), and an approved and completed second-year research project. Students seeking an M.A. degree must adhere to the guidelines set forth by the Graduate Division.

OTHER REQUIREMENTS

Students are required to attend the Education Department’s colloquium series during their first and second years in the program.

The education Ph.D. program emphasizes teaching experience, and all students are required to complete one TAship or teaching internship in education prior to advancement to candidacy.

Students are required to complete a second-year project paper (the same project to be approved for the en route M.A.). The final version must be approved by two faculty readers (by the end of year two or by the first day of fall quarter in year three).
FINANCIAL SUPPORT

It is each student’s responsibility to secure funding for graduate studies. Over the course of students’ enrollment in the graduate program, students typically fund their education with some combination of the following: TAships, GSRships, UCSC graduate fellowships, scholarships or fellowships from outside sources, loans, personal savings, family income, and support from other individuals (e.g., extended family members). When possible, first-year students are supported with UCSC graduate fellowships that typically cover part of a student’s expenses for the first year only. Beginning in the student’s first year, he or she is strongly encouraged to apply for TAships in Education Department courses and in other departments on campus. Students are also encouraged to seek and apply for outside funding from government agencies, private foundations, and industry, and to plan alternative financing should none of these opportunities become available. After advancing to candidacy students can also apply for graduate student instructor positions (GSI-ships.)

Financial support for students includes a variety of fellowships, research assistantships, and teaching assistantships in the Education Department. Students may participate in research projects under the auspices of several interdisciplinary research centers and research projects. In the past, these have included the Chicano/Latino Research Center (CLRC), the Vocabulary Innovations in Education (VINE) project, The Teachers With Computers: Ward Annotations for Vocabulary Education (tecWAVE) project, English Language and Literacy Integration in Subject Areas (ELLISA), Effective Science Teaching for English Language Learners (ESTELL) project, The Center for Collaborative Research for an Equitable California (CREC), and the Center for Educational Research in the Interest of Underserved Students (CERIUS).

DESIGNATED EMPHASIS IN EDUCATION

The Designated Emphasis in Education enables doctoral students in other departments to pursue interests in education and obtain formal certification of a “minor” level of competence in the field of education. The requirements for obtaining a Designated Emphasis in Education are the following:

7. Obtain a designated faculty adviser from the faculty in the Education Department. This faculty adviser will be in addition to the faculty adviser from the student’s home department. The education faculty adviser must serve on the student’s qualifying examination committee and, as appropriate, may also serve on the student’s dissertation committee.

8. Complete at least two of the following three core courses in education:
   - EDUC 261, Thinking and Learning
   - EDUC 262, Social and Cultural Contexts of Education
   - EDUC 263, Foundations of Educational Reform

9. Complete additional courses as needed to total five graduate courses in education, no more than one of which may be a directed readings course (Independent Studies). Courses must be approved by the student’s faculty adviser in the Education Department. Courses in other departments focused on education may be approved by petition to the Education Department’s Doctoral Programs Committee.

10. Prepare a significant piece of writing in some area of education. This writing may take the form of a substantial position paper (seminar paper, qualifying examination paper, dissertation chapter, master’s thesis) grounded in the literature of educational research, as determined by the faculty adviser in education.

Education is an institutional field in which scholars from a wide variety of disciplines—including sociology, psychology, politics, economics, mathematics and science—have scholarly interests. A Designated Emphasis in Education enables graduate students from other departments to ground their work in theory and research on important issues in education.

The Education Department’s foundational courses, EDUC 261 and EDUC 262, are offered in successive quarters every other year; and EDUC 263, an elective course, is offered every other year. The department typically offers approximately eight doctoral courses during each year. The Education Department annually admits 7-10 Ph.D. students, leaving room for doctoral students from other departments to take courses in education.

FOR FURTHER INFORMATION

Contact the doctoral student adviser by sending an email to edphd@ucsc.edu or view the Education Department’s home page where potential applicants can obtain full details about the programs.

EDUCATION FACULTY AND PROFESSIONAL INTERESTS

PROFESSOR

Doris Ash, Emerita
George Bunch
Language and education in linguistically diverse settings, disciplinary language and literacy, preparation of teachers for linguistic diversity, language policy, and bilingualism
Margaret (Greta) A. Gibson, Emerita
Ron Glass
Education as a practice of freedom; research for equity; ethical issues in collaborative research; moral and
Education

political philosophy and education; ideology and education; race and education; school reform; democracy and education

June A. Gordon
Urban education; international comparative education; the impact of economics, culture and politics on educational attitudes and expectations of immigrants; marginalized youth; schooling and society in Japan, China, India, the U.K., and the U.S.A.; sociology of education

Judit Moschkovich
Mathematical thinking and learning, mathematical discourse, student understanding of functions, the transition from arithmetic to algebraic thinking, language and learning mathematics, bilingual mathematics learners, mathematics instruction for English learners, conceptual change in mathematics and science, discourse in mathematics and science classrooms, Vygotskian theories, qualitative methodology

Rodney Ogawa, Emeritus
Brad Olsen
Teachers, teaching, and teacher education (with emphases on professional knowledge, identity, and policy reform); English education; art education; sociolinguistics; philosophical perspectives on education; and qualitative research methods

Art Pearl, Emeritus
Lucinda Pease-Alvarez, Emerita
Trish Stoddart, Emerita
David Swanger, Emeritus
Kip Téllez
Preparation of teachers for linguistic and cultural diversity, second language learning, studies of the school curriculum, educational assessment

David Swanger, Emeritus

ASSOCIATE PROFESSOR

Catherine R. Cooper (Psychology)
Cultural perspectives on child and adolescent development; linkages among families, peers, schools, and work; issues of diversity, ethnicity, and gender in identity; research, practice, and policy in university outreach programs; linking qualitative and quantitative research

Bruce N. Cooperstein (Mathematics)
Algebra, algebraic number theory

Barbara Rogoff (Psychology)
Human development in sociocultural activity; informal and formal arrangements for learning; adult/child and peer communication in families and schools in diverse cultural communities (especially in Guatemala, Mexico and the U.S.); learning by observation and pitching into family and community endeavors

PROFESSOR

Cindy Cruz
Critical ethnography; community-based learning; decolonial pedagogies; foundations of education; LGBTQ street youth; women of color thought; cultural studies and education; and technology and digital practices of homeless youth

Eduardo Mosqueda
Mathematics education of English learners; large-scale data set quantitative analysis; urban education issues

Judith Scott
Literacy and language learning, particularly with students who depend on schools to learn about academic language; reading, writing, vocabulary development; vocabulary assessment; teachers’ professional development through collaboration and inquiry

Jerome Shaw, Emeritus

LOWER-DIVISION COURSES

50A. CAL Teach 1: Science and Mathematics (2 credits). *
Introductory seminar exploring secondary students, teaching, and schools in the context of science and/or mathematics instruction. Concurrent participation in a secondary school internship required. Course material supports and enhances students’ placement experiences. Prerequisite(s): Acceptance into CAL Teach and concurrent participation in a secondary school internship in a science or math classroom. Enrollment limited to 25. (General Education Code(s): PR-S.) The Staff

50B. CAL Teach 1: Mathematics (2 credits). F,W
Introductory seminar exploring secondary students, teaching, and schools in the context of mathematics instruction. Concurrent participation in a secondary school internship required. Course material supports and enhances students’ placement experiences. Prerequisite(s): Acceptance into CAL Teach and concurrent participation in a secondary school internship in a science or math classroom. Enrollment limited to 25. (General Education Code(s): PR-S.) The Staff

50C. CAL Teach 1: Science (2 credits). F,W
Introductory seminar exploring secondary students, teaching, and schools in the context of science instruction. Concurrent participation in a secondary school internship required. Course
material supports and enhances students’ placement experiences. Prerequisite(s): Acceptance into CAL Teach and concurrent participation in a secondary school internship in a science classroom. Enrollment limited to 25. (General Education Code(s): PR-S.) The Staff

60. Introduction to Education: Learning, Schooling, and Society. F,S
Explores the foundations of learning and teaching, the social and political forces within schools and school systems in the U.S., and the educational policies and practices in culturally and linguistically diverse communities. L. Bartlett, E. Mosqueda

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

UPPER-DIVISION COURSES

100A. Cal Teach 2: Science and Mathematics (2 credits). W
Examines students, schools, and science and/or mathematics instruction with emphasis on developing an instructional project aligned with state-mandated content standards. Concurrent participation in a secondary school internship required. Course content supports and enhances students' internship experience. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; course 50A, 50B, or 50C; and acceptance into the Cal Teach program. Enrollment is restricted to sophomores, juniors, and seniors. Enrollment limited to 25. The Staff

100B. Cal Teach 2: Mathematics (2 credits). S
Examines students, schools, and mathematics instruction with emphasis on developing an instructional project aligned with state-mandated content standards. Concurrent participation in a secondary school internship required. Course content supports and enhances students' internship experience. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; course 50A, 50B, or 50C; and acceptance into the Cal Teach program. Enrollment is restricted to sophomores, juniors, and seniors. Enrollment limited to 25. The Staff

100C. Cal Teach 2: Science (2 credits). S
Examines students, schools, and science instruction with emphasis on developing an instructional project aligned with state-mandated content standards. Student must concurrently participate in a K-12 school internship. Concurrent participation in a secondary school internship required. Course content supports and enhances students' internship experience. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; course 50A, 50B, or 50C; and acceptance into the Cal Teach program. Enrollment is restricted to sophomores, juniors, and seniors. Enrollment limited to 25. The Staff

102. Education, Media, and Society. *
Focusing on ways the media (both news and the entertainment industry) portrays schools, teachers, and students to the public, investigates the way society views education, the way education is presented in the media, and the way education is influenced by society. Enrollment is restricted to education or STEM minors, physics education majors, or students with math education concentration or Earth sciences science education concentration, or biology B.A. bioeducation, or by permission of instructor. (General Education Code(s): IM.) R. Glass

104. Ethical Issues and Teaching. F
Emphasizes a philosophical exploration of the moral complexities of teaching. Students read theoretical investigations of these complexities, and examine case studies that pose difficult moral questions and illuminate the dilemmas of everyday life in classrooms. Course is grounded in a dialogical approach to learning. Enrollment restricted to education or STEM minors, physics education majors, or students with math education concentration or Earth sciences science education concentration, or biology B.A. bioeducation, or by permission of instructor. (General Education Code(s): IM.) The Staff

115. K–12 Student Assessment. *
Provides an overview of educational testing. Appropriate use and interpretation of standardized, classroom achievement and special needs assessments are examined. Issues on fair testing of diverse populations of students are discussed within each topic area. Enrollment restricted to education or STEM minors, physics education majors, or students with math education concentration or Earth sciences science education concentration, or biology B.A. bioeducation, or by permission of instructor. The Staff

120. The Arts in Schools: Aesthetic Education Theory and Practice. F
Explores the historical legacy of the arts within education; considers aesthetic education as an inter-arts philosophical and practical endeavor; studies alternatives to the current situation of the arts in education; develops theory, curricula and methods necessary to teach the arts. Addresses both elementary and secondary teaching in the arts. Meets third-course requirements. Enrollment restricted to education or STEM minors, physics education majors, or students with math education concentration or Earth sciences science education concentration, or biology B.A. bioeducation, or by permission of instructor. (General Education Code(s): IM.) The Staff

125. Multicultural Children's Literature for Elementary Classrooms. S
Offers opportunities for undergraduate and graduate students to learn about fundamental aspects of children's literature, increase their knowledge of range and quality of children's literature, enhance their understanding of multicultural children's literature, and develop ways to integrate children's literature into elementary- and middle-school curriculum areas. Enrollment is restricted to junior
Education

126. Foundations of Literacy Learning: Contemporary Perspectives. W
Offers an overview of historical and contemporary perspectives regarding literacy learning in America. Using a socio-cultural lens and research findings to analyze instructional practices, it provides foundational knowledge for potential teachers and policy makers regarding literacy education. Prerequisite(s): courses 60 and 180. J. Scott

128. Immigrants and Education. W
Research and theory on the education of immigrant students. Major topics include the Americanization movement and America’s changing demography, identity maintenance and change, home-school relations, and educators’ roles in meeting the needs of culturally and linguistically diverse student populations. Enrollment is restricted to education or STEM minors, physics education majors, or students with math education concentration or Earth sciences science education concentration, or biology B.A. bioeducation, or by permission of instructor. (General Education Code(s): ER.) The Staff

140. Language, Diversity, and Learning. *
Explores the intersection between language, diversity, and education to examine the education of youth who have been historically underserved by schools. Topics include dialect and register variation; language policy; and sociocultural perspectives on learning/teaching of language. Enrollment is restricted to education or STEM minors, physics education majors, or students with math education concentration or Earth sciences science education concentration, or biology B.A. bioeducation, or by permission of instructor. (General Education Code(s): ER.) The Staff

141. Bilingualism and Schooling. W
Introduces participants to issues related to the schooling of students who speak languages other than or in addition to English. Uses a multidisciplinary perspective to understand the circumstances these students face in schools and considers approaches and policies that best meet their needs. Enrollment is restricted to education or STEM minors, physics education majors, or students with math education concentration or Earth sciences science education concentration, or biology B.A. bioeducation, or by permission of instructor. G. Bunch

160. Issues in Educational Reform. F
Explores a variety of perspectives on key educational policy issues including desegregation, bilingual education, affirmative action, charter schools, national and state curriculum standards, student assessment and the assessment and certification of teachers. Enrollment is restricted to education or STEM minors, physics education majors, or students with math education concentration or Earth sciences science education concentration, or biology B.A. bioeducation, or by permission of instructor. L. Bartlett

164. Urban Education. S
Focuses on urban schooling through critical readings, fieldwork, group projects, and extensive writing. Students explore how socialization, marginalization, and assimilation impede or support academic success, how class intersects with "race", and how "culture" affects one's orientation to education. Enrollment restricted to education or STEM minors, physics education majors, or students with math education concentration or Earth sciences science education concentration, or biology B.A. bioeducation, or by permission of instructor. Satisfies American History and Institutions Requirement. E. Mosqueda

166. Technology and Education. *
Explores the history of technology in education from approximately 1950 to the present, addressing the interpersonal, epistemological, and pedagogical differences between digital and analog learning. Although no programming experience is required, participants will create an instructional application. Enrollment is restricted to junior and senior education and STEM minors or by permission of instructor. Enrollment limited to 70.

170. East Asian Schooling and Immigration. S
Focuses on an historical and contemporary study of education in Japan, China, Korea, Hong Kong, and Taiwan, and the adaptation to schooling in the U.S. of immigrant families from those cultures. Topics include the effects on schooling of language acquisition, religion and cultural practices, family patterns, socioeconomic status, career aspirations, and parental expectations. (Formerly Schools and Asian Cultures.) Enrollment is restricted to education or STEM minors, physics education majors, or students with math education concentration or Earth sciences science education concentration, or biology B.A. bioeducation, or by permission of instructor. (General Education Code(s): CC.) The Staff

171. South and Southeast Asian Schooling and Immigration. F
Historical and contemporary study of education in India, Vietnam, Cambodia, Laos, and the Philippines, and the adaptation to schooling in the U.S. of immigrant families. Topics include: effects of language acquisition; religion and cultural practices; family patterns;
socioeconomic status; career aspirations; and parental expectations. Enrollment is restricted to education or STEM minors, physics education majors, or students with math education concentration or Earth sciences science education concentration, or biology B.A. bioeducation, or by permission of instructor. (General Education Code(s): CC.) J. Gordon

173. Seminar in Critical Pedagogy. S
Philosophical and pedagogical exploration of relationships among oppression, power, society, education, and change. Examines how history, power, economics, and discrimination shape societal perspectives and schooling practices, and considers ways to transform education. Enrollment is restricted to education or STEM minors, physics education majors, or students with math education concentration or Earth sciences science education concentration, or biology B.A. bioeducation, or by permission of instructor. May be repeated for credit. R. Glass

174. Ethnographic Research in Schools and Communities. *
Explores ethnographic research as an important path for future teachers in understanding how diverse communities provide and support schooling at all levels. Prerequisite(s): courses 60 and 180. Enrollment is restricted to junior and senior education or STEM minors or by permission of instructor. C. Cruz

177. Teaching Culturally and Linguistically Diverse Students Math and Science. W
Examines equity issues in the learning and teaching of math and science in culturally and linguistically diverse school settings. Draws on multicultural, bilingual, and math/science education perspectives. Intended for undergraduate majors considering a K–12 teaching career. Satisfies an elective requirement for the minor in education program. Prior completion of course 180 is advised. Enrollment is restricted to education or STEM minors, physics education majors, or students with math education concentration or Earth sciences science education concentration, or biology B.A. bioeducation, or by permission of instructor. (General Education Code(s): ER.) A. Lashaw

178. Advanced Educational Studies. *
Advanced academic development, field research, and guided experiential learning for students planning to work in education. Enrollment is restricted to juniors and seniors. May be applied only once to the minor. Enrollment is restricted to education or STEM minors, physics education majors, or students with math education concentration or Earth sciences science education concentration, or biology B.A. bioeducation, or by permission of instructor. May be repeated for credit. A. Lashaw

180. Introduction to Teaching. F,W
Designed to encourage students to think about teaching in new ways. Assumptions about teaching and schooling are examined as well as considering what it takes to teach so that children learn and understand. Not a course in how to teach, but an opportunity to reconsider what teaching should try to accomplish and what kinds of learning teachers should foster. Practicum in the schools of 30 hours per quarter required. Prerequisite(s): course 60. Enrollment is restricted to education or STEM minors; physics education majors; students with math education concentration; Earth Sciences science education concentration; biology B.A. bioeducation; or by instructor permission. J. Moschkovich

182. American Teacher. *
Examines multiple and competing images of "teachers" and, more specifically, notions of the "good teacher"; also explores social, cultural, historical, and policy context of teachers' work in the U.S. Enrollment is restricted to education or STEM minors, physics education majors, or students with math education concentration or Earth sciences science education concentration, or biology B.A. bioeducation, or by permission of instructor. The Staff

183. Children's Mathematical Thinking. *
Provides an introduction to children's mathematical thinking and an overview of major themes, issues, and questions that researchers in mathematics education have studied in relation to children's mathematical thinking. Prerequisite(s): course 60. Enrollment is restricted to education or STEM minors; physics education majors; students with math education concentration; Earth Sciences science education concentration; biology B.A. bioeducation; or by instructor permission. J. Moschkovich

185B. Introduction to Mathematics Education. W
Provides an introduction to principles and practices for mathematics education; examines how research on learning and teaching mathematics informs approaches to teaching mathematics; provides an introduction to national and state standards, mathematics curricula, and other current issues in mathematics education. Prerequisite(s): C grade or better in Mathematics 11A and B, or Mathematics 19A and B, or Mathematics 20A and B, or Applied Mathematics and Statistics 11A and B; or equivalent courses (by instructor approval); or by permission of the instructor. J. Moschkovich

185C. Introduction to Teaching Science. S
An introduction to the principles and practices for teaching science in secondary classrooms. Course examines theoretical and practical approaches to teaching science, provides an introduction to national and state standards and an overview of science curricula and current issues in science teaching. Enrollment is restricted to juniors, seniors, or education minors or by permission of instructor. The Staff

185L. Introduction to Teaching: Cal Teach 3 (3 credits). S
Supplements theoretical and practical introduction to the teaching of science or mathematics with subject-pedagogical approaches. Concurrent participation in an advanced Cal Teach internship provides context to apply theory and practical techniques. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; course 50A, 50B, or 50C; course 100A, 100B, or 100C; course 185B or 185C. Enrollment restricted to juniors and seniors or education minors, or by permission of instructor. Enrollment limited to 30. The Staff

187. Cognition and Instruction. *
Addresses the question, "How do people learn?" by examining theories of learning and research on cognition, learning, and instruction. Enrollment is restricted to juniors, seniors, or education minors, or by permission of instructor. The Staff

194. Group Projects. F,W,S
Students submit petition to sponsoring agency. May be repeated for credit. The Staff

194F. Group Projects (2 credits). F,W,S
Students submit petition to sponsoring agency. May be repeated for credit. The Staff

197A. Cal Teach Special Project (1 credit). F,W,S
Work with K-12 students on science or math projects, ideally involving inquiry-based learning. Site supervision provided by a credentialed teacher. Project-dependent reading and writing assignments negotiated with instructor. Projects will be offered as available or initiated by student. Enrollment is by interview only. Prerequisite(s): course 50A, 50B, or 50C. Enrollment is restricted to majors in the physical and biological sciences and majors in the school of engineering or by permission of instructor. May be repeated for credit. The Staff

197B. Cal Teach Special Project (2 credits). F,W,S
Work with K-12 students on science or math projects, ideally involving inquiry-based learning. Site supervision provided by a credentialed teacher. Project-dependent reading and writing assignments negotiated with instructor. Projects will be offered as available or initiated by student. Enrollment is by interview only. Prerequisite(s): course 50A, 50B, or 50C. Enrollment is restricted to majors in the physical and biological sciences and majors in the school of engineering or by permission of instructor. May be repeated for credit. The Staff

197C. Cal Teach Special Project (3 credits). F,W,S
Work with K-12 students on science or math projects, ideally involving inquiry-based learning. Site supervision provided by a credentialed teacher. Project-dependent reading and writing assignments negotiated with instructor. Projects will be offered as available or initiated by student. Enrollment is by interview only. Prerequisite(s): course 50A, 50B, or 50C. Enrollment is restricted to majors in the physical and biological sciences and majors in the school of engineering or by permission of instructor. May be repeated for credit. The Staff

198. Independent Field Study. F,W,S
Students submit petition to sponsoring agency. May be repeated for credit. The Staff

198F. Independent Field Study (2 credits). F,W,S
Students submit petition to sponsoring agency. May be repeated for credit. The Staff

199. Tutorial. F,W,S
Students submit petition to sponsoring agency. May be repeated for credit. The Staff

GRADUATE COURSES

200. Beginning Student Teaching. F
A required course that introduces students to the diverse cultural and linguistic settings of today's classrooms. Classroom practices, instructional strategies, and analysis are emphasized. First course in the student teaching placement series. Placements are used to examine and apply teaching methods while developing classroom management skills. Class meetings include discussion and demonstration of teaching methods. (Formerly Applied Classroom Analysis and Methods: Beginning Student Teaching.) Enrollment is restricted to MA/credential students. The Staff

201. Intermediate Student Teaching. W
Designed to provide students enrolled in the UCSC teacher education program a coherent, integrated, pre-professional experience in public school classrooms. Students assume part-time student teaching responsibilities totalling 14–16 hours per week under the direct supervision of an exemplary classroom teacher. Weekly seminars and ongoing supervision by department staff are required. Prerequisite(s): course 200. Enrollment is restricted to MA/credential students. The Staff

201A. Intermediate Student Teaching: Single Subject. W
Provides advanced pre-professional experience for single subject teaching candidates who progressively assume full-time responsibility for public school student teaching beginning in winter quarter. Taken concurrently with course 201. Weekly supervision and seminars with teacher supervisors are required. Prerequisite(s): course 200. Enrollment is restricted to
Education

MA/credential students. The Staff

202A. Advanced Student Teaching. S
Designed for students who have extensive field and course experience in education, and who wish to qualify for the single-subject or multiple-subject teaching credential by undertaking a quarter of full-time, supervised student teaching. Prerequisite(s): course 201. Enrollment is restricted to M.A./credential students. The Staff

202B. Advanced Student Teaching. S
Designed for students who have extensive field and course experience in education, and who wish to qualify for the single-subject or multiple-subject teaching credential by undertaking a quarter of full-time, supervised student teaching. Prerequisite(s): course 201. Enrollment is restricted to M.A./credential students. The Staff

202C. Advanced Student Teaching. S
Designed for students who have extensive field and course experience in education, and who wish to qualify for the single-subject or multiple-subject teaching credential by undertaking a quarter of full-time, supervised student teaching. Prerequisite(s): course 201. Enrollment is restricted to M.A./credential students. The Staff

This course will help future educators develop a practical theory for teaching English as a second language in K-5 schools. Topics include the theoretical foundation for language acquisition; current trends and research in the field; the role of culture in teaching English learners; language assessment; and the design of instructional units. Also focuses on teaching social studies to English learners. Enrollment restricted to M.A./credential students. (Formerly, Methods of English Language Development: Multiple Subject Credential) Enrollment is restricted to MA/credential students. K. Tellez

204. Methods of English Language Development: Single Subject. F
Course helps future educators develop a practical theory for teaching English in the elementary and secondary schools to students who speak other languages. Topics include current trends in the field, language assessment, and the design of instructional units. Enrollment is restricted to MA/credential students. G. Bunch, The Staff

205. Teaching, Learning, and Schooling in a Diverse Society. Required for master’s students in education; offered in summer. Three basic units comprise the subject matter: teaching/learning, with such topics as development, learning, pedagogy, and socialization theories; second, schooling, as the context of teaching/learning both in its existent structures and its reform movements; third, the sociocultural context in which educational institutions exist, topics such as cultural and historical forces, political and economic condition, family, and community structures. (Formerly Teaching, Learning, and Schooling in a Diverse Society: Multiple Subject) Enrollment is restricted to MA/credential students. The Staff

206. Teaching, Learning, and Schooling: Single Subject. * Required for master’s students in education; offered in summer. Three basic units comprise the subject matter: teaching/learning, with such topics as development, learning, pedagogy, and socialization theories; schooling, as the context of teaching/learning both in its existent structures and its reform movements; and the sociocultural context in which educational institutions exist, including topics such as cultural and historical forces, political and economic conditions, family, and community structures. Enrollment is restricted to MA/credential students. Enrollment limited to 30. The Staff

207. Social Foundations of Education. Offered in summer. A sustained inquiry into the social, political, economic, and historical foundations of schools with an emphasis on community attitudes toward education. Student narratives of engagement and resistance will provide a basis for insights and interventions useful to educators. Enrollment is restricted to MA/credential students. The Staff

208. Portfolio Development (2 credits). Offered in summer. Provides student and faculty adviser with time to confer over the completion of the required portfolio. Enrollment is restricted to MA/credential students. The Staff

210. Health, Safety, and Community (2 credits). Offered in summer. Addresses the preparation of teachers for creating a supportive, healthy environment for student learning. Covers topics related to physical, emotional, and social health. Enrollment is restricted to MA/credential students. The Staff

211. Topics in Elementary Education: Teaching Special Populations (2 credits). F Addresses the preparation of teachers for meeting needs of special populations within the general education setting. Covers basic knowledge, skills, and strategies. Enrollment is restricted to MA/credential students. The Staff

212A. Bilingualism and Biliteracy: History, Politics, Theory, and Practice (2 credits). F Taught in Spanish. Prepares future bilingual teachers to be knowledgeable about history, politics, theory, and practices related to bilingual instructional programs. Topics: second-language acquisition, bilingual-program models, equity pedagogy. Enrollment is restricted to MA/credential students. The Staff

212B. Bilingualism and Biliteracy: Language, Literacy and Content Instruction (2 credits). W Taught in Spanish. Prepares future bilingual teachers to teach language, literacy, and the content areas in
ways that address the needs of culturally and linguistically diverse students. Topics: literacy in two languages; academic language; assessment. Enrollment is restricted to MA/credential students. The Staff

212C. Bilingualism and Biliteracy: Community and School Partnerships (2 credits). Taught in Spanish. Provides opportunities for future bilingual teachers to develop culturally relevant practices that build collaboration between the school, students’ families, and community. Topics: Latino culture and history, school-parent communication. Enrollment is restricted to MA/credential students. The Staff

213. Child and Adolescent Development for Educators (2 credits).
Offered in summer. Addresses theories of child and adolescent development and how these theories apply to student success in school. Topics include: cognitive, social, emotional, and physical development, and how this knowledge influences decisions teachers make about instruction and their interaction with students. Enrollment is restricted to graduate students. Enrollment limited to 25. The Staff

217. Topics in Elementary Education: Physical Education (2 credits).
Offered in summer. Examines pedagogical understanding in teaching physical education. Introduces candidates to theoretical and research basis in physical education and content standards and frameworks. Also investigates and presents instructional practices. Enrollment is restricted to MA/credential students. The Staff

218. Topics in Elementary Education: Visual Arts (2 credits).
Offered in summer. Examines pedagogical understanding in teaching visual arts. Introduces candidates to theoretical and research basis for teaching visual arts and content standards and frameworks. Also investigates and presents instructional practices. Enrollment is restricted to MA/credential students. The Staff

219. Topics in Elementary Education: Performing Arts (2 credits).
Offered in summer. Examines pedagogical understanding in teaching performing arts. Introduces candidates to theoretical and research basis for teaching performing arts and content standards and frameworks. Also investigates and presents instructional practices. Enrollment is restricted to MA/credential students. The Staff

220. Reading and Language Arts for Elementary Classrooms. F
This course provides both a theoretical and practical foundation for literacy instruction, emphasizing reading and language arts instruction in grades K–8. Interactive instruction and field experience will be used to examine curricula, methods, materials, and literacy evaluation. Enrollment is restricted to MA/credential students. J. Scott, K. Tellez

221. Science Learning and Teaching in Elementary Classrooms. W
Examines constructivist and sociocultural approaches to the learning and teaching of science in elementary classrooms, including beliefs about the nature of science and theories of how children learn science. Provides a critical overview of curricula, instructional theories, and multiple approaches to teaching the “big ideas” in elementary science. Students are billed a materials fee. Enrollment is restricted to MA/credential students. J. Shaw

222. Mathematics Learning and Teaching in Elementary Classrooms. F
This course is required for the multiple subject credential. Examines constructivist and sociocultural approaches to the learning and teaching of mathematics in elementary classrooms, including the nature of mathematics and theories of how children learn mathematics. Provides an introduction to mathematics teaching standards and a critical overview of curricula, instructional theories, and multiple approaches to teaching the “big ideas” in elementary mathematics. Enrollment is restricted to MA/credential students. The Staff

225. Reading Across the Curriculum in Middle School and Secondary.
Offered in summer. Provides a theoretical and practical foundation for teaching reading within content area instruction in middle school and secondary classrooms. Field experiences and interactive instruction will facilitate learning about strategies, curricula, methods, materials, and observation. Intended for students pursuing a single subject credential. Enrollment is restricted to MA/credential students. The Staff

Required for the single subject English credential student. Examines sociocultural approaches to the learning and teaching of English in secondary classrooms, including theories of how children learn English language, literature, and composition. Enrollment is restricted to MA/credential students. The Staff

227. English Teaching for Secondary Classrooms. W
Prepares English single subject credential candidates for student teaching in winter and spring. Course focuses on developing curricula and strategies in the content area. Through classroom placements, students observe and apply techniques to develop curriculum units used in student teaching. Enrollment is restricted to MA/credential students. The Staff

228. Math Education: Research and Practice. F
Examines research on the learning and teaching of mathematics. Topics include the nature of mathematics cognition and learning, how children learn mathematics, mathematical discourse, and perspectives on addressing diversity in mathematics classrooms. Course is required for M.A./credential students in secondary (single subject) mathematics and of Ph.D. students.
229. Teaching Mathematics in the Secondary Classroom. W
Examines constructivist and sociocultural approaches to teaching mathematics in the secondary classroom. Course will provide an introduction to mathematics teaching standards and a critical overview of curricula, instructional theories, and multiple approaches to teaching the "big ideas" in secondary mathematics. Required for mathematics secondary credential. Prerequisite(s): course 228. Enrollment is restricted to MA/credential students. The Staff

230. Science Education: Research and Practice. F
Examines theoretical approaches to the learning and teaching of science including the nature of scientific knowledge, theories of how children learn science, approaches to scientific discourse, and perspectives on addressing diversity in science classrooms. Course is required for single subjects science credential. Enrollment is restricted to MA/credential students. D. Ash

231. Teaching Science in the Secondary Classroom. W
Examines constructivist and sociocultural approaches to teaching science in secondary classrooms. Course will provide a critical overview of curricula, instructional theories, and multiple approaches to teaching the "big ideas" in science. Students are billed a materials fee. Enrollment is restricted to MA/credential students. The Staff

232. Social Science: Theory and Curriculum. F
Required for the single subject social science credential student. Tracks both the implicit and explicit connections between theory and practice, illustrating that theory suggests best practice while practice informs theory-formation and testing. Enrollment is restricted to MA/credential students. The Staff

233. Social Science Teaching for Secondary Classrooms. W
Prepares social science single subject credential candidates for student teaching in winter and spring. Course focuses on developing curricula and strategies in the content area. Through classroom placements, students observe and apply techniques to develop curriculum units that are used in student teaching. Enrollment is restricted to MA/credential students. The Staff

235. Introduction to Educational Inquiry. F
Addresses foundational knowledge needed to understand and conduct educational inquiry and research. Topics include epistemology in the human sciences, philosophical foundations of modern research strategies, and general classes of research investigations in education. Enrollment is restricted to graduate students. Enrollment limited to 15. J. Scott

236. Quantitative Research Methods. *
Provides an introductory-level knowledge of quantitative research methods in educational settings. Students learn the foundations of quantitative data theory, general logic behind statistical inference, and specific methods of data analysis in educational contexts. (Formerly Quantitative Methods in Educational Research.) Enrollment is restricted to graduate students. Enrollment limited to 15. E. Mosqueda

237. Qualitative Research Methods. W
Graduate level introduction to qualitative methods, with special attention to ethnographic research on schooling. Moves from overview of different methods, through examination of selected studies, to discussion of issues in research design, data collection, analysis, and writing. Enrollment is restricted to graduate students; priority is given to graduate students in education. Enrollment limited to 15. J. Moschkovich

250. Teaching and Teachers. *
Examines the historical, socio-political, and research contours of the teaching profession. Investigates histories of teaching and teacher's work in the 19th and 20th centuries. Analyzes the contemporary era of teachers and teaching in the United States. Enrollment is restricted to graduate students. Enrollment limited to 15. The Staff

251. Analysis of Activity and Interaction in Educational Settings. *
Analyzes topics, which vary systematically from year to year, including analysis of classroom interaction, video recording and transcription, coding and analysis of discourse data, and software programs for qualitative analysis. Prerequisite(s): course 237. Enrollment is restricted to graduate students. Enrollment limited to 12. May be repeated for credit. The Staff

252. Hermeneutics of Education. *
Investigates philosophical hermeneutics to deeply interrogate education. Addresses such questions as: What is hermeneutics? How is education an hermeneutic enterprise? How does knowing hermeneutics deepen the ability to engage in education research? Enrollment is restricted to graduate students. Enrollment limited to 12. B. Olsen

253. Research Design in Mathematics and Science Education. *
Examines multiple approaches to designing research studies in mathematics and science education. Introduces multiple types of research designs and principles used by education researchers examining mathematics/science learning and teaching. Enrollment is restricted to graduate students. Enrollment limited to 15. J. Moschkovich

254. Critical and Alternative Paradigms in Education Research. *
Examines theoretical foundations of critical and alternative research paradigms commonly used in education, including critical ethnography, participatory research, counter-storytelling, and social-design experiments. Examines critiques of
Qualitative/quantitative research from feminist and critical theory; surveys how such critiques have informed the development of new paradigms in education research; and explores the benefits and limits of selected alternative paradigms. Enrollment is restricted to graduate students. Enrollment limited to 15. C. Cruz

255. Intermediate Quantitative Methods. *
Focuses on the applied statistical modeling and analysis of educational data (large-scale data sets), not on the mathematical foundations of science. Students learn to address quantitative research questions using general linear model (GLM) statistical methods. GLM includes regression analysis, analysis of variance (ANOVA), and analysis of covariance (ANCOVA). Students learn statistics by doing statistics. Prerequisite(s): introductory statistics course (course 236 or equivalent). Enrollment is restricted to graduate students. Enrollment limited to 15. E. Mosqueda

256. Intermediate Qualitative Analysis. S
Emphasizes the analysis of qualitative data in education research and introduces interpretive analytical approaches for its use with empirical data, the use of coding software for ethnographic analysis, and video recording and transcription. (Formerly Advanced Qualitative Analysis in Education Research.) Enrollment is restricted to graduate students. Enrollment limited to 15. May be repeated for credit. G. Bunch

260. The Teacher and The School: An Investigation of Related Practice, Reform, and Research. *
Explores empirical and theoretical interconnections between teachers and teaching on the one side, and schools as situated organizations on the other. The course examines these various interconnections in relation to contemporary educational research, practice, and policy reform. Enrollment is restricted to graduate students. Enrollment limited to 12. B. Olsen

261. Thinking and Learning. W
Examines multiple theoretical perspectives on thinking, learning, and teaching; the development of the whole person in a variety of cultural contexts; the roles thinking, learning, and teaching play in that development; and how researchers' and educators' conceptions shape instruction. (Formerly Thinking, Learning, and Teaching.) Enrollment is restricted to graduate students. Enrollment limited to 15. J. Moschkovich

262. Social and Cultural Context of Education. F
Application of anthropological and sociological theories to study of education. Examines social, cultural, and linguistic context of schooling with particular attention to role of race, class, culture, power, and language in influencing schooling outcomes. Enrollment is restricted to graduate students. Enrollment limited to 15. A. Lashaw

263. Educational Reform. W
Provides students with multiple analytic perspectives from which to examine important educational issues by analyzing political, historical, and philosophical origins of educational reform in the U.S. and internationally. (Formerly Foundations of Educational Reform.) Enrollment is restricted to graduate students. Enrollment limited to 15. R. Glass

264. Research on Teacher Development and Teacher Education. W
Addresses personal and professional development of teachers. Explores models of teacher education with specific attention to methods and processes by which teachers can be better prepared to work with culturally and linguistically diverse students. Enrollment is restricted to graduate students. Enrollment limited to 15. K. Tellez

265. Teacher as Educational Policy Maker. *
Focuses on the role teachers play in making/implementing educational policy. Addresses how this topic is implicated in enhancing the educational opportunities available to students who, historically, have been underserved by schools. Enrollment is restricted to graduate students. Enrollment limited to 15.

266. Program Evaluation and Action Research in Educational Reform. *
Overview of the purpose of and practice in program evaluations in a variety of contexts with a specific focus on educational settings. Students learn the techniques of program evaluation; the historical and theoretical context of program evaluations, including its relation to experimental research; and how action research can be used in conducting field-based evaluations. Students should be familiar with basic quantitative and qualitative methodologies. Enrollment is restricted to graduate students. Enrollment limited to 15. K. Tellez

268. Schools, Communities, and Families. S
Examines the nexus of schools, communities, and families, and, in particular, how collaboration across institutional boundaries can facilitate school and community reform. Enrollment is restricted to graduate students. Enrollment limited to 15. R. Glass

271. Theoretical Perspectives on Learning and Using Literacy. *
Examines theoretical perspectives, educational issues, and scholarship related to use and development of literacy among diverse populations, particularly those who have not fared well in U.S. schools. Enrollment is restricted to graduate students. Enrollment limited to 12. J. Scott

272. Language in Education and Society. *
Investigates discipline of sociolinguistics and explores actual ways in which sociolinguistics has become a useful lens for better understanding teaching, learning, and schooling. Conduct own sociolinguistic analyses of data collected for culminating project. (Formerly Sociolinguistics in Education.) Enrollment is restricted to graduate students. Enrollment limited to 15. B. Olsen

273. Language Acquisition, Bilingualism, and Education. *
Foundations of first- and second-language acquisition and bilingualism with emphasis on implications for education in linguistically diverse settings. Topics include linguistic, cognitive, sociolinguistic, and sociocultural approaches to development of languages and the nature of individual and societal bilingualism. Enrollment is restricted to graduate students. Enrollment limited to 15. G. Bunch

274. Language and Power in Education. *
Examines relationships between sociopolitical struggles and language/language practices. Students study ways in which Marxism, critical theory, and post structuralism have represented links between language and power, and investigate contemporary studies of language and power in education. Enrollment is restricted to graduate students. Enrollment limited to 15. B. Olsen

276. Theory and Practice of Writing. *
Explores first and second language-writing theory, research, and practice, especially relating to language minority students and others considered academically under-prepared. Focuses on educational settings from pre-school settings including families and communities. Enrollment is restricted to graduate students. Enrollment limited to 15. G. Bunch, L. Pease-Alvarez

278. Critical Exploration of Reading Theory and Practice. *
Doctoral seminar that examines historical and current research on reading processes and instructional practices. Intensive study of factors affecting the development of proficient, engaged, and reflective readers who can acquire new knowledge from text. Enrollment is restricted to graduate students. Enrollment limited to 15. J. Scott

279. Directed Reading. F,W,S
Directed reading that does not involve a final paper. Students submit a petition to the course-sponsoring agency. May be repeated for credit up to four times. Enrollment is restricted to graduate students. May be repeated for credit. The Staff

279F. Directed Reading (2 credits). F,W,S
Directed reading that does not involve a final paper. Students submit a petition to the course-sponsoring agency. May be repeated for credit up to four times. Enrollment is restricted to graduate students. May be repeated for credit. The Staff

280. Language and Literacy Across Disciplines. S
Considers and critiques conceptualizations of the language used for academic pursuits, from the early years of schooling to higher education. Focuses on implications for research and practice related to the education of students in linguistically diverse schools and societies. (Formerly Academic Language.) Enrollment is restricted to graduate students. Enrollment limited to 15. G. Bunch

281. Conceptual Change in Science and Mathematics. *
Examines approaches in cognitive science, mathematics education, and science education to documenting student conceptions in science and mathematics, defining conceptual change, and describing relationship between conceptual change and learning with understanding. Enrollment is restricted to graduate students. Enrollment limited to 12. J. Moschkovich

282. Informal Learning in Sciences and Mathematics. *
Explores research on learning outside of school in multiple settings such as museums, after-school clubs, aquariums, workplaces, and homes. Readings draw from multiple fields and disciplines, including cognitive psychology, cognitive anthropology, cognitive science, education, museum education and evaluation, science, and mathematics education. Examine theoretical approaches to describing and understanding how people learn science and mathematics outside of school, empirical studies documenting learning in multiple non-school settings, and diversity issues in out-of-school settings. Enrollment is restricted to graduate students. Enrollment limited to 15. D. Ash

283. Equity and Social Justice in Mathematics and Science Education. *
Examines the theory, research, policy and practice of social justice and equity in mathematics and science education in local, national, and international contexts. Emphasizes the promotion of equity and critical mathematics and science literacy in schools and communities. Enrollment is restricted to graduate students. J. Shaw

284. Gender in Mathematics and Science Education. *
Explores basic aspects of gender in the fields of mathematics and science education. Discusses historical trends, current dilemmas, and how science and mathematics block or enable access for women. Enrollment is restricted to graduate students. Enrollment limited to 15. D. Ash

285. Culture and Learning. *
Explores multiple approaches to the study of the relation between culture and learning. Readings include historical and contemporary perspectives from cognitive science, cognitive anthropology, cross-cultural psychology, cultural psychology, and socio-cultural theories as frameworks for the study of culture and learning. Enrollment is restricted to graduate students. Enrollment limited to 15. J. Moschkovich

286. Research in STEM Education.
*
Focuses on particular issues of theoretical importance to research in mathematics and science education. Topics vary from year to year. Particular issues in cognition, learning, teaching, curriculum, and assessment in mathematics and science education may be covered. (Formerly Special Topics in Math and Science Education.) Enrollment is restricted to graduate students. Enrollment limited to 15. May be repeated for credit. D. Ash
Education

287. Issues in Educational Assessment. *
Familiarizes students with the basic concepts of educational assessment and explores issues related to the design and implementation of educational assessment as well as the application of educational assessment in educational research. Enrollment is restricted to graduate students. Enrollment limited to 15. J. Gordon

288. Ethnographies of Education. *
Offers opportunity to critique a range of book-length ethnographic studies of education focusing on relationship between culture, learning, and schooling in the U.S. with comparative studies from other countries. Enrollment is restricted to graduate students. Enrollment limited to 12. The Staff

289. School Organization. *
Applies multiple perspectives drawn from organizational theory, highlighting important aspects of organization of schools, including their operational environment, instructional organization, and professional and bureaucratic dimensions. Enrollment is restricted to graduate students. Enrollment limited to 12. The Staff

290. CHAT and Educational Practice and Research. *
Introduction to cultural-historical activity theory (CHAT) based on work of Vygotsky, Bakhtin, and contemporary developments of their ideas. Explores the utility of CHAT as a framework for thinking about educational practice and research. Enrollment is restricted to graduate students. Enrollment limited to 15. J. Moschkovich

291. Globalization and Transnationalism in Education. *
Examines educational access and advancement in several nations affected by globalization, national policies, and localized identity and opportunity structures. Attention to language and cultural expectations relevant to research in international contexts and how this knowledge provides reflection on the American condition. (Formerly "Comparative and International Education.") Enrollment is restricted to graduate students. Enrollment limited to 15. J. Moschkovich

292. Ideology and Education. *
Philosophical study of the theory of ideology from Marx to the present and how ideologies (racism, sexism, classism, linguicism, abilityism) become embodied, reproduced, resisted, and transformed (and particularly the role of education therein). Enrollment is restricted to graduate students. Enrollment limited to 22. R. Glass

293A. Research Apprenticeship (2 credits). F,W,S
Research apprenticeship under guidance of faculty member during first or second year of doctoral studies. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. The Staff

293B. Research Apprenticeship. F,W,S
Research apprenticeship under guidance of faculty member during first or second year of doctoral studies. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. The Staff

Doctoral students work with faculty advisors to plan, carry out, and write up small independent research project during second year of graduate studies. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. The Staff

295. Critical Perspectives on Education. *
Investigates critical theories in education. Situates the themes against and within critical theory and philosophic foundations of Paulo Freire’s theory of liberation education. Elaborates these themes within the discourses on critical race theory and education, and feminism and education. (Formerly Critical Theories of Education.) Enrollment is restricted to graduate students. Enrollment limited to 15. R. Glass

296. Educational Policy and the Context of Teachers’ Work. *
Focuses on both the conceptual and methodological developments in the study of policy and on the research relation to the policy context of teachers’ work. Enrollment is restricted to graduate students. Enrollment limited to 12. L. Bartlett

297. Independent Study. F,W,S
Students submit petition to sponsoring agency. May be repeated for credit. The Staff

297F. Independent Study (2 credits). F,W,S
Students submit petition to sponsoring agency. May be repeated for credit. The Staff

298. TA Apprenticeship (2 credits). F,W,S
Students work with a faculty member who is teaching an undergraduate or MA/Credential course. Students will not be responsible for final grades, narrative evaluations, or holding discussion section. The expected course time commitment is limited to 2-3 hours per week, plus class meeting time. Students gain perspectives and practices of teaching undergraduate and graduate courses, working with the instructor on lesson planning, class instruction, and grading some student work. Course cannot be repeated for course credit. Enrollment is restricted to graduate students. The Staff

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

* Not offered in 2018-19
Revised: 07/15/18
The Baskin School of Engineering has a high-technology focus incorporating programs and curricula that educate students to meet the changing demands of society and a high-technology global marketplace. The school offers a stimulating academic environment that provides a foundation for professional growth as well as a lifetime of learning. The Baskin School’s programs and courses prepare students for the human aspects, as well as the technical challenges, of careers in engineering, computer science, and bioinformatics. The Baskin School of Engineering includes the Department of Applied Mathematics and Statistics, the Department of Biomolecular Engineering, the Department of Computer Engineering, the Department of Computational Media, the Department of Computer Science, the Department of Electrical Engineering, and the Department of Technology Management.

Graduate Study
The Baskin School of Engineering offers 15 graduate programs designed to prepare students for advanced study and research in major areas of biomolecular, computer, and electrical engineering, as well as computer science and statistics and applied mathematics:
- Biomolecular Engineering and Bioinformatics Master of Science (M.S.) and Doctor of Philosophy (Ph.D.)
- Computer Engineering M.S. and Ph.D.
- Computational Media M.S. and Ph.D.
- Computer Science M.S. and Ph.D.
- Games and Playable Media M.S.
- Electrical Engineering M.S. and Ph.D.
- Scientific Computing and Applied Mathematics M.S.
- Serious Games M.S.
- Statistics and Applied Mathematics M.S. and Ph.D.

These programs are described in subsequent sections. The aim of these programs is to develop professionals who can address the complex scientific and technological problems of today and tomorrow.

GRADUATE STUDENT AFFAIRS OFFICE
The Baskin School of Engineering Graduate Student Affairs/Advising Office offers general advising for prospective and current students in the School of Engineering graduate programs. The office handles general advising, financial support processing, and degree certifications. Graduate students obtain and submit all paperwork requiring departmental approval to the Graduate Student Affairs office. Students may obtain additional information and assistance on the School of Engineering Graduate Student Affairs website.

UNDERGRADUATE STUDY
The School of Engineering offers 12 undergraduate Bachelor of Science (B.S.) and Bachelor of Arts (B.A.) degree programs in the following majors:
- Bioengineering B.S.
- Bioinformatics B.S. or combined B.S./Graduate
- Computer Engineering B.S. or combined B.S./M.S.
- Computer Science B.A. and B.S.
- Computer Science: Computer Game Design B.S.
- Electrical Engineering B.S.
- Network and Digital Technology B.A.
- Robotics Engineering B.S.
- Technology and Information Management B.S.

Bioengineering. The bioengineering program prepares graduates for a rewarding career at the interfaces between engineering, medicine and biology. UCSC bioengineering graduates will have a thorough
The School of Engineering

grounding in the principles and practices of bioengineering and the scientific and mathematical principles upon which they are built; they will be prepared for further education (both formal and informal) and for productive employment in industry. The program includes a broad range of courses in the sciences, engineering, ethics, and other topics, and is co-sponsored by the Departments of Biomolecular Engineering, Computer Engineering, Electrical Engineering, and Molecular, Cell and Developmental Biology.

Bioinformatics. The bioinformatics curriculum combines mathematics, the physical sciences, computer science, and engineering to explore and understand biological data from high-throughput experiments, such as genome sequencing and gene expression chips. The immense growth of biological information stored in computerized databases has led to a critical need for people who can understand the languages, tools, and techniques of mathematics, science, and engineering. The undergraduate bioinformatics degree program prepares students for graduate school or a career in the fast-paced pharmaceutical or biotechnology industries.

Computer Engineering. The computer engineering curriculum focuses on making digital systems that work. It overlaps with computer science on one end (software systems) and with electrical engineering on the other (digital hardware). The emphasis of our program is on design rather than analysis—on making things work, rather than on explaining the abstract theory of computation or electronics. The program’s emphasis on problem solving provides both excellent training for future engineers and a strong foundation for graduate study. The combined B.S./M.S. program provides an opportunity for outstanding undergraduates to begin advanced study and earn both degrees in five years.

Computer Science. The computer science curriculum has options that include topics in hardware and software, giving students a solid grounding in both theoretical and practical aspects of computer technology and computer usage. The bachelor of arts focus is designed to give students a solid grounding in both theoretical and practical topics in computer science, computer engineering, and mathematics while leaving flexibility for a broad program of study, including many courses outside of science and engineering. The bachelor of science curriculum has a stronger concentration in the sciences, with more courses in computer science and computer engineering. Students become proficient in many areas, with a good academic foundation for various careers in the software industry, as well as preparation for graduate school.

Computer Science: Computer Game Design. The computer game design curriculum is a four-year interdisciplinary program that focuses on the technical, dramatic, and artistic elements of computer games. The program provides a rigorous education in computer science, in concert with a broad introduction to those aspects of art, music, narrative, digital media, and computer engineering most relevant to games. An intensive year-long game design studio sequence permits students to create substantial video games as part of a multi-student team. Students receive proficiency in many aspects of computer science, a good academic foundation for careers in the computer game industry or information technology industry, or for the pursuit of graduate studies in computer science, or computer game design.

Electrical Engineering. The electrical engineering curriculum provides a balance of engineering science and design and allows students to specialize in both the traditional topics and the latest subjects in electrical engineering. Students may concentrate their electives in the areas of electronics and optics, communications, or signals and systems. The major is designed to attract motivated students who, upon graduation, will be sought by employers in the high-tech industry. The electrical engineering program is accredited by The Engineering Accreditation Commission of ABET.

Network and Digital Technology. The network and digital technology B.A. program provides students with in-depth knowledge of the underlying structure and function of network and computer technology and the design processes which make these technologies function. The program, through its flexible requirements, is especially tailored to students who wish to combine technology with other fields, such as through a double major or a minor, or who, through the choice of electives, wish to concentrate on the digital design or computer networks aspects of computer engineering in preparation for future employment. The network and digital technology B.A. program is offered by the Computer Engineering Department.

Robotics Engineering. The robotics engineering program prepares graduates for rewarding careers at the interfaces between electrical, computer, and mechanical engineering. UCSC robotics engineering graduates will have a thorough grounding in the principles and practices of robotics and control, and the scientific and mathematical principles upon which they are built; graduates will be prepared for further education (both formal and informal) and for productive employment in industry.

Technology and Information Management. The technology and information management (TIM) curriculum is multidisciplinary and focuses on the fusion of information systems, technology, and business management for two purposes: the use of information systems to solve business problems and the management of technology, which includes new product development and enterprise management. Students must learn the mathematics, science, and technical fundamentals of computer science and engineering as well as understand the environment in which information technology (IT) solutions will be applied—through economics, business, and management of technology courses. It is a rigorous, challenging major for those students wanting to pursue careers in information systems management and the management of technology.

UNDERGRADUATE MINORS

Undergraduate students may choose from the following seven minor options:
**Applied Mathematics.** The applied mathematics minor is available to students who wish to develop 1) proficiency in modeling real-life problems using mathematics and 2) knowledge of standard, practical analytical and numerical methods for the solution of these models. This minor could be combined with a major in any of the physical, biological, mathematical, or engineering sciences as preparation for a graduate degree in that field or in applied mathematics.

**Bioinformatics.** The bioinformatics minor is intended primarily for bioinformatics tool users who are majoring in a biological or chemical specialty. The bioinformatics minor is also appropriate for computer science or computer engineering majors who are considering graduate work in bioinformatics.

**Computer Engineering.** The computer engineering minor provides a solid foundation in digital hardware, electronics, and computer software, as well as the prerequisite material in mathematics and physics. The minor is well-suited to students who wish to take part in the design of computer and embedded systems in any discipline.

**Computer Science.** The computer science minor is available for students whose primary interest is in another area, and are interested in the applications of computer science in other areas of study, from art and music to business and science.

**Electrical Engineering.** The electrical engineering minor provides a solid foundation in the core areas of electronic circuits and signals and systems, as well as the prerequisite material in mathematics and physics. Concentration of upper-division electives in either of the major tracks constitutes substantial and focused work in the discipline of electrical engineering. This minor is particularly suitable for students with majors in applied physics or any School of Engineering major.

**Statistics.** The statistics minor is available for students who wish to gain a quantitative understanding of how to a) measure uncertainty, and b) make good decisions on the basis of incomplete or imperfect information and apply these skills to their interests in another field. This minor could also be combined with a major in mathematics as preparation for a graduate degree in statistics or biostatistics.

**Technology and Information Management.** The technology and information management minor provides undergraduates in the School of Engineering as well as in other programs and divisions of the university, such as economics and business management, computer science, and arts, the opportunity to expand the breadth of their knowledge and training to include the management of information systems and the management of technology.

---

**UNDERGRADUATE ADVISING OFFICE**

The Baskin School of Engineering undergraduate advising office offers general advising for prospective and declared undergraduates majoring in School of Engineering programs. The office handles major declarations, transfer credits, course substitutions, articulations, and degree certifications. Undergraduate students obtain and submit all paperwork requiring departmental approval to the undergraduate advising office. Students may obtain additional information and assistance on the School of Engineering undergraduate advising website.

---

**ADMISSION TO SCHOOL OF ENGINEERING MAJORS**

**HIGH SCHOOL PREPARATION FOR ENGINEERING STUDENTS**

It is recommended that high school students intending to apply to a School of Engineering major have completed four years of mathematics (through advanced algebra and trigonometry) and three years of science in high school. Comparable college mathematics and science courses completed at other institutions also serve to properly prepare students for these majors.

**College Board Advanced Placement Credit**

Prospective students are encouraged to take the College Board Advanced Placement (AP) and International Baccalaureate (IBH) Examinations as acceptable scores on these examinations may satisfy both university or major degree requirements. Prospective engineering students should consider taking examinations in computer science, mathematics, economics, chemistry, physics, or biology. Students must provide official examination scores to the UCSC Office of Admissions to be granted credit toward course prerequisites or degree requirements. The following AP and IBH scores are accepted for course credit requirements as follows:

<table>
<thead>
<tr>
<th>CEEB AP Exam</th>
<th>Score</th>
<th>UCSC Course Credit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Biology</td>
<td>5</td>
<td>Biology 20A, Cell and Molecular Biology; and</td>
</tr>

Students may check with the Office of Admissions for details about other AP and IBH examinations that also satisfy university requirements.

**ADMISSION AS FIRST-YEAR STUDENTS**

Students interested in pursuing a School of Engineering major should indicate the major as their first or second choice on the UC application for admissions. Most School of Engineering programs require that students be listed as a proposed major in order to be admitted. The proposed major status is also required to enroll in many BSOE major courses. Students in the engineering and computing cluster should become proposed majors at their earliest opportunity, because declaration requires proposed major status in most cases.

**COMPUTER SCIENCE**

Students interested in pursuing a computer science B.S. or B.A. must indicate the major on their University of California application for admission. Students who do not indicate this on their application will NOT be allowed to declare the computer science major. Students must be admitted as proposed computer science majors in order to declare the major.

**PROPOSED ENGINEERING MAJOR STATUS**

A proposed engineering major status carries several benefits including being connected to advising, receiving pertinent communication, and priority access to enrolling in some required major courses. The School of Engineering majors require students to be listed as a proposed major in one of the following majors in order to declare: bioengineering, bioinformatics, computer engineering, computer science: computer game design, computer science (B.A. and B.S.), electrical engineering or robotics.

Students who are interested in computer science who are NOT listed as proposed computer science majors will not be allowed to migrate into the major. Students must properly list computer science as their proposed major.

Students pursuing network and digital technology, and technology and information management are not required to be proposed in any BSOE majors in order to declare network and digital technology and technology and information management.

Students in their fourth quarter or beyond who would like to become a proposed major, or students who are proposed and would like to retain their proposed status, must have passed Math 19A or 20A, and two additional BSOE classes from the following list within their first three quarters: CHEM 1A, CMPE 12, CMPE 13, CMPE 16, CMPS 11, CMPS 12A, CMPS 12B, MATH 19B, MATH 20B, PHYS 5A, or PHYS 5C.

Students who are in an engineering proposed major and who do not meet these criteria will be removed.
from their proposed major. Students who want to change to an engineering proposed major must also meet these criteria. Students that do not meet these criteria can appeal this decision. More information about the appeals process can be found on the Undergraduate Advising website.

DECLARING A SCHOOL OF ENGINEERING MAJOR

Students interested in declaring a School of Engineering major can do so by following the major declaration policy for that major as specified in the corresponding program statement. Major declaration must be completed by the sixth quarter of study at UCSC, including students declaring a BSOE major as their second major. Students can declare earlier, once major declaration requirements are met. Specific information about requirements and the School of Engineering major declaration process can be found at BSOE Undergraduate Advising Major Qualification and Declare a Baskin School of Engineering Major or Minor.

APPEAL PROCESS

Students who are informed that they are not eligible to declare the major may appeal this decision by submitting a letter to the department chair within 15 days from the date the notification was mailed. Within 15 days of receipt of the appeal, the department will notify the student, the college, and the Office of the Registrar of the decision. If you have further questions concerning the appeal process, please contact the Undergraduate Advising Office at (831) 459-5840 or email advising@soe.ucsc.edu.

JUNIOR TRANSFER ACCEPTANCE TO MAJORS

The School of Engineering strongly encourages applications from transfer students. Due to the prerequisite structure for upper-division courses, prospective transfer students should have completed as many of the lower-division major requirements as possible to complete the degree within a reasonable time. Students must plan carefully because many courses must be taken sequentially. Students are encouraged to follow the new UC Transfer Pathways. Any student who finishes the UC Transfer Pathways courses for computer science will more than satisfy the admission requirements for transfer to computer science, computer engineering, robotics, and network and digital technology. Any student who finishes the UC Transfer Pathways courses for electrical engineering will more than satisfy the admission requirements for electrical engineering, computer engineering, and robotics. Note that each department will have different GPA requirements for these courses. Completion of mathematics and engineering courses is essential for transfer students; those applying to selective majors should carefully verify the admission requirements for their major. Students who apply as transfer students with junior status (90 quarter credits or more of transfer credit) who wish to earn a degree from the School of Engineering must indicate a School of Engineering major as their first choice on their UC application. Acceptance into the major is based on the student's academic college record and preparation for the major. Applicants are encouraged to take and excel in as many courses that are equivalent to the department's lower-division major requirements as possible. For many School of Engineering majors, this includes completion of a year of calculus (accepted as equivalent to Mathematics 19A-B), linear algebra, differential equations, a year of calculus-based physics courses (accepted as equivalent to Physics 5A, 5B, 5C), and two programming courses are strongly recommended.

LETTER GRADE POLICY

Starting fall 2014, all students admitted to a School of Engineering major, or seeking admission to a major, must take all courses required for that major for a letter grade.

ETHICS REQUIREMENT

Graduates of the Baskin School of Engineering are expected to become professionals with the highest ethical standards. Knowledge and practice of professional ethics is a requirement for the degree. Examples of professional society codes of ethics are available here and here. Students of the Baskin School of Engineering are also expected to adhere to high ethical standards while pursuing their undergraduate studies.

SUBSTITUTIONS FOR COURSES TAKEN AT UCSC

Undergraduate engineering students who wish to substitute a major course with a course from UC Santa Cruz must first consult the School of Engineering Undergraduate Advising Office. The advising office requires a Petition for Course Substitution be approved before credit for an alternate course can be applied to any School of Engineering major requirement. Petition forms are available at the undergraduate advising office and online. Petitions and procedures for approval must be obtained from and submitted to the Undergraduate Advising Office.

COURSE EQUIVALENCIES AND SUBSTITUTIONS TAKEN AT AN OUTSIDE INSTITUTION

Once enrolled in the School of Engineering continuing students must have permission to take courses at another institution to apply toward their School of Engineering major or minor requirements.

COMMUNITY COLLEGES

Once enrolled in the School of Engineering students who wish to take a course at a California community college must first check Assist.org to see if the course is
School of Engineering

Equivalent at UC Santa Cruz. If the course is not listed on Assist.org, students must submit a course substitution petition to the BSOE Undergraduate Advising Office to have it reviewed for equivalency. Courses that need to be reviewed must be accompanied by a course description and syllabus. It is very helpful if students can provide further evidence of course content, such as examples of programming assignments, homework, or examinations. To guarantee equivalency, departments may sometimes require a grade of B or better.

If the course is approved for equivalency or was on Assist.org, then the student must also receive approval by their major department to take the class at the community college PRIOR to taking it. Forms and procedures for approval can be obtained from and submitted to the BSOE Undergraduate Advising Office.

FOUR-YEAR INSTITUTIONS AND THE UC EDUCATION ABROAD PROGRAM (UCEAP)

Students who intend to take a course at a four-year institution or UC Education Abroad, must submit a Course Substitution Petition to the BSOE Undergraduate Advising Office to have the course reviewed for equivalency. Courses that need to be reviewed must be accompanied by a course description and syllabus. It is very helpful if students can provide further evidence of course content, such as examples of programming assignments, homework, or examinations. To guarantee equivalency, departments may sometimes require a grade of B or better.

If the course is approved for equivalency, then the student must also receive approval by their major department PRIOR to taking the class. Forms and procedures for approval can be obtained from and submitted to the BSOE Undergraduate Advising Office.

PERSONAL COMPUTER REQUIREMENT

The Baskin School of Engineering (BSOE) requires that all BSOE students own a laptop. A MAC or PC from the last several years is generally acceptable. The exact minimum specifications appear on the Undergraduate Advising website.

SCHOOL-WIDE INFORMATION AND POLICIES

COMPUTING FACILITIES

The Baskin School of Engineering houses research facilities and teaching laboratories in the Baskin Engineering Building for courses in programming, software design, circuits, electronics, graphics, digital design, and computer and system architecture. Emphasis in these laboratories is on state-of-the-art equipment, including personal computers, engineering workstations, a 1000-processor Linux cluster, logic analyzers, microprocessor development systems, a wireless network for mobile computers, and network support at 100MB/sec.

All Unix computers and workstations and most personal computers on campus are networked together, allowing students to access the School of Engineering and the Information Technology Services (ITS) facilities from any computer account on campus. For a more complete description of the computing facilities on campus, see the ITS website.

PREREQUISITES

Because of the sequential nature of the School of Engineering curricula, most courses have prerequisites, which are listed in the course descriptions. Students should carefully review these descriptions in the catalog and the quarterly Schedule of Classes. Students must have passed all prerequisites of a course for which they are enrolling. Pre-enrolled students who then fail a prerequisite are no longer eligible to be enrolled in the course and will be dropped.

Students who have transferable course work from another institution that appears to satisfy a UCSC course prerequisite, but is not listed in current articulation agreements, should promptly consult with the School of Engineering’s staff advisers for guidance. Students will be asked to present records from the other institution to document the course equivalency. Until such evidence has been verified by the department, students attempting to enroll in a course using a prerequisite course that was not completed at UCSC will be informed that they have not satisfied the course prerequisite. (See the Course Substitutions section.)

PERMISSION NUMBERS

Students not meeting the regular prerequisite requirements for courses sponsored by the Baskin School of Engineering may petition the course instructor to receive a permission number to enroll. The instructor may ask a student to demonstrate the ability and/or potential to succeed in the course or may request additional information to formulate a decision. If no instructor has been assigned to the course, please contact the Undergraduate Advising Office for direction.

MATERIALS FEE

Students should be aware that some laboratory courses require each student to purchase miscellaneous parts or a material kit for completion of the laboratory work. Some laboratory courses may include consumable (one-time use) parts and materials that are distributed to the entire class. Some laboratory kits include parts that the student will assemble into a project and keep. Please refer to the Baskin Engineering Laboratory Support web page for specific course material-fee amounts.

MISCELLANEOUS FEES

Miscellaneous breakage or loss of equipment fees are assessed to address the cost of damaged laboratory equipment and loss of laboratory materials due to abuse or negligence. This fee is only charged if a student breaks or loses laboratory equipment or materials and is not a mandatory fee charged to all students taking the course. Please refer to the Baskin Engineering Laboratory Support web page for more information.

Revised: 07/15/18
APPLIED MATHEMATICS AND STATISTICS

2018-19 General Catalog
Baskin School of Engineering
(phone) (831) 459-2158
website https://www.soe.ucsc.edu

PROGRAM DESCRIPTION

Applied mathematics and statistics are disciplines devoted to the use of mathematical methods and reasoning to solve real-world problems of a scientific or decision-making nature in a wide variety of subjects, principally (but not exclusively) in engineering, medicine, the physical and biological sciences, and the social sciences. Applied mathematical modeling often involves the use of systems of (partial) differential equations to describe and predict the behavior of complex real-world systems that unfold dynamically in time. Statistics, construed broadly, is the study of uncertainty: how to measure it (using ideas and methods in probability theory), and what to do about it (using concepts from statistical inference and decision theory).

The Applied Mathematics and Statistics Department at UCSC offers master’s and doctoral programs in Statistics and Applied Mathematics, or Applied Mathematics and Statistics, depending on chosen emphasis, and a master’s program in Scientific Computing and Applied Mathematics (SciCAM). Effective fall quarter 2018, the department will offer a M.S./Ph.D. program in statistical science, intended to replace the statistics track of the statistics and applied mathematics M.S./Ph.D. program offered by the department. Discontinuance of the statistics track will be proposed in fall 2018. The goal of these programs is to help students develop into independent scholars who are prepared for productive careers in research, teaching, and industry. The department also offers a designated emphasis in statistics, a minor in statistics, and a minor in applied mathematics.

Additional information on these programs can be found on the department’s website.

UNDERGRADUATE PROGRAMS

REQUIREMENTS OF THE MINOR IN STATISTICS

The statistics minor is available for students who wish to gain a quantitative understanding of how to (a) measure uncertainty and (b) make good decisions on the basis of incomplete or imperfect information, and to apply these skills to their interests in another field. This minor could also be combined with a major in mathematics as preparation for a graduate degree in statistics or biostatistics.

Students are required to take the following courses:

- Basic calculus sequence: Applied Mathematics and Statistics 11A-B or Economics 11A-B or Applied Mathematics and Statistics 15A-B or Mathematics 11A-B or Mathematics 19A-B or Mathematics 20A-B
- Plus one course from each of the following seven categories:
  - Statistical Concepts: Applied Mathematics and Statistics 5 or 7/L
  - Computer Programming: Biomolecular Engineering 160/L, Computer Science 12A/L or 5C or 5J or 5P or Computer Engineering 13/L or Earth Sciences 119 or Astronomy and Astrophysics 119
  - Linear Algebra: Applied Mathematics and Statistics 10 or Mathematics 21 (also recommended that students take Applied Mathematics and Statistics 20 or Mathematics 24)
  - Multivariate Calculus: Mathematics 22 or both Mathematics 23A and Mathematics 23B
  - Statistical Inference: Applied Mathematics and Statistics 132
  - Computational Methods: Applied Mathematics and Statistics 147
- Plus two electives from the following list of courses:
  - Applied Mathematics and Statistics 156; Applied Mathematics and Statistics 198; Applied Mathematics and Statistics 202; Applied Mathematics and Statistics 205B; Applied Mathematics and Statistics 206B; Applied Mathematics and Statistics 207; Applied Mathematics and Statistics 256; Biomolecular Engineering 205; Computer Engineering 108; 145; Computer Science 142; Economics 104; 113; 114; 120; 161B; and 190; Electrical Engineering 151; Mathematics 114; Psychology 181; Sociology 103A; Technology and Information Management 230.

Note: Students planning graduate work in statistics are recommended to choose Mathematics 23A-B, Applied Mathematics and Statistics 205B, and Mathematics 105A-B.

REQUIREMENTS OF THE MINOR IN APPLIED MATHEMATICS

The applied mathematics minor is available for students who wish to develop (1) proficiency in modeling real-life problems using mathematics and (2)
knowledge of standard, practical analytical and numerical methods for the solution of these models. This minor could be combined with a major in any of the physical, biological, mathematical, or engineering sciences as preparation for a graduate degree in that field or in applied mathematics.

Students are required to take the following courses:

- Basic calculus sequence: Mathematics 19A-B or Mathematics 20A-B, and Mathematics 23A-B
- Plus one of the following sequences:
  - Applied Mathematics and Statistics 10 and 20
  - Mathematics 21 and 24
  - Physics 116A and 116B
- Note: Students who complete Mathematics 21 and 24 or Physics 116A and 116B, are strongly recommended to complete the MATLAB self-paced tutorial.
- Plus one course from each of the following categories:
  - Probability Theory: Applied Mathematics and Statistics 131 or Computer Engineering 107
  - Dynamical Systems: Applied Mathematics and Statistics 114 or Applied Mathematics and Statistics 214
  - Introduction to Numerical Methods: Applied Mathematics and Statistics 147, Physics 115, or Earth Sciences 119
- Plus one applied-mathematics elective from the following list:

Students may also propose other electives which use applied mathematical methods, subject to approval by the department.

**GRADUATE PROGRAMS**

**GRADUATE PROGRAM IN****

**STATISTICAL SCIENCE**

**(M.S., PH.D.)**

The department of Applied Mathematics and Statistics at UCSC offers both masters and doctoral degrees within the Statistics and Applied Mathematics (SAM) graduate program, with respective emphasis in statistics (for a degree title in “Statistics and Applied Mathematics”) or in applied mathematics (for a degree title in “Applied Mathematics and Statistics”). In addition, the department also offers an independent masters program in “Scientific Computing and Applied Mathematics (SciCAM).”

The goal of the two tracks of the SAM graduate program is to help students develop into independent scholars specialized in statistics or applied mathematics respectively, who are prepared for productive careers in research, teaching, and industry. The Master of Science (M.S.) degree may be used as a terminal degree or as the first step toward the associated Doctor of Philosophy degree (Ph.D.).

Effective fall quarter 2018, the department will offer master’s and doctoral degrees in statistical science. The statistical science M.S./Ph.D. program is administered by the statistics faculty in Applied Mathematics and Statistics, and grows out of the statistics track in the SAM program which it is intended to replace. (Discontinuance of the statistics track of SAM will be proposed in Fall 2018.)

Students in the statistical science program learn to develop and use statistical methods to provide a probabilistic assessment of the variability in different data structures. This knowledge is applied to the quantification of the uncertainties inherent in the discoveries, summaries and conclusions that are drawn from the data analysis. The Ph.D. program provides mastery of fundamental concepts in statistical theory and methods, as well as analytical and computational skills to build modern statistical models, implement them, and effectively communicate their results. Through the process of learning these skills, the students develop the ability to conduct independent research. The M.S. program has its own identity. It places emphasis on the application of statistical methods to the solution of relevant scientific, technological and engineering problems, with the goal of preparing students for professional careers.

The goal of the SciCAM M.S. program is primarily to prepare students interested in scientific computing for productive careers in industry. However, it also serves as an excellent further preparation for students who prefer to pursue an academic career and wish to transfer into a Ph.D. program later, either in scientific computing/applied mathematics, or in the field related to their undergraduate degree.

**UNDERGRADUATE PREPARATION FOR ADMISSION**

We will accept students with undergraduate degrees in fields that include computer science, engineering, mathematics, natural sciences, physics, and statistics, subject to appropriate course requirements in statistics and mathematics. Undergraduate preparation in mathematics and statistics should include: single variable and multivariate differential and integral calculus (UCSC equivalent AMS 11A,B or MATH 19A,B, and MATH 23A,B); linear algebra (UCSC equivalent AMS 10 or MATH 211); introductory statistics (UCSC equivalent AMS 5 or AMS 7); and introductory calculus-based probability and statistical inference (UCSC equivalent AMS 131 and AMS 132).

**PROGRAM OF STUDY**

Students will obtain a graduate degree (M.S. or Ph.D.) in statistical science. More specifically, students will develop background on statistical theory, methods, computing and applications through the program.
coursework, with research emphasis on novel methods and applications of Bayesian statistics.

Ph.D. students must complete 9 core courses: 7 5-credit courses listed below; a 3-credit course on research and teaching (AMS 200); and a 2-credit research seminar (AMS 280B). Ph.D. students must complete 4 additional 5-credit courses from the approved list of elective courses, bringing the total non-seminar credit requirements to 58 credits. M.S. students must complete 8 core courses: 6 5-credit courses listed below; a 3-credit course on research and teaching (AMS 200); and a 2-credit research seminar (AMS 280B). M.S. students must complete 2 additional 5-credit courses from the approved list of elective courses, bringing the total non-seminar credit requirement to 43 credits. None of the additional elective courses required to satisfy the unit requirements for the M.S./Ph.D. program can be substituted by independent study courses (“M.S. Project”, “Independent Study/Research” or “Thesis Research”).

Students in the Ph.D. program must take the following nine core courses:
AMS 203: Introduction to Probability Theory
AMS 204: Introduction to Statistical Data Analysis
AMS 205B: Intermediate Classical Inference
AMS 206B: Intermediate Bayesian Inference
AMS 256: Linear Statistical Models
AMS 207: Intermediate Bayesian Statistical Modeling
AMS 274: Generalized Linear Models
AMS 200: Research and Teaching in AMS
AMS 280B: Seminars in Statistical and Applied Mathematical Modeling

Students in the M.S. program must take the following eight core courses:
AMS 203: Introduction to Probability Theory
AMS 204: Introduction to Statistical Data Analysis
AMS 205: Introduction to Classical Statistical Learning
AMS 206: Applied Bayesian Statistics
AMS 256: Linear Statistical Models
AMS 207: Intermediate Bayesian Statistical Modeling
AMS 200: Research and Teaching in AMS
AMS 280B: Seminars in Statistical and Applied Mathematical Modeling

All core courses are 5-credit courses, except for AMS 200 and AMS 280B. AMS 200 is a 3-credit course which covers basic teaching techniques for teaching assistants, and examines research and professional training items, as well as ethical issues relating to research in science and engineering. AMS 280B is a 2-credit seminar course, which involves attending the AMS Department colloquia and participating in the discussion session after the seminar presentation. The strict requirement for AMS 280B is for students to take it once in their first year in the program. However, students are strongly recommended to take AMS 280B each quarter throughout their graduate studies.

All core courses must be taken for a letter grade (except for AMS 200 and AMS 280B, which are given on a Satisfactory/Unsatisfactory basis). In order to maintain a full load for graduate standing after their first year, students take additional courses, including independent study courses, from the approved list of elective courses, selected in consultation with their advisers.

Ph.D. students are required to serve as teaching assistants for at least one quarter during their graduate study. Certain exceptions may be permitted for those with extensive prior teaching experience, for those who are not allowed to be employed due to visa regulations, or for other reasons approved by the director of graduate studies.

MASTER'S CAPSTONE PROJECT

For the M.S. degree, students conduct a capstone research project in their second year (up to three quarters), and in the spring of that year participate in a seminar in which results from their project are presented. Examples of capstone research projects include: review and synthesis of the literature on a topical area of statistical science; application and comparison of different models and/or computational techniques from a particular area of study in statistics; comprehensive analysis of a data set from a particular application area.

Students must submit a proposal to the potential faculty sponsor no later than the end of the fourth academic quarter. If the proposal is accepted, the faculty member becomes the sponsor and supervises the research and writing of the project. When the project is completed and written, it must be submitted to and accepted by a committee of two individuals, consisting of the faculty adviser and one additional reader. The additional reader will be chosen appropriately from within the graduate program faculty or outside of it. Either the adviser or the additional reader must be from within the graduate program faculty.

PH.D. EXAMINATIONS

At the end of the first year, Ph.D. students take a pre-qualifying examination covering 6 5-credit core courses: AMS 203, 204, 205B, 206B, 207 and 256. This examination comprises two parts: an in-class written examination, followed by a take-home project involving data analysis. Students who do not pass this examination can retake it before the start of the following fall quarter; if they fail the second examination they are dismissed from the Ph.D. program, but have the option to continue in the M.S. program.

Ph.D. students must complete the qualifying examination (advancement to candidacy) requirement by the end of the spring quarter of their third year. Ph.D. students must select a research adviser by the end of their second year in the program. A written dissertation proposal must be submitted to the adviser, and filed with the graduate advising office. A qualifying examination committee will be formed, consisting of the adviser and at least three additional members, approved by the director of graduate studies and the dean of the Graduate Division. The following conditions must be met for the examination committee:

1. The chair of the qualifying examination committee must be a tenured faculty from
within the graduate program faculty. The committee chair cannot be the student's adviser or one of her/his co-advisers.

2. For students with a single adviser, or two co-advisers one of which is from outside the graduate program faculty, the committee must include at least two members from within the graduate program faculty other than the adviser or co-adviser. For students with two co-advisers that are both members of the graduate program faculty, the committee must include at least one additional member from within the graduate program faculty.

3. The committee must include at least one member from outside the graduate program faculty, for which the Senate Regulations for committee membership apply. The outside member can be the student's adviser or co-adviser.

The student submits the written dissertation proposal to all members of the committee no less than one month in advance of the qualifying examination. The dissertation proposal is formally presented in a public oral qualifying examination with the committee, followed by a private examination. Students will advance to candidacy after they have completed all course requirements (including removal of any incompletes), passed the qualifying examination, and paid the filing fee. Under normal progress, a student will advance to candidacy by the end of the spring quarter of her/his third year. A student who has not advanced to candidacy by the start of the fourth year will be subject to academic probation.

Upon advancement to candidacy, a dissertation reading committee is formed, consisting of the dissertation adviser (co-advisers) who serve as the chair (co-chairs) of the committee, and at least two additional readers. Therefore, the minimum number of dissertation reading committee members is 3 (4) for students with a single adviser (two co-advisers). For students with a single adviser, or two co-advisers one of which is from outside the graduate program faculty, the committee must include at least two additional readers from within the graduate program faculty. For students with two co-advisers that are both members of the graduate program faculty, the committee must include at least one additional reader from within the graduate program faculty. The committee is subject to the approval of the director of graduate studies and of the Graduate Division. The Ph.D. dissertation should consist of a minimum of three chapters composed of material suitable for publication in major professional journals in statistics and journals in relevant scientific fields where the statistical methodology is applied. The completed dissertation must be submitted to the reading committee at least one month before the dissertation defense, which consists of a public presentation of the research followed by a private examination by the reading committee. Successful completion of the dissertation defense is the final requirement for the Ph.D. degree.

RELATIONSHIP OF M.S. AND PH.D. PROGRAMS

The M.S. and Ph.D. programs are freestanding and independent, so that students can be admitted to either. Students completing the M.S. program may proceed into the Ph.D. program upon successful completion of the pre-qualifying examination, and application to the graduate committee and acceptance. Students in the Ph.D. program have the option of receiving the M.S. degree upon completion of the M.S. program requirements, including the capstone research project.

NORMATIVE TIME TO DEGREE

The normative time to the M.S. degree (for students enrolled full-time) is two academic years. The normative pre-candidacy period for Ph.D. students (enrolled full-time) is three years and the normative candidacy period is two years, for a total of five years to the Ph.D. degree.

REVIEW OF PROGRESS

Students will be admitted to the graduate (M.S. or Ph.D.) program, not to the research group of any individual faculty member. However, each student will be matched with a first-year mentor, to ensure that adequate guidance is provided in the crucial first year of graduate school. In later years, the role of the mentor will be played by the Ph.D. thesis or M.S. project adviser. Faculty advisers will be responsible for charting the progress of their students on a regular basis, and for making necessary adjustments to their plan of study and research.

The graduate program faculty will meet in the spring quarter of each academic year to review the performance of all students in the program. Based on the results from the faculty review, a written report will be provided to each student with an assessment of her/his performance and description of specific program objectives for the following academic year.

TRANSFER CREDIT

Up to three School of Engineering courses fulfilling the degree requirements of either the M.S. or Ph.D. degrees may be taken before beginning the graduate program through the concurrent enrollment program. Ph.D. students who have previously earned a M.S. degree in a related field at another institution may substitute courses from their previous university with approval of the adviser and the graduate committee. Courses from other institutions may not be applied to the M.S. degree course requirements. Petitions should be submitted along with the transcript from the other institution or UCSC Extension. For courses taken at other institutions, copies of the syllabi, examinations, and other course work should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UCSC. At most, a total of three courses may be transferred from concurrent enrollment and other institutions.

Students who complete the M.S. degree in statistical science and continue onto the Ph.D. program in statistical science can transfer all applicable courses taken during the M.S. to the Ph.D. program, provided that such students meet the minimum residency
GRADUATE PROGRAM IN STATISTICS AND APPLIED MATHEMATICS

REQUIREMENTS FOR A GRADUATE DEGREE IN STATISTICS AND APPLIED MATHEMATICS

This track is for students emphasizing statistics. Ph.D. students must complete the core courses described below.

Required core courses:
200 Research and Teaching in Applied Mathematics and Statistics
203 Introduction to Probability Theory
204 Introduction to Statistical Data Analysis
205B Intermediate Classical Inference
206B Intermediate Bayesian Inference
207 Intermediate Bayesian Statistical Modeling
256 Linear Statistical Models
280B Seminar in Statistics and Applied Mathematical Modeling

The required core courses for M.S. students are the same with the ones for Ph.D. students with one exception: course AMS 206 (Applied Bayesian Statistics) replaces course AMS 206B in the core for the statistics track of the M.S. program.

In addition to these 35 credits, master of science (M.S.) students must complete two additional 5-credit courses from the approved list, for a total requirement of 45 credits; doctor of philosophy (Ph.D.) students must complete four additional 5-credit courses from the approved list, for a total requirement of 55 credits.

REQUIREMENTS FOR A GRADUATE DEGREE IN APPLIED MATHEMATICS AND STATISTICS

This track is for students emphasizing Applied Mathematics. All students must complete the core courses described below.

Required core courses:
200 Research and Teaching in Applied Mathematics and Statistics
211 Foundations of Applied Mathematics
212A Applied Mathematical Methods I
213A Numerical Linear Algebra
213B Numerical Solutions of Differential Equations
214 Applied Dynamical Systems
280B Seminar in Statistical and Applied Mathematical Modeling

In addition to these 30 credits, master of science (M.S.) students must complete three additional 5-credit courses, including a first-year elective (see below), for a total requirement of 45 credits; doctor of philosophy (Ph.D.) students must complete five additional 5-credit courses, including a first-year elective (see below), for a total requirement of 55 credits. All elective courses must be approved by the student's official advisor.

First-year electives in the applied mathematics track are designed to prepare students for their ultimate research emphasis within the applied mathematics track. They must be taken during the first year, and must be selected from the following list: course 203, 209, 216, 217, 227, 230, 231, 232, 238, 250, 260, and 275.

For both emphasis tracks, M.S. students will be allowed to substitute up to two elective courses with their required research project in which they conduct a research program in one or two of the quarters of their second year. The project will consist of solving a problem or problems from the selected area of application and will be presented to the sponsoring faculty member as a written document.

For the applied mathematics emphasis track, Ph.D. students who already have an M.S. degree (or equivalent) will be allowed to substitute up to two elective courses with corresponding numbers of credits of independent study (i.e., 5 or 10), during which they conduct research with their advisor toward their advancement to candidacy.

Ph.D. students will be required to serve as teaching assistants for at least two quarters during their graduate study. Certain exceptions may be permitted for those with extensive prior teaching experience, for those who are not allowed to be employed due to visa regulations, or for other reasons approved by the graduate director.

QUALIFYING EXAMINATIONS

At the end of the first year, all Ph.D. students will take a pre-qualifying examination covering the (non-seminar) core courses. This examination will have two parts: an in-class written examination, followed by a take-home project. Ph.D. students who do not pass this examination will be allowed to retake it before the start of the following fall quarter; if they fail the second examination they will not be allowed to continue in the Ph.D. program, but will have the option to continue into the M.S. program and exit with the M.S. as the terminal degree.

Ph.D. students must complete the oral proposal defense, through which they advance to candidacy, by the end of the spring quarter of their third year. The proposal defense is a public seminar as part of an oral qualifying examination given by the qualifying committee. For the applied mathematics emphasis track, the student's oral presentation must be approximately 45 minutes in length. Applied mathematics students will also be required to submit a substantial written document describing their research to date as well as their Ph.D. proposal ahead of time to the qualifying examination committee.

THESIS AND/OR DISSERTATION REQUIREMENTS
A capstone project is required for the M.S. degree and a dissertation for the Ph.D. degree.

For the M.S. degree, students will conduct a capstone research project in their second year (up to three quarters). Students must submit a proposal to the potential faculty sponsor by the start of the fourth academic quarter. If the proposal is accepted, the faculty member will become the sponsor and will supervise the research and writing of the project. The project will involve the solution of a problem or problems from the selected area of application. When the project is completed and written, it will be submitted to and must be accepted by a committee of two individuals, consisting of the faculty adviser and one additional reader. Additional readers will be chosen appropriately from within the Applied Mathematics and Statistics Department or outside of it. Either the adviser or the additional reader must be from within the Applied Mathematics and Statistics Department.

A dissertation is required for the Ph.D. degree. Ph.D. students must select a faculty research adviser by the end of the second year. A written dissertation proposal will be submitted to the adviser, and filed with the graduate secretary. A qualifying examination committee will be formed, consisting of the adviser and three additional members, approved by the Chair of the Graduate Program and the Dean of the Graduate Division. The student will submit the written dissertation proposal to all members of the committee and the graduate secretary no less than one month in advance of the qualifying examination. The dissertation proposal will be formally presented in a public oral qualifying examination with the committee, followed by a private examination.

Students will advance to candidacy after they have completed all course requirements (including removal of all incompletes), passed the qualifying examination, and paid the filing fee. Under normal progress, a student will advance to candidacy by the end of the spring quarter of her/his third year. A student who has not advanced to candidacy by the start of the fourth year will be subject to academic probation. Upon advancement to candidacy, a dissertation reading committee will be formed, consisting of the dissertation supervisor and at least two additional readers appointed by the Graduate Program chair upon recommendation of the dissertation supervisor. At least one of these additional readers must be in the Applied Mathematics and Statistics Department. The committee is subject to the approval of the Graduate Division.

The dissertation will consist of a minimum of three chapters composed of material suitable for submission and publication in major professional journals in statistics or applied mathematics (or related subject areas of application). The completed dissertation will be submitted to the reading committee at least one month before the dissertation defense, which consists of a public presentation of the research followed by a private examination by the reading committee. Successful completion of the dissertation defense is the final requirement for the Ph.D. degree.
207 Intermediate Bayesian Statistical Modeling and one other statistics course from a list of approved courses in AMS (currently 202, 205B, 221, 223, 225, 241, 245, 256, 261, 263, 268, 274, and 291).

Upon electing to pursue a designated emphasis (DE) in statistics, students must choose a DE faculty adviser in the AMS Department. A list of eligible DE advisers is maintained online. The student must organize a preliminary meeting with the DE adviser, and agree on a plan for completion of the requirements. Once this plan has been designed, the student and the DE adviser must complete the Application for a Designated Emphasis in Statistics form. The completed application form should be signed by the student’s home department adviser, the DE adviser, and the statistics graduate director, and then filed with the BSOE Graduate Advising Office (bsoe-ga@rt.ucsc.edu). This should be done before the student’s advancement to candidacy (for Ph.D. students).

**REQUIREMENTS FOR A DESIGNATED EM phasis IN SCIENTIFIC COMPUTING TO AN EXTERNAL DEGREE PROGRAM**

Students from another degree program who meet certain requirements (see below) can have the designated emphasis of “Scientific Computing” annotated to their degree title. For example, a M.S. or Ph.D. student in physics who meets the requirements would get a certification that read “M.S. Physics (Scientific Computing) or “Ph.D. Physics (Scientific Computing).”

Upon electing to pursue a designated emphasis (DE) in scientific computing, students must choose a DE faculty adviser in the AMS Department. A list of eligible DE advisers is maintained online. The student must organize a preliminary meeting with the DE adviser, and agree on a plan for completion of the requirements. Once this plan has been designed, the student and the DE adviser must complete the DE application form available online. The completed application form should then be signed by the AMS graduate director, and filed in the BSOE graduate advising office. This should be done before the student’s advancement to candidacy (for Ph.D. students), and no later than three months before the planned date for the oral presentation completion requirement (see below).

**COURSE AND WRITING REQUIREMENTS FOR THE DE IN SCIENTIFIC COMPUTING**

- **Course requirements:** AMS 213A (Numerical Linear Algebra), AMS 213B (Numerical Solutions of Differential Equations), AMS 250 (Introduction to High-Performance Computing), as well as one additional course from the following list of approved electives: AMS 260, CMPS 201, CMPS 211, CMPS 242, CMPS 261, and AST 235.

- **Writing requirements:** a substantial and original written body of work related to scientific computing, associated with substantial code development, or substantial modification of existing code, or development of significant computational tools for data analysis. The write-up could take the form of a paper (at least submitted), or an M.S., M.A. or Ph.D. thesis chapter, for instance.

- **Oral presentation requirement:** a presentation of no less than 30 minutes during which the student must demonstrate mastery of the scientific computing component of the submitted written piece of work. This presentation could be the student’s qualifying exam, or the Ph.D. defense, or a separate presentation. The DE adviser must be invited to attend this presentation.

---

**GRADUATE PROGRAM IN SCIENTIFIC COMPUTING AND APPLIED MATHEMATICS (SCICAM)**

**REQUIREMENTS FOR A GRADUATE DEGREE IN SCIENTIFIC COMPUTING AND APPLIED MATHEMATICS**

Required core courses and foundational requirements:

- 212A Applied Mathematical Methods I
- 213A Numerical Linear Algebra
- 213B Numerical Solutions of Differential Equations
- 214 Applied Dynamical Systems
- 250 Introduction to parallel computing

Students in the SciCAM program must also demonstrate mastery in the foundations of Scientific Computing and Applied Mathematics, either by producing evidence through undergraduate transcripts, or by taking some or all of the following foundational courses upon entry to the M.S. program: AMS 147 (Computational Methods and Applications), AMS 209 (Foundations of Scientific Computing) and AMS 211 (Foundations of Applied Mathematics).

Electives and capstone requirements:

Approved elective courses: Any regular graduate AMS course not already in the core except AMS 200 and supervised research courses. Elective courses outside of AMS must be approved by the SciCAM graduate director. Note that some upper-division electives are allowed, bearing in mind that no more than a total of 15 credits of upper-division courses may be used to satisfy the degree requirements.

Students in the SciCAM program may pursue a Plan I (thesis capstone) or a Plan II (comprehensive examination capstone) curriculum.

Candidates for a Plan I capstone must, in addition to the 25 credits required from core courses, (1) complete one additional 5-credit course from the approved elective...
list, (2) complete 10 credits of supervised research (in the form of AMS 297 or AMS 298 with one of the program faculty), and (3) write a thesis.

The thesis requirements are as follows. Students must submit a thesis proposal to the potential faculty sponsor after completion of all core courses. If the proposal is accepted, the faculty member will become the sponsor and will supervise the research and writing of the thesis project. The project will involve the solution of a problem or problems from the selected area of application. The thesis must consist of at least 30 pages and no more than 60 pages of printed written work and accompanying pertinent figures, consisting of a coherent introduction and presentation of the current state of the field, a clear presentation of the questions raised, of the methodology used to solve them, and a discussion of the results obtained. The thesis will be read by at least two faculty from the AMS Department, one of which must be the student’s adviser. The student will then be required to give a short (20-minute) public oral presentation of their thesis, which will be evaluated by the reading committee. The reading committee will assess the quality of both written work and oral presentation in making their recommendation for awarding the M.S. degree to the student.

Candidates for a Plan II capstone must, in addition to the 25 credits required from core courses, (1) complete three additional 5-credit courses from the approved elective list, and (2) successfully pass the SciCAM comprehensive examination. The latter takes place in June at the end of the academic year. Students may only take this exam following completion of the last core course. The exam will take the form of a take-home project covering all core and foundational courses.

ACCELERATED 1-YEAR PROGRAM PLAN

The expected time to completion of the SciCAM degree program is two years. However, AMS also offers a one-year accelerated track for interested students who can demonstrate sufficient proficiency in the foundational subjects. Information on the minimum requirements to join the accelerated track can be found on the program website. Requests to join the accelerated track must be made to the graduate director by e-mail no later than August 31 of each year.

4+1 CONTIGUOUS PATHWAY LEADING TO THE SCICAM DEGREE PROGRAM

The 4+1 pathway into SciCAM is an option that allows undergraduates at UC Santa Cruz to (1) take the SciCAM foundational courses during their undergraduate degree in preparation to join the 1-year track of the SciCAM program, and (2) apply to SciCAM through a streamlined application process. Undergraduate students currently enrolled in approved programs (currently, the B.A. in mathematics, or the B.S. in computer science, the B.S. in robotics engineering, the B.S. in physics, the B.S. in applied physics and the B.S. in physics [astrophysics]) have the opportunity, any time after the start of their junior year and the end of the fall quarter of their senior year, to join the 4+1 contiguous pathway leading to the SciCAM degree program. Qualified undergraduates from other undergraduate majors may also apply to the pathway and their applications will be considered on a case by case basis.

The requirements for admission into the 4+1 pathway are (1) a GPA in the major of 3.5 or more, and (2) to have taken, or to have a plan to take, at least two of the three SciCAM foundational courses before the end of their senior year. Note that some of the foundational courses are waived depending on the student’s major. Interested students should set up a meeting with the SciCAM adviser to discuss their curriculum plan and fill the application forms. The ultimate deadline for application to the pathway is December 1st of the senior year, although students are encouraged to apply significantly earlier, ideally at the same time as their major declaration.

Students in the pathway who apply to SciCAM through the streamlined application process are not guaranteed admission, although we do expect to admit anyone who has passed all the foundational courses and has maintained a GPA in the major of 3.5 or more. Once accepted into the SciCAM program, students from the pathway will follow the same requirements as any other students in the one-year track with anticipated graduation in June of their fifth year for Plan II (comprehensive exam track) students, and the end of the summer of their fifth year for Plan I (thesis track) students.

RELATIONSHIP OF SCICAM MASTERS PROGRAM AND AMS DOCTORAL PROGRAM

Students in the SciCAM M.S. program interested in an academic career will be strongly encouraged to apply to the SAM Ph.D. program. Applications are reviewed in the standard academic cycle, so that students interested in applying to the SAM program are encouraged to discuss this option with the graduate director in the fall of each year.

TRANSFER CREDIT

Up to three UCSC courses fulfilling the degree requirements of the SciCAM degree may be taken before beginning the graduate program. However, students will still need to take courses totalling 35 credits as graduate students to satisfy university requirements. Note that this limit does not apply to the foundational requirements, which may all be taken prior to the start of the SciCAM program without penalty.

Up to one course from other institutions may be applied to the M.S. degree course requirements. Petitions should be submitted along with the transcript from the other institution or UCSC Extension. For courses taken at other institutions, copies of the syllabi, exams, and other course work should accompany the petition. Such
Applied Mathematics and Statistics

Petitions are not considered until the completion of at least one quarter at UCSC.

REVIEW OF PROGRESS

Each year, the faculty reviews the progress of every student in all programs and tracks. Students not making adequate progress toward completion of degree requirements are subject to dismissal from the program (see the Graduate Handbook for the policy on satisfactory academic progress). Also, please refer to specific guidelines on the annual student reviews.

APPLIED MATHEMATICS AND STATISTICS FACULTY AND PROFESSIONAL INTERESTS

PROFESSOR

Nicholas Brummell
Fluid dynamics; magnetohydrodynamics; numerical simulations of geophysical and astrophysical dynamics, especially solar interior physics; supercomputing

David Draper
Bayesian inference, prediction and decision-making; hierarchical modeling; Bayesian non-parametric methods; model specification and model uncertainty; Bayesian data science; accurate Bayesian computations with massive data; quality assessment; risk assessment; statistical applications in the environmental, medical, and social sciences

Pascale Garaud
Astrophysical and geophysical fluid dynamics, magnetohydrodynamics; analytical and numerical solutions of partial differential equations related to these phenomena

Qi Gong
Computational methods for nonlinear optimal control, optimal control of uncertain nonlinear systems, aerospace control applications, trajectory optimization, motion planning of unmanned vehicles

Athanasios Kottas
Bayesian nonparametrics, mixture models, modeling and inference for point processes, nonparametric regression, survival analysis, applications in biometrics, ecology, and the environmental sciences

Herbert Lee
Bayesian statistics, computer simulation experiments, spatial statistics, inverse problems, classification and clustering

Marc Mangel, Emeritus

Dongwook Lee
Computational magnetohydrodynamics and gas dynamics; computational mathematics for large-scale scientific computing on high-performance parallel architectures; numerical algorithms for finite-volume, high-order shock capturing methods; Newton-Krylov-type iterative implicit solvers for stiff nonlinear system; nonlinear numerical methods for astrophysics and high-energy-density physics applications

ASSOCIATE PROFESSOR

Marcella Gomez
Control and dynamical systems, partial differential equations, stochastic systems, systems biology, and delay systems. Particular applications include modeling, analysis, and design of bacterial networks involved in gene regulation, metabolic engineering, and spatial patterning

Rajarshi Guhaniyogi
Areal wombling, compressive methods for high dimensional regression, multi-linear modeling, manifold regression, nonparametric bayes, online learning with massive streaming data, spatial bayes modeling for massive geostatistical datasets, Bayesian tensor regression. applications in epidemiology, forestry, genomics, neuroscience and several other machine learning applications

Abhishek Halder
Systems, control, and optimization; dynamics and control of stochastic systems; uncertainty propagation and nonlinear estimation; Monge-Kantorovich optimal transport; randomized algorithms, density control; density control for aerial robotics and smart grid; cyberphysical systems; model validation, controller robustness verification; model reduction; data-driven modeling for control and machine learning

Ju Hee Lee
Bayesian statistics, bayesian nonparametrics, modeling in biosciences and clinical trials

ASSISTANT PROFESSOR

Daniele Venturi
Uncertainty Quantification (UQ) and computational probability, multi-fidelity stochastic modeling and data-driven stochastic multiscale mathematics, numerical
analysis and high-performance scientific computing, probability density function methods for forward and inverse UQ problems, Mori-Zwanzig approach to dimension reduction and uncertainty quantification, functional differential equations

ASSOCIATE ADJUNCT PROFESSOR

Robin Morris
Statistics and machine learning on massive datasets for recommendation systems, text and image classification, and web traffic analysis

ASSISTANT ADJUNCT PROFESSOR

Shawfeng Dong
High-performance computing and distributed computing, machine learning and deep learning, cyberinfrastructure and cybersecurity

CONTINUING LECTURER

Yonatan Katznelson
Number theory
Bruno Mendes
Parameter and model uncertainty in geophysics and groundwater contamination modeling, Bayesian statistics, parallel computation

Douglas Bonett (Psychology)
Psychometrics and statistics

Gabriel Elkaim (Computer Engineering)
Embedded systems; robust software architectures for real-time reactive systems; sensor fusion; guidance, navigation, and control (GNC) system identification; robust and advanced control schemes; feedback control systems; robotics; unmanned autonomous vehicles (UAVs); and cooperative control

Andrew T. Fisher (Earth Sciences)
Hydrogeology, crustal studies, coupled flows, modeling

Lise Getoor (Computer Science)
Machine learning, reasoning under uncertainty, analysis of graphs and networks, artificial intelligence, databases, information integration, visual analytics, data science

Gary A. Glatzmaier, Emeritus (Earth Sciences)
David Haussler (Biomolecular Engineering)
Bioinformatics, genomics, computational genomic data analysis, molecular evolution and comparative genomics, genomic and clinical data sharing and standards, cancer genomics, neurodevelopment, stem cell research, immunogenomics, information theory, pattern recognition, machine learning, artificial intelligence, information theory, theoretical computer science

David P. Helmbold (Computer Science)
Machine learning, computational learning theory, analysis of algorithms

Roberto Manduchi (Computer Engineering)
Computer vision and sensor processing, with application to assistive technology for the visually impaired, mobile and pervasive computing

Richard Montgomery (Mathematics)
Celestial mechanics, differential geometry, gauge theory, mechanics (quantum and classical), and control theory

Katia Obraczka (Computer Engineering)
Computer networks, distributed systems, operating systems, Internet information systems, mobile computing, wireless networks

Hamid Sadjadpour (Electrical Engineering)
Wireless communication systems, network information theory and scaling laws, performance analysis of wireless ad hoc and sensor networks, routing and MAC protocol design for wireless networks

Manfred Warmuth (Computer Science)
Online learning, machine learning, statistical decision theory, game theory, analysis of algorithms

A. Peter Young, Emeritus (Physics)

Yi Zhang (Technology Management)
Large-scale information retrieval, recommendation systems, Internet advertising, data mining, natural language processing, and applied machine learning

APPLIED MATHEMATICS AND STATISTICS COURSES

LOWER-DIVISION COURSES

Introduces mathematical functions and their uses for modeling real-life problems in the social sciences. Includes inequalities, linear and quadratic equations, functions (linear, quadratic, polynomial, rational, power, exponential, logarithmic, trigonometric), inverses, and the composition of functions. Students cannot receive credit for both this course and Mathematics 3. Mathematics 3 can substitute for this course. (Formerly Precalculus for Science and Engineering.) Prerequisite(s): score of 200 or higher on the mathematics placement examination (MPE), or Mathematics 2. (General Education Code(s): MF.)
The Staff, P. Garaud, B. Mendes

5. Statistics.
Introduction to statistical methods/reasoning, including descriptive methods, data-gathering (experimental design and sample surveys), probability, interval estimation, significance tests, one- and two-sample problems, categorical data analysis, correlation and regression. Emphasis on applications to the natural and social sciences. Students cannot receive credit for this course if they have already received credit for course 7. (General Education Code(s): SR.)
H. Lee, A. Kottas, B. Sanso, R. Morris, J. Katznelson, D. Draper, A. Rodriguez, B. Mendes
Applied Mathematics and Statistics

6. Precalculus for Statistics. *  
Reviews and introduces mathematical methods useful in the elementary study of statistics, including logic, real numbers, inequalities, linear and quadratic equations, functions, graphs, exponential and logarithmic functions, and summation notation. (Formerly course 2, Pre-Statistics.) Prerequisite(s): Mathematics 2 or mathematics placement examination (MPE) score of 200 or higher. (General Education Code(s): MF.) B. Mendes, The Staff

7. Statistical Methods for the Biological, Environmental, and Health Sciences. F,W,S  
Case-study-based introduction to statistical methods as practiced in the biological, environmental, and health sciences. Descriptive methods, experimental design, probability, interval estimation, hypothesis testing, one- and two-sample problems, power and sample size calculations, simple correlation and simple linear regression, one-way analysis of variance, categorical data analysis. Prerequisite(s): score of 300 or higher on the mathematics placement examination (MPE), or course 2 or 3 or 6 or 11A or 15A or Mathematics 3 or 11A or 19A. Concurrent enrollment in course 7L is required. (General Education Code(s): SR.) The Staff, H. Lee, R. Prado, R. Guhaniyogi, A. Rodriguez, J. Lee, D. Draper

Applications-oriented course on complex numbers and linear algebra integrating Matlab as a computational support tool. Introduction to complex algebra. Vectors, bases and transformations, matrix algebra, solutions of linear systems, inverses and determinants, eigenvalues and eigenvectors, and geometric transformations. Students cannot receive credit for this course and for courses 10A or Mathematics 21. Prerequisite(s): score of 400 or higher on the mathematics placement examination (MPE) or Mathematics 3. (General Education Code(s): MF.) The Staff, H. Wang, B. Mendes, M. Gomez, N. Brummell, Q. Gong, D. Venturi, J. Katznelson

11A. Mathematical Methods for Economists I. F,W,S  
Introduction to mathematical tools and reasoning, with applications to economics. Topics are drawn from differential calculus in one variable and include limits, continuity, differentiation, elasticity, Taylor polynomials, and optimization. Students cannot receive credit for both this course and Mathematics 11A or 19A or Applied Mathematics and Statistics 15A. (Also offered as Applied Mathematics and Statistics 11A. Students cannot receive credit for both courses.) (Also offered as Economics 11A. Students cannot receive credit for both courses.) Students who have already taken Mathematics 11A or 19A should not take this course. Prerequisite(s): score of 300 or higher on the mathematics placement examination (MPE), Applied Math and Statistics 2, 3, or 6, or Mathematics 3. (General Education Code(s): MF.) The Staff, J. Katznelson, B. Mendes

11B. Mathematical Methods for Economists II. F,W,S  
Mathematical tools and reasoning, with applications to economics. Topics are drawn from multivariable differential calculus and single variable integral calculus, and include partial derivatives, linear and quadratic approximation, optimization with and without constraints, Lagrange multipliers, definite and indefinite integrals, and elementary differential equations. Students cannot receive credit for both this course and Mathematics 11B or 19B or Applied Math and Statistics 15B. (Also offered as Economics 11B. Students cannot receive credit for both courses.) Prerequisite(s): course 11A, Economics 11A, Mathematics 11A, or Mathematics 19A. (General Education Code(s): MF.) The Staff, J. Katznelson, B. Mendes, H. Wang

15A. Case-Study Calculus I. *  
Case-study-based, first-quarter introduction to single-variable calculus, with computing labs/discussion sections featuring contemporary symbolic, numerical, and graphical computing tools. Case studies drawn from biology, environmental sciences, health sciences, and psychology. Includes functions, mathematical modeling, limits, continuity, tangents, velocity, derivatives, the chain rule, implicit differentiation, higher derivatives, exponential and logarithmic functions and their derivatives, differentiating inverse functions, the mean value theorem, concavity, inflection points, function optimization, and curve-sketching. Students cannot receive credit for this course and course 11A or Economics 11A or Mathematics 11A or 19A. Prerequisite(s): course 3 or Mathematics 3 or score of 300 or higher on the mathematics placement examination (MPE) or by permission of instructor. (General Education Code(s): MF.) The Staff, P. Garaud, B. Mendes

15B. Case-Study Calculus II. *  
Case-study based, second-quarter introduction to single-variable calculus, with computing labs/discussion sections featuring symbolic numerical, and graphical computing tools. Case studies are drawn from biology, environmental science, health science, and psychology. Includes indefinite and definite integrals of functions of a
single variable; the fundamental theorem of calculus; integration by parts and other techniques for evaluating integrals; infinite series; Taylor series, polynomial approximations. Students cannot receive credit for this course and course 11B or Economics 11B or Mathematics 11B of 19B. Prerequisite(s): course 15A or 11A or Economics 11A or Mathematics 11A or 19A. (General Education Code(s): MF) The Staff, P. Garaud, B. Mendes

20. Mathematical Methods for Engineers II. W,S
Applications-oriented class on ordinary differential equations (ODEs) and systems of ODEs using Matlab as a computational support tool. Covers linear ODEs and systems of linear ODEs; nonlinear ODEs using substitution and Laplace transforms; phase-plane analysis; introduction to numerical methods. Students cannot receive credit for this course and for courses 20A or Mathematics 24. Prerequisite(s): Mathematics 19B, and course 10 or 10A or Mathematics 21. (General Education Code(s): MF) The Staff, J. Katzenelson, A. Halder, D. Lee, Q. Gong

80A. Gambling and Gaming. F,S
Games of chance and strategy motivated early developments in probability, statistics, and decision theory. Course uses popular games to introduce students to these concepts, which underpin recent scientific developments in economics, genetics, ecology, and physics. (General Education Code(s): SR) H. Lee, A. Kottas, B. Mendes, A. Rodriguez, R. Guhaniyogi, (F) The Staff

80B. Data Visualization. W
Introduces the use of complex-data graphical representations to extract information from data. Topics include: summary statistics, boxplots, histograms, dotplots, scatterplots, bubble plots, and map-creation, as well as visualization of trees and hierarchies, networks and graphs, and text. (General Education Code(s): SR) A. Rodriguez, The Staff

100. Mathematical Methods for Engineers III.*
Applications-oriented course on complex analysis and partial differential equations using Maple as symbolic math software support. In addition, introduces Fourier analysis, special functions, and asymptotic methods. Students cannot receive credit for this course and course 215. Prerequisite(s): course 131, a university-level course in biology, and operational knowledge of a programming language; or consent of instructor. The Staff

107. Introduction to Fluid Dynamics. F
Covers fundamental topics in fluid dynamics: Euler and Lagrange descriptions of continuum dynamics; conservation laws for inviscid and viscous flows; potential flows; exact solutions of the Navier-Stokes equation; boundary layer theory; gravity waves. Students cannot receive credit for this course and Applied Mathematics and Statistics 217. (Also offered as Physics 107. Students cannot receive credit for both courses.) Prerequisite(s): Mathematics 107 or Physics 116B or Physics 116C. Prerequisite(s): course 20, or by permission of instructor. Enrollment limited to 25. The Staff

114. Introduction to Dynamical Systems. F
Introduces continuous and discrete dynamical systems. Topics include: fixed points; stability; limit cycles; bifurcations; transition to and characterization of chaos; fractals. Examples are drawn from sciences and engineering. Students cannot receive credit for this course and course 214. (Formerly course 146.) Prerequisite(s): course 20 or 20A, or Mathematics 21 and Mathematics 24, or Physics 116B. Enrollment is restricted to sophomores, juniors and seniors. (General Education Code(s): MF) P. Garaud, D. Venturi, D. Milutinovic, Q. Gong

115. Stochastic Modeling in Biology.*
Application of differential equations, probability, and stochastic processes to problems in cell, organismal, and population biology. Topics include life-history theory, behavioral ecology, and population biology. Students may not receive credit for this course and course 215. Prerequisite(s): course 131, a university-level course in biology, and operational knowledge of a programming language; or consent of instructor. The Staff

129. Foundations of Scientific Computing for Scientists and Engineers. F
Covers fundamental aspects of scientific computing for research. Students are introduced to algorithmic development, programming (including the use of compilers, libraries, debugging, optimization, code publication), computational infrastructure, and data analysis tools, gaining hands-on experience through practical assignments. Basic programming experience is assumed. D. Lee, The Staff

131. Introduction to Probability Theory. F,W,S
Introduction to probability theory and its applications. Combinatorial analysis, axioms of probability and independence, random variables (discrete and continuous), joint probability distributions, properties of expectation, Central Limit Theorem, Law of Large Numbers, Markov chains. Students cannot receive credit for this course and course 203 and Computer Engineering 107. Prerequisite(s): course 11B or Economics 11B or Mathematics 11B or 19B or 20B. (General Education Code(s): SR) The Staff, R. Prado, A. Kottas, J. Lee, J. Katzenelson, D. Draper, B. Sanso

132. Classical and Bayesian Inference. W
Introduction to statistical inference at a calculus-based level: maximum likelihood estimation, sufficient statistics, distributions of estimators, confidence intervals, hypothesis testing, and Bayesian inference. Students cannot receive credit for this course and course 206. (Formerly Statistical Inference.) Prerequisite(s): course 131 or Computer Engineering 107. (General Education Code(s): SR)
Students submit petition to sponsoring agency. May be repeated for credit. The Staff

198F. Independent Study or Research (2 credits). F,W,S
Students submit petition to sponsoring agency. May be repeated for credit. The Staff

GRADUATE COURSES

200. Research and Teaching in AMS (3 credits). F
Basic teaching techniques for teaching assistants, including responsibilities and rights; resource materials; computer skills; leading discussions or lab sessions; presentation techniques; maintaining class records; and grading. Examines research and professional training, including use of library; technical writing; giving talks in seminars and conferences; and ethical issues in science and engineering. Enrollment is restricted to graduate students. The Staff, P. Garaud, A. Kottas

202. Linear Models in SAS. *
Case study-based course teaches statistical linear modeling using the SAS software package. Teaches generalized linear models; linear regression; analysis of variance/covariance; analysis of data with random effects and repeated measures. Prerequisite(s): course 156 or 256, or permission of instructor. Enrollment is restricted to graduate students. B. Mendes, The Staff

203. Introduction to Probability Theory. F
Introduces probability theory and its applications. Requires a multivariate calculus background, but has no measure theoretic content. Topics include: combinatorial analysis; axioms of probability; random variables (discrete and continuous); joint probability distributions; expectation and higher moments; central limit theorem; law of large numbers; and Markov chains. Students cannot receive credit for this course and course 131 or Computer Engineering 107. Enrollment is restricted to graduate students, or by permission of the instructor. The Staff, R. Prado, J. Lee, B. Sanso, A. Kottas

204. Introduction to Statistical Data Analysis. F
Presents tools for exploratory data analysis (EDA) and statistical modeling in R. Topics include numerical and graphical tools for EDA, linear and logistic regression, ANOVA, PCA, and tools for acquiring and storing large data. No R knowledge is required. Enrollment is restricted to graduate students. Enrollment limited to 30. A. Rodriguez, R. Prado

205B. Intermediate Classical Inference. W
Statistical inference from a frequentist point of view. Properties of random samples; convergence concepts applied to point estimators; principles of statistical inference; obtaining and evaluating point estimators with particular attention to maximum likelihood estimates and their properties; obtaining and evaluating interval estimators; and hypothesis testing methods and their properties. (Formerly Statistical Inference.) Prerequisite(s): course 203 or equivalent. Enrollment is restricted to graduate students. The Staff, R. Guhaniyogi, D. Draper, B. Sanso

206. Applied Bayesian Statistics. W
Introduces Bayesian statistical modeling from a practitioner’s perspective. Covers basic concepts (e.g., prior-posterior updating, Bayes factors, conjugacy, hierarchical modeling, shrinkage, etc.), computational tools (Markov chain Monte Carlo, Laplace approximations), and Bayesian inference for some specific models widely used in the literature (linear and generalized linear mixed models). (Formerly Classical and Bayesian Inference.) Prerequisite(s): course 131 or 203, or by permission of the instructor. Enrollment is restricted to graduate students. R. Prado, A. Kottas, D. Draper, A. Rodriguez, (F) The Staff

206B. Intermediate Bayesian Inference. W
Bayesian statistical methods for inference and prediction including: estimation; model selection and...
prediction; exchangeability; prior, likelihood, posterior, and predictive distributions; coherence and calibration; conjugate analysis; Markov Chain Monte Carlo methods for simulation-based computation; hierarchical modeling: Bayesian model diagnostics, model selection, and sensitivity analysis. 

Prerequisite(s): course 203. Enrollment is restricted to graduate students; undergraduates may enroll by permission of the instructor. The Staff, J. Lee, A. Rodriguez, R. Prado

207. Intermediate Bayesian Statistical Modeling. S Hierarchical modeling, linear models (regression and analysis of variance) from the Bayesian point of view, intermediate Markov chain Monte Carlo methods, generalized linear models, multivariate models, mixture models, hidden Markov models. Prerequisite(s): courses 206 or 206B; enrollment is restricted to graduate students or by permission of instructor. The Staff, D. Draper, B. Sanso, R. Prado

211. Foundations of Applied Mathematics. F Accelerated class reviewing fundamental applied mathematical methods for all sciences. Topics include: multivariate calculus, linear algebra, Fourier series and integral transform methods, complex analysis, and ordinary differential equations. Enrollment is restricted to graduate students. The Staff, N. Brummell, J. Katznelson, H. Wang

212A. Applied Mathematical Methods I. W Focuses on analytical methods for partial differential equations (PDEs), including: the method of characteristics for first-order PDEs; canonical forms of linear second-order PDEs; separation of variables; Sturm-Liouville theory; Green's functions. Illustrates each method using applications taken from examples in physics. Course 211 or equivalent is strongly recommended as preparation. Enrollment is restricted to graduate students; undergraduates are encouraged to take this class with permission of instructor. The Staff, H. Wang, M. Gomez, N. Brummell, P.

Garaud

212B. Applied Mathematical Methods II. * Covers perturbation methods: asymptotic series, stationary phase and expansion of integrals, matched asymptotic expansions, multiple scales and the WKB method, Padé approximants and improvements of series. Prerequisite(s): course 212A. The Staff, N. Brummell, P. Garaud, H. Wang

213A. Numerical Linear Algebra. W Focuses on numerical solutions to classic problems of linear algebra. Topics include: LU, Cholesky, and QR factorizations; iterative methods for linear equations; least square, power methods, and QR algorithms for eigenvalue problems; and conditioning and stability of numerical algorithms. Provides hands-on experience in implementing numerical algorithms for solving engineering and scientific problems. Basic knowledge of mathematical linear algebra is assumed. Enrollment is restricted to graduate students. The Staff, D. Lee, Q. Gong, P. Garaud

213B. Numerical Methods for the Solution of Differential Equations. S Introduces the numerical solutions of ordinary and partial differential equations (ODEs and PDEs). Focuses on the derivation of discrete solution methods for a variety of differential equations, and their stability and convergence. Also provides hands-on experience in implementing such numerical algorithms for the solution of engineering and scientific problems using MATLAB software. The class consists of lectures and hands-on programming sections. Basic mathematical knowledge of ODEs and PDEs is assumed, and a basic working knowledge of programming in MATLAB is expected. Enrollment is restricted to graduate students. The Staff, D. Lee, H. Wang

214. Applied Dynamical Systems. F Introduces continuous and discrete dynamical systems. Topics include: fixed points; stability; limit cycles; bifurcations; transition to and characterization of chaos; and fractals. Examples drawn from sciences and engineering; founding papers of the subject are studied. Students cannot receive credit for this course and course 114. Enrollment is restricted to graduate students; undergraduates may enroll by permission of instructor. Enrollment limited to 15. The Staff, P. Garaud, D. Venturi, D. Milutinovic, Q. Gong

215. Stochastic Modeling in Biology. S Application of differential equations and probability and stochastic processes to problems in cell, organismal, and population biology. Topics include: life-history theory, behavioral ecology, and population biology. Students may not receive credit for this course and course 115. Enrollment is restricted to graduate students; undergraduates may enroll by permission of the instructor. M. Gomez, The Staff

216. Stochastic Differential Equations. * Introduction to stochastic differential equations and diffusion processes with applications to biology, biomolecular engineering, and chemical kinetics. Topics include Brownian motion and white noise, gambler's ruin, backward and forward equations, and the theory of boundary conditions. Enrollment is restricted to graduate students; undergraduates may enroll by permission of the instructor. H. Wang, The Staff

217. Introduction to Fluid Dynamics. F Covers fundamental topics in fluid dynamics at the graduate level: Euler and Lagrange descriptions of continuum dynamics; conservation laws for inviscid and viscous flows; potential flows; exact solutions of the Navier-Stokes equation; boundary layer theory; gravity waves. Students cannot receive credit for this course and course 107. Enrollment is restricted to graduate students; undergraduates may enroll by permission of the instructor. N. Brummell, The Staff
221. Bayesian Decision Theory. W
Explores conceptual and theoretical bases of statistical decision making under uncertainty. Focuses on axiomatic foundations of expected utility, elicitation of subjective probabilities and utilities, and the value of information and modern computational methods for decision problems. Prerequisite(s): course 206. Enrollment is restricted to graduate students. D. Draper, B. Sanso

223. Time Series Analysis. *
Graduate level introductory course on time series data and models in the time and frequency domains: descriptive time series methods; the periodogram; basic theory of stationary processes; linear filters; spectral analysis; time series analysis for repeated measurements; ARIMA models; introduction to Bayesian spectral analysis; Bayesian learning, forecasting, and smoothing; introduction to Bayesian Dynamic Linear Models (DLMs); DLM mathematical structure; DLMs for trends and seasonal patterns; and autoregression and time series regression models. Prerequisite(s): course 206B, or by permission of instructor. Enrollment is restricted to graduate students. R. Prado

225. Multivariate Statistical Methods. *
Introduction to statistical methods for analyzing data sets in which two or more variables play the role of outcome or response. Descriptive methods for multivariate data. Matrix algebra and random vectors. The multivariate normal distribution. Likelihood and Bayesian inferences about multivariate mean vectors. Analysis of covariance structure: principle components, factor analysis. Discriminant, classification and cluster analysis. Prerequisite(s): course 206 or 206B, or by permission of instructor. Enrollment is restricted to graduate students. The Staff, J. Lee, D. Draper

227. Waves and Instabilities in Fluids. *
Advanced fluid dynamics course introducing various types of small-amplitude waves and instabilities that commonly arise in geophysical and astrophysical systems. Topics covered include, but are not limited to: pressure waves, gravity waves, Rossby waves, interfacial instabilities, double-diffusive instabilities, and centrifugal instabilities. Advanced mathematical methods are used to study each topic. Undergraduates are encouraged to take this course with permission of the instructor. Prerequisite(s): courses 212A and 217. P. Garraud

229. Convex Optimization. F
Focuses on recognizing, formulating, analyzing, and solving convex optimization problems encountered across science and engineering. Topics include: convex sets; convex functions; convex optimization problems; duality; subgradient calculus; algorithms for smooth and non-smooth convex optimization; applications to signal and image processing, machine learning, statistics, control, robotics and economics. Students are required to have knowledge of calculus and linear algebra, and exposure to probability. Enrollment is restricted to graduate students. A. Halder

230. Numerical Optimization. W
Introduces numerical optimization tools widely used in engineering science, and economics. Topics include: line-search and trust-region methods for unconstrained optimization, fundamental theory of constrained optimization, simplex and interior-point methods for linear programming, and computational algorithms for nonlinear programming. Basic knowledge of linear algebra is assumed. Enrollment is restricted to graduate students. Q. Gong

232. Applied Optimal Control. S
Introduces optimal control theory and computational optimal control algorithms. Topics include: calculus of variations, minimum principle, dynamic programming, HJB equation, linear-quadratic regulator, direct and indirect computational methods, and engineering application of optimal control. Prerequisite(s): course 114 or 214, or Computer Engineering 240 or 241, or Mathematics 145. Enrollment is restricted to graduate students. A. Halder, Q. Gong

236. Motion Coordination of Robotic Networks. *
Comprehensive introduction to motion coordination algorithms for robotic networks. Emphasis on mathematical tools to model, analyze, and design cooperative strategies for control, robotics, and sensing tasks. Topics include: continuous and discrete-time evolution models, proximity graphs, performance measures, invariance principles, and coordination algorithms for rendezvous, deployment, flocking, and consensus. Techniques and methodologies are introduced through application setups from multi-agent robotic systems, cooperative control, and mobile sensor networks. Enrollment is restricted to graduate students. Enrollment limited to 15. The Staff

238. Fundamentals of Uncertainty Quantification in Computational Science and Engineering. W
Computing the statistical properties of nonlinear random system is of fundamental importance in many areas of science and engineering. Introduces students to state-of-the-art methods for uncertainty propagation and quantification in model-based computations, focusing on the computational and algorithmic features of these methods most useful in dealing with
systems specified in terms of stochastic ordinary and partial differential equations. Topics include: polynomial chaos methods (gPC and MÉ-gPC), probabilistic collocation methods (PCM and ME-PCM), Monte-Carlo methods (MC, quasi-MC, multi-level MC), sparse grids (SG), probability density function methods, and techniques for dimensional reduction. Basic knowledge of probability theory and elementary numerical methods for ODEs and PDEs is recommended. Prerequisite(s): course 203 or equivalent, and course 213B or equivalent. Enrollment is restricted to graduate students. D. Venturi

241. Bayesian Nonparametric Methods. *

245. Spatial Statistics S
Introduction to the analysis of spatial data: theory of correlation structures and variograms; kriging and Gaussian processes; Markov random fields; fitting models to data; computational techniques; frequentist and Bayesian approaches. Prerequisite(s): course 207. Enrollment is restricted to graduate students. B. Sanso, H. Lee

250. An Introduction to High Performance Computing S
Designed for STEM students and others. Through hands-on practice, this course introduces high-performance parallel computing, including the concepts of multiprocessor machines and parallel computation, and the hardware and software tools associated with them. Students become familiar with parallel concepts and the use of MPI and OpenMP together with some insight into the use of heterogeneous architectures (CPU, CUDA, OpenCL), and some case-study problems. Enrollment is restricted to graduate students; undergraduates may enroll by permission of the instructor. The Staff, D. Lee, N. Brummell, S. Dong

256. Linear Statistical Models S
Theory, methods, and applications of linear statistical models. Review of simple correlation and simple linear regression. Multiple and partial correlation and multiple linear regression. Analysis of variance and covariance. Linear model diagnostics and model selection. Case studies drawn from natural, social, and medical sciences. Course 205 strongly recommended as a prerequisite. Undergraduates are encouraged to take this class with permission of instructor. Prerequisite(s): course 205A or 205B or permission of instructor. Enrollment is restricted to graduate students. The Staff, R. Prado, R. Guhaniyogi, A. Rodriguez, J. Lee, B. Sanso

260. Computational Fluid Dynamics W
Introduces modern computational approaches to solving the differential equations that arise in fluid dynamics, particularly for problems involving discontinuities and shock waves. Examines the fundamentals of the mathematical foundations and computation methods to obtain solutions. Focuses on writing practical numerical codes and analyzing their results for a full understanding of fluid phenomena. Prerequisite(s): Basic knowledge of computer programming languages is assumed. Enrollment is restricted to graduate students. The Staff, D. Lee, N. Brummell

261. Probability Theory with Markov Chains. *
Introduction to probability theory: probability spaces, expectation as Lebesgue integral, characteristic functions, modes of convergence, conditional probability and expectation, discrete-state Markov chains, stationary distributions, limit theorems, ergodic theorem, continuous-state Markov chains, applications to Markov chain Monte Carlo methods. Prerequisite(s): course 205B or by permission of instructor. Enrollment is restricted to graduate students. A. Kottas

263. Stochastic Processes F
Includes probabilistic and statistical analysis of random processes, continuous-time Markov chains, hidden Markov models, point processes, Markov random fields, spatial and spatio-temporal processes, and statistical modeling and inference in stochastic processes. Applications to a variety of fields. Prerequisite(s): course 205A, 205B, or 261, or by permission of instructor. The Staff, R. Guhaniyogi, A. Rodriguez, A. Kottas

266A. Data Visualization and Statistical Programming in R (3 credits). F
Introduces students to data visualization and statistical programming techniques using the R language. Covers the basics of the language, descriptive statistics, visual analytics, and applied linear regression. Enrollment is by permission of the instructor. (Also offered as Computer Science 266A. Students cannot receive credit for both courses.) Enrollment limited to 30. The Staff, A. Rodriguez, S. Lodha

266B. Advanced Statistical Programming in R (3 credits). *
Teaches students already familiar with the R language advanced tools such as interactive graphics, interfacing with low-level languages, package construction, debugging, profiling, and parallel computation. (Also offered as Computer Science 266B. Students cannot receive credit for both courses.) Prerequisite(s): Applied Mathematics and Statistics 266A or Computer Science 266A. Enrollment limited to 30. A. Rodriguez, S. Lodha

266C. Introduction to Data Wrangling (3 credits). *
Introduces students to concepts and tools associated with data collection, curation, manipulation, and cleaning including an introduction to relational databases and SQL, regular expressions, API usage, and web scraping using
268. Advanced Bayesian Computation. *
Teaches some advanced techniques in Bayesian Computation. Topics include Hamiltonian Monte Carlo; slice sampling; sequential Monte Carlo; assumed density filtering; expectation propagation; stochastic gradient descent; approximate Markov chain Monte Carlo; variational inference; and stochastic variational inference. Prerequisite(s): course 207, or by permission of the instructor. Enrollment is restricted to graduate students; undergraduates may enroll by permission of the instructor. R. Guhaniyogi

274. Generalized Linear Models. F
Theory, methods, and applications of generalized linear statistical models; review of linear models; binomial models for binary responses (including logistical regression and probit models); log-linear models for categorical data analysis; and Poisson models for count data. Case studies drawn from social, engineering, and life sciences. Prerequisite(s): course 205A, 205B, or 256. Enrollment is restricted to graduate students. A. Kottas, The Staff

275. Magnetohydrodynamics. *
Studies the interaction of fluid motion and magnetic fields in electrically conducting fluids, with applications in many natural and man-made flows ranging from, for example, planetary physics and astrophysics to industrial metallurgic engineering. (Also offered as Earth Sciences 275. Students cannot receive credit for both courses.) Prerequisite(s): course 107 or 217. Course 227 suggested. Enrollment is restricted to graduate students. N. Brummell, P. Garaud

276. Bayesian Survival Analysis and Clinical Design. S
Introduction to Bayesian statistical methods for survival analysis and clinical trial design: parametric and semiparametric models for survival data, frailty models, cure rate models, the design of clinical studies in phase I/II/III. Prerequisite(s): course 207 or by permission of instructor. Enrollment is restricted to graduate students. J. Lee

280A. Seminar in Mathematical and Computational Biology (2 credits). *
Weekly seminar on mathematical and computational biology. Participants present research findings in organized and critical fashion, framed in context of current literature. Students present own research on a regular basis. Enrollment is restricted to graduate students. Enrollment limited to 20. May be repeated for credit. The Staff

Weekly seminar series covering topics of current research in applied mathematics and statistics. Permission of instructor required. Enrollment is restricted to graduate students. (Formerly Seminar in Applied Mathematics and Statistics.) May be repeated for credit. The Staff

280C. Seminar in Geophysical and Astrophysical Fluid Dynamics (2 credits). F,W,S
Weekly seminar/discussion group on geophysical and astrophysical fluid dynamics covering both analytical and computational approaches. Participants present research progress and findings in semiformal discussions. Students must present their own research on a regular basis. Enrollment is restricted to graduate students; undergraduates may enroll by permission of the instructor. May be repeated for credit. The Staff, D. Lee, N. Brummell, P. Garaud

280D. Seminar in Bayesian Statistical Methodology (2 credits). *
Weekly seminar/discussion group on Bayesian statistical methods, covering both analytical and computational approaches. Participants present research progress and finding in semiformal discussions. Students must present their own research on a regular basis. Enrollment is restricted to graduate students. May be repeated for credit. The Staff

285. Seminar in Career Skills (2 credits). *
Seminar in career skills for applied mathematicians and statisticians. Learn about professional activities such as the publication process, grant proposals, and the job market. Enrollment is restricted to graduate students, typically within two years of their expected Ph.D. completion date. H. Lee, (F) The Staff

290A. Topics in Mathematical and Computational Biology (2 credits). *
Focuses on applications of mathematical and computational methods with particular emphasis on advanced methods applying to organismal biology or resource management. Students read current literature, prepare critiques, and conduct projects. Enrollment is restricted to graduate students. Enrollment limited to 20. May be repeated for credit. The Staff

290B. Advanced Topics in the Numerical Solution of PDEs. *
Modern practical methods for the numerical solution of partial differential equations. Methods considered depend on the expertise of the instructor, but are covered in-depth and up to the cutting-edge of practical contemporary implementation. Content could be method-based (e.g., spectral methods, finite-element methods) or topic-based (e.g., simulations of turbulence). Some programming and numerical analysis (e.g., course 213) highly recommended. Enrollment is restricted to graduate students; undergraduates may enroll by permission of the instructor. The Staff, N. Brummell, P. Garaud, H. Wang

291. Advanced Topics in Bayesian Statistics (3 credits). *
Advanced study of research topics in the theory, methods, or applications of Bayesian statistics. The specific subject depends on the
instructor. Enrollment is restricted to graduate students and by permission of instructor. May be repeated for credit. *The Staff*

**296. Masters Project (2 credits). F, W, S**
Independent completion of a masters project under faculty supervision. Students submit petition to sponsoring agency. Enrollment is restricted to graduate students. May be repeated for credit. *The Staff*

**297. Independent Study or Research (2 credits). F, W, S**
Independent study or research under faculty supervision. Students submit petition to sponsoring agency. Enrollment is restricted to graduate students. *The Staff*

**297F. Independent Study (2 credits). F, W, S**
Independent study or research under faculty supervision. Students submit petition to sponsoring agency. Enrollment is restricted to graduate students. May be repeated for credit. *The Staff*

Thesis research under faculty supervision. Students submit petition to sponsoring agency. Enrollment is restricted to graduate students. *The Staff*

* Not offered in 2018-19

Revised: 07/15/18
 PROGRAM DESCRIPTION

The two concentrations of the UC Santa Cruz Bachelor of Science (B.S.) degree in bioengineering prepare graduates for productive employment in industry or further education in graduate school. Each concentration is based on different essential underlying science and share an emphasis on teaching engineering design using that basis in science. A related major, the Bachelor of Science (B.S.) in biomolecular engineering and bioinformatics (BMEB), is described elsewhere in this catalog.

The bioelectronics concentration is designed for students interested in the interface between organisms and electronic instrumentation or implants. The emphasis is on the interfacing of biological sensors to computer systems, and the underlying sciences are physics and chemistry.

The assistive technology: motor concentration is designed for students interested in helping people with movement disabilities. The emphasis is on designing exoskeletons and robots, and the underlying sciences are physics and anatomy.

In both concentrations, students participate in a capstone design experience: a two- or three-quarter group project intended to prepare students for work in industry, a summer full-time synthetic biology project based on the iGEM competition, or a three-quarter senior thesis. All capstone options involve working closely with faculty and other researchers at UCSC, analyzing ideas, developing technologies, and discovering new approaches. Application areas include biomolecular sensors and systems, nano-electronic implants, assistive technologies for the elderly and disabled, microfluidics, nanoscale biotechnology, environmental monitoring, and other areas at the junction between engineering and the life sciences.

More information about bioengineering research and undergraduate research opportunities can be found at the undergraduate research opportunities website, the bioengineering website, the Genomics Institute website, the STEM maximizing access to research careers (MARC) website, and the STEM diversity programs website.

The program is sponsored by the Departments of Biomolecular Engineering, Computer Engineering, Electrical Engineering, and Molecular, Cell, and Developmental Biology, with additional participating faculty in the Departments of Applied Mathematics and Statistics, Chemistry and Biochemistry.

The program has course requirements in mathematics, science, and engineering. Students interested in bioengineering as a major should contact the School of Engineering advising office (advising@soe.ucsc.edu) before enrolling in any courses at UCSC. Early advising is particularly important before choosing calculus and physics courses.

Bioengineering students may continue their research and studies at UCSC in any of several graduate programs. Information may be found here.

 PROGRAM LEARNING OUTCOMES

A bioengineering student completing the program should:

- have a broad knowledge of science and engineering disciplines including biology, chemistry, physics, mathematics, statistics, and computer science;
- be able to apply their broad knowledge to identify, formulate, and solve engineering design problems;
- be able to find and use information from a variety of sources, including books, journal articles, online encyclopedias, and manufacturer data sheets;
- be able to design and conduct experiments, as well as to analyze and interpret data;
- be able to communicate problems, experiments, and design solutions in writing, orally, and as posters; and
- be able to apply ethical reasoning to make decisions about engineering methods and solutions in a global, economic, environmental, and societal context.

 COURSES FOR NONMAJORS

The following courses are recommended for nonmajors interested in bioengineering. Computer Engineering 80A, Universal Access: Disability, Technology, and Society; Biomolecular Engineering 80G, Bioethics in the 21st Century: Science, Business, and Society; and Biomolecular Engineering 5, Introduction to Biotechnology; BME 160, Research Programming in the Life Sciences; and BME 163, Applied Visualization and Analysis of Scientific Data. Students are also advised to consult the program discussions of the collaborating departments for additional possibilities related to bioengineering.

 DECLARATION OF THE MAJOR

The program is sponsored by the Departments of Biomolecular Engineering, Computer Engineering, Electrical Engineering, and Molecular, Cell, and Developmental Biology, with additional participating faculty in the Departments of Applied Mathematics and Statistics, Chemistry and Biochemistry.

The program has course requirements in mathematics, science, and engineering. Students interested in bioengineering as a major should contact the School of Engineering advising office (advising@soe.ucsc.edu) before enrolling in any courses at UCSC. Early advising is particularly important before choosing calculus and physics courses.

Bioengineering students may continue their research and studies at UCSC in any of several graduate programs. Information may be found here.
In order to be admitted into the bioengineering major students must be listed as a proposed major within the School of Engineering. Please refer to the School of Engineering section under “Proposed Engineering Major Status” for more information.

In addition to being listed as a proposed major, to be admitted to bioengineering students must have completed at least 50 credits with a GPA of 2.8 or better in all attempts from the following courses: Applied Mathematics and Statistics (AMS) 10, AMS 20, Molecular, Cell, and Developmental Biology (BIOL) 20A, Ecology and Evolutionary Biology (BIOE) 20B, BME 80G, Chemistry and Biochemistry (CHEM) 1A, CHEM 1B/M, CHEM 1C/N, Computer Engineering (CMPE) 9, CMPE 12/L, CMPE 13/L, CMPE 80A, CMPE 100/L, Mathematics (MATH) 19A, MATH 19B, Physics (PHYS) 5A/L, PHYS 5B/M and PHYS 5C/N.

Students who want to declare after the sixth quarter are required to appeal, must be declared in another major, and have completed 10 more credits of courses required for the major for each additional quarter.

Appeals for major declaration may be filed with the Baskin School of Engineering Office of Undergraduate Affairs according to the procedures given in the Baskin School of Engineering Program Statement.

TRANSFER STUDENTS

Transfer students need to have completed eight transferable courses from the list used for admission for on-campus students, with a GPA in those courses of 2.8 or better. However, students are recommended to complete at least ten transferable courses prior to transfer, as they may otherwise have difficulty finishing in a timely fashion.

Students may satisfy the bioethics requirement if they have completed a suitable ethics course at their previous institution, even if the course does not articulate to BME 80G.

HONORS IN THE MAJOR

Bioengineering majors are considered for “Honors in the Major” and “Highest Honors in the Major” based on their GPA and on the results of undergraduate research. Students with a GPA of 3.7 receive “Highest Honors in the Major.” Students with a GPA of 3.3 receive “Honors in the Major.” Students with particularly significant accomplishments in undergraduate research may receive honors or highest honors with a lower GPA. Students who have been found guilty of academic misconduct are not eligible for either honors or highest honors.

LETTER GRADE POLICY

Please refer to the letter grade policy in the School of Engineering section.

BASKIN SCHOOL OF ENGINEERING POLICIES

Please refer to the School of Engineering section of the catalog for additional policies that apply to all Baskin School of Engineering programs.

MATERIALS FEE AND MISCELLANEOUS FEES

Please see the section on fees in the School of Engineering section.

MAJOR REQUIREMENTS

ADVISING AND ELECTIVE APPROVAL

Every major must have a bioengineering faculty adviser, assigned by the Baskin School of Engineering undergraduate advising office. With assistance from the adviser, students must formulate a program of proposed coursework that meets the major requirements.

OPTIONAL COURSES FOR MAJORS

CMPS 5P, Introduction to Programming in Python, is recommended for those students who have never done computer programming, before taking CMPS 12A, CMPE 12, or BME 160. Python is frequently used in bioengineering jobs, and starting in Python is easier than starting in Java. (The CMPS 5J+11 sequence is permitted, but not recommended for bioengineers.) Students considering the assistive technology: motor concentration or desiring an early introduction to the use of mathematics in engineering may wish to take Computer Engineering 8, Robot Automation, in their first quarter.

COURSES REQUIRED FOR BOTH CONCENTRATIONS (UPPER-DIVISION, 1)

CMPS 185, Technical Writing or Biomolecular Engineering 185, Technical Writing

CAPSTONE REQUIREMENT, BOTH CONCENTRATIONS, 3 COURSES

Computer Engineering 185, Technical Writing or Biomolecular Engineering 185, Technical Writing
Bioengineering

All bioengineering students complete a senior capstone project in bioengineering, either as a group project or as an individual senior thesis doing research in a faculty laboratory. (Satisfies the campus comprehensive requirement.)

Note that the technical writing requirement is a prerequisite for all the capstone options, including the senior thesis. The group project courses all have additional prerequisites that may not be met with just the required courses in a concentration. Students are responsible for ensuring that they meet the prerequisites for whichever capstone they choose.

CAPSTONE SEQUENCES

Biomolecular Engineering 123A-B, Bioengineering Project; or
Biomolecular Engineering 129A-C, Bioengineering Project; or
Computer Engineering 123A-B, Engineering Design Project I and II; or
Computer Engineering, or Electrical Engineering 129A-C, Capstone Project; (Note: Students may not have all prerequisite courses for 129A-C and will need either an additional course or permission of instructor to enroll); or
BME 180, Professional Practice in Bioengineering (2 credits), and BME 188A/B, Synthetic Biology—Mentored Research (10 credits); or
Twelve credits of independent study (198), Field Study (193), or senior thesis research (195), in biomolecular engineering, computer engineering, or electrical engineering; and Biomolecular Engineering 123T, Senior Thesis Presentation (2 credits).

Students pursuing the senior thesis option must seek approval of their project one year before graduation, typically spring quarter of the third year. Students spend three or more quarters working on their thesis projects. Thesis students must enroll in 123T, Senior Thesis Presentation, before completing their thesis.

ADDITIONAL REQUIRED COURSES FOR BIOELECTRONICS CONCENTRATION (16 COURSES)

Chemistry 1C/N, General Chemistry
Physics 5A/L, 5B/M, and 5C/N, Introduction to Physics I, II, and III
Applied Mathematics and Statistics 10, Mathematical Methods for Engineers I
Applied Mathematics and Statistics 20, Mathematical Methods for Engineers II
Applied Mathematics and Statistics 131, Introduction to Probability Theory
Applied Mathematics and Statistics 132, Classical and Bayesian Inference
Biomolecular Engineering 140, Bioinstrumentation or EE 104, Bio-electronics and Bio-instrumentations
Computer Engineering 12/L, Computer Systems and Assembly Language/Laboratory

Computer Engineering 13/L, Computer Systems and C Programming/Laboratory
Computer Engineering 100/L, Logic Design/Laboratory
Electrical Engineering 101/L, Introduction to Electronic Circuits/Laboratory
Electrical Engineering 103/L, Signals and Systems/Laboratory
And two upper-division or graduate courses from the approved list of electronics electives

ADDITIONAL REQUIRED COURSES FOR ASSISTIVE TECHNOLOGY: MOTOR CONCENTRATION (16 COURSES)

Computer Engineering 80A, Universal Access: Disability, Technology, and Society, or Computer Engineering 8, Robot Automation: Intelligence Through Feedback Control
Physics 5A/L and 5C/N, Introduction to Physics I/Laboratory and Physics III/Laboratory
Computer Engineering 9, Introduction to Statics, Solid Mechanics and Biomechanics
Applied Mathematics and Statistics 10, Mathematical Methods for Engineers I
Applied Mathematics and Statistics 20, Mathematical Methods for Engineers II
Applied Mathematics and Statistics 131, Introduction to Probability Theory
Applied Mathematics and Statistics 132, Classical and Bayesian Inference
Computer Engineering 12/L, Computer Systems and Assembly Language/Laboratory
Computer Engineering 13/L, Computer Systems and C Programming/Laboratory
Computer Engineering 100/L, Logic Design/Laboratory
Microbiology and Environmental Toxicology (METX) 135/L, Functional Anatomy/Laboratory
Computer Engineering 118/L, Introduction to Mechatronics/Laboratory
Electrical Engineering 101/L, Introduction to Mechatronics/Laboratory
Electrical Engineering 103/L, Signals and Systems/Laboratory
One course from the approved list of electronics electives.

DISCIPLINARY COMMUNICATION

The disciplinary communication requirement is satisfied by the technical writing course (CMPE 185 or BME 185) plus the capstone requirement, though oral presentation and writing are integrated throughout the upper-division coursework. The portfolio in the exit requirement is a verification of disciplinary communication in several different forms.

EXIT REQUIREMENT

Students are required to submit a portfolio, exit survey, and exit interview.
The portfolios must be turned in electronically as PDF files by the last day of the quarter of graduation, and will be reviewed quarterly by the undergraduate director. Portfolios must contain the following:

- A substantial written report on a design project. This is typically satisfied by a senior thesis, a written capstone project report, or a design report from the Applied Electronics for Bioengineers course.
- Slides from a substantial verbal presentation. This is typically satisfied by a capstone design presentation, Stem Cell Engineering, or other design courses.
- A research poster. This is typically satisfied by a senior thesis poster or a capstone design project poster, presented at the undergraduate poster symposium.

The three parts of the portfolio should represent at least two different design projects. If a senior thesis is completed, it must be provided as the written report. If a capstone project is completed, it must be provided as one (or more) of the three submissions.

Exit interviews are scheduled during the last week of the quarter by the Baskin School of Engineering (BSOE) advising office, generally as small group interviews.

**BIOENGINEERING MAJOR PLANNERS**

The following sample academic plans show possible courses of study for a bioengineering major. The first plan follows the bioelectronics concentration, and the second the assistive technology: motor concentration.

All plans assume that students are ready for calculus and advanced computer programming courses when they start. Those who need to take precalculus CMPS 5P or CMPS 5J may not be able to complete the entire program within four years.

Students should consider taking courses during the summer to ensure timely completion of the degree. Courses planned to be taken at institutions other than UCSC require pre-approval by the undergraduate director.

All students should meet quarterly with an adviser from the School of Engineering Undergraduate Advising Office to review their finished and planned courses, as schedules and prerequisites change frequently. Any electives should be chosen well ahead of time, to ensure that prerequisites can be scheduled.

Alan M. Zahler (Molecular, Cell, and Developmental Biology)
Molecular biology, splice site selection, and alternative pre-mRNA processing

Jin Z. Zhang (Chemistry and Biochemistry)
Design, synthesis, characterization, and application of nanomaterials, including semiconductor and metal nanoparticles; femtosecond laser spectroscopy; ultrafast dynamics on surfaces and at interfaces; cancer biomarker detection; surface-enhanced Raman spectroscopy

Yi Zuo (Molecular, Cell, and Developmental Biology)
Glia-synapse interaction and synaptic plasticity in vivo

Revised: 07/15/18
The Department of Biomolecular Engineering is an interdisciplinary department that combines expertise from biology, mathematics, chemistry, computer science, and engineering to train students and develop technologies to address major problems at the forefront of biomedical and bio-industrial research. Students trained in the Department of Biomolecular Engineering can look forward to careers in academia, the information and biotechnology industries, public health, or medical sciences.

The department offers an undergraduate minor and a bachelor of science (B.S.) degree in bioinformatics, and graduate master of science (M.S.) and doctor of philosophy (Ph.D.) degrees in biomolecular engineering and bioinformatics. The department co-sponsors the B.S. in bioengineering program, described elsewhere in this catalog, with the departments of Computer Engineering, Electrical Engineering, and Molecular, Cell, and Developmental (MCD) Biology. The department co-sponsors the Program in Biomedical Science and Engineering (PBSE), a doctoral training program, with the departments of MCD Biology, Chemistry and Biochemistry, and Microbiology and Environmental Toxicology.

Departmental faculty advise undergraduate and graduate researchers enrolled in the bioinformatics, bioengineering, and related degree programs. Members of the Department of Biomolecular Engineering actively collaborate with faculty from other Baskin School of Engineering departments, such as Applied Mathematics and Statistics, Computer Engineering, Computer Science, and Electrical Engineering; and with the Physical and Biological Sciences departments of MCD Biology, Chemistry and Biochemistry, Microbiology and Environmental Toxicology, Ecology and Evolutionary Biology, and Ocean Sciences.

Biomolecular Engineering and Bioinformatics Major

The biomolecular engineering and bioinformatics major includes the biomolecular engineering (BME) and bioinformatics (BINF) concentrations. The BME concentration is designed for students interested in protein engineering, stem cell engineering, and synthetic biology. The emphasis is on designing biomolecules (DNA, RNA, proteins) and cells for particular functions, and the underlying sciences are biochemistry and cell biology.

The BINF concentration combines mathematics, science, and engineering to explore and understand biological data from high-throughput experiments, such as genome sequencing, gene-expression chips, and proteomics experiments. The program builds upon the research and academic strengths of the faculty in the Biomolecular Engineering Department.

In both concentrations, students participate in a capstone experience. Options for the senior capstone experience include:

- **Senior Design**—a two- or three-quarter group project intended to prepare students for work in industry, a summer full-time synthetic biology project based on the iGEM competition,
- A three-quarter **Senior thesis**, or an **Advanced bioinformatics** course series. The later option is the required capstone for students participating in the bioinformatics concentrations.

All capstone options involve working closely with faculty and other researchers at UCSC, analyzing ideas, developing technologies, and discovering new approaches. Application areas include biomolecular sensors and systems, nano-electronic implants, assistive technologies for the elderly and disabled, bioinformatics, microfluidics, nanoscale biotechnology, environmental monitoring, and other areas at the junction between engineering and the life sciences.

More information about bioengineering research and undergraduate research opportunities can be found at Undergraduate Research Opportunities, the B.S. in bioengineering program, the Genomics Institute, the program in biomedical sciences and engineering, the STEM Maximizing Access to Research Careers (MARC) program, and the STEM diversity programs.

The program has course requirements in mathematics, science, and engineering. Students interested in Biomolecular Engineering and Bioinformatics as a major should contact the School of Engineering advising office (advising@soe.ucsc.edu) before enrolling in any courses at UCSC. Early advising is particularly important before choosing calculus and physics courses.

Biomolecular engineering and bioinformatics students may continue their research and studies at UCSC in any of several graduate programs. Information may be found at the Division of Graduate Studies website.

The immense growth of biological information stored in computerized databases has led to a critical need for people who can understand the languages, tools, and techniques of statistics, science, and engineering. A classically trained scientist may be unfamiliar with the statistical and algorithmic knowledge required in this field. A classically trained engineer may be unfamiliar
Biomolecular Engineering

with the chemistry and biology required in the field. Thus, this major strives for a balance of the two: an engineer focused on the problems of the underlying science or, conversely, a scientist focused on the use of engineering tools for analysis and discovery.

PROGRAM LEARNING OUTCOMES

A biomolecular engineering and bioinformatics student completing the program should:

• have a broad knowledge of science and engineering disciplines including biology, chemistry, mathematics, statistics, and computer science; those completing the BINF concentration will also have a detailed knowledge of mathematics, statistics, and science; and, those completing the BME concentration will have broader knowledge in biology and chemistry;
• be able to apply their knowledge to identify, formulate, and solve engineering design problems;
• be able to find and use information from a variety of sources, including books, journal articles, online encyclopedias, and manufacturer data sheets;
• be able to design and conduct experiments, as well as to analyze and interpret data;
• be able to communicate problems, experiments, and design solutions in writing, orally, and as posters; and
• be able to apply ethical reasoning to make decisions about engineering methods and solutions in a global, economic, environmental, and societal context.

COURSES FOR NONMAJORS

Biomolecular Engineering 5, Introduction to Biotechnology, presents a broad overview of the impact of biotechnology on the diagnosis and treatment of disease.

BME 18, Scientific Principles of Life, covers the principles of life as it exists on this planet and how they generalize. Discusses Darwinian evolution, genomes, scientific theories of life (mechanistic, thermodynamic, information theoretic), and future of life (Internet, machine learning and adaptation, artificial intelligence, genome editing, fully artificial life).

Biomolecular Engineering 80G, Bioethics in the Twenty-First Century: Science, Business, and Society, is particularly appropriate to all students interested in the societal issues surrounding the revolutions in bioinformatics and biotechnology.

Biomolecular Engineering 80H, The Human Genome, covers principles of human inheritance and techniques used in gene analysis and discusses the evolutionary, social, ethical, and legal issues associated with knowledge of the human genome.

Biomolecular Engineering 110, Computational Biology Tools, provides an introduction to the tools and techniques of bioinformatics from a user’s view. It is intended for biologists and biochemists who need to use bioinformatics tools, but are not primarily interested in building new bioinformatics tools.

Biomolecular Engineering 130, Genomes, teaches the principles of genome-scale analysis to answer biological questions.

Biomolecular Engineering 155, Biotechnology and Drug Development, examines the science and process of discovering, testing, and manufacturing new drugs within the pharmaceutical industry.

Biomolecular Engineering 160, Programming for Biologists and Biochemists, provides an introductory programming class using Python to analyze, transform, and publish biological data.

Biomolecular Engineering 163, Applied Visualization and Analysis of Scientific Data, extends this life-science data focus with an emphasis on understanding and presenting that data.

BIOINFORMATICS POLICIES

DECLARATION OF THE MAJOR

In order to be admitted into the Bioinformatics major students must be listed as a proposed major within the School of Engineering. Please refer to the School of Engineering section under “Proposed Engineering Major Status” for more information.

In addition to being listed as a proposed School of Engineering major, students must have completed at least 50 credits with a GPA of 2.8 or better in all attempts from courses required for the major.

Students wishing to declare the biomolecular engineering and bioinformatics major after the sixth quarter must appeal, already have a declared major, and have completed 10 more credits of required courses in the major for each additional quarter.

Appeals for major declaration may be filed with the Baskin School of Engineering Office of Undergraduate Affairs, according to the procedures given in the Baskin School of Engineering Program Statement.

COURSES TAKEN ELSEWHERE

Please refer to the School of Engineering section of the catalog for policies about taking courses at other institutions after enrolling at UCSC.

HONORS IN THE MAJOR

Biomolecular engineering and bioinformatics majors are considered for “Honors in the Major” and “Highest Honors in the Major” based on their GPA and on results of undergraduate research. Students with a GPA of 3.7 receive “Highest Honors in the Major.” Students with a GPA of 3.3 receive “Honors in the Major.” Students with particularly significant accomplishments in undergraduate research may receive honors or highest honors with a lower GPA. Students who have been found guilty of academic misconduct are not eligible for either honors or highest honors.

TRANSFER STUDENTS
Transfer students need to complete eight transferable courses required for the major with a GPA in those courses of 2.8 or better. Students with fewer than 10 transferable courses may find it difficult to complete the major in only two more years.

Please refer to the School of Engineering section of the catalog for additional policies that apply to all School of Engineering programs.

Students applying for admission as freshmen proposing to take the biomolecular engineering and bioinformatics major should have completed four years of high school mathematics (through advanced algebra and trigonometry) and three years of science, including one year of chemistry and one year of biology. Comparable college mathematics and science courses completed at other institutions may be accepted in place of high school preparation. Students without this preparation may be required to take additional courses to prepare themselves for the program.

REQUIREMENTS FOR THE CONCENTRATION IN BIOMOLECULAR ENGINEERING

Because of the enormous breadth of requirements, biomolecular engineering and bioinformatics majors are urged to take honors courses or sections whenever possible to get as much as possible out of the courses they take in each field.

Biomolecular engineering concentration majors must complete the following courses:

**Applied Mathematics and Statistics**
- Applied Mathematics and Statistics 131, Introduction to Probability Theory
- Applied Mathematics and Statistics 132, Statistical Inference

**Biology**
- Biology (BIOL) 20A, Cell and Molecular Biology
- Biology (BIOE) 20B, Development and Physiology
- Biology (BIOL) 20L Experimental Biology Laboratory

**Biochemistry and Molecular Biology**
- Biochemistry 100A, Biochemistry (first in three-part sequence)
- Biochemistry 100B, Biochemistry (second in three-part sequence)

**Biomolecular Engineering**
- Biomolecular Engineering 51A and 51B, Applied Electronics for Bioengineers I and II
- Biomolecular Engineering 80G, Bioethics in the Twenty-First Century: Science, Business, and Society or Biomolecular Engineering 18, Scientific Principles of Life
- Biomolecular Engineering 105 or Biology 105, Genetics
- Biomolecular Engineering 110, Computational Biology

*Tools*
- Biomolecular Engineering 160/L, Research Programming in the Life Sciences and Laboratory
- Biomolecular Engineering 163, Applied Visualization and Analysis of Scientific Data
- One of the following: Biomolecular Engineering 128, Protein Engineering, or Biomolecular Engineering 140, Bioinstrumentation, or Biomolecular Engineering 177, Engineering Stem Cells

**Chemistry**
- Chemistry 1A, 1B/M, and 1C/N, General Chemistry/Laboratory
- Chemistry 8A and 8B, Organic Chemistry
- Chemistry 8L and Chemistry 8M, Organic Chemistry Labs

**Mathematics**
- Either Mathematics 20A-B, Honors Calculus or Mathematics 19A-B, Calculus for Science, Engineering, and Mathematics
- (Credit for one or both can be granted with adequate performance on the College Entrance Examination Board (CEEB) calculus AB or BC Advanced Placement examination.)

**Physics**
- Physics 5A/L or 6A/L, Introduction to Physics I or Introductory Physics I

**Technical Writing**
- Either Computer Engineering 185, Technical Writing for Computer Engineers; or Biomolecular Engineering 185, Technical Writing for Biomolecular Engineers

**Elective**
- One of the following (courses satisfying an elective cannot be used to satisfy other requirements of the major):
  - Biology 115, Eukaryotic Molecular Biology
  - Microbiology and Environmental Toxicology 119, Microbiology
  - Biochemistry 100C (third in three-part sequence)
  - Biomolecular Engineering 122H, Extreme Environment Virology
  - Biomolecular Engineering 128, Protein Engineering
  - Biomolecular Engineering 128L, Protein Engineering Lab
  - Biomolecular Engineering 130, Genomes
  - Biomolecular Engineering 132, Evolutionary Genomics
  - Biomolecular Engineering 140, Bioinstrumentation
  - Biomolecular Engineering 155, Biotechnology and Drug Development
  - Biomolecular Engineering 170, Frontiers in Drug Action and Discovery
  - Biomolecular Engineering 177, Engineering Stem Cells
  - Biomolecular Engineering 178, Stem Cell Biology
  - or any 5-credit, biomolecular engineering graduate course

**SENIOR CAPSTONE REQUIREMENT**
All biomolecular engineering concentration students must complete a senior capstone project, either as a group project, a series of three Advanced
Bioinformatics courses or as an individual senior thesis doing research in a faculty laboratory.

To complete the senior capstone requirement, Biomolecular Engineering concentrations students must complete one of the following:

Biomolecular Engineering 129A-C, Bioengineering Project

Biomolecular Engineering 180, Professional Practice in Bioengineering (2 credits), and BME 188A/B, Synthetic biology—mentored research (10 credits)

Biomolecular Engineering 205 Bioinformatics Models and Algorithms, and Biomolecular Engineering 230A

Twelve credits of independent study (198), Field Study (193), or senior thesis research (195), in biomolecular engineering, computer engineering, or electrical engineering; and Biomolecular Engineering 123T, Senior Thesis Presentation (5 credits).

Students pursuing the senior thesis option must seek approval of their project one year before graduation, typically spring quarter of the third year. Students spend three or more quarters working on their thesis projects. Thesis students must enroll in Biomolecular Engineering 123T, Senior Thesis Presentation, before completing their thesis.

* Revised: 10/08/18

---

REQUIREMENTS FOR THE CONCENTRATION IN BIOINFORMATICS

Because of the enormous breadth of requirements, biomolecular engineering and bioinformatics majors are urged to take honors courses or sections whenever possible to get as much as possible out of the courses they take in each field.

Bioinformatics concentration majors must complete the following courses:

**Applied Mathematics and Statistics**
- Applied Mathematics and Statistics 131, Introduction to Probability Theory
- Applied Mathematics and Statistics 132, Statistical Inference

**Biology**
- Biology (BIOL) 20A, Cell and Molecular Biology
- Biology (BIOE) 20B, Development and Physiology

**Biochemistry and Molecular Biology**
- Biochemistry 100A, Biochemistry (first in three-part sequence)

**Biomolecular Engineering**
- Biomolecular Engineering 80G, Bioethics in the Twenty-First Century: Science, Business, and Society or Biomolecular Engineering 18, Scientific Principles of Life
- Biomolecular Engineering 105 or Biology 105, Genetics
- Biomolecular Engineering 110, Computational Biology Tools
- Biomolecular Engineering 160/L, Research Programming in the Life Sciences and Laboratory

**Chemistry**
- Chemistry 1A, 1B/M, and 1C/N, General Chemistry
- Chemistry/Laboratory
- Chemistry 8A and 8B, Organic Chemistry

**Computer Engineering**
- Computer Engineering 16, Applied Discrete Mathematics

**Computer Science**
- One of the following series:
  - Computer Science 12A/L, Introduction to Programming/Laboratory (accelerated)
  - Computer Science 5J, Introduction to Programming in Java, and
  - Computer Science 11, Intermediate Programming
  - Computer Engineering 12/L, Computer Systems and Assembly Language/Laboratory, and
  - Computer Engineering 13/L, Computer Systems and C Programming/Laboratory and
  - Computer Science 12B/M, Introduction to Data Structures/Laboratory
- Computer Science 101, Algorithms and Abstract Data Structures
- And either
  - Computer Science 182, Introduction to Database Management Systems, or
  - Computer Science 180, Database Systems

**Mathematics**
- Either Mathematics 20A-B, Honors Calculus or Mathematics 19A-B, Calculus for Science, Engineering, and Mathematics. (Credit for one or both can be granted with adequate performance on the College Entrance Examination Board (CEEB) calculus AB or BC Advanced Placement examination.)
- One of the following:
  - Mathematics 21, Elementary Linear Algebra
  - Mathematics 22, Calculus in Several Variables
  - Mathematics 23A, Vector Calculus

**Technical Writing**
- Either Computer Engineering 185, Technical Writing for Computer Engineers; or
- Biomolecular Engineering 185, Technical Writing for Biomolecular Engineers

**Elective**
- One of the following (courses satisfying an elective cannot be used to satisfy other requirements of the major):
  - Biomolecular Engineering 122H, Extreme Environment Virology
  - Biomolecular Engineering 128, Protein Engineering
  - Biomolecular Engineering 128L, Protein Engineering Lab
  - Biomolecular Engineering 130, Genomes Biomolecular Engineering 132, Evolutionary Genomics Biomolecular Engineering 140, Bioinstrumentation Biomolecular Engineering 155, Biotechnology and Drug Development Biomolecular Engineering 170, Frontiers in Drug Action and Discovery Biomolecular Engineering 177, Engineering Stem Cells Biomolecular Engineering 178, Stem Cell Biology or any 5-credit biomolecular engineering graduate course
SENIOR CAPSTONE REQUIREMENT

The senior capstone is fulfilled by completing Biomolecular Engineering 205, Bioinformatics Models and Algorithms, and Biomolecular Engineering 230A, Introduction to Computational Genomics and Systems Biology.

DISCIPLINARY COMMUNICATION (DC) REQUIREMENT

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. Biomolecular engineering and bioinformatics majors satisfy the DC requirement by completing Computer Engineering 185, Technical Writing for Engineers, or Biomolecular Engineering 185, Technical Writing for Biomolecular Engineers.

BIOMOLECULAR ENGINEERING AND BIOINFORMATICS MAJOR PLANNERS

Every biomolecular engineering and bioinformatics major must have a faculty adviser, assigned by the Baskin School of Engineering undergraduate advising office, and with that adviser must formulate a program of proposed coursework that meets the major requirements.

As in all engineering and science programs, it is recommended that students spread their general education requirements out over all 12 quarters. Delaying a general education requirement is safer than delaying a major requirement.

Four-year plans require individual design to fit in the desired electives. It is recommended that students reserve the summer after the junior year for undergraduate research. One popular plan involves taking organic chemistry and the associated laboratories in the summer after completing general chemistry, so that biochemistry may be started in the junior year.

Biomolecular Engineering 205, Bioinformatics Models and Algorithms, should be taken after Biomolecular Engineering 110, Computational Biology Tools and Biomolecular Engineering 160, Research Programming in the Life Sciences.

REQUIREMENTS FOR THE BIOINFORMATICS MINOR

The bioinformatics minor is intended primarily for bioinformatics tool users who are majoring in a biological or chemical specialty. The bioinformatics minor is also appropriate for computer science or computer engineering majors who are considering graduate work in bioinformatics. The bioinformatics minor cannot be combined with the biomolecular engineering and bioinformatics major.

A bioinformatics minor consists of the following 16 courses:

Lower-division (6 courses)

Biology (2)
Biology 20A, Cell and Molecular Biology
Biology 20B, Development and Physiology

Chemistry (1)
Chemistry 1A

Single-Variable Calculus (2)
One of the following:
Mathematics 19A and 19B (preferred); or
Biomolecular Engineering

Mathematics 11A and 11B; or
Mathematics 20A and 20B

Bioethics (1)
Biomolecular Engineering 80G or BME 18, Scientific Principles of Life

Upper-division (6 courses)

Genetics (1)
Biomolecular Engineering 105 Genetics (recommended) or Biology 105 Genetics

Programming (2)
Biomolecular Engineering 160/L, Research Programming in the Life Sciences and Laboratory
Biomolecular Engineering 163, Applied Visualization and Analysis of Scientific Data

Statistics (2)
Applied Mathematics and Statistics 131 and 132

Bioinformatics (1)
Biomolecular Engineering 110

The bioinformatics minor requirements may satisfy the requirements of other majors or minors under the campus policy discussed under Major and Minor Requirements. Majors with substantial overlap include biochemistry, all biology majors, chemistry, computer science, and computer engineering. Students pursuing one of these majors are particularly encouraged to consider the bioinformatics minor.

CONTIGUOUS FIVE-YEAR BACHELOR'S (B.S.)/MASTER'S (M.S.) DEGREE PATH

Because the bioinformatics concentration of the Biomolecular Engineering and Bioinformatics B.S. provides excellent preparation for a graduate program in bioinformatics, we offer a contiguous B.S./M.S. degree pathway that allows those students to complete the M.S. (or Ph.D.) somewhat sooner than students with a less-tailored preparation.

The current B.S. and M.S. requirements have three courses in common:
Biomolecular Engineering 80G, Bioethics in the 21st Century*
Biomolecular Engineering 205, Bioinformatics Models and Algorithms*  
Biomolecular Engineering 230A, Intro to Computational Genomics and Systems Biology*

In accordance with UCSC Graduate Council guidelines for contiguous five-year Bachelor's / Master's programs, students are required to complete 35 credits during the Master's phase of the program. Since Biomolecular Engineering 205 and Biomolecular Engineering 230A are taken in the undergraduate phase, the credits cannot be counted towards the overall credits required by the M.S. degree.

M.S. students must complete a total of at least 41 credits as described below.

BIOMOLECULAR ENGINEERING AND BIOINFORMATICS GRADUATE PROGRAM

The Department of Biomolecular Engineering offers interdisciplinary M.S. and Ph.D. degrees in biomolecular engineering and bioinformatics and accepts students from a wide-variety of backgrounds. A typical cohort includes incoming students from molecular biology, genetics, computer science, engineering, and mathematics. The unifying theme of our research training program is using quantitative approaches to addressing fundamental questions in biology and biomedical science. The Ph.D. program prepares students to lead independent research programs in academic or industry settings. The M.S. program is designed to prepare students for careers in contemporary biomedical research settings in the biotechnology industry.

Program coursework is designed to provide the technical skills in programming and other technical skills required for independent and advanced scientific discovery. Incoming students undertake rigorous core coursework, conduct laboratory rotations (Ph.D. only), and are exposed to a rich environment of regular seminars and group meetings. Students interact closely with biomolecular engineering and bioinformatics faculty members while undertaking their dissertation research (Ph.D.) or capstone projects (M.S.), and have first-hand access to state-of-the-art computation tools and laboratory facilities throughout their training, including cluster computing and high-throughput sequencing facilities.

M.S. students must complete a total of at least 41 credits as described below.
Biomolecular Engineering

Ph.D. students must complete a total of at least 55 credits as described below.

</tbody>
</table>

**Core courses (5-credit) six are required**
- Biomolecular Engineering 205, Bioinformatics Models and Algorithms
- Biomolecular Engineering 230A, Intro to Computational Genomics and Systems Biology or
- Biomolecular Engineering 229, Protein and Cell Engineering
- *Graduate level quantitative science course* (Biomolecular Engineering 80G)

Two Biomolecular Engineering graduate-level, 5-credit courses to be selected in consultation with faculty adviser

*Suitable courses for quantitative science and biomolecular engineering graduate electives are to be selected in consultation with the Biomolecular Engineering Graduate Advising Committee, the student, and the student's faculty mentor.

**Biomolecular Engineering 80G can be taken to meet the ethics requirement, however, the credits will not be counted toward the overall credit requirement for the M.S. or Ph.D. since it is a lower-division course.

<table>
<thead>
<tr>
<th>OTHER CURRICULUM REQUIREMENTS</th>
</tr>
</thead>
</table>
| **Bootcamp activity:** Entering graduate cohorts are strongly encouraged to participate in the hands-on “bootcamp” just before the start of the fall quarter. Bootcamp activities include program orientation, laboratory safety training, teaching assistant (TA) training, fellowship advice, cohort building activities, practical advice for navigating graduate school, and a hands-on research project. Biomolecular Engineering 201, Scientific Writing, 3 credits (Ph.D. only). Typically taken as a second-year Ph.D. student in winter quarter.

No further courses are required. However, with faculty guidance students often choose to take upper-division undergraduate courses or graduate courses outside the department to make up for deficiencies in background areas of particular importance.

With consent of the graduate director, variations in the composition of the required courses may be approved.

**Seminars**
- **M.S. students:** a minimum of three seminar courses, including at least one quarter of the 2-credit Biomolecular Engineering seminar, 280B
- **Ph.D. students:** a minimum of six seminar courses, including at least two quarters of the 2-credit Biomolecular Engineering seminar, 280B

Before and after advancement, full-time Ph.D. students are required to enroll in at least one seminar course each quarter (e.g., 280 or 281), and must present the results of their ongoing research at least once each year. Because the intent of the seminar requirement is to ensure breadth of knowledge, laboratory group meetings (Biomolecular Engineering 281 courses) do not count for the seminar requirement.

<table>
<thead>
<tr>
<th>RESEARCH EXPERIENCE</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>M.S. students:</strong> one quarter of independent study (Biomolecular Engineering 297).</td>
</tr>
<tr>
<td><strong>Ph.D. students:</strong> three research laboratory rotations (Biomolecular Engineering 296 - must enroll in fall and winter quarters of their first year) with different supervisors. Laboratory rotations for Ph.D. students are generally completed in the first two quarters (three 7-week rotations). One of the laboratory rotations must be with a faculty supervisor who does wet-lab research, though the students rotation project may be purely computational.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>QUALIFYING EXAMINATIONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ph.D. students are required to pass the qualifying examination and advance to candidacy by the end of their second year.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>ADEQUATE PROGRESS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Graduate students receiving two or more U (unsatisfactory) grades or grades below B- in courses relevant to the program are not making adequate progress and will be placed on academic probation for the next three quarters of registered enrollment.</td>
</tr>
</tbody>
</table>

Graduate students who fail (unsatisfactory or lower than B-) a relevant course while on probation may be dismissed from the program. Students may appeal their dismissal. Graduate students who fail a relevant course after being removed from probation are immediately returned to academic probation.

Graduate students experiencing circumstances that may adversely affect their academic performance should consult with their adviser and the graduate director.

<table>
<thead>
<tr>
<th>MASTER'S CAPSTONE REQUIREMENT</th>
</tr>
</thead>
<tbody>
<tr>
<td>M.S. students must complete a one-quarter research project with written report to fulfill the capstone requirement. In consultation with the faculty adviser, the student forms a Master's capstone reading committee of at least two faculty members (including the adviser), each of whom is provided a copy of the project report. The final project report must be signed by the reading committee before the award of the Master of Science Degree.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>DOCTORAL DISSERTATION REQUIREMENTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ph.D. students must select a faculty research adviser by the end of the first year. A qualifying examination</td>
</tr>
</tbody>
</table>
Biomolecular Engineering committee is then formed in the second year, which consists of the adviser and three additional members, and which is approved by the graduate director and the campus graduate dean. At least two of the four must be members of the Department of Biomolecular Engineering. The student must submit a written dissertation proposal to all members of the committee and the graduate program adviser one month in advance of the examination. The dissertation proposal is publicly and formally presented in an oral qualifying examination given by the qualifying committee.

Ph.D. candidates will submit the completed dissertation to a reading committee at least one month prior to the dissertation defense. The reading committee, formed upon advancement to candidacy, consists of the dissertation supervisor and two readers appointed by the graduate director upon the recommendation of the dissertation supervisor. At least one of the three must be a member of the Department of Biomolecular Engineering. The candidate will present their research in a public seminar. The seminar will be followed by a defense of the dissertation to the reading committee and attending faculty, who will then decide whether the dissertation is acceptable or requires revision.

TRANSFER LIMITATIONS

Up to two courses may be transferred from other graduate institutions with the approval of the faculty adviser and the graduate director.

BIOMOLECULAR ENGINEERING FACULTY AND PROFESSIONAL INTERESTS

**PROFESSOR**

Mark Akeson  
Development of nanopore sensors for single molecule identification, epigenetics, bioethics

Phillip Berman  
Distinguished Professor  
Drug development, vaccines, AIDS, monoclonal antibody therapeutics, immunology, molecular cell/biology, recombinant protein production (commercial scale)

Camilla Forsberg  
Hematopoietic stem cells, stem cell fate decisions, transcriptional regulation, chromatin, epigenetics, blood and immune cell development, hematopoietic cell transplantation and trafficking, genetic engineering, bioengineering

David Haussler  
Distinguished Professor  
Bioinformatics, genomics, computational genomic data analysis, molecular evolution and comparative genomics, genomic and clinical data sharing and standards, cancer genomics, neurodevelopment, stem cell research, immunogenomics, information theory, pattern recognition, machine learning, artificial intelligence, information theory, theoretical computer science

Richard Hughey (joint with Computer Engineering)  
Bioinformatics, hidden Markov models, computer architecture, parallel computation

Kevin Karplus  
Teaching analog electronics (formerly protein-structure prediction, genome assembly, and signal processing for nanopore signals)

Todd Lowe  
Experimental and computational genomics, non-coding RNA gene finders, and high-throughput small RNA sequencing small RNA roles in cancer, evolution of RNA-based gene regulation

Nader Pourmand  
Bioelectronics, biosensors, chemosensors, nanotechnology, single-cell characterization, sequencing, genotyping, pathogen detection, DNA fingerprinting

Joshua Stuart  
Jack Baskin Endowed Chair of Biomolecular Engineering  
Computational functional genomics, comparative analysis of gene regulation, cross-species inference of gene networks, probabilistic graphical models

**ASSOCIATE PROFESSOR**

Richard “Ed” Green  
Genomics, computational molecular biology, genome assembly, human evolutionary genetics, ancient DNA, high-throughput sequencing, mRNA-processing and alternative splicing

**ASSISTANT PROFESSOR**

Angela Brooks  
Genomics, functional genomics, cancer genomics, RNA processing, gene regulation, gene variant function

Russell Corbett-Detig  
Population genomics and functional consequences of natural selection; the evolution of chromosomal inversion polymorphism, intra-specific epistasis, and genome-wide patterns of natural selection

Rebecca M. Dubois  
Protein engineering, structural biology, X-ray crystallography, virology, vaccines, antibody therapeutics, antiviral drugs

Daniel H. Kim  
Stem cell genomics, long noncoding RNAs, single cell analysis, epigenetic reprogramming, cancer

Benedict Paten  
Computational genomics, biological sequence analysis, human variation, genome evolution, precision medicine

Christopher Vollmers  
Developing DNA sequencing tools to analyze B cells on a population and single cell level
**Biomolecular Engineering**

**RESEARCH PROFESSOR**

**David W. Deamer (UC Davis Emeritus)**  
Membrane biophysics, nanopore analysis, DNA sequencing, biomolecular self-assembly

**ADJUNCT PROFESSOR**

**Robert Coffman**  
Regulation of innate and adaptive immunity, systems biology of human immune responses, development of novel vaccines and oligonucleotide-based drugs

**Jonathan Trent**  
Organic aggregates, marine snow, microbial physiology, microenvironments, robust proteins, genetic engineering for nanotechnology

**Zemin Zhang**  
Cancer genomics, bioinformatics, anti-cancer target and biomarker discovery, tumor immunology, drug-genome interaction

**ASSOCIATE ADJUNCT PROFESSOR**

**Nathalie Scholler**  
Recombinant antibody engineering, yeast-display library screening, cancer biomarkers, cancer immunology, ovarian cancer, tumor microenvironment, cancer vaccines, innate immunity

**ASSISTANT ADJUNCT PROFESSOR**

**David Bernick**  
Synthetic biology as a means to produce energy, medicines, food and for waste conversion, single molecule sequencing of tRNA as a means to understand mitochondrial disease, gene discovery of extremozymes and their applications, high throughput sequencing of novel genomes, RNA abundance, microbiol communities and viruses at the extremes

**Theodore Goldstein**  
Cancer bioinformatics research including prostate cancer, pediatric cancer and immunotherapy; gene expression as a clinical tool, pathway analysis, machine learning, collaborative social networking, scoring systems

**CONTINUING LECTURER**

**Wendy Rothwell**  
Biotechnology, molecular genetics

**Manuel Ares, Jr. (Molecular, Cell, and Developmental Biology)**  
RNA processing, structure and function of RNA

**Hinrich Boeger (Molecular, Cell, and Developmental Biology)**  
Chromatin structure and gene regulation

**Manel Camps (Microbiology and Environmental Toxicology)**  
Molecular mechanisms of reactive DNA methylation toxicity

**Lars Fehren-Schmitz (Anthropology)**  
Palaeogenetics/anthropological genetics, human evolutionary ecology, evolutionary demography, gene-culture coevolution, migration theories, population history of the Americas, archaeology of South America

**A. Russell Flegal, Emeritus (Microbiology and Environmental Toxicology)**  
Organic chemistry, combinatorial synthesis, biotechnology, molecular cell biology

**Glenn L. Millhauser (Chemistry and Biochemistry)**  
Electron spin resonance; nuclear magnetic resonance, melanocortin receptor signaling, agouti proteins, prions, peptide synthesis

**Karen Ottemann (Microbiology and Environmental Toxicology)**  
How bacterial pathogens are able to chronically colonize mammalian hosts and cause disease outcomes such as inflammation and cancer

**Beth Shapiro (Ecology and Evolutionary Biology)**  
Evolutionary and molecular ecology, ancient DNA, genomics, pathogen evolution

**John W. Tamkun (Molecular, Cell, and Developmental Biology)**  
Transcriptional regulation, molecular genetics of *Drosophila* development; regulation of gene expression

**Hongyun Wang (Applied Mathematics and Statistics)**  
Single molecule studies and biophysics, statistical physics, stochastic processes and stochastic differential equations, classical analysis, numerical analysis

**Manfred K. Warmuth (Computer Science)**  
Online learning, machine learning, statistical decision theory, game theory, analysis of algorithms

**W. Todd Wipke, Emeritus (Chemistry and Biochemistry)**

**Fitnat H. Yildiz (Microbiology and Environmental Toxicology)**  
Understanding processes controlling transmission of bacterial pathogens

**Alan M. Zahler (Molecular, Cell, and Developmental Biology)**  
Alternative pre-mRNA splicing and small RNA function

---

**BIOMOLECULAR ENGINEERING COURSES**

**LOWER-DIVISION COURSES**

**5. Introduction to Biotechnology. F, W**  
Introduces the tools and applications of biotechnology in the fields of medicine, agriculture, the environment, and industry.  
(General Education Code(s): PE-T)  
The Staff. N. Pourmand, W. Rothwell

**18. Scientific Principles of Life. F**
Biomolecular Engineering

The principles of life as it exists on this planet and how they generalize. Darwinian evolution, genomes, scientific theories of life (mechanistic, thermodynamic, information theoretic). Future of life: Internet, machine learning and adaptation, artificial intelligence, genome editing, fully artificial life. Earth Sciences 7 is recommended as preparation. (General Education Code(s): SI.) D. Deamer; D. Haessler

51A. Applied Electronics for Bioengineers Part 1. W
Lab-based course that introduces measuring, modeling, and designing electronics circuits, emphasizing voltage dividers and complex impedance culminating in simple, negative-feedback op amp circuits for amplifying audio signals. Students are billed a materials fee. Prerequisite(s): Mathematics 19A; or Mathematics 11A by consent of instructor. High school physics recommended. Enrollment is restricted to bioengineering majors and proposed majors; other majors by consent of instructor. Enrollment limited to 100. K. Karplus

51B. Applied Electronics for Bioengineers Part 2. S
Lab-based course that introduces designing, measuring, and modeling electronics circuits, emphasizing RC filters and negative-feedback amplifiers for various sensors circuits for amplifying audio signals, design of multi-stage amplifiers, transimpedance amplifiers, instrumentation amplifiers, and class-D power amplifiers. Students are billed a materials fee. Prerequisite(s): course 51A. Enrollment limited to 100. K. Karplus

Serves science and non-science majors interested in bioethics. Guest speakers and instructors lead discussions of major ethical questions having arisen from research in genetics, medicine, and industries supported by this knowledge. (Also offered as Philosophy 80G. Students cannot receive credit for both courses.) (General Education Code(s): PE-T.) The Staff, S. Dreisbach, M. Akeson

80H. The Human Genome. W,S
Course will focus on understanding human genes. Accessible to non-science majors. Will cover principles of human inheritance and techniques used in gene analysis. The evolutionary, social, ethical, and legal issues associated with knowledge of the human genome will be discussed. (General Education Code(s): PE-T.) W. Rothwell, The Staff

94. Tutorial. F,W,S
Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

94F. Group Tutorial (2 credits). F,W,S
Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

99F. Tutorial (2 credits). F,W,S
Students submit petition to sponsoring agency. May be repeated for credit. The Staff

UPPER-DIVISION COURSES

105. Genetics in the Genomics Era. S
Principles of genetics and genomics focusing on how sequencing technologies enable us to understand gene function, genotype to phenotype relationships, and genetic inheritance. Prerequisite(s): BIOL 20A and BIOE 20B. Enrollment is restricted to bioengineering and bioinformatics majors. A. Brooks

110. Computational Biology Tools. F,W
Hands-on lectures and laboratory geared to teach basic tools and skills used in computational biology (genome browsers, sequence database searching, motif analysis, multiple sequence alignment, gene finders, phylogenetics analysis, protein structure visualization, and others). Web-based tools/databases are used on student laptops. Open to all science students; no prior programming or Unix experience required. Prerequisite(s): course 105, or Biology 100, or Biology 105, or Biochemistry 100A, or Chemistry 103, or declared Bioinformatics majors. The Staff, T. Lowe, D. Kim, R. Corbett-Detig, A. Brooks

122H. Extreme Environmental Virology. F
Examines life in extreme environments with an emphasis on the viruses that live there. Integrates aspects of virology, molecular biology, and computational biology. Students investigate a high-salt, extreme environment at the Don Edwards National Wildlife Refuge, and use DNA extraction methods to find molecular evidence of the organisms that live there and describe the genetic content of viruses and the community living in those high-salt ponds. Enrollment is restricted to College Scholar Students, and or by permission of the instructor. Enrollment limited to 24. (General Education Code(s): TA.) D. Bernick, The Staff

123T. Senior Thesis Writing. W
For bioengineering senior thesis students, guidance in preparing a draft manuscript describing their senior research project. Students also practice conference-style oral or poster presentation. Enrollment is restricted to senior bioengineering majors. Prerequisite(s): course 185 or Computer Engineering 185. Concurrent enrollment in course 193F or 195F or 198F or Computer Engineering 193F or 195F or 198F or Electrical Engineering 193F or 195F or 198F is required. Enrollment limited to 25. K. Karplus, T. Terhaar, M. Akeson

128. Protein Engineering. W
For bioengineering, bioinformatics, and biology majors, focuses on engineering (i.e., changing) of proteins. Topics focus on practical aspects of protein engineering strategies that are crucial to modern biotechnology and biomedical applications.
Biomolecular Engineering

Prerequisite(s): Biology 20A, and Biology 100 or Biochemistry and Molecular Biology 100A, or by permission of instructor. R. Dubois, The Staff

128L. Protein Engineering Laboratory (2 credits). S
Students address a current scientific question about protein stability using structure-guided protein engineering. Specifically, Students use recombinant DNA technology to produce an engineered protein that is predicted to have enhanced stability. Students then assess its stability with differential scanning fluorimetry. Students are billed a materials fee. Prerequisite(s): Biochemistry 100A or Biology 100, and Biology 100K or Biology 101L. Concurrent enrollment in course 128 is required. Enrollment is restricted to junior and senior bioengineering majors; other majors by permission of instructor. Enrollment limited to 20. R. Dubois, (F) The Staff

129A. Project Design and Implementation in Biomolecular Engineering I. F
First of a three-part series focused on senior design projects in biomolecular engineering. In this first part, students examine experiments that elucidated the function of biological macromolecules at the Angstrom scale, and how technologies related to those functions were invented and implemented. Guided by these examples, each student develops a senior design project concept or small business proposal and defends its utility, plausibility, and inventiveness in a written document and an oral presentation. Prerequisite(s): BIOL 20A and BIOL 20B; and BIOL 100 or BIOC 100A; course 51A recommended. Enrollment is restricted to junior and senior bioengineering majors or by permission of the instructor. N. Pourmand, M. Akeson

129B. Project Design and Implementation in Biomolecular Engineering II. W
Second part of a three-course sequence that is the culmination of the bioengineering program for students who chose a senior design group project to fulfill their capstone requirement. Students apply knowledge and skills gained in biomolecular engineering coursework to articulate, organize, and plan a senior design group project. Student groups complete research, specification, planning, and procurement for their project. Includes technical discussions, design reviews, and formal presentations. Students are billed a materials fee. Prerequisite(s): course 129A or course 150. Enrollment is restricted to senior bioengineering majors. M. Akeson

129C. Project Design and Implementation in Biomolecular Engineering III. S
Final part of a three-course sequence that is the culmination of the bioengineering program for students who chose a senior design group project to fulfill their capstone requirement. Students apply knowledge and skills gained in biomolecular engineering coursework to articulate, organize, and plan a senior design group project. Student groups complete research, specification, planning, and procurement for their project. Includes technical discussions, design reviews, and formal presentations. Students are billed a materials fee. Prerequisite(s): courses 129A and 129B. Enrollment is restricted to senior bioengineering majors. (General Education Code(s): PR-E.) M. Akeson, The Staff

130. Genomes. F
Advanced elective for biology majors, examining biology on the genome scale. Topics include genome sequencing; large scale computational and functional analysis; features specific to prokaryotic, eukaryotic, or mammalian genomes; proteomics; SNP analysis; medical genomics; and genome evolution. Prerequisite(s): Biology 100 or Chemistry 103 or Biochemistry 100A; and Biology 105; or approval of instructor. R. Green

132. Evolutionary Genomics. F
Covers major recent advances in evolutionary genomics. Students learn to analyze and interpret scientific writing in depth. Students also present on work covered in the class and produce one research or review paper. Students cannot receive credit for this course and course 232. Prerequisite(s): course 105 or BIOL 105. Enrollment is restricted to juniors and seniors. Enrollment limited to 50. (General Education Code(s): TA.) R. Corbett-Detig

140. Bioinstrumentation. F
Introduces the fundamental aspects of bioinstrumentation that are essential for beginning-level employment in clinical, pharmaceutical, and biotechnology laboratories. The advantages and disadvantages of several instruments are discussed and demonstrated, such as thermocycler, polymerase chain reaction (PCR), next-generation DNA sequencing platforms, pyrosequencing, fabless nanofabrication, ion-sensitive measurements, microarray fabrication, and fluorescent-activated cell sorter (FACS). Students are billed a materials fee. Prerequisite(s): course 5; or courses 51A and 51B; or Electrical Engineering 101/L; or Biology 100; or Biochemistry and Molecular Biology 100A. N. Pourmand

155. Biotechnology and Drug Development. *
Recommended for students interested in careers in the biopharmaceutical industry. F Focuses on recombinant DNA technology and the drug-development process, including discovery research; preclinical testing; clinical trials; and regulatory review, as well as manufacturing and production considerations. Students may not receive credit for this course and Biomolecular Engineering 255 and Chemistry 255. Prerequisite(s): Biology 20A and Biology 100 or Chemistry 103 or Biochemistry and Molecular Biology 100A. P. Berman
Biomolecular Engineering

Programming assignments comprise the majority of the assignments, and a final project using skills developed in this course is required. BioPython and other modules introduced for use in the final project. (Formerly Research Programming for Biologists and Biochemists.) Prerequisite(s): Biology 20A or 21A. Previous or concurrent enrollment in course 160L is required. (General Education Code(s): MF.) The Staff, J. Stuart, D. Bernick

160L. Research Programming in the Life Sciences Laboratory (1 credit). W,S Laboratory sequence illustrating topics covered in course 160. One two-hour laboratory per week. (Formerly Research Programming for Biologists and Biochemists Laboratory.) Prerequisite(s): Biology 20A or 21A. Previous or concurrent enrollment in course 160L is required. The Staff, J. Stuart, D. Bernick

163. Applied Visualization and Analysis of Scientific Data. S Python and its Numpy, Scipy, and Matplotlib packages as well as Inkscape are used on scientific data to generate "publication-quality" figures. Students cannot receive credit for this course and course 263. Prerequisite(s): course 160 or course 285. Prerequisites can be waived in cases where students have the required programming skills. Enrollment is restricted to juniors and seniors. Enrollment limited to 30. (General Education Code(s): SR.) C. Vollmers

170. Drug Action and Development. * Lectures and case studies explore principles and approaches in drug discovery and development, emphasizing concepts in pharmacology; medicinal chemistry; and genomics- and bioinformatics-based approaches to drug discovery to illustrate pathways from discovery through development for clinical use. Cannot receive credit for this course and course 270. (Formerly Frontiers in Drug Action and Discovery.) (Also offered as Chemistry and Biochemistry 170. Students cannot receive credit for both courses.) Prerequisite(s): Biology 100 or Chemistry 103 or Biochemistry 100A. Biology 110 and 130/L or 131/L are recommended. Enrollment is restricted to juniors and seniors. D. Smith, T. Holman, M. Camps, R. Linington, P. Berman

177. Engineering Stem Cells. S For bioengineering students interested in stem cells. Class uses project-based learning to discuss basic stem cell concepts and past breakthrough approaches to identify and design solutions for technological hurdles in stem cell research. Prerequisite(s): course 140 or 150, and BIOL 100, or by consent of instructor. Enrollment limited to 30. (General Education Code(s): TA.) The Staff, D. Kim, C. Forsberg

178. Stem Cell Biology. W Basic concepts, experimental approaches, and therapeutic potential are discussed. Students gain experience in reading the primary scientific literature. Prerequisite(s): Biology 110; Biology 115 recommended. (General Education Code(s): TA.) D. Kim, C. Forsberg

180. Professional Practice in Bioengineering (2 credits). S Seminar course where students develop a research proposal and the collaborative skills needed for independent research projects. Includes professional practice development in collaboration skills, project management, proposal development, and funding. Prerequisite(s): previous or concurrent enrollment in course 185 or Computer Engineering 185. Enrollment is restricted to junior and senior bioengineering and bioinformatics majors or by permission of instructor. Enrollment limited to 25. (General Education Code(s): PR-E.) D. Bernick, The Staff

185. Technical Writing for Biomolecular Engineers. F Writing by biomolecular engineers, not to general audiences, but to engineers, engineering managers, and technical writers. Exercises include job application and resume, library puzzle, graphics, laboratory protocols, document specification, progress report, survey article or research proposal, poster, and oral presentation. Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements; previous or concurrent enrollment in BIOL 20L or BIOL 101L. Enrollment restricted to junior and senior biomolecular engineering, bioengineering, and bioinformatics majors. Enrollment limited to 20. K. Karplus, J. Hagen

193. Field Study. F,W,S Provides for individual programs of study with specific aims and academic objectives carried out under the direction of a BME faculty member and a willing sponsor at a field site, using resources not normally available on campus. Credit is based upon written and oral presentations demonstrating the achievement of the objectives of the course. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

193F. Field Study (2 credits). F,W,S Provides for individual programs of study with specific aims and academic objectives carried out under the direction of a BME faculty member and a willing sponsor at a field site, using resources not normally available on campus. Credit is based upon written and oral presentations demonstrating the achievement of the objectives of the course. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

194. Group Tutorial. F,W,S A program of study arranged between a group of students and a faculty member. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

194F. Group Tutorial (2 credits). F,W,S A program of independent study arranged between a group of students and a faculty member. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

195. Senior Thesis Research. F,W,S Students submit petition to
Biomolecular Engineering

sponsoring agency. May be repeated for credit. The Staff

195F. Senior Thesis or Research (2 credits). F,W,S
Students submit petition to sponsoring agency. May be repeated for credit. The Staff

198. Individual Study or Research. F,W,S
Students submit petition to sponsoring agency. May be repeated for credit. The Staff

198F. Individual Study or Research (2 credits). F,W,S
Students submit petition to sponsoring agency. May be repeated for credit. The Staff

199. Tutorial. F,W,S
For fourth-year students majoring in bioinformatics or bioengineering. May be repeated for credit. The Staff

GRADUATE COURSES

200. Research and Teaching in Bioinformatics (3 credits). *
Basic teaching techniques for teaching assistants, including responsibilities and rights of teaching assistants, resource materials, computer security, leading discussion or lab sessions, presentation techniques, maintaining class records, electronic handling of homework, and grading. Examines research and professional training, including use of library and online databases, technical typesetting, writing journal and conference papers, publishing in bioinformatics, giving talks in seminars and conferences, and ethical issues in science and engineering. Required for all teaching assistants. Enrollment is restricted to graduate students. J. Stuart, R. Green, K. Karplus

201. Scientific Writing (3 credits). W
Covers effective writing styles for scientific communication for biology and engineering graduate students. Covers instruction for writing grant applications, scientific manuscripts, and thesis proposals. Students practice by preparing, editing, and evaluating each of these documents. Enrollment is restricted to graduate students. R. Green

205. Bioinformatics Models and Algorithms. F
Covers bioinformatics models and algorithms: the use of computational techniques to convert the masses of information from biochemical experiments (DNA sequencing, DNA chips, and other high-throughput experimental methods) into useful information. Emphasis is on DNA and protein sequence alignment and analysis. Enrollment is restricted to graduate students. Undergraduates may enroll with prerequisite(s): Computer Science 12B; and Computer Engineering 107 or Applied Math and Statistics 131; and Biology 20A; and concurrent enrollment in Biochemistry 100A. The Staff, K. Karplus, D. Bernick

Detailed insight into the techniques and technological trends in genomics and transcriptomics, building the necessary foundations for further research in genetic association studies, population genetic association studies, population genetics, diagnostics, medicine, and drug development. Students should already have a deeper understanding of the basic tools of molecular biotechnology than acquired in introductory courses in biotechnology, biochemistry, and molecular biotechnology. Enrollment is restricted to graduate students. N. Pourmand

222. Applied Biotechnology: Engineering Immunotherapeutic Drugs. *
For students interested in careers in the biotech industry. Focus is applied technology, with particular emphasis on the application of cell engineering and protein engineering to solve problems encountered in the design and manufacturing of immunotherapeutic drugs produced by recombinant DNA technology. (Formerly Applied Biotechnology: Protein and Cell Engineering.) Enrollment is restricted to graduate students in biomolecular engineering; chemistry and biochemistry; and molecular, cellular, and developmental biology. Prior coursework in biochemistry, molecular biology, genetics, and cell biology recommended. Enrollment limited to 15. P. Berman

229. Protein and Cell Engineering. W
Focuses on established and novel strategies for protein and cell engineering. Explores concepts, design, and practical applications of engineered proteins, cells, and organisms as research tools and in therapeutic applications. Recommended for graduate students with interests in bioengineering. Enrollment is restricted to graduate students. Undergraduates by permission of instructor. Enrollment limited to 25. R. Dubois, C. Forsberg

230A. Introduction to Computational Genomics and Systems Biology. W
Introductory and intermediate-level topics in computational genomics, DNA and RNA sequence analysis, mapping, quantification, detection of variants and their associations with disease. Covers topics in machine-learning, probabilistic graphical models, gene regulatory network inference, and single cell analysis. Students conduct related independent research. Prerequisite(s): course 205. Enrollment is restricted to juniors, seniors, and graduate students. J. Stuart, B. Paten, D. Haussler

230B. Advanced Computational Genomics and Systems Biology. S
Covers advanced topics in computational genomics, DNA and RNA sequence analysis, mapping, quantification, detection of variants and their associations with disease. Topics include machine-learning, probabilistic graphical models, gene regulatory network inference, and single cell analysis. Students participate in teams in a computational analysis competition. Prerequisite(s): course 230A. Enrollment is restricted to juniors, seniors, and graduate students. J. Stuart, B. Paten, D. Haussler

232. Evolutionary Genomics. F
Covers major recent advances in evolutionary genomics. Students
233. A Technological History of Antibody Genetics. *
Covers the genetics of antibody formation and the histories of immunology and genetics. Students read and analyze seminal papers on antibody genetics. Enrollment is restricted to graduate students. *C. Vollmers

235. Banana Slug Genomics. *
Students will assemble and annotate the banana slug genome (Ariolimax dolichophallus) from next-generation sequencing data. Students also will explore the capabilities of the latest next-generation bioinformatics tools and write their own as needed. Prerequisite(s): course 205 or graduate status. Seniors who have taken course 110 and a computer programming course may enroll with permission of instructor. May be repeated for credit. *K. Karplus, The Staff

237. Applied RNA Bioinformatics. *
Teaches methods for RNA gene discovery; gene expression quantification; probabilistic modeling, secondary structure/trans-interaction prediction; mRNA splicing; and functional analysis. Emphasis on leveraging comparative genomics and employing high-throughput RNA sequencing data. Includes lectures, scientific literature discussion, problem sets, and final gene-discovery project. Enrollment is restricted to seniors and graduate students. *The Staff, A. Brooks, T. Lowe

255. Biotechnology and Drug Development. *
Recommended for students interested in careers in the biopharmaceutical industry. Focuses on recombinant DNA technology and the drug-development process, including discovery research; preclinical testing; clinical trials; and regulatory review, as well as manufacturing and production considerations. Students may not receive credit for this course and Biomolecular Engineering 155 and Biology 179. (Also offered as Chemistry and Biochemistry 255. Students cannot receive credit for both courses.) Enrollment is limited to graduate students. Enrollment limited to 15. *P. Berman

263. Applied Visualization and Analysis of Scientific Data. S
Python and its Numpy, Scipy, and Matplotlib packages as well as Inkscape are used to generate "publication quality" figures from scientific data. Students cannot receive credit for this course and course 163. Prerequisite(s): course 160 or 205. Prerequisite(s) can be waived in cases where students have required programming skills. Enrollment is restricted to graduate students. Enrollment limited to 10. *C. Vollmers

268A. Science and Justice: Experiments in Collaboration. *
Considers the practical and epistemological necessity of collaborative research in the development of new sciences and technologies that are attentive to questions of ethics and justice. Enrollment is by permission of instructor. Enrollment is restricted to graduate students. (Also offered as Anthropology 267A. Students cannot receive credit for both courses.) Enrollment limited to 15. *The Staff

268B. Science and Justice Research Seminar. *
Provides in-depth instruction in conducting collaborative interdisciplinary research. Students produce a final research project that explores how this training might generate research that is more responsive to the links between questions of knowledge and questions of justice. Prerequisite(s): Sociology 268A, Biomedical Engineering 268A, Feminist Studies 268A, or Anthropology 267A. Enrollment is by permission of instructor. Enrollment is restricted to graduate students. (Also offered as Anthropology 267B. Students cannot receive credit for both courses.) Enrollment limited to 15. *The Staff

270. Drug Action and Development. *
Lectures and case studies explore principles and approaches in drug discovery and development, emphasizing concepts in pharmacology, medicinal chemistry; and genomics- and bioinformatics-based approaches to drug discovery to illustrate pathways from discovery through development for clinical use. Cannot receive credit for this course and course 170. (Formerly Frontiers in Drug Action and Discovery.) (Also offered as Chemistry and Biochemistry 270. Students cannot receive credit for both courses.) Enrollment is restricted to graduate students. *D. Smith, T. Holman, M. Camps, R. Linington, P. Berman

280B. Seminar on Bioinformatics and Bioengineering (2 credits). F,W,S
Weekly seminar series covering topics of current research in computational biology, and bioinformatics. Current research work and literature in these areas are discussed. (Formerly Seminar on Bioinformatics.) May be repeated for credit. *The Staff, J. Stuart, D. Kim, A. Brooks, R. Green

281A. Seminar on Processive Enzymes and Nanopores (2 credits). W,S
Weekly seminar series covering experimental research in nanopore technology and single-molecule analysis of polymerase function. Current research work and literature is discussed. Students lead some discussions and participate in all meetings. Enrollment is restricted to graduate students. Qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *M. Akeson

281B. HIV Vaccine Research (2 credits). F,W,S
Weekly seminar series covering...
topics of HIV vaccine research. Current research work and
literature in this area discussed. Students lead some discussions and participate in all meetings. Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. R. Green

**281F. Blood Cell Development (2 credits). F,W,S**
Weekly seminar covering topics in current research on blood cell development and stem cell biology. Current research and literature in these areas discussed. Students lead some discussions and participate in all meetings. Enrollment is restricted to graduate students. Undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. C. Forsberg

**281C. Seminar in Cancer Genomics (2 credits). F,W,S**
Present current computational biology research to identify genomics-based signatures of cancer onset, progression, and treatment response. Examples of such investigations include: genetic pathway interpretation of multivariate high-throughput datasets; discovery of mutations in whole-genome sequence; identifications and quantification of gene isoforms, alleles, and copy number variants; and machine-learning tools to predict clinical outcomes. Students present their own research, host journal clubs, and attend lectures and teleconferences to learn about research conducted by national and international projects. Enrollment is restricted to graduate students. May be repeated for credit. D. Haussler, J. Stuart

**281D. Seminar on Protein Engineering (2 credits). F,W,S**
Weekly seminar series covering experimental research in protein structure, function, and engineering. Current research work and literature in this area are discussed. Students lead some discussions and participate in all meetings. Enrollment is restricted to graduate students. May be repeated for credit. R. Dubois

**281E. Seminar in Genomics (2 credits). F,W,S**
Current topics in genomics including high-throughput sequencing, genome assembly, and comparative genomics. Students design and implement independent research projects. Weekly laboratory meetings are held to discuss these projects and related research in the field. Enrollment is restricted to graduate students. May be repeated for credit. R. Green

**281H. Seminar in Comparative Genomics (2 credits). F,W,S**
Weekly seminar series covering topics of current computational and experimental research in comparative genomics. Current research work and literature in this area discussed. Students lead some discussions and participate in all meetings. Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. D. Haussler

**281J. Seminar in Computational Genomics and Biomedicine (2 credits). F,W,S**
Research seminar of the UCSC Computational Genomic Laboratory and Platform Teams (cgl.genomics.ucsc.edu/). Topics include genomic and transcriptomic sequence analysis methods, comparative and evolutionary genomics, big-data genomic analysis, biomedical data sharing, and precision medicine. Enrollment is restricted to graduate students. May be repeated for credit. B. Paten

**281K. Seminar on Protein Structure Prediction (2 credits). W,S**
Weekly seminar series covering topics of current computational and experimental research in protein structure prediction. Current research work and literature in this area discussed. Students lead some discussions and participate in all meetings. Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. A. Brooks

**281L. Seminar in Computational Genetics (2 credits). F,W,S**
Weekly seminar series covering topics and experimental research in computational genetics. Current research work and literature in this area discussed. Students lead some discussions and participate in all meetings. Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. T. Lowe

**281N. Seminar in Transcriptomics (2 credits). F,W,S**
Covers current topics in computational and experimental research in transcriptomics. Current research work and literature discussed. Weekly laboratory meetings held to discuss these projects and related research in the field. Enrollment is restricted to graduate students. May be repeated for credit. R. Green

**281P. Seminar on Nanotechnology and Biosensors (2 credits). F,W,S**
Weekly seminar covering topics of research in the development of new tools and technologies to detect and study genes and proteins. Latest research work and literature in these areas are discussed. Students lead some discussions and participate in all meetings. Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. N. Pourmand

**281R. Seminar in Stem Cell Genomics (2 credits). F,W,S**
Weekly seminar series covering topics in research on stem cell genomics. Current research and literature in this area is discussed. Students lead some discussions and participate in all meetings. Enrollment restricted to graduate students; qualified undergraduates may enroll with instructor permission. D. Kim

**281S. Seminar in Computational Functional Genomics (2 credits). F,W,S**
Weekly seminar series covering topics of current computational and
Biomolecular Engineering

experimental research in computational functional genomics. Current research work and literature in this area discussed. Students lead some discussions and participate in all meetings. Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. J. Stuart

281V. Immunogenomics Seminar (2 credits). F,W,S
Journal club and research presentations in immunogenomics. Enrollment is by consent of the instructor and is restricted to graduate students, juniors, and seniors. May be repeated for credit. C. Vollmers

Covers major recent topics in evolutionary and population genomics. Consists primarily of discussions of recent literature and updates on group members' research. Enrollment is available only members of the Corbett-Detig laboratory. May be repeated for credit. R. Corbett-Detig

293. Seminar in Biomolecular Engineering. *
Weekly seminar series covering topics of bioinformatics and biomolecular engineering research. Current research work and literature in this area discussed. Students lead some discussions and participate in all meetings. Enrollment is restricted to graduate students; qualified undergraduates may enroll with permission of instructor. The Staff

Independent research in bioinformatics under faculty supervision. Although this course may be repeated for credit, not every degree program accepts a repeated course towards degree requirements. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

297. Independent Study or Research. F,W,S
Independent study or research under faculty supervision. Although course may be repeated for credit, not every degree program accepts a repeated course towards degree requirements. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

297F. Independent Study or Research (2 credits). F,W,S
Independent study or research under faculty supervision. Although course may be repeated for credit, not every degree program accepts a repeated course towards degree requirements. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

Thesis research conducted under faculty supervision. Although course may be repeated for credit, not every degree program accepts a repeated course towards degree requirements. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

* Not offered in 2018-19
Revised: 09/01/18
Computer engineering focuses on the design, analysis, and application of computers and on their applications as components of systems. The Department of Computer Engineering at the University of California, Santa Cruz, sustains and strengthens its teaching and research program to provide students with inspiration and quality education in the theory and practice of computer engineering. The department offers the Bachelor of Science (B.S.) in computer engineering, the Bachelor of Science in robotics engineering, the Bachelor of Arts (B.A.) in digital and network technology, the Master of Science (M.S.) and the Doctor of Philosophy (Ph.D.) in computer engineering degrees as well as an undergraduate minor. A combined B.S./M.S. pathway allows students to complete both the B.S. and M.S. in computer engineering degrees in five years. The department administers the interdisciplinary graduate designated emphasis in robotics and control that may be pursued along with a graduate degree in computer engineering or another field such as applied mathematics and statistics or electrical engineering.

UNDERGRADUATE PROGRAM DESCRIPTION

The department offers two bachelor of science majors, one in computer engineering and the other in robotics engineering. The department also offers a bachelor of arts in network and digital technology. The programs are closely related with many common requirements, so that students do not need to immediately decide among the three.

The two undergraduate engineering degrees have the same program objectives for their graduates. The program objectives of the UC Santa Cruz B.S. in computer engineering and B.S. in robotics engineering are:

- Graduates who choose to pursue a career in industry, government, or academia will become successful engineers, scientists, or educators who demonstrate strong leadership, technical, and team skills; and a commitment to continuing professional development.
- Graduates who choose to pursue advanced degrees will gain admission to graduate programs and will be successful graduate students.

The UC Santa Cruz B.S. in computer engineering prepares graduates for a rewarding career in engineering. UCSC computer engineering graduates will have a thorough grounding in the principles and practices of computer engineering and the scientific and mathematical principles upon which they are built; they will be prepared for further education (both formal and informal) and for productive employment in industry. Because computer engineering is so broad, the B.S. in computer engineering offers five specialized concentrations for completing the program: systems programming, computer systems, robotics and control, networks, and digital hardware.

Descriptions of these concentrations follow in the section on major requirements.

The UC Santa Cruz B.S. in robotics engineering prepares graduates for a rewarding career at the interfaces between electrical, computer, and mechanical engineering. UCSC robotics engineering graduates will have a thorough grounding in the principles and practices of robotics and control, and the scientific and mathematical principles upon which they are built; graduates will be prepared for further education (both formal and informal) and for productive employment in industry.

The UC Santa Cruz B.A. in network and digital technology provides students with in-depth knowledge of the underlying structure and function of network and computer technology and the design processes that make those technologies function. The program is tailored to students who wish to combine technology with other fields or have a general focus on digital design or computer networks. The B.A. in network and digital technology is not an engineering degree, but B.A. graduates will be prepared to work with technology development in other capacities, or join the computer network workforce. Students interested in graduate study should pursue either B.S. program.

The Department of Computer Engineering offers an undergraduate minor, described after the B.A. program below. The minor in computer engineering focuses on the technical aspects of computer hardware, embedded systems, and software design. This minor is particularly recommended for students interested in the design of computer technology for use in another discipline.

The Department co-sponsors the B.S. in bioengineering with the Departments of Biomolecular Engineering, Electrical Engineering, and Molecular, Cell and Developmental Biology.

Beyond the extensive research, design, and development projects taking place within courses required for the major, many computer engineering students join faculty-led research projects to take part in cutting-edge research.

Many computer engineering students continue their education through the M.S. degree. The Department of Computer Engineering offers a combined B.S./M.S.
Computer Engineering pathway in computer engineering that enables eligible undergraduates to move without interruption to the graduate program. Interested computer engineering and robotics engineering majors should contact their adviser for more details. The graduate program of the Department of Computer Engineering also offers both the standard M.S. and the Ph.D. degrees.

PROGRAM LEARNING OUTCOMES (PLOS)

For the computer engineering and robotics engineering B.S. degree, the PLOs are:

- an ability to apply knowledge of mathematics, science, and engineering;
- an ability to design a system, component, or process to meet desired needs within realistic constraints;
- an ability to function effectively on teams that establish goals, plan tasks, meet deadlines, and analyze risk and uncertainty;
- an ability to communicate effectively; and
- an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

For the network and digital technology B.A. degree the PLOs are:

- an ability to apply knowledge of mathematics, science, and engineering;
- an ability to design a system, component, or process;
- an ability to communicate effectively; and
- an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

COURSES FOR NONMAJORS

The Department of Computer Engineering offers course Computer Engineering 1, Hands-on Computer Engineering, a two-credit laboratory course designed to introduce students to computer engineering via many short fun projects; course Computer Engineering 3, Personal Computer Concepts: Software and Hardware, providing students an introductory course on the design and use of computers from an engineering viewpoint; and Computer Engineering 8, Robot Automation: Intelligence through Feedback Control. Other computer engineering courses of interest to nonmajors include Computer Engineering 12, Computing Systems and Assembly Language, an introductory course on computer systems, system software, and machine-level programming; Computer Engineering 80N, Introduction to Networking and the Internet, an introduction to technological services of the Internet; Computer Engineering 80E, Engineering Ethics; and Computer Engineering 80A, Universal Access: Disability, Technology, and Society.

COMPUTER ENGINEERING POLICIES

ADVISING FOR PROPOSED MAJORS

Students interested in pursuing any of the department's three majors but not yet ready to declare should have their status updated to reflect the associated proposed major. They should also visit the Baskin School of Engineering undergraduate advising office to plan a course of study that will allow them to complete any of the department's three majors as well as preserve their options for other majors that might be of interest. Proposed majors will be assigned a faculty adviser upon request and invited to School of Engineering and Computer Engineering advising events. Please note that students who are proposed majors still need to follow the procedure for declaring one of the three majors as described below; a student may not graduate as a proposed major.

DECLARATION OF THE COMPUTER ENGINEERING MAJORS

In order to be admitted into the computer engineering major students must be listed as a proposed major within the School of Engineering. Students in the engineering and computing cluster must propose a School of Engineering major before they can declare. Please refer to the Declaration of Major section in the School of Engineering Program Statement.

In addition to being listed as a proposed School of Engineering major, declaration of the computer engineering major in the first six quarters of enrollment at UC Santa Cruz is based on performance in the CE Major Qualification Courses: Mathematics 19A, Mathematics 19B, Mathematics 23A, Applied Mathematics and Statistics 10 or Mathematics 21(whichever is completed first), Applied Mathematics and Statistics 20, Computer Engineering 12/L, Computer Engineering 13/L, Computer Engineering 16, Computer Science 12B/M, Physics 5A/L and Physics 5C/N. Students in their first six quarters who have completed at least 36 credits in these courses will be admitted to the computer engineering major if:

1. their cumulative GPA is at least 2.8 in all of the CE Major Qualification Courses attempted; and
2. they have no more than 7 credits resulting in grades of C-, D+, D, D-, F or NP among all of the CE Major Qualification Courses attempted.

In order to be admitted into the robotics engineering major students must be listed as a proposed major within the School of Engineering. Students in the engineering and computing cluster must propose a School of Engineering major before they can declare. Please refer to the School of Engineering section under Declaration of Major for more information.

In addition to being listed as a proposed School of Engineering major, declaration of the robotics engineering major in the first six quarters of enrollment at UC Santa Cruz is based on performance in the following lower-division courses and associated labs required for the major: Mathematics 19A, Mathematics 19B, Mathematics 23A, Applied Mathematics and
Computer Engineering
Statistics 10 or Mathematics 21 (whichever is completed first), Applied Mathematics and Statistics 20, Computer Engineering 9, Computer Engineering 12/L, Computer Engineering 13/L, Computer Engineering 16, Computer Science 12B/M, Physics 5A/L and Physics 5C/N. Students in their first six quarters who have completed at least 41 credits in these courses will be admitted to the computer engineering major if
1. their cumulative GPA is at least 2.8 in all the courses listed above; and
2. they have attempted no more than 7 credits resulting in grades of C-, D+, D, D-, F or NP in all of the courses listed above.

Declaration of the network and digital technology major is based on performance in the following lower-division courses and associated labs required for the major:
Math 19A, Math 19B, Math 23A, Applied Mathematics and Statistics 10 or Mathematics 21 (whichever is completed first), Applied Mathematics and Statistics 20 or Mathematics 24 (whichever is completed first), Computer Engineering 12/L, Computer Engineering 13/L, Computer Engineering 16, Computer Science 12B/M, Physics 5A/L or Physics 6A/L and Physics 5C/N or Physics 6C/N. Students in their first six quarters who have completed at least 36 credits in these courses with a cumulative GPA of at least 2.30 or greater will be admitted to the network and digital technology major.

Students seeking to change their current major to network and digital technology after their sixth quarter must have completed the courses listed above with a cumulative GPA of at least 2.30.

Denials of admission to any of the department’s majors may be appealed by following the procedure in the School of Engineering section of the catalog.

TRANSFER STUDENTS

Computer Engineering B.S.
Students should complete at least six courses excluding labs from the following list:
Mathematics 19A,
Mathematics 19B,
Mathematics 23A,
Applied Mathematics and Statistics 10 or Mathematics 21 (whichever is completed first),
Applied Mathematics and Statistics 20
Computer Engineering 12/L,
Computer Engineering 13/L,
Computer Engineering 16,
Computer Science 12B/M,
Physics 5A/L
Physics 5C/N

Their cumulative GPA should be at least 2.8 in all of the courses attempted. Prospective transfer students completing the 2018-19 criteria (published in the 2017-18 catalog) and applying for Fall 2019 will also have satisfied major preparation.

Students should consult assist.org to determine which courses at other institutions in California are transferable to UCSC.

Mathematics 23A,
Applied Mathematics and Statistics 10 or Mathematics 21 (whichever is completed first),
Applied Mathematics and Statistics 20
Computer Engineering 9,
Computer Engineering 12/L,
Computer Engineering 13/L,
Computer Engineering 16,
Computer Science 12B/M,
Physics 5A/L
Physics 5C/N

Their cumulative GPA should be at least 2.8 in all of the courses attempted. Prospective transfer students completing the 2018-19 criteria (published in the 2017-18 catalog) and applying for Fall 2019 will also have satisfied major preparation.

Network and Digital Technology B.A.
Students should complete at least six courses excluding labs from the following list:
Mathematics 19A,
Mathematics 19B,
Mathematics 23A,
Applied Mathematics and Statistics 10 or Mathematics 21 (whichever is completed first),
Applied Mathematics and Statistics 20 or Mathematics 24 (whichever is completed first),
Computer Engineering 12/L,
Computer Engineering 13/L,
Computer Engineering 16,
Computer Science 12B/M,
Physics 5A/L or Physics 6A/L
Physics 5C/N or Physics 6C/N

Their cumulative GPA should be at least 2.3 in all of the courses attempted. Prospective transfer students completing the 2018-19 criteria (published in the 2017-18 catalog) and applying for Fall 2019 will also have satisfied major preparation.

Students should consult assist.org to determine which courses at other institutions in California are transferable to UCSC.

ADVISING

Every major and minor must have a computer engineering faculty adviser, assigned by the Baskin School of Engineering undergraduate advising office, and with that adviser must formulate a program of proposed coursework that meets the major or minor requirements. Additional information can be found on the SOE webpages.

To determine which courses at other institutions in California are transferable to UCSC.

RESTRICTIONS ON DOUBLE MAJORS AND MINORS

Students completing any of the department's three majors cannot also receive the computer engineering minor.

Students completing the Robotics Engineering B.S. or the Computer Engineering BS cannot receive the Network and Digital Technology B.A. degree.

Students completing the Robotics Engineering B.S. can receive the Computer Engineering B.S. as well only by
Computer Engineering

completing a concentration other than Robotics and Control.

HONORS IN THE MAJOR

Majors are considered for “Honors in the Major” and “Highest Honors in the Major” based on their GPA and on results of undergraduate research and other significant contributions to the School of Engineering. Students with a GPA of 3.70, in most cases, receive highest honors. Students with a GPA of 3.30, in most cases, receive honors. Students with particularly significant accomplishments in undergraduate research or contributions to the School of Engineering may be considered with a lower GPA. Computer engineering and robotics engineering juniors and seniors may also be eligible for election to the UC Santa Cruz chapter of Tau Beta Pi, the national engineering honor society founded in 1885.

LETTER GRADE POLICY

The Computer Engineering Department requires letter grading for all courses applied towards any of its three undergraduate degrees: the B.S. in computer engineering, the B.S. in robotics engineering and the B.A. in network and digital technology. This policy includes courses required for these degrees that are sponsored by other departments.

SCHOOL OF ENGINEERING POLICIES

Please refer to the School of Engineering section of the catalog for additional policies that apply to all School of Engineering programs.

MATERIALS FEE AND MISCELLANEOUS FEES

Please see the section on fees under the School of Engineering.

REQUIREMENTS OF THE COMPUTER ENGINEERING MAJOR

All students in the computer engineering major take the same core courses, which give the fundamentals of programming and hardware design, supported by the physics and mathematics necessary to understand them. Students must complete all of the courses listed within their selected concentration, and they must complete the capstone sequence. The senior comprehensive requirement for computer engineering majors is satisfied by completion of the capstone course and the exit requirement.

LOWER-DIVISION CORE REQUIREMENTS

Students who may have originally pursued another major should discuss with the Baskin School of Engineering undergraduate advising office whether or not already completed coursework may be substituted for one or more lower-division requirements.

Applied Mathematics and Statistics 10, Mathematical Methods for Engineers I; or Mathematics 21, Linear Algebra
Applied Mathematics and Statistics 20, Mathematical Methods for Engineers II
Computer Engineering 12/L, Computer Systems and Assembly Language/Laboratory
Computer Engineering 13/L, Computer Systems and C Programming/Laboratory
Computer Science 12B/M, Introduction to Data Structures/Laboratory
Computer Engineering 16, Applied Discrete Mathematics
Mathematics 19A-B, Calculus for Science, Engineering, and Mathematics
Mathematics 23A, Multivariable Calculus
Physics 5A/L, Introduction to Physics I/Laboratory
Physics 5B/M, Introduction to Physics II/Laboratory; or Computer Engineering 9, Statics, Dynamics, and Biomechanics (recommended for robotics and control concentration)
Physics 5C/N, Introduction to Physics III/Laboratory

UPPER-DIVISION CORE REQUIREMENTS

Computer Engineering 100/L, Logic Design/Laboratory
Computer Engineering 107, Probability and Statistics for Engineers
Computer Engineering 110, Computer Architecture
Computer Engineering 121/L, Microprocessor System Design/Laboratory
Computer Engineering 185, Technical Writing for Computer Engineers
Computer Science 101, Abstract Data Types
Electrical Engineering 101/L, Introduction to Electronics/Laboratory
Electrical Engineering 103/L, Signals and Systems/Laboratory

CONCENTRATIONS

The following concentrations are specializations for the computer engineering student. Students must complete all of the courses listed within their selected concentration.

SYSTEMS PROGRAMMING CONCENTRATION

The systems programming concentration focuses on software systems: courses include operating systems, compilers, software engineering, and advanced programming. Students finishing this concentration are very well prepared for building large software systems.
Computer Engineering of all types. This concentration is the closest one to a computer science major—the main differences are that it does not require computer science theory courses, but because of the core computer engineering requirements, includes more hardware and electronics than a computer science bachelor's degree.

Computer Science 111, Introduction to Operating Systems; or Computer Engineering 105, Principles of Computer Systems Design
Computer Science 109, Advanced Programming; or Computer Science 115, Software Methodology; or Computer Engineering 114, Embedded Operating Systems

Computer Engineering 150/L, Introduction to Computer Networks/Laboratory
Elective: Upper-division or graduate elective from the approved list

Any one of the following courses:
- Computer Engineering 113, Parallel and Concurrent Programming
- Computer Engineering 156/L, Network Programming/Laboratory
- Computer Science 104A, Fundamentals of Compiler Design I

COMPUTER SYSTEMS CONCENTRATION

The computer systems concentration provides a balance between software and hardware design. Students are prepared for a large variety of different design tasks, especially those requiring the integration of hardware and software systems, but may need further training for any particular specialization.

Computer Engineering 125/L, Logic Design with Verilog/Laboratory; or Computer Engineering 122*, Introduction to VLSI Digital System Design
Computer Science 109, Advanced Programming; or Computer Science 115, Software Methodology; or Computer Engineering 114, Embedded Operating Systems

Computer Science 111, Introduction to Operating Systems; or Computer Engineering 105, Principles of Computer Systems Design
Elective: Upper-division or graduate elective from the approved list

*Computer Engineering 222, Advanced VLSI Digital System Design, may be substituted for CMPE 122 with department approval.

DIGITAL HARDWARE CONCENTRATION

The digital hardware concentration focuses on hardware design and includes more electronics than the other concentrations. Students finishing this concentration are well prepared for building hardware systems. This concentration is the closest one to an electronics major; the main differences are that it does not require as much electronics theory or analog electronic design, but because of the core computer engineering requirements, requires more software skills.

Computer Engineering 125/L, Logic Design with Verilog/Laboratory
Electrical Engineering 171/L, Analog Electronics/Laboratory; or Computer Engineering 122*, Introduction to VLSI Digital System Design
Elective: Upper-division or graduate elective from the approved list

Any one of the following courses:
- Computer Engineering 122*, Introduction to VLSI Digital System Design (if not taken to satisfy above requirement)
- Electrical Engineering 171/L, Analog Electronics/Laboratory (if not taken to satisfy above requirement)
- Electrical Engineering 173/L, High-Speed Digital Design/Laboratory (requires prerequisite)

NETWORKS CONCENTRATION

The networks concentration focuses on communication between computers, covering both network hardware and protocols. Students finishing this concentration are well prepared for the design of wired and wireless network systems.

Computer Engineering 150/L, Introduction to Computer Networks/Laboratory
Computer Engineering 156/L, Network Programming/Laboratory
Computer Science 111, Introduction to Operating Systems; or Computer Engineering 105, Principles of Computer Systems Design

Elective: Computer Engineering 151/L, Advanced Computer Networks/Laboratory; or an upper-division or graduate elective from the approved list

ROBOTICS AND CONTROL CONCENTRATION

This concentration covers the hardware, software, sensing, and control aspects of autonomous and embedded systems. Students receive training in the theory, design, and realization of complex systems such as mobile robots. The concentration emphasizes integration of embedded software with hardware systems that interact with the environment.

Any two of the following three courses:
- Computer Engineering 118/L, Introduction to Mechatronics/Laboratory
- Computer Engineering 167/L, Sensing and Sensor Technologies/Laboratory
- Computer Engineering 141, Feedback Control Systems
Third course from above (Computer Engineering 118/L, Computer Engineering 167/L, Computer Engineering 141); or any course from the list of approved robotics electives list
Elective: Upper-division or graduate elective from the approved list
DISCIPLINARY COMMUNICATION (DC) REQUIREMENT

Students of every major must satisfy that major’s upper-division Disciplinary Communication (DC) requirement. The DC requirement in computer engineering is satisfied by completing Computer Engineering 185, Technical Writing for Computer Engineers.

CAPSTONE REQUIREMENT

All computer engineering students complete one of the following capstone sequences:
- Computer Engineering 123A, Computer Engineering Design Project I; and Computer Engineering 123B, Computer Engineering Design Project II
- Computer Engineering 129A, Capstone Project I; and Computer Engineering 129B, Capstone Project II; and Computer Engineering 129C, Capstone Project III
- Computer Engineering 195, Senior Thesis Research; submission of approved senior thesis

Computer Science 115, Introduction to Software Engineering; Computer Science 116, Software Design Project; and Computer Science 117, Software Design Project II

EXIT REQUIREMENT

Students are required to complete an exit survey and attend an exit interview. Portfolios of the students’ work will be collected from our courses for program evaluation. The portfolios will be reviewed by the computer engineering undergraduate committee and will include two project reports: CMPE 121/L and either the senior capstone report (CMPE 129A/B/C or CMPE 123A/B) or the student’s senior thesis. Exit interviews are scheduled during the last week of the quarter.

COMPUTER ENGINEERING MAJOR PLANNERS

Below are two sample academic plans for students majoring in Computer Engineering. Since the plans for the third and fourth years will vary according to the concentration and capstone selected, placeholders for these courses have been indicated with “concentration course” and “capstone course.” As part of the major declaration process students prepare a 4 year plan based on a concentration and this may affect the placement of other courses as well. Careful planning at the time of declaration is required to complete the degree within four years. Entering frosh who have little programming experience, are strongly advised to take a programming course in the fall quarter.

REQUIREMENTS OF THE ROBOTICS ENGINEERING MAJOR

All students in the robotics engineering major must take the courses listed below. Although not required, it is strongly recommended that students interested in the robotics engineering major take Computer Engineering 8, Introduction to Robot Automation in their first quarter. The senior comprehensive requirement for robotics engineering majors is satisfied by completion of the capstone course and the portfolio exit requirement. The robotics engineering major requires two more courses than the computer engineering major, including one graduate course. Students not making sufficient progress in the major may be required to change to another major.

LOWER-DIVISION CORE REQUIREMENTS

Students who may have originally pursued another major should discuss with the Baskin School of Engineering undergraduate advising office whether or not already completed coursework may be substituted for one or more lower-division requirements.

Applied Mathematics and Statistics 10, Mathematical Methods for Engineers I; or Mathematics 21 Linear Algebra

Applied Mathematics and Statistics 20, Mathematical Methods for Engineers II

Computer Engineering 12/L, Computer Systems and Assembly Language/Laboratory

Computer Engineering 13/L, Computer Systems and C Programming/Laboratory

Computer Science 12B/M, Introduction to Data Structures/Laboratory

Computer Engineering 16, Applied Discrete Mathematics

Mathematics 19A-B, Calculus for Science, Engineering, and Mathematics

Mathematics 23A, Multivariable Calculus

Physics 5A/L, Introduction Physics I/Laboratory

Physics 5C/N, Introduction Physics III/Laboratory

Computer Engineering 9, Statics, Dynamics, and Biomechanics

Computer Engineering 10, Introduction to Solid Mechanics

UPPER-DIVISION CORE REQUIREMENTS

Computer Engineering 100/L, Logic Design/Laboratory

Computer Engineering 107, Probability and Statistics for Engineers

Computer Engineering 118/L, Introduction to Mechatronics/Laboratory

Computer Engineering 121/L, Microprocessor System Design/Laboratory

Computer Engineering 141, Feedback Control Systems

Computer Engineering 167/L, Sensing and Sensor Technologies/Laboratory

Computer Engineering 185, Technical Writing for Computer Engineers

Computer Science 101, Abstract Data Types

Electrical Engineering 101/L, Introduction to Electronics/Laboratory

Electrical Engineering 103/L, Signals and Systems/Laboratory

Advanced Robotics Elective: Upper-division or graduate elective from the list of approved advanced robotics electives

E elective: Upper-division or graduate elective from the approved list

DISCIPLINARY COMMUNICATION (DC) REQUIREMENT

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in robotics engineering is satisfied by completing Computer Engineering 185, Technical Writing for Computer Engineers.

CAPSTONE REQUIREMENT

All robotics engineering students complete one of the following capstone sequences:

Computer Engineering 123A, Computer Engineering Design Project I and Computer Engineering 123B, Computer Engineering Design Project II;

Computer Engineering 129A, Capstone Project I; and Computer Engineering 129B, Capstone Project II; and Computer Engineering 129C, Capstone Project III

Computer Engineering 195, Senior Thesis Research; submission of approved senior thesis
EXIT REQUIREMENT

Students are required to complete an exit survey and attend an exit interview. Portfolios of the students work will be collected from our courses for program evaluation. The portfolios will be reviewed by the computer engineering undergraduate committee and will include two project reports: CMPE 118/L and either the senior capstone report (CMPE 129A/B/C or CMPE 123A/B) or the student's senior thesis.

ROBOTICS ENGINEERING MAJOR

Below is a sample academic plan for students majoring in robotics engineering. The plan for the third and fourth years will vary according to the electives and capstone selected. As part of the major declaration process students prepare a four-year plan and the selected electives may affect the placement of other courses as well. Carefully planning at the time of declaration is required to complete the degree within four years.

Four-Year Planner for Robotics Engineering

</tbody>
</table>

Plan for Junior Transfers

Below is a sample academic plan for students transferring to UC Santa Cruz in robotics engineering for their junior year. It assumes that all lower-division course requirements have already been satisfied, except possibly CMPE 10. The plan for the third and fourth years will vary according to the electives and capstone selected. As part of the major declaration process students prepare a plan and the selected electives may affect the placement of other courses as well. Carefully planning at the time of declaration is required to complete the degree within two years.

NETWORK AND DIGITAL TECHNOLOGY MAJOR

All students in the network and digital technology major must take the following courses. The senior comprehensive requirement is satisfied by completion of the capstone course and the portfolio exit requirement.

LOWER-DIVISION REQUIREMENTS

Students who may have originally pursued another major should discuss with the Baskin School of Engineering undergraduate advising office whether or not already completed coursework may be substituted for one or more lower division-requirements.

Applied Mathematics and Statistics 10, Mathematical Methods for Engineers I; or Mathematics 21, Linear Algebra
Applied Mathematics and Statistics 20, Mathematical Methods for Engineers II; or Mathematics 24, Ordinary Differential Equations
Computer Engineering 12/L, Computer Systems and Assembly Language/Laboratory
Computer Engineering 13/L, Computer Systems and C Programming/Laboratory
Computer Science 12B/M, Introduction to Data Structures/Laboratory
Computer Engineering 16, Applied Discrete Mathematics
Mathematics 19A-B, Calculus for Science, Engineering, and Mathematics
Mathematics 23A, Multivariable Calculus
Physics 5A/L, Introduction Physics /Laboratory I; or Physics 6A/L, Introductory Physics I/Laboratory
Physics 5C/N, Introduction Physics III/Laboratory; or Physics 6C/N, Introductory Physics III/Laboratory

UPPER-DIVISION REQUIREMENTS

Computer Engineering 100/L, Logic Design/Laboratory
Computer Engineering
Computer Engineering 150/L, Computer Networks/Laboratory
Computer Engineering 185, Technical Writing for Computer Engineers
Computer Science 101, Abstract Data Types; or Electrical Engineering 101/L, Introduction to Electronics/Laboratory
Three additional 5-credit, upper-division electives, and associated laboratories, from the approved list of electives, and one capstone requirement course.

**CAPSTONE REQUIREMENT**

Each capstone course features a 3-month supervised design experience in digital or network technology culminating in a substantial written report. Computer Engineering 185, Technical Writing for Computer Engineers, must be completed prior to or concurrently with the capstone project course. Students must notify the instructor at the start of the quarter that they are working to complete their B.A. in Digital Technology Capstone Requirement. Students select one of the following:

- Computer Engineering 118/L, Introduction to Mechatronics/Laboratory
- Computer Engineering 121/L, Microprocessor System Design/Laboratory
- Computer Engineering 125/L, Logic Design with Verilog/Laboratory
- Computer Engineering 151/L, Advanced Computer Networks/Laboratory
- Computer Engineering 156/L, Network Programming/Laboratory
- Computer Science 115, Software Methodology

**ELECTIVE CHOICE**

Students wishing to focus on digital technology should consider including among their courses: Electrical Engineering 101/L, Computer Engineering 110, Computer Engineering 118/L, Computer Engineering 121/L, and Computer Engineering 125/L.

Students wishing to focus on network technology should consider including among their courses: Computer Science 101, Computer Engineering 151/L, Computer Engineering 156/L, and Computer Science 111.

In all cases, students should discuss their interests and elective choices with their faculty adviser.

**DISCIPLINARY COMMUNICATION (DC) REQUIREMENT**

Students of every major must satisfy that major’s upper-division Disciplinary Communication (DC) requirement. The DC requirement in network and digital technology is satisfied by completing Computer Engineering 185, Technical Writing for Computer Engineers.

**EXIT REQUIREMENT**

Students are required to submit a portfolio and complete the exit survey. Students whose submissions are deemed inadequate, either in presentation or in content, may be required to revise and rewrite the portfolio or to complete an additional project course. The portfolios must be turned in electronically by the last day of the quarter of graduation. The online form can be found on the computer engineering web pages. The portfolios will be reviewed quarterly by the computer engineering undergraduate committee and must include the project report of the student’s capstone course.

**NETWORK AND DIGITAL TECHNOLOGY MAJOR PLANNER**

The first year is similar to option 2 for the computer engineering major. Students choosing between the B.S. and the B.A. program should follow the B.S. curriculum until major declaration. General education courses needed outside major requirements are not shown.

**COMPUTER ENGINEERING MINOR**

The computer engineering minor provides a solid foundation in digital hardware, electronics, and computer software, as well as the prerequisite material in mathematics and physics. The minor is well-suited to students who wish to take part in the design of computer and embedded systems in any discipline. Computer Engineering 118/L, Introduction to Mechatronics/Introduction to Mechatronics Laboratory or Computer Engineering 121/L, Microprocessor System Design/Microprocessor System Design Laboratory provides a capstone engineering design experience for students pursuing the computer engineering minor.
The pathway prepares students for leadership positions in industry, and is also attractive for undergraduate students planning to pursue a Ph.D. degree targeting research careers in industry or academia. The School of Engineering has many opportunities for undergraduate research, and B.S./M.S. students can continue their undergraduate research projects with the same research group. Upon advancement to graduate standing, B.S./M.S. students are eligible for financial support as graduate research assistants and teaching assistants.

Particularly motivated B.S./M.S. students can complete the entire pathway in 14 quarters (or fewer with Advanced Placement credit); however, advance planning is essential. Interested students should contact the department and their faculty adviser early in their college career-no later than the start of their junior year. B.S./M.S. students retain undergraduate status until the completion of all undergraduate requirements, but may begin graduate coursework in advance of graduate standing.

### ADMISSION TO THE B.S./M.S. PATHWAY

The undergraduate degree requirements are the same as those for other computer engineering, robotics engineering, electrical engineering, and computer science majors; however, the B.S./M.S. pathway capitalizes on graduate-level courses that may apply toward both degree requirements. B.S./M.S. candidates may use (at most) two graduate courses taken as undergraduates toward both the M.S. degree and B.S. degree electives. At the time graduate status is achieved, no more than three graduate courses taken as an undergraduate may count toward the nine courses required for the M.S. degree. Furthermore, B.S./M.S. students may not apply undergraduate courses toward the M.S. degree.

Admission to the B.S./M.S. pathway is by formal application, but is very simple. Undergraduate applicants seeking admission to the pathway can apply at any time starting in the first quarter of junior standing, and no graduate record examination (GRE) is required to apply. To qualify, applicants must have a 3.0 GPA when they apply to the B.S./M.S. pathway, and must maintain a 3.0 GPA or higher until the completion of their undergraduate requirements.

Students who cannot meet the B.S./M.S. application requirements or who are not admitted into the pathway are encouraged to apply for admission to the standard M.S. or Ph.D. program during their senior year. Additional information about this pathway can be found on the department's website.

### GRADUATE PROGRAMS

#### M.S. AND PH.D. DEGREE PROGRAMS

The graduate program in computer engineering accepts students for both the M.S. and the Ph.D. degrees. Graduate students in this program establish a solid
Computer Engineering foundation in computer algorithms and architectures and then proceed to a thorough study of recent developments in their selected area of specialization. This provides the basis for the M.S. degree and Ph.D. thesis work. The major areas of research concentration in computer engineering at UC Santa Cruz are computer networks; embedded and autonomous systems; computer systems design; robotics and control, mobile and pervasive computing; and computer-aided design; and sensing and interaction.

The computer engineering program benefits from a close relationship with other graduate programs in the School of Engineering and UC Santa Cruz as a whole. It maintains strong ties to local industry in the Silicon Valley and Monterey Bay areas. Graduates of the program are prepared for careers in academia and research as well as for positions in industrial research and development.

While in the program, most graduate students are supported as research assistants on faculty-sponsored projects or as teaching assistants for undergraduate courses.

Additional information on the computer engineering M.S. and Ph.D. degrees, including degree requirements and applications for admission, can be found on the department's website.

---

**BASE REQUIREMENT (FOR BOTH M.S. AND PH.D.)**

In their first year, graduate students (both M.S. and Ph.D.) must show proficiency in three fundamental subjects: 1) computer algorithms and data structures; 2) computer architecture; and 3) one of the following three subjects—logic design, circuits, or software systems. Proficiency can be demonstrated by either completing one of the associated undergraduate courses, by establishing that an equivalent undergraduate course has been completed elsewhere, or by passing the final examination (or project when deemed appropriate by the responsible faculty) of an associated course. Students should obtain a computer engineering base requirement worksheet for the list of associated courses and instructions on fulfilling this requirement.

All graduate students (both M.S. and Ph.D.) must meet the base requirement by the end of the spring quarter of their first year in the program.

---

**LETTER GRADE POLICY (FOR BOTH M.S. AND PH.D.)**

The Computer Engineering Department requires letter grading for all courses applied toward its master's and Ph.D. degrees with an exception for up to 10 credits of the student's choice and the following courses: Research and Training in Computer Science and Engineering (CMPE 200), Master's Project (CMPE 296), Independent Study or Research (CMPE 297), Thesis Research (CMPE 299), and seminar courses (CMPE 280 series). This policy includes courses used for these degrees that are sponsored by other departments. To ensure they will receive a letter grade, students should check that they have selected the letter grade option no later than the 15th day of instruction each quarter for each class in which they are enrolled.

---

**REQUIREMENTS FOR THE MASTER'S DEGREE THESIS TRACK**

**COURSE REQUIREMENTS**

Each M.S. student is required to complete a total of at least 48 credits. The coursework must include:

1. Completion of base requirement as described above.
2. Core requirements:
3. Computer Engineering 200, Research and Teaching in Computer Science and Engineering (to be taken in fall quarter of the first year)
4. Computer Science 201, Analysis of Algorithms
5. Computer Engineering 202, Computer Architecture
6. Research credits: Up to 10 credits of Computer Engineering 297, Independent Study or Research; or Computer Engineering 299, Thesis Research
7. Up to 10 credits of either graduate courses (not seminars) in related disciplines outside the School of Engineering (requires adviser and computer engineering graduate director approval) or upper-division undergraduate courses when necessary to strengthen the student's preparation for graduate studies (requires adviser approval).
8. All remaining courses must be regular 5-credit graduate courses from within the School of Engineering (with adviser and grad director approval); courses that do not count include all courses numbered 200, 280, 296, 297, and 299.

At least half of the credits from the graduate-level courses must be computer engineering graduate courses.

**THESIS**

Completion of a master's thesis is required for award of the master's degree. To fulfill this requirement, the student must submit a written proposal to a faculty member, usually by the third academic quarter. By accepting the proposal, the faculty member becomes the thesis adviser for the proposed thesis. In consultation with the adviser, the student must form a master's thesis reading committee with at least two additional faculty members, each of whom is provided a copy of the proposal. It is recommended that the student give an expository talk on the thesis research. The approved reading committee must accept the final thesis before the Master of Science degree can be awarded.

---

**REQUIREMENTS FOR THE MASTER'S DEGREE PROJECT TRACK**

**COURSE REQUIREMENTS**

Each student is required to complete a total of at least 48 credits. The coursework must include:

1. Completion of base requirement as described above.
Computer Engineering

2. Core requirements:
3. Computer Engineering 200, Research and Teaching in Computer Science and Engineering (to be taken in Fall quarter of first year)
4. Computer Science 201, Analysis of Algorithms
5. Computer Engineering 202, Computer Architecture
6. Computer Engineering 296, Master's Project, 2 credits;
7. Up to 10 credits of either graduate courses (not seminars) in related disciplines outside the School of Engineering (requires adviser and computer engineering graduate director approval) or upper-division undergraduate courses when necessary to strengthen the student's preparation for graduate studies (requires adviser approval).
8. All remaining courses must be regular, 5-credit graduate courses from within the School of Engineering (with adviser's and grad director's approval); courses that do not count include all courses numbered 200, 280, 296, 297, and 299.

At least half of the credits from the graduate-level courses must be computer engineering graduate courses.

PROJECT

Completion of a master's project is required to satisfy the master's degree capstone requirement. The master's project is the culmination of the student's academic experience and builds upon the knowledge acquired during the program. In consultation with the adviser, the student forms a master's project reading committee of at least two faculty members, each of whom is provided a copy of the project report. The final project must be accepted by the review committee before the award of the Master of Science degree.

REQUIREMENTS FOR THE PH.D. DEGREE

COURSE REQUIREMENTS

A Ph.D. student is required to take a total of 58 credits of graduate courses, which must consist of:
1. Completion of base requirement as described above
2. Core requirements:
3. Computer Engineering 200, Research and Teaching in Computer Science and Engineering (to be taken in fall quarter of the first year)
4. Computer Science 201, Analysis of Algorithms
5. Computer Engineering 202, Computer Architecture
6. Research credits: Up to 10 credits of Computer Engineering 297, Independent Study or Research; or Computer Engineering 299, Thesis Research
7. Up to 10 credits of graduate courses (not seminars) in related disciplines outside the School of Engineering (requires adviser and computer engineering graduate director approval).
8. All remaining courses must be regular, 5-credit graduate courses from within the School of Engineering (with adviser and computer engineering graduate director approval); credits that do not count include all courses numbered 200, 280, 296, 297, and 299. At least 20 credits of these remaining courses must be Computer Engineering courses.

Course selection should form a coherent plan of study and requires adviser approval. Undergraduate courses may not be used to satisfy Ph.D. course requirements.

Ph.D. students who have satisfied the requirements for the master's degree are eligible to receive a master's degree.

INTERNSHIPS

Where appropriate, research internships with companies, research organizations, or government labs are recognized as an integral part of the research leading to the Ph.D. dissertation. At the adviser's discretion, internships in an appropriate company, research organization, or government lab may be required for individual students.

EXAMINATIONS AND DISSERTATION

To continue in the Ph.D. program, students must pass a preliminary examination in their chosen research area by the end of their third year. Preliminary examinations are held during the first three weeks of each spring quarter; students must petition the computer engineering graduate committee for an examination in their chosen area two weeks before the end of winter quarter.

Examination committees consist of four faculty members, two chosen by the student and two by the computer engineering graduate director. The format of this oral examination is up to the examination committee; the examination will typically evaluate both general knowledge of the chosen area and specific understanding of selected technical papers. The preliminary examination requirement is waived for students who advance to candidacy by the end of their third year.

Each student must write a Ph.D. dissertation. The dissertation must show the results of in-depth research, by an original contribution of significant knowledge, and include material worthy of publication. As the first step, a student must submit a written dissertation proposal to a School of Engineering faculty member. By accepting the proposal, the faculty member becomes the student's dissertation supervisor. The student may choose a faculty member outside the Computer Engineering Department within the School of Engineering as adviser only with approval from the computer engineering graduate director. The dissertation proposal is publically and formally presented in an oral qualifying examination given by a qualifying examination committee, approved by the computer engineering graduate director and the graduate division. The student must submit his or her written dissertation proposal to all members of the qualifying examination committee and the graduate adviser at least one month in advance of the examination.

Students are advanced to candidacy after they have completed the course requirements, passed both the preliminary and qualifying examinations (or just the qualifying examination if passed prior to the end of the student's third year in the program), cleared all Incomplete grades from their records, have an
Computer Engineering appointed dissertation reading committee, and paid the filing fee. Students who have not advanced to candidacy by the end of their fourth year will be placed on academic probation.

Each Ph.D. candidate must submit the completed dissertation to a reading committee at least one month prior to the dissertation defense. The appointment of the dissertation reading committee is made immediately after the qualifying examination and is necessary for advancing to candidacy. The candidate must present his or her research results in a public seminar sponsored by the dissertation supervisor. The seminar is followed by a defense of the dissertation to the reading committee and attending faculty who will then decide whether the dissertation is acceptable or requires revision. Successful completion of the dissertation fulfills the final academic requirement for the Ph.D. degree.

## TRANSFER CREDIT

Up to three School of Engineering courses fulfilling the degree requirements of either the M.S. or Ph.D. degrees may be taken before beginning the graduate program through the concurrent enrollment program.

M.S. students who have previously successfully completed graduate-level classes in a related field at another institution may substitute courses from their previous institution with the approval of the graduate director. The number of courses that can be substituted is limited so that, in all cases, students must complete a minimum of four graduate-level classes during their matriculation at UC Santa Cruz. These classes must be School of Engineering graduate-level courses and must be approved by the student’s advisor and the computer engineering graduate director.

Petitions for course substitutions should be submitted along with the transcript from the other institution or UC Santa Cruz extension. For courses taken at other institutions copies of the syllabi, exams, and other coursework should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UCSC.

Ph.D. students who have previously earned a master’s degree or have successfully completed graduate-level classes as regular students in a graduate program in a related field at another institution may apply for a modified program of course requirements taking into account their previous coursework. Such a modified program should specify the coursework that will be completed at UC Santa Cruz, which must include no fewer than four graduate-level courses and must be approved by the student’s advisor and the computer engineering graduate director. These four courses must be taken while in the graduate program at UCSC.

Application for a modified program of course requirements must be made within the first year of graduate study at UC Santa Cruz and will be reviewed by the graduate director and a committee of three faculty members approved by the graduate director. Copies of the syllabi, exams, other relevant coursework, and the relevant transcript from the other institution, must accompany the application. Interviews with the committee members may be required to properly assess the coursework.

Acceptance of prior work for course transfer and modified programs of study is at the discretion of the department.

## ROBOTICS AND CONTROL DESIGNATED EMPHASIS

The graduate designated emphasis (DE) leading to the degree notation “with an emphasis in Robotics and Control” is a collaboration of faculty from several Baskin School of Engineering programs and is administered by the Department of Computer Engineering. Students wishing to complete a master’s thesis or doctoral dissertation in this area must satisfy the degree requirements of a primary program as well as of the DE. The DE is most suitable for students pursuing degrees in Applied Mathematics and Statistics, Computer Engineering and Electrical Engineering, but students from any area may work in this interdisciplinary field so long as they meet all requirements, including progress, within the primary degree program. A current list of the robotics and control faculty and electives is available at the Computer Engineering website.

### REQUIREMENTS FOR THE DESIGNATED EMPHASIS NOTATION

**Committee composition.** The student’s Ph.D. or M.S. committee must include one member of the robotics and control faculty.

**Writing.** The student’s dissertation or thesis must include a significant section (chapter) related to robotics and control, with content suitable for a conference or journal article. Students pursuing the M.S. project track must complete a project report related to robotics and control, with content suitable for a conference or journal article.

**Course requirements.** The student must complete four five-credit graduate courses and several two-credit seminar courses. All students must complete CMPE 241/EE 241, Introduction to Feedback Control Systems, and three 5-credit robotics and control graduate electives.

Master’s students must complete two offerings of CMPE 280C, Seminar in Control (2 credits).

Doctoral students must complete four offerings of CMPE 280C.

### REVIEW OF PROGRESS

Each year, computer engineering faculty reviews the progress of every student in the graduate program. Students not making adequate progress towards completion of degree requirements (see the UC Santa Cruz Graduate Handbook for policy on satisfactory academic progress) are subject to dismissal from the program. Students with academic deficiencies may be required to take additional courses. Full-time students with no academic deficiencies are normally expected to complete the degree requirements at the rate of at least
Computer Engineering
two courses per quarter. Full-time students must
complete Computer Science 201 and Computer
Engineering 202 within two years and normally must
complete all course requirements within two years for
the M.S. and three years for the Ph.D. program.

Students receiving two or more grades of U
(Unsatisfactory) or below B in School of Engineering
courses are not making adequate progress and will be
placed on academic probation for the following three
quarters of registered enrollment. Withdrawing or
taking a leave of absence does not count as enrollment.
Part-time enrollment is counted as a half of a quarter of
enrollment.

Should any computer engineering graduate student fail
a School of Engineering course while on probation, the
Computer Engineering Department may request the
graduate dean to dismiss that student from the
graduate program. If, after being removed from
probation, the student again fails a School of
Engineering course, he or she will return immediately
to academic probation.

Graduate students experiencing circumstances or
difficulties that impact their academic performance
should contact their adviser and the graduate director
immediately. Students may appeal their dismissal.

COMPUTER ENGINEERING FACULTY AND PROFESSIONAL INTERESTS

Alexandre Brandwajn, Emeritus

Gabriel Elkaim
Embedded systems; robust software architectures for
real-time reactive systems; sensor fusion; guidance,
navigation, and control (GNC) system identification;
robust and advanced control schemes; feedback control
systems; robotics; unmanned autonomous vehicles
(UAVs); and cooperative control

F. Joel Ferguson, Emeritus

J. J. García-Luna-Aceves (joint with Technology
Management), Distinguished Professor
Jack Baskin Chair of Computer Engineering
Principles of computer communication, Internet, mobile
and pervasive computing, wireless networks,
information-centric networks, network science

Richard Hughey (joint with Biomolecular Engineering)
Bioinformatics, hidden Markov models, computer
architecture, parallel computation

Tracy Larrabee
Test-pattern simulation and generation, fault modeling,
fault diagnosis, design verification, technical writing,
logic simulation

Darrell D. E. Long
Distinguished Professor
Kumar Malavalli Endowed Chair
Data storage systems, distributed computing, operating
systems, high performance computing, performance
evaluation, reliability, computer and network security,
multimedia

Roberto Manduchi
Computer vision and sensor processing, with
application to assistive technology for the visually
impaired, mobile and pervasive computing

Patrick E. Mantey (joint with Technology Management)
Jack Baskin Chair of Computer Engineering
Multimedia systems, digital signal processing, sensor
systems and networks, real-time monitoring and
control, image systems, image processing, visualization,
geographic information systems, decision support
systems

Ethan L. Miller
Veritas Presidential Chair
Archival storage; non-volatile memory and next-
generation storage; storage security and reliability; file

Dejan Milutinović
Stochastic and nonlinear control, optimization,
stochastic processes and estimation, hybrid and
discrete event systems, signal processing and real-time
computer control with applications to robotics, air-
traffic and multi-agent systems

Katia Oblaczka
Computer networks, distributed systems, operating
systems, Internet information systems, mobile
computing, wireless networks, mobile and pervasive
computing

Jose Renau
Computer architecture, including design effort metrics
and models, infrared thermal measurements and
modeling, simulation, FPGA/ASIC design, mobile and
pervasive computing

Martine D. F. Schlag
VLSI design tools and algorithms, VLSI theory, field-
programmable gate arrays, FPGA-based computing
engines

Anujan Varma
Computer networking, computer architecture, optical
networks

Alexander Wolf
Engineering of large and/or complex software systems,
experimental computer science, distributed systems
and networks, software engineering, self-managed
systems

Matthew R. Guthaus
Integrated circuits and chip design (VLSI), electronic
computer-aided design (ECAD), low-power circuits,
memory circuits, synchronous systems, low-power
circuits, variability and reliability of electronics

Ricardo Sanfelice
Modeling, stability, robust control, observer design, and
simulation of nonlinear and hybrid systems with
applications to power systems, robotics, aerospace, and
biology

ASSOCIATE PROFESSOR

Pak K. Chan, Emeritus
Computer Engineering
Mircea Teodorescu
Dynamics, vibrations, contact mechanics, biomechanics

ASSISTANT PROFESSOR

Scott Beamer
Computer architecture, systems, graph algorithms, and interconnects

Heiner Litz
Computer architecture, operating systems, storage systems, machine learning, hardware design

Chen Qian
Computer networks, Internet of things, security and privacy, mobile and pervasive computing, distributed systems, cloud computing

Michael Wehner
Robotics, human-machine interaction, soft systems, wearables, rehabilitation

ADJUNCT PROFESSOR

Renwick Curry
Control and optimization with special attention to aviation; air-traffic control; and collision-avoidance system design and analysis

ASSOCIATE ADJUNCT PROFESSOR

Bradley Smith
Computer communications, distributed systems, policy-based routing, routing protocols, path algebras, in-network caching and Information Centric Networking (ICN), security and trust in distributed systems, virtual network labs for network instruction

Cedric Westphal
Internet architecture, information-centric network, content and video distribution, wireless networks, analytical modeling, mobile and pervasive computing

CONTINUING LECTURER

Gerald Moulds
Technical writing, professional communications

Luca De Alfaro (Computer Science)
Reputation systems, crowdsourcing, game theory, formal methods

Benjamin Friedlander (Electrical Engineering)
Digital communications, wireless communication system, array processing, adaptive signal processing

Qi Gong (Applied Mathematics and Statistics)
Computational methods for real-time control systems, trajectory optimization and motion planning, nonlinear filtering and observer design, robust and adaptive control of nonlinear systems, industry applications of control theory

Claire Gu, Emerita (Electrical Engineering)
Abhishek Halder (Applied Mathematics and Statistics)
Systems, control, and optimization; dynamics and control of stochastic systems; uncertainty propagation and nonlinear estimation; Monge-Kantorovich optimal transport; randomized algorithms, density control; density control for aerial robotics and smart grid; cyberphysical systems; model validation, controller robustness verification; model reduction; data-driven modeling for control and machine learning

Kevin Karplus (Biomolecular Engineering)
Genome assembly from next-generation sequence data. (Formerly protein structure prediction), signal processing and statistics for nanopore signals

Suresh K. Lodha (Computer Science)
Data analytics and visualization, vision, innovation, technology for social good

Dominic W. Massaro, Emeritus (Psychology)

Charles E. McDowell (Computer Science)
Programming languages, parallel computing, and computer science education

John Musacchio (Technology Management)
Control, analysis, and pricing of communications networks; applications of game theory in networking; wireless ad-hoc networks; and management of technology

Alex T. Pang (Computer Science)
Uncertainty visualization, tensor visualization, scientific visualization, comparative visualization, collaboration software, virtual reality interfaces

Ira Pohl, Emeritus (Computer Science)

Hamid Sadjadpour (Electrical Engineering)
Wireless communication systems, network information theory and scaling laws, performance analysis of wireless and social networks, routing and MAC protocol design for wireless networks

Patrick Tantalo (Computer Science)
Graph theory, combinatorics, optimization, algorithms

Linda Werner (Computer Science)
Software engineering, computer-science education, testing, increasing diversity in computer science

Jim Whitehead (Computational Media)
Software engineering, software evolution, software bug prediction, level design in computer games, procedural content generation

Donald Wiberg, Emeritus (UCLA)
Control systems, Kalman filtering, system parameter estimation, adaptive optics for large telescopes, and biomedical system modeling

Yi Zhang (Technology Management)
Large-scale information retrieval, recommendation systems, internet advertising, data mining, language processing, applied machine learning

COMPUTER ENGINEERING COURSES
Introduction to dynamical systems, feedback control, and robotics. Fundamental concepts in dynamical systems, modeling, stability analysis, robustness to uncertainty, feedback as it occurs naturally, and the design of feedback-control laws to engineer desirable static and dynamic response. Course includes an introduction to MATLAB and programming in MATLAB. Students are billed a materials fee. Priority enrollment restricted to first-year students and sophomores. (General Education Code(s): MF.) R. Sanfelice, The Staff

9. Introduction to Statics, Dynamics, and Biomechanics. W
Theory and application of statics and mechanics of materials for mechanical and biomechanical systems. Covers statics of particles; equilibrium of rigid bodies; free-body diagrams; analysis of structure; friction; concepts of stress and strain; axial loading; torsion and bending; and failure criteria. Prerequisite(s): Mathematics 19A, and Physics 5A/L or 6A/L., and Applied Mathematics and Statistics 10 or Mathematics 21. M. Wehner, M. Teodorescu

10. Fundamentals of Robot Kinematics and Dynamics. S
Covers the theory and application of mathematical models to analyze the kinematics and dynamics of robot mechanisms. Continues the exploration of C++ programming and computer architecture. May include C language. Students with no prior programming experience are strongly recommended to take course 3, Computer Science 5J, Computer Science 5P, Computer Science 10, or equivalent before taking this course. Prerequisite(s): previous or concurrent enrollment in course 12L is required. The Staff, T. Larrabee, M. Dunne, J. Renau Ardevol, M. Guthaus, D. Long

12L. Computer Systems and Assembly Language Laboratory (2 credits). F,W,S
Introduction to computer systems and assembly language and how computers compute in hardware and software. Topics include digital logic, number systems, data structures, compiling/assembly process, basics of system software, and computer architecture. May include C language. Students with no prior programming experience are strongly recommended to take course 3, Computer Science 5J, Computer Science 5P, Computer Science 10, or equivalent before taking this course. Prerequisite(s): previous or concurrent enrollment in course 12L is required. The Staff, T. Larrabee, M. Dunne, J. Renau Ardevol, M. Guthaus, D. Long

Introduction to the C programming language as a means for controlling embedded and general computing systems. Continuing the exploration begun in course 12, students move to higher levels of abstraction in the control of complex computer systems. Prerequisite(s): courses 12 and 12L. Concurrent enrollment in course 13L is required. The Staff, E. Miller, M. Dunne, G. Elkaim, D. Long

13L. Computer Systems and C Programming Lab (2 credits). W,S
Laboratory sequence in C
Computer Engineering programming for embedded and general computing systems. Two 2-hour laboratories per week. Concurrent enrollment in course 13 is required. The Staff, E. Miller, M. Dunne, G. Elkaim, D. Long

Introduction to applications of discrete mathematical systems. Topics include sets, functions, relations, graphs, predicate calculus, mathematical proof methods (induction, contraposition, contradiction), counting methods (permutations, combinations), and recurrences. Examples are drawn from computer science and computer engineering. Knowledge of computer programming is useful before taking this course. Students who do not have prior programming experience are strongly recommended to take Computer Science 5C, 5J, or 5P before taking this course. Prerequisite(s): Mathematics 19A or 11B or Applied Mathematics and Statistics 11B or 15B or Economics 11B. (General Education Code(s): MF.) T. Larrabee, C. Qian, W. Dunbar, M. Schlag

80A. Universal Access: Disability, Technology, and Society. F
Overview of human-centered technology and of its potential for increasing the quality of life and independence of disabled individuals. A substantial portion of the course is devoted to studying physical, psychological, and psychosocial aspects of disability. Topics include: diversity and integration, legislation, accessibility, and universal design. (Formerly Assistive Technology and Universal Access.) (General Education Code(s): PE-T.) S. Kurniawan, R. Manduchi

80E. Engineering Ethics.*
Ethical theories, analysis, and their application to issues in the practice of engineering, such as safety and liability, professional responsibility to clients and employers, codes of ethics, legal obligations, environmental issues, and social issues. Emphasis on developing independent ethical analysis through the use of case studies. (General Education Code(s): PE-T.) S. Kurniawan, The Staff

80H. History of Modern Computing.*
Presents a history of the development of computing technologies (CPUs and I/O devices, operating systems, and languages) through the latter half of the 20th century in order to build an understanding of how today's computing environment evolved. The Staff

80N. Introduction to Networking and the Internet. F,W,S
Introduction to the evolution, technological basis, and services of the Internet, with descriptions of its underlying communications structure, routing algorithms, peer-to-peer hierarchy, reliability, and packet switching. Network security, mail, multimedia and data compression issues, HTML, and digital images. Students who have completed course 150 cannot receive credit for this course. (General Education Code(s): PE-T.) The Staff. P. Mantey, T. Larrabee

80U. Ubiquitous and Mobile Computing.*
Ubiquitous computing integrates computer and communication technology with day-to-day life. Ubiquitous and mobile technology includes: MP-3 players, camera cell phones, Bluetooth headsets, sensor networks, and new emerging technologies. Course provides an overview of the technology and economics of ubiquitous computing. The Staff

94. Group Tutorial. F,W,S
Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

94F. Group Tutorial (2 credits). F,W,S
Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

100. Logic Design. F,W,S
Boolean algebra, logic minimization, finite-state machine design, sequential circuits, common logic elements, programmable logic devices, and an introduction to system level design. The electrical behavior of circuits including three state outputs, propagation delay, logic levels, and fanout. Prerequisite(s): courses 12 and 12L; previous or concurrent enrollment in course 100L is required. Enrollment limited to 60. M. Schlag, The Staff

100L. Logic Design Laboratory (2 credits). F,W,S
Laboratory sequence illustrating topics covered in course 100. Two 2-hour laboratory sessions per week. Weekly laboratory assignments which require the use of the oscilloscopes, TTL circuits, computer-aided design and simulation tools, and programmable logic. Students are billed a materials fee. Prerequisite(s): courses 12 and 12L; previous or concurrent enrollment in course 100L is required. Enrollment limited to 60. M. Schlag, The Staff

Covers the principles governing computer-systems design and complexity; familiarity with memory, storage, and networking; concurrency and synchronization; layering (abstraction and modularity); naming; client-server and virtualized system models; and performance. Requires significant programming projects demonstrating mastery of these concepts. Prerequisite(s): courses 12 and 12L; and either CMPE 13 and 13L, or CMPS 12B and 12M; and knowledge of C programming language. G. Elkaim, E. Miller

107. Probability and Statistics for
108. Data Compression. *
Basics of information theory, lossless coding (Huffman coding, arithmetic coding, dictionary coding), lossy coding (PCM, predictive coding, transform coding). Application to the compression of specific data set, which may include biological time series, DNA sequences, and multimedia streams. Programming experience is required. Prerequisite(s): course 107 or Applied Mathematics and Statistics 131. The Staff

Introduction to computer architecture including examples of current approaches and the effect of technology and software. Computer performance evaluation, basic combinatorial and sequential digital components, different instruction set architectures with a focus on the MIPS ISA and RISC paradigm. Evolution of CPU microarchitecture from single-cycle to multi-cycle pipelines, with overview of superscalar, multiple-issue and VLIW. Memory system, cache, virtual memory and relationship between memory and performance. Evolution of PC system architecture. May include advanced topics, such as parallel processing, MIMD, and SIMD. Prerequisite(s): courses 12/L and courses 13/L or Computer Science 12A/L or Computer Science 11. Course 16 recommended. The Staff, H. Litz, J. Renau Ardevol, E. Miller

112. Computer and Game Console Architecture. *
Introduces computer and game console architecture, including examples of current approaches and the effect of technology and software. Computer performance evaluation; instruction-set architectures; RISC CPU and pipelining; cache and memory; multi-core, system-level architecture; video card; special console architectures. Prerequisite(s): course 12. The Staff

113. Parallel and Concurrent Programming. *
Introduction to parallel and concurrent programming. Topics include: types of parallel computers and programming platforms; design, implementation, and optimization of programs for parallel and multicore processors; basic and advanced programming techniques; performance analysis and load balancing; and selected parallel algorithms. (Also offered as Computer Science 113. Students cannot receive credit for both courses.) Prerequisite(s): Computer Engineering 12 and 12L and Computer Science 101. Computer Engineering 110 or 112 recommended. The Staff

114. Embedded Operating Systems. *
Detailed exploration of the internal design of an embedded operating systems kernel. Covers kernel structure and organization, device drivers, I/O systems, file systems, memory management, and security. Students complete significant programming projects that extend or modify existing operating systems. Prerequisite(s): courses 105 and 110. Enrollment limited to 50. D. Long, E. Miller

115. Introduction to Solid Mechanics. *
Introduces the solid mechanics of materials. Topics include: stress and strain, torsion, bending of beams, shearing stresses in beams, compound stresses, principal stresses, deflections of beams, and statically indeterminate members and columns. Prerequisite(s): course 9 and Mathematics 19B, and Applied Mathematics and Statistics 10 or Mathematics 21. M. Teodorescu

118. Introduction to Mechatronics. F,S
Technologies involved in mechatronics (intelligent electromechanical systems) and techniques necessary to integrate these technologies into mechatronic systems. Topics include electronics (A/D, D/A converters, opamps, filters, power devices), software program design (event-driven programming, state machine-based design), DC and stepper motors, basic sensing, and basic mechanical design (machine elements and mechanical CAD). Combines lab component of structured assignments with a large and open-ended team project. Cannot receive credit for this course and course 218. Prerequisite(s): Electrical Engineering 101/L and courses 12/L and 100/L. Concurrent enrollment in course 118L is required. Enrollment limited to 36. G. Elkaim, M. Wehner, M. Dunne

118L. Introduction to Mechatronics Laboratory (2 credits). F
Laboratory sequence illustrating topics covered in course 118. Two 2-hour laboratory sessions per week. Students cannot receive credit for this course and course 218L. Students are billed a materials fee. Prerequisite(s): Concurrent enrollment in course 118 is required. Enrollment limited to 36. G. Elckain, M. Wehner, M. Dunne

121. Microprocessor System Design. F,S
The design and use of microprocessor-based systems. Covers microprocessor and microcontroller architecture, programming techniques, bus and memory organization, DMA, timing issues, interrupts, peripheral devices, serial and parallel communication, and interfacing to analog and digital systems. Prerequisite(s): courses 12/L and 100/L; and 13/L or Computer Science 12B/M; and EE 101/L and
Computer Engineering
Physics SC/N. Concurrent enrollment in course 121L required. Enrollment is restricted to Computer Engineering and Robotics majors during first-pass enrollment. Enrollment limited to 40. A. Varma

121L. Microprocessor System Design Laboratory (2 credits). F,S
Laboratory sequence illustrating topics covered in course 121. Two 2-hour laboratory sessions per week. Students design, build, program, debug, document, and demonstrate a microprocessor-based system. Students are billed a materials fee. Prerequisite(s): courses 12/L and 100/L; and EE 101/L and Physics SC/N. Concurrent enrollment in course 121L required. Enrollment is restricted to Computer Engineering and Robotics majors during first-pass enrollment. Enrollment limited to 40. A. Varma

122. Introduction to VLSI Digital System Design. W
Introduces very large scale integrated (VLSI) custom integrated circuits. Topics include: semiconductor manufacturing, logic families, field-effect transistors (FETs), interconnect models, simulation, and circuits. Introduces the design flow from logic design to layout with a focus on high performance and low power. Students cannot receive credit for this course and course 222. Prerequisite(s): courses 12/L and 100/L and Electrical Engineering 101/L. Enrollment limited to 25. M. Guthaus

123A. Engineering Design Project I. W
First of a two-course sequence that is the culmination of the engineering program. Students apply knowledge and skills gained in elective track to complete a major design project. Students complete research, specification, planning, and procurement for a substantial project. Includes technical discussions, design reviews, and formal presentations; engineering design cycle, engineering teams, and professional practices. Formal technical specification of the approved project is presented to faculty. Students are billed a materials fee. Prerequisite(s): Computer Engineering 121; previous or concurrent enrollment in Computer Engineering 185; permission of department and instructor. (General Education Code(s): PR-E.) A. Varma, The Staff

123B. Engineering Design Project II (7 credits). S
Second of two-course sequence in engineering system design. Students fully implement and test system designed and specified in course 123A. Formal written report, oral presentation, and demonstration of successful project to review panel of engineering faculty required. Students are billed a materials fee. Prerequisite(s): courses 123A and 185. Enrollment limited to 35. A. Varma, The Staff

125. Logic Design with Verilog. S
Verilog digital logic design with emphasis on ASIC and FPGA design. Students design and verify large-scale systems. Assignments and project use the Verilog Hardware Description Language with emphasis on verification and high-frequency ASIC/FPGA targets. Prerequisite(s): courses 100 and 100L. Concurrent enrollment in course 125L is required. Enrollment limited to 40. J. Renau Ardevol, H. Litz, M. Guthaus

125L. Logic Design with Verilog Laboratory (2 credits). S
Laboratory sequence illustrating topics covered in course 125. Two 2-hour laboratory sessions per week. Students are billed a materials fee. Prerequisite(s): courses 100 and 100L. Concurrent enrollment in course 125 is required. Enrollment limited to 40. J. Renau Ardevol, H. Litz, M. Guthaus

129A. Capstone Project I (2 credits). F
First of a three-course sequence in which students apply knowledge and skills gained in elective track to complete a major design project. In this first course, students complete the specification and planning for a substantial project. Topics covered: engineering design cycle, engineering teams, and professional practices. Prerequisite(s): previous or concurrent enrollment in courses 121 and 121L. Enrollment is restricted to bioengineering, computer engineering, and robotics engineering majors. G. Elkaim, P. Mantey

129B. Capstone Project II. W
Second of a three-course sequence in which students apply knowledge and skills gained in elective track to complete a major design project. In this second course, students complete the research and procurement for a substantial project and a preliminary implementation. Students are billed a materials fee. Prerequisite(s): courses 121, 121L, and 129A. Previous or concurrent enrollment in course 185. Enrollment by permission of instructor. (General Education Code(s): PR-E.) G. Elkaim, A. Varma, The Staff

129C. Capstone Project III. S
Third of a three-course sequence in which students apply knowledge and skills gained in elective track to complete a major design project. In this third course, students work in teams to complete the project specified and advanced in the first two courses. A formal written report, oral presentation, and demonstration of the successful project to a review panel of engineering faculty is required. Students are billed a materials fee. Prerequisite(s): courses 129B and 185. Enrollment by permission of instructor. G. Elkaim, P. Mantey

131. Human-Computer Interaction. S
Theory and hands-on practice to understand what makes user interfaces usable and accessible to diverse individuals. Covers human senses and memory and their design implications, requirement solicitation, user-centered design and prototyping techniques, and expert and user evaluations. Interdisciplinary course for social science and engineering majors. Students cannot receive credit for this course and Computer Engineering 231 or Digital Arts and New Media 231. Prerequisite(s): Computer Science 12B. The Staff

141. Feedback Control Systems. F
Analysis and design of continuous linear feedback control systems.
Computer Engineering

Essential principles and advantages of feedback. Design by root locus, frequency response, and state space methods and comparisons of these techniques. Applications. (Also offered as Electrical Engineering 154. Students cannot receive credit for both courses.) Prerequisite(s): Electrical Engineering 103. Enrollment is restricted to School of Engineering and Division of Physical and Biological Sciences majors, or by permission of instructor. Enrollment limited to 30.

D. Milutinovic

145. Estimation and Introduction to Control of Stochastic Processes.

Provides practical knowledge of Kalman filtering and introduces control theory for stochastic processes. Selected topics include: state-space modeling; discrete- and continuous-time Kalman filter; smoothing; and applications in feedback control. Students learn through hands-on experience. Students cannot receive credit for this course and course 245. Enrollment by permission of instructor. (Formerly Applied Mathematics and Statistics 118.) (General Education Code(s): SR) D. Milutinovic

149. Introduction to Cyber-Physical Systems.

Presents the basic concepts and tools for the study of cyber-physical systems, including modeling and analysis tools for continuous-time and discrete-time systems, finite state machines, stateflow, timed and hybrid automata, concurrency, invariants, linear temporal logic, verification, and numerical simulation. Students are guided on methods for simulation and encouraged to apply them to several applications. The course is self-contained. Students are expected to have a basic background in logic circuits, programming, the mathematical modeling of dynamical systems (course 8 is recommended), differential equations, linear algebra, and basic calculus. Knowledge of MATLAB/Simulink is useful. Students cannot receive credit for this course and course 249. (Formerly course 142.) Prerequisite(s): courses 100/L or equivalent, and courses 13/L or equivalent. R. Sanfelice

150. Introduction to Computer Networks.

Addresses issues arising in organizing communications among autonomous computers. Network models and conceptual layers; Internet-working; characteristics of transmission media; switching techniques (packet switching, circuit switching, cell switching); medium access control (MAC) protocols and local area networks; error-control strategies and link-level protocols; routing algorithms for bridges and routers; congestion control mechanisms; transport protocols; application of concepts to practical wireless and wireline networks and standard protocol architectures. Students who have completed course 80N can take this course for credit. Prerequisite(s): course 16 and either courses 12 and 12L, or Computer Science 12B and 12M. Concurrent enrollment in course 150L is required. The Staff, C. Qian, K. Obrazcka

150L. Introduction to Computer Networks Laboratory (2 credits).

Illustrates the concepts covered in course 150 and provides students with hands-on experience in computer networks. Students are billed a materials fee. Prerequisite(s): course 16 and either courses 12 and 12L, or Computer Science 12B and 12M. Concurrent enrollment in course 150L is required. The Staff, C. Qian, K. Obrazcka

151. Advanced Computer Networks.

Provides an in-depth coverage of fundamental topics introduced in course 150 including routing, transport, and internetworking. Also introduces advanced concepts not covered in course 150 including wireless, application-layer services, security, etc. (Formerly Network Administration.) Prerequisite(s): course 150. Concurrent enrollment in course 151L is required. Enrollment limited to 60. The Staff, J. Garcia-Luna-Aceves, B. Smith

151L. Advanced Computer Networks Laboratory (2 credits).

Introduction to the principles of signal processing, including discrete-time signals and systems, the z-transform, sampling of continuous-time signals, transform analysis of linear time-invariant systems, structures for discrete-time systems, the discrete Fourier transform, computation of the discrete Fourier transform, and filter design techniques. Taught in conjunction with Electrical Engineering 250. Students cannot receive credit for this course and Electrical Engineering 250. (Also offered as Electrical Engineering 153. Students cannot receive credit for both courses.) Prerequisite(s): Electrical Engineering 103. The Staff

156. Network Programming.

Methods and tools used for network programming. Topics include: operating system (OS) support for network protocols; inter-process communication (IPC) facilities, such as pipes, sockets, and remote procedure call (RPC); design of client and server sides of network applications; network security; and programming projects. Prerequisites: course 150/L and Computer Science 101. Concurrent enrollment in course 156L is required. The Staff, A. Varma, M. Parsa

156L. Network Programming Laboratory (2 credits).

Laboratory sequence illustrating concepts taught in course 156. Students learn use of network programming tools and methods via programming exercises. Students are billed a materials fee. Prerequisites: course 150/L and Computer Science 101. Concurrent enrollment in course 156L is required. The Staff, A. Varma, M. Parsa

158. Network Management and
advanced topics may include noise, analog-to-digital conversion. sensors are integrated into a digital system using filtering, amplification, and analog-to-digital conversion. advanced topics may include noise, temperature, and other sources of variability. prerequisite(s): course 13/L and electrical engineering 103/L. concurrent enrollment in course 167 is required. M. Guthaus, The Staff

185. Technical Writing for Computer Engineers. F,W,S
Writing by engineers and computer scientists, not to general audiences, but to engineers, engineering managers, and technical writers. Exercises include job application and resume, in-code documentation, algorithm description, naive-user documentation, library puzzle, survey article, proposal, progress report, formal technical report, and oral presentation. Enrollment is restricted to majors in computer engineering, bioengineering, bioinformatics, robotics engineering, or network and digital technology. Prerequisite(s): satisfaction of Entry Level Writing Placement requirements; and Computer Science 12B or Computer Engineering 12 or Biomolecular Engineering 160 or by permission of the instructor. Enrollment limited to 60. G. Moulds

193F. Field Study. F,W,S
Provides for individual programs of study with specific academic objectives carried out under the direction of a faculty member of the Computer Engineering Department and a willing sponsor at the field site using resources not normally available on campus. Credit is based on the presentation of evidence of achieving the objectives by submitting a written and oral presentation. May not be repeated for credit. Students submit petition to sponsoring agency. The Staff

A program of independent study arranged between a group of students and a faculty member. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

194F. Group Tutorial (2 credits). F,W,S
A program of independent study arranged between a group of students and a faculty member. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

Students submit petition to sponsoring agency. Prerequisite(s): course 123A or 129A. The Staff

195F. Senior Thesis Research (2 credits). F,W,S
Students submit petition to sponsoring agency. Consent of instructor required. Prerequisite: course 123A. The Staff

198. Individual Study or Research. F,W,S
Students submit petition to sponsoring agency. May be repeated for credit. The Staff

198F. Individual Study or Research (2 credits). F,W,S
Students submit petition to sponsoring agency. May be repeated for credit. The Staff

199. Tutorial. F,W,S
For fourth-year students majoring in computer engineering. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

199F. Tutorial (2 credits). F,W,S
Computer Engineering
For fourth-year students majoring in computer engineering. Students submit petition to sponsoring agency. May be repeated for credit.

The Staff

GRADUATE COURSES

200. Research and Teaching in Computer Science and Engineering (3 credits). F
Basic teaching techniques for teaching assistants including responsibilities and rights of teaching assistants, resource materials, computer security, leading discussion or lab sessions, presentation techniques, maintaining class records, electronic handling of homework, and grading. Examines research and professional training, including use of the library and online databases, technical typesetting, writing journal and conference papers, publishing in computer science and computer engineering, giving talks in seminars and conferences, and ethical issues in science and engineering. Required for all T.A.s. Enrollment is restricted to graduate students. K. Obraczka

Provides a thorough and fundamental treatment of the art of computer architecture. Topics include concepts of von Neumann architectures, methods of evaluating CPU performance, instruction-set design and examples, compiler issues, instruction pipelining, superscalar processors, methods for reduction of branch penalty, memory hierarchies, I/O systems, floating-point arithmetic, and current issues in parallel processing. Prerequisite(s): course 110 or 112. Enrollment is restricted to graduate students; undergraduates may enroll if they have completed course 110 or 112 and with consent of instructor. Enrollment limited to 30. J. Renau Ardevol, The Staff

215. Models of Robotic Manipulation. S
Theory and application of mathematical models to analyze, design, and program serial kinematic chains (robot arms). Covers models of arbitrary articulated robotic or biological arms and their application to realistic arms and tasks, including the homogeneous coordinate model of positioning tasks; the forward and inverse kinematic models; the Jacobian matrix; trajectory generation; and dynamic models, including Newton-Euler and Lagrangian formulations. Enrollment is restricted to graduate students; and to seniors who have taken electrical engineering 154, and applied mathematics and statistics 10 or 10A or mathematics 21; or by permission of instructor. M. Wehner, M. Teodorescu

216. Bio-Inspired Locomotion. F
Presents the principles of biological locomotion and application to robotics problems. Students learn about effective movements in the biological world (slithering, walking, climbing, and flying); extract their underlying principles; and apply them creatively to robotics design. Prerequisite(s): course 9 or equivalent. Enrollment is restricted to graduate students, and seniors by permission of instructor. Enrollment limited to 20. M. Teodorescu

218. Mechatronics. F,S
Introduction to intelligent electromechanical systems, combining aspects of computer, electrical, mechanical, and software engineering. Students become proficient in all aspects of mechanical, electrical, computer system design, analysis, prototyping, presentation and team mentorship. Cannot receive credit for this course and course 118. Prerequisite(s): concurrent enrollment in course 218L. Enrollment is restricted to graduate students. Enrollment limited to 36. G. Elkaim, M. Wehner, M. Dunne

218L. Mechatronics Lab (2 credits). F,S
Laboratory sequence illustrating topics covered in course 218. Two 2-hour laboratory sessions per week. Students cannot receive credit for this course and course 118L. Students are billed a materials fee. Prerequisite(s): concurrent enrollment in course 218. Enrollment is restricted to graduate students. Enrollment limited to 36. G. Elkaim, M. Wehner, M. Dunne

M. Dunne

220. Advanced Parallel Processing. F
Introduction to programming advanced parallel computer architecture. Topics may include: SIMD massively parallel processor arrays; streaming parallel coprocessors, such as graphics cards used for general-purpose processing (GPGPU); or other hybrid MIMD/SIMD architectures. Course has programming lab component, a project, and student presentation on related topics. (Formerly Parallel Processing.) Enrollment is restricted to graduate students; undergraduates may enroll with permission of instructor. H. Litz, J. Renau Ardevol

221. Advanced Microprocessor Design. *
Introduction to latest advances in computer architecture. Focuses on processor core design. Topics include simultaneous multithreading, thread level speculation, trace caches, novel out-of-order mechanisms, and energy-efficient processor core designs. Final project is modification/enhancement of an out-of-order processor on an FPGA development system. Prerequisite(s): course 202; and course 125, 225, or equivalent Verilog experience. Concurrent enrollment in course 221 is required. Enrollment restricted to graduate students. Enrollment limited to 20. J. Renau Ardevol

221L. Advanced Microprocessor Design Laboratory (3 credits). *
Laboratory sequence illustrating topics covered in course 221. Prerequisite(s): course 202; and course 125, 225, or equivalent Verilog experience. Concurrent enrollment in course 221 is required. Enrollment restricted to graduate students. Enrollment limited to 20. J. Renau Ardevol

222. VLSI Digital System Design. W
Advanced Very Large Scale Integrated (VLSI) custom integrated circuits. Topics include: semiconductors; field-effect transistors (FETs); circuits; and interconnect simulation, along with
223. VLSI System-on-a-Chip Design. S
Design methodologies for Application Specific Integrated Circuits (ASICs). Topics include: behavioral specification; logic synthesis; standard-cell libraries; advanced timing analysis; and physical design automation tools. Familiarizes students with real-world tools during the design of a small system-on-a-chip project. Students are encouraged to fabricate and test their chips in an independent study. Prerequisite(s): course 222 or permission of instructor. Enrollment is restricted to graduate students. M. Guthaus

224. Testing Digital Circuits. *
An introduction to the theory and practice of testing. Topics are chosen from fault and defect models, test generation for combinational and sequential circuits, fault simulation, scan-design and built-in self-test. Enrollment is restricted to graduate students; undergraduates may enroll if they have completed Computer Science 101. The Staff

225. Introduction to ASIC Systems Design. *
Introduces reconfigurable computing systems with emphasis on field-programmable devices. Topics include: architectures of field-programmable devices; novel reconfigurable systems; and hardware algorithms. Students are billed a materials fee. Enrollment is restricted to computer engineering graduate students. Enrollment limited to 10. The Staff

229. Field-Programmable Gate Arrays Computer-Assisted Design. *
Design methods for Field-Programmable Gate Arrays (FPGAs), including algorithms for technology mapping, routability estimation, placement, and routing. The relationship between FPGA architectures and their computer-aided design tools. Course project involves the modification and analysis of an FPGA tool. Enrollment is restricted to graduate students or by consent of instructor. Courses 100, 125, 126, 222, 225, or other digital design experience recommended. Enrollment limited to 20. M. Schlag

Introduction to methods of analysis of computer system performance. Predictive performance models with emphasis on queuing models; exact and approximate solution methods, discrete-event simulation, and numeric iterative approaches; analytical solutions and their computation; separable queuing networks, decomposition approaches; examples of practical application; and performance measurement, model validation, robustness of models, and operational analysis. Enrollment is restricted to graduate students. Enrollment limited to 20. The Staff

231. Human-Computer Interaction. *
Theory and hands-on practice to understand what makes user interfaces usable and accessible to diverse individuals. Covers human senses and memory and their design implications, requirement solicitation, user-centered design and prototyping techniques, and expert and user evaluations. Individual research project. Interdisciplinary course for art, social science and engineering graduate students. Students cannot receive credit for both courses.) Prerequisite(s): course 201. Enrollment is restricted to graduate students. D. Long

232. Arithmetic Processors. *
Concept of number systems: binary additions, multiplications, divisions; elementary function evaluations; algorithm acceleration; floating-point and significant arithmetics; IEEE standards; technology related issues; algorithm evaluation by implementation with gate arrays.

Prerequisite(s): course 202. Enrollment is restricted to graduate students. Enrollment limited to 15. The Staff

233. Human Factors. *
Course focuses on theories, practices, and design of systems to optimize human well-being and system performance through consideration of psychological, social, physical, and biological factors. Covers human sensory systems and memory, workload management, error and reliability, performance measurement, and ergonomic design. Interdisciplinary course for social science and engineering graduate students. Enrollment is restricted to graduate students; undergraduates may enroll if they have completed course 131. The Staff

236. Understanding Cryptography. *
Cryptography has become ubiquitous, from light bulbs to atomic weapons. This course provides both a comprehensive introduction to applied cryptography and an additional focus on the human issues caused by bad implementations, bad processes, and broken algorithms. Knowledge of C Programming, Linux, and Virtual machines is required. (Also offered as Computer Science 236. Students cannot receive credit for both courses.) Prerequisite(s): course 201. Enrollment is restricted to graduate students. D. Long

240. Introduction to Linear Dynamical Systems. S
Introduction to applied linear algebra and linear dynamical systems with applications to circuits, signal processing, communications, and control systems. Topics include the following: Least-squares approximations of over-determined equations and least-norm solutions of underdetermined equations. Symmetric matrices, matrix norm and singular value decomposition. Eigenvalues, left and right eigenvectors, and dynamical interpretation. Matrix exponential, stability, and asymptotic behavior. Multi-input multi-output systems, impulse and step matrices;
241. Introduction to Feedback Control Systems. F
Graduate-level introduction to control of continuous linear systems using classical feedback techniques. Design of feedback controllers for command-following, disturbance rejection, and dynamic response specifications. Root locus and frequency response design techniques. Extensive use of Matlab for computer-aided controller design. Course has concurrent lectures with Electrical Engineering 154. (Also offered as Electrical Engineering 241. Students cannot receive credit for both courses.) Enrollment is restricted to graduate students. The Staff, D. Milutinovic, R. Sanfelice

242. Applied Feedback Control. W
Sequel to Electrical Engineering 154. After reviewing control design techniques examined in EE 154, this course explores state space control, discrete-time control, and two case studies in control design. Students design and implement feedback controllers on an inverted pendulum experiment. Prerequisite(s): Electrical Engineering 154 or course 241. Enrollment is restricted to juniors, seniors, and graduate students. R. Sanfelice, D. Milutinovic, G. Elkaim

243. System Identification. *
Course provides introduction to the construction of linear dynamical models from experimental data using parametric and non-parametric identification techniques. Theoretical and practical aspects of these techniques addressed. Prerequisite(s): course 240, or by permission of instructor. The Staff

244. Digital Control. W
Teaches the design and analysis of digital control systems. The topics covered are discrete-time system modeling; z-transform; stability, controllability, and observability of discrete-time systems; various design approaches to control design in which sensor, computer hardware, actuation, communication, and user interface are part of the design. Note: knowledge of linear algebra, calculus, basic differential equations, Laplace transform, signals and systems, linear-system control theory, MATLAB, and the use of word-processing software are assumed. Prerequisite(s): course 141 or 241. Enrollment is restricted to graduate students, or by permission of the instructor. D. Milutinovic, P. Mantey

245. Estimation and Introduction to Control of Stochastic Processes. *
Provides practical knowledge of Kalman filtering and introduces control theory for stochastic processes. Selected topics include: state-space modeling; discrete- and continuous-time Kalman filter; smoothing; and applications in feedback control. Students learn through hands-on experience. Students cannot receive credit for this course and course 145. Prerequisite(s): course 240 or 241. Knowledge of Matlab is expected. Enrollment is restricted to graduate students. Enrollment limited to 10. D. Milutinovic

246. Hybrid Dynamical Systems. *
Examines the modeling and analysis of hybrid dynamical systems, including the modeling of hybrid systems, the concept of solutions, Zeno behavior, equilibrium sets, stability, convergence, Lyapunov-based conditions, robustness, and simulation. Students are guided on methods for simulation and encouraged to apply them to several applications. Prerequisite(s): course 241. Enrollment is restricted to graduate students. R. Sanfelice

247. Advanced Feedback Control Design. *
Advanced methods for the design of control algorithms for systems with nonlinearities, input constraints, network actuators/sensors, and intermittent availability of information. Modeling of nonlinear systems, Lyapunov stability, feedback redesign, nonlinear damping, control-Lyapunov functions, gain scheduling, passivity, network control, self- and event-triggered control, hybrid feedback control. Students validate analytical results using tools for numerical simulation of control systems. Prerequisite(s): courses 241 and 242. Enrollment is restricted to graduate students. R. Sanfelice

248. Games in Design and Control. *
Graduate-level introduction to game theory and its applications to system design, verification, analysis, and optimal control. Enrollment is restricted to graduate students. Computer Science 101, 201, or equivalent recommended. The Staff

249. Introduction to Cyber-physical Systems. F
Presents the basic concepts and tools for the study of cyber-physical systems, including modeling and analysis tools for continuous-time and discrete-time systems, finite state machines, stateflow, timed and hybrid automata, concurrency, invariants, linear temporal logic, verification, and numerical simulation. Students are guided on methods for simulation and encouraged to apply them to several applications. The course is self-contained. Students are expected to have a basic background in logic circuits, programming, the mathematical modeling of dynamical systems (course 8 is recommended), differential equations, linear algebra, and basic calculus. Knowledge of MATLAB/Simulink is useful. Students cannot receive credit for this course and course 149. Prerequisite(s): courses 100/L or equivalent, and courses 13/L or equivalent. R. Sanfelice

250. Multimedia Systems. *
Study of state-of-the-art technology for networked multimedia systems. Topics include audio, image, and video acquisition and compression standards (JPEG, MPEG, and ITU families); networking for
Computer Engineering
multimedia; and digital television. Proficiency in C or C++ required. Prerequisite(s): Enrollment is restricted to graduate students. R. Manduchi

251. Error-Control Coding. * Overview of coding to protect messages against error during transmission or storage. Topics include channel models, linear algebra over finite fields, linear block codes and bounds, cyclic codes (BCH and RS), decoding algorithms, spectral analysis, codes on graphs, and low-complexity algorithms. Enrollment is restricted to graduate students or consent of instructor. The Staff

252A. Computer Networks. F Issues resulting from organizing communication among autonomous computers. Includes network models and switching techniques; medium access control protocols and local area networks; error control and retransmission strategies; routing algorithms and protocols; congestion control mechanisms and end-to-end protocols; application-level protocols; and application of concepts to wireless and wireline networks, with emphasis on the Internet. Enrollment is restricted to graduate students. J. Garcia-Luna-Aceves, C. Qian, K. Obraczka

252B. Principles of Computer Communication. W Theory and practice of computer communication networks. Emphasis is on verification and performance analysis of network control processes. Topics include protocols for channel access, point-to-point and multipoint reliable transmission, routing, congestion control, network management, multicasting, and ATM networks. (Formerly Modeling of Communications Protocols.) Prerequisite(s): courses 107 and 252A. J. Garcia-Luna-Aceves

Covers mechanisms for privacy and integrity, and methods for intrusion detection. Prerequisite(s): course 252A and Computer Science 201. Enrollment restricted to graduate students. C. Qian, A. Varma

254. High Speed Computer Networks. * Fiber-optic technology; fiber-optic link design; network protocol concepts; coding and error control; high-speed local area and metropolitan area networks; gigabit networks; error and congestion control; photonic networks; research topics. Prerequisite(s): course 252B. A. Varma

255. Design Project in Computer Networks. * Students develop a working implementation of a network protocol with the goal of obtaining hands-on experience in implementing real-world network protocols. Prerequisite(s): course 252A. Enrollment is restricted to graduate students. The Staff

256. Wireless and Mobile Networks. W An interdisciplinary course on wireless communication and mobile computing. Covers the physical aspects of wireless communication but emphasizes higher protocol layers. Topics include cellular networks, packet radio and ad hoc networks, wireless transport protocols, security, and application-level issues. Prerequisite(s): course 252A or permission of instructor. Enrollment limited to 20. J. Garcia-Luna-Aceves, C. Qian, K. Obraczka

257. Unix Networking Internals. * In-depth treatment of the implementation of network protocols in typical open-source Unix systems. Topics include implementation of send and receive functions, buffer management, interrupt handling, locking, scheduling and timer management. Major implementation project required. Prerequisite(s): course 252A. Computer Science 111 recommended. Enrollment is restricted to graduate students. D. Long, The Staff

258. Sensor Networks. S Focuses on the networking aspects of sensor networks; protocols at the various layers and how they answer the specific requirements posed by these networks (e.g., data driven, energy efficient, etc.) and their applications (monitoring, tracking, etc.). Explores how physical layer and hardware issues may influence protocol design. Course 257 is recommended as a prerequisite. Prerequisite(s): course 252A. K. Obraczka

263. Data Compression. * Introduction to information theory and data compression. Lossless coding (Huffman, arithmetic, dictionary codes). Lossy coding (scalar and vector quantization, differential coding, transform coding). Applications to the compression of real data sets (DNA sequences, biological time series, multimedia streams). Concurrent lectures with course 108. Students cannot receive credit for both this course and course 108. Students must have basic knowledge of probability theory. Enrollment is restricted to graduate students. The Staff

264. Computer Vision. F Introduces general concepts in computer vision, with an emphasis on geometric 3D reconstruction. Topics include radiometry, photometry, projective geometry, geometric camera model, epipolar geometry, stereo depth reconstruction, corner and edge features, point descriptors and matching, and optical flow. (Formerly Image Analysis and Computer Vision.) Enrollment is restricted to graduate students. Undergraduate students who are interested in enrolling should meet with the instructor first. R. Manduchi

277. Graph Algorithms. * Explores graph theory and algorithms for solving problems in engineering. A review of basic graph concepts and algorithms is followed by topics in network flow, partitioning, spectral analysis of graphs, graph isomorphism, and intractability. Prerequisite(s): Computer Science 101 and 102; or course 177; or Computer Science 201; or equivalent. Enrollment is restricted to graduate students.
280C. Seminar on Control (2 credits). F,W,S
Weekly seminar series covering topics of current research in theory and application of control to engineering systems. Current research work and literature in these areas discussed. Enrollment is restricted to graduate students; undergraduates may enroll with permission of instructor. May be repeated for credit. D. Long, E. Miller

280T. Seminar on New Technologies (2 credits). * Weekly seminar series in which distinguished speakers from industry, universities, and government discuss current developments in networking and computer technology. The emphasis is on open research questions that may lead to collaborative work with faculty and graduate students. The Staff

280G. VLSI/CAD Seminar (2 credits). W,S
Weekly seminar on advanced topics in VLSI and computer-aided design (CAD). Students present and discuss modern issues in semiconductor design, fabrication, and CAD. Frequent guest speakers present pertinent results from industry and academia. Enrollment limited to 20. May be repeated for credit. M. Guthaus

280N. Seminar on Networks (2 credits). F,W
Weekly seminar series covering topics of current research in networks and networked systems. Current research work and literature in these areas are discussed. Prerequisite(s): permission of instructor. Enrollment is restricted to graduate students. May be repeated for credit. J. Garcia-Luna-Aceves, C. Qian, K. Obrazcka

280P. Seminar on Parallel Processing (2 credits). * Weekly seminar series covering topics of current research in parallel systems, architectures, and algorithms. Current research work and literature in these areas are discussed. Enrollment is restricted to graduate students. Enrollment limited to 20. May be repeated for credit. J. Renaud Ardevol

Weekly seminar series covering topics of current research in computer systems. Presents and discusses current research and literature in these areas. Prerequisite(s): Proven engagement in computer systems research. Enrollment is by permission of the instructor. Enrollment is restricted to graduate students. May be repeated for credit. D. Long, E. Miller

280V. Seminar on Computer Vision (2 credits). F,W,S
Weekly graduate-level seminar series discussing advanced topics in computer vision and image analysis. Current research and literature presented during each meeting. Enrollment is by permission of the instructor. Enrollment is restricted to graduate students. Enrollment limited to 20. May be repeated for credit. R. Manduchi

285. Technical Writing for Engineering Graduates. S
Writing skills development for graduate engineers. Students produce a major writing project with many subtasks. Exercises include fellowship application; mathematical and algorithmic description; use of tables and graphs; experiment description; and producing technical web sites, presentations, and posters. Enrollment is restricted to graduate biomedical engineering, computer engineering, computer science, and electrical engineering majors. (Open to all School of Engineering graduate students.) Enrollment limited to 20. T. Larrabee

289L. Advanced Topics in VLSI Computer-Aided Design. * A graduate course on a research topic in VLSI computer-aided design. Topic varies according to instructor. Possible topics include, but are not limited to, verification, electrical simulation, software reliability and reusability, systolic arrays. The Staff, M. Guthaus, E. Miller

290M. Topics in Parallel Computation. * Investigates selected topics in applied parallel computation. Topics may include numerical methods, artificial intelligence and machine learning algorithms, graphics and image processing, systolic algorithms, and the interplay between hardware and algorithms. Students are encouraged to investigate and discuss the parallelization of their own research. Enrollment is restricted to graduate students. The Staff

290N. Topics in Computer Performance. * Selected topics of current interest in the area of computer system performance. Subjects may include aspects of large systems, performability, computer networks, storage subsystems, and nontraditional approaches and are subject to periodic revision. Enrollment is restricted to graduate students. The Staff

290V. Advanced Topics in Visual Computing. * Advanced course in image analysis and computer vision. Topics include motion analysis, multiple view geometry, 3D reconstruction, image-based rendering, vision-based graphics, face detection and recognition, tracking, image and video retrieval, and human-computer interface. Enrollment is restricted to seniors and graduate students. Enrollment limited to 20. The Staff

293. Advanced Topics in Computer Engineering. A graduate seminar on a research topic in computer engineering which varies according to instructor. Possible topics include, but are not limited to, communication networks, data compression, special-purpose architectures, computer arithmetic, software reliability and reusability, systolic arrays. The Staff, M. Guthaus, E. Miller

296. Masters Project (2 credits). F,W,S
Independent completion of a
Computer Engineering masters project under faculty supervision. Students submit petition to sponsoring agency. Enrollment is restricted to graduate students. May be repeated for credit. *The Staff*

**297. Independent Study or Research. F,W,S**
Independent study or research under faculty supervision. Students submit petition to sponsoring agency. *The Staff*

Thesis research conducted under faculty supervision. Students submit petition to sponsoring agency. *The Staff*

**299F. Thesis Research (2 credits). F,W,S**
Independent study or research under faculty supervision. Enrollment is restricted to graduate students. Recommended for part-time students. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

* Not offered in 2018-19

Revised: 07/15/18
PROGRAM DESCRIPTION

Computational media includes the creation, enhancement, and study of media forms for which computational processes enable deeply interactive and generative experiences, as well as the use of computation to understand and assist creation of media broadly. The department emphasizes the construction of technologies that make possible novel media experiences and tools, while simultaneously embracing and engaging in theoretical and practical approaches from the arts, humanities, and social sciences. The Computational Media (CMPM) Department offers courses on a wide range of topics, many of which integrate technical subject matter with design-oriented, theoretical, and historical topics. The Computational Media Department administers an undergraduate bachelor of science (B.S.) degree in computer game design, a master of science (M.S.) degree in games and playable media, as well as a master of science (M.S.) and a doctor of philosophy (Ph.D.) in computational media. Besides offering instructional courses, the department engages in a substantial research program in which both advanced undergraduates and graduate students participate.

B.S. COMPUTER SCIENCE: COMPUTER GAME DESIGN MAJOR REQUIREMENTS

The goal of this degree is to provide students a deep understanding of the technical aspects of computer game engineering and a broad background in the artistic, systemic, and production elements of game design and development. The core of the degree program is a strong grounding in computer science and computer engineering, preceded by a foundation in mathematics. Classes also develop skills in areas such as visual communication and team-oriented game production, while developing knowledge of topics such as game and art history, play experiences, and social and ethical issues. In their upper-division courses, students gain depth by taking upper-division electives in computational media, computer science, and computer engineering, with options such as game AI, mobile app development, game engine architecture, and interactive narrative. A two-course interdisciplinary game creation experience (usually taken at the end of the sophomore year) and a year-long interdisciplinary capstone game design and development studio class allow students to develop substantial computer games and integrate materials from the rest of the program.

PROGRAM LEARNING OUTCOMES

Recipients of a B.S. degree in computer game design at UCSC are expected to have the following skills and experiences:

1. Demonstrate mastery of computer science in the following core knowledge areas: algorithms, data structures, complexity, and software engineering and development.
2. Apply system-level perspective by thinking at multiple levels of detail and abstraction and by recognizing the context in which a computer system may function, including its interactions with people and the physical world.
3. Apply problem-solving skills and the knowledge of computer science to solve real problems.
4. Recognize and take into account the social, legal, ethical, and cultural issues in the discipline of computer games.
5. Demonstrate written and oral communication skills regarding technical material about computer science and computer games, broadly conceived.
6. Design and build a technical system that achieves an artistic goal for audience experience, employing sound computer science techniques.
7. Demonstrate the ability to collaboratively plan, organize, and execute complex, team-oriented projects, using appropriate communication and coordination techniques.

DECLARATION OF THE MAJOR

In order to be admitted into the Computer Science: Computer Game Design major, students must be listed as a proposed major within the School of Engineering. Students in the Engineering and Computing Cluster must propose a major before they can declare. Please refer to the School of Engineering section under “Declaration of Major” for more information.

In addition to being listed as a proposed School of Engineering major, admission to the Computer Science: Computer Game Design major is based on the following criteria:

1. Students have to complete all the foundation courses when they declare their major: a core programming sequence, Computer Engineering (CMPE) 16: Applied Discrete Mathematics, and a calculus sequence, which may be Mathematics 19A and 19B, or 20A and 20B. Options for core programming include one of the following group of classes:
At most one unsuccessful attempt (grade C-, D+, D, D-, F, or NP) for a foundation course is permitted. Denials of admission to the major may be appealed by submitting a letter to the School of Engineering Undergraduate Office, addressed to the Computational Media Undergraduate Director. The appeal letter must describe why the prior performance is not an accurate reflection of the student’s potential. Students who are informed that they are not eligible to declare the major after their first appeal may submit a letter to the department chair within 15 days from the date the notification was mailed. Within 15 days of receipt of the appeal, the department will notify the student and their college of the decision.

HONORS IN THE MAJOR

Students must obtain a GPA of 3.8 or higher in the courses in the major to be considered for the distinction of “Highest Honors in the Major.” Students must obtain a GPA of 3.5 or higher in the courses in the major to be considered for the distinction of “Honors in the Major.” The School of Engineering reserves the right to withhold honors based on other criteria, such as an incident of academic dishonesty.

DISCIPLINARY COMMUNICATION (DC) REQUIREMENT

Students must satisfy the Disciplinary Communication (DC) requirement by successfully passing CMPM 170.

LETTER GRADE POLICY

Please refer to the School of Engineering section of the catalog (subheading: Letter Grade Policy).

TRANSFER STUDENTS

Most courses have a strong theoretical component to prepare the student for designing, as opposed to simply using, technical and game systems. Often, courses taken at other institutions which emphasize applications of current programming languages and authoring tools do not count toward the major at UCSC.

At UCSC, the core programming sequence—courses Computer Science (CMPS) 12A/L (or 5J) and 12B/M or 12B/M (or 13H/L, which covers both 12A/L and 12B/M)—exposes students to both Java and C. Many upper-division courses that involve programming use the C and C++ programming languages. Transfer students who are not familiar with both Java and C may need to take a remedial course. Students familiar with C++ and Unix should find the transition to Java and C relatively simple.

Transfer students must have completed all of the core programming, computer systems, and mathematics courses (CMPS 12A/L and 12B/M, CMPE 16, MATH 19 A and B), or their articulated equivalents. A student lacking one such course may be admitted if they have completed CMPE 12/L. It is highly recommended that all transfer students complete this course prior to admission.

To the extent possible, it is recommended that transfer students take the equivalents of additional major required courses beyond the core programming, computer systems, and mathematics courses. If students have access to courses that develop a foundation in building and understanding games and other forms of interactive media, these are valuable to take—and in some cases may be substituted for CMPM 80K, Foundations of Video Game Design, once they enter the program. Transfer students who are planning a course substitution for CMPM 80K should refer to the School of Engineering portion of the catalog (subheading Course Substitutions).

Finally, transfer students should have completed as many general education requirements as possible. If transfer students are admitted for the winter quarter of their junior year, they must have completed ARTG 80G and ARTG 80H before coming to UCSC.

SCHOOL OF ENGINEERING POLICIES

Please refer to the School of Engineering section of the catalog (subheading: Admission to School of Engineering Majors) for additional policies that apply to all School of Engineering programs. These policies include admission to the major and the need for students to obtain preapproval before taking courses elsewhere.

PREPARATION FOR THE MAJOR

It is recommended that high school students intending to apply to the major have completed four years of mathematics (through advanced algebra and trigonometry) as well as any available courses in computer science, arts, and media (especially interactive media). Comparable college mathematics, arts, and media courses completed at other institutions also serve to properly prepare a student for the major.

MAJOR REQUIREMENTS

The curriculum has 24-26 courses (depending on core programming sequence taken). Fourteen of the courses are upper-division. Several of the required courses and electives are also general education courses. Please consult with the schedule of classes or the general catalog for more information.

LOWER- AND UPPER-DIVISION REQUIREMENTS

Course requirements are divided into six conceptual areas and may not be credited in more than one area:

Mathematics
Complete all of the following courses:
Mathematics 19A-B, Calculus for Science, Engineering, and Mathematics (students can alternately take Mathematics 20A-B, Honors Calculus. Credit for one or both Mathematics 19A-B may be granted with adequate performance on the CEEB calculus AB or BC Advanced Placement examinations).
Mathematics 21, Linear Algebra, or Applied Mathematics and Statistics 10, Mathematical Methods for Engineers I
Computer Engineering 16, Applied Discrete Mathematics

Computational Foundations
Complete all of the following courses:
Computer Science 12A/L, Introduction to Programming (Accelerated)/Laboratory* (or both Computer Science 5] and 11 or Computer Engineering 13/L)
Computer Science 12B/M, Introduction to Data Structures/Laboratory*
Computer Engineering 12/L, Computer Systems and Assembly Language/Laboratory
Computer Science 109, Advanced Programming
Computer Science 101, Algorithms and Abstract Data Types
*Computer Science (CMPS) 13H/L may be used instead of both CMPS 12A/L and 12B/M

Arts Foundations
Complete the following course:
Art and Design: Games and Playable Media (ARTG) 80G, Visual Communication and Interaction Design

Games and Playable Media Foundations
Complete all of the following courses:
Art and Design: Games and Playable Media 80H, History of Digital Games
Film and Digital Media 80V, Video Games as Visual Culture

Game Design and Development
Complete all of the following courses.
Computational Media 80K, Foundations of Video Game Design
Computational Media 120, Game Development Experience
Art and Design: Games and Playable Media 120, Game Design Experience
Computational Media 170, Game Design Studio I
Computational Media 171, Game Design Studio II (7 credits)
Computational Media 172, Game Design Studio III (7 credits)
Computational Media 176, Systems Design

Computer Game Engineering
Complete five courses from the following list. No more than two of the five can be courses marked with an asterisk (*). The majority of these Computer Game Engineering electives are technical practice electives which focus on the development and analysis of computational systems (the “programming” part of game creation). The asterisk (*) courses focus on other skills useful in computer game development, such as design, production, and mathematical analysis.
Computational Media 131, User Experience for Interactive Media
Computational Media 147, Generative Design
Computational Media 148, Interactive Storytelling
Computational Media 146, Game Artificial Intelligence
* Computational Media 150, Creating Digital Audio
Computational Media 151, Algorithmic Music for Games
Computational Media 163/L, Game Graphics and Real-Time Rendering
Computational Media 164/L, Game Engines/Laboratory
* Computational Media 177, Creative Strategies for Designing Interactive Media
Computational Media 178, Human-Centered Design Research
Computational Media 179, Game Design Practicum (may be repeated for credit; only the first offering counts toward the Computer Game Engineering requirement)
Computer Science 102, Introduction to Analysis of Algorithms
Computer Science 104A, Fundamentals of Compiler Design I
Computer Science 104B, Fundamentals of Compiler Design II
Computer Science 105, Systems Programming
Computer Science 111, Introduction to Operating Systems
Computer Science 112, Comparative Programming Languages
Computer Science 115, Software Methodology
Computer Science 116, Software Design Project
Computer Science 117, Software Design Project II
Computer Science 119, Software for Society
Computer Science 121, Mobile Applications
Computer Science 122, Computer Security
Computer Science 128, Distributed Systems, File Sharing, Online Gaming, and More
Computer Science 129, Data Storage Systems
* Computer Science 130, Computational Models
* Computer Science 132, Computability and Computational Complexity
Computer Science 140, Artificial Intelligence
Computer Science 142, Machine Learning and Data Mining
Computer Science 143, Natural Language Processing
Computer Science 160/L, Introduction to Computer Graphics/Laboratory
Computer Science 161, Introduction to Data Visualization
Computer Science 162, Advanced Computer Graphics and Animation
Computer Science 165, Data Programming for Visualization
* Computer Science 166A, Game Theory and Applications I
Computer Science 180, Database Systems I
Computer Science 181, Database Systems II
Computer Science 183, Web Applications
Computer Science 184, Data Wrangling and Visualization
Computer Engineering 110, Computer Architecture
Computer Engineering 113, Parallel and Concurrent
**DISCIPLINARY COMMUNICATION (DC) REQUIREMENT**

Students must satisfy the major's upper-division Disciplinary Communication (DC) requirement by completing the first course in the game design studio sequence CMPM 170.

**COMPREHENSIVE REQUIREMENT**

Students satisfy the senior comprehensive requirement by receiving a passing grade in all three courses of the game design studio sequence.

### MAJOR PLANNERS

The following are three sample academic plans that students can use to plan their sequence of courses in the major. The first two plans are suggested guidelines for students who begin their studies in their frosh year. Such students, if they plan carefully, will have several openings free to take other breadth courses they find interesting. Plan one is for a student entering UCSC in their frosh year who is prepared to go directly into Mathematics 19A/20A and Computer Science 12A/L. Plan two is for a student entering UCSC their frosh year who needs to take preparatory courses prior to Mathematics 19A or Computer Science 12A/L to ensure a successful outcome in those courses. The third plan is for a junior transfer student who has completed their mathematics, computational foundations, modern art history, and general education requirements.

#### PLAN ONE

<table>
<thead>
<tr>
<th>Year 1 (Jr)</th>
<th>Fall</th>
<th>Winter</th>
<th>Spring</th>
</tr>
</thead>
<tbody>
<tr>
<td>ARTG 80H (PE-T)</td>
<td>ARTG 80K (IM)</td>
<td>ARTG 80I (PE-H)* Composition 2 CMPS 12B/M</td>
<td></td>
</tr>
<tr>
<td>MATH 19A College Core</td>
<td>MATH 19B or 20B</td>
<td>Composition 2 CMPS 12B/M</td>
<td></td>
</tr>
<tr>
<td>CMPS 12A/L (MF)</td>
<td>CMPS 120 (PR-E)</td>
<td>ARTG 120 CMPE 16</td>
<td></td>
</tr>
</tbody>
</table>

*This planner assumes that, in addition to the minimum requirements for transfer students to be admitted to UCSC, they have completed one of these two courses: MATH 21 or AMS 10, and CMPE 12A/L; this slot in the planner is for the third course. Not having completed one additional course may result in a student taking more than two years to graduate.

**GRADUATE PROGRAM**

**MASTER'S DEGREE IN COMPUTATIONAL MEDIA**

The goal of the M.S. in Computational Media (CM) is to help students build on existing strengths and move into new areas of computational media work. The design of the degree ensures, first, that students have a meaningful foundation in the key areas needed for undertaking interdisciplinary CM work. This may require some additional development in one or more
areas (e.g., a sequence of computer programming classes). In addition, the M.S. coursework includes both broad and topical classes that help students understand the different ways that innovative work in CM connects the knowledge and methods of the different disciplines that contribute to it. Finally, the M.S. also includes a student-defined thesis, in which they demonstrate their ability to apply their foundational and integrative knowledge while developing novel work through supervised research. The M.S. is appropriate for students continuing in a variety of directions, including pursuing a terminal degree and performing innovative media creation.

M.S. students must complete a minimum of 35 quarter credits of graduate and upper-division courses, including 15 credits of core courses, 10 credits of topical courses, CMPM 204 (5 credits), and at least 2 credits of supervised research. No more than 15 credits may be upper-division undergraduate courses.

**Core Courses (15 Credits)**

- CMPM 201: Introduction to Computational Media (5 credits)
- CMPM 202: Computational Media Research (5 credits)
- CMPM 203: Computational Media Methods (5 credits)

**Topics Courses (10 Credits)**

M.S. students are required to take 10 credits of CM topics courses. This category includes all 5-credit CMPM graduate classes, as long as they are not already counted in another category (e.g., it cannot include core courses), in addition to courses available in other departments. Current topics courses are listed below.

**M.S. Thesis (7-10 credits)**

The M.S. is either a written thesis or a project (with a written report of the project) in lieu of a thesis. It is a substantial undertaking within the CM field, which may emphasize technical, media-creation, or interpretive aspects—or may emphasize more than one area equally. It is reviewed by a committee of at least two faculty that must include at least one member of the CM department and draw half or more of its members from the UCSC academic senate. M.S. students are required to take CMPM 204 (Computational Media Project Definition), in which their written thesis or project topic is developed, as well as CMPM 299, an independent study with the faculty adviser for their written thesis or project.

**Additional Requirements**

There are three additional program requirements, though students may have completed the necessary work for one or more before admission.

First, all M.S. students must demonstrate an understanding of media creation in a CM context, and must do so by the end of their second year in the program. This can be completed by any of:

- The Computer Science: Computer Game Design B.S. game studio sequence (CMPM 170, 171, 172) before graduate enrollment
- The Art and Design: Games and Playable Media B.A. game studio sequence (ARTG 170, 171, 172) before graduate enrollment

- A Digital Arts and New Media (DANM) project group sequence (three DANM 250 courses in same area, in sequence) during or before computational media M.S./Ph.D. graduate enrollment.
- The Games and Playable Media M.S. project sequence (GAME 270, 271, 272) before computational media M.S./Ph.D. graduate enrollment (due to Professional Degree Supplemental Tuition (PDST) and cohort model, these cannot be taken by students in other programs).
- At least three graduate or upper-division undergraduate courses from a list of offerings at UCSC that require programming knowledge and are focused on defining and developing CM-related projects (e.g., CMPM 148) during or before CM graduate enrollment. See the media creation courses list below.
- Petition to CM graduate director, presenting evidence of equivalent coursework at another institution and/or equivalent CM project experience in another context.

Second, all M.S. students must demonstrate an understanding of computer programming sufficient to carry out CM research, and must do so by the end of their second year in the program. This can be completed by either:

- Taking core programming (e.g., CMPS 12A and 12B) and advanced programming (e.g., CMPS 109) at UCSC or another institution.
- Petition to CM graduate director, presenting evidence of programming knowledge developed in another context.

Third, all M.S. students are expected to have an understanding of interpretive and critical methods sufficient to carry out CM research. Students who lack such a background are strongly encouraged to take a series of courses in this area, consulting with their adviser regarding which courses would be most appropriate. A set of three courses from those required for the minor in History of Consciousness (HISC) are recommended:

- HISC 1: Introduction to the History of Consciousness
- HISC 185: Topics in the History of Consciousness
- A five-credit graduate or upper-division undergraduate course in an area of the student’s interest from the History of Consciousness course listing (which includes cross-listed courses with programs such as anthropology, political studies, and history of art and visual culture)

**Note:** In extraordinary circumstances the graduate director can reduce the number of required courses based on a petition presenting past accomplishments, for example, reducing the number of required topics courses by one for each substantial past research publication or system accepted from the petition.
TRANSFER CREDIT

Up to 10 credits transferred from equivalent courses in previous graduate work at UCSC or elsewhere can be applied toward the M.S. course requirements. This can satisfy the topics requirement, but is not to exceed the three-course overall limit on transfers from outside institutions. A Course Substitution/Waiver form can be found on the Jack Baskin School of Engineering (BSOE) Graduate Advising website.

LOWER-DIVISION COURSES

Students who are considering enrolling in lower-division courses in order to fulfill additional degree requirements (e.g., CMPS 12A, HISC 1) may wish to consult with the course instructor and their adviser about instead taking an independent study or directed study (with the course instructor, their adviser, or a third faculty member) that subsumes the work of the course and adds additional content to bring it up to a graduate level. Graduate students must be enrolled in some combination of at least 10 credits of courses or independent studies that are either graduate or upper-division undergraduate courses in order to be considered full-time enrolled.

Current Topics Courses

| CMPM 235: User Evaluation of Technology |
| CMPM 244: Artificial Intelligence in Games |
| CMPM 245: Computational Models of Discourse and Dialogue |
| CMPM 248: Interactive Narrative |
| CMPM 265: Generative Methods |
| CMPM 290J: Playable Media |
| CMPM 290K: Social and Emotional Approaches to Human Computer Interaction |
| CMPM 290P: Topics in Computational Cinematography |
| CMPE 231: Human-Computer Interaction |
| CMPS 260: Computer Graphics |
| CMPS 261: Advanced Visualization |
| CMPS 263: Data Driven Discovery and Visualization |
| CMPS 290L: Topics in Crowdsourcing and Collaboration |
| DANM 250A: Collaborative Research Project Group: Mechatronics (can be repeated) |
| DANM 250B: Collaborative Research Project Group: Participatory Culture (can be repeated) |
| DANM 250C: Collaborative Research Project Group: Performative Technologies (can be repeated) |
| DANM 250D: Collaborative Research Project Group: Playable Media (can be repeated) |
| FILM 228: Moving Image Archives and the Frontiers of Information |
| FILM 230: Expanded Documentary |
| FILM 234: Toward an Ethics of New Media |

Current Media Creation Courses

| CMPM 146: Game AI |
| CMPM 147: Generating Worlds |
| CMPM 148: Interactive Narrative |
| CMPM 164: Game Engines |
| CMPM 179: Game Design Practicum |
| CMPM 244: Artificial Intelligence in Games |
| CMPM 245: Computational Models of Discourse and Dialogue |
| CMPM 248: Interactive Narrative |

SAMPLE PROGRAMS

M.S. in One Year (Student with technical CM B.S. degree)

This is a sample program for a student who has completed a bachelor's degree with significant technical content and a focus on some form of computational media (such as computer games). The B.S. in Computer Science: Computer Game Design at UCSC is such a degree. Such students will have already satisfied the requirement for understanding media creation in a CM context (e.g., by taking the CMPM 170, 171, and 172 sequence at UCSC) and the requirement for demonstrating an understanding of computer programming (e.g., by taking a core programming sequence and CMPS 109 at UCSC). This program is for a student who wants to complete the M.S. degree in one year.

M.S. in Five Quarters (Student requiring technical and interpretive foundation work)

This is a sample program for a student who has graduated from a digital media program or other undergraduate degree that provides experience in media creation in a CM context, but not an understanding of computer programming or interpretive practices. (CMPM 202 is moved to the second year, to reflect the need for computer programming knowledge before taking this course.)

### PH.D. IN COMPUTATIONAL MEDIA

The Ph.D. in computational media is designed for those who are already actively working in computational media and want to develop new knowledge that will change what is possible and how we understand it. The Ph.D. program includes all the course requirements of the M.S., with the exception of those related to the M.S. thesis. Ph.D. students have a number of additional requirements, as well. First, they must take additional topics courses, building understanding of a broader set of CM approaches. Second, they must pass both a first-year exam and a comprehensive exam, setting clear milestones for the development of expert-level knowledge in CM. Third, they must engage in substantial independent research that contributes to the development of the field, working closely with CM research faculty. Fourth, they must propose, complete, and defend a significant and novel dissertation project. The Ph.D. is appropriate for those who aim to lead future CM research efforts, within the academy, industry, government, non-profit, and other contexts. Ph.D. students will complete 15 credits of core courses, 20 credits of topical courses, and 12 credits of courses involved in preparation for the comprehensive examination.

### Core Courses (15 Credits)

<table>
<thead>
<tr>
<th>CMPM 201: Introduction to Computational Media (5 credits)</th>
</tr>
</thead>
<tbody>
<tr>
<td>CMPM 202: Computational Media Research (5 credits)</td>
</tr>
<tr>
<td>CMPM 203: Computational Media Methods (5 credits)</td>
</tr>
</tbody>
</table>

### Topics Courses (20 Credits)

Ph.D. students are required to take 20 credits of CM topics courses. The courses may be any combination of these types (as long as not already counted in another category):

- 5-credit CMPM graduate classes.
- Classes in other subject codes that cover the theory and/or practice of a CM area, as listed in the “topics courses.”
- Up to 10 credits transferred from equivalent courses in previous graduate work at UCSC or elsewhere (not to exceed three course overall limit on transfers from outside institutions, between this and other requirements).

### Exam Courses (12 Credits)

| CMPM 206: Computational Media Research Preparation (2 credits): Teaches skills for gathering literature and preparing portfolio for Comprehensive Exam, taken the same quarter as exam. |

---

### CMPM 297: Independent Study (10 credits): Research in preparation for the Comprehensive Exam, usually taken with the student's adviser the same quarter as CMPM 206.

### Additional Requirements

There are three additional program requirements, though students may have completed the necessary work for one or more before admission.

First, all Ph.D. students must demonstrate an understanding of media creation in a CM context, and must do so by the end of their second year in the program—and before the comprehensive exam. This can be completed by any of:

- The Computer Science: Computer Game Design B.S. game studio sequence (CMPS 170, 171, 172) before graduate enrollment.
- The Art and Design: Games and Playable Media B.A. game studio sequence (ARTG 170, 171, 172) before graduate enrollment.
- A DANM project group sequence (three DANM 250 courses in same area, in sequence) during or before CM M.S./Ph.D. graduate enrollment.
- The Games and Playable Media M.S. project sequence (GAME 270, 271, 272) before CM M.S./PhD graduate enrollment (due to PDST and cohort model, these cannot be taken by students in other programs).
- At least three graduate or upper-division undergraduate courses from a list of offerings at UCSC that require programming knowledge and are focused on defining and developing CM-related projects (e.g., CMPM 148) during or before CM graduate enrollment. See the list of media creation courses.
- Petition to CM graduate director, presenting evidence of equivalent coursework at another institution and/or equivalent CM project experience in another context.

Second, all Ph.D. students must demonstrate an understanding of computer programming sufficient to carry out CM research, and must do so by the end of their second year in the program—and before the comprehensive exam. This can be completed by either:

- Taking core programming (e.g., CMPS 12A and 12B) and advanced programming (e.g., CMPS 109) at UCSC or another institution.
- Petition to CM graduate director, presenting evidence of programming knowledge developed in another context.

Third, all Ph.D. students are expected to have an understanding of interpretive and critical methods sufficient to carry out our CM research. Students who lack such a background are strongly encouraged to take a series of courses in this area, consulting with their adviser regarding which courses would be most appropriate. A set of three courses from those required for the minor in History of Consciousness are recommended:

- HISC 1: Introduction to the History of Consciousness
Computational Media

- HISC 185: Topics in the History of Consciousness
- A five-credit graduate or upper-division undergraduate course in an area of the student’s interest from the History of Consciousness course listing (which includes cross-listed courses with programs such as anthropology, political studies, and history of art and visual culture)

**Note:** In extraordinary circumstances the Graduate Director can reduce the number of required courses based on a petition presenting past accomplishments. For example, reducing the number of required topics courses by one for each substantial past research publication or system accepted from the petition.

**TRANSFER CREDIT**

Up to 10 credits transferred from equivalent courses in previous graduate work at UCSC or elsewhere can be applied toward the Ph.D. course requirements. This can partially satisfy the topics requirement, but is not to exceed the three-course overall limit on transfers from outside institutions. A Course Substitution/Waiver form can be found on the BSOE Graduate Advising webpage.

**Lower-Division Courses**

Students who are considering enrolling in lower-division courses in order to fulfill additional degree requirements (e.g., CMPS 12A, HISC 1) may wish to consult with the course instructor and their adviser about instead taking an independent study or directed study (with the course instructor, their adviser, or a third faculty member) that subsumes the work of the course and adds additional content to bring it up to a graduate level. Graduate students must be enrolled in some combination of at least 10 credits of courses or independent studies that are either graduate or upper-division undergraduate courses in order to be considered full-time enrolled.

**PH.D FIELD EXAMINATIONS**

The Ph.D. requires two examinations before the qualifying examination.

**First-Year Examination**

The Ph.D. first-year exam measures students’ understanding of, and ability to synthesize and apply, core computational media knowledge (history, theory, research approaches, and evaluation methods). This is the material covered in the CM core courses.

There are three possible outcomes of the first-year exam:

- Pass at Ph.D. level
- Pass at M.S. level
- Fail

Students who pass at the Ph.D. level are done with the exam. Students who pass at the M.S. level may elect to leave the program with an M.S., upon completion of all M.S. requirements. Both students who pass at the M.S. level and students who fail have the option to take the exam again, in the immediately following summer offering (unless granted an exception to take it the following academic year). Students who take the exam again may not decrease their outcome (e.g., a student who passes at the M.S. level in spring, then fails in summer, retains the option of completing the M.S.). Students may only take the exam twice. Students are recommended for dismissal from the program immediately if they either (a) fail twice or (b) fail once and elect not to take the exam again.

In extraordinary circumstances the graduate director may give a student the option of taking the first-year exam without having taken the core coursework (CMPM 201, 202, and 203) during any quarter. Those who pass may complete the degree without taking the core courses.

**Ph.D. Comprehensive Examination**

The Ph.D. comprehensive exam measures students’ preparation to perform independent CM research. It must be taken (for the first time) no later than the end of a student’s third year in the program (the ninth quarter, excluding summer quarters). Before taking the exam, students must have completed the requirements for understanding media creation and computer programming, as well as demonstrated an understanding of interpretive practices (as outlined above). Students enroll in CMPM 206 (a two-unit course, usually offered by the CM grad director each quarter) and a 10-unit independent study (CMPM 297, usually with their adviser), and take an exam evaluated by adviser and graduate director (with another faculty member stepping in if adviser is graduate director). The exam itself includes:

- Reading a significant body of material in two or three depth areas of CM—from a list developed by student, adviser, and course instructor—integrating it, and writing one or more essays about it.
- A portfolio review of CM projects, with (a) a detailed written description of the computational system-building goals and process of at least one project led (in this aspect) by the student and (b) a detailed written description of the media-making goals and process of at least one project led (in this aspect) by the student. The projects may be from during or before enrollment in program, and the written descriptions may be of the same or different projects.

There are three possible outcomes of the comprehensive exam:

- Pass at Ph.D. level
- Pass at M.S. level
- Fail

As with the first-year exam, students who pass the comprehensive exam at the Ph.D. level are done with the exam. Students who pass at the M.S. level may elect to leave the program with an M.S., upon completion of all M.S. requirements. Both students who pass at the M.S. level and students who fail have the option to take the exam again, in a future quarter, not later than the middle of their fourth year in the program (the 11th quarter, excluding summer quarters). Students who take the exam again may not decrease their outcome
Computational Media

(e.g., a student who passes at the M.S. level in spring, then fails the following fall, retains the option of completing the M.S.). Students may only take the exam twice. Students are recommended for dismissal from the program immediately if they either (a) fail twice or (b) fail once and elect not to take the exam again.

Qualifying Examination and Advancement to Candidacy

The Ph.D. qualifying examination measures students’ preparation to begin Ph.D. research. It must be taken (for the first time) no later than the end of a student’s fourth year in the program (the 12th quarter, excluding summer quarters). It has two parts: first, a detailed written description of a proposed dissertation project, distributed to the committee before the oral examination; second, an oral presentation of the project, followed by questioning from the committee.

The committee policy for the CM Ph.D. follows that of UC Santa Cruz. Specifically: The qualifying examination committee shall consist of at least four examiners, one of whom is not a member of the student’s department. The department shall submit to the Office of the Graduate Dean at least one month before the proposed examination a list of four qualified persons who are willing to serve on the examination committee, and who meet the following conditions:

- The chair of the examination committee must be a tenured faculty member.
- The student’s thesis adviser cannot chair the examination committee.
- The outside member must be (a) a tenured faculty member from a different discipline on the University of California, Santa Cruz, campus, (b) a tenured faculty member of the same or different discipline from another academic institution involved in research and graduate education, or (c) a qualified person outside of academia with significant research experience (as determined by the Graduate Division).

After passing the qualifying examination, students advance to candidacy. Students who do not pass the examination may take it again, but must do so no later than the end of their fifth year in the program. Students may only take the examination twice. Students are recommended for dismissal from the program immediately if they either (a) fail twice or (b) fail once and elect not to take the examination again.

PH.D. DISSERTATION

The Ph.D. dissertation is a significant contribution to the CM field. It may emphasize technical, media-creation, or interpretive aspects, but must have a significant secondary contribution from at least one of the other areas—and may also emphasize areas equally. It requires an oral defense before a faculty committee, as well as a final dissertation document reviewed by that committee (distributed to the committee before the defense, and revised after the defense in response to committee comments). The committee must include at least two members of the CM Department.

SAMPLE PROGRAMS

Ph.D., Not Seeking M.S. Degree (Students with Technical CM M.S. Degree)

This is a sample program for a student who has completed a master’s degree with significant technical content and a focus on some form of computational media (such as computer games). The M.S. in Games and Playable Media at UC Santa Cruz (offered in Silicon Valley) is such a degree. Such students will have already satisfied the requirement for understanding media creation in a CM context (e.g., by taking the CMPP 270, 271, and 272 sequence at UCSC) and the requirement for demonstrating an understanding of computer programming (such master’s degrees generally only
accept students who know how to program). This program is for a student who wants to complete the Ph.D. without getting a second M.S. in the process.

### Ph.D., Seeking M.S. Degree (Students with Non-technical Master's Degree)

This is a sample program for a student who has completed a master's degree with significant arts content and a focus on some form of computational media (such as digital art). The M.F.A. in Digital Art and New Media at UC Santa Cruz is such a degree. Such students will have already satisfied the requirement for understanding media creation in a CM context (e.g., by taking one of the DANM 250 sequences at UCSC) but not necessarily the requirement for demonstrating an understanding of computer programming (such master's degrees generally focus on the strength of the student's arts portfolio, rather than technical skills). This program is for a student who wants to complete the Ph.D. while getting an M.S. in the process.

### Master's Degree in Games and Playable Media

This is a sample program for a student who has completed a bachelor's degree with significant technical content but little focus on any form of computational media. The B.S. in computer science at UC Santa Cruz is such a degree. Such students will have already satisfied the requirement for demonstrating an understanding of computer programming (e.g., by taking a core programming sequence and CMPS 109 at UCSC) through students strongly focused on theoretical computer science may need to take an advanced programming course. This program is for a student who wants to complete the M.S. degree on the way to the Ph.D.
The goal of the M.S. in games and playable media is to prepare students to make professional contributions to the creation of games and other forms of media that invite and structure play. The degree is offered through the UC Santa Cruz location in Silicon Valley, enabling connection and collaboration with local industry. The curriculum includes deep engagement with game creation as well as a focus on professional development. Students can also take advantage of the opportunities for coursework and collaboration offered by its "sister" degree in serious games (also offered in Silicon Valley), as well as strong course offerings in games and related technologies on the Santa Cruz campus, and the potential for connections with the department’s field-leading research groups. The M.S. in games and playable media is a five-quarter program that spans one and two-thirds academic years. Students are expected to complete coursework in five academic quarters, without leaves of absence.

REQUIREMENTS FOR THE GAMES AND PLAYABLE MEDIA MASTER’S DEGREE

### Course Requirements

Each student is required to take 60 credits. Required courses are as follows:

- **Games and Playable Media 200**, Game Design Systems (5 credits)
- **Games and Playable Media 221**, Professional Development for Game Makers 1 (2 credits)
- **Games and Playable Media 230**, Fundamentals of Game Engineering (5 credits) or both of Games and Playable Media 235, Game Development I (5 credits) and Games and Playable Media 236, Game Development II (5 credits)
- **Games and Playable Media 231**, Game Technologies (5 credits)
- **Games and Playable Media 270, 271, 272; Games and Playable Media Studio 1, 2, 3; 15 credits** (5 credits each)
- **Games and Playable Media 280A**, Games Proseminar; 4 offerings; 8 credits (2 credits each)
- **Three courses from the electives list below**, 15 credits (5 credits each)

Students who lack sufficient technical preparation to enter course Games and Playable Media 230, Fundamentals of Game Engineering, must take both course Games and Playable Media 235, Game Development I, and course Games and Playable Media 236, Game Development II. Assessment of technical preparation will be performed based on completed coursework prior to entry into the program, discussion with the student, and, at the program’s discretion, use of a technical assessment examination.

### Project

Completion of a master's project is required for the master's degree. These are generally collaborative projects, created together with other students in the Games and Playable Media M.S. program. Projects are typically completed by students during Games and Playable Media 272, Games and Playable Media Studio III. Students are evaluated based both on their individual contributions to the project and on the overall success of the project as a whole. Each project will be demonstrated via a public presentation, and this demonstration comprises part of the final project evaluation.

Evaluation of projects is performed by a committee consisting of at least three people, comprised of at least the games and playable media vice chair and will contain other members of the games and playable media program faculty, or members of the games and playable media program advisory committee, or other instructors in the games and playable media program. A majority of the committee’s voting members are members of the UC Santa Cruz academic senate.

### Sample Programs

There are two primary paths through the first year of the degree. Students with less technical background take GAME 235, GAME 236, and GAME 231 in their first year, while those with more technical background take GAME 230 and GAME 231 in their first year. The sample programs include summer internships or sponsored projects. These are not required, and do not bear academic credit. They are, however, strongly suggested.

### Sample program with more technical background

GAME 280A, Games Proseminar (2 credits) |

### Transfer Credit

Up to three School of Engineering courses fulfilling the degree requirements of the M.S. degree may be taken before beginning the graduate program through the concurrent enrollment program. The game art, game writing, and game sound requirements of the M.S. program may also be satisfied through courses from other institutions or prior UCSC coursework. Petitions should be submitted along with the transcript from the other institution. For courses taken at other institutions, copies of the syllabi, examinations, and other coursework should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UCSC.

At most, a total of three courses may be transferred from concurrent enrollment and other institutions.

### Review of Progress

On an ongoing basis, the faculty reviews the progress of every student. Students not making adequate progress toward completion of degree requirements (see the Graduate Handbook for policy on satisfactory academic progress) are subject to dismissal from the program. Students with academic deficiencies may be required to take additional courses. Full-time students with no academic deficiencies are normally expected to complete the degree requirements at the rate of at least two courses per quarter, and move forward through the course sequences together with their cohort, remaining on track to complete the degree in a single four-quarter year.

Students receiving two or more unsatisfactory grades (U or grade below B) in the School of Engineering (SoE) courses, or who receive an unsatisfactory grade (U or grade below B) in a course in the Games and Playable Media Studio sequence, are not making adequate progress and will be placed on academic probation for the following quarter of registered enrollment. Withdrawing or taking a leave of absence does not count as enrollment. Part-time enrollment is counted as a half quarter of enrollment. Students who are on academic probation or are not enrolled full time are no longer guaranteed any previously committed funding. Should students receive an unsatisfactory grade (U or below B) in a School of Engineering course while on probation, the Computational Media Department may request the graduate dean to dismiss that student from the graduate program. If after being removed from probation, the student again receives an unsatisfactory grade (U or below B) in a School of Engineering course, he or she will return immediately to academic probation.

Graduate students experiencing circumstances or difficulties that impact their academic performance should contact their adviser and the graduate director immediately. Students may appeal their dismissal.
DESIGNATED EMPHASIS IN HUMAN LANGUAGE MEDIA AND MODELING

The graduate designated emphasis (DE) leading to the degree notation “with an emphasis in Human-Language Media and Modeling” (HLMM) is a collaboration of faculty from Computational Media, Linguistics, and Technology Management. This DE is administered by the Department of Computational Media. Students wishing to complete a Master’s Thesis or Doctoral Dissertation in this area must satisfy the degree requirements of a primary program as well as of the DE. The DE is most suitable for students pursuing degrees in Linguistics, Computer Science, and Psychology. However, students from any area may work in this interdisciplinary field as long as they meet all requirements, including progress, within the primary degree program.

DE Faculty. The current HLMM DE faculty are:
- Pranav Anand, Linguistics
- Marilyn Walker, Computer Science
- Yi Zhang, Technology Management
- Jean E. Fox Tree, Psychology

Requirements for the Designated Emphasis

Committee Composition. The student’s M.S. project or Ph.D. qualifying exam, or Ph.D. committee must include one member of the HLMM faculty.

Writing. The student’s master’s project, dissertation or thesis must demonstrate knowledge of, and orientation to, research issues related to HLMM.

Proficiency Requirements. All students must demonstrate an understanding of Human-Language Media and Modeling, through prior work and the completion of a set of HLMM electives or courses.

Course requirements. All students must complete three five-credit graduate core courses from the approved list of courses and one two-unit seminar course and provide evidence of having attended 6 related seminars or invited talks.

List of Approved Courses

Three 5-credit courses plus two, 2-credit seminars are required, chosen from the list of approved courses, which is initially:

- CMPM 235 User Evaluation of Technology (5 credits)
- CMPM 244 Artificial Intelligence in Games (5 credits)
- CMPM/LING 245 Computational Models of Discourse and Dialogue (5 credits)
- CMPM 248 Interactive Storytelling (5 credits)
- CMPM 265 Generative Methods (5 credits)
- CMPM 290J Playable Media (5 credits)
- CMPM 290P Topics in Computational Cinematography (5 credits)
- CMPM 280X Seminar in Expressive AI (2 credits)
- CMPM 280W Seminar in Digital Media (2 credits)
- CMPS 280Z Seminar in Natural Language Processing (2 credits)

The Designated Emphasis can be retrospectively fulfilled by the previous numbering of these courses as CMPS 244, 245, 248, 265, 290J, 290P, 280W, CMPM 280Z and CMPE 235.

COMPUTATIONAL MEDIA FACULTY AND PROFESSIONAL INTERESTS

PROFESSOR

Katherine Isbister
Games and human computer interactions, games and emotion, game user research, game character design, human-centered design, research through design, social wearables, haptics for self-regulation

Sri Kurniawan
Human-computer interaction, human factors and ergonomics, accessibility, assistive technology, usability, virtual reality, human-centered design

Michael Mateas
Artificial Intelligence (AI) for art and entertainment, game AI, AI and creativity, AI-based interactive storytelling, autonomous characters

Noah Wardrip-Fruin
Digital media, computer games, electronic literature, interactive narrative, software studies, game and software collections (preservation, discovery, citation)

Jim Whitehead
Generative methods, procedural content generation, level design in computer games, software engineering, software analytics, software evolution, software bug prediction

Sri Kurniawan
Human-computer interaction, human factors and ergonomics, accessibility, assistive technology, usability, virtual reality, human-centered design

ASSISTANT PROFESSOR

Angus Forbes
Data visualization, computer graphics, human-computer interaction, immersive environments

Adam Smith
Generative methods, game design knowledge representation and reasoning, machine playtesting, design feedback tools, visual search for interactive media

TEACHING PROFESSOR

Nathan Altice
Digital media theory and production, computing culture and history, game development, media archaeology, platform studies, sound synthesis

LECTURER

Christopher Yonge
3D modeling and animation, industrial design and visualization
### LOWER-DIVISION COURSES

**25. Introduction to 3D Modeling. F,W**
Introduces theory and techniques of 3D computer graphics. Topics include: capabilities of modern graphics hardware; 3D coordinate spaces; modeling with polygons; NURBS and subdivision surfaces; applying textures and materials; lighting; and simple effects. Students develop proficiency in 3D modeling via lectures and assignments focused on the use of a 3D modeling tool. (Formerly Computer Science 25, Introduction to Computer Graphics: 3D Modeling.) (General Education Code(s): PR-C) The Staff, C. Yonge, J. Whitehead

**26. Introduction to 3D Animation. W**
Introduces theories and techniques of 3D computer animation. Topics include: character animation; rigging; simulation of cloth, liquids, and fire; motion capture; rendering; and editing animated scenes. Students develop proficiency in 3D animation via lectures and assignments focused on the use of a 3D animation tool and use of motion-capture software. (Formerly Computer Science 26, Introduction to Computer Graphics: 3D Animation.) Prerequisite(s): course 25. (General Education Code(s): PR-C) C. Yonge, The Staff

**80A. Accessible Games. S**
Overview of the physical, psychological, cultural, and psychosocial aspects of disability and how they impact game play. Discusses implications for universal and accessible game design. (General Education Code(s): PE-T.) S. Kurniawan

**80K. Foundations of Video Game Design. W**
A generally accessible course in which students explore how video games (and games generally) shape experiences and express ideas. Students develop novel games, engage in game interpretation, and survey related topics (e.g., game history, technology, narrative, and ethics) through lectures and readings. Programming experience is not required. (General Education Code(s): IM) A. Smith, N. Wardrip-Fruin, J. Whitehead

**94. Group Tutorial. F,W,S**
Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit a petition to the sponsoring agency. May be repeated for credit. The Staff

**94F. Group Tutorial (2 credits). F,W,S**
Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit a petition to the sponsoring agency. May be repeated for credit. The Staff

### UPPER-DIVISION COURSES

**120. Game Development Experience. S**
Teaches the concrete programming and collaboration skills associated with making a digital game from start to finish, including but not limited to: establishing a team, concepting, storyboarding, prototyping, producing, and testing a game for release. Students are organized into groups and work together to create and produce a playable game. This course is taught in conjunction with Art 120G which covers the skills required to design and critique digital games. Prerequisite(s): course 80K, Computer Science 12B and 12M, and Film and Digital Media 80V; and Art and Design: Games and Playable Media (ARTG) 80G or 80H or 80I; and concurrent enrollment in ARTG 120. (General Education Code(s): PR-E) N. Altice, The Staff

**131. User Experience for Interactive Media. S**
Theories and practices for approaching the design problems of interactive media holistically, beyond usability and accessibility. Includes hands-on learning, application of human-centered design and evaluation skills in group projects, and peer critique. Prerequisite(s): Computer Science 12B. Enrollment is restricted to juniors, seniors, and graduate students. Enrollment limited to 60. S. Kurniawan

**146. Game AI. *W**
Course provides a comprehensive introduction to the use of artificial intelligence (AI) in computer games. Building on fundamental principles of AI, course explains how to create non-player characters (NPCs) with progressively more sophisticated capabilities. (Formerly Computer Science 146) Prerequisite(s): Computer Science 101; familiarity with C++. Enrollment is restricted to sophomores, juniors, seniors, and graduate students. The Staff, M. Mateas, A. Smith

**147. Generative Design. S**
Introduces generative methods for design. Uses algorithmic techniques to generate and evaluate game content (images, sounds, map designs) along with mechanics and progression systems. Search-based and learning-based techniques with connections to artificial intelligence are also covered. Prerequisite(s): course 120. A. Smith

**148. Interactive Storytelling. W**
Covers a range of design approaches and technologies including storytelling in games, interactive fiction, interactive drama, and artificial intelligence-based story generation. Through a
mixture of readings, assignments, and project work, students explore the theoretical positions, debates, and technical and design issues arising from these approaches. (Formerly Computer Science 148.) Prerequisite(s): Computer Science 101. Enrollment is restricted to juniors and seniors. M. Mateas, The Staff

150. Creating Digital Audio. W
Introduces digital sound recording and editing technologies, sound synthesis, and concepts in sound design for media production. Covers the basics of sound capture, microphones, audio manipulation and editing, effects, sound formats, mixing and dynamics, synthesizers, audio software, and game audio. Enrollment is restricted to sophomores, juniors, and seniors. (General Education Code(s): PR-C.) N. Altice

151. Algorithmic Music for Games. S
Introduces compositional techniques and procedural audio as exhibited in the sound and music of video games. Surveys different styles of music implemented in video games and associated compositional approaches. Students develop skill in procedural audio via a series of workshops and assignments. Prerequisite(s): Computer Science 12A and Computer Science 12L, or Computer Science 11. N. Altice

163. Game Graphics and Real-Time Rendering. S
Introduces real-time, hardware-accelerated graphics programming suitable for game development, visual effects, and interactive multimedia projects. Emphasizes contemporary shader-programming techniques and developing custom effects using game engines and multimedia software. Prerequisite(s): computer science 12B/M (exceptions granted in special cases by permission of the instructor) A. Forbes

164. Game Engines. *
Covers the graphic elements in computer games. Topics include modifying, optimizing, adding components, and building a game engine. Course evaluation based on exams and several programming projects, including a game built using the student’s game engine. (Formerly Computer Science 164.) Prerequisite(s): Computer Science 160 and 160L. Concurrent enrollment in course 164L is required. A. Smith, The Staff

164L. Game Engines Lab (2 credits). *
Provides hands-on experience in using, designing, and building game engines. Students also explore different special effects, such as particle systems, spring systems, and game physics. (Formerly Computer Science 164L.) Concurrent enrollment in course 164 is required. A. Smith, The Staff

170. Game Design Studio I. F
First of a three-course capstone sequence for the computer game design program. Students work in teams to develop a comprehensive game design for a substantial computer game, including detailed storyline, level design, artistic approach, implementation technologies, and art-asset pipeline. Emphasis placed on creating novel, artistic game design concepts. Includes design reviews and formal presentations. Companion lectures cover advanced topics in game design, game programming, and software project management. Students are billed a materials fee. (Formerly Computer Science 170.) Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; course 120, ARTG 120 and Computer Science 109. Enrollment is restricted to Computer science: computer game design majors. The Staff, J. Whitehead, N. Altice, N. Wardrip-Fruin, M. Mateas

171. Game Design Studio II (7 credits). S
Second of a three-course capstone sequence for the computer game design program. Students work in teams on the software design, implementation, and testing of the computer game designed in course 170. Includes design reviews, progress reviews, and formal presentations. Companion lectures cover topics in software engineering, including user and software testing, release engineering and project management; also covered are game design and game programming. Students are billed a materials fee. (Formerly Computer Science 171.) Prerequisite(s): course 171. Enrollment is restricted to Computer science: computer game design major. The Staff, N. Wardrip-Fruin, M. Mateas, J. Whitehead

176. Game Systems. F
Presents game design as the interplay of multiple interacting game systems. Surveys various game systems: movement, combat, reward, economic, logistics, quest, information visibility, narrative. Students explore systems via study, design, and play of board, card, and computer games. Prerequisite(s): course 80K. N. Altice, The Staff

177. Creative Strategies for Designing Interactive Media. *
Surveys tactical, structural, contextual, and other methods to enhance creativity and innovation in the design of games and other interactive media. Investigates strategies for creativity and innovation drawn from diverse fields, including interactive affordances, narrative and poetics, biology, contextual inquiry, and design research. To innovate in a field of fixed genres is challenging: the allure of modeling exemplars is strong. Although imitation can be successful in the marketplace, the
Computational Media

most creative action occurs on the leading edge of change. Innovation benefits from strategies and methods that are directly aimed at exploring new perspectives and structures to learn through the process of discovery. (Formerly Computer Science 177.) Enrollment is restricted to juniors and seniors. K. Isbister

178. Human-Centered Design Research. W
Students move through a rigorous design-research process involving skills and principles in human-centered design research as well as selected formal research methods. They learn to use tools for ideation, human-centered qualitative research, domestic probes, mock-ups, and prototypes. (Formerly Computer Science 178.) Enrollment is restricted to juniors, seniors, and graduate students. (General Education Code(s): PR-C.) K. Isbister, S. Kurniawan

179. Game Design Practicum.
Provides the opportunity to practice the creation of novel computer games. Students learn a new game-making technology, then create three games using this technology. (Also offered as Art&Des:Games&PlayableMedia 179. Students cannot receive credit for both courses.) Prerequisite(s): course 20 or 120; and course 80K or Computer Science 80K. May be repeated for credit. (General Education Code(s): PR-C.) The Staff, N. Altice, J. Whitehead

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit a petition to the sponsoring agency. May be repeated for credit. The Staff

194F. Group Tutorial (2 credits). F,W,S
Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit a petition to the sponsoring agency. May be repeated for credit. The Staff

Students submit a petition to the sponsoring agency. Prerequisite(s): satisfaction of the Entry Level Writing requirement. The Staff

195F. Senior Thesis Research (2 credits). F,W,S
Intended for majors. Students submit a petition to the sponsoring agency. Prerequisite(s): satisfaction of the Entry Level Writing requirement. The Staff

198. Individual Study or Research. F,W,S
Students submit petition to sponsoring agency. May be repeated for credit. The Staff

198F. Individual Study or Research (2 credits). F,W,S
Intended for majors. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

199. Tutorial. F,W,S
For fourth-year students majoring in computational media. Students submit a petition to the sponsoring agency. May be repeated for credit. The Staff

199F. Tutorial (2 credits). F,W,S
For fourth-year students majoring in computational media. Students submit a petition to the sponsoring agency. May be repeated for credit. The Staff

GRADUATE COURSES

201. Introduction to Computational Media. F
Provides a broad foundation in the history, theory, and contemporary practice of computational media, examining its roots in a variety of fields and current structures of participation. Also covers a selection of key critical lenses for understanding computational media. Enrollment is restricted to computational media graduate students, or by permission of the instructor. N. Altice, N. Wardrip-Fruin

Overview of computational media research strategies. Includes case studies of how particular projects were defined and completed and how interdisciplinary concerns have been successfully integrated. Considers the expressive and authorial affordances of different system architecture approaches. Prerequisite(s): course 201, or by permission of the instructor. Enrollment is restricted to graduate students. A. Forbes, M. Mateas

203. Computational Media Methods. S
Overview of major methods in computational media research. Includes non-numerical methods such as playtesting, arts critique, ethnographic observation, and humanistic interpretation. Also includes numerically oriented methods such as survey instruments, data mining, user experiments, and characterizing expressive/generative spaces. Enrollment is restricted to Computational Media graduate students. K. Isbister

204. Computational Media Project Definition. F
Students define the topic, approach, and scope for an M.S. thesis or project. Includes discussion of successful past projects and theses, visits from faculty presenting open problems, reviews of related literature, topic and timeline presentations, and critiques. Enrollment is restricted to computational media graduate students, or by permission of the instructor. S. Kurniawan, N. Altice, N. Wardrip-Fruin

206. Computational Media Research Preparation (2 credits). F,S
Covers skills for finding relevant literature for a novel research topic, integrating that literature, and communicating the results. Also covers how to select work for a research portfolio, present that work, and describe contributions. Enrollment is by permission of the instructor. Prerequisite(s): courses 201, 202, and 203 for an understanding of media creation and computer programming; good standing in the PhD program. Enrollment is restricted to graduate students. N. Wardrip-Fruin

235. User Evaluation of Technology. *
Presents a variety of evaluation
Computational Media methodologies to assess usability, acceptance, and effectiveness of technology with the intended users. Combines lectures and exercises for students to gain firsthand experiences of these methodologies with real users. (Formerly Computer Engineering 235.) Enrollment is restricted to graduate students. Seniors may enroll with completion of Computer Science 131. K. Isbister, S. Kurniawan

244. Artificial Intelligence in Games. *
Artificial intelligence has long used game-playing as a metric for progress. Key algorithms such as alpha-beta and HPA search studied. Computer algorithms for backgammon, poker, and chess examined. There will be individualized projects. (Formerly Computer Science 244.) Prerequisite(s): course 201; and course 211 or 240 or 242. Enrollment limited to 20. M. Mateas, A. Smith

245. Computational Models of Discourse and Dialogue. *
Focuses on classic and current theories and research topics in the computational modeling of discourse and dialogue, with applications to human-computer dialogue interactions; dialogue interaction in computer games and interactive story systems; and processing of human-to-human conversational and dialogue-like language such as e-mails. Topics vary depending on the current research of the instructor(s) and the interests of the students. Students read theoretical and technical papers from journals and conference proceedings and present class lectures. A research project is required. (Also offered as Linguistics 245. Students cannot receive credit for both courses.) Enrollment is restricted to graduate students. Undergraduates may enroll with permission of instructor. May be repeated for credit. M. Walker

248. Interactive Storytelling. *
Covers wide range of practices including hypertext, interactive fiction, embedded narratives in games, interactive drama, and artificial intelligence-based story generation. Through a mixture of readings, assignments, and project work, explores the theoretical positions, debates, and technical and design issues arising from these different approaches. (Formerly Computer Science 248.) Enrollment is restricted to graduate students. Enrollment limited to 20. M. Mateas, J. Whitehead

265. Generative Methods. *
In-depth exploration of algorithms for the automated generation of 2D and 3D models and content. Covers multiple approaches, including noise, grammars, genetic algorithms and programming, parametric design, and answer-set programming. Includes application of techniques to computer-game content and level design. (Formerly Computer Science 265.) Enrollment is restricted to graduate students. A. Smith, M. Mateas, J. Whitehead

280G. Seminar in Generative Methods (2 credits). *
Weekly seminar covering advanced topics and current research in generative methods—the field focused on algorithms for creation of 2D and 3D models and content. Enrollment is restricted to graduate students. Enrollment limited to 30. May be repeated for credit. J. Whitehead

280H. Seminar in Human-Computer Interaction and Computational Media (2 credits). *
Covers advanced topics and current research in human-computer interaction as it intersects computational media. Focuses on student presentations and seminar participation. Enrollment restricted to graduate students and by permission of the instructor. Enrollment limited to 25. May be repeated for credit. K. Isbister

280K. Seminar in Interactive Systems for Individuals with Special Needs (2 credits). *
Covers advanced topics and current research in interactive systems for individuals who have special needs. Focuses on student presentations and seminar participation. Enrollment is restricted to graduate students. Enrollment limited to 15. May be repeated for credit. S. Kurniawan

280W. Seminar in Digital Media (2 credits). *
Covers advanced topics and current research in digital media—the interdisciplinary field at the intersection of computer science, media authoring, and models of interpretation from the humanities and social sciences. Focuses on student presentations and seminar participation. (Formerly Computer Science 280W.) Enrollment is restricted to graduate students. May be repeated for credit. N. Wardrip-Fruin

280X. Expressive AI (2 credits). *
Weekly seminar covering topics of current research in artificial intelligence applied to interactive art and entertainment, including computer games. Enrollment by permission of instructor. Enrollment restricted to graduate students. (Formerly Computer Science 280X.) Enrollment limited to 30. May be repeated for credit. N. Wardrip-Fruin, M. Mateas

290A. Topics in Computational Media. F,W,S
Students learn about a current research area in computational media and make a contribution. Each course offering focuses on a different aspect of technical, creative, and/or interpretive work in the field. Enrollment is restricted to computational media graduate students. A. Smith, A. Forbes, N. Altice, N. Wardrip-Fruin

290J. Playable Media. S
Focuses on media, such as computer games, that invite and structure play. Work includes building and critiquing a series of prototypes; studying major examples in the field; and discussing both theoretical and practice-oriented texts. Enrollment by permission of instructor. Enrollment restricted to graduate students. (Formerly Computer Science 290J.) (Also offered as Digital Arts and New Media 250D. Students cannot receive credit for both courses.) May be repeated for credit. R. Hunnicut, N. Wardrip-Fruin

290K. Social and Emotional Approaches to Human Computer Interaction. W
Computational Media

Focuses on enhancing social and emotional capabilities and qualities in interactive systems. Students read research, look at sample systems, and engage in evaluation, design, and prototyping exercises. A research project and helping to lead class discussions are also required. Enrollment is restricted to graduate students. Enrollment limited to 20. May be repeated for credit. K. Isbister

290P. Topics in Computational Cinematography.*
Focuses on discussion of recent advances in visual storytelling in graphical environments. Major topics covered are: intelligent camera control, shot-compositions, lighting design, interactive storytelling, and computational techniques associated with these applications. Class consists of in-class discussions and student presentations of research papers and a final student project. (Formerly Computer Science 290P.) (Also offered as Digital Arts and New Media 290P. Students cannot receive credit for both courses.) Enrollment is restricted to graduate students. The Staff

297. Independent Study or Research. *
Independent study or research under faculty supervision. Although this course may be repeated for credit, not every degree program will accept a repeated course toward degree requirements. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

Thesis research conducted under faculty supervision. Although this course may be repeated for credit, not every degree program will accept a repeated course toward degree requirements. Students submit petition to sponsoring agency. May be repeated for credit. The Staff

* Not offered in 2018-19
Revised: 07/15/18
Computer science is the study of the theoretical and practical aspects of computer technology and computer usage. The Computer Science (CMPS) Department offers courses on a wide range of topics, many of which include a mathematical component, and offers undergraduate bachelor of arts and bachelor of science degrees in computer science, as well as the master of science and doctor of philosophy degrees. Besides offering instructional courses, the department engages in a substantial research program in which both advanced undergraduates and graduate students participate. The department offers two undergraduate degree programs.

**BACHELOR OF ARTS IN COMPUTER SCIENCE**

The bachelor of arts (B.A.) program at UC Santa Cruz is designed to give students a solid grounding in both theoretical and practical topics in computer science, computer engineering, and mathematics while leaving flexibility for a broad program of study, including some courses outside of science and engineering, or even for a double major in another discipline.

**BACHELOR OF SCIENCE IN COMPUTER SCIENCE**

The bachelor of science (B.S.) program is appropriate for students desiring a somewhat stronger concentration in the core areas of computer science—algorithms, programming languages, and systems—with more courses in computer science, computer engineering, and computational media; this program also allows for a few electives outside of science and engineering.

Because many courses in both programs have prerequisites, students leaning toward any of these programs will enjoy greater scheduling flexibility if they take some preparatory courses in their first year. The specific course requirements for each undergraduate degree are given below.

Applications of computer science are found in many other areas of study, from art, music, and linguistics to social sciences, economics, business, digital, and social media, environmental and life sciences, and sciences. Thus, interdisciplinary activities are encouraged. For those students whose primary interest is in another area, a minor in computer science is offered.

**PROGRAM DESCRIPTION**

The Computer Science Department offers a wide range of courses intended for nonmajors as well as majors. These include CMPS 10, Introduction to Computer Science; CMPS 17, Social Networks; CMPS 80J, Technology Targeted at Social Issues; CMPS 80L, Social Data Analytics and Visualization; and CMPS 80S, From Software Innovation to Social Entrepreneurship. CMPS 10, Introduction to Computer Science, may be beneficial to students who are considering the major but have a limited background in computer science. There are also introductory programming classes intended for nonmajors: CMPS 5P, Introduction to Programming in Python.

**PROGRAM LEARNING OUTCOMES FOR B.S. OR B.A. DEGREE**

Recipients of a Bachelor of Science or a Bachelor of Arts degree in Computer Science at UC Santa Cruz are expected to have the following skills and experiences:

1. Demonstrate mastery of computer science in the following core knowledge areas:
   - Algorithms, data structures, and complexity
   - Programming languages
   - Software engineering and development
   - Computer systems

2. Apply system-level perspective by thinking at multiple levels of detail and abstraction and by recognizing the context in which a computer system may function, including its interactions with people and the physical world.

3. Apply problem-solving skills and the knowledge of computer science to solve real problems.

4. Understand how technological advances impact society and the social, legal, ethical and cultural ramifications of computer technology and their usage.

5. Write about and orally communicate technical material about computer science and computer systems, broadly conceived.

**COMPUTER SCIENCE POLICIES**

**DECLARATION OF THE COMPUTER SCIENCE MAJORS**

Students interested in pursuing computer science must indicate computer science as a proposed major on their application for admission to UCSC. Students admitted to UCSC in Fall 2018 will be able to declare a computer
science major only if they have been admitted to UCSC as proposed computer science majors. For all students, it is necessary to be listed as proposed computer science majors within the School of Engineering before being able to declare the major. Additionally, students must satisfy the following three criteria to be able to declare the major: (i) students must declare CS (Computer Science B.S. or Computer Science B.A.) as their major between student’s second to sixth quarter; (ii) students have to have completed all the foundation courses listed below when they declare their major; and (iii) students must have a cumulative GPA of at least 2.80 in the foundation courses attempted at UCSC, with at most one unsuccessful attempt (grade C-, D+, D, D-, F, or NP) permitted in a foundation course. Denials of admission to the major may be appealed by submitting a letter to the School of Engineering Undergraduate Office, addressed to the Computer Science Undergraduate Director, describing why the prior performance is not an accurate reflection of the student’s potential. Students who are informed that they are not eligible to declare the major may appeal this decision by submitting a letter to the department chair within 15 days from the date the notification was mailed. Within 15 days of receipt of the appeal, the department will notify the student, college, and Office of the Registrar of the decision. Please refer to the “Declaration of Major” section in the School of Engineering Program Statement for more information.

FOUNDATION COURSES
The foundation courses for all computer science majors are as follows:
CMPS 12A/L (or Computer Engineering 13, or both CMPS 5J and CMPS 11)
CMPS 12B/M
CMPS 13H/L simultaneously satisfies the requirement of 12A/L and 12B/M
Mathematics 19A (or Mathematics 20A)
Mathematics 19B (or Mathematics 20B)
Computer Engineering 16

HONORS IN THE MAJORS
Students must obtain a GPA of 3.8 or higher in the courses in the major to be considered for the distinction of "Highest Honors in the Major." Students must obtain a GPA of 3.5 or higher in the courses in the major to be considered for the distinction of "Honors in the Major." The School of Engineering reserves the right to withhold honors based on other criteria, such as an incident of academic dishonesty.

DISCIPLINARY COMMUNICATION (DC) REQUIREMENT
Students of every major must satisfy that major’s upper-division Disciplinary Communication (DC) requirement. Refer to major program statements for details.

LETTER GRADE POLICY
Please refer to the School of Engineering section of the catalog (subheading: Letter Grade Policy).

TRANSFER STUDENTS
Most courses in the computer science program at UCSC have a strong theoretical component to prepare the student for designing, as opposed to simply using, computer systems. Often, courses taken at other institutions which emphasize applications of current languages and computers do not count toward the computer science major at UCSC.

At UCSC, computer science students are first introduced to programming using the programming language Java. The core programming sequence, courses 12A/L and 12B/M (or 13H/L, which covers both 12A/L and 12B/M), exposes students to both Java and C. Many upper-division courses that involve programming use the C and C++ programming languages. Transfer students who are not familiar with both Java and C may need to take a remedial course. Students familiar with C++ and Unix should find the transition to Java and C relatively simple.

Prior to admission transfer students must have completed all of the foundation courses listed above, or their articulated equivalents. A student lacking one foundation course may be admitted if they have completed CMPE 12/L (or its articulated alternative). Furthermore, transfer students must have completed at least three (3) foundation courses by the end of the fall term of the previous academic year and have a minimum 2.80 GPA over all completed foundation courses at that time. All foundation courses must be completed by the end of the spring term of the previous academic year with a minimum 2.80 GPA.

Transfer students admitted during the winter term must satisfy the major preparation criteria for transfer students admitted during the fall term and, additionally, must have successfully completed at least two (2) required courses for the proposed degree, prior to admission. It is highly recommended that two of these courses are AMS 10 (or Math 21) and Math 23A.

SCHOOL OF ENGINEERING POLICIES

Please refer to the School of Engineering section of the catalog (subheading: Admission to School of Engineering Majors) for additional policies that apply to all School of Engineering programs. These policies include admission to the major and the need for computer science students to obtain pre-approval before taking courses elsewhere.

PREPARATION FOR THE MAJOR

It is recommended that high school students intending to apply to the computer science major have completed four years of mathematics (through advanced algebra and trigonometry) and three years of science in high school. Comparable college mathematics and science courses completed at other institutions also serve to properly prepare a student for the computer science major.

B.A. MAJOR REQUIREMENTS

The aim of this program is to expose students to a rigorous curriculum in computer science while maintaining sufficient flexibility so that students can take courses outside computer science, pursue a minor in another discipline, or complete a double major. Every student must complete a minimum of 15 courses, 7 lower-division and 8 upper-division. Out of these, the 7 lower-division courses and the first upper-division course are required preparatory courses for every student. Once these preparatory courses are completed, students tailor their own program by choosing 7 upper-division elective courses.

LOWER-DIVISION REQUIREMENTS

Each student must successfully complete the following seven required preparatory courses:

**Computer Science**
- CMPS 12A/L, Introduction to Programming (Accelerated)/Laboratory (or CMPS 5J, Introduction to Programming in Java and CMPS 11, Intermediate Programming).
- Computer Engineering 13 may be taken as an alternative to CMPS 12A/L. CMPS 13H/L may be taken as an alternative to CMPS 12A/L and CMPS 12B/M.
- CMPS 12B/M, Introduction to Data Structures/Laboratory (CMPS 13H/L may be taken as an alternative to CMPS 12A/L and CMPS 12B/M).

**Computer Engineering**
- Computer Engineering 12/L, Computer Systems and Assembly Language/Laboratory
- Computer Engineering 16, Applied Discrete Mathematics

**Mathematics**
- Mathematics 19A and 19B, Calculus for Science, Engineering, and Mathematics (credit for one or both may be granted with adequate performance on the College Entrance Examination Board (CEEB) calculus AB or BC Advanced Placement examination), or
- Mathematics 20A and 20B, Honors Calculus

**Applied Mathematics and Statistics**
- Applied Mathematics and Statistics 10 (Mathematical Methods for Engineers I) or Mathematics 21 (Linear Algebra)

UPPER-DIVISION REQUIREMENTS

All students in the major must complete the following courses:

- CMPS 101, Algorithms and Abstract Data Types

**Breadth List (complete any three courses)**
- CMPS 102, Introduction to Analysis of Algorithms
- CMPS 104A, Compiler Design
- CMPS 111, Operating Systems
- CMPS 112, Comparative Programming Languages
- CMPS 115, Software Methodology
- CMPS 122, Computer Security
- CMPS 128, Distributed Systems
- CMPS 130, Computational Models
- CMPS 140, Artificial Intelligence
- CMPS 142, Machine Learning
- CMPS 143, Natural Language Processing
- CMPS 160/L, Computer Graphics/Laboratory
B.S. MAJOR REQUIREMENTS

This program is designed for students who wish to maximize exposure to computer science concepts and methods by taking a larger selection of upper-division computer science courses, as well as additional courses in the sciences and mathematics. A minimum of 20 courses must be completed for the B.S. in computer science, whereas a minimum of 15 courses must be completed for the B.A. in computer science. Out of the 20 courses, 8 are lower-division courses, and 12 are upper-division courses. The B.S. is more structured than the B.A.; 15 specific courses are required, and the remaining 5 are elective upper-division computer science courses.

LOWER- AND UPPER-DIVISION REQUIREMENTS

Students are required to take the following 15 courses:

**Computer Science**

- CMPS 180, Database Systems I
- Computer Engineering (CMPE) 110, Computer Architecture

**Elective List (complete any four courses)**

Two of the selected elective courses must be upper-division Computer Science courses except 191-194 and 196-199. For non-Computer Science courses, Computer Engineering, Computational Media, and Applied Mathematics and Statistics courses strongly recommended.

- Any 5-credit upper-division course offered by the Baskin School of Engineering
- Any 5-credit upper-division course offered by the Division of Physical and Biological Sciences except those numbered 190 and above (mathematics, physics, chemistry, and biology courses strongly recommended).
- Art 118, Computer Art: Theories, Methods, and Practices
- Art 120/121, Advanced Projects in Computer Art I/II
- Economics 100M, Intermediate Microeconomics, Math Intensive
- Economics 100N, Intermediate Macroeconomics, Math Intensive
- Economics 101, Managerial Economics
- Environmental Studies 115A/L, Geographic Information Systems
- Film and Digital Media 170A, Fundamentals of Introduction to Digital Media Production
- Film and Digital Media 177, Digital Media Workshop: Computer as Medium
- Linguistics 112/113/114, Syntax I/II/III
- Linguistics 116/118, Semantics II/III
- Linguistics 125, Foundations of Linguistic Theory
- Music 123, Electronic Sound Synthesis
- Music 124, Intermediate Electronic Sound Synthesis
- Music 125, Advanced Electronic Sound Synthesis
- CMPS 12A/L Introduction to Programming (Accelerated)/Laboratory (or CMPS5J, Introduction to Programming in Java and CMPS11, Intermediate Programming). Computer Engineering 13/L may be taken as an alternative to CMPS 12A/L. CMPS 13H/L to simultaneously satisfy the requirement of CMPS 12A/L and CMPS 12B/M)
- CMPS 12B/M Introduction to Data Structures/Laboratory
- CMPS 101 Algorithms and Abstract Data Types
- CMPS 102 Introduction to Analysis of Algorithms
- CMPS 111 Introduction to Operating Systems
- CMPS 112 Comparative Programming Languages
- CMPS 130 Computational Models

**Computer Engineering**

- Computer Engineering 12/L Computer Systems and Assembly Language/Laboratory
- Computer Engineering 16 Applied Discrete Mathematics
- Computer Engineering 107, Probability and Statistics for Engineers, or Applied Mathematics and Statistics 131, Introduction to Probability Theory
- Computer Engineering 110 Computer Architecture

**Mathematics**

- Mathematics 19A and 19B, Calculus for Science, Engineering, and Mathematics, or Mathematics 20A and 20B, Honors Calculus
- Mathematics 23A, Multivariable Calculus
- Applied Mathematics and Statistics
- Applied Mathematics and Statistics 10, Mathematical Methods for Engineers I; or Mathematics 21, Linear Algebra
- Applied Mathematics and Statistics 131, Introduction to Probability Theory, or Computer Engineering 107, Probability and Statistics for Engineers

**Upper-Division Electives**

Five courses must be completed from the list below. At least one course must be a computer science course. At most two courses can be from applied mathematics and statistics and mathematics, of which at most one may be substituted with two physics classes, chosen from the following list of class pairs: Physics 6A and 6C, 6A and 6B, 5A and 5C, 5A and 5B. Any laboratories required or recommended by the Physics Department associated with these classes, are not part of the computer science B.S. major requirements.

- All upper-division computer science (CMPS) courses with course number 190 or below
- CMPS 195
- All upper-division computer engineering (CMPE) courses with course number 190 or below
- CMPE 120, Game Development Experience
- CMPE 131, User Experience for Interactive Media
- CMPE 146, Game AI
- CMPE 163, Game Graphics and Real-Time Rendering
- CMPE 164/L, Game Engines Laboratory
Computer Science

- CMPM 171, Game Design Studio II
- CMPM 172 Game Design Studio III
- Applied Mathematics and Statistics 114, Introduction to Dynamical Systems
- Applied Mathematics and Statistics 132, Classical and Bayesian Inference
- Applied Mathematics and Statistics 147, Computational Methods and Applications
- Mathematics 115, Graph Theory
- Mathematics 116, Combinatorics
- Mathematics 117, Advanced Linear Algebra
- Mathematics 134, Cryptography
- Mathematics 148, Numerical Analysis
- Mathematics 160, Mathematical Logic I
- Mathematics 161, Mathematical Logic II

DISCIPLINARY COMMUNICATION (DC) REQUIREMENT FOR THE COMPUTER SCIENCE B.A. AND B.S.

Students of every major must satisfy that major’s upper-division Disciplinary Communication (DC) requirement. The DC requirement in computer science B.A. or B.S. is satisfied by completing CMPS 115, CMPS 195, Computer Engineering 185, CMPS 132 and 132W, CMPS 185, or CMPS 180 and 180W. These courses may also fulfill one of the upper-division electives listed above.

Comprehensive Requirement for the Computer Science B.A. and B.S.

In addition to the above B.A. or B.S. requirements, students in the computer science majors must satisfy one of the following two exit requirements: pass one of the capstone courses (see Capstone Courses below); or successfully complete a senior thesis. A passed capstone course also counts toward satisfying the minimum number of upper-division electives requirement.

CAPSTONE COURSES

Students may choose from one of the following capstone courses to satisfy their exit requirement:
- CMPS 104B, Fundamentals of Compiler Design II
- CMPS 117, Software Design Project II
- CMPS 161/L, Introduction to Data Visualization and Laboratory
- CMPS 162/L, Advanced Computer Graphics and Animation
- CMPS 165, Data Programming for Visualization
- CMPS 181, Database Systems II
- CMPS 183, Web Applications
- CMPS 184, Data Wrangling and Web Scraping
- CMPM 172, Game Design Studio III

Students taking one of the capstone courses will enroll normally. Students need to pass the capstone course to pass the exit requirement. No course may be attempted more than twice without prior approval from the chair of the department offering the course. Withdrawals count as an attempted class for this purpose.

SENIOR THESIS

The senior thesis consists of a self-contained project within the broad scope of computer science, but one that is not available in the regular course offerings. A student wishing to complete a senior thesis must successfully complete a minimum of 5 credits in CMPS 195, Senior Thesis Research. The supervision of a senior thesis student is always at the discretion of the faculty member. The student first submits a written thesis proposal and obtains approval of a faculty sponsor. Then the student submits a written draft and makes an oral presentation to a faculty examining committee. After receiving feedback from the examining committee, the student submits one or more additional drafts, until the final draft is approved by the examining committee. The total amount of writing shall be consistent with the campus disciplinary communication requirement. A passing grade in CMPS 195 is earned when the final thesis is approved.

Computer Science Major Planners

The following are three sample academic plans: (1) a four-year plan for the B.S. major for first-year students with programming experience; (2) a four-year plan for the B.A. major for first-year students with programming experience; and (3) an alternative first-year plan for students without programming experience, suitable for both majors. Students who do not have adequate preparation to take MATH 19A should take MATH 3.

MINOR REQUIREMENTS

Eleven courses are required for the computer science minor. These courses are:
Mathematics 11A and 11B or Mathematics 19A and 19B, or Mathematics 20A and 20B;
Applied Mathematics and Statistics 10 or Mathematics 21;
CMPS 12A/L (or Computer Engineering 13/L, or both CMPS 5J and CMPS 11);
CMPS 12B/M;
Computer Engineering 16;
CMPS 101;
Two upper-division, computer science courses selected from the Breadth List for the computer science B.A. given above;
Two additional upper-division computer science courses.
Upper-division computer engineering and mathematics courses may not be applied toward the computer science minor. In addition, CMPS 19X courses may not be applied toward the computer science minor. There is no comprehensive examination or senior thesis requirement for the minor.

CONTIGUOUS FIVE-YEAR BACHELOR’S/MASTER’S PATH

The Department of Computer Science offers a combined bachelor and master of science degree path. Undergraduate students in computer science can apply to the path in order to earn a B.S. degree or a B.A. degree together with an M.S. degree in computer science. It is expected that the combined path can be completed in five years.

The five-year bachelor's/master's path offers a competitive edge to students who are completing their undergraduate degree at UCSC, by enabling those with advanced preparation to move directly from the undergraduate to the graduate program. The path assists qualified enrolled students with a simplified graduate application process that does not require students to take the graduate record examination (GRE) if they have an overall GPA of 3.5 or above by the end of their junior year standing, and makes it possible to complete an M.S. degree with just nine courses beyond the bachelor's degree.

The path prepares students for leadership positions in industry. The School of Engineering has many opportunities for undergraduate and graduate research. Upon advancement to graduate standing, students are eligible for financial support as graduate research assistants and teaching assistants.
Particularly motivated students can complete both the bachelor's and the master's degrees in 15 quarters. However, advance planning is essential. Interested students should contact the graduate advising office and their faculty adviser early in their college career—no later than the end of their junior year. Students in this path retain undergraduate status until the completion of all undergraduate requirements, but may begin graduate coursework in advance of graduate standing.

ADMISSION TO THE CONTIGUOUS FIVE-YEAR BACHELOR’S/MASTER’S PATH

The undergraduate degree requirements are the same as those for all computer science majors. Admission to the five-year contiguous path is gained by formally applying to the Computer Science Masters program. The application deadline is usually early January. UC
Santa Cruz undergraduate students majoring in computer science may have the graduate record examination (GRE) waived if their overall GPA is 3.5 or above after their third quarter of junior year standing. Contact the graduate advising office for more information.

### GRADUATE PROGRAMS

#### PROGRAM DESCRIPTION

The Computer Science Department offers a doctorate (Ph.D.) and two Master of Science (M.S.) degree programs. The normative time for the Ph.D. program is five years for a full-time student. Students admitted to the Ph.D. program come with financial support in the form of a combination of fellowship, teaching assistantship, and/or graduate research assistantships. The normative time for the M.S. thesis track program is two years for a full-time student. This track is for students interested in advanced studies and carrying out independent research as well as those contemplating pursuit of a Ph.D. degree. The normative time for the M.S. project track program is one year for a full-time student. This track is for students interested in advanced studies and preparing themselves in the information technology workforce. Students in the M.S. programs are not guaranteed any form of financial support from the department. It is the student's responsibility to ensure that they have sufficient funds for completing the M.S. degree program. Most M.S. students manage their finances by working as interns at companies in the Bay Area during the summer months.

Graduate students work in close collaboration with faculty members in different areas of research including machine learning, database systems, data science, big data, data analytics and visualization, privacy and security, distributed systems, operating systems, storage systems, real-time systems, mobile computing, cloud computing, human computing, software engineering, programming languages, algorithms and complexity, artificial intelligence, technology for social good, natural languages, human-computer interaction, and computer vision.

Additional information on the computer science graduate programs can be found on the Computer Science Department website.

### REQUIREMENTS FOR THE COMPUTER SCIENCE MASTER'S DEGREE: PROJECT TRACK

#### COURSE REQUIREMENTS

Each student is required to take 40 credits as follows:

- Computer Science 200, Research and Teaching in Computer Science and Engineering, 3 credits
- Computer Science 201, Analysis of Algorithms, 5 credits
- Computer Science 203, Programming Languages, 5 credits
- Computer Science 296, Master's Project, 2 credits
- a base requirement in computer architecture must be met by taking Computer Engineering 110 (grade B or higher) or Computer Engineering 202. Computer Engineering 110 can be taken to meet the architecture requirement, however, the credits will not be counted toward graduation requirements
- one course each from three different breadth categories for a total of three courses (15 credits)—see the Breath Requirements webpage.
- all remaining courses must be regular, 5-credit graduate courses from computer science; courses that do not count include all courses numbered 200, 280, 296, 297, and 299
- at least 25 credits must be in computer science
- upper-division undergraduate UCSC computer science courses may be taken to strengthen a student’s preparation for graduate studies. At most, 10 credits of UCSC upper-division undergraduate computer science courses (other than CMPS 101) may be counted toward the degree requirements.
- with the exception of 200, 280, 296, 297, and 299, all graduate courses and upper-division courses must be taken for letter grade. Only courses with a letter grade of B- or higher can be counted toward the M.S. degree requirements.
- courses that are taken to satisfy an undergraduate degree requirement cannot be counted toward the M.S. degree requirements. Undergraduates who are in their senior year at UCSC and are taking computer science upper-division courses or computer science graduate courses that are beyond their undergraduate degree requirements can count those courses as part of their M.S. degree should they apply to the computer science M.S. program.
- courses from other institutions may be substituted for equivalent courses at UCSC (with the approval of the graduate director and graduate committee) but may not count toward the 40-credit requirement of the computer science M.S. degree. For example, a student may substitute an equivalent course for CMPS 201 but may not count that course toward the 40-credit requirement. As another example, a student may substitute an equivalent graduate course for CMPS 260 and count that as breadth but may not count that course toward the 40-credit requirement or as part of the 25 credits from computer science.

Each student must complete CMPS 200 in their first year.

Each student must complete CMPS 201 or a course to prepare the student for CMPS 201 in their first year, after which CMPS 201 should be completed by the end of the second year.

Each student must complete CMPS 203 or a course to prepare the student for CMPS 203 in their first year, after which CMPS 203 should be completed by the end of the second year.

Each student must complete Computer Engineering 110 or Computer Engineering 202 in their first year.
Completion of a master's project is required for the master's degree. The M.S. project is an individual or a team-based project supervised by a faculty adviser and approved by a reading committee composed of the faculty adviser and a ladder rank SOE faculty, teaching professor, or lecturer. In situations when a lecturer is on the reading committee, an extra senate faculty member must be added so that senate faculty forms a majority of the reading committee. A team is made up of three to five members. Projects can either be proposed by the team or the team may bid on projects proposed by faculty members. It is also possible to have industry- or government-sponsored projects, in which case, the industry/government supervisor can be invited to be an optional third member on the reading committee. In situations where multiple teams are bidding on a project, the project sponsor decides on which team work on the project. Project lifetimes are on the order of one to two quarters. It is expected that team members are enrolled in CMPS 296 in at least one of the quarters. Over the course of the project, teams may be required to meet milestones, e.g., design and specification, implementation plan, checkpoints, etc., at a schedule arranged by the faculty adviser. For effective team management and member participation, evaluation strategies such as 360-degree reviews may be employed.

The final project must be accepted by the review committee before the Master of Science degree is conferred.

Requirements for the Computer Science Master's Degree: Thesis Track

Course Requirements

Each student is required to take 43 credits as follows:

- Computer Science 200, Research and Teaching in Computer Science and Engineering, 3 credits;
- Computer Science 201, Analysis of Algorithms, 5 credits;
- Computer Science 203, Programming Languages, 5 credits;
- Computer Science 299, Thesis Research, 5 credits;
- A base requirement in computer architecture must be met by taking Computer Engineering 110 (grade B or higher) or Computer Engineering 202.
- Computer Engineering 110 can be taken to meet the architecture requirement, however, the credits will not be counted toward graduation requirements;
- One course each from three different breadth categories for a total of three courses (15 credits)—see the Breath Requirements webpage;
- All remaining courses must be regular, 5-credit graduate courses from computer science courses that do not count include all courses numbered 200, 280, 296, 297, and 299
- At least 25 credits must be in computer science
- Upper-division undergraduate UCSC computer science courses may be taken to strengthen a student's preparation for graduate studies. At most, 10 credits of UCSC upper-division undergraduate computer science courses (other than CMPS 101) may be counted toward the degree requirements.
- With the exception of 200, 280, 296, 297, and 299, all graduate courses and upper-division courses must be taken for letter grade. Only courses with a letter grade of B- or higher can be counted toward the M.S. degree requirements.
- Courses that are taken to satisfy an undergraduate degree requirement cannot be counted toward the M.S. degree requirements. Undergraduates who are in their senior year at UCSC and are taking computer science upper-division courses or computer science graduate courses that are beyond their undergraduate degree requirements can count those courses as part of their M.S. degree should they apply to the computer science M.S. program.
- Courses from other institutions may be substituted for equivalent courses at UCSC (with the approval of the graduate director and graduate committee) but may not count toward the 43-credit requirement of the computer science M.S. degree. For example, a student may substitute an equivalent course for CMPS 201 but may not count that course toward the 43-credit requirement. As another example, a student may substitute an equivalent graduate course for CMPS 260 and count that as breadth but may not count that course toward the 43-credit requirement or as part of the 25 credits from CMPS.

Each student must complete CMPS 200 in their first year.

Each student must complete CMPS 201 or a course to prepare the student for CMPS 201 in their first year, after which CMPS 201 should be completed by the end of the second year.

Each student must complete CMPS 203 or a course to prepare the student for CMPS 203 in their first year, after which CMPS 203 should be completed by the end of the second year.

Each student must complete Computer Engineering 110 or Computer Engineering 202 in their first year.

Thesis

Completion of a master's thesis is required for the master's degree. To fulfill this requirement, the student submits a written proposal to a faculty member, usually by the third academic quarter. By accepting the proposal, the faculty member becomes the thesis adviser. In consultation with the adviser, the student forms a master's thesis reading committee with at least two additional faculty members, each of whom is provided a copy of the proposal. The student presents an expository talk on the thesis research, and the final thesis must be accepted by the review committee before the award of the master of science degree.
REQUIREMENTS FOR THE PH.D. DEGREE

COURSE REQUIREMENTS

Each student is required to take 58 credits as follows:

- CMPS 200, Research and Teaching in Computer Science and Engineering, 3 credits;
- CMPS 201, Analysis of Algorithms, 5 credits;
- CMPS 203, Programming Languages, 5 credits;

a base requirement in computer architecture must be met by taking Computer Engineering 110 or Computer Engineering 202 or equivalent elsewhere (approval required); Computer Engineering 110 can be taken to meet the architecture requirement, however, the credits will not be counted toward degree requirements;

- one course each from three different breadth categories for a total of three courses (15 credits)—see www.cs.ucsc.edu/graduates/breadth/

- up to 10 credits of course 297, Independent Study or Research; or course 299, Thesis Research;

- all remaining courses must be regular, 5-credit graduate courses from: computer science, within the School of Engineering (with faculty adviser’s approval); or outside the School of Engineering (with faculty adviser’s and grad director’s approval); courses that do not count include all courses numbered 200, 280, 296, 297, and 299;

- at least 33 credits must be in computer science;

- graduate courses (not seminars) in related disciplines outside the list of approved graduate courses may be substituted, when necessary to strengthen a student’s preparation for graduate studies, with prior approval from the adviser and the graduate director. Course selection should form a coherent plan of study and requires adviser approval. Undergraduate courses may not be used to satisfy Ph.D. course requirements;

- each student is required to complete at least one quarter of teaching assistantship. This requirement can be met after advancement to candidacy. Certain exceptions may be permitted for those with extensive prior teaching experience or those who are not allowed to be employed due to visa regulations.

Ph.D. students who have satisfied the requirements for the master’s degree are eligible to receive a master’s degree.

QUALIFYING EXAMINATION AND DISSERTATION

The two major milestone in the Ph.D. program are (1) advancing to candidacy, and (2) dissertation defense. To continue in the Ph.D. program, students must advance to candidacy by the end of their third year. Students are advanced to candidacy after they have completed the course requirements, passed the qualifying examination, cleared all incompletes from their records, have an appointed dissertation reading committee, and paid the filing fee. A successful qualifying examination involves a student writing a research prospectus, a public oral presentation of the proposed research, evaluation of research prospectus and oral presentation by a qualifying examination committee that is approved by the Graduate Division, and an appointment of a reading committee for the dissertation (which may differ from the qualifying examination committee).

Students who have not advanced to candidacy by the end of their third year (9 quarters) are recommended for academic probation, and are subject to dismissal from the program if they do not advance by the end of their fourth year (12 quarters).

Each student writes a Ph.D. dissertation which must be submitted to the reading committee at least one month prior to the dissertation defense. The dissertation must show the results of in-depth research, be an original contribution of significant knowledge, and include material worthy of publication. Where appropriate, research internships with companies, government laboratories, or elsewhere are recognized (and may be required) as an integral part of the research leading to the dissertation.

The candidate presents their research results in a public seminar sponsored by the dissertation supervisor. The seminar is followed by a defense of the dissertation to the public and the reading committee. The latter then decides whether the dissertation is acceptable or requires revision. Successful completion of the dissertation fulfills the final academic requirement for the Ph.D. degree.

TRANSFER CREDIT

- Up to three School of Engineering courses fulfilling the degree requirements of either the M.S. or Ph.D. degrees may be taken before beginning the graduate program through the concurrent enrollment program.

- Ph.D. students who have previously earned a master’s degree in a related field at another institution may substitute courses from their previous university with approval of the graduate director and the graduate committee.

- Courses from other institutions may not be applied to the M.S. degree course requirements. They may be used to meet core requirements. For example, an equivalent computer architecture class taken elsewhere may be used in lieu of CMPE 202. However, the student will need to replace it with 5 credits of another graduate elective course.

- Petitions should be submitted along with the transcript from the other institution or UCSC extension. For courses taken at other institutions, copies of the syllabi, exams, and other coursework should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UCSC.

- At most, a total of three courses may be transferred from concurrent enrollment and other institutions.

REVIEW OF PROGRESS
Each year, the faculty reviews the progress of every student. Students not making adequate progress toward completion of degree requirements (see the Graduate Handbook for policy on satisfactory academic progress) are subject to dismissal from the program. Students with academic deficiencies may be required to take additional courses. Full-time students with no academic deficiencies are normally expected to complete the degree requirements at the rate of at least two courses per quarter. Full-time computer science students must complete course 201, Computer Engineering 202, and course 203 within two years and normally must complete all course requirements within two years for the M.S. and three years for the Ph.D.

Ph.D. students who have not advanced to candidacy by the end of their third year (9 quarters) will be recommended for academic probation, and may be subject to dismissal from the program if not advanced to candidacy by the end of their fourth year (12 quarters).

Students receiving two or more unsatisfactory grades (U or letter grade below B-) in the School of Engineering (SoE) courses are not making adequate progress and will be recommended for academic probation for the following three quarters of registered enrollment. Withdrawing or taking a leave of absence does not count as enrollment. Part-time enrollment is counted as a half quarter of enrollment.

Should any computer science graduate student fail a School of Engineering course while on probation, the Computer Science Department may request the graduate dean to dismiss that student from the graduate program. If after being removed from probation, the student again fails a School of Engineering course, he or she will return immediately to academic probation.

Graduate students experiencing circumstances or difficulties that impact their academic performance should contact their faculty advisor and the graduate director immediately. Students may appeal their dismissal.

### COMPUTER SCIENCE FACULTY AND PROFESSIONAL INTERESTS

#### PROFESSOR

- **Martín Abadi, Emeritus**  
  Analysis of algorithms, machine learning, random structures

- **Dimitris Achlioptas**  
  Analysis of algorithms, machine learning, random structures

- **Luca de Alfaro**  
  Reputation systems, crowdsourcing, game theory, formal methods

- **Scott A. Brandt**  
  Operating systems, storage systems, real-time systems

- **James E. Davis**  
  Information and Communication Technologies for Development (ICTD), technology for global social issues, human computation, computational photography, computer vision, computer graphics

- **Cormac Flanagan**  
  Programming languages, security, program analysis, verification, type systems, concurrency, blockchains

- **Lise Getoor**  
  Machine learning, reasoning under uncertainty, analysis of graphs and networks, artificial intelligence, database management, information integration, visual analytics, data science

- **David P. Helmbold**  
  Machine learning, computational learning theory, analysis of algorithms

- **Phokion G. Kolaitis**  
  Distinguished Professor  
  Principles of database systems, logic in computer science, and computational complexity

- **Robert A. Levinson, Emeritus**  
  Data analytics and visualization, vision, innovation, technology for social good

- **Charles E. McDowell, Emeritus**
- **Alex T. Pang**  
  Visualization for the masses, uncertainty visualization, tensor visualization, scientific visualization, comparative visualization, collaboration software, augmented/virtual reality interfaces

- **Ira Pohl, Emeritus**  
  Machine learning, reasoning under uncertainty, analysis of graphs and networks, artificial intelligence, database management, information integration, visual analytics, data science

- **R. Michael Tanner, Emeritus**  
  Allen Van Gelder  
  Logic programming algorithms, parallel algorithms, complexity, programming languages, automated theorem proving, scientific visualization

- **Marilyn Walker**  
  Dialogue systems, natural language processing, computer games, human-computer interaction, machine learning, artificial intelligence

- **Manfred K. Warmuth, Emeritus**  
  Alexander Wolf  
  Engineering of large and/or complex software systems, experimental computer science, distributed systems and networks, software engineering, self-managed systems

#### ASSOCIATE PROFESSOR

- **Seshadhri Comandur**  
  Analysis of algorithms, theoretical foundations for massive data algorithms, social network analysis

#### ASSISTANT PROFESSOR

- **Peter Alvaro**  
  Data management systems, distributed systems, logic programming
Owen Arden
Language-based security, decentralized systems, programming languages

Snigdha Chaturvedi
Natural language processing, machine learning, text mining

Abhradeep Guha Thakurta
Statistical data privacy and its relation to machine learning and data mining. More precisely, the privacy implications in problems spanning the areas of high-dimensional statistics, risk minimization, online learning and pattern mining. Usually studying the privacy implications result in analyzing the algorithmic stability of existing learning algorithms

Lindsey Kuper
Language-based approaches to building parallel and distributed software systems that are correct and efficient

Yang Liu
Interactions between society and artificial intelligence, algorithmic decision-making, machine learning

Faisal Nawab
Data management/databases; distributed and cloud systems; wireless, edge, and data center networking; Internet of things/edge data management

TEACHING PROFESSOR

Narges Norouzi
Adoption of machine learning and statistical signal processing techniques in biometric recognition, biostatistics, and genomic medicine; computer science education research

ADJUNCT PROFESSOR

Carlos Maltzahn
Scalable file system data and metadata management, storage, Quality of Service (QoS), data management games, network intermediaries, information retrieval and cooperation dynamics

Ike Nassi
High-performance computing, computer systems architecture, parallel processing, programming languages, computer networks, operating systems, distributed systems, personal computers, history of computing

Thomas Schwarz
Reliability and security in storage systems

Neel Sundaresan
Big data science, machine learning, e-commerce, search science, recommender system, internet economics and monetization, internet of things, programming languages, parallel computing, reputation systems, human computing

Linda Werner
Software engineering, computer science education, children and computer game creation, testing, increasing diversity in computer science

Delbert (Dean) Bailey
Complexity, artificial intelligence, machine learning

Wesley Mackey
Compiler construction, programming languages

Patrick Tantalo
Graph theory, combinatorics, optimization, algorithms

Lawrence Andrews (Film and Digital Media)
Documentary, sound, animation, installation

Alexandre Brandwajn, Emeritus (Computer Engineering)

Pak K. Chan, Emeritus (Computer Engineering)

Gabriel Elkaim (Computer Engineering)

Embedded systems, robust software architectures for real-time reactive systems, sensor fusion, guidance, navigation, and control (GNC) system identification; robust and advanced control schemes, feedback control systems, robotics, unmanned autonomous vehicles (UAVs), and cooperative control

F. Joel Ferguson, Emeritus (Computer Engineering)

J. J. García-Luna-Aceves (Computer Engineering; Technology Management)
Principles of computer communication, Internet, mobile and pervasive computing, wireless networks, information centric networks, network science

David Haussler (Biomolecular Engineering)
Bioinformatics, genomics, computational genomic data analysis, molecular evolution and comparative genomics, genomic and clinical data sharing and standards, cancer genomics, neurodevelopment, stem cell research, immunogenomics, information theory, pattern recognition, machine learning, artificial intelligence, information theory, theoretical computer science

Richard Hughey (Biomolecular Engineering; Computer Engineering)
Computer architecture, parallel processing, computational biology

Kevin Karplus (Biomolecular Engineering)
Genome assembly from next-generation sequence data (Formerly protein structure prediction), signal processing and statistics for nanopore signals

Tracy Larrabee (Computer Engineering)
Test-pattern simulation and generation, fault modeling, fault diagnosis, design verification, technical writing, logic simulation

Patrick E. Mantey (Computer Engineering; Technology Management)
Multimedia systems, digital signal processing, sensor systems and networks, real-time monitoring and control, image systems, image processing, visualization, geographic information systems, decision support systems

Michael Mateas (Computational Media)
Artificial Intelligence (AI) for art and entertainment, game AI, AI and creativity, AI-based interactive storytelling, autonomous characters

Katia Obraczka (Computer Engineering)
Computer networks, distributed systems, operating
systems, Internet information systems, mobile computing, wireless networks

**Warren Sack (Film and Digital Media)**
Software design and media theory

**Martine D. F. Schlag (Computer Engineering)**
VLSI design tools and algorithms, VLSI theory, field-programmable gate arrays, FPGA-based computing engines

**Barry Sinervo (Ecology and Evolutionary Biology)**
Animal behavior, evolution, physiological ecology

**Anujan Varma (Computer Engineering)**
Computer networking, computer architecture, optical networks

**Noah Wardrip-Fruin (Computational Media)**
Digital media, computer games, electronic literature, software studies

**Jim Whitehead (Computational Media)**
Software engineering, software evolution, software bug prediction, level design in computer games, procedural content generation

**W. Todd Wipke, Emeritus (Chemistry and Biochemistry)**

---

**COMPUTER SCIENCE COURSES**

---

**LOWER-DIVISION COURSES**

2. **Computer Literacy.**
Introduction to how computers work and how to use them. Topics covered include network information systems, text editors, formatting, file and directory system, spreadsheets and databases. Computers as symbol manipulation devices. Introduction to programming concepts and computer languages. Impact of computers on society. Designed for students with little or no experience using computers. Preference is given to students who have not taken other computer engineering or computer science courses.
Students cannot receive credit for this course and Computer Engineering 3. (General Education Code(s): PE-T.) *The Staff*

5J. **Introduction to Programming in Java.**
Introduces programming in Java for students who have no prior programming experience. Students learn programming and documentation skills, as well as algorithmic problem-solving, and programming methodologies.
Introduces computers, compilers, and editors. Students write small to medium-sized programs. This course and courses 5C and 5J cover similar concepts, but use different programming languages. Because 5J followed by course 11 is a two-quarter alternative to the accelerated course 12A/L, engineering majors and students planning on continuing the programming sequence are encouraged to take 5J rather than 5C or 5P. Students may not receive credit for 5J taken concurrently or subsequently to course 12A, 12B, or Computer Engineering 13. (General Education Code(s): MF.) *The Staff, D. Bailey, F. Nawab, D. Helmbold, P. Tantalo*

5P. **Introduction to Programming in Python.**
Introduces programming in Python, a high-level programming language used in the physical and social sciences and for Internet scripting. Students learn programming and documentation skills, as well as algorithmic problem-solving, coding, and debugging.

---

10. **Introduction to Computer Science.**
An overview of the theory, foundations, and practice of computer science with emphasis on what computers can and cannot do, now and in the future. Topics include algorithms and data, correctness and efficiency of algorithms, hardware, programming languages, limitations of computation, applications, and social issues. No programming skills are required as a prerequisite.
Major concepts and open problems in computer science are presented without reliance on sophisticated mathematical tools. Students cannot receive credit for this course after completing course 12B. (General Education Code(s): MF.) *The Staff, M. Walker, D. Achlioptas, P. Tantalo*
Continuation of course 5J. Covers basic object-oriented programming, event-driven programming, graphical user interface (GUI) creation, recursion, two-dimensional arrays. The two-quarter sequence courses 5J and 11 cover in two quarters the same material as the accelerated introductory course and lab 12A/L cover in one quarter. Students cannot receive credit this course and course 12A. Prerequisite(s): course 5J, and Mathematics 3 or 11A or 19A or Applied Mathematics and Statistics 3 or Applied Mathematics and Statistics/Economics 11A or a score of 400 or higher on the mathematics placement examination (MPE). (General Education Code(s): MF.) The Staff, N. Norouzi, P. Tantalo

12A. Introduction to Programming (Accelerated). F,W,S
Accelerated introduction to programming. Students write medium-sized programs. Topics include: functions; conditionals and loops; classes; event-driven programming and graphic user interfaces (GUIs); recursion; and arrays. Students who have no or very limited programming experience should consider courses 5J and 11 which cover the same material in two quarters. Students may not receive credit for both this course and course 11. Some prior programming experience in a language such as C, C++, Java, or C# strongly recommended. Prerequisite(s): Mathematics 3 or 11A or 19A or Applied Mathematics and Statistics 3 or Applied Mathematics and Statistics/Economics 11A, or a score of 400 or higher on the mathematics placement examination (MPE). Concurrent enrollment in 12L required. The Staff, D. Bailey, W. Mackey, N. Norouzi, C. Flanagan, A. Pang, D. Helmbold, D. Long

12B. Introduction to Data Structures. F,W,S
Teaches students to implement common data structures and the algorithms associated with each data structure, through progressively difficult exercises. Topics include big "O" notation; pointers, recursion (induction), and dynamic allocation; linked lists and list processing stacks, queues, binary trees and binary search trees; simple sorting techniques and simple search techniques. Students will gain a working knowledge of the elements of the Java and C programming languages. Prior experience with Unix is assumed. Prerequisite(s): course 11 or 12A or Computer Engineering 13. Concurrent enrollment in course 12M is required. (General Education Code(s): MF.) The Staff, P. Tantalo, S. Comandur, D. Long, W. Mackey

12L. Computer Programming Laboratory (2 credits). F,W,S
Laboratory sequence complementing topics taught in course 12A by providing training and exposure to several software development tools and practices not covered in course 12A. In addition, the lab provides an initial exposure to a second programming language to reinforce concepts from course 12A. Prerequisite(s): Concurrent enrollment in course 12A is required. The Staff, D. Bailey, W. Mackey, D. Helmbold, C. Flanagan, A. Pang, D. Long

12M. Data Structures Laboratory (2 credits). F,W,S
Complements course 12B, gaining additional competence with a number of important software development tools, languages, and techniques. Included are advanced Unix features and utilities such as grep, find, diff, the shell, and pipes; C programs utilizing 1/0, arrays, pointers, and structures; a scripting language to perform simple text and file manipulation; and the make utility. Concurrent enrollment in course 12B is required. The Staff, P. Tantalo, S. Comandur, D. Long, W. Mackey

13H. Introduction to Programming and Data Structures (Honors). *
Provides an accelerated introduction to programming and data structures. Includes a review of basic programming, including loop and conditional control structures, procedures and parameter passing, and arrays. Course goes on to cover the same material as course 12B. Students cannot receive credit for this course and course 12A or 12B. Prerequisite(s): Students must have completed a high school or college-level programming course in Java, C, or C++. An entrance examination is given to ascertain programming level; enrollment is contingent on passing this examination. Concurrent enrollment in course 13L is required. D. Long

13L. Introduction to Programming and Data Structures Laboratory (2 credits).
