UCSC General Catalog Updates 2007-08

The 2007-08 catalog updates are available on this web site. These updates include a revision to the entire Programs and Courses section as well as revisions to the selected sections listed below. Quarterly updates to course and program information are also reflected in the *Schedule of Classes*.

Programs and Courses

- Program statements. Changes to each program for 2007-08, with additions in <u>underlined</u> <u>green type</u> and deletions in <u>red strikethrough type</u>. Program statements with changes also appear in their finalized version in black type without additions and deletions highlighted. Program statements with no changes for 2007-08 are also provided.
- Courses. All active courses for the academic year 2007-08.
- Faculty. Faculty listings by department for the academic year 2007-08.

Fields of Study

Revised chart showing changes for 2007-08.

Undergraduate Admission

Admissions information is as published in the 2006-08 General Catalog, except for the following revised sections for 2007-08:

- Application Filing Periods
- · High School Preparation for University Work
- High School Proficiency Examination
- Transfer Credit
- · Credit for Courses Taken Elsewhere

Fees and Financial Aid for 2007-08

- Undergraduate
- Graduate

Undergraduate Academic Program

Undergraduate Academic Program information is as published in the 2006-08 General Catalog, except for the following revised sections for 2007-08:

Graduation Requirements

- Entry Level Writing Requirement
- Credit for Transfer Students
- College Requirements

Advising

- Advising: From Course Selection to Careers
- ROTC and Military Affairs

General Education Requirements

Revised list of 2007-08 courses that fulfill general education requirements.

The Colleges

At UCSC, all undergraduate students and most faculty are affiliated with one of the 10 colleges. College descriptions are as published in the 2006–08 General Catalog, except for the following colleges, which have revised their descriptions for 2007-08:

- Cowell College
- Stevenson College (Faculty and staff changes only)
- Crown College

- (There were no changes to the Merrill College program)
- Porter College
- Oakes College
- (There were no changes to the Kresge College program)
- College Eight (Faculty and staff changes only)
- College Nine
- College Ten

Combined majors. In addition, students may complete a combined major leading to a B.A. degree in a number of designated fields. Combined majors currently available include those in Earth sciences/anthropology, environmental studies/biology, environmental studies/Earth sciences, environmental studies/economics, Latin American and Latino studies/global economics, Latin American and Latino studies/literature, Latin American and Latino studies/sociology. Students also have the option of pursuing a double major (see page 33).

- **c** = concentration, or emphasis, within a program. Some programs give students the option of following a general course of study or selecting a concentration; other programs require students to choose a concentration. Consult the program on the page indicated
- ¹Combined B.A./M.S. programs in business management economics, economics/applied economics and finance, and global economics are also available.
- ²A combined B.S./M.S. program in computer engineering is also available.
- 3 A master of fine arts (M.F.A.) degree is awarded in digital arts and new media.
- ⁴Because California state law requires prospective teachers to earn a bachelor's degree in an academic discipline other than education, no undergraduate major is offered. All teaching credentials are earned postbaccalaureate. UCSC offers the professional clear Crosscultural, Language and Academic Development (CLAD) and Bilingual Crosscultural, Language and Academic Development (BCLAD) multiple subjects credentials, which are used in self-contained elementary classrooms (K–6) where all subjects are taught by the same teacher. UCSC also offers the CLAD and BCLAD single subjects credentials, which are used in departmentalized settings where the teacher is responsible for one subject (7–12). A doctor of education (Ed.D.) degree in collaborative leadership is available through a joint program with San José State University and California State University, Monterey Bay.
- ⁵An intensive major is also available.
- 6 A B.M. degree in music is also available. A doctorate of musical arts (D.M.A.) degree in composition is available.
- ⁷A minor is available in Southeast Asian studies only.

Please note that sections under this topic that contained no changes from the General Catalog 2006-08 are not included. For the complete section, go to 2006-08 Undergraduate Admission.

Admission

Undergraduate admission to the University of California is based on two principles: that the best predictor of a student's success in the university is high scholarship in previous work and that the study of certain subjects gives a student good preparation for university work. Minimum admission requirements are the same for each UC campus, but each sets additional standards when the number of qualified applicants exceeds capacity. In 2007, UCSC received nearly 30,000 applications for 3,325 places in the freshman class and 925 in the transfer class.

If you are considering applying to UC Santa Cruz, the Office of Admissions wants to help you learn more about the campus and its distinctive educational programs. Admissions counselors from UCSC visit many high schools and community colleges throughout California and are available to answer your questions about Santa Cruz.

If you are able to visit the campus, you may wish to take a student-led tour or attend a transfer workshop. The Office of Admissions offers tours on weekdays and selected Saturdays, and reservations are required. Visit our web site at admissions.ucsc.edu/campustours for information and reservations for campus tours and transfer workshops. If you do not have Internet access, please call (831) 459-4008.

The University of California, Santa Cruz, continues to take positive steps to increase the diversity of the student population, including applicants coming from low socioeconomic backgrounds, students with disabilities, veterans, and non-traditionally aged students. The university does not discriminate on the basis of , race, color, national origin, religion, sex, gender identity, pregnancy (pregnancy, childbirth and medical conditions related to childbirth), disability, age, medical condition (cancer-related), ancestry, martial status, citizenship, sexual orientation, or status as a Vietnam-era veteran or special disabled veteran in admission to or participation in its programs, activities, or services.

Educational Opportunity Programs at UCSC are designed to encourage students from educationally and/or economically disadvantaged backgrounds to prepare for and enter the university. For a description of these programs, see the Educational Opportunity Programs section.

Admission by Exception. Special consideration may be given to a limited number of applicants who do not meet standard admission requirements. Admission by Exception is granted to a very small percentage of those considered for admission each quarter. Such factors as academic accomplishments in light of a person's life experiences and/or special circumstances, socioeconomic background, special talents and/or achievements, contributions to the community, and the quality of the applicant's personal statement are taken into consideration when reviewing applicants seeking Admission by Exception.

Graduation rates. The following graduation-rate information is listed in compliance with the 1990 Title I: Federal Right-to-Know Act, Section 103. Fifty percent of the students who entered as first-year students in 2002 graduated in four years; 64 percent of those who entered in 2001 graduated in five years; and 70 percent of those who entered in 2000 graduated in six years. In recent years, students who entered as first-year students took an average of 4.15 years to graduate, and students transferring to UCSC as juniors averaged 2.18 years. These graduation rates are well above the national averages.

In accord with the Education Amendments of 1976, Section 493A, more detailed information regarding retention is available on the Institutional Research web site at

[Return to top.]

Application Filing Periods

You should submit an application for admission during the filing period for the quarter in which you want to attend the university. Enrollment opportunities for winter are more limited than for fall. Check with the Office of Admissions to see if UCSC is accepting applications for winter quarter.

Quarter of Attendance	Filing Period
Fall quarter 2008	November 1–30, 2007
Winter quarter 2009	July 1–31, 2008
Fall quarter 2009	November 1-30, 2008
Winter quarter 2010	July 1–31, 2009

High School Preparation for University Work

A carefully planned program of high school study provides you with the best preparation for university work. It can give you a definite edge in your undergraduate course work and the opportunity to do advanced preparation for your chosen field of study. Most important, students who master certain basic knowledge and skills in high school substantially increase your chances of success at the university. (Requirements for transfer students are explained in the Admission as a Transfer Student section.)

Prospective university students should give priority to completing the high school courses required for admission—the "a-g" requirements section.

You should understand, however, that the "a-g" requirements are minimum admission standards. Demonstrating proficiency in these subjects will not automatically prepare you for first-year work in every discipline, much less in your major or program of study. The university strongly recommends, but does not require, that you complete advanced study in many of the "a-g" subjects.

A student who is well-prepared for univeresity work will have mastered the equivalent of four years of English; four years of mathematics, including a course in the senior year; two to three years of laboratory science; two or more years of history and social sciences; and one or more years of visual or performing arts.

You should also give careful thought to the general field of study, and perhaps the specific major, you want to pursue at the university. If you are able to make this decision in advance, plan to take additional courses in high school related to the field.

You should take courses beyond the minimum levels in reading, writing, and mathematics in order to be adequately prepared for basic university courses, such as English composition and calculus, that you may be expected to take in the freshman year. A lack of basic preparation can cause problems for students who do not choose a major until after they enroll or for those who prepare for one major and then decide to change to another.

A lack of basic preparation can cause problems for students who do not choose a major until after they enroll or for those who prepare for one major and then decide to change to another.

Good study habits and skills are also essential for success at the university. These are often developed in more advanced courses in high school, but can also be gained in self-directed learning methods. University students are expected to know how to read a textbook effectively and master background material, how to take notes, and how to plan a proper study schedule.

Senior-Year Program. The more challenging your high school program, the better prepared you will be for university work. Prospective students should take particular care in planning the senior-year program. The senior year should be used to prepare students for their first year at the university and should include honors and advanced courses as well as courses that will strengthen overall preparation. A challenging senior-year program successfully completed is a natural bridge between high school and university course work in the intended major. A strong senior program will also strengthen your chances for admission to UC Santa Cruz.

Reading. Prospective university students need to develop the ability to read and understand scholarly publications. You will have to do more reading and more writing than in high school and will be required to learn more material in shorter periods of time. You should be able to analyze what you read and question yourself about an author's intentions, viewpoint, arguments, and

conclusions. You should have experience reading commentaries and essays as well as textbooks. You should read a wide variety of other material—including literature, biography, nonfiction, and criticism—in addition to what you are required to read in class. You should become familiar and comfortable with the conventions of standard English and with various writing strategies and techniques.

Writing. Prospective university students must learn to write clearly and skillfully. You will be expected to write papers for many university classes, and many examinations will include essays. You will have to think critically and analyze what you learn in class and in your outside reading, and present your ideas in a clear and persuasive manner.

By university standards, a student proficient in composition is able to understand the assigned topic; select and develop a theme by argument and example; use words and sentences that clearly and precisely express what he or she means, demonstrate an understanding of the rules of standard English, and punctuate and spell correctly.

Students who plan to attend UC Santa Cruz, must take English courses in high school that require the development and practice of these skills. You must take at least four years of English composition and literature with a focus on expository writing—the development of persuasive critical thinking on the written page.

[Return to top.]

Mathematics. Many students are unaware of the large number of fields that require preparation in mathematics beyond the three years necessary for admission to UCSC. Courses in calculus are included in all majors in engineering and the physical, mathematical, and life sciences, as well as in programs leading to professional degrees in fields such as medicine, dentistry, optometry, and pharmacy. Moreover, many majors in the social sciences and economics require statistics or calculus, and sometimes both.

The university highly recommends that students take four years of mathematics in high school, including precalculus in the senior year. Courses in mathematics should include basic operations with numerical and algebraic functions; operations with exponents and radicals; linear equations and inequalities; polynomials and polynomial equations; functions and their graphs; trigonometry, logarithms, and exponential functions; and applications and word problems.

High School Proficiency Examination

While the University of California expects freshman applicants to have graduated from high school, in lieu of the regular high school diploma, the university will accept the following:

- Certificate of Proficiency, awarded by the State Board of Education upon successful completion of the California High School Proficiency Examination
- Proficiency tests from other states
- General Educational Development (GED) Certificate

Transfer Credit

Transfer credit may be granted to a freshman applicant for an acceptable college course taken while still in high school if an official transcript is received from the college that conducted the course.

Transfer credit is granted for specified College Board Advanced Placement Examinations completed with a score of 3, 4, or 5 and for specified International Baccalaureate Higher Level Exams completed with a score of 5, 6, or 7. A score of 30 or higher on the International Baccalaureate Diploma is also accepted for transfer credit.

Credit for Courses Taken Elsewhere

The university gives unit credit to transfer students for courses they have completed at other accredited colleges and universities, including courses taken at recognized institutions outside of the U.S. To be accepted for credit, your courses must be comparable to those offered at the university, as determined by the UC Santa Cruz Admissions Office. The UC Santa Cruz department sponsoring your major decides which transfer courses may be used to satisfy major requirements.

Because a total of 70 semester units (105 quarter units) of credit toward a university degree may be earned at a community (two-year) college, only subject credit will be granted for courses taken in excess of these amounts.

Applicants will not be considered for admission if they have completed 90 semester units (135 quarter units) or more of UC-transferable credit because it is not usually possible for these students to complete a bachelor's degree within UC Santa Cruz graduation requirements.

Advanced Placement (AP) or International Baccalaureate Higher Level (IBH) credit is permitted to exceed the 90 semester unit maximum by the number of AP or IBH units granted.

Opportunities to take courses at UC Santa Cruz as a nonmatriculated student are available through Summer Session, Concurrent Enrollment through UC Extension, and Intersegmental Cross-Enrollment (see the Intersegmental Cross-Enrollment section for more information).

Please note that sections under this topic that contained no changes from the General Catalog 2006-08 are not included. For the complete section, go to 2006-08 Undergraduate Admission.

To read an updated copy of this page without strikeouts or additions, see 2007-08 **Undergraduate Admission.**

* Editor's note: The Office of Admissions has discontinued offering Transfer Workshops since the 2006-08 Catalog was published. Please disregard references to the workshops in the following section.

Admission

Undergraduate admission to the University of California is based on two principles: that the best predictor of a student's success in the university is high scholarship in previous work and that the study of certain subjects gives a student good preparation for university work. Minimum admission requirements are the same for each UC campus, but each sets additional standards when the number of qualified applicants exceeds capacity. In 2005-2007, UCSC received over 28,000 nearly 30,000 applications for 3,000 3,325 places in the freshman class and 900 925 in the transfer class.

If you are considering applying to UC Santa Cruz, the Office of Admissions wants to help you learn more about the campus and its distinctive educational programs. Admissions counselors from UCSC visit many high schools and community colleges throughout California and are available to answer your questions about Santa Cruz.

If you are able to visit the campus, you may wish to take a student-led tour or attend a transfer workshop. The Office of Admissions offers tours on weekdays and selected Saturdays, and reservations are required. Visit our web site at admissions.ucsc.edu/campustours for information and reservations for campus tours and transfer workshops. If you do not have Internet access, please call (831) 459-4008.

The University of California, Santa Cruz, continues to take positive steps to increase the diversity of the student population, including applicants coming from educationally low socioeconomic backgrounds, students with disabilities, veterans, and non-traditionally aged students and/or economically disadvantaged backgrounds, disabled persons, and re-entry women and men, in its academic programs (see pages 36-40). The university does not discriminate on the basis of handicap , race, color, ancestry <u>national origin</u> , religion, national origin, age, sexual orientation , sex, gender identity, pregnancy (pregnancy, childbirth and medical conditions related to childbirth), disability, age, medical condition (cancer-related), ancestry, martial status, citizenship, sexual orientation, or status as a Vietnam-era veteran or special disabled veteran or gender in admission to or participation in its programs, activities, or services.

Educational Opportunity Programs at UCSC are designed to encourage students from educationally and/or economically disadvantaged backgrounds to prepare for and enter the university. For a description of these programs, see the Educational Opportunity Programs

Admission by Exception. Special consideration may be given to a limited number of applicants who do not meet standard admission requirements. Admission by Exception is granted to a very small percentage of those considered for admission each quarter. Such factors as academic accomplishments in light of a person's life experiences and/or special circumstances, socioeconomic background, special talents and/or achievements, contributions to the community, and the quality of the applicant's personal statement are taken into consideration when reviewing applicants seeking Admission by Exception.

Graduation rates. The following graduation-rate information is listed in compliance with the 1990 Title I: Federal Right-to-Know Act, Section 103. Forty-six-Fifty percent of the students who entered as first-year students in 2002 graduated in four years; 66-64 percent of those who entered in 2001 graduated in five years; and 70 percent of those who entered in 2000 graduated in six years. In recent years, students who entered as first-year students took an average of four and one-half-4.15 years to graduate, and students transferring to UCSC as juniors averaged two and one-half-2.18 years. These graduation rates are well above the national averages.

In accord with the Education Amendments of 1976, Section 493A, more detailed information regarding retention is available on the Institutional Research web site at planning.ucsc.edu/irps/retengrad.asp.

[Return to top.]

Application Filing Periods

You should submit an application for admission during the filing period for the quarter in which you want to attend the university. Enrollment opportunities for winter are more limited than for fall. Check with the Office of Admissions to see if UCSC is accepting applications for winter quarter.

Quarter of Attendance	Filing Period
Fall quarter 2008	November 1-30, 2007
Winter quarter 2009	July 1-31, 2008
Fall quarter 2009	November 1-30, 2008
Winter quarter 2010	July 1-31, 2009

Preparing High School Preparation for University Work

A carefully planned program of high school courses—study provides you with excellent—the best preparation for university work. If you did not complete the basic required courses in high school, you should take equivalent classes at a community college, state university, or private school before transferring to UC. (Requirements for transfer students are explained in the Admission as a Transfer Student section.) This background—It can give you a definite edge in your undergraduate studies—course work and provides and the opportunity to do advanced preparation for your chosen field of study. Most important, if you students who master certain basic knowledge and skills and subjects before entering UC, you in high school substantially increase your chances of success at the university. (Requirements for transfer students are explained in the Admission as a Transfer Student section.)

Prospective university students should give priority to completing the basic subject high school courses required for admission—the "a-g" requirements section. In addition, you should give careful thought to the general field of study, if not the specific major, you want to pursue at the university. If you can make this decision in advance, you can take additional high school or college courses related to your field. Your school counselor or an instructor can help you select the courses you need.

You should understand, however, that the "a-g" and transfer-student requirements are minimum entrance admission standards. Completing the required courses with satisfactory grades

Demonstrating proficiency in these subjects will not automatically prepare you for university-level first-year work in every subject discipline, much less in your major or program of study. The university strongly recommends, but does not require, that you complete advanced study in many of the "a-g" subjects. Many entering students discover to their dismay that they are not adequately prepared for basic courses, such as English composition and calculus, which they may be expected to take in their freshman year. Also, many undergraduate majors, particularly those in sciences and mathematics, require more preparation than that necessary for admission.

A student who is well-prepared for univeresity work will have mastered the equivalent of four years of English; four years of mathematics, including a course in the senior year; two to three years of laboratory science; two or more years of history and social sciences; and one or more years of visual or performing arts.

You should also give careful thought to the general field of study, and perhaps the specific major, you want to pursue at the university. If you are able to make this decision in advance, plan to take additional courses in high school related to the field.

You should take courses beyond the minimum levels in reading, writing, and mathematics in order to be adequately prepared for basic university courses, such as English composition and calculus, that you may be expected to take in the freshman year. A lack of basic preparation can cause problems for students who do not choose a major until after they enroll or for those who prepare for one major and then decide to change to another.

A lack of <u>basic</u> preparation can cause problems for students who do not choose a major until after they <u>enter the university enroll</u> or for those who prepare for one major and then decide to change to another.

Good study habits and skills are also essential for success at the university. These are often developed in more advanced courses in high school, but can also be gained in self-directed learning methods. University students are expected to know how to read a textbook effectively and master background material, how to take notes, and how to plan a proper study schedule.

For these reasons, you should take a thorough academic program in high school—or the equivalent through a combination of high school and college-level classes—that will prepare you beyond minimum levels of competence in reading, writing, and mathematics. A student who is well prepared for university work will have taken four years of English in high school, four years of mathematics, including a course in the senior year, two to three years of a language other than English, two to three years of laboratory science, two or more years of history and social studies, and one or more years of visual or performing arts. A yearlong high school course is generally equivalent to a semester or quarter of college work.

Senior-Year Program. The more challenging your high school program, the better prepared you will be for university work. Prospective students should take particular care in planning the senior-year program. The senior year should be used to prepare students for their first year at the university and should include honors and advanced courses as well as courses that will strengthen overall preparation. A challenging senior-year program successfully completed is a natural bridge between high school and university course work in the intended major. A strong senior program will also strengthen your chances for admission to UC Santa Cruz.

Reading. Many students are not prepared for either the kinds or amounts of reading demanded at the university. You should become proficient in reading and understanding technical materials and scholarly works. You should learn to read analytically and critically, actively questioning yourself about the author's intentions, viewpoint, arguments, and conclusions. You should also become familiar, and comfortable, with the conventions of standard written English and with various writing strategies and techniques. Your reading experience should include original works in their entirety, not just textbooks and anthologies, and should encompass a wide variety of forms and topics. Prospective university students need to develop the ability to read and understand scholarly publications. You will have to do more reading and more writing than in high school and will be required to learn more material in shorter periods of time. You should be able to analyze what you read and question yourself about an author's intentions, viewpoint, arguments, and conclusions. You should have experience reading commentaries and essays as well as textbooks. You should read a wide variety of other material—including literature, biography, nonfiction, and criticism—in addition to what you are required to read in class. You should become familiar and comfortable with the conventions of standard English and with various writing strategies and techniques.

Writing. Effective critical thinking and proficiency with written language are closely related, and both are skills that every university student must master. Prospective university students must learn to write clearly and skillfully. You will be expected to write papers for many university classes, and many examinations will include essays. You will have to think critically and analyze what you learn in class and in your outside reading, and present your ideas in a clear and persuasive manner.

By university standards, a student proficient in composition is able to understand the assigned topic; select and develop a theme by argument and example; choose words that aptly and precisely convey the intended meaning; (d) construct effective sentences, ones that economically and successfully convey the writer's ideas and display a variety of structures; (e) demonstrate an awareness of the conventions of standard written English, avoiding such errors as sentence fragments, run-on sentences, faulty agreements, and improper pronoun references; and (f) punctuate, capitalize, and spell correctly, use words and sentences that clearly and precisely express what he or she means, demonstrate an understanding of the rules of standard English, and punctuate and spell correctly.

Before attending the university, you should Students who plan to attend UC Santa Cruz, must take English courses in high school that require the development and practice of these skills. You must take the equivalent of at least four years of high school English composition and literature courses that stress with a focus on expository writing—the development of persuasive critical thinking on the written page.

[Return to top.]

Mathematics. Many undergraduate majors students are unaware of the large number of fields that require preparation in mathematics beyond that the three years necessary for admission to UCSC. the university. All majors in the physical and biological sciences, engineering, and mathematics require calculus. Courses in calculus are included in all majors in engineering and the physical, mathematical, and life sciences, as well as in programs leading to professional degrees in fields such as medicine, dentistry, optometry, and pharmacy. Moreover, many majors

in the social sciences <u>and economics</u> require statistics or calculus, and some require <u>sometimes</u> both. If you have selected a major that requires either calculus or statistics, you should expect to take that course during your freshman year. Transfer students selecting such a major should take the course before transferring.

You should prepare yourself for university calculus courses before entering UCSC. In addition to the three years of high school mathe- matics required for admission, you should take the equivalent of a year of precalculus mathematics. Your high school math courses—The university highly recommends that students take four years of mathematics in high school, including precalculus in the senior year. Courses in mathematics—should include basic operations with numerical and algebraic functions; operations with exponents and radicals; linear equations and inequalities; polynomials and polynomial equations; functions and their graphs; trigonometry, logarithms, and exponential functions; and applications and word problems.

Examination Arrangements

Registration forms and information about the required tests may be obtained from the following addresses:

For the SAT I and SAT II:

Web: www.collegeboard.com/student/testing/sat/scores/sending.html-(800) 728-7267

For the ACT:

Web: www.act.org/aap/scores/howrequest.html-(319) 337-1313

Test fees should be paid to the testing services, not to the University of California.

When you take any of the required tests, you must indicate at that time that you want your scores to be reported to the UC Santa Cruz Office of Admissions. Your scores will be regarded as official only if they are reported directly to the Admissions Office by the testing services. The Educational Testing Service school code for UC Santa Cruz is 004860.

High School Proficiency Examination

In lieu of the regular high school diploma, the University of California will accept the following:

While the University of California expects freshman applicants to have graduated from high school, in lieu of the regular high school diploma, the university will accept the following:

- Certificate of Proficiency, awarded by the State Board of Education upon successful completion of the California High School Proficiency Examination
- · Proficiency tests from other states
- · General Educational Development (GED) Certificate

Transfer Credit

Transfer credit may be granted to a freshman applicant for an acceptable college course taken while still in high school if an official transcript is received from the college that conducted the course.

Transfer credit is also granted for each specified College Board Advanced Placement Examinations completed with a score of 3, 4, or 5 and for each specified International Baccalaureate Higher Level Exams completed with a score of 5, 6, or 7. A score of 30 or higher on the International Baccalaureate Diploma is also accepted for transfer credit.

Credit for Courses Taken Elsewhere

The university gives unit credit to transfer students for courses they have completed at other accredited colleges and universities, including courses taken at recognized institutions outside of the U.S. To be accepted for credit, your courses must be comparable to those offered at the university, as determined by the campus_UC Santa Cruz. Admissions Office. The UC Santa Cruz department sponsoring your major decides which transfer courses may be used to satisfy major requirements.

Because a total of 70 semester units (105 quarter units) of credit toward a university degree may be earned at a community (two-year) college, only subject credit will be granted for courses taken in excess of these amounts.

Applicants will not be considered for admission if they have completed 90 semester units (135 quarter units) or more of UC-transferable credit because it is not usually possible for these

students to complete a bachelor's degree within UC Santa Cruz graduation requirements. Advanced Placement (AP) or International Baccalaureate Higher Level (IBH) credit is permitted to exceed the 90 semester unit maximum by the number of AP or IBH units granted.

Opportunities to take courses at UC Santa Cruz as a nonmatriculated student are available through Summer Session, Concurrent Enrollment through UC Extension, and Intersegmental Cross-Enrollment (see the Intersegmental Cross-Enrollment section for more information).

Total Budget CA Nonresidents			\$14,791.60	\$44,374.70			

- a) Undergraduates who are unable to maintain a full-time program of study because of employment responsibilities, family obligations, or health problems may be eligible for a 50 percent reduction in the Educational Fee.
- b) One quarter at \$336.60; two quarters at \$336.55.
- c) Estimated personal expenses for students living off campus total \$4,623 per quarter or \$13,869 for three quarters. Estimated personal expenses for students living with family total \$2,979 per quarter or \$8,937 for three quarters.
- d) Expenses of owning a car and parking on campus are not included here. For parking fees, see www2.ucsc.edu/taps/pdf/rates07-08.pdf.

Financial Aid

Grants

The following grants are available to undergraduates. Students must submit the FAFSA by March 2 for the following academic year.

The **Cal Grant A** program, open only to California residents, will provide a maximum award of \$6,636 in 2007–08 to help offset mandatory registration fees for the academic year. Students are selected on the basis of academic achievement and financial need.

The **Cal Grant B** program, designed for California students from low-income families, will provide an annual living stipend of \$1,551 to all eligible freshman students in 2007–08. In 2007–08, to help offset mandatory registration fees and aid with annual living expenses, this grant will provide \$8,187 to students at the sophomore level and above.

All California residents seeking financial aid must apply for a Cal Grant bysubmitting a FAFSA by March 2 and listing a California college in the information-release section of the FAFSA. New applicants for the Cal Grant must also file a GPA Verification form directly to the California Student Aid Commission by March 2. More information is available at www.csac.ca.gov.

Federal Pell Grants will provide a maximum of \$4,310 during 2006-07.

Federal Supplemental Educational Opportunity Grants are available to students with substantial financial need. The grants range from \$100 to \$4,000.

Federal Academic Competitiveness Grants provide up to \$750 for first-year college students and up to an additional \$1,300 for second-year students. To receive an Academic Competitiveness Grant, freshmen and sophomores must be Federal Pell Grant eligible, U.S. citizens, enrolled full-time, and have completed a program of rigorous high school course work as defined by their state (all regularly admitted UCSC students meet this criteria). In addition, sophomores must have earned a 3.0 GPA by the end of their freshman year. Visit federalstudentaid.ed.gov for more details.

Federal National Science and Mathematics Access to Retain Talent (SMART) Grants provide up to \$4,000. To receive a SMART Grant, juniors and seniors must be Federal Pell Grant eligible, U.S. citizens, enrolled full-time, majoring in designated science, technology, math, or critical foreign languages, and maintain a 3.0 GPA each term during the year. Visit federalstudentaid.ed.gov for more details.

UC Santa Cruz Grants are designed for students with substanial financial need. Funds for this grant program come in part from the educational fees paid quarterly by students at all campuses of the university.

Scholarships

A variety of scholarships, ranging from \$250 per year to an amount that covers full financial need, are available to undergraduates. Funding comes from many sources—private donors, corporations, professional associations, alumni, and the university itself.

The amount of the scholarship award is generally based on the student's demonstrated financial need. In cases where the student's established financial need exceeds the amount of the scholarship, the award may be supplemented by other types of financial aid.

Merit scholarships are awarded competitively on the basis of high academic achievement and potential. Other scholarships are restricted to students from particular geographic areas or family backgrounds or are limited to students in particular majors, classes, or colleges. The donors have different reasons for giving, and their varied interests are reflected in the wide range of scholarships available. Merit and restricted scholarship awards range up to \$2,000 and are for one year.

Regents Scholarships are awarded for periods of four years to entering frosh and for periods of two years to continuing or transfer students beginning their junior year at the university. These awards are based on academic achievement and promise, irrespective of financial need. New recipients of Regents Scholarships receive either an honorarium of \$6,000, for students with no calculated financial need, or a stipend in combination with other gift aid that pays full in-state financial need as calculated by the Financial Aid Office.

Need-Based Loans

Student loan funds are administered by UC in accordance with the regulations of the federal government. There is no interest on need-based student loans as long as the student is enrolled in college at least half-time. To qualify, students must be enrolled in a degree program and demonstrate financial need. To apply for these loans, students must submit the FAFSA.

Through the **Federal Perkins Loan Program**, students may borrow up to \$20,000 for undergraduate study. Repayment begins nine months after graduation or withdrawal from higher

education. The interest rate is 5 percent per year.

William D. Ford Federal Direct Subsidized Student Loans are administered by the UCSC Financial Aid Office. Students must demonstrate financial need, and annual limits for dependent students are \$3,500 for first-year students, \$4,500 for second-year students, and \$5,500 for all other undergraduates. The annual limit for graduate students is \$8,500. Students may borrow up to \$23,000 for undergraduate study and up to \$65,500 for undergraduate and graduate study combined. Students pay an origination fee and an insurance premium of up to 2.5 percent. Repayment begins six months after graduation or withdrawal from higher education. The interest rate is 6.8 percent fixed on all loans made in 2007-08.

Non-Need-Based Loans

William D. Ford Federal Direct Unsubsidized Student Loans are administered by the Financial Aid Office. These loans are available to students who do not qualify for the subsidized loans (above), and students must first be determined ineligible for a Federal Direct Subsidized Student Loan. Interest is charged on unsubsidized loans from the date the loan is made. The interest rate is fixed at 6.8 percent on all loans made in 2007-08.

The borrower must pay an origination fee of up to 2.5 percent, which is deducted from the amount of the loan. Eligibility is calculated by subtracting any financial assistance awarded the student from the cost of education as defined by the Financial Aid Office (see the Undergraduate Budget table). Loan limits for dependent students are the same as for the Federal Direct Subsidized Student Loans. Federal Direct Subsidized and Unsubsidized Student Loans are added together for students who have both types to determine if the limit has been reached.

Independent students have higher combined Federal Direct Subsidized and Unsubsidized Student Loan limits than do dependent students. The annual limits for independent students are as follows: \$7,500 for first-year students; \$8,500 for second-year students; \$10,500 for other undergraduates; and \$20,500 for graduate students. Students may borrow up to \$46,000 for undergraduate study and \$138,500 for undergraduate and graduate study combined.

Students may begin repaying principal and interest on Federal Direct Unsubsidized Student Loans immediately, pay only interest immediately, or defer both principal and interest until they are no longer enrolled in school at least half-time.

Through Federal Direct Parent Loans for Undergraduate Students, parents may borrow up to the full cost of education as defined by the UCSC Financial Aid Office, less any financial assistance the student receives. Parents must demonstrate creditworthiness for loan approval. Borrowers pay an origination fee of up to 4 percent, which is deducted from the loan amount. Loan payments begin 60 days after the last disbursement. The interest rate is fixed at 7.9 percent on all loans made in 2007-08.

Other loans. The UCSC Financial Aid Office provides information about other privately sponsored education loans at www2.ucsc.edu/fin-aid or upon request.

Total Budget CA Nonresidents			\$14,791.60	\$44,374.70

a) Undergraduates who are unable to maintain a full-time program of study because of employment responsibilities, family obligations, or health problems may be eligible for a 50 percent reduction in the Educational Fee.

b) For California residents, the annual amount for the Educational Fee is \$5,406. Nonresidents of California pay an annual Educational Fee of \$5,922. Undergraduates who are unable to maintain a full-time program of study because of employment responsibilities, family obligations, or health problems may be eligible for a 50 percent reduction in the Educational Fee. One quarter at \$336.60; two quarters at \$336.55.

c) Estimated personal expenses for students living off campus total \$4,623 per

quarter or \$13,869 for three quarters. Estimated personal expenses for students living with family total \$2,979 per quarter or \$8,937 for three quarters.

d) Expenses of owning a car and parking on campus are not included here. For parking fees, see www2.ucsc.edu/taps/pdf/rates07-08.pdf.

[Return to top.]

Financial Aid

For undergraduate students who require financial assistance, the university maintains a broad-based financial aid program of grants, scholarships, loans, and part-time employment.

Administered by the Financial Aid Office, these resources help bridge the gap between the cost of education and what parents and students can reasonably contribute.

If you are a dependent student, the amount of the contribution expected from you and your parents is determined through a careful analysis of your family's financial strength, considering such variables as income, number of dependents, allowable expenses, and assets (excluding the home you live in). Nationally established procedures and campus policies are used in the evaluation. The same policies apply to married and independent students.

Application Deadlines

The Free Application for Federal Student Aid (FAFSA) may be filed beginning on January 1 preceding the academic year in which you wish to enroll. The deadline for applications is March 2. If you are an entering or continuing student seeking financial assistance for fall, winter, or spring enrollment, you must file a completed FAFSA no later than March 2 preceding the academic year for which you are requesting aid. The FAFSA can be filled out online and filed electronically at www.fafsa.ed.gov . A "FAFSA on the Web Worksheet" is available in high school guidance and college financial aid offices throughout the country. You can also obtain a paper FAFSA at these locations. Prior-year FAFSA applicants can use their PIN number to access their information and to complete their renewal FAFSA on the web.

In some cases, the Financial Aid Office will require additional information from applicants. These applicants will be sent an e-mail instructing them to log onto the student portal at my.ucsc.edu and view their "To Do List," which will specify the required documents (e.g., copies of student and parent tax returns or other forms). These are mandatory requirements with a due date for each requested item on the "To Do List." Please be sure to keep your e-mail address current at MyUCSC.

Applications received after the deadline will be reviewed after those received on time have been processed. Late applicants will be considered on a funds-available basis.

The admission notification date is the financial aid application deadline for students seeking to transfer to UCSC during the winter or spring quarter of the following academic year. Required supporting documents must be submitted by December 20.

First-year student applications will be processed first, and every effort will be made to provide frosh with an aid offer by May 1. The earlier the FAFSA is submitted after January 1, the earlier you will receive an offer. All other applicants will be notified as applications are processed after that date. If you are applying for winter or spring quarter, you will receive notification of your award as soon as possible after you are admitted and your aid application file is complete.

Types of Aid

If you apply for financial aid and you meet the application deadlines, outlined above, you are considered for all the types of assistance described below. Depending upon the funds available and your financial need, your financial aid package may include a combination of grants, scholarships, loans, and work opportunities.

Grants

The following grants are available to undergraduates. Students must submit the FAFSA by March 2 for the following academic year.

The **Cal Grant A** program, open only to California residents, will provide a maximum award of \$6,141 \$6,636 in 2007–08 to help offset mandatory registration fees for the academic year. Students are selected on the basis of academic achievement and financial need.

The **Cal Grant B** program, designed for California students from low-income families, will provide an annual living stipend of \$1,551 to all eligible freshman students in 2007–08. In 2007–08, to help offset mandatory registration fees and aid with annual living expenses, this grant will provide \$7,692 \$8,187 to students at the sophomore level and above.

All California residents seeking financial aid must apply for a Cal Grant bysubmitting a FAFSA by March 2 and listing a California college in the information-release section of the FAFSA. New applicants for the Cal Grant must also file a GPA Verification form directly to the California Student Aid Commission by March 2. More information is available at www.csac.ca.gov .

Federal Pell Grants are expected to will provide a maximum of \$4,050 \$4,310 during 2006-07.

Federal Supplemental Educational Opportunity Grants are available to students with substantial financial need. The grants range from \$100 to \$4,000.

Federal Academic Competitiveness Grants provide up to \$750 for first-year college students and up to an additional \$1,300 for second-year students. To receive an Academic Competitiveness Grant, freshmen and sophomores must be Federal Pell Grant eligible, <u>U.S. citizens</u>, enrolled full-time, and have completed a program of rigorous high school course work as defined by their state (all regularly admitted UCSC students meet this criteria). In addition, sophomores must have earned a 3.0 GPA by the end of their freshman year. Visit federalstudentaid.ed.gov for more details.

Federal National Science and Mathematics Access to Retain Talent (SMART) Grants provide up to \$4,000. To receive a SMART Grant, juniors and seniors must be Federal Pell Grant eligible, <u>U.S. citizens</u>, enrolled full-time, majoring in designated science, technology, math, or critical foreign languages, and maintain a 3.0 GPA each term during the year. Visit federalstudentaid.ed.gov for more details.

UC Santa Cruz Grants are designed for students with substanial financial need. Funds for this grant program come in part from the educational fees paid quarterly by students at all campuses of the university. The average grant in 2005–06 was \$5,284.

Scholarships

A variety of scholarships, ranging from \$250 per year to an amount that covers full financial need, are available to undergraduates. Funding comes from many sources—private donors, corporations, professional associations, alumni, and the university itself.

The amount of the scholarship award is generally based on the student's demonstrated financial need. In cases where the student's established financial need exceeds the amount of the scholarship, the award may be supplemented by other types of financial aid.

Merit scholarships are awarded competitively on the basis of high academic achievement and potential. Other scholarships are restricted to students from particular geographic areas or family backgrounds or are limited to students in particular majors, classes, or colleges. The donors have different reasons for giving, and their varied interests are reflected in the wide range of scholarships available. Merit and restricted scholarship awards range up to \$2,000 and are for one year. Students must reapply for these scholarships each year.

Regents Scholarships are awarded for periods of four years to entering frosh and for periods of two years to continuing or transfer students beginning their junior year at the university. These awards are based on academic achievement and promise, irrespective of financial need. New recipients of Regents Scholarships receive either an honorarium of \$6,000, for students with no calculated financial need, <u>or a stipend in combination with other gift aid</u> that pays full in-state financial need as calculated by the Financial Aid Office.

For the academic year beginning each fall quarter, new frosh and transfer students apply for scholarships by filling the Application for Undergraduate Admission and Scholarships during the November 1–30 filling period. Continuing students file an undergraduate-scholarship application by February 1. Late applications are not considered.

Need-Based Loans

Student loan funds are administered by UC in accordance with the regulations of the federal government and the Regents. There is no interest on need-based student loans as long as the student is enrolled in college at least half-time. To qualify, students must be enrolled in a degree program and demonstrate financial need. To apply for these loans, students must submit the FAFSA.

Through the **Federal Perkins Loan Program**, students may borrow up to \$20,000 for undergraduate study and up to \$40,000 for undergraduate and graduate study combined. Repayment begins nine months after graduation or withdrawal from higher education. The interest rate is 5 percent per year.

William D. Ford Federal Direct Subsidized Student Loans are administered by the UCSC Financial Aid Office. Students must demonstrate financial need, and annual limits for dependent students are \$2,625 \$3,500 for first-year students, \$3,500 \$4,500 for second-year students, and \$5,500 for all other undergraduates. The annual limit for graduate students is \$8,500. Students may borrow up to \$23,000 for undergraduate study and up to \$65,500 for undergraduate and graduate study combined. Students pay an origination fee and an insurance premium of up to 3

<u>2.5</u> percent. Repayment begins six months after graduation or withdrawal from higher education. The interest rate is 6.8 percent fixed on all loans made on or after July 1, 2006 in 2007-08.

Non-Need-Based Loans

William D. Ford Federal Direct Unsubsidized Student Loans are administered by the Financial Aid Office. These loans are available to students who do not qualify for the subsidized loans (above), and students must first be determined ineligible for a Federal Direct Subsidized Student Loan. Interest is charged on unsubsidized loans from the date the loan is made. The interest rate is fixed at 6.8 percent on all loans made on or after July 1, 2006 in 2007-08.

The borrower must pay an origination fee of up to \$\frac{3}{2.5}\$ percent, which is deducted from the amount of the loan. Eligibility is calculated by subtracting any financial assistance awarded the student from the cost of education as defined by the Financial Aid Office (see the Undergraduate Budget table). Loan limits for dependent students are the same as for the Federal Direct Subsidized Student Loans. Federal Direct Subsidized and Unsubsidized Student Loans are added together for students who have both types to determine if the limit has been reached.

Independent students have higher combined Federal Direct Subsidized and Unsubsidized Student Loan limits than do dependent students. The annual limits for independent students are as follows: \$7,500 for first-year students; \$8,500 for second-year students; \$10,500 for other undergraduates; and \$20,500 for graduate students. Students may borrow up to \$46,000 for undergraduate study and \$138,500 for undergraduate and graduate study combined.

Students may begin repaying principal and interest on Federal Direct Unsubsidized Student Loans immediately, pay only interest immediately, or defer both principal and interest until they are no longer enrolled in school at least half-time.

Through **Federal Direct Parent Loans for Undergraduate Students**, parents may borrow up to the full cost of education as defined by the UCSC Financial Aid Office, less any financial assistance the student receives. Parents must demonstrate creditworthiness for loan approval. Borrowers pay an origination fee of up to 4 percent, which is deducted from the loan amount. Loan payments begin 60 days after the last disbursement. The interest rate is fixed at 7.9 percent on all loans made on or after July 1, 2006 in 2007-08.

Other loans. The UCSC Financial Aid Office provides information about other privately sponsored education loans at www2.ucsc.edu/fin-aid or upon request.

Work-Study Program

Employment through the work-study program is offered to eligible financial aid applicants and is available during the academic year (late September through early June). Students are hired for part-time employment at prevailing rates, with federal funds paying part of the wages and the employer paying the balance. Federal College Work-Study Awards represent the total amount a student may earn through this program. Students may apply for a variety of jobs on campus or with approved nonprofit organizations off campus.

Job postings are announced initially at the Work-Study Orientation held on the first Sunday of fall quarter. All work-study jobs are posted on the day of the orientation, and students must apply online. For job listings, application process, and more information on the Career Center, visit our web site: www2.ucsc.edu/careers.

Further Information

For more information about applying for financial aid, deadlines for filling applications and supporting documents, and campus policy regarding refunds of overpayments, contact the Financial Aid Office, 201 Hahn Student Services Building, (831) 459-2963, e-mail fin_aid@ucsc.edu, or visit www2.ucsc.edu/fin-aid.

Fees and Expenses

Fees and expenses for graduate students are shown below. *Tuition, fees, and other charges are subject to change without notice by the Regents of the University of California. For current fee information, check reg.ucsc.edu.*

Graduate Stud	<mark>lent Fees, 2007–</mark>	08
	One Quarter	F-W-S Quarters
University Registration Fee	\$262.00	\$786.00
Educational Fee(a)	\$2,218.00	\$6,654.00
Santa Cruz campus fees	\$307.66	\$922.98
Health Insurance (waivable)	\$789.00	\$2,367.00
Total for California Residents	\$3,576.66	\$10,729.98
Nonresident Tuition (b)	\$4,898.00	\$14,694.00
Educational Fee Differential	\$98.00	\$294.00
Total for Nonresidents of California	\$8,572.66	\$25,717.98

a) Graduate students who have been approved to enroll in parttime study may be eligible for a 50 percent Educational Fee

b) A limited number of Nonresident Tuition Fellowships are available.

Estimated Graduate Student Budget, 2007-08							
	California Resident	Nonresident					
Fees	\$10,730	\$25,715					
Books and supplies	\$1,395	\$1,395					
Room and board (on or off campus)(a)	\$13,584	\$13,584					
Transportation	\$1,701	\$1,701					
Personal	\$2,445	\$2,445					
Total	\$29.855	\$44.840					

a) Estimated room and board for graduate students living with family is \$4,005.

[Return to top.]

Fellowships, Assistantships, Grants

Cal Grant A and B Programs. Students who received one of these awards as undergraduates may request a one-year extension from the California Student Aid Commission to attend a teacher credential program. The Cal Grant A program is expected to pay a maximum of \$7,440, and the Cal Grant B program is expected to pay a maximum of \$8,990 per year for study at the University of California in 2007-08. Renewal of these awards requires the student to submit the FAFSA by March 2.

[Return to top.]

Student Loans

Graduate students may apply for student loans through the Financial Aid Office. Students who apply using the FAFSA are eligible for loans funded by the federal government. Students who demonstrate financial need qualify for the William D. Ford Federal Direct Subsidized Student Loan, and students who do not demonstrate need or who want an additional loan qualify for the William D. Ford Federal Direct Unsubsidized Student Loan. Subsidized loans are interest-free while the student is enrolled; interest accrues on unsubsidized loans during enrollment. Graduate students may also be eligible to borrow through the Federal Direct Graduate PLUS loan program. See Financial Aid for additional information.

[Return to top.]

Loan Forgiveness Programs

The Assumption Program of Loans for Education (APLE) is another program offered by the California Student Aid Commission for students. This program serves students who plan to become public schoolteachers.

Students must be nominated by the UCSC Education Department. Under the program, the commission may assume up to \$11,000 in educational loan balances in return for service as a public schoolteacher in California, in either a designated subject-shortage area or at a school serving large populations of students from low-income families. In addition, participants who teach mathematics, science, or special education in the lowest-performing schools may have a total of \$19,000 in debt assumed. To receive full benefits, you must provide four consecutive years of teaching at a California public school. Additional eligibility criteria include California residence, U.S. citizenship or eligible noncitizenship, academic ability, and financial need. Contact the Education Department at (831) 459-3249 for more information. The funding status of the program for 2007-08 is subject to California budget deliberations. Call the California Student Aid Commission at (888) 224-7268 for an update.

Fellowships, Assistantships, Grants

The following kinds of financial support are available through the Division of Graduate Studies:-

Regents Fellowships. A limited number of these fellowships are awarded to first-year graduate students in master's and doctoral programs. For the 2006–07 academic year, these awards provide a stipend of \$10,000 plus payment of all university fees except nonresident tuition. Regents Fellowships may be awarded for one to three quarters.

Grants-in-Aid are designed for students with substantial financial need. Funds for this grant program come from the educational fees paid quarterly by students at all campuses of the university. Eligibility is determined by analysis of data provided by the applicant on the FAFSA.

Chancellor's Fellowships. A limited number of these fellowships are awarded to first-year graduate students in doctoral programs. For the 2006–07 academic year, these nine-month awards provide a stipend of \$21,000–\$24,000 plus payment of all university fees and nonresident tuition.

Humanities Predoctoral Fellowships. These state-funded fellowships are intended for entering graduate students enrolling in humanities programs leading to the Ph.D. The fellowships provide guaranteed support for four years: a \$12,900 stipend plus fees for the first year, teaching or research assistantship support provided by the department for the second and third years, and a dissertation award for the fourth year.

Eugene Cota-Robles Fellowships. These state-funded merit-based fellowships of \$21,000 plus fees are awarded on a competitive basis to first-year graduate students who have overcome significant social or educational obstacles to achieve a college education, and whose backgrounds equip them to contribute to intellectual diversity among the graduate student population. Doctoral program candidates who demonstrate strong potential for university teaching and research will be selected.

Dissertation-Year Fellowships. These state-funded merit-based fellowships are awarded on a competitive basis to doctoral graduate students who have overcome significant social or educational obstacles to achieve a college education, and whose backgrounds equip them to contribute to intellectual diversity among the graduate student population. Fellows receive a \$21,000 stipend plus payment of fees.

Tuition Fellowships. A number of Nonresident Tuition Fellowships are available for students who are recommended by their department. (Nonresident tuition is \$4,898 per quarter for 2006–07.)

Cal Grant A and B Programs. Students who received one of these awards as undergraduates may request a one-year extension from the California Student Aid Commission to attend a teacher credential program. The Cal Grant A program is expected to pay a maximum of \$6,897 \$7,440, and the Cal Grant B program is expected to pay a maximum of \$8,448 \$8,990 per year for study at the University of California in 2007-08. Renewal of these awards requires the student to submit the FAFSA by March 2.

Graduate Student Researcherships. For the 2006–07 academic year, half-time researcherships provided a salary ranging from \$1,261 to \$1,818 per month, depending on the student's academic level and department.

The application for fellowships, assistantships, and researcherships is Part C of the admission application, which may be obtained from the Division of Graduate Studies. It should be filed by the program's deadline or by the February 1 preceding admission, whichever is earlier.

The division and the UCSC Career Center can provide information about external graduate fellowships and grants.

[Return to top.]

Student Loans

Graduate students may apply for student loans through the Financial Aid Office. Students who apply using the FAFSA are eligible for loans funded by the federal government. Students who demonstrate financial need qualify for the William D. Ford Federal Direct Subsidized Student Loan, and students who do not demonstrate need or who want an additional loan qualify for the William D. Ford Federal Direct Unsubsidized Student Loan. Subsidized loans are interest-free while the student is enrolled; interest accrues on unsubsidized loans during enrollment. Graduate students may also be eligible to borrow through the Federal Direct Graduate PLUS loan program. See Financial Aid for additional information.

Graduation Requirements

Credit for Transfer Students

General Education Requirements

Transfer students may apply courses taken at other institutions toward the general education requirements with two exceptions: The writing-intensive course (W code) must be taken at UCSC. Also, transfer courses are not applied to the topical requirement (T code), but topical courses are waived at entrance according to the following formula: 45–83.9 transferable quarter credits, one course waived; 84–104.9 transferable quarter credits, two courses waived; 105 or more transferable quarter credits, all three courses waived. If one topical course is required in residence at UCSC, it may be chosen from any of the three academic areas (humanities and arts, natural sciences and engineering, and social sciences). If two are required, they must be from two different areas.

Please note that beginning with students entering UCSC fall quarter 2010, the topical requirements will need to be satisfied with specific transfer courses. UCSC is currently in the process of identifying appropriate courses offered through California community colleges (www.assist.org) beginning September 2007.

If you are currently attending one of the California community colleges, consult with the UCSC Office of Admissions or your current counselor to determine which college courses satisfy UCSC general education requirements.

Transfer students who have satisfied the general education or breadth requirements of another UC campus prior to transfer will be considered to have completed the UCSC general education requirements. Completion of the Intersegmental General Education Transfer Curriculum (IGETC) prior to enrollment at UCSC will also be accepted in lieu of the campus general education requirements.

[Return to top]

College Requirements

You must fulfill the requirements of your college in addition to those of your major and of the university. Each college has established a core course, which all first-year students are required to complete. Students admitted as transfer students are exempt from the core course requirement but may take the core course at their option. College requirements are outlined below. The core courses are described more fully in the individual college descriptions, see college descriptions http://reg.ucsc.edu/catalog/html/colleges.htm.

[Return to top]

Entry Level Writing Requirement

Every candidate for a bachelor's degree must demonstrate an acceptable level of ability in English composition. Before your fourth quarter of enrollment, you must fulfill this requirement in one of the following ways:

- By achieving a score of 680 or higher on the writing component of the SAT Reasoning Examination.
- By achieving a score of 3, 4, or 5 on the College Board Advanced Placement Examination in English Language or Literature, or by achieving a score of 5, 6, or 7 on the IBH English Language A1 Examination
- By achieving a score of 8 or higher on the systemwide UC Analytical Writing Placement

Examination

- By demonstrating an acceptable level of proficiency on UCSC's Writing Placement Examination, given several times each year
- Prior to first enrollment at UC, by completing at another institution an acceptable collegelevel course of at least 4 quarter credits, or the equivalent, in English composition with a grade of C or better.

California high school seniors who have been admitted to UCSC must take the systemwide UC Analytical Writing Placement Examination given in May, unless they have already satisfied the requirement.

[Return to top]

Advising: From Course Selection to Careers

Attending Summer Orientation is one of the most important steps a new student takes in preparing for the transition to university life. Summer Orientation provides the academic advising you need to make informed decisions about classes and majors, and the opportunity to ask questions regarding financial aid and housing.

Orientation begins the process of academic advising, as well as providing a comprehensive introduction to all aspects of UCSC. While at Orientation, you will be introduced to continuing students, faculty, and staff who will assist you in attaining academic and personal success at the university.

Summer Orientation is held eight times over the course of the summer and includes separate programs for first-year and transfer students, as well as concurrent programs for parents and family members.

New students reserve their place in Summer Orientation online through the UC Santa Cruz portal at my.ucsc.edu. Fall Welcome Week, occurring during the first week of fall quarter, is the next step in your orientation and advising process. It provides you with an opportunity to settle into life at UCSC, take advantage of important services, and continue your academic advising.

Questions can be directed to the Office of Campus Orientation Programs at (831) 459-5468, or via e-mail to orientation@ucsc.edu. Web: admissions.ucsc.edu/orientation.

[Return to top]

ROTC and Military Affairs

Reserve Officer Training Corps (ROTC) is not available on the UC Santa Cruz campus. However, interested UCSC students have the option of attending programs at Santa Clara University, San Jose State University, and UC Berkeley.

To find out about the Army ROTC program, contact the Department of Military Science, Santa Clara University, 500 El Camino Real, Santa Clara, CA 95053-0631 or (408) 554-4034, e-mail SStitt@scu.edu, or visit rotc.scu.edu.

For information on the Air Force ROTC program, contact the Department of Aerospace Studies, AFROTC Det 045, One Washington Square, San Jose State University, San Jose, CA 95192-0047; (408) 924-2960, e-mail Det045@maxwell.af.mil, or visit the web: www.sjsu.edu/depts/AFROTC/homepage.html. Students may call or inquire about program prerequisites, scholarship availability, and class schedules at the Department of Aerospace

UC Berkeley offers a variety of courses in military affairs, including courses offered by the Departments of Naval Science, Military Science, and Aerospace Studies, subject to departmental approval. (See UC Berkeley General Catalog, Military Officers' Education Program, sis.berkeley.edu/qc/curricula.html) These courses are offered to cadets and noncadets.

Arrangements for all ROTC programs are made on an individual basis with the appropriate sponsoring campus.

Undergraduate Academic Program

Please note that sections under this topic that contained no changes from the General Catalog 2006-08 are not included. For the complete section, go to 2006-08 Undergraduate Academic Program.

To read an updated copy of this page without strikeouts or additions, see 2007-08 Undergraduate Academic Program.

Graduation Requirements

Credit for Transfer Students

General Education Requirements

Transfer students may apply courses taken at other institutions toward the general education requirements with two exceptions: The writing-intensive course (W code) must be taken at UCSC. Also, transfer courses are not applied to the topical requirement (T code), but topical courses are waived at entrance according to the following formula: 45-83.9 transferable quarter credits, one course waived; 84-104.9 transferable quarter credits, two courses waived; 105 or more transferable quarter credits, all three courses waived. If one topical course is required in residence at UCSC, it may be chosen from any of the three academic areas (humanities and arts, natural sciences and engineering, and social sciences). If two are required, they must be from two different areas.

Please note that beginning with students entering UCSC fall quarter 2010, the topical requirements will need to be satisfied with specific transfer courses. UCSC is currently in the process of identifying appropriate courses offered through California community colleges (www.assist.org) beginning September 2007.

If you are currently attending one of the California community colleges, consult with the UCSC Office of Admissions or your current counselor to determine which college courses satisfy UCSC general education requirements.

Transfer students who have satisfied the general education or breadth requirements of another UC campus prior to transfer will be considered to have completed the UCSC general education requirements. Completion of the Intersegmental General Education Transfer Curriculum (IGETC) prior to enrollment at UCSC will also be accepted in lieu of the campus general education requirements.

[Return to top]

College Requirements

You must fulfill the requirements of your college in addition to those of your major and of the university. Each college has established a core course, which all first-year students and some incoming transfer students are required to complete. Students admitted as lower-division transfer students who prior to enrolling have completed at least one UC-transferable college English composition course with a minimum grade of C (2.0) or better are exempt from the core course requirement. College requirements are outlined below. The core courses are described more fully in the individual college descriptions, see college descriptions http://reg.ucsc.edu/catalog/html/colleges.htm.

You must fulfill the requirements of your college in addition to those of your major and of the university. Each college has established a core course, which all first-year students are required to complete. Students admitted as transfer students are exempt from the core course requirement but may take the core course at their option. College requirements are outlined below. The core courses are described more fully in the individual college descriptions, see college descriptions http://reg.ucsc.edu/catalog/html/colleges.html.

American History and Institutions

Every candidate for a bachelor's degree must demonstrate a knowledge of American history and institutions.* You may fulfill this requirement in one of the following ways:†

- * By achieving a score of 550 or higher on the College Board SAT II: Subject Test in American History SAT Subject Examination in U.S. History
- * By achieving a score of 3, 4, or 5 on the College Board Advanced Placement Examination in U.S. History, or by achieving a score of 5, 6, or 7 on the IBH History of the Americas Examination
 - * By satisfactorily completing a college-level course in American history and institutions
- * By certification of completion of the requirement on a transcript from an accredited California institution of higher education
- * By completing an acceptable history or government course in high school that satisfies the subject requirement for admission to the university, described in the Subject requirement a-g section with a grade of C or better.

*Foreign students with an F (student) or J (exchange-visitor) visa are exempted from the American history and institutions requirement at the time they declare their candidacy for graduation. You can verify your exemption by bringing your passport to the Office of International Education, 205 Classroom Unit Building. Call (831) 459-2858 for more information.

†Alternatives for satisfying this requirement vary among the campuses of the University of California. If you plan to transfer to another UC campus, consult its general catalog for information on this point.

Entry Level Writing Requirement (Formerly Subject A)

Every candidate for a bachelor's degree must demonstrate an acceptable level of ability in English composition. Before your fourth quarter of enrollment, you must fulfill this requirement in one of the following ways:

- By achieving a score of 680 or higher on the College Board SAT H: Subject Test in Writing writing component of the SAT Reasoning Examination.
- By achieving a score of 3, 4, or 5 on the College Board Advanced Placement Examination in English <u>Language or Literature</u>, or by achieving a score of 5, 6, or 7 on the IBH English Language A1 Examination
- By achieving a score of 8 or higher on the systemwide UC Analytical Writing Placement Examination
- By demonstrating an acceptable level of proficiency on UCSC's Writing Placement Examination, given several times each year
- Prior to first enrollment at UC, by completing at another institution an acceptable collegelevel course of at least 4 quarter credits, or the equivalent, in English composition with a grade of C or better.

California high school seniors who have been admitted to UCSC must take the systemwide UC Analytical Writing Placement Examination given in May, unless they have already satisfied the requirement.

Advising: From Course Selection to Careers

Translating your goals and interests into a coherent academic program requires careful planning. Advising can help you make decisions at the university—selecting courses, choosing a major, deciding on a career, or determining prerequisites for graduate school. UC Santa Cruz offers many forms of academic and career advising tailored to various student needs. In addition, the student handbook called *The Navigator* and the quarterly *Schedule of Classes* —both online at reg.ucsc.edu —answer most procedural and administrative questions.

Attending summer orientation is one of the most important steps a new student takes in preparing for the transition to university life. Summer orientation provides the academic advising you need to make informed decisions about classes and majors, and the opportunity to ask questions regarding financial aid and housing.

In addition to facilitating initial advisement, orientation is designed to provide you a comprehensive introduction to all aspects of UCSC. While at orientation, you will be introduced to continuing students, faculty, and staff who will collectively assist in your academic as well as personal success at the university.

Summer orientation occurs six times over the course of the summer. Separate programs for firstyear and transfer students help to better meet the needs of each group. Families play an important role in the academic and personal success of students; UCSC has designed programs for parents and family members to better support their student's transition to the university.

Reservation brochures are mailed to new students as soon as they submit their Statement of Intent to Register at UCSC. These brochures provide details on the summer program and allow students to make a reservation. New students who have advising questions over the summer but are unable to attend summer orientation should contact their college office.

Fall Welcome Week, occuring during the first week of fall quarter, is the next step in your orientation and advising process.

Important information on particular majors may be viewed on individual departmental web sites. The sites will give you contact information and office hours. Advisers provide detailed information regarding requirements for the major and assist you in planning a program of study. The department adviser can also assign you to an appropriate faculty adviser who may serve as a mentor in your field, recommending courses and helping you refine your educational goals.

It is also important to seek departmental advising for assistance in planning your overall academic program. For transfer students and for students in many majors (such as those in the physical and biological sciences, engineering, arts, and environmental studies), it is necessary to obtain departmental advising prior to or at the start of the first quarter on campus.

For more general academic questions, make an appointment with a college adviser. Each college has specialized staff members, called academic preceptors, who advise students on everything from general education requirements to choosing a major.

For help in assessing career interests and exploring and choosing career options, contact the Career Center. The staff also will assist with resume preparation, interviewing skills, applying for an internship, and job-search strategies. Many students find that participation in internships and field programs gives them a practical basis for making career decisions. The Career Center offers workshops, an online database, and publications on many internship opportunities. The office's Career Advice Network (CAN) will connect you with UCSC alumni professionals who help students achieve their career goals.

If you plan to go on to graduate school, consult with faculty in your major. Faculty advisers are the best people to ask about the quality of graduate programs in your field of interest. In addition, the Career Center offers advising and workshops on applying to graduate school. A letter-of-reference service enables you to maintain your recommendation letters at the Career Center.

If you intend to pursue graduate study in a field not offered as a major at Santa Cruz, you can prepare for your intended program through one of the campus's regular majors. You must plan your studies carefully, however, and advising will be especially important. The Career Center library has information that will help prepare you for graduate and professional programs. The following are some fields in which UCSC alumni have pursued graduate study and successful careers:

Architecture-BusinessConservationFilmFinanceGuidance and counselingHigh-tech industryHuman resourcesIndustrial and labor relationsInternational relationsLawMarketingMuseum administrationPublic administrationUrban planning

If you plan to pursue a career in medicine or another health-related field (including dentistry, nursing, nutrition, occupational therapy, optometry, osteopathic medicine, pharmacology, physical therapy, public health, and veterinary medicine), contact the Division of Physical and Biological Sciences' Health Career Resource Office at (831) 459-2954. Ethnicminority students may also be eligible for the MARC/MBRS Programs, described below.

If you are interested in the field of law, the prelaw adviser for UCSC is at the Career Center, (831) 459-2957.

A number of programs provide additional academic advising and comprehensive support services to students with specific needs. Educational Opportunity Programs (EOP), Services for Transfer and Re-Entry Students (STARS), the Disability Resource Center, and International Programs are described below. If you need assistance in another area, check to see if it is listed

in the Index . For additional information, check with your college office or consult *The Navigator* or *Schedule of Classes* (req.ucsc.edu).

Counseling on personal and family issues is available through Counseling and Psychological Services :

Attending Summer Orientation is one of the most important steps a new student takes in preparing for the transition to university life. Summer Orientation provides the academic advising you need to make informed decisions about classes and majors, and the opportunity to ask questions regarding financial aid and housing.

Orientation begins the process of academic advising, as well as providing a comprehensive introduction to all aspects of UCSC. While at Orientation, you will be introduced to continuing students, faculty, and staff who will assist you in attaining academic and personal success at the university.

Summer Orientation is held eight times over the course of the summer and includes separate programs for first-year and transfer students, as well as concurrent programs for parents and family members.

New students reserve their place in Summer Orientation online through the UC Santa Cruz portal at my.ucsc.edu. Fall Welcome Week, occurring during the first week of fall quarter, is the next step in your orientation and advising process. It provides you with an opportunity to settle into life at UCSC, take advantage of important services, and continue your academic advising.

Questions can be directed to the Office of Campus Orientation Programs at (831) 459-5468, or via e-mail to orientation@ucsc.edu. Web: admissions.ucsc.edu/orientation.

ROTC and Military Affairs

Reserve Officer Training Corps (ROTC) is not available on the UC Santa Cruz campus. However, interested UCSC students have the option of attending programs at Santa Clara University, <u>San Jose State University</u>, and UC Berkeley.

For information on the Air Force ROTC program, contact the Department of Aerospace Studies, 176 Hearst Gymnasium, University of California, Berkeley, CA 94720, (510) 642-3572, e-mail airforce@uclink.berkeley.edu, or visit the web: airforcerotc.berkeley.edu. AFROTC Det 045, One Washington Square, San Jose State University, San Jose, CA 95192-0047; (408) 924-2960, e-mail Det045@maxwell.af.mil , or visit the web: www.sjsu.edu/depts/AFROTC/homepage.html. Students may call or inquire about program prerequisites, scholarship availability, and class schedules at the Department of Aerospace Studies.

UC Berkeley offers a variety of courses in military affairs, including courses offered by the Departments of Naval Science, Military Science, and Aerospace Studies, subject to departmental approval. (See UC Berkeley General Catalog, Military Officers' Education Program, sis.berkeley.edu/gc/curricula.html www.berkeley.edu/catalog/curricula.html. These courses are offered to cadets and noncadets.

Arrangements for all ROTC programs are made on an individual basis with the appropriate sponsoring campus.

Courses That Fulfill General Education Requirements

Introductions to disciplines, humanities and arts (IH code)—two courses from different departments required (10 credits)

Only one IH requirement may be satisfied with a course (equivalent to 5 credits) from the Arts Division (art, film and digital media, history of art and visual culture, music, theater arts); only one language course may be used to satisfy an IH requirement; and only one literature course may be used to satisfy an IH requirement. Note: Transfer courses designated IH from English departments are considered to be literature courses for general education purposes.

American Studies 1, 2 Chinese 4, 5, 6, 50 Cowell 118B Feminist Studies 1 Film and Digital Media 20A, 20B, 20C French 4, 5, 6 German 4, 5, 6 Hebrew 4, 5 Hindi 4, 5, 6 History 1, 2A, 2B, 4, 5A, 5B, 10A, 10B, 11A, 11B, 13, 14, 30, 40, 41, 43, 61, 62A, 62B, 65A, 65B, 66, 70A, 70B, 70C History of Art and Visual Culture 10D, 10E, 10F, 10G Italian 4, 5, 6 Japanese 4, 5, 6, 50 Linguistics 20, 52, 53, 55 Literature 1, 61F, 61H, 61M, 61P, 61R Spanish Literature 60 Music 11A, 11B, 11C, 11D Philosophy 9, 11, 22, 24, 26, 28 Portuguese 60B, 65A, 65B Russian 4, 5, 6 Spanish 4, 5, 5M, 6, 56 Spanish for Spanish Speakers 61, 62, 63 Theater Arts 10, 19, 20, 30, 32, 33, 36, 40, 61, 122, 136

Topical courses (T code)—three courses required (15 credits)

Students entering UCSC with fewer than 45

transferable credits must take three topical courses in residence at UCSC. UCSC Summer Session courses can be used to satisfy topical requirements.

Choose one course from each academic area: natural sciences (2), social sciences (3), and humanities and arts (4). Courses labeled 5, 6, and 7 satisfy topical requirements in two different academic areas; students can apply this kind of topical course to either academic area indicated. The three topical course requirements must be satisfied with three different courses. In the Schedule of Classes, courses that carry a T general education code are listed as follows:

2-Natural Sciences Area

3-Social Sciences Area

4-Humanities and Arts Area

5-Humanities and Arts or Social Sciences Area

6-Natural Sciences or Humanities and Arts Area

The Colleges

Cowell College | Stevenson College | Crown College | Porter College | Oakes College | College Eight | College Nine | College Ten

Please note that sections under this topic that contained no changes from the General Catalog 2006-08 are not included. For the complete section, go to 2006-08 Colleges.

To read an updated copy of this page with strikeouts and additions highlighted, see 2007-08 Colleges, highlighted copy.

Cowell College

Cowell College inaugurated the Santa Cruz campus when it opened with a pioneer class of 600 students in 1965. The founding faculty shaped an educational program that challenged and enriched students through wide-ranging inquiry and disciplined study. Today, Cowell has nearly 1,500 affiliated students and 100 faculty fellows. Its motto—The Pursuit of Truth in the Company of Friends—expresses a continuing commitment to create a serious academic environment within a humane and broadly inclusive community. The college is named for the S. H. Cowell Foundation, which endowed the college at its founding.

Academic Emphases

The academic theme of the college encourages students to pursue their general and disciplinary study with attention to the values of liberal arts education: understanding one's individual perspective by exploration of its historical background and world context. Students affiliated with the college pursue majors from all departments on campus.

The faculty fellows affiliated with the college represent all academic divisions (arts, engineering, humanities, physical and biological sciences, and social sciences). The faculty fellows guide the college academic programs and serve as academic mentors to the students, supplementing the advising provided by the college academic advisers and departmental advising.

In satisfying their general education requirements, first-year Cowell students are required to take the Cowell Core Course in the fall term. The core course (Cowell 80), taught in small seminar sections, seeks to develop critical reading, analytical writing, and seminar discussion skills by reading a selection of classic and contemporary texts.

The college academic buildings house humanities faculty, with notable concentrations in philosophy, classics (study of ancient Greek and Latin language and civilization), and modern foreign languages, especially Chinese, French, Italian, and Japanese. The interdisciplinary faculty group in pre- and early modern studies is centered at Cowell College.

Students who develop ideas for research, creative projects, community service, or internship experiences may apply to the college provost for financial support. The college sponsors prizes for outstanding academic work and acknowledges students who graduate with overall academic excellence in a breadth of study with College Honors.

The college enriches the intellectual and cultural life of the campus by sponsoring events of various kinds: lectures and presentations by local faculty and visiting scholars, theatrical and musical performances, and forums and debates on topics of current interest.

Crown College

Crown College faculty and students represent a wide variety of academic disciplines. The majority of the faculty are in the physical and biological sciences

and the social sciences. Although Crown has more science and engineering students than any of the other colleges, the majority of Crown's students major in the social sciences, humanities, and arts. This diversity of interests and thinking enriches our intellectual environment.

An important goal of the college is to foster an appreciation for the contributions of diverse cultural groups and to provide an atmosphere in which issues of both diversity and common social purpose are integrated into a wide range of programs and discussions.

Crown is located on a hilltop surrounded by a redwood forest. The core buildings consist of an administration office, dining commons, lounge spaces, recreation facilities, study spaces, faculty offices, and classrooms built around a large patio and central fountain. The award-winning architecture with its white walls and high-pitched tiled roofs suggests a hillside Mediterranean village. The college's residential facilities are made up of eight traditional residence hall buildings and eight apartment buildings housing approximately 700 students. The facilities at Crown College were built through a partnership of public funds and a gift from the Crown Zellerbach Foundation.

Academic Emphases

From the time of its founding in 1967, issues pertaining to the role of science and technology in society have been a focus of special interest at Crown College. We approach these issues from an interdisciplinary perspective that recognizes the influence of social and cultural factors on scientific enterprise, as well as the ways in which science and technology influence society.

The Crown College core course, Crown 80, Ethical Issues in Emerging Technologies: Transgenics, Clones, Cyborgs, and Artificial Intelligence is an interdisciplinary seminar concerning the effects of these world-changing technologies and encourages students to develop decision-making strategies to ethically steer these technologies. The course examines the impacts of these technologies on society using a variety of disciplinary approaches that engage the perspectives of both humanists and scientists. The fall quarter core course is required of all nontransfer students during their first quarter at UCSC. As with the core courses from our sister colleges, the development of critical reading and writing skills is a major thrust of Crown 80. (See the Crown College Course Descriptions section for a full description.)

The Crown-Merrill Science and Technology Learning Community is an innovative program to support first-year students who are interested in pursuing a major in the sciences. Students enrolled in this program live together, forming a supportive community that promotes collaborative learning and group problem solving. To facilitate this process, students are placed in a special section of Chemistry 1A and participate in a residentially based study group. The program is designed especially for students who have a strong interest in the sciences but feel slightly underprepared for university-level course work. It often acts as a bridge to the ACE Program in the physical and biological sciences and engineering (see the Academic Excellence Program section). Participation—limited to first-year students at Crown and Merrill Colleges—requires a commitment to succeed, a willingness to work hard, and a positive attitude.

The Crown *Undergraduate Seminar in Science, Technology, and Society* provides highly motivated students the opportunity to work closely with ladder-rank research faculty in a small seminar environment. Topics have included California Climate Change: Past, Present, and Future; Food Matters: Science, Technology, and Society; and an honors seminar on introductory computer architecture.

Juniors and seniors can participate in the college's new Undergraduate Research Fellowship Program, which awards \$800 fellowships to student-faculty teams and encourages their interaction through undergraduate research.

Porter College

The Porter College theme, Arts in a Multicultural Society, reflects the consensus among Porter College fellows that the creative process is an inseparable aspect of a broad-minded and rigorous education. The seminars, co-curricular activities, and cultural environment at Porter encourage creativity in all fields—from composition to community studies to computer programming.

Academic Emphases

Porter's faculty includes most of the campus's practicing artists and art scholars, though some of the college's faculty (and half of its students) specialize in the humanities or in the physical and biological or social sciences. The college is the administrative home of the Division of the Arts and the History of Art and Visual Culture Department. The Digital Arts and New Media Program also has offices here.

Porter 80, the core course (see the Porter College Course Descriptions section) focuses on writing across the arts, with concentration on literature and arts of California and the Pacific Rim. Students admitted as transfer applicants are exempt from the college graduation requirement if they have completed with a grade of C or better two UC-transferable college courses in English composition. Students meet with their faculty member in a seminar, attend regular lecture/performances, and participate in writing groups, advising, and other sessions that introduce some of the academic issues they will confront at the university. The course emphasizes critical reading, writing, and close intellectual contact with faculty and other students.

The college also offers 2-credit courses in a variety of areas connected to the arts. These are small classes in the practice or theory of the arts; they may include investigation of a particular style of music or dance, visits to Bay Area theaters and museums, working in the arts, or creation of a show in one of the college galleries. These diverse offerings allow Porter students to understand the significance of creativity in a university education.

The college provides fellowship funds each year to talented students pursuing original research and creative projects.

College Community and Facilities

The traditional residence halls and apartments play an important role in bringing the college community together. Students are encouraged to spend their beginning years in residence in the college, where housing is available for 845 students. The residence halls are divided into smaller units, with from 20 to 35 students sharing common lounges and other facilities. Theme halls include Performing Arts, Film and Digital Media, Gender Studies, Visual Arts, and Outdoors Experiences. Students also have a choice of quiet/intensive study, same gender, or substance-free halls. The six-person apartments are reserved for upper-division students.

In addition to traditional classrooms, Porter has many specialized facilities such as a fireside lounge, student galleries, and a dining hall that converts to a theater space. The Arts Instructional Computing Laboratories, located at Porter College, consist of two high-end labs oriented toward the arts (see page 57). Porter also has a study center with an adjoining computer lab for Porter students only. This lab has eight workstations for word processing, graphics production, Internet capabilities, and printing.

Adjacent to the college are the campus's Theater Arts Center (see the Theater Arts program description section), the Elena Baskin Visual Arts Center (see the Art program description section), and the Music Center (see the Music program description section).

Porter provides constructive opportunities for relaxation and recreation to balance the intellectual demands of a university education. The Porter Activities Office, in conjunction with the Porter Student Senate, organizes formal and informal events, including dances and recreational activities, which augment campuswide activities in these areas. For relaxing, Porter students and faculty gather at the college's coffeehouse—the Hungry Slug.

Many students and faculty perform or exhibit their work at Porter, and cultural events are a constant feature of life at the college. The dining commons has been the site of performances by artists such as *El Teatro Campesino*, lectures and readings by contemporary authors such as Amiri Baraka, and performances by artists such as Komar & Melamid and Nina Wise.

Porter College facilities were constructed through a partnership of public funds and a gift from the Porter-Sesnon family of Santa Cruz. Part of the gift was used to establish an endowment for the college.

For more information, call (831) 459-2273 or visit the web site: www2.ucsc.edu/porter.

Oakes College

Oakes was founded in 1972 to provide high-quality education to students from diverse cultural and social backgrounds. Students, staff, and faculty associated with the college believe that learning takes place not only in the classroom but also in residential settings. For that reason, they work hard to create a multicultural community whose members strive together toward certain universal goals—including equal access to educational opportunity and freedom from oppression—while simultaneously affirming and celebrating some of the distinctive aspects of the different backgrounds from which they come.

Academic Emphases

Oakes faculty members represent a variety of disciplines in the humanities, social sciences, and physical and biological sciences. Since its founding, Oakes has made a special effort to provide academic programs and experiences for underrepresented groups, including women. These programs and experiences are enriched by the presence of core faculty from disciplines housed in

the college: American studies, American literature, writing, world literature, and history of consciousness. Oakes graduates have gone on to successful careers in fields such as medicine, law, education, medical research, and community service.

The Oakes core course 80, Values and Change in a Diverse Society, is required of all first-year students. The course is writing intensive and examines individual and collective responses to issues of culture, gender, sexuality, race, and class. (See the Oakes College Course Descriptions section for a description of the course.) Students admitted as lower-division transfer students who prior to enrolling have completed at least one UC-transferable college English composition course with a minimum grade of C (2.0) or better are exempt from the core course requirement.

Students at Oakes are challenged in many ways. Not only do they have the opportunity to live and work with people from different backgrounds, but they are also expected to demonstrate academic excellence in their chosen fields of study. To enable all students to to succeed academically in a variety of services are available:

- The Learning Center at Oakes College serves as a location for study groups as well as tutoring and advising programs. Special assistance in writing and tutoring in a variety of subjects is offered to Oakes students and EOP students.
- The Oakes Computer Lab provides access to 20 PC computers for Oakes students.
- Oakes 77, Exploring Opportunities for Social Justice Fieldwork provides students with the
 opportunity to work with a variety of community service organizations. All Oakes students
 are encouraged to contribute service to public agencies, schools, and community
 organizations in the city of Santa Cruz and in economically deprived areas of Santa Cruz
 and Monterey Counties. Oakes students serve as tutors, teachers, mentors, and community
 builders. Academic credit is available through the Oakes community service course.
- Student services at Oakes include academic advising and psychological counseling.

College Community and Facilities

Oakes College, located on the west side of the UCSC campus, commands a sweeping view of Monterey Bay. Students may choose between apartment and residence hall living. The residence halls have lounges on each floor, attractive courtyards, and views of the ocean and the city of Santa Cruz. Students can also share an apartment-style living space, which includes a common living area and small kitchen. All students participate in a university meal plan. Residence halls are coed and provide space for students in double and single rooms. Restroom facilities for each gender are located on each floor.

Full-time coordinators for residential education and neighborhood assistants help residents develop cooperative ways of living together. As one student put it, "Oakes is a community where people of many different colors, backgrounds, interests, and goals form a friendly neighborhood. We share our cultures and adapt to the different lifestyles of our neighbors." The residential program is designed to assist all students in integrating their academic and social needs. The residential staff hosts activities such as brunches, study breaks, and block dinners, each with a different theme and often reflecting the various cultures represented by Oakes students. Other events include College Night programs in the dining hall, celebrations of cultural traditions such as Kwanzaa and Dia de los Muertos, an annual Harvest Dinner for the Oakes community, a Valentine's Day party, and a spring block party.

The college staff seeks to nurture and sustain a community in which mutual respect, understanding, and concern for others are the norm. Within that atmosphere of community expectations, students are also supported and encouraged to find room for their own creative personal expression.

The other physical facilities at Oakes further support the special programs of the college and provide recreational opportunities for the students. College facilities include the Learning Center; a multipurpose room for lectures, movies, and small theater productions; a college library; a dining facility shared with College Eight; TV lounges in the residences and adjacent to the Oakes Café; and a small basketball court, the "Underdome." Additional recreational facilities located close to the college include tennis courts, a large soccer field, and an indoor basketball court.

A grant from the San Francisco Foundation—from Roscoe and Margaret Oakes Foundation funds—was used in partnership with public funds for the construction of Oakes. Part of the grant was used to establish an endowed fund for the college.

For further information, call (831) 459-2558 or visit the web site: oakes.ucsc.edu.

College Eight

The theme of College Eight—Environment and Society—is concern for social, political, scientific, and ethical issues, recognizing the essential interconnections among human beings and between humans and all other forms of life. College Eight faculty are drawn primarily from the Environmental Studies, Sociology, and Community Studies Depart-ments, but also include faculty from other disciplines, such as Biology, Computer Engineer-ing, Computer Science, Earth Sciences, Mathematics, Physics, and Psychology.

The students who come to College Eight bring with them a wide variety of life, work, and educational experiences. They represent all the disciplines in their choices of major. They also represent a rich diversity of cultural backgrounds. A large number of transfer students attend College Eight and tend to have a clear sense of their educational and professional objectives. For first-year students, the college fosters an exciting, interdisciplinary intellectual atmosphere in which to explore their academic interests and potential. This mix of ages and backgrounds creates a refreshingly easy fellowship among faculty, staff, and students.

Academic Emphases

The College Eight core course 80, Environment and Society, examines different perspectives on environment and community in the contemporary world. (See the College Eight Course Descriptions section for the course description.) Through a series of lectures, films, readings, and small-group discussions, the course provides an opportunity for first-year students to study issues of vital importance and to share their diverse backgrounds, cultural heritage, and points of view. The course, which is required of all first-year students, features guidance and practice in the critical reading and writing skills necessary for successful study at the university level. Students admitted as lower-division transfer students who prior to enrolling have completed at least one UC-transferable college English composition course with a minimum grade of C (2.0) or better are exempt from the core course requirement.

College Eight students and faculty are encouraged to develop courses, conferences, and field projects. Internships and field studies offer an opportunity to link classroom theory with action in the community.

College Community and Facilities

College Eight is located on a sunny, terraced hillside on the west side of the UCSC campus, a site that offers a spectacular view of Monterey Bay and the California coastline. The college is designed to encourage interaction among resident and commuter students, faculty, and staff. Outdoor spaces allow for relaxing and informal opportunities to converse and socialize; they include small residence hall patios, grass quadrangles, and a large plaza—the heart of the college—where pedestrian traffic converges. Adjacent to the college are recreational facilities including the West Field House, tennis courts, basketball and sand volleyball courts, and playing fields. The Theater Arts and Music Centers, McHenry Library, and Porter and Oakes Colleges are a short distance from the college.

College Eight's facilities include an academic building that accommodates the college office, the Sociology and Community Studies Departments and associated research centers, a computer lab with printers, five classrooms, and faculty offices.

Approximately 390 students live in a community of two- and three-story residence halls with single and double rooms and suites. The residence halls include designated study lounges, laundry facilities, and lobbies that serve as living rooms—favorite places where residents gather to relax, watch television, and catch up on the news of the day. Another 260 students are housed in College Eight's two-, three-, and four-bedroom apartments, which are generally reserved for students at the sophomore level and above.

The college's enthusiastic residential staff is composed of coordinators for residential education, who are full-time live-in professionals, along with undergraduate resident assistants. The residential staff plans a variety of educational and recreational events including community barbecues, outdoor movies, and a quarterly cultural festival celebrating the diversity of our community. More intimate gatherings include study breaks, coffee talks, brunches, and potlucks.

The residential staff is available to ease the transition to college life, making the college a comfortable new home for our residents.

The Student Commons building contains the office of College Eight's college programs coordinator and a large meeting room for student use. The study center is located across the plaza. The lively College Eight Café features a pool table and a quiet, comfortable corner with couches. The café is a favorite haven and gathering place for students, faculty, staff, and other members of the campus community.

The College Eight Student Programs Office, in conjunction with the student government and student organizations, plans social, multicultural, and educational events for the college community. Weekly Café Nights—featuring open mikes, music, art shows, and guest speakers—accommodate the diverse spectra of cultural and artistic interests of the students. College Night, a monthly cultural event, provides an opportunity for students to learn about a variety of cultures through entertainment and delicious cuisine. In addition, the College Eight Student Programs Office works closely with the Student Environmental Center to bring programs that educate and build long-lasting networks, which aim to address the environmental issues affecting our world today.

Above all, College Eight seeks to create a community of inclusion, in which each person is encouraged to share and explore beliefs, worldviews, values, and ideas in an atmosphere of mutual support and trust.

For more information, contact the college at (831) 459-2361, e-mail 8housing@ucsc.edu or crmeusel@ucsc.edu, or visit the web site: www2.ucsc.edu/eight/.

College Nine

Service Learning

Students can extend their learning beyond the classroom by getting practical experience and course credit working as an intern for a community or business organization. This type of practical experience is known as service learning or field study. Examples include assisting in a classroom or at a homeless shelter. College Nine has its own service-learning program. The service-learning supervisor guides the student at the practicum site and helps the student develop a reading list and paper topic related to the placement.

College Ten

Service Learning

Students can extend their learning beyond the classroom by volunteering for a local nonprofit or school in the community for credit . This type of hands-on experience is known as service learning or field study. Examples include assisting in a classroom or at a homeless shelter. College Ten has its own service-learning program. The service-learning supervisor teaches a class in which students meet weekly to reflect upon their experiences, discuss readings, and listen to speakers from the community. To culminate the service experience, students develop a final project related to civic engagement. Other service-learning opportunities include Praxis—a service-learning organization—and a serivce-learning trip to Mexico for alternative spring break.

Cowell College

Cowell College inaugurated the Santa Cruz campus when it opened with a pioneer class of 600 students in 1965. The founding faculty shaped an educational program that challenged and enriched students through wide-ranging inquiry and disciplined study. Today, Cowell has nearly 1,500 affiliated students and 90 100 faculty fellows. Its motto—The Pursuit of Truth in the Company of Friends—expresses a continuing commitment to create a serious academic environment within a humane and broadly inclusive community. The college is named for the S. H. Cowell Foundation, which endowed the college at its founding.

Academic Emphases

The academic theme of the college encourages students to pursue their general and disciplinary study with attention to the values of liberal arts education: understanding one's individual perspective by exploration of its historical background and world context. Students affiliated with the college pursue majors from all departments on campus.

The faculty fellows affiliated with the college represent all academic divisions (arts, engineering, humanities, physical and biological sciences, and social sciences). The faculty fellows guide the college academic programs and serve as academic mentors to the students, supplementing the advising provided by the college academic advisers and departmental advising.

The Cowell core course is required of all first-year students and many transfer students during the first fall quarter they spend at UCSC. Students admitted as lower-division transfer students who prior to enrolling have completed at least one UC-transferable college English composition course with a minimum grade of C (2.0) or better are exempt from the core course requirement. The core course (Cowell 80), taught in small seminar sections, seeks to develop critical reading, analytical writing, and seminar discussion skills by reading a selection of classic and contemporary texts.

In satisfying their general education requirements, first-year Cowell students are required to take the Cowell Core Course in the fall term. The core course (Cowell 80), taught in small seminar sections, seeks to develop critical reading, analytical writing, and seminar discussion skills by reading a selection of classic and contemporary texts.

The college academic buildings house humanities faculty, with notable concentrations in philosophy, classics (study of ancient Greek and Latin language and civilization), and modern foreign languages, especially Chinese, French, Italian, and Japanese. The interdisciplinary faculty group in pre- and early modern studies is centered at Cowell College.

Students who develop ideas for research, creative projects, community service, or internship experiences may apply to the college provost for financial support. The college sponsors prizes for outstanding academic work and acknowledges students who graduate with overall academic excellence in a breadth of study with College Honors.

The college enriches the intellectual and cultural life of the campus by sponsoring events of various kinds: lectures and presentations by local faculty and visiting scholars, theatrical and musical performances, and forums and debates on topics of current interest.

Crown College

Crown College faculty (the college fellows) and students represent a wide variety of academic disciplines. The majority of fellows the faculty are in the physical and biological sciences and the social sciences. There are more science and engineering students at Crown than at any other college. However, the majority of Crown students major in the social sciences, humanities, and arts. Although Crown has more science and engineering students than any of the other colleges, the majority of Crown's students major in the social sciences, humanities, and arts. This diversity of interests and thinking enriches our intellectual environment.

An important goal of the college is to foster an appreciation for the contributions of diverse cultural groups and to provide an atmosphere in which issues of both diversity and common social purpose are integrated into a wide range of programs and discussions.

From the time of its founding in 1967, issues pertaining to the role of science and technology in society have been a focus of special interest at Crown College. Recently, we have approached these issues from an interdisciplinary perspective that recognizes the influence of social and cultural factors on scientific enterprise, as well as the ways in which science and technology influence society.

Crown is located on a hilltop surrounded by a redwood forest. The core buildings consist of an administration office, dining commons, lounge spaces, recreation facilities, study spaces, faculty offices, and classrooms built around a large patio and central fountain. The award-winning architecture with its white walls and high-pitched tiled roofs suggests a hillside Mediterranean village. The college's residential facilities are made up of eight traditional residence hall buildings and eight apartment buildings housing approximately 700 students. The facilities at Crown College were built through a partnership of public funds and a gift from the Crown Zellerbach Foundation.

Academic Emphases

From the time of its founding in 1967, issues pertaining to the role of science and technology in society have been a focus of special interest at Crown College. Recently, we have approached We approach these issues from an interdisciplinary perspective that recognizes the influence of social and cultural factors on scientific enterprise, as well as the ways in which science and technology influence society.

The Crown College core course, Crown 80, Ethical Issues in Emerging Technologies: Transgenics, Clones, Cyborgs, and Artificial Intelligence is an interdisciplinary seminar concerning the effects of these world-changing technologies and encourages students to develop decision-making strategies to ethically steer these technologies. The course examines these debates the impacts of these technologies on society using a variety of disciplinary approaches that engage the perspectives of both humanists and scientists. The fall quarter core course is required of all first-year-nontransfer students and many transfer students during their first quarter at UCSC. Students admitted as lower-division transfer students who prior to enrolling have completed at least one UC-transferable college English composition course with a minimum grade of C (2.0) or better are exempt from the core course requirement. As with the core courses from our sister colleges, the development of critical reading and writing skills is a major thrust of Crown 80. (See the Crown College Course Descriptions section for a full description.)

The Crown-Merrill Science and Technology Learning Community is an innovative program to support first-year students who are interested in pursuing a major in the sciences. Students

enrolled in this program live together, forming a supportive community that promotes collaborative learning and group problem solving. To facilitate this process, students are placed in a special section of Chemistry 1A and participate in a residentially based study group. The program is designed especially for students who have a strong interest in the sciences but feel slightly underprepared for university-level course work. It often acts as a bridge to the ACE Program in the physical and biological sciences and engineering (see the Academic Excellence Program section). Participation—limited to first-year students at Crown and Merrill Colleges—requires a commitment to succeed, a willingness to work hard, and a positive attitude.

The Crown *Undergraduate Seminar in Science, Technology, and Society* provides highly motivated students the opportunity to work closely with ladder-rank research faculty in a small seminar environment. Topics have included California Climate Change: Past, Present, and Future; Food Matters: Science, Technology, and Society; and an honors seminar on introductory computer architecture.

Juniors and seniors can participate in the college's new Undergraduate Research Fellowship Program, which awards \$800 fellowships to student-faculty teams and encourages their interaction through undergraduate research.

Porter College

The Porter College theme, Arts in a Multicultural Society, reflects the consensus among Porter College fellows that the creative process is an inseparable aspect of a broad-minded and rigorous education. The seminars, co-curricular activities, and cultural environment at Porter encourage creativity in all fields—from composition to community studies to computer programming.

Academic Emphases

Porter's faculty includes most of the campus's practicing artists and art scholars, though some of the college's faculty (and half of its students) specialize in the humanities or in the physical and biological or social sciences. The college is the administrative home of the Division of the Arts and the History of Art and Visual Culture Department. The Institute for Humanities Research Digital Arts and New Media Program also has offices here.

Porter 80, the core course (see the Porter College Course Descriptions section) focuses on writing across the arts, with concentration on literature and arts of California and the Pacific Rim. Students admitted as lower-division transfer students who prior to enrolling have completed at least one UC-transferable college English composition course with a minimum grade of C (2.0) or better are exempt from the core course requirement. Students admitted as transfer applicants are exempt from the college graduation requirement if they have completed with a grade of C or better two UC-transferable college courses in English composition. Students meet with their faculty member in a seminar, attend regular lecture/performances, and participate in writing groups, advising, and other sessions that introduce some of the academic issues they will confront at the university. The course emphasizes critical reading, writing, and close intellectual contact with faculty and other students.

The college also offers 2-credit courses in a variety of areas connected to the arts. These are small classes in the practice or theory of the arts; they may include investigation of a particular style of music or dance, visits to Bay Area theaters and museums, working in the arts, or creation

of a show in one of the college galleries. These diverse offerings allow Porter students to understand the significance of creativity in a university education.

The college provides fellowship funds each year to talented students pursuing original research and creative projects.

College Community and Facilities

The traditional residence halls and apartments play an important role in bringing the college community together. Students are encouraged to spend their beginning years in residence in the college, where housing is available for 845 students. The residence halls are divided into smaller units, with from 20 to 35 15 to 40 students sharing common lounges and other facilities. Theme halls include Performing Arts, Film and Digital Media, Gender Studies, Visual Arts, and Outdoors Experiences. Students also have a choice of quiet/intensive study, same gender, or substance-free halls. The six-person apartments are reserved for upper-division students.

In addition to traditional classrooms, Porter has many specialized facilities such as a fireside lounge, darkroom, student galleries, and a dining hall that converts to a theater space. The Arts Instructional Computing Laboratories, located at Porter College, consist of two high-end labs oriented toward the arts (see page 57). Porter also has a study center with an adjoining computer lab for Porter students only. This lab has eight workstations for word processing, graphics production, Internet capabilities, and printing.

Adjacent to the college are the campus's Theater Arts Center (see the Theater Arts program description section), the Elena Baskin Visual Arts Center (see the Art program description section), and the Music Center (see the Music program description section).

Porter provides constructive opportunities for relaxation and recreation to balance the intellectual demands of a university education. The Student Porter Activities Office, in conjunction with the Porter Student Senate, organizes formal and informal events, including dances and recreational activities, which augment campuswide activities in these areas. For relaxing, Porter students and faculty gather at the college's coffeehouse—the Hungry Slug.

Many students and faculty perform or exhibit their work at Porter, and cultural events are a constant feature of life at the college. The dining commons has been the site of performances by artists such as *El Teatro Campesino*, lectures and readings by contemporary authors such as Amiri Baraka, and performances by artists such as Komar & Melamid and Nina Wise.

Porter College facilities were constructed through a partnership of public funds and a gift from the Porter-Sesnon family of Santa Cruz. Part of the gift was used to establish an endowment for the college.

For more information, call (831) 459-2273 or visit the web site: www2.ucsc.edu/porter.

Oakes College

Oakes was founded in 1972 to provide high-quality education to students from diverse cultural and social backgrounds. Students, staff, and faculty associated with the college believe that learning takes place not only in the classroom but also in residential settings. For that reason, they work hard to create a multicultural community whose members strive together toward certain universal goals—including equal access to educational opportunity and freedom from oppression—while simultaneously affirming and celebrating some of the distinctive aspects of the different backgrounds from which they come.

Academic Emphases

Oakes faculty members represent a variety of disciplines in the humanities, social sciences, and physical and biological sciences. Since its founding, Oakes has made a special effort to provide academic programs and experiences for underrepresented groups, including women. These programs and experiences are enriched by the presence of core faculty from disciplines housed in the college: American studies, American literature, writing, world literature, and history of consciousness. Oakes graduates have gone on to successful careers in fields such as medicine, law, education, medical research, and community service.

The Oakes core course 80, Values and Change in a Diverse Society, is required of all first-year students. The course is writing intensive and examines individual and collective responses to issues of culture, gender, sexuality, race, and class. (See the Oakes College Course Descriptions section for a description of the course.) Students admitted as lower-division transfer students who prior to enrolling have completed at least one UC-transferable college English composition course with a minimum grade of C (2.0) or better are exempt from the core course requirement.

Students at Oakes are challenged in many ways. Not only do they have the opportunity to live and work with people from different backgrounds, but they are also expected to demonstrate academic excellence in their chosen fields of study. To enable all students to do well—regardless of their level of high school preparation to succeed academically in a variety of services are available:

- The Learning Center at Oakes College offers serves as a location for study center groups as well as tutoring and advising programs. Special assistance in writing and tutoring in a variety of subjects is offered to Oakes students and EOP students.
- The Oakes Computer Lab provides access to 20 PC computers for Oakes students.
- Oakes Community Service
 - 77, Exploring Opportunities for Social Justice Fieldwork provides students with information about and assistance in making contact the opportunity to work with a wide-variety of community service organizations. All Oakes students are encouraged to contribute service to public agencies, schools, and community organizations in the city of Santa Cruz and in economically deprived areas of Santa Cruz and Monterey Counties.
 Oakes students serve as tutors, teachers, mentors, and community builders. Academic credit is available through the Oakes community service course.
- Academic and psychological counselors work with students to help them overcome
 obstacles to learning and realize their full potential Student services at Oakes include
 academic advising and psychological counseling.

College Community and Facilities

Oakes College, located on the west side of the UCSC campus, commands a sweeping view of Monterey Bay. Students may choose between apartment and residence hall living. The residence halls have lounges on each floor, attractive courtyards, and views of the ocean and the city of Santa Cruz. The college's residence halls and apartments are arranged into "blocks." Five students share an apartment, along with the responsibilities for maintaining it and cooking their own meals. Students can also share an apartment-style living space, which includes a common living area and small kitchen. All students participate in a university meal plan. Residence halls are coed and provide space for students in double and single rooms. Restroom facilities for each gender are located on each floor.

Full-time coordinators for residential education and neighborhood assistants help residents develop cooperative ways of living together. As one student put it, "Oakes is a community where people of many different colors, backgrounds, interests, and goals form a friendly neighborhood. We share our cultures and adapt to the different lifestyles of our neighbors." The residential program is designed to assist all students in integrating their academic and social needs. The residential staff hosts activities such as brunches, study breaks, and block dinners, each with a different theme and often reflecting the various cultures represented by Oakes students. Other events include College Night programs in the dining hall, celebrations of cultural traditions such as Kwanzaa and Dia de los Muertos, an annual Harvest Dinner for the Oakes community, a Valentine's Day party, and a

spring block party.

The college staff seeks to nurture and sustain a community in which mutual respect, understanding, and concern for others are the norm. Within that atmosphere of community expectations, students are also supported and encouraged to find room for their own creative personal expression.

The other physical facilities at Oakes further support the special programs of the college and provide recreational opportunities for the students. College facilities include the Learning Center; a multipurpose room for lectures, movies, and small theater productions; a college library; a lounge used for college dinners and meetings; a dining facility shared with College Eight; TV lounges in the residences and adjacent to the coffee shop Oakes Café; and a small basketball court, the "Underdome." Additional recreational facilities located close to the college include tennis courts, a large soccer field, and an indoor basketball court.

A grant from the San Francisco Foundation—from Roscoe and Margaret Oakes Foundation funds—was used in partnership with public funds for the construction of Oakes. Part of the grant was used to establish an endowed fund for the college.

For further information, call (831) 459-2558 or visit the web site: oakes.ucsc.edu.

College Ten

Service Learning

Students can extend their learning beyond the classroom by getting practical experience and course credit working as an intern-volunteering for a community or business organization local nonprofit or school in the community for credit. This type of practical hands-on experience is known as service learning or field study. Examples include assisting in a classroom or at a homeless shelter. College Ten has its own service-learning program. The service-learning supervisor guides the student at the practicum site and helps the student develop a reading list and paper topic related to the placement. The service-learning supervisor teaches a class in which students meet weekly to reflect upon their experiences, discuss readings, and listen to speakers from the community. To culminate the service experience, students develop a final project related to civic engagement. Other service-learning opportunities include Praxis—a service-learning organization—and a serivce-learning trip to Mexico for alternative spring break.

Changes to 2006-08 Catalog Highlighted | Faculty | Course Descriptions

Program Description

The American studies program is committed to a self-critical and historically grounded examination of the United States and its diverse people, viewed within a local and global context. The major is designed to be comparative along a number of axes. First, it is an interdisciplinary project, drawing on a mix of methodological and theoretical approaches. Second, it compares the United States with other imperial enterprises and states. And third, it compares different social groups and identities in historical context. The program aims to help students develop critical thinking, research, and writing skills so that they will be able to function effectively in an everchanging, complicated, and culturally diverse world.

Students will take courses and work closely with faculty who are committed to interdisciplinary, multicultural, and transnational work and who include these interlocking themes in their courses: (1) *Political Culture and Economy* addresses the ways in which global capitalism structures everyday life and life chances in the United States; (2) *Comparative Race, Ethnicity, and Diaspora Studies* features research concerning the myriad relations among different racial, ethnic, and diasporic groups; and (3) *Cultural Representations and Practices* support research into the history, aesthetics, and politics of different cultural forms, including music, visual culture, literature, film, mass media, popular culture, and vernacular performance.

Because of their broad-based exposure to the United States, collective learning experience, and ability to focus on topics of particular interest to them, American studies students find the major a useful preparation for careers in education, law, journalism, social work, community organizing, business, and government. The major also offers an excellent liberal education for students interested in exploring their responsibilities and opportunities as American citizens. Students who intend to go on to graduate school, whether in American studies or another discipline, should determine an appropriate selection of courses with their American studies faculty adviser.

Requirements for the Major

Students wishing to pursue a major in American studies must submit a proposed study plan specifying courses of study that satisfy the requirements for the major in a coherent manner and, at the same time, enable efficient pursuit of their particular interests. The study plan must be approved by the American Studies Department before the student is formally accepted into the major. Students are urged to submit their study plan no later than the third quarter of their sophomore year or, in the case of transfer students, no later than the first quarter of their junior year. Forms and information about the major are available from the American Studies Department office in Oakes 231.

Upon acceptance to the major, each student should meet first with the departmental staff adviser and then a faculty adviser from the department. Through periodic conferences with these advisers, students can make appropriate revisions in their major plans and decide on the best way to fulfill the comprehensive requirement.

Course Requirements

To graduate with a major in American studies, a student is required to complete 12 courses with the approval of the department:

- one lower-division course chosen from 1 or 2;
- one lower-division course chosen from the AMST 80 series;
- nine upper-division courses chosen from 100–189. Two courses outside the program that
 are integrated and related to American studies may be used to meet this requirement:
 e.g., two language courses in the same language at level 4 or above or two Education
 Abroad Program (EAP) courses or two upper-division courses in the same department or

- two upper-division courses in an area of U.S. ethnic study or 10 credits of fieldwork or internship;
- one senior seminar from the 190 series to fulfill the comprehensive exit requirement in the major; students may petition to complete a senior thesis project or teach a senior-directed seminar in lieu of taking the senior seminar.

Graduate Studies

Graduate students in the Literature and History of Consciousness Departments may work toward a parenthetical annotation in American studies on their Ph.D. degree documents. Students in other departments must initiate the request through their home departments. Guidelines and application forms are available in the American Studies Department office in Oakes 231. The following are required for the annotation:

- a designated graduate adviser who is a faculty member of the American Studies
 Department and who will serve on the student's qualifying examination or dissertation
 committee;
- submission of a significant piece of scholarly writing in the area of American studies;
- five graduate courses in American studies selected from relevant offerings of any UCSC department or program, with at least three courses taught by faculty members of the American Studies Department;
- teaching experience as a teaching assistant or instructor in an American studies course.

Plans are currently underway to launch an interdivisional doctoral program in comparative United States studies (CUSSP). Enrollment in the program is projected for fall 2008 or 2009.

Program Description | Faculty | Course Descriptions

Program Description

The American studies program is committed to a self-critical and historically grounded examination of the United States and its diverse people, viewed within a local and global context. The major is designed to be comparative along a number of axes. First, it is an interdisciplinary project, drawing on a mix of methodological and theoretical approaches. Second, it compares the United States with other imperial enterprises and states. And third, it compares different social groups and identities in historical context. The program aims to help students develop critical thinking, research, and writing skills so that they will be able to function effectively in an ever-changing, complicated, and culturally diverse world.

Students will take courses and work closely with faculty who are committed to interdisciplinary, multicultural, and transnational work and who include these interlocking themes in their courses: (1) *Political Culture and Economy* addresses the ways in which global capitalism and the state structures everyday life and life chances in the United States and elsewhere; (2) *Comparative Race, Ethnicity, and Diaspora Studies* features research concerning the myriad relations among different racial, ethnic, and diasporic groups; and (3) *Cultural Representations and Practices* support research into the history, aesthetics, and politics of different cultural forms, including music, visual culture, literature, film, mass media, popular culture, and vernacular performance.

Because of their broad-based exposure to the <u>study of the</u> United States, collective learning experience, and ability to focus on topics of particular interest to them, American studies students find the major a useful preparation for careers in education, law, journalism, social work, community organizing, business, and government. The major also offers an excellent liberal education for students interested in exploring their responsibilities and opportunities as American citizens. Students who intend to go on to graduate school, whether in American studies or another discipline, should determine an appropriate selection of courses with their American studies faculty adviser.

Requirements for the Major

Students wishing to pursue a major in American studies must submit a proposed study plan specifying courses of study that satisfy the requirements for the major in a coherent manner and, at the same time, enable efficient pursuit of their particular interests. The study plan must be approved by the American Studies Department before the student is formally accepted into the major. Students are urged to submit their study plan no later than the third quarter of their sophomore year or, in the case of transfer students, no later than the first quarter of their junior year. Forms and information about the major are available from the American Studies Department office in Oakes 231.

Upon acceptance to the major, each student should meet first with the departmental

staff adviser and then a faculty adviser from the department. Through periodic conferences with these advisers, students can make appropriate revisions in their major plans and decide on the best way to fulfill the comprehensive requirement.

Course Requirements

To graduate with a major in American studies, a student is required to complete 12 courses with the approval of the department:

- one lower-division course chosen from 1 or 2;
- one lower-division course chosen from the <u>American Studies 100-159</u> American <u>Studies 80 series</u>;
- Seven nine upper-division courses chosen from 100–189. Two courses outside the program that are integrated and related to American studies may be used to meet this requirement: e.g., two language courses in the same language at level 4 or above or two Education Abroad Program (EAP) courses or two upper-division courses in the same department or two upper-division courses in an area of U.S. ethnic study or 10 credits of fieldwork or internship.
- one senior seminar from the 190 series to fulfill the comprehensive exit requirement in the major; students may petition to complete a senior thesis project or teach a senior-directed seminar in lieu of taking the senior seminar.

Graduate Studies

Graduate students in the <u>Literature</u> and <u>History of Consciousness</u> Departments may work toward a parenthetical annotation in American studies on their Ph.D. degree documents. Students in other departments must initiate the request through their home departments. Guidelines and application forms are available in the American Studies Department office in Oakes 231. The following are required for the annotation:

- a designated graduate adviser who is a faculty member of the American Studies Department and who will serve on the student's qualifying examination and/or dissertation committee;
- submission of a significant piece of scholarly writing in the area of American studies;
- five graduate courses in American studies or the equivalent selected from relevant offerings of any UCSC department or program, with at least three courses taught by faculty members of the American Studies Department;
- teaching experience as a teaching assistant or instructor in an American studies course.

Plans are currently underway to launch an interdivisional doctoral program in comparative United States studies (CUSSP) in the future.

American Studies

Program Description | Course Descriptions

Faculty and Professional Interests

Michael H. Cowan, Professor, American Studies

American cultural theory and history, history of American studies, symbolic expression in American life, urban cultural studies, American literary studies, studies in the institutional culture of higher education

John Dizikes, Professor Emeritus, American Studies

A Y. Huginnie, Assistant Professor, American Studies

Race and class relations within western American history, U.S. labor and immigration history, and comparative ethnic studies

Ann M. Lane, Emerita, American Studies

Kimberly J. Lau, Associate Professor

Feminism, discourse, and power; feminist theory; discourse, analysis, and ethographic methods; folklore and narrative; globalization

Amy Lonetree, Assistant Professor, American Studies

Indigenous history, museum studies, memory and American history, Native American cultural production, public history, and Ho-Chunk tribal history

George Lipsitz, Professor, American Studies

Race, culture, and social identities; 20th-century U.S. history; urban history and culture; and social movements

Eric C. Porter, Associate Professor, American Studies

Black cultural and intellectual history; U.S. cultural history and cultural studies; comparative ethnic studies; popular music and jazz studies; race, science, and technology

Catherine S. Ramirez, Assistant Professor, American Studies

Chicana and U.S. Latino literature, culture, and history; gender studies and feminist theory; visual culture and style politics; cultural studies; popular and urban youth cultures; speculative fiction, Afrofuturism, and Chicanafuturism; science, technology, race, and gender; theories and methods of American studies

Renya K. Ramirez, Assistant Professor, American Studies

Native American studies, Indian identity, Native Americans and anthropology, urban Indians, Native American women, cultural citizenship, expressive culture, and anti-racist education

Forrest G. Robinson, Professor, American Studies

Nineteenth- and 20th-century American literature, including Mark Twain, the American West, and popular culture; biography and American culture theory

Patricia L. Rose, Professor, American Studies

Twentieth-century African American culture, urban history, cultural politics, race and gender theory, race and sexuality

Judith Yung, Professor Emerita, American Studies

David H. Anthony, Associate Professor, History

African and African American history, art, music, literature, and cinema; eastern and southern Africa; African languages; Indian Ocean world; African and African American linkages; Islamic civilization; African diaspora studies; world history

Robert F. Berkhofer, Professor Emeritus, History

Michael K. Brown, Professor, Politics

Inequality, race and African American politics, political economy, political development of welfare states, theories and methods of historical social science

David T. Brundage, Associate Professor, Community Studies

American working-class and immigration history, history of U.S. social movements, Irish history and politics

Pedro G. Castillo, Associate Professor, History; Provost, Oakes College

Chicano/a history and culture; American social and urban history; race, class, and gender in California history, immigration history, Latina/os in the U.S.

John B. Childs, Professor, Sociology

Ethnic conflict and transcommunal cooperation; sociology of knowledge; African American, Native American, Latino interactions

Angela Y. Davis, Professor, History of Consciousness

Feminism, African American studies, critical theory, popular music culture and social consciousness, philosophy of punishment (women's jails and prisons)

Barbara L. Epstein, Professor, History of Consciousness

Social movements and theories of social movements, 20th-century U.S. politics and culture, Marxism and related theories of social change

Susan Gillman, Professor, American Literature

Nineteenth-century American literature and culture; theories of culture, race, and gender; world literature and cultural studies

Herman S. Gray, Professor, Sociology

Cultural studies, media and television studies, black cultural politics, social theory

Kirsten S. Gruesz, Associate Professor, Literature

Comparative Americas studies, Chicano/Latino literatures and cultures, 19th-century U.S. literature, poetry and translation, genre theory

Lisbeth Haas, Associate Professor, History

U.S.-Mexico borderlands, Chicano and Native American history; visual culture in the colonial Americas; the U.S. West and California; historical memory, theory, and historical methodology

Judith A. Habicht Mauche, Professor, Anthropology

Precontact and early contact North American cross-cultural interaction and trade; ceramic technology; archaeology of gender, power, and identity; Southwest and Southern Plains

Susan F. Harding, Professor, Anthropology

Culture, politics, narrative, gender, local/global studies, ethnographic writing, fundamentalism, Christianity, state-making, aging, America, and Spain

Nathaniel E. Mackey, Professor, Literature

Twentieth-century American literature, Afro-American literature, creative writing

Olga Najera Ramirez, Professor, Anthropology

Folklore theory, ritual, festival, dance, greater Mexican culture, history and folklore, transnationalism, identity; expressive culture, ethnomusicology, bilingual communication, gender, history, and culture of Latin America, the U.S., and Mexico

Triloki N. Pandey, Professor, Anthropology

Native peoples of North America, cultures of India, political anthropology, anthropological theories and comparisons

Mary B. Pudup, Associate Professor, Community Studies

Regional studies, economic justice, public policy, historical geography of the U.S.

Paul N. Skenazy, Emeritus

Contemporary U.S. fiction, popular culture (especially detective fiction), practical criticism and reviews, oral history, the teaching of literature, American writers abroad, journalism

Nancy E. Stoller, Professor, Community Studies

Race and gender aspects of health, the AIDS epidemic, community organizing, sexualities, and medicine in prisons

Dana Takagi, Professor, Sociology

Social inequality and identity, research methods, race relations, nationalism and social movements

Marilyn J. Westerkamp, Professor, History

British colonial and revolutionary America, early modern cultural and religious history, U.S. religious history, women's history, gender

Daniel J. Wirls, Professor, Politics

American politics, including national political institutions (Congress) and the President; public policy (military and foreign policy) and political history

Deborah Woo, Professor, Community Studies

Asian Americans and social change, glass ceilings and workplace discrimination, Asian American health, and mental health

Alice S. Yang-Murray, Associate Professor, History

Historical memory, Asian American history, gender history, race and ethnicity, 20th-century U.S., oral history

Patricia J. Zavella, Professor, Latin American and Latino Studies Relationship between women's work and domestic labor, poverty, family, sexuality and social networks, feminist studies, ethnographic research methods, and transnational migration of Mexicana/o workers and U.S. capital

American Studies

209 Humanities 1 (831) 459-4658 http://humwww.ucsc.edu

Program Description | Faculty

Lower-Division Courses

1. America and Americans. W,S

An introductory course to basic theories in American studies, including the U.S. in historical and transnational perspectives, social and cultural diversity and conflict in American life, and debates over concepts of national culture and citizenship. Satisfies American History and Institutions Requirement. (General Education Code(s): IH, E.) (W) G. Brahm, (S) A. Huginnie

2. California and Californians. F

Interdisciplinary examination of past and present California and its diverse peoples, with attention to regional, national, and global contexts. Addresses social, political, and cultural issues and considers representation of California life in literature and film. Satisfies American History and Institutions Requirement. (General Education Code(s): IH, E.) *F. Robinson*

42. Student-Directed Seminar. F,W,S

Seminars taught by upper-division students under faculty supervision. (See course 192.) *The Staff*

80E. U.S. Racial and Ethnic Histories and Formations. W,S

Introduces key concepts and debates in study of race and ethnicity in U.S. by focusing on a particular ethnoracial group (e.g., Native Americans, Mexican Americans, Asian Americans, African Americans) or by developing a comparative perspective. May be repeated for credit. (General Education Code(s): T5-Humanities and Arts or Social Sciences, E.) (F) The Staff, (W) R. Ramirez, (S) E. Porter

80F. Introduction to U.S. Popular Cultures. F,S

Introduces key concepts and debates in popular culture and media studies and discusses their importance in relation to American studies. Addresses these issues by examining films, television programs, musical recordings, fashion, and so on and the ways in which they are produced, distributed, marketed, and consumed. (General Education Code(s): T5-Humanities and Arts or Social Sciences.) (F) B. Carson, (S) G. Brahm

80G. Introduction to U.S. Political Cultures. F

Introduces key concepts and debates around topics such as political economy, nationalism, globalization, citizenship, class, and social movements and addresses their importance to American studies. Examines these issues through attention to political theory, social transformations, and cultural representations. (General Education Code(s): T5-Humanities and Arts or Social Sciences.) *G. Brahm*

93. Field Study. F.W.S

Various topics to be arranged. Students submit petition to sponsoring agency. May

be repeated for credit. The Staff

99. Tutorial. F,W,S

Various topics to be arranged. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses

100. Key Concepts in American Studies. F,W,S

Introduction to key American studies concepts, featuring the close scrutiny of a small selection of representative American studies texts, lectures by several American studies faculty, and careful attention to analytical writing. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to American studies majors. (General Education Code(s): W.) (F) F. Robinson, (W) K. Lau, (S) The Staff

101. Race and Ethnicity. W

A critical examination of sociological and historical literature on race/ethnic formations and relations in U.S. society within the socioeconomic and political contexts of capitalism and colonization. Concepts and theories are applied to contemporary issues of race and ethnic relations. Course 1 recommended as preparation. Enrollment restricted to American studies majors. Enrollment limited to 24. (General Education Code(s): E.) *A. Huginnie*

102A. Gender and U.S. Society. *

Introduction to the gendered analysis of U.S. society and culture from theoretical and historical perspectives. Particular attention given to the ways in which gender intersects with racial, ethnic, and class differences, focusing on the themes of work, politics, and sexuality. Course 1 is recommended prior to taking this course. *The Staff*

102B. Sexuality and Culture. *

Examines how aspects of sexuality (such as sexual identities, preferences, roles, and desires) are fundamentally shaped by social-cultural and psychological factors. Topics include gender formation, the social construction of sexuality, and the historical emergence of the modern "gay" and "lesbian" identity of the U.S. Recommended for senior American studies majors. *The Staff*

105A. Oral History. W

Study and application of the theories, methods, and ethical issues involved in the practice of oral history. Critical readings and writing exercises will culminate in a 20-page oral history project. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to American studies majors. Enrollment limited to 24. (General Education Code(s): W.) *K. Lau*

105B. Understanding "America" through Ethnography. S

Examines ethics and politics of ethnographic research and various methodologies. Students collect their own ethnographic data to be analyzed with relevant theory in a final capstone project. Enrollment restricted to senior American studies majors. Enrollment limited to 20. *R. Ramirez*

107A. U.S. Popular Culture: 1800–1918. *

A survey of major popular cultural forms and texts in the pre-WWI era including Minstrelsy, *Uncle Tom's Cabin*, P.T. Barnum, *Ramona*, *The Wizard of Oz*, and *Birth*

of a Nation, with attention to historical context and theory. F. Robinson

107B. U.S. Popular Culture: 1920-Present. *

Major popular cultural forms from the 1920s to the present. Topics include early "race" recordings; Depression radicalism; WWII entertainments; the Cold War; popular film genres; the 1970s and 1980s contemporary music (conjunto, jazz, rock, and rap). Particular attention to multicultural issues. Course 107A recommended. *E. Porter*

109A. Technology and American Culture. *

Assesses political conditions under which the U.S. became committed to certain technologies, discusses merits of recent accounts of "crisis" in our politics and environment, and examines alternatives to mainstream politics and technology. Enrollment restricted to sophomores, juniors, and seniors. *The Staff*

109B. Science Fiction in Multicultural America. W

Science fiction by authors and artists of diverse cultural backgrounds, contextualized within the political and economic conditions of the U.S. Enrollment restricted to sophomores, juniors, and seniors. *C. Ramirez*

111A. The West in American Culture. *

Features texts with Western settings and with representative casts of Western characters. The often contradictory patterns that emerge from this regional literature and the qualities that attach to its familiar hero are explored. *F. Robinson*

112. Immigration and Assimilation. *

Examines immigration to U.S. from colonial era to present with special emphasis on issues of citizenship, social identities, and social membership. *The Staff*

113A. Imagining America. *

Examination of varied and often conflicting ways the ambiguous entity conventionally labeled "America" has been imagined, both positively and negatively, in political speeches, painting, fiction, film, television, music, drama, advertising, parades, and other modes of expression. *M. Cowan*

114A. Politics and American Culture. *

Examination of major conceptions of citizenship in the context of American society and culture, with particular attention both to the sources of these conceptions in Western political thought and to their elaboration and testing in specific historical situations. Enrollment restricted to juniors and seniors. *The Staff*

114B. Marxist Thought in American Culture. *

Explores history of Marxist thought and activism in the U.S. with special emphasis on uses and effects of Marxism within aggrieved communities of color. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. (General Education Code(s): W.) *The Staff*

114C. Labor in U.S. Society. F

Examines the history of work and class in U.S. society with particular attention to how race and gender inform the constructions of multiple working classes. Drawing upon primary and secondary materials, the course analyzes the formations of labor unions, regional labor patterns, and the development of the capitalist market economy. *A. Huginnie*

121C. Mixed Race in America. *

Examines what it means to be of mixed race in America along historical, social, political, and cinematic lines. Theories on racial and identity formation applied to understanding multiracial experiences of various racial groups in the U.S. (General Education Code(s): E.) *The Staff*

123. Native American Studies.

123F. Native American Women. *

Introduces students to the history of Native North American women's lives. Topics include the impact of colonization and Christianization on Native women, political activism, the role of Native women in tribal politics, and contemporary artistic production. (General Education Code(s): E.) *R. Ramirez*

123H. Native Americans: Decolonization, Identity, and Resistance. *

This course examines how Native Americans are constructed by the dominant discourse on race, culture, and gender and how they subvert these negative representations through autobiography, novels, and humor. (General Education Code(s): E.) *R. Ramirez*

123M. Celluloid Natives: American Indian History on Film. F

Examines how American Indian history and culture has been portrayed in Hollywood films, with an emphasis on films that represent Native Americans over the broad spectrum of Native American/white relations. (General Education Code(s): E.) *A. Lonetree*

123T. Inventing the Savage. S

Examines how colonialism is at the root cause of cultural trauma in Native American communities; how colonialism affects both the colonizer and the colonized; how Native American scholars have theorized cultural trauma; and using novels, how Native Americans create strategies to heal from the negative effects of colonialism. (General Education Code(s): E.) *R. Ramirez*

123X. American Indian History in the Twentieth Century. W

History of Native peoples of the U.S., from 1900 to present, with emphasis on Indian/white relations and continuing development of federal Indian policy and its impact. Attention also given to the persistence, change, and adaption of Native cultures to historical and contemporary social conditions. (General Education Code(s): E.) *A. Lonetree*

123Z. Native Americans and Museums. W

Provides a historical overview of the relationship between American Indians and museums. Current issues and practices in museums—primarily those associated with ethics, collecting practices, exhibitions, education/interpretation, and administration/governance—explored. (General Education Code(s): E.) *A. Lonetree*

125. African American Studies.

125A. Aspects of African American Culture. *

A seminar examining the dominant and defining characteristics of

African American culture, covering such areas as folklore, religion, politics, music, verbal arts, and social ritual, as well as more "everyday" manifestations of the culture. May be repeated for credit. (General Education Code(s): E.) *The Staff*

125E. Jazz Cultures. W

Explores the meaning of jazz in American culture, particularly the social and cultural forces that have produced different jazz styles and the various ways that social conflicts and ideals have been displaced onto jazz. A prior familiarity with the music itself will be helpful but is not required. (General Education Code(s): E.) *E. Porter*

125G. African American Life in the City. *

Examines social and cultural history of three black urban communities: Chicago, Los Angeles, and New York. Focusing primarily on the midto-late 20th century; considers black life through sociological, musical, literary, and historical sources. (General Education Code(s): E.) *The Staff*

125H. Black Feminism. *

Explores elements of African American feminist thought and its articulation in writings, music, literature, and practice/activism in 20th-century U.S. Sexuality and reproduction is a primary theme—especially motherhood, politics of reproduction, and sexual narratives. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to junior and senior American studies majors. Enrollment limited to 25. (General Education Code(s): W, E.) *The Staff*

125X. Hip Hop Music Culture. *

Examines hip hop music and culture since its inception and addresses the contexts for its emergence in U.S. cities: sampling, cultural crossings, market forces, aesthetics, popular culture debates, race, culture, gender, sexuality, and class. (General Education Code(s): E.) *The Staff*

126. Chicano Studies.

126B. Chicana/o Music. *

Examines Chicana/o music. Topics include *corridos* and border rebellion, music and social movements, Chicano radio and record industries, Chicanas/os and the emergence of rock and roll, Latin American/Latino music, and contemporary Chicana/o music. (General Education Code(s): E.) *The Staff*

126C. Chicana/o Literature and Film. *

Examines the formations and contestations of social, political, and cultural identities for Chicanas and Chicanos through a critical study of select Mexican American texts and films. (General Education Code(s): E.) *The Staff*

127. Asian American Studies.

127A. Aspects of Asian American Culture. *

Selected topics on Asian American culture, religion, music, foodways, literature, theater, film, and/or art. May be repeated for credit. (General Education Code(s): E.) *The Staff*

127C. Asian American Literature and Culture: Memories of War. S

Course assumes that war is key element in transpacific formation of Asian America and attempts to examine wars in Asia/Pacific region from Filipino-American through the Pacific, Korean, and Vietnam Wars U.S. has participated in and to ask how war memories have shaped the Asian American experience and reconfigured notion of the homeland. Looks at specific Asian American texts to discuss issues of ethnicity, politics of memory, immigration, and diaspora in respective war context and considers impact of cold war as transpacific structure of ideological determination. Enrollment limited to 60. (General Education Code(s): E.) *The Staff*

127D. Filipino Americans: History and Culture. *

Examines the history and culture of Filipinos in the U.S. from 1763 to present day within the context of colonial and postcolonial relations between the Philippines and the U.S. Topics include immigration, labor, community, identity, politics, and contemporary issues. (General Education Code(s): E.) *The Staff*

127E. Asian American Women. *

Examines the intersectionality of race, class, gender, and sexuality in the history and lives of Asian American women from a woman-centered perspective. Topics include immigration, work, family, identities, sexploitation, and political and social activism. Students cannot receive credit for this course and History 189. (General Education Code(s): E.) *The Staff*

127F. Chinese Americans: History and Culture. *

Examines the history, culture, and politics of Chinese Americans from the California Gold Rush to present day within the context of socioeconomic and political developments in China and the U.S. Topics include immigration and labor patterns; race, gender, and class dynamics; family and community development; identity politics; and cultural expressions. (General Education Code(s): E.) *The Staff*

127K. South Asian Americans. *

Examines South Asian migration to the U.S., with specific attention to historical and political contexts of immigration and to (re)configurations of culture, politics, and identity in the South Asian American diaspora. (General Education Code(s): E.) *The Staff*

141. The Great Book of America. *

The course will feature texts that were conceived as, or have been widely received as, expressions of themes and values that are especially or essentially American. *Moby Dick, Walden, Leaves of Grass,* and *Huckleberry Finn* are such books. *F. Robinson*

145. Mark Twain and American Culture. *

A survey of Mark Twain's major writings with special attention to biography and historical content. The writer's status as a leading cultural spokesperson is also

explored. Satisfies literature major requirement. Students cannot receive credit for this course and American Literature 120B. F. Robinson

157. Sexual Identities and Communities. *

Examines how gay, lesbian, bisexual, and transgendered people negotiate the intersections of their sexual and gender identities with their racial, ethnic, and class identities in the contemporary U.S. Considers the ramifications of these intersections for notions of "gay issues" and "queer communities." *The Staff*

180. Special Topics in American Studies. *

Highlights important, relevant, and topical themes in American studies and society. By closely examining one topic or theme, students connect larger issues and think across areas of study. Topics include: the prison industrial complex; radical traditions in America; race and cultural exchange; and citizenship in America. May be repeated for credit. *The Staff*

188. 9/11. F

Considers the events of September 11, 2001, and the subsequent changes in U.S. society and in the country's role across the globe. Focuses on three arenas where these transformations have occurred: politics, culture, popular culture, and racial and ethnic relations. *E. Porter*

190. Senior Seminars.

Capstone seminars enable American studies seniors to apply their overall training in interdisciplinary research and analysis to major problems in the field. Topics vary from year to year. Satisfies American studies senior comprehensive requirement. *The Staff*

190C. Debating American Culture. W

Examines major debates about national culture in the U.S., considered in the context of ethnic, class, gendered, and other subnational and transnational cultural formations and of relevant social, political, and cultural theory. Enrollment restricted to senior American studies majors. Enrollment limited to 20. *G. Brahm*

190D. American Studies and Cultural Studies. W

Examines the history and state of the field of American studies. Investigates current debates in the field, with a focus on recent calls for a "post-nationalist" American studies, and begins to chart some of the directions in which the field is moving. Encourages students to reflect on their education in American studies at UCSC. Enrollment restricted to senior American studies majors. Enrollment limited to 20. *C. Ramirez*

190E. Rethinking American Studies. S

As a culminating experience in the major, the seminar intends to encourage seniors to meditate critically on what American studies is and what it will be in the future. Focuses much attention on recent calls for a "post-nationalist" American studies, considers the possibilities/problems such imperatives bring, and analyzes recent work in this direction. Enrollment limited to 20. *K. Lau*

190H. Race, Politics, and Region. F

Examines race relations in western U.S. with particular emphasis upon California since 1945. Students examine the experiences of African

Americans, Asian Americans, European Americans, Mexican Americans, and Native Americans and how class and gender politics shape and, at times, become the language for race relations. Enrollment restricted to senior American studies majors. Enrollment limited to 20. (General Education Code(s): E.) *A. Huginnie*

192. Directed Student Teaching. F,W,S

Teaching of a lower-division seminar under faculty supervision. (See course 42.) For students with upper-division standing who have submitted a proposal supported by a faculty member willing to supervise. *The Staff*

193. Field Study. F,W,S

Individual studies program undertaken off campus. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

194. Group Tutorial. F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

195A. Senior Project. F,W,S

For students continuing work on their senior thesis. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

195B. Senior Project. F,W,S

For students continuing work on their senior thesis. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198. Independent Field Study. F,W,S

Individual study program off campus for which faculty supervision is not in person (e.g., supervision is by correspondence). Up to three such courses may be taken for credit in any one quarter. Approval of student's adviser and certification of adequate preparation required. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Various topics to be arranged. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Various topics to be arranged. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

205. Theorizing American Culture. S

A selective examination of theoretical and methodological issues central to American studies, of the history of attempts to consider the U.S. as manifesting a cultural system, and of contemporary critiques that problematize the focusing of cultural analysis on a nation-state. Enrollment restricted to graduate students. *H. Berger*, *F. Robinson*

207. Politics of Popular Music. *

Engages a number of the critical theoretical and methodological issues raised in contemporary studies of popular music. Explores these issues while reading case

studies that range across scholarly disciplines and musical genres. Enrollment restricted to graduate students. Enrollment limited to 10. *E. Porter*

208. Readings in the History of the U.S. West. *

Explores recent trends in historical scholarship on the U.S. West, including the use of Western resources, the relationship between urban and rural places in the West, and the diversity of Western peoples. In order to reflect on the variety of ways in which scholars communicate their understandings of history, students also read a variety of academic books. Enrollment limited to 20. A. Huginnie

210. Studies in Early American Nationality. S

Examines the relationship of the attempts to legitimize U.S. nationhood in the late eighteenth and nineteenth centuries and the construction during this period of the concept of a national culture. Particular stress is given to the ideological functions served by the developing conception of American nation as both polity and culture. Enrollment restricted to graduate students. Enrollment limited to 8. *R. Ramirez*

211. Nativity, Culture, Race, and Space. *

This seminar examines the concept of "nativity" (of being or claiming to be native to a particular location) and how it functions in historical and contemporary conflicts, ranging from historical settler colonialism to contemporary gentrification of urban areas. Enrollment restricted to graduate students. Enrollment limited to 10. A. *Huginnie*

222. Tradition and Modernity in Black Culture. *

Examines the interplay of past and present in expressive culture by, for, and about African Americans, especially in respect to artistic and social innovations and their relationships to history, collective memory, and tradition. Upper-division students may enroll via permission code from instructor. Enrollment restricted to graduate students. Enrollment limited to 15. *The Staff*

223. Cultural Citizenship. *

Seminar examines the right to be different and belong in a participatory, democratic sense. Explores vernacular definitions of what confers political and cultural entitlement, taking into consideration factors ranging from the economic to notions of dignity and respect. Enrollment restricted to graduate students. Enrollment limited to 10. *R. Ramirez*

225. Black Feminist Thought and Practice. *

Explores the development of African American feminist thought and its articulations in writing, music, literature, and practice in the 20th-century U.S. Black women's sexuality a major theme, especially motherhood, politics of reproduction, and sexual narratives. Enrollment restricted to graduate students. Enrollment limited to 10. *The Staff*

295. Directed Reading. F,W,S

Directed reading which does not involve a term paper. Designed for graduate students. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

296. Special Student Seminar. F,W,S

A seminar study group for graduate students arranged between students and faculty member. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

297. Independent Study. F,W,S

Independent study for graduate students who need to establish a research area for their thesis. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Independent thesis research for graduate students. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

* Not offered in 2007-08

Anthropology

361 Social Sciences 1 Building (831) 459- 3320 http://anthro.ucsc.edu/

Changes to 2006-08 Catalog Highlighted | Faculty | Course Descriptions

Program Description

Anthropology studies people throughout the world and through time. Because it covers a wide range of topics—physical evolution, material remains of the past, and the world that humans create through their ideas and practices in present-day societies—anthropology is an especially integrative discipline.

The anthropology program at UCSC offers courses that reflect the diversity of the field.

- Cultural anthropology explores the movements of people, objects, and ideas in diverse societies, including our own. Cultural anthropology courses examine such topics as race and ethnicity, medicine, science, gender, sexuality, the environment, religion, law, popular culture, and politics.
- Archaeology uses the material evidence of human activities to understand past human lives. Archaeology at UCSC focuses on past people's interactions with one another at the local level and within their wider social and ecological contexts. Faculty research areas include the pre-colonial and early post-colonial history of East Africa and the American Southwest.
- Physical anthropology traces the human journey from its beginnings in Africa over five million years ago. Physical anthropology courses look at fossil evidence, evolutionary theory, human variation, and the behavior of primate relatives in order to analyze biological, social, and cultural changes over time.

UCSC students have the opportunity to do independent library and field research in cultural anthropology, archaeology, and physical anthropology. Laboratory courses in archaeology and physical anthropology offer practical experience in the analysis of biological and cultural materials. Students may use the social science media laboratory to develop technical and creative skills in visual and audio media. In cultural anthropology courses, students learn to carry out anthropological research through interviews, participant observation, surveys, the collection of oral histories, and the interpretation of archives.

Because anthropology is concerned with understanding human interaction, it is a useful major for anyone planning a career that involves working with people, especially those from diverse cultures. Some UCSC anthropology graduates are in social work, many are in teaching, and others pursue careers in law, city planning, politics, medicine, public health, cultural resource management, and journalism. Students intending to specialize in anthropology usually go on to graduate school because professional employment in the field almost always demands an advanced degree.

Most anthropology faculty have their offices in Social Sciences 1 Building. Social Sciences 1 also houses the Visual Culture Research Laboratory and laboratories for archaeology and physical anthropology where space is provided for laboratory and individual studies courses and for collections of mammalian skeletal material, casts of fossil hominids, ceramics, stone tools, and other archaeological artifacts.

The Anthropology Society, a campus club, is open to all students interested in anthropology. The Anthropology Colloquium showcases guest speakers and gives faculty and students an opportunity to discuss new approaches to anthropological questions. Students and faculty interested in archaeology also gather informally at the Archaeology/ Physical Anthropology Forum to share information on fieldwork and employment opportunities.

Undergraduate Handbook

All undergraduate majors should obtain a copy of *A Guide to the Anthropology Department* at UCSC from the department office (361 Sciences I Building). It outlines information on department procedures and requirements, program planning, independent study, faculty interests, and campus resources for anthropology majors.

Major Requirements

The Anthropology Department urges students to seek faculty advice early in planning for the major. Faculty hold regular office hours weekly and encourage students to come in to talk about their program or course work. Peer advisers are also available.

To graduate with an anthropology major, students must take courses 1, 2, 3, and either course 4 or an 80s-level course as background for upper-division courses. They must take a minimum of nine upper-division courses, including at least one course selected from each of these five categories:

Anthropological Theory Courses

- 100 History and Theory of Physical Anthropology
- 150 Communicating Anthropology
- 152 Survey of Cultural Anthropological Theory
- 170 History of Archaeological Theory

Sociocultural Anthropology Courses

- 123 Psychological Anthropology
- 124 Anthropology of Religion
- 126 Sexuality and Society in Cross-Cultural Perspective
- 127 Ethnographies of Capitalism
- 131 Women in Cross-Cultural Perspective
- 132 Photography and Anthropology
- 133 Narratives of the Popular
- 134 Medical Anthropology
- 135A Cities
- 137 Consuming Culture
- 138 Political Anthropology
- 139 Language and Culture
- 142 Anthropology of Law
- 146 Anthropology and the Environment
- 151 Workshop in Ethnography
- 154 Multimedia Ethnography
- 155 Cultural Encounters
- 159 Race and Anthropology165 Anthropological Folklore

Ethnographic Area Studies Courses

- 130A Peoples and Cultures of Africa
- 130B Brazil
- 130C Politics and Culture in China
- 130E Culture and Politics of Island Southeast Asia
- 130F African Diasporas in the Americas
- 130G Asian Americans in Ethnography and Film
- 130H Ethnography of Russia and Eastern Europe
- 130I Cultures of India
- 130M Inside Mexico
- 130L Ethnographies of Latin America
- 130N Native Peoples of North America
- 130X Special Topics in Ethnography

Physical Anthropology and Archaeology Courses

- 101 Human Evolution
- 102A Human Skeletal Biology
- 103 Forensic Anthropology
- 104 Human Adaptability
- 106 Primate Behavior and Ecology
- 107 Human Functional Anatomy
- 111 Human Ecology
- 172 Archaeological Research Design
- 174 Origins of Complex Societies
- 175A African Archaeology
- 175B African Archaeology: Development
- 175C African Diaspora
- 176A North American Archeology

- 176B Meso-American Archaeology
- 178 Historical Archaeology: A Global Perspective
- 180 Ceramic Analysis in Archaeology
- 182A Lithic Technology
- 183 Introduction to Quantitative Methods in Archaeology
- Zooarchaeology 184
- 185 Osteology of Mammals, Birds, and Fish

Senior Seminar Courses

- 194A Community
- 194B Chimpanzees: Biology, Behavior and Evolution
- 194D Person-Centered Ethnography
- 194E Advanced Topics in Folkloristics
- 194F Memory
- 194G Anthropology of Travel
- 194I Consumption and Cons194K Reading Ethnographies Consumption and Consumerism
- 194M Special Topics in Medical Anthropology
- 194N Comparison of Cultures
- 1940 Anthropology of Sexuality
- 194P Space, Place, and Culture
- 194S Hearing Culture: The Anthropology of Sound
- 194T Poverty and Inequality
- 194U Environmental Anthropology: Nature, Culture, Politics
- 194V Picturing Cultures
- 194X Women in Politics: A Third World Perspective

Two-credit courses do not count toward the nine upper-division courses required for the major. Only one 5-credit individual studies course (197, 198, or 199) may be counted toward the nine required upper-division courses.

Comprehensive Requirement

Students can fulfill the senior comprehensive requirement in anthropology either by passing an advanced senior seminar (194-series course), by writing an acceptable independent senior thesis, or by passing a graduate-level topical seminar in anthropology.

- Senior seminars are small, writing-intensive classes focusing on advanced topics in anthropology. The prerequisite for admission to a senior seminar is successful completion of courses 1, 2, and 3; senior seminars are restricted to anthropology majors.
- · Students considering an independent thesis must arrange for the sponsorship and support of a faculty member before beginning research. An independent senior thesis (not written within a 194-series course) should be based on original research and reflect the student's understanding of fundamental theories and issues in anthropology. The thesis should be comparable in content, style, and length (generally 25-30 pages) to a professional journal article in its subfield. Students writing a senior thesis must complete five, instead of four, upper-division electives.
- Students who intend to satisfy the exit requirement by taking a graduate seminar must first get permission from the department. Not all graduate seminars are appropriate for fulfilling this requirement.

All majors, including double majors, must prepare a program of study in consultation with a member of the Anthropology Department. Students may arrange double majors in anthropology and another discipline by special petition. A combined major in anthropology and Earth and planetary sciences, leading to a B.A. degree, is also offered; for that program description, see Earth and Planetary Sciences. Students going on to graduate school should plan course schedules in close consultation with faculty advisers.

Many anthropology majors whose studies emphasize archaeology have benefited from concurrent study in the Cabrillo College Archaeological Technology Certificate Program. This vocational certification program is sponsored entirely by Cabrillo College, but credit for its summer field survey and excavation component may be transferred for credit at UCSC. Although courses in the Archaeological Technology Certificate Program do not count toward the UCSC anthropology major, students who have obtained the certificate in tandem with their bachelor's degree in anthropology have expanded their employment and advanced degree program opportunities. Students interested in exploring this possibility are encouraged to consult with UCSC archaeology faculty and to visit the program's web site at http://www.cabrillo.edu/academics/archtech/.

Transfer Students

If possible, transfer students should complete lower-division requirements for the major before coming to UCSC by taking classes equivalent to courses 1, 2, and 3. Department policy also

allows up to 10 quarter credits (equivalent to two UCSC courses) of upper-division transfer credit toward the major requirement. Transfer students should bring a copy of their UCSC Transfer Credit Summary and an unofficial copy of all pertinent transcripts to the adviser in charge of undergraduate studies in the department office (361 Social Sciences 1 Building) as soon as possible after reaching campus so that prerequisites can be verified and course enrollment can proceed smoothly.

Peer Advisers

The Anthropology Department has instituted a peer adviser program as a supplement to academic advising offered by faculty members. The peer advisers are juniors and seniors who have been trained to help students with questions and general guidance through the anthropology major. Peer advisers hold regularly scheduled office hours in the department office and the Ethnographic Library (328 Social Sciences I).

Honors

The Anthropology Department awards "honors in the major" based on a ranked departmental grade point average that is calculated using all upper-division courses taken in the major with the exception that only one independent-study course can be used in this calculation. For students who have taken multiple independent-study courses in the department, the independent-study course that has the highest grade is used for the calculation. Approximately 15 percent of the graduating class is considered for honors based on their cumulative GPA through the quarter before graduation.

1. "Highest honors in the major" is determined by faculty review of all the departmental narrative evaluations for all students considered for honors within a particular quarter. The criteria for awarding highest honors in the major are overall superlative performance in the major and general breadth of excellence across the subfields of anthropology as reflected in the narrative evaluations. Receiving honors on the senior exit requirement is also considered as a factor in awarding highest honors, but is not always determinative.

Minor Requirements

Students earn a minor in anthropology by completing all of the requirements for the major with the following differences:

- The number of upper-division courses is reduced from nine to six. Of these, at least one must be from each of the following categories: (1) theory, (2) sociocultural anthropology, (3) ethnographic area studies, and (4) physical anthropology or archaeology.
- Independent study courses cannot be used toward completion of the minor.
- · No senior seminar or thesis is required.

For more information regarding department policies, please consult the undergraduate adviser at the Anthropology Department office, 361 Social Sciences 1 Building. A handbook on the anthropology program is available there or online.

Graduate Program

The anthropology doctoral program at UCSC consists of three tracks: cultural anthropology, archaeology, and physical anthropology. The majority of students are admitted to the cultural anthropology program. Smaller numbers of students are admitted to the programs in archaeology and physical anthropology.

Although applicants are accepted only for the Ph.D. program, students may obtain an M.A. degree after fulfilling specific requirements during the first two years.

The study of culture and power unites the research interests of the faculty in the cultural anthropology graduate program at UCSC. In recent years, anthropology's central concept of culture has been subjected to extraordinary ethnographic and theoretical pressures. For certain kinds of problems, anthropologists can study culture as shared meanings—symbols, assumptions, and knowledge—which are enduring and stabilizing and possess an internal logic that organizes apparently contradictory or unrelated activities. But problems requiring attention to power—including not only coercion, persuasion, and authority, but also the discursive practices by which meanings are produced and contested—have led anthropologists to retheorize culture. In this perspective, culture is not shared equally but is positioned within a field of inequalities; is more the outcome of events than their precondition; and is as readily manifested in disorder, conflict, and fragmentation as in order and stability.

Our concentration on culture and power and on the construction of anthropological knowledge is especially well suited for drawing together specialists in challenging and enriching conversations. Rather than reproduce the boundaries among the traditional subfields of anthropology, we explore

how recombinations of these approaches can elucidate specific anthropological problems.

Working with their faculty advisory committee, students in cultural anthropology have considerable freedom to design their own programs of study after completing the two-quarter core course and the ethnographic practice course during the first year. To achieve Ph.D. candidacy, students are expected to pass a first-year review of their written work, take three additional 5-credit courses in anthropology (excluding independent study courses), maintain satisfactory academic progress, satisfy the ethnographic writing requirement and the foreign language requirement, pass a qualifying exam at the end of the third year, and meet the specific requirements of the Division of Graduate Studies. After advancing to Ph.D. candidacy, students carry out a sustained ethnographic fieldwork project and are expected to complete their dissertation within a year after returning from the field.

Graduate students in cultural anthropology may obtain a notation on the anthropology Ph.D. diploma indicating that they have specialized in feminist studies and Latin American and Latino studies (LALS) if they meet requirements spelled out by the individual committee composed of anthropology and feminist studies faculty or the anthropology and LALS faculty.

The Ph.D. program in archaeology is highly selective and emphasizes intersections of theories of economy and production, human ecology, gender, and ethnicity. The study of theory is augmented by rigorous laboratory apprenticeships. Training is offered in combinations of the following: ceramic analysis; zooarchaeology; isotopic characterization studies; and archaeology of the Southwest, California, and Africa.

The Ph.D. program in physical anthropology combines a strong emphasis on hard and soft tissue anatomy with a broad evolutionary perspective. This highly selective track is characterized by intense mentoring of students, involvement of students in instruction as well as course work, and interdisciplinary training. Specific training is offered in skeletal biology, primate anatomy, forensic anthropology, and evolutionary theory.

Although the areas of study of the archaeology and physical anthropology programs are distinct, their paths toward the Ph.D. are the same. In the first year, students take two foundational theory courses and pass a review of their work. Within the first two years of study, students complete at least two foundational materials/methods courses or laboratory courses in other departments; two advanced laboratory apprenticeship courses or similar courses in other departments; two foundational courses in geographic/temporal areas or, in physical anthropology, topical areas; two graduate seminars with other anthropology or campus faculty; one quantitative methods course; and two terms of supervised teaching experience.

The third year requirements are three laboratory apprenticeship courses, the grant writing seminar, and tutorials to prepare the student for the qualifying exams. All courses outside the department must be approved by the student's adviser. After advancing to Ph.D. candidacy, the student carries out a sustained laboratory or fieldwork project and is expected to complete the dissertation within a year after finishing research.

- 130L Ethnographies of Latin America
- 130N Native Peoples of North America
- 130Q Mejicanos in Anthropological Discourse
- 130U Amazonia
- 130X Special Topics in Ethnography

Physical Anthropology and Archaeology Courses

- 101 Human Evolution
- 102A Human Skeletal Biology
- 103 Forensic Anthropology
- 104 Human Adaptability
- 106 Primate Behavior and Ecology
- 107 Human Functional Anatomy
- 110 Anthropology of Movement
- 111 Human Ecology
- 172 Archaeological Research Design
- 173 Origins of Farming
- 174 *Origins of Complex Societies*
- 175A African Archaeology
- 175B African Archaeology: Development of Complex Socities
- 175C African Diaspora
- 176A North American Archeology
- 176B Meso-American Archaeology
- 177 European Conquest of the Americas
- 178 Historical Archaeology: A Global Perspective
- 180 Ceramic Analysis in Archaeology
- 182A Lithic Technology
- 183 Introduction to Quantitative Methods in Archaeology
- 184 Zooarchaeology
- 185 Osteology of Mammals, Birds, and Fish

Senior Seminar Courses

- 194A History of Evolutionary Theory Community
- 194B Chimpanzees: Biology, Behavior and Evolution
- 194C Food and Medicine
- 194D Person-Centered Ethnography

194E Advanced Topics in Folkloristics 194F Memory 194G Anthropology of Travel 1941 Thinking with Bateson 194I Consumption and Consumerism 194J Histories of Forests and Other Wild Places 194K Reading Ethnographies 194L Southwest Prehistory 194M Special Topics in Medical Anthropology 194N Comparison of Cultures 1940 Anthropology of Sexuality 194P Space, Place, and Culture 1940 Race, Hegemony, Diaspora 194R Behavioral Ecology in Archaeology 194S Hearing Culture: The Anthropology of Sound 194T Poverty and Inequality 194U Environmental Anthropology: Nature, Culture, Politics 194V Picturing Cultures 194W Evolution of Human Sensory Systems 194X Women in Politics: A Third World Perspective

Two-credit courses do not count toward the nine upper-division courses required for the major. Only one 5-credit individual studies course (197, 198, or 199) may be counted toward the nine required upper-division courses.

Comprehensive Requirement

Students can fulfill the senior comprehensive requirement in anthropology either by passing an advanced senior seminar (194-series course), by writing an acceptable independent senior thesis, or by passing a graduate-level topical seminar in anthropology.

- Senior seminars are small, writing-intensive classes focusing on advanced topics in anthropology. The prerequisite for admission to a senior seminar is successful completion of courses 1, 2, and 3; senior seminars are restricted to anthropology majors.
- Students considering an independent thesis must arrange for the sponsorship and support of a faculty member before beginning research. An independent senior thesis (not written within a 194-series course) should be based on original research and reflect the student's understanding of fundamental theories and issues in anthropology. The thesis should be comparable in content, style, and length (generally 25–30 pages) to a professional journal article in its subfield. Students writing a senior thesis must complete five, instead of four, upper-division electives.
- Students who intend to satisfy the exit requirement by taking a graduate seminar must first get permission from the department. Not all graduate seminars are appropriate for fulfilling this requirement.

All majors, including double majors, must prepare a program of study in consultation with a member of the Anthropology Department. Students may arrange double majors in anthropology and another discipline by special petition. A combined major in anthropology and Earth and planetary sciences, leading to a B.A. degree, is also offered; for that program description, see Earth and Planetary Sciences. Students going on to graduate school should plan course schedules in close consultation with faculty advisers.

Many anthropology majors whose studies emphasize archaeology have benefited

from concurrent study in the Cabrillo College Archaeological Technology Certificate Program. This vocational certification program is sponsored entirely by Cabrillo College, but credit for its summer field survey and excavation component may be transferred for credit at UCSC. Although courses in the Archaeological Technology Certificate Program do not count toward the UCSC anthropology major, students who have obtained the certificate in tandem with their bachelor's degree in anthropology have expanded their employment and advanced degree program opportunities. Students interested in exploring this possibility are encouraged to consult with UCSC archaeology faculty and to visit the program's web site at http://www.cabrillo.edu/academics/archtech/.

Transfer Students

If possible, transfer students should complete lower-division requirements for the major before coming to UCSC by taking classes equivalent to courses 1, 2, and 3. Department policy also allows up to 10 quarter credits (equivalent to two UCSC courses) of upper-division transfer credit toward the major requirement. Transfer students should bring a copy of their UCSC Transfer Credit Summary and an unofficial copy of all pertinent transcripts to the adviser in charge of undergraduate studies in the department office (361 Social Sciences 1 Building) as soon as possible after reaching campus so that prerequisites can be verified and course enrollment can proceed smoothly.

Peer Advisers

The Anthropology Department has instituted a peer adviser program as a supplement to academic advising offered by faculty members. The peer advisers are juniors and seniors who have been trained to help students with questions and general guidance through the anthropology major. Peer advisers hold regularly scheduled office hours in the department office, the Peer Advising office (347A Social Sciences I), and the Ethnographic Library (328 Social Sciences I).

Honors

Honors in anthropology are awarded to graduating seniors whose evaluations are judged to be consistently outstanding by a committee of anthropology faculty. Highest Honors in the major are reserved for students who have received consistently superior evaluations and a notation of Honors on their senior comprehensive requirement (senior seminar or senior thesis).

The Anthropology Department awards "honors in the major" based on a ranked departmental grade point average that is calculated using all upper-division courses taken in the major with the exception that only one independent-study course can be used in this calculation. For students who have taken multiple independent-study courses in the department, the independent-study course that has the highest grade is used for the calculation. Approximately 15 percent of the graduating class is considered for honors based on their cumulative GPA through the quarter before graduation.

"Highest honors in the major" is determined by faculty review of all the departmental narrative evaluations for all students considered for honors within a particular quarter. The criteria for awarding highest honors in the major are overall superlative performance in the major and general breadth of excellence across the subfields of anthropology as reflected in the narrative evaluations. Receiving honors on the senior exit requirement is also considered as a factor in awarding highest honors, but is not always determinative.

Minor Requirements

Students earn a minor in anthropology by completing all of the requirements for the major with the following differences:

• The number of upper-division courses is reduced from nine to six. Of these, at

least one must be from each of the following categories: (1) theory, (2) sociocultural anthropology, (3) ethnographic area studies, and (4) physical anthropology or archaeology.

- Independent study courses cannot be used toward completion of the minor.
- No senior seminar or thesis is required.

For more information regarding department policies, please consult the undergraduate adviser at the Anthropology Department office, 361 Social Sciences 1 Building. A handbook on the anthropology program is available there or online.

Graduate Program

The anthropology doctoral program at UCSC consists of three tracks: cultural anthropology, archaeology, and physical anthropology. The majority of students are admitted to the cultural anthropology program. Smaller numbers of students are admitted to the programs in archaeology and physical anthropology.

Although applicants are accepted only for the Ph.D. program, students may obtain an M.A. degree after fulfilling specific requirements during the first two years.

The study of culture and power unites the research interests of the faculty in the cultural anthropology graduate program at UCSC. In recent years, anthropology's central concept of culture has been subjected to extraordinary ethnographic and theoretical pressures. For certain kinds of problems, anthropologists can study culture as shared meanings—symbols, assumptions, and knowledge—which are enduring and stabilizing and possess an internal logic that organizes apparently contradictory or unrelated activities. But problems requiring attention to power—including not only coercion, persuasion, and authority, but also the discursive practices by which meanings are produced and contested—have led anthropologists to retheorize culture. In this perspective, culture is not shared equally but is positioned within a field of inequalities; is more the outcome of events than their precondition; and is as readily manifested in disorder, conflict, and fragmentation as in order and stability.

Our concentration on culture and power and on the construction of anthropological knowledge is especially well suited for drawing together specialists in challenging and enriching conversations. Rather than reproduce the boundaries among the traditional subfields of anthropology, we explore how recombinations of these approaches can elucidate specific anthropological problems.

Working with their faculty advisory committee, students in cultural anthropology have considerable freedom to design their own programs of study after completing the two-quarter core course and the ethnographic practice course during the first year. To achieve Ph.D. candidacy, students are expected to pass a first-year review of their written work, take three additional 5-credit courses in anthropology (excluding independent study courses), maintain satisfactory academic progress, satisfy the ethnographic writing requirement and the foreign language requirement, pass a qualifying exam at the end of the third year, and meet the specific requirements of the Division of Graduate Studies. After advancing to Ph.D. candidacy, students carry out a sustained ethnographic fieldwork project and are expected to complete their dissertation within a year after returning from the field.

Graduate students in cultural anthropology may obtain a notation on the anthropology Ph.D. diploma indicating that they have specialized in feminist studies and Latin American and Latino studies (LALS) if they meet requirements spelled out by the individual committee composed of anthropology and feminist studies faculty or the

anthropology and LALS faculty.

The Ph.D. program in archaeology is highly selective and emphasizes intersections of theories of economy and production, human ecology, gender, and ethnicity. The study of theory is augmented by rigorous laboratory apprenticeships. Training is offered in combinations of the following: ceramic analysis; zooarchaeology; isotopic characterization studies; and archaeology of the Southwest, California, and Africa.

The Ph.D. program in physical anthropology combines a strong emphasis on hard and soft tissue anatomy with a broad evolutionary perspective. This highly selective track is characterized by intense mentoring of students, involvement of students in instruction as well as course work, and interdisciplinary training. Specific training is offered in skeletal biology, primate anatomy, forensic anthropology, and evolutionary theory.

Although the areas of study of the archaeology and physical anthropology programs are distinct, their paths toward the Ph.D. are the same. In the first year, students take two foundational theory courses and pass a review of their work. Within the first two years of study, students complete at least two foundational materials/methods courses or laboratory courses in other departments; two advanced laboratory apprenticeship courses or similar courses in other departments; two foundational courses in geographic/temporal areas or, in physical anthropology, topical areas; two graduate seminars with other anthropology or campus faculty; one quantitative methods course; and two terms of supervised teaching experience.

The third year requirements are three laboratory apprenticeship courses, the grant writing seminar, and tutorials to prepare the student for the qualifying exams. All courses outside the department must be approved by the student's adviser. After advancing to Ph.D. candidacy, the student carries out a sustained laboratory or fieldwork project and is expected to complete the dissertation within a year after finishing research.

Anthropology

<u>Program Description | Course Descriptions</u>

Faculty and Professional Interests

Professor

Donald Brenneis

Linguistic anthropology, folklore, legal anthropology, ethnomusicology, overseas Indians, South Asia, disputing and dispute management, legal language, bureaucratic institutions

May N. Diaz, Emerita

Shelly Errington

Globalization of folk art, visual and social semiotics, photography, film, the Internet and digital media, Southeast Asia, and Latin America

Alison Galloway

Skeletal biology, forensic anthropology, human variation, history and ethics of physical anthropology, reproductive energetics and aging

Diane Gifford-Gonzalez

Neolithic Africa and Eurasia, colonial New Mexico, origins of food production, pastoralists, zooarchaeology, history of archaeology, interpretive theory, visual anthropology

Judith A. Habicht-Mauche

Precontact and early contact North America; cross-cultural interaction and trade; ceramic technology; archaeology of gender, power, and identity; Southwest and Southern Plain

Susan Harding

Culture, politics, narrative, gender, local/global studies, ethnographic writing, fundamentalism, Christianity, state-making, aging, America, and Spain

Diane K. Lewis, Emerita

Daniel T. Linger

Self and identity, politics, cultural theory, cities, violence, transnational experience, Brazil, Japan

Carolyn Martin Shaw

African societies, colonial discourse, social theory, anthropology of women, sexuality

Olga Nájera-Ramírez

Folklore theory, ritual, festival, dance, greater Mexican culture, history and folklore, transnationalism, identity; expressive culture, ethnomusicology, bilingual communication, gender, history, and culture of Latin America, the U.S., and Mexico

Triloki Nath Pandey

Native peoples of North America, cultures of India, political anthropology, anthropological theories and comparisons; native North America; tribal India; Nepal

Richard R. Randolph, Emeritus

Lisa Rofel

Critical theory, anthropology of modernity, popular/public culture, gender and sexuality, cultures of capitalism, postcolonial feminist anthropology, China

Stuart A. Schlegel, Emeritus

Anna Tsing

Culture and politics, feminist theory and gender in the U.S., social landscapes and tropical forest ethnoecologies, ethnicity, local power and relations to the state in Indonesia, Southeast Asia, and the U.S.

Adrienne L. Zihlman

Primate and human evolution, comparative functional anatomy of monkeys and apes, sex and gender, growth and development, life history and evolutionary theory, history of physical anthropology

Associate Professor

Melissa L. Caldwell

Poverty and welfare, religious development work, food, transnationalism, socialism and postsocialism, Russia, the former Soviet Union, and Eastern Europe

Nancy N. Chen

Medical anthropology, visual anthropology, urban anthropology, Asian American identity, mental health, food, China

Assistant Professor

Mark Anderson

Racial formation, diaspora, nationalism, transnationalism, culture and power; Latin America, African diaspora

Nathaniel J. Dominy

Ecology and foraging behavior of humans and non-human primates; sensory ecology; color vision; primate evolution; tropical forests

Andrew Salvador Mathews

Environmental anthropology, science and technology studies, conservation and development

J. Cameron Monroe

Historical archaeology, complex societies, political economy, architecture and landscape, Africa and the African diaspora

Professor

Raoul Birnbaum (History of Art and Visual Culture)

Buddhist studies, especially Chinese practices from medieval times to the present; religion and visual culture in China

John Brown Childs (Sociology)

Ethnic conflict and transcommunal cooperation; sociology of knowledge; African American, Native American, Latino interactions

James T. Clifford (History of Consciousness)

History of anthropology, travel, and exoticism; transnational cultural studies, museum studies, indigenous studies

Carolyn Dean (History of Art and Visual Culture)

Cultural histories of the native Americas and colonial Latin America

A. Russell Flegal (Environmental Toxicology)

Anthropogenic perturbations of biogeochemical cycles, applications of isotopic tracers in anthropology and archaeology

Margaret (Greta) A. Gibson (Education)

Immigrants and education; minority status and schooling; community-school relationships; ethnicity, class, gender, and educational processes; qualitative research methods

Stephen R. Gliessman (Environmental Studies)

Agroecology, sustainable agriculture, natural history, tropical land use and development, ecology and management of California vegetation

Donna Haraway (History of Consciousness and Feminist Studies)

Feminist theory, cultural and historical studies of science and technology, relation of life and human sciences, human-animal relations, and animal studies

Paul Koch (Earth Sciences)

Isotope biogeochemistry, vertebrate paleontology

Marc S. Mangel (Applied Mathematics and Statistics)

Mathematical modeling of biological phenomena, especially the evolutionary ecology of growth, aging, and longevity; quantitative issues in fishery management; mathematical and computational aspects of disease

Patricia Zavella (Latin American and Latino Studies)

Relationship between women's work and domestic labor, poverty, family, sexuality and social networks, feminist studies, ethnographic research methods, and transnational migration of Mexicana/o workers and U.S. capital

Associate Professor

S. Ravi Rajan (Environmental Studies)

Environmental history and political ecology, risk and disaster studies, science and technology studies, North-South environmental conflicts, environmental social theory, environmental ethics

Assistant Professor

Renya Ramirez (American Studies)

Native American studies, Indian identity, Native Americans and anthropology, urban Indians, Native American women, cultural citizenship, expressive culture, and anti-racist education

Marcia Ochoa (Community Studies)

Gender and sexuality, race and ethnicity, Latina/o studies, media and cultural studies, ethnography of media, feminism, queer theory, multimedia production, Latin American studies—Colombia and Venezuela, political philosophy, geography

Program Description | Changes to 2006-08 Catalog Highlighted | Faculty

Lower-Division Courses

1. Introduction to Human Evolution. F

Study of evolution illustrated by Pleistocene hominid fossils and variation in living human groups. Behavior and evolution of primates examined as they contribute to the understanding of human evolution. Required for all anthropology majors. (General Education Code(s): IN.) *L. Milligan*

2. Introduction to Cultural Anthropology. S

A number of different peoples are studied and a variety of approaches to the nature of the culture and to the study of specific cultures presented. Required for all anthropology majors. (General Education Code(s): IS.) *T. Pandey*

3. Introduction to Archaeology. W

Overview of ways of learning about the human past beyond the scope of written history. Reviews development of archaeology, fundamental methods and theories, and archaeology's contribution to understanding human origins, the emergence of farming, and the origins of complex societies. (General Education Code(s): IS.) *D. Gifford-Gonzalez*

4. Public Life and Contemporary Issues. W

How can cultural anthropology help us to understand current events unfolding locally, nationally, and globally? Students learn how to "read" newspapers differently—that is, through the lens of cultural analysis. The world of everyday politics and society, as it unfolds in debates happening right now, forms the topical substance of the course. (General Education Code(s): IS.) *L. Rofel*

42. Student-Directed Seminar.

Seminars taught by upper-division students under faculty supervision. (See course 192.) *The Staff*

80C. Introduction to Forensic Anthropology. *

Introductory level course in basic analysis of human remains for the medico-legal profession. Course covers development of the field of forensic anthropology, introduction to human osteology, how age, sex, ancestry, and stature are determined from skeletel material, and how skeletel trauma is evaluated. Will be offered in the 2008-09 academic year. (General Education Code(s): T3-Social Sciences.) *The Staff*

80F. Exotic Tours. *

Explores exotic (including extreme, adventure, ethnic, and eco) tourism and journalism using writings, photography, and web sites. It is, in effect, a series of virtual exotic tours, each one centered around an itinerary drawn from actual tours. Will be offered in the 2008-09 academic year. (General Education Code(s): T3-

80G. Barrio Popular Culture. *

Introduces students to a broad sampling of verbal and nonverbal forms of Mexican folklore. Concentrates on experiencing these forms through texts, film, and if possible, performances. Attention to how these forms have been used by scholars to comment on Mexican culture is an underlying theme. Knowledge of Spanish is useful but not required. (General Education Code(s): T3-Social Sciences, E.) Olga Nájera-Ramírez

80I. Culture and Power in Latin America. *

Introduces key issues in the anthropology of Latin America, with emphasis on identity formation, cultural practices, and power. Major themes include race, class, and gender as intersecting forms of oppression, violence, and terror and indigenous social movements. (General Education Code(s): T3-Social Sciences, E.) *M. Anderson*

80J. Introduction to Visual Culture. F

Introduces current issues in cultural anthropology using film as a medium with which to explore culture. Raises questions about visual representations and the portrayal of cultural difference in the context of global inequalities. (General Education Code(s): T3-Social Sciences.) *S. Errington*

80K. Culture through Food. *

Examines anthropology of food and politics of eating. Cultural and social uses of food in rituals of solidarity or fasting, identities and meanings of food for individuals, and consumption in the global context are key components of study. (General Education Code(s): T3-Social Sciences.) *M. Caldwell*

80P. India and Indian Diaspora through Films. S

Explores several themes of relevance in contemporary India and Indian diaspora, concentrating on anthropological research and various documentary and popular Bollywood films. Through films and ethnographies, students analyze the nature of anthropological contributions to the study of Indian societies. (General Education Code(s): T3-Social Sciences, E.) *A. Pandey*

81A. Mexican Folklorico Dance (2 credits). F

Provides instruction in the aesthetic, cultural, and historical dimensions of Mexican folklorico dance. Students taught choreographed dances from various regions of Mexico and also learn dance techniques (técnica) and stage make-up application. Additional workshops and lectures offered to supplement class. Open to all students; no previous experience required. (Also offered as Latin American&Latino Studies 81A. Students cannot receive credit for both courses.) May be repeated for credit. (General Education Code(s): A.) Olga Nájera-Ramírez

81B. Mexican Folklorico Dance (2 credits). W

Second course in series. Provides instruction in the aesthetic, cultural, and historical dimensions of Mexican folklorico dance. (Also offered as Latin American&Latino Studies 81B. Students cannot receive credit for both courses.) May be repeated for credit. (General Education Code(s): A.) Olga Nájera-Ramírez

81C. Mexican Folklorico Dance (2 credits). S

Third course in series. Provides instruction in the aesthetic, cultural, and historical dimensions of Mexican folklorico dance. (Also offered as Latin American&Latino

Studies 81C. Students cannot receive credit for both courses.) Prerequisite(s): course 81A or 81B. May be repeated for credit. (General Education Code(s): A.) *Olga Nájera-Ramírez*

81J. Introduction to Visual Culture Lab (2 credits). F

Optional digital photography lab. Students learn to compose shots, download photos, resize them, and put them into a meaningful sequence. Concurrent enrollment in Anthropology 80J required. Enrollment limited to 36. *S. Errington*

93. Field Study. F,W,S

Supervised research or organized projects on anthropological topics for lowerdivision students. Conducted either on or off campus. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

Upper-Division Courses

100. History and Theory of Physical Anthropology. S

Provides an historical overview from the 18th century to the present of race, apehuman relationships, and human nature. Emergence of an evolutionary framework and of fossil, genetic, and primate information becomes the basis for reformulating ideas about human biology within anthropology. Prerequisite(s): courses 1, 2, and 3. *A. Zihlman*

101. Human Evolution. W

Study of human evolution covering the last five million years. Examines the fossil evidence and emphasizes the reconstruction of behavior from the paleontological and anatomical evidence. Prerequisite(s): course 1. Offered in alternate academic years. *L. Milligan*

101E. Human Evolution Laboratory (2 credits). *

Laboratory focuses on the locomotor, dental, facial-cranial anatomy of hominids. Meets weekly, with exercises designed around primate and human skeletal materials and casts of fossil hominids. Will be offered in the 2008-09 academic year. Concurrent enrollment in course 101 required. Enrollment limited to 15. A. Zihlman

102A. Human Skeletal Biology. W

Presents basic human osteology allowing students to identify skeletal material by element. Emphasizes the dynamic nature of bone by integrating anatomy with a discussion of bone physiology within the context of the human life cycle. Prerequisite(s): course 1. Enrollment limited to 16. *C. Juarez*

103. Forensic Anthropology. *

Covers the basic analysis of human skeletal remains for the medicolegal profession. Assessment of age, sex, ancestry, and general physical characteristics, trauma, and disease are discussed. Legal responsibilities of the anthropologist are addressed. *The Staff*

104. Human Adaptability. S

Explores the major environmental factors (temperature, altitude, diet, and disease); how they are perceived by the human body; the physiological, micro- and macroanatomical responses; and how behavior and culture can modify the impact of

these stresses. Course 1 is highly recommended as preparation. L. Milligan

106. Primate Behavior and Ecology. F

The nature of primate social systems and social bonds is examined in the light of evolutionary and ecological concepts. Students cannot receive credit for this course and course 206. Prerequisite(s): course 1. N. Dominy

107. Human Functional Anatomy. S

Study of structure and function of the human body through lectures with an evolutionary perspective including regional anatomy and body systems. Students cannot receive credit for this course and Anthropology 207. (Also offered as Biology 135. Students cannot receive credit for both courses.) Prerequisite(s): course 1; concurrent enrollment in course 107L required. Enrollment restricted to anthropology majors. *N. Dominy*

107L. Human Functional Anatomy Laboratory. S

Study of structure and function of the human body using dissection, comparative vertebrate anatomy, anatomical models, and computer-assisted instruction. Students are billed a \$60.00 materials fee. Students cannot receive credit for this course and Anthropology 207L. (Also offered as Biology 135L. Students cannot receive credit for both courses.) Prerequisite(s): course 1; concurrent enrollment in course 107 required. Enrollment restricted to anthropology majors. Enrollment limited to 20. *N. Dominy*

111. Human Ecology. *

Reviews the environmental, physiological, behavioral, and cultural ways that humans interact with their physical surroundings. The effects of human culture on the environment and of the environment on the shape of human culture is emphasized. Will be offered in the 2008-09 academic year. *N. Dominy*

123. Psychological Anthropology. *

An introduction to some of the central theoretical issues in psychological anthropology. Psychoanalytic, cognitive, and relativist perspectives on the link between person and society are discussed and compared. *D. Linger*

124. Anthropology of Religion. W

Study of the phenomenon of religion as manifested in ethnographic literature, with special attention to traditional and recent modes of analysis of religious behavior. Special topics include myth, religious healing, witchcraft and sorcery, ritual, and millenarian movements. *A. Pandey*

126. Sexuality and Society in Cross-Cultural Perspective. W

The meaning and social processes associated with sexuality in selected societies. Examination of variations in sexual expressions and control of sexuality, and in economic and political organizations, highlights the interrelationship of sex and society. Prerequisite(s): course 2. *C. Shaw*

127. Ethnographies of Capitalism. *

Challenges approaches to capitalism that treat it as socioeconomic relations separable from "culture." Readings include ethnographies demonstrating the inextricability of cultural meanings from capitalist practices. Topics include capitalism's relationship to colonialism, nationalism, socialism, gender, and the commodification of aesthetics. *L. Rofel*

130. Enthographic Area Studies.

130A. Peoples and Cultures of Africa. W

Survey of sub-Saharan societies. Analysis of principles of social organization and factors of cultural unity of selected western, eastern, central, and southern African peoples. (General Education Code(s): E.) *N. Tamarkin*

130B. Brazil. *

Examines Brazilian culture and its link to interpersonal relationships, religion, politics, and psychological experience. (General Education Code(s): E.) *D. Linger*

130C. Politics and Culture in China. F

Joins substantive information "about" Chinese society and culture with debates in social theory and rethinks conventional wisdom about colonialism and modernity. Topics include representations of "Chineseness," class revolution, Chinese diaspora, popular culture, family and kinship, nationalism, history/memory, race and gender. Will be offered in the 2007–2008 academic year. (General Education Code(s): E.) *L. Rofel*

130E. Culture and Politics of Island Southeast Asia. *

Southeast Asia includes a variety of societies exhibiting many ecological adaptations, religions, marriage systems, and experiences with colonial powers. Case studies of particular societies, chosen to reveal variety, are examined comparatively. Emphasis on religion and social organization. Prerequisite(s): course 2. (General Education Code(s): E.) *The Staff*

130F. African Diasporas in the Americas. *

Focuses on African diasporas of the Caribbean, United States, and Latin America. Themes include: theorizing diaspora, historical formations, slavery, analytical approaches to cultures of the African diaspora, religion, music, comparative identity formation and racism, gender dynamics, social movements, and transnationalism. (General Education Code(s): E.) *M. Anderson*

130G. Asian Americans in Ethnography and Film. *

Critically examines category of Asian Americans. Addresses historic representations of Asians and Asian Americans in ethnographic research and film. Explores contemporary issues of race, culture, and politics through ethnographic practice and cultural production. (General Education Code(s): E.) *N. Chen*

130H. Ethnography of Russia and Eastern Europe. W

Introduces students to the ethnography of Eurasia, with special attention to the lived experience and legacy of state socialism in this region. Topics include new ideas of personhood, changing economic practices, public health, and international development. (General Education Code(s): E.) *M. Caldwell*

130I. Cultures of India. *

An examination of anthropological studies of tribal, rural, and urban

cultures of India and a look at changes taking place in India. Prerequisite(s): course 2. Offered in alternate academic years. (General Education Code(s): E.) *T. Pandey*

130L. Ethnographies of Latin America. F

A broad introduction to issues and areas of cultural production and transformation in the Caribbean, Mexico, and Central and South America. Colonial, neocolonial, class, ethnic, gender, religious, ecological, and political relations intersect as represented in ethnographies and film. Will be offered in the 2008-09 academic year. Prerequisite(s): course 2. (General Education Code(s): E.) A. Kramer

130M. Inside Mexico. S

Examines various communities within the Republic of Mexico as represented in ethnographic texts and other forms of cultural production, particularly music and dance. Emphasis on the interplay between the concept of regionalism and national identity. Previous course work in Mexican culture and/or history strongly recommended. Some reading in Spanish is required. (General Education Code(s): E.) *Olga Nájera-Ramírez*

130N. Native Peoples of North America. *

A survey of Native American cultures and experience during the past century, with emphasis on Pueblo cultures of the American Southwest. (General Education Code(s): E.) *T. Pandey*

130X. Special Topics in Ethnography. F,W,S

This course on special topics in ethnography will be taught on a rotating basis by various faculty members. Precise focus of each year's courses will vary according to the instructor and will be announced by the department. May be repeated for credit. *The Staff*

131. Women in Cross-Cultural Perspective. S

Examines the diversity of women's as well as men's roles, experiences, and self-conceptions in a number of societies to explore how women and men shape, and are shaped by, particular forms of social life. Prerequisite(s): course 2. Offered in alternate academic years. *A. Kramer*

132. Photography and Anthropology. *

Moving historically from woodcuts and paintings to the World Wide Web, but emphasizing the invention and development of documentary photography, this course explores the world of images depicting society and culture. Major theoretical approaches to "reading" pictures will be emphasized, and students must produce a final project incorporating visual images. Prerequisite(s): course 2 or History of Art and Visual Culture 10D or 10E or 10F or 10G or Art 30. *S. Errington*

132L. Photography and Anthropology Laboratory (2 credits). *

This still photography lab trains students in the basic operations and techniques of the camera and the creation of a set of still photographs to use for social documentation. It includes lectures, demonstrations, hands-on instruction, and a continuous review of the students' work in progress. It does not include darkroom work. Concurrent enrollment in course 132 required. Enrollment restricted to anthropology majors. Enrollment limited to 30. *S. Errington*

133. Narratives of the Popular. *

Addresses the increasing importance of popular culture as the terrain upon which to address issues of culture and power. Emphasizes an ethnographic approach to popular culture as sociocultural phenomena. Students learn about a variety of activities including television and film viewing, music, fashion, photography, postcards, comic books, and urban spatial relations and architecture. Offered in alternate academic years. *The Staff*

134. Medical Anthropology: An Introduction. *

Cross-cultural study of health, disease, and illness behavior from ecological and ethnomedical perspectives. Implications for biomedical health care policy. Will be offered in the 2008-09 academic year. *The Staff*

135A. Cities. F

Examines cities from an anthropological perspective. Reviews pertinent social scientific literature of the 19th and early 20th centuries. Surveys the concepts and methods used by contemporary anthropologists to investigate urban phenomena. *D. Linger*

137. Consuming Culture. S

Explores consumption as a cultural form. Beginning with theories of capitalism and exchange, it then focuses on sites and modes of consumption and display such as department stores, museums and zoos, advertisements and photography, cultural tourism. Prerequisite(s): course 2. *M. Caldwell*

138. Political Anthropology. F

The ideas, in selected non-Western societies, about the nature of power, order, social cohesion, and the political organization of these societies. (Also offered as Legal Studies 138. Students cannot receive credit for both courses.) Offered in alternate academic years. *T. Pandey*

139. Language and Culture. *

Examination of language system and language use in relationship to cultural contexts of communication in Western and non-Western societies. Topics include the Sapir-Whorf linguistic relativity hypothesis; linguistic constructions of gender; speech variation in relation to class, ethnicity, and national identity; and the emergence of self in communicative acts. Prerequisite(s): course 2. *D. Brenneis*

142. Anthropology of Law. *

An ethnographically informed consideration of law, dispute management, and social control in a range of societies including the contemporary U.S. Topics include conflict management processes, theories of justice, legal discourse, and relations among local, national, and transnational legal systems. Will be offered in the 2008-09 academic year. (Also offered as Legal Studies 142. Students cannot receive credit for both courses.) Enrollment restricted to anthropology and legal studies majors. *D. Brenneis*

146. Anthropology and the Environment. F

Examines recent approaches to study of nature and the environment. Considers historical relationship between nature, science, and colonial expansion as well as key issues of contemporary environmental concern: conservation, environmental justice, and social movements. Prerequisite(s): course 2. A. Mathews

150. Communicating Anthropology. F

Encourages anthropology majors to explore different means of communicating anthropology with much attention to individual writing and presentation skills. Intensive work on library research; recognizing, comparing, and making arguments; and analyzing ethnographies, articles, reviews, and films. Prerequisite(s): two of the following courses: 1, 2, or 3; satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to sophomore and junior anthropology majors. (General Education Code(s): W.) *C. Shaw*

151. Workshop in Ethnography. F

Through demonstration, practice, and participation, acquire skills in collecting and analyzing cultural data. Work with members of other cultures and with each other to learn to identify significant cultural patterns. Lectures and readings provide added perspective and a theoretical base. Prerequisite(s): course 2. Enrollment limited to 20. *S. Harding*

152. Survey of Cultural Anthropological Theory. W

Major figures, ideas, and writings in 19th- and 20th-century cultural anthropology surveyed. Prerequisite(s): course 2 and satisfaction of the Entry Level Writing and Composition requirements; enrollment restricted to anthropology majors. (General Education Code(s): W.) *S. Harding*

154. Multimedia Ethnography. W

Students learn the fundamentals of photography or video production and audio recording in order to create mini-ethnographies. Prerequisite(s): courses 1, 2, and 3. Enrollment restricted to anthropology majors. Enrollment limited to 40. S. Errington

154L. Multimedia Laboratory (2 credits). W

Designed to instruct in aesthetics and technical production of a short digital slideshow. Using iMovie3 editing program, produce a digital slideshow incorporating sound (narration, music, and sound effects) and still images. Concurrent enrollment in course 154 required. Enrollment limited to 12. *S. Errington*

155. Cultural Encounters. *

Explores cross-cultural encounters through a combination of theoretical and ethnographic texts. Various faculty members teach on a rotating basis. The focus of each year's course(s) varies according to the instructor and will be announced by the department. Prerequisite(s): course 2 or permission of instructor. May be repeated for credit. *S. Harding*

159. Race and Anthropology. S

Examines concept of race in anthropology. Begins with histories of race in anthropology; turns to contemporary analysis of racism, identity formation, and diaspora; and concludes with current debates on the validity of "race" as an object of analysis. *M. Anderson*

165. Anthropological Folklore. W

Survey of the major forms of folklore with emphasis upon games, humor, superstitions, and folk-narratives (myth, legend, and folktales). Addresses methodological issues in folklore and theoretical approaches to the study of folklore. Prerequisite(s): course 2. Offered in alternate academic years. *Olga Nájera-Ramírez*

170. History of Archaeological Theory. F

Historical review of prehistoric archaeology from antiquarianism to the present. Emphasis on development of archaeological theory and its relation to evolutionary and anthropological theory. Students cannot receive credit for this course and course 270. Prerequisite(s): course 3; satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to anthropology majors. Recommended for juniors. Offered in alternate academic years. (General Education Code(s): W.) *D. Gifford-Gonzalez*

172. Archaeological Research Design. S

Introduces theories and methods for recovering and analyzing archaeological data. Critically explores the nature of archaeological evidence and how archaeologists know what they know. Strongly recommended for those contemplating further studies in archaeology. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, course 3, and one upper-division archaeology course. Strongly recommended for those contemplating further studies in archaeology. Enrollment limited to 25. Offered in alternate academic years. (General Education Code(s): W.) *C. Boone*

174. Origins of Complex Societies. W

Deals with evidence and theories concerning the origins of complex society; the transition from egalitarian, foraging societies to the hierarchical, economically specialized societies often referred to as "civilizations." Focuses on both Old World and New World cultures. Prerequisite(s): course 3. *J. Monroe*

175A. African Archaeology: 2.5 Million BP to Farming. F

Archaeological history of Africa from the first 2.5 million-year-old artifacts to the emergence of African pastorialism and farming. Disciplinary models and assumptions critically examined in their historic and political contexts. Students cannot receive credit for this course and course 275A. (Formerly *African Archaeology*.) Prerequisite(s): course 3 or by permission of instructor. Enrollment restricted to junior and senior anthropology majors. Enrollment limited to 45. *D. Gifford-Gonzalez*

175B. African Archaeology: Development of Complex Societies. W

Introduces the evolution of African kingdoms and states from the emergence of farming communities to initial contact with Europe. Particular attention paid to the origins of social inequality and the evolution of centralized polities. Students cannot receive credit for this course and course 275B. Prerequisite(s): course 3; course 175A strong recommended. *J. Monroe*

175C. African Diaspora. *

Introduces the African diaspora from an archaeological perspective. Focuses on examining the cultural, social, economic, and political lives of Africans and their descendants in the New World and West Africa from the 15th through 19th centuries. Students cannot receive credit for this course and course 275C. Prerequisite(s): course 3; courses 175A and 175B strongly recommended. *J. Monroe*

176A. North American Archaeology. F

Development of Native cultures in North America. Topics include peopling of the New World, early foragers, spread of agriculture and complex societies in the Southwest and Eastern Woodlands, and review of cultural developments in the West and Far North. *J. Sunseri*

176B. Meso-American Archaeology. *

Review of the archaeological and ethnohistorical evidence for the origins and development of pre-Columbian civilizations in Meso-America including the Olmec,

Maya, Zapotec, Mixtec Teotihuacan, Toltec, Tarascan, and Aztec. Prerequisite(s): course 3. *The Staff*

178. Historical Archaeology: A Global Prespective. S

Introduces archaeology of European colonialism and the early-modern world. Topics include historical archaeological methods; the nature of European colonial expansion in New and Old Worlds; culture contact and change; and power and resistance in colonial societies. Students cannot receive credit for this course and course 278. Prerequisite(s): course 3 or consent of instructor. *J. Monroe*

180. Ceramic Analysis in Archaeology. S

Focuses on theories and techniques used by archaeologists to bridge the gap between the recovery of ceramic materials and their interpretation within cultural contexts. Topics include the origins of pottery, production methods, classification and typology, seriation, functional analysis, materials analysis and description, organization of production, trade, and the analysis of style. Students cannot receive credit for this course and course 280. Prerequisite(s): course 3. Concurrent enrollment in course 180L required. Enrollment restricted to anthropology majors. *J. Habicht Mauche*

180L. Ceramic Analysis Laboratory (2 credits). S

Practicum in ceramic materials analysis and description. Students perform material experiments in materials selection and processing, hand-building techniques, and open-pit firing. Demonstrations of standard techniques of attribute analysis and the mineralogical and chemical characterization of ceramic materials are presented. Students cannot receive credit for this course and course 280L. Prerequisite(s): course 3. Concurrent enrollment in course 180 required. Enrollment restricted to anthropology majors. Enrollment limited to 16. *J. Habicht Mauche*

182A. Lithic Technology. *

Introduction to lithic and ceramic analysis in archaeology. Includes lab analysis, discussions of classification and typology, and exploration of the concept of style as it relates to ceramics and lithics in archaeology. Prerequisite(s): course 3. Enrollment limited to 20. *The Staff*

183. Introduction to Quantitative Methods in Archaeology. S

An introduction to the use of statistics and other formal methods in solving archaeological problems. Teaches basic interests, terms, and concepts important in quantitative archaeological thought through lectures, assigned readings, problem sets, and in-class discussions. Prerequisite(s): course 1 or 3. E. Vogel

184. Zooarchaeology. *

Lectures and seminar on archaeological faunal analysis. Topics include mammalian evolution and osteology, vertebrate taphonomy, reconstruction of human diet from faunal remains, foraging strategy theory, data collection and management, and methods of quantitative analysis. Students cannot receive credit for this course and course 284. Prerequisite(s): course 3. Offered in alternate academic years. *D. Gifford-Gonzalez*

185. Osteology of Mammals, Birds, and Fish. *

Practicum in archaeological faunal analysis. Students learn to identify bones of all larger mammal species of central California plus selected bird and fish species. Students cannot receive credit for this course and course 285. Prerequisite(s): courses 184 or 102 or Biology 138/L or Earth Sciences 100 or Environmental Studies 105/L,

and permission of instructor. Enrollment limited to 16. Offered in alternate academic years. *The Staff*

190A. Primate Field Ecology: Tropical Forest Ecology. W

Explores tropical forest ecology with emphases on plant-life history variation and patterns of diversity. Topics include: photosynthesis, competition, and plant-animal interactions, such as pollination, herbivory, and seed dispersal. Special focus on neotropical forests and adaptations to life in humid environments. Students cannot receive credit for this course and course 290A. Competitive selection based on application and interview during previous fall quarter. Concurrent enrollment in courses 190B and 190C required. Enrollment limited to 15. *N. Dominy*

190B. Primate Field Ecology: Field Methods in Primatology. W

Field-oriented course in primate behavioral ecology. Combines lectures on approaches and methodologies with practical field studies. Students complete field project in primate ecology and behavior and learn natural history of the plants and animals of Costa Rica. Students cannot receive credit for this course and course 290B. Competitive selection based on application and interview during previous fall quarter. Concurrent enrollment in courses 190A and 190C required. Students are billed a materials fee. Enrollment limited to 15. *N. Dominy*

190C. Primate Field Ecology: Independent Field Research. W

Students carry out substantial field projects at two locations in Costa Rica under the supervision of course instructors. Students develop research proposals, analyze data, and prepare final research papers and oral presentations. Students cannot receive credit for this course and course 290C. Competitive selection based on application and interview during previous fall quarter. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Concurrent enrollment in courses 190A and 190B required. Enrollment limited to 15. (General Education Code(s): W.) *N. Dominy*

192. Directed Student Teaching. F,W,S

Teaching of a lower-division seminar under faculty supervision. (See course 42.) Students submit petition to sponsoring agency. *The Staff*

193. Field Study. F,W,S

Students submit petition to sponsoring agency. The Staff

194. Senior Seminar.

194A. Community. S

Critically considers four concepts of community: community as place, community of interests, community as social relations, and community as intentional goal. Students examine internal dynamics of communities, social relations between communities in complex societies, and the successes and failures of particular intentional communities. Prerequisite(s): courses 1, 2, and 3, and satisfaction of the Entry Level Writing and Composition requirements. Enrollment limited to 20. (General Education Code(s): W.) *C. Shaw*

194B. Chimpanzees: Biology, Behavior and Evolution. S

Explores studies on wild and captive chimpanzees with reference to other apes and humans. Topics include sociality, tool using, locomotion,

traditions, and life history; social and physical dimensions of growth and development; language studies, genetics, and applications to human evolution. Prerequisite(s): courses 1, 2, and 3; satisfaction of the Entry Level Writing and Composition requirement. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) A. Zihlman

194D. Person-Centered Ethnography. *

Examines the theory and practice of person-centered ethnography focusing on the relationship between personal experience and sociocultural worlds. Seminar participants write a substantial paper based on their own ethnographic research. Will be offered in the 2008–2009 academic year. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *The Staff*

194E. Advanced Topics in Folkloristics. *

An examination of selected topics and issues in the field of folklore; topics vary each quarter. Designed for advanced students with a demonstrated interest in folkloristics. Will be offered in the 2008–2009 academic year. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 1, 2, and 3. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *Olga Nájera-Ramírez*

194F. Memory. *

Intensive and fast-paced seminar focusing on theoretical and ethnographic studies of memory as a means for dealing with the past. Examines how ordinary people and societies have coped with the past through acts of selective remembering and forgetting. Prerequisite(s): courses 1, 2, and 3; satisfaction of the Entry Level Writing and Composition requirement. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *M. Caldwell*

194G. Anthropology of Travel. *

Theories of migration and tourism merge in this course examining travel; travel's subjection to state regulation and surveillance; the impacts of different traveling populations (economic migrants, refugees, tourists) on the nation state; and the formation of transnational communities. Prerequisite(s): courses 1, 2, 3, and satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *The Staff*

194I. Consumption and Consumerism. S

Investigates cultural analysis of consumer society, commodities, and consumer practices. Students develop their own research projects. Themes include: critiques of consumer society; symbolic analysis of goods, consumption as resistance, anthropologies of marketing, culture jamming; consumption and (post) colonialism. Prerequisite(s): courses 1, 2, and 3; satisfaction of the Entry Level Writing and Composition requirement. Enrollment restricted to senior anthropology majors.

194K. Reading Ethnographies. F

Explores issues in the representation of culture through reading and discussing ethnographies. Recent experimental ethnographies open topics including the relation between fieldwork and writing, textual strategies, and the politics of ethnographic writing and research. Prerequisite(s): courses 1, 2, and 3; satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *S. Harding*

194M. Special Topics in Medical Anthropology. *

Focuses on critical issues in the social sciences of health and healing. Designed for students pursuing graduate work in medical anthropology and/or public health. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 1, 2, 3, and 134. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *N. Chen*

194N. Comparison of Cultures. *

Seminar for upper-division students interested in theories and methodology of social and cultural anthropology. Devoted to critical discussion of different methods of comparison practiced in anthropology. Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements; courses 1, 2, and 3. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *T. Pandey*

1940. The Anthropology of Sexuality. *

Provides an anthropological approach that focuses on the way representations of sexuality are connected with a broad array of cultural and historical contexts including colonialism, kinship, the formation of policies, nationalism, rituals of exchange, and cultural borderlands. Students cannot take this course after completing another senior seminar. Will be offered in the 2007–2008 academic year. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 1, 2, and 3. Enrollment restricted to senior anthropology majors. Enrollment limited to 15. (General Education Code(s): W.) *C. Shaw*

194P. Space, Place, and Culture. F

Examines ways anthropologists have studied relationship between space, place, and culture. Covers early formulations acknowledging people in different cultural contexts ascribe particular meanings to places and to the concept of space and then traces the ways these questions have come to the fore in more recent scholarship. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *J. O'Reilly*

194S. Hearing Culture: The Anthropology of Sound. *

Explores relationships between culture and acoustic worlds—environmental, verbal, and musical—within which we live. How sound is shaped by human belief and practice and the role sound plays in

cultural and social life, both past and present. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 1, 2, and 3. Enrollment restricted to senior anthropology majors. Enrollment limited to 15. (General Education Code(s): W.) *D. Brenneis*

194T. Poverty and Inequality. F

Through ethnographies about homelessness, food deprivation, and unemployment, examines the institutions through which poverty is recognized, the systems of morality shaping debates about need and appropriate behavior, and the effects of community responses to poverty. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 1, 2, and 3. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *M. Caldwell*

194U. Environmental Anthropology: Nature, Culture, Politics. W

Presents key readings in environmental anthropology focusing on environmental conflicts. Students guided in developing research paper on a society environment topic of their choice. Class is writing intensive with in-class discussion and final presentations. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) A. Mathews

194V. Picturing Cultures. W

A historical, analytical, and practical exploration of the uses of still and moving pictures in ethnographic representations, research, and production. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 1, 2, and 3; and course 80J, 120, 132, or 154. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *S. Errington*

194X. Women in Politics: A Third World Perspective. *

Focuses cross-culturally on the status of women in the Third World and their formal and informal participation in politics. Also discussed are organized efforts, through participation in both national and autonomous movements, for women's rights. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 1, 2, and 3. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *A. Pandey*

194Y. Archaeologies of Space and Landscape. *

Examines contemporary archaeological perspectives on space and landscape. Focuses on how archaeology can contribute to an appreciation of the economic, cultural, and political factors that shape human perception, use, and construction of the physical world. Prerequisite(s): courses 1, 2, 3, and satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *J. Monroe*

196A. Archaeology of the American Southwest (3 credits). W

Outlines development of Native cultures in the American Southwest from Paleo-Indian times through early European contact. Students must enroll in courses 196A and 196B. Students cannot receive credit for courses 196A-B and 194I. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 1, 2, and 3. Enrollment restricted to anthropology majors. Enrollment limited to 25. (General Education Code(s): W.) *J. Habicht Mauche*

196B. Archaeology of the American Southwest (3 credits). S

Outlines development of Native cultures in the American Southwest from Paleo-Indian times through early European contact. Students must enroll in courses 196A and 196B. Students cannot receive credit for courses 196A-B and 194I. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 1, 2, 3, and 196A. Enrollment restricted to anthropology majors. Enrollment limited to 25. (General Education Code(s): W.) *J. Habicht Mauche*

197. Laboratory Tutorial. F,W,S

Independent laboratory research on selected topics in archeology and physical anthropology. Interview with appropriate instructor required. May be repeated for credit. *The Staff*

197F. Laboratory Tutorial (2 credits). F,W,S

Independent laboratory research on selected topics in archaeology and physical anthropology. Interview with appropriate instructor required. Enrollment restricted to anthropology majors. May be repeated for credit. D. Gifford-Gonzalez, A. Zihlman, J. Habicht Mauche, A. Galloway, N. Dominy, J. Monroe

198. Independent Field Study. F,W,S

Off-campus field study. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

Graduate Courses

200. Theoretical Foundations of Physical Anthropological Research. S

Provides historical and theoretical foundation of physical anthropology. Grounds students in the changing frameworks and perspectives during the last 150 years regarding questions in human biology, evolution, nature, and culture, by examining texts and scientific journals. Enrollment restricted to graduate students. Enrollment limited to 15. *A. Zihlman*

200A. Core Graduate Course (10 credits). F

Introduces history, ethnography, and theory of cultural anthropology with emphasis on awareness of construction of anthropological canon and areas of conflict within it, leading up to contemporary debates on a variety of issues. Two-term course: students must enroll in both quarters. Enrollment restricted to anthropology graduate students. Enrollment limited to 12. *D. Linger, M. Caldwell*

200B. Core Graduate Course. W

Introduces history, ethnography, and theory of cultural anthropology with emphasis on awareness of construction of anthropological canon and areas of conflict within it, leading up to contemporary debates on a variety of issues. Multiple-term course; students must enroll in both quarters to receive academic credit. Enrollment restricted to anthropology graduate students. Enrollment limited to 12. *T. Pandey*

201. Human Evolution. *

Provides an overview of the first five million years of human evolution and a framework for studying evolution and reconstructing the human past. Emphasizes that all lines of evidence must be included: hominid fossils, archaeology, paleoecology, and molecular data. Will be offered in the 2008–2009 academic year. Enrollment restricted to graduate students. Enrollment limited to 15. A. Zihlman

202A. Skeletal Biology. *

Focuses on human skeletal biology, the identification of elements, physiology of hard tissue formation, growth, and maintenance. Students are required to show competence in skeletal identification to pass this class. Prerequisite(s): course 102A or permission of instructor. Enrollment restricted to graduate students. Enrollment limited to 5. *The Staff*

203. Forensic Anthropology. *

Provides training in techniques used in identifying biological profile from the skeleton, assessing the trauma, and estimating time since death. Impact of legal context in which these assessments are made paramount to this course. Enrollment restricted to graduate students. Enrollment limited to 10. *The Staff*

206. Primate Behavior. F

An overview of primate evolution and review of the major groups of primates in terms of their ecological, locomotor, dietary, and social adaptations. Theoretical frameworks, such as behavioral ecology, sexual selection, and life history, are evaluated from long-term studies of primate behavior. Students cannot receive credit for this course and course 106. Enrollment restricted to graduate students. Enrollment limited to 15. *N. Dominy*

207. Human Functional Anatomy. S

Study of the human body from molecules to organ systems, emphasizing evolution and medical applications. Students cannot receive credit for this course, course 107, and Biology 135. Concurrent enrollment in course 207L required. Enrollment restricted to graduate students. Enrollment limited to 15. *N. Dominy*

207L. Human Functional Anatomy Laboratory. S

Study of the human body using dissection and comparative anatomy exercises for advanced anatomy students. Students are billed a laboratory fee. Students cannot receive credit for this course, course 107L, and Biology 135L. Concurrent enrollment in course 207 required. Enrollment restricted to graduate students. Enrollment limited to 15. *N. Dominy*

208A. Ethnographic Practice. S

Introduces graduate students to the practice of fieldwork. Students design and carry out a quarter-long research project exploring a range of methods and producing an analytical case study. Readings and discussion emphasize both methodological critique and successful implementation. Enrollment restricted to anthropology graduate students. Enrollment limited to 15. *S. Harding*

208L. Video Laboratory (2 credits). S

Provides students with hands-on training with a variety of audiovisual equipment. Through lectures, demonstrations, hands-on field exercises, and review of students' media exercises, students learn the fundamentals of photography, video production, and audio recording in the field. Concurrent enrollment in course 208A required.

Enrollment restricted to anthropology graduate students. Enrollment limited to 15. *S. Harding*

211. Human Ecology. *

Reviews environmental, physiological, behavioral, and cultural ways that humans interact with their physical surroundings. Effects of human culture on the environment, and of the environment on the shape of human culture will be emphasized. Will be offered in the 2008–2009 academic year. Enrollment restricted to graduate students. Enrollment limited to 15. *N. Dominy*

216. Methods in Physical Anthropology. F

Topical methodologies in physical anthropology. Particular emphasis placed on the use of molecular techniques, spatial pattern analysis, morphometrics, stable isotopes, and Bayesian statistics. Contact time structured as a weekly three-hour meeting. Enrollment restricted to graduate students. Enrollment limited to 15. *N. Dominy*

228. Grant Writing. F

Devoted entirely to writing grant proposals. Students either work on their graduate education fellowships or their doctoral dissertation grants or both. Reading materials consist of granting agency documents plus examples of successful applications. Enrollment restricted to anthropology graduate students. Enrollment limited to 15. May be repeated for credit. *C. Shaw*

229. Constructing Regions. *

Discusses centrality of the idea of "regions" in studies of culture, the history of "locating" social theory, and debates about area studies. Students develop area of transregional bibliographies. Primarily for second- or third-year anthropology graduate students reading "area" literatures. Enrollment restricted to graduate students. Enrollment limited to 15. M. Anderson

230. Image Culture. *

Visuality as epistemology, image-consumption, and the political and representational possibilities stemming from digitization and the World Wide Web are increasingly important issues in the humane sciences. Offers historical and critical background and the possibility of hands-on practice using visual material in current research. Will be offered in the 2008–2009 academic year. Enrollment restricted to graduate students. Enrollment limited to 15. *S. Errington*

234. Feminist Anthropology. *

Examines how feminist anthropology has created its object of knowledge: gender differentiation in cross-cultural perspective. Reading across feminist theory and ethnography, focuses on nature/culture, post-colonial debates, the intersection of gender with race and nationalism, and gender and transnationalism. Enrollment restricted to graduate students. Enrollment limited to 15. A. Tsing

243. Cultures of Capitalism. *

Introduction to selected themes in political economy, stressing the work of Marx. Topics include the development of capitalism, colonialism, dependency, world systems, state formation, class consciousness, commodity fetishism, the nature of late capitalism, post-modernism, and the aesthetics of mass culture. Through political economy's interlocutors, raises questions about gender, race and ethnicity, and post-structuralist critiques. Enrollment restricted to graduate students. Enrollment limited to 15. *L. Rofel*

246. Race in Theory and Ethnography. *

Explores theoretical and methodological approaches to the cross-cultural study of "race," with an emphasis on historical and ethnographic analysis. Main approaches considered include Foucauldian, Gramscian, diaspora theory and the everyday poetics and politics of race. Will be offered in the 2008–2009 academic year. Enrollment restricted to graduate students. Enrollment limited to 15. *M. Anderson*

249. Ecological Discourses. *

Explores narratives of nature and their practical consequences in contests over "wild places" and their resources. Readings focus on the histories of forests and on analytic frameworks—ecology, social history, interpretation, cultural studies—with which to investigate competing constructions of the environment. Enrollment restricted to graduate students. Enrollment limited to 15. A. Tsing

252. Survey of Cultural Anthropological Theory. W

Major figures, ideas, and writing in 19th- and 20th-century cultural anthropology surveyed. Enrollment restricted to graduate students. Enrollment limited to 15. *S. Harding*

253. Advanced Cultural Theory. W

Examines cultural anthropology's interdisciplinary practices of knowledge formation at an advanced level. Drawing on various types of theoretical texts, the course elaborates on the relationship between culture and power, taking up different themes each time it is taught. Enrollment restricted to graduate students. Enrollment limited to 15. *L. Rofel*

270. History of Archaeology. F

Historical review of prehistoric archaeology from antiquarianism to the present. Emphasis on the development of archaeological theory, its relation to evolutionary and anthropological theory, and themes ongoing over time. Students cannot receive credit for this course and course 170. Enrollment restricted to graduate students. Enrollment limited to 15. *D. Gifford-Gonzalez*

275A. Seminar on Early African Archaeology. F

Tutorial on archaeology of Africa, from 2.5 million years ago to emergence of African pastoralism and farming. Weekly examination of disciplinary models and assumptions in historic context, emphasizing overarching themes in prehistoric archaeology. Students cannot receive credit for this course and course 175A. (Formerly *Tutorial on African Archaeology*.) Enrollment restricted to graduate students or by consent of instructor. Enrollment limited to 15. *D. Gifford-Gonzalez*

275B. Tutorial in Archaeology of African Complex Societies. W

Graduate tutorial on the archaeology of precolonial African kingdoms and states. Particular attention paid toward the origins of social inequality and the evolution of centralized polities. Students cannot receive credit for this course and course 175B. Prerequisite(s): Enrollment restricted to graduate students. Enrollment limited to 15. *J. Monroe*

275C. Tutorial in African Diaspora Archaeology. *

Graduate tutorial on African diaspora archaeology. Focuses on the cultural, social, economic, and political lives of Africans and their descendants in the New World and West Africa from the 15th through 19th centuries. Students cannot receive credit for this course and course 175C. Prerequisite(s): Enrollment restricted to graduate students. Enrollment limited to 15. *J. Monroe*

275D. Issues in Africanist Archeology. *

Advanced readings and discussion in Africanist archaeology. Focus to be guided by the needs of advanced students. This course does not replace the 275-series and should only be taken by students who have successfully completed at least one of these courses. Prerequisite(s): course 275A or 275B or 275C. Enrollment restricted to graduate students. Enrollment limited to 15. May be repeated for credit. *D. Gifford-Gonzalez*

276A. Advanced Topics in North American Archaeology. F

In-depth examination of development of Native cultures in North America from end of last ice age to time of European contact. Focuses on specific regional trajectories and problems of social change. Enrollment restricted to graduate students. Enrollment limited to 15. *J. Habicht Mauche*

276D. Archaeology of the Peopling of the Americas. *

Using a multidisciplinary approach, examines physical geology, paleoenvironment, human biology, linguistics, and culture history of Americas at end of last Ice Age. Particular emphasis on reconstructing timing, routes, and context of first peopling of the American continents. Taught in conjunction with Earth Sciences 276. Students cannot receive credit for both courses. Enrollment restricted to graduate students. Enrollment limited to 15. *J. Habicht Mauche*

277. Tutorial on European Conquest of the Americas. *

Uses ethnographic, archaeological, and historical sources to examine clash of cultures between Native Americans and Europeans during the 15th through 19th centuries. Emphasizes critical analyses of social, political, and demographic impacts of contact on Native American societies. Enrollment restricted to graduate students. Enrollment limited to 15. *J. Habicht Mauche*

278. Tutorial on Historical Archaeology. S

Tutorial on archaeology of European colonialism and the early-modern world. Focuses on the nature of European colonial expanison in New and Old Worlds; culture contact and change; and power and resistance in colonial societies. Students cannot receive credit for this course and course 178. Enrollment restricted to graduate students. Enrollment limited to 15. *J. Monroe*

280. Advanced Ceramic Analysis. S

Advanced graduate seminar that focuses on techniques and theories used to bridge the gap between the recovery of ceramic remains from archaeological contexts and their interpretation with respect to various anthropological issues and problems. Students cannot receive credit for this course and course 180. Enrollment restricted to graduate students. Concurrent enrollment in Anthropology 280L required. Enrollment limited to 5. *J. Habicht Mauche*

280L. Advanced Ceramic Analysis Laboratory (2 credits). S

Emphasizes advanced techniques of ceramic analysis, including materials selection and processing, hand-building, and open-pit firings. Standard techniques for describing and measuring formal and technological attributes of pottery also presented. Students cannot receive credit for this course and course 180L. Enrollment restricted to graduate students. Concurrent enrollment in Anthropology 280 required. Enrollment limited to 5. *J. Habicht Mauche*

281. Landscape Archaeology. S

Graduate seminar on contemporary archaeological perspectives about space and landscape. Focuses on archaeological contributions to understanding economic, cultural, and political factors that shape human perception, use, and construction of the physical world. Enrollment restricted to graduate students. Enrollment limited to 15. *J. Monroe*

284. Zooarchaeology. *

Lectures and seminar on archaeological faunal analysis. Topics include mammalian evolution and osteology, vertebrate taphonomy, reconstruction of human diet from faunal remains, foraging strategy theory, data collection and management, and methods of quantitative analysis. Students cannot receive credit for this course and course 184. Enrollment restricted to graduate students. *D. Gifford-Gonzalez*

285. Osteology of Mammals, Birds, and Fish. *

Practicum in vertebrate osteology, covering all larger mammal species of central California, plus selected bird and fish species, and topics in evolution and ecology of selected taxa. Students cannot receive credit for this course and course 185. Enrollment restricted to graduate students. Enrollment limited to 15. *D. Gifford-Gonzalez*

288. Gender and Archaeology. *

Seminar on the use of concepts of gender, sex, and sexuality in archaeological analysis and sociopolitics, reviewing antecedents in the general anthropological literature, the first critiques of androcentrism, and more recent research incorporating gender in analysis, as well as the impacts of archaeological sociopolitics on persons of different genders and sexual preferences. Will be offered in the 2008–2009 academic year. Enrollment restricted to graduate students. Enrollment limited to 15. *D. Gifford-Gonzalez*

289. Writing in the Anthropological Sciences (no credit). S

Worshop on writing styles in anthropological sciences, including specialized, general anthropological, and mainstream scientific journals, monographs, and public education pieces. Cultivates flexible writing skill through comparative analysis of data presentation and rhetoric, with drafts in different formats. Enrollment restricted to graduate students. Enrollment limited to 15. *D. Gifford-Gonzalez*

290A. Primate Field Ecology: Tropical Forest Ecology. W

Tropical forest ecology with emphases on plant-life history variation and patterns of diversity. Topics include: photosynthesis, competition, and plant-animal interactions, such as pollination, herbivory, and seed dispersal. Special focus on neotropical forests and adaptations to life in humid environments. Students cannot receive credit for this course and course 190A. Competitive selection based on application and interview during previous fall quarter. Enrollment restricted to graduate students. Concurrent enrollment in courses 290B and 290C required. Enrollment limited to 15. *N. Dominy*

290B. Primate Field Ecology: Field Methods in Primatology. W

Field-oriented course in primate behavioral ecology. Combines lectures on approaches and methodologies with practical field studies. Students complete field project in primate ecology and behavior and learn natural history of the plants and animals of Costa Rica. Students cannot receive credit for this course and course 190B. Competitive selection based on application and interview during previous fall quarter. Enrollment restricted to graduate students. Concurrent enrollment in courses 290A and 290C required. Students are billed a materials fee. Enrollment limited to

290C. Primate Field Ecology: Independent Field Research. W

Students carry out substantial field projects at two locations in Costa Rica under the supervision of course instructors. Students develop research proposals, analyze data, and prepare final research papers and oral presentations. Students cannot receive credit for this course and course 190C. Competitive selection based on application and interview during previous fall quarter. Enrollment restricted to graduate students. Concurrent enrollment in courses 290A and 290B required. Enrollment limited to 15. *N. Dominy*

292. Graduate Colloquium (2 credits). F,W,S

Designed to offer an institutionalized mechanism for the presentation of research papers and teaching efforts by faculty and advanced graduate students. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

294A. History of Evolutionary Theory. *

History of ideas about evolution as a process, with a focus on human evolution from Darwin's methods and contributions through genetics, paleontology, and the modern evolutionary synthesis, concluding with the impact of molecular data on understanding of evolution today. Students cannot receive credit for this course and course 194A. Will be offered in the 2008–2009 academic year. Enrollment restricted to graduate students. Enrollment limited to 15. A. Zihlman

294L. Advanced Topics in Southwest Prehistory. *

Advanced overview of Native cultures in the American Southwest from Paleo-Indian times through early European contact. Completion of undergraduate course in North American archaeology is strongly recommended. Students cannot receive credit for this course and course 194L. Will be offered in the 2008–2009 academic year. Completion of undergraduate course in North American archaeology is strongly recommended. Enrollment restricted to graduate students. Enrollment limited to 10. *J. Habicht Mauche*

294N. Comparison of Cultures. *

Seminar for students interested in theories and methodology of social and cultural anthropology devoted to critical discussion of different methods of comparison practiced in anthropology. Enrollment restricted to graduate students. Enrollment limited to 15. *T. Pandey*

297. Independent Study. F,W,S

Students submit petition to sponsoring agency. The Staff

298. Advanced Laboratory Apprenticeship. F,W,S

Supervised tutorial in specialized analytic methods in archaeology or physical anthropology. Students collaborate on laboratory research with a departmental mentor or, with advisor's consent, with researchers on or off campus, preparing a manuscript for publication or an extensive literature review. Permission of instructor required. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Prerequisite(s): petition on file with sponsoring agency. The Staff

Applied Mathematics and Statistics

Baskin School of Engineering 335 Baskin Engineering Building (831) 459-2158

http://www.soe.ucsc.edu

Changes to 2006-08 Catalog Highlighted | Faculty | Course Descriptions

Program Description

Applied mathematics and statistics are disciplines devoted to the use of mathematical methods and reasoning to solve real-world problems of a scientific or decision-making nature in a wide variety of subjects, principally (but not exclusively) in engineering, medicine, the physical and biological sciences, and the social sciences. Applied mathematical modeling often involves the use of systems of (partial) differential equations to describe and predict the behavior of complex real-world systems that unfold dynamically in time. Statistics, construed broadly, is the study of uncertainty: how to measure it (using ideas and methods in probability theory), and what to do about it (using concepts from statistical inference and decision theory).

The Applied Mathematics and Statistics Department at UCSC offers both a master's program and a doctoral program in Statistics and Stochastic Modeling. The goal of these programs is to help students develop into independent scholars who are prepared for productive careers in research, teaching, and industry. The department also offers a minor in Statistics.

Additional information on these programs can be found on the department's web pages at www.soe.ucsc.edu.

Undergraduate Programs

Requirements for an Undergraduate Minor in Statistics

The statistics minor is available for students who wish to gain a quantitative understanding of how to (a) measure uncertainty, and (b) make good decisions on the basis of incomplete or imperfect information, and to apply these skills to their interests in another field. This minor could also be combined with a major in mathematics as a preparation for a graduate degree in statistics or biostatistics.

Students are required to take a two-quarter basic calculus sequence:

Basic Calculus Sequence:

 Applied Mathematics and Statistics 11A-B or Economics 11A-B or Mathematics 11A-B or Mathematics 19A-B or Mathematics 20A-B

Plus one course from each of the following nine categories:

- Statistical Concepts: Applied Mathematics and Statistics 5 or 7/L
- Computer Programming: Bioinformatics 60 or Computer Science 12A/L or 60G or 60N
- Engineering Mathematics or Linear Algebra: Applied Mathematics and Statistics 27/L or Mathematics 21
- Multivariate Calculus: Mathematics 22 or 23A
- Probability: Applied Mathematics and Statistics 131 or Computer Engineering 107
- Statistical Inference: Applied Mathematics and Statistics 132 or Applied Mathematics and Statistics 162
- Computational Methods: Applied Mathematics and Statistics 147
- Bayesian Statistics: Applied Mathematics and Statistics 206
- Statistical Elective: Applied Mathematics and Statistics 198, or Applied Mathematics and Statistics 205, or Biomolecular Engineering 205, or Computer Engineering 108, or Economics 114, or Electrical Engineering 151, or Mathematics 114, or Psychology 181, or Sociology 103A

At most two upper-level courses may be used to satisfy the requirements of another major or minor degree. With the permission of the AMS Department, students may substitute any graduate-level AMS course for an upper-level requirement. Students planning graduate work in statistics are recommended to choose Mathematics 21, Mathematics 23A, and Applied Mathematics and Statistics 205, and also to take Mathematics 23B and Mathematics 105A-B.

Graduate Programs (M.S., Ph.D.)

Requirements for a Graduate Degree in Statistics and Stochastic Modeling

All students must complete the first six core courses described below (30 units) and a 3-unit course on research and teaching, together with participation in a 2-unit research seminar (Applied Mathematics and Statistics 280B) for one quarter per year. M.S. students must complete two additional 5-unit courses from the approved list, bringing the total requirement to 43 units. Ph.D. students must complete an additional four 5-unit courses from the approved list, for a total requirement of 53 units.

The core courses for the Ph.D. in Statistics and Stochastic Modeling are:

Applied Mathematics and Statistics 205 Mathematical Statistics
Applied Mathematics and Statistics 206 Bayesian Statistics
Applied Mathematics and Statistics 207 Intermediate Bayesian Modeling
Applied Mathematics and Statistics 211 Applied Mathematical Methods I
Applied Mathematics and Statistics 256 Linear Statistical Models
Applied Mathematics and Statistics 261 Probability Theory and Markov Chains
Applied Mathematics and Statistics 280B Seminar in Statistics and Stochastic
Modeling

For students seeking a parenthetical degree notation in Applied Mathematics and Statistics, the core courses for the Ph.D. in Statistics and Stochastic Modeling are:

Applied Mathematics and Statistics 205 Mathematical Statistics
Applied Mathematics and Statistics 211 Foundations of Applied Mathematics for
Science and Engineering
Applied Mathematics and Statistics 212A Applied Mathematical Methods I
Applied Mathematics and Statistics 212B Applied Mathematical Methods II
Applied Mathematics and Statistics 213 Numerical Solutions Differential Equations
Applied Mathematics and Statistics 214 Applied Dynamical Systems
Applied Mathematics and Statistics 280B Seminar in Statistics and Stochastic
Modeling

M.S. students will be allowed to substitute up to two courses with their required research project in which they conduct a research program in one or two of the quarters of their second year. The project will consist of solving a problem or problems from the selected area of application and will be presented to the sponsoring faculty member as a written document.

Ph.D. students will be required to serve as teaching assistants for at least two quarters during their graduate study. Certain exceptions may be permitted for those with extensive prior teaching experience or those who are not allowed to be employed due to visa regulations.

Qualifying examinations

At the end of the first year, all students will take a pre-qualifying examination covering the six (non-seminar) core courses. This examination will have two parts: an in-class written exam, followed by a take-home project involving data analysis. Students who do not pass this exam will be allowed to retake it before the start of the following fall quarter; if they fail the second examination they will be dismissed from the program.

Ph.D. students must complete the Oral Proposal Defense, through which they advance to candidacy, by the end of the spring quarter of their third year. The proposal defense is a public seminar as part of an oral qualifying examination given by the qualifying committee.

Thesis and/or dissertation requirements

A capstone project is required for the M.S. degree and a dissertation for the Ph.D. degree. For the M.S. degree, students will conduct a capstone research project in their second year (up to three quarters). Students must submit a proposal to the potential faculty sponsor by the start of the fourth academic quarter. If the proposal is accepted, the faculty member will become the sponsor and will supervise the research and writing of the project. The project will involve the solution of a problem or problems from the selected area of application. When the project is completed and written, it will be submitted to and must be accepted by a committee of two individuals, consisting of the faculty adviser and one additional reader. Additional readers will be chosen appropriately from within AMS or outside of it. Either the adviser or the additional reader must be from within AMS.

A dissertation is required for the Ph.D. degree. Ph.D. students must select a faculty research adviser by the end of the second year. A written dissertation proposal will be submitted to the adviser, and filed with the graduate secretary. A qualifying examination committee will be formed, consisting of the adviser and three additional members, approved by the Chair of the Graduate Program and the Dean of the Graduate Division. The student will submit the written dissertation proposal to all members of the committee and the graduate secretary no less than one month in advance of the qualifying examination. The dissertation proposal will be formally presented in a public oral qualifying examination with the committee, followed by a private examination. Students will advance to candidacy after they have completed all course requirements (including removal of all incompletes), passed the qualifying examination, and paid the filing fee. Under normal progress, a student will advance to candidacy by the end of the spring quarter of her/his third year. A student who has not advanced to candidacy by the start of the fourth year will be subject to academic probation. Upon advancement to candidacy, a dissertation reading committee will be formed, consisting of the dissertation supervisor and at least two additional readers appointed by the Graduate Program chair upon recommendation of the dissertation supervisor. At least one of these additional readers must be in AMS. The committee is subject to the approval of the Graduate Division.

The dissertation will consist of a minimum of three chapters composed of material suitable for submission and publication in major professional journals in Statistics and Stochastic Modeling. The completed dissertation will be submitted to the reading committee at least one month before the dissertation defense, which consists of a public presentation of the research followed by a private examination by the reading committee. Successful completion of the dissertation defense is the final requirement for the Ph.D. degree.

Relationship of masters and doctoral programs

The M.S. and Ph.D. programs are freestanding and independent, so that students can be admitted to either. Students completing the M.S. program may proceed into the Ph.D. program, and students in the Ph.D. program will receive a M.S. degree upon completion of M.S. requirements, including the capstone research project. Each Ph.D. student will be required to have knowledge of Statistics and Stochastic Modeling equivalent to that required for the M.S. degree. In addition, Ph.D. candidates will be required to complete coursework beyond the M.S. level.

Transfer Credit

Up to three School of Engineering courses fulfilling the degree requirements of either the M.S. or Ph.D. degrees may be taken before beginning the graduate program through the concurrent enrollment program. Ph.D. students who have previously earned a master's degree in a related field at another institution may substitute courses from their previous university with approval of the adviser and the graduate committee. Courses from other institutions may not be applied to the M.S. degree course requirements.

Petitions should be submitted along with the transcript from the other institution or UCSC Extension. For courses taken at other institutions, copies of the syllabi, exams, and other course work should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UCSC. At most, a total of three courses may be transferred from concurrent enrollment and other institutions.

Review of Progress

Each year, the faculty reviews the progress of every student. Students not making adequate progress toward completion of degree requirements (see Graduate Handbook for policy on satisfactory academic progress) are subject to dismissal from the program. For specific guidelines on the annual student reviews, please refer to http://www.soe.ucsc.edu/programs/ssm/graduate/index.html.

Applied Mathematics and Statistics

Baskin School of Engineering 335 Baskin Engineering Building (831) 459-2158 http://www.soe.ucsc.edu

Program Description | Faculty | Course Descriptions

Program Description

Applied mathematics and statistics are branches of mathematics that are devoted to the use of mathematical methods and reasoning to solve real-world problems of a scientific or decision-making nature in a wide variety of subjects, principally (but not exclusively) in engineering, medicine, the physical and biological sciences, and the social sciences. Applied mathematical modeling often involves the use of systems of (partial) differential equations to describe and predict the behavior of complex real-world systems that unfold dynamically in time. Statistics, construed broadly, is the study of uncertainty: how to measure it (using ideas and methods in probability theory), and what to do about it (using concepts from statistical inference and decision theory).

Applied mathematics and statistics faculty offer courses under the sponsorship of the School of Engineering. Applied mathematics and statistics faculty also teach courses in collaboration with Mathematics, Economics, and other departments.

Graduate programs leading to M.S. and Ph.D. degrees in applied mathematics and statistics are currently under development and review. At present, students wishing to pursue graduate study in these subjects should apply for admission through the existing graduate programs in Computer Science, Environmental Studies, Ocean Sciences, or Physics, stating clearly in the application process that they are interested in graduate study in Applied Mathematics and Statistics.

Applied mathematics and statistics are disciplines devoted to the use of mathematical methods and reasoning to solve real-world problems of a scientific or decision-making nature in a wide variety of subjects, principally (but not exclusively) in engineering, medicine, the physical and biological sciences, and the social sciences. Applied mathematical modeling often involves the use of systems of (partial) differential equations to describe and predict the behavior of complex real-world systems that unfold dynamically in time. Statistics, construed broadly, is the study of uncertainty: how to measure it (using ideas and methods in probability theory), and what to do about it (using concepts from statistical inference and decision theory).

The Applied Mathematics and Statistics Department at UCSC offers both a master's program and a doctoral program in Statistics and Stochastic Modeling. The goal of these programs is to help students develop into independent scholars who are prepared for productive careers in research, teaching, and industry. The department also offers a minor in Statistics.

Additional information on these programs can be found on the department's web pages at www.soe.ucsc.edu.

Undergraduate Programs

At most two upper-level courses may be used to satisfy the requirements of another major or minor degree.

With the permission of the AMS Department, students may substitute any graduate-level AMS course for an upper-level requirement. Students planning graduate work in statistics are recommended to choose Mathematics 21, Mathematics 23A, and Applied Mathematics and Statistics 205, and also to take Mathematics 23B and Mathematics 105A-B.

Graduate Programs (M.S., Ph.D.)

Stochastic Modeling

Requirements for a Graduate Degree in Statistics and Stochastic Modeling

All students must complete the first six core courses described below (30 units) and a 3-unit course on research and teaching, together with participation in a 2-unit research seminar (Applied Mathematics and Statistics 280B) for one quarter per year. M.S. students must complete two additional 5-unit courses from the approved list, bringing the total requirement to 43 units. Ph.D. students must complete an additional four 5-unit courses from the approved list, for a total requirement of 53 units.

The core courses for the Ph.D. in Statistics and Stochastic Modeling are:

Applied Mathematics and Statistics 205 Mathematical Statistics
Applied Mathematics and Statistics 206 Bayesian Statistics
Applied Mathematics and Statistics 207 Intermediate Bayesian Modeling
Applied Mathematics and Statistics 211 Applied Mathematical Methods I
Applied Mathematics and Statistics 256 Linear Statistical Models
Applied Mathematics and Statistics 261 Probability Theory and Markov
Chains
Applied Mathematics and Statistics 280B Seminar in Statistics and

For students seeking a parenthetical degree notation in Applied Mathematics and Statistics, the core courses for the Ph.D. in Statistics and Stochastic Modeling are:

Applied Mathematics and Statistics 205 Mathematical Statistics Applied Mathematics and Statistics 211 Foundations of Applied Mathematics for Science and Engineering

Applied Mathematics and Statistics 212A Applied Mathematical Methods I

Applied Mathematics and Statistics 212B Applied Mathematical Methods II

Applied Mathematics and Statistics 213 Numerical Solutions Differential Equations

Applied Mathematics and Statistics 214 Applied Dynamical Systems
Applied Mathematics and Statistics 280B Seminar in Statistics and
Stochastic Modeling

M.S. students will be allowed to substitute up to two courses with their required research project in which they conduct a research program in one or two of the quarters of their second year. The project will consist of solving a problem or problems from the selected area of application and will be presented to the sponsoring faculty member as a written document.

Ph.D. students will be required to serve as teaching assistants for at least two quarters during their graduate study. Certain exceptions may be permitted for those with extensive prior teaching experience or those who are not allowed to be employed due to visa regulations.

Qualifying examinations

At the end of the first year, all students will take a pre-qualifying examination covering the six (non-seminar) core courses. This examination will have two parts: an in-class written exam, followed by a take-home project involving data analysis. Students who do not pass this exam will be allowed to retake it before the start of the following fall quarter; if they fail the second examination they will be dismissed from the program.

Ph.D. students must complete the Oral Proposal Defense, through which they advance to candidacy, by the end of the spring quarter of their third year. The proposal defense is a public seminar as part of an oral qualifying examination given by the qualifying committee.

Thesis and/or dissertation requirements

A capstone project is required for the M.S. degree and a dissertation for the Ph.D. degree.

For the M.S. degree, students will conduct a capstone research project in their second year (up to three quarters). Students must submit a proposal to the potential faculty sponsor by the start of the fourth academic quarter. If the proposal is accepted, the faculty member will become the sponsor and will supervise the research and writing of the project. The project will involve the solution of a problem or problems from the selected area of application. When the project is completed and written, it will be submitted to and must be accepted by a committee of two individuals, consisting of the faculty adviser and one additional reader. Additional readers will be chosen appropriately from within AMS or outside of it. Either the adviser or the additional reader must be from within AMS.

A dissertation is required for the Ph.D. degree. Ph.D. students must select a faculty research adviser by the end of the second year. A written dissertation proposal will be submitted to the adviser, and filed with the graduate secretary. A qualifying examination committee will be formed, consisting of the adviser and three additional members, approved by the Chair of the Graduate Program and the Dean of the Graduate Division. The student will submit the written dissertation proposal to all members of the committee and the graduate secretary no less than one month in advance of the qualifying examination. The dissertation proposal will be formally presented in a public oral qualifying examination with the committee, followed by a private examination. Students will advance to candidacy after they have completed all course requirements (including removal of all incompletes), passed the qualifying examination, and paid the filing fee. Under normal progress, a student will advance to candidacy by the end of the spring quarter of her/his third year. A student who has not advanced to candidacy by the start of the fourth year will be subject to academic probation. Upon advancement to candidacy, a dissertation reading committee will be formed, consisting of the dissertation supervisor and at least two additional readers appointed by the Graduate Program chair upon recommendation of the dissertation supervisor. At least one of these additional readers must be in AMS. The committee is subject to the approval of the Graduate Division.

The dissertation will consist of a minimum of three chapters composed of material suitable for submission and publication in major professional journals in Statistics and Stochastic Modeling. The completed dissertation will be submitted to the reading committee at least one month before the dissertation defense, which consists of a public presentation of the research followed by a private examination by the reading committee. Successful completion of the dissertation defense is the final requirement for the Ph.D. degree.

Relationship of masters and doctoral programs

The M.S. and Ph.D. programs are freestanding and independent, so that students can be admitted to either. Students completing the M.S. program may proceed into the Ph.D. program, and students in the Ph.D. program will receive a M.S. degree upon completion of M.S. requirements, including the capstone research project. Each Ph.D. student will be required to have knowledge of Statistics and Stochastic Modeling equivalent to that required for the M.S. degree. In addition, Ph.D. candidates will be required to complete coursework beyond the M.S. level.

Transfer Credit

Up to three School of Engineering courses fulfilling the degree requirements of either the M.S. or Ph.D. degrees may be taken before beginning the graduate program through the concurrent enrollment program. Ph.D. students who have previously earned a master's degree in a related field at another institution may substitute courses from their previous university with approval of the adviser and the graduate committee. Courses from other institutions may not be applied to the M.S. degree course requirements.

Petitions should be submitted along with the transcript from the other institution or UCSC Extension. For courses taken at other institutions, copies of the syllabi, exams, and other course work should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UCSC. At most, a total of three courses may be transferred from concurrent enrollment and other institutions.

Applied Mathematics and Statistics

Baskin School of Engineering 335 Baskin Engineering Building (831) 459-2158 http://www.soe.ucsc.edu

Program Description | Course Descriptions

Faculty and Professional Interests

Professor

David Draper

Bayesian statistics, hierarchical modeling, nonparametric methods, model specification and model uncertainty, quality assessment, risk assessment, statistical applications in the environmental, medical, and social sciences

Marc Mangel

Mathematical modeling of biological phenomena, especially the evolutionary ecology of growth, aging, and longevity; quantitative issues in fishery management; mathematical and computational aspects of disease

Associate Professor

Nicholas Brummell

Fluid dynamics; magnetohydrodynamics; numerical simulations of geophysical and astrophysical dynamics, especially solar interior physics; supercomputing

Herbert Lee

Bayesian statistics, computational statistics, model selection and model averaging, inverse problems, spatial statistics, nonparametric regression, neural networks, classification and clustering

Raquel Prado

Bayesian non-stationary time series modeling, multivariate time series, biomedical signal processing and statistical genetics

Bruno Sansó

Bayesian spatio-temporal modeling, environmental and geostatistical applications, modeling of extreme values, statistical assessment of climate variability

Hongyun Wang

Molecular modeling and biophysics, numerical analysis, fluid mechanics, computer animation, partial differential equations, parallel computing, statistical physics, data structures, fast algorithms

Assistant Professor

Pascale Garaud

Astrophysics, geophysics, fluid dynamics, numerical resolutions of differential equations, mathematical modeling of natural flows

Athanasios Kottas

Bayesian nonparametric modeling and inference mixture models, quantile regression, spatial statistics, survival analysis, applications in ecology and the environmental sciences

Lecturer

Jonathan R. Katznelson

Mathematical methods for economists, number theory

Professor

Andrew T. Fisher (Earth Sciences)

Hydrogeology, crustal studies, coupled flows, modeling

Gary A. Glatzmaier (Earth Sciences)

Computer simulation of geodynamics and planetary dynamics

David Haussler (Biomolecular Engineering; Director, Institute for Quantitative Biomedical Research)

Genomics, bioinformatics, computational molecular biology, statistical models, machine learning, neural networks, decision theory, theory of computation

David P. Helmbold (Computer Science)

Machine learning, computational learning theory, analysis of algorithms

Richard Montgomery (Mathematics)

Celestial mechanics, differential geometry, gauge theory, mechanics (quantum and classical), and control theory

Manfred Warmuth (Computer Science)

Online learning, machine learning, statistical decision theory, neural computation, analysis of algorithms

Peter Young (Physics)

Condensed matter theory, statistical mechanics

Associate Professor

Roberto Manduchi (Computer Engineering)

Sensor processing and image analysis with application to assistive technology and environmental modeling

Katia Obraczka (Computer Engineering)

Computer networks, distributed systems, operating systems, Internet information systems, mobile computing, wireless networks

Hamid Sadjadpour (Electrical Engineering)

Wireless communication systems, coding and information theory, ad hoc and sensor networks

Jack Vevea (Psychology)

Applied statistics, item response theory, mathematical models for bias in memory, statistical methods for meta-analysis

Assistant Professor

William Dunbar (Computer Engineering)

Theory and application of feedback control, air traffic control, nanopore sensors,

dynamics and control of biomolecules

Yi Zhang (Information Systems Management)

Information retrieval, knowledge management, natural language processing, machine learning

[Return to top.]

Baskin School of Engineering 335 Baskin Engineering Building (831) 459-2158 http://www.soe.ucsc.edu

Program Description | Changes to 2006-08 Catalog Highlighted | Faculty

Lower-Division Courses

3. Precalculus for Science and Engineering. F,W

Includes real and complex numbers, inequalities, linear and quadratic equations, functions, graphs, exponential and logarithmic functions, trigonometry, and analytic geometry, with applications in science and engineering. Students cannot receive credit for both this course and Mathematics 2AB or 3. Mathematics 3 can substitute for course 3. Prerequisite(s): score of 20 or higher on Mathematics Placement Exam or Mathematics 2. (General Education Code(s): Q.) *The Staff*

5. Statistics. F,W,S

Introduction to statistical methods/reasoning, including descriptive methods, datagathering (experimental design and sample surveys), probability, interval estimation, significance tests, one- and two-sample problems, categorical data analysis, correlation and regression. Emphasis on applications to the natural and social sciences. Students cannot receive credit for this course if they have already received credit for course 7. (General Education Code(s): IN, Q.) *H. Lee, A. Kottas, B. Sanso*

7. Statistical Methods for the Biological, Environmental, and Health Sciences. F,W

Case-study-based introduction to statistical methods as practiced in the biological, environmental, and health sciences. Descriptive methods, experimental design, probability, interval estimation, hypothesis testing, one- and two-sample problems, power and sample size calculations, simple correlation and simple linear regression, one-way analysis of variance, categorical data analysis. (Formerly *Statistical Methods for the Biological and Environmental Sciences.*) Prerequisite(s): score of 31 or higher on mathematics placement exam, course 3, 11A, Mathematics 3, 11A, 19A or by permission of instructor. Concurrent enrollment in course 7L is required. (General Education Code(s): IN, Q.) *H. Lee, R. Prado, D. Draper*

7L. Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory (2 credits). F,W

Computer-based laboratory course in which students gain hands-on experience in analysis of data sets arising from statistical problem-solving in the biological, environmental, and health sciences. Descriptive methods, interval estimation, hypothesis testing, one-and two-sample problems, correlation and regression, one-way analysis of variance, categorical data analysis. (Formerly *Statistical Methods for the Biological and Environmental Sciences Laboratory.*) Prerequisite(s): score of 31 or higher on mathematics placement exam, course 3, 11A, Mathematics 3, 11A, 19A, or by permission of instructor. Concurrent enrollment in course 7 is required. *H. Lee, R. Prado, D. Draper*

11A. Mathematical Methods for Economists. F,W,S

An introduction to mathematical tools and reasoning, with applications to economics. Topics are drawn from precalculus and calculus and include functions and graphs, techniques of differentiation, relative extrema, logarithms and exponents, and differentials. Students who have already taken Mathematics 11A and 19A should not take this course. (Also offered as Economics 11A. Students cannot receive credit for both courses.) Prerequisite(s): score of 31 or above on Mathematics Placement Exam. Students who do not place into precalculus should enroll in Math 2. (General Education Code(s): IN, Q.) *J. Katznelson*

11B. Mathematical Methods for Economists. F,W,S

Mathematical tools and reasoning, with applications to economics. Topics are drawn from integral calculus, multivariable calculus, and linear algebra and include definite integrals, partial derivatives, Lagrange multipliers, matrix algebra, and solving systems of linear equations. (Also offered as Economics 11B. Students cannot receive credit for both courses.) Prerequisite(s): course 11A or Economics 11A. (General Education Code(s): IN, Q.) *J. Katznelson*

27. Mathematical Methods for Engineers. F,S

This course provides the mathematical background for several engineering courses. The content includes linear algebra, ordinary differential equations, and Laplace Transform methods. Students cannot receive credit for this course and Mathematics 24 or 27. Prerequisite(s): Mathematics 19B or 22 or 23A or 26 or permission of instructor. Concurrent enrollment in course 27L is required. *H. Wang, J. Cortes, The Staff*

27L. Mathematical Methods for Engineers Laboratory (2 credits). F,S

Computer demonstrations of solutions of differential equations. Numerical simulations of differential equations using the supplied Matlab programs with graphics user interfaces. Elementary programming in Matlab language to solve equations and to visualize solutions. Prerequisite(s): Mathematics 19B or 22 or 23A or 26 or permission of instructor. Concurrent enrollment in course 27 is required. *H. Wang, J. Cortes, The Staff*

Upper-Division Courses

107. Introduction to Fluid Dynamics. *

Fundamental topics in fluid dynamics. Euler and Lagrange descriptions of continuum dynamics. Conservation laws for inviscid and viscous flows. Potential flows. Exact solutions of the Navier-Stokes equation. Boundary layer theory. Gravity waves. Students cannot receive credit for this course and Applied Mathematics and Statistics 217. (Also offered as Physics 107. Students cannot receive credit for both courses.) Prerequisite(s): course 27, or Physics 116 A-B-C or equivalent. *N. Brummell*

113. Managerial Statistics. *

Practical methods for analyzing data relevant to the management sciences, with particular emphasis on information systems management. Reviews basic topics in probability and statistics, including correlation and simple linear regression and multiple regression. Experience using statistical software package. Case studies drawn from business problems. Students cannot receive credit for this course and Economics 113. Prerequisite(s): course 11B or Economics 11B or Mathematics 11B or 19B. (General Education Code(s): Q.) *H. Lee*

131. Introduction to Probability Theory. S

Introduction to probability theory and its applications. Combinatorial analysis,

axioms of probability and independence, random variables (discrete and continuous), joint probability distributions, properties of expectation, Central Limit Theorem, Law of Large Numbers, Markov chains. Students cannot receive credit for this course and Computer Engineering 107. Prerequisite(s): course 11B or Economics 11B or Mathematics 11B or 19B. (General Education Code(s): Q.) R. Prado, M. Mangel

132. Statistical Inference. F

Introduction to statistical inference at a calculus-based level: maximum likelihood estimation, sufficient statistics, distributions of estimators, confidence intervals, hypothesis testing, and Bayesian inference. Prerequisite(s): course 131 or Computer Engineering 107. *The Staff*

146. Introduction to Dynamical Systems. W

Linear difference equations and the calculus of differences. Nonlinear difference equations and maps. Fixed points, stability, bifurcations, and cycles. The logistic map and the period-doubling cascade to chaos. Strange attractors and measures of chaos. Students cannot receive credit for this course and Mathematics 145. Prerequisite(s): course 27 or Mathematics 27 or Mathematics 21 and 24. *P. Garaud, J. Cortes*

147. Computational Methods and Applications. W

Applications of computational methods to solving mathematical problems using Matlab. Solution of nonlinear equations, linear systems, differential equations, sparse matrix solver, and eigenvalue problems. Some prior experience with Matlab is helpful but not required. Knowledge of differential equations is recommended (course 27 or Mathematics 24). Prerequisite(s): course 27 or Mathematics 21. *H. Wang*

162. Design and Analysis of Computer Simulation Experiments. *

Methods for the design and analysis of computer simulation experiments: random number generation; estimation of sample size necessary to achieve desired precision goals; antithetic variables and other devices for increasing simulation efficiency; analysis of the output of large "deterministic" computer programs, exploring the sensitivity of outputs to changes in the inputs. Applications drawn mainly from engineering and environmental sciences. Prerequisite(s): course 5 or 7 or 113 or 131 or Computer Engineering 107 or permission of instructor. (General Education Code(s): Q.) *The Staff, H. Lee*

198. Independent Study or Research. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

198F. Independent Study or Research (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

Graduate Courses

205. Mathematical Statistics. F

Graduate introduction to topics in probability and mathematical statistics from the frequentist point of view: sufficiency, exponential families, maximum likelihood estimation, optimality theory for estimation, confidence intervals and significance testing, decision theory, convergence in probability and in law, central limit theorems, and efficiency and asymptotic normality. Enrollment restricted to graduate students. *B. Sanso*

206. Bayesian Statistics. W

Introduction to Bayesian statistical methods for inference and prediction; exchangeability; prior, likelihood, posterior, and predictive distributions; coherence and calibration; conjugate analysis; Markov Chain Monte Carlo methods for simulation-based computation; hierarchical modeling; Bayesian model diagnostics, model selection, and sensitivity analysis. Prerequisite(s): graduate standing or permission of instructor. *H. Lee*

207. Intermediate Bayesian Statistical Modeling. S

Hierarchical modeling, linear models (regression and analysis of variance) from the Bayesian point of view, intermediate Markov chain Monte Carlo methods, generalized linear models, multivariate models, mixture models, hidden Markov models. Prerequisite(s): graduate standing or permission of instructor. *R. Prado, B. Sanso*

210. Mathematical Models. *

Serves a dual purpose: provides an introduction to the ideas underlying the mathematical modeling of physical phenomena; and in discussing the various phenomena, this course either reviews or introduces mathematical concepts and techniques. Models described chosen from diverse topics such as population dynamics, chemical reactions, fluid and solid mechanics, quantum theory, and probability. Mathematical techniques covered include advanced theory of ordinary and partial differential equations, eigenvalue problems, and linear stability theory. Enrollment restricted to graduate students or permission of instructor. *The Staff*

211. Foundations of Applied Mathematics. F

Accelerated class on applied mathematical methods for all sciences. Topics include: multivariate calculus, linear algebra, Fourier series, ordinary differential equations, complex analysis, and integral transforms. Enrollment restricted to graduate students. *The Staff*

212A. Applied Mathematical Methods I. F

Focuses on the analytical and numerical methods for solving differential equations. Topics include well-posed problems, Fourier transform, separation of variables, Green's functions, Huygen's principle, calculus of variation, numerical discretization, local truncation error, global error, error estimation, numerical stability, multigrid method. (Formerly course 211.) Enrollment restricted to graduate students. Undergraduates are encouraged to take this class with permission of instructor. *H. Wang, P. Garaud, N. Brummell*

212B. Applied Mathematical Methods II. W

Covers pertubation methods: asymptotic series, stationary phase and expansion of integrals, matched asymptotic expansions, multiple scales and the WKB method, Padé approximants and improvements of series. (Formerly course 212.) Prerequisite(s): course 212A. H. Wang, P. Garaud, N. Brummell

213. Numerical Solutions of Differential Equations. W

Focuses on numerical solutions of differential equations. Topics include Runge-Kutta methods; error estimation and error control; consistency, stability, and convergence; conjugate gradient method; multigrid method; CFL condition; and high-resolution methods for conservation laws. Enrollment restricted to graduate students or permission of instructor. *H. Wang, P. Garaud, N. Brummell*

214. Applied Dynamic Sys. S

Introduction to applied dynamical systems and the qualitative study of differential equations. Topics include: Lyapunov stability, invariant manifolds, periodic orbits, Lagrangian and Hamiltonian equations, center manifold theory, bifurcations, and perturbation theory, and averaging. Special emphasis on motivation behind new concepts and their application to problems in science and engineering. Examples drawn from astronomy, biology, engineering, and robotics. Prerequisite(s): AMS 146 or permission of the instructor. Enrollment restricted to graduate students. Undergraduates are encouraged to enroll with permission of the instructor. Enrollment limited to 15. *H. Wang, M. Mangel, P. Garaud, J. Cortes, The Staff*

215. Stochastic Modeling in Biology. *

Application of differential equations and probability and stochastic processes to problems in cell, organismal, and population biology. Topics include life history theory, ecology, and population biology. Enrollment restricted to graduate students or permission of instructor. *M. Mangel*

216. Stochastic Differential Equations. *

Introduction to stochastic differential equations and diffusion processes with applications to biology, biomolecular engineering, and chemical kinetics. Topics include Brownian motion and white noise, gambler's ruin, backward and forward equations, and the theory of boundary conditions. Enrollment restricted to graduate students or consent of instructor. *M. Mangel*

217. Introduction to Fluid Dynamics. *

Fundamental topics in fluid dynamics. Euler and Lagrange descriptions of continuum dynamics. Conservation laws for inviscid and viscous flows. Potential flows. Exact solutions of the Navier-Stokes equation. Boundary layer theory. Gravity waves. Students cannot receive credit for this course and course 107. Enrollment restricted to graduate students. *N. Brummell*

221. Bayesian Decision Theory. *

Explores conceptual and theoretical bases of statistical decision making under uncertainty. Focuses on axiomatic foundations of expected utility, elicitation of subjective probabilities and utilities, and the value of information and modern computational methods for decision problems. Prerequisite(s): course 206. Enrollment restricted to graduate students. *B. Sanso*

223. Time Series Analysis. F

Graduate level introductory course on time series data and models in the time and frequency domains: descriptive time series methods; the periodogram; basic theory of stationary processes; linear filters; spectral analysis; time series analysis for repeated measurements; ARIMA models; introduction to Bayesian spectral analysis; Bayesian learning, forecasting, and smoothing; introduction to Bayesian Dynamic Linear Models (DLMs); DLM mathematical structure; DLMs for trends and seasonal patterns; and autoregression and time series regression models. Prerequisite: course 206. Enrollment restricted to graduate students. *R. Prado*

231. Nonlinear Control Theory. W

Covers analysis and design of nonlinear control systems using Lyapunov theory and geometric methods. Includes properties of solutions of nonlinear systems, Lyapunov stability analysis, effects of perturbations, controllability, observability, feedback linearization, and nonlinear control design tools for stabilization. Prerequisite(s): basic knowledge of mathematical analysis and ordinary differential equations is assumed. Enrollment restricted to graduate students or permission of instructor. *The*

236. Motion Coordination of Robotic Networks. *

Comprehensive introduction to motion coordination algorithms for robotic networks. Emphasis on mathematical tools to model, analyze, and design cooperative strategies for control, robotics, and sensing tasks. Topics include: continuous and discrete-time evolution models, proximity graphs, performance measures, invariance principles, and coordination algorithms for rendezvous, deployment, flocking, and consensus. Techniques and methodologies are introduced through application setups from multiagent robotic systems, cooperative control, and mobile sensor networks. Enrollment restricted to graduate students. Enrollment limited to 15. *J. Cortes*

241. Bayesian Nonparametric Methods. *

Theory, methods, and applications of Bayesian nonparametric modeling. Prior probability models for spaces of functions. Dirichlet processes. Pólya trees. Nonparametric mixtures. Models for regression, survival analysis, categorical data analysis, and spatial statistics. Examples drawn from social, engineering, and life sciences. Prerequisite(s): course 207. Enrollment restricted to graduate students. *A. Kottas*

245. Spatial Statistics. *

Introduction to the analysis of spatial data: theory of correlation structures and variograms; kriging and Gaussian processes; Markov random fields; fitting models to data; computational techniques; frequentist and Bayesian approaches. Prerequisite(s): course 207. Enrollment restricted to graduate students. *H. Lee*

256. Linear Statistical Models. W

Theory, methods, and applications of linear statistical models. Review of simple correlation and simple linear regression. Multiple and partial correlation and multiple linear regression. Analysis of variance and covariance. Linear model diagnostics and model selection. Case studies drawn from natural, social, and medical sciences. Course 205 strongly recommended as a prerequisite. Undergraduates are encouraged to take this class with permission of instructor. Prerequisite(s): course 205 or permission of instructor. Enrollment restricted to graduate students. *R. Prado, B. Sanso*

261. Probability Theory with Markov Chains. S

Introduction to probability theory: probability spaces, expectation as Lebesgue integral, characteristic functions, modes of convergence, conditional probability and expectation, discrete-state Markov chains, stationary distributions, limit theorems, ergodic theorem, continuous-state Markov chains, applications to Markov chain Monte Carlo methods. Prerequisite(s): course 205. Enrollment restricted to graduate students. *A. Kottas*

263. Stochastic Processes. S

Includes probabilistic and statistical analysis of random processes, continuous-time Markov chains, hidden Markov models, point processes, Markov random fields, spatial and spatio-temporal processes, and statistical modeling and inference in stochastic processes. Applications to a variety of fields. Prerequisite(s): course 205 or 261 or permission of instructor. *The Staff, A. Kottas*

274. Generalized Linear Models. W

Theory, methods, and applications of generalized linear statistical models; review of linear models; binomial models for binary responses (including logistical regression

and probit models); log-linear models for categorical data analysis; and Poisson models for count data. Case studies drawn from social, engineering, and life sciences. Prerequisite(s): course 205 or 256. Enrollment restricted to graduate students. *A. Kottas*

280A. Seminar in Mathematical and Computational Biology (2 credits). *

Weekly seminar on mathematical and computational biology. Participants present research findings in organized and critical fashion, framed in context of current literature. Students present own research on a regular basis. Enrollment restricted to graduate students. Enrollment limited to 20. May be repeated for credit. *M. Mangel*

280B. Seminars in Statistical and Applied Mathematical Modeling (2 credits). F,W,S

Weekly seminar series covering topics of current research in applied mathematics and statistics. Permission of instructor required. Enrollment restricted to graduate students. (Formerly *Seminar in Applied Mathematics and Statistics*.) May be repeated for credit. *The Staff*

285. Seminar in Career Skills (2 credits). F

Seminar in career skills for applied mathematicians and statisticians. Learn about professional activities such as the publication process, grant proposals, and the job market. Enrollment restricted to graduate students, typically within two years of their expected Ph.D. completion date. *The Staff*

290A. Topics in Mathematical and Computational Biology. *

Focuses on applications of mathematical and computational methods with particular emphasis on advanced methods applying to organismal biology or resource management. Students read current literature, prepare critiques, and conduct projects. Enrollment restricted to graduate students. Enrollment limited to 20. May be repeated for credit. *M. Mangel*

290B. Advanced Topics in the Numerical Solution of PDEs. W

Modern practical methods for the numerical solution of partial differential equations. Methods considered depend on the expertise of the instructor, but are covered indepth and up to the cutting-edge of practical contemporary implementation. Content could be method-based (e.g., spectral methods, finite-element methods) or topic-based (e.g., simulations of turbulence). Some programming and numerical analysis (e.g., course 213) highly recommended. Enrollment restricted to graduate students and undergraduates with permission of the instructor. Enrollment restricted to graduate students and undergraduates with permission of the instructor. *H. Wang, P. Garaud, N. Brummell*

296. Masters Project (2 credits). F,W,S

Independent completion of a masters project under faculty supervision. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

297. Independent Study or Research. F,W,S

Independent study or research under faculty supervision. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. *The Staff*

297F. Independent Study (2 credits). F,W,S

Independent study or research under faculty supervision. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for

credit. The Staff

299. Thesis Research. F,W,S

Thesis research under faculty supervision. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. *The Staff*

Arabic

Language Program 239 Cowell College (831) 459-2054 http://language.ucsc.edu

Course Descriptions

(There were no substantive changes to the Arabic Program Description from the General Catalog 2006-08.)

Program Description

For students interested in acquiring proficiency in the Arabic language, beginning level language courses are offered. The courses emphasize reading, writing, understanding, and speaking modern standard Arabic as used by educated native speakers of the language. In the beginning, the fundamental structures are emphasized with an aim toward developing the reading and writing skills and introducing the speaking and comprehension skills gradually.

Campus Language Laboratories and Placement Exams

Information about these topics can be found under the Language Program.

Art

Elena Baskin Visual Arts Studios Room E-104 (831) 459-2272 visart@ucsc.edu http://art.ucsc.edu

Changes to 2006-08 Catalog Highlighted | Faculty | Course Descriptions

Program Description

The Art Department offers an integrated program of study in theory and practice exploring the power of visual communication for personal expression and public interaction. The department provides students with the means to pursue this exploration through courses that provide the practical skills for art production in a variety of media within the contexts of critical thinking and broad-based social perspectives.

The art program at UCSC is composed of courses in drawing, painting, photography, sculpture, printmaking, intermedia, critical theory, electronic art, public art, and interactive technologies. The Art Department is committed to pursuing a continuing dialogue about what constitutes basic preparation in the arts while offering students experience in established practices, new genres, and new technologies. Foundation courses are open to all non-art students after priority enrollment. Art and pre-art majors have enrollment priority in all art courses. Non-art majors may enroll in art courses on the first day of class if space permits.

Students graduating with a major in art may become professional artists or pursue careers in such diverse areas as arts management, museum and gallery practices, communication technologies, public school teaching, media arts, and publishing. Many students who want to teach at the college level continue their education in graduate school.

Baskin visual arts studios provide excellent facilities for drawing, painting, installation, traditional and digital photography, casting and sculptural construction, electronic art, and printmaking.

Declaring the Pre-Art Major

Students must declare the pre-art major in order to enroll in introductory studio courses. Students should declare their pre-art major in the first quarter of their freshman year to insure their ability to enroll in studio courses, but may declare early in their sophomore year also. Juniors cannot declare pre-art. Deadlines for pre-art declaration are the same as those established by the Office of the Registrar for filing the Proposed Study Plan and Declaration of Major/ Minor petition. Please note that students who have declared the pre-art major still need to follow the procedure for acceptance to the full major; a student may not graduate as a pre-art major.

Acceptance to the Art Major: Freshmen

Students may apply for admission to the art major after completing at least three lower-division studio courses at UCSC (not foundation courses) with grades of B or better. If one of these classes is graded B- or lower, the student must take a different lower-division studio course and receive a B to be eligible to declare art. Students cannot take more than four lower-division studio classes to obtain the requisite B grades. While completing this lower-division course work, it is critical that each student meet with a faculty adviser regarding the student's potential to proceed to the major level.

Junior Transfer Students

Junior transfer students are accepted into the art major for fall quarter after passing a portfolio review in early April. Their acceptance is contingent upon their acceptance to UCSC. Acceptance

to UCSC does not guarantee admittance to the art program, nor does passing the portfolio review guarantee that UCSC will accept the student to the university. Transfer students must identify themselves as potential art majors when applying to the university in order to receive information on the portfolio review deadlines and the materials required for the review. All junior transfers will be required to take Art 60, *Forms and Ideas*, and one art seminarin their junior year at UCSC in lieu of the foundation program requirements.

Requirements for the Art Major

The minimum requirements for the art major are completion of seven lower-division and nine upper-division courses and satisfaction of the senior comprehensive requirement. Substitutions are limited to a maximum of three courses total in the student's program of study (including EAP courses) and must have received a grade of B or higher. Students should plan carefully when using this option.

Students plan their course of study in consultation with a faculty adviser.

Lower-Division Requirements (Freshmen)

Students complete seven courses as follows:

 The foundation series consists of two courses: 80C Introduction to Visual Arts (fall quarter), and 10H 3-D Foundation (winter quarter)

Ωľ

10G 2-D Foundation (spring quarter)

- Three courses from the following list (with a grade of B or better):
 - 20 Introduction to Drawing for the Major
 - 21 Introduction to Computer Art
 - 22 Introduction to Electronics for Intermedia
 - 23 Intermedia I
 - 24A Introduction to Painting: Oil
 - 24B Introduction to Painting: Acrylic
 - 25 Relief Printmaking
 - 26 Introduction to Printmaking
 - 27 Monoprinting/Mixed Media Printing
 - 28 Figurative Sculpture
 - 30 Introduction to Photography for Art Majors
 - 39 Public Art I: Community, Site, and Place
 - 40 Sculpture I
- Two courses from history of art and visual culture, one with a Western focus and one with a non-Western focus; students may substitute one history of art and visual culture (HAVC) course from the 80 series or upper-division (HAVC) classes for this requirement.

Requirements (Junior Transfers)

In lieu of the foundation courses, junior transfers complete the following:

- 60 Forms and Ideas, and One of the following art seminars: 149A or B Contemporary Visual Media: Issues of theory and Practice, or 150C Issues in Collaboration and Interactivity
- Three lower-division studios (equivalent to those found in the above list) should be taken at the community college, college, or university in preparation for the mandatory portfolio review prior to acceptance to the art major.
- Two courses from history of art and visual culture, one with a Western focus and one with a non-Western focus, may be taken at the community college, college, or university, if available, or at UCSC.

Art Major Planner

The following is a recommended academic plan for freshmen to complete during their first two years as preparation for the art major.

Year	Fall	Winter	Spring
1st	Art 80C	Art 10H*	Art 10G*
(frsh)		low-div studio	low-div studio
2nd	Low-div studio	HAVC**	

(soph)	HAVC**	

^{*}Students take only one foundation course of their choice

Upper-Division Requirements

Students complete nine courses as follows:

- five upper-division (100+ numbered) studio courses;
- 10 credits of senior studio courses or equivalent senior-level work in the area of focus;
- two upper-division non-studio courses from history of art and visual culture, film and digital media theory, or art critical theory seminars. Students may choose two upper-division courses from another department relevant to the area of focus in consultation with a faculty adviser, however, courses from departments other than film and digital media or history of art and visual culture constitute substitutions, which will be counted toward the maximum number of three allowed.

The last three quarters of course work for the major must be completed in residence at UCSC.

Comprehensive Requirement

Senior majors should meet with their faculty adviser about this requirement. Students may satisfy the comprehensive requirement with one of the following two options:

- 1. Completing 10 credits of senior studio course work in the area of focus;
- 2. Completing 10 credits of upper-division studio course work in the area of focus; and
 - a. Presenting an exhibition and, by appointment, meeting with a faculty member for review and critique of the exhibition; or
 - b. Submitting a portfolio and, by appointment, meeting with a faculty member for review and critique of the portfolio.

Study Abroad

The UC Education Abroad Program (EAP) offers students the opportunity for study abroad. Art majors may participate in EAP in their junior year. Pre-art majors are not approved to study abroad. Art students may not go abroad in their senior year, as the last three quarters of course work must be in residence at UCSC. When considering attending EAP, the student should be mindful that only three courses may be substituted in the art major and each must receive a grade of B or better.

Materials Fee

Art students should be aware of the materials fee required for some studio courses. The fee is billed to the student's account for specific course materials purchased by the Art Department through the university. Fees generally range from \$5 to \$150 per course. Students may incur additional expense purchasing individual supplies.

[Return to top.]

^{**}Courses from history of art and visual culture, one with a Western focus, and one with a non-Western focus

Students should plan carefully when using this option.

Students plan their course of study in consultation with a faculty adviser.

Lower-Division Requirements (Freshmen)

Students complete seven courses as follows:

• The foundation series consists of two courses: 80C *Introduction to Visual Arts* (fall quarter), and 10H *3-D Foundation* (winter quarter) or 10G *2-D Foundation* (spring quarter)

- Three courses from the following list (with a grade of B or better):
 - 20 Introduction to Drawing for the Major
 - 21 Introduction to Computer Art
 - 22 Introduction to Electronics for Intermedia
 - 23 Intermedia I
 - 24A Introduction to Painting: Oil
 - 24B Introduction to Painting: Acrylic
 - 25 Relief Printmaking
 - 26 Introduction to Printmaking
 - 27 Monoprinting/Mixed Media Printing
 - 28 Figurative Sculpture
 - 30 Introduction to Photography for Art Majors
 - 39 Public Art I: Community, Site, and Place
 - 40 Sculpture I
- Two courses from history of art and visual culture, one with a Western focus

and one with a non-Western focus; students may substitute one history of art and visual culture (HAVC) course from the 80 series or upper-division (HAVC) classes for this requirement.

Requirements (Junior Transfers)

In lieu of the foundation courses, junior transfers complete the following:

- 60 Forms and Ideas, and
 One of the following art seminars:
 149A or B Contemporary Visual Media: Issues of theory and Practice, or
 150C Issues in Collaboration and Interactivity
- Three lower-division studios (equivalent to those found in the above list) should be taken at the community college, college, or university in preparation for the mandatory portfolio review prior to acceptance to the art major.
- Two courses from history of art and visual culture, one with a Western focus and one with a non-Western focus, may be taken at the community college, college, or university, if available, or at UCSC.

Art Major Planner

The following is a recommended academic plan for freshmen to complete during their first two years as preparation for the art major.

Year	Fall	Winter	Spring
1st	Art 80C	Art 10H*	Art 10G*
(frsh)		low-div studio	low-div studio
2nd	Low-div studio	HAVC**	
(soph)	HAVC**		

^{*}Students take only one foundation course of their choice

Upper-Division Requirements

Students complete nine courses as follows:

- five upper-division (100+ numbered) studio courses;
- 10 credits of senior studio courses or equivalent senior-level work in the area of focus;
- two upper-division non-studio courses from history of art and visual culture, film and digital media theory, or art critical theory seminars. Students may choose two upper-division courses from another department relevant to the area of focus in consultation with a faculty adviser, however, courses from departments other than film and digital media or history of art and visual culture constitute substitutions, which will be counted toward the maximum number of three allowed.

The last three quarters of course work for the major must be completed in residence

^{**}Courses from history of art and visual culture, one with a Western focus, and one with a non-Western focus

at UCSC.

Comprehensive Requirement

Senior majors should meet with their faculty adviser about this requirement. Students may satisfy the comprehensive requirement with one of the following two options:

- 1. Completing 10 credits of senior studio course work in the area of focus;
- 2. Completing 10 credits of upper-division studio course work in the area of focus; and
 - a. Presenting an exhibition and, by appointment, meeting with a faculty member for review and critique of the exhibition; or b. Submitting a portfolio and, by appointment, meeting with a faculty member for review and critique of the portfolio.

Study Abroad

The <u>UC Education Abroad Program (EAP)</u> offers students the opportunity for study abroad. Art majors may participate in EAP in their junior year. Pre-art majors are not approved to study abroad. Art students may not go abroad in their senior year, as the last three quarters of course work must be in residence at UCSC. When considering attending EAP, the student should be mindful that only three courses may be substituted in the art major <u>and each must receive a grade of B or better.</u>

Materials Fee

Art students should be aware of the materials fee required for some studio courses. The fee is billed to the student's account for specific course materials purchased by the Art Department through the university. Fees generally range from \$5 to \$150 per course. Students may incur additional expense purchasing individual supplies.

Program Description | Changes to 2006-08 Catalog Highlighted | Faculty

Lower-Division Courses

10. Foundation Series in Art.

Introduces general education students and prospective majors to theory and practice of art and contemporary discourse surrounding it. Courses 10G and 10H comprise large lecture sections that meet once a week and smaller studio sections that meet once or twice a week. Courses include both lecture and studio components and are not intended to be technique-intensive studio classes. Students must register for both lecture and studio sections. *The Staff*

10G. 2D Foundation. S

Introduction to two-dimensional art practice and theory. Readings and lectures address both history and contemporary contexts of 2D art practice. Covers issues of content, representation, communication, and process. In the studio, students apply concepts covered in lecture to art projects. Students are billed a materials fee. Enrollment restricted to pre-art and art majors during priority enrollment. Enrollment limited to 100. (General Education Code(s): A.) *The Staff, J. McDade*

10H. 3D Foundation. W

Introduction to three-dimensional sculpture, intermedia, performance art, and technologically based contemporary art. Weekly lectures and section discussions introduce historical, theoretical, and critical methods of viewing and understanding contemporary art. Studio assignments introduce students to a range of contemporary techniques and materials used to make sculptural, performative, and technologically based work. Students are billed a materials fee. Enrollment restricted to pre-art and art majors during priority enrollment. Enrollment limited to 100. (General Education Code(s): A.) W. Hibbert-Jones, E. Stephens, J. Parker

20. Introduction to Drawing for the Major. F,W,S

Introduction to the methods, materials, and purposes of drawing to develop perceptual and conceptual skills through a series of assignments, providing various approaches to drawing as a tool for creative exploration. Discussions and critiques facilitate the development of critical skills. Designed for students considering the art major. Students are billed a materials fee. Enrollment restricted to pre-art, art, and history of art and visual culture majors. Enrollment limited to 20. (General Education Code(s): A.) *The Staff, J. McDade, F. Galuszka, M. Gwyn*

21. Introduction to Computer Art. F,S

Basic introduction to the use of a computer as a fine art tool and medium. Addresses basic skills, concepts relevant to contemporary art theories, and practices. Provides a hands-on introduction to fundamentals of graphics, image acquisition, and

manipulation and programming with demonstrations of relevant software. Students work independently and in groups. Assignments include digital image acquisition and manipulation, basic scripting, hypertext and web publishing, and computer programming. Lectures, readings, and discussions examine new technology artwork and technology's relationship to contemporary culture. Enrollment restricted to art, pre-art, and history of art and visual culture majors. Enrollment limited to 20. (General Education Code(s): A.) *The Staff, E. Anderson, E. Osborn*

22. Introduction to Electronics for Intermedia. F,W

Provides basic introduction to electronic devices for use in making intermedia art. Provides hands-on experience working with sensors, motors, switches, gears, lights, simple circuits, and hardware store devices to create kinetic and interactive works of art. Produce sculptural or installation-based projects. Demonstrations, lectures, and critical discussion of work given to develop concepts and technical skills. Students are billed a materials fee. Enrollment restricted to pre-art, art, and history of art and visual culture majors. Enrollment limited to 20. (General Education Code(s): A.) *The Staff, E. Anderson, E. Osborn*

23. Intermedia I. F

Introduction to combining media, materials, and forms to explore contemporary art practices such as installation, time based work, performance, collaboration, and interactivity. Assignments encourage an exploration of conscious subject matter, process, and technique. Discussions, reading handouts, and critiques help develop perceptual and conceptual skills. Skill workshops introduce new techniques. Students are billed a materials fee. Enrollment restricted to pre-art, art, and history of art and visual culture majors. Enrollment limited to 20. (General Education Code(s): A.) *The Staff, E. Stephens, E. Crichton*

24A. Introduction to Painting: Oil. F,W,S

Introduction to medium of oil painting and to painting process. Assignments develop understanding of potential of this medium as a tool for perceptual and conceptual exploration. Slide lectures introduce assignments and are basis for class discussion of contemporary and historical art activity in the field. Students are billed a materials fee. (Formerly course 24.) Prerequisite(s): course 20 or 80A. Enrollment restricted to pre-art, art, and history of art and visual culture majors. Enrollment limited to 20. (General Education Code(s): A.) *The Staff, J. McDade, F. Galuszka, M. Gwyn*

24B. Introduction to Painting: Acrylic. W

Introduction to acrylic painting and to painting process. Assignments develop understanding of this medium's potential as a tool for perceptual and conceptual exploration. Slide lectures introduce assignments and are basis for class discussion of contemporary and historical art activity in this field. Students are billed a materials fee. Prerequisite(s): course 20 or 80A. Enrollment restricted to pre-art, art, and history of art and visual culture majors. Enrollment limited to 20. (General Education Code(s): A.) *F. Galuszka*

25. Relief Printmaking. S

Introduction and development of relief printmaking. Course explores the traditions and contemporary issues of relief printmaking with emphasis on color work including reduction process, multiplate and viscosity printing. Students will build a portfolio using a wide spectrum of this complex relief process. Students are billed a materials fee. Prerequisite(s): courses 20 or 80A. Enrollment restricted to pre-art, art, and history of art and visual culture majors. Enrollment limited to 20. *J. Lee, P. Rangell*

26. Introduction to Printmaking. F

Survey of print medium: basic terminology, techniques, application of tools, materials, and condensed history of development of printmaking. Assignments consist of individual and collaborative projects aimed at building skills and gathering technical experience. Introduction to relief printing (black and white and color), intaglio, letterpress, and interface between photography/computer and the handmade print. Exploration of print media for communication of issues including formal aesthetics, social/psychological and personal narrative. Students are billed a materials fee. Prerequisite(s): course 20 or 80A. Enrollment restricted to pre-art, art, and history of art and visual culture majors. Enrollment limited to 20. (General Education Code(s): A.) *The Staff, J. Lee, P. Rangell*

27. Monoprinting/Mixed Media Printing. W

Explores crossover discipline that combines skills of drawing and painting with printmaking, offering a wide range of possibility for personal expression using both oil-based and water-based inks on a variety of plates. Registration and over-printing methods are demonstrated along with mixed media prints. Students are billed a materials fee. Prerequisite(s): courses 20 or 80A. Enrollment restricted to pre-art, art, and history of art and visual culture majors. Enrollment limited to 20. (General Education Code(s): A.) *J. Lee*

28. Introduction to Figurative Sculpture. *

Introduction to a wide range of techniques for creating sculpture, based on and about the body/figure, through the exploration of contemporary concepts and ideas. Provides demonstrations, slide lectures, and critical discussion of work to develop concepts and technical skills. Students are billed a materials fee. Enrollment restricted to art, pre-art, and history of art and visual culture majors. Enrollment limited to 20. (General Education Code(s): A.) W. Hibbert-Jones, J. Parker

30. Introduction to Photography for Art Majors. F,W,S

Introduction to photography as an art form that explores visual ideas beginning with camera-ready use, negative development, and printing. Prepares for further work in photography or for collaboration with other media in art including computer arts and two- and three-dimensional mixed media. Critically examines photographic works while reading historical and theoretical texts. Students are billed a materials fee. Enrollment restricted to pre-art, art, and history of art and visual culture majors. Enrollment limited to 20. (General Education Code(s): A.) *The Staff, L. Watts, N. Locks*

39. Public Art I: Community, Site, and Place. F,W

Introduces contemporary public art through studio practice, slides, and readings. Create public art works, design scale models, drawings, and project proposals. Includes a local community-based public art project and an ephemeral landscape project. Students are billed a materials fee. Enrollment restricted to pre-major art students and history of art and visual culture majors. Enrollment limited to 20. (General Education Code(s): A.) *The Staff, W. Hibbert-Jones*

40. Sculpture I. W

Introduction to a range of concepts and forms used to make contemporary sculpture. Assignments facilitate becoming familiar with sculptural techniques and materials to enable students to visually manifest their sculptural ideas. Combines lectures and demonstrations with work time in class. Students are billed a materials fee. Enrollment restricted to pre-art, art, and history of art and visual culture majors.

Enrollment limited to 20. (General Education Code(s): A.) The Staff, W. Hibbert-Jones, E. Stephens, J. Parker

42. Student-Directed Seminar. *

Seminars taught by upper-division students under faculty supervision. Does not fulfill major requirement. (See course 192.) *The Staff*

60. Forms and Ideas. F,W

Required for all junior transfer student art majors. Introduction to the art program, emphasizing awareness of contemporary visual practices and theory. Combines studio practice and theory. Students are billed a materials fee. Enrollment restricted to junior transfer art majors. Enrollment limited to 20. (General Education Code(s): A.) *The Staff, D. Murray*

70A. Bookbinding. F

Students learn techniques of bookbinding, construction, and design, and fundamentals of letterpress printing. Students are billed a materials fee. May not be used to fulfill art major requirements. (Also offered as Cowell College 70A. Students cannot receive credit for both courses.) Enrollment limited to 12. (General Education Code(s): A.) *P. Ritscher*

70B. Printing I: Elements of Printing. W

Learn fundamental skills in fine letterpress printing, including hand typesetting and instruction in the operation of printing presses. Basic typography explored as students design and print a small edition of a selected text. Students are billed a materials fee. May not be used to fulfill art major requirements. (Also offered as Cowell College 70B. Students cannot receive credit for both courses.) Prerequisite(s): course 70A. Enrollment limited to 12. (General Education Code(s): A.) *P. Ritscher*

70C. Printing II: Typography and Book Design. S

Students learn fundamental skills in fine letterpress printing, including hand typesetting and instruction in the operation of printing presses. Basic typography explored as students design and print a small edition of a selected text. Students are billed a materials fee. May not be used to fulfill art major requirements. (Also offered as Cowell College 70C. Students cannot receive credit for both courses.) Prerequisite(s): course 70B or by instructor permission. Enrollment limited to 12. May be repeated for credit. (General Education Code(s): A.) *P. Ritscher*

80A. Introduction to Drawing. F.S.

Introductory course for beginners and students not majoring in art. Covers the history of what are considered master drawings from prehistory to the present. Various media are examined and assigned in specific exercises. Course is a balance of historical study and practice through assigned homework exercises. A disciplined performance is expected. Enrollment limited to 90. (General Education Code(s): T4-Humanities and Arts, A.) *The Staff*

80C. Introduction to Visual Arts. F

Focus is placed on contemporary issues in critical theory and studio practice in comparison with theory and practice in other historical contexts. Students are introduced to topics that involve the social, political, and aesthetic role of visual images in both the private and public domains. While theory and practice are addressed in the context of Western cultures, guest speakers introduce topics related to the visual practices of their cultures. Enrollment limited to 200. (General

Education Code(s): T4-Humanities and Arts, A.) The Staff, D. Murray

80D. Introduction to Photography. F,S

Introductory course for beginners and nonmajors. Various techniques examined and assigned in specific exercises. Work on projects using color film; this is a non-darkroom course. Examples given of photography from 1826 to the present. Balances historical study and practice through assigned homework exercises. Students are billed a materials fee. Enrollment limited to 90. (General Education Code(s): T4-Humanities and Arts, A.) *The Staff*

80F. Introduction to Issues in Digital Media. F

Digital media is revolutionizing ways in which artists create and exchange information. Introduces digital media through lectures, demonstrations, and exercises. Topics include networks, imaging, MIDI, interactivity, audio/video, and the World Wide Web. Enrollment limited to 100. (General Education Code(s): T6-Natural Sciences or Humanities and Arts, A.) *The Staff, E. Anderson*

80V. Issues and Artists. W

Focuses on key issues in contemporary art, art theory, and curatorial practice through lectures, discussions, and readings. Course consists of weekly series of lectures designed to familiarize students with theories and practice surrounding seven current topics of interest in the larger art world. Instructor introduces each topic theoretically and shows work of relevant artists and curators. Guest artists and curators present their work in relation to the topic. May not be used to fulfill major requirements. Enrollment limited to 100. (General Education Code(s): T4-Humanities and Arts, A.) *The Staff, E. Stephens, E. Crichton*

99. Tutorial. F.W.S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

Upper-Division Courses

100. Gallery/Museum Management and Practices (2 credits). *

Focuses on providing practical experience in all phases of exhibition design and implementation. General tasks of program operation supplemented with selective reading and written assignments designed to enhance theoretical understanding of broader issues in art administration. Includes field trips to galleries and museums as well as in-class visits by artists and arts professionals. Enrollment restricted to art, pre-art, and history of art and visual culture majors. Enrollment limited to 20. *S. Graham*

101. Intermediate/Advanced Drawing. F,W,S

Work moves toward individual directions in drawing. A variety of media are explored. Each student is expected to do 150 hours of drawing over the quarter. Students are billed a materials fee. Prerequisite(s): course 20. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. *The Staff, J. McDade, F. Galuszka, M. Gwyn*

102. Figure Drawing. F,S

Focuses on drawing from the human figure and exploring the figure for the purpose of personal expression and social communication. Intended for the intermediate/advanced drawing student. Students are billed a materials fee. Prerequisite(s): course 20. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. (General Education Code(s): A.) *The Staff, J.*

103. Intermediate/Advanced Painting. F,W,S

Continuation of the development of a basic foundation in painting with emphasis on the development of individual, experimental procedures. Students are billed a materials fee. Prerequisite(s): course 24A or 24B. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. *The Staff, J. McDade, F. Galuszka, M. Gwyn*

104. Special Topics in Painting. *

Special studies in painting as announced. Students are billed a materials fee. Prerequisite(s): course 24A or 24B. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. *J. McDade, F. Galuszka, M. Gwyn*

106A. Senior Studio in Drawing and Painting. S

An intensive studio experience for art majors, meeting three full days per week. Major emphasis is on the development of individual projects in preparation for the senior exhibition. Satisfies senior exit requirement. 106A and 106B must be taken concurrently. Students are billed a materials fee. Course is designed for senior art majors. Portfolio review prior to advance enrollment required; students should complete course 103 as preparation. Enrollment limited to 18. May be repeated for credit. *J. McDade, F. Galuszka, M. Gwyn*

106B. Senior Studio in Drawing and Painting. S

An intensive studio experience for art majors, meeting three full days per week. Major emphasis is on the development of individual projects in preparation for the senior exhibition. Satisfies senior exit requirement. Course is designed for senior art majors. Portfolio review prior to advance enrollment required; students should complete course 103 as preparation. Courses 106A and 106B must be taken concurrently. Enrollment limited to 18. May be repeated for credit. *J. McDade, F. Galuszka, M. Gwyn*

107. Mixed Media Works on Paper. F

This course stresses alternative drawing processes, techniques, and materials. Intended for the intermediate or advanced student. Students are billed a materials fee. Prerequisite(s): course 20. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. (General Education Code(s): A.) *The Staff, J. McDade, F. Galuszka, P. Rangell*

107A. Outdoor Painter's Project. *

Along with an increasing general concern to preserve our natural environment, there has been the resurgence of interest in celebrating the landscape through painting. This impulse to strengthen the bond between art and nature has provided a degree of urgency, revitalizing a tradition that had once been a simple nostalgia for a romantic and rural past. Explores the potential for meaning in outdoor painting today. Emphasis is placed on group excursions and intensive discussion that includes visiting artists. Enrollment limited to 20. *The Staff*

109. Intermedia II. W

Further investigation in combining media, materials, and forms to explore a variety of contemporary art practices. Students develop their projects thematically throughout the quarter. Assignments encourage experimentation with time and motion, text and images, collaboration, installation, performance, and interactivity. Discussions, reading handouts, and critiques further the development of perceptual

and conceptual skills. Skill workshops introduce new techniques. Students are billed a materials fee. Prerequisite(s): course 22 or 23 or 29 or 39 or 40. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. (General Education Code(s): A.) *E. Stephens, E. Crichton*

110. Special Topics in Intermedia. S

Exploring interactive strategies for making art. Projects experiment with combining forms and mediums to engage an audience. Students are billed a materials fee. Prerequisite(s): course 23 or 29 or 39 or 40. Enrollment restricted to art majors. Enrollment limited to 20. *E. Stephens, E. Crichton*

111. Book Arts II. F,W,S

Individual projects to complete printing and binding of small books. Taught in conjunction with course 70. Does not fulfill a requirement for the art major. Students are billed a materials fee. Enrollment limited to 12. May be repeated for credit. *The Staff*

112. Intaglio I. F

Introduces students to various methods used in making intaglio prints. Encourages individual artistic growth of imagery and technique through assignments designed to explore the medium. Includes discussion and critique of work with equal emphasis on technique and concept. Students are billed a materials fee. Prerequisite(s): course 25, 26, or 27. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. (General Education Code(s): A.) *The Staff, J. Lee*

113. Intaglio II. W

This presentation of advanced intaglio techniques emphasizes a variety of multi-plate color printing and photo etching processes. The course concentrates on individual development in style and concept through the intaglio process. Students are billed a materials fee. Prerequisite(s): course 26 or 112. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. (General Education Code(s): A.) *J. Lee*

114. Lithography I. W

Introduction to drawing, processing, and printing of lithographs from stone. Emphasis on discovery of tonal, textural, and expressive potential from the surface of the stone, while establishing individual directions in imagery. Condensed history of the medium, technical theory, and critique in lecture and demonstrations. Students are billed a materials fee. Prerequisite(s): course 20. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. (General Education Code(s): A.) *P. Rangell*

115. Lithography II. S

Continuation of course 114. Introduction of tusche wash, aluminum plates, transfers, photo-lithography (computer interface), and multiple color techniques. Emphasis on experimentation, refinement of craft and approach, defining individual imagery, and expanding scale. Further investigation of the history of the medium and contemporary practice. Students are billed a materials fee. Prerequisite(s): course 114. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. *P. Rangell*

116A. Senior Studio in Printmaking. S

An intensive studio experience for majors, meeting three full days per week. Provides an opportunity for in-depth practice in all print media in preparation for the senior exhibition. In addition to individual projects, students work collaboratively and in series. Prints incorporating multiple colors and concurrent media, and utilizing a larger scale are encouraged. Readings and research are required. Satisfies senior exit requirement. Students are billed a materials fee. Portfolio review prior to advance enrollment required; students should complete courses 113 and 114, or 112 and 115, as preparation. Courses A and B must be taken concurrently. Enrollment limited to 18. May be repeated for credit. *J. Lee, P. Rangell*

116B. Senior Studio in Printmaking. S

An intensive studio experience for majors, meeting three full days per week. Provides an opportunity for in-depth practice in all print media in preparation for the senior exhibition. In addition to individual projects, students work collaboratively and in series. Prints incorporating multiple colors and concurrent media, and utilizing a larger scale are encouraged. Readings and research are required. Satisfies senior exit requirement. Portfolio review prior to advance enrollment required; students should complete courses 113 and 114, or 112 and 115, as preparation. Courses A and B must be taken concurrently. Enrollment limited to 18. May be repeated for credit. *J. Lee, P. Rangell*

117. Special Topics in Printmaking. F

Special studies in printmaking, as announced. Students are billed for a materials fee. Prerequisite(s): course 25, 26, or 27. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. *The Staff, J. Lee, P. Rangell*

118. Computer Art: Theories, Methods, and Practices. W

Examines computer interactivity and interface in art making through theory and practice. Students develop interactive installation and sculptural works of art. Assignments may include the acquisition and creation of digital images, two-dimensional animation, programming with MAX/MSP/Jitter, basic electronics and sensors, and digital video and audio. Discussions, readings, and critiques address content, aesthetics, concepts, and expression as well as a practical grasp of relevant software. Students are encouraged to develop research projects and explore experimental practices. Students are billed a materials fee. Prerequisite(s): course 21 or 22 or 109 or prior basic programming experience and permission of instructor. Enrollment limited to 20. May be repeated for credit. (General Education Code(s): A.) *The Staff, E. Anderson, E. Osborn*

119. Digital Video. S

An exploration of the video medium including production using the digital video format. Digital video cameras will be used to produce digital source material to be manipulated in a non-linear digital editing system. Image manipulation, effects, and editing will be explored. A variety of video structures, theories, concepts, and forms will be examined through production, discussions, and viewing students' and artists' work. Prerequisite(s): course 21 or 22 or 23 or 80F or 118, or by permission of instructor. Enrollment restricted to art majors. Enrollment limited to 18. May be repeated for credit. (General Education Code(s): A.) *E. Anderson, E. Osborn*

120. Advanced Projects in Computer Art I. *

Independent and collaborative creative projects using advanced computer methods. May include networking projects, virtual representations, interactive multimedia, installation, performance, robotics, and three-dimensional modeling. Emphasis on advanced critical and experimental approaches to computers as a unique art medium and contemporary research issues. Students are required to enroll in scheduled lab sections. Students are billed a materials fee. Prerequisite(s): course 118. Enrollment

121. Advanced Projects in Computer Art II. *

Independent and collaborative creative projects using advanced computer methods, which may be a continuation of projects initiated in course 120. May include networking projects, virtual representations, interactive multimedia, installation, performance, 3D modeling and animation, or robotics. Emphasis on advanced critical and experimental approaches to computers as a unique art medium, and contemporary research issues. Students are required to enroll in scheduled lab section. Students are billed for a materials fee. Enrollment limited to 20. May be repeated for credit. *The Staff, E. Anderson, E. Osborn*

123. Digital Printmaking in Contemporary Art Practice. W

Addresses electronic imaging, output, and transferring as means of producing prints. Students gain knowledge and experience in using computer equipment including digital cameras, scanners, printers, and a variety of software. Investigation of conceptual and technical identities between digital image-making and traditional methods, as well as crossing over them to contemporary trends in art practice. Students are billed a materials fee. Prerequisite(s): course 26 or permission of instructor. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. (General Education Code(s): A.) *The Staff*

126. Art of Bookmaking. F

Introduction to production of small edition books and multiples utilizing sequential visual imaging, narrative content, and mixed media in bookmaking. Provides instruction in conceptualizing, producing, and distributing printed artists' multiples. Ideas encouraged within a broad range of possibilities via the format of artists' books. Students are billed a materials fee. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. (General Education Code(s): A.) *The Staff*

127A. Visiting Artist Special Topics: A. F.S

Students work collaboratively with a professional visiting artist on his/her research to develop their studio skills, discuss current critical and theoretical readings, and learn skills necessary to becoming a professional artist. Enrollment by portfolio review and restricted to junior and senior art majors. Concurrent enrollment in course 127B is required. Students are billed a materials fee. Enrollment limited to 20. *The Staff*

127B. Visiting Artist Special Topics: B. F.S.

Students develop independent projects under the advice and guidance of a professional visiting artist during weekly studio classes and discussions. Enrollment by portfolio review and restricted to junior and senior art majors. Concurrent enrollment in course 127A required. Enrollment limited to 20. *The Staff*

130. Intermediate Photography. F,W,S

Continuation of course 30. Students explore visual ideas, directing their work toward individualized goals. Required work includes making photographic prints, reading historical and theoretical works, and examination of photographs. Students are billed a materials fee. Prerequisite(s): course 30. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. *The Staff, L. Watts, N. Locks*

131. Advanced Photography. F

Continuation of course 130. Students produce a portfolio of photographs, read historical and theoretical works, and study photographs and other art works. Students

are billed a materials fee. Prerequisite(s): one of the following: course 130 and either course 132 or 134 or by passing 10 credits of 130. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. *The Staff, L. Watts, N. Locks*

132. Color in Photography. F,W

Concentration on making photographic works in color. Students produce a portfolio of color photographs, read historical and theoretical works, and study photographs and other art works. Individualized projects may include work with color transparencies, ektacolor printing, color xerox, computer-generated imagery, or mixed media. Students are billed for a materials fee. May be repeated for credit. Prerequisite(s): course 130. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. *The Staff, L. Watts, N. Locks*

133A. Senior Studio in Photography. W,S

An intensive studio experience, with major emphasis on the development of individual projects leading to a required senior exhibition. Satisfies senior exit requirement. Students are billed a materials fee. Portfolio review prior to advance enrollment required. Courses 133A and 133B must be taken concurrently. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. *L. Watts, N. Locks*

133B. Senior Studio in Photography. W,S

An intensive studio experience, with major emphasis on the development of individual projects leading to a required senior exhibition. Satisfies senior exit requirement. Portfolio review prior to advance enrollment required. Courses 133A and 133B must be taken concurrently. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. *L. Watts, N. Locks*

134. Special Topics in Photography. W,S

Special studies in photography, concentrating on specific subject matter or media. Topics may include documentary photography, landscape, alternative processes, or mixed media. Students are billed a materials fee. Prerequisite(s): course 30. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. *The Staff, L. Watts, N. Locks, E. Crichton*

135. Introduction to Digital Photography. F,W,S

Introduction to basic theories behind the digital production, manipulation, and output of photographic images. Through readings and production, students address major issues specific to working with images in an increasingly digital environment. Students are billed a materials fee. Prerequisite(s): course 30. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. (General Education Code(s): A.) *The Staff, L. Watts, E. Crichton*

136. Advanced Digital Photography. *

A continuation of course 135 to further study the practice, theories, and criticisms of the digital production, manipulation, and output of photographic images. Major issues specific to the production of digital images will be addressed through readings and discussion, including techniques and theories drawn from a course reader and a textbook on advanced Photoshop skills. A final project is required. Students are billed a materials fee. Prerequisite(s): course 135 or portfolio review. Enrollment restricted to art majors. May be repeated for credit. (General Education Code(s): A.) *N. Locks*

139. Intermediate to Advanced Sculpture (Foundry). F,S

This intermediate/advanced course provides the information and facilities necessary to express ideas through the indirect process of metal casting. The "lost wax" method is used to manifest ideas in sculpture. Lectures and demonstrations are combined with work time in class. Students generate sculpture forms in wax then gate, invest, weld, chase, patina, and present at least one finished piece. Students are billed a materials fee. May be repeated *once* for credit. Prerequisite(s): one of the following: course 23, 28, 29, 39, 40, or 41. Enrollment restricted to art majors. Enrollment limited to 17. May be repeated for credit. W. Hibbert-Jones, E. Stephens, J. Parker

140. Metal Sculpture. F,W

Focus on teaching intermediate to advanced students the processes and techniques of direct metal fabrication for contemporary sculpture. Explores a range of welding, cutting, and forming techniques and processes through demonstrations, slide lectures, field trips, and studio time. Demonstrations, slide lectures, and critical discussion of work help develop technical and conceptual skills. Students are billed a materials fee. Prerequisite(s): one of the following courses: 22, 23, 28, 29, 40, or 41. Enrollment restricted to art majors. Enrollment limited to 16. May be repeated for credit. *The Staff, W. Hibbert-Jones, E. Stephens, J. Parker*

141. Sculpture II. S

More advanced fabrication techniques in sculpture using wood, metal, industrial, and other materials. Techniques include carpentry and woodshop skills, and an introduction to sculptural forms, processes, and ideas. Demonstrations, slide lectures, and critical discussion of work help develop technical and conceptual skills. Students are billed a materials fee. Prerequisite(s): course 23, 28, 29, 39, or 40. Enrollment restricted to pre-art, art, and history of art and visual culture majors. Enrollment limited to 20. May be repeated for credit. (General Education Code(s): A.) *W. Hibbert-Jones, E. Stephens, J. Parker*

146. Special Topics in Intermedia: Conceptual and Process-Oriented Approaches. *

Special subjects to be offered by regular staff or visiting artists as announced. Students are billed a materials fee. Prerequisite(s): one of the following courses: 23, 28, 29, 39, or 40. Enrollment restricted to junior and senior art majors. Enrollment limited to 20. May be repeated for credit. *The Staff, E. Stephens, E. Crichton*

148. Special Topics in Sculpture. W

Special topics in sculpture as announced, concentrating on specific aspects of subject matter and media. Students are billed a materials fee. Prerequisite(s): course 23 or 28 or 29 or 39 or 40 or 143 or 145. Enrollment restricted to art majors. Enrollment limited to 20. Offered in alternate academic years. May be repeated for credit. *The Staff, W. Hibbert-Jones, E. Stephens, J. Parker*

149A. Contemporary Visual Media: Issues of Theory and Practice. W

Through class discussions of a core of readings, selected issues in critical theory relevant to contemporary visual practices are examined. Enrollment restricted to juniors and seniors. Enrollment limited to 20. *The Staff, D. Murray*

149B. Contemporary Visual Media: Issues of Theory and Practice. S

Continuation of course 149A with emphasis on readings about visual practices related to issues of class, gender, sexuality, ethnicity, postcolonialism and postnationalism. Enrollment restricted to juniors and seniors. Enrollment limited to 20. *The Staff, D. Murray*

150C. Issues in Collaboration and Interactivity. F

Explores the role of collaboration and interactivity in contemporary art practices. Emphasis placed on modes of making works in which responsibility for the activity is shared, and modes of reception in which, in various degrees, boundaries between artist and audience are breached. Enrollment restricted to art or history of art and visual culture majors. Enrollment limited to 20. *The Staff, D. Murray*

151. Introduction to Gallery Management. *

Provides practical experience in all phases of an exhibition program's design and implementation including curation, registration, preparation, and publicity. The general tasks of program operation are supplemented with selected reading and written assignments designed to enhance theoretical understanding of broader issues in art administration, including an introduction to the political and ethical realities professionals face. Enrollment restricted to art majors. Enrollment limited to 20. *The Staff*

156. Topics in Public Art II: Memory, Landscape, and Artist as Activist. S In-depth exploration of art in the public sphere. Students build an understanding of public art sparked by practical experience designing and developing projects. Theoretical aspects of contemporary public art, and an introduction to the range of current public art practices will be introduced through readings, lectures, and artist's talks. The combination of practical hands-on technique and theoretical ideology will enable students to fully develop their own project within the class. Students are billed a materials fee. Prerequisite(s): course 23, 39, 40, or by permission of instructor. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. W. Hibbert-Jones

159A. Senior Studio: Intermedia, Sculpture, Electronic Art, and Public Art. S An intensive studio experience for art majors concentrating in the areas of intermedia, sculpture, public art, installation art, electronic art, and interactive art. Major emphasis is on development of individual and collaborative projects in preparation for the senior exhibition. Readings and research required. Class discussions focus on project work and critiques, assigned reading, and the development of a written component by each student. Satisfies senior exit requirement. Students are billed a materials fee. Portfolio review prior to advance enrollment required. Enrollment restricted to art majors. Courses 159A and 159B must be taken concurrently. Enrollment limited to 18. May be repeated for credit. *E. Anderson, W. Hibbert-Jones, E. Stephens, J. Parker, E. Crichton*

159B. Senior Studio: Intermedia, Sculpture, Electronic Art, and Public Art. S An intensive studio experience for art majors concentrating in the areas of intermedia, sculpture, public art, installation art, electronic art, and interactive art. Major emphasis is on development of individual and collaborative projects in preparation for the senior exhibition. Readings and research required. Class discussions focus on project work and critiques, assigned reading, and the development of a written component by each student. Satisfies senior exit requirement. Portfolio review prior to advance enrollment required. Enrollment restricted to art majors. Courses 159A and 159B must be taken concurrently. Enrollment limited to 18. May be repeated for credit. *E. Anderson, W. Hibbert-Jones, E. Stephens, J. Parker, E. Crichton*

161. Picturing Identity: Document and Culture. *

Studio addresses issues of race, gender, culture, personal identity, and visual representation. Examines ways ideas of identity are given visual form and

communicated in fine arts and mass media. Students research ways traditionally underrepresented groups in society have been and are being represented in mass media; they then visually interpret that information in forms of visual artifacts. This process and interpretation serve as springboard to examination of expanded ideas of identity, including personal and/or family culture and history, gender, and ethnicity. Encourages use of broad range of mediums available to construct visual representations of identity. Students are billed a materials fee. Enrollment restricted to pre-art, art, film and digital media, and history of art and visual culture majors. Enrollment limited to 20. (General Education Code(s): A.) *L. Watts*

191. Teaching Apprenticeship. F,W,S

Designed for art majors at the upper-division level. Each student assists in a lower-division art course under the direct supervision of a faculty member. Students assist in technical instruction, critiques, and class discussions. May not be repeated for credit. Does not count toward upper-division major requirements. Enrollment restricted to art majors. *The Staff*

192. Directed Student Teaching. F,W,S

Teaching of a lower-division seminar under faculty supervision. (See course 42.) Students should have upper-division standing with a proposal supported by a faculty member willing to supervise. Students submit petition to sponsoring agency. Enrollment limited to 5. *The Staff*

193. Field Study. F,W,S

Supervised off-campus study conducted under the immediate and direct guidance of a faculty supervisor. To be used primarily by upper-division students doing part-time off-campus study. Students submit petition to sponsoring agency. Petitions may be obtained in the Art Department Office. May be repeated for credit. *The Staff*

196. Senior Project. F,W,S

Student will concentrate on completing work for comprehensive exhibition under the direction of his or her art adviser, with help from other faculty as needed. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198. Independent Field Study. F,W,S

Provides for department-sponsored independent study programs off campus for which faculty supervision is not in person (e.g., supervision is by correspondence). Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Individual study in areas approved by sponsoring instructors. Students submit petition to sponsoring agency. Students are billed a materials fee. May be repeated for credit. *The Staff*

Graduate Courses

297. Independent Study. F,W,S

Independent study or research for graduate students. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

* Not offered in 2007-08

Arts Division

D Building, Porter College (831) 459-4940 http://arts.ucsc.edu

Changes to 2006-08 Catalog Highlighted

The Division of the Arts offers technical training and historical, theoretical, and critical studies in art, art history (visual culture), dance, drama (acting, directing, and playwriting), theater design and technology, film and digital media, and music to all UCSC undergraduates, as well as to those undergraduate and graduate students majoring in the arts. The mission of the arts in education derives from their special contributions to human experience and achievement. The arts involve unique ways of knowing, understanding, feeling, communicating, and creating. In education, and at this university, the arts complement humanistic and scientific thought, and students and faculty in the arts are frequently involved in collaborations with colleagues in humanities and science disciplines.

The Division of the Arts provides students with access to excellent state-of-the-art facilities, including music recital halls and practice rooms, an electronic music studio, several theaters, drama and dance studios, painting and printmaking studios, a foundry, film and video editing rooms, a photography laboratory, multimedia computing laboratories, and specialized lecture and seminar classrooms.

Among the division's many performing and fine arts programs, Shakespeare Santa Cruz, an internationally recognized professional repertory company, exemplifies our goal of combining scholarship with the performance and practice of the arts.

The departments and majors in the Division of the Arts are listed in detail under Art, Film and Digital Media, History of Art and Visual Culture, Music, Theater Arts, and Digital Arts and New Media.

In education, and at this university, the arts complement humanistic and scientific thought, and students and faculty in the arts are frequently involved in collaborations with colleagues in humanities and science disciplines.

The Division of the Arts provides students with access to excellent state-of-the-art facilities, including recently constructed and equipped music recital halls and practice rooms, an electronic music studio, several theaters, drama and dance studios, painting and printmaking studios, a foundry, film and video editing rooms, a photography laboratory, multimedia computing laboratories, and specialized lecture and seminar classrooms.

Among the division's many performing and fine arts programs, Shakespeare Santa Cruz, an internationally recognized professional repertory company, exemplifies our goal of combining scholarship with the performance and practice of the arts.

The departments and majors in the Division of the Arts are listed in detail under Art, Film and Digital Media, History of Art and Visual Culture, Music, Theater Arts, and Digital Arts and New Media.

Digital Arts and New Media M.F.A. Program

The program explores the theory, history, and practice of digital and electronic art media, with an emphasis on collaborative work in project groups. The curriculum is interdisciplinary, involving faculty from the Art, History of Art and Visual Culture, Film and Digital Media, Music, and Theater Arts Departments as well as from the Baskin School of Engineering, the Division of Physical and Biological Sciences, and the Division of Social Sciences. A minimum of two years will be required in order to complete the program. Further information regarding the program, its admission criteria, and the application process can be found at http://digitalarts.ucsc.edu. Also, see Digital Arts and New Media M.F.A. Program.

Astronomy and Astrophysics

Fees

Astronomy Department Office 201 Interdisciplinary Sciences Building (831) 459-2844

http://www.astro.ucsc.edu

Changes to 2006-08 Catalog Highlighted | Faculty | Course Descriptions

Program Description

The science of astronomy has the universe as its domain. Galaxies, stars, planets, and an ever-increasing variety of phenomena observed from ground- and space-based observatories are among the objects of study. Areas of special interest at UCSC include cosmology, the formation and evolution of planets, stars, and galaxies, high-energy astrophysics, active galaxies, supernovae and nucleo-synthesis, extra-solar planets, interstellar medium, intergalactic medium, solar system, dynamics, and all aspects of observational optical and infrared astronomy. Astronomers use concepts from and contribute to the development of many other scientific disciplines, including optics, mechanics, relativity, atomic and nuclear physics, applied mathematics, chemistry, geology, and meteorology. The interdisciplinary nature of astronomy, including its historical and philosophical elements, makes its study valuable to those planning careers in a variety of fields.

The Astronomy and Astrophysics Department offers a broad undergraduate curriculum that fulfills the needs of students seeking a general education but also enables students wishing to obtain a minor or major in astrophysics to study the subject in greater depth.

The graduate program is intended for those with a professional interest in the subject. The interests of the faculty embrace a wide range of both theoretical and observational aspects of astronomy. Current research and course offerings include our solar system and other solar systems, stellar structure and evolution, stellar spectroscopy, the interstellar medium, galactic structure, active galaxies and quasars, cosmology, general relativity and gravitational radiation, the origin of the elements, infrared and radio astronomy, advanced astronomical instrumentation, astrobiology, high-energy astrophysics, and X-ray and gamma-ray astronomy.

Graduate students have access to state-of-the-art instrument development and data reduction technology, the UCO/Lick Observatory computer network, and an unusually extensive astronomical library at the Lick Observatory headquarters on campus. Graduate students may conduct supervised research using selected telescopic facilities of the Lick Observatory on Mount Hamilton, 55 miles from Santa Cruz. The 10-meter Keck Telescope in Hawaii, the world's largest, is administered from the UCSC campus and is used for frontier research by UC astronomers.

The Center for Adaptive Optics (CfAO) is also headquartered at UCSC. Education is central to the CfAO's mission, and a key element of this is the support provided by the center to graduate students. In addition to research, the center provides interdisciplinary access to a nationwide network of scientists in astronomy and vision science.

Undergraduate Courses

Instruction in astronomy for undergraduates at UCSC is designed to meet the needs of several groups of students.

Courses 2, 3, 4, 5, 8, 80A, 80B, and 80D, providing a general survey of the universe as now understood from historical and modern observations, are offered for those not specializing in a scientific discipline.

Courses 11, 12, 13, 14, 16, and 18, emphasizing basic physical laws and theories as applied to astronomy, taken together provide a survey of modern astronomy for students with some facility in mathematics. Taken separately, these courses provide an in-depth introduction to gravitational interaction, stellar evolution, and extragalactic astrophysics. These courses are designed for students intending to major in a scientific subject, although qualified nonscience majors may

attend. A good high school background in mathematics and physics is assumed.

Prior or concurrent enrollment in a basic calculus course (Mathematics 11A or 19A) and a basic physics course (Physics 5A/L or 6A/L) is helpful but not required.

Finally, a more thorough quantitative treatment of selected topics in astronomy and astrophysics at the upper-division level is provided by courses 112, 113, 117, and 118. Completion of course work in calculus of several variables (Mathematics 22 or 23A-B) and Physics 5B/M or 6B/M and 101A is required for these advanced courses.

Astrophysics Minor

For undergraduate students having a particular interest in the subject, a minor in astronomy and astrophysics is offered. Most students who minor in astronomy and astrophysics are majors in another science, though majors in other fields are also possible. The minor in astronomy and astrophysics requires that students take the Physics 5 or 6 series (with associated laboratories), Physics 101A, a minimum of two courses from the Astronomy 11–18 series, and a minimum of three courses from the Astronomy 112–118 series. A senior thesis on an astronomy-related topic is also encouraged. Interested students should contact the Astronomy Department office for further information.

Astrophysics Major

The UCSC major in astrophysics is administered by the Physics Department and combines a core physics major with advanced electives in astrophysics, an astrophysics laboratory course, and senior thesis work on a topic in astrophysics. It is a rigorous program designed to prepare students for a broad range of technical careers or for entry into graduate or professional programs. A full description of the major can be found in the physics section of this catalog.

Preparation for Graduate Work in Astrophysics

The UCSC graduate program in astronomy and astrophysics is designed for Ph.D. students seeking a professional career in teaching and research. In view of the thorough preparation in mathematics and physics required for graduate study, most entering astronomy graduate students major in physics or astrophysics as undergraduates.

The suggested minimum requirements for admission to graduate standing at UCSC include the following undergraduate courses:

Basic physics. Mechanics, wave motion, sound, light, electricity and magnetism, thermodynamics, atomic physics, and quantum mechanics (Physics 5A, 5B, and 5C).

Basic mathematics. Calculus (Mathematics 19A-B and 23A-B or equivalent) and statistics (Mathematics and Statistics 5).

Intermediate-level physics. Mechanics (Physics 105); electricity, magnetism, and optics (Physics 110A-B); mathematical methods in physics (Physics 116A-B-C); nuclear and particle physics (Physics 129); and quantum mechanics (Physics 139A-B).

Intermediate-level mathematics. Linear algebra (Mathematics 21), complex analysis (Mathematics 103), and ordinary and partial differential equations (Mathematics 106A and 106B).

Graduate Program

Graduate instruction is built upon a two-year cycle of 13, one-quarter courses in astronomy and physics that are required of all students.

Six courses are specifically required:

Astonomy 202, Electromagnetism and Plasma Physics

Astonomy 204A, Physics of Astrophysics I

Astonomy 204B, Physics of Astrophysics II

Astonomy 205, Introduction to Astronomical Research

Astonomy 220A, Stella Structure and Evolution

Astonomy 240A, Galactic and Extragalactic Stellar Systems

Seven courses are chosen from the list of electives given below.

Students must meet at least quarterly with an assigned adviser.

Each student must also be a teaching assistant for at least one quarter.

By the end of their second year, students must complete one quarter of independent study with a faculty member and give a department talk on that work. Also toward the end of their second year, students must pass a written examination based on course material, relevant physics, and

general astronomical knowledge.

After passing a board review based on the above-mentioned requirements and a qualifying exam based on a proposed thesis topic (expected to be taken before the end of the third year), students pursue independent research leading to the doctoral dissertation. Upon completion of the Ph.D. dissertation, students must pass an oral dissertation defense.

Students are encouraged to engage in research projects under the supervision of the faculty during the early part of their graduate career. Exceptions are rare and are granted on a case-by-case basis to individual students.

Electives may be drawn from this list:

Galaxies and Cosmology (at least two):

Astonomy 214, Structure Formation in the Universe

Astonomy 224, Origin and Evolution of the Universe

Astonomy 230, Low-Density Astrophysics

Astonomy 233, Physical Cosmology

Astonomy 240B, Galactic and Extragalactic Stellar Systems

Astonomy 240C, Galactic and Extragalactic Stellar Systems

Astonomy 253, Stellar Dynamics

Stars and Planets (at least two):

Astonomy 212, Dynamical Astronomy

Astonomy 220B, Star and Planet Formation

Astonomy 220C, Advanced Stages of Stellar Evolution and Nucleosynthesis

Astonomy 222, Planetary Science

Astonomy 225, Physics of Compact Objects

Astonomy 237, Accretion of Early and Late Stages of Stellar Evolution

Other:

Astonomy 207, Future Directions/Future Missions

Astonomy 226, General Relativity

Astonomy 231, Astrophysical Gas Dynamics

Astonomy 235, Numerical Techniques

Astonomy 257, Modern Observational Techniques

Astonomy 260, Instrumentation for Astronomy

Astonomy 275, Radio Astronomy

Astonomy 289C, Adaptive Optics and Its Applications

Earth Sciences 275, Magnetohydrodynamics

Education 286, Research and Practice in Science Training for Research

Engineering 206, Bayesian Statistics

Physics 210, Classical Mechanics

Physics 215, Introduction to Non-Relativistic Quantum Mechanics

Physics 216, Advanced Topics in Non-Relativistic Quantum Mechanics

Physics 217, Quantum Field Theory I

Physics 218, Quantum Field Theory II

Most students who minor in astronomy and astrophysics are majors in another science, though majors in other fields are also possible. The minor in astronomy and astrophysics requires that students take the Physics 5 or 6 series (with associated laboratories), Physics 101A, a minimum of two courses from the Astronomy 11–18 series, and a minimum of three courses from the Astronomy 112–118 series. A senior thesis on an astronomy-related topic is also encouraged. Interested students should contact the Astronomy Department office for further information.

Astrophysics Major

The UCSC major in astrophysics is administered by the Physics Department and combines a core physics major with advanced electives in astrophysics, an astrophysics laboratory course, and senior thesis work on a topic in astrophysics. It is a rigorous program designed to prepare students for a broad range of technical careers or for entry into graduate or professional programs. A full description of the major can be found in the physics section of this catalog.

Preparation for Graduate Work in Astrophysics

The UCSC graduate program in astronomy and astrophysics is designed for Ph.D. students seeking a professional career in teaching and research. In view of the thorough preparation in mathematics and physics required for graduate study, most entering astronomy graduate students major in physics or astrophysics as undergraduates.

The suggested minimum requirements for admission to graduate standing at UCSC

include the following undergraduate courses:

Basic physics. Mechanics, wave motion, sound, light, electricity and magnetism, thermodynamics, atomic physics, and quantum mechanics (Physics 5A, 5B, and 5C).

Basic mathematics. Calculus (Mathematics 19A-B and 23A-B or equivalent) and statistics (Mathematics and Statistics 5).

Intermediate-level physics. Mechanics (Physics 105); electricity, magnetism, and optics (Physics 110A-B); mathematical methods in physics (Physics 116A-B-C); nuclear and particle physics (Physics 129); and quantum mechanics (Physics 139A-B).

Intermediate-level mathematics. Linear algebra (Mathematics 21), complex analysis (Mathematics 103), and ordinary and partial differential equations (Mathematics 106A and 106B).

Graduate Program

Graduate instruction is built upon a two-year cycle of 13 one-quarter courses in astronomy and physics that are required of all students. Four courses are specifically required (courses 202, 205, 220A, 240A); and nine courses are chosen from the lists of electives given below. Each student in the program must also be a teaching assistant for at least one quarter. By the end of their second year, students must complete one quarter of independent study with a faculty member and give a department talk on that work. Also toward the end of their second year, students must pass a written examination based on course material, relevant physics, and general astronomical knowledge. After passing a board review based on the above-mentioned requirements and a qualifying exam based on a proposed thesis topic (expected to be taken before the end of the third year), students pursue independent research leading to the doctoral dissertation. Upon completion of the Ph.D. dissertation, students must pass an oral dissertation defense. Students are encouraged to engage in research projects under the supervision of the faculty during the early part of their graduate career.

Electives may be drawn from these lists of courses:

- Galaxies and Cosmology (at least two from this list): Astronomy 214, 224, 230, 233, 240B, 240C, 253.
- Astrophysics (at least two from this list): Astronomy 204A, 204B, 212, 225, 231; Earth Sciences 275; Physics 210, 215, 216, 217, 218.
- Stars and Planets (at least two from this list): Astronomy 220B, 220C, 222, 225, 237.
- Other: Astronomy 207, 212, 226, 231, 235, 257, 260, 275, 289C; Education 286; Engineering 206.

<u>Graduate instruction is built upon a two-year cycle of 13, one-quarter courses in astronomy and physics that are required of all students.</u>

Six courses are specifically required:

Astonomy 202, Electromagnetism and Plasma Physics
Astonomy 204A, Physics of Astrophysics I
Astonomy 204B, Physics of Astrophysics II
Astonomy 205, Introduction to Astronomical Research
Astonomy 220A, Stella Structure and Evolution
Astonomy 240A, Galactic and Extragalactic Stellar Systems

Seven courses are chosen from the list of electives given below.

Students must meet at least quarterly with an assigned adviser.

Each student must also be a teaching assistant for at least one guarter.

By the end of their second year, students must complete one quarter of independent study with a faculty member and give a department talk on that work. Also toward the end of their second year, students must pass a written examination based on course material, relevant physics, and general astronomical knowledge.

After passing a board review based on the above-mentioned requirements and a qualifying exam

based on a proposed thesis topic (expected to be taken before the end of the third year), students pursue independent research leading to the doctoral dissertation. Upon completion of the Ph.D. dissertation, students must pass an oral dissertation defense.

Students are encouraged to engage in research projects under the supervision of the faculty during the early part of their graduate career. Exceptions are rare and are granted on a case-bycase basis to individual students.

Electives may be drawn from this list:

Galaxies and Cosmology (at least two):

Astonomy 214, Structure Formation in the Universe Astonomy 224, Origin and Evolution of the Universe

Astonomy 230, Low-Density Astrophysics

Astonomy 233, Physical Cosmology

Astonomy 240B, Galactic and Extragalactic Stellar Systems

Astonomy 240C, Galactic and Extragalactic Stellar Systems

Astonomy 253, Stellar Dynamics

Stars and Planets (at least two):

Astonomy 212, Dynamical Astronomy

Astonomy 220B, Star and Planet Formation

Astonomy 220C, Advanced Stages of Stellar Evolution and Nucleosynthesis

Astonomy 222, Planetary Science

Astonomy 225, Physics of Compact Objects

Astonomy 237, Accretion of Early and Late Stages of Stellar Evolution

Other:

Astonomy 207, Future Directions/Future Missions

Astonomy 226, General Relativity

Astonomy 231, Astrophysical Gas Dynamics

Astonomy 235, Numerical Techniques

Astonomy 257, Modern Observational Techniques

Astonomy 260, Instrumentation for Astronomy

Astonomy 275, Radio Astronomy

Astonomy 289C, Adaptive Optics and Its Applications

Earth Sciences 275, Magnetohydrodynamics

Education 286, Research and Practice in Science Training for Research

Engineering 206, Bayesian Statistics

Physics 210, Classical Mechanics

Physics 215, Introduction to Non-Relativistic Quantum Mechanics

Physics 216, Advanced Topics in Non-Relativistic Quantum Mechanics

Physics 217, Quantum Field Theory I

Physics 218, Quantum Field Theory II

Astronomy and Astrophysics

<u>Program Description | Course Descriptions</u>

Faculty and Professional Interests

Professor/Astronomer

Peter H. Bodenheimer

Stellar structure, star formation

Michael J. Bolte

Dynamics of star clusters, ages of star clusters, chemical enrichment history of the galaxy, observations of interacting galaxies

Jean P. Brodie

Galaxies, instrumentation

Harland W. Epps

Astronomical optics and instrumentation

Sandra M. Faber

Galaxies, stellar populations, cosmology, instrumentation

Puragra (Raja) GuhaThakurta

Faint blue galaxies, study of faint stars using multicolor CCD data, search for Kuiper belt comets, gravitational lensing by galaxy clusters, HST studies of dense globular cluster cores, near infrared Tully-Fisher diagram, galactic "cirrus" clouds, interacting galaxies, dwarf galaxies

Garth D. Illingworth

Stellar and galaxy dynamics, instrumentation

Burton F. Jones, Emeritus

David C. Koo

Cosmology, birth and evolution of galaxies and quasars

Robert P. Kraft, Emeritus

Bruce H. Margon

High-energy astrophysics, space astronomy

Claire Max

Adaptive optics, planetary science

Joseph S. Miller

Active galaxies, quasi-stellar objects

Jerry E. Nelson

Design and construction of large telescopes; project scientist for the two Keck telescope and Thirty Meter telescope

David M. Rank, Emeritus

Graeme H. Smith

Stellar populations, chromospheric activity among late-type stars

Steven S. Vogt

Stellar spectroscopy, instrumentation

Merle F. Walker, Emeritus

Astronomer

Lloyd B. Robinson, Emeritus

Associate Professor/Associate Astronomer

Jason Prochaska

Damped Lya systems in quasars, Lyman limit systems, stellar abundances, thick disk imaging of our galaxy

Constance Rockosi

Galactic structure, stellar populations, CCD detectors, astronomical instrumentation

Professor

George R. Blumenthal

Cosmology, galaxy formation, high-energy astrophysics

Frank D. Drake, Emeritus

John Faulkner, Emeritus

Gregory Laughlin

Extra-solar planets, numerical astrophysics, astrophysical phenomena of the extremely distant future

Douglas N. C. Lin

Fluid dynamics, star formation, galactic structure, planetary systems, accretion disks

Piero Madau

Cosmology, high-energy astrophysics

Bruce H. Margon

High-energy astrophyics, space astronomy

William G. Mathews

Galaxies, high-energy astrophysics, gaseous nebulae; cornetto (music)

Stephen E. Thorsett

Radio astronomy, high-energy astrophysics, compact objects, relativity

Stanford E. Woosley

Nuclear astrophysics, stellar structure

Associate Professor

Enrico Ramirez-Ruiz

Stellar explosions, gamme-ray bursts accretion physics, nearcompact stars

Associate Adjunct Professor

Rachel J. Dewey

Radio astronomy, pulsar astrophysics, VLBI astrometry

Alexander Heger

Stellar evolution, nucleosynthesis

Stephen Murray

Formation of globular clusters and dwarf galaxies and the structure and evolution of the interstellar medium in young galaxies

Professor

Joel R. Primack (Physics)

Theory of fundamental particles, cosmology, astrophysics

Gary Glatzmaier (Earth and Planetary Sciences)

Computer simulation of geodynamics and planetary dynamics

Assistant Professor

Anthony N. Aguirre (Physics)

Cosmology of the early and late universe: inflation and the global structure of cosmological models; the intergalactic medium and its enrichment with heavy elements; galaxy formation, evolution, and feedback processes; dark matter; theories of modified gravity

Pascale Garaud (Applied Mathematics)

Astrophysics, geophysics, fluid dynamics, numerical resolutions of differential equations, and mathematical modeling of natural flows

David Smith (Physics)

High-energy astrophysics; X-ray and gamma-ray detectors and instrumentation; solar, terrestrial, and planetary sources of gamma radiation

Research Astronomer

Donald Gavel

Adaptive optics

Robert B. Hanson

Astrometry, galactic structure, and statistical astronomy

Robert Kibrick

Development of computer software and wide-area networks in support of remote control and data-acquisition systems for telescopes and astronomical instruments

Remington Stone

Photometry, spectrophotometry, spectrophotometric standard stars, optical SETI

Richard Stover

Instrumentation, cataclysmic variables

Mingzhi Wei

Development of astronomical CCD detectors and CCD controllers

Associate Research Astronomer

Drew Phillips

Extragalactic star-formation, gas-phase abundances, galaxy kinematics, and galaxy formation and evolutions; development of astronomical optics and instrumentation

Scott Severson

Astronomical instrumentation, adaptive optics, near-infrared astronomy

Research Physicist

Terry Mast

Astronomical instrumentation

[Return to top.]

Program Description | Changes to 2006-08 Catalog Highlighted | Faculty

Lower-Division Courses

2. Overview of the Universe. F,W,S

An overview of the main ideas in our current view of the universe, and how they originated. Galaxies, quasars, stars, pulsars, and planets. Intended primarily for nonscience majors interested in a one-quarter survey of classical and modern astronomy. (General Education Code(s): IN, Q.) S. Vogt, P. Guha Thakurta, A. Steinacker. J. Miller

3. Introductory Astronomy: The Solar System. W

Properties of the solar system, the sun, solar system exploration, the physical nature of the Earth and the other planets, comets and asteroids, origin of the solar system, possibility of life on other worlds, planet formation, and search for planets beyond the solar system. Intended for nonscience majors. Courses 3, 4, and 5 are independent and may be taken separately or sequentially. (General Education Code(s): IN, Q.) *D. Lin*

4. Introductory Astronomy: The Stars. S

Stellar evolution: observed properties of stars, internal structure of stars, stages of a star's life including stellar births, white dwarfs, supernovae, pulsars, neutron stars, and black holes. Planet and constellation identification. Intended for nonscience majors. Courses 3, 4, and 5 are independent and may be taken separately or sequentially. (General Education Code(s): IN, Q.) *J. Brodie*

5. Introductory Astronomy: The Formation and Evolution of the Universe. F

The universe explained. Fundamental concepts of modern cosmology (Big Bang, dark matter, curved space, black holes, star and galaxy formation), the basic physics underlying them, and their scientific development. Intended for non-science majors. Courses 3, 4, and 5 are independent and may be taken separately. (General Education Code(s): IN, Q.) *J. Prochaska*

8. The Violent Universe: Cosmic Catastrophes and Life on Earth. F

An overview of current ideas of how astronomical events have influenced evolution of life on Earth. Comet/meteor impacts, mass extinctions, direct evidence, dealing with future impacts. Related topics: evolution of the sun and other stars, supernova explosions, gamma-ray bursts, origin and fate of the universe. Course intended for nonscience majors. (General Education Code(s): IN, Q.) S. Murray

12. Stars and Stellar Evolution. W

Introduction to the observational facts and physical theory pertaining to stars. Topics include the observed properties of stars and the physics underlying them, stellar atmospheres, stellar structure, and evolution. A course in high school physics is

recommended; course intended principally for science students. Offered in alternate academic years. (General Education Code(s): IN, Q.) R. Dewey

13. Galaxies, Cosmology, and High Energy Astrophysics. S

Introduction to modern cosmology and extragalactic astronomy. Topics include the origin of the universe, Big Bang cosmology, expansion of the universe, dark matter and dark energy, properties of galaxies and active galactic nuclei, and very energetic phenomena in our own and other galaxies. It is recommended that students have completed a minimum of high school physics; course intended principally for science majors. (General Education Code(s): IN, Q.) *D. Koo*

14. Observational Astronomy. W

Observational introduction to the night sky. Naked-eye and digital observations of the moon, planets, stars, nebulae, and galaxies are used to understand astronomical phenomena. Topics range from planetary orbits to cosmology. An understanding of mathematics at the Math 2 level is desirable. Enrollment limited to 60. Offered in alternate academic years. (General Education Code(s): IN, Q.) *R. Shuping*

15. Dead Stars and Black Holes. W

Examines the structure, formation, and astrophysical manifestations of compact objects, such as white dwarfs, neutron stars, and black holes, and the astronomical evidence for their existence. A course in high school physics is recommended; course intended for science majors. (General Education Code(s): IN, Q.) *E. Ramirez-Ruiz*

16. Astrobiology: Life in the Universe. F

Topics include the detection of extrasolar planets, planetary habitable zones, planet formation, stellar evolution and properties of stars, the exploration of our solar system and the search for life within it, and the evolution of life on Earth. The course is aimed at science majors. (Formerly *Life in the Universe*.) Enrollment limited to 50. (General Education Code(s): IN, Q.) *A. Steinacker*

18. Planets and Planetary Systems. *

Overview of our solar system and those recently discovered around nearby stars. Topics include formation of planets, structure of planets, moons and rings, asteroids and comets, ground-based and space-based observations, and physical processes. A course in high school physics is recommended; course intended for science majors. Offered in alternate academic years. (General Education Code(s): IN, Q.) *C. Max*

70. Honors Undergraduate Seminar in Astrophysical Research (2 credits). F

Explores current problems in astrophysical research and how they are being solved by practicing scientists. Each presentation-discussion focuses on a different problem or question, explaining how the problem relates to broader astronomical issues, describing the methods used to solve the problem and reviewing the hoped for, or anticipated outcome. Intended for students considering a career in the physical sciences. Enrollment by permission of instructor, with preference to first and second year students majoring in physics or earth sciences. *G. Smith, S. Faber*

80A. The Space-Age Solar System. F

Exploration of the solar system during the space age: the early history of rocket development, the Apollo program and the exploration of the moon, studying the earth from space, and the planets of the solar system as revealed by unmanned spacecraft. Intended for nonscience majors. (General Education Code(s): T2-Natural Sciences.) *G. Smith*

80B. Light, Color, and Vision. *

Covers a variety of optical and visual phenomena, including the nature of light, optical effects in the atmosphere, the camera and photography, simple optical instruments, the human eye and vision, binocular vision, and color and color perception. Offered in alternate academic years. (General Education Code(s): T2-Natural Sciences, Q.) (F) The Staff

80D. Historical Astronomy. *

Historical development of astronomical thought, from stone megaliths to the expanding universe; Western astronomy from ancient Greece to the 20th century; prehistorical and non-Western astronomy; role of astronomy in development of modern science; political, social, and cultural aspects of astronomy. Prerequisite(s) satisfaction of the Entry Level Writing and Composition requirements. Offered in alternate academic years. (General Education Code(s): T2-Natural Sciences, W.) A. Steinacker

Upper-Division Courses

112. Physics of Stars. F

The leading observational facts about stars as interpreted by current theories of stellar structure and evolution. Spectroscopy, abundances of the elements, nucleosynthesis, stellar atmospheres, stellar populations. Final stages of evolution, including white dwarfs, neutron stars, supernovae. Prerequisite(s): Mathematics 22 or 23A, Physics 5B or 6B, and 101A. A. Heger

113. Physical Cosmology. W

Physical examination of our evolving universe: the Big Bang model; simple aspects of general relativity; particle physics in the early universe; production of various background radiations; production of elements; tests of geometry of the universe; dark energy and dark matter; and formation and evolution of galaxies and large-scale structure. Prerequisite(s): Mathematics 22 or 23A, Physics 5B or 6B, and 101A. *P. Madau*

117. High Energy Astrophysics. S

Theory and practice of space and ground-based x-ray and gamma-ray astronomical detectors. High-energy emission processes, neutron stars, black holes. Observations of x-ray binaries, pulsars, magnetars, clusters, gamma-ray bursts, the x-ray background. High-energy cosmic rays. Neutrino and gravitational-wave astronomy. Prerequisite(s): Mathematics 22 or 23A, Physics 5B or 6B, and 101A. *D. Williams*

118. Physics of Planetary Systems. S

Determination of the physical properties of the solar system, its individual planets, and extrasolar planetary systems through ground-based and space-based observations, laboratory measurements, and theory. Theories of the origin and evolution of planets and planetary systems. Prerequisite(s): Mathematics 22 or 23A or 23B, Physics 5B or 6B, and 101A. Offered in alternate academic years. *A. Steinacker*

135. Astrophysics Advanced Laboratory. *

Introduction to the techniques of modern observational astrophysics at optical and radio wavelengths through hands-on experiments. Offered in some academic years as a multiple-term course: 135A in fall and 135B in winter, depending on astronomical conditions. (Also offered as Physics 135. Students cannot receive credit for both courses.) Prerequisite(s): Physics 133 and at least one astronomy course. Intended

primarily for juniors and seniors majoring or minoring in astrophysics. R. Dewey

135A. Astrophysics Advanced Laboratory (3 credits). F

Introduction to techniques of modern observational astrophysics at optical and radio wavelengths through hands-on experiments. Intended primarily for juniors and seniors majoring or minoring in astrophysics. Offered in some academic years as single-term course 135 in fall, depending on astronomical conditions. (Also offered as Physics 135A. Students cannot receive credit for both courses.) Prerequisite(s): Physics 133 and at least one astronomy course. *R. Dewey*

135B. Astrophysics Advanced Laboratory (2 credits). W

Introduction to techniques of modern observational astrophysics at optical and radio wavelengths through hands-on experiments. Intended primarily for juniors and seniors majoring or minoring in astrophysics. Offered in some academic years as single-term course 135 in fall, depending on astronomical conditions. (Also offered as Physics 135B. Students cannot receive credit for both courses.) Prerequisite(s): Physics 133 and at least one astronomy course. *R. Dewey*

171. General Relativity, Black Holes, and Cosmology. F

Special relativity is reviewed. Curved space-time, including the metric and geodesics, are illustrated with simple examples. The Einstein equations are solved for cases of high symmetry. Black-hole physics and cosmology are discussed, including recent developments. (Also offered as Physics 171. Students cannot receive credit for both courses.) Prerequisite(s): Physics 105, 110B, and 114B. A. Aguirre

199. Tutorial. F,W,S

The Staff

Graduate Courses

202. Electromagnetism and Plasma Physics. S

Topics in classical radiation: multipole radiation, synchrotron and Cerenkov radiation, Compton scattering, bremsstrahlung, stimulated and coherent emission, diffraction and scattering. Topics in plasma physics: plasma waves, Debye length, adiabatic invariants, wave propagation in plasmas, Landau damping, two-stream instability. Offered in alternate academic years. *E. Ramirez-Ruiz*

204A. Physics of Astrophysics I. F

Explores how physical conditions in astrophysical objects can be diagnosed from their spectra. Discussion topics include how energy flows determine the thermal state of radiating objects and how the physics of radiative transfer can explain the emergent spectral characteristics of stars, accretion disks, Lyman-alpha clouds, and microwave background. Enrollment restricted to graduate students. Offered in alternate academic years. *G. Laughlin*

204B. Physics of Astrophysics II. W

Fluid mechanics, equation of motion, inviscid and viscous flow, boundary layers, turbulence, compressibility, sound and non-linear waves, heat and momentum transport, instabilities, magnetohydrodynamics, Alfven waves, antipolar diffusion, plasma physics, stability. Enrollment restricted to graduate students. Offered in alternate academic years. *G. Laughlin*

205. Introduction to Astronomical Research. F

Lectures by UCSC faculty on current areas of astronomical and astrophysical

207. Future Directions/Future Missions. *

Examines possible key science goals for the the next decade, such as planet detection, galaxy formation, and "dark energy" cosmology; the means for addressing these goals, such as new space missions and/or ground-based facilities; and the political, technical, and scientific constraints on such research. Looks at the role of the Decadel Survey. Examines a few existing programs (DEEP, ALMA, SNAP, NGST) as examples. Enrollment restricted to graduate students. Offered in alternate academic years. *G. Illingworth*

212. Dynamical Astronomy. *

Surveys dynamical processes in astrophysical systems on scales ranging from the planetary to the cosmological, stability and evolution of planetary orbits, scattering processes and the few-body problem, processes in stellar clusters, spiral structure and galactic dynamics, galactic collisions, and evolution of large-scale structure. Enrollment restricted to graduate students. *G. Laughlin*

214. Structure Formation in the Universe. *

Course builds upon course 240C (offered in alternate) and covers a similar set of topics with a larger emphasis on first stars and black holes, galaxy formation, the physics of the intergalactic medium, and high-redshift sources. Enrollment restricted to graduate students. *P. Madau*

220A. Stellar Structure and Evolution. *

Survey of stellar structure and evolution. Physical properties of stellar material. Convective and radiative energy transport. Stellar models and evolutionary tracks through all phases. Comparison with observations. Enrollment restricted to graduate students. Offered in alternate academic years. *P. Bodenheimer*

220B. Star and Planet Formation. *

Theory of star formation. Interpretation of observations in star forming regions. Theory and observations of protoplanetary disks. Origin and evolution of the solar nebula. Formation and evolution of the terrestrial planets and the giant planets. Prerequisite(s): course 220A. Offered in alternate academic years. *P. Bodenheimer*

220C. Advanced Stages of Stellar Evolution and Nucleosynthesis. *

The evolution of massive stars beyond helium burning; properties of white dwarf stars; physics and observations of novae, supernovae, and other high energy stellar phenomena; nuclear systematics and reaction rates; the origin and production of all the chemical elements. Prerequisite(s): course 220A. Enrollment restricted to graduate students. Offered in alternate academic years. *S. Woosley*

222. Planetary Science. *

Gross dynamical and chemical properties of solar system, interior structure, plate tectonics, atmosphere of terrestrial planets, structure and evolution of giant planets, generation of magnetic fields, planet-satellite tidal interaction, planetary rings, comets, meteorites, formation and long-term stability of solar system. Enrollment restricted to graduate students. Offered in alternate academic years. *D. Lin*

224. Origin and Evolution of the Universe. W

Introduction to the particle physics and cosmology of the very early universe: relativistic cosmology, initial conditions, inflation and grand unified theories,

baryosynthesis, nucleosynthesis, gravitational collapse, hypotheses regarding the dark matter and consequences for formation of galaxies and large scale structure. (Also offered as Physics 224. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. Offered in alternate academic years. *J. Primack*

225. Physics of Compact Objects. *

Physics of dense matter: equations of state. Structure and cooling of white dwarfs and neutron stars. Observations and phenomenology of pulsars. Elementary relativity; properties of black holes. Compact objects in binary systems: X-ray sources, binary pulsars. Pulsars in globular clusters. Offered in alternate academic years. *The Staff*

226. General Relativity. S

Develops the formalism of Einstein's general relativity, including solar system tests, gravitational waves, cosmology, and black holes. (Also offered as Physics 226. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. Offered in alternate academic years. *A. Aguirre*

230. Low-Density Astrophysics. *

Fundamental physical theory of gaseous nebulae and the interstellar medium. Ionization, thermal balance, theory and observation of emission spectra. Interstellar absorption lines, extinction by interstellar dust. Ultraviolet, optical, infrared, and radio spectra of gaseous nebulae. Offered in alternate academic years. *W. Mathews*

233. Physical Cosmology. *

Survey of modern physical cosmology, including Newtonian cosmology, curved space-times, observational tests of cosmology, the early universe, inflation, nucleosynthesis, dark matter, and the formation of structure in the universe. Prerequisite(s): course 202. Offered in alternate academic years. *G. Blumenthal*

235. Numerical Techniques. *

Gives students a theoretical and practical grounding in the use of numerical methods and simulations for solving astrophysical problems. Topics include N-body, SPH and grid-based hydro methods as well as stellar evolution and radiation transport techniques. Enrollment restricted to graduate students. Offered in alternate academic years. *G. Laughlin*

237. Accretion in Early and Late Stages of Stellar Evolution. *

Theories of spherical accretion, structure and stability of steady-state accretion disks, and the evolution of time-dependent accretion disks. Applications of these theories to the formation of the solar system as well as the structure and evolution of dwarf novae and X-ray sources are emphasized. Offered in alternate academic years. *D. Lin*

240A. Galactic and Extragalactic Stellar Systems. F

Structure and evolutionary histories of nearby galaxies. Stellar populations, galactic dynamics, dark matter, galactic structure and mass distributions. Peculiar galaxies and starbursting galaxies. Structure and content of the Milky Way. Evolution of density perturbations in the early universe. Hierarchical clustering model for galaxy formation and evolution. Offered in alternate academic years. *C. Rockosi*

240B. Galactic and Extragalactic Stellar Systems. W

Galaxy formation and evolution from observations of intermediate-to-high redshift

galaxies (z 0.5-5). Complements and builds on 240A. Cluster galaxies and field galaxies. Foundation from classic papers on distant galaxies. Recent discoveries from IR and sub-mm measurements. Impact of AGNs and QSOs. Overview of modeling approaches. Identify theoretical and observational issues. Enrollment restricted to graduate students. Offered in alternate academic years. *G. Illingworth*

240C. Galactic and Extragalactic Stellar Systems. S

Cosmological models. Recombination epoch and thermal history of the intergalactic medium. Formation of first structures: minihalos, stars, and black holes. Cosmological reionization and early metal enrichment. Radiative transfer in a clumpy universe. Quasar absorption systems. Galaxies at high redshifts and cosmic star formation history. The nature of QSOs and active galaxies. Extragalactic background radiation. Enrollment restricted to graduate students. Offered in alternate academic years. *P. Madau*

253. Stellar Dynamics. *

Kinematics and relaxation of stellar systems. Potential and orbit theories. Dynamics of globular clusters, spiral and elliptical galaxies. Dynamical friction, mergers, and galactic cannibalism. Galaxy clustering in the early universe. Offered in alternate academic years. *D. Lin*

257. Modern Observational Techniques. S

Astronomical telescopes and detectors. Astronomical observing techniques. The reduction of observations. Machine shop practice in instrument construction. Offered in alternate academic years. *M. Bolte*

260. Instrumentation for Astronomy. *

An introduction to astronomical instrumentation for infrared and visible wavelengths. Topics include instrument requirements imposed by dust, atmosphere, and telescope; optical, mechanical, and structural design principles and components; electronic and software instrument control. Imaging cameras and spectrographs are described. Offered in alternate academic years. Enrollment restricted to graduate students. *C. Rockosi*

275. Radio Astronomy. *

Theory and practice of radio telescopes, radiometers, and data handling systems. Principles of aperture synthesis. Theory of continuum and line radio emission mechanisms, and application to actual astronomical observations. Galactic radio sources, quasars, and pulsars. Offered occasionally. *S. Thorsett*

289. Special Topics in Astrophysics.

Occasional courses in particular areas of current interest. The Staff

289C. Adaptive Optics and Its Application. W

Introduction to adaptive optics and its astronomical applications. Topics include effects of atmospheric turbulence on astronomical images, basic principles of feedback control, wavefront sensors and correctors, laser guide stars, how to analyze and optimize performance of adaptive optics systems, and techniques for utilizing current and future systems for astronomical observations. Prerequisite(s): Enrollment restricted to graduate students. Offered in alternate academic years. *C. Max*

292. Seminar (no credit). F,W,S

Seminar attended by faculty, graduate students, and upper-division undergraduate students. *The Staff*

297. Independent Study. F,W,S

Independent study or research for graduate students who have not yet begun work on their theses. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. *The Staff*

299. Thesis Research. F,W,S

Students submit petition to sponsoring agency. The Staff

* Not offered in 2007-08

Biochemistry and Molecular Biology

230 Physical Sciences Building (831) 459-4125 http://www.chemistry.ucsc.edu

Changes to 2006-08 Catalog Highlighted | Faculty | Course Descriptions

Program Description

Research at the macromolecular, molecular, and atomic levels is revolutionizing our understanding of the fundamental processes of life. Students interested in joining this search are best prepared by undertaking course work in biology, chemistry, physics, mathematics, and computer science. Toward this end, an undergraduate major in biochemistry and molecular biology (BMB) is offered by faculty who are actively engaged in research on biological systems.

Students who declare the BMB major earn a bachelor of science degree. The BMB major constitutes an integrated curriculum of basic instruction in biology, chemistry, mathematics, and physics, followed by the opportunity to pursue advanced study in specialized areas of interest. In modern, well-equipped laboratories, distinguished faculty are engaged in frontline research. The Departments of Chemistry and Biochemistry and Biological Sciences host a very active seminar series of national and international scholars in which advanced undergraduates are encouraged to participate.

The BMB program features close faculty-student interaction, small upper-division classes, stimulating learning environments, and opportunities for independent research and study. Students majoring in BMB are encouraged to become involved in research under the guidance of a faculty sponsor. Many students participating in this aspect of the program have made important contributions to the scientific literature.

Given the wide scope and interdisciplinary nature of this program, a considerable degree of flexibility has been incorporated into the major. All prospective majors should consult the Department of Chemistry and Biochemistry to be assigned a BMB adviser as early as possible. Junior transfer students or others with questions should consult the Department of Chemistry and Biochemistry undergraduate programs adviser. To become a BMB major, a student must file a declaration of major petition through the Department of Chemistry and Biochemistry. A double major of BMB with the biological sciences majors or chemistry is not permitted. No minor is offered.

Requirements for the B.S. Degree

Core Courses

- · Chemistry 1A, 1B/M and 1C/N, General Chemistry/ Laboratory
- · Biology 20A and 20B, Introductory Biology Sequence
- Biology 20L, Experimental Biology Laboratory
- · Mathematics 11A-B or 19A-B, and 22, Calculus
- Physics 5A/L, 5B/M, and 5C/N; or 6A/L, 6B/M, and 6C/N, Introductory Physics/Laboratory
- Biology 105, Genetics
- Biology 110, Cell Biology
- Biology 115, Eukaryotic Molecular Biology
- Chemistry 108A/L and 108B/M; or 112A/L, 112B/M, and 112C/N, Organic Chemistry/Laboratory
- · Chemistry 163A and 163B, Physical Chemistry
- Biochemistry and Molecular Biology 100A, 100B, and 100C, Biochemistry

Biochemistry and Molecular Biology Planner

The following is a recommended academic plan for students to complete during their first two years as preparation for the biochemistry and molecular biology major.

Year	Fall	Winter	Spring
1st (frsh)	Math 11A or 19A college core Chem 1A	Math 11B or 19B Chem 1B/M gen ed	Math 22 Chem 1C/N Biol 20A
2nd (soph)	Chem 108A/L Phys 6A/L Biol 20B	Chem 108B/M Phys 6B/M	Biol 20L Phys 6C/N

Laboratory Elective

One laboratory course selected from the following list is required. Students should be sure to plan for completing appropriate prerequisites.

Biochemistry and Molecular Biology

· 110, Biochemistry Laboratory

Biology

- 100L, Biochemistry Laboratory
- 105L, Eukaryotic Genetics Laboratory
- 105M, Microbial Genetics
- 109L, Yeast Molecular Genetics Laboratory
- · 110L, Cell Biology Laboratory
- 116L, Eukaryotic Molecular Biology Laboratory
- 119L, Microbiology Laboratory
- 187L, Molecular Biotechnology Laboratory

Comprehensive Requirement

Students have two options for fulfilling the senior comprehensive requirement: (a) achieving a score at or above the 50th percentile on the Graduate Record Examination (GRE) Biochemistry, Cell, and Molecular Biology Subject Test, or (b) completing a senior thesis sponsored or cosponsored by a faculty member affiliated with the biochemistry and molecular biology program.

Program Planning Notes

Students who do not begin the lower-division requirements during their first year may have difficulty completing the program within four years. Transfer students may also have problems completing the program within the usual time, depending upon whether they took equivalent courses at their previous institutions. The department adviser works closely with students interested in pursuing the major to insure that they begin the program immediately and follow the appropriate steps toward its completion.

It is strongly recommended that students avail themselves of the opportunities to obtain firsthand research experience through either independent study or senior thesis research. A tutorial course or a senior thesis research course may not be substituted for the required laboratory elective.

A number of graduate courses in biochemistry and molecular biology are offered by the biology, chemistry, and biochemistry programs. Advanced undergraduates with the necessary background may take one or more of these courses with the consent of the instructor; however, graduate courses may not be substituted for the required elective courses.

Letter Grade Policy

For all students entering UCSC in fall 2001 and later, all courses used to satisfy any of the biological sciences majors must be taken for a letter grade.

Major Disqualification Policy

All biochemistry and molecular biology majors are covered by the biology major disqualification and letter grade policies in the Biological Sciences section.

Materials Fee

Biochemistry and molecular biology students should be aware of the materials fee required for some laboratory courses. The fee is billed to the student's account for specific laboratory materials purchased by the Department of Chemistry and Biochemistry through the university. Fees generally range from \$15 to \$50 per course. Students may incur additional expenses purchasing individual supplies.

Program Description | Faculty | Course Descriptions

Program Description

Research at the macromolecular, molecular, and atomic levels is revolutionizing our understanding of the fundamental processes of life. Students interested in joining this search are best prepared by undertaking course work in biology, chemistry, physics, mathematics, and computer science. Toward this end, an undergraduate major in biochemistry and molecular biology (BMB) is offered by faculty who are actively engaged in research on biological systems.

Students who declare the BMB major earn a bachelor of science degree. The BMB major constitutes an integrated curriculum of basic instruction in biology, chemistry, mathematics, and physics, followed by the opportunity to pursue advanced study in specialized areas of interest. In modern, well-equipped laboratories, distinguished faculty are engaged in frontline research. The Departments of Chemistry and Biological Sciences host a very active seminar series of national and international scholars in which advanced undergraduates are encouraged to participate.

The BMB program features close faculty-student interaction, small upper-division classes, stimulating learning environments, and opportunities for independent research and study. Students majoring in BMB are encouraged to become involved in research under the guidance of a faculty sponsor. Many students participating in this aspect of the program have made important contributions to the scientific literature.

Given the wide scope and interdisciplinary nature of this program, a considerable degree of flexibility has been incorporated into the major. All prospective majors should consult the Department of Chemistry and Biochemistry to be assigned a BMB adviser as early as possible. Junior transfer students or others with questions should consult the Department of Chemistry and Biochemistry undergraduate programs adviser. To become a BMB major, a student must file a declaration of major petition through the Department of Chemistry and Biochemistry. A double major of BMB with the biological sciences majors or chemistry is not permitted. No minor is offered.

Requirements for the B.S. Degree

Core Courses

- Chemistry 1A, 1B/M and 1C/N, General Chemistry/ Laboratory
- Biology 20A and 20B, Introductory Biology Sequence
- Biology 20L, Experimental Biology Laboratory
- Mathematics 11A-B or 19A-B, and 22, Calculus
- Physics 5A/L, 5B/M, and 5C/N; or 6A/L, 6B/M, and 6C/N, *Introductory Physics/Laboratory*
- Biology 105, Genetics

- Biology 110, Cell Biology
- Biology 115, Eukaryotic Molecular Biology
- Chemistry 108A/L and 108B/M; or 112A/L, 112B/M, and 112C/N, *Organic Chemistry/Laboratory*
- Chemistry 163A and 163B, *Physical Chemistry*
- Biochemistry and Molecular Biology 100A, 100B, and 100C, Biochemistry

Biochemistry and Molecular Biology Planner

The following is a recommended academic plan for students to complete during their first two years as preparation for the biochemistry and molecular biology major.

Year	Fall	Winter	Spring
1st	Math 11A or 19A	Math 11B or 19B	Math 22
(frsh)	college core	Chem 1B/M	Chem 1C/N
	Chem 1A	gen ed	Biol 20A
2nd	Chem 108A/L	Chem 108B/M	Biol 20L
(soph)	Phys 6A/L	Phys 6B/M	Phys 6C/N
_	Biol 20B		

Laboratory Elective

One laboratory course selected from the following list is required. Students should be sure to plan for completing appropriate prerequisites.

Biochemistry and Molecular Biology

• 110, Biochemistry Laboratory

Biology

- 100L, Biochemistry Laboratory
- 105L, Eukaryotic Genetics Laboratory
- 105M, Microbial Genetics
- 109L, Yeast Molecular Genetics Laboratory
- 110L, Cell Biology Laboratory
- 116L, Eukaryotic Molecular Biology Laboratory
- 119L, Microbiology Laboratory
- 187L, Molecular Biotechnology Laboratory

Comprehensive Requirement

Students have two options for fulfilling the senior comprehensive requirement: (a) achieving a score at or above the 50th percentile on the Graduate Record Examination (GRE) Biochemistry, Cell, and Molecular Biology Subject Test, or (b) completing a senior thesis sponsored or co-sponsored by a faculty member affiliated with the biochemistry and molecular biology program.

Program Planning Notes

Students who do not begin the lower-division requirements during their first year may have difficulty completing the program within four years. Transfer students may also have problems completing the program within the usual time, depending upon whether they took equivalent courses at their previous institutions. The department adviser works closely with students interested in pursuing the major to insure that

they begin the program immediately and follow the appropriate steps toward its completion.

It is strongly recommended that students avail themselves of the opportunities to obtain firsthand research experience through either independent study or senior thesis research. A tutorial course or a senior thesis research course may not be substituted for the required laboratory elective.

A number of graduate courses in biochemistry and molecular biology are offered by the biology, chemistry, and biochemistry programs. Advanced undergraduates with the necessary background may take one or more of these courses with the consent of the instructor; however, graduate courses may not be substituted for the required elective courses.

Letter Grade Policy

For all students entering UCSC in fall 2001 and later, all courses used to satisfy any of the biological sciences majors must be taken for a letter grade.

Major Disqualification Policy

All biochemistry and molecular biology majors are covered by the biology major disqualification policy, which limits the number of times a student may receive a No Pass, D, and/or F in the introductory biology sequence and also limits the number of times a student may receive a No Pass, D, and/or F in upper-division biology courses. Students should refer to the Biological Sciences section for more information.

All biochemistry and molecular biology majors are covered by the biology major disqualification and letter grade policies in the Biological Sciences section.

Materials Fee

Biochemistry and molecular biology students should be aware of the materials fee required for some laboratory courses. The fee is billed to the student's account for specific laboratory materials purchased by the Department of Chemistry and Biochemistry through the university. Fees generally range from \$15 to \$50 per course. Students may incur additional expenses purchasing individual supplies.

Biochemistry and Molecular Biology

230 Physical Sciences Building (831) 459-4125 http://www.chemistry.ucsc.edu

Program Description | Changes to 2006-08 Catalog Highlighted | Faculty

Lower-Division Courses

100A. Biochemistry. F

Fundamentals of molecular biology, structure and function of nucleic acids, and protein structure. Designed for students preparing for research careers in biochemistry and molecular biology. Lecture: 3-1/2 hours; discussion: 1-1/4 hours. Prerequisite(s): Chemistry 108B or 112C; Biology 20A; Biology 105 strongly recommended as preparation. *H. Noller*

Upper-Division Courses

100B. Biochemistry. W

Covers enzyme mechanisms, kinetics, regulations, membrane composition and structure, specialized membrane functions, active transport and electro-chemical storage, excitable membranes and neurotransmitters, membrane receptors and sensory transduction mechanisms. Lecture: 3-1/2 hours; discussion: 1-1/4 hours. Prerequisite(s): course 100A *S. Rubin*

100C. Biochemistry. S

Biochemistry: intermediary metabolism and bioenergetics. How enzymatically catalyzed reactions are organized and regulated; how energy from molecules is extracted for chemical work. Lecture: 3-1/2 hours; discussion: 1-1/4 hours. prerequisite(s): course 100B *R. Ludwig*

110. Biochemistry Laboratory. S

An introduction to the major techniques used in the isolation and characterization of biological components. Laboratory: 8 hours; lecture: 1-1/4 hours. Students are billed a materials fee. Prerequisite(s): course 100B *O. Einarsdottir*

Bioengineering

Baskin School of Engineering 335 Baskin Engineering Building (831) 459-2158 http://www.soe.ucsc.edu

Faculty

(The Bioengineering Program is new this year and was not included in the General Catalog 2006-08.)

Program Description

Bioengineering focuses on the application of engineering tools and techniques to the problems of medicine and the biological sciences. The UCSC program in bioengineering, through its participating faculty and departments, provides students with inspiration and quality education in the theory and practice of bioengineering

The UC Santa Cruz B.S. in bioengineering program prepares graduates for a rewarding career at the interfaces between engineering, medicine, and biology. UCSC bioengineering graduates will have a thorough grounding in the principles and practices of bioengineering and in the scientific and mathematical principles upon which these principles and practices are built; graduates will be prepared for further education (both formal and informal) and for productive employment in industry.

In the UCSC bioengineering B.S. program, many undergraduates work on faculty research projects, analyzing ideas, developing technologies, and discovering new approaches. Areas include biomolecular sensors and systems, nanoelectronic implants, assistive technologies for the elderly and disabled, bioinformatics, microfluidics, nanobiotechnology, and other areas at the junction between engineering, medicine, and the life sciences. More information about bioengineering research and undergraduate research opportunities can be found on the web at www.cbse.ucsc.edu, biomedical.ucsc.edu, marcmbrs.ucsc.edu, surf-it.soe.ucsc.edu, and graddiv.ucsc.edu/ucleads.

The program is sponsored by the departments of biomolecular engineering, computer engineering, electrical engineering, and molecular, cell, and developmental biology, with additional participating faculty in the departments of applied mathematics and statistics, community studies, chemistry and biochemistry, philosophy, physics, and psychology.

The program has extensive course requirements in mathematics, science, and engineering, and students potentially interested in bioengineering as a major should contact the School of Engineering Advising Office (advising@soe.ucsc.edu) before enrolling in any courses at UC Santa Cruz.

Bioengineering students may continue their research and studies at UC Santa Cruz in the graduate programs of the collaborating department and other departments. Programs and application information may be found at http://www.graddiv.ucsc.edu.

Every major must have a bioengineering faculty adviser, assigned by the Baskin School of Engineering Undergraduate Advising Office, and with that adviser must formulate a program of proposed course work that meets the major or minor requirements.

Courses for Nonmajors

The bioengineering program does not sponsor any courses. However, the program recommends the following courses to nonmajors interested in bioengineering. Computer Engineering 80A, Assistive Technology and Universal Access (T6-Natural Sciences or Social Sciences); and Biomolecular Engineering/Philosophy 80G, Bioethics in the 21st Century: Science, Business, and Society (T5-Natural Sciences or Humanities and Arts). Students planning careers in medicine should consider Biology 89, Clinical Health Care: Organization and Financing (IS). Students are

also advised to consult the program discussions of the collaborating departments for additional possibilities related to bioengineering.

Admissions Policy

Admission to the major is selective. First-year applicants may receive direct admission at the time they apply to UCSC, based on their high school record and test scores.

Admission to the bioengineering major after a student has entered UCSC is based on performance in courses offered by the School of Engineering and the Division of Physical and Biological Sciences (the SOE GPA). An SOE GPA of 2.5 or better is expected at the time of major declaration. Progress in the major and ability to complete the major within campus limits will also be considered

After the first year, at least six courses required for the major, and any associated laboratories, must be completed prior to declaration. Required courses are listed below.

Transfer Students

Transfer admission will be based on GPA and the level of completion of lower-division requirements. Most importantly, transfer students should have completed articulated calculus, multivariable calculus, linear algebra, and differential equations, as well as at least three of the four other introductory areas (programming, biology, chemistry, and physics). Students may satisfy the bioethics requirement if they have completed a suitable ethics course at their community college. Transfer students who have completed a course that articulates to Mathematics 22 prior to transfer do not need to complete Mathematics 23A.

Honors in the Major

Bioengineering majors are awarded "Honors in the Major" and "Highest Honors in the Major" based on major GPA and on results of undergraduate research. Students with an SOE GPA of 3.7 in most cases receive Highest Honors. Students with an SOE GPA of 3.3 in most cases receive Honors. Students with particularly significant accomplishments in undergraduate research may be considered with a lower SOE GPA.

Disqualification Policy

Please refer to the School of Engineering section of this catalog for the School of Engineering's Major Disqualification Policy.

Letter Grade Policy

The bioengineering program requires letter grading for all courses applied to the degree with the exception of two lower-division courses, which students may elect to take Pass/No Pass.

School of Engineering Policies

Please refer to the School of Engineering section of the catalog for additional policies that apply to all School of Engineering programs.

Major Requirements

The following courses are required for the major. Major requirements may satisfy several general education categories, including both Introduction to the Discipline: Natural Science and Engineering (IN) courses, two Topical (T) courses, the Quantitative Course (Q) requirement, and the Writing-Intensive Course requirement (W).

Optional Courses for Majors

Bioengineering students planning a career in medicine should take Biology 89, *Clinical Health Care*, which also satisfies the Introduction to the Discipline-Social Sciences (IS) general education requirement. Students desiring or needing an early introduction to the use of mathematics in engineering should take Computer Engineering 8, *Robot Automation*, in their first quarter.

Introductory Requirements, 18 courses

Mathematics 19A-B, Calculus for Science, Engineering, and Mathematics

Mathematics 23A, Multivariable Calculus

Applied Mathematics and Statistics 7/L, Statistical Methods for the Biological and Environmental Sciences Laboratory.

Applied Mathematics and Statistics 27/L, *Mathematical Methods for Engineers/Laboratory*; or the two courses Mathematics 21, *Linear Algebra* and Mathematics 24, *Ordinary Differential Equations*

Biomolecular Engineering 80G, Bioethics in the 21st Century: Science, Business, and Society

One of:

Computer Engineering 80A, Assistive Technology and Universal Access; or Electrical Engineering, Introduction to Bioengineering (planned); or Biomolecular Engineering 5, Introduction to Biotechnology

Chemistry and Biochemistry 1A, 1B/M and 1C/N, *General Chemistry*, or (with preapproval) courses completed elsewhere that enable enrollment in 108A/L.

Chemistry and Biochemistry 108A/L, Organic Chemistry

Biology 20A, Cell and Molecular Biology

Biology 20B, Development and Physiology

Physics 5A/L and 5B/M and 5C/N, *Introductory Physics* (if necessary for scheduling reasons, the first course, 5A/L, may be substituted with 6A/L)

Computer Engineering 12/L, Computer Systems and Assembly Language

One of:

Biomolecular Engineering 60/L, *Programming for Biologists and Biochemists Laboratory*; or

160/L, Research Programming for Biologists and Biochemists Laboratory; or Computer Science 12A/L, Introduction to Programming Laboratory

Advanced Requirements, six courses

Electrical Engineering 70/L, Introduction to Electronic Circuits Laboratory

Electrical Engineering 103, Signals and Systems

Either Biology 100, *Biochemistry*, or Biochemistry and Molecular Biology 100A-B, *Biochemistry* (also fulfills one elective)

Biomolecular Engineering 150, Molecular Biomechanics (first offering 2008-09)

Physiology and Measurement, 1 course:

Biomolecular Engineering 104, *Measurement and Instrumentation in Physiology* (first offering 2008-09), or Biology 130/L, *Human Physiology*, (taken in 2007-08 or earlier), or Biology 131/L, *Animal Physiology* (taken in 2007-08 or earlier)

Computer Engineering 185, Technical Writing for Computer Engineers

Electives, four courses

Bioengineering students plan a coherent selection of 4 elective courses in consultation with their faculty adviser and approved by the program. At least 2 electives must be laboratory courses from the School of Engineering with an associated 1 or 2 unit laboratory. Students who use BIO130/L or BIO131/L to satisfy the Physiology and Measurement requirement may only have one elective outside the School of Engineering. The elective list is frequently updated, and students should obtain a current copy from the School of Engineering Undergraduate Advising Office. As of this catalog printing, the list includes:

Biology courses 105, 110, 115, 119, 120, 125, 130, and 186L. Biochemistry Course 100B and C. Biomolecular Engineering courses 102, 110, 155, and 205. Chemistry course 108B/M. Computer Engineering course 118/L or 121/L. Electrical Engineering course 171/L, 212, and 270.

A variety of new bioengineering electives are planned to be offered beginning in the 2007-8 academic year. Please contact the School of Engineering Undergraduate Office for the most recent electives list.

Capstone Project, two courses

All bioengineering students complete a senior design project in bioengineering as part of a multidisciplinary team solving a current problem. The project proposal must be approved by the Bioengineering Undergraduate Director as a bioengineering project. (Satisfies the campus Comprehensive Requirement)

Computer Engineering, or Electrical Engineering 123A, Engineering Design Project I; Computer Engineering, or Electrical Engineering 123B, Engineering Design Project II; or Computer

Engineering, Electrical Engineering, or Biomolecular Engineering 195, Senior Thesis Research

Portfolio Exit Requirement

Students are required to submit a portfolio and exit interview. The portfolios must be turned in electronically at least seven days before the end of instruction in the quarter of graduation.

The portfolios will be reviewed quarterly by the bioengineering undergraduate committee and must include the following:

- The capstone project report
- A second project report of the student's selection
- A one- to two-page overview of the two projects, the student's contribution to them, and a narrative as specified at the submission site (http://www.soe.ucsc.edu/programs/beng/)
- · An exit interview

Bioengineering Major Planners

The following sample academic plans show possible courses of study for a bioengineering major. Students should consider taking courses during the summer to ensure timely completion of the degree. Courses planned to be taken at institutions other than UC Santa Cruz require preapproval.

Plan On	ie			
Year	Fall	Winter	Spring	Summer
1st (frsh)	gen ed (C1) Math 19A Chem 1A	Cmpe 80A Math 19B Chem 1B	gen ed (C2) Math 23A Chem 1C	
2nd (soph)	Phys 5A AMS 7 BME 80G	Phys 5B Biol 20A BME 60	Phys 5C Biol 20B AMS 27	Chem 108A

4th (sr)	elective Biol 100 Cmpe 185	EE 123A gen ed (IH) elective	EE 123B BME 150 gen ed (IH)	

Plan Three

Because of the extensive course requirements, students needing to take precalculus or other preparatory courses should complete one or more courses during summer to enable completion of the degree in four years. The following is a plan for a student beginning the mathematics sequence with precalculus. Students should discuss their plans with the School of Engineering Advising Office prior to enrolling in any courses.

Year	Fall	Winter	Spring	Summer
1st (frsh)	gen ed (C1) AMS 3 Chem 1A	Cmpe 80A Math 19A Chem 1B	gen ed (C2) Math 19B Chem 1C	Biol 20A

Bioengineering

Program Description | Course Descriptions

Participating Faculty and Professional Interests

Mark Akeson (Biomolecular Engineering)

DNA structure and dynamics, single molecule biophysics, bioethics

Manuel Ares Jr. (Molecular, Cell, and Developmental Biology)

RNA processing, structure and function of RNA

Phillip Berman (Biomolecular Engineering)

Drug development, vaccines, AIDS, monoclonal antibody therapeutics, immunology, molecular cell/biology, recombinant protein production (commercial scale)

David Deamer (Biomolecular Engineering)

Membrane biophysics, single molecule analysis

David Draper (Applied Mathematics and Statistics)

Bayesian statistics, hierarchical modeling, nonparametric methods, model specification and model uncertainty, quality assessment, risk assessment, statistical applications in the environmental, medical, and social sciences

William Dunbar (Computer Engineering)

Theory and application of feedback control; air traffic control; nanopore sensors, dynamics and control of biomolecules

Dietlind L. Gerloff (Biomolecular Engineering)

Protein to protein interactions, protein function prediction, functional genomics, protein structure prediction

Alexander A. Grillo (SCIPP, Research Physicist)

Neurophysiology, neural systems, high-energy particle physics

Grant Hartzog (Molecular, Cell, and Developmental Biology)

Biochemistry, genetics, chromatin and transcriptional regulation

David Haussler (Biomolecular Engineering; Director, Institute for Quantitative Biomedical Research and the Center for Biomolecular Science and Engineering) Molecular evolution, neurodevelopment, genomics, bioinformatics, computational molecular biology, statistical models, machine learning, neural networks

Richard Hughey (Biomolecular Engineering, Computer Engineering)

Computer architecture, parallel processing, computational biology

Michael Isaacson, (Electrical Engineering)

Nano- and microfabrication technology and applications to biomedical and diagnostic devices, nanocharacterization of materials with emphasis on the development of microscopy tools, novel modes of imaging, electron and light optics

Kevin Karplus (Biomolecular Engineering)

Protein structure prediction, protein design

Douglas Kellogg (Molecular, Cell, and Developmental Biology)

Coordination of cell growth and cell division

Joel Kubby, (Electrical Engineering)

Micro-Electro-Mechanical-Systems (MEMS), adaptive optics, integrated optics, bio-MEMS Alan M. Litke (Physics)

Neural systems; retinal processing; development and prosthesis; technology development for neurophysiology; high-energy physics

Wentai Liu (Electrical Engineering)

Retinal prosthesis, biomimetic systems, integrated neuro-electronics, molecular electronics, CMOS and SOI transceiver design, current mode band limited signaling, microelectronic sensor, timing/clock recovery and optimization, noise characterization and modeling, and computer vision/image processing

Todd Lowe (Biomolecular Engineering)

Experimental and computation genomics, ncRNA gene finders, DNA microarrays to study the biology of Archaea

Roberto Manduchi (Computer Engineering)

Sensor processing and image analysis with application to assistive technology and environmental modeling

Dominic W. Massaro (Psychology)

Understanding language, speech perception and reading, language learning and speech technology, pattern recognition, psychology of interactive media, psychology of art and new media, human-machine interface

Glenn L. Millhauser (Chemistry and Biochemistry)

Electron spin resonance; nuclear magnetic resonance, melanocortin receptor signaling, agouti proteins, prions, peptide synthesis

Linda Ogren (Molecular, Cellular, and Developmental Biology)

Endocrinology

Raquel Prado (Applied Mathematics and Statistics)

Bayesian non-stationary time series modeling, multivariate time series, biomedical signal processing and statistical genetics

Wendy Rothwell (Biomolecular Engineering)

Biotechnology, molecular genetics

Holger Schmidt, (Electrical Engineering)

Integrated optics for biomedicine and quantum optics, nano-magneto-optics, semiconductor physics, optoelectronic and photonic devices, ultrafast optics, quantum interference

Andrea Steiner (Community Studies/Health Sciences)

Health-care systems, health justice, critical public health, gerontology, ageism, long-term care

Joshua Stuart (Biomolecular Engineering)

Computational functional genomics, comparative analysis of gene regulation, cross-species inference of gene networks, probabilistic graphical models

Ellen Kappy Suckiel (Philosophy)

Ethics, William James, American philosophy, genetic ethics, ethics of biotechnology

John Tamkun (Molecular, Cell, and Developmental Biology)

Transcriptional regulation, molecular genetics of Drosophila development, regulation of gene expression

John F. Vesecky, (Electrical Engineering)

HF radar design and construction and observation of ocean surface winds, waves and currents with applications to coastal and deep water ocean processes; project MEDSAT

Alan M. Zahler (Molecular, Cell, and Developmental Biology)

Molecular biology, splice site selection, and alternative pre-mRNA processing

Jin Z. Zhang (Chemistry and Biochemistry)

Design, synthesis, characterization, and application of nanomaterials, including semiconductor and metal nanoparticles; femtosecond laser spectroscopy; ultrafast dynamics on surfaces and at interfaces; cancer biomarker detection; surface-enhanced Raman spectroscopy

Yi Zuo (Molecular, Cell, and Developmental Biology)

Glia-synapse interaction and synaptic plasticity in vivo

Changes to 2006-08 Catalog Highlighted | Faculty | Course Descriptions

General Program Description

The biological sciences have entered into an exciting new era in which phenomena that once seemed insoluble mysteries—such as embryonic development, the functions of the brain, and the dynamics of ecosystems—are now yielding their secrets as the technology to study them becomes more and more sophisticated. From molecular biology, with its potential to revolutionize medicine and agriculture, to ecology, with its lessons for the sustainable management of the environment, biologists are fully engaged in meeting the challenges of the future, helping to improve the quality of human life and to preserve habitats and biodiversity. Thus, it is no surprise that the biological sciences are at the heart of many of today's most pressing intellectual and social concerns.

The Departments of Ecology and Evolutionary Biology and Molecular, Cell, and Developmental Biology offer a broad spectrum of courses that reflect the exciting new developments and directions in the field of biology. An outstanding group of faculty, each with a vigorous, internationally recognized research program, are available to teach courses in their specialties as well as core courses for the major. Areas of research strength within the departments include RNA molecular biology, molecular and cellular aspects of genetics and development, neurobiology, endocrinology, immunology, microbial biochemistry, plant biology, animal behavior, physiology, evolution, ecology, and marine biology. UCSC is unique in the UC system in providing exceptional opportunities for undergraduate research, allowing students to interact one-on-one with faculty and other researchers in a laboratory or field setting.

Biological Sciences Majors

Students may plan a program that leads to one of several B.A. or more advanced B.S. degrees. The latter are more appropriate for students planning to go on to graduate programs or to medical, dental, or veterinary schools. Students may choose from the following major options:

Biology B.A. (general)

Biology B.S. (general)

Ecology and evolution B.S.

Health sciences B.S.

Marine biology B.S.

Molecular, cell, and developmental biology B.S.

Neuroscience and behavior B.A.

Neuroscience and behavior B.S.

Plant sciences B.S.

Biochemistry and molecular biology B.S. (administered in conjunction with the Chemistry and Biochemistry Department.)

Environmental studies/biology combined major B.A. (administered in conjunction with the Environmental Studies Department.)

Bioinformatics B.S. (administered in conjunction with the School of Engineering.)

Bioengineering B.S. (administered in conjunction with the School of Engineering.)

Advanced undergraduates, with the consent of faculty supervisors, have access to extensive departmental laboratory facilities for independent research. Fieldwork draws on a remarkable variety of terrestrial habitats, as well as ready access to Monterey Bay and the open Pacific. Marine studies are supported by a coastal facility with running seawater, with a research vessel available for offshore work. Año Nuevo Island, north of Santa Cruz, is the site of extensive behavioral studies of marine mammals. Hospitals, convalescent and physical therapy centers, veterinary clinics, and other enterprises in the vicinity of the campus provide the opportunity to pursue field projects and internships comparable to on-the-job training. This array of opportunities for directed independent study enables biological science majors to enhance their upper-division programs to reflect and strengthen their own interests and goals in the sciences.

Education Abroad Opportunities

The UC Education Abroad Program (EAP) offers qualified students unique opportunities to broaden their educational horizons. The biological sciences departments encourage interested students to participate. Many programs are in English-speaking countries or use English for advanced courses. Many programs offer small classes, extensive laboratories, and/or field research experience.

There are excellent programs for biological science students in Costa Rica, Australia, New Zealand, the United Kingdom, Denmark, and Germany, among others. The Costa Rica Tropical Biology Program is of note to students interested in tropical biology and ecology. Held spring and fall quarters at the Monteverde Research Station, this program gives students experience with hands-on field research, offers a homestay program, and carries credit for two upper-division biology courses. The University of Queensland (Australia) offers an intensive, full-semester Marine Science Program, which includes a stay at a research station on the Great Barrier Reef, near sheltered mangrove and seagrass habitats. Molecular, cell, and developmental biology majors and premedical students might want to consider the Human Biology Program at the Panum Institute in Denmark. This program is taught in English for advanced students planning careers in medicine or biomedical research.

Students interested in study abroad need to get an early start on their basic science requirements, including chemistry, math, and introductory biology and must declare their major prior to applying to go abroad. Visit the EAP office as soon as possible to begin planning, and seek advice about your schedule from the biological sciences undergraduate adviser and/or faculty adviser.

Prerequisites for the Biological Sciences

The introductory biology sequence, is prerequisite to virtually all upper-division biology courses. Biology 20A has a prerequisite of Chemistry 1B, Chemistry 1B has a prerequisite of Chemistry 1A, and thus students cannot enroll in course 20A until they have completed Chemistry 1A and 1B. Therefore, it is essential for students considering a major in the biological sciences to start chemistry as soon as possible. Students who have not taken Chemistry 1A or 1B but have passed the biology placement exam may begin the introductory sequence with Biology 20C. The entire introductory biology sequence should be taken the first and second year, concurrently with or following the general chemistry sequence (Chemistry 1A, 1B/M and 1C/N).

The biology placement examination is given several times each quarter and must be taken in order to enroll in any biology courses. Students who score below 70 on the placement exam must take course 3, *Concepts in Biology*, before enrolling in the introductory series. An Advanced Placement score of 3+ or biology course credit from another college may waive the placement exam requirement; consult with an academic adviser to determine if you qualify.

The Mathematics Department offers a placement exam several times a year. Biological science majors are expected to take this exam. If the results indicate a need for precalculus, students need to take Mathematics 3 as soon as possible. Students with even less preparation may need to take college algebra at another institution.

Students intending to major in Health sciences should take the Spanish placement exam, offered by the Language Program, to determine with which course they should begin the Spanish

sequence.

Course Substitution/Transfer Credit Policy

At least half of the upper-division courses (Biology 100–190) required for each major must be taken through the biological sciences program at UCSC, not as transfer credits from another department or institution. Transfer students are advised to contact the Biological Sciences Undergraduate Advising office before enrolling in numerous upper-division courses at other institutions. For more information on transferring courses to UCSC, please consult the Biological Sciences Undergraduate web site at http://www.biology.ucsc.edu/ug.

A maximum of one upper-division course requirement may be met with a research-based independent study or graduate-level UCSC biology course or a course offered by another UCSC department.

Declaration Process for Biological Sciences Majors

Declaration guidelines for biology majors can be found on the Biological Sciences Undergraduate web site at http://www.biology.ucsc.edu/ug.

Comprehensive Requirement

All majors in the biological sciences require a comprehensive requirement. This requirement can be satisfied in one of the following ways:

- by passing course 190 Senior Seminar;
- · by receiving a passing grade in an internship, independent research, or field course:

100L, Biochemistry Lab

105L, Eukaryotic Genetics Lab

105M, Microbial Genetics Lab

109L, Yeast Molecular Genetics Lab

110L, Cell Biology Lab

111L Immunology Lab

115L, Eukaryotic Molecular Biology Lab

119L, Microbiology Lab

120L, Developmental Biology Lab

128L, Neural Genetics Lab

141L, Ecological Field Methods

143L, Field Methods in Herpetological Research

145L, Behavioral Ecology Field Course

148L, Quantitative Ecology for Conservation Lab

160L, Marine Ecology Lab

161L, Kelp Forest Ecology Lab

162, Marine Ecology Field Quarter

165, Ecology and Conservation in Practice

169L, Field Methods in Plant Ecology

183, Undergraduate Research in EEB

185, Hughes Undergraduate Research Lab

186, Undergraduate Research in MCD

189, Health Sciences Internship

- by completing a senior thesis. See the Biological Sciences Undergraduate web site for more information, including exact deadline dates, at http://www.biology.ucsc.edu/ug/advising/graduation/thesis.html;
- by achieving a Graduate Record Examination score at or above the 50th percentile on the Biology Subject Test or the Biochemistry, Cell, and Molecular Biology Subject Test. Reports of GRE scores must be submitted to the Biological Sciences Advising office before the last day of the graduating quarter;
- by obtaining an MCAT score at or above the 50th percentile on the biological sciences section. Reports of MCAT scores must be submitted to the Biological Sciences Advising office before the last day of the graduating quarter.

Letter Grade Policy

For all students entering UCSC in fall 2001 and later, all courses used to satisfy any of the biological sciences majors must be taken for a letter grade.

Major Disqualification Policy

The biological sciences departments have adopted a major disqualification policy that is intended to encourage students to take their performance in the introductory requirements seriously and to make a strong effort to pass the introductory courses.

Students who receive more than one No Pass, D, and/or F in the following introductory major requirements will not be permitted to major in any of the biological sciences majors:

Biology 20A, Cell and Molecular Biology
Biology 20B, Development and Physiology
Biology 20C, Ecology and Evolution
Biology 20L, Experimental Biology Lab
Chemistry 1B, General Chemistry
Chemistry 1C, General Chemistry

Math 11A, Calculus with Applications Math 11B, Calculus with Applications

Math 19A, Calculus for Science, Engineering, and Mathematics Math 19B, Calculus for Science, Engineering, and Mathematics

Students will be assessed for disqualification after grades are submitted each quarter and at the end of each summer session.

Students may appeal their disqualification within the appeal period by writing a letter to the department chair. This appeal must be submitted to the advising office no later than 15 days from the date the disqualification notification was mailed, or the 10th day of classes in the quarter of their disqualification, whichever is later. The advising office will subsequently notify the student, the college, and the Office of the Registrar of the decision, no later than 15 days after the submission of the appeal.

A student who has been disqualified from the major may, no earlier than three months from the date of the disqualification, petition to be reinstated. This application will be considered only if there is substantial new evidence that the student is capable of making normal progress in the major.

Academic Advising

Academic advising is available at the biological sciences undergraduate advising office. Students should take full advantage of this opportunity and should keep in frequent touch with the office to stay informed about late announcements of courses, changes in scheduling, and opportunities for special study.

The Biological Sciences Undergraduate web site (http://www.biology.ucsc.edu/ug/) serves as the program handbook containing advice and information pertinent to students' most frequently voiced questions. Each student in the major should review the information posted on the web site; for further assistance, contact the advising office.

Transfer Students

The faculty encourages applications from transfer students in the biological sciences. It is imperative transfer students complete science prerequisite courses before transfer, especially a complete sequence of calculus, general chemistry, and introductory biology. Students should also take organic chemistry, if possible. Students who transfer without having completed the prerequisite coursework may have difficulty enrolling in courses and will require more than two years to complete a biological sciences degree. Prospective transfer students should review the transfer guidelines at http://www.biology.ucsc.edu/ug/advising or contact the undergraduate advising office for further information.

Medical and Professional School Admission

Medical and professional school admissions requirements vary; students should verify that their coursework will satisfy the admissions requirements of the programs to which they plan to apply.

Graduate Programs

The Biological Sciences Departments have two graduate programs offering doctorate and master's degrees in ecology and evolutionary biology and in molecular, cell, and developmental biology.

Ecology and Evolutionary Biology

The graduate program in ecology and evolutionary biology (EEB) at UCSC is one of the premier programs in the country. This is due to the quality and commitment of the faculty, the long-standing tradition of the University of California, and the unique environment of the Santa Cruz campus. UCSC has been singularly blessed with varied and easily accessible marine and terrestrial resources for research. UCSC is ideal for marine research—having its own marine laboratory, a fleet of boats, and one of the most active scientific diving programs in the country. In close proximity to pinniped rookeries at the UC Reserve at Año Nuevo, the campus is located on Monterey Bay, which has the largest concentration of marine research programs in the country. In addition to state-of-the-art departmental laboratories, students have full access to

the Molecular Ecology and Evolutionary Genetics (MEEG) facility and other analytical laboratories of the UCSC Institute of Marine Sciences.

Terrestrial biologists have access to all of California's natural environments through the University of California's Natural Reserve System; the diverse habitats on UCSC's 2,000-acre campus itself (mixed redwood forest, fossil sand dune associations, rolling pasture land, and chaparral) and on several adjacent preserves; the UCSC experimental Farm and Garden; extensive Southern Hemisphere plantings in the UCSC Arboretum; and greenhouses and associated laboratory facilities. More than two-thirds of our faculty participate in field studies throughout the Pacific Basin (from Alaska to Antarctica), in Pacific Rim nations (in Latin America, the Far East, and Australia), and beyond.

The program in ecology and evolutionary biology is comprised of four core tracks: (1) population and community ecology, (2) evolutionary biology, (3) physiology and behavior including marine and terrestrial animals, and (4) systematics and biodiversity.

Degree Requirements for the Program in Ecology and Evolutionary Biology Ph.D. Requirements

Students must take Biology 250A and 250B in the first year. Biology 279 must be taken fall quarter of the first year; Biology 293 is required four quarters thereafter. Biology 294 must be taken every quarter that the student is in residence. Each Ph.D. student must complete at least two quarters as a teaching assistant during their graduate career.

During fall of the second year, students take a comprehensive examination. This is a two-part exam, written and oral, the goal of which is to examine the student's breadth and depth of knowledge of evolution, ecology, physiology, behavior, organismal, and general biology. A committee is comprised of four examiners selected by each student and the student's supervisor. Each student's area of research, together with the stated goal of the exam, should guide the composition of the student's committee.

During the sixth term, the student submits a dissertation research proposal to their dissertation committee and must defend it in a three-hour oral examination before the dissertation committee. The student advances to candidacy only after completing all course work, passing the written and oral portions of the comprehensive examination, writing and defending a dissertation research proposal, and presenting a candidacy seminar on his/her proposed research.

The student must submit his/her doctoral dissertation to the dissertation committee for tentative approval at least 60 days before presenting a formal, public doctoral research seminar. Also, the student must meet with the dissertation committee to defend the thesis at least one week prior to the public seminar. Before the dissertation is accepted for signature by the dissertation committee, at least one chapter must be submitted as a paper (not an abstract) to a refereed journal for publication.

M.A. Requirements

In addition to course work identified by the advisory committee or adviser, each student will be required to take Biology 279, two quarters of Biology 293, Biology 294 and the appropriate lab course when in residence at the university (not in the field), and Biology 297, as needed, to come up with 15 credits. Biology 250A and 250B are recommended but not required.

The student must submit their thesis draft to the thesis committee for tentative approval at least 60 days before presenting a formal, public research seminar. Also, the student must meet with the thesis committee to defend the thesis at least one week prior to the public seminar. At that time, the committee may sign the cover page of the student's dissertation.

There is no requirement, but it is highly recommended, that at least one thesis chapter be submitted as a paper (not an abstract) to a refereed journal for publication.

Molecular, Cell, and Developmental Biology

The program in molecular, cell, and developmental (MCD) biology leads to either the Ph.D. or the M.A. and is designed to prepare students for careers in research, teaching, and biotechnology. Current research in MCD biology focuses on such topics as the structure and function of RNA, gene expression, signaling, cell division, development, and pathogenesis. A unique focus of the department is the Center for the Molecular Biology of RNA.

Degree Requirements for the Program in Molecular, Cell, and Developmental Biology

Ph.D. and master's students complete the graduate core courses, Biology 200A, 200B, and 200C, in the first year. Additional undergraduate courses required to strengthen the student's background may be assigned by the advisory committee during the initial advising meeting. Typically, these courses are Biochemistry 100A and Biology 115. Students are required to participate in lab research meetings and departmental seminar series every quarter.

First-year Ph.D. students complete three 10-week laboratory rotations. Students choose their rotation laboratories in consultation with the Graduate Advisory Committee. The lab rotations give

students a chance to learn about the diverse fields and methods of inquiry and to interact with members of the department. At the end of each quarter, students present a short talk to the department on their rotation project. At the end of spring quarter, students consult with rotation faculty to identify a permanent thesis laboratory.

Second-year Ph.D. students are required to submit two proposals—one on their proposed thesis work and a second on an unrelated MCDB research topic. The Ph.D. qualifying exam, taken in spring quarter of the second year, is an oral examination before a committee comprised of three internal reviewers and one external reviewer.

Once the qualifying exam is passed, students, in conjunction with their faculty adviser, select a committee to consult with in the development of their thesis. This committee monitors the student's progress and ultimately approves the final draft of the student's dissertation. The student must meet with the thesis committee at least once a year after passing the qualifying exam.

Students are advanced to candidacy following presentation of their research to the department in a seminar. This takes place no later than spring of the third year.

Graduate students must take two approved advanced graduate electives. Students who enter the Ph.D. program with a Masters degree without doing rotations must complete an additional two approved graduate elective courses.

Ph.D. requirements

- · Completion of the graduate core course
- Completion of the Practice of Science course
- · Completion of an oral qualifying exam
- Completion of an advancement to candidacy seminar
- · Completion of two advanced graduate elective courses
- · Yearly meetings with a thesis committee after the qualifying exam
- Completion of two quarters of service as a teaching assistant
- Completion of thesis research resulting in a dissertation of individual work
- Presentation of thesis defense in departmental seminar

M.A. requirements

Acceptance to the master's program requires a faculty sponsor. Interested applicants must contact faculty directly and procure sponsorship before beginning the application process.

- · Completion of the graduate core course
- Completion of the Practice of Science course
- · Write a master's thesis based on original research
- Presentation of thesis defense in departmental seminar

General Biology Majors and Minor

The general biology majors permit flexibility, but demand careful attention to one's own interests and plans. Each student should select courses on the basis of up-to-date information in consultation with a biology faculty adviser whose interests reflect the student's interests.

General Biology B.A. Major Requirements

Introductory Requirements

Biology 20A, 20B, and 20C Chemistry 1A, 1B/M and 1C/N Chemistry 108A/L and 108B/M or 112A/L, 112B/M, and 112C/N Mathematics 11A-B or 19A-B Physics 7A/L and 7B/M

A total of eight upper-division biology courses, as follows:

100, Biochemistry; or Biochemistry and Molecular Biology 100A, 100B, and 100C, Biochemistry (Upon completion of the series, Biochemistry and Molecular Biology 100C may be used to satisfy one elective.)

105, Genetics 175, Evolution

Students must complete one upper-division biology course that includes regular laboratory or fieldwork.

Students must fulfill the major distribution requirement, which includes one course from each of the following groups:

Cell/developmental biology: 110, 111, 115, 117A, 119, 120,

Physiology: 113, 125, 130/L, 131/L, 133/L, 166

Ecology: 136/L, 138/L, 140, 145L, 150, 152, 160, 161, 169, 171

Students must complete two additional upper-division biology electives chosen from courses 100-187L.

General Biology B.A. Sample Planners

Plan One is for freshmen placing into Mathematics 3, and Biology 3:

Plan One	Plan One					
1st year	Fall	Winter	Spring			
	Chem 1A	Chem 1B/M	Chem 1C/N			
	Math 3	Math 11A	Math 11B			
	core	Biol 3	gen ed			
2nd year	Biol 20A	Biol 20B	Biol 20C			
	gen ed	Chem 108A/L	Chem 108B/M			
	gen ed	gen ed	gen ed			

Plan Two is a more rigorous schedule for first-year students placing into Math 11A and Biology 20:

Plan Two	Plan Two					
1st year	Fall	Winter	Spring			
	Chem 1A Math 11A core	Chem 1B/M Math 11B gen ed	Chem 1C/N Biol 20A gen ed			
2nd year	Biol 20B Chem 108A/L gen ed	Biol 20C Chem 108B/M gen ed	Biol 100 Biol 105 gen ed			

General Biology B.S. Major Requirements

The requirements for the biology B.S. follow a similar pattern to those for the biology B.A., but are more rigorous to ensure a stronger level of scientific preparation. Students need to follow the requirements below to complete the B.S. program (differences from the B.A. program are noted):

Introductory Requirements

- Biology 20A, 20B, and 20C
- Chemistry 1A, 1B/M and 1C/N (same as for B.A.)
- Chemistry 108A/L and 108B/M or Chemistry 112A/L, 112B/M, and 112C/N
- Mathematics 11A-B or 19A-B and 22 (one additional calculus course required for the B.S.)
- Physics 6A/L, 6B/M, and 6C/N (Physics 7A/B option does not apply for the B.S.)

Advanced Requirements

A total of nine upper-division biology courses are required, including two upper-division laboratory courses and three upper-division electives chosen from courses 100-187L.

General Biology B.S. Sample Planners

Plan One is for freshmen placing into Mathematics 3, and Biology 3:

Plan One			
1st year	Fall	Winter	Spring
	Chem 1A	Chem 1B/M	Chem 1C/N
	Math 3	Math 11A	Math 11B
	core	Biol 3	gen ed
2nd year	Biol 20A	Biol 20B	Biol 20C
	Math 22	Chem 108A/L	Chem 108B/M
	gen ed	gen ed	gen ed

Plan Two is a more rigorous schedule for first-year students placing into Math 11A and Biology 20:

Р	ıa	n	w	O	

1st year	Fall	Winter	Spring
	Chem 1A	Chem 1B/M	Chem 1C/N
	Math 11A	Math 11B	Math 22
	core	gen ed	Biol 20A
2nd year	Biol 20B	Biol 20C	Biol 100
	Chem 108A/L	Chem 108B/M	Biol 105
	gen ed	gen ed	gen ed

General Biology Minor Requirements

In addition to the introductory biology, chemistry, mathematics, and physics (as listed above), students are required to take a total of five upper-division biology courses including courses 100, 105, and the three distribution requirement courses; one must include a laboratory. There is no senior comprehensive requirement for the minor. Please contact the Biological Sciences undergraduate Advising office for further information.

Ecology and Evolution Major

Program Description

The ecology and evolution major provides students with interdisciplinary skills necessary for understanding and solving complex problems in ecology, evolution, behavior, and physiology. While some of these disciplines focus on molecular or chemical mechanisms, they all address questions on larger spatial and temporal scales that can be applied to important environmental problems, including genetic and ecological aspects of conservation biology and biodiversity. Students majoring in ecology and evolution will receive a B.S. degree based on an integrated series of courses providing breadth in fundamental areas of biology and allied sciences that enhance understanding of evolutionary and ecological processes. The capstone of this curriculum is a suite of field courses providing students unique opportunities to learn and conduct research in a host of ecological systems. Students are encouraged to take field courses in their areas of specialization. Other opportunities include participation in research projects with faculty sponsors and the intensive Education Abroad Programs in Costa Rica (tropical biology) and Australia (marine sciences).

Ecology and Evolution B.S. Major Requirements

Introductory Requirements

- Biology 20A, 20B, and 20C
- Chemistry 1A, 1B/M and 1C/N
- · Applied Mathematics and Statistics 7/L
- Mathematics 11A and 11B (calculus)
- Physics 7A/L and 7B/M

Advanced Requirements

A total of eleven upper-division courses; two must include laboratory or fieldwork.

- 105, Genetics
- 150, Ecology
- 175, Evolution
- One of the following physiology courses:

131/L, Animal Physiology/Laboratory 166, Plant Physiology

• One of the following organism courses:

119/L, Microbiology/Laboratory

136/L, Invertebrate Zoology/Laboratory

138/L, Biology and Ecology of Vertebrates/Laboratory

168/L, Systematic Botany of Flowering Plants/Laboratory

170/L, Marine Botany/Laboratory

Elective list for Ecology and Evolution Major

Three topical electives chosen from the following:

Biological Sciences

100, Biochemistry107/L, Population Genetics/Laboratory110, Cell Biology115, Eukaryotic Molecular Biology

119, Microbiology 119L, Microbiology Lab 120, Development 120L, Development Lab 131/L, Animal Physiology/Laboratory 133/L, Exercise Physiology 136/L, Invertebrate Zoology/Laboratory 137/L, Ichthyology/Laboratory 138/L, Biology and Ecology of Vertebrates/Laboratory 139/L, Biology of Marine Mammals/Laboratory 140, Behavioral Ecology 141, Ecological Field Methods 141L, Ecological Field Methods Laboratory 142, Ocean Ecosystems 143/L, Herpetology/Laboratory 144/L, Ornithology/Laboratory 145L, Behavioral Ecology Field Course 152, Community Ecology 158, Ecology of Reefs, Mangroves, and Sea Grasses 160, Marine Ecology 160L, Marine Ecology Laboratory 161, Kelp Forest Ecology 161L, Kelp Forest Ecology Laboratory 162ABCD, Marine Ecology Field Quarter 163, Marine Conservation Biology 165ABCD, Ecology and Conservation in Practice 166, Plant Physiology 168/L, Systematic Botany/Laboratory 169, Plant Ecology 169L, Field Methods in Plant Ecology 170/L, Marine Botany/Laboratory 171, Marine Microbial Ecology

Three general electives chosen from the following:

Biological Sciences

100, Biochemistry 107/L, Population Genetics/Laboratory 110, Cell Biology 115, Eukaryotic Molecular Biology 119, Microbiology 119L, Microbiology Lab 120, Development 120L, Development Lab 131/L, Animal Physiology/Laboratory 133/L, Exercise Physiology 136/L, Invertebrate Zoology/Laboratory 137/L, Ichthyology/Laboratory 138/L, Biology and Ecology of Vertebrates/Laboratory 139/L, Biology of Marine Mammals/Laboratory 140, Behavioral Ecology 141, Ecological Field Methods 141L, Ecological Field Methods Laboratory 142, Ocean Ecosystems 143/L, Herpetology/Laboratory 144/L, Ornithology/Laboratory 145L, Behavioral Ecology Field Course 152, Community Ecology 156/L, Marine Plankton/Laboratory 158, Ecology of Reefs, Mangroves, and Sea Grasses 159, Biological Oceanography 160, Marine Ecology 160L, Marine Ecology Laboratory 161, Kelp Forest Ecology 161L, Kelp Forest Ecology Laboratory 162ABCD, Marine Ecology Field Quarter 163, Marine Conservation Biology 165ABCD, Ecology and Conservation in Practice 166, Plant Physiology 168/L, Systematic Botany/Laboratory 169, Plant Ecology 169L, Field Methods in Plant Ecology 170/L, Marine Botany/Laboratory 171, Marine Microbial Ecology

Chemistry

108A, Organic Chemistry 108B, Organic Chemistry

Earth Sciences

100/L, Vertebrate Paleontology

102, Marine Geology

105, Coastal Geology

122, Paleoceanography

Environmental Studies

104A, Introduction to Environmental Field Methods

108/L, General Entomology/Laboratory

115A/L, GIS and Environmental Applications/Exercises in GIS

120, Conservation Biology

122, Tropical Ecology and Conservation

123, Animal Ecology and Conservation

129, Integrated Pest Management

130A/L, Agroecology and Sustainable Agriculture/Laboratory

130B, Principles of Sustainable Agriculture

131/L, Insect Ecology/Laboratory

138/L, Field Ethnobotany/Laboratory

160, Restoration Ecology

161A/L, Soils and Plant Nutrition/Laboratory

162, Plant Physiological Ecology

163/L, Plant Disease Ecology/Laboratory

167, Freshwater and Wetland Ecology

168, Biochemistry and the Global Environment

Psychology

123, Behavioral Neuroscience

One of the following may also be used as an upper-division elective:

Biological Sciences

183L, Undergraduate Research in EEB

188AB, Supervised Teaching (4 units)

195, Senior Thesis

198, Independent Field Study

199, Tutorial

Environmental Studies

183, Environmental Studies Internship

Ecology and Evolution B.S. Sample Planners

Plan One is for freshmen placing into Mathematics 3, and Biology 3:

Plan One

Health Sciences Major

The B.S. major in health sciences is designed for students interested in careers in medicine or biomedical research and satisfies the admission requirements for most U.S. medical schools. It is based on the existing B.S. degree in molecular, cell, and developmental biology, with similar course requirements in chemistry, physics, and math. Students are required to take five courses directly relevant to human health in addition to genetics, biochemistry, and cell biology. Students in this program must also fulfill Spanish language and health care internship requirements.

Health Sciences B.S. Major Requirements*

Introductory Requirements

- · Biology 20A, 20B, and 20L
- · Chemistry 1A, 1B/M and 1C/N
- Chemistry 108A/L and 108B/M, 108C recommended for pre-med students or 112A/L, 112B/M, and 112C/N
- Mathematics 11A-B or 19A-B and 22 (three quarters of calculus)
- Physics 6A/L, 6B/M, and 6C/N

Advanced Requirements

A total of eight upper-division biology courses, as follows:

· Four core courses:

100, Biochemistry; or Biochemistry and Molecular Biology 100A, 100B, and 100C,

Biochemistry

105, Genetics

110, Cell Biology

130/L, Human Physiology/Laboratory

- · Three of the following lecture courses:
 - 111, Immunology
 - 113, Mammalian Endocrinology
 - 114, Cancer Cell Biology
 - 115, Eukaryotic Molecular Biology
 - 119, Microbiology
 - 120, Development
 - 125, Neuroscience
 - 126, Advanced Neural Development
 - 133/L, Exercise Physiology/Laboratory
 - 135/L, Anatomy of the Human Body/Laboratory
- Internship Requirement: Biology 189, *Health Science Internship*. The student must participate in a community health care service activity approved by the health sciences internship coordinator. Credit may be earned over multiple quarters.
- Language Requirement: Spanish 1–4 or the equivalent and one quarter of Spanish for health care workers (Spanish 5M).
- * Medical and professional school admissions requirements vary; students should verify that their coursework will satisfy the admissions requirements of the programs to which they plan to apply.

Marine Biology Major

Program Description

UCSC is situated within five miles of Monterey Bay and its great diversity of coastal marine ecosystems; nature reserves; state, federal, and private marine research institutions and resource management agencies. These resources, combined with on-campus computing and analytical facilities and the Long Marine Laboratory, make UCSC an exceptional campus for the study of marine biology and its application to coastal conservation and management. Descriptions of nearby environments, institutions, and facilities are available through the Ecology and Evolutionary Biology Department web site at http://www.biology.ucsc.edu/eeb/index.html.

The marine biology major is designed to introduce students to marine organisms and the biological and physical processes that affect these organisms, their populations, and their coastal and oceanic ecosystems. The emphasis is on basic principles that help us understand the processes that shape life in marine environments. The marine biology major is a demanding program that offers a B.S. degree and requires several more courses than the general biology B.A. major.

Marine Biology B.S. Major Requirements

Introductory Requirements

The lower-division course requirements are designed to provide a good introduction to biology as well as the foundation in chemistry, mathematics, and physics fundamental to the study of biology.

- · Biology 20A, 20B, and 20C
- · Chemistry 1A, 1B/M and 1C/N
- Applied Mathematics and Statistics 7/L
- Mathematics 11A-B or 19A-B (calculus)
- Physics 7A/L and 7B/M

Advanced Requirements

A total of eleven upper-division courses; two must include laboratory or fieldwork.

- 105, Genetics
- 175, Evolution
- One ecology course:

150, Ecology

160, Marine Ecology

• One marine environment course:

142, Ocean Ecosystems

159, Biological Oceanography

Ocean Sciences 101, Marine Environment

• One marine course:

136/L, Invertebrate Zoology/Laboratory

137/L, Ichthyology/Laboratory

139/L, Biology of Marine Mammals/Laboratory

170/L, Marine Botany/Laboratory

Elective list for Marine Biology Major

Three topical electives chosen from the following:

Biological Sciences

136/L, Invertebrate Zoology/Laboratory

137/L, Ichthyology/Laboratory

139/L, Biology of Marine Mammals/Laboratory

142, Ocean Ecosystems

156/L, Marine Plankton/Laboratory

158, Ecology of Reefs, Mangroves, and Sea Grasses

159, Biological Oceanography

160, Marine Ecology

160L, Marine Ecology Laboratory

161, Kelp Forest Ecology

161L, Kelp Forest Ecology Laboratory

162ABCD, Marine Ecology Field Quarter

163, Marine Conservation Biology

170/L, Marine Botany/Laboratory

171, Marine Microbial Ecology

Earth Sciences

102, Marine Geology

105, Coastal Geology

122, Paleoceanography

Three general electives chosen from the following:

Biological Sciences

100, Biochemistry

107/L, Population Genetics/Laboratory

110, Cell Biology

115, Eukaryotic Molecular Biology

119, Microbiology

119L, Microbiology Lab

120, Development

120L, Development Lab

131/L, Animal Physiology/Laboratory

133/L, Exercise Physiology

136/L, Invertebrate Zoology/Laboratory

137/L, Ichthyology/Laboratory

138/L, Biology and Ecology of Vertebrates/Laboratory

139/L, Biology of Marine Mammals/Laboratory

140, Behavioral Ecology

141, Ecological Field Methods

141L, Ecological Field Methods Laboratory

142, Ocean Ecosystems

143/L, Herpetology/Laboratory

144/L, Ornithology/Laboratory

145L, Behavioral Ecology Field Course

150, Ecology

152, Community Ecology

156/L, Marine Plankton/Laboratory

158, Ecology of Reefs, Mangroves, and Sea Grasses

159, Biological Oceanography

160, Marine Ecology

160L, Marine Ecology Laboratory

161, Kelp Forest Ecology

161L, Kelp Forest Ecology Laboratory

162ABCD, Marine Ecology Field Quarter

163, Marine Conservation Biology

165ABCD, Ecology and Conservation in Practice

166, Plant Physiology

168/L, Systematic Botany/Laboratory

169, Plant Ecology

169L, Field Methods in Plant Ecology

170/L, Marine Botany/Laboratory

171, Marine Microbial Ecology

Chemistry

108A, Organic Chemistry 108B, Organic Chemistry

Molecular, Cell, and Developmental Biology Major

Program Description

The molecular, cell, and developmental (MCD) biology major is designed for students interested in medical or other professional graduate programs and those preparing for careers in biotechnology industries. This major is more structured than the general biology major and requires that students pay careful attention to the prerequisites required for upper-division biology courses.

Molecular, Cell, and Developmental Biology B.S. Major Requirements

Introductory Requirements

- · Biology 20A, 20B, and 20C
- · Chemistry 1A, 1B/M and 1C/N
- Chemistry 108A/L and 108B/M or 112A/L, 112B/M, and 112C/N
- Mathematics 11A-B or 19A-B and 22 (three guarters of calculus)
- Physics 6A/L, 6B/M, and 6C/N

Advanced Requirements

A total of nine upper-division biology courses, as follows:

· Four core courses

100, Biochemistry; or Biochemistry and Molecular Biology 100A, 100B, and 100C, Biochemistry (Upon completion of the series, Biochemistry and Molecular Biology 100C may be used to satisfy one elective.)

105, Genetics

110, Cell Biology

115, Eukaryotic Molecular Biology

- · Three of the following lecture courses
 - 111, Immunology
 - 113, Mammalian Endocrinology
 - 114, Cancer Cell Biology
 - 119, Microbiology
 - 120, Development
 - 125, Neuroscience
 - 130/L, Human Physiology/Laboratory
 - 166, Plant Physiology
 - 175, Evolution
- Two of the following laboratory courses
 - 100L, Biochemistry Laboratory
 - 105L, Eukaryotic Genetics Laboratory
 - 105M, Microbial Genetics Laboratory
 - 109L, Yeast Molecular Genetics Laboratory
 - 110L, Cell Biology Lab
 - 111L, Immunology Lab
 - 115L, Eukaryotic Molecular Biology Laboratory
 - 119L, Microbiology Laboratory
 - 120L, Development Laboratory
 - 128L, Neural Genetics Laboratory
 - 130/L, Human Physiology/Laboratory*
 - 180/L, Research Programming for Biologists and Biochemists/Laboratory
 - 181, Computational Biology Tools
 - 185L Hughes Undergraduate Research Laboratory
 - 186L Undergraduate Research in MCD
 - 187L, Molecular Biotechnology Laboratory

Neuroscience and Behavior Majors

Program Description

Neuroscience, the study of the nervous system and behavior of animals, is a frontier area in biology, touching psychology on the one hand and computer science on the other. The neuroscience and behavior majors provide students with rigorous preparation for graduate studies and research in the fields of neuroscience and behavior. The brain and determinants of behavior are studied at all levels, from biological molecules to individual nerve cells to functioning organisms to social behavior. The majors emphasize the interrelationship between the two fields, building on a common core of general and biological science course work. Students select a pathway in either behavior or molecular neuroscience. Rigorous course work is supplemented by opportunities for hands-on laboratory and field courses and independent research.

Neuroscience and Behavior B.A. Major Requirements

Introductory Course Requirements

- Biology 20A, 20B, and 20C
- Chemistry 1A, 1B/M and 1C/N
- Chemistry 108A/L and 108B/M or Chemistry 112A/L, 112B/M, and 112C/N
- · Mathematics 11A-B or 19A-B
- Physics 7A/L and 7B/M
- · Applied Mathematics and Statistics 7/L

Advanced Course Requirements

Five upper-division core courses to include:

100, Biochemistry; or Biochemistry and Molecular Biology 100A, 100B, and 100C, Biochemistry (Upon completion of the series, Biochemistry and Molecular Biology 100C may be used to satisfy one elective.)

105, Genetics

110, Cell Biology

125, Neuroscience

140, Behavioral Ecology

Plus additional elective courses chosen from one of two areas of concentration:

Molecular Neuroscience Pathway (four courses)

115, Eukaryotic Molecular Biology

126, Advanced Molecular Neuroscience

One of the following physiology or psychology courses:

Biology 130/L, Psychology 121, or 123

One of the following biology laboratory courses:

100L, Biochemistry Laboratory

105L, Eukaryotic Genetics Laboratory

109L, Yeast Molecular Genetics Laboratory

110L, Cell Biology Lab

111L, Immunology Lab

115L, Eukaryotic Molecular Biology Laboratory

120L, Development Laboratory

128L, Neural Genetics Laboratory

130/L, Human Physiology/Laboratory*

180/L, Research Programming for Biologists and

Biochemists/Laboratory

181, Computational Biology Tools

185L Hughes Undergraduate Research Laboratory

186L Undergraduate Research in MCD

Behavior Pathway (four courses)

113, Mammalian Endocrinology

One of the following: Biology 139/L, 141, 143/L, 144/L, 145L

One of the following physiology or psychology courses: Biology 120, 130/L, 131/L, 133/L, 136/L, 138/L; Psychology 120, 121, 123, 133

One of the following laboratory courses:

105L, Eukaryotic Genetics Laboratory

130/L, Human Physiology Lab

131/L, Animal Physiology/Laboratory

136/L, Invertebrate Zoology/Laboratory

138/L, Biology and Ecology of the Vertebrates/Laboratory

141L, Ecological Field Methods

145L, Behavioral Ecology Field Course

180/L, Research Programming for Biologists and Biochemists/Laboratory

181, Computational Biology Tools

Computer Science 12A or 12B or 60N

Neuroscience and Behavior B.A. Sample Planners

Plant Sciences Major

Program Description

UCSC has a strong program in the plant sciences (sometimes called botany). A fine natural environment, the campus Arboretum, the facilities under the Center for Agroecology and Sustainable Food Systems (especially the Farm and Garden), and an excellent greenhouse collection all enhance the resources that support our botanical programs.

The plant sciences major is designed for students with an interest in plant biology and its associated curricular fields such as plant ecology, plant physiology, plant pathology, plant molecular biology, soils, and applied plant sciences. After completion of the core courses, students can proceed in one of several directions depending on their interest. For example, a more in-depth study of physiology and molecular biology courses can serve as preparation for work in the biotechnology field or for graduate school; further studies in plant ecology, tropical ecology, or restoration ecology can lead to careers such as resource ecologist or naturalist or to the pursuit of related fields in graduate school; upper-division training in agroecology can lead to careers in agriculture or food systems. A special feature of this major is a one-quarter internship and/or independent research requirement. There are many opportunities for internships both on the UCSC campus and in the community at large.

Plant Sciences B.S. Major Requirements

Introductory Requirements

- Biology 20A, 20B, and 20C
- Chemistry 1A, 1B/M and 1C/N
- Applied Mathematics and Statistics 7/L
- Mathematics 11A and 11B (calculus)
- Physics 7A/L and 7B/M

Advanced Requirements

A total of eleven upper-division courses; two of which must include laboratory or fieldwork.

- 105, Genetics
- 150, Ecology
- 175, Evolution
- · One plant physiology course from the following:

166, *Plant Physiology* Environmental Studies 162, *Plant Physiological Ecology*

· One botany course from the following:

168/L, Systematic Botany 170/L, Marine Botany/Laboratory

Elective list for Plant Sciences Major

Three topical electives chosen from the following:

Biological Sciences

110, Cell Biology115, Eukaryotic Molecular Biology165ABCD, Ecology and Conservation in Practice166, Plant Physiology168/L, Systematic Botany/Laboratory169, Plant Ecology

169L, Field Methods in Plant Ecology 170/L, Marine Botany/Laboratory

Program Description | Faculty | Course Descriptions

General Program Description

The biological sciences have entered into an exciting new era in which phenomena that once seemed insoluble mysteries—such as embryonic development, the functions of the brain, and the dynamics of ecosystems—are now yielding their secrets as the technology to study them becomes more and more sophisticated. From molecular biology, with its potential to revolutionize medicine and agriculture, to ecology, with its lessons for the sustainable management of the environment, biologists are fully engaged in meeting the challenges of the future, helping to improve the quality of human life and to preserve habitats and biodiversity. Thus, it is no surprise that the biological sciences are at the heart of many of today's most pressing intellectual and social concerns.

The Departments of Ecology and Evolutionary Biology and Molecular, Cell, and Developmental Biology offer a broad spectrum of courses that reflect the exciting new developments and directions in the field of biology. An outstanding group of faculty, each with a vigorous, internationally recognized research program, are available to teach courses in their specialties as well as core courses for the major. Areas of research strength within the departments include RNA molecular biology, molecular and cellular aspects of genetics and development, neurobiology, endocrinology, immunology, microbial biochemistry, plant biology, animal behavior, physiology, evolution, ecology, and marine biology. UCSC is unique in the UC system in providing exceptional opportunities for undergraduate research, allowing students to interact one-on-one with faculty and other researchers in a laboratory or field setting.

Biological Sciences Majors

Students may plan a program that leads to one of several B.A. or more advanced B.S. degrees. The latter are more appropriate for students planning to go on to graduate programs or to medical, dental, or veterinary schools. Students may choose from the following major options:

Biology B.A. (general)

Biology B.S. (general)

Ecology and evolution B.S.

Health sciences B.S.

Marine biology B.S.

Molecular, cell, and developmental biology B.S.

Neuroscience and behavior B.A.

Neuroscience and behavior B.S.

Plant sciences B.S.

Biochemistry and molecular biology B.S. (administered in conjunction with the Chemistry and Biochemistry Department.)

Environmental studies/biology combined major B.A. (administered in conjunction with the Environmental Studies Department.)

Bioinformatics B.S. (administered in conjunction with the <u>School of Engineering.</u>)

Bioengineering B.S. (administered in conjunction with the School of Engineering.)

Advanced undergraduates, with the consent of faculty supervisors, have access to extensive departmental laboratory facilities for independent research. Fieldwork draws on a remarkable variety of terrestrial habitats, as well as ready access to Monterey Bay and the open Pacific. Marine studies are supported by a coastal facility with running seawater, with a research vessel available for offshore work. Año Nuevo Island, north of Santa Cruz, is the site of extensive behavioral studies of marine mammals. Hospitals, convalescent and physical therapy centers, veterinary clinics, and other enterprises in the vicinity of the campus provide the opportunity to pursue field projects and internships comparable to on-the-job training. This array of opportunities for directed independent study enables biological science majors to enhance their upper-division programs to reflect and strengthen their own interests and goals in the sciences.

Education Abroad Opportunities

The <u>UC Education Abroad Program (EAP)</u> offers qualified students unique opportunities to broaden their educational horizons. The biological sciences departments encourage interested students to participate. Many programs are in English-speaking countries or use English for advanced courses. Many programs offer small classes, extensive laboratories, and/or field research experience.

There are excellent programs for biological science students in Costa Rica, Australia, New Zealand, the United Kingdom, Denmark, and Germany, among others. The Costa Rica Tropical Biology Program is of note to students interested in tropical biology and ecology. Held spring and fall quarters at the Monteverde Research Station, this program gives students experience with hands-on field research, offers a homestay program, and carries credit for two upper-division biology courses. The

University of Queensland (Australia) offers an intensive, full-semester Marine Science Program, which includes a stay at a research station on the Great Barrier Reef, near sheltered mangrove and seagrass habitats. Molecular, cell, and developmental biology majors and premedical students might want to consider the Human Biology Program at the Panum Institute in Denmark. This program is taught in English for advanced students planning careers in medicine or biomedical research.

Students interested in study abroad need to get an early start on their basic science requirements, including chemistry, math, and introductory biology and must declare their major prior to applying to go abroad. Visit the EAP office as soon as possible to begin planning, and seek advice about your schedule from the biological sciences undergraduate adviser and/or faculty adviser.

Prerequisites for the Biological Sciences

The introductory biology sequence, is prerequisite to virtually all upper-division biology courses. Biology 20A has a prerequisite of Chemistry 1B, Chemistry 1B has a prerequisite of Chemistry 1A, and thus students cannot enroll in course 20A until they have completed Chemistry 1A and 1B. Therefore, it is essential for students considering a major in the biological sciences to start chemistry as soon as possible. Students who have not taken Chemistry 1A or 1B but have passed the biology placement exam may begin the introductory sequence with Biology 20C. The entire introductory biology sequence should be taken the first and second year, concurrently with or following the general chemistry sequence (Chemistry 1A, 1B/M and 1C/N).

The biology placement examination is given several times each quarter and must be taken in order to enroll in any biology courses. Students who score below 70 on the placement exam must take course 3, *Concepts in Biology*, before enrolling in the introductory series. An Advanced Placement score of 3+ or biology course credit from another college may waive the placement exam requirement; consult with an academic adviser to determine if you qualify.

The Mathematics Department offers a placement exam several times a year. Biological science majors are expected to take this exam. If the results indicate a need for precalculus, students need to take Mathematics 3 as soon as possible. Students with even less preparation may need to take college algebra at another institution.

The Chemistry Department also offers a placement exam. Students are encouraged to take the chemistry placement exam at either summer orientation or at the start of their first quarter. Completing Chemistry 1B is the prerequisite to enrolling in Biology 20A.

Students intending to major in Health sciences should take the Spanish placement exam, offered by the Language Program, to determine with which course they should begin the Spanish sequence.

Some of the biological science majors require one of the following organic chemistry combinations: Chemistry 108A/L and 108B/M or 112A/L, 112B/M, 112C/N.

Course Substitution/Transfer Credit Policy

At least half of the upper-division courses (Biology 100–190) required for each major must be taken through the biological sciences program at UCSC, not as transfer credits from another department or institution. Transfer students are advised to contact the Biological Sciences Undergraduate Advising office before enrolling in

numerous upper-division courses at other institutions. For more information on transferring courses to UCSC, please consult the Biological Sciences Undergraduate web site at http://www.biology.ucsc.edu/ug.

A maximum of one upper-division course requirement may be met with a researchbased independent study or graduate-level UCSC biology course or a course offered by another UCSC department.

Declaration Process for Biological Sciences Majors

Declaration guidelines for biology majors can be found on the Biological Sciences Undergraduate web site at http://www.biology.ucsc.edu/ug.

Comprehensive Requirement

All majors in the biological sciences require a comprehensive requirement. This requirement can be satisfied in one of the following ways:

- by passing course 190 Senior Seminar;
- by receiving a passing grade in an internship, independent research, or field course:

100L, Biochemistry Laboratory

105L, Eukaryotic Genetics Laboratory

105M, Microbial Genetics Laboratory

109L, Yeast Molecular Genetics Laboratory

110L, Cell Biology Laboratory

111L Immunology Laboratory

115L, Eukaryotic Molecular Biology Laboratory

119L, Microbiology Laboratory 120L, Developmental Biology Laboratory

128L, Neural Genetics Laboratory

141L, Ecological Field Methods

143L, Field Methods in Herpetological Research

145L, Behavioral Ecology Field Course

148L, Quantitative Ecology for Conservation Laboratory

160L, Marine Ecology Laboratory

161L, Kelp Forest Ecology Laboratory

162, Marine Ecology Field Quarter

165, Field Ecology of Baja California Ecology and Conservation in Practice

169L, Field Methods in Plant Ecology

183, Undergraduate Research in EEB

185, Hughes Undergraduate Research Laboratory

186, Undergraduate Research in MCD

189, Health Sciences Internship

- by completing a senior thesis or a senior essay. See the Biological Sciences Undergraduate web site for more information, including exact deadline dates, at http://www.biology.ucsc.edu/ug/advising/f_thesiseval.html;
- by achieving a Graduate Record Examination score at or above the 50th percentile on the Biology Subject Test or the Biochemistry, Cell, and Molecular Biology Subject Test. Reports of GRE scores must be submitted to the Biological Sciences Advising office before the last day of the graduating quarter;
- by obtaining an MCAT score at or above the 50th percentile on the biological

sciences section. Reports of MCAT scores must be submitted to the Biological Sciences Advising office before the last day of the graduating quarter.

Letter Grade Policy

For all students entering UCSC in fall 2001 and later, all courses used to satisfy any of the biological sciences majors must be taken for a letter grade.

Major Disqualification Policy

The biological sciences departments have adopted a major disqualification policy that is intended to encourage students to take their performance in the introductory requirements seriously and to make a strong effort to pass the introductory courses.

Students who receive more than one No Pass, D, and/or F in the following introductory major requirements will not be permitted to major in any of the biological sciences majors:

Biology 20A, Cell and Molecular Biology

Biology 20B, Development and Physiology

Biology 20C, Ecology and Evolution

Biology 20L, Experimental Biology Laboratory

Chemistry 1B, General Chemistry

Chemistry 1C, General Chemistry

Math 11A, Calculus with Applications

Math 11B, Calculus with Applications

Math 19A, Calculus for Science, Engineering, and Mathematics

Math 19B, Calculus for Science, Engineering, and Mathematics

Students will be assessed for disqualification after grades are submitted each quarter and at the end of each summer session.

Students may appeal their disqualification within the appeal period by writing a letter to the department chair. This appeal must be submitted to the advising office no later than 15 days from the date the disqualification notification was mailed, or the 10th day of classes in the quarter of their disqualification, whichever is later. The advising office will subsequently notify the student, the college, and the Office of the Registrar of the decision, no later than 15 days after the submission of the appeal.

A student who has been disqualified from the major may, no earlier than three months from the date of the disqualification, petition to be reinstated. This application will be considered only if there is substantial new evidence that the student is capable of making normal progress in the major.

Academic Advising

Academic advising is available at the biological sciences undergraduate advising office. Students should take full advantage of this opportunity and should keep in frequent touch with the office to stay informed about late announcements of courses, changes in scheduling, and opportunities for special study.

The Biological Sciences Undergraduate web site (http://www.biology.ucsc.edu/ug) serves as the program handbook containing advice and information pertinent to students' most frequently voiced questions. Each student in the major should review the information posted on the web site; for further assistance, contact the advising office.

Transfer Students

The faculty encourages applications from transfer students in the biological sciences. It is very important imperative transfer students complete science prerequisite courses before transfer, especially a complete sequence of precalculus, and general chemistry, and introductory biology. Students should also take an introductory biology sequence, calculus, and, if possible, take organic chemistry, if possible. Students who transfer without having completed the prerequisite coursework may have difficulty enrolling in courses and will require more than two years to complete a biological sciences degree. Prospective transfer students should review the transfer guidelines at http://www.biology.ucsc.edu/ug/advising or contact the undergraduate advising office for further information.

Medical and Professional School Admission

Medical and professional school admissions requirements vary; students should verify that their coursework will satisfy the admissions requirements of the programs to which they plan to apply.

First-Year Sample Schedule Planners

Plan One is for freshmen placing into Chemistry 1A, Mathematics 3, and Biology 3.

Pla	an One		
	Fall	Winter	Spring
	Chem 1A	Chem 1B/M	Chem 1C/N
	Math 3	Math 11A	Math 11B
	core	Biol 3	Biol 20A

Plan Two is for freshmen placing into Chemistry 1A, Mathematics 11A, and Biology 20.

Plan Two				
Fall	Winter	Spring		
Chem 1A	Chem 1B/M	Chem 1C/N		
Math 11A	Math 11B	Biol 20A		
core	gen ed	gen ed		

Plan Three is for freshmen placing into Chemistry 1B, Mathematics 11A, and Biology 20, starting the introductory sequence with Biology 20A.

Plan Three			
Fall	Winter	Spring	
Chem 1B/M	Chem 1C/N	Math 11B	
Math 11A	Math 11A	Biol 20B	
core	gen ed	gen ed	

Plan Four is for freshmen placing into Chemistry 1B, Mathematics 11A, and Biology 20, starting the introductory sequence with Biology 20C.

Plan Four			
Fall	Winter	Spring	
Chem 1B/M	Chem 1C/N	Math 11B	
Biol 20C	Math 11A	Biol 20B	
core	Biol 20A	gen ed	

Graduate Programs

The Biological Sciences Departments have two graduate programs offering doctorate and master's degrees in ecology and evolutionary biology and in molecular, cell, and developmental biology.

Ecology and Evolutionary Biology

The graduate program in ecology and evolutionary biology (EEB) at UCSC is one of

the premier programs in the country. This is due to the quality and commitment of the faculty, the long-standing tradition of the University of California, and the unique environment of the Santa Cruz campus. UCSC has been singularly blessed with varied and easily accessible marine and terrestrial resources for research. UCSC is ideal for marine research—having its own marine laboratory, a fleet of boats, and one of the most active scientific diving programs in the country. In close proximity to pinniped rookeries at the UC Reserve at Año Nuevo, the campus is located on Monterey Bay, which has the largest concentration of marine research programs in the country. In addition to state-of-the-art departmental laboratories, students have full access to the Molecular Ecology and Evolutionary Genetics (MEEG) facility and other analytical laboratories of the UCSC Institute of Marine Sciences.

Terrestrial biologists have access to all of California's natural environments through the University of California's Natural Reserve System; the diverse habitats on UCSC's 2,000-acre campus itself (mixed redwood forest, fossil sand dune associations, rolling pasture land, and chaparral) and on several adjacent preserves; the UCSC experimental Farm and Garden; extensive Southern Hemisphere plantings in the UCSC Arboretum; and greenhouses and associated laboratory facilities. More than two-thirds of our faculty participate in field studies throughout the Pacific Basin (from Alaska to Antarctica), in Pacific Rim nations (in Latin America, the Far East, and Australia), and beyond.

The program in ecology and evolutionary biology is comprised of four core tracks: (1) population and community ecology, (2) evolutionary biology, (3) physiology and behavior including marine and terrestrial animals, and (4) systematics and biodiversity.

Degree Requirements for the Program in Ecology and Evolutionary Biology Ph.D. Requirements

Students must take Biology 250A and 250B in the first year. Biology 279 must be taken fall quarter of the first year; Biology 293 is required four quarters thereafter. Biology 294 must be taken every quarter that the student is in residence. Each Ph.D. student must complete at least two quarters as a teaching assistant during their graduate career.

During fall of the second year, students take a comprehensive examination. This is a two-part exam, written and oral, the goal of which is to examine the student's breadth and depth of knowledge of evolution, ecology, physiology, behavior, organismal, and general biology. A committee is comprised of four examiners selected by each student and the student's supervisor. Each student's area of research, together with the stated goal of the exam, should guide the composition of the student's committee.

During the sixth term, the student submits a dissertation research proposal to their dissertation committee and must defend it in a three-hour oral examination before the dissertation committee. The student advances to candidacy only after completing all course work, passing the written and oral portions of the comprehensive examination, writing and defending a dissertation research proposal, and presenting a candidacy seminar on his/her proposed research.

The student must submit his/her doctoral dissertation to the dissertation committee for tentative approval at least 60 days before presenting a formal, public doctoral research seminar. Also, the student must meet with the dissertation committee to

defend the thesis at least one week prior to the public seminar. Before the dissertation is accepted for signature by the dissertation committee, at least one chapter must be submitted as a paper (not an abstract) to a refereed journal for publication.

M.A. Requirements

In addition to course work identified by the advisory committee or adviser, each student will be required to take Biology 279, two quarters of Biology 293, Biology 294 and the appropriate lab course when in residence at the university (not in the field), and Biology 297, as needed, to come up with 15 credits. Biology 250A and 250B are recommended but not required.

The student must submit their thesis draft to the thesis committee for tentative approval at least 60 days before presenting a formal, public research seminar. Also, the student must meet with the thesis committee to defend the thesis at least one week prior to the public seminar. At that time, the committee may sign the cover page of the student's dissertation.

There is no requirement, but it is highly recommended, that at least one thesis chapter be submitted as a paper (not an abstract) to a refereed journal for publication.

Molecular, Cell, and Developmental Biology

The program in molecular, cell, and developmental (MCD) biology leads to either the Ph.D. or the M.A. and is designed to prepare students for careers in research, teaching, and biotechnology. Current research in MCD biology focuses on such topics as the structure and function of RNA, gene expression, signaling, cell division, development, and pathogenesis. A unique focus of the department is the Center for the Molecular Biology of RNA.

Degree Requirements for the Program in Molecular, Cell, and Developmental Biology

Ph.D. and master's students complete the graduate core courses, Biology 200A, 200B, and 200C, in the first year. Additional undergraduate courses required to strengthen the student's background may be assigned by the advisory committee during the initial advising meeting. Typically, these courses are Biochemistry 100A and Biology 115. Students are required to participate in lab research meetings and departmental seminar series every quarter.

First-year Ph.D. students complete three 10-week laboratory rotations. Students choose their rotation laboratories in consultation with the Graduate Advisory Committee. The lab rotations give students a chance to learn about the diverse fields and methods of inquiry and to interact with members of the department. At the end of each quarter, students present a short talk to the department on their rotation project. At the end of spring quarter, students consult with rotation faculty to identify a permanent thesis laboratory.

Second-year Ph.D. students are required to submit two proposals—one on their proposed thesis work and a second on an unrelated MCDB research topic. The Ph.D. qualifying exam, taken in spring quarter of the second year, is an oral examination before a committee comprised of three internal reviewers and one external reviewer.

Once the qualifying exam is passed, students, in conjunction with their faculty adviser, select a committee to consult with in the development of their thesis. This committee monitors the student's progress and ultimately approves the final draft of the student's dissertation. The student must meet with the thesis committee at least once a year after passing the qualifying exam.

Students are advanced to candidacy following presentation of their research to the department in a seminar. This takes place no later than spring of the third year.

Graduate students must take two approved advanced graduate electives. Students who enter the Ph.D. program with a Masters degree without doing rotations must complete an additional two approved graduate elective courses.

Ph.D. requirements

- Completion of the graduate core course
- Completion of the *Practice of Science* course
- Completion of an oral qualifying exam
- Completion of an advancement to candidacy seminar
- Completion of two advanced graduate elective courses
- Yearly meetings with a thesis committee after the qualifying exam
- Completion of two quarters of service as a teaching assistant
- Completion of thesis research resulting in a dissertation of individual work
- Presentation of thesis defense in departmental seminar

M.A. requirements

Acceptance to the master's program requires a faculty sponsor. Interested applicants must contact faculty directly and procure sponsorship before beginning the application process.

- Completion of the graduate core course
- Completion of the *Practice of Science* course
- Write a master's thesis based on original research
- Presentation of thesis defense in departmental seminar

General Biology Majors and Minor

The general biology majors permit flexibility, but demand careful attention to one's own interests and plans. Each student should select courses on the basis of up-to-date information in consultation with a biology faculty adviser whose interests reflect the student's interests.

General Biology B.A. Major Requirements

Introductory Requirements

- Biology 20A, 20B, and 20C
- Chemistry 1A, 1B/M and 1C/N
- Chemistry 108A/L and 108B/M or 112A/L, 112B/M, and 112C/N
- Mathematics 11A-B or 19A-B
- Physics 7A/L and 7B/M or two courses with laboratories from the Physics 6A/L, 6B/M,

A total of eight upper-division biology courses, as follows:

- 100, Biochemistry; or Biochemistry and Molecular Biology 100A, 100B, and 100C, Biochemistry (Upon completion of the series, Biochemistry and Molecular Biology 100C may be used to satisfy one elective.)
- 105, Genetics
- 175, Evolution

Students must complete one upper-division biology course that includes regular laboratory or fieldwork.

Students must fulfill the major distribution requirement, which includes one course from each of the following groups:

- Cell/developmental biology: 110, 111, 115, 117A, 119, 119L, 120, 120L
- Physiology: 113, 125, 130/L, 131/L, 132, 133/L, 166
- Ecology: 136/L, 138/L, 140, 145L, 150, 152, 160, 160L, 161, 161L, 169, 169L, 171

Students must complete two additional upper-division biology electives chosen from courses 100-187L.

General Biology B.A. Sample Planners

Plan One is for freshmen placing into Mathematics 3, and Biology 3:

Plan One	<u>Plan One</u>			
1st year	<u>Fall</u>	Winter	Spring	
	Chem 1A	Chem 1B/M	Chem 1C/N	
	Math 3	Math 11A	Math 11B	
	<u>core</u>	Biol 3	gen ed	
2nd year	Biol 20A	Biol 20B	Biol 20C	
	gen ed	Chem 108A/L	<u>Chem 108B/M</u>	
	gen ed	gen ed	gen ed	

Plan Two is a more rigorous schedule for first-year students placing into Math 11A and Biology 20:

Plan Two	<u>Plan Two</u>			
1st year	<u>Fall</u>	<u>Winter</u>	Spring	
	Chem 1A	Chem 1B/M	Chem 1C/N	
	Math 11A	Math 11B	Biol 20A	
	core	gen ed	gen ed	
2nd year	Biol 20B	Biol 20C	Biol 100	
	Chem 108A/L	Chem 108B/M	Biol 105	
	gen ed	gen ed	gen ed	

General Biology B.S. Major Requirements

The requirements for the biology B.S. follow a similar pattern to those for the biology B.A., but are more rigorous to ensure a stronger level of scientific preparation. Students need to follow the requirements below to complete the B.S.

program (differences from the B.A. program are noted):

Introductory Requirements

- Biology 20A, 20B, and 20C
- Chemistry 1A, 1B/M and 1C/N (same as for B.A.)
- Chemistry 108A/L and 108B/M or Chemistry 112A/L, 112B/M, and 112C/N
- Mathematics 11A-B or 19A-B and 22 (one additional calculus course required for the B.S.)
- Physics 6A/L, 6B/M, and 6C/N (Physics 7A/B option does not apply for the B.S.)

Advanced Requirements

A total of nine upper-division biology courses are required, including two upper-division laboratory courses and three upper-division electives chosen from courses 100-187L.

General Biology B.S. Sample Planners

Plan One is for freshmen placing into Mathematics 3, and Biology 3:

Plan One	<u>Plan One</u>				
1st year	<u>Fall</u>	Winter	Spring		
	Chem 1A	Chem 1B/M	Chem 1C/N		
	Math 3	Math 11A	<u>Math 11B</u>		
	<u>core</u>	Biol 3	gen ed		
2nd year	Biol 20A	Biol 20B	Biol 20C		
	Math 22	Chem 108A/L	<u>Chem 108B/M</u>		
	gen ed	gen ed	gen ed		

Plan Two is a more rigorous schedule for first-year students placing into Math 11A and Biology 20:

<u>Plan Two</u>				
1st year	<u>Fall</u>	<u>Winter</u>	Spring	
	Chem 1A	Chem 1B/M	Chem 1C/N	
	Math 11A	Math 11B	Math 22	
	core	gen ed	Biol 20A	
2nd year	Biol 20B	Biol 20C	Biol 100	
	Chem 108A/L	Chem 108B/M	Biol 105	
	gen ed	gen ed	gen ed	

General Biology Minor Requirements

In addition to the introductory biology, chemistry, mathematics, and physics (as listed above), students are required to take a total of five upper-division biology courses including courses 100, 105, and the three distribution requirement courses; one must include a laboratory. There is no senior comprehensive requirement for the minor. Please contact the Biological Sciences undergraduate Advising office for further information.

Ecology and Evolution Major

Program Description

behavior, and physiology. While some of these disciplines focus on molecular or chemical mechanisms, they all address questions on larger spatial and temporal scales that can be applied to important environmental problems, including genetic and ecological aspects of conservation biology and biodiversity.

Students majoring in ecology and evolution will receive a B.S. degree based on an integrated series of courses providing breadth in fundamental areas of biology and allied sciences that enhance understanding of evolutionary and ecological processes. The capstone of this curriculum is a suite of field courses providing students unique opportunities to learn and conduct research in a host of ecological systems. Students are encouraged to take field courses in their areas of specialization. Other opportunities include participation in research projects with faculty sponsors and the

intensive Education Abroad Programs in Costa Rica (tropical biology) and Australia

The ecology and evolution major provides students with interdisciplinary skills necessary for understanding and solving complex problems in ecology, evolution,

Ecology and Evolution B.S. Major Requirements

Introductory Requirements

(marine sciences).

- Biology 20A, 20B, and 20C
- Chemistry 1A, 1B/M and 1C/N
- Applied Mathematics and Statistics 7/L
- Mathematics 11A and 11B (calculus)
- Physics 7A/L and 7B/M

Advanced Requirements

A total of eleven upper-division courses; two must include laboratory or fieldwork.

- 105, Genetics
- 150, *Ecology*
- 175. Evolution
- One of the following physiology courses:

131/L, Animal Physiology/Laboratory 166, Plant Physiology

• One of the following organism courses:

119/L, Microbiology/Laboratory 136/L, Invertebrate Zoology/Laboratory 138/L, Biology and Ecology of Vertebrates/Laboratory 168/L, Systematic Botany of Flowering Plants/Laboratory 170/L, Marine Botany/Laboratory

Elective List for Ecology and Evolution Major

Three topical electives chosen from the following:

Biological Sciences

100, Biochemistry

107/L, Population Genetics/Laboratory 110, Cell Biology 115, Eukaryotic Molecular Biology 119, Microbiology 119L, Microbiology Laboratory 120, Development 120L, Development Laboratory 131/L, Animal Physiology/Laboratory 133, Exercise Physiology 133L, Exercise Physiology 133/L, Exercise Physiology 136/L, Invertebrate Zoology/Laboratory 137/L, *Ichthyology/Laboratory* 138/L, Biology and Ecology of Vertebrates/Laboratory 139/L, Biology of Marine Mammals/Laboratory 140, Behavioral Ecology 141, Ecological Field Methods 141L, Ecological Field Methods Laboratory 142, Ocean Ecosystems 143/L, Herpetology/Laboratory 144/L, Ornithology/Laboratory 145L, Behavioral Ecology Field Course 152, Community Ecology 158, Ecology of Reefs, Mangroves, and Sea Grasses 160, Marine Ecology 160L, Marine Ecology Laboratory 161, Kelp Forest Ecology 161L, Kelp Forest Ecology Laboratory 162ABCD, Marine Ecology Field Quarter 163, Marine Conservation Biology 165ABCD, Ecology and Conservation in Practice

166, Plant Physiology 168/L, Systematic Botany/Laboratory 169, Plant Ecology 169L, Field Methods in Plant Ecology

170/L, Marine Botany/Laboratory 171, Marine Microbial Ecology

Three general electives chosen from the following:

Biological Sciences

100, Biochemistry 107/L, Population Genetics/Laboratory 110, Cell Biology 115, Eukaryotic Molecular Biology 119, Microbiology 119L, Microbiology Laboratory 120, Development 120L, Development Laboratory 131/L, Animal Physiology/Laboratory 133, Exercise Physiology 133L, Exercise Physiology 133/L, Exercise Physiology 136/L, Invertebrate Zoology/Laboratory

137/L, Ichthyology/Laboratory

138/L, Biology and Ecology of Vertebrates/Laboratory

139/L, Biology of Marine Mammals/Laboratory

140, Behavioral Ecology

141, Ecological Field Methods

141L, Ecological Field Methods Laboratory

142, Ocean Ecosystems

143/L, Herpetology/Laboratory

144/L, Ornithology/Laboratory

145L, Behavioral Ecology Field Course

152, Community Ecology

156/L, Marine Plankton/Laboratory

158, Ecology of Reefs, Mangroves, and Sea Grasses

159, Biological Oceanography

160, Marine Ecology

160L, Marine Ecology Laboratory

161, Kelp Forest Ecology

161L, Kelp Forest Ecology Laboratory

162ABCD, Marine Ecology Field Quarter

163, Marine Conservation Biology

165ABCD, Ecology and Conservation in Practice

166, Plant Physiology

168/L, Systematic Botany/Laboratory

169, Plant Ecology

169L, Field Methods in Plant Ecology

170/L, Marine Botany/Laboratory

171, Marine Microbial Ecology

Anthropology

101/E, Human Evolution/Laboratory

102A, Human Skeletal Biology

103, Forensic Anthropology

106/E, Primate Behavior and Ecology/Laboratory

107, Anatomy of the Human Body

Chemistry

108A, Organic Chemistry

108B, Organic Chemistry

Earth Sciences

100/L, Vertebrate Paleontology

102, Marine Geology

105, Coastal Geology

122, Paleoceanography

Environmental Studies

104A, Introduction to Environmental Field Methods

108/L, General Entomology/Laboratory

115A/L, GIS and Environmental Applications/Exercises in GIS

120, Conservation Biology

122, Tropical Ecology and Conservation

123, Animal Ecology and Conservation

129, Integrated Pest Management

130A/L, Agroecology and Sustainable

Agriculture/Laboratory

130B, Principles of Sustainable Agriculture

131/L, Insect Ecology/Laboratory

138/L, Field Ethnobotany/Laboratory

160, Restoration Ecology

161A/L, Soils and Plant Nutrition/Laboratory

162, Plant Physiological Ecology

163/L, Plant Disease Ecology/Laboratory

167, Freshwater and Wetland Ecology

168, Biochemistry and the Global Environment

Environmental Toxicology

140, Molecular Biology of Prokaryotes

Psychology

123, Behavioral Neuroscience

One of the following may also be used as an upper-division elective:

Biological Sciences

183L, Undergraduate Research in EEB

188AB, Supervised Teaching (4 units)

195, Senior Thesis

198, Independent Field Study

199, Tutorial

Environmental Studies

183, Environmental Studies Internship

Ecology and Evolution B.S. Sample Planners

Health Sciences Major

The B.S. major in health sciences is designed for students interested in careers in medicine or biomedical research and satisfies the admission requirements for most U.S. medical schools. It is based on the existing B.S. degree in molecular, cell, and developmental biology, with similar course requirements in chemistry, physics, and math. Students are required to take five courses directly relevant to human health in addition to genetics, biochemistry, and cell biology. Students in this program must also fulfill Spanish language and health care internship requirements.

Health Sciences B.S. Major Requirements*

Introductory Requirements

- Biology 20A, 20B, and 20L
- Chemistry 1A, 1B/M and 1C/N
- Chemistry 108A/L and 108B/M, 108C recommended for pre-med students or 112A/L, 112B/M, and 112C/N
- Mathematics 11A-B or 19A-B and 22 (three quarters of calculus)
- Physics 6A/L, 6B/M, and 6C/N

Advanced Requirements

A total of eight upper-division biology courses, as follows:

Four core courses:

100, Biochemistry; or Biochemistry and Molecular Biology 100A, 100B, and 100C,

Biochemistry

105, Genetics 110, Cell Biology 130/L, Human Physiology/Laboratory

- Three of the following lecture courses:
 - 111, Immunology
 - 113, Mammalian Endocrinology
 - 114, Cancer Cell Biology
 - 115, Eukaryotic Molecular Biology
 - 119, Microbiology
 - 120, Development
 - 125, Neuroscience
 - 126, Advanced Neural Development 132, Comparative Physiology of Vertebrates
 - 133/L, Exercise Physiology/Laboratory
 - 135/L, Anatomy of the Human Body/Laboratory
- Internship Requirement: Biology 189, Health Science Internship. The student

must participate in a community health care service activity approved by the health sciences internship coordinator. Credit may be earned over multiple quarters.

- Language Requirement: Spanish 1–4 or the equivalent and one quarter of Spanish for health care workers (Spanish 5M).
- * Medical and professional school admissions requirements vary; students should verify that their coursework will satisfy the admissions requirements of the programs to which they plan to apply.

Health Sciences B.S. Sample Planners

Plan One is for freshmen placing into Mathematics 3, and Biology 3:

Plan One			
1st year	<u>Fall</u>	<u>Winter</u>	Spring
	Chem 1A	Chem 1B/M	Chem 1C/N
	Math 3	Math 11A	Math 11B
	<u>core</u>	Biol 3	gen ed
2nd year	Biol 20A	Biol 20B	Biol 105
	Math 22	Chem 108A/L	Chem 108B/M
	gen ed	gen ed	gen ed

Plan Two is a more rigorous schedule for first-year students placing into Math 11A and Biology 20:

Plan Two	<u>Plan Two</u>			
1st year	<u>Fall</u>	<u>Winter</u>	Spring

	gen ed	gen ed	gen ed	

Marine Biology Major

Program Description

UCSC is situated within five miles of Monterey Bay and its great diversity of coastal marine ecosystems; nature reserves; state, federal, and private marine research institutions and resource management agencies. These resources, combined with oncampus computing and analytical facilities and the Long Marine Laboratory, make UCSC an exceptional campus for the study of marine biology and its application to coastal conservation and management. Descriptions of nearby environments, institutions, and facilities are available through the Ecology and Evolutionary Biology Department web site at http://www.biology.ucsc.edu/eeb/index.html.

The marine biology major is designed to introduce students to marine organisms and the biological and physical processes that affect these organisms, their populations, and their coastal and oceanic ecosystems. The emphasis is on basic principles that help us understand the processes that shape life in marine environments. The marine biology major is a demanding program that offers a B.S. degree and requires several more courses than the general biology B.A. major.

Marine Biology B.S. Major Requirements

Introductory Requirements

The lower-division course requirements are designed to provide a good introduction to biology as well as the foundation in chemistry, mathematics, and physics fundamental to the study of biology.

- Biology 20A, 20B, and 20C
- Chemistry 1A, 1B/M and 1C/N
- Applied Mathematics and Statistics 7/L
- Mathematics 11A-B or 19A-B (calculus)
- Physics 7A/L and 7B/M

Advanced Requirements

A total of eleven upper-division courses; two must include laboratory or fieldwork.

- 105, Genetics
- 175, Evolution
- One ecology course:

150, Ecology 160, Marine Ecology

• One marine environment course:

142, Ocean Ecosystems
159, Biological Oceanography
Ocean Sciences 101, Marine Environment
Ocean Sciences 130, Biological Oceanography
Ocean Sciences 142, Ocean Ecosystems

• One marine course:

136/L, Invertebrate Zoology/Laboratory 137/L, Ichthyology/Laboratory 139/L, Biology of Marine Mammals/Laboratory 170/L, Marine Botany/Laboratory

Elective List for Marine Biology Major

Three topical electives chosen from the following:

Biological Sciences

136/L, Invertebrate Zoology/Laboratory
137/L, Ichthyology/Laboratory
139/L, Biology of Marine Mammals/Laboratory
142, Ocean Ecosystems
156/L, Marine Plankton/Laboratory
158, Ecology of Reefs, Mangroves, and Sea Grasses
159, Biological Oceanography
160, Marine Ecology

160L, Marine Ecology Laboratory 161, Kelp Forest Ecology

161L, Kelp Forest Ecology Laboratory 162ABCD, Marine Ecology Field Quarter

163, Marine Conservation Biology

170/L, Marine Botany/Laboratory

171, Marine Microbial Ecology

Earth Sciences

102, Marine Geology

105, Coastal Geology

122, Paleoceanography

Three general electives chosen from the following:

Biological Sciences

100, Biochemistry

107/L, Population Genetics/Laboratory

110, Cell Biology

115, Eukaryotic Molecular Biology

119, Microbiology

119L, Microbiology Laboratory

120, Development

120L, Development Laboratory

131/L, Animal Physiology/Laboratory

133, Exercise Physiology

133L, Exercise Physiology

133/L, Exercise Physiology

136/L, Invertebrate Zoology/Laboratory

137/L, *Ichthyology/Laboratory*

138/L, Biology and Ecology of Vertebrates/Laboratory

139/L, Biology of Marine Mammals/Laboratory

140, Behavioral Ecology

141, Ecological Field Methods

141L, Ecological Field Methods Laboratory

142, Ocean Ecosystems

143/L, Herpetology/Laboratory

144/L, Ornithology/Laboratory

145L, Behavioral Ecology Field Course

150, Ecology

152, Community Ecology

156/L, Marine Plankton/Laboratory

158, Ecology of Reefs, Mangroves, and Sea Grasses

159, Biological Oceanography

160, Marine Ecology

160L, Marine Ecology Laboratory

161, Kelp Forest Ecology

161L, Kelp Forest Ecology Laboratory

162ABCD, Marine Ecology Field Quarter

163, Marine Conservation Biology

165ABCD, Ecology and Conservation in Practice

166, Plant Physiology

168/L, Systematic Botany/Laboratory

169, Plant Ecology 169L, Field Methods in Plant Ecology 170/L, Marine Botany/Laboratory 171, Marine Microbial Ecology

Anthropology

101/E, Human Evolution/Laboratory
102/A, Human Skeletel Biology
103, Forensic Anthropology
106/E, Primate Behavior and Ecology/Laboratory
107, Anatomy of the Human Body

Chemistry

108A, Organic Chemistry 108B, Organic Chemistry

Earth Sciences

100/L, Vertebrate Paleontology

102, Marine Geology

105, Coastal Geology

122, Paleoceanography

Environmental Studies

104A, Introduction to Environmental Field Methods 108/L, General Entomology/Laboratory 115A/L, GIS and Environmental Applications/Exercises in GIS

120, Conservation Biology

122. Tropical Ecology and Conservation

123, Animal Ecology and Conservation

129, Integrated Pest Management

130A/L, Agroecology and Sustainable

Agriculture/Laboratory

130B, Principles of Sustainable Agriculture

131/L, *Insect Ecology/Laboratory*

138/L, Field Ethnobotany/Laboratory

160, Restoration Ecology

161A/L, Soils and Plant Nutrition/Laboratory

162, Plant Physiological Ecology

163/L, Plant Disease Ecology/Laboratory

167, Freshwater and Wetland Ecology

168, Biochemistry and the Global Environment

Environmental Toxicology

140, Molecular Biology of Prokaryotes

Psychology

123. Behavioral Neuroscience

One of the following may also be used as a general elective:

Biological Sciences

183L, Undergraduate Research in EEB 188AB, Supervised Teaching (4 units) 195, Senior Thesis 198, Independent Field Study 199, Tutorial

Environmental Studies

183, Environmental Studies Internship

Marine Biology B.S. Sample Planners

Plan One is for freshmen placing into Mathematics 3, and Biology 3:

Plan One			
1st year	<u>Fall</u>	Winter	Spring

Molecular, Cell, and Developmental Biology Major

Program Description

The molecular, cell, and developmental (MCD) biology major is designed for students interested in medical or other professional graduate programs and those preparing for careers in biotechnology industries. This major is more structured than the general biology major and requires that students pay careful attention to the prerequisites required for upper-division biology courses.

Molecular, Cell, and Developmental Biology B.S. Major Requirements

Introductory Requirements

- Biology 20A, 20B, and 20C
- Chemistry 1A, 1B/M and 1C/N
- Chemistry 108A/L and 108B/M or 112A/L, 112B/M, and 112C/N
- Mathematics 11A-B or 19A-B and 22 (three quarters of calculus)

• Physics 6A/L, 6B/M, and 6C/N

Advanced Requirements

A total of nine upper-division biology courses, as follows:

• Four core courses

100, Biochemistry; or Biochemistry and Molecular Biology 100A, 100B, and 100C, Biochemistry (Upon completion of the series, Biochemistry and Molecular Biology 100C may be used to satisfy one elective.)

105, Genetics

110, Cell Biology

115, Eukaryotic Molecular Biology

- Three of the following lecture courses
 - 111, Immunology
 - 113, Mammalian Endocrinology
 - 114, Cancer Cell Biology
 - 119, Microbiology
 - 120, Development
 - 125, Neuroscience
 - 130/L, Human Physiology/Laboratory
 - 166, Plant Physiology
 - 175, Evolution
- Two of the following laboratory courses

100L, Biochemistry Laboratory

105L, Eukaryotic Genetics Laboratory

105M, Microbial Genetics Laboratory

109L, Yeast Molecular Genetics Laboratory

110L, Cell Biology Laboratory

111L, Immunology Laboratory

115L, Eukaryotic Molecular Biology Laboratory

119L, Microbiology Laboratory

120L, Development Laboratory

128L, C. elegans Neural Genetics Laboratory

130/L, Human Physiology/Laboratory*

180/L, Research Programming for Biologists and

Biochemists/Laboratory

181, Computational Biology Tools

185L Hughes Undergraduate Research Laboratory

186L Undergraduate Research in MCD

187L, Molecular Biotechnology Laboratory

Biochemistry and Molecular Biology

110, Biochemistry Laboratory

*Biology 130/L meets either one lecture or one laboratory requirement, but not both.

Molecular, Cell & Developmental Biology B.S. Sample Planners

Plan One is for freshmen placing into Mathematics 3, and Biology 3:

Plan One			
1st year	<u>Fall</u>	<u>Winter</u>	Spring
	Chem 1A	Chem 1B/M	Chem 1C/N
	Math 3	Math 11A	Math 11B
	<u>core</u>	Biol 3	gen ed

Neuroscience and Behavior Majors

Program Description

Neuroscience, the study of the nervous system and behavior of animals, is a frontier area in biology, touching psychology on the one hand and computer science on the other.

The neuroscience and behavior majors provide students with rigorous preparation for graduate studies and research in the fields of neuroscience and behavior. The brain and determinants of behavior are studied at all levels, from biological molecules to individual nerve cells to functioning organisms to social behavior. The majors emphasize the interrelationship between the two fields, building on a common core of general and biological science course work. Students select a pathway in either behavior or molecular neuroscience. Rigorous course work is supplemented by opportunities for hands-on laboratory and field courses and independent research.

Neuroscience and Behavior B.A. Major Requirements

Introductory Course Requirements

- Biology 20A, 20B, and 20C
- Chemistry 1A, 1B/M and 1C/N
- Chemistry 108A/L and 108B/M or Chemistry 112A/L, 112B/M, and 112C/N
- Mathematics 11A-B or 19A-B
- Introductory physics: either Physics 7A/L and 7B/M; or two courses from the 6A/L, 6B/M, 6C/N series Physics 7A/L and 7B/M
- Statistics: either Applied Mathematics and Statistics 5 or 7 or Environmental Toxicology 120 Applied Mathematics and Statistics 7/L

Advanced Course Requirements

Five upper-division core courses to include:

- 100, *Biochemistry*; or *Biochemistry and Molecular Biology* 100A, 100B, and 100C, *Biochemistry* (Upon completion of the series, *Biochemistry and Molecular Biology* 100C may be used to satisfy one elective.)
- 105, Genetics
- 110, Cell Biology
- 125, Neuroscience
- 140, Behavioral Ecology

Plus additional elective courses chosen from one of two areas of concentration:

Molecular Neuroscience Pathway (five four courses)

- 115, Eukaryotic Molecular Biology
- 126, Advanced Molecular Neuroscience
- One of the following molecular/development courses: 120, 128, or 135/L
 One of the following physiology or psychology courses: Biology 130/L, 132,
 Psychology 121, or 123
- One of the following biology laboratory courses:

```
100L, Biochemistry Laboratory
```

105L, Eukaryotic Genetics Laboratory

105M, Microbial Genetics Laboratory

109L, Yeast Molecular Genetics Laboratory

110L, Cell Biology Laboratory

111L, Immunology Laboratory

116 115L, Eukaryotic Molecular Biology Laboratory

119L, Microbiology Laboratory

120L, Development Laboratory

128L, C. elegans Neural Genetics Laboratory

130/L, Human Physiology/Laboratory*

180/L, Research Programming for Biologists and

Biochemists/Laboratory

181, Computational Biology Tools

185L Hughes Undergraduate Research Laboratory

186L Undergraduate Research in MCD

187L, Molecular Biotechnology Laboratory

Behavior Pathway (four courses)

113, Mammalian Endocrinology

One of the following: Biology 139/L, 141#, 143 $/<math>\!\!\!\perp$, 144 $/<math>\!\!\!\perp$, 145L; or Anthropology 106

One of the following physiology or psychology courses: Biology 120, 130/L, 131/L, 132, 133/L, 136/L, 138/L; Psychology 120, 121, 123, 133

One of the following laboratory courses:

```
105L, Eukaryotic Genetics Laboratory
```

105M, Microbial Genetics Laboratory

130/L, Human Physiology Laboratory

131/L, Animal Physiology/Laboratory

136/L, *Invertebrate Zoology/Laboratory*

138/L, Biology and Ecology of the Vertebrates/Laboratory

141L, Ecological Field Methods

145L, Behavioral Ecology Field Course

180/L, Research Programming for Biologists and Biochemists/Laboratory

181, Computational Biology Tools

Computer Science 12A or 12B or 60N

*Biology 130/L meets either a physiology or a laboratory requirement, but not both.

Neuroscience and Behavior B.A. Sample Planners

Plan One is for freshmen placing into Mathematics 3, and Biology 3:

Plan One	1		
1st year	<u>Fall</u>	Winter	Spring
	Chem 1A	Chem 1B/M	Chem 1C/N
	Math 3	Math 11A	<u>Math 11B</u>
	<u>core</u>	Biol 3	gen ed
2nd year	Biol 20A	<u>Biol 20B</u>	Biol 20C
	AMS 7/L	Chem 108A/L	Chem 108B/M
	gen ed	gen ed	gen ed

Plan Two is a more rigorous schedule for first-year students placing into Math 11A and Biology 20:

Plan Two	<u>Plan Two</u>			
1st year	<u>Fall</u>	Winter	Spring	
	Chem 1A	Chem 1B/M	Chem 1C/N	
	Math 11A	Math 11B	Biol 20A	
	<u>core</u>	gen ed	gen ed	
2nd year	Biol 20B	Biol 20C	Biol 105	
	AMS 7/L	Chem 108A/L	Chem 108B/M	
	gen ed	gen ed	gen ed	

Neuroscience and Behavior B.S. Major Requirements

In addition to the courses above, the following courses are required for the B.S. degree program.

- Mathematics: one additional course in calculus, Mathematics 22.
- Physics: three courses in calculus-based physics, Physics 6A/L, 6B/M, and 6C/N
- A second laboratory course, chosen from the courses listed in the student's concentration/pathway

Neuroscience and Behavior B.S. Sample Planners

Plan One is for freshmen placing into Mathematics 3, and Biology 3:

<u>Plan One</u>			
1st year	<u>Fall</u>	<u>Winter</u>	Spring
	Chem 1A	Chem 1B/M	Chem 1C/N
	Math 3	Math 11A	Math 11B
	<u>core</u>	Biol 3	gen ed
2nd year	Biol 20A	Biol 20B	Biol 20C

Math 22	Chem 108A/L	Chem 108B/M
gen ed	gen ed	gen ed

Plan Two is a more rigorous schedule for first-year students placing into Math 11A and Biology 20:

Plant Sciences Major

Program Description

UCSC has a strong program in the plant sciences (sometimes called botany). A fine natural environment, the campus Arboretum, the facilities under the Center for Agroecology and Sustainable Food Systems (especially the Farm and Garden), and an excellent greenhouse collection all enhance the resources that support our botanical programs.

The plant sciences major is designed for students with an interest in plant biology and its associated curricular fields such as plant ecology, plant physiology, plant pathology, plant molecular biology, soils, and applied plant sciences. After completion of the core courses, students can proceed in one of several directions depending on their interest. For example, a more in-depth study of physiology and molecular biology courses can serve as preparation for work in the biotechnology field or for graduate school; further studies in plant ecology, tropical ecology, or restoration ecology can lead to careers such as resource ecologist or naturalist or to the pursuit of related fields in graduate school; upper-division training in agroecology can lead to careers in agriculture or food systems. A special feature of this major is a one-quarter internship and/or independent research requirement. There are many opportunities for internships both on the UCSC campus and in the community at large.

Plant Sciences B.S. Major Requirements

Introductory Requirements

- Biology 20A, 20B, and 20C
- Chemistry 1A, 1B/M and 1C/N
- Applied Mathematics and Statistics 7/L
- Mathematics 11A and 11B (calculus)
- Physics 7A/L and 7B/M

Advanced Requirements

A total of eleven upper-division courses; two of which must include laboratory or fieldwork.

105, Genetics

- 150, *Ecology*
- 175, Evolution
- One plant physiology course from the following:

166, *Plant Physiology* Environmental Studies 162, *Plant Physiological Ecology*

• One botany course from the following:

168/L, Systematic Botany 170/L, Marine Botany/Laboratory

Elective List for Plant Sciences Major

Three topical electives chosen from the following:

Biological Sciences

110, Cell Biology
115, Eukaryotic Molecular Biology
165ABCD, Ecology and Conservation in Practice
166, Plant Physiology
168/L, Systematic Botany/Laboratory
169, Plant Ecology
169L, Field Methods in Plant Ecology
170/L, Marine Botany/Laboratory

Environmental Studies

104A, Introduction to Environmental Field Methods 129, Integrated Pest Management 130A/L, Agroecology and Sustainable Agriculture/Laboratory 130B, Principles of Sustainable Agriculture 131/L, Insect Ecology/Laboratory 138/L, Field Ethnobotany/Laboratory 160, Restoration Ecology 161A/L, Soils and Plant Nutrition/Laboratory 162, Plant Physiological Ecology 163/L, Plant Disease Ecology/Laboratory

Three general electives chosen from the following:

Biological Sciences

100, Biochemistry
107/L, Population Genetics/Laboratory
110, Cell Biology
115, Eukaryotic Molecular Biology
119, Microbiology
119L, Microbiology Laboratory
120, Development
120L, Development Laboratory
131/L, Animal Physiology/Laboratory
133, Exercise Physiology

133L, Exercise Physiology 133/L, Exercise Physiology

136/L, Invertebrate Zoology/Laboratory

137/L, Ichthyology/Laboratory

138/L, Biology and Ecology of Vertebrates/Laboratory

139/L, Biology of Marine Mammals/Laboratory

140, Behavioral Ecology

141, Ecological Field Methods

141L, Ecological Field Methods Laboratory

142, Ocean Ecosystems

143/L, Herpetology/Laboratory

144/L, Ornithology/Laboratory

145L, Behavioral Ecology Field Course

152, Community Ecology

156/L, Marine Plankton/Laboratory

158, Ecology of Reefs, Mangroves, and Sea Grasses

159, Biological Oceanography

160, Marine Ecology

160L, Marine Ecology Laboratory

161, Kelp Forest Ecology

161L, Kelp Forest Ecology Laboratory

162ABCD, Marine Ecology Field Quarter

163, Marine Conservation Biology

166, Plant Physiology

168/L, Systematic Botany/Laboratory

169, Plant Ecology

169L, Field Methods in Plant Ecology

170/L, Marine Botany/Laboratory

171, Marine Microbial Ecology

Anthropology

101/E, Human Evolution/Laboratory

102/A, Human Skeletel Biology

103, Forensic Anthropology

106/E, Primate Behavior and Ecology/Laboratory

107, Anatomy of the Human Body

Chemistry

108A, Organic Chemistry

108B, Organic Chemistry

Earth Sciences

100/L, Vertebrate Paleontology

102, Marine Geology

105, Coastal Geology

122, Paleoceanography

Environmental Studies

104A, Introduction to Environmental Field Methods

108/L, General Entomology/Laboratory

115A/L, GIS and Environmental Applications/Exercises in

GIS

120, Conservation Biology

122, Tropical Ecology and Conservation

129, Integrated Pest Management

130A/L, Agroecology and Sustainable

Agriculture/Laboratory

130B, Principles of Sustainable Agriculture

131/L, Insect Ecology/Laboratory

138/L, Field Ethnobotany/Laboratory

160, Restoration Ecology

161A/L, Soils and Plant Nutrition/Laboratory

162, Plant Physiological Ecology

163/L, Plant Disease Ecology/Laboratory

167, Freshwater and Wetland Ecology

168, Biochemistry and the Global Environment

Environmental Toxicology

140, Molecular Biology of Prokaryotes

Psychology

123, Behavioral Neuroscience

One of the following may also be used as an upper-division elective:

Biological Sciences

183L, Undergraduate Research in EEB

188AB, Supervised Teaching (4 units)

195, Senior Thesis

198, Independent Field Study

199, Tutorial

Environmental Studies

183, Environmental Studies Internship

Plant Sciences B.S. Sample Planners

Plan One is for freshmen placing into Mathematics 3, and Biology 3:

Plan One			
1st year	<u>Fall</u>	Winter	Spring
	Chem 1A	Chem 1B/M	Chem 1C/N

Biology

<u>Program Description | Course Descriptions</u>

Faculty and Professional Interests

Molecular, Cell, and Developmental Biology

Manuel Ares Jr.

RNA processing, structure and function of RNA

Hanns H. Boeger

Chromatin structure and the regulation of transcription

Barry Bowman

Membrane biochemistry and genetics, biochemistry and molecular biology of membrane proteins

Bin Chen

Mammalian brain development

David Feldheim

Developmental neuroscience

Grant Hartzog

Biochemistry, genetics, chromatin and transcriptional regulation

Lindsay Hinck

Neurobiology, cell biology, development

Melissa Jurica

Structural analysis of ribonucleoprotein macromolecules

Rohinton T. Kamakaka

Gene repression and insulators

Douglas R. Kellogg

Coordination of cell growth and cell division

Robert A. Ludwig

Plant microbe interactions, photorespiration, genetic recombination in plants

Harry F. Noller

Ribosomes, RNA structure and function, RNA protein interaction

Michael Rexach

Structure and function of nuclear pore complex, nuclear transport

William M. Saxton

Cytoskeletal motors and active transport processes

Susan Strome

Chromatin and RNA regulation in C. elegans

William T. Sullivan

Genetics, cell biology, development of the Drosophila embryo

John W. Tamkun

Transcriptional regulation, molecular genetics of Drosophila development, regulation of gene expression

Alan M. Zahler

Molecular biology, splice site selection, and alternative pre-mRNA processing

Martha C. Zúñiga

Molecular, cellular, and developmental biology of the immune system

Yi 7uc

Glia-synapse interaction and synaptic plasticity in vivo

Molecular, Cell, and Developmental Biology Emeritus Faculty

Charles Daniel
Robert Edgar
Jerry F. Feldman
Henry Hilgard
Kivie Moldave
Clifton A. Poodry
Lincoln Taiz
Frank J. Talamantes
Howard H. Wang

Scott Lokey (Chemistry and Biochemistry)

Organic chemistry; combinatorial synthesis, biotechnology, molecular cell biology

Todd M. Lowe (Biomolecular Engineering)

Experimental and computation genomics, ncRNA gene finders, DNA microarrays to study the biology of Archaea

Karen Ottemann (Environmental Toxicology)

Environmental responses of pathogenic bacteria

Seth Rubin (Chemistry and Biochemistry)

Biomolecular mechanisms of cell-cycle regulation and cancer; structural biology and biochemistry; macromolecular x-ray crystallography; nuclear magnetic resonance

William G. Scott (Chemistry and Biochemistry)

Structure and function of RNA, proteins, and their complexes

Fitnat Yildiz (Environmental Toxicology)

Microbiology, molecular genetics, genomics; the mechanism of persistence of survival of Vibrio cholerae

Molecular, Cell, and Developmental Biology Lecturers

Michael Dalbey Jeremy Lee Linda Ogren Mary Zavanelli

Ecology and Evolutionary Biology

Giacomo Bernardi

Fish biology, phylogenetics, evolution

Mark H. Carr

Marine ecology, applied marine ecology

Daniel P. Costa

Physiological ecology of marine mammals and birds

Donald Croll

Foraging ecology of marine birds and mammals, island conservation/ecology

Daniel F. Doak

 $Conservation\ biology,\ population\ biology,\ plant-animal\ interactions$

Laurel R. Fox

Terrestrial population and community ecology, plant-animal interactions

Lynda J. Goff

Algal symbiosis, host-parasite relationships, molecular evolution

Bruce E. Lyon

Behavioral ecology, evolutionary ecology, avian ecology

Jonathan Moore

Ecology and conservation of freshwater ecosystems

Ingrid M. Parker

Plant ecology, pollination, plant-pathogen interactions, biological invasions

Grant H. Pogson

Molecular population genetics, ecological genetics, marine invertebrates and fishes

Donald C. Potts

Coral reef ecology, genetics, evolution, and geological history; marine biodiversity; tropical biology, global change, and remote sensing

Peter T. Raimondi

Marine ecology, evolutionary ecology, experimental design, applied ecology

Barry Sinervo

Animal behavior, evolution, physiological ecology

John N. Thompson

Coevolution, evolutionary ecology and genetics of species interactions, organization of biodiversity

Terrie M. Williams

Vertebrate locomotor and thermoregulatory physiology; marine biodiversity; comparative vertebrate energetics, exercise physiology

Ecology and Evolutionary Biology Emeritus Faculty

Ralph Berger
William Jackson Davis
William Doyle
Ralph Hinegardner
Jean Langenheim
Burney LeBoeuf
Charles (Leo) Ortiz
A. Todd Newberry
John Pearse

James Estes (Ecology and Evolutionary Biology and Ocean Sciences)
Marine sciences, community ecology

Greg Gilbert (Environmental Studies)

Disease ecology, conservation biology, tropical forest ecology, microbial ecology

Daniel Harder (Ecology and Evolutionary Biology)

Floristic inventory of Indochina and central Africa, biogeography, plant systematics

Karen D. Holl (Environmental Studies)

Restoration ecology, conservation biology, landscape ecology

Paul L. Koch (Earth Sciences)

Isotope biogeochemistry, vertebrate paleontology

Raphael Kudela (Ocean Sciences)

Ecological modeling and remote sensing, satellite oceanography, phytoplankton ecology and harmful algal blooms

R. Bruce Mac Farlane (Ecology and Evolutionary Biology)

Physiological ecology of marine, estuarine, and anadromous fishes

Marc S. Mangel (Applied Mathematics and Statistics)

Mathematical modeling of biological phenomena, especially the evolutionary ecology of growth, aging, and longevity; quantitative issues in fishery management; mathematical and computational aspects of disease

Mary W. Silver (Ocean Sciences)

Biological oceanography, marine plankton, midwater ecology

Bernie Tershy (Ecology and Evolutionary Biology) Ecology and conservation of seabirds and island ecosystems

Robert Vrijenhoek (Ecology and Evolutionary Biology)

Kerstin Wasson (Ecology and Evolutionary Biology) Evolutionary ecology, invasion biology, conservation science

Jonathan Zehr (Ocean Sciences) Aquatic microbial ecology, biological oceanography

Ecology and Evolutionary Biology Lecturers

Baldo Marinovic Jill Thompson

Program Description | Changes to 2006-08 Catalog Highlighted | Faculty

Lower-Division Courses

3. Concepts in Biology. W

A non-survey course suitable for people who have not had biology. A historical and experimental approach covers five key biological concepts: homeostasis, the integration of structure and function, cell theory, the mechanism of heredity, and evolution. Students cannot receive credit for this course after receiving prior credit for course 20A, 20B, or 20C. Prerequisite(s): completion of biology placement exam. *B. Marinovic*

15. Undergraduate Research Reports (1 credit). F,W,S

Undergraduate students who work in faculty research laboratories present the results of their projects. Organized by the Minority Undergraduate Research Program and the Minority Access to Research Careers Program. Designed for students with membership in the above-mentioned programs. Prerequisite(s): qualifications as determined by instructor at first class meeting. May be repeated for credit. (FW) B. Bowman, (S) A. Zahler

20A. Cell and Molecular Biology. F,W,S

Introduction to molecular biology, cell physiology, and genetics. Students cannot receive credit for this course and course 21A. Prerequisite(s): course 3 or a passing score on the biology placement exam, and Chemistry 1B. Enrollment restricted to first-year students, sophomores, and juniors. (General Education Code(s): IN.) *The Staff*

20B. Development and Physiology. F,W,S

Topics in morphology, physiology, development, genetics, and endocrinology selected to exemplify current issues and perspectives in organismic biology. Prerequisite(s): course 20A. *The Staff*

20C. Ecology and Evolution. F,W,S

Introduction to ecology and evolution covering principles of evolution at the molecular, organismal, and population levels. Evolutionary topics include genetic

and phenotypic variation, natural selection, adaptation, speciation, and macroevolution. Also covers behavioral, population, and community ecology including applied ecological issues. Prerequisite(s): passing score on Biology Placement Exam or course 3. *The Staff*

20L. Experimental Biology Laboratory (2 credits). F,W,S

Provides biology majors with the theory and practice of experimental biology. A wide range of concepts and techniques used in the modern laboratory are included in the exercises. Designed to satisfy the introductory biology lab requirement of many medical and professional schools. Students are billed a materials fee. Prerequisite(s): course 20A and previous or concurrent enrollment in 20B. Enrollment restricted to health sciences and biochemistry and molecular biology majors; other majors by permission. Enrollment limited to 20. *The Staff*

70. Introduction to Psychobiology. F

Brain sciences, behavior of animals and humans in the laboratory and field; the evolution of social behavior through natural selection. Topics include research techniques, neural mechanisms, sensory-motor processes, sensory systems, learning, biological rhythms, energy regulation. (General Education Code(s): IN.) *M. Zavanelli, E. Switkes*

75. Scientific Diving Certification (2 credits). F,S

Prerequisite for course 161/L, *Kelp Forest Ecology*, and all research diving performed under the auspices of UCSC or other academic institutions. Course work includes lectures and scuba diving. Topics include subtidal sampling techniques, navigation, low visibility diving, search and recovery, rescues, small boat use, oxygen administration for divers, technical blue water deep diving, physics, and physiology. Pick up application in room A414 EMS during preceding quarter. Students are billed a course materials fee that covers costs for equipment use, materials, and transportation. Prerequisite(s): skill level equal to Advanced Scuba Diver Certification, pass scuba physical, provide own scuba gear, be certified in CPR and First Aid; and interview: pass swim test and scuba skills test. Enrollment limited to 16. *The Staff*

80A. Female Physiology and Gynecology. F,S

Biochemical, medical, social, and clinical aspects of the female body. Emphasis will be on biological-chemical interactions in the female organs. Topics include female anatomy, cell physiology, endocrine functions, sexuality and intimacy, sexually transmitted diseases, puberty, pregnancy, menopause, birth control, abortion, immunity, cancer. (General Education Code(s): T2-Natural Sciences.) *M. Zavanelli*

80E. Evolution. *

Introduction to Darwinian evolution including how the theory was devised and a discussion of other theories proposed at the time. Explores the facts and evidence of evolutionary processes and the insights they provide in biological diversity, consequences of extinction, and emergence of new diseases. Includes a discussion of evolution and spirituality. (General Education Code(s): T2-Natural Sciences.) *M. Zavanelli*

80H. The Human Genome. F,W,S

Course will focus on understanding human genes. Accessible to non-science majors. Will cover principles of human inheritance and techniques used in gene analysis. The evolutionary, social, ethical, and legal issues associated with knowledge of the human genome will be discussed. (Also offered as Biomolecular Engineering 80H.

Students cannot receive credit for both courses.) (General Education Code(s): T2-Natural Sciences.) *W. Rothwell*

80J. Biology of AIDS. W

An overview of the biology of the acquired immunodeficiency syndrome (AIDS) and the social and legal issues that surround it are explored in a series of lectures by biology faculty and experts in the field. (General Education Code(s): T2-Natural Sciences.) *M. Zavanelli*

80N. Biology of Human Health and Nutrition. W

An introduction to the biology of human nutrition and its effects on human health. The course explores how nutrient balance, exercise, and age interact in their effects on human health, fitness, and disease. (General Education Code(s): T2-Natural Sciences.) *J. Thompson*

80P. Infectious Diseases and Human Populations. S

An overview of the biology of infectious diseases in human societies including why diseases vary in severity, how human bodies defend themselves, and how public health efforts cope with the problem of rapidly evolving pathogens. (General Education Code(s): T2-Natural Sciences.) *J. Thompson*

80R. Introduction to Philosophy of Biology. *

Introduction to core philosophical issues in the biological sciences. Covers such conceptual issues as the nature of evolutionary theory; choosing the unit of selection; the relationship between evolution and development; whether all biological phenomena are reducible to genes; and the definition of adaptions, and how to identify them. (Also offered as Philosophy 80R. Students cannot receive credit for both courses.) (General Education Code(s): T6-Natural Sciences or Humanities and Arts.) *The Staff*

89. Clinical Health Care: Organization and Financing. F

Introduces students to the principles of health care organizations, including how they are paid for, and examines social constructions of health care in the U.S. Key concepts include access, quality of care, and cultural competence; also features hands-on research. Recommended for health science majors and community studies majors focusing on health. Cannot receive credit for this course and course 89W. (General Education Code(s): IS.) A. Steiner

89W. Clinical Health Care: Organization and Financing. F

Introduces students to the principles of health care organizations, including how they are paid for, and examines social constructions of health care in the U.S. Key concepts include access, quality of care, and cultural competence; also features hands-on research. Recommended for health science majors and community studies majors focusing on health. Students cannot receive credit for this course and course 89. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; enrollment by permission of instructor at first class meeting. Enrollment limited to 25. (General Education Code(s): IS, W.) A. Steiner

99. Tutorial. F,W,S

Individual, directed study for undergraduates. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses

An introduction to biochemistry including biochemical molecules, protein structure and function, membranes, bioenergetics, and regulation of biosynthesis. Provides students with basic essentials of modern biochemistry and the background needed for upper-division biology courses. Students who plan to do advanced work in biochemistry and molecular biology should take the Biochemistry and Molecular Biology 100 series directly. Students cannot receive credit for this course after they have completed any two courses from the Biochemistry and Molecular Biology 100A, 100B, and 100C sequence with grades of Pass, C, or better. Prerequisite(s): courses 20A and 20B; and Chemistry 7 or 108A or 112A. (*F*) *R. Ludwig*, (*S*) *M. Dalbey*

100L. Biochemistry Laboratory. F

Basic techniques and principles of laboratory biochemistry including isolation and characterization of a natural product, manipulation of proteins and nucleic acids to demonstrate basic physical and chemical properties; and characterization of enzyme substrate interactions. Students are billed a materials fee. Prerequisite(s): course 100 (may enroll concurrently). Enrollment restricted to biological sciences and affiliated majors, non-majors by permission of instructor. Enrollment limited to 20. *The Staff*

105. Genetics. F,W,S

Mendelian and molecular genetics; mechanisms of heredity, mutation, recombination, and gene action. Students cannot receive credit for this course and course 106. Prerequisite(s): course 20A. (F) R. Kamakaka, (S) W. Sullivan

105L. Eukaryotic Genetics Laboratory. F,W,S

Classical and newly developed molecular-genetic techniques used to explore genetic variation in wild populations of the fruit fly *Drosophila melanogaster*. Topics include Mendelian fundamentals, mapping, design of genetic screens, bio-informatic and database analysis, genetic enhancers, and population genetics. Students are billed a materials fee. Prerequisite(s): course 105; course 100 or Biochemistry and Molecular Biology 100A recommended. Enrollment restricted to biological sciences and affiliated majors, non-majors by permission of instructor. *J. Lee*

105M. Microbial Genetics Laboratory. *

Exploration of basic genetics processes such as replication, mutation, DNA repair, recombination, gene exchange, population genetics, and evolution using microbial model organisms; classic techniques in microbial genetics and contemporary molecular techniques presented. Students are billed a materials fee. Prerequisite: course 105. Enrollment restricted to biological sciences and affiliated majors; other majors by permission of instructor. Enrollment limited to 16. *M. Dalbey*

107. Population Genetics. *

Basic population genetics and selected topics will be covered, including genetics of speciation, tempo and mode of evolution, genetics of social behavior, natural selection in human populations, and the impact of molecular studies on evolutionary theory. Students cannot receive credit for this course and course 207. Concurrent enrollment in course 107L is required. Prerequisite(s): courses 20A, 20B, 20C, and 105. Concurrent enrollment in course 107L is required. Offered in alternate academic years. *G. Pogson*

107L. Population Genetics Laboratory (2 credits). *

A companion course to 107, *Population Genetics*, that applies the theory developed in that course to related disciplines including conservation biology, ecology, agriculture, and population biology. Original scientific literature relating to the theory

developed in course 107 is read, and applied problem sets are solved by the students. Students cannot receive credit for this course and course 207L. Concurrent enrollment in course 107 is required. Prerequisite(s): courses 20A, 20B, 20C, and 105. Concurrent enrollment in course 107 is required. Offered in alternate academic years. *G. Pogson*

109L. Yeast Molecular Genetics Laboratory. W

The powerful genetic and molecular techniques available for yeast combined with the complete genomic DNA sequence offers opportunity for discovery of fundamental aspects of eukaryotic life. Lab providing practical experience in using yeast as an experimental system. Students are billed a materials fee. Prerequisite(s): course 105; 115 strongly recommended. Enrollment restricted to biological sciences and affiliated majors, non-majors by permission of instructor. Enrollment limited to 15. M. Ares, R. Kamakaka

110. Cell Biology. F,S

Covers the structure, organization, and function of eukaryotic cells. Topics include biological membranes, organelles, protein and vesicular trafficking, cellular interactions, the cytoskeleton, and signal transduction. Requires a good understanding of basic biochemistry and molecular biology. Prerequisite(s): course 100 or Biochemistry and Molecular Biology 100A. (F) D. Feldheim, (S) M. Rexach

110L. Cell Biology Laboratory. W

Fundamental aspects of cell biology explored through experimentation in a modern laboratory setting. Research topics include the structure and function of biological membranes; intracellular transport and organelle biogenesis; the cell cycle; and the cytoskeleton. Prerequisite(s): course 100 or Biochemistry 100A; previous or concurrent enrollment in course 110. Enrollment restricted to biological sciences and affilitated majors, non-majors by permission of instructor. Enrollment limited to 16. *M. Rexach*

111. Immunology. W

Immune systems—their manifestations and mechanisms of action. Prerequisite(s): courses 20A, 20B, 105, and 110. *M. Zuniga*

111L. Immunology Laboratory. S

Techniques of current immunology applicable to both cellular and humoral mechanisms. (Formerly course 123L.) Prerequisite(s): course 111. Enrollment restricted to biological sciences and affiliated majors. *M. Zuniga*

113. Mammalian Endocrinology. S

Introduction to the major endocrine organs, their hormones, and their receptors. Emphasis is on the following topics: structural analysis of the hormones and receptors at the protein and molecular level, regulation of expression of hormones and their receptors, and the biological functions of hormones. Prerequisite(s): course 100 or Biochemistry and Molecular Biology 100A. *L. Ogren*

114. Cancer Cell Biology. S

Focuses on the molecular and cellular mechanisms behind cancer. Topics covered include oncogenes, tumor suppressor genes, cell growth genes, checkpoint genes, telomeres, and apoptosis. Students will gain experience in reading the primary scientific literature. Prerequisite(s): course 110 or 115. A. Zahler

115. Eukaryotic Molecular Biology. W,S

Covers eukaryotic gene and genome organization; DNA, RNA, and protein

synthesis; regulation of gene expression; chromosome structure and organization; and the application of recombinant DNA technology to the study of these topics. Prerequisite(s): course 100 or Biochemistry and Molecular Biology 100A, and either course 105 or 106. Enrollment restricted to biological sciences and affiliated majors, non-majors by permission of instructor. (W) G. Hartzog, (S) H. Boeger

115L. Eukaryotic Molecular Biology Laboratory. W,S

A laboratory designed to provide students with direct training in basic molecular techniques. Each laboratory is a separate module which together builds to allow cloning, isolation, and identification of a nucleic acid sequence from scratch. Students cannot receive credit for this course and course 187L or 287L. Students are billed a materials fee. Prerequisite(s): course 100 or Biochemistry and Molecular Biology 100A, and previous or concurrent enrollment in course 115. Enrollment restricted to biological sciences and affiliated majors, non-majors by permission of instructor. Enrollment limited to 20. *M. Zavanelli*

117A. Advanced Genetics. F

An analysis of selected topics in the primary research literature including conditional lethality, classical fine structure genetics, the coding problem, control of operon expression, phage lambda, and developmental genetics. Students cannot receive credit for this course and 200A. Prerequisite(s): course 105 and Biochemistry and Molecular Biology 100A. W. Saxton

117B. Advanced Molecular Biology. W

An in-depth coverage of the structure, function, and synthesis of DNA, RNA, and proteins. Discussion of the roles of macromolecules in the regulation of information in the cell. Students cannot receive credit for this course and course 200B. Prerequisite(s): course 117A. *The Staff*

117C. Advanced Cell Biology. S

An in-depth coverage of topics in cellular and subcellular organization, structure and function in plants and animals. Emphasis on current research problems. Students cannot receive credit for this course and course 200C. Previous or concurrent enrollment in courses 110 and 117B is required. *D. Kellogg*

118. Biology of Disease. W

Primary objective is to provide an understanding of disease processes in humans. Integrates normal physiology and pathophysiology with the molecular and physiologic bases of diseases. Major emphasis on the physiological, molecular, and biochemical basis of diseases, with particular emphasis on the neuromuscular, cardiovascular, respiratory, renal, immune, and central nervous systems. Also addresses environmental risk factors in the etiology of diseases. Overviews provided, but covers selective topics considered most important in depth. (Also offered as Environmental Toxicology 138. Students cannot receive credit for both courses.) Prerequisite(s): courses 20A and 20B or equivalent and course 110. Course 130 is recommended. Offered in alternate academic years. *D. Smith*

119. Microbiology. F,W

Cell and molecular biology of bacteria and their viruses, including applications in medicine, public health, agriculture, and biotechnology. Prerequisite(s): course 100 or Biochemistry 100A. (F) K. Ottemann, (W) F. Yildiz

119L. Microbiology Laboratory. F,W

An introduction to the principles and practices of laboratory microbiology, with a

substantial presentation of optical microscopy. Students are billed a materials fee. Prerequisite(s): course 119. Course 119 may be taken concurrently. Enrollment restricted to biological sciences and affiliated majors, non-majors by permission of instructor. *The Staff*

120. Development. W

A description and analysis of selected developmental events in the life cycle of animals. Experimental approaches to understanding mechanisms are emphasized. Prerequisite(s): course 100 or Biochemistry and Molecular Biology 100A, and course 105. *J. Lee*

120L. Development Laboratory. S

Experimental studies of animal development using a variety of locally obtainable organisms. Approximately eight hours weekly, but it will often be necessary to monitor continuing experiments throughout the week. Concurrent enrollment in course 120 required. Students are billed a materials fee. Prerequisite(s): course 100 or Biochemistry and Molecular Biology 100A and course 110. Concurrent enrollment in course 120 required. Enrollment restricted to biological sciences and affiliated majors, non-majors by permission of instructor. *J. Lee*

122. Cellular and Organismal Toxicology. W

Emphases of biochemical, cellular, and organ system basis of intoxication, including dose-response relationships, biotransformation of toxicants, biochemical mechanisms underlying toxicity, factors influencing toxic action, and biomarkers of exposure. Emphasizes effects of various classes of toxins, including heavy metals and persistent synthetic organics, with a focus on susceptible biochemical/cellular processes of the central nervous, immune, hepatic, and renal target organ systems. Designed for advanced undergraduates. Students cannot receive credit for this course and course 202. (Also offered as Environmental Toxicology 102. Students cannot receive credit for both courses.) Prerequisite(s): courses 20A, 20B or equivalent; courses 100 and 110 are recommended. Enrollment restricted to juniors and seniors. *The Staff*

125. Introduction to Neuroscience. F

The structure and function of the nervous system. Topics include elementary electrical principles, biophysics and physiology of single nerve and muscle cells, signal transduction at synapses, development of the nervous system, and neural basis of behavior. Requires a good understanding of basic biochemistry, cell biology, and molecular biology. Prerequisite(s): course 100. Concurrent enrollment in course 105 or 110 is encouraged. *B. Chen*

126. Advanced Molecular Neuroscience. S

Explores in detail cellular and molecular events that underlay the function of the nervous system. Topics include neural development, axon guidance and regeneration, advanced electrical principles (synaptic transmission through a variety of receptors), synaptic plasticity, learning and memory, as well as several neural disorders. Prerequisite(s): course 125. Y. Zuo

128L. Neural Genetics Laboratory. *

A genetics laboratory course using the nematode *C. elegans* as a model organism to understand the development and function of the nervous system. Comprehensive research projects are designed to teach the basic methodology and principles of genetic analysis. Students are billed a materials fee. Prerequisite(s): courses 20A and 105. Enrollment restricted to biological sciences and affiliated majors, non-majors by

permission of instructor. Enrollment limited to 16. The Staff

130. Human Physiology. F,W,S

Function, organization, and regulation of the major organ systems of humans, with emphasis on integration among systems. Students cannot receive credit for this course and course 131. Prerequisite(s): courses 20A, 20B, 100, and 110. L. Ogren

130L. Human Physiology Laboratory (2 credits). F,W,S

Examines fundamental principles of systemic physiology focusing on the human. Students cannot receive credit for this course and course 131L. Students are billed a materials fee. (General Education Code(s): W satisfied by taking this course and course 189.) Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 20A, 20B, 100, and 110. Concurrent enrollment in 130 is required. Enrollment restricted to biological sciences and affiliated majors, non-majors by permission. *L. Ogren*

131. Animal Physiology. W

Principles and concepts underlying the function of tissues and organ systems in animals with emphasis on vertebrate systems. Students cannot receive credit for this course and course 130. Prerequisite(s): courses 20A, 20B, and 20C. *The Staff*

131L. Animal Physiology Laboratory (2 credits). W

Experiments conducted with primary focus on quantitative physiological principles of organ systems and intact organisms. Students cannot receive credit for this course and course 130L. Students are billed a materials fee. Prerequisite(s): courses 20A, 20B, and 20C. Concurrent enrollment in course 131 is required. Enrollment limited to 25. *The Staff*

133. Exercise Physiology. *

An advanced-level course concerning physiological and biochemical processes associated with human performance. Emphasis is on the integration of organ systems for exercise. Topics include metabolism and fuel utilization, cardiovascular and respiratory dynamics during activity, and the effects of training. Requires a good understanding of basic physiological function and anatomy. Students cannot receive credit for this course and course 233. By interview; permission of instructor required. Must be taken concurrently with course 133L. Course 131 or 132 recommended as preparation. Enrollment limited to 20. Offered in alternate academic years. *T. Williams*

133L. Exercise Physiology Laboratory (2 credits). *

An introduction to basic measurement techniques used in assessing the physiological response of humans to exercise. Sessions cover oxygen consumption, respiratory rate, and heart rate monitoring during aerobic and anaerobic activity. By interview: permission of instructor required; course 131 or 132 recommended as preparation. Must be taken concurrently with course 133. Enrollment limited to 20. Offered in alternate academic years. *T. Williams*

135. Human Functional Anatomy. S

Study of structure and function of the human body through lectures with an evolutionary perspective including regional anatomy and body systems. Students cannot receive credit for this course and Anthropology 207. (Also offered as Anthropology 107. Students cannot receive credit for both courses.) Prerequisite(s): courses 20A and 20B; or Anthropology 1. Concurrent enrollment in course 135L is required. Enrollment restricted to biological sciences and affiliated majors, non-

majors by permission of instructor. N. Dominy

135L. Human Functional Anatomy Laboratory. S

Study of structure and function of the human body using dissection, comparative vertebrate anatomy, anatomical models, and computer-assisted instruction. Students are billed a \$60.00 materials fee. Students cannot receive credit for this course and Anthropology 207L. (Also offered as Anthropology 107L. Students cannot receive credit for both courses.) Prerequisite(s): courses 20A and 20B. Concurrent enrollment in course 135 is required. Enrollment restricted to biological sciences and affiliated majors, non-majors by permission of instructor. Enrollment limited to 20. *N. Dominy*

136. Invertebrate Zoology. W

An examination of invertebrates and their habitats. Lecture format. Prerequisite(s): courses 20A, 20B, and 20C. Course 136L must be taken concurrently. Enrollment limited to 96. *B. Marinovic*

136L. Invertebrate Zoology Laboratory (2 credits). W

An examination of invertebrates and their habitats. Weekly laboratories or field trips. Students are billed a materials fee. Prerequisite(s): courses 20A, 20B, and 20C. Course 136 must be taken concurrently. Enrollment limited to 96. *B. Marinovic*

137. Ichthyology. F

An introduction to the biology of jawless, cartilaginous, and bony fishes—their classification, evolution, form, physiology, and ecology. Prerequisite(s): courses 20A, 20B, and 20C. Course 137L must be taken concurrently. Offered in alternate academic years. *G. Bernardi*

137L. Ichthyology Laboratory (2 credits). F

One laboratory session a week and several field trips to study the biology of fish. Students are billed a materials fee. Prerequisite(s): courses 20A, 20B, and 20C. Course 137 must be taken concurrently. Offered in alternate academic years. *G. Bernardi*

138. Biology and Ecology of the Vertebrates. *

An introduction to the fundamentals of vertebrate biology and ecology including evolutionary history, basic anatomy and physiology, systematics, ecology and major specializations for locomotion, reproduction, homeostasis, energy balance, and thermoregulation. (Also offered as Environmental Studies 105. Students cannot receive credit for both courses.) Prerequisite(s): course 20A, 20B, and 20C, or course 150 or Environmental Studies 24. Concurrent enrollment in course 138L required. Enrollment restricted to majors sponsored by biological sciences. Enrollment limited to 50. *The Staff*

138L. Biology and Ecology of the Vertebrates Laboratory (2 credits). *

Covers the basics of vertebrate anatomy and taxonomy with emphasis on local species identification. Lab includes a weekly film series and two Saturday trips to the California Academy of Sciences. Concurrent enrollment in course 105 is required. (Also offered as Environmental Studies 105L. Students cannot receive credit for both courses.) Prerequisite(s): course 20C, 150, or Environmental Studies 24. Concurrent enrollment in course 138 is required. Enrollment restricted to majors sponsored by biological sciences. Enrollment limited to 12. *The Staff*

139. Biology of Marine Mammals. S

A survey of cetaceans, pinnipeds, sirenians, and sea otters, including natural history, systematics, physiology, behavior, anatomy, and conservation. Prerequisite(s):

courses 20A, 20B, and 20C; course 138 is recommended. D. Costa

139L. Biology of Marine Mammals Laboratory (2 credits). S

Covers the basics of marine mammal taxonomy, anatomy, and field methods with an emphasis on local field identification and understanding of local species. Will include field trips to Long Marine Lab, Ano Nuevo, and Monterey Bay. Students are billed a materials fee. Prerequisite(s): courses 20A, 20B, and 20C. Must be taken concurrently with course 139. *D. Costa*

140. Behavioral Ecology. F

An introduction to social and reproductive behavior. Emphasis on studies of vertebrates in their natural habitat. Ideas concerning the evolution of social behavior, mating systems, and individual reproductive strategies. Case histories of well-studied animals that illustrate key principles in courtship and mating, parental behavior, and food-getting behavior. Prerequisite(s): courses 20A, 20B, and 20C. *The Staff*

141. Ecological Field Methods. *

Lectures and laboratory computer exercises designed to familiarize students with research methods, study design, statistical approaches, and analysis tools for ecological research. Students cannot receive credit for this course and Environmental Studies 104A. Prerequisite(s): courses 20A, 20B, and 20C; concurrent enrollment in course 141L is required. Course 140, 150, 152, or 160 recommended. Enrollment limited to 25. *D. Croll*

141L. Ecological Field Methods Laboratory. *

Field-oriented course in the study of animal ecology and behavior. Combines overview of methodologies and approaches to field research with practical field studies. Students are billed a materials fee. Prerequisite(s): courses 20A, 20B, and 20C; concurrent enrollment in course 141 is required. Course 140, 150, 152, or 160 recommended. Enrollment limited to 25. (General Education Code(s): W.) *D. Croll*

142. Ocean Ecosystems. W

Discussion of selected topics in animal ecology of the open sea: zooplankton production, variability of pelagic populations, food webs, deep-sea pelagic and benthic ecology, fisheries oceanography, and human effects on the open ocean biota. Students cannot receive credit for this course and course 242. (Also offered as Ocean Sciences 142. Students cannot receive credit for both courses.) Prerequisite(s): Biology 20A-B-C and 20L or an equivalent introductory biology sequence with lab; one ocean sciences course recommended. *M. Silver*

143. Herpetology. S

Lectures introduce students to evolution, development, physiology, behavior, ecology, and life history of reptiles and amphibians. The materials integrate with conceptual and theoretical issues of ecology, evolution, physiology, and behavior. Prerequisite(s): course 138, 140, 150, 175 or Environmental Studies 105. Concurrent enrollment in course 143L required. Enrollment limited to 25. Offered in alternate academic years. *B. Sinervo*

143L. Field Methods in Herpetological Research (2 credits). S

Field trips introduce students to natural history, censusing techniques, physiological ecology, and behavioral analysis of reptiles and amphibians. Laboratories introduce students to techniques for analyzing behavior and physiology. Field studies culminate with a group project in a natural setting. Some field trips may be held on weekends due to weather considerations. Some field trips may require students to

provide their own transportation, some transportation will be provided by UCSC. Students are billed a materials fee. Prerequisite(s): course 138, 140, 150, 175, or Environmental Studies 105. Concurrent enrollment in course 143 is required. Offered in alternate academic years. *B. Sinervo*

144. Ornithology. F

Introduction to the evolution, ecology, behavior, and natural history of birds, using exemplary case histories to illustrate key concepts in evolution, ecology, and behavior. Prerequisite(s): course 140, 150, or 175, or Environmental Studies 24 or 105. Concurrent enrollment in course 144L is required. Enrollment limited to 20. *The Staff*

144L. Ornithology Field Studies (2 credits). F

Field trips introduce students to field identification skills and field investigation of census, foraging behavior, migration, social behavior, and communication. Examination of specimens in the laboratory will be used to highlight the diversity and taxonomy of birds. Students are billed a materials fee. Some field trips may require students to provide their own transportation. Prerequisite(s): course 140, 150, or 175, or Environmental Studies 24 or 105. Concurrent enrollment in course 144 is required. Enrollment limited to 20. Offered in alternate academic years. *The Staff*

145L. Behavioral Ecology Field Course. *

A field-based course introducing students to concepts and methods for studying behavioral ecology in nature. Students will conduct observations and field experiments on various local model organisms including elephant seals, hummingbirds, sparrows, lizards, ants, bees, frogs, and salamanders. Students are billed a materials fee. Prerequisite(s): course 140 or 150 or Environmental Studies 105; satisfaction of the Entry Level Writing and Composition requirements. Enrollment limited to 25. Offered in alternate academic years. (General Education Code(s): W.) *B. Lyon, B. Sinervo*

150. Ecology. W,S

Focuses on physiological, behavioral, and population ecology, and on linking ecological processes to evolution. It includes basic principles, experimental approaches, concepts of modeling, and applications to ecological problems. Prerequisite(s): courses 20A, 20B, and 20C. (W) B. Lyon, (S) B. Marinovic

152. Community Ecology. S

Develops the major themes of community biology: structure, trophic dynamics, succession, complex interactions among species, herbivory, evolution and coevolution. Uses case histories of well-studied marine and terrestrial systems. Students cannot receive credit for this course and course 252. Prerequisite(s): course 150 or Environmental Studies 24. Enrollment limited to 50. *L. Fox*

156. Marine Plankton. *

Review of morphology, systematics, and natural history of major marine planktonic taxa and evaluation of local plankton forms. Two lecture/lab sessions of three and one-half hours each, and two field trips during the quarter. (Also offered as Ocean Sciences 156. Students cannot receive credit for both courses.) Concurrent enrollment in course 156L is required; one of the following recommended as preparation: Ocean Sciences 118, 142, or 242; or Biology 136, 146, or 170. Recommended for upper-division and graduate students. *M. Silver*

156L. Marine Plankton Laboratory (2 credits). *

Two lab meetings weekly. Concerned primarily with evaluation of local plankton forms. (Also offered as Ocean Sciences 156L. Students cannot receive credit for both courses.) Concurrent enrollment in course 156 is required; one of the following recommended as preparation: Ocean Sciences 118, 142, or 242; or Biology 136, 146, or 170. *M. Silver*

158. Ecology of Reefs, Mangroves, and Seagrasses. W

Integrated treatment of coral reefs, sea grasses, and mangroves emphasizing interactions and processes through time. Major topics: biological and geological history, biogeography, evolution and ecology of dominant organisms, biodiversity, community and ecosystem ecology, geology, biogeochemistry, global change, human impacts. (Also offered as Ocean Sciences 157. Students cannot receive credit for both courses.) Prerequisite(s): courses 20A, 20B, and 20C. *D. Potts*

159. Biological Oceanography. S

Biological description of sea, with emphasis on processes and patterns. Topics include microbial dynamics, phytoplankton and zooplankton production, and ecology of marine food webs. Emphasis placed on understanding how physical, chemical, and geological environment shapes biology and ecology of oceans, including such topics as harmful algal blooms, global estimates of productivity, and effects of humans on environment. Students may not receive credit for this course and Ocean Sciences 230. (Also offered as Ocean Sciences 130. Students cannot receive credit for both courses.) Prerequisite(s): course 20A, 20B, and 20C; previous course in ocean sciences recommended. Enrollment restricted to juniors (with instructor approval), seniors, graduate students. *R. Kudela*

160. Marine Ecology. W

Paradigms and designs in marine ecology. A review of the paradigms that have shaped our understanding of marine ecology; analysis and discussion of experiments with these paradigms. Students cannot receive credit for this course and course 260. Prerequisite(s): courses 20A, 20B, and 20C; course 140 or 150 recommended. *M. Carr*

160L. Marine Ecology Laboratory. S

Supervised individual research projects in experimental marine biology. Students carry out a complete research project, including (1) the formation of hypotheses; (2) the design and implementation of experiments; (3) collection, analysis, and interpretation of data; and (4) write-up of an oral presentation. Students are billed a materials fee. Prerequisite(s): course 160; satisfaction of the Entry Level Writing and Composition requirements. Enrollment limited to 20. Offered in alternate academic years. (General Education Code(s): W.) *P. Raimondi, M. Carr*

161. Kelp Forest Ecology. F

Study of organization of kelp forests as models for examining biological communities. The physical and biotic factors responsible for community organization of kelp forests are explored using original literature and data collected in course 161L. Class meets one full morning each week. Prerequisite(s): by interview only; courses 20A, 20B, and 20C are required. Students must pass the University Research Diving Certification (contact the diving safety officer, Institute of Marine Sciences, for further information). Enrollment restricted to seniors. Course 161L must be taken concurrently; courses 136/L, 150, or 170/L are recommended. Enrollment limited to 24. Offered in alternate academic years. *P. Raimondi, M. Carr*

161L. Kelp Forest Ecology Laboratory. F

Fieldwork using SCUBA to quantitatively and qualitatively examine the abundance and distribution of organisms in kelp forests, with additional laboratory work. Culminates with a directed individual research project. Class meets one full morning each week. Students are billed a materials fee. Admission by interview. Prerequisite(s): courses 20A, 20B, and 20C; satisfaction of the Entry Level Writing and Composition requirements; course 161 must be taken concurrently; course(s) 136/L, 150, or 170/L are recommended. Students must pass the University Research Diving Certification (contact the Diving Safety Officer, Institute of Marine Sciences, for further information). Enrollment limited to 24. Offered in alternate academic years. (General Education Code(s): W.) *P. Raimondi, M. Carr*

162A. Marine Ecology Field Quarter: Marine Ecology with Laboratory. *

Total immersion in marine ecology for very motivated students. Students develop a research project during first five weeks on campus and then spend five weeks of immersion in directed research without distraction in isolated locations off campus (past locations include the Gulf of California in Mexico and Moorea in French Polynesia). Not available through University Extension. No other courses may be taken during this quarter. Students must sign a contract agreeing to standards of behavior outlined in the UCSC Rule Book and by the instructors. Students are billed a materials, transportation (not airfare), and room and board fee. Paradigms and designs in marine ecology. A review of the paradigms that have shaped our understanding of marine ecology and analysis and discussion of experiments with these paradigms. Students carry out a complete research project, including the formation of hypotheses; the design and implementation of experiments; the collection, analysis, and interpretation of data; and the write-up and oral presentation of results. Admission by interview during previous winter quarter. Courses 162A, 162B, 162C, and 162D are equivalent to courses 137, 137L, 160, and 160L for major requirements. Courses 162A, 162B, 162C, and 162D must be taken concurrently. Enrollment limited to 26. Offered in alternate academic years. P. Raimondi

162B. Marine Ecology Field Quarter: Ichthyology with Laboratory. * An introduction to the biology of jawless, cartilaginous, and bony fishes—their classification, evolution, form, physiology, and ecology. Admission by interview during previous winter quarter. Courses 162A, 162B, 162C, and 162D are equivalent to courses 137, 137L, 160, and 160L for major requirements. Courses 162A, 162B, 162C, and 162D must be taken concurrently. Enrollment limited to 26. Offered in alternate academic years. *G. Bernardi*

162C. Marine Ecology Field Quarter: Methods in Field Ecology. *

Students learn quantitative methods for field experiments and surveys. Emphasis will be on marine environments, but there will also be exposure to terrestrial systems. This is the lecture component to course 162D. No text is required for this course; instead, readings from the current literature will be assigned. Students are evaluated on written independent field project proposals and class participation. Admission by interview during previous winter quarter. Courses 162A, 162B, 162C, and 162D are equivalent to courses 137, 137L, 160, and 160L for major requirements. Courses 162A, 162B, 162C, and 162D must be taken concurrently. Enrollment limited to 26. Offered in alternate academic years. *P. Raimondi*

162D. Marine Ecology Field Quarter: Methods in Field Ecology Laboratory (4 credits). **

This is laboratory portion of course 162C. Students carry out independent field projects under the supervision of course instructors. All work is done during the 5–6 week off-campus portion of course 162. Students are evaluated on field techniques,

the final write-up of their independent field projects, and class participation. Admission by interview during previous winter quarter. Courses 162A, 162B, 162C, and 162D are equivalent to courses 137, 137L, 160, and 160L for major requirements. Courses 162A, 162B, 162C, and 162D must be taken concurrently. Enrollment limited to 26. Offered in alternate academic years. *G. Bernardi*

163. Marine Conservation Biology. F

Initially undertakes an in-depth comparison of the biology and conservation of marine versus terrestrial ecosystems. With this foundation, course examines marine biodiversity loss resulting from overexploitation, habitat loss, species introduction, and pollution, with particular emphasis on the resulting trophic cascades, biodiversity losses, and climate change. Students cannot receive credit for this course and Environmental Studies 120. Prerequisite(s): courses 20A, 20B, and 20C; Ocean Sciences 101 recommended. *D. Croll*

165A. Ecology and Conservation in Practice Supercourse: Ecological Field Methods. S

An intensive, on-site learning experience in terrestrial field ecology and conservation, using the University of California Natural Reserves. Students study advance concepts in ecology, conservation, and field methods for four weeks, then experience total immersion in field research at the UC Natural Reserves. Lectures, field experiments, and computer exercises familiarize students with research methods, study design, statistical approaches, and analytical tools for ecological research. Enrollment by application. Prerequisite(s): Biology 20A, 20B, 20C or Environmental Studies 23, 24, 100; and Applied Mathematics and Statistics 7 and 7L. Concurrent enrollment in Biology 165B-C-D or Environmental Studies 109B-C-D is required. Satisfies the senior exit requirement for biological sciences majors and satisfies the senior exit requirement for environmental studies majors by prior approval. Students cannot receive credit for this course and Biology 141, 141L, Environmental Studies 104A or 196A. (Also offered as Environmental Studies 109A. Students cannot receive credit for both courses.) Enrollment limited to 25. *E. Zavaleta*, *D. Croll*

165B. Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory. S

Field-oriented course in ecological research. Combines overview of methodologies and approaches to field research with practical field studies. Students complete field projects in ecology and also learn the natural history of the flora and fauna of California . Students are billed a materials fee. Enrollment by application. Prerequisite(s): Entry Level Writing and Composition requirements; Biology 20A, 20B, 20C or Environmental Studies 23, 24, 100; and Applied Mathematics and Statistics 7 and 7L. Concurrent enrollment in Biology 165A-C-D or Environmental Studies 109A-C-D is required. Satisfies the senior exit requirement for biological sciences majors and satisfies the senior exit requirement for environmental studies majors by prior approval. Students cannot receive credit for this course and Biology 141, 141L, Environmental Studies 104A or 196A. (Also offered as Environmental Studies 109B. Students cannot receive credit for both courses.) Enrollment limited to 25. (General Education Code(s): W.) *E. Zavaleta, D. Croll*

165C. Ecology and Conservation in Practice Supercourse: Functions and Processes of Terrestrial Ecosystems. S

From lectures and discussion of terrestrial community and ecosystem ecology, students work individually or in small groups to present an idea for a project, review relevant literature, develop a research question/hypothesis, design and perform an

experiment, collect and analyze data, and write a report. The instructor evaluates the feasibility of each student's project before it begins. Enrollment by application. Prerequisite(s): Biology 20A, 20B, 20C or Environmental Studies 23, 24, 100; and Applied Mathematics and Statistics 7 and 7L. Concurrent enrollment in Biology 165A-B-D or Environmental Studies 109A-B-D is required. Satisfies the senior exit requirement for biological sciences majors and satisfies the senior exit requirement for environmental studies majors by prior approval. Students cannot receive credit for this course and Biology 141, 141L, Environmental Studies 104A or 196A. (Also offered as Environmental Studies 109C. Students cannot receive credit for both courses.) Enrollment limited to 25. *E. Zavaleta*, *D. Croll*

165D. Ecology and Conservation in Practice Supercourse: Conservation in Practice. S

Focuses on current issues in environmental and conservation biology and the emerging field methods used to address them. From field-oriented lectures about current issues in environmental and conservation biology, students pursue research project as individuals and small groups to develop hands-on experience with field skills in conservation research and resource management. Enrollment by application. Prerequisite(s): Biology 20A, 20B, 20C or Environmental Studies 23, 24, 100; and Applied Mathematics and Statistics 7 and 7L. Concurrent enrollment in Biology 165A-B-C or Environmental Studies 109A-B-C is required. Satisfies the senior exit requirement for biological sciences majors and satisfies the senior exit requirement for environmental studies majors by prior approval. Students cannot receive credit for this course and Biology 141, 141L, Environmental Studies 104A or 196A. (Also offered as Environmental Studies 109D. Students cannot receive credit for both courses.) Enrollment limited to 25. *E. Zavaleta*, *D. Croll*

166. Plant Physiology. S

Cellular and organismal functions important in the life of green plants. Prerequisite(s): courses 20A and 20B; a course in cell biology recommended; courses 100 and 110 are highly recommended as preparation. *L. Goff*

168. Systematic Botany of Flowering Plants. S

An examination of the taxonomy and evolution of flowering plants. Special topics include phylogenetics and cladistics, plant species concepts, and modern methods of systematic research. Prerequisite(s): courses 20A, 20B, and 20C; or Environmental Studies 24. Must be taken concurrently with course 168L. *The Staff*

168L. Systematic Botany of Flowering Plants Laboratory (2 credits). S

Weekly laboratory concerned primarily with California flora and plant families. Several field trips. Students are billed a materials fee. Prerequisite(s): courses 20A and 20B; and 20C or Environmental Studies 24. Must be taken concurrently with course 168. *The Staff*

169. Plant Ecology. F

An exploration of the ecology of plant form, function, distribution, abundance, and diversity. Topics include plant adaptations to environmental conditions, life history variation, competition, reproductive ecology, herbivory, and patterns of diversity. Lecture with discussions of original papers and independent field project. Students cannot receive credit for this course and courses 165 or 269. Prerequisite(s): course 20A, 20B, and 20C; or Environmental Studies 24. Course 150 is recommended. Enrollment limited to 30. *I. Parker*

169L. Field Methods in Plant Ecology. F

Hands-on exploration of the concepts and techniques of plant ecology. A combination of lab, greenhouse, and field-based exercises (irrespective of weather conditions). Statistical analysis and scientific writing. One required weekend field trip. Students cannot receive credit for this course and courses 165 or 269L. Students are billed a materials fee. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 20A, 20B, and 20C; or Environmental Studies 24. Concurrent enrollment in course 169 is required. Course 150 is recommended. Enrollment limited to 30. (General Education Code(s): W.) *I. Parker*

170. Marine Botany. S

An introduction to the biology of marine algae, fungi, and angiosperms with regard to form and function. Major boreal, temperate, and tropical marine plant communities. Lecture format. Prerequisite(s): courses 20A, 20B, and 20C. Must be taken concurrently with course 170L. *The Staff*

170L. Marine Botany Laboratory (2 credits). S

One laboratory weekly and several field trips. Focuses on marine algae, fungi, and angiosperms. Students are billed a materials fee. Prerequisite(s): courses 20A, 20B, and 20C. Must be taken concurrently with course 170. Enrollment limited to 20. *The Staff*

171. Marine Microbial Ecology. S

The study of marine bacteria and their role in the marine ecosystem. Emphasis on biochemistry and physiology in relation to metabolic activity and elemental cycles, trophic interactions, and flows of material and energy in marine food webs. Exams and term paper required. Students cannot receive credit for this course and Ocean Sciences 218. (Also offered as Ocean Sciences 118. Students cannot receive credit for both courses.) Prerequisite(s): courses 20A, 20B, 20C, and Chemistry 1C. *J. Zehr*

175. Evolution. F,W

An examination of the history and mechanisms of evolutionary change. Topics include molecular evolution, natural and sexual selection, adaptation, speciation, biogeography, and macroevolution. Prerequisite(s): courses 20A, 20B, 20C, and 105. (F) G. Pogson, (W) The Staff

180. Research Programming for Biologists and Biochemists. W

No programming experience required, but basic computer skills assumed. Students without prior programming experience taught basic proficiency in Perl, BioPerl, and other Perl libraries needed to analyze, transform, and publish biological data. Students required to solve a research problem as a final project. Lectures and labs are shared with Biomolecular Engineering 60. Students cannot receive credit for this course and Biomolecular Engineering 60. (Also offered as Biomolecular Engineering 160. Students cannot receive credit for both courses.) Prerequisite(s): Biology 20A or 21A. Previous or concurrent enrollment in course 160L is required. *J. Stuart*

180L. Research Programming for Biologists and Biochemists Laboratory (1 credit). W

Laboratory sequence illustrating topics covered in course 160. One two-hour laboratory per week. Students cannot receive credit for this course and Biomolecular Engineering 60L. (Also offered as Biomolecular Engineering 160L. Students cannot receive credit for both courses.) Prerequisite(s): course 20A or 21A. Concurrent enrollment in course 180 is required. *J. Stuart*

181. Computational Biology Tools. W,S

Hands-on laboratory geared to teach basic tools used in computational biology (motif searching, primer selection, sequence comparison, multiple sequence alignment, genefinders, phylogenetics analysis, X-ray crystallography software). Web- and Unix-based tools/databases are used. Open to all science students; no prior Unix experience required. (Also offered as Biomolecular Engineering 110. Students cannot receive credit for both courses.) Prerequisite(s): course 20B and Chemistry 1C. Enrollment limited to 25. *D. Gerloff*

183F. Undergraduate Research in Ecology and Evolutionary Biology (2 credits). F,W,S

Supervised undergraduate research on a project with an ecology and evolutionary biology faculty member for students considering a career based on biological research. Class reviews the philosophy of science, basic statistics, and library searches, and emphasizes how to input data, create graphs, and prepare results for publication, posters, and talks. Prerequisite(s): one upper-division course in ecology, evolution, behavior, or physiology; and by permission of instructor. Enrollment restricted to sophomore, junior, and senior EEB majors conducting research project with EEB faculty member. *The Staff*

183L. Undergraduate Research in Ecology and Evolutionary Biology. F,W,S Supervised undergraduate research on a project with an ecology and evolutionary biology faculty member for students considering a career based on biological research. Class reviews the philosophy of science, basic statistics, and library

research. Class reviews the philosophy of science, basic statistics, and library searches, and emphasizes how to input data, create graphs, and prepare results for publication, posters, and talks. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; one upper-division course in ecology, evolution, behavior, or physiology; and by permission of instructor. Enrollment restricted to sophomore, junior, and senior EEB majors conducting research project with EEB faculty member. Prerequisite(s): course 20B and Chemistry 1C. (General Education Code(s): W.) *The Staff*

186F. Undergraduate Research in MCD Biology (2 credits). F,W,S

Supervised undergraduate research in laboratory of an MCD biology faculty member accompanied by weekly lectures on ethical and practical scientific issues. Topics include laboratory safety; the scientific method; the collection, treatment, and presentation of data; critical evaluation of scientific literature; scientific misconduct; and peer review. Career issues, including how to apply for admission to graduate and professional schools, also discussed. Prerequisite(s): courses 20A and 20B; at least one of course 100, 105, or Biochemistry 100A; and permission of instructor. May be repeated for credit. *The Staff*

186L. Undergraduate Research in MCD Biology. F,W,S

Supervised undergraduate research in laboratory of an MCD biology faculty member accompanied by weekly lectures on ethical and practical scientific issues. Topics include laboratory safety; the scientific method; the collection, treatment, and presentation of data; critical evaluation of scientific literature; scientific misconduct; and peer review. Career issues, including how to apply for admission to graduate and professional schools, also discussed. Prerequisite(s): courses 20A and 20B; at least one of course 100, 105, or Biochemistry 100A; and permission of instructor. *The Staff*

187L. Molecular Biotechnology Laboratory. F

An intensive molecular biology laboratory that presents procedures used in molecular and biotechnology research. Topics and procedures include DNA/RNA isolation,

cloning and library construction, southern and northern hybridization, DNA fingerprinting, PCR, manual and automated sequencing, and computer methods for analyzing molecular data. New procedures currently being developed in biotechnology industries are presented by industry representatives. Students cannot receive credit for this course and course 116L or 287L. Students are billed a materials fee. Prerequisite(s): courses 20A, 20B, 20C, 100, and 110. Enrollment limited to 20. *M. Zavanelli*

188. Supervised Teaching and Writing in Biology Courses. W,S

Teaching, writing, and the teaching of writing in associated survey level biology courses. Topics include teaching scientific writing, styles, techniques, research, analysis, and guiding peer reviews, in addition to evaluating, critiquing, and developing written assignments in conjunction with teaching responsibilities. Prerequisite(s): satisfaction of the Entry Level Writing requirement. Application required. Enrollment restricted to junior and senior upper-division qualified students meeting application requirements. (Formerly course 188A.) (General Education Code(s): W.) *J. Thompson*

189. Health Sciences Internship. F,W,S

Structured off-campus learning experience providing hands-on experience and preprofessional mentoring in a variety of health-related settings. Interns are trained and supervised by a professional at their placement and receive academic guidance from their faculty sponsor. Students spend 10–12 hours per week at their placement, participate in weekly discussion meetings on campus, keep a reflective journal, and submit a final paper. Prerequisite(s): course 20L; satisfaction of the Entry Level Writing and Composition requirements; students interview with health sciences internship coordinator; applications are due one quarter in advance to the Health Sciences Internship Office. Enrollment restricted to health sciences majors. (General Education Code(s): W satisfied by taking this course and course 130L.) May be repeated for credit. (W) M. Zuniga, (FS) G. Hartzog

189F. Health Sciences Internship (2 credits). F,W,S

Structured off-campus learning experience providing hands-on experience and preprofessional mentoring in a variety of health-related settings. Interns are trained and supervised by a professional at their placement, and receive academic guidance from their faculty sponsor. Students spend six hours per week at their placement, keep a reflective journal, and submit a final paper. Prerequisite(s): course 20L; students interview with health sciences internship coordinator. Applications due one quarter in advance to the Health Sciences Internship Office. May be repeated for credit. *G. Hartzog, J. Tamkun*

190. Senior Seminar (2 credits). S

Satisfies the senior exit requirement for all biological sciences majors. The Staff

191. Teaching College Biology.

Course designed to provide undergraduates at the upper-division level with an opportunity to participate in planning and teaching college-level biology. May not be repeated for credit. *The Staff*

193. Field Study. F,W,S

Provides for individual programs of study carried out under the direct supervision of a member of the Biology Department and using resources not normally available on campus. With permission of the department, may be repeated for credit, or two or three courses may be taken concurrently. Students submit petition to sponsoring

agency. May be repeated for credit. The Staff

193F. Field Study (2 credits). F,W,S

Provides for individual programs of study carried out under the direct supervision of a member of the Biology Department and using resources not normally available on campus. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

195. Senior Thesis Research. F,W,S

An individually supervised course, with emphasis on independent research, to culminate in a senior thesis. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198. Independent Field Study. F,W,S

Provides for individual programs of study (a) by means other than the usual supervision in person, or (b) when the student is doing all or most of the course work off campus. With permission of the department, may be repeated for credit, or two or three courses taken concurrently. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198F. Independent Field Study (2 credits). F,W,S

Provides for two units of independent field study (a) by means other than the usual supervision in person, or (b) when the student is doing all or most of the course work off campus. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Reading, discussion, written reports, and laboratory research on selected biological topics, using facilities normally available on campus. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Two unit Tutorial. Reading, discussion, written reports, and laboratory research on selected biological topics, using facilities normally available on campus. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

200A. Advanced Genetics. F

An analysis of selected topics in the primary research literature including conditional lethality, classical fine structure genetics, the coding problem, control of operon expression, phage lambda, and developmental genetics. Students cannot receive credit for this course and course 117A. Enrollment restricted to graduate students. Qualified undergraduates may enroll in course 117A. W. Saxton

200B. Advanced Molecular Biology. W

An in-depth coverage of the structure, function, and synthesis of DNA, RNA, and proteins. Discussion of the roles of macromolecules in the regulation of information in the cell. Students cannot receive credit for this course and course 117B. Prerequisite(s): course 200A. Enrollment restricted to graduate students. Qualified advanced undergraduates may enroll in course 117B. *The Staff*

200C. Advanced Cell Biology. S

An in-depth coverage of topics in cellular and subcellular organization, structure, and function in plants and animals. Emphasis on current research problems. Students

cannot receive credit for this course and course 117C. Prerequisite(s): course 200B. Enrollment restricted to graduate students. Qualified undergraduates may enroll in course 117C. *D. Kellogg*

201. RNA Processing. F

An advanced graduate-level course on biological aspects of RNA function and processing in eukaryotes. Lectures and discussions will be developed using the current literature. Prerequisite(s): course 200B or permission of instructor. Enrollment restricted to graduate students. Enrollment limited to 15. *M. Ares*

202. Cellular and Organismal Toxicology. *

Emphasizes biochemical, cellular, and organ system basis of intoxication, including dose-response relationships, biotransformation of toxicants, biochemical mechanisms underlying toxicity, factors influencing toxic action, and biomarkers of exposure. Emphasizes effects of various classes of toxins, including heavy metals and persistent synthetic organics, with a focus on susceptible biochemical/cellular processes of the central nervous, immune, hepatic, and renal target organ systems. Students cannot receive credit for this course and Environmental Toxicology 102 or Biology 122. (Also offered as Environmental Toxicology 202. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. *D. Smith*

203. Ribosomes and Translation. *

Covers the field of ribosome research in depth, including the structure and function of ribosomes and the molecular mechanisms of protein synthesis. Begins with historical review of the ribosome field and proceeds to the most recent findings. Focus is on central questions: (1) How is the accuracy of the aminoacyl-tRNA selection determined? (2) What is "accommodation"? (3) What is the mechanism of peptide bond formation (peptidyl transferase)? (4) What is the mechanism of translocation? (5) What are the mechanistic roles of the ribosome and translation factor EF-G in translocation? (6) To what extent is the mechanism of translation determined by RNA? (7) Why is RNA so well suited for the ribosome? (8) How did translation evolve from an RNA world? Prerequisite(s): Biochemistry and Molecular Biology 100A, course 200B or permission of instructor. Enrollment restricted to graduate students. *H. Noller*

204. Chromatin. *

Eukaryotic DNA is complexed with histones to form chromatin. This course focuses on the ways in which chromatin influences and is manipulated to regulate gene expression. Prerequisite(s): courses 105 and 115; undergrads by permission of instructor. Enrollment restricted to graduate students. Enrollment limited to 15. Offered in alternate academic years. *G. Hartzog, J. Tamkun*

206. Introduction to Stem Cell Biology. F

Fundamental issues and experimental approaches of stem cell biology research. Course divides into three sections: basic principles, experimental approaches, and emerging areas of research. Topics covered include stem cell self-renewal and differentiation, the microenvironment, epigenetics, cell cycle regulation, as well as how basic research translates to medical therapeutics. Enrollment restricted to graduate students. *W. Sullivan*

206L. Current Protocols in Stem Cell Biology. S

Provides students with hands-on experience in embryonic stem cell culture methods. Enrollment restricted to graduate students; qualified undergraduates may enroll by permission of instructor. Enrollment limited to 10. *D. Feldheim*

207. Population Genetics. *

Basic population genetics and selected topics are covered including genetics of speciation, tempo and mode of evolution, genetics of social behavior, natural selection in human populations, and the impact of molecular studies on evolutionary theory. Students cannot receive credit for this course and Biology 107. Concurrent enrollment in course 207L is required. Enrollment restricted to graduate students. Offered in alternate academic years. *G. Pogson*

207L. Population Genetics Laboratory (2 credits). *

A companion course to 207, *Population Genetics*, that applies the theory developed in that course to related disciplines including conservation biology, ecology, agriculture, and population biology. Original scientific literature relating to the theory developed in course 207 is read, and applied problem sets are solved by the students. Students cannot receive credit for this course and course 107L. Must be taken concurrently with course 207. Enrollment restricted to graduate students. Offered in alternate academic years. *G. Pogson*

208. Cellular Signaling Mechanisms. *

All eukaryotic cells utilize intricate signaling pathways to control such diverse events as cell-cell communication, cell division, and changes in cell morphology. This course covers the molecular basis of these cellular signaling pathways, focusing on the most current research. Prerequisite(s): courses 105, 110, and 115. Enrollment restricted to seniors and graduate students. Enrollment limited to 15. Offered in alternate academic years. *D. Kellogg*

210. Experimental Systems Biology. S

Topics include, but are not limited to, microarray production techniques, experimental strategies using microarrays, extraction and analysis of microarray data, DNA and protein arrays, SNP analysis, gene expression analysis, materials analysis, and advanced analysis of data using bioinformatic techniques. (Formerly *Application and Analysis of Microarrays*.) (Also offered as Biomolecular Engineering 210. Students cannot receive credit for both courses.) Enrollment limited to graduate students; undergraduates may enroll with permission of instructor. *The Staff*

214. Cancer Cell Biology. S

Focuses on molecular and cellular mechanisms behind cancer. Topics include oncogenes, tumor suppressor genes, cell growth genes, checkpoint genes, telomeres, and apoptosis. Students gain experience in understanding the cutting edge of cancer drug design and formulate their own proposals for applying molecular and cellular biological techniques toward cancer diagnosis and treatment. Enrollment restricted to graduate students. Enrollment limited to 10. A. Zahler

226. Advanced Molecular Neuroscience. S

Basis of neural behavior at the cellular, molecular and system levels. First half of course focuses on cellular, molecular, and developmental aspects of the nervous system and covers two sensory systems: olfaction and auditory. Last half of course concerns higher-level functions of the nervous system, such as processing and integrating information. Discusses human diseases and disorders. Enrollment restricted to graduate students. *Y. Zuo*

233. Exercise Physiology. *

Physiological and biochemical processes associated with human performance. Students are expected to be familiar with basic organ physiology, biochemistry, and human anatomy. Focuses on bioenergetics and fuel utilization, cardiovascular and respiratory dynamics during activity, and the effects of training, age, and disease on exercise. Laboratory sessions incorporated into study sections. Students cannot receive credit for this course and course 133. Prerequisite(s): by interview; course 131 or 132 recommended as preparation. Enrollment restricted to graduate students. Enrollment limited to 20. Offered in alternate academic years. *T. Williams*

242. Ocean Ecosystems. W

Discussion of selected topics in animal ecology of the open sea: zooplankton production, variability of pelagic populations, food webs, deep sea pelagic and benthic ecology, fisheries oceanography, and human effects on the open ocean biota. Students cannot receive credit for this course and course 142. (Also offered as Ocean Sciences 242. Students cannot receive credit for both courses.) Prerequisite(s): courses 20A, 20B, 20C, and 20L or an equivalent introductory biology sequence with lab; one ocean sciences course recommended. Enrollment restricted to graduate students. *M. Silver*

250A. Scientific Skills. F

Exposes graduate students to teaching skills, understanding the scientific method, searching and organizing literature, grant proposal and scientific writing, data management and presentation, and scientific speaking. Students are evaluated on their participation and the quality of a written research proposal. Enrollment restricted to graduate students. *M. Carr*

250B. Advanced Organismal Biology. F

Consists of lectures focusing on pivotal topics in ecology and evolution. Relevant background material is developed followed by a critical analysis of readings from the primary literature. Designed to give graduate (and advanced undergraduate) students direct contact with the major areas of research that are currently at the forefront of organismal biology. Enrollment restricted to graduate students. *The Staff*

252. Community Ecology. S

Develops the major themes of community ecology: structure, trophic dynamics, succession, complex interactions among species, herbivory, evolution, and coevolution. Uses case histories of well-studied marine and terrestrial systems. Students cannot receive credit for this course and course 152. Enrollment restricted to graduate students. *L. Fox*

260. Marine Ecology. W

Paradigms and designs in marine ecology. A review of the paradigms that have shaped our understanding of marine ecology; analysis and discussion of experiments with these paradigms. Students cannot receive credit for this course and course 160. Enrollment restricted to graduate students. *M. Carr*

260L. Experimental Marine Ecology. S

Supervised individual research projects in experimental marine biology. Students carry out a complete research project, including (1) the formation of hypotheses, (2) the design and implementation of experiments, (3) collection, analysis, and interpretation of data, and (4) the write-up of an oral presentation. Prerequisite(s): course 260; and interview to assess ability to carry out field project. Enrollment limited to 20. Offered in alternate academic years. *P. Raimondi, M. Carr*

269. Plant Ecology. F

An exploration of the ecology of plant form, function, distribution, abundance, and diversity. Topics include plant adaptations to environmental conditions, life history

variation, competition, reproductive ecology, herbivory, and patterns of diversity. Lecture with discussions of original papers and independent field project. Students cannot receive credit for this course and course 169. Prerequisite(s): course 150 or Environmental Studies 24 or permission of instructor. Concurrent enrollment in course 269L is required except by permission of instructor. Enrollment restricted to graduate students. *I. Parker*

269L. Field Methods in Plant Ecology Laboratory. F

Hands-on exploration of the concepts and techniques of plant ecology. A combination of lab, greenhouse, and field-based exercises (irrespective of weather conditions), statistical analysis, and scientific writing. One required weekend field trip. Students cannot receive credit for this course and course 169. Concurrent enrollment in course 269 is required. Enrollment restricted to graduate students. Enrollment limited to 2. *I. Parker*

274. Evolutionary Game Theory. *

Reviews static equilibrium concepts, games of incomplete information, and the traditional theory of dynamic games in discrete time. Develops recent evolutionary game models, including replicator and best reply dynamics, and applications to economics, computer science, and biology. Prerequisite(s): upper-division math courses in probability theory are strongly recommended. (Also offered as Computer Science 272. Students cannot receive credit for both courses.) *M. Warmuth, D. Friedman, B. Sinervo*

279. Evolutionary Ecology. W

Analysis of the ways in which ongoing evolution and coevolution shape the ecological structure and dynamics of populations, species, and species interactions across geographic landscapes. Enrollment restricted to graduate students. *J. Thompson*

280A. Topics in Research on Molecular Genetics of Yeast (2 credits). F,W,S Intensive research seminar on the structure and function of the gene expression machinery in the simple eukaryote *Saccharomyces cervisiae* and its relationship to the human gene expression machinery. Enrollment restricted to graduate students; qualified undergraduates may enroll with approval of instructor. May be repeated for credit. *M. Ares*

280B. Chromatin Structure and Transcriptional Regulation (2 credits). F,W,S Weekly seminar on structure and gene regulatory function of chromatin. Discusses research of participants and relevant scientific literature. Enrollment restrIcted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *H. Boeger*

280C. Mammalian Brain Development (2 credits). F,W,S

Seminar covers research into the development of the mammalian brain. Enrollment restricted to graduate students; undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *B. Chen*

280D. RNA Processing (2 credits). F,W,S

A discussion of current research and literature concerning the regulation of precursor messenger RNA processing. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *A. Zahler*

280F. Development of Vertebrate Neural Connections (2 credits). F,W,S

Intensive research seminar on molecular mechanisms by which neural connections are established during mouse development. Special focus on topographic maps and role of Eph receptors and ephrins in this process. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *D. Feldheim*

280H. Topics on Research into Chromatin and Transcription (2 credits). F,W,S Seminar covering research into the effects of chromatin on transcription in yeast. Enrollment restricted to graduate students; undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *G. Hartzog*

280I. Epigenetic Gene Silencing and Insulators (2 credits). F,W,S

Intensive course on molecular mechanisms by which insulator elements regulate epigenetic gene silencing. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *R. Kamakaka*

280J. Structures of Macromolecular Complexes (2 credits). F,W,S

Focuses on structure and function of the spliceosome using electron microscopy and x-ray crystallography. Participants present results from their own research and relevant journal articles. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 20. May be repeated for credit. *M. Jurica*

280K. Topics in Cell Cycle Research (2 credits). F,W,S

An intensive seminar focusing on current research on the molecular mechanisms that control cell division. Participants are required to present results of their own research or to review journal articles of interest. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. *D. Kellogg*

280L. Topics on Neural Development (2 credits). F,W,S

Seminar covering research into the development of the embryonic nervous system. Enrollment restricted to graduate students. Enrollment limited to 12. May be repeated for credit. *L. Hinck*

280N. Structure and Function of Ribosomes (2 credits). F,W,S

An intensive and advanced course focusing on the structure and function of ribosomes. Participants present research findings in an organized, critical fashion, in the context of current research literature in the ribosome field. Enrollment restricted to graduate students; qualified undergraduate students may enroll with permission of the instructor. Enrollment limited to 20. May be repeated for credit. *H. Noller*

280O. Topics in Bacterial Pathogenesis (2 credits). F,W,S

Intensive seminar focusing on mechanisms of bacterial pathogenesis of the ulcer-causing bacterium *Helicobacter pylori*. Participants are required to present results from their own research and relevant journal articles. (Also offered as Environmental Toxicology 281O. Students cannot receive credit for both courses.) Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 20. May be repeated for credit. *K. Ottemann*

280Q. Cell Biology of Oocytes, Embryos, and Neurons (2 credits). F,W,S Weekly seminar and round-table discussion about research problems and recent advances in molecular motor proteins, cytoskeletons, and the control of force-

producing processes. Each participant reports recent advances in their field from current literature, their own primary research questions, current approaches to answering those questions, and their research progress. Undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *W. Saxton*

280R. Structure and Function of the Nuclear Pore Complex (2 credits). F,W,S Intensive and advanced course focusing on structure and function of the nuclear pore complex. Participants present research findings in an organized critical fashion in the context of current research literature in the nucleo-cytoplasmic transport field. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *M. Rexach*

280S. Chromatin and RNA Regulation in *C. elegans* (2 credits). F,W,S Intensive research seminar about regulators of chromatin organization; the composition and function of germ granules; and the roles of both levels of regulation in germline development in *C. elegans*. Participants present their research results and report on related journal articles. Enrollment restricted to graduate students; undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *S. Strome*

280T. Molecular Biology of *Drosophila* Development (2 credits). * An intensive seminar concerning the molecular genetics of *Drosophila*. Recent research is discussed weekly, with an emphasis on gene regulation and development. Students present their own research or critical reviews of recent articles at least once during the quarter. Enrollment restricted to graduate students. Qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10.

280U. Discussions on the Development of the *Drosophila* Embryo (2 credits). F,W,S

Involves a two-hour weekly meeting in which the students discuss topics concerning the cell cycle, early embryonic development, and the cytoskeleton. These discussions critically evaluate ongoing research in this area. Material is drawn from student research and recently published journal articles. Students are also expected to meet individually with the instructor two hours weekly. In addition to a three–five page research proposal, each student gives two one-hour oral presentations. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *W. Sullivan*

280W. Membrane Proteins (2 credits). F,W,S

May be repeated for credit. *J. Tamkun*

Seminar on recent research on membrane proteins, with an emphasis on ion-pumping ATPase. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 20. May be repeated for credit. *B. Bowman*

280Y. Activity-Dependent Synaptic Plasticity (2 credits). F,W,S

Research seminar covering the regulation of synaptic plasticity in the mammalian nervous system, focusing on how the activity regulates the structural and functional dynamics of synapses. Enrollment restricted to graduate students; undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *Y. Zuo*

281A. Topics in Basic and Applied Marine Ecology. F,W,S

Seminar focusing on concepts in basic and applied ecology. Structure rotates quarterly between graduate student research and readings of journal articles and textbooks. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. *M. Carr*

281B. Topics in Molecular Evolution (2 credits). F,W,S

A discussion of current research and literature review on the subject of molecular evolution. Primary focus on recent results on molecular phylogenetics and molecular population genetics. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *G. Bernardi*

281C. Topics in Physiological Ecology. F,W,S

An intensive seminar focusing on the interaction between physiological constraint and life history options and solutions employed by animals. Topics vary from comparative physiology to ecological theory. Participants are required to present results of their own research or review papers of interest. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *D. Costa*

281F. Ecological Research Topics. F,W,S

Intensive research and discussions on plant-animal interactions. All students undertake a research project and meet weekly with the faculty sponsor to monitor progress. The group meets weekly to discuss experimental design and analysis, specific problems related to the students' research, relevant research papers, or manuscripts that the group members are writing. Each student gives a formal presentation of research plans or progress each quarter. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *L. Fox*

281J. Topics in Research on Biochemical Ecology. F,W,S

Seminar in which students give critically evaluated presentations regarding current research on selected topics in plant ecology with an emphasis on biochemical ecology. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 12. May be repeated for credit. *J. Langenheim*

281L. Topics in Behavioral and Evolutionary Ecology. F,W,S

An intensive seminar on selected topics in behavioral and evolutionary ecology. Students are expected to discuss the current literature and present literature reviews, research proposals, and preliminary results from their ongoing research. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. *B. Lyon*

281M. Freshwater Ecology (2 credits). W,S

Seminar focusing on the ecology of freshwaters. Discussion focuses on recent literature or on student presentations of their own research. Enrollment restricted to graduate students; undergraduates may enroll with permission of instructor. May be repeated for credit. *J. Moore*

281N. Topics in Marine Vertebrate Ecology. F,W,S

Seminar on the ecology of marine vertebrates. Topics vary from the factors that explain the distribution of marine predators to island biogeography and the

ecosystem effects of introduced vertebrates on islands. Enrollment restricted to graduate students. Enrollment limited to 12. May be repeated for credit. *D. Croll*

281P. Topics in Plant Population Ecology. F,W,S

An intensive seminar on selected topics in plant ecology and population biology. Students present results from their own research and discuss recent advances from the literature. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission from instructor. Enrollment limited to 12. May be repeated for credit. *I. Parker*

281Q. Topics in Molecular Evolutionary Genetics. F,W,S

An intensive seminar on selected topics in molecular evolutionary genetics. Students are required to present results from their own research projects, present a critical review paper at least once during the quarter, and submit a written research proposal. Enrollment restricted to graduate students; qualified undergraduate students may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *G. Pogson*

281R. Topics in Marine Ecology and Evolutionary Biology. F,W,S

An intensive seminar series focusing on fundamental concepts in marine ecology. Emphasis changes quarter to quarter. At least one quarter per year is devoted to discussion of graduate student research. Other quarters involve reading and evaluating current and classic literature on marine ecology and evolutionary biology. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *P. Raimondi*

281T. Species Interactions and Coevolution. F,W,S

The genetics and ecological structure of species interactions, and the role of coevolution between species in shaping biodiversity. Enrollment restricted to graduate students. Enrollment limited to 15. May be repeated for credit. *J. Thompson*

281U. Topics in Invertebrate Biology. F,W,S

An intensive study about concepts, theory, and techniques for graduate students conducting research on the ecology, genetics, evolution, systematics, or biodiversity of marine invertebrates. Enrollment restricted to graduate students; advanced undergraduates may enroll with permission of instructor. Enrollment limited to 15. May be repeated for credit. *D. Potts*

281V. Topics in Behavioral Ecology. F,W,S

A discussion of current topics and methods in behavioral ecology and life history evolution. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *B. Sinervo*

281W. Topics in Exercise and Environmental Physiology. F,W,S

A weekly seminar discussion on current research and techniques in mammalian exercise and environmental physiology. Areas covered include locomotor physiology, exercise testing and cardiovascular monitoring, and biomechanics. Oral presentation of ongoing research or current literature required from each student. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *T. Williams*

286. Experimental Design and Data Analysis. W

Focuses on problems and designs in ecology and population biology. Topics include basic experimental design; exploratory data analysis—from a graphical perspective;

hands-on statistics; and graphical theory. Structured around a statistical analysis and graphics computer program to teach students to design their own surveys and experiments and analyze their data correctly. Students cannot receive credit for this course and course 186. Prerequisite(s): one course in statistics or by permission of instructor. Enrollment restricted to graduate students. Enrollment limited to 20. *P. Raimondi*

286L. Experimental Design and Data Analysis Lab (2 credits). W

Required lab that accomplanies Biology 286. Lab will focus on hands-on statistical problem solving, graphical presentations and experimental design issues. Concurrent enrollment in course 286 is required. Enrollment restricted to graduate students. Enrollment limited to 20. *P. Raimondi*

288. Stem Cell Research: Scientific, Ethical, Social, and Legal Issues. W Scientific, ethical, social, and legal dimensions of human embryonic stem-cell research, including the moral status of the embryo; the concept of respect for life; ethical constraints on oocyte procurement; creation of embryonic chimeras; federal policies; and political realities. (Also offered as Biomolecular Engineering 247. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. *E. Suckiel*

289. Practice of Science. W

Examination of ethical and practical scientific issues, including the collection and treatment of data, attribution of credit, plagiarism, fraud, and peer review. Career issues, including how to apply for grants and positions in industry or academia, will be discussed. Prerequisite(s): courses 200A, 200B, and 200C or permission of instructor. Enrollment restricted to graduate students; undergraduates may enroll with permission of the instructor. Enrollment limited to 20. *The Staff*

290. Proseminar.

Special topics offered from time to time by visiting professors or staff members. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. *The Staff*

291. Molecular, Cellular, and Developmental Biology Seminar (2 credits). F,W,S

Topics of current interest in molecular, cellular, and developmental biology are presented weekly by graduate students, faculty, and guest speakers. Enrollment restricted to graduate students. Enrollment limited to 60. May be repeated for credit. *The Staff*

292. MCD Seminar (no credit). F,W,S

Various topics by weekly guest speakers. Enrollment restricted to graduate students. *The Staff*

293. Readings in Ecology and Evolution (2 credits). W,S

Weekly readings and discussions of recent research papers in ecology, evolution, and related topics from organismal biology. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

294. Ecology, Evolutionary Biology Seminar (no credit). F,W,S

Selected topics of current interest to ecologists and evolutionary biologists presented by weekly guest speakers. Enrollment restricted to graduate students. *The Staff*

295. Advanced Ecology and Evolutionary Biology Seminar (no credit). F,W,S

Course consists of extended weekly meetings organized around an advanced theme in theoretical or applied evolutionary biology, ecology, physiology, behavior, or other aspect of oranismal biology. Course is targeted at students who already have reached a professional level of expertise in their field and advanced master students. Enrollment restricted to graduate students. Enrollment limited to 24. *The Staff*

296. Laboratory Research in Molecular, Cell, and Developmental Biology. F,W,S

Independent laboratory research in molecular, cellular, and developmental biology. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

297. Independent Study. F,W,S

Independent study for graduate students who have not yet settled on a research area for their thesis. Students submit petition to sponsoring agency. *The Staff*

299. Thesis Research. F,W,S

Students submit petition to sponsoring agency. The Staff

Changes to 2006-08 Catalog Highlighted | Faculty | Course Descriptions

Program Description

The program in bioinformatics is a multidisciplinary program sponsored by the Biomolecular Engineering Department. The program currently offers B.S, M.S., and Ph.D. degrees in bioinformatics, as well as a minor in bioinformatics.

Bioinformatics combines mathematics, science, and engineering to explore and understand biological data from high-throughput experiments, such as genome sequencing, gene expression chips, and proteomics experiments. The program builds upon the research and academic strengths of the faculty in the Center for Biomolecular Science and Engineering.

The Human Genome Project, the international collaboration to determine the sequence of human DNA and understand its function, had its origin in a conference that took place at UCSC in 1985. One notable output from our research is that UCSC is the primary release site for the public version of the human genome and its annotation: http://genome.ucsc.edu. We are also a major player in protein-structure prediction, and have a strong research group in DNA microarray analysis.

The undergraduate bioinformatics degree program prepares students for graduate school or a career in the fast-paced pharmaceutical or biotechnology industries.

The immense growth of biological information stored in computerized databases has led to a critical need for people who can understand the languages, tools, and techniques of statistics, science, and engineering.

A classically trained scientist may be unfamiliar with the statistical and algorithmic knowledge required in this field. A classically trained engineer may be unfamiliar with the chemistry and biology required in the field.

Thus, this program strives for a balance of the two, an engineer focused on the problems of the underlying science or, conversely, a scientist focused on the use of engineering tools for analysis and discovery.

The undergraduate degree program in bioinformatics builds a solid foundation in the constituent areas of the field. Students complete core sequences in mathematics (including calculus, statistics, and discrete mathematics), science (including biology, chemistry, and biochemistry), and engineering (including programming, algorithms, and databases). The core topics are brought together in two bioinformatics courses: BME 110, Computational Biology Tools, and BME 205 Bioinformatics Models and Algorithms. Students have two electives for specialization within the fields of bioinformatics and are required to take a bioethics course (either BME 80G, Bioethics in the Twenty-First Century: Science, Business, and Society or PHIL 145, Brave New World: Ethical Issues in Genetics) to study the ethical, legal, and social implications of this new technology. As a comprehensive requirement, all students complete a graduate project course: BME 210, Application and Analysis of Microarrays, BME 220/L, Protein Bioinformatics, or BME 230/L, Computational Genomics. Students who work on independent research projects with faculty may substitute a senior thesis, BME 195, for the graduate project course.

The department co-sponsors the B.S. in bioengineering with the Departments of Computer Engineering, Electrical Engineering, and Molecular, Cell, and Developmental Biology.

Courses for Nonmajors

Biomolecular Engineering 60 and 160, *Programming for Biologists and Biochemists*, provide an introductory programming class using Perl and BioPerl to analyze, transform, and publish biological data.

Biomolecular Engineering 80G, *Bioethics in the Twenty-First Century: Science, Business, and Society,* is particularly appropriate to all students interested in the societal issues surrounding the revolutions in bioinformatics and biotechnology.

Biomolecular Engineering 110, *Computational Biology Tools*, provides an introduction to the tools and techniques of bioinformatics from a user's view. It is intended for biologists and biochemists who need to use bioinformatics tools, but are not primarily interested in building new bioinformatics tools.

Biomolecular Engineering 109, Resource-efficient Programming, provides advice and practice for people working at the limits of their computer hardware. It is of use for bioinformaticians, game programmers, and embedded-system designers.

Biomolecular Engineering 102, IntroductionMedical Biotechnology, presents a broad overview of the impact of biotechnology on the diagnosis and treatment of disease.

Biomolecular Engineering 155, *Biotechnology and Drug Development*, examines the science and process of discovering, testing, and manufacturing new drugs within the pharmaceutical industry.

Bioinformatics Policies

Admissions Policy

Admission to the bioinformatics major is selective. First-year applicants may receive direct admission at the time they apply to UCSC, based on their high school record and test scores.

Admission to the bioinformatics major after a student has entered UCSC is based on performance in courses offered by the School of Engineering and the Division of Physical and Biological Sciences (the SOE GPA). Due to the required graduate courses in the senior years, a School of Engineering GPA of 2.9 or better is expected at the time of major declaration. After the first year, the following foundation courses must be completed before admission to the major: Computer Science 12A and 12B, Chemistry 1B/M and 1C/N, and Mathematics 19A-B.

Courses Taken Elsewhere

Please refer to the School of Engineering section of the catalog for policies about taking courses at other institutions after enrolling at UCSC.

Disqualification Policy

Students who do not make adequate progress in the major (normally passing six required courses per year) may be disqualified from the major. All students not meeting the progress in the major or grade point average requirements must meet with the undergraduate director to discuss their options for continuing in the major. Please refer to the Engineering section of this catalog for the School of Engineering's Major Disqualification Policy.

Honors in the Major

Bioinformatics majors are considered for "Honors in the Major" and "Highest Honors in the Major" based on the School of Engineering GPA and on results of undergraduate research. Students with an SOE GPA of 3.7 in most cases receive Highest Honors. Students with an SOE GPA of 3.3 in most cases receive Honors. Students with particularly significant accomplishments in undergraduate research may be considered with a lower SOE GPA.

Transfer Students

Please refer to the School of Engineering section of the catalog for the policy regarding transfer students.

School of Engineering Policies

Please refer to the School of Engineering section of the catalog for additional policies that apply to all School of Engineering programs.

Preparation for the Major

Students applying for admission to the bioinformatics major should have completed four years of high school mathematics (through advanced algebra and trigonometry) and three years of science, including one year of chemistry and one year of biology. Comparable college mathematics and science courses completed at other institutions may be accepted in place of high school preparation. Students without this preparation may be required to take additional courses to prepare themselves for the program.

Bioinformatics Major Requirements

Every bioinformatics major must have a faculty adviser, assigned by the Baskin School of Engineering Undergraduate Advising office, and with that adviser must formulate a program of proposed course work that meets the major requirements. Because of the enormous breadth of requirements, bioinformatics majors are urged to take honors courses or sections whenever possible, to get as much as possible out of the courses they take in each field.

Lower-Division Requirements

Majors must complete the following lower-division courses:

Biology

20A, Cell and Molecular Biology 20B, Development and Physiology

Biomolecular Engineering

80G, Bioethics in the Twenty-First Century: Science, Business, and Society; or Philosophy 145, Brave New World: Ethical Issues in Genetics

Chemistry

1B/M and 1C/N, General Chemistry/Laboratory (1A may also be needed as a prerequisite to 1B/M)

Computer Engineering

16, Applied Discrete Mathematics

Computer Science

13H/L, Introduction to Programming and Data Structures (Honors)/Laboratory; or both

12A/L, Introduction to Programming/Laboratory and 12B+M, Introduction to Data Structures+Laboratory

Mathematics

20A-B. Honors Calculus, or

19A-B, Calculus for Science, Engineering, and Mathematics (Credit for one or both can be granted with adequate performance on the CEEB calculus AB or BC Advanced Placement examination.)

23A, Multivariable Calculus

Upper-Division Requirements

Majors must complete the following upper-division courses:

Applied Math and Statistics

Computer Engineering 107, Mathematical Methods of Systems Analysis: Stochastic; or

Applied Math and Statistics 131, Introduction to Probability Theory Applied Math and Statistics 206, Bayesian Statistics

Biochemistry and Molecular Biology

100A, Biochemistry (first in three-part sequence)

Bioinformatics

Biomolecular Engineering 110, Computational Biology Tools Biomolecular Engineering 205, Bioinformatics Models and Algorithms

One of the following:

Biomolecular Engineering 210, Application and Analysis of Microarrays, or 220/L, Protein Bioinformatics/Laboratory; or 230/L, Computational Genomics/Laboratory; or 195, Senior Thesis Research

Chemistry

108A/L, Organic Chemistry+Laboratory; or 112A/L and 112B/M, Organic Chemistry/Laboratory

Computer Engineering

185, Technical Writing

Computer Science

101, Abstract Data Types 180, Database Systems

Advanced Programming

One of the following five courses:

Biomolecular Engineering 109, Resource-efficient Programming; or Computer Engineering 177, Applied Graph Theory and Algorithms; or Computer Science 104A, Fundamentals of Compiler Design I; or Computer Science 109, Advanced Programming; or Computer Science 115, Software Methodology

Required Electives

Students must select two additional courses as electives, justify their choices in writing, and get the choices approved by their faculty adviser. The following courses are typical of the ones chosen, but do not constitute a pre-approved list:

Applied Math and Statistics 162, 203, 205, 207, 215
Biochemistry 100B, 100C, 110
Biology 100L, 105, 105L, 105M, 109L, 110, 115, 115L, 117A, 117B, 119, 119L, 187L, 200A, 200B
Biomolecular Engineering 102, 109, 130, 210, 220, 230
Chemistry 103, 108B/M, 112C/N, 200A, 200B, 200C
Computer Engineering 108, 177
Computer Science 104A, 105, 109, 115, 116, 130, 140, 142, 160/L
Information Systems Management 206, 250

Note: many of these courses are offered only once a year and have long prerequisite chains, so advance planning is necessary to make sure elective courses can be fit into the student's schedule.

Comprehensive Requirement

The bioinformatics comprehensive requirement can be met by taking Biomolecular Engineering 210, *Application and Analysis of Microarrays*, or Biomolecular Engineering 220/L, *Protein Bioinformatics*, or Biomolecular Engineering 230/L, *Computational Genomics*, which include substantial projects, or Biomolecular Engineering 195, *Senior Thesis Research*. Students electing the senior thesis must submit a written thesis proposal to the undergraduate director of bioinformatics for approval one quarter prior to submitting the final thesis.

The Bioinformatics Minor

The bioinformatics major is intended for people who wish to become bioinformaticians – to create the tools needed to solve new problems in computational biology. The bioinformatics minor is intended primarily for bioinformatics tool users who are majoring in a biological or chemical specialty. It is also appropriate for computer science or computer engineering majors who are considering graduate work in bioinformatics.

A bioinformatics minor consists of the following 15 courses:

Lower-division (10 courses)

Biology (2): BIO20A/B or BIO21A/B
General chemistry (2): CHEM 1B/M and CHEM 1C/N
Calculus (3): (MATH 19A and MATH 19B and MATH 23A) or (MATH 11A and MATH 11B and MATH 22) or (MATH 20A and MATH 20B and MATH 23A)
Programming (2): (CMPS 12A/L and CMPS 12B/M) or CMPS 13H
Bioethics (1): BME 80G or PHIL 145

Upper-division (5 courses)

Organic chemistry (1): CHEM 108A or CHEM 112A/B
Biochemistry (1): BIOC 100A or BIO 100
Statistics (1): CMPE 107 or AMS 131
Bioinformatics (2): Two of the following three courses: BME 109, BME 110, BME 160, AMS 162, or BME 205

A bioinformatics minor may count any of the courses of the minor toward the fulfillment of the requirements of their major. Majors with substantial overlap with bioinformatics include biochemistry, chemistry, computer science, computer engineering, and molecular, cellular, and

developmental biology.

For example, a biochemistry and molecular biology major, chemistry major with biochemistry emphasis, or MCD biology major could double-count the biology, general chemistry, calculus, organic chemistry, and biochemistry courses. A chemistry major could double-count the general chemistry, calculus, organic chemistry, programming and biochemistry courses. A computer science major could double-count the programming, calculus, and statistics classes. A computer engineering major could double-count the chemistry, programming, calculus, and statistics classes.

The Bioinformatics Combined B.S./Graduate Degree Program

Because our bioinformatics B.S. program provides excellent preparation for a graduate program in bioinformatics, we offer a combined B.S./grad program that allows our B.S. students to complete the M.S. (or Ph.D.) somewhat sooner than students with a less tailored preparation.

The current B.S. and graduate requirements have four courses in common:

BME 80G, Bioethics in the 21st Century or PHIL 145/245 Brave New World: Ethical Issues in Genetics

BME 205, Bioinformatics Models and Algorithms

BME 220, Protein Bioinformatics or BME 230, Computational Genomics

AMS 206, Bayesian Statistics

Masters students take nine courses, two seminars (four credits), BME 200, and two independent project courses (such as BME 220L and BME 230L). The course work for Ph.D. students is essentially the same, except that eight credits of seminars are required and three research lab rotations are required in place of the two project courses.

The combined B.S./grad program does not make any changes to the undergraduate program, except that students must pass the four overlapping courses listed above for a grade of B- or better.

The requirements at the graduate level are changed to remove the four courses that overlap with the B.S. and to add two graduate electives to be chosen by the students with the approval of their advisers. Thus, the total number of full courses required is reduced from nine to seven. To apply for the combined program, students apply to the M.S. or Ph.D. program through the normal graduate admission process in the fall of their senior year. If admitted into the graduate program, they would automatically be included in the combined B.S./M.S. or B.S./Ph.D. program.

Bioinformatics Major Planners

Plan One is a suggested plan for students who are undecided between bioinformatics and another School of Engineering major. Plan Two is suggested for students undecided between bioinformatics and some other field in biology or chemistry. As in all engineering and science programs, it is recommended that students spread their general education requirements out over all 12 quarters.

Four-year plans require individual design to fit in the desired electives, so only the first two years of the academic plan are presented here. It is recommended that students reserve the summer after the junior year for undergraduate research. One popular plan involves taking organic chemistry and the associated labs in the summer after completing general chemistry, so that biochemistry may be started in the junior year.

Most students find it easiest to take BME 100/L, *Introduction to Bioinformatics*, after BME 110, *Computational Biology Tools*.

Plan One				
Year	Fall	Winter	Spring	
1st (frosh)	CMPS 12A/L	Math 19B CMPS 12B/M gen ed	Math 23A CMPE 16 gen ed	
2nd (soph)	CMPE 107	Chem 1C/N Bio 20A gen ed	CMPS 101 Biol 20B gen ed	
Plan Two				
Year	Fall	Winter	Spring	
1st (frosh)	Chem 1B/M	Math 19B Chem 1C/N gen ed	Math 23A CMPE 16 gen ed	
2nd (soph)	Chem 108 A/L	CMPS 12B/M Biol 20A gen ed	CMPS 101 Biol 20B gen ed	

Bioinformatics Graduate Program

The graduate program in bioinformatics offers both M.S. and Ph.D. degrees.

Course Requirements

Both masters and doctoral students must complete nine, 5-credit courses (seven core courses and two electives; see below) and a 3-credit research and teaching course. In addition, M.S. students must complete four seminar credits, while Ph.D. students must complete eight seminar credits. M.S. students must complete two (1-credit or 2-credit) research project courses (such as BME 220L, BME 230L, BME 297F, or BME297), and Ph.D. students must complete three research lab rotations (BME 296) with different supervisors.

Core courses (5-credit)-seven are required

Biomolecular Engineering

205, *Bioinformatics Models and Algorithms* Two of the following:

210, Application and Analysis of Microarrays

220, Protein Bioinformatics

230, Computational Genomics

80G, Bioethics in the Twenty-First Century: Science, Business, and Society; or Philosophy 245, Brave New World: Ethical Issues in Genetics

One graduate course, approved by the faculty, in each of the following three areas:

Statistics (Applied Mathematics and Statistics 206 recommended) Biology (Biology 200B recommended) Chemistry (Chemistry 200B recommended)

Electives (5-credit)-two are required

The electives should be graduate-level courses selected with approval of the faculty to ensure a coherent, balanced program. For M.S. students, 5 credits of independent research (297) or thesis research (299) may count as electives toward the degree requirements upon approval of the faculty. For Ph.D. students, independent or thesis research cannot be counted as electives. Students must choose their electives with faculty guidance and approval to balance their preparation and make up for deficiencies in background areas. In addition to fulfilling background needs, students may choose to emphasize one of the breadth areas: molecular biology, biochemistry, statistics, computational biology, genetics, computer science, computer engineering, applied mathematics, cell biology, and computer graphics/visualization or may take a cross-sampling of the electives to achieve a broad knowledge base.

Other Curriculum Requirements

Biomolecular Engineering 200, Research and Teaching in Bioinformatics, 3 credits

Seminars

M.S. students: a minimum of two seminar courses, including at least one quarter of the 2-credit Biomolecular Engineering seminar, 280B (formerly Computer Engineering 280B)

Ph.D. students: a minimum of four seminar courses, including at least two quarters of the 2-credit Biomolecular Engineering Seminar, 280B

Research experience

M.S. students: a minimum of two research project courses. This requirement can be met by taking BME 220L, BME 230L, and/or independent study (BME 297F or BME 297).

Ph.D Students: three quarters of lab rotations (BME 296), generally within the first 12 months.

One of the lab rotations must be with a faculty supervisor who does wet-lab research, though the student's rotation project may be purely computational.

Adequate Progress

Graduate students receiving two or more U (unsatisfactory) grades or grades below B in courses relevant to the program are not making adequate progress and will be placed on academic probation for the next three quarters of registered enrollment.

Graduate students who fail (unsatisfactory or lower than B) a relevant course while on probation may be dismissed from the program. Students may appeal their dismissal. Graduate students who fail a relevant course after being removed from probation are immediately returned to academic probation.

Graduate students experiencing circumstances that may adversely affect their academic performance should consult with their adviser and the graduate director.

Thesis and Dissertation Requirements

In addition to completing the course requirements, students must fulfill the following thesis or dissertation requirements.

For M.S. students, a written thesis proposal must be submitted to a faculty member before the end of the fourth academic quarter. If the faculty member accepts the proposal, he or she will become the student's adviser and will be in charge of supervising the writing of the master's thesis. When the thesis is completed, it will be submitted to a faculty review committee consisting of the thesis adviser and at least two additional readers. The committee must include a School of Engineering faculty member, may include participants from the Division of Physical and Biological Sciences and from industry as appropriate, and must be approved by the bioinformatics program director. Students are required to present their thesis project in a public seminar.

Ph.D. students must select a faculty research adviser by the end of the second year. A written dissertation proposal is required before the end of the third year. A qualifying committee is then formed, which consists of the adviser and three additional members, and approved by the bioinformatics program director and the campus graduate dean. The student must submit his or her written dissertation proposal to all members of the committee and the graduate assistant one month in advance of the examination. The dissertation proposal is publicly and formally presented in an oral qualifying examination given by the qualifying committee.

Ph.D. candidates will submit the completed dissertation to a reading committee at least one month prior to the dissertation defense. The reading committee, formed upon advancement to candidacy, consists of the dissertation supervisor and two readers appointed by the program director upon the recommendation of the dissertation supervisor. The candidate will present his or her research in a public seminar. The seminar will be followed by a defense of the dissertation to the reading committee and attending faculty, who will then decide whether the dissertation is acceptable or requires revision.

Transfer Limitations

Up to two courses may be transferred from other graduate institutions, with the approval of the faculty adviser and the graduate director.

Biomolecular Engineering

Baskin School of Engineering 335 Baskin Engineering Building (831) 459-2158 http://www.soe.ucsc.edu

Program Description | Faculty | Course Descriptions

Program Description

The program in bioinformatics is a multidisciplinary program sponsored by the Biomolecular Engineering Department. The program currently offers B.S, M.S., and Ph.D. degrees in bioinformatics, as well as a minor in bioinformatics.

Bioinformatics combines mathematics, science, and engineering to explore and understand biological data from high-throughput experiments, such as genome sequencing, gene expression chips, and proteomics experiments. The program builds upon the research and academic strengths of the faculty in the Center for Biomolecular Science and Engineering.

The Human Genome Project, the international collaboration to determine the sequence of human DNA and understand its function, had its origin in a conference that took place at UCSC in 1985. One notable output from our research is that UCSC is the primary release site for the public version of the human genome and its annotation: http://genome.ucsc.edu. We are also a major player in protein-structure prediction, and have a strong research group in DNA microarray analysis.

The undergraduate bioinformatics degree program prepares students for graduate school or a career in the fast-paced pharmaceutical or biotechnology industries.

The immense growth of biological information stored in computerized databases has led to a critical need for people who can understand the languages, tools, and techniques of statistics, science, and engineering.

A classically trained scientist may be unfamiliar with the statistical and algorithmic knowledge required in this field. A classically trained engineer may be unfamiliar with the chemistry and biology required in the field.

Thus, this program strives for a balance of the two, an engineer focused on the problems of the underlying science or, conversely, a scientist focused on the use of engineering tools for analysis and discovery.

The undergraduate degree program in bioinformatics builds a solid foundation in the constituent areas of the field. Students complete core sequences in mathematics (including calculus, statistics, and discrete mathematics), science (including biology, chemistry, and biochemistry), and engineering (including programming, algorithms, and databases). The core topics are brought together in two bioinformatics courses: BME 110, *Computational Biology Tools*, and BME 205 Bioinformatics Models and Algorithms. Students have two electives for specialization within the fields of bioinformatics and are required to take a bioethics course (either BME 80G,

Bioethics in the Twenty-First Century: Science, Business, and Society or PHIL 145, Brave New World: Ethical Issues in Genetics) to study the ethical, legal, and social implications of this new technology. As a comprehensive requirement, all students complete a graduate project course: BME 210. Application and Analysis of Microarrays. BME 220/L, Protein Bioinformatics, or BME 230/L, Computational Genomics. Students who work on independent research projects with faculty may substitute a senior thesis, BME 195, for the graduate project course.

The department co-sponsors the B.S. in bioengineering with the Departments of Computer Engineering. Electrical Engineering, and Molecular, Cell, and Developmental Biology.

Courses for Nonmajors

Biomolecular Engineering 60 and 160, *Programming for Biologists and Biochemists*, provide an introductory programming class using Perl and BioPerl to analyze, transform, and publish biological data.

Biomolecular Engineering 80G, *Bioethics in the Twenty-First Century: Science, Business, and Society*, is particularly appropriate to all students interested in the societal issues surrounding the revolutions in bioinformatics and biotechnology.

Biomolecular Engineering 110, *Computational Biology Tools*, provides an introduction to the tools and techniques of bioinformatics from a user's view. It is intended for biologists and biochemists who need to use bioinformatics tools, but are not primarily interested in building new bioinformatics tools.

Biomolecular Engineering 109, *Resource-efficient Programming*, provides advice and practice for people working at the limits of their computer hardware. It is of use for bioinformaticians, game programmers, and embedded-system designers.

Biomolecular Engineering 102, IntroductionMedical Biotechnology, presents a broad overview of the impact of biotechnology on the diagnosis and treatment of disease.

Biomolecular Engineering 155, Biotechnology and Drug Development, examines the science and process of discovering, testing, and manufacturing new drugs within the pharmaceutical industry.

Bioinformatics Policies

Admissions Policy

Admission to the bioinformatics major is selective. First-year applicants may receive direct admission at the time they apply to UCSC, based on their high school record and test scores. Admission to the bioinformatics major after a student has entered UCSC is based on performance in courses required for the major. The following foundation courses must be completed before admission to the major: Computer Science 13H (or 12A and 12B), Chemistry 1B/M and 1C/N, and Mathematics 19A-B. Admission to the bioinformatics major after a student has entered UCSC is based on performance in courses offered by the School of Engineering and the Division of Physical and Biological Sciences (the SOE GPA). Due to the required graduate courses in the senior years, a School of Engineering GPA of 2.9 or better is expected at the time of major declaration. After the first year, the following foundation courses must be completed before admission to the major: Computer Science 12A and 12B, Chemistry 1B/M and 1C/N, and Mathematics 19A-B.

Courses Taken Elsewhere

Please refer to the School of Engineering section of the catalog for policies about taking courses at other institutions after enrolling at UCSC.

Disqualification Policy

Students who do not make adequate progress in the major (normally passing six required courses per year) may be disqualified from the major. All students not meeting the progress in the major or grade point average requirements must meet with the undergraduate director to discuss their options for continuing in the major. Please refer to the Engineering section of this catalog for the School of Engineering's Major Disqualification Policy.

Honors in the Major

Bioinformatics majors are considered for "Honors in the Major" and "Highest Honors in the Major" based on the School of Engineering GPA and on results of undergraduate research. Students with an SOE GPA of 3.7 in most cases receive Highest Honors. Students with an SOE GPA of 3.3 in most cases receive Honors. Students with particularly significant accomplishments in undergraduate research may be considered with a lower SOE GPA.

Transfer Students

Please refer to the School of Engineering section of the catalog for the policy regarding transfer students.

School of Engineering Policies

Please refer to the School of Engineering section of the catalog for additional policies that apply to all School of Engineering programs.

Preparation for the Major

Students applying for admission to the bioinformatics major should have completed four years of high school mathematics (through advanced algebra and trigonometry) and three years of science, including one year of chemistry and one year of biology. Comparable college mathematics and science courses completed at other institutions may be accepted in place of high school preparation. Students without this preparation may be required to take additional courses to prepare themselves for the program.

Bioinformatics Major Requirements

Every bioinformatics major must have a faculty adviser, assigned by the Baskin School of Engineering Undergraduate Advising office, and with that adviser must formulate a program of proposed course work that meets the major requirements. Because of the enormous breadth of requirements, bioinformatics majors are urged to take honors courses or sections whenever possible, to get as much as possible out of the courses they take in each field.

Lower-Division Requirements

Majors must complete the following lower-division courses:

Biology

20A, Cell and Molecular Biology 20B, Development and Physiology

Biomolecular Engineering

80G, Bioethics in the Twenty-First Century: Science, Business, and Society; or

Philosophy 145, Brave New World: Ethical Issues in Genetics

Chemistry

1B/M and 1C/N, General Chemistry/Laboratory (1A may also be needed as a prerequisite to 1B/M)

Computer Engineering

16, Applied Discrete Mathematics

Computer Science

13H/L, Introduction to Programming and Data Structures (Honors)/Laboratory; or both 12A/L, Introduction to Programming/Laboratory and 12B+M, Introduction to Data Structures+Laboratory

Mathematics

20A-B, *Honors Calculus*, or 19A-B, *Calculus for Science, Engineering, and Mathematics* (Credit for one or both can be granted with adequate performance on the CEEB calculus AB or BC Advanced Placement examination.) 23A. *Multivariable Calculus*

Upper-Division Requirements

Majors must complete the following upper-division courses:

Applied Math and Statistics

Computer Engineering 107, Mathematical Methods of Systems Analysis: Stochastic; or Applied Math and Statistics 131, Introduction to Probability Theory Applied Math and Statistics 206, Bayesian Statistics

Biochemistry and Molecular Biology

100A, *Biochemistry* (first in three-part sequence)

Bioinformatics

Biomolecular Engineering 110, Computational Biology Tools Biomolecular Engineering 205, Bioinformatics Models and Algorithms

One of the following:

Biomolecular Engineering 210. Application and Analysis of Microarrays. or 220/L, Protein Bioinformatics/Laboratory; or 230/L, Computational Genomics/Laboratory; or 195, Senior Thesis Research

Chemistry

108A/L, Organic Chemistry+Laboratory; or 112A/L and 112B/M, Organic Chemistry/Laboratory

Computer Engineering

185, Technical Writing

Computer Science

101, Abstract Data Types 180, Database Systems

Advanced Programming

One of the following five courses:

Biomolecular Engineering 109, Resource-efficient Programming; or Computer Engineering 177, Applied Graph Theory and Algorithms; or Computer Science 104A, Fundamentals of Compiler Design I; or Computer Science 109, Advanced Programming; or Computer Science 115, Software Methodology

Required Electives

Students must select two additional courses as electives, justify their choices in writing, and get the choices approved by their faculty adviser. The following courses are typical of the ones chosen, but do not constitute a pre-approved list:

Applied Math and Statistics 162, 203, 205, 207, 215
Biochemistry 100B, 100C, 110
Biology 100L, 105, 105L, 105M, 109L, 110, 115, 115L, 117A, 117B, 119, 119L, 187L, 200A, 200B
Biomolecular Engineering 102, 109, 130, 210, 220, 230
Chemistry 103, 108B/M, 112C/N, 200A, 200B, 200C
Computer Engineering 108, 177
Computer Science 104A, 105, 109, 115, 116, 130, 140, 142, 160/L
Information Systems Management 206, 250

Note: many of these courses are offered only once a year and have long prerequisite chains, so advance planning is necessary to make sure elective courses can be fit into the student's schedule.

Comprehensive Requirement

The bioinformatics comprehensive requirement can be met by taking Biomolecular Engineering 210, *Application and Analysis of Microarrays*, or Biomolecular Engineering 220/L, *Protein Bioinformatics*, or Biomolecular Engineering 230/L, *Computational Genomics*, which include substantial projects, or Biomolecular Engineering 195, *Senior Thesis Research*. Students electing the senior thesis must submit a written thesis proposal to the undergraduate director of bioinformatics for approval one quarter prior to submitting the final thesis.

The Bioinformatics Minor

The bioinformatics major is intended for people who wish to become bioinformaticians — to create the tools needed to solve new problems in computational biology. The bioinformatics minor is intended primarily for bioinformatics tool users who are majoring in a biological or chemical specialty. It is

also appropriate for computer science or computer engineering majors who are considering graduate work in bioinformatics.

A bioinformatics minor consists of the following 15 courses:

Lower-division (10 courses)

Biology (2): BIO20A/B or BIO21A/B General chemistry (2): CHEM 1B/M and CHEM 1C/N Calculus (3): (MATH 19A and MATH 19B and MATH 23A) or (MATH 11A and MATH 11B and MATH 22) or (MATH 20A and MATH 20B and MATH 23A) Programming (2): (CMPS 12A/L and CMPS 12B/M) or CMPS 13H Bioethics (1): BME 80G or PHIL 145

Upper-division (5 courses)

Organic chemistry (1): CHEM 108A or CHEM 112A/B Biochemistry (1):BIOC 100A or BIO 100 Statistics (1): CMPE 107 or AMS 131 Bioinformatics (2): Two of the following three courses: BME 109, BME 110, BME 160, AMS 162, or BME 205

A bioinformatics minor may count any of the courses of the minor toward the fulfillment of the requirements of their major. Majors with substantial overlap with bioinformatics include biochemistry, chemistry, computer science, computer engineering, and molecular, cellular, and developmental biology.

For example, a biochemistry and molecular biology major, chemistry major with biochemistry emphasis, or MCD biology major could double-count the biology, general chemistry, calculus, organic chemistry, and biochemistry courses. A chemistry major could double-count the general chemistry, calculus, organic chemistry, programming and biochemistry courses. A computer science major could double-count the programming, calculus, and statistics classes. A computer engineering major could double-count the chemistry, programming, calculus, and statistics classes.

The Bioinformatics Combined B.S./Graduate Degree Program

Because our bioinformatics B.S. program provides excellent preparation for a graduate program in bioinformatics, we offer a combined B.S./grad program that allows our B.S. students to complete the M.S. (or Ph.D.) somewhat sooner than students with a less tailored preparation.

The current B.S. and graduate requirements have four courses in common:

BME 80G, Bioethics in the 21st Century or PHIL 145/245 Brave New World: Ethical Issues in Genetics
BME 205, Bioinformatics Models and Algorithms
BME 220, Protein Bioinformatics or BME 230, Computational Genomics
AMS 206, Bayesian Statistics

Masters students take nine courses, two seminars (four credits), BME 200, and two independent project courses (such as BME 220L and BME 230L). The course work

for Ph.D. students is essentially the same, except that eight credits of seminars are required and three research lab rotations are required in place of the two project courses.

The combined B.S./grad program does not make any changes to the undergraduate program, except that students must pass the four overlapping courses listed above for a grade of B- or better.

The requirements at the graduate level are changed to remove the four courses that overlap with the B.S. and to add two graduate electives to be chosen by the students with the approval of their advisers. Thus, the total number of full courses required is reduced from nine to seven.

To apply for the combined program, students apply to the M.S. or Ph.D. program through the normal graduate admission process in the fall of their senior year. If admitted into the graduate program, they would automatically be included in the combined B.S./M.S. or B.S./Ph.D. program.

Bioinformatics Major Planners

Plan One is a suggested plan for students who are undecided between bioinformatics and another School of Engineering major. Plan Two is suggested for students undecided between bioinformatics and some other field in biology or chemistry. As in all engineering and science programs, it is recommended that students spread their general education requirements out over all 12 quarters.

Four-year plans require individual design to fit in the desired electives, so only the first two years of the academic plan are presented here. It is recommended that students reserve the summer after the junior year for undergraduate research. One popular plan involves taking organic chemistry and the associated labs in the summer after completing general chemistry, so that biochemistry may be started in the junior year.

Most students find it easiest to take BME 100/L, *Introduction to Bioinformatics*, after BME 110, *Computational Biology Tools*.

	<u>BME 80G</u>				

The graduate program in bioinformatics offers both M.S. and Ph.D. degrees.

Course Requirements

Both masters and doctoral students must complete nine, 5-credit courses (seven core courses and two electives; see below) and a 3-credit research and teaching course. In addition, M.S. students must complete four seminar credits, while Ph.D. students must complete eight seminar credits. M.S. students must complete two (1-credit or 2-credit) research project courses (such as BME 220L, BME 230L, BME 297F, or BME297), and Ph.D. students must complete three research lab rotations (BME 296) with different supervisors.

Core courses (5-credit)-seven are required

Biomolecular Engineering

205, *Bioinformatics Models and Algorithms* Two of the following:

210, Application and Analysis of Microarrays220, Protein Bioinformatics230, Computational Genomics

80G, Bioethics in the Twenty-First Century: Science, Business, and Society; or Philosophy 245, Brave New World: Ethical Issues in Genetics

One graduate course, approved by the faculty, in each of the following three areas:

Statistics (Applied Mathematics and Statistics 206 recommended) Biology (Biology 200B recommended) Chemistry (Chemistry 200B recommended)

Electives (5-credit)-two are required

The electives should be graduate-level courses selected with approval of the faculty to ensure a coherent, balanced program. For M.S. students, 5 credits of independent research (297) or thesis research (299) may count as electives toward the degree requirements upon approval of the faculty. For Ph.D. students, independent or thesis research cannot be counted as electives.

Students must choose their electives with faculty guidance and approval to balance their preparation and make up for deficiencies in background areas. In addition to fulfilling background needs, students may choose to emphasize one of the breadth areas: molecular biology, biochemistry, statistics, computational biology, genetics, computer science, computer engineering, applied mathematics, cell biology, and computer graphics/visualization or may take a cross-sampling of the electives to achieve a broad knowledge base.

Other Curriculum Requirements

Biomolecular Engineering 200, Research and Teaching in Bioinformatics, 3 credits

Seminars

M.S. students: a minimum of two seminar courses, including at least one quarter of the 2-credit Biomolecular Engineering seminar, 280B (formerly Computer Engineering 280B)

Ph.D. students: a minimum of four seminar courses, including at least two quarters of the 2-credit Biomolecular Engineering Seminar, 280B

Research experience

M.S. students: a minimum of two research project courses. This requirement can be met by taking BME 220L, BME 230L, and/or independent study (BME 297F or BME 297).

Ph.D Students: three quarters of lab rotations (BME 296), generally within the first 12 months.

One of the lab rotations must be with a faculty supervisor who does wet-lab research, though the student's rotation project may be purely computational.

Adequate Progress

Graduate students receiving two or more U (unsatisfactory) grades or grades below B in courses relevant to the program are not making adequate progress and will be placed on academic probation for the next three quarters of registered enrollment.

Graduate students who fail (unsatisfactory or lower than B) a relevant course while on probation may be dismissed from the program. Students may appeal their dismissal. Graduate students who fail a relevant course after being removed from probation are immediately returned to academic probation.

Graduate students experiencing circumstances that may adversely affect their academic performance should consult with their adviser and the graduate director.

Thesis and Dissertation Requirements

In addition to completing the course requirements, students must fulfill the following thesis or dissertation requirements.

For M.S. students, a written thesis proposal must be submitted to a faculty member before the end of the fourth academic quarter. If the faculty member accepts the proposal, he or she will become the student's adviser and will be in charge of supervising the writing of the master's thesis. When the thesis is completed, it will be submitted to a faculty review committee consisting of the thesis adviser and at least two additional readers. The committee must include a School of Engineering faculty member, may include participants from the Division of Physical and Biological Sciences and from industry as appropriate, and must be approved by the bioinformatics program director. Students are required to present their thesis project in a public seminar.

Ph.D. students must select a faculty research adviser by the end of the second year. A written dissertation proposal is required before the end of the third year. A

qualifying committee is then formed, which consists of the adviser and three additional members, and approved by the bioinformatics program director and the campus graduate dean. The student must submit his or her written dissertation proposal to all members of the committee and the graduate assistant one month in advance of the examination. The dissertation proposal is publicly and formally presented in an oral qualifying examination given by the qualifying committee.

Ph.D. candidates will submit the completed dissertation to a reading committee at least one month prior to the dissertation defense. The reading committee, formed upon advancement to candidacy, consists of the dissertation supervisor and two readers appointed by the program director upon the recommendation of the dissertation supervisor. The candidate will present his or her research in a public seminar. The seminar will be followed by a defense of the dissertation to the reading committee and attending faculty, who will then decide whether the dissertation is acceptable or requires revision.

Transfer Limitations

Up to two courses may be transferred from other graduate institutions, with the approval of the faculty adviser and the graduate director.

<u>Program Description</u> | <u>Course Descriptions</u>

Faculty and Professional Interests

Professor

David W. Deamer, Emeritus (Chemistry and Biochemistry) Membrane biophysics, single molcule analysis

David Haussler (Biomolecular Engineering; Director, Institute for Quantitative Biomedical Research and the Center for Biomolecular Science and Engineering) Genomics, bioinformatics, computational molecular biology, statistical models, machine learning, neural networks, decision theory, theory of computation

Richard Hughey (Biomolecular Engineering/ Computer Engineering) Computer architecture, parallel processing, computational biology

Kevin Karplus (Biomolecular Engineering; Undergraduate and Graduate Director of Bioinformatics)

Protein structure prediction, protein design

Assistant Professor

Camilla Forsberg (Biomolecular Engineering)

Hematopoietic stem cells; transcriptional regulation; chromatin; blood cell development; cell surface receptors; genomics

Dietlind L. Gerloff (Biomolecular Engineering)

Protein to protein interactions, protein function prediction, functional genomics, protein structure prediction

Todd Lowe (Biomolecular Engineering)

Experimental and computation genomics, ncRNA gene finders, DNA microarrays to study the biology of Archaea

Joshua Stuart (Biomolecular Engineering)

Computational functional genomics, comparative analysis of gene regulation, cross-species inference of gene networks, probabilistic graphical models

Assistant Adjunct Professor

Carol Rohl (Biomolecular Engineering)

Protein design, protein structure and function prediction; protein-protein interactions

Adjunct Associate Professor

Mark Akeson (Biomolecular Engineering)

DNA structure and dynamics, single molecule biophysics, bioethics

Jonathan Trent (Biomolecular Engineering)

Organic aggregates, marine snow, microbial physiology, microenviroments, robust proteins, genetic engineering for nanotechnology

Professor

Manuel Ares (Molecular, Cell, and Developmental Biology)

RNA processing, structure and function of RNA

A. Russell Flegal (Environmental Toxicology)

Anthropogenic perturbations of biogeochemical cycles, applications of isotopic tracers in anthropology and archaeology

Suresh Lodha (Computer Science)

Geo-spatial visualization, scientific visualization, sensor and computer vision, data mining

Marc Mangel (Applied Mathematics and Statistics)

Mathematical modeling of biological phenomena, especially the evolutionary ecology of growth, aging, and longevity; quantitative issues in fishery management; mathematical and computational aspects of disease

John W. Tamkun (Molecular, Cell, and Developmental Biology)

Transcriptional regulation, molecular genetics of *Drosophila* development, regulation of gene expression

Manfred K. Warmuth (Computer Science)

Online learning, machine learning, statistical decision theory, neural computation, analysis of algorithms

W. Todd Wipke, Emeritus (Chemistry and Biochemistry)

Alan M. Zahler (Molecular, Cell, and Developmental Biology)

Molecular biology, splice site selection, and alternative pre-mRNA processing

Assistant Professor

William Dunbar (Computer Engineering)

Theory and application of feedback control, distributed control of supply chains, model predictive control, optimization and optimal control, and control applications in sequencing technologies

Robert S. Lokey (Chemistry and Biochemistry)

Organic chemistry; combinatorial synthesis, biotechnology, molecular cell biology

Karen Ottemann (Environmental Toxicology)

Environmental responses of pathogenic bacteria

Hongyun Wang (Applied Mathematics and Statistics)

Molecular modeling and biophysics, numerical analysis, fluid mechanics, computer animation, partial differential equations, parallel computing, statistical physics, data structures, fast algorithms

Fitnat H. Yildiz (Environmental Toxicology)

Microbiology, molecular genetics, genomics; the mechanism of persistence of survival of *Vibrio cholerae*

Program Description | Changes to 2006-08 Catalog Highlighted | Faculty

Lower-Division Courses

5. Introduction to Biotechnology. S

Introduces the tools and applications of biotechnology in the fields of medicine, agriculture, the environment, and industry. (General Education Code(s): IN.) *W. Rothwell*

60. Programming for Biologists and Biochemists. W

Lecture and lab-based course teaching programming skills needed by biologists and biochemists. No programming experience required, but basic computer skills assumed. Students without prior programming experience will be taught the basic proficiency in Perl, BioPerl, and other Perl libraries needed to analyze, transform, and publish biological data. Students cannot receive credit for this course and Biomolecular Engineering 160 or Biology 180. Prerequisite(s): Biology 20A or 21A. Previous or concurrent enrollment in course 60L required. *J. Stuart*

60L. Programming for Biologists and Biochemists Laboratory (1 credit). W Laboratory sequence illustrating topics covered in course 60. One two-hour laboratory per week. Concurrent enrollment in course 60 required. Students cannot receive credit for this course and Biomolecular Engineering 160L or Biology 180L. Prerequisite(s): Biology 20A or 21A. Previous or concurrent enrollment in course 60 is required. *J. Stuart*

80G. Bioethics in the 21st Century: Science, Business, and Society. F

Serves science and non-science majors interested in bioethics. Guest speakers and instructors lead discussions of major ethical questions having arisen from research in genetics, medicine, and industries supported by this knowledge. (Also offered as Philosophy 80G. Students cannot receive credit for both courses.) (General Education Code(s): T6-Natural Sciences or Humanities and Arts.) *M. Akeson*

80H. The Human Genome. F,W,S

Course will focus on understanding human genes. Accessible to non-science majors. Will cover principles of human inheritance and techniques used in gene analysis. The evolutionary, social, ethical, and legal issues associated with knowledge of the human genome will be discussed. (Also offered as Biology 80H. Students cannot receive credit for both courses.) (General Education Code(s): T2-Natural Sciences.) *W. Rothwell, M. Ares*

94. Group Tutorial. F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

94F. Group Tutorial (2 credits). F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

99F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

Upper-Division Courses

109. Resource-Efficient Programming. *

Writing programs that use computer resources efficiently. Learn to measure resource usage and modify programs to get better performance. Particularly appropriate for programmers working at limits of their hardware (bioinformaticians, game programmers, and embedded system programs). Prerequisites(s): Computer Science 12B and 12M or 13H and 13L, Computer Engineering 16 or 16H, and Mathematics 19A. Enrollment limited to 90. *K. Karplus*

110. Computational Biology Tools. W,S

Hands-on laboratory geared to teach basic tools used in computational biology (motif searching, primer selection, sequence comparison, multiple sequence alignment, genefinders, phylogenetics analysis, X-ray crystallography software). Web- and Unix-based tools/databases are used. Open to all science students; no prior Unix experience required. (Also offered as Biology 181. Students cannot receive credit for both courses.) Prerequisite(s): Biology 20B and Chemistry 1C Enrollment limited to 25. *T. Lowe, D. Gerloff*

130. Genomes. *

Advanced elective for biology majors, examining biology on the genome scale. Topics include genome sequencing; large scale computational and functional analysis; features specific to prokaryotic, eukaryotic, or mammalian genomes; proteomics; SNP analysis; medical genomics; and genome evolution. Prerequisite(s): Biology 100 or Biochemistry 100A and Biology 105, or approval of instructor. Enrollment limited to 30. *T. Lowe*

155. Biotechnology and Drug Development. W

Recommended for students interested in careers in the biopharmaceutical industry. Focuses on recombinant DNA technology and the drug-development process, including discovery research; preclinical testing; clinical trials; and regulatory review, as well as manufacturing and production considerations. Students may not receive credit for this course and course 255. Prerequisite(s): Biology 20A and Biology 100 or Biochemistry and Molecular Biology 100A. Enrollment limited to 15. *P. Berman*

160. Research Programming for Biologists and Biochemists. W

No programming experience required, but basic computer skills assumed. Students without prior programming experience taught basic proficiency in Perl, BioPerl, and other Perl libraries needed to analyze, transform, and publish biological data. Students required to solve a research problem as a final project. Lectures and labs are shared with Biomolecular Engineering 60. Students cannot receive credit for this

course and Biomolecular Engineering 60. (Also offered as Biology 180. Students cannot receive credit for both courses.) Prerequisite(s): Biology 20A or 21A. Concurrent enrollment in course 180L is required. *J. Stuart*

160L. Research Programming for Biologists and Biochemists Laboratory (1 credit). \mathbf{W}

Laboratory sequence illustrating topics covered in course 160. One two-hour laboratory per week. Students cannot receive credit for this course and Biomolecular Engineering 60L. (Also offered as Biology 180L. Students cannot receive credit for both courses.) Prerequisite(s): Biology 20A or 21A. Previous or concurrent enrollment in course 160 is required. *J. Stuart*

193. Field Study. F,W,S

Provides for individual programs of study with specific aims and academic objectives carried out under the direction of a BME faculty member and a willing sponsor at a field site, using resources not normally available on campus. Credit is based upon written and oral presentations demonstrating the achievement of the objectives of the course. Students submit petition to sponsoring agency. *The Staff*

193F. Field Study (2 credits). F,W,S

Provides for individual programs of study with specific aims and academic objectives carried out under the direction of a BME faculty member and a willing sponsor at a field site, using resources not normally available on campus. Credit is based upon written and oral presentations demonstrating the achievement of the objectives of the course. Students submit petition to sponsoring agency. *The Staff*

194. Group Tutorial. F,W,S

A program of study arranged between a group of students and a faculty member. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

194F. Group Tutorial (2 credits). F,W,S

A program of independent study arranged between a group of students and a faculty member. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

195. Senior Thesis Research. F,W,S

Students submit petition to sponsoring agency. Enrollment restricted to bioinformatics majors. May be repeated for credit. *The Staff*

195F. Senior Thesis or Research (2 credits). F,W,S

Students submit petition to sponsoring agency. Enrollment restricted to bioinformatics majors. May be repeated for credit. *The Staff*

198. Individual Study or Research. F,W,S

Students submit petition to sponsoring agency. Enrollment restricted to bioinformatics majors. May be repeated for credit. *The Staff*

198F. Individual Study or Research (2 credits). F,W,S

Students submit petition to sponsoring agency. Enrollment restricted to bioinformatics majors. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

For fourth-year students majoring in bioinformatics. Enrollment restricted to Bioinformatics majors. May be repeated for credit. *The Staff*

200. Research and Teaching in Bioinformatics (3 credits). F

Basic teaching techniques for teaching assistants, including responsibilities and rights of teaching assistants, resource materials, computer security, leading discussion or lab sessions, presentation techniques, maintaining class records, electronic handling of homework, and grading. Examines research and professional training, including use of library and online databases, technical typesetting, writing journal and conference papers, publishing in bioinformatics, giving talks in seminars and conferences, and ethical issues in science and engineering. Required for all teaching assistants. Enrollment restricted to graduate students. *T. Lowe, K. Karplus*

205. Bioinformatics Models and Algorithms. F

Covers bioinformatics models and algorithms: the use of computational techniques to convert the masses of information from biochemical experiments (DNA sequencing, DNA chips, and other high-throughput experimental methods) into useful information. Emphasis is on DNA and protein sequence alignment and analysis. Enrollment restricted to graduate students. Undergraduates may enroll with prerequisite(s): Computer Science 12B; and Computer Engineering 107 or Applied Math and Statistics 131; and Biology 20A; and concurrent enrollment in Biochemistry 100A. *K. Karplus*

210. Experimental Systems Biology. S

Topics include, but are not limited to, microarray production techniques, experimental strategies using microarrays, extraction and analysis of microarray data, DNA and protein arrays, SNP analysis, gene expression analysis, materials analysis, and advanced analysis of data using bioinformatic techniques. (Formerly *Application and Analysis of Microarrays.*) (Also offered as Biology 210. Students cannot receive credit for both courses.) Enrollment restricted to graduate students; undergraduates by permission of instructor. *T. Lowe*

211. Computational Systems Biology. S

Teaches machine-learning methods relevant for the analysis of high-throughput molecular biology experiments. Students should be fluent in a programming language and should have taken basic molecular biology courses. Prerequisite(s): course 205. Enrollment restricted to graduate students; undergraduates may enroll if they have completed course 205, Computer Science 101, and any upper-division molecular biology or biochemistry course, such as Biochemistry 100 or 100A. *J. Stuart*

220. Protein Bioinformatics. W

Covers the application of bioinformatics techniques to protein sequences and structures. Topics include protein sequence analysis, protein structure prediction, and sources of experimental data about proteins. Prerequisite(s): course 205, or Chemistry 200B; concurrent enrollment in course 220L, 296, or 297 is required. Enrollment restricted to graduate students; undergraduates may enroll if they have completed course 205, CMPS 101, and BIOC 100A. *K. Karplus*

220L. Protein Bioinformatics Laboratory (1 credit). W

Project in protein bioinformatics. Prerequisite(s): course 205; concurrent enrollment in course 220 is required. *K. Karplus*

225. Protein Function in Biology and Bioinformatics. F

Reviews functional roles of proteins and computational methods used to predict functional aspects of proteins. Focus is on molecular function and structure-function relationships. Wider-reaching notions of function (pathways, interaction networks) are considered peripherally, as the context in which molecular function occurs. Course includes lectures, (computational) lab work, and discussions of topical publications. Prerequisite(s): Biochemistry and Molecular Biology 100A (or equivalent knowledge) and courses 205 and 220, or by instructor's permission. Enrollment limited to 15. *D. Gerloff*

230. Computational Genomics. W

Genomics databases: analysis of high-throughput genomics datasets; BLAST and related sequence comparison methods; pairwise alignment of biosequences by dynamic programming; statistical methods to discover common motifs in biosequences; multiple alignment and database search using motif models; constructing phylogenetic trees; hidden Markov models for finding genes, etc.; discriminative methods for analysis of bioinformatics data, neural networks, and support vector machines; locating genes and predicting gene function, including introduction to linkage analysis and disease association studies using SNPs; and modeling DNA and RNA structures. Prerequisite(s): course 205; concurrent enrollment in course 230L, 296, or 297 is required. Enrollment restricted to graduate students; undergraduates may enroll if they have completed course 205, Computer Science 101, and BIOC 100A. *J. Stuart, D. Haussler, T. Lowe*

230L. Computational Genomics Laboratory (1 credit). W

Project in computational genomics. Prerequisite(s): course 205; concurrent enrollment in course 230 is required. *J. Stuart, D. Haussler, T. Lowe*

247. Stem Cell Research: Scientific, Ethical, Social, and Legal Issues. W Scientific, ethical, social, and legal dimensions of human embryonic stem-cell research, including the moral status of the embryo; the concept of respect for life; ethical constraints on oocyte procurement; creation of embryonic chimeras; federal policies; and political realities. (Also offered as Biology 288. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. *E. Suckiel*

255. Biotechnology and Drug Development. W

Recommended for students interested in careers in the biopharmaceutical industry. Focuses on recombinant DNA technology and the drug-development process, including discovery research; preclinical testing; clinical trials; and regulatory review, as well as manufacturing and production considerations. Students may not receive credit for this course and course 155. Enrollment limited to graduate students. Enrollment limited to 10. *P. Berman*

280B. Seminar on Bioinformatics (2 credits). F,W,S

Weekly seminar series covering topics of current research in computational biology or bioinformatics. Current research work and literature in these areas are discussed in weekly meetings. Enrollment restricted to graduate students or permission of instructor. May be repeated for credit. *J. Stuart, D. Haussler, T. Lowe, K. Karplus*

281B. HIV Vaccine Research (2 credits). F,S

Weekly seminar series covering topics of HIV vaccine research. Current research work and literature in this area are discussed. Students lead some discussions and participate in all meetings. Enrollment restricted to graduate students. Enrollment limited to 10. *P. Berman*

281G. Seminar on Protein Structure and Function (2 credits). F,W,S

Weekly seminar series covering topics of current computational and experimental research in protein structure prediction and design, structure-function relationships and protein evolution. Current research work and literature in these areas discussed. Students lead some discussions and participate in all meetings. (Formerly course 281R.) Enrollment restricted to graduate students; qualifed undergraduates may enroll with permission of instructor. May be repeated for credit. *D. Gerloff*

281H. Seminar in Comparative Genomics (2 credits). F,W,S

Weekly seminar series covering topics of current computational and experimental research in comparative genomics. Current research work and literature in this area discussed. Students lead some discussions and participate in all meetings. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *D. Haussler*

281K. Seminar on Protein Structure Prediction (2 credits). F,W

Weekly seminar series covering topics of current computational and experimental research in protein structure prediction. Current research work and literature in this area discussed. Students lead some discussions and participate in all meetings. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *K. Karplus*

281L. Seminar in Computational Genetics (2 credits). F,W,S

Weekly seminar series covering topics and experimental research in computational genetics. Current research work and literature in this area discussed. Students lead some discussions and participate in all meetings. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *T. Lowe*

281S. Seminar in Computational Functional Genomics (2 credits). F,W,S

Weekly seminar series covering topics of current computational and experimental research in computational functional genomics. Current research work and literature in this area discussed. Students lead some discussions and participate in all meetings. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *J. Stuart*

293. Seminar in Biomolecular Engineering. *

Weekly seminar series covering topics of bioinformatics and biomolecular engineering research. Current research work and literature in this area discussed. Students lead some discussions and participate in all meetings. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. *The Staff*

296. Research in Bioinformatics. F,W,S

Independent research in bioinformatics under faculty supervision. Although this course may be repeated for credit, not every degree program accepts a repeated course towards degree requirements. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

297. Independent Study or Research. F,W,S

Independent study or research under faculty supervision. Although course may be repeated for credit, not every degree program accepts a repeated course towards degree requirements. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

297F. Independent Study or Research (2 credits). F,W,S

Independent study or research under faculty supervision. Although course may be repeated for credit, not every degree program accepts a repeated course towards degree requirements. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Thesis research conducted under faculty supervision. Although course may be repeated for credit, not every degree program accepts a repeated course towards degree requirements. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Chemistry and Biochemistry

230 Physical Sciences Building (831) 459-4125 http://chemistry.ucsc.edu

Program Description | Changes to 2006-08 Catalog Highlighted | Faculty | Course Descriptions

Program Description

Chemistry is central to modern science. Ultimately, most phenomena in biology, medicine, geology, and the environmental sciences can be described in terms of the chemical and physical behavior of atoms and molecules. Because of the wide appeal and utility of chemistry, UCSC offers many lower-division courses, differing in emphasis and style, to meet diverse needs. Students should also note the numerous upper-division course offerings and select those most suitable to their academic interests. The curriculum in chemistry exposes the student to the principal areas of modern chemistry, including organic, inorganic, physical, analytical, and biochemistry. The curriculum is designed to meet the needs of students who plan to end their formal education with a bachelor of arts or bachelor of science degree, as well as those who wish to go on for an advanced degree. The UCSC chemistry B.A. or B.S. graduate is well prepared to pursue a career in chemistry or an allied field.

Research in chemistry at UCSC is closely interwoven with graduate and undergraduate education. The chemistry and biochemistry program is active at the graduate level, and faculty also encourage undergraduates to become involved in research. Research is done for academic credit in courses 180A-B-C, Senior Research; or in course 199, Tutorial. There are also opportunities for interdisciplinary research spanning, for example, chemistry/physics, chemistry/geology, chemistry/oceanography, chemistry/biology, chemistry/computer science, and chemistry/environmental toxicology. At UCSC, it is not uncommon for students to see their own original work published in research journals.

Chemistry and biochemistry faculty and approximately 90 graduate students and 30 postdoctoral fellows are housed in two well-equipped buildings near the Science Library. Standard and specialized spectrophotometric equipment, a number of instruments devoted to structural studies, instrumentation for specialized analytical purposes, and computer facilities used in studies of structure and reactivity are all available. The Science Library has an excellent collection of current journals, in print and electronic form, and reference works, as well as earlier volumes of all the major journals. Additional source material can be readily and rapidly obtained on interlibrary loan.

A degree in chemistry opens the door to a wide variety of academic careers. Some UCSC graduates are working as researchers in industry in areas such as electronic materials, biotechnology, medicinal chemistry, and petrochemicals. Others have entered government service, as research chemists in the Food and Drug Administration, the Environmental Protection Agency, or law enforcement crime laboratories. Fields such as patent law, commercial development, and scientific writing are open to graduates. Many chemistry majors go on to university graduate programs across the nation to prepare for careers in research, teaching, or a combination of the two. The degree in chemistry also provides a strong disciplinary background in preparation for a career in the important and much needed area of science teaching in high school. A major in chemistry is also an excellent beginning for one of the many opportunities in the health sciences.

The UCSC Chemistry and Biochemistry Department offers both B.S. and B.A. degree programs. The B.S. program has more requirements, and a student in this program earns a degree that meets the requirements of an American Chemical Society certified program. The B.S. degree should be the choice if a student is interested in getting a job in chemistry immediately after receiving their college degree. The B.S. program also provides a good background for graduate work in chemistry. The B.A. program has fewer requirements and should be considered by students who wish to take more science courses outside of chemistry to enter an interdisciplinary area. Examples might be chemical oceanography, geochemistry, chemical physics, environmental chemistry, and health sciences. The B.A. might also be a good choice for students who wish to become high school teachers. However, for either degree, the courses stress the fundamentals of chemistry and allow students to pursue independent research.

Opportunities for Nonmajors

In addition to its regular course offerings for majors, the Chemistry and Biochemistry Department offers several courses for the nonmajor. These include 80A, *Chemistry of Nutrition: Concepts and Controversy*, and 80H, *Introduction to Wines and Wine Chemistry*. These courses are taught by chemistry faculty and are designed to present various aspects of chemical science to the nonmajor. A minor in chemistry is also offered for those who wish to have a strong complementary program in chemistry while majoring in another course of study.

Requirements for the B.A. Degree

The requirements for the bachelor of arts in chemistry have been kept to a minimum so that students may tailor their program to their own purposes, for example, to pursue a double major, to study areas of the humanities or social sciences, to complete major requirements late in their college career, or to concentrate study in a specific branch of chemistry. The minimum requirements (including prerequisites) constitute 54 percent of a student's total undergraduate program; consequently, there is ample time to explore and discover other interests within the university. To plan wisely, students are advised to refer to each course description for a detailed listing of prerequisites. Students who decide they want a professional career in chemistry are advised to meet with the chemistry undergraduate staff adviser.

Lower-Division Requirements

- · Chemistry 1A, 1B/M and 1C/N
- Mathematics 11A-B and 22 or 19A-B and 22
- Physics 5A/L, 5B/M, and 5C/N; or 6A/L, 6B/M, and 6C/N

Upper-Division Requirements

- Chemistry 108A/L and 108B/M; or 112A/L, 112B/M, and 112C/N
- Chemistry 151A/L, 163A, 163B, 164A, 164B, and one of the following: 146A, 146B, 146C
- Elective(s). At least two if 108A/L and 108B/M are taken; or at least one from the following list if 112A/L, 112B/M, and 112C/N are taken:
 - Chemistry 103 (can be used as elective only if Biochemistry and Molecular Biology 100A, 100B, and 100C are not taken as electives)
 - Chemistry 122, 143, 151B, 156C, 163C, and graduate-level lecture courses in chemistry
 - Biochemistry and Molecular Biology 100A, 100B, 100C
 - Computer Science 12A or 60N, or BME 60
 - Environmental Toxicology 101, or 102
 - Ocean Sciences 120 or 220
 - Physics 110A-B, 116A-B-C

Comprehensive Requirement. The Comprehensive Requirement is a part of all UCSC degrees. In the Department of Chemistry and Biochemistry, there are two options for satisfying this requirement:

- Senior thesis. A senior research project based on original experimental or theoretical research (courses 180A-B-C). At the conclusion of the project, the student submits a satisfactory formal research paper to the faculty sponsor. Students arrange for a faculty sponsor by consulting with a relevant faculty member within the chemistry or the biochemistry and molecular biology major program. In some cases, faculty outside these major programs (for example, in biology, ocean sciences, environmental toxicology, or Earth sciences) may be an appropriate sponsor. Students who select a sponsor outside the chemistry or the biochemistry and molecular biology major programs should have the title and description of the proposed thesis reviewed by the undergraduate adviser in the Department of Chemistry and Biochemistry. Students, usually working in the laboratory of the faculty sponsor, acquire experimental and/or theoretical research experience and skills in the laboratory as well as instruction in the writing of a research paper. Students are expected to make satisfactory academic progress and be in good academic standing while they take 180 courses. Students who achieve excellence in both research and thesis may be awarded honors in the Senior Comprehensive Requirement upon graduation.
- Senior essay. An essay based on literature research (course 199). After agreeing in advance on an appropriate topic of interest and a format, the student submits a satisfactory essay on the topic. Students arrange for a faculty sponsor by consulting with a relevant faculty member within the chemistry or the biochemistry and molecular biology major program. In some cases, faculty outside these major programs (for example, in biology, ocean sciences, or Earth sciences) may be an appropriate sponsor. Students who select a sponsor outside the chemistry or the biochemistry and molecular biology major programs should have the title and description of the proposed essay reviewed by the undergraduate adviser in the Department of Chemistry and Biochemistry. Students acquire experience and skills in scientific literature research as well as in the writing of a research paper.

Chemistry Major B.A. Planner

The following is the recommended academic plan for students to complete during their first two years as preparation for the B.A. degree.

Year	Fall	Winter	Spring
1st	Chem 1A	Chem 1B/M	Chem 1C/N
(frsh)	Math 11A	Math 11B	Math 22
2nd	Chem 112A/L or	Chem 112B/M or	Chem 112C/N
(soph)	Chem 108A/L	Chem 108B/M or	
		Chem 108A/L	108B/M
	Phys 6A/L	Phys 6B/M	Phys 6C/N

Requirements for the B.S. Degree

The bachelor of science major program is designed for students who intend to pursue a professional career in chemistry. It is rigorous and broadly based, appropriate to that purpose. The course requirements for the B.S. major are as follows; please refer to each course description for a detailed listing of prerequisites.

Lower-Division Requirements

- · Chemistry 1A, 1B/M and 1C/N
- Mathematics 19A-B and Mathematics 22; or Mathematics 11A-B, and Mathematics 22, and either AMS 27/L, or Math 21, or Math 24
- Physics 5A/L, 5B/M, and 5C/N; or 6A/L, 6B/M, and 6C/N

Upper-Division Requirements

- Chemistry 112A/L, 112B/M, and 112C/N; or 108A/L, 108B/M, and 143 Chemistry 103
- Chemistry 151A/L, 163A, 163B, 163C, 164A, 164B, and one of the following: 146A, 146B, 146C
- Electives. At least two from the following list (to receive certification from the American Chemical Society, you must complete Chemistry 122 as one of the two electives)
 - Chemistry 122, 143 (if not taken for the organic chemistry requirement), 151B, graduate-level lecture courses in chemistry (5 credits or two 3-credit lecture courses)
 - Biochemistry and Molecular Biology 100A, 100B, 100C (can substitute for Chemistry 103)
 - Environmental Toxicology 101 or 102
 - Ocean Sciences 120 or 220
 - Physics 110A-B, 116A-B-C

Comprehensive Requirement: Same as for the B.A. (see above)

- *B.S. Degree with Biochemistry Emphasis.* The biochemistry pathway is designed for students who intend to pursue a career in biochemistry or in a related field such as biotechnology, and it provides an exceptionally rigorous chemistry emphasis.
 - Chemistry 1A, 1B/M and 1C/N
 - Mathematics 19A-B, 22 or 11A, 11B, 22, and AMS 27/L or Math 21 or Math 24
 - Physics 5A/L, 5B/M, and 5C/N; or 6A/L, 6B/M, and 6C/N
 - Chemistry 112A/L, 112B/M, and 112C/N; or 108A/L, 108B/M, and 143
 - Chemistry 151A/L, 163A, 163B, 163C
 - Biochemistry and Molecular Biology 100A, 100B, 100C, 110
 - Biology 20A, 20B, 20L

Comprehensive Requirement: same as for the B.A. (see above)

Chemistry Major B.S. Planner

The following is the recommended academic plan for students to complete during their first two years as preparation for the B.S. degree.

Year	Fall	Winter	Spring
1st (frsh)	Math 19A Chem 1A	Math 19B Chem 1B/M	Math 22 Chem 1C/N
2nd (soph)	Chem 112A/L or Chem 108A/L Phys 6A/L	Chem 112B/M or Chem 108B/M or Chem 108A/L Phys 6B/M	Chem 112C/N Chem 108B/M Phys 6C/N

B.S. Degree with Environmental Chemistry Concentration

A concentration within the biology, chemistry, and Earth sciences degree programs, collectively identified as the environmental sciences program, is offered. Students will develop a core competence suitable for pursuing graduate work in the environmental chemistry area or in graduate environmental sciences programs.

Lower-Division Requirements

- Biology 20A and 20B
- Chemistry 1A, 1B/M and 1C/N
- Earth Sciences 20/L, 10/L, or 5/L
- Environmental Studies 25
- Mathematics 11A-B and 22; or 19A-B and 22
- Physics 5A/L, 5B/M, and 5C/N; or 6A/L, 6B/M, and 6C/N

Upper-Division Requirements

- Environmental Toxicology 101, Source of Pollutants or 102, Cellular and Organismal Toxicology
- Chemistry 103, Biochemical Structures, Reactions, and Energetics
- · Chemistry 108A/L, 108B/M, Organic Chemistry
- Chemistry 122, Principles of Instrumental Analysis
- Chemistry 151A/L, Chemistry of Metals/Inorganic Lab
- Chemistry 163A, Quantum Mechanics and Basic Spectroscopy; and 163B, Thermodynamics and Kinetic Theory; and 146A or 146B or 146C, Advanced Laboratory
- · Chemistry 164A, Physical Chemistry Laboratory I: Data Analysis
- Chemistry 164B, Physical Chemistry Laboratory II
- Earth Sciences 110B/M, Earth as a Chemical System/Laboratory
- Ocean Sciences 120, Aquatic Chemistry: Principles and Applications; or 220, Chemical Oceanography

Comprehensive Requirement (choose one of the following):

- Senior thesis: 180A, 180B, 180C, Senior Research
- · Senior essay: 199, Tutorial

Environmental Chemistry Planner

The following is the recommended academic plan for students who wish to pursue the environmental chemistry concentration.

Year	Fall	Winter	Spring
1st (frsh)	Chem 1A Math 11A or 19A college core	Chem 1B/M Math 11B or 19B	Chem 1C/N Math 22 Biol 20A
2nd (soph)	Chem 108A/L Phys 6A/L Biol 20B	Chem 108B/M Phys 6B/M Envs 25	Eart 10/L Phys 6C/N
3rd (jr)	Chem 163A Chem 122 gen ed	Eart 110B/M Chem 163B	Chem 151A/L gen ed
4th (sr)	Chem 164A Etox 101 gen ed	Chem 164B Ocea 220 gen ed	Chem 146B/C Chem 103 gen ed

Senior Research (courses 180A-B-C) offers an opportunity to participate in the process whereby knowledge is discovered; it is recommended to students, regardless of their ultimate career interest. Students should note, however, that the time demands of Senior Research are greater than those of the usual course.

Requirements for the Minor

The course requirements for the minor, including electives, are the same as for the B.A. degree, with the exclusion of courses 151A/151L, 164A, 164B, 146A, 146B, 146C. The minor has no senior comprehensive requirement.

Advising and Chemistry Curriculum Guide

The chemistry and biochemistry adviser provides counsel to undergraduate majors. Students are encouraged to pick up a declaration of major form at their college office and declare their major at an early date so that advising and planning can commence. To assist with this advising, the Chemistry and Biochemistry Department has prepared a curriculum guide. Copies are available at the office.

Prerequisites

Students who wish to obtain permission to take a course without having completed the listed prerequisites must make prior arrangements with the instructor. Courses are designed for students who have met all the prerequisites; those who have not are at a disadvantage.

High School Preparation

Prospective chemistry majors are encouraged to get a solid foundation in high school mathematics; familiarity with algebra, logarithms, trigonometry, and analytic geometry is particularly recommended. High school study of chemistry is not necessary to major in chemistry. Students without high school chemistry start their program with course 1A, whereas those with some preparation start in courses 1B and 1M. Experience shows that starting with course 1A does not cause any impediment to progress in the major.

Transfer Students

The Chemistry and Biochemistry Department encourages the admission of students from community colleges. Students who intend to transfer from other institutions, particularly community colleges, are urged to develop a strong background in general chemistry, organic chemistry, calculus, and physics. If the institution offers a physics course based on calculus as well as a non-calculus-based course, the student should take the calculus-based course. Prospective transfer students should consult with a community college adviser regarding details of course transferability, and soon after arrival at UCSC, they should meet with a UCSC adviser to clarify their transfer credit status.

Program for Students of the Health Sciences

Students intending to enter medical, dental, or another health science professional school can satisfy entrance requirements with a major program in chemistry supplemented with further courses, especially in biology, as specified by the particular school. Students are urged to contact the Health Career Resource office. A brochure about preparing for careers in the health sciences is available from that office on request.

Biochemistry Program

See the biochemistry and molecular biology program description and major requirements.

American Chemical Society Certification

The American Chemical Society (ACS) recognizes certain undergraduate programs, including those of UCSC, to be of such quality as to entitle graduates to become ACS members immediately upon graduation. Graduates must be individually certified to the ACS by the Chemistry and Biochemistry Department chair if they have satisfactorily completed an approved program of study. ACS certification standards are rigorous; a graduate who has met them carries a distinction that is well recognized in the profession. Broadly speaking, ACS certification requirements are satisfied by completing a B.S. major in chemistry (not including concentrations in biochemistry or environmental chemistry) at UCSC, including course 122 as an elective. A year of study in a major modern foreign language (preferably German) is recommended. More information is available from the chemistry undergraduate adviser.

Graduate Programs

The Chemistry and Biochemistry Department offers three graduate degrees: the Ph.D., a thesis M.S., and a coursework M.S. The Ph.D. and thesis M.S. programs are designed to help students develop into independent scholars while pursuing the excitement of scientific research in a personal, supportive environment. Both the Ph.D. and the research M.S. programs prepare students for careers in academia, industry, government laboratories, and other settings requiring an advanced education in chemistry and related disciplines. The coursework M.S. does not require research and is suited to teachers and others wishing to update or broaden their chemical expertise. Approximately 90 graduate students are currently enrolled in the graduate program.

Within the Ph.D. program students have the flexibility to design a course of study focused on personal research interests, and at the same time are expected to maintain the high intellectual standards associated with the doctoral degree. Research options include biochemistry, physical

chemistry, biophysical chemistry, inorganic chemistry, bioinorganic chemistry, organic chemistry and bioorganic chemistry. Collaborative research efforts are encouraged, both intra- and inter-departmentally. The interdisciplinary Center for Biomolecular Science and Engineering emphasizes bioinformatics, nanotechnology, and computational approaches to chemistry. Biochemists join geneticists, computer scientists, and biologists in the Center for the Molecular Biology of RNA. Productive interactions have also developed between Chemistry and Biochemistry and Environmental Toxicology, Molecular Cell and Developmental Biology, and the School of Engineering.

Before beginning course work, Ph.D. students take attainment exams to confirm their level of preparation in four areas: organic, inorganic, physical, and biochemistry. First-year students take 292 and 296, and select an adviser and research committee in spring quarter. In the first two years, students enroll in core courses and electives related to their specialization. Core courses are 200A, B, and C for biochemistry and biophysical chemistry; 234 and 256A, B, or C for inorganic and bioinorganic chemistry; the 240 series for organic chemistry; and 261, 262, and 263 for physical chemistry. Organic studies students must pass four cumulative exams based on assigned reading in current research journals. The Ph.D. candidate's research committee meets formally with the student to evaluate research progress at least once a year. Students are expected to finish all Ph.D. requirements in five to six years.

M.S. students and Ph.D. students who have not advanced to candidacy attend a weekly seminar (291A, B, C, or D). Speakers from UCSC, other universities, and research labs expose students to advances at the frontiers of chemical research, offering the opportunity for personal contact with leading scientists.

Teaching assistantships provide both financial support and the opportunity to put into practice the required pedagogical training offered in 296 (presentation techniques, discussion strategies, lab teaching skills, lab safety procedures, time management). Advanced doctoral students can also be supported as graduate student researchers.

Ph.D. Requirements

- 1. Pass all four attainment exams and meet any deficiencies as directed by spring of first year.
- 2. Take 292 and 296 in fall of first year.
- 3. Take 291A, B, C, or D, Research Seminar, every quarter until advanced to candidacy.
- 4. Organic studies students must pass four out of 12 "cumulative exams" based on reading lists of current published organic research.
- 5. Select adviser and nominate Research Committee in spring of first year.
- 6. Present second-year seminar on a topic of current interest in published research outside own research area.
- 7. TA at least three quarters in the first two years, before attempting the Ph.D. oral qualifying exam.
- 8. Pass six lecture courses: at least four at 200 level, at least four in Chemistry and Biochemistry; on departmental approval, up to two courses may be at upper-division undergraduate level.
- 9. In the fall of the third year, pass the Ph.D. oral qualifying exam before an examining committee consisting of three Research Committee members plus one outside member approved by the Graduate Dean. Candidate presents (a) a summary of current research results and possible future direction, and (b) an original research proposal on a chemistry or biochemistry topic either related or unrelated to the candidate's current thesis research.
- 10. Nominate Dissertation Reading Committee (DRC).
- 11. Submit research prospectus (outline of dissertation chapters) in spring of fourth year and meet with DRC to review research progress.
- 12. Submit updated research prospectus (outline of dissertation chapters) to DRC in winter of fifth year.
- 13. Present dissertation seminar.

The average time to degree is five and one-quarter years. Ph.D. candidates are expected to complete research and write the dissertation within nine quarters after advancing to candidacy following a successful Ph.D. oral qualifying exam. Financial support is no longer available after 18 quarters in the graduate program.

For both Ph.D. and M.S. students, the standard course load is three courses per quarter, or a total of 15 units per quarter.

M.S. Requirements: Research Thesis Path

- 1. Pass all four attainment exams in the first year.
- 2. Take 292.
- 3. Take 296 if enrolled as teaching assistant at the time.
- 4. Take 291A, B, C, or D each quarter.
- 5. Select adviser and nominate Research Committee in the first year.
- 6. Pass at least five Chemistry and Biochemistry lecture courses, of which at least three must be graduate level (200).
- 7. Conduct original laboratory research.

8. Capstone requirement: write thesis based on original research.

M.S. Requirements: Coursework Path

- 1. Pass all four attainment exams in the first year.
- 2. Take 296 if enrolled as teaching assistant at any time.
- 3. Take 291A, B, C, or D each quarter.
- 4. Pass nine courses. Of these, seven must be lecture courses (at least four at 200 level) from three of the four sub-disciplines.
- 5. Capstone requirement: present seminar on a topic of current interest in published research.

Materials Fee

Chemistry students should be aware of the materials fee required for some courses. The fee is billed to the student's account for specific laboratory materials purchased by the Department of Chemistry and Biochemistry through the university. Fees generally range from \$15 to \$50 per course. Students may incur additional expense, purchasing individual supplies.

Chemistry and Biochemistry

389 Thimann Laboratories 230 Physical Sciences Building (831) 459-4125 http://chemistry.ucsc.edu

<u>Program Description</u> | <u>Faculty</u> | <u>Course Descriptions</u>

Program Description

Chemistry is central to modern science. Ultimately, most phenomena in biology, medicine, geology, and the environmental sciences can be described in terms of the chemical and physical behavior of atoms and molecules. Because of the wide appeal and utility of chemistry, UCSC offers many lower-division courses, differing in emphasis and style, to meet diverse needs. Students should also note the numerous upper-division course offerings and select those most suitable to their academic interests. The curriculum in chemistry exposes the student to the principal areas of modern chemistry, including organic, inorganic, physical, analytical, and biochemistry. The curriculum is designed to meet the needs of students who plan to end their formal education with a bachelor of arts or bachelor of science degree, as well as those who wish to go on for an advanced degree. The UCSC chemistry B.A. or B.S. graduate is well prepared to pursue a career in chemistry or an allied field.

Research in chemistry at UCSC is closely interwoven with graduate and undergraduate education. The chemistry and biochemistry program is active at the graduate level, and faculty also encourage undergraduates to become involved in research. Research is done for academic credit in courses 180A-B-C, Senior Research; or in course 199, Tutorial. There are also opportunities for interdisciplinary research spanning, for example, chemistry/physics, chemistry/geology, chemistry/oceanography, chemistry/biology, chemistry/computer science, and chemistry/environmental toxicology. At UCSC, it is not uncommon for students to see their own original work published in research journals.

Chemistry and biochemistry faculty and approximately 90 graduate students and 30 postdoctoral fellows are housed in two well-equipped buildings near the Science Library. Standard and specialized spectrophotometric equipment, a number of instruments devoted to structural studies, instrumentation for specialized analytical purposes, and computer facilities used in studies of structure and reactivity are all available. The Science Library has an excellent collection of current journals, in print and electronic form, and reference works, as well as earlier volumes of all the major journals. Additional source material can be readily and rapidly obtained on interlibrary loan.

A degree in chemistry opens the door to a wide variety of academic careers. Some UCSC graduates are working as researchers in industry in areas such as electronic materials, biotechnology, medicinal chemistry, and petrochemicals. Others have entered government service, as research chemists in the Food and Drug Administration, the Environmental Protection Agency, or law enforcement crime laboratories. Fields such as patent law, commercial development, and scientific writing are open to graduates. Many chemistry majors go on to university graduate programs across the nation to prepare for careers in research, teaching, or a combination of the two. The degree in chemistry also provides a strong disciplinary

background in preparation for a career in the important and much needed area of science teaching in high school. A major in chemistry is also an excellent beginning for one of the many opportunities in the health sciences.

The UCSC Chemistry and Biochemistry Department offers both B.S. and B.A. degree programs. The B.S. program has more requirements, and a student in this program earns a degree that meets the requirements of an American Chemical Society certified program. The B.S. degree should be the choice if a student is interested in getting a job in chemistry immediately after receiving their college degree. The B.S. program also provides a good background for graduate work in chemistry. The B.A. program has fewer requirements and should be considered by students who wish to take more science courses outside of chemistry to enter an interdisciplinary area. Examples might be chemical oceanography, geochemistry, chemical physics, environmental chemistry, and health sciences. The B.A. might also be a good choice for students who wish to become high school teachers. However, for either degree, the courses stress the fundamentals of chemistry and allow students to pursue independent research.

Opportunities for Nonmajors

In addition to its regular course offerings for majors, the Chemistry and Biochemistry Department offers several courses for the nonmajor. These include 80A, *Chemistry of Nutrition: Concepts and Controversy*, and 80H, *Introduction to Wines and Wine Chemistry*. These courses are taught by chemistry faculty and are designed to present various aspects of chemical science to the nonmajor. A minor in chemistry is also offered for those who wish to have a strong complementary program in chemistry while majoring in another course of study.

Requirements for the B.A. Degree

The requirements for the bachelor of arts in chemistry have been kept to a minimum so that students may tailor their program to their own purposes, for example, to pursue a double major, to study areas of the humanities or social sciences, to complete major requirements late in their college career, or to concentrate study in a specific branch of chemistry. The minimum requirements (including prerequisites) constitute 54 percent of a student's total undergraduate program; consequently, there is ample time to explore and discover other interests within the university. To plan wisely, students are advised to refer to each course description for a detailed listing of prerequisites. Students who decide they want a professional career in chemistry are advised to meet with the chemistry undergraduate staff adviser.

Lower-Division Requirements

- Chemistry 1A, 1B/M and 1C/N
- Mathematics 11A-B and 22 or 19A-B and 22
- Physics 5A/L, 5B/M, and 5C/N; or 6A/L, 6B/M, and 6C/N

Upper-Division Requirements

- Chemistry 108A/L and 108B/M; or 112A/L, 112B/M, and 112C/N
- Chemistry 151A/L, 163A, 163B, 164A, 164B, and one of the following: 146A, 146B, 146C
- Elective(s). At least two if 108A/L and 108B/M are taken; or at least one from the following list if 112A/L, 112B/M, and 112C/N are taken:

- Chemistry 103 (can be used as elective only if Biochemistry and Molecular Biology 100A, 100B, and 100C are not taken as electives)
- Chemistry 122, 143, 151B, 156C, 163C, and graduate-level lecture courses in chemistry
- Biochemistry and Molecular Biology 100A, 100B, 100C
- Computer Science 12A or 60N, or BME 60
- Environmental Toxicology 101, or 102
- Ocean Sciences 120 or 220
- Physics 110A-B, 116A-B-C

Comprehensive Requirement. The Comprehensive Requirement is a part of all UCSC degrees. In the Department of Chemistry and Biochemistry, there are two options for satisfying this requirement:

- Senior thesis. A senior research project based on original experimental or theoretical research (courses 180A-B-C). At the conclusion of the project, the student submits a satisfactory formal research paper to the faculty sponsor. Students arrange for a faculty sponsor by consulting with a relevant faculty member within the chemistry or the biochemistry and molecular biology major program. In some cases, faculty outside these major programs (for example, in biology, ocean sciences, environmental toxicology, or Earth sciences) may be an appropriate sponsor. Students who select a sponsor outside the chemistry or the biochemistry and molecular biology major programs should have the title and description of the proposed thesis reviewed by the undergraduate adviser in the Department of Chemistry and Biochemistry. Students, usually working in the laboratory of the faculty sponsor, acquire experimental and/or theoretical research experience and skills in the laboratory as well as instruction in the writing of a research paper. Students are expected to make satisfactory academic progress and be in good academic standing while they take 180 courses. Students who achieve excellence in both research and thesis may be awarded honors in the Senior Comprehensive Requirement upon graduation.
- Senior essay. An essay based on literature research (course 199). After agreeing in advance on an appropriate topic of interest and a format, the student submits a satisfactory essay on the topic. Students arrange for a faculty sponsor by consulting with a relevant faculty member within the chemistry or the biochemistry and molecular biology major program. In some cases, faculty outside these major programs (for example, in biology, ocean sciences, or Earth sciences) may be an appropriate sponsor. Students who select a sponsor outside the chemistry or the biochemistry and molecular biology major programs should have the title and description of the proposed essay reviewed by the undergraduate adviser in the Department of Chemistry and Biochemistry. Students acquire experience and skills in scientific literature research as well as in the writing of a research paper.

Chemistry Major B.A. Planner

The following is the recommended academic plan for students to complete during their first two years as preparation for the B.A. degree.

Year	Fall	Winter	Spring
1st	Chem 1A	Chem 1B/M	Chem 1C/N
(frsh)	Math 11A	Math 11B	Math 22
2nd	Chem 112A/L or	Chem 112B/M or	Chem 112C/N
(soph)	Chem 108A/L	Chem 108B/M or	

		Chem 108A/L	108B/M
Phys	6A/L	Phys 6B/M	Phys 6C/N

Requirements for the B.S. Degree

The bachelor of science major program is designed for students who intend to pursue a professional career in chemistry. It is rigorous and broadly based, appropriate to that purpose. The course requirements for the B.S. major are as follows; please refer to each course description for a detailed listing of prerequisites.

Lower-Division Requirements

- Chemistry 1A, 1B/M and 1C/N
- Mathematics 19A-B, 22 Mathematics 19A-B and Mathematics 22; or Mathematics 11A-B, and Mathematics 22, and either Applied Mathematics and Statistics 27/L, or Mathematics 21, or Mathematics 24
- Physics 5A/L, 5B/M, and 5C/N; or 6A/L, 6B/M, and 6C/N

Upper-Division Requirements

- Chemistry 112A/L, 112B/M, and 112C/N; or 108A/L, 108B/M, and 143 Chemistry 103
- Chemistry 151A/L, 163A, 163B, 163C, 164A, 164B, and one of the following: 146A, 146B, 146C
- Electives. At least two from the following list (to receive certification from the American Chemical Society, you must complete Chemistry 122 as one of the two electives)
 - Chemistry 122, 143 (if not taken for the organic chemistry requirement), 151B, graduate-level lecture courses in chemistry (5 credits or two 3credit lecture courses)
 - Biochemistry and Molecular Biology 100A, 100B, 100C (can substitute for Chemistry 103)
 - Environmental Toxicology 101 or 102
 - Ocean Sciences 120 or 220
 - Physics 110A-B, 116A-B-C

Comprehensive Requirement: Same as for the B.A. (see above)

- B.S. Degree with Biochemistry Emphasis. The biochemistry pathway is designed for students who intend to pursue a career in biochemistry or in a related field such as biotechnology, and it provides an exceptionally rigorous chemistry emphasis.
 - Chemistry 1A, 1B/M and 1C/N
 - Mathematics 19A-B, 22 Mathematics 19A-B and Mathematics 22; or Mathematics 11A-B, and Mathematics 22, and either Applied Mathematics and Statistics 27/L, or Mathematics 21, or Mathematics 24
 - Physics 5A/L, 5B/M, and 5C/N; or 6A/L, 6B/M, and 6C/N
 - Chemistry 112A/L, 112B/M, and 112C/N; or 108A/L, 108B/M, and 143
 - Chemistry 151A/L, 163A, 163B, 163C
 - Biochemistry and Molecular Biology 100A, 100B, 100C, 110
 - Biology 20A, 20B, 20L

Comprehensive Requirement: same as for the B.A. (see above)

Chemistry Major B.S. Planner

The following is the recommended academic plan for students to complete during their first two years as preparation for the B.S. degree.

Year	Fall	Winter	Spring
1st	Math 19A	Math 19B	Math 22
(frsh)	Chem 1B/M <u>1A</u>	Chem 1C/N <u>1B/M</u>	Chem 1C/N
2nd	Chem 112A/L or	Chem 112B/M or	Chem 112C/N
(soph)	Chem 108A/L	Chem 108B/M or	Chem 108B/M
	Phys 6A/L	Chem 108A/L	Phys 6C/N
		Phys 6B/M	

B.S. Degree with Environmental Chemistry Concentration

A concentration within the biology, chemistry, and Earth sciences degree programs, collectively identified as the environmental sciences program, is offered. Students will develop a core competence suitable for pursuing graduate work in the environmental chemistry area or in graduate environmental sciences programs.

Lower-Division Requirements

- Biology 20A and 20B
- Chemistry 1A, 1B/M and 1C/N
- Earth Sciences 20/L, 10/L, or 5/L
- Environmental Studies 25
- Mathematics 11A-B and 22; or 19A-B and 22
- Physics 5A/L, 5B/M, and 5C/N; or 6A/L, 6B/M, and 6C/N

Upper-Division Requirements

- Environmental Toxicology 101, Source of Pollutants or 102, Cellular and Organismal Toxicology
- Chemistry 103, Biochemical Structures, Reactions, and Energetics
- Chemistry 108A/L, 108B/M, Organic Chemistry
- Chemistry 122, Principles of Instrumental Analysis
- Chemistry 151A/L, Chemistry of Metals/Inorganic Lab
- Chemistry 163A, Quantum Mechanics and Basic Spectroscopy; and 163B, Thermodynamics and Kinetic Theory; and 146A or 146B or 146C, Advanced Laboratory
- Chemistry 164A, Physical Chemistry Laboratory I: Data Analysis
- Chemistry 164B, Physical Chemistry Laboratory II
- Earth Sciences 110B/M, Earth as a Chemical System/Laboratory
- Ocean Sciences 120, Aquatic Chemistry: Principles and Applications; or 220, Chemical Oceanography

Comprehensive Requirement (choose one of the following):

• Senior thesis: 180A, 180B, 180C, Senior Research

• Senior essay: 199, *Tutorial*

Environmental Chemistry Planner

The following is the recommended academic plan for students who wish to pursue the environmental chemistry concentration.

Year	Fall	Winter	Spring	
			- r	

1st (frsh)	Chem 1B/M 1A Math 11A or 19A college core	Chem 16/N 1B/M Math 11B or 19B Biol 20A	gen ed Chem 1C/N Math 22 Biol 20B Biol20A

3rd (jr)	Chem 163A Chem 122 gen ed	Eart 110B/M Chem 163B	Chem 151A/L gen ed
4th	Chem 164A Etox 101	Chem 164B Ocea 220	Chem 146 A/B/C Chem 146B/C Chem 103
(sr)	gen ed	gen ed	gen ed

Senior Research (courses 180A-B-C) offers an opportunity to participate in the process whereby knowledge is discovered; it is recommended to students, regardless of their ultimate career interest. Students should note, however, that the time demands of Senior Research are greater than those of the usual course.

Requirements for the Minor

The course requirements for the minor, including electives, are the same as for the B.A. degree, with the exclusion of courses 151A/151L, 164A, 164B, 146A, 146B, 146C. The minor has no senior comprehensive requirement.

Advising and Chemistry Curriculum Guide

The chemistry and biochemistry adviser provides counsel to undergraduate majors. Students are encouraged to pick up a declaration of major form at their college office and declare their major at an early date so that advising and planning can commence. To assist with this advising, the Chemistry and Biochemistry Department has prepared a curriculum guide. Copies are available at the office.

Prerequisites

Students who wish to obtain permission to take a course without having completed the listed prerequisites must make prior arrangements with the instructor. Courses are designed for students who have met all the prerequisites; those who have not are at a disadvantage.

High School Preparation

Prospective chemistry majors are encouraged to get a solid foundation in high school mathematics; familiarity with algebra, logarithms, trigonometry, and analytic geometry is particularly recommended. High school study of chemistry is not necessary to major in chemistry. Students without high school chemistry start their program with course 1A, whereas those with some preparation start in courses 1B and 1M. Experience shows that starting with course 1A does not cause any impediment to progress in the major.

Transfer Students

The Chemistry and Biochemistry Department encourages the admission of students from community colleges. Students who intend to transfer from other institutions, particularly community colleges, are urged to develop a strong background in general

chemistry, organic chemistry, calculus, and physics. If the institution offers a physics course based on calculus as well as a non-calculus-based course, the student should take the calculus-based course. Prospective transfer students should consult with a community college adviser regarding details of course transferability, and soon after arrival at UCSC, they should meet with a UCSC adviser to clarify their transfer credit status.

Program for Students of the Health Sciences

Students intending to enter medical, dental, or another health science professional school can satisfy entrance requirements with a major program in chemistry supplemented with further courses, especially in biology, as specified by the particular school. Students are urged to contact the Health Career Resource office. A brochure about preparing for careers in the health sciences is available from that office on request.

Biochemistry Program

See the biochemistry and molecular biology program description and major requirements.

American Chemical Society Certification

The American Chemical Society (ACS) recognizes certain undergraduate programs, including those of UCSC, to be of such quality as to entitle graduates to become ACS members immediately upon graduation. Graduates must be individually certified to the ACS by the Chemistry and Biochemistry Department chair if they have satisfactorily completed an approved program of study. ACS certification standards are rigorous; a graduate who has met them carries a distinction that is well recognized in the profession. Broadly speaking, ACS certification requirements are satisfied by completing a B.S. major in chemistry (not including concentrations in biochemistry or environmental chemistry) at UCSC, including course 122 as an elective. A year of study in a major modern foreign language (preferably German) is recommended. More information is available from the chemistry undergraduate adviser.

Graduate Programs

The Chemistry and Biochemistry Department offers three graduate degrees: the Ph.D., a thesis M.S., and a coursework M.S. The Ph.D. and thesis M.S. programs are designed to help students develop into independent scholars while pursuing the excitement of scientific research in a personal, supportive environment. Both the Ph.D. and the research M.S. programs prepare students for careers in academia, industry, government laboratories, and other settings requiring an advanced education in chemistry and related disciplines. The coursework M.S. does not require research and is suited to teachers and others wishing to update or broaden their chemical expertise. Approximately 90 graduate students are currently enrolled in the graduate program.

Within the Ph.D. program students have the flexibility to design a course of study focused on personal research interests, and at the same time are expected to maintain the high intellectual standards associated with the doctoral degree. Research options include biochemistry, physical chemistry, biophysical chemistry, inorganic chemistry, bioinorganic chemistry, organic chemistry and bioorganic chemistry. Collaborative research efforts are encouraged, both intra- and inter-departmentally.

The interdisciplinary <u>Center for Biomolecular Science and Engineering</u> emphasizes bioinformatics, nanotechnology, and computational approaches to chemistry. Biochemists join geneticists, computer scientists, and biologists in the <u>Center for the Molecular Biology of RNA. Productive</u> interactions have also developed between Chemistry and <u>Biochemistry and Environmental Toxicology, Molecular Cell and Developmental Biology, and the <u>School of Engineering.</u></u>

Before beginning course work, Ph.D. students take attainment exams to confirm their level of preparation in four areas: organic, inorganic, physical, and biochemistry. First-year students take 292 and 296, and select an adviser and research committee in spring quarter. In the first two years, students enroll in core courses and electives related to their specialization. Core courses are 200A, B, and C for biochemistry and biophysical chemistry; 234 and 256A, B, or C for inorganic and bioinorganic chemistry; the 240 series for organic chemistry; and 261, 262, and 263 for physical chemistry. Organic studies students must pass four cumulative exams based on assigned reading in current research journals. The Ph.D. candidate's research committee meets formally with the student to evaluate research progress at least once a year. Students are expected to finish all Ph.D. requirements in five to six years.

M.S. students and Ph.D. students who have not advanced to candidacy attend a weekly seminar (291A, B, C, or D). Speakers from UCSC, other universities, and research labs expose students to advances at the frontiers of chemical research, offering the opportunity for personal contact with leading scientists.

Teaching assistantships provide both financial support and the opportunity to put into practice the required pedagogical training offered in 296 (presentation techniques, discussion strategies, lab teaching skills, lab safety procedures, time management). Advanced doctoral students can also be supported as graduate student researchers.

Ph.D. Requirements

- 1. Pass all four attainment exams and meet any deficiencies as directed by spring of first year.
- 2. Take 292 and 296 in fall of first year.
- 3. Take 291A, B, C, or D, Research Seminar, every quarter until advanced to candidacy.
- 4. Organic studies students must pass four out of 12 "cumulative exams" based on reading lists of current published organic research.
- 5. Select adviser and nominate Research Committee in spring of first year.
- 6. Present second-year seminar on a topic of current interest in published research outside own research area.
- 7. TA at least three quarters in the first two years, before attempting the Ph.D. oral qualifying exam.
- 8. Pass six lecture courses: at least four at 200 level, at least four in Chemistry and Biochemistry; on departmental approval, up to two courses may be at upper-division undergraduate level.
- 9. In the fall of the third year, pass the Ph.D. oral qualifying exam before an examining committee consisting of three Research Committee members plus one outside member approved by the Graduate Dean. Candidate presents (a) a summary of current research results and possible future direction, and (b) an original research proposal on a chemistry or biochemistry topic either related or unrelated to the candidate's current thesis research.
- 10. Nominate Dissertation Reading Committee (DRC).

- 11. Submit research prospectus (outline of dissertation chapters) in spring of fourth year and meet with DRC to review research progress.
- 12. Submit updated research prospectus (outline of dissertation chapters) to DRC in winter of fifth year.
- 13. Present dissertation seminar.

The average time to degree is five and one-quarter years. Ph.D. candidates are expected to complete research and write the dissertation within nine quarters after advancing to candidacy following a successful Ph.D. oral qualifying exam. Financial support is no longer available after 18 quarters in the graduate program.

For both Ph.D. and M.S. students, the standard course load is three courses per quarter, or a total of 15 units per quarter.

M.S. Requirements: Research Thesis Path

- 1. Pass all four attainment exams in the first year.
- 2. Take 292.
- 3. Take 296 if enrolled as teaching assistant at the time.
- 4. Take 291A, B, C, or D each quarter.
- 5. Select adviser and nominate Research Committee in the first year.
- 6. Pass at least five Chemistry and Biochemistry lecture courses, of which at least three must be graduate level (200).
- 7. Conduct original laboratory research.
- 8. Capstone requirement: write thesis based on original research.

M.S. Requirements: Coursework Path

- 1. Pass all four attainment exams in the first year.
- 2. Take 296 if enrolled as teaching assistant at any time.
- 3. Take 291A, B, C, or D each quarter.
- 4. Pass nine courses. Of these, seven must be lecture courses (at least four at 200 level) from three of the four sub-disciplines.
- 5. Capstone requirement: present seminar on a topic of current interest in published research.

Materials Fee

Chemistry students should be aware of the materials fee required for some courses. The fee is billed to the student's account for specific laboratory materials purchased by the Department of Chemistry and Biochemistry through the university. Fees generally range from \$15 to \$50 per course. Students may incur additional expense, purchasing individual supplies.

Chemistry and Biochemistry

<u>Program Description | Course Descriptions</u>

Faculty and Professional Interests

Professor

Roger W. Anderson

Experiments and theory for low temperature, light-activated chemical vapor deposition, achromatic focusing of molecules with external electric fields, discrete orthoganol polynomials in molecular collision theory, fractal geometry structural measures for large molecules

Frank C. Andrews

Theoretical statistical mechanics and thermodynamics, science and human values, and general problem solving

Ilan Benjamin

Theoretical chemistry, molecular dynamics of chemical reactions in liquids and at interfaces

Claude F. Bernasconi

Kinetic studies of fast reactions, organic reaction mechanisms, acid-base catalysis, proton transfers, nucleophilic reactions, organometallic reactions, ab initio molecular orbital calculations

Roberto A. Bogomolni

Biophysical chemistry, photobiology, light energy conversion and signal transduction in biological systems

Joseph F. Bunnett, Emeritus

Philip O. Crews

Marine natural products chemistry, bioorganic chemistry, organic structural analysis by NMR, natural products of marine macro- and microorganisms

Ólöf Einarsdóttir

Time-resolved spectroscopy, biophysics and bioenergetics, heme-copper oxidases, electron transfer, proton translocation

Anthony L. Fink

Molecular basis of protein deposition diseases—for example, Parkinson's disease and amyloidoses; development of drugs to prevent protein deposition, protein folding, and aggregation; biophysical studies of protein structure

Theodore R. Holman

Biochemistry and bioinorganic chemistry; lipoxygenase enzymology, protein engineering, inhibitor discovery, computer inhibitor design, mass spectroscopy, electron paramagnetic resonance

David S. Kliger

Time-resolved laser spectroscopy, biophysics, studies of visual transduction, protein function, and protein folding

Joseph P. Konopelski

Synthetic organic chemistry; heterocyclic chemistry, bio-organic chemistry

Pradip Mascharak

Bioinorganic chemistry, design of antitumor drugs, modeling of active sites of metalloenzymes, design of catalysts for hydrocarbon oxidation, studies on intermediates in non-heme oxygenase chemistry, design of NO-donors for photodynamic therapy

Glenn L. Millhauser

Electron spin resonance; nuclear magnetic resonance, melanocortin receptor signaling, agouti proteins, prions, peptide synthesis

Thomas W. Schleich

Biomedical magnetic resonance spectroscopy, magnetic resonance imaging, nuclear magnetic resonance spectroscopy, biophysical chemistry

Bakthan Singaram

Organic synthesis, organoborane chemistry, heterocyclic chemistry, organometallic chemistry, asymmetric synthesis, biosensors, and natural products chemistry

Eugene Switkes

Quantum theory applied to problems in chemistry and biochemistry; visual information processing, spatial vision, color vision

Stanley M. Williamson, Emeritus

W. Todd Wipke, Emeritus

Jin Z. Zhang

Design, synthesis, characterization, and application of nanomaterials, including semiconductor and metal nanoparticles; femtosecond laser spectroscopy; ultrafast dynamics on surfaces and at interfaces; cancer biomarker detection; surface-enhanced Raman spectroscopy

Associate Professor

Rebecca Braslau

Synthetic organic chemistry: new synthetic methodologies using free radicals; nitroxides, nitroxide mediated "living" polymerizations: design preparation and functionalization of tailored polymers for biomedical and general applications in nanotechnology

Shaowei Chen

Synthesis, characterization, and manipulation of novel functional nanomaterials (metals and semiconductors); their long-range ordered assemblies and related nanoscale electron transfer; applications in fuel cells, photovoltaics, and electronic devices

Scott R. Oliver

Inorganic materials: nanoporous crystal structures for environmental cleanup and catalysis; polymer templating of macroporous inorganics for solar cells and biomaterials; thin films for sensors and nanofabrication

William G. Scott

Structure and function of RNA, proteins, and their complexes

Assistant Professor

Yat Li

Rational synthesis of new functional nanostructures (nanocrystals, semiconductor nanowires, and nanowire heterostructures); electron microscopy study of nanostructures; investigation of fundamental optical, magnetic, and electrical properties of nanomaterials; development of nanoscale electrons, photonics, and photovoltaics

Roger G. Linington

Marine natural products; drugs for neglected diseases; chemical biology; chemical probes

Robert S. Lokey

Organic chemistry; combinatorial synthesis, biotechnology, molecular cell biology

Seth M. Rubin

Biomolecular mechanisms of cell-cycle regulation and cancer; structural biology and biochemistry; macromolecular x-ray crystallography; nuclear magnetic resonance

Lecturer

Daniel Palleros

Affiliate

David W. Deamer, Professor Emeritus (recalled)

Professor

Kenneth W. Bruland (Ocean Sciences)

Chemical oceanography, biogeochemistry of trace metals and radionuclides, aquatic chemistry, geochemistry

A. Russell Flegal (Environmental Toxicology)

Anthropogenic perturbations of biogeochemical cycles, applications of isotopic tracers in anthropology and archaeology

Donald R. Smith (Environmental Toxicology)

Neurotoxicity, cellular and organismal responses to environmental toxins

Assistant Professor

Carol Rohl (Biomolecular Engineering)

Protein design, protein structure and function prediction; protein-protein interactions

Program Description | Changes to 2006-08 Catalog Highlighted | Faculty

Lower-Division Courses

1A. General Chemistry. F,W

First term of an integrated study of general chemistry. Course 1A suitable for people who have a solid background in high school chemistry. Covers a range of topics including the atomic structure of matter; molecules; chemical reactions; acids and bases; gases; and equilibria in the gas and liquid phase. Lecture: 3-1/2 hours; discussion: 1-1/4 hours. Students expected to use algebra to solve problems. Prerequisite(s): high school level chemistry. (General Education Code(s): IN, Q.) (*F*) *R. Roland*, (*FW*) *T. Schleich*

1B. General Chemistry. W,S

Second term of an integrated study of general chemistry. Coverage includes quantum mechanics; the hydrogen atom; many-electron atoms and chemical periodicity; elementary covalent bonding; thermochemistry; and intermolecular forces and solutions, including colligative properties. Lecture: 3-1/2 hours, discussion: 1-1/4 hours. Prerequisite(s): course 1A or a grade of 5 on the AP chemistry examination. Concurrent enrollment in course 1M is required. Enrollment limited to 750. (General Education Code(s): IN, Q.) *R. Roland, R. Bogomolni*

1C. General Chemistry. F,S

Third term of an integrated study of general chemistry. Coverage includes thermodynamics; chemical kinetics; oxidation-reduction and electrochemistry; liquids and solids; transition metals; and nuclear chemistry. Lecture: 3-1/2 hours; discussion: 1-1/4 hours. Prerequisite(s): course 1B. Concurrent enrollment in course 1N is required. (General Education Code(s): IN, Q.) *R. Roland, R. Anderson*

1M. General Chemistry Laboratory (2 credits). W,S

Laboratory sequence illustrating topics covered in courses 1B and 1C and important experimental techniques. Laboratory: 3 hours; lecture: 1-1/4 hours. Students are billed a materials fee. Course 1M offered in winter 2008 and spring 2008; 1N offered in spring 2008 and fall 2008. Prerequisite(s): course 1A. Concurrent enrollment in course 1B is required. *R. Roland*

1N. General Chemistry Laboratory (2 credits). F,S

Laboratory sequence illustrating topics covered in courses 1B-1C, respectively, and important experimental techniques. Laboratory: 3 hours; lecture: 1-1/4 hours. Students are billed a materials fee. Course 1M offered in winter 2008 and spring 2008; 1N offered in spring 2008 and fall 2008. Prerequisite(s): course 1M. Concurrent enrollment in course 1C is required. *R. Roland*

1P. Chemistry Essentials (3 credits). F

Introduction to basic concepts required for the Chemistry 1 series. This course is for

students who have little background in high school chemistry or equivalent. Covers elementary topics including units, conversions, the mole, chemical reactions, and balancing. Enrollment limited to 90. *R. Roland*

80H. Introduction to Wines and Wine Chemistry. *

Introduction to scientific aspects of winemaking and wine sensory evaluation. Overview of wines emphasizing chemical and biological principles appropriate for both non-science and science students. Aspects of wine presented including history, viticulture, fermentation, winery operations, and physiology of wine consumption. Students are billed a materials fee. (General Education Code(s): T2-Natural Sciences.) *P. Crews*

80L. Introduction to Chemistry of Wines and Musts (2 credits). *

An integrated course exploring elementary aspects of wine evaluation and modern winemaking. Topics: effects of grape varieties, vineyard locations, production techniques, aging practices on wine quality, and winemaking. Survey of commercial wine styles and lab methods of wine component analysis provide insights on how fine wines are made and analyzed. Students are billed a materials fee. Prerequisite(s): concurrent enrollment in or completion of course 80H. Enrollment limited to 32. *P. Crews*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

99F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses

103. Biochemical Structures, Reactions, and Energetics. S

Introduces biochemical molecules that compose all living organisms. Focus on structure and function relationships in chemical components of cells, primary enzyme-catalyzed reactions of metabolism. Chemical principles of cell function at molecular level; molecular structure of nucleic acids discussed. Prerequisite(s): courses 1B and 1C; 108A-B or 112A-B-C or 7. *T. Schleich*

108A. Organic Chemistry. F,W

An integrated study of fundamental organic chemistry, with emphasis on materials especially relevant to the biological sciences. Students with credit for course 112A cannot receive credit for course 108A; students with credit for 112B or 112C cannot receive credit for 108B. Lecture: 3-1/2 hours, discussion: 1-1/4 hours. Prerequisite(s): course 1C or 4B. *J. Konopelski, C. Bernasconi*

108B. Organic Chemistry. W,S

An integrated study of fundamental organic chemistry, with emphasis on materials especially relevant to the biological sciences. Students with credit for course 112A cannot receive credit for course 108A; students with credit for 112B or 112C cannot receive credit for 108B. Lecture: 3-1/2 hours, discussion: 1-1/4 hours. Prerequisite(s): course 108A or 112A. *The Staff, B. Singaram*

108C. Organic Chemistry (3 credits). S

Integrated study of fundamental organic chemistry, with emphasis on materials especially relevant to biological sciences. Students with credit for course 112A cannot receive credit for course 108A; students with credit for course 112B cannot

receive credit for course 108B; students with credit for course 112C cannot receive credit for course 108C. Lecture: 2 hours, 20 minutes. Discussion: 1 hour. Prerequisite(s): course 108B or equivalent. *The Staff*

108L. Organic Chemistry Laboratory (2 credits). F,W

Laboratory experience in organic chemistry associated with courses 108A-108B, respectively. Designed to introduce the student to the many techniques associated with organic chemistry while affording an opportunity to explore the concepts discussed in the lecture material. Laboratory: 4 hours, lecture: 1-1/4 hours. Students are billed a materials fee. Prerequisite(s): courses 1C/N and 108A or concurrent enrollment. *D. Palleros*

108M. Organic Chemistry Laboratory (2 credits). W,S

Laboratory experience in organic chemistry associated with courses 108A-108B, respectively. Designed to introduce the student to the many techniques associated with organic chemistry while affording an opportunity to explore the concepts discussed in the lecture material. Laboratory: 4 hours, lecture: 1-1/4 hours. Students are billed a materials fee. Prerequisite(s): courses 108A/L and 108B or concurrent enrollment. *D. Palleros*

112A. Organic Chemistry. F

An integrated study of fundamental organic chemistry, including principles, descriptive chemistry, synthetic methods, reaction mechanisms, and compounds of biological interest. These courses are coordinated with 112L-M-N respectively and are to be taken concurrently with them. Students with credit in course 108A can receive credit for courses 112B and 112C but not for 112A; students with credit in 108B cannot receive credit for 112B or 112C. Lecture: 3-1/2 hours; optional discussion section: 1-1/4 hours. Prerequisite(s): course 1C or 4B; and course 1N. Concurrent enrollment in course 112L is required. Enrollment limited to 80. *R. Lokey*

112B. Organic Chemistry. W

An integrated study of fundamental organic chemistry, including principles, descriptive chemistry, synthetic methods, reaction mechanisms, and compounds of biological interest. These courses are coordinated with 112L-M-N respectively and are to be taken concurrently with them. Students with credit in course 108A can receive credit for courses 112B and 112C but not for 112A; students with credit in 108B cannot receive credit for 112B or 112C. Lecture: 3-1/2 hours; optional discussion section: 1-1/4 hours. Prerequisite(s): course 112A/L. Concurrent enrollment in course 112M is required. Enrollment limited to 80. *R. Braslau*

112C. Organic Chemistry. S

An integrated study of fundamental organic chemistry, including principles, descriptive chemistry, synthetic methods, reaction mechanisms, and compounds of biological interest. These courses are coordinated with 112L-M-N respectively and are to be taken concurrently with them. Students with credit in course 108A can receive credit for courses 112B and 112C but not for 112A; students with credit in 108B cannot receive credit for 112B or 112C. Lecture: 3-1/2 hours; optional discussion section: 1-1/4 hours. Prerequisite(s): courses 112B/M. Students should be concurrently enrolled in course 112N. Enrollment limited to 80. *R. Linington*

112L. Organic Chemistry Laboratory (2 credits). F

Laboratory experience in organic chemistry and associated principles. Experiments involve the preparation, purification, characterization, and identification of organic

compounds and make use of modern as well as classical techniques. These courses are coordinated with 112A-B-C respectively, and are to be taken concurrently with them. For courses 112L and 112M: lecture: 1-1/2 hours and laboratory: 4 hours; for course 112N: lecture: 1-1/4 hours and laboratory: 8 hours. Students are billed a materials fee. Prerequisite(s): courses 1C/N. Students should be concurrently enrolled in course 112A. Enrollment limited to 80. *D. Palleros*

112M. Organic Chemistry Laboratory (2 credits). W

Laboratory experience in organic chemistry and associated principles. Experiments involve the preparation, purification, characterization, and identification of organic compounds and make use of modern as well as classical techniques. These courses are coordinated with 112A-B-C respectively, and are to be taken concurrently with them. For courses 112L and 112M: lecture: 1-1/2 hours and laboratory: 4 hours; for course 112N: lecture: 1-1/4 hours and laboratory: 8 hours. Students are billed a materials fee. Prerequisite(s): course 112A/L . Concurrent enrollment in course 112B is required. Enrollment limited to 80. *D. Palleros*

112N. Organic Chemistry Laboratory (2 credits). S

Laboratory experience in organic chemistry and associated principles. Experiments involve the preparation, purification, characterization, and identification of organic compounds and make use of modern as well as classical techniques. These courses are coordinated with 112A-B-C respectively, and are to be taken concurrently with them. For courses 112L and 112M: lecture: 1-1/2 hours and laboratory: 4 hours; for course 112N: lecture: 1-1/4 hours and laboratory: 8 hours. Students are billed a materials fee. Prerequisite(s): courses 112B/M. Students should be concurrently enrolled in course 112C. Enrollment limited to 80. *D. Palleros*

122. Principles of Instrumental Analysis. F

A laboratory course designed to develop familiarity with techniques and instrumentation used in analytical chemistry, emphasizing determination of trace inorganic species. Primary emphasis on applications utilizing the absorption or emission of electromagnetic radiation and on voltammetry. Topics include molecular UV-visible absorption and fluorescence spectrometry; atomic absorption, emission and fluorescence spectrometry; and various forms of voltammetry. Lecture: 2 hours; laboratory: 8 hours. Students are billed a materials fee. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, course 108B or 112C. (General Education Code(s): W.) *D. Smith*

143. Organic Chemical Structure and Reactions. F

Advanced topics such as the chemistry of terpenes, steroids, synthetic polymers, alkaloids, reactive intermediates, and reaction mechanisms are treated. Lecture: 4 hours. Prerequisite(s): course 108B or 112C. *B. Singaram*

146A. Advanced Laboratory in Organic Chemistry (2 credits). F

Designed to expose students to advanced laboratory techniques in organic chemistry. Experiments carry a research-like format and cover the areas of natural products and reaction chemistry. Modern methods of organic analysis are emphasized including chromatographic methods and organic structure determination by spectroscopy. Laboratory: 8 hours. Students billed a materials fee. Prerequisite(s): courses 108B/M or 112C/N. Enrollment limited to 16. *R. Braslau*

146B. Advanced Laboratory in Inorganic Chemistry (2 credits). S

Designed to expose students to advanced synthetic and spectroscopic techniques in inorganic chemistry. Examples include anaerobic manipulations, characterization of

inorganic materials through spectral assignments and synthesis of coordination and organometallic complexes. Lecture: 1-1/4 hours; laboratory: 8 hours. Students billed a materials fee. Prerequisite(s): courses 108B/M or 112C/N; 163A. S. Oliver

146C. Advanced Laboratory in Physical Chemistry (2 credits). S

Provides advanced and more open-ended laboratory experience in the areas of thermodynamics, kinetics, spectroscopy, and computer simulations. Lecture: 1-1/4 hours; laboratory: 4 hours. Students are billed a materials fee. Prerequisite(s): course 163B and 164B. Enrollment limited to 20. *S. Chen*

151A. Chemistry of Metals. S

Fundamental topics of inorganic chemistry are presented at the level of the standard texts of field. Special emphasis is given to maintain breadth in the areas of metallic, nonmetallic, and biological aspects of inorganic chemistry. Lecture: 3-1/2 hours; discussion: 1-1/4 hours. Prerequisite(s): courses 108B/M or 112C/N; 163A; students should be concurrently enrolled in course 151L. *S. Oliver*

151B. Chemistry of the Main Group Elements. *

Fundamental aspects of inorganic chemistry of main group elements are discussed. The emphasis is placed on the chemistry of nontransition elements including noble gases and halogens. In addition, students are exposed to the concepts of extended structures, new materials, and solid-state chemistry. Lecture: 3-3/4 hours. Prerequisite(s): courses 108B/M or 112C/N, and 163A. Recommended for chemistry majors. *The Staff*

151L. Inorganic Chemistry Laboratory (2 credits). S

Laboratory experience in inorganic chemistry. Experiments involve the preparation, purification, and characterization of inorganic compounds. In addition, experiments are designed to illustrate fundamental principles in inorganic chemistry and are coordinated with lectures in course 151A. Laboratory: 4 hours per week. Students are billed a materials fee. Prerequisite(s): courses 108B/M or 112C/N; 163A; students should be concurrently enrolled in course 151A. *S. Oliver*

156C. Advanced Topics in Inorganic Chemistry. *

Advanced topics in inorganic chemistry and an introduction to solid state chemistry. Synthesis and structure of materials discussed as well as their influence on properties for modern devices and applications. Recent developments in area of material science also explored. Taught in conjunction with course 256C. Prerequisite(s): course 151A. Enrollment restricted to seniors. *S. Oliver*

163A. Quantum Mechanics and Basic Spectroscopy. F

A detailed introduction to quantum theory and the application of wave mechanics to problems of atomic structure, bonding in molecules, and fundamentals of spectroscopy. Prerequisite(s): course 1C or 4B, Physics 5A-B-C or 6A-B-C and Mathematics 11C or 22 or 23B. Physics 6C can be taken concurrently. *I. Benjamin*

163B. Thermodynamics and Kinetic Theory. W

Fundamentals of thermodynamics and applications to chemical and biochemical equilibria. Prerequisite(s): course 1C or 4B, Physics 6A or 5A, and Math 11C or 22. *E. Switkes*

163C. Kinetic Theory and Reaction Kinetics, Statistical Mechanics, Spectroscopic Applications. S

Introduction to statistical mechanics, kinetic theory, and reaction kinetics and topics

in spectroscopy. Prerequisite(s): courses 163A and 163B. G. Millhauser

164A. Physical Chemistry Laboratory I: Data Analysis (2 credits). F

Introduction to data analysis and statistical treatment of errors for physical chemistry experiments. Emphasizes the use of computers for problem solving and data analysis of one required laboratory report. Lecture: 1 hour; laboratory: 4 hours. Prerequisite(s): course 1C or 4B; Physics 6A-B-C or 5A-B-C; Mathematics 11C or 22. *S. Chen*

164B. Physical Chemistry Laboratory II (2 credits). W

Provides laboratory experience in the areas of thermodynamics, kinetics, and spectroscopy. Lecture: 1 hour; laboratory: 4 hours. Students are billed a materials fee. Prerequisite(s): course 164A. *R. Anderson*

180A. Senior Research. F

An individually supervised course with emphasis on independent research. Multipleterm course extending over two or three quarters; the grade and evaluation submitted for the final quarter apply to all previous quarters. Students submit petition to sponsoring agency; may not be repeated for credit. *The Staff*

180B. Senior Research. F

An individually supervised course with emphasis on independent research. Multiple-term course extending over two or three quarters; the grade and evaluation submitted for the final quarter apply to all previous quarters. Students submit petition to sponsoring agency; may not be repeated for credit. *The Staff*

180C. Senior Research. F

An individually supervised course with emphasis on independent research. Multipleterm course extending over two or three quarters; the grade and evaluation submitted for the final quarter apply to all previous quarters. Students submit petition to sponsoring agency; may not be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

199F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

Graduate Courses

200A. Advanced Biochemistry: Biophysical Methods. F

An introduction to the theory, principles, and practical application of biophysical methods to the study of biomolecules, especially proteins and nucleic acids. Emphasis on spectroscopic techniques. Topics include magnetic resonance, optical spectroscopy, fast reaction techniques, crystallography, and mass spectrometry. *S. Rubin*

200B. Advanced Biochemistry: Protein Structure and Function. W

A detailed discussion of protein chemistry, ranging from the structure, thermodynamics, and folding of proteins to the relationship between structure and function, and encompassing the methods used to determine such information. *G. Millhauser*

200C. Advanced Biochemistry: Structure and Function of Nucleic Acids. S

A variety of contemporary problems in biochemistry and molecular biology are investigated in a detailed manner. Lecture: 3-1/2 hours. W. Scott

231. Enzyme Mechanisms and Kinetics. *

A study of enzyme kinetics, mechanisms, and factors involved in enzymic catalysis. Lecture: 3-1/2 hours. Offered in alternate academic years. *A. Fink*

234. Bioinorganic Chemistry. F,W

The role played by transition metals in biological systems is discussed through application of the principles of coordination chemistry and inorganic spectroscopy. Topics include metalloproteins involved in oxygen binding, iron storage, biological redox reactions, and nitrogen fixation, as well as metal complexes of nucleic acids. Lecture: 4 hours. Prerequisite(s): courses 151A/L, 163A; and Biochemistry and Molecular Biology 100A. *P. Mascharak*

238. Topics in Biophysical Chemistry. *

A discussion of the application of selected topics in biophysical chemistry to contemporary problems in biochemistry and molecular biology. Lecture: 3-1/2 hours. Offered in alternate academic years. *T. Schleich*

240A. Kinetics and Mechanisms of Organic Reactions (3 credits). S

Basic principles and methods of the kinetic study of reaction mechanisms are covered, including linear free energy relationships. Theories are examined concerning how reactions choose a mechanism. *C. Bernasconi*

240B. Combinatorial and High-Throughput Methods in Synthetic Chemistry (3 credits). W

Focuses on solid phase synthetic methods as applied to synthesis of compound libraries. Explores advances in laboratory automation, library synthesis, encoding and decoding schemes, and computational approaches to library design and virtual screening. Enrollment restricted to seniors and graduate students. *R. Lokey*

240C. Organic Structure Analysis from Spectra (3 credits). *

Determination of 2-D and 3-D structure and functionality of organic molecules from spectroscopic properties, including nuclear magnetic resonance, infrared, ultraviolet-visible and mass spectroscopy. *The Staff*

240E. Modern Synthetic Methods (3 credits). F

An advanced study designed to provide the background and insight to enable the student to compare and contrast new reagents and reactions with existing methods. Prerequisite(s): course 143. *B. Singaram*

240F. Selectivity and Strategy in Organic Synthesis (3 credits). F

An advanced study on the use of chemoselectivity, regioselectivity, and stereoselectivity in organic transformations. Strategic planning in approaching the synthesis of complex molecules focuses primarily on retrosynthetic analysis and stereochemical control. Prerequisite(s): course 240E. *R. Braslau*

240G. Bioorganic Chemistry of Amino Acids and Peptides (3 credits). S

Chemistry of amino acids and secondary structure of amino acid polymers (peptides and proteins) discussed. Special emphasis placed on structure and function of the distinct amino acid side chain functionality as it contributes to structure and function. *J. Konopelski*

246. Advanced Topics in Organic Chemistry. *

A graduate course covering advanced topics in organic chemistry. Topics vary from year to year. *The Staff*

246A. Organic Reactions and Molecular Orbital Theory. *

Qualitative molecular orbital concepts, especially concerning aromaticity, orbital symmetry, and perturbation theory, and their application toward interpretation of reactivity and mechanism. Lecture: 3-1/2 hours. Prerequisite(s): courses 273 and 240A. Offered in alternate academic years. May be repeated for credit. *The Staff*

246B. Marine Organic Chemistry. *

A survey of organic natural products from marine sources. Organic chemical structural families unique to marine organisms are outlined. Pathways of their synthesis and interconversions; their role in the marine environment; approaches to their analysis; the distribution of organics in seawater. Lecture: 3-1/2 hours. Prerequisite(s): courses 108B/M or 112C/N. Offered in alternate academic years. May be repeated for credit. *P. Crews*

246C. Computers and Information Processing in Chemistry. *

An introduction to digital computers and their applications in chemistry. Includes Monte Carlo, artificial intelligence, pattern recognition, modeling, simulation, and optimization problem-solving methods. Applications to include structural analysis, spectroscopy, organic synthesis, and kinetics. Lecture: 3-1/2 hours; laboratory: 1-1/2 hours. Offered in alternate academic years. May be repeated for credit. *The Staff*

246F. Organoboranes in Organic Synthesis. *

An introduction to organoborane chemistry and its applications to synthetic organic chemistry, including principles, synthetic methods, reaction mechanisms, and asymmetric synthesis. A variety of topics including allylboration, boron-enolates, and asymmetric reductions are discussed. Enrollment restricted to seniors and graduate students. Offered in alternate academic years. May be repeated for credit. *B. Singaram*

246G. Heterocyclic Chemistry. *

Advanced study of synthesis and reactions of heterocyclic organic compounds; particular emphasis on structures with important medicinal value from natural products or pharmaceutical research. Prerequisite(s): course 143 or approval of instructor. *J. Konopelski*

246H. Organic Free Radical Chemistry. *

Covers a range of topics including radical stabilization, rates of fundamental radical reactions, methods of radical generation, synthetic applications of free radicals, persistent radicals, and some aspects of free radicals in biology. Prerequisite(s): course 143 or permission of instructor. *R. Braslau*

246I. Advanced Mechanistic Chemistry and Solution Kinetics. *

Kinetic approach to selected topics in mechanistic chemistry with emphasis on structure-reactivity relationships in organic as well as inorganic and biochemical systems. Discussion of significance and treatment of kinetic data illustrated with examples from various branches of chemistry. Prerequisite(s): permission of instructor. *C. Bernasconi*

256A. Advanced Topics in Inorganic Chemistry. *

Advanced topics in inorganic chemistry are presented. Topics covered vary from

year to year, and are announced in advance. Possible topics include A) organometallic chemistry; B) structural methods in inorganic chemistry; C) solid-state chemistry. Prerequisite(s): courses 151A/L and 146B or graduate standing. *The Staff*

256B. Advanced Topics in Inorganic Chemistry. S

Advanced topics in inorganic chemistry are presented. Topics covered vary from year to year, and are announced in advance. Possible topics include A) organometallic chemistry; B) structural methods in inorganic chemistry; C) solid-state chemistry. Prerequisite(s): courses 151A/L and 146B or graduate standing. *T. Holman*

256C. Advanced Topics in Inorganic Chemistry. *

Advanced topics in inorganic chemistry are presented. Topics covered vary from year to year, and are announced in advance. Possible topics include A) organometallic chemistry; B) structural methods in inorganic chemistry; C) solid-state chemistry. Prerequisite(s): courses 151A/L and 146B or graduate standing. *The Staff*

256D. X-ray Crystallography. W

Course in chemical crystallography focuses on the needs of small-molecule, single-crystal diffraction studies. Includes diffraction theory, space-group analysis, data collection, structure solution, and refinement. Practical component: use of diffraction equipment and solution/refinement software. Enrollment restricted to graduate students and seniors who have taken courses 151A, 151L, and 163A. *S. Oliver*

261. Foundations of Spectroscopy.

The basic theory of time dependent processes is covered at an advanced level. The interaction of electromagnetic radiation and matter is described using both semiclassical and quantum field formulations. A variety of modern spectroscopic techniques are discussed both in terms of the basic processes and their use in the elucidation of chemical structure and dynamics. Prerequisite(s): course 163A. Offered in alternate academic years. *J. Zhang*

262. Statistical Mechanics. *

Theory and concepts of statistical mechanics with applications to ideal gases, condensed systems, phase transition, and non-equilibrium thermodynamics. Lecture: 3-1/2 hours. Prerequisite(s): course 160B or 163A. Offered in alternate academic years. *I. Benjamin*

263. Quantum Mechanics. *

A rigorous introductory course: the Schrödinger equation, operator formalism, matrix mechanics, angular momentum, and spin. Perturbation and other approximate methods. Applications to atomic and molecular problems. Lecture: 3-1/2 hours. Prerequisite(s): courses 163A and Physics 114A-B. Offered in alternate academic years. *J. Zhang*

265. Computer Simulation in Statistical Mechanics. W

A detailed introduction of the use of computer simulation methods in physical and biophysical chemistry. Includes review of thermodynamics and statistical mechanics, molecular mechanics, molecular dynamics, and Monte-Carlo methods. Applications to liquid structure, reaction dynamics, and protein dynamics. Offered in alternate academic years. *I. Benjamin*

266. Advanced Topics in Physical Chemistry. *

A graduate course covering advanced topics in physical chemistry. Topics vary from year to year. *The Staff*

266A. Lasers and Their Chemical Applications. *

Introduces the basic theoretical principles of lasers and laser light. Various types of lasers and selected applications to chemistry are discussed. The use of lasers in photochemistry, spectroscopy, chemical kinetics, and chemical analysis is considered. Lecture: 3-1/2 hours. Prerequisite(s): course 163A and Physics 114A-B. Offered in alternate academic years. May be repeated for credit. *The Staff*

266B. Gas Phase Kinetics. *

A discussion of rate processes in gases. Descriptions of experimental and theoretical work on unimolecular, bimolecular, and termolecular reactions and energy transfer processes. Lecture: 3-1/2 hours. Prerequisite(s): course 262. Offered in alternate academic years. May be repeated for credit. *The Staff*

268. Solid State and Materials Chemistry. F

Topics include synthesis of solid-state materials and their characterization using experimental techniques: XRD, TEM spectroscopy, NMR, and their applications in technologies. Emphasis on new materials, e.g., polymer, biopolymers, nanomaterials, organic/inorganic composites, ceramics, superconductors, electronic, magnetic, and opto-electronic materials. Prerequisite(s): courses 163A and 163B. Enrollment restricted to senior and graduate chemistry majors. *Y. Li*

269. Electrochemistry. *

Designed to introduce basic principles and applications of electrochemistry to students at upper undergraduate and lower graduate levels in various fields including analytical, physical, and materials chemistry. Enrollment restricted to seniors and graduate students. *S. Chen*

273. Applications of Symmetry and Quantum Mechanics. S

Group theory and quantum mechanics are applied to problems of the electronic structure and spectra of molecules. A variety of topics including molecular orbital theory, reactivity, electronic structure calculations, and spectroscopy are discussed. Lecture: 3-1/2 hours. Prerequisite(s): course 163A. Offered in alternate academic years. *E. Switkes*

274. Proseminar in Synthetic and Polymer Chemistry. F,W,S

Weekly meetings devoted to study of synthetic organic chemistry and controlled polymer design for applications in nanotechnology. Topics drawn from current literature and research interests of participants. May be repeated for credit. *R. Braslau*

275. Proseminar in Biological Inorganic Chemistry. F,W,S

Weekly meetings devoted to biological inorganic chemistry and biochemistry. Topics are drawn from current literature. Papers and reviews are discussed, and participants give short seminars on their research interests. May be repeated for credit. *T. Holman*

282. Proseminar: Synthetic Methods. F,W,S

Weekly meetings devoted to the study of asymmetric and/or enantio-selective synthesis of optically active organic compounds of biological and medicinal significance. Topics drawn from the current literature and the research interests of

the participants. May be repeated for credit. B. Singaram

283. Proseminar in Physical Organic Chemistry. F,W,S

Weekly meetings devoted to the study of physical and mechanistic organic chemistry. Topics drawn from the current literature and the research experiences of the participants. May be repeated for credit. *C. Bernasconi*

284. Proseminar in Synthetic Organic Chemistry. F,W,S

Weekly meetings devoted to the study of synthetic organic chemistry. Topics drawn from the current literature and the research interests of the participants. May be repeated for credit. *J. Konopelski*

285. Proseminar: Photobiochemistry and Photobiology. F,W,S

A detailed study of molecular mechanisms of light energy conversion and light-signal transduction processes in biological systems. Student participation in critical discussion of current literature examples are emphasized. Two-hour lecture and two-hour seminar weekly. Enrollment limited to 8. May be repeated for credit. *R. Bogomolni*

286. Proseminar in Natural Products Chemistry. F,W,S

Weekly meetings devoted to the study of natural products. Topics drawn from the current literature and research interests of the participants. May be repeated for credit. *P. Crews*

288. Proseminar in Bioinorganic Chemistry. F,W,S

Weekly meetings devoted to inorganic and bioinorganic research. Topics are drawn from current literature. Papers and reviews are discussed. Participants also give short seminars on topics of their research interests. May be repeated for credit. *P. Mascharak*

289. Proseminar: Biophysical Chemistry. *

Weekly meetings devoted to a detailed study of the theory and applications of nuclear magnetic resonance spectroscopy and imaging and related spectroscopic techniques to problems in biophysical chemistry. Topics are drawn from the current research literature and the research experiences of the participants. Enrollment limited to 20. May be repeated for credit. *T. Schleich*

291A. Organic Chemistry Research Seminar. F,W,S

Open to chemistry graduate students interested in organic chemistry. Weekly meetings are held to hear both local and external speakers discuss their work. Enrollment restricted to graduate students. May be repeated for credit. (S) R. Linington, (FW) R. Braslau

291B. Biochemistry and Molecular Biology Research Seminar. F,W,S

A weekly seminar series covering topics on the frontiers of biochemistry and molecular biology. The speakers include experts in these fields from other institutions. Enrollment restricted to graduate students. May be repeated for credit. (W) W. Scott, (FS) T. Holman

291C. Inorganic Chemistry Research Seminar. F,W,S

For those interested in following the recent developments in the various areas of inorganic chemistry. External speakers; weekly discussion based on personal research or recent literature, led by the inorganic chemistry faculty, postdoctoral fellows, and students. Enrollment restricted to graduate students. May be repeated

for credit. (F) P. Mascharak, (WS) T. Holman

291D. Physical Chemistry Research Seminar. F,W,S

A weekly seminar series covering topics of current research in physical chemistry. Weekly meetings are held to hear both local and external speakers discuss their work. Enrollment restricted to graduate students. May be repeated for credit. (F) *J.* Zhang, (W) Y. Li, (S) S. Chen

292. Seminar (2 credits). F

Enrollment restrictions: graduate standing or approval of the graduate adviser. *R. Linington, Y. Li*

296. Teaching Chemistry (3 credits). F

University-level pedagogy in chemistry; examines the role of preparation, assessment, and feedback in teaching chemistry discussion and laboratory sections. Effective classroom techniques and organizational strategies discussed; oral presentations analyzed critically. Required of entering chemistry graduate students. *R. Roland*

297. Independent Study. F,W,S

A topic will be studied with faculty tutorial assistance to satisfy a need for the student when a regular course is not available. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Students submit petition to sponsoring agency. The Staff

Language Program 239 Cowell College (831) 459-2054 http://language.ucsc.edu

Faculty | Course Descriptions

(There were no substantive changes to the Chinese Program Description from the General Catalog 2006-08.)

Program Description

Students interested in acquiring proficiency in Chinese can enroll in language courses from beginning to advanced levels. Students may choose a major or minor in language studies, a minor in East Asian studies through the History Department, an individual major in East Asian studies through their college, or a global economics major.

The sequence of lower-division courses 1-6 is aimed at enabling students to gain proficiency in aural comprehension, speaking, reading, and writing skills. Instruction takes place mostly in Chinese from the second half of the first quarter.

Campus Language Laboratories and Placement Exams

Information about these topics can be found under Language Program.

Study Abroad

Students may apply to study intensive Chinese language at one of China's finest universities-in Taipei, Hong Kong, or Beijing-for periods ranging from a summer up to a full year through the UC Education Abroad Program. Courses taken abroad can, with approval of an adviser, be applied to major requirements. For more information on the program, see UC Education Abroad Program. For information on credit applied to a major, please contact the appropriate department.

Program Description | Faculty

Lower-Division Courses

1. Instruction in the Chinese (Mandarin) Language. F

Instruction in elementary spoken and written Chinese (Mandarin), beginning with the sounds of Chinese and their representation in the pinyin romanization system. Conversation, structural analysis, and an introduction to character texts. Elementary sequence (1-2-3) begins only in fall quarter. Students interested in learning Chinese who are uncertain about where they should enter the sequence should meet with the instructor, prior to the first class meeting. *The Staff*

2. Instruction in the Chinese (Mandarin) Language. W

Continuation of Chinese 1, which assumes that students are familiar both with the pinyin romanization system and approximately 150 basic characters. Prerequisite(s): course 1, or equivalent. *The Staff*

3. Instruction in the Chinese (Mandarin) Language. S

Continuation of Chinese 2, which assumes that students are familiar both with the pinyin romanization system and approximately 300 basic characters. Prerequisite(s): course 2, or equivalent. *The Staff*

4. Intermediate Chinese (Mandarin). F

Instruction in intermediate spoken and written Chinese (Mandarin). Conversation, composition, and the reading of modern texts. Intermediate sequence (4-5-6) begins only in fall quarter. Students interested in improving their Chinese who are uncertain about where they should enter the sequence should meet with the instructor, prior to the first class meeting. Prerequisite(s): course 3, or equivalent. (General Education Code(s): IH.) *The Staff*

5. Intermediate Chinese (Mandarin). W

Continuation of Chinese 4. Conversation, composition, and the reading of modern texts. Prerequisite(s): course 4, or equivalent. (General Education Code(s): IH.) *The Staff*

6. Intermediate Chinese (Mandarin). S

Continuation of Chinese 5. Conversation, composition, and the reading of modern texts. Prerequisite(s): course 5, or equivalent. (General Education Code(s): IH.) *The Staff*

50. Preadvanced Chinese. F

Places additional emphasis in the areas of specialized vocabulary, sentence structure, and translation as well as conversational and compositional skills in preparation for advanced courses. Offered fall quarter only. Students interested in this course who have not taken the prerequisite should meet with the instructor prior to the first class

meeting. Prerequisite(s): course 6, or placement by examination. Enrollment limited to 20. May be repeated for credit. (General Education Code(s): IH.) *The Staff*

94. Group Tutorial. F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

99F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

Upper-Division Courses

104. Advanced Chinese: Readings in Literature. W

Covers a body of Chinese literature of recognized merit from the modern or classical tradition. Students are introduced to the basic critical concepts, in Chinese, relating to narrative and/or poetry, revealed by the works under discussion. Students interested in this course who have not taken the prerequisite should meet with the instructor prior to the first class meeting. Prerequisite(s): course 6 or 50. May be repeated for credit. *The Staff*

105. Advanced Chinese: Readings in History. S

Offers an appreciation of some of the central issues in Chinese history as defined by Chinese historians of the 20th century. Through readings of graduated difficulty, the vocabulary, style, and form of modern Chinese historical writing are introduced. Students interested in this course who have not taken the prerequisite should meet with the instructor prior to the first class meeting. Prerequisite(s): course 6 or 50. *The Staff*

194. Group Tutorial. F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

199F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

Classical Studies

Department of History 201 Humanities (831) 459-2982 http://history.ucsc.edu

Changes to 2006-08 Catalog Highlighted | Faculty

Program Description

"Classics" is a traditional designation for the study of the literature, history, and culture of ancient Greece and Rome. Classical studies at UCSC combines features of traditional programs, such as solid grounding in the ancient languages, with innovative, interdisciplinary approaches (literary theory, gender studies, performance, and film).

Classical studies is an interdisciplinary field. While the core of the major is focused on courses in the ancient Greek and Latin languages, the major also includes courses in history, history of art and visual culture, linguistics, literature, philosophy, politics, religious studies, and theater arts. Students are encouraged to study the literary and material artifacts of Greece and Rome within the larger context of ancient Mediterranean and Near Eastern cultures.

The classical studies major offers an opportunity to work in small classes with a dedicated teaching faculty and excellent fellow students. Over the years, classical studies has averaged six to ten majors per year. Classical studies is an excellent preparation for further study in a wide variety of graduate and professional programs including comparative literature, English, philosophy, law, and publishing.

The basic requirements for the classical studies major allow a variety of emphases and concentrations. For example, students with an interest in contemporary philosophy and political theory might want to concentrate in Greek, taking upper-division courses in Greek, history, philosophy, and politics. Students with an interest in European literature might want to concentrate in Latin, taking upper-division courses in Latin, history, and literature in translation. Students planning on pursuing a classics degree at the Ph.D. level should concentrate most of their course work in the Greek and Latin languages themselves.

Requirements for the Major

A prerequisite for the classical studies major is the lower-division sequence in elementary Greek or Latin language (Greek 1 and 2 or Latin 1 and 2). The major requires a total of ten courses plus a senior comprehensive exam and must include the following:

- one lower-division survey of ancient history or literature in translation;
- · three upper-division courses in Greek or Latin;
- six additional approved upper-division courses (which may include courses in Greek or Latin language);
- one two-credit History 199F, to be taken in the student's final quarter with the chair of the committee of the student's senior comprehensive examination.

Requirements for the Minor

A minor in classical studies requires the lower-division sequence in elementary Greek or Latin language (Greek 1 and 2 or Latin 1 and 2) and Greek or Latin Literature 100 plus any four of the upper-division courses listed as satisfying the classical studies major requirements.

Classical Studies

Program Description

Faculty and Professional Interests

Karen Bassi, Professor of Literature

Greek and Latin literatures, Greek drama, Hellenistic poetics, feminist interpretation, literary and cultural theory, pre- and early modern studies, historiography

Janina Darling, Lecturer in History of Art and Visual Culture

Visual culture of the Ancient Mediterrean (Mesopotamia, Egypt, Greece, and Rome), Pompeian studies, food and wine in Greece and Rome

Mary-Kay Gamel, Professor of Literature

Performance studies, ancient Mediterranean performance, Greek and Latin literatures, myth, reception of Greek and Roman texts and artifacts, film, feminist approaches to literature and performance

Gildas Hamel, Lecturer

History of Judaism and Christianity; Hebrew and Greek Bible; classical languages

Charles W. Hedrick Jr., Professor of History

Greek and Roman history, epigraphy, historiography, political theory

John P. Lynch, Professor of Literature, Emeritus

Gary B. Miles, Professor of History, Emeritus

Daniel L. Selden, Associate Professor of Literature

Afroasiatic languages and literatures, Greek and Latin, Hellenistic culture, the classical tradition, history of criticism, literary theory

Program Faculty Advisers

Karen Bassi, Professor of Literature

Mary-Kay Gamel, Professor of Literature

Charles W. Hedrick Jr., Professor of History

Special Programs

Graduation

College Eight

College Office (831) 459-2361 http://eight.ucsc.edu/

Lower-Division Courses

10. Academic Success (2 credits).

An interactive course providing students with the opportunity to assess and revise methods of and purposes in studying. Critical, effective approaches to reading, writing, participating in lectures and sections, taking exams, balancing competing responsibilities, and utilizing campus resources are all explored. Prerequisite(s): permission of college adviser. Enrollment limited to 30. *The Staff*

20A. Pueblo Indian Conceptions of Nature (2 credits). *

Explores traditional and contemporary Pueblo Indian beliefs about and interactions with non-human nature, including fundamental assumptions about space, time, matter, and mind. Enrollment restricted to first-year and sophomore college members. Enrollment limited to 25. *J. Todd*

20B. International Affairs and Global Issues (2 credits). *

Examines inter-related global issues: Colonialism and post-colonialism, trade, poverty, globalization, geopolitics, human rights, and the environment. Students choose a particular region on which to focus. Enrollment restricted to first-year and sophmore college members. Enrollment limited to 25. *The Staff*

20C. The Water Environment: Literature of the Sea (2 credits). W

Students consider the representation of the sea in selected texts, noting how it becomes the focal point for the fears, hopes, and prejudices of Western civilization. Students write critical papers and their own narratives. Enrollment restricted to first-year and sophmore college members. Enrollment limited to 25. *C. Calsoyas*

20D. College Students' Lives (2 credits). F

Students understand their peers and themselves better through an exploration of issues that affect the daily life of college students. Topics include campus/student cultures, the academic system, and other critical issues. Overview of campus resources also provided. Enrollment restricted to first-year and sophomore College Eight members. *T. Douglas*

20E. Climate Change (2 credits). S

Discusses the impacts of human activities on the global climate system and focuses on the interface of climate science, policy, and the public. Students read widely in the field and produce a research paper. Enrollment restricted to first-year and sophomore College Eight members. Enrollment limited to 25. *M. Boykoff*

20F. Justice on Earth (3 credits). W

Examines issues of oppression, privilege, and social justice within a global and environmental context through self-reflective and group work. May include an optional service-learning component requiring travel during spring break. Enrollment limited to 20. *The Staff*

28. Peer Leadership in Higher Education (2 credits). S

Overview of theories of student development, critical student issues, and skills needed for appropriate peer leadership interventions. Utilizes a variety of learning modes including readings, discussions, case studies, lectures, and group projects. Interview only: approval of instructor; Resident Assistant (RA) pre-employment training course. Enrollment limited to 25. May be repeated for credit. *T. Douglas*

61. Education for Sustainable Living Program (2 credits). S

Analyzes sustainability and its application in daily life and on campus, involving collaboration between students, faculty, staff, administration, and the community. Guest lecturers, discussions, an optional UC-wide retreat, and essays allow engagement with aspects of ecological and social sustainability. *J. Borrego*

80A. Introduction to University Discourse: Environment and Society. F

Explores rhetorical principles and conventions of university discourse, providing intensive practice in analytical writing, critical reading, and speaking. Explores relationships between society, social justice and the environment, through environmental history and contemporary environmental studies. Students cannot receive credit for this course and course 80B. Enrollment restricted to first-year college members who have not satisfied the C1 requirement. (General Education Code(s): T3-Social Sciences, C1.) *S. Rajan*

80B. Rhetoric and Inquiry: Environment and Society. F

Explores the intersections of investigation, interpretation, and persuasion and hones strategies for writing and research. Explores relationships between society and social justice and the environment through environmental history and contemporary environmental studies. Students cannot receive credit for this course and course 80A. Prerequisite(s): satisfaction of the Entry Level Writing and C1 requirements. Enrollment restricted to first-year college members. (General Education Code(s): T3-Social Sciences, C2.) *S. Rajan*

90. College Eight Garden Internship (1 credit). F,W,S

One-credit internship in the College Eight Garden. Offers students of College Eight an opportunity to become involved in an experimental learning project focusing on application of concepts of sustainable agriculture. Enrollment restricted to members of College Eight. Enrollment limited to 10. May be repeated for credit. *C. Calsoyas*, *S. Gliessman*

93. Field Study. F,W,S

The Staff

99. Tutorial. F,W,S

May be repeated for credit. The Staff

99F. Tutorial (2 credits). F,W,S

Individual study for lower-division students directed by a faculty member affiliated with College Eight. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses

128. Advanced Peer Leadership Practicum (2 credits). S

Advanced practicum for the application of skills and theoretical knowledge studied in course 28. Uses many learning modes including readings, discussions, case

studies, lectures, and group projects. Prerequisite(s): course 28. Enrollment by permission of instructor. Enrollment limited to 25. May be repeated for credit. *T. Douglas*

161. Education for Sustainable Living Program. S

Analyzes sustainability and its application in daily life and on campus, involving collaboration between students, faculty, staff, administration, and the community. Guest lecturers, discussions, an optional UC-wide retreat, and essays allow engagement with aspects of ecological and social sustainability. Interview only. Enrollment limited to 25. *J. Borrego*

170A. UC Sacramento Seminar. W,S

Seminar provides a systematic understanding of the public policy and political process in California and involves students in creating a research-based paper on some aspect of public policy and/or politics in California. Interview only: enrollment in UC Sacramento program is required. Enrollment restricted to sophomores, juniors, and seniors. May be repeated for credit. *The Staff*

170B. UC Sacramento Internship. W,S

Provides students with a challenging opportunity to engage in experiential learning. Interview only: enrollment in UC Sacramento program is required. Enrollment restricted to sophomores, juniors, and seniors. May be repeated for credit. *The Staff*

170C. Law and Politics in California: Fundamental Perspectives and Current Controversies. S

Investigates California's current crisis of governance—in what sense is our state's political process "broken," and how should it be "fixed?" Explores laws, legal issues, and the legal profession. Interview only: enrollment in UC Sacramento program is required. Enrollment restricted to sophomores, juniors, and seniors. Formerly *The Political Economy of California's Political Crisis.*) G. Dymski

193. Field Study. F,W,S

The Staff

193F. Field Study (2 credits). F,W,S

Provides for individual programs of study sponsored by the college and performed off campus. Must be sponsored by College Eight faculty. Approval of the student's adviser and the academic preceptor is needed to enroll. May be repeated three times for credit. Students submit petition to sponsoring agency. *The Staff*

195. Senior Thesis. F,W,S

May be repeated for credit. The Staff

198. Independent Field Study. F,W,S

The Staff

199. Tutorial. F,W,S

May be repeated for credit. The Staff

199F. Tutorial (2 credits). F,W,S

Individual study for upper-division students directed by a faculty member affiliated with College Eight. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Lower-Division Courses

80A. Introduction to University Discourse: International and Global Issues. F Explores rhetorical principles and conventions of university discourse and provides intensive practice in analytical writing, critical reading, and speaking. Topics address contemporary global issues including economic globalization, human rights, international and inter-ethnic conflicts, poverty, and immigration. Students cannot receive credit for this course and course 80B. Enrollment restricted to first-year college members who have not satisfied the C1 requirement. Enrollment limited to 22. (General Education Code(s): T3-Social Sciences, C1.) *The Staff*

80B. Rhetoric and Inquiry: International and Global Issues. F

Explores the intersection of investigation, interpretation, and persuasion and refines strategies for writing, research, and speaking. Topics address contemporary global issues including economic globalization, human rights, international and inter-ethnic conflicts, poverty, and immigration. Students cannot receive credit for this course and course 80A. Prerequisite(s): satisfaction of the Entry Level Writing and C1 requirements. Enrollment restricted to first-year college members. Enrollment limited to 22. (General Education Code(s): T3-Social Sciences, C2.) *The Staff*

85. Global Leadership: A Model United Nations Workshop (2 credits). W Course explores role of the United Nations through interactive exercise, presentations, films, and workshops that address social, cultural, political, and environmental issues both globally and within particular regions across the world. Enrollment restricted to College Nine members. Enrollment limited to 20. *E. Ramsden*

86. College Leadership Development (2 credits). S

Students newly appointed into leadership positions at College Nine explore the concept of leadership relating to college's theme of International and Global Perspectives. Prerequisite(s): current College Nine student leader; permission of instructor. *The Staff*

91. Global Issues Colloquium (1 credit). F,W,S

Weekly colloquium on global issues with different topical focus each quarter. Presentations by UCSC faculty and invited speakers. Students must attend class, read an assigned article, and write a one-page synopsis. Co-sponsored by College Nine and The Center for Global, International, and Regional Studies. Enrollment limited to 50. May be repeated for credit. *R. Lipschutz*

Upper-Division Courses

191. Teaching International and Global Issues. F,W

Undergraduates at upper-division level participate in teaching discussion groups for College Nine 80 (F) or College Nine 85 (W). Prerequisite(s): permission of instructor: essay describing interest in becoming course assistant, copies of

evaluations, and letter of recommendation from faculty member and/or college staff member. Enrollment restricted to College Nine juniors or seniors. *The Staff*

193. Field Study. F,W,S

Provides college members opportunity to apply their academic learning in a practical setting in the community. Students earn academic credit by working as interns in a community agency or business for 10–12 hours per week. They are trained and supervised by a professional on site. A faculty sponsor also meets regularly with each student to provide supervision and guidance and works with the student in writing an academic paper relevant to the practicum. Prerequisite(s): approval of student's adviser and the provost. Enrollment restricted to sophomore, junior, and senior college members. May be repeated for credit. A. Asher

193F. Field Study (2 credits). F,W,S

Provides college members opportunity to apply their academic learning in a practical setting in the community. Students earn academic credit by working as interns in a community agency or business for 4–5 hours per week. They are trained and supervised by a professional on site. A faculty sponsor also meets regularly with each student to provide supervision and guidance and works with the student in writing an academic paper relevant to the practicum. Prerequisite(s): approval of student's adviser and the provost. Enrollment restricted to sophomore, junior, and senior college members. May be repeated for credit. A. Asher

199. Independent Study. F,W,S

Individual directed study for upper-division college members with college-affiliated faculty. Students must submit petition with one of the college academic advisers with accompanying letter from faculty adviser. Approval of provost required. Enrollment restricted to upper-division College Nine members. May be repeated for credit. *The Staff*

199F. Independent Study (2 credits). F,W,S

Individual directed study for upper-division college members with college-affiliated faculty. Students must submit petition with one of the college academic advisers with accompanying letter from faculty adviser. Approval of provost required. Enrollment restricted to upper-division College Nine members. May be repeated for credit. *The Staff*

Communication and Rhetoric

Writing Program 166 Kresge College (831) 459-2431

http://humwww.ucsc.edu/writing/index.html

(There were no substantive changes to the Communication and Rhetoric Program Description from the General Catalog 2006-08.)

Admission to the minor in communication and rhetoric is suspended at present. The following conditions will apply if it is reinstituted.

The Writing Program accepts students each quarter into the minor in communication and rhetoric. The minor consists of a series of courses that give students the opportunity to hone practical communication skills in a variety of contexts. It also provides a grounding in the analytical tools and critical theory that a rhetorical perspective provides.

A full description of the minor and forms for proposing a study plan and declaring the minor are available at the Writing Program office (166 Kresge).

Course Requirements

To earn a minor in communication and rhetoric, students must complete six courses after having satisfied the composition (C) requirement:

- either Writing 70, Communication and Rhetoric: An Introduction; or Writing 101, An Introduction to the History, Theory, and Practice of Rhetoric;
- · a course that concentrates on editing: either Writing 120, Editing English Prose; or Writing 163, Advanced Workshop in Expository Writing;
- · four electives, at least three of which must be chosen from among the following upperdivision writing courses: 101, 102, 103, 104, 106, 107, 108, 109, 110A, 163, 167, 169, and 191A-D. No more than one elective may be chosen from a list of courses offered by other departments (list is available from the program office).

Community Studies

211 College Eight Academic Building (831) 459-2371 http://communitystudies.ucsc.edu

Changes to 2006-08 Catalog Highlighted | Faculty | Course Descriptions

Program Description

Community studies is an interdisciplinary major integrating knowledge and methodologies from the social sciences and humanities to examine theory and practice in a variety of social justice domains. The UCSC faculty offer courses based on their scholarly research as it relates to social justice—including broad structural and social changes and community-based organizing—in the following areas: global political economy with regional and local impacts; the intersection of class, race, gender, and sexuality in relation to health; labor studies, including the history of the working class; youth cultures, youth activism, and empowerment; race and racism; cultural work in social justice; gay and lesbian issues; global food systems; media and social change; and resistance and social movements. The faculty are active scholars who publish widely in their respective disciplines and also engage in community-oriented fieldwork in the U.S., Latin America, and elsewhere.

The major provides an opportunity for the student who is actively committed to social justice to work on a full-time basis beyond the boundaries of the university. Each student in the program builds his or her academic curriculum around a combination of course work and a six-month field study with a community organization or agency. The core curriculum includes courses in preparation for field study as well as in theory and analysis. Students complete the major by preparing a senior capstone project integrating academic course work, field study, and original research work. The major usually takes about two years to complete.

With the intellectual guidance of a faculty adviser and a field study coordinator, community studies students choose field placements related to one of the department's areas of focus. The majority of field studies have been in California, although students have worked as far away as Mexico, Central America, New York, Thailand, London, Paris, and South Africa. Placements have been with health centers, immigrant rights organizations, newspapers, minority media outlets, city planning departments, neighborhood organizations, civil rights groups, battered women's shelters, legal clinics, programs for seniors, tenant unions, government agencies and the offices of elected officials, trade unions, and other organizations committed to and working for social justice in communities.

Facilities

The Community Studies Department maintains several unique resources for students. A media laboratory is available for majors (and others in the social sciences) to learn the use of video, radio, film, and graphic media as research and presentation tools. Two field-study coordinators work with students to develop part- and full-time field studies, and a field study resource office is available to assist students in selecting an appropriate field study organization.

Major Program

The program for all students in the major includes preparatory courses, the field study itself, post-field-study course work, electives chosen to broaden knowledge for the individual's senior capstone requirement, and the capstone requirement itself. Students who wish to pursue a major in Community Studies are required to satisfactorily complete Community Studies 10, Introduction to Community Activism. It is recommended that students complete this course prior to beginning their path through the sequential core curriculum, i.e., before they enroll in CMMU 100(A-Z). It is required that students satisfactorily complete Introduction to Community Activism prior to enrolling in CMMU 102, Preparation for Field Study.

It is important to emphasize community studies is a major with a sequential core curriculum. This means required courses must be taken in a specified order established by the quarter(s) when

those courses are offered.

To begin the major and declaration process, a student must be enrolled in one of the Community Studies 100(A–Z), *Theory and Practice* seminars. These seminars are gateways into the community studies major. Students will learn about a distinct area of academic theory and social justice practice that will become the focus of their academic study plan, field study, and senior capstone requirement. Several sections of Community Studies 100(A–Z) are offered each fall and winter quarter. Theory and practice topics vary from year to year and may include economic justice; health care; race and ethnicity; immigration, social documentation, sustainability in agrofood systems; Asian-American activism; youth empowerment; resistance and social movements; and cultural work and social justice. Following the *Theory and Practice* seminars is CMMU 102, *Preparation for Field Study*, offered only in spring quarter.

Students are expected to arrange the rest of their academic program of study around the two-quarter (six-month) full-time field study (15 units each quarter). Students must conduct their fieldwork in summer and fall quarters so that they can immediately follow up with CMMU 194, *Analysis of Field Materials*, offered only in winter quarter.

Language competency must be demonstrated by students planning a field study in a non-English speaking country. Students must plan appropriate language study well in advance of the field study. In addition, students must demonstrate knowledge of the history, culture, and political economy of the place where they will be completing their field study – whether that place is a neighborhood in Santa Cruz, New York City, or a small village in Guatemala. Students may also find media production skills useful in their fieldwork and are encouraged to visit the Social Sciences Media Laboratory, located in 47 Social Sciences 2, early in their academic career.

Admission to the Major

A general background or course work in politics, sociology, anthropology, and/or community activism is suggested for students considering the community studies major. Students are required to have enrolled in two community studies courses at the time they declare the major: one must be a CMMU 100(A–Z) seminar and the other may be any of the lower- or upperdivision courses except for the 42 series of student directed seminars or independent or field studies.

The process of declaring the community studies major properly begins when a student enrolls in a section of CMMU 100(A–Z), the *Theory and Practice* seminar series. Prospective majors must choose a seminar that matches their own academic and social justice focus. Because of their small size, the CMMU 100(A–Z) seminars are enrolled by "interview only." Although they are open to all students, prospective community studies majors enjoy priority enrollment.

To fulfill the declaration of major process, prospective majors must prepare a three- to four-page essay outlining how their academic and social justice focus matches the emphasis of their theory and practice seminar. The essay should also describe their academic study plan, including relevant upper-division electives and their tentative field-study plans. Students then meet with the professor in charge of their CMMU 100(A–Z) seminar to review and discuss the essay and other application materials. Occasionally, a student is not accepted into the major because the student's social justice and field-study focus are poorly matched with the department's theory and practice areas.

Instructions for Applying to the Major

- 1. Attend a department orientation held at the beginning of each quarter (check the *Schedule of Classes* for date/time/location).
- 2. Choose and enroll in the appropriate Community Studies 100(A–Z) seminar. If you are accepted into the class, a permission number will be given to you; you can then move on to step
- 3. Print out a Declaration of Major petition from your student portal (MyUCSC), and obtain the signature of your college adviser. Complete the Application for Admission to Community Studies (available in the *Student Handbook*, found on the department web site: communitystudies.ucsc.edu. Prepare an academic study plan (on a separate piece of paper) for completing all requirements for the major including field study and upper-division electives. (Be prepared to be flexible on your elective choices as your faculty adviser may make other recommendations during step 5.)
- 4. Write a three- to four-page essay (typewritten) explaining:
 - Why you think that the community studies major is the best way for you to pursue your academic and social change interests. The department is interested in both the substance of your essay and your ability to express yourself in written form
 - The social change or social justice organization with which you expect to work.
 - The classes you have taken and/or plan to take, in addition to Community Studies 100(A–Z), to prepare you to work with this organization.
 - · Your social location, defined as the intersection of nationality, immigration,

ethnicity, racial privilege, class, gender, age, and sexuality in you background and current social status.

- The ways your social location may influence and be influenced by your sixmonth field placement.
- 5. Meet with your Community Studies 100(A–Z) seminar professor to discuss your essay, field-study plans, electives, and other application materials. Obtain the faculty signature on the application form. Bring any evaluations or progress reports from currently enrolled courses to support your application to the major.
- 6. Before the declaration of major deadline, bring your completed Declaration of Major petition, draft study plan, signed application form, and essay to the Community Studies Department office (213 Oakes College) for final approval and processing. You are not officially declared until step 6 is finalized.

Note: you cannot begin course 102 without completing step 6. Failure to do so will defer your progress in the major until the following year when the 102 course is again offered. CMMU 102 is offered only in spring quarter.

A student may be directed to another department of study on campus in those instances where his/her academic interests cannot be fulfilled by current department offerings.

Community Studies 100(A-Z) Enrollment Procedures

All Community Studies 100(A–Z) courses are "interview only." Our goal is to provide access to these courses for those students who plan to become community studies majors. You must attend the first day of class. Each instructor will ask you to provide information from which they will decide who gets priority in the class. It is wise to meet with him or her to discuss your plans for the major prior to the beginning of course 100(A–Z) to make sure that Community Studies Department and the 100(A–Z) course you have chosen is appropriate for your needs.

Major Course Requirements

Summary of Sequence R	Credits	
10	Introduction to Community Activism (spring)	5
100(A–Z)	Theory and Practice (fall or winter)	5
102	Preparation for Field Studies (spring)	5
198	Independent Field Study (summer/fall)	30
194	Analysis of Field Materials (winter)	5
	Three upper-division electives (all quarters)	15

10. Introduction to Community Activism

Community Studies 10 seeks to make sense of our contemporary era when community activism would seem so alive and well, and yet a shocking and sad number of people continue to lead lives of material deprivation and social exclusion. A goal of the course is resolving this seeming paradox by making clear and necessary distinctions among charity, empowerment, grass roots organizing, and human rights — put simply, activism designed to help people and activism designed to eliminate the need for help.

The course explores different kinds of community activism (e.g., volunteering, faith-based activism, nonprofit-based service provision and advocacy, community-based organizing) and critically appraises their strengths and shortcomings and their interconnectedness. The aim is learning how certain desirable societal outcomes (e.g., ending hunger, eliminating homelessness, improving on-the-job working conditions) are made more or less possible through different activism strategies. A central goal is developing a critical perspective on the contemporary political economy of charity and so-called empowerment. Toward this end, we consider how the brave new world of neoliberalism has set in motion a devolution of responsibility for collective well-being to the individual through the efficacy of localized private organizations that now constitute sites where political struggle takes place and citizens are formed.

100(A–Z), Theory and Practice Seminars

Each of these courses explores the relationship between theory, practice, and social justice within a particular subject area. The Community Studies 100(A–Z) seminars are designed to raise

questions about the relationships between different theoretical perspectives and social justice. For example, do social psychological, historical, or literary theories vary in their usefulness in helping us understand social justice work around race and racism? What is the relationship between activism and theory? How do social justice activists select, develop, and, sometimes, even seem to reject their own theoretical perspectives?

The primary course objective is demonstrating how current issues and problems can be researched by better understanding the relationship between theory and practice—how theory gives rise to certain kinds of issues and actions and, in turn, how practice can introduce new ways of thinking about the world. The goal is to expose students to different ways of perceiving and understanding the world and to engage them in an ongoing dialogue about the "practical implications of theory" and the "theoretical implications of practice."

102, Preparation for Field Study

This course immerses community studies majors who are planning full-time field study in the practical and theoretical work of field study with a focus on activist research—that is, study conducted by and with activists so as to participate in and learn from their work. A required part-time field study with a local community-based social justice organization is a central component of the course; this activity should ideally approximate the kind of work students intend for their full-time field study. Other course components for 102 are organized around the part-time field study for this course.

Community Studies 102 engages students in a range of issues common to all field studies and focuses on the relationship between theory, field methods, and on-the-ground fieldwork. It gives students the opportunity to develop interpersonal and organizational skills and to learn how to relate issues in the fieldwork within a community/region to those within the global society. Assignments are designed to rigorously prepare students for activist research in a social justice organization by fostering specific research and organizing skills.

198, Full-Time Independent Field Study

A distinguishing feature of the community studies major is the six-month, full-time field study, an arrangement facilitated by the student's Community Studies 100(A–Z) instructor and the field study coordinators. During the field study, students are enrolled at UCSC and receive full-time university credit. Students in the 100(A–Z) courses are presented with recommended organizations from which to select their placements. The Field Study office provides full placement information and guidelines for setting up placements, along with logistical and academic support during the field study.

194, Analysis of Field Materials

This course is designed for community studies seniors returning from their full-time field study. The course has two related goals: (1) to help students, both individually and collectively, analyze and gain perspective on their field experiences; and (2) to move students through the process of completing the senior capstone requirement. A central question addressed in the course is how the student's theory and practice of social justice has been affected by his or her field experience. Each student has a unique field-study experience; and, collectively, students have been involved with widely varying types of organizations with little or no relation to each other. Yet there is common ground, and students have much to learn from each other. Thus, a related objective of this course is to discover and travel the common ground. For students completing the major with a senior essay, the essay is completed in course 194. For students doing a senior thesis, project, or student-directed seminar, the student completes at least three major pieces of writing; some or all of which will be incorporated into the completed thesis, project, or student-directed seminar.

Upper-Division Electives

Each student in the major must complete three upper-division electives. The purpose of the elective requirement is to ensure that students have the necessary intellectual background for their field studies and senior capstone requirement. At least one of these courses must be from the Community Studies Department, but the other two may be from another campus program as long as the substantive content of the courses is related to the full-time field study and academic plan. Senior thesis and independent studies do not fulfill the elective requirement. At least two of the three electives must be completed prior to the full-time field study. Electives must be approved by the student's 100(A–Z) seminar professor.

Senior Capstone Requirement

Each student must fulfill a senior capstone requirement, either through the senior essay, a senior thesis, a senior project, or a student-directed seminar. For a thesis, project, or student-directed seminar, the student must choose a faculty member to serve as his or her adviser.

Senior Essay: Students complete a senior essay that analyzes local, global, and theoretical contextualizations of field study; the essay should incorporate essays completed in other courses,

including course 100(A–Z) and field study, along with essays written in course 194. The minimum length is 25 pages, plus bibliography. The senior essay is completed entirely in course 194, *Analysis of Field Materials*.

Senior Thesis: Some students may choose to complete a senior thesis, which is comprised of linked essays combining local and global contextualizations of field study and theoretical and historical analysis of social justice issues at the heart of the field study. The thesis can incorporate essays from other courses (including course 194), but must involve significant post-field-study research using primary source materials; typical length is 35–50 pages, including bibliography. Students begin the senior thesis during course 194 and generally complete it in the following quarter(s).

Senior Project: Students may choose to complete a senior project in other genres of social documentation including film and video production, photography, sound production, creative writing, and other formats such as grant proposals and organizing pamphlets. The senior project also requires a significant analytical essay of 20 pages, plus bibliography, describing the project conceptualization, rationale, methodology, and evaluation. Students begin the senior project during course 194 and complete it the following quarter(s).

Student-Directed Seminar (SDS): The SDS capstone option is reserved for exceptional students. Under the direction of a faculty adviser, the student develops and teaches a Community Studies 42 course that relates to the student's field study and social justice focus, accompanied by a seminar completion report.

The department selects only a limited number of student-directed seminars each year. Selection is based on the excellence of the SDS proposal, the relevance of the subject matter to the major, the student's background preparation, and the total number of proposals submitted each quarter. The Committee on Educational Policy gives the final approval.

For students interested in teaching a student-directed seminar, it is recommended that they meet with their adviser early on—prior to the full-time field study—to begin the process of obtaining course approval. A short written work providing the theoretical basis for the project, giving a brief analysis of the connection between the student's field work and the project itself, a course syllabus, a bibliography, and copies of their evaluations are required, along with a letter from the sponsoring faculty.

Students must also take course 199, Tutorial, the quarter prior to teaching the SDS, to give them time to prepare the course material. A *Student-Directed Seminar Guide*, giving detailed information about preparing for and teaching an SDS, is available in the department office.

Honors in the Major

Honors in the community studies major are awarded to graduating seniors whose academic performance in their major coursework is judged to be consistently excellent to outstanding. Students must also do excellent work on their senior capstone requirement; an honors-eligible senior essay must be particularly outstanding. The senior capstone must have intellectual merit, a genuine social change/social justice focus, and demonstrate that the student gained insight into processes of social change.

Community Studies

211 College Eight Academic Building (831) 459-2371 http://communitystudies.ucsc.edu

Program Description | Faculty | Course Descriptions

Program Description

Community studies is an interdisciplinary major integrating knowledge and methodologies from the social sciences and humanities to examine theory and practice in a variety of social justice domains. The UCSC faculty offer courses based on their scholarly research as it relates to social justice—including broad structural and social changes and community-based organizing—in the following areas: global political economy with regional and local impacts; the intersection of class, race, gender, and sexuality in relation to health; labor studies, including the history of the working class; youth cultures, youth activism, and empowerment; race and racism; cultural work in social justice; gay and lesbian issues; global food systems; media and social change; and resistance and social movements. The faculty are active scholars who publish widely in their respective disciplines and also engage in community-oriented fieldwork in the U.S., Latin America, and elsewhere.

The major provides an opportunity for the student who is actively committed to social justice to work on a full-time basis beyond the boundaries of the university. Each student in the program builds his or her academic curriculum around a combination of course work and a six-month field study with a community organization or agency. The core curriculum includes courses in preparation for field study as well as in theory and analysis. Students complete the major by preparing a senior capstone project integrating academic course work, field study, and original research work. The program has no lower-division prerequisites and major usually takes about two years to complete.

With the intellectual guidance of a faculty adviser and a field study coordinator, community studies students choose field placements related to one of the department's areas of focus. The majority of field studies have been in California, although students have worked as far away as Mexico, Central America, New York, Thailand, London, Paris, and South Africa. Placements have been with health centers, immigrant rights organizations, newspapers, minority media outlets, city planning departments, neighborhood organizations, civil rights groups, battered women's shelters, legal clinics, programs for seniors, tenant unions, government agencies and the offices of elected officials, trade unions, and other organizations committed to and working for social justice in communities.

Facilities

The Community Studies Department maintains several unique resources for students. A media laboratory is available for majors (and others in the social sciences) to learn the use of video, radio, film, and graphic media as research and presentation tools. Two field-study coordinators work with students to develop part- and full-time field studies, and a field study resource office is available to assist students in selecting an appropriate field study organization.

Major Program

The program for all students in the major includes preparatory courses, the field study itself, post-field-study course work, electives chosen to broaden knowledge for the individual's senior capstone requirement, and the capstone requirement itself. Students who wish to pursue a major in Community Studies are required to satisfactorily complete Community Studies 10. Introduction to Community Activism. It is recommended that students complete this course prior to beginning their path through the sequential core curriculum, i.e., before they enroll in CMMU 100(A-Z). It is required that students satisfactorily complete Introduction to Community Activism prior to enrolling in CMMU 102, Preparation for Field Study.

It is important to emphasize community studies is a major with a sequential core curriculum. This means required courses must be taken in a specified order established by the quarter(s) when those courses are offered.

To begin the major and declaration process, a student must be enrolled in one of the Community Studies 100(A–Z), *Theory and Practice* seminars. These seminars are gateways into the community studies major. Students will learn about a distinct area of academic theory and social justice practice that will become the focus of their academic study plan, field study, and senior capstone requirement. Several sections of Community Studies 100(A–Z) are offered each fall and winter quarter. Theory and practice topics vary from year to year and may include economic justice; health care; race and ethnicity; immigration, social documentation, sustainability in agrofood systems; Asian-American activism; youth empowerment; resistance and social movements; and cultural work and social justice. Following the *Theory and Practice* seminars is CMMU 102, *Preparation for Field Study*, offered only in spring quarter.

Students are expected to plan arrange the rest of their academic program of study around the two-quarter (six-month) full-time field study (15 units each quarter). Students must conduct their fieldwork in summer and fall quarters so that they can immediately follow up with CMMU 194, *Analysis of Field Materials*, offered only in winter quarter.

Language competency must be demonstrated by students planning a field study in a non-English speaking country. Students must plan appropriate language study well in advance of the field study. In addition, students must demonstrate knowledge of the history, culture, and political economy of the place where they will be completing their field study – whether that place is a neighborhood in Santa Cruz, New York City, or a small village in Guatemala. Students may also find media production skills useful in their fieldwork and are encouraged to visit the <u>Social Sciences Media Laboratory</u>, located in 47 Social Sciences 2, early in their academic career.

Admission to the Major

A general background or course work in politics, sociology, anthropology, and/or community activism is suggested for students considering the community studies major. Students are required to have enrolled in two community studies courses at the time they declare the major: one must be a CMMU 100(A–Z) seminar and the other may be any of the lower- or upper-division courses except for the 42 series of student directed seminars or independent or field studies.

The process of declaring the community studies major properly begins when a student enrolls in a section of CMMU 100(A–Z), the *Theory and Practice* seminar series. Prospective majors must choose a seminar that matches their own academic and social justice focus. Because of their small size, the CMMU 100(A–Z) seminars

are enrolled by "interview only." Although they are open to all students, prospective community studies majors enjoy priority enrollment.

To fulfill the declaration of major process, prospective majors must prepare a three-to four-page essay outlining how their academic and social justice focus matches the emphasis of their theory and practice seminar. The essay should also describe their academic study plan, including relevant upper-division electives and their tentative field-study plans. Students then meet with the professor in charge of their CMMU 100(A-Z) seminar to review and discuss the essay and other application materials. Occasionally, a student is not accepted into the major because the student's social justice and field-study focus are poorly matched with the department's theory and practice areas.

Instructions for Applying to the Major

- 1. Attend a department orientation held at the beginning of each quarter (check the *Schedule of Classes* for date/time/location).
- 2. Choose and enroll in the appropriate Community Studies 100(A–Z) seminar. If you are accepted into the class, a permission number will be given to you; you can then move on to step
- 3. Pick up a Declaration of Major petition from your college, and obtain approval for Part 1 (signature of your college adviser). Print out a Declaration of Major petition from your student portal (MyUCSC), and obtain the signature of your college adviser. Complete the Application for Admission to Community Studies (available in the *Student Handbook*, found on the department web site: communitystudies.ucsc.edu. Prepare an academic study plan (on a separate piece of paper) for completing all requirements for the major including field study and upper-division electives. (Be prepared to be flexible on your elective choices as your faculty adviser may make other recommendations during step 5.)
- 4. Write a three- to four-page essay (typewritten) explaining:
 - Why you think that the community studies major is the best way for you to
 pursue your academic and social change interests. The department is interested
 in both the substance of your essay and your ability to express yourself in
 written form.
 - The social change or social justice organization with which you expect to work.
 - The classes you have taken and/or plan to take, in addition to Community Studies 100(A–Z), to prepare you to work with this organization.
 - Your social location, defined as the intersection of nationality, immigration, ethnicity, racial privilege, class, gender, age, and sexuality in you background and current social status.
 - The ways your social location may influence and be influenced by your sixmonth field placement.
- 5. Meet with your Community Studies 100(A–Z) seminar professor to discuss your essay, field-study plans, electives, and other application materials. Obtain the faculty signature on the application form. Bring any evaluations or progress reports from currently enrolled courses to support your application to the major.
- 6. Before the declaration of major deadline, bring your completed Declaration of Major petition, draft study plan, signed application form, and essay to the

Community Studies Department office (211 College Eight) (213 Oakes College) for final approval and processing. You are not officially declared until step 6 is finalized.

Note: you cannot begin course 102 without completing step 6. Failure to do so will defer your progress in the major until the following year when the 102 course is again offered. CMMU 102 is offered only in spring quarter.

A student may be directed to another department of study on campus in those instances where his/her academic interests cannot be fulfilled by current department offerings.

Community Studies 100(A–Z) Enrollment Procedures

All Community Studies 100(A–Z) courses are "interview only." Our goal is to provide access to these courses for those students who plan to become community studies majors. You must attend the first day of class. Each instructor will ask you to provide information from which they will decide who gets priority in the class. It is wise to meet with him or her to discuss your plans for the major prior to the beginning of course 100(A–Z) to make sure that Community Studies Department and the 100(A–Z) course you have chosen is appropriate for your needs.

Major Course Requirements

Summary Sequence	Credits	
<u>10</u>	<u>Introduction to Community</u> <u>Activism (spring)</u>	<u>5</u>
100(A-Z)	Theory and Practice (fall or winter)	5
102	Preparation for Field Studies (spring)	5
198	Independent Field Study (summer/fall)	30
194	Analysis of Field Materials (winter)	5
	Three upper-division electives (all quarters)	15

10. Introduction to Community Activism

Community Studies 10 seeks to make sense of our contemporary era when community activism would seem so alive and well, and yet a shocking and sad number of people continue to lead lives of material deprivation and social exclusion. A goal of the course is resolving this seeming paradox by making clear and necessary distinctions among charity, empowerment, grass roots organizing, and human rights — put simply, activism designed to help people and activism designed to eliminate the need for help.

The course explores different kinds of community activism (e.g., volunteering, faith-based activism, nonprofit-based service provision and advocacy, community-based organizing) and critically appraises their strengths and shortcomings and their interconnectedness. The aim is learning how certain desirable societal outcomes (e.g., ending hunger, eliminating homelessness, improving on-the-job working conditions) are made more or less possible through different activism strategies. A central goal is developing a critical perspective on the contemporary political economy of charity and so-called empowerment. Toward this end, we consider how the brave new world of neoliberalism has set in motion a devolution of responsibility for collective well-being to the individual through the efficacy of localized private organizations that now

100(A–Z), Theory and Practice Seminars

Each of these courses explores the relationship between theory, practice, and social justice within a particular subject area. The Community Studies 100(A–Z) seminars are designed to raise questions about the relationships between different theoretical perspectives and social justice. For example, do social psychological, historical, or literary theories vary in their usefulness in helping us understand social justice work around race and racism? What is the relationship between activism and theory? How do social justice activists select, develop, and, sometimes, even seem to reject their own theoretical perspectives?

The primary course objective is demonstrating how current issues and problems can be researched by better understanding the relationship between theory and practice—how theory gives rise to certain kinds of issues and actions and, in turn, how practice can introduce new ways of thinking about the world. The goal is to expose students to different ways of perceiving and understanding the world and to engage them in an ongoing dialogue about the "practical implications of theory" and the "theoretical implications of practice."

102, Preparation for Field Study

This course immerses community studies majors who are planning full-time field study in the practical and theoretical work of field study with a focus on activist research—that is, study conducted by and with activists so as to participate in and learn from their work. A required part-time field study of six to eight hours a week with a local community-based social justice organization is a central component of the course; this activity should ideally approximate the kind of work students intend for their full-time field study. Other course assignments are organized around this core component of the course components for 102 are organized around the part-time field study for this course.

Community Studies 102 engages students in a range of issues common to all field studies and focuses on the relationship between theory, field methods, and on-the-ground fieldwork. It gives students the opportunity to develop interpersonal and organizational skills and to learn how to relate issues in the fieldwork within a community/region to those within the global society. Assignments are designed to rigorously prepare students for activist research in a social justice organization by fostering specific research and organizing skills.

198, Full-Time Independent Field Study

A distinguishing feature of the community studies major is the six-month, full-time field study, an arrangement facilitated by the student's Community Studies 100(A–Z) instructor and the field study coordinators. During the field study, students are enrolled at UCSC and receive full-time university credit. Students in the 100(A–Z) courses are presented with recommended organizations from which to select their placements. The Field Study office provides full placement information and guidelines for setting up placements, along with logistical and academic support during the field study.

194, Analysis of Field Materials

This course is designed for community studies seniors returning from their full-time field study. The course has two related goals: (1) to help students, both individually

and collectively, analyze and gain perspective on their field experiences; and (2) to move students through the process of completing the senior capstone requirement. A central question addressed in the course is how the student's theory and practice of social justice has been affected by his or her field experience. Each student has a unique field-study experience; and, collectively, students have been involved with widely varying types of organizations with little or no relation to each other. Yet there is common ground, and students have much to learn from each other. Thus, a related objective of this course is to discover and travel the common ground. For students completing the major with a senior essay, the essay is completed in course 194. For students doing a senior thesis, project, or student-directed seminar, the student completes at least three major pieces of writing; some or all of which will be incorporated into the completed thesis, project, or student-directed seminar.

Upper-Division Electives

Each student in the major must complete three upper-division electives. The purpose of the elective requirement is to ensure that students have the necessary intellectual background for their field studies and senior capstone requirement. At least one of these courses must be from the Community Studies Department, but the other two may be from another campus program as long as the substantive content of the courses is related to the full-time field study and academic plan. Senior thesis and independent studies do not fulfill the elective requirement. At least two of the three electives must be completed prior to the full-time field study. Electives must be approved by the student's 100(A-Z) seminar professor.

Senior Capstone Requirement

Each student must fulfill a senior capstone requirement, either through the senior essay, a senior thesis, a senior project, or a student-directed seminar. For a thesis, project, or student-directed seminar, the student must choose a faculty member to serve as his or her adviser.

Senior Essay: Students complete a senior essay that analyzes local, global, and theoretical contextualizations of field study; the essay should incorporate essays completed in other courses, including course 100(A–Z) and field study, along with essays written in course 194. The minimum length is 25 pages, plus bibliography. The senior essay is completed entirely in course 194, *Analysis of Field Materials*.

Senior Thesis: Some students may choose to complete a senior thesis, which is comprised of linked essays combining local and global contextualizations of field study and theoretical and historical analysis of social justice issues at the heart of the field study. The thesis can incorporate essays from other courses (including course 194), but must involve significant post-field-study research using primary source materials; typical length is 35–50 pages, including bibliography. Students begin the senior thesis during course 194 and generally complete it in the following quarter(s).

Senior Project: Students may choose to complete a senior project in other genres of social documentation including film and video production, photography, sound production, creative writing, and other formats such as grant proposals and organizing pamphlets. The senior project also requires a significant analytical essay of 20 pages, plus bibliography, describing the project conceptualization, rationale, methodology, and evaluation. Students begin the senior project during course 194 and complete it the following quarter(s).

Student-Directed Seminar (SDS): The SDS capstone option is reserved for

exceptional students. Under the direction of a faculty adviser, the student develops and teaches a Community Studies 42 course that relates to the student's field study and social justice focus, accompanied by a seminar completion report.

The department selects only a limited number of student-directed seminars each year. Selection is based on the excellence of the SDS proposal, the relevance of the subject matter to the major, the student's background preparation, and the total number of proposals submitted each quarter. The Committee on Educational Policy gives the final approval.

For students interested in teaching a student-directed seminar, it is recommended that they meet with their adviser early on—prior to the full-time field study—to begin the process of obtaining course approval. A short written work providing the theoretical basis for the project, giving a brief analysis of the connection between the student's field work and the project itself, a course syllabus, a bibliography, and copies of their evaluations are required, along with a letter from the sponsoring faculty.

Students must also take course 199, Tutorial, the quarter prior to teaching the SDS, to give them time to prepare the course material. A *Student-Directed Seminar Guide*, giving detailed information about preparing for and teaching an SDS, is available in the department office.

Honors in the Major

Honors in the community studies major are awarded to graduating seniors whose academic performance in their major coursework is judged to be consistently excellent to outstanding. Students must also do excellent work on their senior capstone requirement; an honors-eligible senior essay must be particularly outstanding. The senior capstone must have intellectual merit, a genuine social change/social justice focus, and demonstrate that the student gained insight into processes of social change.

<u>Program Description | Course Descriptions</u>

Faculty and Professional Interests

Professor

William H. Friedland, Emeritus

B. Ruby Rich

Documentary film and video, post-9/11 culture, new queer cinema, feminist film history, Latin American and Latin/a cinema, U.S. independent film and video, the essay film, the politics of film festival proliferation and the marketing of foreign films in the U.S.

Nancy Stoller, Emerita

David T. Wellman

Working-class culture, American ethnic and racial diversity, social documentary studies, critical race theory, interrogations of whiteness, and qualitative research methods

Carter Wilson, Emeritus

Deborah A. Woo

Asian Americans and social change, glass ceilings and workplace discrimination, Asian American health, and mental health

Associate Professor

David T. Brundage

American working-class and immigration history, history of U.S. social movements, Irish history and politics

Julie Guthman

Sustainable agriculture and alternative food movements, international political economy of food and agriculture, politics of obesity, political ecology, race and food, critical human geography

Paul Ortiz

African American history, U.S. social and political history, social documentary, oral history, subaltern studies and theories of resistance, U.S. South, Latino studies, social movements, working-class history; history of farm labor, African diaspora

Mary Beth Pudup

Regional studies, economic justice, public policy, historical geography of the U.S.

Renee Tajima-Peña

Documentary film and video focusing on Asian American and immigrant communities, media, and social change

Assistant Professor

Marcia Ochoa

Gender and sexuality, race and ethnicity, Latina/o studies, media and cultural studies, ethnography of media, feminism, queer theory, multimedia production, Latin American studies—Colombia and Venezuela, political philosophy, geography

Pamela Perry

Youth activism; racism and anti-racism, whiteness, educational inequalities; school integration; ethnographic documentary; racial and ethnic identities; cultural studies

Lecturer and Field Program Coordinator

Michael Rotkin

Marxist theory, capitalist system, community organizing, electoral politics, media, government programs, community power structure, institutional analysis, and affirmative action

Lecturer

Larry D. Trujillo

Chicana/o studies, ethnic studies, grassroots community organizations, prison-industrial complex, student development, Chicano music

Professor

John G. Borrego (Latin American and Latino Studies)

Global political economy, national development, urban and regional planning, community organizing, social change, ethnic minorities, Mexico and the Southwest

Dana Frank (History)

U.S. social and economic history; women, labor, and working-class history; contemporary political economy

Patricia J. Zavella (Latin American and Latino Studies)

Relationship between women's work and domestic labor, poverty, family, sexuality and social networks, feminist studies, ethnographic research methods, and transnational migration of Mexicana/o workers and U.S. capital

Community Studies

211 College Eight Academic Building (831) 459-2371 http://communitystudies.ucsc.edu

Program Description | Changes to 2006-08 Catalog Highlighted | Faculty

Lower-Division Courses

10. Introduction to Community Activism. S

Surveys different strategies of community activism including charity, volunteering, labor and community organizing, and recently emerging global activism with goal of demonstrating how certain strategies challenge existing social relations and arrangements while others typically (and often by design) reproduce them. (General Education Code(s): IS.) *M. Pudup*

20. Youth and Social Movements. S

Examines roles young people have played and still play in social movements locally and internationally. Guiding questions are "Under what conditions do youth enter social movements?" and "What models do they create or adopt?" (General Education Code(s): E.) *P. Perry*

42. Student-Directed Seminar. F,W,S

Seminars taught by upper-division or graduate students under faculty supervision. (See course 192.) *The Staff*

70. Video Laboratory (2 credits). F,W

Trains students in the techniques of documentary film making. Through lectures, demonstrations, hands-on instruction, and review of students' work in progress, students learn the fundamentals of film/video pre-production, production, and post-production skills. Concurrent enrollment in course 80L required. Enrollment limited to 25. *The Staff*

71. Basic Photography Laboratory (2 credits). F,W

Provides students with photography skills. Through lecture, demonstration, hands-on experience, and field sessions, students acquire technical and aesthetic training in basic darkroom skills, methods of photographing people, an introduction to alternative processes, and presentation of finished photographs. Concurrent enrollment in course 80L required. Enrollment limited to 20. *The Staff*

72. Audio Laboratory (2 credits). F,W

Trains students in the fundamental techniques of documentary audio production. Through lectures, documentary examples, demonstrations, hands-on instruction, and consultation with students regarding their work in progress, students gain the skills they need to produce their own audio documentaries. Concurrent enrollment in course 80L required. Enrollment limited to 20. *The Staff*

73. Digital Photo Lab (2 credits). F,W

Provides introduction to digital photography and social documentary photographic techniques. Through lecture, demonstration, hands-on experience and field sessions,

students learn camera operation, how to photograph people, photographic aesthetics, Adobe Photoshop, and arranging photos in essay form. Concurrent enrollment in CMMU 80L is required. Enrollment limited to 15. *The Staff*

80A. Chicanos and Social Change. W

Introduction to study of Chicano political experience with selected U.S. institutions, e.g., education and health, beginning with historical overview and ending with consideration of Chicanos' political future in the 1990s. Weekly guest lecturers. (General Education Code(s): T3-Social Sciences, E.) *L. Trujillo*

80B. Civil Rights Movement: Grassroots Change and American Society. F

The civil rights movement of the 1950s–60s was one of the most important grassroots social movements in American history. Course examines this movement, focusing especially on the experiences of rank-and-file participants and on its effects on American society. (General Education Code(s): T3-Social Sciences, E.) *D. Brundage*

80F. Transgressive Sexualities and Genders. *

Historical and ethnographic examination of lesbian/gay subcultures, institutions, and politics in contemporary U.S. Topics include growth of urban gay communities, lesbian/gay people of color, family, youth, sex/gender theory, the law, and repression and resistance. General introduction to "queer studies." (General Education Code(s): T3-Social Sciences, E.) *N. Stoller*

80H. Social Change and Asian Americans. *

Introduction to the study of social change and Asian Americans, with an emphasis on community and activist perspectives. Weekly film or guest lecturers. (General Education Code(s): T3-Social Sciences, E.) *D. Woo*

80L. Social Documentation. F,W

Examines works from various media recognized as being drawn from "real life." Through film, photography, oral history, and other examples, develops critical understanding of social documentation as a process with implicit theories and conventions. Students create beginning documentaries in production collectives. (General Education Code(s): T3-Social Sciences.) *The Staff*

80Q. Asian American Health. F

Examines social and cultural issues relevant to Asian American health or mental health. Given implicit exclusionary biases in conventional health practices, the need is to broaden definitions of practice and prevention to encompass alternative conceptions of health care, as well as larger social problems related to social inequality, education, work, and adjustment to a racially diverse society. (General Education Code(s): T3-Social Sciences, E.) *D. Woo*

93. Field Study. F,W,S

Supervised research for lower-division students, conducted off campus within regular commuting distance of the campus. Petitions may be obtained in the Community Studies Office. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

93F. Field Study (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

93G. Field Study (3 credits). F,W,S

Supervised off-campus study conducted under the immediate and direct guidance of a faculty supervisor. For lower-division students doing part-time off-campus study. Petition must be obtained from the Community Studies Department. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Individual directed study for lower-division undergraduates. Petitions may be obtained in the Community Studies Office. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

Upper-Division Courses

100. Theory and Practice.

Introduces students to different ways of perceiving and understanding social phenomena in an ongoing dialogue about practical implications of theory and theoretical implications of practice. Faculty introduce and discuss their own work in these terms. Topics vary from quarter to quarter. Enrollment priority given to proposed community studies majors. Permission of instructor required; see enrollment conditions in the *Schedule of Classes*. *The Staff*

100B. Media and Social Change. *

Uses case study approach to analyze use of films and videos in relation to social change movements. Students produce a video as final project. Interview only: admission determined at first class meeting. Enrollment restricted to sophomores and juniors. Concurrent enrollment in course 170 is required. Course 80L is recommended. Enrollment limited to 25. (General Education Code(s): IS.) *R. Tajima*

100E. Theory and Practice of Economic Justice. W

Examines how markets operate within the political economy of contemporary capitalism to generate myriad and often chronic forms of economic and social inequality in the United States. Explores different approaches to addressing inequality within the multi-faceted economic justice movement. Interview only: admission determined at first class meeting. Enrollment limited to sophomores and juniors. Enrollment limited to 25. (General Education Code(s): IS, E.) *M. Pudup*

100F. Public Health. *

Examination of community activism to address health issues: examples are drawn from a range of concerns, e.g., environmental racism, prison conditions, feminist health matters, the AIDS epidemic, violence, and alcoholism. Special attention is given to the social frameworks of health and to the utilization of social and political strategies for improving community well-being. Interview only: admission determined at first class meeting. Enrollment limited to sophomores and juniors. Enrollment limited to 25. (General Education Code(s): IS.) *The Staff*

100J. Immigration and Social Justice. F

Introduction to contemporary U.S. immigration patterns and policies, to major problems facing immigrant communities, and to theory and practice of immigrants and their allies in confronting these problems and working for social justice. Interview only: admission determined at first class meeting. Enrollment limited to sophomores and juniors. Enrollment limited to 25. (General Education Code(s): IS, E.) *D. Brundage*

100K. Culture and Health. *

Explores the role of culture in health or health practice. Critiques the Western medical model, including its individual bias, and encourages a broader perspective on prevention that includes the role of social, economic, environmental, and cultural factors. Interview only: admission determined at first class meeting. Enrollment limited to sophomores and juniors. Enrollment limited to 25. (General Education Code(s): IS.) *D. Woo*

100M. Health Care Inequalities. F

Examines system and non-system that is American health care with special attention to inequalities in access, financing, and quality of care. Covers concepts such as equality, fairness, and need as well as community organizing and community building for health. Interview only: admission determined at first class meeting. Enrollment limited to sophomores and juniors. Enrollment limited to 25. (General Education Code(s): IS.) *A. Steiner*

100P. Resistance and Social Movements. *

Where do ideas for democratic social change come from? How are new social movements formed? Emphasis will be placed on subaltern groups including slaves, peasants, workers, utopians, and "second-class citizens" of the global economy from 1492 to the present. Interview only: admission determined at first class meeting. Enrollment limited to sophomores and juniors. Enrollment limited to 25. (General Education Code(s): IS, E.) *P. Ortiz*

100Q. Theory and Practice of Feminist Organizing/Global Realities. *

Examines sexuality and gender as political forces, in dominant social orders and oppositional movements. Focus on U.S. locates sexual politics in global race/class relations. Emphasize grassroots organizing on: sexual violence, abortion, arts censorship, sex work/public sex, HIV/AIDS, LGBT/queer civil rights. Interview only: admission determined at first class meeting. Enrollment limited to sophomores and juniors. Enrollment limited to 25. (General Education Code(s): IS.) *N. Stoller*

100R. Asian Pacific American Activism. *

Approaches activism that is generated through working for change and social justice in Asian and Pacific American communities. Examines both the larger sociopolitical context in which this occurs and factors that contribute to varying degrees of success and failure. Interview only: admission determined at first class meeting. Enrollment restricted to sophomores and juniors. (Formerly *Theory and Practice of Asian Pacific American Activism.*) Enrollment limited to 25. (General Education Code(s): IS, E.) *D. Woo*

100S. Social Documentation. *

Provides advanced understanding of history of social documentation and corresponding theories and practices of social documentation. Students also required to advance skills in a practical aspect of social documentation (i.e., video, photography, audio, oral history). Interview only: admission determined at first class meeting. Enrollment limited to sophomores and juniors. Enrollment limited to 25. (General Education Code(s): IS.) *D. Wellman*

100T. Agriculture, Food, and Social Justice. F

Examines the primary ways in which activists are attempting to resist, provide alternatives to, and/or transform aspects of the food system using social and environmental justice frameworks to evaluate such activism. Topics explored include

organic farming, food charity, fair trade, relocalization, and farmworker organizing. Interview only: admission determined at first class meeting. Enrollment limited to sophomores and juniors. Enrollment limited to 25. (General Education Code(s): IS.) *J. Guthman*

100V. Politics of Culture. W

Examination and analysis of structures and strategies governing the cultural sector, including but not limited to film exhibition and distribution, "entertainment" journalism, and the art world. Interview only: admission determined at first class meeting. Enrollment limited to sophomores and juniors. Enrollment limited to 25. (General Education Code(s): IS.) *B. Rich*

100X. Sex, Gender, and Sexuality. W

How do people produce and politicize sex, gender, and sexuality on their bodies? How are these represented and disciplined? Topics include transgender, sex work, feminist and queer realities. Materials include testimonials, films, ethnography, social theory, and clinical texts. Interview only: admission determined at first class meeting. Enrollment limited to sophomores and juniors. Enrollment limited to 25. (General Education Code(s): IS.) *M. Ochoa*

100Y. Youth and Society. W

Examines principal theories of youth "development" and role of schooling, poverty, and other influences on well-being and life outcomes of youth. Explores effective strategies for youth-related organizing and social change work. Interview only: admission determined at first class meeting. Enrollment limited to sophomores and juniors. Enrollment limited to 25. (General Education Code(s): IS.) *P. Perry*

102. Preparation for Field Studies. S

A practicum to prepare students for field study. Course must be successfully completed prior to the six-month field study. Prerequisite(s): course 10; submission of signed Goals and Objectives form and completion of admissions process to the major; signed approval of full-time field study. Enrollment limited to community studies majors. *M. Ochoa*

103. Field Study Practicum (2 credits). S

A practicum in social change work in which the students works for a social change organization on a part-time basis. Concurrent enrollment in course 102 required. *N. Stoller*

104. Class in the United States. **

Explores politics and culture of class in contemporary U.S. from interdisciplinary perspective, drawing on social theory, political economy, and cultural forms (film, music, and literature) with special emphasis on race, ethnicity, and gender. *D. Frank*

111. Ageism and Activism. F

Introduces students to gerontology, the study of aging. Taking a multidisciplinary approach, critically examines the theories, stereotypes, and realities of worldwide demographic transition and considers the many interesting implications for organizing social and personal life. Enrollment limited to 25. A. Steiner

112. In the Eye of 9/11: Film Culture and National Catastrophe. *

Explore national/international history through selected screenings/readings, attempting to understand how representation intersects with history and governance. Learn about earlier times of national panic or confusion to understand the

114. Whiteness, Racism, and Anti-Racism. S

Examines the social, cultural, institutional, and personal ways that white privilege and racial domination are constructed, maintained, and reproduced in U.S. society. Goal is to reveal the "hidden" quality of whiteness and illuminate effective strategies for anti-racist activism. Enrollment limited to 25. (General Education Code(s): E.) *P. Perry*

116. Documentary and Social Change. *

Critical analysis of the relationship between documentary and social change. Explores a wide array of documentary methods including film, testimonies, radio, protest novels, oral history, and electronic formats. Case studies include anti-slavery, farm worker, and anti-Apartheid movements. *P. Ortiz*

118. Broadcast Journalism (2 credits). F,W,S

Focuses on writing radio news. Through lectures, hands-on instruction, and written assignments, students acquire technical and aesthetic training in broadcast news reporting, writing, and audio production. Enrollment restricted to sophomores and juniors. Enrollment limited to 25. *R. Goodman*

119. Banana Slug News (2 credits). F,W,S

Introduction to television news production in which students become familiar with the tools of the medium and the process involved in the creation of a completed television news program through basic studio exercises and Electronic News Gathering (ENG). Enrollment limited to 15. May be repeated for credit. *J. Mejia*

121. Health and Human Rights in Prison. *

Critical analysis of health and human rights conditions for prisoners. Includes examination of contemporary theory and practice of punishment, health care in prison, and community and legal intervention in jail and prison conditions. Previous course work or background in the criminal justice area preferred. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment limited to 25. (General Education Code(s): W.) *N. Stoller*

123. Wal-Mart Nation. F

Examines origins and growth of Wal-Mart stores as powerful guides to understanding dynamics of contemporary global political economy and, relatedly, the changing fortunes of global social classes. *M. Pudup*

125. Documentary and Technology: Objectivity, Subjectivity, and Truth. * Intended to provide a solid grounding in the documentary (largely film/video), its approaches over time, changes in thinking about the role that the machine has played in the nature of the medium, and an opportunity to think critically about practice, community, use, and reception. (General Education Code(s): A.) *B. Rich*

126. African American/Latino Communities: Histories. W

Explores the histories, cultures, and politics of African Americans and Latinos since the Mexican-American War; racial oppression and civil rights, culture and identity, citizenship, labor, and public policy struggles; and contemporary politics of black and Latino relationships in the U.S. Enrollment limited to 25. (General Education Code(s): E.) *P. Ortiz.*

132. Mediating Desire. *

Considers the ways Third World voices and bodies are understood, performed, embraced, commodified, exploited, and rejected through representations. Uses representations of, by, and for the margins to engage theories of communication, identity, and representation. Creative final projects encouraged. (General Education Code(s): E.) *M. Ochoa*

134. Youth Cultures and Identity Politics. *

What is "youth culture?" What does it have to do with race, class, and gender politics? Combining sociology of race with cultural studies, the course addresses these questions and examines the potential of youth cultures to affect social change. (General Education Code(s): E.) *P. Perry*

136. Black Liberation in the African Diaspora. S

Critically examines anti-slavery, anti-colonial, revolutionary, and civil rights struggles in the African diaspora from slavery to freedom: dynamics of racial oppression, debates within black communities, and the impact of gender, class, and cultural differences in the shaping of contemporary protest traditions. (General Education Code(s): E.) *P. Ortiz*

142. Introduction to Marxism. W

A close study of original texts by Marx and Engels and contemporary Marxists, focusing on the basic tenets of Marxism and their applicability to current community problems. An interdisciplinary course for students with little previous experience in Marxist method. *M. Rotkin*

145. Politics of Obesity. *

Critically examines the construction and representation of the so-called epidemic of obesity, the major explanations for the rise in obesity and the interventions they beget, and the implications of naming obesity as a problem. *J. Guthman*

146. Leadership Education for Asian Americans. F

Aims to promote leadership and activism on the part of Asian American/Pacific Islander (AAPI) students or those working with AAPI communities. A major theme is the application of leadership concepts and models to specific communities or groups. (General Education Code(s): E.) *D. Woo*

147. The Rise and Fall of the New Queer Cinema. *

Documents/interprets the phenomenon "New Queer Cinema." Seeks to understand its precedents, preconditions (social, political, medical) leading to its explosive growth, and forces (economic, aesthetic, medical) spelling the end of the artistic movement, though its influence seemed simultaneously to spill into every televisual medium. (General Education Code(s): A.) *B. Rich*

148. Women's Health Activism. W

Examines concrete aspects of women's health in social and political contexts, including such factors as environmental and occupational health, the role of race and nationality, diverse sexualities and health, American medical care systems, and international comparisons and organizing approaches. *N. Stoller*

149. Political Economy of Food and Agriculture. S

Intensive reading course, focusing on key concepts in agrarian political economy and historical development of world food system. *J. Guthman*

152. Gender and Sexuality in Latin America. *

Advanced topics in gender and sexuality in Latin America and Latina/o studies. Analyzes role of power, race, coloniality, national and transnational processes in the production and analysis of genders and sexualities. Materials include memoir, fiction, ethnography, social documentary and history. Prerequisite(s): Latin American and Latino Studies 80S or equivalent. (General Education Code(s): E.) *M. Ochoa*

156. Corporate Culture, Corporate Structure, and Race. *

Examines how corporations have either explicitly or implicitly supported racial inequities. As such, it broadens the traditional anti-discrimination paradigm, largely focused on individual prejudice or intentionality, to encompass issues of accountability at the corporate level. *D. Woo*

160. Communities, Problems and Interventions. *

Prepares students to develop and design responses to problems affecting communities. Informed by the history of community interventions in Chicana/o, feminist, labor, civil rights, HIV/AIDS, and GLBT/queer movements, students research, design, and propose a community-level intervention. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment limited to 25. (General Education Code(s): W.) *M. Ochoa*

162. Introduction to Grant Writing. *

Introduces students to non-profit organizations and grant writing. Through hands-on grant-writing experiences, students learn how to write a successful grant. Please bring a potential fundable project idea to the first class. (Formerly *Introduction to Non-Profit Organizations and Grantwriting.*) *The Staff*

163. American Cities and Social Change. *

Examines the historical development of and contemporary conditions within U.S. cities by focusing on social and economic restructurings of cities, cultural and political transformations, and spatial reorganizations of the urban landscape. Goal is understanding the changing nature of urban experience. Students must also enroll in course 164. *M. Pudup*

164. Urban Field Study (2 credits). *

Examines multifaceted processes of urban growth and restructuring during two all-day field trips in the greater San Francisco Bay Area. Goal is making urban theory and history come to life. Must be taken concurrently with course 163. Enrollment limited to 15. *M. Pudup*

166. Northern Ireland: Communities in Conflict. S

Introduction to the so-called "troubles" in Northern Ireland, from the 1960s to the present. Examination of the historical background to the conflict, the patterns of conflict in the 1970s and 1980s, and the emergence of a peace process in the 1990s. *D. Brundage*

168. Globalization and Its Discontents. *

Provides an overview of the origins and existing character of major institutions, structures, and dynamics of the global political economy. Examines some social consequences of neoliberalism as well as political responses to it. *J. Guthman*

170. Video Laboratory (2 credits). *

Trains students in the techniques of documentary film making. Through lectures, demonstrations, hands-on instruction, and review of work in progress, students learn the fundamentals of film-video pre-production, production, and post-production

skills. Prerequisite(s): concurrent enrollment in course 100S. D. Wellman

171. Photography Laboratory (2 credits). *

Provides students with photography skills. Through lecture, demonstration, hands-on experience, and field sessions, students acquire technical and aesthetic training, darkroom skills, methods of photographing people, introduction to alternative processes, and learn to present finished photographs. Prerequisite(s): concurrent enrollment in course 100S. D. Wellman

172. Audio Laboratory (2 credits). *

Trains students in techniques of documentary audio production. Through lectures, documentary examples, demonstrations, hands-on instruction, and in consultation regarding work in progress, students gain skills required to produce their own audio documentaries. Prerequisite(s): concurrent enrollment in course 100S. *D. Wellman*

180. Video Production of the Social Documentary. S

Intensive overview of the production of social-issue documentary videos covering conceptualization, research, treatment and proposal writing, interview technique, camera, editing, production, and distribution. Prerequisite(s): course 80L. Concurrent enrollment in course 180L required. Enrollment limited to 20. *R. Tajima*

180L. Video Laboratory (2 credits). S

Further training in techniques of documentary filmmaking. Through lectures, demonstrations, hands-on instruction, and review of students' work in progress, students learn skills in film/video pre-production, production, and post-production. Concurrent enrollment in course 180 is required. *R. Tajima*

189. Methods of Teaching Community Studies. F,W,S

Each student serves as a facilitator for small discussion groups in connection with core community studies courses. Facilitators complete course readings and meet with instructor as a group to discuss the teaching process. May not be counted toward upper-division major requirements. Prerequisite(s): prior course work in the major. *The Staff*

192. Directed Student Teaching. F,W,S

Teaching of a lower-division seminar, course 42, under faculty supervision. Students submit petition to sponsoring agency. Approval by the Committee on Educational Policy the prior quarter. *The Staff*

193. Field Study. F,W,S

Supervised off-campus study conducted under the immediate and direct guidance of a faculty supervisor. To be used primarily by upper-division students doing part-time off-campus study. Petitions may be obtained in the Community Studies Department Office. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

193F. Field Study (2 credits). F,W,S

Supervised off-campus study conducted under the immediate and direct guidance of a faculty supervisor. For upper-division students doing part-time off-campus study. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

193G. Field Study (3 credits). F,W,S

Supervised off-campus study conducted under the immediate and direct guidance of a faculty supervisor. For upper-division students doing part-time off-campus study.

Petition must be obtained from the Community Studies Department. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

194. Analysis of Field Materials. W

A seminar for students who have completed a full-time field study. Devoted to the systematic analysis of field materials, integrating appropriate concepts and relevant literature, as well as utilizing the experience of other students. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, course 198. Enrollment restricted to community studies majors. (General Education Code(s): W.) *The Staff, D. Wellman, D. Brundage, J. Guthman*

195A. Senior Thesis. F,W,S

Individual study with a faculty member to complete the senior thesis. Petitions may be obtained in the Community Studies Department Office. Students submit petition to sponsoring agency. *The Staff*

195B. Senior Thesis. F,W,S

Individual study with a faculty member to complete the senior thesis. Petitions may be obtained in the Community Studies Department Office. Students submit petition to sponsoring agency. *The Staff*

195C. Senior Thesis. F,W,S

Individual study with a faculty member to complete the senior thesis. Petitions may be obtained in the Community Studies Department Office. Students submit petition to sponsoring agency. *The Staff*

198. Independent Field Study. F

Provides for department-sponsored individual study programs off campus for which faculty supervision is not in person (e.g., supervision is by correspondence). Community studies majors are required to take 30 credits of field study. Students engaging in full-time field study must complete all application procedures as described in the Community Studies handbook. Students submit petition to sponsoring agency. Prerequisite(s): course 102 must be successfully completed before enrollment in this course. May be repeated for credit. *The Staff, M. Rotkin*

199. Tutorial. F,W,S

Advanced directed reading and research for the serious student. May be repeated for credit with consent of instructor. Petitions may be obtained in the Community Studies Department Office. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Advanced directed reading and research for the serious student. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

201. Theories of "Whiteness" and Anti-Racist Practice. *

Examines most current literature on "whiteness" emanating from legal studies, the humanities, and social sciences and analyzes insights offered for anti-racist public and educational policy, particularly, and white anti-racist practice, generally. Enrollment restricted to graduate students. Enrollment limited to 15. *P. Perry*

209. Ethnographic Writing.

Fleshes out social analysis. Prepares students entering or returning from fieldwork to represent people, places, and social processes in writing. Employs writing exercises, in-class workshop, and review of ethnographic literature. Enrollment restricted to graduate students. Enrollment limited to 30. *M. Ochoa*

297. Independent Study. F,W,S

Either study related to a course being taken or a totally independent study. Designed for graduate students. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

* Not offered in 2007-08

Computer Engineering

Baskin School of Engineering 335 Baskin Engineering Building (831) 459-2158

http://www.soe.ucsc.edu

Changes to 2006-08 Catalog Highlighted | Faculty | Course Descriptions

Program Description

Computer engineering focuses on the design, analysis, and application of computers and on their applications as components of systems. The UCSC Department of Computer Engineering sustains and strengthens its teaching and research program to provide students with inspiration and quality education in the theory and practice of computer engineering.

The UCSC B.S. in computer engineering prepares graduates for a rewarding career in engineering. UCSC computer engineering graduates will have a thorough grounding in the principles and practices of computer engineering and the scientific and mathematical principles upon which they are built; they will be prepared for further education (both formal and informal) and for productive employment in industry.

Because computer engineering is so broad, we offer five specialized concentrations for completing the program: systems programming, computer systems, autonomous and embedded systems, networks, and digital hardware. Descriptions of these concentrations follow in the section on major requirements.

The Department of Computer Engineering offers two undergraduate minors, described after the B.S. program below. The minor in computer technology provides a broad look at computer hardware, computer software, engineering design, and the interface between computer technology and society. This minor is particularly recommended for students interested in the use of computer technology in another discipline or in K-12 teaching. The minor in computer engineering focuses on the technical aspects of computer hardware, embedded system, and software design. This minor is particularly recommended for students interested in the design of computer technology for use in another discipline.

The Department co-sponsors the B.S. in bioengineering with the Departments of Biomolecular Engineering, Electrical Engineering, and Molecular, Cell & Developmental Biology.

Beyond the extensive research, design, and development projects taking place within courses required for the major, many computer engineering students join faculty labs to take part in cutting-edge research. The Department sponsors the Summer Undergraduate Research Fellowship in Information Technology (SURF-IT, http://surf-it.soe.ucsc.edu), as well as many other research opportunities. The Department holds regular faculty-undergraduate lunches to discuss research and other issues of interest.

Many computer engineering students continue their education through the M.S. degree. The Department of Computer Engineering offers an accelerated combined B.S./M.S. degree in computer engineering that enables eligible undergraduates to move without interruption to the graduate program. Interested computer engineering majors should contact their adviser for more details. The graduate program of the Department of Computer Engineering also offers both the standard M.S. and the Ph.D. degrees.

Every major and minor must have a computer engineering faculty adviser, assigned by the Baskin School of Engineering Undergraduate Advising office, and with that adviser must formulate a program of proposed course work that meets the major or minor requirements (see http://www.soe.ucsc.edu/advising/undergraduate/).

Students considering the computer engineering major among other possibilities are strongly encouraged to take course 1 (2 units) or course 8 within the first two quarters, and course 12 within the first three quarters.

The computer engineering B.S. program is accredited by the Engineering Accreditation

Commission of ABET, Inc., (previously the Accreditation Board for Engineering and Technology).

Courses for Nonmajors

The Department of Computer Engineering offers course 1, Hands-on Computer Engineering: a 2-unit laboratory course designed to introduce students to Computer Engineering via many short fun projects; course 3, Personal Computer Concepts: Software and Hardware, providing students an introductory course on the design and use of computers from an engineering viewpoint; and course 8, Robot Automation: Intelligence through Feedback Control. Other computer engineering courses of interest to nonmajors include course 12, Computing Systems and Assembly Language, an introductory course on computer systems, system software, and machine-level programming; course 80N, Introduction to Networking and the Internet, an introduction to technological services of the Internet; course 80H, History of Modern Computing; course 80E, Engineering Ethics; and course 80A, Assistive Technology and Universal Access.

Computer Engineering Policies

Admissions Policy

Lower-division students will be accepted into the computer engineering major on completion of the SOE major declaration process during any of their first three quarters at UCSC. See http://www.soe.ucsc.edu/advising/undergraduate/ for quarterly deadlines and mandatory major declaration workshops.

After the first three quarters, petitions to declare the major are reviewed individually. Students must have completed at least five courses required for the major, and are expected to have a GPA among School of Engineering and Division of Physical and Biological Sciences courses (the SOE GPA) of 2.5. Progress in the major and ability to complete the major within campus limits will also be considered.

Transfer Students

Admission to the computer engineering major for transfer students is based on their performance in all transferable science, math, and engineering courses. To be admitted, at least four courses required for the major must transfer for a student to be eligible for admission. Requirements are listed below. We recommend, in particular, substantial completion of the mathematics series, as well as programming or physics.

Honors in the Major

Computer engineering majors are considered for "Honors in the Major" and "Highest Honors in the Major" based on the School of Engineering GPA and on results of undergraduate research and other significant contributions to the School of Engineering. Students with an SOE GPA of 3.7 in most cases receive Highest Honors. Students with an SOE GPA of 3.3 in most cases receive Honors. Students with particularly significant accomplishments in undergraduate research or contributions to the School of Engineering may be considered with a lower SOE GPA. Computer Engineering juniors and seniors may also be eligible for election to the Engineering Honor Society.

Progress in the Major

Declared majors must complete courses required for the major in a manner that will enable graduation within campus limits. Students not making sufficient progress may be required to take a higher course load, complete courses during summer, or otherwise adjust their study plan, at the discretion of the faculty. Students who do not complete required changes to the study plan may be disqualified from the major.

Disqualification Policy

Please refer to the Engineering section of this catalog for the School of Engineering's Major Disqualification Policy .

Letter Grade Policy

The Computer Engineering Department requires letter grading for all courses applied to the degree with the exception of two lower-division courses, which students may elect to take Pass/No Pass. This policy includes courses required for the computer engineering major but sponsored by other departments.

School of Engineering Policies

Please refer to the School of Engineering section of the catalog for additional policies that apply to all School of Engineering programs.

Major Requirements

All students in the computer engineering major take the same core courses, which give the fundamentals of programming and hardware design, supported by the physics and mathematics necessary to understand them. The core courses also cover the fundamentals of computer architecture and designing with microprocessors.

Lower-Division Requirements

Core Requirements

Computer Engineering

- 1, Hands-On Computer Engineering (two credits, recommended)
- 8, Robot Automation: Intelligence through Feedback Control (recommended) 12/L, Computer Systems and Assembly Language/Laboratory

Computer Science

12A/L, Introduction to Programming; and 12B/M, Introduction to Data Structures; or 13H, Introduction to Programming and Data Structures (Honors)

Electrical Engineering

70/L, Introduction to Electronics/Laboratory

Mathematics

Computer Engineering 16, Applied Discrete Mathematics; Mathematics 19A-B, Calculus for Science, Engineering, and Mathematics Mathematics 23A, Multivariable Calculus Electrical Engineering 103, Signals and Systems Applied Mathematics and Statistics 27/L, Mathematical Methods for Engineers/Laboratory; or Mathematics 21, Linear Algebra; and Mathematics 24, Ordinary Differential Equations

Science

Students must complete Physics 5A/L or 6A/L, Physics 5C/N or 6C/N, and any two the following science classes:

Biology: Chemistry 1B/M; and Biology 20A or 21A Chemistry: Chemistry 1B/M; Chemistry 1C/N

Earth Science: Earth Science 10/L; a choice of one 5-credit Earth science upper-

division course, excluding Earth Science 111

Physics: Physics 5B/M or 6B/M; Physics 5D or one 5-credit upper-division physics

course

Ethics

Students must take Computer Engineering 80E, Engineering Ethics; or another approved ethics course.

This course is required even for transfer students who have had their general education requirements waived.

Upper-Division Requirements

Core Requirements

Computer Engineering

100/L, Logic Design/Laboratory

121/L, Microprocessor System Design/Laboratory

110, Computer Architecture

107, Mathematical Methods of Systems Analysis: Stochastic

185, Technical Writing for Computer Engineers

Computer Science

101, Abstract Data Types

Concentrations

The following concentrations are specializations for the computer engineering student. Students must complete all of the courses listed within their selected concentration, and they must

complete the capstone sequence.

Systems Programming Concentration

The systems programming concentration focuses on software systems: courses include operating systems, compilers, software engineering, and advanced programming. Students finishing this concentration are very well prepared for building large software systems of all types. This concentration is the closest one to a computer science major-the main differences are that it does not require computer science theory courses, but because of the core computer engineering requirements, includes more hardware and electronics than a computer science bachelor's degree.

- Computer Science 111, Introduction to Operating Systems
- Computer Science 115, Software Methodology
- · Elective: Upper-division elective from approved list

Any two of the following courses:

Computer Engineering 113, Parallel and Concurrent Programming
Computer Engineering 117/L, Embedded Software/ Laboratory
Computer Engineering 118/L, Introduction to Mechatronics/Laboratory
Computer Engineering 156, Network Programming (requires course 150)
Computer Science 104A, Fundamentals of Compiler Design I
Computer Science 104B, Fundamentals of Compiler Design II
Computer Science 116, Software Design Project

Computer Systems Concentration

The computer systems concentration provides a balance between software and hardware design. Students are prepared for a large variety of different design tasks, especially those requiring the integration of hardware and software systems, but may need further training for any particular specialization.

- Computer Engineering 125/L, Logic Design with Verilog/Laboratory; or 126/L, Advanced Logic Design/Laboratory
- Computer Science 111, Introduction to Operating Systems
- Elective: Two upper-division or graduate electives from approved list

Robotics and Control Concentration

This concentration covers the hardware, software, sensing, and control aspects of autonomous and embedded systems. Students receive training in the theory, design, and realization of complex systems such as mobile robots. The concentration emphasizes integration of embedded software with hardware systems that interact with the environment.

Three out of the following four courses:

- Computer Engineering 117/L, Embedded Software/Laboratory
- Computer Engineering 118/L, Mechantronics/Laboratory
- Computer Engineering 163/L, Multimedia Processing and Application/Laboratory
- Electrical Engineering 154, Feed back Control Systems
- Elective: (three possibilities):
 - Completion of all four courses listed above, or
 - Computer Engineering 174, *Tools for Digital Systems Design Lab* and any approved School of Engineering upper-division elective, or
 - Computer Engineering 161533/L, Signal Processing
 - Applied Math and Statistics 146, Chaotic Dynamical Systems
 - Applied Math and Statistics 162, Design and Analysis of Computer Simulation Experiments
 - Computer Engineering 242, Applied Feedback Control
 - Computer Engineering 240, Introduction to Linear Dynamical Systems
 - Information Systems Management 206, Optimization Theory and Applications

Networks Concentration

The networks concentration focuses on communication between computers, covering both network hardware and protocols. Students finishing this concentration are well prepared for the design of wired and wireless network systems.

- Computer Engineering 150, I ntroduction to Computer Networks
- Computer Engineering 151, Network Administration; or 156, Network Programming
- Computer Science 111, Introduction to Operating Systems
- Electives: Upper-division or graduate elective from approved list

Digital Hardware Concentration

The digital hardware concentration focuses on hardware design and includes more electronics

than the other concentrations. Students finishing this concentration are well prepared for building hardware systems. This concentration is the closest one to an electronics major; the main differences are that it does not require as much electronics theory or analog electronic design, but because of the core computer engineering requirements, requires more software skills.

- Computer Engineering 125/L, Logic Design with Verilog/Laboratory; or 126/L, Advanced Logic Design/Laboratory
- Computer Engineering 173/L, High-Speed Digital Design
- Computer Engineering 174, Introduction to the EDA Tools for PCB Design (three credits)
- Electrical Engineering 171/L, Analog Electronics
- · Elective: Upper-division or graduate elective from approved list

Capstone Sequence

All computer engineering students complete a two-quarter capstone project sequence. Working with students from different concentrations and majors, student sapply the skills and techniques from their own chosen concentration to a major design problem.

Computer Engineering

- 123A, Computer Engineering Design Project I
- 123B, Computer Engineering Design Project II; or 195, Senior Thesis Research

Portfolio Exit Requirement

Students are required to submit a portfolio and exit survey. Students whose submissions are deemed inadequate, either in presentation or in content, may be required to revise and rewrite the portfolio or to complete an additional project course. The portfolios must be turned in electronically via http://www.soe.ucsc.edu/programs/ce/undergraduate/portfolio.html at least seven days before the end of instruction in the quarter of graduation.

The portfolios will be reviewed quarterly by the computer engineering undergraduate committee and must include the following:

- · A hardware-oriented project report
- A software-oriented project report
- · A third project report of the student's selection
- A one- to two-page overview of the three projects, the student's contribution to them, and a narrative as specified at http://www.soe.ucsc.edu/programs/ce/undergraduate/portfolio.html
- An exit survey

If a project report is associated with a course, it must be an upper-division or graduate course. One of the reports must be the result of a multi-person project. One of the reports must be the result of an individual project. One of the reports must be the result of the student's capstone design project.

Comprehensive Requirement

The senior comprehensive requirement for computer engineering majors is satisfied by completion of the capstone course and the portfolio exit requirement.

Computer Engineering Major Planners

The following are two sample academic plans for students to complete during their first two years as preparation for the computer engineering major. Plan One is suggested guidelines for students who are committed to the major early in their academic career. Plan Two is for students who are considering the major.

Plan One					
Year	Fall	Winter	Spring		
1st (frsh)	Math 19A Cmps 12A/L core course	Math 19B Cmpe 12L Cmpe 1 (2 unit) gen ed	Cmpe 80E Cmps 12B/M gen ed		
2nd (soph)	Phys 5A/L Math 23A gen ed	AMS 27/L Cmpe 100/L gen ed	Phys 5C/N Cmpe 16 Cmpe 80E		
Plan Two					
Year	Fall	Winter	Spring		
1st (frsh)	Math 3 (pre-calc) Cmpe 8 Cmpe 1 (2 unit) core course	Math 19A Cmps 12/L gen ed	Math 19B Cmps 12A/L gen ed		

2nd	Phys 5A/L	Cmpe 100/L	Phys 5C/N
(soph)	Cmps 12B/M	Cmpe 16	AMS 27/L
	gen ed	gen ed	Cmpe 80E

Computer Engineering Minor

The computer engineering minor provides a solid foundation in digital hardware, electronics, and computer software, as well as the prerequisite material in mathematics and physics. The minor is well-suited to students who wish to take part in the design of computer and embedded systems in any discipline. Course 121/L, *Microprocessor System Design* and *Laboratory*, provides a capstone engineering design experience for students pursuing the Computer Engineering minor.

Computer Engineering Minor Requirements

Requirements for the minor in computer engineering are the following:

Mathematics

19A-B, Calculus for Science, Engineering, and Mathematics

23A, Multivariable Calculus

Applied Mathematics and Statistics 27/L, *Mathematical Methods for Engineers/Laboratory* (formerly Mathematics 27); or Mathematics 21, *Linear Algebra*; and 24, *Ordinary Differential Equations*

Computer Engineering 16, Applied Discrete Mathematics;

Science

Physics 5A/L or 6A/L, and 5C/N or 6C/N

Core Requirements

Computer Engineering

12/L, Computer Systems and Assembly Language/ Laboratory

100/L, Logic Design/Laboratory

110, Computer Architecture

121/L, Microprocessor System Design/Laboratory

Computer Science

12A/L, Introduction to Programming/Computer Programming Laboratory; and

12B/M, Introduction to Data Structures/Data Structures Laboratory; or 13H/L, Introduction to Programming and Data Structures (Honors)/ Laboratory

101, Abstract Data Types

Electrical Engineering

70/L, Introduction to Electronics/Laboratory

At most, two of the upper-division core courses and the lower-division electrical engineering course may be used to satisfy the requirements of another major or minor degree.

The portfolio exit requirement does not apply for the computer engineering minor.

Computer Technology Minor

The computer technology minor provides a broad exposure computer hardware and software technology. The minor is intended for non-engineering majors who would like to develop an understanding of the design and use of computer technology. The minor may be particularly valuable for students who expect to use computer technology in another discipline, who are interested in K-12 teaching, or who have a general interest in computer technology and how it works. The minor includes a required capstone essay.

The computer technology minor is not available to computer engineering, computer xcience, electrical engineering, or information systems management majors, or to computer engineering minors.

Computer Technology Minor Requirements

Computer Engineering

Four required courses, one optional course:

- 1, Hands-On Computer Engineering (2 credits)
- 3. Personal Computer Concepts: Hardware and Software (optional)

12/L, Computer Systems and assembly Language/Laboratory

100/L, Logic Design/Laboratory

80N, Networking and the Internet; or 150, Introduction to Computer Networks

Programming

Two of the following courses (only one 60 course is permitted):

Biomolecular Engineering 60, Programming for Biologists and Biochemists

Computer Science 60G, Beginning Programming: Social Sciences and Humanities

Computer Science 60N, Beginning Programming: Natural Sciences

Computer Science 12A/L, Introduction to Programming/Computer Programming Laboratory

Computer Science 12B/M, Introduction to Date Structures/Data Structures Laboratory

Computer Technology and Society

Three courses:

80E, Engineering Ethics; and

80H, History of Modern Computing, or

Electrical Engineering 80T, Modern Electronic Technology and How it Works; and ISM 101, Management of Technology Seminar (1 credit)

Elective

Two five-unit upper-division School of Engineering electives and any associated laboratories

Capstone Requirement

194F, *Group Tutorial* (2 units). A group tutorial completed during the winter quarter prior to graduation considering the impact of computer technology. Students will complete papers considering aspects of the impact of computer technology on the students' discipline. Contact the School of Engineering Undergraduate Advising office during fall quarter to join this course.

Materials Fee and Miscellaneous Fees

Please see the section on fees under the School of Engineering .

Undergraduate Programs

B.S./M.S. Undergraduate Program

The Department of Computer Engineering offers a combined bachelor and master of science degree program in computer engineering, providing the opportunity to earn both degrees in five years. The B.S./M.S. program offers a competitive edge to students who are completing their undergraduate degree at UCSC, by enabling those with advanced preparation to move directly from the undergraduate to the graduate program. The program assists qualified enrolled students with a simplified graduate application process and makes it possible to complete an M.S. degree with just seven courses beyond the B.S. program.

The program prepares students for engineering positions in industry, and it is particularly attractive for undergraduate students planning to engage in engineering research in industry or academia. The School of Engineering has many opportunities for undergraduate research, especially for honors-level students. B.S./M.S. students can continue their undergraduate research projects with the same research group. Upon advancement to graduate standing, B.S./M.S. students are eligible for support as graduate research assistants. The B.S./M.S. program provides knowledge and training in important and contemporary areas of computer engineering.

Particularly motivated B.S./M.S. students can complete the entire program in 14 quarters (or fewer with Advanced Placement credit); however, advance planning is essential. Interested students should contact the department and their faculty adviser early in their college career-no later than the start of their junior year. B.S./M.S. students retain undergraduate status until the completion of all undergraduate requirements, but may begin graduate course work in advance of graduate standing.

The undergraduate degree requirements are the same as those for other computer engineering majors; however, the B.S./M.S. program capitalizes on graduate-level courses that may apply toward both degree requirements. B.S./M.S. candidates may apply (at most) two graduate courses taken as undergraduates toward both the M.S. degree and B.S. degree electives. At the time graduate status is achieved, no more than three graduate courses taken as an undergraduate may count toward the nine courses required for the M.S. degree. B.S./M.S. students may not apply undergraduate courses toward the M.S. degree.

Admission to the B.S./M.S. program is by formal application. Undergraduate applicants seeking admission as graduate students generally apply in their last quarter of junior standing. To qualify, applicants must have completed the following:

Computer Engineering 100/L, Logic Design/Laboratory

Computer Science 101, Abstract Data Types

Computer Engineering 110, Computer Architecture; or 121/L, Microprocessor System Design/ Laboratory

Electrical Engineering 70/L, Introduction to Electronics/Laboratory

and at least one additional upper-division School of Engineering course.

Applications will be considered until the student's first quarter of senior standing. This extension of the application period into the first quarter of the senior year is specifically geared to enable eligible transfer students to complete the courses required for admission.

Students who cannot meet the B.S./M.S. application requirements or who are not admitted into the program are encouraged to apply for admission to the standard M.S. or Ph.D. program during their senior year.

Additional information about this program can be found on the department's web pages at www.soe.ucsc.edu/programs/undergraduate/ .

Graduate Programs

M.S. and Ph.D. Degree Programs

The graduate program in computer engineering accepts students for both the M.S. and the Ph.D. degrees. Graduate students in this program establish a solid foundation in computer algorithms and architectures and then proceed to a thorough study of recent developments in their selected area of specialization. This provides the basis for the M.S. degree and Ph.D. thesis work. The major areas of research concentration in computer engineering at UCSC are computer networks, computer systems design, computer-aided design technologies, digital media and education technology, and software and systems engineering.

The computer engineering program benefits from a close relationship with the computer science and electrical engineering programs at UCSC and ties to industry in the Silicon Valley and Monterey Bay areas. Graduates of the program are prepared for careers in teaching and research as well as for positions in industrial research and development.

While in the program, most graduate students are supported as research assistants on faculty-sponsored projects or as teaching assistants for undergraduate courses.

Additional information on the computer engineering M.S. and Ph.D. degrees, including degree requirements and applications for admission, can be found on the department's web pages at www.soe.ucsc.edu/programs/graduate/.

Requirements for the Master's Degree

Base Requirement

In their first year, graduate students must show proficiency in three fundamental subjects: 1. data structures; 2. computer architecture; and 3. one of the following three subjects-logic design, circuits, and software systems. Proficiency can be demonstrated by either completing one of the associated undergraduate courses, by establishing that an equivalent undergraduate course has been completed elsewhere, or by passing the final exam (or project when deemed appropriate by the faculty responsible) of an associated course. Students should obtain a Computer Engineering Base Worksheet for the list of associated courses and instructions on fulfilling this requirement.

The base requirement must be met by all graduate students (both M.S. and Ph.D.) by the end of the spring quarter of their first year in the program.

Course Requirements

Each student is required to complete a total of 48 units. The course work must include

Computer Engineering 200, Research and Teaching in Computer Science and Engineering

Computer Science 201, Analysis of Algorithms

Computer Engineering 202, Computer Architecture

Up to 10 credits of Computer Engineering 297, *Independent Study* or *Research*; or Computer Engineering 299, *Thesis Research*

Up to 10 credits of either graduate courses (not seminars) in related disciplines outside the School of Engineering (requires adviser and computer engineering graduate committee approval) or upper-division undergraduate courses when necessary to strengthen the student's preparation for graduate studies (requires adviser approval)

All remaining credits must be graduate elective courses from Computer Engineering's list of approved graduate courses (available online or from the department)

In addition, the selection of graduate elective courses must show breadth by including a minimum of 5 credits in each of two categories from Computer Engineering's list of approved graduate electives. Computer Science 201 and Computer Engineering 202 cannot be used to satisfy the breadth requirement.

At least half of the units from the graduate-level courses must be computer engineering graduate courses.

Thesis

Completion of a master's thesis is required for award of the master's degree. To fulfill this requirement, the student must submit a written proposal to a faculty member, usually by the third academic quarter. By accepting the proposal, the faculty member becomes the thesis adviser for the proposed thesis. In consultation with the adviser, the student must form a master's thesis reading committee with at least two additional faculty members, each of whom is provided a copy of the proposal. The student is required to present an expository talk on the thesis research, and the final thesis must be accepted by the review committee before the award of the master of science degree.

Requirements for the Ph.D. Degree

Base Requirement

In their first year, graduate students must show proficiency in three of five fundamental subjects: 1. data structures; 2. computer architecture; and 3. one of the following three subjects-logic design, circuits, and software systems. Proficiency can be demonstrated by either completing one of the associated undergraduate courses, by establishing that an equivalent undergraduate course has been completed elsewhere, or by passing the final exam (or project when deemed appropriate by the faculty responsible) of an associated course. Students should obtain a Computer Engineering Base Work Sheet for the list of associated courses and instructions on fulfilling this requirement.

The base requirement must be met by all graduate students (both M.S. and Ph.D.) by the end of the spring quarter of the first year in the program.

Course Requirements

A Ph.D. student is required to take a total of 58 credits of graduate courses, which must consist of

Course 200, Research and Teaching in Computer Science and Engineering;

Computer Science 201, Analysis of Algorithms;

Course 202, Computer Architecture;

A minimum of 20 credits of graduate computer engineering courses from Computer Engineering's list of approved graduate courses (available online or from the department);

Up to 10 credits of course 297, *Independent Study* or *Research*; or course 299, *Thesis Research*:

Up to 10 credits of graduate courses (not seminars) in related disciplines outside the School of Engineering (requires adviser and computer engineering graduate committee approval);

All remaining units must be graduate elective courses from Computer Engineering's list of approved graduate courses.

The selection of elective courses must show breadth by including either 10 credits in each of two categories or 5 credits in each of three separate categories from Computer Engineering's list of approved graduate courses. Computer Science 201 and course 202 cannot be used to satisfy the breadth requirement.

Course selection should form a coherent plan of study and requires adviser approval. Undergraduate courses may not be used to satisfy Ph.D. course requirements.

Ph.D. students who have satisfied the requirements for the master's degree are eligible to receive a master's degree.

Examinations and Dissertation

To continue in the Ph.D. program, students must pass a preliminary examination in their chosen research area by the end of their third year. Preliminary examinations are held during the first three weeks of each spring quarter; students must petition the computer engineering graduate committee for an examination in their chosen area two weeks before the end of winter quarter. Examination committees consist of four faculty members, two chosen by the student and two by the computer engineering graduate committee. The format of this oral examination is up to the examination committee; the examination will typically evaluate both general knowledge of the chosen area and specific understanding of selected technical papers. The preliminary examination requirement is waived for students who advance to candidacy by the end of their third year.

Each student must write a Ph.D. dissertation. The dissertation must show the results of in-depth research, by an original contribution of significant knowledge, and include material worthy of publication. As the first step, a student must submit a written dissertation proposal to a School of Engineering faculty member. By accepting the proposal, the faculty member becomes the student's dissertation supervisor. The student may choose a faculty member outside the Computer Engineering Department within the School of Engineering as adviser only with approval from the computer engineering graduate committee. The dissertation proposal is publicly and formally presented in an oral qualifying examination given by a qualifying exam committee, approved by the computer engineering graduate committee and the graduate council. The student must submit his or her written dissertation proposal to all members of the qualifying exam committee and the graduate assistant one month in advance of the examination.

Students are advanced to candidacy after they have completed the course requirements, passed both the preliminary and qualifying examinations (or just the qualifying examination if passed prior to the end of the student's third year in the program), cleared all Incomplete grades from their records, have an appointed dissertation reading committee, and paid the filing fee. Students who have not advanced to candidacy by the end of their fourth year will be placed on academic probation.

Each Ph.D. candidate must submit the completed dissertation to a reading committee at least one month prior to the dissertation defense. The appointment of the dissertation reading committee is made immediately after the qualifying exam and is necessary for advancing to candidacy. The candidate must present his or her research results in a public seminar sponsored by the dissertation supervisor. The seminar is followed by a defense of the dissertation to the reading committee and attending faculty who will then decide whether the dissertation is acceptable or requires revision. Successful completion of the dissertation fulfills the final academic requirement for the Ph.D. degree.

Transfer Credit

Up to three School of Engineering courses fulfilling the degree requirements of either the M.S. or Ph.D. degrees may be taken before beginning the graduate program through the concurrent enrollment program.

Ph.D. students who have previously earned a master's degree in a related field at another institution may substitute courses from their previous university with approval of the adviser and the computer engineering graduate committee. Courses from other institutions may not be applied to the M.S. degree course requirements. Petitions for course substitutions must designate a specific graduate-level course from the list of approved graduate courses. They should be submitted along with the transcript from the other institution or UCSC extension. For courses taken at other institutions, copies of the syllabi, exams, and other course work should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UCSC.

Up to three courses may be transferred from concurrent enrollment and other institutions on approval of the petition for course substitution by the computer engineering graduate committee.

Two additional courses may be transferred if the student, in addition to submitting the petition, also takes the final examination and obtains a passing grade (B or better) in the Computer Engineering graduate course at UCSC equivalent to the course being transferred.

Review of Progress

Each year, the computer engineering faculty reviews the progress of every student in the graduate program. Students not making adequate progress towards completion of degree requirements (see *UCSC Graduate Student Handbook* for policy on satisfactory academic progress) are subject to dismissal from the program. Students with academic deficiencies may be required to take additional courses. Full-time students with no academic deficiencies are normally expected to complete the degree requirements at the rate of at least two courses per quarter. Full-time students must complete Computer Science 201 and course 202 within two years and normally must complete all course requirements within two years for the M.S. and three years for the Ph.D. program.

Students receiving two or more grades of U (Unsatisfactory) or below B in School of Engineering courses are not making adequate progress and will be placed on academic probation for the following three quarters of registered enrollment. Withdrawing or taking a leave of absence does not count as enrollment. Part-time enrollment is counted as a half of a quarter of enrollment.

Should any computer engineering graduate student fail a School of Engineering course while on probation, the Computer Engineering Department may request the graduate dean to dismiss that student from the graduate program. If, after being removed from probation, the student again fails a School of Engineering course, he or she will return immediately to academic probation.

Graduate students experiencing circumstances or difficulties that impact their academic performance should contact their adviser and the graduate director immediately. Students may appeal their dismissal.

Computer Engineering

Baskin School of Engineering 335 Baskin Engineering Building (831) 459-2158 http://www.soe.ucsc.edu

Program Description | Faculty | Course Descriptions

Program Description

Computer engineering focuses on the design, analysis, and application of computers and on their applications as components of systems. The UCSC Department of Computer Engineering sustains and strengthens its teaching and research program to provide students with inspiration and quality education in the theory and practice of computer engineering.

The UCSC B.S. in computer engineering prepares graduates for a rewarding career in engineering. UCSC computer engineering graduates will have a thorough grounding in the principles and practices of computer engineering and the scientific and mathematical principles upon which they are built; they will be prepared for further education (both formal and informal) and for productive employment in industry.

Because computer engineering is so broad, we offer five specialized concentrations for completing the program: systems programming, computer systems, autonomous and embedded systems, networks, and digital hardware. Descriptions of these concentrations follow in the section on major requirements.

The Department of Computer Engineering offers two undergraduate minors, described after the B.S. program below. The minor in computer technology provides a broad look at computer hardware, computer software, engineering design, and the interface between computer technology and society. This minor is particularly recommended for students interested in the use of computer technology in another discipline or in K-12 teaching. The minor in computer engineering focuses on the technical aspects of computer hardware, embedded system, and software design. This minor is particularly recommended for students interested in the design of computer technology for use in another discipline.

The Department co-sponsors the B.S. in bioengineering with the Departments of Biomolecular Engineering, Electrical Engineering, and Molecular, Cell & Developmental Biology.

Beyond the extensive research, design, and development projects taking place within courses required for the major, many computer engineering students join faculty labs to take part in cutting-edge research. The Department sponsors the Summer Undergraduate Research Fellowship in Information Technology (SURF-IT, http://surf-it.soe.ucsc.edu), as well as many other research opportunities. The Department holds regular faculty-undergraduate lunches to discuss research and other issues of interest.

Many computer engineering students continue their education through the M.S. degree. The Department of Computer Engineering offers an accelerated combined B.S./M.S. degree in computer engineering that enables eligible undergraduates to move without interruption to the graduate program. Interested computer engineering majors should contact their adviser for more details. The graduate program of the Department of Computer Engineering also offers both the standard M.S. and the

Ph.D. degrees.

Every major and minor must have a computer engineering faculty adviser, assigned by the Baskin School of Engineering Undergraduate Advising office, and with that adviser must formulate a program of proposed course work that meets the major or minor requirements (see http://www.soe.ucsc.edu/advising/undergraduate/).

Students considering the computer engineering major among other possibilities are strongly encouraged to take course 1 (2 credits) or course 8 within the first two quarters, and course 12 within the first three quarters.

The computer engineering B.S. program is accredited by the Engineering Accreditation Commission of ABET, Inc., (previously the Accreditation Board for Engineering and Technology). (ABET).

Courses for Nonmajors

The Department of Computer Engineering offers course 1, Hands-on Computer Engineering: a 2-unit laboratory course designed to introduce students to Computer Engineering via many short fun projects; course 3, Personal Computer Concepts: Software and Hardware, providing students an introductory course on the design and use of computers from an engineering viewpoint; and course 8, Robot Automation: Intelligence through Feedback Control. Other computer engineering courses of interest to nonmajors include course 12, Computing Systems and Assembly Language, an introductory course on computer systems, system software, and machine-level programming; course 16, Applied Discrete Mathematics, an introduction to applications of discrete mathematical systems; course 80N, Introduction to Networking and the Internet, an introduction to technological services of the Internet; course 80H, History of Modern Computing; and course 80E, Engineering Ethics; and course 80A, Assistive Technology and Universal Access.

Computer Engineering Policies

Admissions Policy

Admission to the computer engineering major is selective. Freshmen applicants may receive early admission at the time they apply to UCSC, based on their high school record and test scores.

Admission to the major after a student has entered UCSC is based on performance in all courses required for the major. At least five required five-unit courses, with associated laboratories, must be completed prior to requesting admission to the major. Required courses are listed below.

Lower-division students will be accepted into the computer engineering major on completion of the SOE major declaration process during any of their first three quarters at UCSC. See http://www.soe.ucsc.edu/advising/undergraduate/ for quarterly deadlines and mandatory major declaration workshops.

After the first three quarters, petitions to declare the major are reviewed individually. Students must have completed at least five courses required for the major, and are expected to have a GPA among School of Engineering and Division of Physical and Biological Sciences courses (the SOE GPA) of 2.5. Progress in the major and ability to complete the major within campus limits will also be considered.

Transfer Students

Admission to the computer engineering major for transfer students is based on their performance in all transferable science, math, and engineering courses. To be admitted, at least four courses required for the major must transfer for a student to be eligible for admission. Requirements are listed below. We recommend, in particular, substantial completion of the mathematics series, as well as programming or physics.

Honors in the Major

Computer engineering majors are considered for "Honors in the Major" and "Highest Honors in the Major" based on the School of Engineering GPA and on results of undergraduate research and other significant contributions to the School of Engineering. Students with an SOE GPA of 3.7 in most cases receive Highest Honors. Students with an SOE GPA of 3.3 in most cases receive Honors. Students with particularly significant accomplishments in undergraduate research or contributions to the School of Engineering may be considered with a lower SOE GPA. Computer Engineering juniors and seniors may also be eligible for election to the Engineering Honor Society.

Progress in the Major

Declared majors must complete courses required for the major in a manner that will enable graduation within campus limits. Students not making sufficient progress may be required to take a higher course load, complete courses during summer, or otherwise adjust their study plan, at the discretion of the faculty. Students who do not complete required changes to the study plan may be disqualified from the major.

Disqualification Policy

Please refer to the Engineering section of this catalog for the <u>School of Engineering's Major Disqualification Policy</u>.

Letter Grade Policy

The Computer Engineering Department requires letter grading for all courses applied to the degree with the exception of two lower-division courses, which students may elect to take Pass/No Pass. This policy includes courses required for the computer engineering major but sponsored by other departments.

School of Engineering Policies

Please refer to the <u>School of Engineering section of the catalog for additional policies</u> that apply to all School of Engineering programs.

Major Requirements

All students in the computer engineering major take the same core courses, which give the fundamentals of programming and hardware design, supported by the physics and mathematics necessary to understand them. The core courses also cover the fundamentals of computer architecture and designing with microprocessors.

Lower-Division Requirements

Core Requirements

Computer Engineering

- 1, Hands-On Computer Engineering (2 credits, recommended)
- <u>8, Robot Automation: Intelligence through Feedback Control (recommended)</u>
- 12/L, Computer Systems and Assembly Language/Laboratory

Computer Science

- 12A/L, *Introduction to Programming* and
- 12B/M, Introduction to Data Structures or 13H, Introduction to Programming and Data Structures (Honors)

Electrical Engineering

Mathematics

- Computer Engineering 16, Applied Discrete Mathematics
- Mathematics 19A-B, Calculus for Science, Engineering, and Mathematics
- Mathematics 23A, Multivariable Calculus
- Electrical Engineering 103, Signals and Systems
- Applied Mathematics and Statistics 27/L, Mathematical Methods for Engineers/Laboratory, or Mathematics 21, Linear Algebra and Mathematics 24, Ordinary Differential Equations

Science

Students must complete Physics 5A/L or 6A/L, Physics 5C/N or 6C/N, and any two the following science classes:

- Biology: Chemistry 1B/M, and Biology 20A or 21A
- Chemistry: Chemistry 1B/M; Chemistry 1C/N
- Earth Science: Earth Science 10/L; a choice of one 5-credit Earth science upper-division course, excluding Earth Science 111
- Physics: Physics 5B/M or 6B/M; Physics 5D or one 5-credit, upper-division physics course

Ethics

Students must take Computer Engineering 80E, Engineering Ethics; or another approved ethics course.

This course is required even for transfer students who have had their general education requirements waived.

Upper-Division Requirements

Core Requirements

Computer Engineering

- 100/L, Logic Design/Laboratory
- 121/L, Microprocessor System Design/Laboratory
- 110, Computer Architecture
- 107, Mathematical Methods of Systems Analysis: Stochastic
- 185, Technical Writing for Computer Engineers

Computer Science

101, Abstract Data Types

Concentrations

The following concentrations are specializations for the computer engineering student. Students must complete all of the courses listed within their selected concentration, and they must complete the capstone sequence.

Systems Programming Concentration

The systems programming concentration focuses on software systems: courses include operating systems, compilers, software engineering, and advanced programming. Students finishing this concentration are very well prepared for building large software systems of all types. This concentration is the closest one to a computer science major-the main differences are that it does not require computer science theory courses, but because of the core computer engineering requirements, includes more hardware and electronics than a computer science bachelor's degree.

- Computer Science 111, Introduction to Operating Systems
- Computer Science 115, Software Methodology
- Elective: Upper-division elective from approved list

Any two of the following courses:

- Computer Engineering 113, Parallel and Concurrent Programming
- Computer Engineering 117/L, Embedded Software/ Laboratory
- Computer Engineering 118/L, Introduction to Mechatronics/Laboratory
- Computer Engineering 156, Network Programming (requires course 150)
- Computer Science 104A, Fundamentals of Compiler Design I
- Computer Science 104B, Fundamentals of Compiler Design II
- Computer Science 116, Software Design Project

Computer Systems Concentration

The computer systems concentration provides a balance between software and hardware design. Students are prepared for a large variety of different design tasks, especially those requiring the integration of hardware and software systems, but may need further training for any particular specialization.

- Computer Engineering 125/L, Logic Design with Verilog/Laboratory; or 126/L, Advanced Logic Design/Laboratory
- Computer Science 111, Introduction to Operating Systems
- Elective: Two upper-division or graduate electives from approved list

Autonomous and Embedded Systems Robotics and Control Concentration

This concentration covers the hardware, software, sensing, and control aspects of autonomous and embedded systems. Students receive training in the theory, design, and realization of complex systems such as mobile robots. The concentration emphasizes integration of embedded software with hardware systems that interact with the environment. Students pursuing this concentration are strongly advised to complete the option of both Mathematics 21 and Mathematics 24.

Three out of the following four courses:

- Computer Engineering 117/L, Embedded Software/Laboratory
- Computer Engineering 118/L, Mechantronics/Laboratory
- Computer Engineering 163/L, Multimedia Processing and Application/Laboratory
- Computer Engineering 167/L Sensing and Sensor Technology/Laboratory
- Electrical Engineering 154, Feed back Control Systems
- Elective (three possibilities):
 - Completion of all four courses listed above, or
 - Computer Engineering 174, *Tools for Digital Systems Design Laboratory* and any approved School of Engineering upper-division elective, or

Completion of one of the following courses:

- Computer Engineering 153/L, Signal Processing
- Applied Math and Statistics 146, Chaotic Dynamical Systems
- Applied Math and Statistics 162, Design and Analysis of Computer Simulation Experiments
- Computer Engineering 242, Applied Feedback Control
- Computer Engineering 240, Introduction to Linear Dynamical Systems
- Information Systems Management 206, Optimization Theory and Applications

Networks Concentration

The networks concentration focuses on communication between computers, covering both network hardware and protocols. Students finishing this concentration are well prepared for the design of wired and wireless network systems.

- Computer Engineering 150, Introduction to Computer Networks
- Computer Engineering 151, Network Administration or 156, Network Programming
- Computer Engineering 156, Network Programming
- Computer Science 111, Introduction to Operating Systems
- Electives: Upper-division or graduate elective from approved list

Digital Hardware Concentration

The digital hardware concentration focuses on hardware design and includes more electronics than the other concentrations. Students finishing this concentration are well prepared for building hardware systems. This concentration is the closest one to an electronics electrical engineering major; the main differences are that it does not require as much electronics theory or analog electronic design, but because of the core computer engineering requirements, requires more software skills.

- Computer Engineering 125/L, Logic Design with Verilog/Laboratory or 126/L, Advanced Logic Design/Laboratory
- Computer Engineering 173/L, High-Speed Digital Design
- Computer Engineering 174, Introduction to the EDA Tools for PCB Design (three credits)
- Electrical Engineering 171/L, Analog Electronics
- Elective: Upper-division or graduate elective from approved list

Capstone Sequence

All computer engineering students complete a two-quarter capstone project sequence. Working with students from different concentrations and majors, students apply the skills and techniques from their own chosen concentration to a major design problem.

Computer Engineering

- 123A, Computer Engineering Design Project I
- 123B, Computer Engineering Design Project II or 195, Senior Thesis Research

Portfolio Exit Requirement

Students are required to submit a portfolio and exit survey. Students whose submissions are deemed inadequate, either in presentation or in content, may be required to revise and rewrite the portfolio or to complete an additional project

course. The portfolios must be turned in electronically via http://www.soe.ucsc.edu/programs/ce/undergraduate/portfolio.html at least seven days before the end of instruction in the quarter of graduation.

The portfolios will be reviewed quarterly by the computer engineering undergraduate committee and must include the following:

- A hardware-oriented project report
- A software-oriented project report
- A third project report of the student's selection
- A one- to two-page overview of the three projects, the student's contribution to them, and a narrative as specified at http://www.soe.ucsc.edu/programs/ce/undergraduate/portfolio.html.
- An exit survey

If a project report is associated with a course, it must be an upper-division or graduate course. One of the reports must be the result of a multi-person project. One of the reports must be the result of an individual project. One of the reports must be the result of the student's capstone design project.

Comprehensive Requirement

The senior comprehensive requirement for computer engineering majors is satisfied by completion of the capstone course and the portfolio exit requirement.

Computer Engineering Major Planners

The following are two sample academic plans for students to complete during their first two years as preparation for the computer engineering major. Plan One is suggested guidelines for students who are committed to the major early in their academic career. Plan Two is for students who are considering the major.

Plan One					
Year	Fall	Winter	Spring		
1st	Math 19A	Math 19B	Cmpe 80E		
(frsh)	Cmps 12A/ <u>₩</u>	Cmpe 12L	Cmps 12B/ <u>N</u> − <u>M</u>		
	Cmpe 1 (2 credit) core course	Cmpe 1 (2 unit	gen ed		
	core course	credit)			
2nd	Dhyg 5 A /I	gen ed Ams 27/L	Dhyg 5C/N		
	Phys 5A/L Math 23A		Phys 5C/N		
(soph)	gen ed	Cmpe 100/L	Cmpe 16 Cmpe 80E		
Plan Two		9-11-1-1			
Year	Fall	Winter	Spring		
1st	Math 3 (pre-calc)	Math 19A	Math 19B		
(frsh)	Cmps 3 8	Cmps 12/L	Cmps 12A/L		
	Cmpe 1 (2 unit	gen ed	gen ed		
	credit)				
2nd	Dhyo 5 A /I	Cmpa 100/I	Dhyg 5C/N		
2nd	Phys 5A/L	Cmpe 100/L	Phys 5C/N		
(soph)	Cmps 12B/M	Cmpe 16	AMS 27/L		
	gen eu	gen eu	Cmpe 80E		

Computer Engineering Minor

The computer engineering minor provides a solid foundation in digital hardware, electronics, and computer software, as well as the prerequisite material in mathematics and physics. The minor is well-suited to students who wish to take part in the design of computer and embedded systems in any discipline. Course 121/L, *Microprocessor System Design* and *Laboratory*, provides a capstone engineering design experience for students pursuing the Computer Engineering minor.

Computer Engineering Minor Requirements

Requirements for the minor in computer engineering are the following:

Mathematics

- 19A-B, Calculus for Science, Engineering, and Mathematics
- 23A, Multivariable Calculus
- Applied Mathematics and Statistics 27/L, *Mathematical Methods for Engineers/Laboratory* (formerly Mathematics 27), or Mathematics 21, *Linear Algebra* and 24, *Ordinary Differential Equations*
- Computer Engineering 16, Applied Discrete Mathematics

Science

Physics 5A/L or 6A/L, and 5C/N or 6C/N

Core Requirements

Computer Engineering

- 12/L, Computer Systems and Assembly Language/Laboratory
- 100/L, Logic Design/Laboratory
- 110, Computer Architecture
- 121/L, Microprocessor System Design/Laboratory

Computer Science

- 12A/L, Introduction to Programming/Computer Programming Laboratory and
- 12B/M, Introduction to Data Structures/Data Structures Laboratory, or
- 13H/L, Introduction to Programming and Data Structures (Honors)/Laboratory
- 101, Abstract Data Types

Electrical Engineering

70/L, Introduction to Electronics/Laboratory

At most, two of the upper-division core courses and the lower-division electrical engineering course may be used to satisfy the requirements of another major or minor degree.

Among the courses 100/L, 110, and 121/L, Computer Science 101, and Electrical Engineering 70/L, up to two may be used to satisfy the requirements of another major or minor degree without the need to take a replacement upper-division course. There is no restriction of the remaining lower-division courses.

The portfolio exit requirement does not apply for the computer engineering minor.

Computer Technology Minor

The computer technology minor provides a broad exposure computer hardware and software technology. The minor is intended for non-engineering majors who would like to develop an understanding of the design and use of computer technology. The minor may be particularly valuable for students who expect to use computer technology in another discipline, who are interested in K-12 teaching, or who have a general interest in computer technology and how it works. The minor includes a required capstone essay.

The computer technology minor is not available to computer engineering, computer xcience, electrical engineering, or information systems management majors, or to computer engineering minors.

Computer Technology Minor Requirements

Computer Engineering

Four required courses, one optional course:

- 1, Hands-On Computer Engineering (2 credits)
- 3, Personal Computer Concepts: Hardware and Software (optional)
- 12/L, Computer Systems and assembly Language/Laboratory
- 100/L, Logic Design/Laboratory
- 80N, Networking and the Internet or 150, Introduction to Computer Networks

Programming

Two of the following courses (only one 60 course is permitted):

- Biomolecular Engineering 60, Programming for Biologists and Biochemists
- Computer Science 60G, Beginning Programming: Social Sciences and Humanities
- Computer Science 60N, Beginning Programming: Natural Sciences
- Computer Science 12A/L, Introduction to Programming/Computer Programming Laboratory
- Computer Science 12B/M, Introduction to Date Structures/Data Structures Laboratory

Computer Technology and Society

Three courses:

- 80E, Engineering Ethics and 80H, History of Modern Computing, or
- 80A, Assistive Technology and Universal Access, or
- 80H, History of Modern Computing, or
- Computer Science 80J, Technology Targeted at Social Issues, or
- Electrical Engineering 80T, Modern Electronic Technology and How it Works and ISM 101, Management of Technology Seminar (1 credit)

Elective

Two five-credit, upper-division School of Engineering electives and any associated laboratories.

Capstone Requirement

194F, Group Tutorial (2 credits). A group tutorial completed during the winter quarter

prior to graduation considering the impact of computer technology. Students will complete papers considering aspects of the impact of computer technology on the students' discipline. Contact the School of Engineering Undergraduate Advising office during fall quarter to join this course.

Materials Fee and Miscellaneous Fees

Please see the <u>section on fees under the School of Engineering</u>.

Undergraduate Programs

B.S./M.S. Undergraduate Program

The Department of Computer Engineering offers a combined bachelor and master of science degree program in computer engineering, providing the opportunity to earn both degrees in five years. The B.S./M.S. program offers a competitive edge to students who are completing their undergraduate degree at UCSC, by enabling those with advanced preparation to move directly from the undergraduate to the graduate program. The program assists qualified enrolled students with a simplified graduate application process and makes it possible to complete an M.S. degree with just seven courses beyond the B.S. program.

The program prepares students for engineering positions in industry, and it is particularly attractive for undergraduate students planning to engage in engineering research in industry or academia. The School of Engineering has many opportunities for undergraduate research, especially for honors-level students. B.S./M.S. students can continue their undergraduate research projects with the same research group. Upon advancement to graduate standing, B.S./M.S. students are eligible for support as graduate research assistants. The B.S./M.S. program provides knowledge and training in important and contemporary areas of computer engineering.

Particularly motivated B.S./M.S. students can complete the entire program in 14 quarters (or fewer with Advanced Placement credit); however, advance planning is essential. Interested students should contact the department and their faculty adviser early in their college career-no later than the start of their junior year. B.S./M.S. students retain undergraduate status until the completion of all undergraduate requirements, but may begin graduate course work in advance of graduate standing.

The undergraduate degree requirements are the same as those for other computer engineering majors; however, the B.S./M.S. program capitalizes on graduate-level courses that may apply toward both degree requirements. B.S./M.S. candidates may apply (at most) two graduate courses taken as undergraduates toward both the M.S. degree and B.S. degree electives. At the time graduate status is achieved, no more than three graduate courses taken as an undergraduate may count toward the nine courses required for the M.S. degree. B.S./M.S. students may not apply undergraduate courses toward the M.S. degree.

Admission to the B.S./M.S. program is by formal application. Undergraduate applicants seeking admission as graduate students generally apply in their last quarter of junior standing. To qualify, applicants must have completed the following:

- Computer Engineering 100/L, Logic Design/Laboratory
- Computer Science 101, Abstract Data Types
- Computer Engineering 110, Computer Architecture or 121/L, Microprocessor System Design/ Laboratory

- Electrical Engineering 70/L, Introduction to Electronics/Laboratory
- and at least one additional upper-division School of Engineering course

Applications will be considered until the student's first quarter of senior standing. This extension of the application period into the first quarter of the senior year is specifically geared to enable eligible transfer students to complete the courses required for admission.

Students who cannot meet the B.S./M.S. application requirements or who are not admitted into the program are encouraged to apply for admission to the standard M.S. or Ph.D. program during their senior year.

Additional information about this program can be found on the department's web pages at www.soe.ucsc.edu/programs/undergraduate/.

Graduate Programs

M.S. and Ph.D. Degree Programs

The graduate program in computer engineering accepts students for both the M.S. and the Ph.D. degrees. Graduate students in this program establish a solid foundation in computer algorithms and architectures and then proceed to a thorough study of recent developments in their selected area of specialization. This provides the basis for the M.S. degree and Ph.D. thesis work. The major areas of research concentration in computer engineering at UCSC are computer networks, computer systems design, computer-aided design technologies, digital media and education technology, and software and systems engineering.

The computer engineering program benefits from a close relationship with the computer science and electrical engineering programs at UCSC and ties to industry in the Silicon Valley and Monterey Bay areas. Graduates of the program are prepared for careers in teaching and research as well as for positions in industrial research and development.

While in the program, most graduate students are supported as research assistants on faculty-sponsored projects or as teaching assistants for undergraduate courses.

Additional information on the computer engineering M.S. and Ph.D. degrees, including degree requirements and applications for admission, can be found on the department's web pages at www.soe.ucsc.edu/programs/graduate/.

Requirements for the Master's Degree

Base Requirement

In their first year, graduate students must show proficiency in three fundamental subjects: 1. data structures; 2. computer architecture; and 3. one of the following three subjects-logic design, circuits, and software systems. Proficiency can be demonstrated by either completing one of the associated undergraduate courses, by establishing that an equivalent undergraduate course has been completed elsewhere, or by passing the final exam (or project when deemed appropriate by the faculty responsible) of an associated course. Students should obtain a Computer Engineering Base Worksheet for the list of associated courses and instructions on fulfilling this requirement.

The base requirement must be met by all graduate students (both M.S. and Ph.D.) by the end of the spring quarter of their first year in the program.

Course Requirements

Each student is required to complete a total of 48 units. The course work must include

- Computer Engineering 200, Research and Teaching in Computer Science and Engineering
- Computer Science 201, Analysis of Algorithms
- Computer Engineering 202, Computer Architecture
- Up to 10 credits of Computer Engineering 297, *Independent Study* or *Research*; or Computer Engineering 299, *Thesis Research*
- Up to 10 credits of either graduate courses (not seminars) in related disciplines outside the School of Engineering (requires adviser and computer engineering graduate committee approval) or upper-division undergraduate courses when necessary to strengthen the student's preparation for graduate studies (requires adviser approval)

All remaining credits must be graduate elective courses from Computer Engineering's list of approved graduate courses (available online or from the department)

In addition, the selection of graduate elective courses must show breadth by including a minimum of 5 credits in each of two categories from Computer Engineering's list of approved graduate electives. Computer Science 201 and Computer Engineering 202 cannot be used to satisfy the breadth requirement.

At least half of the units from the graduate-level courses must be computer engineering graduate courses.

Thesis

Completion of a master's thesis is required for award of the master's degree. To fulfill this requirement, the student must submit a written proposal to a faculty member, usually by the third academic quarter. By accepting the proposal, the faculty member becomes the thesis adviser for the proposed thesis. In consultation with the adviser, the student must form a master's thesis reading committee with at least two additional faculty members, each of whom is provided a copy of the proposal. The student is required to present an expository talk on the thesis research, and the final thesis must be accepted by the review committee before the award of the master of science degree.

Requirements for the Ph.D. Degree

Base Requirement

In their first year, graduate students must show proficiency in three of five fundamental subjects: 1. data structures; 2. computer architecture; and 3. one of the following three subjects-logic design, circuits, and software systems. Proficiency can be demonstrated by either completing one of the associated undergraduate courses, by establishing that an equivalent undergraduate course has been completed elsewhere, or by passing the final exam (or project when deemed appropriate by the faculty responsible) of an associated course. Students should obtain a Computer

Engineering Base Work Sheet for the list of associated courses and instructions on fulfilling this requirement.

The base requirement must be met by all graduate students (both M.S. and Ph.D.) by the end of the spring quarter of the first year in the program.

Course Requirements

A Ph.D. student is required to take a total of 58 credits of graduate courses, which must consist of

- Course 200, Research and Teaching in Computer Science and Engineering
- Computer Science 201, Analysis of Algorithms
- Course 202, Computer Architecture
- A minimum of 20 credits of graduate computer engineering courses from Computer Engineering's list of approved graduate courses (available online or from the department)
- Up to 10 credits of course 297, Independent Study or Research or course 299, Thesis Research
- Up to 10 credits of graduate courses (not seminars) in related disciplines outside the School of Engineering (requires adviser and computer engineering graduate committee approval)

All remaining units must be graduate elective courses from Computer Engineering's list of approved graduate courses.

The selection of elective courses must show breadth by including either 10 credits in each of two categories or 5 credits in each of three separate categories from Computer Engineering's list of approved graduate courses. Computer Science 201 and course 202 cannot be used to satisfy the breadth requirement.

Course selection should form a coherent plan of study and requires adviser approval. Undergraduate courses may not be used to satisfy Ph.D. course requirements.

Ph.D. students who have satisfied the requirements for the master's degree are eligible to receive a master's degree.

Examinations and Dissertation

To continue in the Ph.D. program, students must pass a preliminary examination in their chosen research area by the end of their third year. Preliminary examinations are held during the first three weeks of each spring quarter; students must petition the computer engineering graduate committee for an examination in their chosen area two weeks before the end of winter quarter. Examination committees consist of four faculty members, two chosen by the student and two by the computer engineering graduate committee. The format of this oral examination is up to the examination committee; the examination will typically evaluate both general knowledge of the chosen area and specific understanding of selected technical papers. The preliminary examination requirement is waived for students who advance to candidacy by the end of their third year.

Each student must write a Ph.D. dissertation. The dissertation must show the results of in-depth research, by an original contribution of significant knowledge, and include material worthy of publication. As the first step, a student must submit a written dissertation proposal to a School of Engineering faculty member. By

accepting the proposal, the faculty member becomes the student's dissertation supervisor. The student may choose a faculty member outside the Computer Engineering Department within the School of Engineering as adviser only with approval from the computer engineering graduate committee. The dissertation proposal is publicly and formally presented in an oral qualifying examination given by a qualifying exam committee, approved by the computer engineering graduate committee and the graduate council. The student must submit his or her written dissertation proposal to all members of the qualifying exam committee and the graduate assistant one month in advance of the examination.

Students are advanced to candidacy after they have completed the course requirements, passed both the preliminary and qualifying examinations (or just the qualifying examination if passed prior to the end of the student's third year in the program), cleared all Incomplete grades from their records, have an appointed dissertation reading committee, and paid the filing fee. Students who have not advanced to candidacy by the end of their fourth year will be placed on academic probation.

Each Ph.D. candidate must submit the completed dissertation to a reading committee at least one month prior to the dissertation defense. The appointment of the dissertation reading committee is made immediately after the qualifying exam and is necessary for advancing to candidacy. The candidate must present his or her research results in a public seminar sponsored by the dissertation supervisor. The seminar is followed by a defense of the dissertation to the reading committee and attending faculty who will then decide whether the dissertation is acceptable or requires revision. Successful completion of the dissertation fulfills the final academic requirement for the Ph.D. degree.

Transfer Credit

Up to three School of Engineering courses fulfilling the degree requirements of either the M.S. or Ph.D. degrees may be taken before beginning the graduate program through the concurrent enrollment program.

Ph.D. students who have previously earned a master's degree in a related field at another institution may substitute courses from their previous university with approval of the adviser and the computer engineering graduate committee. Courses from other institutions may not be applied to the M.S. degree course requirements. Petitions for course substitutions must designate a specific graduate-level course from the list of approved graduate courses. They should be submitted along with the transcript from the other institution or UCSC extension. For courses taken at other institutions, copies of the syllabi, exams, and other course work should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UCSC.

Up to three courses may be transferred from concurrent enrollment and other institutions on approval of the petition for course substitution by the computer engineering graduate committee. Two additional courses may be transferred if the student, in addition to submitting the petition, also takes the final examination and obtains a passing grade (B or better) in the Computer Engineering graduate course at UCSC equivalent to the course being transferred.

Review of Progress

Each year, the computer engineering faculty reviews the progress of every student in

the graduate program. Students not making adequate progress towards completion of degree requirements (see *UCSC Graduate Student Handbook* for policy on satisfactory academic progress) are subject to dismissal from the program. Students with academic deficiencies may be required to take additional courses. Full-time students with no academic deficiencies are normally expected to complete the degree requirements at the rate of at least two courses per quarter. Full-time students must complete Computer Science 201 and course 202 within two years and normally must complete all course requirements within two years for the M.S. and three years for the Ph.D. program.

Students receiving two or more grades of U (Unsatisfactory) or below B in School of Engineering courses are not making adequate progress and will be placed on academic probation for the following three quarters of registered enrollment. Withdrawing or taking a leave of absence does not count as enrollment. Part-time enrollment is counted as a half of a quarter of enrollment.

Should any computer engineering graduate student fail a School of Engineering course while on probation, the Computer Engineering Department may request the graduate dean to dismiss that student from the graduate program. If, after being removed from probation, the student again fails a School of Engineering course, he or she will return immediately to academic probation.

Graduate students experiencing circumstances or difficulties that impact their academic performance should contact their adviser and the graduate director immediately. Students may appeal their dismissal.

Computer Engineering

<u>Program Description | Course Descriptions</u>

Faculty and Professional Interests

Professor

Alexandre Brandwajn

Computer architecture, performance modeling, queueing network models of computer systems, operating systems

F. Joel Ferguson

Fault diagnosis, failure analysis, logic fault modeling, digital test pattern generation, design-fortest of digital circuits and systems

J. Joaquín García-Luna-Aceves

Baskin Professor of Computer Engineering Wireless networks, Internet, multimedia information systems

Richard Hughey

Computer architecture, parallel processing, computational biology

Glen G. Langdon Jr., Emeritus

Tracy Larrabee

Test-pattern simulation and generation, fault modeling, fault diagnosis, design verification, technical writing, logic simulation

Patrick E. Mantey

Baskin Professor of Computer Engineering

Image systems, image processing, visualization, image and multimedia systems, digital signal processing, real-time control

Martine D. F. Schlag

VLSI design tools and algorithms, VLSI theory, field-programmable gate arrays, FPGA-based computing engines

Anujan Varma

Computer networking, computer architecture, optical networks

Associate Professor

Luca de Alfaro

Formal methods, game theory, embedded systems, software engineering

Pak K. Chan

Placement and routing algorithms, field-programmable gate arrays, spectral-based partitioning, circuit theory, computer arithmetic

Roberto Manduchi

Sensor processing and image analysis with application to assistive technology and environmental modeling

Katia Obraczka

Computer networks, distributed systems, operating systems, Internet information systems, mobile computing, wireless networks

Hai Tao

Image and video processing, computer vision, vision-based graphics, and human-computer interaction

Assistant Professor

William Dunbar

Theory and application of feedback control, air traffic control, nanopore sensors, dynamics and control of biomolecules

Gabriel Elkaim

Embedded systems; robust software architectures for real-time reactive systems; sensor fusion; guidance, navigation, and control (GNC) system identification; robust and advanced control schemes; feedback control systems; robotics; unmanned autonomous vehicles (UAVs); and cooperative control

Matthew R. Guthaus

VLSI, systems-on-a-chip, design automation, design for variability/robustness, mixed-signal systems

Sri Kurniawan

Human-computer interaction; human factors and ergonomics; accessibility; assistive technology; usability; empirical studies; user-centered design

Jose Renau

Computer architecture, chip multiprocessors, energy/performance trade-offs, thread level speculation, interaction between architecture and compilers, Linux kernel

Assistant Adjunct Professor

Bradley Smith

Computer communications, distributed systems, policy-based routine, routing protocols, security and trust in distributed systems

Lecturer

Cyrus Bazeghi

Computer architecture, VLSI, FPGA, embedded systems, and system architecture

Andrea Di Blas

Parallel computer architectures, parallel applications and programming models, combinatorial optimization

Gerald Moulds

Technical writing, professional communications

Stephen C. Petersen

Embedded controller systems, RF wireless systems, modulation and spectrum reuse, digital signal processing, circuit theory

Patrick Tantalo

Graph theory, combinatorics, optimization, algorithms

Linda Werner

Software engineering testing, usability engineering, educational and social issues

Professor

Benjamin Friedlander (Electrical Engineering)

Digital communications, wireless communication system, array processing, adaptive signal processing

Claire Gu (Electrical Engineering)

Fiber sensors for bio-applications, optical fiber communications, volume holographic data storage, liquid crystal displays, nonlinear optics, optical information processing

Kevin Karplus (Biomolecular Engineering)

Undergraduate and Graduate Director of Bioinformatics Protein structure prediction, protein design

Suresh K. Lodha (Computer Science)

Geo-spatial visualization, scientific visualization, sensor and computer vision, data mining

Darrell D. E. Long (Computer Science)

Storage systems, distributed computing systems, operating systems, mobile computing, performance evaluation, fault tolerance, computer security, multimedia, and video-on-demand systems

Dominic W. Massaro (Psychology)

Understanding language, speech perception and reading, language learning and speech technology, pattern recognition, psychology of interactive media, psychology of art and new media, human-machine interface

Charles E. McDowell (Computer Science)

Programming languages, parallel computing, and computer science education

Peyman Milanfar (Electrical Engineering)

Statistical signal image/video processing and reconstruction; modeling and inverse problems in imaging; detection and estimation theory; applied mathematics

Alex T. Pang (Computer Science)

Uncertainty visualization, tensor visualization, scientific visualization, collaboration software, virtual reality interfaces

Ira Pohl (Computer Science)

Artificial intelligence, programming languages, heuristic methods, educational and social issues, combinatorial algorithms

Associate Professor

Ethan L. Miller (Computer Science)

File and storage systems, operating systems, computer security, distributed systems, reliability and fault tolerance, performance evaluation, and information retrieval

Hamid Sadjadpour (Electrical Engineering)

Wireless communication systems, coding and information theory, ad hoc and sensor networks

Assistant Professor

John Musacchio (Information Systems Management)

Control, analysis, and pricing of communications networks; applications of game theory in networking; wireless ad-hoc networks; and management of technology

Kevin Ross (Information Systems Management)

Service engineering and management; resource allocation; operations research, pricing, scheduling; queueing theory; networks

Yi Zhang (Information Systems Management)

Information retrieval, knowledge management, natural language processing, machine learning

Adjunct Professor

Harwood G. Kolsky, Retired

Program Description | Changes to 2006-08 Catalog Highlighted | Faculty

Lower-Division Courses

1. Hands-On Computer Engineering (2 credits). F,W,S

Hands-on introduction to computer engineering practice and research, including digital systems, computer networks, robotics, multimedia systems, embedded systems, and computer architecture. Designed for students without previous background in computer engineering. Preference given to students considering the computer engineering major. Enrollment restricted to first-year students and sophomores. Other students may contact faculty for permission number. Enrollment limited to 30. *T. Larrabee*, *R. Hughey*, *S. Petersen*

3. Personal Computer Concepts: Software and Hardware. F,W,S

Provides an introduction to computers. Personal computing is emphasized, and students are introduced to word processing, spreadsheets, database management, graphics, and programming. Covers fundamentals of computing and current and future uses of computer technology, PC hardware, Windows operating system, applications software, networking and the Internet, and developments in the computer industry. Designed for students with little or no experience using computers. Students cannot receive credit for this course and Computer Science 2. (General Education Code(s): IN.) *The Staff*

8. Robot Automation: Intelligence through Feedback Control. F

Introduction to dynamical systems, feedback control, and robotics. Fundamental concepts in dynamical systems, modeling, stability analysis, robustness to uncertainty, feedback as it occurs naturally, and the design of feedback-control laws to engineer desirable static and dynamic response. Course includes an introduction to MATLAB and programming in MATLAB. Enrollment restricted to first-year students and sophomores. (General Education Code(s): Q.) W. Dunbar

12. Computer Systems and Assembly Language. F,W,S

Introduction to computer systems and assembly language and how computers compute in hardware and software. Topics include digital logic, number systems, data structures, compiling/assembly process, basics of system software, and computer architecture. May include C language. Prerequisite(s): course 3 or 8, or Computer Science 10 or 12A or 60G or 60N, or Biomolecular Engineering 60, or suitable programming experience; previous or concurrent enrollment in course 12L required. (General Education Code(s): IN, Q.) *T. Larrabee, R. Hughey, F. Ferguson, G. Elkaim*

12L. Computer Systems and Assembly Language Laboratory (2 credits). F,W,S Laboratory sequence in assembly language programming. The basics of logic design, both RISC and microcontroller programming. May include C language

programming. Two two-hour laboratories per week. Prerequisite(s): course 3 or 8, or Computer Science 10 or 12A or 60G or 60N, or Biomolecular Engineering 60, or suitable programming experience; previous or concurrent enrollment in course 12 required. *T. Larrabee, R. Hughey, F. Ferguson, G. Elkaim*

16. Applied Discrete Mathematics. F,W

Introduction to applications of discrete mathematical systems. Topics include sets, functions, relations, graphs, trees, switching algebra, first order predicate calculus, mathematical induction, permutations, combinations, summation, and recurrences. Examples drawn from computer science and computer engineering. Prerequisite(s): eligibility to enroll in Mathematics 19A (completion of Mathematics 2B or 3 or Mathematics Placement Exam score of 40 or higher) or completion of Mathematics 19A or 11A. (General Education Code(s): Q.) *H. Tao, T. Larrabee, M. Schlag, L. De Alfaro*

80A. Universal Access: Disability, Technology, and Society. W

Overview of human-centered technology and of its potential for increasing the quality of life and independence of disabled individuals. A substantial portion of the course is devoted to studying physical, psychological, and psychosocial aspects of disability. Topics include: diversity and integration, legislation, accessibility, and universal design. (Formerly *Assistive Technology and Universal Access.*) (General Education Code(s): T7-Natural Sciences or Social Sciences.) *R. Manduchi*

80E. Engineering Ethics. S

Ethical theories, analysis, and their application to issues in the practice of engineering, such as safety and liability, professional responsibility to clients and employers, codes of ethics, legal obligations, environmental issues, and social issues. Emphasis on developing independent ethical analysis through the use of case studies. (General Education Code(s): T6-Natural Sciences or Humanities and Arts.) *The Staff*

80H. History of Modern Computing.

Presents a history of the development of computing technologies (CPUs and I/O devices, operating systems, and languages) through the latter half of the 20th century in order to build an understanding of how today's computing environment evolved. (General Education Code(s): T2-Natural Sciences.) *D. Pease*

80N. Introduction to Networking and the Internet. F,S

Introduction to the evolution, technological basis, and services of the Internet, with descriptions of its underlying communications structure, routing algorithms, peer-to-peer hierarchy, reliability, and packet switching. Network security, mail, multimedia and data compression issues, HTML, and digital images. Students who have completed course 150 cannot receive credit for this course. (General Education Code(s): T2-Natural Sciences.) *R. Manduchi, K. Obraczka, A. Varma*

80U. Ubiquitous and Mobile Computing. W

Ubiquitous computing integrates computer and communication technology with day-to-day life. Ubiquitous and mobile technology includes: MP-3 players, camera cell phones, Bluetooth headsets, sensor networks, and new emerging technologies. Course provides an overview of the technology and economics of ubiquitous computing. (General Education Code(s): T2-Natural Sciences.) *H. Tao, R. Manduchi*

94. Group Tutorial. F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency.

May be repeated for credit. The Staff

94F. Group Tutorial (2 credits). F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

99F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

Upper-Division Courses

100. Logic Design. W,S

Boolean algebra, logic minimization, finite-state machine design, sequential circuits, common logic elements, programmable logic devices, and an introduction to system level design. The electrical behavior of circuits including three state outputs, propagation delay, logic levels, and fanout. Prerequisite(s): courses 12 and 12L; previous or concurrent enrollment in course 100L required. Enrollment limited to 60. *T. Larrabee, M. Schlag, S. Petersen*

100L. Logic Design Laboratory (2 credits). W,S

Laboratory sequence illustrating topics covered in course 100. One two-hour laboratory session per week. Weekly laboratory assignments which require the use of the oscilloscopes, TTL circuits, computer-aided design and simulation tools, and programmable logic. Students are billed a materials fee. Prerequisite(s): courses 12 and 12L; previous or concurrent enrollment in course 100 required. Enrollment limited to 60. *T. Larrabee, M. Schlag, S. Petersen*

107. Mathematical Methods of Systems Analysis: Stochastic. F,W

Introduction to fundamental tools of stochastic analysis. Probability, conditional probability, Bayes Theorem, random variables, independence, Poisson processes, Bernnoulli trials, and Markov chains. Instructor's choice of additional topics, most likely drawn from confidence measures, difference equations, transform methods, stability issues, applications to reliability, queues, and hidden Markov models. Students cannot receive credit for this course and Applied Mathematics and Statistics 131. Prerequisite(s): course 16 or 16H and Mathematics 22 or 23A. *R. Manduchi, A. Brandwajn*

108. Data Compression. F

Basics of information theory, lossless coding (Huffman coding, arithmetic coding, dictionary coding), lossy coding (PCM, predictive coding, transform coding). Application to the compression of specific data set, which may include biological time series, DNA sequences, and multimedia streams. Prerequisite(s): course 107 or Applied Mathematics and Statistics 131; and Computer Science 101. *R. Manduchi*

110. Computer Architecture. W

Introduction to computer architecture including examples of current approaches and the effect of technology and software. Computer performance evaluation, basic combinatorial and sequential digital components, different instruction set architectures with a focus on the MIPS ISA and RISC paradigm. Evolution of CPU microarchitecture from single-cycle to multi-cycle pipelines, with overview of super-

scalar, multiple-issue and VLIW. Memory system, cache, virtual memory and relationship between memory and performance. Evolution of PC system architecture. May include advanced topics, such as parallel processing, MIMD, and SIMD. Prerequisite(s): courses 12, 12L, and 16. A. Di Blas, R. Hughey, F. Ferguson, A. Brandwajn, J. Renau

113. Parallel and Concurrent Programming.

Introduction to parallel and concurrent programming. Topics include types of parallel computers and programming platforms, basic and advanced programming techniques in C with MPI and OpenMP, performance analysis and load balancing, and selected parallel algorithms. Students must have a discrete working knowledge of the C programming language and a user-level familiarity with the Unix operating system. Prerequisite(s): Computer Science 12B. A. Di Blas, R. Hughey, K. Obraczka, L. De Alfaro

117. Embedded Software. S

Introduction to software design for embedded systems. Emphasis on real-time embedded systems as follows: fundamentals of scheduling for real-time systems, real-time operating systems, and real-time protocols for distributed real-time systems; time-triggered and event-triggered paradigms for embedded software development, their tradeoffs, and languages and tools for development of embedded software. Prerequisite(s): course 121 or Computer Science 111; previous or concurrent enrollment in course 117L required. Enrollment limited to 20. *L. De Alfaro*

117L. Embedded Software Laboratory (2 credits). S

Gain experience in the practical aspects of embedded programming by writing several programs for small robots. Emphasis is to provide experience in a spectrum of programming paradigms (even-triggered, time-triggered), communication paradigms (synchronous and asynchronous programming), and programming languages (both C/C++ and more specialized languages for embedded programming). Students are billed a materials fee. Concurrent enrollment in course 117 is required. Enrollment limited to 30. *L. De Alfaro*

118. Introduction to Mechatronics. W

Technologies involved in mechatronics (intelligent electro-mechanical systems) and techniques necessary to integrate these technologies into mechatronic systems. Topics include electronics (A/D, D/A converters, opamps, filters, power devices), software program design (event-driven programming, state machine-based design), DC and stepper motors, basic sensing, and basic mechanical design (machine elements and mechanical CAD). Combines lab component of structured assignments with a large and open-ended team project. Prerequisite(s): Electrical Engineering 70/L and course 12/L or equivalent. Concurrent enrollment in course 118L is required. Enrollment limited to 36. *G. Elkaim*

118L. Introduction to Mechatronics Laboratory (2 credits). W

Technologies involved in mechatronics (intelligent electro-mechanical systems) and techniques necessary to integrate these technologies into mechatronic systems. Topics include electronics (A/D, D/A converters, opamps, filters, power devices), software program design (event-driven programming, state machine-based design), DC and stepper motors, basic sensing, and basic mechanical design (machine elements and mechanical CAD). Combines lab component of structured assignments with a large and open-ended team project. Students are billed a materials fee. Prerequisite(s): Electrical Engineering 70/L and course 12/L or equivalent.

121. Microprocessor System Design. F,S

The design and use of microprocessor-based systems. Covers microprocessor and microcontroller architecture, programming techniques, bus and memory organization, DMA, timing issues, interrupts, peripheral devices, serial and parallel communication, and interfacing to analog and digital systems. Prerequisite(s): courses 12/L and 100/L; Electrical Engineering 70/L; previous or concurrent enrollment in course 121L required. Enrollment limited to 40. *P. Chan, R. Hughey, S. Petersen*

121L. Microprocessor System Design Laboratory (2 credits). F,S

Laboratory sequence illustrating topics covered in course 121. One two-hour laboratory session per week. Students design, build, program, debug, document, and demonstrate a microprocessor-based system. Students are billed a materials fee. Prerequisite(s): courses 12C/L and 100/L; Electrical Engineering 70/L; previous or concurrent enrollment in course 121 required. Enrollment limited to 40. *P. Chan, R. Hughey, S. Petersen*

123A. Engineering Design Project I. F,W

First of a two-course sequence that is the culmination of the engineering program. Students apply knowledge and skills gained in elective track to complete a major design project. Students complete research, specification, planning, and procurement for a substantial project. Includes technical discussions, design reviews, and formal presentations; engineering design cycle, engineering teams, and professional practices. Formal technical specification of the approved project is presented to faculty. Prerequisite(s): Electrical Engineering 171 or Computer Engineering 121; previous or concurrent enrollment in Computer Engineering 185; permission of department and instructor. Students are billed a materials fee. (Also offered as Electrical Engineering 123A. Students cannot receive credit for both courses.) *The Staff*

123B. Engineering Design Project II (7 credits). W,S

Second of two-course sequence in engineering system design. Students fully implement and test system designed and specified in course 123A. Formal written report, oral presentation, and demonstration of successful project to review panel of engineering faculty required. Students are billed a materials fee. (Also offered as Electrical Engineering 123B. Students cannot receive credit for both courses.) Prerequisite(s): courses 123A and 185. Enrollment limited to 35. *The Staff*

125. Logic Design with Verilog. F

Verilog digital logic design with emphasis on ASIC and FPGA design. Students design and verify large-scale systems. Assignments and project use the Verilog Hardware Description Language with emphasis on verification and high-frequency ASIC/FPGA targets. Prerequisite(s): courses 100 and 100L; and electrical engineering 70 and 70L. Concurrent enrollment in course 125L required. Enrollment limited to 40. *P. Chan, A. Varma, M. Schlag, J. Renau, M. Guthaus*

125L. Logic Design with Verilog Laboratory (2 credits). F

Laboratory sequence illustrating topics covered in course 125. One two-hour laboratory session per week. Students are billed a materials fee. Prerequisite(s): courses 100 and 100L; electrical engineering 70 and 70L. Concurrent enrollment in course 125 is required. Enrollment limited to 40. *P. Chan, A. Varma, M. Schlag, J.*

126. Advanced Logic Design. S

Digital logic and system-level design using state-of-the-art FPGA tools. Students design large-scale logic circuits from fundamental building blocks and methods using design-automation tools. All examples and assignments use the Verilog Hardware Description Language with emphasis on FPGA systems. Prerequisite(s): courses 100 and 100L; electrical engineering 70 and 70L. Concurrent enrollment in course 126L is required. Enrollment limited to 20. *P. Chan, A. Varma, M. Schlag, J. Renau, M. Guthaus*

126L. Advanced Logic Design Laboratory (2 credits). S

Laboratory sequence illustrating topics in course 126. One four-hour laboratory session per week. Students use computer-aided design tools for the specification, design, and verification of digital systems. Students implement and realize a digital system using field-programmable gate arrays. Students are billed a materials fee. Prerequisite(s): courses 100 and 100L; electrical engineering 70 and 70L. Concurrent enrollment in course 126 is required. Enrollment limited to 20. *P. Chan, A. Varma, M. Schlag, J. Renau, M. Guthaus*

150. Introduction to Computer Networks. F

Addresses issues arising in organizing communications among autonomous computers. Network models and conceptual layers; Internet-working; characteristics of transmission media; switching techniques (packet switching, circuit switching, cell switching); medium access control (MAC) protocols and local area networks; errorcontrol strategies and link-level protocols; routing algorithms for bridges and routers; congestion control mechanisms; transport protocols; application of concepts to practical wireless and wireline networks and standard protocol architectures. Students who have completed course 80N can take this course for credit. Students are billed for a materials fee. Prerequisite(s): courses 12, 12L, and 16 or 16H. *J. Garcia-Luna-Aceves, K. Obraczka, A. Varma*

151. Network Administration.

Projects include installing and configuring (client and server) machines, configuring network routing, setting up firewalls and network appliances, and setting up and using wireless networks. Includes lectures, projects presented, and discussions. Requires formal written reports, oral presentations, and demonstrations of projects. Students are billed a materials fee. Prerequisite(s): course 150. Enrollment limited to 30. *K. Obraczka*

152. Analysis and Design of Communication Protocols.

Analysis and design of communication protocols for computer networks. Random processes and queueing theory applied to performance analysis of communication protocols, protocol verification methods, channel access protocols, protocols for point-to-point and point-to-multipoint reliable transmission, routing protocols, multicast protocols, and congestion control protocols. Prerequisite(s): courses 107 and 150. *J. Garcia-Luna-Aceves*

153. Digital Signal Processing. S

Introduction to the principles of signal processing, including discrete-time signals and systems, the z-transform, sampling of continuous-time signals, transform analysis of linear time-invariant systems, structures for discrete-time systems, the discrete fourier transform, computation of the discrete fourier transform, and filter design techniques. Taught in conjunction with Electrical Engineering 250. Students

cannot receive credit for this course and Electrical Engineering 250. (Also offered as Electrical Engineering 153. Students cannot receive credit for both courses.) Prerequisite(s): Electrical Engineering 103. *The Staff*

156. Network Programming.

Methods and tools used for network programming. Topics include inter-process communication (IPC), facilities such as pipes, shared memory, semaphores, sockets, and remote procedure call (RPC); design of client and server sides of network applications; CGI programming; and programming projects. Prerequisites: course 150 and Computer Science 111. Concurrent enrollment in course 156L required. *K. Obraczka, A. Varma*

156L. Network Programming Laboratory (2 credits).

Laboratory sequence illustrating concepts taught in course 156. Learn use of network programming tools and methods via programming exercises. Students are billed a materials fee. Prerequisites: course 150 and Computer Science 111. Concurrent enrollment in course 156 required. *K. Obraczka, A. Varma*

167. Sensing and Sensor Technologies.

Introduces the fundamental issues in sensing and various sensor technologies including motion sensors, velocity sensors, GPS sensors, acoustic sensors, light and image sensors, and range sensors. Also demonstrates sensor technologies using a system approach to show how they can be integrated into a complete digital system. Prerequisite(s): course 100 and Electrical Engineering 70. Concurrent enrollment in course 167L is required. *H. Tao, G. Elkaim*

167L. Sensing and Sensor Technologies Lab (2 credits).

Lab assignments reinforce the concepts and techniques learned in course 167. Assignments include measurement and estimation techniques, experiments with various sensors, and a course project in which students build digital sensing systems. Students are billed a materials fee. Prerequisite(s): course 100 and Electrical Engineering 70. Concurrent enrollment in course 167 is required. *H. Tao, G. Elkaim*

173. High-Speed Digital Design. W

Studies of analog circuit principles relevant to high-speed digital design: signal propagation, crosstalk, and electromagnetic interference. Topics include electrical characteristics of digital circuits, interfacing different logic families, measurement techniques, transmission lines, ground planes and grounding, terminations, power systems, connectors/ribbon cables, clock distribution, shielding, electromagnetic compatibility and noise suppression, and bus architectures. Prerequisite(s): Electrical Engineering 70, 70L and course 174. Electrical Engineering 171 and course 121 recommended. Previous or concurrent enrollment in course 173L required. Enrollment limited to 30. *P. Chan, S. Petersen*

173L. High-Speed Digital Design Laboratory (2 credits). W

Laboratory sequence illustrating topics covered in course 173. One two-hour laboratory session per week. Students are billed a materials fee. Prerequisite(s): Electrical Engineering 70, 70L and course 174. Electrical Engineering 171 and course 121 recommended. Previous or concurrent enrollment in course 173 required. Enrollment limited to 30. *P. Chan, S. Petersen*

174. Introduction to EDA Tools for PCB Design (3 credits). F

Focus on EDA tools for design of printed-circuit boards. Elements of design flow covered: schematic capture and simulation to final PCB layout. Final project is

required. Students are billed a materials fee. Prerequisite(s): Electrical Engineering 70 or consent of instructor. S. Petersen

177. Applied Graph Theory and Algorithms.

Basic concepts and algorithms are reviewed including trees, Eulerian and Hamiltonian graphs, and graph transversal. Algorithms are explored to solve problems in connectivity, routing, matching, and embedding of graphs. Graph theory and algorithms are developed around applications in computer engineering. Prerequisite(s): Computer Science 101. *M. Schlag*

185. Technical Writing for Computer Engineers. F,W

Writing by engineers and computer scientists, not to general audiences, but to engineers, engineering managers, and technical writers. Exercises include job application and resume, in-code documentation, algorithm description, naive-user documentation, library puzzle, survey article, proposal, progress report, formal technical report, and oral presentation. Offered in alternate quarters. Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements; Computer Science 12B or 13H or Computer Engineering 12. Enrollment restricted to School of Engineering majors. Enrollment limited to 60. (General Education Code(s): W.) *G. Moulds, T. Larrabee*

193. Field Study. F,W,S

Provides for individual programs of study with specific academic objectives carried out under the direction of a faculty member of the Computer Engineering Department and a willing sponsor at the field site using resources not normally available on campus. Credit is based on the presentation of evidence of achieving the objectives by submitting a written and oral presentation. May not normally be repeated for credit. Students submit petition to sponsoring agency. *The Staff*

193F. Field Study (2 credits). F,W,S

Provides for individual programs of study with specific academic objectives carried out under the direction of a faculty member of the Computer Engineering Department and a willing sponsor at the field site using resources not normally available on campus. Credit is based on the presentation of evidence of achieving the objectives by submitting a written and oral presentation. May not normally be repeated for credit. Students submit petition to sponsoring agency. *The Staff*

194. Group Tutorial. F,W,S

A program of independent study arranged between a group of students and a faculty member. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

194F. Group Tutorial (2 credits). F,W,S

A program of independent study arranged between a group of students and a faculty member. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

195. Senior Thesis Research. F,W,S

Students submit petition to sponsoring agency. Prerequisite: course 123A. The Staff

195F. Senior Thesis Research (2 credits). F,W,S

Students submit petition to sponsoring agency. Consent of instructor required. Prerequisite: course 123A. *The Staff*

198. Individual Study or Research. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

198F. Individual Study or Research (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

199. Tutorial. F,W,S

For fourth-year students majoring in computer engineering. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

For fourth-year students majoring in computer engineering. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

200. Research and Teaching in Computer Science and Engineering (3 credits). F

Basic teaching techniques for teaching assistants including responsibilities and rights of teaching assistants, resource materials, computer security, leading discussion or lab sessions, presentation techniques, maintaining class records, electronic handling of homework, and grading. Examines research and professional training, including use of the library and online databases, technical typesetting, writing journal and conference papers, publishing in computer science and computer engineering, giving talks in seminars and conferences, and ethical issues in science and engineering. Required for all T.A.s. Enrollment restricted to graduate students. *T. Larrabee, S. Brandt, A. Brandwajn, M. Schlag*

202. Computer Architecture. F

Provides a thorough and fundamental treatment of the art of computer architecture. Topics include concepts of von Neumann architectures, methods of evaluating CPU performance, instruction-set design and examples, compiler issues, instruction pipelining, superscalar processors, methods for reduction of branch penalty, memory hierarchies, I/O systems, floating-point arithmetic, and current issues in parallel processing. Prerequisite(s): course 110. Enrollment restricted to graduate students; undergraduates may enroll if they have completed course 110 and with consent of instructor. Enrollment limited to 30. *P. Chan, R. Hughey, A. Varma, J. Renau*

220. Parallel Processing. W

Introduction to programming advanced parallel computer architecture. Topics may include: SIMD massively parallel processor arrays; streaming parallel coprocessors, such as graphics cards used for general-purpose processing (GPGPU); or other hybrid MIMD/SIMD architectures. Course has programming lab component, a project, and student presentation on related topics. Enrollment restricted to graduate students; undergraduates may enroll with permission of instructor. *A. Di Blas, R. Hughey*

221. Advanced Microprocessor Design.

Introduction to latest advances in computer architecture. Focuses on processor core design. Topics include simultaneous multithreading, thread level speculation, trace caches, novel out-of-order mechanisms, and energy-efficient processor core designs. Final project is modification/enhancement of an out-of-order processor on an FPGA development system. Prerequisite(s): course 202; and course 125, 225, or equivalent Verilog experience. Concurrent enrollment in course 221L required. Enrollment

restricted to graduate students. Enrollment limited to 20. J. Renau

221L. Advanced Microprocessor Design Laboratory (3 credits).

Laboratory sequence illustrating topics covered in course 221. Prerequisite(s): course 202; and course 125, 225, or equivalent Verilog experience. Concurrent enrollment in course 221 required. Enrollment restricted to graduate students. Enrollment limited to 20. *J. Renau*

222. VLSI Digital System Design. F

Introduction to Very Large Scale Integrated (VLSI) design, focusing on custom integrated circuits. Topics include logic families, FETs, interconnect models, simulation, and RC timing. Course covers the design flow from logic design to layout, with a focus on high performance and low power. Students should be familiar with RC circuit analysis. Enrollment restricted to seniors and graduate students. Undergraduates may enroll with permission of instructor. *C. Bazeghi, M. Guthaus*

223. VLSI System-on-a-Chip Design. W

Design methodologies for Application Specific Integrated Circuits (ASICs). Topics include: behavioral specification; logic synthesis; standard-cell libraries; advanced timing analysis; and physical design automation tools. Familiarizes students with real-world tools during the design of a small system-on-a-chip project. Students are encouraged to fabricate and test their chips in an independent study. Prerequisite(s): course 222 or permission of instructor. Enrollment restricted to graduate students. *C. Bazeghi, M. Guthaus*

224. Testing Digital Circuits. S

An introduction to the theory and practice of testing. Topics are chosen from fault and defect models, test generation for combinational and sequential circuits, fault simulation, scan-design and built-in self-test. Enrollment restricted to graduate students; undergraduates may enroll if they have completed Computer Science 101. *T. Larrabee, F. Ferguson*

225. Introduction to ASIC Systems Design. S

Introduction to system prototyping using field-programmable gate arrays (FPGAs). Topics include architectures of FPGAs, behavioral design specification, system partitioning, synthesis tools, design verification, and studies of novel systems implemented with FPGAs. Intended to familiarize students with the techniques and tools in ASIC designs. Final project is the complete design of a small system using FPGAs. Enrollment restricted to graduate students; undergraduates may enroll if they have completed courses 100/L and 202. Enrollment limited to 10. Offered in alternate academic years. *P. Chan*

226. Computer-Aided Analysis of Electrical Circuits.

Covers issues involved in building an electrical circuit simulator. Topics include formulation of circuit equations, device modeling, solution of systems of linear and nonlinear equations, numerical integration techniques, and switch-level timing simulation. Enrollment restricted to graduate students; undergraduates may enroll if they have completed courses 171/L. Offered in alternate academic years. *P. Chan*

229. Field-Programmable Gate Arrays Computer-Assisted Design.

Design methods for Field-Programmable Gate Arrays (FGPAs), including algorithms for technology mapping, routability estimation, placement, and routing. The relationship between FPGA architectures and their computer-aided design tools. Course project involves the modification and analysis of an FPGA tool. Enrollment

restricted to graduate students or by consent of instructor. Courses 100, 125, 126, 222, 225, or other digital design experience recommended. Enrollment limited to 20. *M. Schlag*

230. Computer Performance Evaluation. W

Introduction to methods of analysis of computer system performance. Predictive performance models with emphasis on queuing models; exact and appropriate solution methods, discrete-event simulation, and numeric iterative approaches; analytical solutions and their computation; separable queuing networks, decomposition approaches; examples of practical application; and performance measurement, model validation, robustness of models, and operational analysis. Enrollment restricted to graduate students. Enrollment limited to 20. Offered in alternate academic years. *A. Brandwajn*

232. Arithmetic Processors.

Concept of number systems: binary additions, multiplications, divisions; elementary function evaluations; algorithm acceleration; floating-point and significant arithmetics; IEEE standards; technology related issues; algorithm evaluation by implementation with gate arrays. Prerequisite(s): course 202. Enrollment restricted to graduate students. Enrollment limited to 15. *P. Chan*

240. Introduction to Linear Dynamical Systems. F

Introduction to applied linear algebra and linear dynamical systems with applications to circuits, signal processing, communications, and control systems. Topics include the following: Least-squares approximations of over-determined equations and least-norm solutions of underdetermined equations. Symmetric matrices, matrix norm and singular value decomposition. Eigenvalues, left and right eigenvectors, and dynamical interpretation. Matrix exponential, stability, and asymptotic behavior. Multi-input multi-output systems, impulse and step matrices; convolution and transfer matrix descriptions. Control, reachability, state transfer, and least-norm inputs. Observability and least-squares state estimation. Enrollment restricted to graduate students; undergraduates may enroll if they have completed Electrical Engineering 103 and Applied Math and Statistics 147. *G. Elkaim, K. Ross, W. Dunbar, J. Cortes*

241. Introduction to Feedback Control Systems. W

Graduate-level introduction to control of continuous linear systems using classical feedback techniques. Design of feedback controllers for command-following error, disturbance rejection, stability, and dynamic response specifications. Root locus and frequency response design techniques. Extensive use of Matlab for computer-aided controller design. Course has concurrent lectures with Electrical Engineering 154. (Also offered as Electrical Engineering 241. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. *G. Elkaim, W. Dunbar, J. Cortes*

242. Applied Feedback Control. *

Sequel to Electrical Engineering 154. After reviewing control design techniques examined in EE 154, this course explores state space control, discrete time control, and two case studies in control design. Students design and implement feedback controllers on an inverted pendulum experiment. Prerequisite(s): Electrical Engineering 154 or course 241. Enrollment restricted to juniors, seniors, and graduate students. *W. Dunbar*

243. System Identification. *

Course provides introduction to the construction of linear dynamical models from

experimental data using parametric and non-parametric identification techniques. Theoretical and practical aspects of these techniques addressed. Prerequisite(s): course 240, or by permission of instructor. *G. Elkaim, W. Dunbar*

248. Games in Design and Control. S

Graduate-level introduction to game theory and its applications to system design, verification, analysis, and optimal control. Enrollment restricted to graduate students. Computer Science 101, 201, or equivalent recommended. *L. De Alfaro*

250. Multimedia Systems. W

Study of state-of-the-art technology for networked multimedia systems. Topics include audio, image, and video acquisition and compression standards (JPEG, MPEG, and ITU families); networking for multimedia; and digital television. Proficiency in C or C++ required. Prerequisite(s): Enrollment restricted to graduate students. *R. Manduchi*

251. Error-Control Coding.

Overview of coding to protect messages against error during transmission or storage. Topics include channel models, linear algebra over finite fields, linear block codes and bounds, cyclic codes (BCH and RS), decoding algorithms, spectral analysis, codes on graphs, and low-complexity algorithms. Enrollment restricted to graduate students or consent of instructor. *H. Sadjadpour*

252A. Computer Networks. F

Issues resulting from organizing communication among autonomous computers. Includes network models and switching techniques; medium access control protocols and local area networks; error control and retransmission strategies; routing algorithms and protocols; congestion control mechanisms and end-to-end protocols; application-level protocols; and application of concepts to wireless and wireline networks, with emphasis on the Internet. Enrollment restricted to graduate students. *J. Garcia-Luna-Aceves*

252B. Modeling of Communications Protocols.

Theory and practice of computer communication networks. Emphasis is on verification and performance analysis of network control processes. Topics include protocols for channel access, point-to-point and multipoint reliable transmission, routing, congestion control, network management, multicasting, and ATM networks. Prerequisite(s): courses 107 and 252A. *J. Garcia-Luna-Aceves, A. Varma*

253. Network Security.

Fundamental mechanisms for network security and their application in widely deployed protocols. In-depth treatment of security mechanism at the data-link, network, and transport layers for both wired and wireless networks. Covers mechanisms for privacy and integrity, and methods for intrusion detection. Prerequisite(s): course 252A and Computer Science 201. Enrollment restricted to graduate students. *A. Varma*

254. High Speed Computer Networks. S

Fiber-optic technology; fiber-optic link design; network protocol concepts; coding and error control; high-speed local area and metropolitan area networks; gigabit networks; error and congestion control; photonic networks; research topics. Prerequisite(s): course 252B. Offered in alternate academic years. *A. Varma*

256. Design Project in Computer Networks. W

Students develop a working implementation of a network protocol with the goal of obtaining hands-on experience in implementing real-world network protocols. Prerequisite(s): course 252A; enrollment restricted to graduate students. *A. Varma*

257. Wireless and Mobile Networks. W

An interdisciplinary course on wireless communication and mobile computing. Covers the physical aspects of wireless communication but emphasizes higher protocol layers. Topics include cellular networks, packet radio and ad hoc networks, wireless transport protocols, security, and application-level issues. Prerequisite(s): course 252A or permission of instructor. Enrollment limited to 20. *J. Garcia-Luna-Aceves, K. Obraczka*

258. Unix Networking Internals.

In-depth treatment of the implementation of network protocols in typical open-source Unix systems. Topics include implementation of send and receive functions, buffer management, interrupt handling, locking, scheduling and timer management. Major implementation project required. Prerequisite(s): course 252A. Computer Science 111 recommended. Enrollment restricted to graduate students. *A. Varma*

259. Sensor Networks. S

Focus is on the networking aspects of sensor networks: protocols at the various layers and how they answer the specific requirements posed by these networks (e.g., data driven, energy efficient, etc.) and their applications (monitoring, tracking, etc.). Explore how physical layer and hardware issues may influence protocol design. Courses 252A and 257 recommended. *K. Obraczka*

263. Data Compression. F

Introduction to information theory and data compression. Lossless coding (Huffman, arithmetic, dictionary codes). Lossy coding (scalar and vector quantization, differential coding, transform coding). Applications to the compression of real data sets (DNA sequences, biological time series, multimedia streams). Concurrent lectures with course 108. Students cannot receive credit for both this course and course 108. Students must have basic knowledge of probability theory. Enrollment restricted to graduate students. *R. Manduchi*

264. Image Analysis and Computer Vision. S

Brief review of image processing. Binary images, thresholding, morphological operations; edge detection and segmentation; contours: digital curves and curve fitting; statistical texture analysis, shape from texture; depth cues, stereo matching, depth from stereo; color perception and segmentation; and shading and image radiance, surface orientation, and shape from shading. Electrical Engineering 264 encouraged, but not required. Undergraduate students who are interested in enrolling should meet with the instructor first. *H. Tao*

276. Software Engineering.

Introduction to the general principles of software engineering. Covers current and classical topics from both practical and theoretical viewpoints. Topics include software evolution, project management, software inspections, design methods, requirements analysis and specification, software testing, maintenance, software implementation, human interfaces, and software engineering experimentation. Enrollment restricted to graduate students; undergraduates may enroll in this course if they have completed Computer Science 115. *The Staff*

Explores graph theory and algorithms for solving problems in engineering. A review of basic graph concepts and algorithms is followed by topics in network flow, partitioning, spectral analysis of graphs, graph isomorphism, and intractability. Prerequisite(s): Computer Science 101 and 102; or course 177; or Computer Science 201; or equivalent. Enrollment restricted to graduate students. Enrollment limited to 20. *M. Schlag*

278. Introduction to the Theory of Discrete Systems. F

Introduction to methods for modeling, analyzing, and reasoning about discrete systems, such as hardware and software designs. First part of course presents basic models for hardware and software systems and introduces methods for system specification, verification, abstraction, and stepwise refinement of a design into an implementation. Second part discusses role of structure: hierarchy, system composition, and interface specification. Prerequisite(s): some mathematical background is assumed. Enrollment restricted to graduate students or by permission of instructor. *L. De Alfaro*

280C. Seminar on Control (2 credits). F,W,S

Weekly seminar series covering topics of current research in theory and application of control to engineering systems. Current research work and literature in these areas discussed. Enrollment restricted to graduate students; undergraduates may enroll with permission of instructor. May be repeated for credit. *G. Elkaim, K. Ross, W. Dunbar, J. Cortes*

280N. Seminar on Networks (2 credits). F,W,S

Weekly seminar series covering topics of current research in networks and networked systems. Current research work and literature in these areas are discussed. Prerequisite(s): permission of instructor. Enrollment restricted to graduate students. May be repeated for credit. *J. Garcia-Luna-Aceves, K. Obraczka*

280P. Seminar on Parallel Processing (2 credits). F,W,S

Weekly seminar series covering topics of current research in parallel systems, architectures, and algorithms. Current research work and literature in these areas are discussed. Enrollment restricted to graduate students. Enrollment limited to 20. May be repeated for credit. *R. Hughey, J. Renau, M. Guthaus*

280T. Seminar on New Technologies (2 credits). *

Weekly seminar series in which distinguished speakers from industry, universities, and government discuss current developments in networking and computer technology. The emphasis is on open research questions that may lead to collaborative work with faculty and graduate students. *The Staff*

280V. Seminar on Computer Vision (2 credits). F,W,S

Weekly graduate-level seminar series discussing advanced topics in computer vision and image analysis. Current research and literature presented during each meeting. Enrollment limited to 20. May be repeated for credit. *H. Tao, R. Manduchi*

285. Technical Writing for Engineering Graduates.

Writing skills development for graduate engineers. Students produce a major writing project with many subtasks. Exercises includes fellowship application; mathematical and algorithmic description; use of tables and graphs; experiment description; and producing technical web sites, presentations, and posters. Enrollment restricted to graduate biomolecular engineering, computer engineering, computer science, and electrical engineering majors. (Open to all School of Engineering graduate students.)

290L. Advanced Topics in VLSI Computer-Aided Design.

A graduate course on a research topic in VLSI computer-aided design. Topic varies according to instructor. Possible topics include, but are not limited to specification languages and formal verification, logic minimization, testing and verification, electrical simulation, layout synthesis, and behavioral synthesis. Course 100, 125, 126, 222, or 225 recommended. Offered in alternate academic years. *P. Chan, T. Larrabee, F. Ferguson, M. Schlag*

290M. Topics in Parallel Computation.

Investigates selected topics in applied parallel computation. Topics may include numerical methods, artificial intelligence and machine learning algorithms, graphics and image processing, systolic algorithms, and the interplay between hardware and algorithms. Students are encouraged to investigate and discuss the parallelization of their own research. Enrollment restricted to graduate students. *R. Hughey*

290N. Topics in Computer Performance.

Selected topics of current interest in the area of computer system performance. Subjects may include aspects of large systems, performability, computer networks, storage subsystems, and nontraditional approaches and are subject to periodic revision. Enrollment restricted to graduate students. Offered in alternate academic years. *A. Brandwajn*

290V. Advanced Topics in Visual Computing.

Advanced course in image analysis and computer vision. Topics include motion analysis, multiple view geometry, 3D reconstruction, image-based rendering, vision-based graphics, face detection and recognition, tracking, image and video retrieval, and human-computer interface. Enrollment restricted to seniors and graduate students. Enrollment limited to 20. *H. Tao. S. Lodha*

293. Advanced Topics in Computer Engineering. S

A graduate seminar on a research topic in computer engineering which varies according to instructor. Possible topics include, but are not limited to, communication networks, data compression, special-purpose architectures, computer arithmetic, software reliability and reusability, systolic arrays. *The Staff*

297. Independent Study or Research. F,W,S

Independent study or research under faculty supervision. Students submit petition to sponsoring agency. *The Staff*

299. Thesis Research. F,W,S

Thesis research conducted under faculty supervision. Students submit petition to sponsoring agency. *The Staff*

299F. Thesis Research (2 credits). F,W,S

Independent study or research under faculty supervision. Enrollment restricted to graduate students. Recommended for part-time students. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Changes to 2006-08 Catalog Highlighted | Faculty | Course Descriptions

Program Description

Computer science is the study of the theoretical and practical aspects of computer technology and computer usage. The Computer Science Department offers courses on a wide range of topics, many of which include a mathematical component, and offers undergraduate bachelor of arts and bachelor of science degrees in computer science, a bachelor of science in computer science: computer game design, bachelor of science as well as the master of science and doctor of philosophy degrees. Besides offering instructional courses, the department engages in a substantial research program in which both advanced undergraduates and graduate students participate.

The bachelor of arts program at UCSC is designed to give students a solid grounding in both theoretical and practical topics in computer science, computer engineering, and mathematics while leaving flexibility for a broad program of study, including many courses outside of the sciences, or even for a double major in another discipline. The bachelor of science program is appropriate for students desiring a somewhat stronger concentration in the sciences, with more courses in computer science and computer engineering, as well as courses in physics or chemistry; this program also allows for electives outside of the sciences.

The bachelor of science in computer game design builds on a rigorous core program of study in computer science, adding interdisciplinary study on the artistic, dramatic, and narrative elements of computer game design; a year-long game design project acts as a capstone learning experience. Because many courses in all three programs have prerequisites, students leaning toward any of these programs will enjoy greater scheduling flexibility if they begin some preparatory courses in their first year. The specific course requirements for each undergraduate degree are given below.

Applications of computer science are found in many other areas of study, from art and music to business and science. Thus, interdisciplinary activities are encouraged. For those students whose primary interest is in another area, a minor in computer science is offered.

Courses for Nonmajors

The Computer Science Department offers a wide range of courses intended for nonmajors as well as majors. These include course 2, Computer Literacy; course 10, Introduction to Computer Science; course 80B, Systems and Simulation; course 80C, Computer Arts and Graphics; course 80J, Technology Targeted at Social Issues; and course 80K, Foundations of Interactive Game Design. Course 10, Introduction to Computer Science, may be beneficial to students who are considering the major but have a limited background in computer science. There are also introductory programming classes intended for nonmajors: courses 60G and 60N, Beginning Programming.

Computer Science Policies

Admissions Policy

Admission to the computer science majors is selective. First-year applicants may receive direct admission at the time they apply to UCSC based on their high school record and test scores. Admission to the major after a student has entered UCSC is based on performance in all School of Engineering and Physical and Biological Sciences courses attempted at UCSC. Please refer to

the School of Engineering section of the catalog for the full admissions policy.

Foundation Courses

The foundation courses for each computer science major are as follows:

Computer Science BS and BA: Computer Science 12A and 12B (or 13H); Computer Engineering 16; and Mathematics 19A-B, or 20A-B Computer Game Design: Computer Science 12A and 12B, Computer Engineering 16 or Mathematics 19A-B.

UCSC students that have completed three or more quarters at UCSC must complete the foundation courses before they can declare a computer science major.

Disqualification and Satisfactory Progress in the Major

Students who do not make adequate progress in the computer science major may be disqualified from the major. Adequate progress normally means passing a minimum of three courses required for the major over every three consecutive quarters. (For part-time students, 15 credits attempted equals one full term.) Students who do not expect to meet this requirement should consult their faculty adviser and/or the undergraduate director for their major beforehand.

Students who receive a total of three grades of D, F, or No Pass in the key courses, Computer Science 12A, 12B, 13H, 101; and Computer Engineering 12 and 16, may, at the discretion of the department, be disqualified from the major.

The department may, at its sole discretion, disqualify from the major any student making two unsuccessful attempts in any one of the following principal courses commonly used to satisfy degree requirements:

- Computer Science 12A, 12B, 13H, 101, 102, 104A, 104B, 105, 111, 112, 115, 116, 130, 132, 140, 160, 161, 180, 181, and 183;
- Computer Engineering 12, 16, 100, 107, and 110;
- Applied Mathematics and Statistics 27, 131, and 147;
- Physics 5A, 5B, 5C, 6A, 6B, and 6C;
- · Chemistry 1B and 1C;
- Mathematics 19A-B or Mathematics 20A-B, and 23A.

Each grade of D, F, or No Pass counts as one unsuccessful attempt; each grade of W counts as one-half of an unsuccessful attempt.

The School of Engineering section contains additional disqualification policies, such as maintaining a 2.0 School of Engineering GPA and the ethics requirement, that apply to computer science majors.

Students at risk of disqualification must meet with an undergraduate adviser to discuss their options for continuing in the major.

Letter Grade Policy

The Computer Science Department requires letter grades for all courses applied toward the B.A., B.S., and minor in computer science with the exception of two lower-division courses which students may elect to take Pass/No Pass. This policy includes courses required for the computer science majors but sponsored by other departments.

Transfer Students

Most courses in the computer science program at UCSC have a strong theoretical component to prepare the student for designing, as opposed to simply using, computer systems. Often, courses taken at other institutions which emphasize applications of current languages and computers do not count toward the computer science major at UCSC.

At UCSC, students are first introduced to programming using the programming language Java. The core programming sequence, courses 12A/L and 12B/M (or 13H/L, which covers both 12A/L and 12B/M), exposes students to both Java and C. Many upper-division courses that involve programming use the C and C++ programming languages. Transfer students who are not familiar with both Java and C may need to take a remedial course. Students familiar with C++ and Unix should find the transition to Java and C relatively simple.

Please refer to the School of Engineering section of the catalog for the policy regarding transfer students.

School of Engineering Policies

Please refer to the School of Engineering section of the catalog for additional policies that apply to all School of Engineering programs. These policies include admission to the major, limits on the number of times courses can be attempted, and the need for computer science students to

obtain preapproval before taking courses elsewhere.

Preparation for the Major

It is recommended that high school students intending to apply to the computer science major have completed four years of mathematics (through advanced algebra and trigonometry) and three years of science in high school. Comparable college mathematics and science courses completed at other institutions also serve to properly prepare a student for the computer science major.

B.A. Major Requirements

The aim of this program is to expose students to a rigorous curriculum in computer science while maintaining sufficient flexibility so that students can take courses outside computer science, pursue a minor in another discipline, or complete a double major. Every student must complete a minimum of 17 courses, eight lower-division and nine upper-division. Out of these, the eight lower-division courses and the first upper-division course are required preparatory courses for every student. Once these preparatory courses are completed, students tailor their own program by choosing eight additional upper-division elective courses. To provide an adequate balance in subject matter, these additional courses must be divided between those that emphasize the theoretical aspects of the field and those that have a more practical focus. To provide a depth of study in one aspect of computer science, students must complete one of the approved depth sequences.

Lower-Division Requirements

Each student must successfully complete the following nine required preparatory courses:

Computer Science

12A/L, Introduction to Programming/Computer Programming Laboratory; 12B/M, Introduction to Data Structures/Laboratory; 13H/L, Introduction to Programming and Data Structures/Laboratory (Honors)

Computer Engineering

12/L, Computer Systems and Assembly Language/ Laboratory 16 (or 16H), Applied Discrete Mathematics (or Honors Applied Discrete Mathematics)

Mathematics

19A-B, Calculus for Science, Engineering, and Mathematics (credit for one or both may be granted with adequate performance on the CEEB calculus AB or BC Advanced Placement exam); or Mathematics 20A-B, Honors Calculus 23A, Multivariable Calculus

Applied Mathematics and Statistics

27/L, Mathematical Methods for Engineers/Laboratory (formerly Mathematics 27); or Mathematics 21, Linear Algebra; and 24, Ordinary Differential Equations

Upper-Division Requirements

101, Algorithms and Abstract Data Types

In addition to the above nine required courses, students must complete eight upper division electives, by completing the requirements for one depth sequence. At least 50 percent of these upper-division courses must be completed at UCSC.

Depth Sequence Requirements

For the following depth sequences, students must take at least seven courses from the theory and practice course lists, as follows:

- a minimum of three courses from the theory course list and a minimum of three courses from the practice course list;
- the seven courses from the theory and practice course lists must include all of the courses of one of the depth sequences;
- the eighth upper-division elective must be selected from any upper-division (5-credit) School of Engineering course.

The depth sequence courses are:

- Compilers and language theory: Computer Science 104A, 112, and 104B or 130;
- Operating systems and hardware: Computer Engineering 100/L, Computer Science 111,

and Computer Engineering 110 or 121/L;

- Theory: Computer Science 102, 130, and 132;
- Software methodology: Computer Science 115 and two of the following: 104A, 112, and 116:
- Graphics: Computer Science 160/L, 161/L, and AMS 147;
- Databases: Computer Science 180, 181, and 183

For the Interactive Game Design depth sequence only, students must satisfy the following requirements:

- Core courses: students must take Computer Science 130, 105, 140, 160/L, and 115.
- Game Design Electives: students must take two courses from the game design electives list.
- Free elective: any course from the theory and practice course lists.

Theory Course List

Computer Science

- 102, Introduction to Analysis of Algorithms
- 130, Computational Models
- 132, Computability and Computational Complexity
- 142, Machine Learning and Data Mining

Computer Engineering

- 107, Mathematical Methods of Systems Analysis: Stochastic
- 108, Data Compression
- 154, Data Communications
- 177, Applied Graph Theory and Algorithms

Electrical Engineering

- 103, Signals and Systems
- 153, Digital Signal Processing (formerly Computer Engineering 153)
- **Applied Mathematics and Statistics**
- 131, Introduction to Probability Theory (formerly Mathematics 131A)
- 146, Introduction to Dynamical Systems
- 147, Computational Methods and Applications
- 162, Design and Analysis of Computer Simulation Experiments

Mathematics

- 115, Graph Theory
- 117, Advanced Linear Algebra
- 126, Mathematical Control Theory
- 148, Numerical Analysis

Practice Course List

Computer Science

- 104A, Fundamentals of Compiler Design I
- 104B, Fundamentals of Compiler Design II
- 105, Systems Programming
- 109, Advanced Programming
- 111, Introduction to Operating Systems
- 112, Comparative Programming Languages
- 115, Software Methodology
- 116, Software Design Projects
- 122, Computer Security
- 128, Distributed Systems: File Sharing, Online Gaming, and More
- 129, Data Storage Systems
- 140, Artificial Intelligence
- 146, Game Artificial Intelligence
- 160/L, Introduction to Computer Graphics /Laboratory
- 161/L, Visualization and Computer Animation/Laboratory
- 164/L, Game Engines/Laboratory
- 180, Database Systems I
- 181, Database Systems II
- 183, Hypermedia and the Web
- 190X, Methods of Cryptography

204, Compiler Design

Computer Engineering

100/L, Logic Design/Laboratory

- 110, Computer Architecture
- 113, Parallel and Concurrent Programming
- 117/L, Embedded Software/Laboratory
- 118/L, Introduction to Mechatronics/Laboratory
- 121/L, Microprocessor System Design/Laboratory
- 123A, Computer Engineering Design Project I
- 123B, Computer Engineering Design Project II
- 125/L, Logic Design with Verilog/Laboratory
- 126/L, Advanced Logic Design/Laboratory
- 150, Introduction to Computer Networks
- 152, Analysis and Design of Communication Protocol
- 155/L, Computer Networks Project/Laboratory
- 163/L, Multimedia Processing and Applications/ Laboratory
- 167/L, Sensing and Sensor Technologies/Laboratory

Electrical Engineering

130/L, Introduction to Optoelectronics and Photonics/Laboratory

Game Design Electives

Computer Science

- 102, Introduction to Analysis of Algorithms
- 116, Software Design Project
- 128, Distributed Systems: File Sharing, Online Gaming, and More
- 161/L, Visualization and Computer Animation/Laboratory
- 180, Database Systems I

Computer Engineering

150, Introduction to Computer Networks

167/L, Sensing and Sensor Technologies/Laboratory

Film and Digital Media

170A, Introduction to Digital Media Production

171D, Social Information Spaces

177, Digital Media Workshop: Computer as Medium

B.S. Major Requirements

This program is designed for students who wish to maximize exposure to computer science concepts and methods by taking a larger selection of upper-division computer science courses, as well as additional courses in the sciences and mathematics. A minimum of 22 courses must be completed for the B.S. in computer science degree, whereas a minimum of 17 courses must be completed for the B.A. in computer science degree. Out of the 22 courses, 10 are lower-division courses (including two science courses), and 12 are upper-division courses. The B.S. is more structured than the B.A.; 18 specific courses are required, and the remaining four are elective upper-division computer science or computer engineering courses.

Lower-and Upper-Division Requirements

Students are required to take the following 18 courses:

Computer Science

12A/L, Introduction to Programming/Laboratory

12B/M, Introduction to Data Structures/Laboratory

13H/L, Introduction to Programming and Data Structures/Laboratory (Honors) may

be taken in place of taking both 12A/L and 12B/M

101, Algorithms and Abstract Data Types

102, Introduction to Analysis of Algorithms

104A, Fundamentals of Compiler Design I

111, Introduction to Operating Systems

112, Comparative Programming Languages

130, Computational Models

Computer Engineering

12/L, Computer Systems and Assembly Language/ Laboratory

16, Applied Discrete Mathematics

107, Mathematical Methods of Systems Analysis: Stochastic; or AMS 131,

Introduction to Probability Theory (formerly Mathematics 131A)

110, Computer Architecture

Mathematics

19A-B, Calculus for Science, Engineering, and Mathematics; or Mathematics 20A-B, Honors Calculus 23A. Multivariable Calculus

Applied Mathematics and Statistics

27/L, Mathematical Methods for Engineers/Laboratory (formerly Mathematics 27); or Mathematics 21, Linear Algebra; and 24, Ordinary Differential Equations 131, Introduction to Probability Theory; or Computer Engineering 107, Mathematical Methods of Systems Analysis: Stochastic

Physics or Chemistry

Either two physics or two chemistry courses, with their associated laboratories, from the following:

Physics 5A/L, Introduction to Physics I/Laboratory (or 6A/L); and either Physics 5B/M, Introduction to Physics II/Laboratory (or 6B/M); or Physics 5C/N, Introduction to Physics III/Laboratory (or 6C/N) Chemistry 1B/M, General Chemistry/Laboratory Chemistry 1C/N, General Chemistry/Laboratory

The remaining four courses must be upper-division computer science or computer engineering electives selected from the theory and practice course lists (see B.A. Major Requirements reference above). One of these courses may be replaced by an upper-division mathematics course from the theory course list.

Comprehensive Requirement

In addition to the above B.A. or B.S. requirements, students in the computer science majors must satisfy one of the following three exit requirements: pass one of the capstone courses (see Capstone Course below); obtain a scaled score of 600 or above on the Graduate Record Examination (GRE) Advanced Computer Science Subject Test; or successfully complete a senior thesis.

Capstone Courses

Students may choose from one of the following capstone courses to satisfy their exit requirement:

CMPS 104B, Fundamentals of Compiler Design II CMPS 116, Software Design Project CMPS 140, Artificial Intelligence CMPS 161/L, Visualization and Computer Animation/Laboratory CMPS 181, Database Systems II CMPS 183, Hypermedia and the Web

Students taking one of the capstone courses will enroll normally. Students need to pass the capstone course to pass the exit requirement. No course may be attempted more than twice without prior approval from the chair of the department offering the course. W's count as an attempted class for this purpose. If a student fails to receive a passing score during these two attempts, he or she may still take the GRE Advanced Computer Science Subject Test and achieve a scaled score of 600 or above to satisfy the exit requirement.

The senior thesis consists of a self-contained project within the broad scope of computer science, but one that is not available in the regular course offerings. A student wishing to complete a senior thesis must successfully complete a minimum of 5 credits in course 195, Senior Thesis Research; submit a written thesis proposal; and have it accepted by a faculty supervisor. The supervision of a senior thesis student is always at the discretion of the faculty member. A written report and an oral presentation to a faculty examining committee are required.

Students who elect to use the GRE Advanced Computer Science Subject Test as their senior exit requirement must arrange to take the GRE test and have scores submitted to the department before graduation deadlines. Contact the UCSC Career Center for GRE information and application forms.

Honors in the Major

Students must obtain a GPA of 3.8 or higher in the courses in the major to be considered for the distinction of "Highest Honors in the Major." Students must obtain a GPA of 3.5 or higher in the courses in the major to be considered for the distinction of "Honors in the Major." The School of Engineering reserves the right to withhold honors based on other criteria, such as incident of

academic dishonesty.

Computer Science Major Planners

The following are four sample academic plans for first-year students as preparation for the computer science major. Plans One A and Two A are suggested guidelines for students who are committed to the major early in their academic career. Plans One B and Two B are for students who are considering the major. Students who plan carefully can still have several openings free to take other breadth courses they find interesting.

Plan One A, B.A. Degree							
Year	Fall	Winter	Spring				
1st (frsh)	Cmps 10 Math 19A	Cmps 12A/L Math 19B	Cmps 12B/M Math 23A				
2nd (soph)	Cmpe 16	Cmpe 12/L	Cmps 101 Ams 27/L				
Plan One B,	B.A. Degree						
Year	Fall	Winter	Spring				
1st (frsh)	Ams 3	Math 19A	Math 19B				
2nd (soph)	Cmps 10 Math 23A	Cmpe 16 or 16H/L Cmps 12A/L	Cmps 12B/M AMS 27/L				
Plan Two A, B.S. Degree							
Year	Fall	Winter	Spring				
1st (frsh)	Cmps 12A/L Math 19A	Cmps 12B/M Math 19B	Cmpe 12/L Math 23A				
2nd (soph)	Cmpe 16 Ams 27/L	Cmpe 100/L Phys 6A/L	Cmps 101 Phys 6C/N				
Plan Two B,	B.S. Degree						
Year	Fall	Winter	Spring				
1st (frsh)	Cmps 10	Math 19A	Cmps 12A/L Math 19B				
2nd (soph)	Math 23A	Cmps 12B/M Cmpe 16	Cmpe 12/L Cmps 101 or Ams 27/L				

B.S. Computer Science: Computer Game Design Major Requirements

The goal of this degree is to provide students a deep understanding of the technical aspects of computer game engineering, and a broad background in the artistic, narrative, and dramatic elements of game design. The core of the degree program is a strong grounding in computer science and computer engineering, preceded by a foundation in math and physics. Classes in ethics, as well as courses in art, film, music, theater arts, and economics provide breadth in topics of special relevance to computer game design. In their upper division courses, students gain depth by taking upper division electives in computer science and computer engineering. Two advanced courses in digital media give students the ability to view computer software from an artistic framework. A year-long capstone game design studio class allows students to develop substantial computer games, and integrate materials from the rest of the program.

The curriculum has 124-141 credits in 24-25 courses (depending on whether a student enters as a transfer student). 12 of the courses are upper division. Students interested in the major should pay special attention to the overlap between general education requirements and major requirements, as the major covers up to six general education requirements.

Lower- and Upper-Division Requirements

Course requirements are divided into six conceptual areas:

Mathematics and Physics

Complete all of the following courses:

Mathematics 19A-B, *Calculus for Science, Engineering, and Mathematics* (Students can alternately take Honors Calculus, Mathematics 20A-B. Credit for one or both Math 19A-B may be granted with adequate performance on the CEEB calculus AB or BC Advanced Placement exam)

Mathematics 21, *Linear Algebra*, or Applied Mathematics and Statistics 27/L, *Mathematical Methods for Engineers/Laboratory*

Computer Engineering 16 (or 16H), Applied Discrete Mathematics (or Honors Applied Discrete Mathematics)

Physics 5A/L (or 6A/L), Introduction to Physics I/Laboratory

Computational Foundations

Complete all of the following courses:

```
Computer Science 12A/L: Introduction to Programming/Laboratory
Computer Science 12B/M: Introduction to Data Structures/Laboratory
Computer Engineering 12/L: Computer Systems and Assembly Language/Laboratory
```

Computer Science 109: Advanced Programming

Computer Science 101: Algorithms and Abstract Data Types

Game Design

Complete all of the following courses. The course Game Design Experience is waived for transfer students.

```
Computer Science 20: Game Design Experience
Computer Science 170: Game Design Studio I
Computer Science 171: Game Design Studio II
Computer Science 172: Game Design Studio III
```

Computer Game Engineering

Complete five courses from the following list:

```
Computer Science 160/L: Introduction to Computer Graphics/Laboratory
Computer Science 161/L: Visualization and Computer Animation/Laboratory
Computer Science 164/L: Game Engines/Laboratory
Computer Engineering 163/L: Multimedia Processing and Applications
Computer Science 140: Artificial Intelligence
Computer Science 146: Game Artificial Intelligence
Computer Engineering 110: Computer Architecture
Computer Science 128: Distributed Systems: File Sharing, Online Gaming, and
Computer Science 105: Systems Programming
Computer Science 111: Introduction to Operating Systems
Computer Engineering 150: Introduction to Computer Networks
Computer Engineering 152: Analysis and Design of Communication Protocols
Computer Engineering 113: Parallel and Concurrent Programming
Computer Engineering 118/L: Introduction to Mechatronics/Laboratory
Computer Science 180: Database Systems I
Computer Science 181: Database Systems II
Computer Science 183: Hypermedia and the Web
Computer Science 102: Introduction to Analysis of Algorithms
Computer Science 130: Computational Models
Computer Engineering 117/L: Embedded Software/Laboratory
Applied Mathematics and Statistics 131: Introduction to Probability Theory
Applied Mathematics and Statistics 147: Computational Methods and Applications
Applied Mathematics and Statistics 162: Design and Analysis of Computer
Simulation Experiments
```

Digital Media

Complete two courses from the following list:

```
Film and Digital Media 170A: Introduction to Digital Media Production
Film and Digital Media 177: Digital Media Workshop: Computer as a Medium
Film and Digital Media 171D: Social Information Spaces
Any course offered in the Digital Arts New Media (DANM) curriculum (requires approval of professor)
Art 118: Computer Art: Theories, Methods, and Practices (may require approval of instructor)
Theater Arts 157: Playwriting Workshop
```

Art and Social Foundations

Complete the ethics requirement and three of the following electives.

```
Ethics Requirement
```

One of:

```
Computer Engineering 80E: Engineering Ethics
Philosophy 22: Introduction to Ethical Theory
Philosophy 24: Introduction to Ethics: Contemporary Moral Issues
Philosophy 28: Environmental Ethics
Biomolecular Engineering 80G: Bioethics in the 21st Century:
```

Science, Business, and Society (crosslisted as PHIL 80G)

Art Elective

One of:

Art 10G: 2D Foundation Art 10H: 3D Foundation

Art 80A: Introduction to Drawing

Art 80F: Introduction to Issues in Digital Media

Film Elective

One of:

Film and Digital Media 20A: The Film Experience

Film and Digital Media 20C: Introduction to Digital Media

Film and Digital Media 20P: Introduction to Production Technique

Theater Elective

One of:

Theater Arts 10: Introduction to Theater Design and Technology

Theater Arts 18: Drafting for Theatrical Production
Theater Arts 19: Design Studio: Lighting Studio
Theater Arts 20: Introductory Studies in Acting

Theater Arts 30: Introduction to Modern Dance Theory and

Technique

Theater Arts 40: Introduction to Directing Theater Arts 80E: Stand-Up Comedy

Theater Arts 80L: Muppet Magic: Jim Henson's Art

Music Elective

One of:

Music 11A: Introduction to Western Art Music

Music 11B: Introduction to Jazz

Music 11C: Introduction to American Popular Music

Music 11D: Introduction to World Music

Music 80C: History, Literature, and Technology of Electronic Music

Music 80L: Artificial Intelligence and Music

Music 80M: Film Music

Music 80R: Music and the World Wide Web

Economics Elective

One of:

Economics 1: Introductory Microeconomics: Resource Allocation and

Market Structure

Economics 2: Introductory Macroeconomics: Aggregate Economic

Activity

Economics 80H: Wall Street and the Money Game

Comprehensive Requirement

Students satisfy the senior comprehensive requirement by either receiving a passing grade in all three courses of the Game Design Studio sequence or performing a senior thesis.

Computer Science: Computer Game Design Major Planners

The following are three sample academic plans that students can use to plan their sequence of courses in the major. Plans One and Two are suggested guidelines for students who begin their studies in their freshman year. Such students, if they plan carefully will have several openings free to take other breadth courses they find interesting. Plan One is for a student entering UCSC in their freshman year who is prepared to go directly into Mathematics 19A/20A and Computer Science 12A. Plan Two is for a student entering UCSC their freshman year who needs to take preparatory courses prior to Mathematics 19A or Computer Science 12A to ensure a successful outcome in those courses. Plan Three is for students that transfer to campus at the beginning of their junior year.

Plan One-Enter UCSC Freshman Year							
Year	Fall	Winter	Spring				

1st (frsh)	ore Composition (C, Iath 19A or 20A or gen ed) MPS 12A/L Math 19B or 20B MPS 12L or Ionors Project ab I CMPS 12M or Honors Project Lab II		Art/Social Elective I CMPE 12/L CMPS 20 (Game Design Experience)

Minor Requirements

Courses required for the computer science minor are Mathematics 19A-B or 20A-B, and 23A;

Applied Mathematics and Statistics 27/L (formerly Mathematics 27); Computer Science courses 12A/L and 12B/M (or 13H/L can be taken to cover both 12A/L and 12B/M12M/L) and course 101; Computer Engineering 12/L and 16; and four additional upper-division computer science courses from a list of approved electives (see the department's checklist for the computer science minor at www.soe.ucsc.edu/programs/cs/undergraduate/). In selecting the four upper-division courses, students may elect to focus on one subdiscipline of computer science by completing the courses in a BA depth sequence. Upper-division computer engineering and mathematics courses that generally apply toward the computer science major may not be applied toward the computer science minor. In addition, some upper-division computer science courses may not be applied toward the computer science minor. There is no comprehensive examination or senior thesis requirement for the minor.

Graduate Programs

Program Description

The Computer Science Department at UCSC offers both a master's program and a doctoral program. The goal of these programs is to help students develop into independent scholars who are prepared for productive careers in research, teaching, and industry. The master's degree may be used as a terminal degree or as the first step toward the Ph.D. degree. The student-faculty ratio is five to one, making it possible for students to receive individual attention and to pursue programs that fit their individual needs. The intellectual atmosphere is enriched by regular colloquia and seminars presented by eminent contributors to the field, many of whom are associated with other major universities and industrial research centers in the San Francisco Bay Area.

The Computer Science Department enjoys a close relationship with the Computer Engineering and Electrical Engineering Departments, the Bioinformatics Department, and the new Applied Mathematics and Statistics Department.

Most computer science graduate students are hired as teaching assistants helping with undergraduate courses, hired as research assistants working for computer science and other School of Engineering faculty, or awarded fellowships to pursue their research.

Additional information on the computer science graduate programs can be found on the department's web pages at www.soe.ucsc.edu.

Requirements for the Master's Degree: Project Track

Course Requirements

Each student is required to take 50 credits as follows:

Computer Science

- 200, Research and Teaching in Computer Science and Engineering, 3 credits;
- 201, Analysis of Algorithms, 5 credits;
- 203, Programming Languages, 5 credits;
- 296, Master's Project, 2 credits;
- A base requirement in computer architecture must be met by taking CMPE 110 or CMPE 202 or equivalent elsewhere (approval required);
- one course each from three different breadth categories for a total of three courses (15 credits). See www.soe.ucsc.edu/programs/cs/graduate/;
- all remaining credits must be graduate elective courses from the list of approved graduate courses. See www.soe.ucsc.edu/programs/cs/graduate/;
- two upper-division undergraduate computer science courses (other than course 101) or a graduate course (not seminar) in related disciplines outside the list of approved graduate courses may be substituted for one graduate course, when necessary to strengthen a student's preparation for graduate studies, with prior approval from the adviser and the graduate director.

Project

Completion of a master's project is required for the master's degree. In consultation with the adviser, the student forms a master's project reading committee of at least two faculty members, each of whom is provided a copy of the project report. The final project must be accepted by the review committee before the award of the master of science degree.

Requirements for the Master's Degree: Thesis Track

Course Requirements

Each student is required to take 48 credits as follows:

Computer Science

- 200, Research and Teaching in Computer Science and Engineering, 3 credits;
- 201, Analysis of Algorithms, 5 credits;
- 203, Programming Languages, 5 credits;
- A base requirement in computer architecture must be met by taking CMPE 110 or CMPE 202 or equivalent elsewhere (approval required);
- one course each from three different breadth categories for a total of 3 courses (15 credits). See www.soe.ucsc.edu/programs/cs/graduate/;
- up to 10 credits of course 297, Independent Study or Research; or course 299, Thesis Research;
- all remaining credits must be graduate elective courses from the list of approved graduate courses. See www.soe.ucsc.edu/programs/cs/graduate/;
- two upper-division undergraduate computer science courses (other than course 101) or a graduate course (not seminar) in related disciplines outside the list of approved graduate courses may be substituted for one graduate course, when necessary to strengthen a student's preparation for graduate studies, with prior approval from the adviser and the graduate director.

Thesis

Completion of a master's thesis is required for the master's degree. To fulfill this requirement, the student submits a written proposal to a faculty member, usually by the third academic quarter. By accepting the proposal, the faculty member becomes the thesis adviser. In consultation with the adviser, the student forms a master's thesis reading committee with at least two additional faculty members, each of whom is provided a copy of the proposal. The student presents an expository talk on the thesis research, and the final thesis must be accepted by the review committee before the award of the master of science degree.

Requirements for the Ph.D. Degree

Course Requirements

Each student is required to take 58 credits as follows:

Computer Science

- 200, Research and Teaching in Computer Science and Engineering, 3 credits;
- · 201, Analysis of Algorithms, 5 credits;
- 203, Programming Languages, 5 credits;
- A base requirement in computer architecture must be met by taking CMPE 110 or CMPE 202 or equivalent elsewhere (approval required);
- One course each from three different breadth categories for a total of 3 courses (15 credits). See www.soe.ucsc.edu/programs/cs/graduate/;
- up to 10 credits of course 297, *Independent Study or Research*; or course 299, *Thesis Research*;
- At least 33 units must be in computer science;
- All remaining credits must be graduate elective courses from the list of approved graduate courses. See www.soe.ucsc.edu/programs/cs/graduate/;
- Graduate courses (not seminars) in related disciplines outside the list of approved graduate courses may be substituted, when necessary to strengthen a student's preparation for graduate studies, with prior approval from the adviser and the graduate director. Course selection should form a coherent plan of study and requires adviser approval. Undergraduate courses may not be used to satisfy Ph.D. course requirements;
- Each student is required to complete at least one quarter of teaching assistantship. This requirement can be met after advancement to candidacy. Certain exceptions may be permitted for those with extensive prior teaching experience or those who are not allowed to be employed due to visa regulations.

Ph.D. students who have satisfied the requirements for the master's degree are eligible to receive a master's degree.

Dissertation

Each student writes a Ph.D. dissertation. The dissertation must show the results of in-depth research, be an original contribution of significant knowledge, and include material worthy of publication. Where appropriate, research internships with companies, government labs, or elsewhere are recognized (and may be required) as an integral part of the research leading to the dissertation. As the first step, a student submits a written dissertation proposal to a School of Engineering faculty member. By accepting the proposal, the faculty member becomes the dissertation supervisor. The dissertation proposal is publicly and formally presented in an oral qualifying examination given by a qualifying exam committee, approved by the graduate committee and the Graduate Council. The student must submit his or her written dissertation proposal to all members of the committee and the graduate assistant one month in advance of the examination

Students are advanced to candidacy after they have completed the course requirements, passed

the qualifying examination, cleared all Incompletes from their records, have an appointed dissertation reading committee, and paid the filing fee. Students who have not advanced to candidacy by the end of their fourth year will be placed on academic probation. Each Ph.D. candidate submits the completed dissertation to a reading committee at least one month prior to the dissertation defense. The appointment of the dissertation reading committee is made immediately after the qualifying exam and is necessary for advancing to candidacy. The candidate presents his or her research results in a public seminar sponsored by the dissertation supervisor. The seminar is followed by a defense of the dissertation to the reading committee and attending faculty, who will then decide whether the dissertation is acceptable or requires revision. Successful completion of the dissertation fulfills the final academic requirement for the Ph.D. degree.

Transfer Credit

Up to three School of Engineering courses fulfilling the degree requirements of either the M.S. or Ph.D. degrees may be taken before beginning the graduate program through the concurrent enrollment program.

Ph.D. students who have previously earned a master's degree in a related field at another institution may substitute courses from their previous university with approval of the adviser and the graduate committee.

Courses from other institutions may not be applied to the M.S. degree course requirements. Petitions should be submitted along with the transcript from the other institution or UCSC extension. For courses taken at other institutions, copies of the syllabi, exams, and other course work should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UCSC.

At most, a total of three courses may be transferred from concurrent enrollment and other institutions.

Review of Progress

Each year, the faculty reviews the progress of every student. Students not making adequate progress toward completion of degree requirements (see Graduate Handbook for policy on satisfactory academic progress) are subject to dismissal from the program. Students with academic deficiencies may be required to take additional courses. Full-time students with no academic deficiencies are normally expected to complete the degree requirements at the rate of at least two courses per quarter. Full-time students must complete CMPS 201, CMPE 202, and CMPS 203 within two years and normally must complete all course requirements within two years for the M.S. and three years for the Ph.D.

Students receiving two or more grades of below B or U (fail) in the School of Engineering (SoE) courses are not making adequate progress and will be placed on academic probation for the following three quarters of registered enrollment. Withdrawing or taking a leave of absence does not count as enrollment. Part-time enrollment is counted as a half quarter of enrollment.

Should any computer science graduate student fail an SoE course while on probation, the Computer Science Department may request the graduate dean to dismiss that student from the graduate program. If after being removed from probation, the student again fails a SoE course, he or she will return immediately to academic probation.

Graduate students experiencing circumstances or difficulties that impact their academic performance should contact their adviser and the graduate director immediately. Students may appeal their dismissal. See

www.soe.ucsc.edu/programs/cs/graduate/CSCurrentReq.html#progress for more information on this policy.

Computer Sciences

Baskin School of Engineering 335 Baskin Engineering Building (831) 459-2158 http://www.soe.ucsc.edu

Program Description | Faculty | Course Descriptions

Program Description

Computer science is the study of the theoretical and practical aspects of computer technology and computer usage. The Computer Science Department offers courses on a wide range of topics, many of which include a mathematical component, and offers undergraduate bachelor of arts and bachelor of science degrees in computer science, a bachelor of science in computer science: computer game design, bachelor of science as well as the master of science and doctor of philosophy degrees. Besides offering instructional courses, the department engages in a substantial research program in which both advanced undergraduates and graduate students participate.

The bachelor of arts program at UCSC is designed to give students a solid grounding in both theoretical and practical topics in computer science, computer engineering, and mathematics while leaving flexibility for a broad program of study, including many courses outside of the sciences, or even for a double major in another discipline. The bachelor of science program is appropriate for students desiring a somewhat stronger concentration in the sciences, with more courses in computer science and computer engineering, as well as courses in physics or chemistry; this program also allows for electives outside of the sciences.

The bachelor of science in computer game design builds on a rigorous core program of study in computer science, adding interdisciplinary study on the artistic, dramatic, and narrative elements of computer game design; a year-long game design project acts as a capstone learning experience. Because many courses in all three programs have prerequisites, students leaning toward any of these programs will enjoy greater scheduling flexibility if they begin some preparatory courses in their first year. The specific course requirements for each undergraduate degree are given below.

Applications of computer science are found in many other areas of study, from art and music to business and science. Thus, interdisciplinary activities are encouraged. For those students whose primary interest is in another area, a minor in computer science is offered.

Courses for Nonmajors

The Computer Science Department offers a wide range of courses intended for nonmajors as well as majors. These include course 2, *Computer Literacy*; course 10, *Introduction to Computer Science*; course 80B, *Systems and Simulation*; course 80C, *Computer Arts and Graphics*; course 80J, *Technology Targeted at Social Issues*; and course 80K, *Foundations of Interactive Game Design*. Course 10, *Introduction to Computer Science*, may be beneficial to students who are considering the major but have a limited background in computer science. There are also introductory programming

classes intended for nonmajors: courses 60G and 60N, Beginning Programming.

Computer Science Policies

Admissions Policy

Admission to the computer science majors is selective. First-year applicants may receive direct admission at the time they apply to UCSC based on their high school record and test scores. Admission to the major after a student has entered UCSC is based on performance in the foundation courses 12A and 12B (or 13H); Computer Engineering 16; and Mathematics 19A-B, or Mathematics 20A-B all School of Engineering and Physical and Biological Sciences courses attempted at UCSC. Please refer to the School of Engineering section of the catalog for the full admissions policy.

Foundation Courses

The foundation courses for each computer science major are as follows:

Computer Science BS and BA: Computer Science 12A and 12B (or 13H); Computer Engineering 16; and Mathematics 19A-B, or 20A-B
Computer Game Design: Computer Science 12A and 12B, Computer Engineering 16 or Mathematics 19A-B.

<u>UCSC</u> students that have completed three or more quarters at UCSC must complete the foundation courses before they can declare a computer science major.

Disqualification and Satisfactory Progress in the Major

Students who do not make adequate progress in the computer science major may be disqualified from the major. Adequate progress normally means passing a minimum of three courses required for the major over every three consecutive quarters. (For part-time students, 15 credits attempted equals one full term.) Students who do not expect to meet this requirement should consult their faculty adviser and/or the undergraduate director for their major beforehand.

Students who receive a total of three grades of D, F, or No Pass in the key courses, Computer Science 12A, 12B, 13H, 101; and Computer Engineering 12 and 16, may, at the discretion of the department, be disqualified from the major.

The department may, at its sole discretion, disqualify from the major any student making two unsuccessful attempts in any one of the following principal courses commonly used to satisfy degree requirements:

- Computer Science 12A, 12B, 13H, 101, 102, 104A, 104B, 105, 111, 112, 115, 116, 130, 132, 140, 160, 161, 180, 181, and 183;
- Computer Engineering 12, 16, 100, 107, and 110;
- Applied Mathematics and Statistics 27, 131, and 147;
- Physics 5A, 5B, 5C, 6A, 6B, and 6C;
- Chemistry 1B and 1C;
- Mathematics 19A-B or Mathematics 20A-B, and 23A.

Each grade of D, F, or No Pass counts as one unsuccessful attempt; each grade of W counts as one-half of an unsuccessful attempt.

The <u>School of Engineering section contains additional disqualification policies</u>, such as maintaining a 2.0 School of Engineering GPA in the major and the ethics requirement, that apply to computer science majors.

Students at risk of disqualification must meet with an undergraduate adviser to discuss their options for continuing in the major.

Letter Grade Policy

The Computer Science Department requires letter grades for all courses applied toward the B.A., B.S., and minor in computer science with the exception of two lower-division courses which students may elect to take Pass/No Pass. This policy includes courses required for the computer science majors but sponsored by other departments.

Transfer Students

Most courses in the computer science program at UCSC have a strong theoretical component to prepare the student for designing, as opposed to simply using, computer systems. Often, courses taken at other institutions which emphasize applications of current languages and computers do not count toward the computer science major at UCSC.

At UCSC, students are first introduced to programming using the programming language Java. The core programming sequence, courses 12A/L and 12B/M (or 13H/L, which covers both 12A/L and 12B/M), exposes students to both Java and C. Many upper-division courses that involve programming use the C and C++ programming languages. Transfer students who are not familiar with both Java and C may need to take a remedial course. Students familiar with C++ and Unix should find the transition to Java and C relatively simple.

Please refer to the <u>School of Engineering section of the catalog for the policy regarding transfer students.</u>

School of Engineering Policies

Please refer to the School of Engineering section of the catalog for additional policies that apply to all School of Engineering programs. These policies include admission to the major, limits on the number of times courses can be attempted, and the need for computer science students to obtain preapproval before taking courses elsewhere.

Preparation for the Major

It is recommended that high school students intending to apply to the computer science major have completed four years of mathematics (through advanced algebra and trigonometry) and three years of science in high school. Comparable college mathematics and science courses completed at other institutions also serve to properly prepare a student for the computer science major.

B.A. Major Requirements

The aim of this program is to expose students to a rigorous curriculum in computer science while maintaining sufficient flexibility so that students can take courses outside computer science, pursue a minor in another discipline, or complete a double major. Every student must complete a minimum of 17 courses, eight lower-division and nine upper-division. Out of these, the eight lower-division courses and the first upper-division course are required preparatory courses for every student. Once these preparatory courses are completed, students tailor their own program by choosing

eight additional upper-division elective courses. To provide an adequate balance in subject matter, these additional courses must be divided between those that emphasize the theoretical aspects of the field and those that have a more practical focus. To provide a depth of study in one aspect of computer science, students must complete one of the approved depth sequences.

Lower-Division Requirements

Each student must successfully complete the following nine required preparatory courses:

Computer Science

12A/L, Introduction to Programming/Computer Programming Laboratory; 12B/M, Introduction to Data Structures/Laboratory; 13H/L, Introduction to Programming and Data Structures/Laboratory (Honors)

Computer Engineering

12/L, Computer Systems and Assembly Language/ Laboratory
16 (or 16H), Applied Discrete Mathematics (or Honors Applied Discrete Mathematics)

Mathematics

19A-B, Calculus for Science, Engineering, and Mathematics (credit for one or both may be granted with adequate performance on the CEEB calculus AB or BC Advanced Placement exam); or Mathematics 20A-B, Honors Calculus
23A. Multivariable Calculus

Applied Mathematics and Statistics

27/L, Mathematical Methods for Engineers/Laboratory (formerly Mathematics 27); or Mathematics 21, Linear Algebra; and 24, Ordinary Differential Equations

Upper-Division Requirements

101, Algorithms and Abstract Data Types

In addition to the above nine required courses, students must complete eight upper division electives, by completing the requirements for one depth sequence. At least 50 percent of these upper-division courses must be completed at UCSC.

Depth Sequence Requirements

For the following depth sequences, students must take at least seven courses from the theory and practice course lists, as follows:

- a minimum of three courses from the theory course list and a minimum of three courses from the practice course list;
- the seven courses from the theory and practice course lists must include all of the courses of one of the depth sequences;
- the eighth upper-division elective must be selected from any upper-division

(5-credit) School of Engineering course.

The depth sequence courses are:

- Compilers and language theory: Computer Science 104A, 112, and 104B or 130;
- Operating systems and hardware: Computer Engineering 100/L, Computer Science 111, and Computer Engineering 110 or 121/L;
- Theory: Computer Science 102, 130, and 132;
- Software methodology: Computer Science 115 and two of the following: 104A, 112, and 116;
- Graphics: Computer Science 160/⊥, 161/⊥, and AMS 147;
- Databases: Computer Science 180, 181, and 183

For the Interactive Game Design depth sequence only, students must satisfy the following requirements:

- Core courses: students must take Computer Science 130, 105, 140, 160/⊥, and 115.
- Game Design Electives: students must take two courses from the game design electives list.
- Free elective: any course from the theory and practice course lists.

Theory Course List

Computer Science

102, Introduction to Analysis of Algorithms

130, Computational Models

132, Computability and Computational Complexity

142, Machine Learning and Data Mining

Computer Engineering

107, Mathematical Methods of Systems Analysis: Stochastic

108, Data Compression

154, Data Communications

177, Applied Graph Theory and Algorithms

Electrical Engineering

103, Signals and Systems

153, Digital Signal Processing (formerly Computer Engineering 153)

Applied Mathematics and Statistics

131, Introduction to Probability Theory (formerly Mathematics 131A)

146, Discrete Dynamical Systems Introduction to Dynamical Systems

147, Computational Methods and Applications

162, Design and Analysis of Computer Simulation Experiments

Mathematics

115, Graph Theory

117, Advanced Linear Algebra

126, Mathematical Control Theory

Practice Course List

Computer Science

104A, Fundamentals of Compiler Design I

104B, Fundamentals of Compiler Design II

105, Systems Programming

109, Advanced Programming

111, Introduction to Operating Systems

112, Comparative Programming Languages

115, Software Methodology

116, Software Design Projects

122, Computer Security

128, Distributed Systems: File Sharing, Online Gaming, and More

129, Data Storage Systems

140, Artificial Intelligence

146, Game Artificial Intelligence

160/L, Introduction to Computer Graphics /Laboratory

161/L, Visualization and Computer Animation/Laboratory

164/L, Game Engines/Laboratory

180, Database Systems I

181, Database Systems II

183, Hypermedia and the Web

190X, Methods of Cryptography

204, Compiler Design

Computer Engineering

100/L, Logic Design/Laboratory

110, Computer Architecture

113, Parallel and Concurrent Programming

117/L, Embedded Software/Laboratory

B.S. Major Requirements

This program is designed for students who wish to maximize exposure to computer science concepts and methods by taking a larger selection of upper-division computer science courses, as well as additional courses in the sciences and mathematics. A minimum of 22 courses must be completed for the B.S. in computer science degree, whereas a minimum of 17 courses must be completed for the B.A. in computer science degree. Out of the 22 courses, 10 are lower-division courses (including two science courses), and 12 are upper-division courses. The B.S. is more structured than the B.A.: 18 specific courses are required, and the remaining four are elective upper-division computer science or computer engineering courses.

Lower-and Upper-Division Requirements

Students are required to take the following 18 courses:

Computer Science

12A/L, Introduction to Programming/Laboratory

12B/M, Introduction to Data Structures/Laboratory

13H/L, Introduction to Programming and Data Structures/Laboratory

(Honors) (may be taken in place of taking both 12A/L and 12B/M)

101, Algorithms and Abstract Data Types

102, Introduction to Analysis of Algorithms

104A, Fundamentals of Compiler Design I

111, Introduction to Operating Systems

112, Comparative Programming Languages

130, Computational Models

Computer Engineering

12/L, Computer Systems and Assembly Language/ Laboratory

16, Applied Discrete Mathematics

107, Mathematical Methods of Systems Analysis: Stochastic; or AMS

131, Introduction to Probability Theory (formerly Mathematics 131A)

110, Computer Architecture

Mathematics

19A-B, Calculus for Science, Engineering, and Mathematics; or Mathematics 20A-B, Honors Calculus

23A, Multivariable Calculus

Applied Mathematics and Statistics

27/L, Mathematical Methods for Engineers/Laboratory (formerly Mathematics 27); or Mathematics 21, Linear Algebra; and 24, Ordinary Differential Equations
131, Introduction to Probability Theory; or Computer Engineering 107, Mathematical Methods of Systems Analysis: Stochastic

Physics or Chemistry

Either two physics or two chemistry courses, with their associated laboratories, from the following:

Physics 5A/L, Introduction to Physics I/Laboratory (or 6A/L); and either Physics 5B/M, Introduction to Physics II/Laboratory (or 6B/M); or Physics 5C/N, Introduction to Physics III/Laboratory (or 6C/N)
Chemistry 1B/M, General Chemistry/Laboratory
Chemistry 1C/N, General Chemistry/Laboratory

The remaining four courses must be upper-division computer science or computer engineering electives selected from the theory and practice course lists (see <u>B.A. Major Requirements</u> reference above). One of these courses may be replaced by an upper-division mathematics course from the theory course list.

Comprehensive Requirement

In addition to the above B.A. or B.S. requirements, students in the computer science majors must satisfy one of the following three exit requirements: pass one of the capstone courses (see <u>Capstone Course</u> below); obtain a scaled score of 600 or above on the Graduate Record Examination (GRE) Advanced Computer Science Subject Test; or successfully complete a senior thesis.

Capstone Courses

Students may choose from one of the following capstone courses to satisfy their exit requirement:

CMPS 104A, Fundamentals of Compiler Design I
CMPS 104B, Fundamentals of Compiler Design II
CMPS 116, Software Design Project
CMPS 140, Artificial Intelligence
CMPS 161/L, Visualization and Computer Animation/Laboratory
CMPS 181, Database Systems II
CMPS 183, Hypermedia and the Web

Students taking one of the capstone courses will enroll normally. Students need to pass the capstone course to pass the exit requirement. No course may be attempted more than twice without prior approval from the chair of the department offering the course. W's count as an attempted class for this purpose. If a student fails to receive a passing score during these two attempts, he or she may still take the GRE

Advanced Computer Science Subject Test and achieve a scaled score of 600 or above to satisfy the exit requirement.

The senior thesis consists of a self-contained project within the broad scope of computer science, but one that is not available in the regular course offerings. A student wishing to complete a senior thesis must successfully complete a minimum of 5 credits in course 195, Senior Thesis Research; submit a written thesis proposal; and have it accepted by a faculty supervisor. The supervision of a senior thesis student is always at the discretion of the faculty member. A written report and an oral presentation to a faculty examining committee are required.

Students who elect to use the GRE Advanced Computer Science Subject Test as their senior exit requirement must arrange to take the GRE test and have scores submitted to the department before graduation deadlines. Contact the UCSC Career Center for GRE information and application forms.

Honors in the Major

Students who must obtain a GPA of 3.8 or higher in the courses in the major will receive to be considered for the distinction of "Highest Honors in the Major." Students who must obtain a GPA of 3.5 or higher in the courses in the major will receive be considered for the distinction of "Honors in the Major." The School of Engineering reserves the right to withhold honors based on other criteria, such as incident of academic dishonesty.

Computer Science Major Planners

The following are four sample academic plans for first-year students as preparation for the computer science major. Plans One A and Two A are suggested guidelines for students who are committed to the major early in their academic career. Plans One B and Two B are for students who are considering the major. Students who plan carefully can still have several openings free to take other breadth courses they find interesting.

Plan One A, B.A. Degree					
Year	Fall	Winter	Spring		
1st	Cmps 10	Cmps 12A/L	Cmps 12B/M

B.S. Computer Science: Computer Game Design Major Requirements

The goal of this degree is to provide students a deep understanding of the technical aspects of computer game engineering, and a broad background in the artistic, narrative, and dramatic elements of game design. The core of the degree program is a strong grounding in computer science and computer engineering, preceded by a foundation in math and physics. Classes in ethics, as well as courses in art, film, music, theater arts, and economics provide breadth in topics of special relevance to computer game design. In their upper division courses, students gain depth by taking upper division electives in computer science and computer engineering. Two advanced courses in digital media give students the ability to view computer software from an artistic framework. A year-long capstone game design studio class allows students to develop substantial computer games, and integrate materials from the rest of the program.

The curriculum has 124-141 credits in 24-25 courses (depending on whether a student enters as a transfer student). 12 of the courses are upper division. Students interested in the major should pay special attention to the overlap between general education requirements and major requirements, as the major covers up to six general education requirements.

Lower- and Upper-Division Requirements

Course requirements are divided into six conceptual areas:

Mathematics and Physics

Complete all of the following courses:

Mathematics 19A-B, Calculus for Science, Engineering, and Mathematics (Students can alternately take Honors Calculus, Mathematics 20A-B. Credit for one or both Math 19A-B may be granted with adequate performance on the CEEB calculus AB or BC Advanced Placement exam)

Mathematics 21, *Linear Algebra*, or Applied Mathematics and Statistics 27/L, *Mathematical Methods for Engineers/Laboratory*Computer Engineering 16 (or 16H), *Applied Discrete Mathematics* (or

Honors Applied Discrete Mathematics)

Physics 5A/L (or 6A/L), *Introduction to Physics I*_{/Laboratory}

Computational Foundations

Complete all of the following courses:

Computer Science 12A/L: Introduction to Programming/Laboratory
Computer Science 12B/M: Introduction to Data Structures/Laboratory
Computer Engineering 12/L: Computer Systems and Assembly
Language/ Laboratory

Computer Science 109: Advanced Programming
Computer Science 101: Algorithms and Abstract Data Types

Game Design

Complete all of the following courses. The course Game Design Experience is waived for transfer students.

Computer Science 20: Game Design Experience Computer Science 170: Game Design Studio I Computer Science 171: Game Design Studio II Computer Science 172: Game Design Studio III

Computer Game Engineering

Complete six-five courses from the following list:

Computer Science 160/L: Introduction to Computer Graphics/Laboratory

Computer Science 161/L: Visualization and Computer

Animation/Laboratory

Computer Science 164/L: Game Engines/Laboratory

Computer Engineering 163/L: Multimedia Processing and Applications

Computer Science 140: Artificial Intelligence

Computer Science 146: Game Artificial Intelligence

Computer Engineering 110: Computer Architecture

Computer Science 128: Distributed Systems: File Sharing, Online

Gaming, and More

Computer Science 105: Systems Programming

Computer Science 111: Introduction to Operating Systems

Computer Engineering 150: Introduction to Computer Networks

Computer Engineering 152: Analysis and Design of Communication

Protocols

Computer Engineering 113: Parallel and Concurrent Programming

Computer Engineering 118/L: Introduction to Mechatronics/Laboratory

Computer Science 180: Database Systems I

Computer Science 181: Database Systems II

Computer Science 183: Hypermedia and the Web

Computer Science 102: Introduction to Analysis of Algorithms

Computer Science 130: Computational Models

Computer Engineering 117/L: Embedded Software/Laboratory

Applied Mathematics and Statistics 131: *Introduction to Probability Theory*

Applied Mathematics and Statistics 147: Computational Methods and Applications

Applied Mathematics and Statistics 162: Design and Analysis of Computer Simulation Experiments

Digital Media

Complete two courses from the following list:

Film and Digital Media 170A: Introduction to Digital Media Production Film and Digital Media 177: Digital Media Workshop: Computer as <u>a</u> Medium

Film and Digital Media 171D: Social Information Spaces

Any course offered in the Digital Arts New Media (DANM) curriculum (requires approval of professor)

Art 118: Computer Art: Theories, Methods, and Practices (may require approval of instructor)

Theater Arts 157: Playwriting Workshop

Art and Social Foundations

Complete the ethics requirement and three of the following electives.

Ethics Requirement

One of:

Computer Engineering 80E: Engineering Ethics Philosophy 22: Introduction to Ethical Theory

Philosophy 24: Introduction to Ethics: Contemporary Moral

Issues

Philosophy 28: Environmental Ethics

Biomolecular Engineering 80G: Bioethics in the 21st

Century:

Science, Business, and Society (crosslisted as PHIL 80G)

Art Elective

One of:

Art 10G: 2D Foundation Art 10H: 3D Foundation

Art 80A: Introduction to Drawing

Art 80F: Introduction to Issues in Digital Media

Film Elective

One of:

Film and Digital Media 20A: The Film Experience

Film and Digital Media 20C: *Introduction to Digital Media* Film and Digital Media 20P: *Introduction to Production*

Technique

Theater Elective

One of:

Theater Arts 10: Introduction to Theater Design and

Technology

Theater Arts 18: Drafting for Theatrical Production

Theater Arts 19: Design Studio: Lighting Studio

Theater Arts 20: Introductory Studies in Acting

Theater Arts 30: Introduction to Modern Dance Theory and

Technique

Theater Arts 40: *Introduction to Directing* Theater Arts 80E: *Stand-Up Comedy*

Theater Arts 80L: Muppet Magic: Jim Henson's Art

Music Elective

One of:

Music 11A: Introduction to Western Art Music

Music 11B: Introduction to Jazz

Music 11C: Introduction to American Popular Music

Music 11D: Introduction to World Music

Music 80C: History, Literature, and Technology of

Electronic Music

Music 80L: Artificial Intelligence and Music

Music 80M: Film Music

Music 80R: Music and the World Wide Web

Economics Elective

One of:

Economics 1: Introductory Microeconomics: Resource

Allocation and Market Structure

Economics 2: Introductory Macroeconomics: Aggregate

Economic Activity

Economics 80H: Wall Street and the Money Game

Comprehensive Requirement

Students satisfy the senior comprehensive requirement by either receiving a passing grade in all three courses of the Game Design Studio sequence or performing a senior thesis.

Computer Science: Computer Game Design Major Planners

The following are three sample academic plans that students can use to plan their sequence of courses in the major. Plans One and Two are suggested guidelines for students who begin their studies in their freshman year. Such students, if they plan carefully will have several openings free to take other breadth courses they find interesting. Plan One is for a student entering UCSC in their freshman year who is prepared to go directly into Mathematics 19A/20A and Computer Science 12A. Plan Two is for a student entering UCSC their freshman year who needs to take preparatory courses prior to Mathematics 19A or Computer Science 12A to ensure a successful outcome in those courses. Plan Three is for students that transfer to campus at the beginning of their junior year.

Plan One-Enter UCSC Freshman Year			
Year	Fall	Winter	Spring
1st (frsh)	Core Math 19A or 20A CMPS 12A/L	(C, or gen ed)	Art/Social Elective I CMPE 12/L CMPS 20 (Game-
	CMPS 12L or Honors Project Lab I	20B CMPS 12B/M CMPS 12M	Design Experience)

Minor Requirements

Courses required for the computer science minor are Mathematics 19A-B or 20A-B, and 23A; Applied Mathematics and Statistics 27/L (formerly Mathematics 27); Computer Science courses 12A/L and 12B/M (or 13H/L can be taken to cover both 12A/L and 12M/L) and course 101; Computer Engineering 12/L and 16; and four additional upper-division computer science courses from a list of approved electives (see the department's checklist for the computer science minor at www.soe.ucsc.edu/programs/cs/undergraduate/). In selecting the four upper-division courses, students may elect to focus on one subdiscipline of computer science by completing the courses in a BA depth sequence. Upper-division computer engineering and mathematics courses that generally apply toward the computer science major may not be applied toward the computer science minor. In addition, some upper-division computer science courses may not be applied toward the computer science minor. There is no comprehensive examination or senior thesis requirement for the minor.

Graduate Programs

Program Description

The Computer Science Department at UCSC offers both a master's program and a doctoral program. The goal of these programs is to help students develop into independent scholars who are prepared for productive careers in research, teaching, and industry. The master's degree may be used as a terminal degree or as the first step toward the Ph.D. degree. The student-faculty ratio is five to one, making it possible for students to receive individual attention and to pursue programs that fit their individual needs. The intellectual atmosphere is enriched by regular colloquia and seminars presented by eminent contributors to the field, many of whom are associated with other major universities and industrial research centers in the San Francisco Bay Area.

The Computer Science Department enjoys a close relationship with the Computer Engineering and Electrical Engineering Departments, the Bioinformatics Department, and the new Applied Mathematics and Statistics Department.

Most computer science graduate students are hired as teaching assistants helping with undergraduate courses, hired as research assistants working for computer science and other School of Engineering faculty, or awarded fellowships to pursue their research.

Additional information on the computer science graduate programs can be found on the department's web pages at www.soe.ucsc.edu.

Requirements for the Master's Degree: Project Track

Course Requirements

Each student is required to take 50 credits as follows:

Computer Science

- 200, Research and Teaching in Computer Science and Engineering, 3 credits;
- 201, Analysis of Algorithms, 5 credits;
- 203, *Programming Languages*, 5 credits;
- 296, Master's Project, 2 credits;
- A base requirement in computer architecture must be met by taking CMPE 110 or CMPE 202 or equivalent elsewhere (approval required);
- one course each from three different breadth categories for a total of three courses (15 credits). See www.soe.ucsc.edu/programs/cs/graduate/;
- all remaining credits must be graduate elective courses from the list of approved graduate courses. See

www.soe.ucsc.edu/programs/cs/graduate/:

• two upper-division undergraduate computer science courses (other than course 101) or a graduate course (not seminar) in related disciplines outside the list of approved graduate courses may be substituted for one graduate course, when necessary to strengthen a student's preparation for graduate studies, with prior approval from the adviser and the graduate director.

Project

Completion of a master's project is required for the master's degree. In consultation with the adviser, the student forms a master's project reading committee of at least two faculty members, each of whom is provided a copy of the project report. The final project must be accepted by the review committee before the award of the master of science degree.

Requirements for the Master's Degree: Thesis Track

Course Requirements

Each student is required to take 48 credits as follows:

Computer Science

- 200, Research and Teaching in Computer Science and Engineering, 3 credits;
- 201, Analysis of Algorithms, 5 credits;
- 203, *Programming Languages*, 5 credits;
- A base requirement in computer architecture must be met by taking CMPE 110 or CMPE 202 or equivalent elsewhere (approval required);
- one course each from three different breadth categories for a total of 3 courses (15 credits). See www.soe.ucsc.edu/programs/cs/graduate/;
- up to 10 credits of course 297, *Independent Study or Research*; or course 299, *Thesis Research*;
- all remaining credits must be graduate elective courses from the list of approved graduate courses. See

www.soe.ucsc.edu/programs/cs/graduate/;

• two upper-division undergraduate computer science courses (other than course 101) or a graduate course (not seminar) in related disciplines outside the list of approved graduate courses may be substituted for one graduate course, when necessary to strengthen a student's preparation for graduate studies, with prior approval from the adviser and the graduate director.

Thesis

Completion of a master's thesis is required for the master's degree. To fulfill this requirement, the student submits a written proposal to a faculty member, usually by the third academic quarter. By accepting the proposal, the faculty member becomes the thesis adviser. In consultation with the adviser, the student forms a master's thesis reading committee with at least two additional faculty members, each of whom is provided a copy of the proposal. The student presents an expository talk on the thesis research, and the final thesis must be accepted by the review committee before the award of the master of science degree.

Requirements for the Ph.D. Degree

Course Requirements

Each student is required to take 58 credits as follows:

Computer Science

- 200, Research and Teaching in Computer Science and Engineering, 3 credits;
- 201, Analysis of Algorithms, 5 credits;
- 203, *Programming Languages*, 5 credits;
- A base requirement in computer architecture must be met by taking CMPE 110 or CMPE 202 or equivalent elsewhere (approval required);
- One course each from three different breadth categories for a total of 3 courses (15 credits). See www.soe.ucsc.edu/programs/cs/graduate/;
- up to 10 credits of course 297, *Independent Study or Research*; or course 299, *Thesis Research*;
- At least 33 units must be in computer science;
- All remaining credits must be graduate elective courses from the list of approved graduate courses. See

www.soe.ucsc.edu/programs/cs/graduate/;

- Graduate courses (not seminars) in related disciplines outside the list of approved graduate courses may be substituted, when necessary to strengthen a student's preparation for graduate studies, with prior approval from the adviser and the graduate director. Course selection should form a coherent plan of study and requires adviser approval. Undergraduate courses may not be used to satisfy Ph.D. course requirements;
- Each student is required to complete at least one quarter of teaching assistantship. This requirement can be met after advancement to candidacy. Certain exceptions may be permitted for those with extensive prior teaching experience or those who are not allowed to be employed due to visa regulations.

Ph.D. students who have satisfied the requirements for the master's degree are

eligible to receive a master's degree.

Dissertation

Each student writes a Ph.D. dissertation. The dissertation must show the results of indepth research, be an original contribution of significant knowledge, and include material worthy of publication. Where appropriate, research internships with companies, government labs, or elsewhere are recognized (and may be required) as an integral part of the research leading to the dissertation. As the first step, a student submits a written dissertation proposal to a School of Engineering faculty member. By accepting the proposal, the faculty member becomes the dissertation supervisor. The dissertation proposal is publicly and formally presented in an oral qualifying examination given by a qualifying exam committee, approved by the graduate committee and the Graduate Council. The student must submit his or her written dissertation proposal to all members of the committee and the graduate assistant one month in advance of the examination.

Students are advanced to candidacy after they have completed the course requirements, passed the qualifying examination, cleared all Incompletes from their records, have an appointed dissertation reading committee, and paid the filing fee. Students who have not advanced to candidacy by the end of their fourth year will be placed on academic probation.

Each Ph.D. candidate submits the completed dissertation to a reading committee at least one month prior to the dissertation defense. The appointment of the dissertation reading committee is made immediately after the qualifying exam and is necessary for advancing to candidacy. The candidate presents his or her research results in a public seminar sponsored by the dissertation supervisor. The seminar is followed by a defense of the dissertation to the reading committee and attending faculty, who will then decide whether the dissertation is acceptable or requires revision. Successful completion of the dissertation fulfills the final academic requirement for the Ph.D. degree.

Transfer Credit

Up to three School of Engineering courses fulfilling the degree requirements of either the M.S. or Ph.D. degrees may be taken before beginning the graduate program through the concurrent enrollment program.

Ph.D. students who have previously earned a master's degree in a related field at another institution may substitute courses from their previous university with approval of the adviser and the graduate committee.

Courses from other institutions may not be applied to the M.S. degree course requirements.

Petitions should be submitted along with the transcript from the other institution or UCSC extension. For courses taken at other institutions, copies of the syllabi, exams, and other course work should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UCSC.

At most, a total of three courses may be transferred from concurrent enrollment and other institutions.

Review of Progress

progress towards completion of degree requirements are subject to dismissal from the program. See www.soe.ucsc.edu/programs/cs/graduate/CSCurrentReq.html#progress for more information on this policy.

Each year, the faculty reviews the progress of every student. Students not making adequate progress toward completion of degree requirements (see Graduate Handbook for policy on satisfactory academic progress) are subject to dismissal from the program. Students with academic deficiencies may be required to take additional courses. Full-time students with no academic deficiencies are normally expected to complete the degree requirements at the rate of at least two courses per quarter. Full-time students must complete CMPS 201, CMPE 202, and CMPS 203 within two years and normally must complete all course requirements within two years for the M.S. and three years for the Ph.D.

Students receiving two or more grades of below B or U (fail) in the School of Engineering (SoE) courses are not making adequate progress and will be placed on academic probation for the following three quarters of registered enrollment. Withdrawing or taking a leave of absence does not count as enrollment. Part-time enrollment is counted as a half quarter of enrollment.

Should any computer science graduate student fail an SoE course while on probation, the Computer Science Department may request the graduate dean to dismiss that student from the graduate program. If after being removed from probation, the student again fails a SoE course, he or she will return immediately to academic probation.

<u>Graduate students experiencing circumstances or difficulties that impact their academic performance should contact their adviser and the graduate director immediately. Students may appeal their dismissal. See</u>

www.soe.ucsc.edu/programs/cs/graduate/CSCurrentReq.html#progress for more information on this policy.

<u>Program Description | Course Descriptions</u>

Faculty and Professional Interests

Professor

Martín Abadi

Computer and network security, principles of programming languages, specification and verification methods

Scott A. Brandt

Operating systems, storage systems, real-time systems

David P. Helmbold

Machine learning, computational learning theory, analysis of algorithms

Harry D. Huskey, Emeritus

Phokion G. Kolaitis

Logic in computer science, automated deduction, computational complexity, database theory

Robert A. Levinson

Artificial intelligence, machine learning, heuristic search, associative pattern retrieval, hierarchical reinforcement learning, semantic networks

Suresh K. Lodha

Visualization, vision, innovation, entrepreneurship

Darrell D. E. Long

Storage systems, distributed computing systems, operating systems, mobile computing, performance evaluation, fault tolerance, computer security, multimedia, and video-on-demand systems

Charles E. McDowell

Programming languages, parallel computing, and computer science education

Alex T. Pang

Uncertainty visualization, tensor visualization, scientific visualization, collaboration software, virtual reality interfaces

Ira Pohl

Artificial intelligence, programming languages, heuristic methods, educational and social issues, combinatorial algorithms

R. Michael Tanner, Emeritus

Allen Van Gelder

Logic programming algorithms, parallel algorithms, complexity, programming languages, automated theorem proving, scientific visualization

Manfred K. Warmuth

Online learning, machine learning, statistical decision theory, neural computation, analysis of algorithms

Associate Professor

Dimitris Achlioptas

Analysis of algorithms, machine learning, random structures

Cormac Flanagan

Programming languages, type systems, specification and verification methods, software engineering, concurrency

Ethan L. Miller

File and storage systems, operating systems, computer security, distributed systems, reliability and fault tolerance, performance evaluation, and information retrieval

E. James Whitehead Jr.

Software engineering, software configuration management, web, hypertext, collaborative authoring, hypertext versioning, Internet information systems

Assistant Professor

James E. Davis

Computer graphics and computer vision, methods for acquiring and manipulating complex graphical models from the real world

Neoklis Polyzotis

Synopses for XML data, visual query interfaces, query processing, and optimization

Wang-Chiew Tan

Database systems: data provenance, information integration, scientific databases, database query languages, combinatorial optimization of database problems

Adjunct Professor

Martin Griss

Software Engineering

Assistant Adjunct Professor

John D. Funge

Artificial intelligence (AI); game AI; computer games; machine learning; knowledge representation and democratic methods

Lecturer

Delbert (Dean) Bailey

Artificial intelligence, pattern recognition, computational complexity, analysis of algorithms

Paulo Franca

Computer programming teaching methodology; web-based development techniques, office automation, and paperless document management

Wesley Mackey

Compiler construction, programming languages

Patrick Tantalo

Graph theory, combinatorics, optimization, algorithms

Linda Werner

Software engineering, testing, usability engineering, educational and social issues

Assistant Research/Computer Scientist

Carlos Maltzahn

Scalable file-system data and metadata management; very long-term data preservation; network intermediaries; machine learning; information retrieval; and cooperation dynamics

Alexandre Brandwajn (Computer Engineering)

Computer architecture, performance modeling, queueing network models of computer systems, operating systems

F. Joel Ferguson (Computer Engineering)

Fault diagnosis, failure analysis, logic fault modeling, digital test pattern generation, design-for-test of digital circuits and systems

J. Joaquín García-Luna-Aceves (Computer Engineering)

Wireless networks, Internet, multimedia information systems

Jorge Hankamer (Linguistics)

Syntax, semantics, morphology, computational linguistics, Turkish

David Haussler (Biomolecular Engineering; Director, Institute for Quantitative Biomedical Research and the Center for Biomolecular Science and Engineering) Genomics, bioinformatics, computational molecular biology, statistical models, machine learning, neural networks, decision theory, theory of computation

Richard Hughey (Biomolecular Engineering and Computer Engineering)

Computer architecture, parallel processing, computational biology

Kevin Karplus (Biomolecular Engineering)

Protein structure prediction, protein design

Tracy Larrabee (Computer Engineering)

Test-pattern simulation and generation, fault modeling, fault diagnosis, design verification, technical writing, logic simulation

Patrick E. Mantey (Computer Engineering)

Image systems, image processing, visualization, image and multimedia systems, digital signal processing, real-time control

Geoffrey K. Pullum (Linguistics)

Syntax, English grammar, mathematical and computational linguistics, philosophy of linguistics

Martine D. F. Schlag (Computer Engineering)

VLSI design tools and algorithms, VLSI theory, field-programmable gate arrays, FPGA-based computing engines

Barry Sinervo (Ecology and Evolutionary Biology)

Animal behavior, evolution, physiological ecology

Anujan Varma (Computer Engineering)

Computer networking, computer architecture, optical networks

W. Todd Wipke, Emeritus (Chemistry and Biochemistry)

Joel Yellin (Physical and Biological Sciences, Natural Sciences, Environmental Science) Classical and quantum lattice dynamics, nonlinear waves; classical and quantum information theory; engineering, economics, and policy issues related to the Internet

Associate Professor

Pak K. Chan (Computer Engineering)

Placement and routing algorithms, field-programmable gate arrays, spectral-based partitioning, circuit theory, computer arithmetic

Luca De Alfaro (Computer Engineering)

Formal methods, game theory, embedded systems, software engineering

Katia Obraczka (Computer Engineering)

Computer networks, distributed systems, operating systems, Internet information systems, mobile computing, wireless networks

Warren Sack (Film and Digital Media)

Software design and media theory

Hai Tao (Computer Engineering)

Image and video processing, computer vision, vision-based graphics, and human-computer interaction

Assistant Professor

Gabriel Elkaim (Computer Engineering)

Embedded systems; robust software architectures for real-time reactive systems; sensor fusion; guidance, navigation, and control (GNC) system identification; robust and advanced control schemes; feedback control systems; robotics; unmanned autonomous vehicles (UAVs); and cooperative control

Program Description | Changes to 2006-08 Catalog Highlighted | Faculty

Lower-Division Courses

2. Computer Literacy. F,S

Introduction to how computers work and how to use them. Topics covered include network information systems, text editors, formatting, file and directory system, spreadsheets and databases. Computers as symbol manipulation devices. Introduction to programming concepts and computer languages. Impact of computers on society. Designed for students with little or no experience using computers. Preference is given to students who have not taken other computer engineering or computer science courses. Students cannot receive credit for this course and Computer Engineering 3. (General Education Code(s): IN.) *P. Franca*

10. Introduction to Computer Science. F,W

An overview of the theory, foundations, and practice of computer science with emphasis on what computers can and cannot do, now and in the future. Topics include algorithms and data, correctness and efficiency of algorithms, hardware, programming languages, limitations of computation, applications, and social issues. No programming skills are required as a prerequisite. Major concepts and open problems in computer science are presented without reliance on sophisticated mathematical tools. (General Education Code(s): IN.) *P. Tantalo*

12A. Introduction to Programming. F,W,S

An introductory programming course for computer science and engineering majors where students learn programming and documentation skills, as well as algorithmic problem solving and programming methodologies. Introduces students to computers, compilers, and editors, and they are expected to write medium-sized programs. Topics include, but are not limited to, procedures and functions, conditionals and loop control structures, static and dynamic memory manipulations, and text processing. Prior experience with Unix helpful, and some prior programming experience strongly recommended (e.g., course 10). This course is required for computer engineering, computer science, electrical engineering, and information systems management majors. Prerequisite(s): eligibility to enroll in Mathematics 19A (Mathematics 2B or 3 or 40 or higher on mathematics placement exam) or completion of Mathematics 11A or 19A or Economics 11A or AMS 3 or 11A. Concurrent enrollment in 12L required. (General Education Code(s): IN.) *The Staff, D. Bailey, P. Tantalo, C. Flanagan, C. McDowell*

12B. Introduction to Data Structures. F,W,S

Teaches students to implement common data structures and the algorithms associated with each data structure, through progressively difficult exercises. Topics include big "O" notation; pointers, recursion (induction), and dynamic allocation; linked lists and list processing; stacks, queues, binary trees and binary search trees; simple sorting

techniques and simple search techniques. Students will gain a working knowledge of the elements of the Java and C programming languages. Prior experience with Unix is assumed. Prerequisite(s): course 12A. Concurrent enrollment in course 12M required. Enrollment limited to 150. (General Education Code(s): IN.) W. Mackey

12L. Computer Programming Laboratory (2 credits). F,W,S

Laboratory sequence complementing topics taught in course 12A by providing training and exposure to several software development tools and practices not covered in course 12A. In addition, the lab provides an initial exposure to a second programming language to reinforce concepts from course 12A. Prerequisite(s): eligibility to enroll in Mathematics 19A (Mathematics 2B or 3 or 40 or higher on mathematics placement exam) or completion of Mathematics 11A or 19A or Economics 11A or AMS 3 or 11A. Previous or concurrent enrollment in 12A required. *The Staff, D. Bailey, P. Tantalo, C. Flanagan, C. McDowell*

12M. Data Structures Laboratory (2 credits). F,W,S

Complements course 12B, gaining additional competence with a number of important software development tools, languages, and techniques. Included are advanced Unix features and utilities such as grep, find, diff, the shell, and pipes; C programs utilizing I/O, arrays, pointers, and structures; a scripting language to perform simple text and file manipulation; and the make utility. Prerequisite(s): courses 12A and 12L. Concurrent enrollment in course 12B required. W. Mackey

13H. Introduction to Programming and Data Structures (Honors). *

Provides an accelerated introduction to programming and data structures. Includes a review of basic programming, including loop and conditional control structures, procedures and parameter passing, and arrays. Course goes on to cover same material as course 12B. Students cannot receive credit for this course and course 12A or 12B. Prerequisite(s): interview only; students must have completed a high school or college level programming course in Java, C, or C++. A short oral examination given to ascertain programming level. Concurrent enrollment in course 13L required. Enrollment limited to 25. (General Education Code(s): IN.) *S. Brandt, D. Long*

13L. Introduction to Programming and Data Structures Laboratory (2 credits).

Provides accelerated introduction to practical aspects of programming and data structures. Covers three areas: 1) common programming tools, including Unix commands, compilers and linkers, editors, debuggers, and Makefiles; 2) basic programming techniques, including design, testing, and debugging; and 3) C programming, focusing on the major differences between C and Java. Previous or concurrent enrollment in course 13H required. Prerequisite(s): interview only; students must have completed a high school or college level programming course in Java, C, or C++. A short oral examination given to ascertain programming level. *S. Brandt, D. Long*

20. Game Design Experience. W

Surveys history, technology, narrative, ethics, and design of interactive computer games. Covers the interplay of narrative, graphics, rule systems, and artificial intelligence in the creation of interactive games. Intended as an introduction to computer game design with a game programming focus for computer game design majors. Students cannot receive credit for this course and course 80K. Prerequisite(s): course 12A, or equivalent programming experience and permission of instructor. *E. Whitehead, M. Mateas*

60G. Beginning Programming: Social Sciences and Humanities. F,W

An introduction to the basic techniques of computer programming. Detailed study of one programming language. Extensive practice using a computer, particularly personal computers, to solve problems. Course 60G is intended for social sciences and humanities students. Students can only receive credit for either 60G or 60N. Students cannot receive credit for course 60G if taken concurrently with or subsequently to course 12A. (General Education Code(s): IN.) *P. Franca*

60M. Scientific Computation with Matlab and Maple. S

Basic concepts from calculus visualized using Matlab and Maple; plotting data and functions, integration, differentiation, limits; solving systems of equation; linear regression; and example applications from science and engineering. Prerequisite(s): Mathematics 19B, or 20B, or by consent of instructor. Enrollment limited to 60. *M. Warmuth*

60N. Beginning Programming: Natural Sciences. S

An introduction to the basic techniques of computer programming. Detailed study of one programming language. Extensive practice using a computer to solve problems. Course 60N is intended for science students. Students can only receive credit for either 60G or 60N. Students cannot receive credit for course 60N if taken concurrently with or subsequently to course 12A. (General Education Code(s): IN.) *D. Bailey, W. Tan*

80B. Systems and Simulation. F

An introduction to systems analysis as an approach to understanding and solving complex problems. The use of simulation as an aid in this problem solving. Examples are taken from ecology, economics, physics, computer science, and other fields. Intended as a generally accessible undergraduate course in which students can develop and explore computer simulation models matched to their individual interests. (General Education Code(s): T2-Natural Sciences, Q.) *R. Levinson*

80C. Computer Arts and Graphics. *

Covers the design and use of various computer graphics programs for painting, drawing, computer-aided design, modeling, and animation. Students create graphical images using available software and design programs. Exposure to peripherals such as mice, laser printers, and possibly video and experimental peripherals. Use of SGI graphics workstations. Includes discussion of computer art and its development over time, and includes slides and videos of computer graphics. Not intended for computer science or computer engineering majors, who are advised to take course 160. (General Education Code(s): T2-Natural Sciences.) *S. Lodha*

80G. Introduction to Unix. S

Introduction to computing, the Internet, and the World Wide Web through the language of the Unix operating system. Oriented to the beginner, the course presupposes no previous acquaintance with any particular sort of computer. It covers the basic concepts of text editing and formatting, writing Web pages in basic HTML, and promotes a rigorous understanding of Unix commands and shell scripts. Views communication with a computer as a matter of learning a few simple though powerful languages. (Also offered as Linguistics 80G. Students cannot receive credit for both courses.) (General Education Code(s): T2-Natural Sciences.) *A. Van Gelder*

80J. Technology Targeted at Social Issues. S

Introduces the idea that engineering can be a means for addressing social issues. Case studies and guest speakers. Issues might include: economic development,

privacy, activism, safe drinking water, inexpensive shelters, sustainable energy, education, and waste disposal. (General Education Code(s): T7-Natural Sciences or Social Sciences.) *S. Lodha, J. Davis*

80K. Foundations of Interactive Game Design. W

Surveys history, technology, narrative, ethics, and design of interactive computer games. Work in teams to develop novel game-design storyboards. Intended as a generally accessible undergraduate course in which students can explore the interplay of narrative, graphics, rule systems, and artificial intelligence in the creation of interactive games. Programming experience not required. Students cannot receive credit for this course and course 20. Enrollment limited to 150. (General Education Code(s): T2-Natural Sciences.) *E. Whitehead*

80S. From Software Innovation to Social Entrepreneurship. F

Emerging software innovations with emphasis on social software. Web 2.0 companies and services. Software that has social impact in a global context. Entrepreneurial plan including social, economic, and innovation value. Final group project on innovative software design and entrepreneurship plan. (General Education Code(s): T7-Natural Sciences or Social Sciences, E.) *S. Lodha*

80V. VRML 3D Worlds on the Web. *

This hands-on course covers authoring and publishing 3D virtual worlds on the web. Focus is on tools and techniques for adding new dimensions to online publications including 3D worlds, sound, animation, and interactions. Topics are updated as technology changes. Representative topics have included VRML, HTML, XML, X3D, U3D, Acrobat, etc. Introduces students to concepts in 3D graphics, transformations, and animation through lectures, individual/group laboratory exercises, and a final project. Students must know how to use e-mail, a text editor, and a web browser. Enrollment limited to 80. (General Education Code(s): T2-Natural Sciences.) *A. Pang*

94. Group Tutorial. F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

94F. Group Tutorial (2 credits). F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

99F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

Upper-Division Courses

101. Algorithms and Abstract Data Types. F,S

Studies basic algorithms and their relationships to common abstract data types. Covers the notions of abstract data types and the distinction between an abstract data type and an implementation of that data type. The complexity analysis of common algorithms using asymptotic (big "O") notation is emphasized. Topics include sorting

and searching techniques, basic graph algorithms, and algorithm design techniques. Abstract data types covered include priority queues, dictionaries, disjoint sets, heaps, balanced trees, and hashing. Familiarity with C, Java, and Unix is assumed. Prerequisite(s): course 12B or 13H, Computer Engineering 16 or 16H, Mathematics 19B, and one course from the following: Mathematics 21, 22, 23A, 24, or Applied Mathematics and Statistics 27. Enrollment restricted to School of Engineering majors. *P. Tantalo, A. Van Gelder*

102. Introduction to Analysis of Algorithms. W

Methods for the systematic construction and mathematical analysis of algorithms. Order notation, the RAM model of computation, lower bounds, and recurrence relations are covered. The algorithm design techniques include divide-and-conquer, branch and bound, and dynamic programming. Applications to combinatorial, graph, string, and geometric algorithms. Prerequisite(s): course 101. *M. Warmuth, A. Van Gelder, S. Lodha, D. Helmbold, D. Achlioptas*

104A. Fundamentals of Compiler Design I. F

An introduction to the basic techniques used in compiler design. Topics include compiler structure, symbol tables, regular expressions and languages, finite automata, lexical analysis, context-free languages, LL(1), recursive descent, LALR(1), and LR(1) parsing; and attribute grammars as a model of syntax-directed translation. Students use compiler building tools to construct a working compiler. Prerequisite(s): course 101 and Computer Engineering 12 and 12L. W. Mackey

104B. Fundamentals of Compiler Design II. S

A detailed study of the structure and design of a compiler. Continues study begun in course 104A. Topics include compiler structure emphasizing the back end, type systems, run-time environments; static, stack and heap storage management, garbage collection; addressing, register allocation, code generation; basic blocks and dataflow analysis; local and global code optimization; interpretation versus compilation. Students generate machine code runnable on a real machine. Prerequisite(s): course 104A. W. Mackey

105. Systems Programming. W

Covers fundamentals of systems programming including standard tools, shell programming, file I/O, files and directories, system data files and information, Unix processes, process control, synchronization, signals, event-driven programming, terminal I/O, daemons, interprocess communication, basic network programming, and basic user-interface programming. Prerequisite(s): course 101 and Computer Engineering 12 and 12L. Enrollment restricted to School of Engineering majors. *E. Miller, W. Mackey, S. Brandt, D. Long*

109. Advanced Programming. W

An introduction to object-oriented techniques of software development including data abstraction, inheritance, polymorphism, and object-oriented design. Extensive practice using a computer to solve problems, including construction of graphical user interfaces and a multithreaded client/server applications. Prerequisite(s): course 12B/M. *The Staff, D. Bailey, I. Pohl, C. McDowell*

111. Introduction to Operating Systems. F,S

Fundamental principles of operating systems: process synchronization, deadlocks, memory management, resource allocation, scheduling, storage systems, and study of several operating systems. A major programming project will be required. Prerequisite(s): course 101 and Computer Engineering 110. E. Miller, W. Mackey, S.

112. Comparative Programming Languages. W

Covers several programming languages and compares styles, philosophy, and design principles. Principles underlying declarative, functional, and object-oriented programming styles are studied. Students write programs emphasizing each of these techniques. Prerequisite(s): course 101 or 109. W. Mackey, M. Abadi, D. Long, C. Flanagan, A. Van Gelder, C. McDowell

115. Software Methodology. W,S

Emphasizes the characteristics of well-engineered software systems. Topics include requirements analysis and specification, design, programming, verification and validation, maintenance, and project management. Practical and research methods are studied. Imparts an understanding of the steps used to effectively develop computer software. Prerequisite(s): course 101. Enrollment restricted to computer science, computer engineering, and information systems management majors. Enrollment limited to 25. *D. Bailey, E. Whitehead, C. Flanagan, L. Werner*

116. Software Design Project. S

Students in teams specify, design, construct, test, and document a complete software system in a specialized application domain. Class time is spent in technical discussions and ongoing design reviews. A formal presentation and demonstration of each project is required. An organizational meeting will be held during the preceding quarter. Projects may be drawn from industry and campus research groups. Prerequisite(s): course 115. *E. Whitehead*

122. Computer Security. *

Introduction to computer security (including selected topics in network security). Access control. Security in programming languages. Basic cryptography. Security protocols. Prerequisite(s): course 111 or permission of instructor. Enrollment restricted to School of Engineering majors. Enrollment limited to 100. *E. Miller, M. Abadi*

128. Distributed Systems: File Sharing, Online Gaming, and More. S

Covers topics in distributed computing including communication, naming, synchronization, consistency and replication, fault tolerance, and security. Examples drawn from peer-to-peer systems, online gaming, the World Wide Web; other systems also used to illustrate approaches to these topics. Students implement simple distributed systems over the course of the quarter. Prerequisite(s): course 101 or Computer Engineering 150. Course 111 or 105 recommended. *E. Miller, S. Brandt, D. Long*

129. Data Storage Systems. *

Covers all aspects of storage systems technology from magnetic media up through system software, including principles of magnetic recording, hard drive technology and evolution, performance measurement, file systems, storage networking, disk arrays, network-attached storage, and alternative storage technologies.

Prerequisite(s): course 101, 111, and Physics 5A or 6A. E. Miller, S. Brandt, D. Long

130. Computational Models. W,S

Various representations for regular languages, context-free grammars, normal forms, parsing, pushdown automata, pumping lemmas, Turing machines, the Church-Turing thesis. Prerequisite(s): course 101. D. Bailey, M. Warmuth, R. Levinson, P. Kolaitis

132. Computability and Computational Complexity. W

Turing machines, general phase-structure grammars, the Chomsky hierarchy, recursive functions, diagonalization, the Halting problem, computability and unsolvability, computational complexity, time and space bounds, NP-completeness with emphasis on reductions between problems from various areas. Prerequisite(s): course 130. M. Warmuth, A. Van Gelder, P. Kolaitis, D. Helmbold

140. Artificial Intelligence. W

Introduction to the contemporary concepts and techniques of artificial intelligence, including any or all of: machine perception and inference, machine learning, optimization problems, computational methods and models of search, game playing and theorem proving. Emphasis may be on any formal method of perceiving, learning, reasoning, and problem solving which proves to be effective. This includes both symbolic and neural network approaches to artificial intelligence. Issues discussed include symbolic versus nonsymbolic methods, local versus global methods, hierarchical organization and control, and brain modeling versus engineering approaches. Lisp or Prolog may be introduced. Involves one major project or regular programming assignments. Prerequisite(s): course 101 and one of the following: course 130, Computer Engineering 177, or Mathematics 115. *I. Pohl, R. Levinson*

142. Machine Learning and Data Mining. *

Introduction to machine learning algorithms and their applications. Topics include classification learning, density estimation and Bayesian learning regression, and online learning. Provides introduction to standard learning methods such as neural networks, decision trees, boosting, and nearest neighbor techniques. Prerequisite(s): course 101 and one of Applied Mathematics and Statistics 5, 7, 113, 131, or Computer Engineering 107. Enrollment limited to 50. *M. Warmuth, D. Helmbold*

146. Game AI. *

Course provides a comprehensive introduction to the use of artificial intelligence (AI) in computer games. Building on fundamental principles of AI, course explains how to create non-player characters (NPCs) with progressively more sophisticated capabilities. Prerequisite(s): course 140; familiarity with C++. Enrollment restricted to juniors, seniors, and graduate students. Enrollment limited to 20. *The Staff*

148. Interactive Narrative. S

Covers wide range of practices including hypertext, interactive fiction, embedded narratives in games, interactive drama, and artificial intelligence-based story generation. Through a mixture of readings, assignments, and project work, explores the theoretical positions, debates, and technical and design issues arising from these different approaches. Students may not receive credit for this course and course 248. Prerequisite(s): course 101 Enrollment limited to 40. *M. Mateas*

160. Introduction to Computer Graphics. F

Introduces different techniques of modeling, transformation, and rendering to obtain computer generated imagery. Topics include 2D and 3D graphical primitives, line drawings, curves and surface modeling, projections, matrix composition, hidden surface removal, and shading algorithms. Several intensive programming assignments on bit-mapped raster scan displays and a major programming project are required. Prerequisite(s): course 101 and Mathematics 21 or Applied Mathematics and Statistics 27. Concurrent enrollment in course 160L required. Enrollment limited to 35. *A. Pang, S. Lodha, J. Davis*

160L. Introduction to Computer Graphics Laboratory (2 credits). F

Complements course 160, gaining additional competence with a number of important software development tools, graphics libraries, and graphical user interfaces. Included are OpenGL program, utilizing rubberbanding, picking, trackballing, display lists, double buffering, lighting, shading, materials and textures; and FLTK program, utilizing sliders, buttons, and dialog boxes. Prerequisite(s): course 101 and Mathematics 21 or Applied Math 27. Concurrent enrollment in course 160 required. Enrollment restricted to all engineering majors. Enrollment limited to 35. *A. Pang, S. Lodha, J. Davis*

161. Visualization and Computer Animation. W

Introduction to standard techniques of computer animation and data visualization. Topics include mathematical foundations; creature and behavioral animation; scalar, vector and tensor visualization methods. Involves programming exercises, instruction in available software, and a project. Prerequisite(s): course 160 and 160L or equivalent. Enrollment restricted to students majoring in computer sciences, computer engineering, or electrical engineering. Concurrent enrollment in course 161L required. Enrollment limited to 35. *A. Pang, S. Lodha*

161L. Visualization and Computer Animation Laboratory (2 credits). W

Complements course 161, gaining additional competence with a number of important software development tools and techniques. Included are Visualization Toolkit (vtk) and Insight Toolkit (ITK); C, OpenGL, and FLTK programs utilizing visualization techniques of isosurfacing, transfer function, volumetric rendering, streamlines visualization; video capture for facial animation and pose estimation, group and behavioral animations. Prerequisite(s): courses 160 and 160L; concurrent enrollment in course 161 required. Enrollment restricted to all engineering majors. Enrollment limited to 35. *A. Pang, S. Lodha*

164. Game Engines. F

Covers the graphic elements in computer games. Topics include modifying, optimizing, adding components, and building a game engine. Course evaluation based on exams and several programming projects, including a game built using the student's game engine. Prerequisite(s): courses 160 and 160L. Concurrent enrollment in course 164L required. *A. Pang*

164L. Game Engines Lab (2 credits). F

Provides hands-on experience in using, designing, and building game engines. Students also explore different special effects, such as particle systems, spring systems, and game physics. Prerequisite(s): courses 160 and 160L. Concurrent enrollment in course 164 required. *A. Pang*

170. Game Design Studio I. F

First of a three-course capstone sequence for the computer game design program. Students work in teams to develop a comprehensive game design for a substantial computer game, including detailed storyline, level design, artistic approach, implementation technologies, and art-asset pipeline. Emphasis placed on creating novel, artistic game design concepts. Includes design reviews and formal presentations. Companion lectures cover advanced topics in game design, game programming, and software project management. Enrollment restricted to senior computer game design majors. Enrollment limited to 50. *E. Whitehead, M. Mateas*

171. Games Design Studio II. W

Second of a three-course capstone sequence for the computer game design program.

Students work in teams on the software design, implementation, and testing of the computer game designed in course 170. Includes design reviews, progress reviews, and formal presentations. Companion lectures cover topics in software engineering, including design, testing, and project management. Game design and game programming also covered. Enrollment restricted to senior computer game design majors. Enrollment limited to 50. *E. Whitehead, M. Mateas*

172. Game Design Studio III. S

Third of a three-course capstone sequence for the computer game design program. Students work in teams on the software design, implementation and testing of the computer game designed in courses 170 and 171. Includes progress reviews and formal presentations. Companion lectures cover topics in software engineering, including user and software testing, release engineering and project management; also covered are game design and game programming. Prerequisite(s): course 171. Enrollment restricted to senior computer game design majors. Enrollment limited to 50. *E. Whitehead, M. Mateas*

180. Database Systems I. W

Introduction to the concepts, approaches, tools, and methodology of database design. Covers the entity-relationship model, the relational model, relational algebra, relational calculus, commercial languages (such as SQL and QBE), functional dependencies, normal forms, and design theory. Other topics may include knowledge-bases, constraint databases, and alternative database models. Prerequisite(s): course 101. W. Tan, N. Polyzotis, P. Kolaitis

181. Database Systems II. S

Introduction to the architecture and implementation of database systems. Topics covered include data storage, tree and hash indexes, storage management, query evaluation and optimization, transaction management, concurrency control, recovery, and XML data management. Prerequisite(s): course 180. Enrollment limited to 50. *W. Tan, N. Polyzotis*

183. Hypermedia and the Web. *

An introduction to the construction of hypermedia systems and large-scale web applications. Topics covered include pre-web hypertext systems, hypermedia data models, namespaces, system architecture of the web, design of large linked information spaces, design and development of database-backed web applications, web site load testing, and web collaboration technologies. Students work in teams over the term to develop a significant web application. Prerequisite(s): course 180. Enrollment limited to 40. *E. Whitehead*

190X. Methods of Cryptography. F

Theory and practice of encryption and decryption. Classic ciphers. Shannon's information-theoretic approach. Block and stream ciphers. The DES standard. Public key systems: Diffie-Hellman key exchange, RSA, digital signatures. Elliptic curve cryptography. Authentication protocols. Prerequisite(s): Mathematics 19B, 21, and Computer Engineering 16, or equivalent courses. Applied Mathematics and Statistics 27 or equivalent may be substituted for Mathematics 19B and 21. Consult with instructor regarding a course equivalent. *J. Yellin*

191. Computer Science and Technology Seminar (2 credits). W

Weekly talks by industry experts, university researchers, field practitioners, and video presentations provide an in-depth exposure to a specific or a broad area of computer science and technology. Topics include emerging ideas, opportunities,

challenges, and future of the industry. May be repeated for credit. S. Lodha

193. Field Study. F,W,S

Provides for individual programs of study with specific academic objectives carried out under the direction of a member of the Computer Science Department and using resources not normally available on campus. Credit is based on the presentation of evidence of achieving the objectives, usually a term paper or project. Cannot normally be repeated for credit. Students submit petition to sponsoring agency. *The Staff*

193F. Field Study (2 credits). F,W,S

Provides for individual programs of study with specific academic objectives carried out under the direction of a faculty member of the Computer Science Department and a willing sponsor at the field site. Uses resources not normally available on campus. Credit is based on the presentation of evidence of achieving the objectives by submitting a written and oral presentation. Cannot normally be repeated for credit. Intended for students majoring in computer science. Students submit petition to sponsoring agency. *The Staff*

194. Group Tutorial. F,W,S

A program of independent study arranged between a group of students and a faculty member. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

194F. Group Tutorial (2 credits). F,W,S

A program of independent study arranged between a group of students and a faculty member. Intended for students majoring in computer science. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

195. Senior Thesis Research. F,W,S

Students submit petition to sponsoring agency. The Staff

195F. Senior Thesis Research (2 credits). F,W,S

Intended for majors. Students submit petition to sponsoring agency. The Staff

198. Individual Study or Research. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

198F. Individual Study or Research (2 credits). F,W,S

Intended for majors. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

For fourth-year students majoring in computer science. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

For fourth-year students majoring in computer science. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

200. Research and Teaching in Computer Science and Engineering (3 credits). F

Basic teaching techniques for teaching assistants, including responsibilities and rights of teaching assistants, resource materials, computer security, leading discussion or lab sessions, presentation techniques, maintaining class records, electronic handling of homework, and grading. The course examines research and professional training, including use of the library and online databases, technical typesetting, writing journal and conference papers, publishing in computer science and computer engineering, giving talks in seminars and conferences, and ethical issues in science and engineering. Required for all teaching assistants. Enrollment restricted to graduate students. *S. Brandt*

201. Analysis of Algorithms. F,W

Rigorous analysis of the time and space requirements of important algorithms, including worst case, average case, and amortized analysis. Techniques include order-notation, recurrence relations, information-theoretic lower bounds, adversary arguments. Analysis of the key data structures: trees, hash tables, balanced tree schemes, priority queues, Fibonacci and binomial heaps. Algorithmic paradigms such as divide and conquer, dynamic programming, union-find with path compression, augmenting paths. Selected advanced algorithms. Introduction to NP-completeness. Enrollment restricted to graduate students; undergraduate students may enroll in this course if they have completed either course 102 or Computer Engineering 177 and have the consent of the instructor. *P. Tantalo, A. Van Gelder, M. Schlag, D. Helmbold*

203. Programming Languages. F

Covers current issues in programming languages. Language topics include object oriented, concurrent, functional, and logic programming, and other programmable applications such as symbolic manipulators and simulation. Enrollment restricted to graduate students; undergraduate students may enroll for this course if they have completed course 112 and have the consent of the instructor. *C. Flanagan, A. Van Gelder, C. McDowell*

204. Compiler Design. S

A detailed study of the structure and design of a compiler. Topics include compiler structure, pushdown automata, symbol tables, regular expressions and languages, finite state automata, tokens and lexical analyzers, context-free languages, LL(1), recursive descent, LR(1) parsing, attribute grammars as a model of syntax-directed translation, addressing, register allocation, code optimization, and code generation for real machines. Enrollment restricted to graduate students. Offered in alternate academic years. *W. Mackey*

210. Computational Models and Complexity. *

Finite automata and regular expressions, universal models of computation, computability and unsolvability, relations between complexity classes, hierarchy theorems, reductions, complete problems for the major complexity classes (L, NL, P, NP, PSPACE). Other topics may include complexity of counting and enumeration problems, complexity of approximation, randomized complexity classes. Prerequisite(s): course 201. *M. Warmuth, P. Kolaitis, D. Helmbold*

211. Combinatorial Algorithms. F

Fundamental combinatorial algorithms, graph algorithms, flow problems, matching problems, linear programming, integer programming, NP-completeness, approximation algorithms for optimization problems. Prerequisite(s): course 201. Offered in alternate academic years. *P. Kolaitis, D. Achlioptas*

217. Logic in Computer Science. F

The applications and uses of formal systems to computer science. Covers the syntax and semantics of propositional logic and first-order logic, normal forms, soundness and completeness theorems, Herbrand's theorem, unification and resolution, foundations of logic programming, automated theorem proving. Other topics may include deductive databases, database query languages, nonmonotonic reasoning. Enrollment restricted to graduate students. Offered in alternate academic years. *A. Van Gelder, P. Kolaitis*

221. Advanced Operating Systems. F

A detailed study of the issues involved in operating systems design and implementation. Readings cover current research topics and systems of historical significance. Topics include (but are not restricted to) process and memory management, protection, security, synchronization, performance evaluation, file systems, distributed systems. Enrollment restricted to graduate students; undergraduates by interview only. *E. Miller, S. Brandt, D. Long*

223. Advanced Computer Security. *

Overview of research topics in computer and network security. Topics may include cryptographic operations, security properties and policies, authentication and access control, attacks on computer systems and defenses against them, security in programming languages, and network protocols for security. Enrollment restricted to graduate students or consent of instructor. *E. Miller, M. Abadi*

229. Storage Systems. W

Topics include storage devices, storage architectures, local file systems, high-performance file systems, and next-generation storage devices and architectures; covers issues of performance, reliability, scalability, robustness, and security. Prerequisite(s): course 221 or permission of instructor. *E. Miller, S. Brandt, D. Long*

232. Distributed Systems. *

Overview of research topics in distributed computer systems. Topics may include communication paradigms, process management, naming, synchronization and coordination, consistency and replication, fault tolerance, and security. Examples include distributed operating systems, distributed file and object systems, distributed document systems, and peer-to-peer systems. Prerequisite(s): course 221 or permission of instructor. *E. Miller, D. Long*

240. Artificial Intelligence. S

Prepares students for doing research in artificial intelligence. Major topics covered are search and heuristics, knowledge representation, planning, deduction and inference, reinforcement learning, associative pattern retrieval, and adaptive search. Discussion includes current research issues in AI problem-solving methods. Individualized projects. Undergraduates may enroll in this course if they have completed course 140. Enrollment limited to 30. *I. Pohl, R. Levinson*

241. Knowledge Engineering. *

Introduction to the acquisition, representation, and application of knowledge in expert systems. Topics include production systems, backward and forward chaining, dependency-directed backtracking, reasoning with uncertainty, certainty factors, fuzzy systems, knowledge representation (rules, frames, and semantic nets), inference engines, and metaknowledge. Discussion includes current research issues in adaptive expert systems. Involves one major project. Undergraduates may enroll in this course if they have completed course 140. Offered in alternate academic

242. Machine Learning. W

Introduction to machine learning algorithms. Covers learning models from fields of statistical decision theory and pattern recognition, artificial intelligence, and theoretical computer science. Topics include classification learning and the Probably Approximately Correct (PAC) learning framework, density estimation and Bayesian learning, EM, regression, and online learning. Provides an introduction to standard learning methods such as neural networks, decision trees, boosting, nearest neighbor, and support vector machines. Requirements include one major experimental learning project or theoretical paper. Enrollment restricted to graduate students. Enrollment limited to 30. *M. Warmuth, D. Helmbold*

244. Artificial Intelligence in Games. W

Artificial intelligence has long used game-playing as a metric for progress. Key algorithms such as alpha-beta and HPA search studied. Computer algorithms for backgammon, poker, and chess examined. There will be individualized projects. Prerequisite(s): course 201; and course 211 or 240 or 242. Enrollment limited to 20. *I. Pohl, M. Mateas*

248. Interactive Narrative. S

Covers wide range of practices including hypertext, interactive fiction, embedded narratives in games, interactive drama, and artificial intelligence-based story generation. Through a mixture of readings, assignments, and project work, explores the theoretical positions, debates, and technical and design issues arising from these different approaches. Students may not receive credit for this course and course 148. Enrollment restricted to graduate students. Enrollment limited to 20. *M. Mateas*

250. Introduction to Information Theory. W

An introduction to information theory including topics such as entropy, relative entropy, mutual information, asymptotic equipartition property, channel capacity, differential entropy, rate distortion theory, and universal source coding. (Also offered as Electrical Engineering 253. Students cannot receive credit for both courses.) Prerequisite(s): Computer Engineering 107, or Applied Mathematics and Statistics 131 or equivalent course, or permission of instructor. Enrollment restricted to graduate students. *H. Sadjadpour*

253. Advanced Programming Languages. *

Covers issues in the design, implementation, analysis, and specification of programming languages. Topics include formal semantics (including operational, axiomatic, and denotational semantics), advanced type systems, program analysis (including abstract interpretation and model checking), specification, and verification. Prerequisite(s): course 203 or equivalent. *C. Flanagan*

260. Computer Graphics. *

Advanced course in computer graphics. Topics may vary depending on interests of students and research directions in the field. Main topics include in-depth study of curves and surface modeling, deformations, advanced ray tracing, and radiosity methods. Enrollment restricted to graduate students; undergraduates by interview only. Enrollment limited to 20. A. Pang, S. Lodha

262. Computer Animation. F

An in-depth treatment of computer animation, including its origins in conventional animation, 2-D animation, inbetweening, motion control, morphing, graphical motion

editors, animation languages, motion blur, simulation of articulated body motion, realtime animation, and special-purpose animation hardware. Enrollment restricted to graduate students. Enrollment limited to 15. *J. Davis*

272. Evolutionary Game Theory. *

Reviews static equilibrium concepts, games of incomplete information, and the traditional theory of dynamic games in discrete time. Develops recent evolutionary game models, including replicator and best reply dynamics, and applications to economics, computer science, and biology. Prerequisite(s): upper-division math courses in probability theory are strongly recommended. (Also offered as Biology 274. Students cannot receive credit for both courses.) *M. Warmuth, D. Friedman, B. Sinervo*

277. Principles of Database Systems. F

Advanced course on principles of database systems. Main topics include overview of the relational data model and relational query languages; recursive queries, datalog, and fixed-points; query processing and optimization; database design, dependencies, normal forms, and the chase procedure. Additional topics may include information integration, complex objects, semistructured data, and XML. (Formerly *Database Systems I.*) Prerequisite(s): course 180 (or equivalent) or consent of instructor. Enrollment restricted to graduate students. Enrollment limited to 20. Offered in alternate academic years. *W. Tan, N. Polyzotis*

278. Database Systems II. S

Advanced course in implementation techniques for database systems. Topics include transaction management, locking protocols for tables, and locking for index structures; query optimization, database statistics, and query processing; access methods for multidimensional data; and database recovery in centralized and distributed systems. Additional topics may include objects in databases, parallel database systems, advanced query optimization techniques, and data mining. Prerequisite(s): course 277 or 181 (or equivalent) or consent of instructor. Enrollment restricted to graduate students. Enrollment limited to 20. W. Tan, N. Polyzotis

279. Software Reuse and Component-Based Software Engineering. *

Detailed study of interlocking business, organizational, and technical issues in large-scale software reuse and component-based software engineering. Topics include architecture, design for reuse, domain engineering, model-driven development, domain-specific kits, components, frameworks, software agents, generators, problem-oriented languages, library design, reuse tools, patterns, and aspects. Assumes prior exposure to software engineering topics. Prerequisite(s): computer engineering 276 or consent of instructor. Enrollment restricted to graduate students. Enrollment limited to 20. *C. McDowell*

280A. Seminar in Computer Science Research (2 credits). F,S

Weekly seminar covering topics of current research in computer science. Enrollment by permission of instructor. Enrollment limited to 30. May be repeated for credit. *The Staff*

280D. Seminar in Database Systems (2 credits). S

Covers advanced research topics from the recent literature in database systems and related fields. Involves presentations from UCSC students and faculty, and guest talks from researchers in industry and other academic institutions. Enrollment by permission of instructor. Enrollment by permission of instructor. Enrollment limited to 30. May be repeated for credit. W. Tan, N. Polyzotis, P. Kolaitis

280G. Seminar on Software Engineering (2 credits). *

Weekly seminar covering topics of current research in software engineering. Prerequisite(s): permission of instructor. Enrollment restricted to graduate students. Enrollment limited to 30. May be repeated for credit. *N. Whitehead, C. Flanagan, L. De Alfaro, C. McDowell*

280J. Seminar on Computer Graphics (2 credits). F,W,S

Weekly seminar covering topics of current research in computer graphics. Enrollment restricted to graduate students and by permission of instructor. Enrollment limited to 30. May be repeated for credit. *J. Davis*

280S. Seminar on Computer Systems (2 credits). F,W,S

Weekly seminar series covering topics of current research in computer systems. Enrollment by permission of instructor. Enrollment limited to 30. May be repeated for credit. *E. Miller, S. Brandt, D. Long*

290A. Topics in Algorithms and Complexity Theory: Probabilistic Algorithms and Average Case Analysis. W

Examines the use of probability theory both in the design and analysis of algorithms. Uses probability theory to analyze the average performance of deterministic algorithms on randomly chosen or "typical" inputs, rather than on worst case inputs. Also a look at algorithms that use randomization, such as random walk and simulated annealing techniques. Examples of specific topics include martingales, random graphs, and rapidly mixing Markov Chains. Enrollment restricted to graduate students. Enrollment limited to 15. Offered in alternate academic years. May be repeated for credit. *D. Haussler, D. Achlioptas*

290B. Advanced Topics in Computer Graphics. S

A graduate seminar in computer graphics on topics from recently published research journal articles and conference proceedings. Topics vary from year to year depending on interests of students. Primary areas of interest are likely to be scientific visualization, modeling, rendering, scattered data techniques, wavelets, and color and vision models. Students read technical papers and present class lectures. Guest lectures supplement the student presentations. A research project is required. Enrollment limited to 15. A. Pang, S. Lodha, J. Davis

290C. Advanced Topics in Machine Learning. S

In-depth study of current research topics in machine learning. Topics vary from year to year but include multi-class learning with boosting and SUM algorithms, belief nets, independent component analysis, MCMC sampling, and advanced clustering methods. Students read and present research papers; theoretical homework in addition to a research project. Prerequisite(s): course 242. *M. Warmuth, D. Helmbold*

290D. Neural Computation. *

An introduction to the design and analysis of neural network algorithms. Concentrates on large artificial neural networks and their applications in pattern recognition, signal processing, and forecasting and control. Topics include Hopfield and Boltzmann machines, perceptions, multilayer feed forward nets, and multilayer recurrent networks. Enrollment restricted to graduate students. Offered in alternate academic years. *D. Haussler, M. Warmuth*

290E. Object-Oriented Programming Methodology. *

Object-oriented programming methodology is the application of abstract-data types

and polymorphism to coding solution. Topics geared to beginning thesis research in this field. Prerequisite(s): courses 201 and 203. Enrollment restricted to graduate students. Enrollment limited to 20. *I. Pohl, C. McDowell*

290F. Applications of Combinatorics. W

Combinatorial mathematics, including summation methods, working with binomial coefficients, combinatorial sequences (Fibonacci, Stirling, Eulerian, Harmonic, Bernoulli numbers), generating functions and their uses, Bernoulli processes, and other topics in discrete probability. Oriented toward problem solving, applications mainly to computer science, but also physics. Prerequisite(s): Computer Engineering 16 and Applied Mathematics and Statistics 27. Enrollment restricted to graduate students and upper-division undergraduates. Offered in alternate academic years. May be repeated for credit. *J. Yellin*

290G. Topics in Software Engineering. *

Research seminar on current topics in software engineering. Topics vary from year to year depending on the current research of the instructor(s) and interests of students. Students read technical papers from relevant journals and conference proceedings. Synthesis and understanding of materials is demonstrated by a required research project. Prerequisite(s): Computer Engineering 276 recommended. Enrollment restricted to graduate students; undergraduates may enroll with permission of instructor. Enrollment limited to 35. May be repeated for credit. *E. Whitehead, L. De Alfaro, C. McDowell, L. Werner*

290H. Topics in Database Systems. W

Focuses on current research topics in database systems. Different offerings cover different topics depending on current research of instructor(s) and the interests of students. Students read technical papers from journals and conference proceedings and present class lectures. A research project is required. Prerequisite(s): course 180 (or equivalent) or 277 or consent of instructor. Enrollment restricted to graduate students. Enrollment limited to 20. W. Tan, N. Polyzotis, P. Kolaitis

290I. Internet Technology and Policy. *

Graduate seminar that explores the transforming effects of the Internet on the physical access to information, the content of communications, the security of private information, and the availability of investments. Computer engineering and computer science undergraduate students may enroll in this course if they have completed Computer Engineering 152; other graduate and advanced undergraduate students may enroll with consent of the instructor. *J. Yellin*

290S. Advanced Topics in Computer Systems. S

Focuses on current research topics in computer systems. Topics vary from year to year depending on the current research of the instructor(s) and the interests of the students. Students read technical papers from current journals and conference proceedings, and present class lectures. A research project is required. Prerequisite(s): course 221. Enrollment restricted to graduate students; qualified undergraduates may enroll with instructor's consent. *E. Miller, W. Tan, S. Brandt, D. Long*

290X. Cryptography and Computer Security. *

Research seminar on encryption and related technologies. Topics include theory of codes, random sequences and generators, public key cryptosystems, private key cyphers, key exchange protocols, quantum computing and cryptography. Major project required. Prerequisite: interview with instructor. Enrollment limited to 12. *J.*

290Y. Quantum Computing. S

Quantum information theory and theory of quantum computation. Quantum circuits. Algorithms for database search, integer factorization, and order finding. Quantum coding and error correction. Quantum teleportation. Shannon and von Neumann entropies. Quantum communication and cryptography. See instructor to discuss course requirements before enrolling. Enrollment restricted to graduate students. Undergraduates may enroll with the consent of the instructor. *J. Yellin*

296. Masters Project (2 credits). F,W,S

Independent completion of a masters project under faculty supervision. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

297. Independent Study or Research. F,W,S

Independent study or research under faculty supervision. Although this course may be repeated for credit, not every degree program will accept a repeated course towards degree requirements. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

297F. Directed Readings in Machine Learning (2 credits). F,W,S

Directed readings in machine learning. Students read, present, and discuss current papers in machine learning. Specific topics include online learning the PAC (Probably Almost Correct) learning model, pattern recognition, and practical learning algorithms. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Thesis research conducted under faculty supervision. Although the course may be repeated for credit, not every degree program will accept a repeated course towards degree requirements. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

* Not offered in 2007-08

Communication and Rhetoric

Writing Program
166 Kresge College
(831) 459-2431
http://humwww.ucsc.edu/writing/index.html

(There were no substantive changes to the Communication and Rhetoric Program Description from the General Catalog 2006-08.)

Admission to the minor in communication and rhetoric is suspended at present. The following conditions will apply if it is reinstituted.

The Writing Program accepts students each quarter into the minor in communication and rhetoric. The minor consists of a series of courses that give students the opportunity to hone practical communication skills in a variety of contexts. It also provides a grounding in the analytical tools and critical theory that a rhetorical perspective provides.

A full description of the minor and forms for proposing a study plan and declaring the minor are available at the Writing Program office (166 Kresge).

Course Requirements

To earn a minor in communication and rhetoric, students must complete six courses after having satisfied the composition (C) requirement:

- either Writing 70, Communication and Rhetoric: An Introduction; or Writing 101, An Introduction to the History, Theory, and Practice of Rhetoric;
- a course that concentrates on editing: either Writing 120, *Editing English Prose*; or Writing 163, *Advanced Workshop in Expository Writing*;
- four electives, at least three of which must be chosen from among the following upper-division writing courses: 101, 102, 103, 104, 106, 107, 108, 109, 110A, 163, 167, 169, and 191A–D. No more than one elective may be chosen from a list of courses offered by other departments (list is available from the program office).

Special Programs

Graduation

Cowell College

College Office (831) 459-2253 http://www2.ucsc.edu/cowell

Program Description

Lower-Division Courses

10. Becoming a Successful Student (2 credits). W

An interactive course providing the opportunity to assess and revise methods of, and purposes in, studying. Critical, effective approaches to reading, writing, participating in lectures and sections, taking exams, balancing competing responsibilities, and utilizing campus resources are explored. Enrollment by permission of college adviser. Enrollment limited to 20. S. Rogerson

42. Student-Directed Seminar. F,W,S

Seminars taught by upper-division students under faculty supervision. (See course 192.) *The Staff*

50. Library Skills for the Digital Age (2 credits). W

Intended to enhance students' skills in using the most powerful learning tool in any university: the library. Topics: organization of the library; how to begin researching; search engine and database use; judging the quality of sources; using sources responsibly. Disciplinary focus changes from quarter to quarter. For winter 2007: Social Sciences. Enrollment limited to 22. W. Martyna

60. Social Justice and Diversity (2 credits). W

Perspectives and case studies on diversity, communication, and social recognition. Discusses instances of social "isms" and "phobias" (racism, sexism, homophobia, xenophobia), and raises issues of religious tolerance and inter-faith dialogue. Includes current events and diversity topics in university life. Enrollment restricted to college members. Admission by written application. Enrollment limited to 22. *T. Miller*

61. Critical Journeys (2 credits). W

For publication in a Cowell literary journal, students substantively revise one of their fall quarter essays by studying a major work that influences, acknowledges, or further clarifies a required reading of the Cowell core course. Prerequisite(s): course 80A or 80B; enrollment restricted to members of Cowell College. Enrollment limited to 20. *J. Wilson*

70A. Bookbinding. F

Students learn techniques of bookbinding, construction, and design, and fundamentals of letterpress printing. Students are billed a materials fee. May not be used to fulfill art major requirements. (Also offered as Art 70A. Students cannot receive credit for both courses.) Enrollment limited to 12. (General Education Code(s): A.) *P. Ritscher*

70B. Printing I: Elements of Printing. W

Learn fundamental skills in fine letterpress printing, including hand typesetting and instruction in the operation of printing presses. Basic typography explored as students design and print a small edition of a selected text. Students are billed a materials fee. May not be used to fulfill art major requirements. (Also offered as Art 70B. Students cannot receive credit for both courses.) Prerequisite(s): course 70A. Enrollment limited to 12. (General Education Code(s): A.) *P. Ritscher*

70C. Printing II: Typography and Book Design. S

Students learn fundamental skills in fine letterpress printing, including hand typesetting and instruction in the operation of printing presses. Basic typography explored as students design and print a small edition of a selected text. Students are billed a materials fee. May not be used to fulfill art major requirements. (Also offered as Art 70C. Students cannot receive credit for both courses.) Prerequisite(s): course 70B or by instructor permission. Enrollment limited to 12. May be repeated for credit. (General Education Code(s): A.) *P. Ritscher*

80A. Introduction to University Discourse: Imagining Justice Past and Present. F

Explores rhetorical principles and conventions of university discourse, providing intensive practice in analytical writing, critical reading, and speaking. Focuses on conceptions of justice, historic and contemporary, and considers how literary and artistic media may transmit, question, or revise notions of the just. Students cannot receive credit for this course and course 80B. Enrollment restricted to first-year college members who have not satisfied the C1 requirement. Enrollment limited to 22. (General Education Code(s): T4-Humanities and Arts, C1.) *D. Shemek*

80B. Rhetoric and Inquiry: Imagining Justice Past and Present. F

Explores the intersections of investigation, interpretation, and persuasion and hones strategies for writing and research. Focuses on conceptions of justice, historic and contemporary, and considers how literary and artistic media may transmit, question, or revise notions of the Just. Incorporates independent research. Students cannot receive credit for this course and course 80A. Prerequisite(s): satisfaction of the Entry Level Writing and C1 requirements. Enrollment restricted to first-year college members. Enrollment limited to 22. (General Education Code(s): T4-Humanities and Arts, C2.) *D. Shemek*

85. Introduction to Chinese Writing Systems. *

Gateway course illuminating the operation of the writing systems of greater China. Intended for students who are curious about the world's longest continually used symbol set as well as for those who may be considering a serious commitment to learning the language. *D. Keenan*

93. Field Study. F,W,S

Various topics to be arranged. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

93F. Field Study (2 credits). F,W,S

Various topics to be arranged. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

94. Group Tutorial. F,W,S

A program of independent study arranged between a group of students and a faculty instructor. Students submit petition to sponsoring agency. Enrollment limited to 10. May be repeated for credit. *The Staff*

94F. Group Tutorial (2 credits). F,W,S

A program of independent study arranged between a group of students and a faculty instructor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Various topics to be arranged. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99F. Tutorial (2 credits). F,W,S

Various topics to be arranged. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses

118B. Words & Music: Poetry, Musical Theater, Opera. W

Study of significant texts enhanced by music for performance. Topics vary annually. Course compares original texts in English translation with their adaptation to musical theater (*My Fair Lady, Oklahoma*, etc.) and opera (*Carmen*, etc.) May be repeated for credit. (General Education Code(s): IH.) *M. Ellis*

184A. Leadership and Institution Building (2 credits). F

Through lectures by senior administrators and student consensus-and-recommendation teams, students learn how leaders work with constituent groups, build cooperation, and develop implementation plans in an institution such as the University of California, specifically, UC Santa Cruz. Enrollment restricted to undergraduates accepted in the Chancellor's Undergraduate Internship Program. Enrollment limited to 40. *W. Ladusaw*

184B. Leadership and Institution Building (2 credits). W

Through lectures by senior administrators and student consensus-and-recommendation teams, students learn how leaders work with constituent groups, build cooperation, and develop implementation plans in an institution such as the University of California, specifically, UC Santa Cruz. Enrollment restricted to undergraduates accepted in the Chancellor's Undergraduate Internship Program. Enrollment limited to 40. W. Ladusaw

184C. Leadership and Institution Building (2 credits). S

Through lectures by senior administrators and student consensus-and-recommendation teams, students learn how leaders work with constituent groups, build cooperation, and develop implementation plans in an institution such as the University of California, specifically, UC Santa Cruz. Enrollment restricted to undergraduates accepted in the Chancellor's Undergraduate Internship Program. Enrollment limited to 40. *W. Ladusaw*

192. Directed Student Teaching. F,W,S

Teaching of a lower-division seminar under faculty supervision. (See course 42.) Upper-division standing required and a proposal supported by a faculty member willing to supervise. *The Staff*

193. Field Study. F,W,S

Program of study arranged between a group of students and an instructor, which may involve work with an off-campus or non-departmental agency (e.g., internship or

field work). Interview only; prior arrangement with instructor. Enrollment restricted to juniors and seniors. May be repeated for credit. *The Staff*

193F. Field Study (2 credits). F,W,S

Program of study arranged between a group of students and an instructor, which may involve work with an off-campus or non-departmental agency (e.g., internship or field work). Interview only; prior arrangement with instructor. Enrollment restricted to juniors and seniors. May be repeated for credit. *The Staff*

194. Group Tutorial. F,W,S

A program of independent study arranged between a group of students and an instructor. May be repeated for credit. *The Staff*

194F. Group Tutorial (2 credits). F,W,S

A program of independent study arranged between a group of students and an instructor. Students submit petition to sponsoring agency. Enrollment restricted to juniors and seniors. May be repeated for credit. *The Staff*

195. Senior Thesis. F,W,S

Students submit petition to sponsoring agency. The Staff

198. Independent Field Study. F,W,S

Provides for college-sponsored individual study programs off campus, for which faculty supervision is not in person (e.g., supervision is by correspondence.) Up to three such courses may be taken for credit in any one quarter. Approval of student's adviser, certification of adequate preparation, and approval by provost required. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Various topics to be arranged. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Various topics to be arranged. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

* Not offered in 2007-08

Graduation

Crown College

College Office (831) 459-2665 http://www2.ucsc.edu/crown

Program Description

Lower-Division Courses

10. Becoming a Successful Student (2 credits). W,S

An interactive course providing students with the opportunity to assess and revise methods of and purpose in studying. Critical, effective approaches to reading, writing, participating in lectures and sections, taking exams, balancing competing responsibilities, and utilizing campus resources are all explored. Permission of college adviser required. Enrollment limited to 24. *F. Ferguson*

28. Crown Student Leadership Development Seminar (2 credits). W

Explore leadership as it relates to student development at Crown College. Examine how values, ethics, involvement, identity, and theory affect leadership in a variety of content areas. Evaluate student's leadership strengths to determine objectives for improvement. *S. Woodside*

31. Crown College Student Leadership in Action Seminar (2 credits). S

Focuses on developing and establishing leadership skills and styles for new leaders at Crown College. Explores communication styles, group dynamics, community development, programming, moral development and conflict resolution concepts and strategies. Applies theory to action. Enrollment limited to college members and by permission of instructor. *I. Rupert, S. Woodside, J. Johnson*

80A. Intro to University Discourse: Ethical Issues in Emerging Technologies: Transgenics, Clones, Cyborgs. F

Explores rhetorical principles and conventions of university discourse, providing intensive practice in analytical writing, critical reading, and speaking. Examines ethical challenges resulting from the constant changes caused by rapidly accelerating pace of change brought on by science and technology. Students cannot receive credit for this course and course 80B. Enrollment restricted to first-year college members who have not satisfied the C1 requirement. (General Education Code(s): T4-Humanities and Arts, C1.) *F. Ferguson*

80B. Rhetoric and Inquiry: Ethical Issues in Emerging Technologies: Transgenics, Clones, Cyborgs, and AI. F

Explores the intersections of investigation, interpretation, and persuasion and hones strategies for writing and research. Examines ethical challenges resulting from constant changes caused by rapidly accelerating pace of change brought on by science and technology. Students cannot receive credit for this course and course 80A. Prerequisite(s): satisfaction of the Entry Level Writing and C1 requirements. Enrollment restricted to first-year college members. (General Education Code(s): T4-Humanities and Arts, C2.) *The Staff*

80C. Cosmology and Culture. *

Introduction to scientific cosmology. Examination of cultural roles of creation myths and cosmologies; examples include Zunian, Mayan, and ancient, medieval, and modern Judeo-Christian cosmologies. Possible cultural and religious repercussions of Big Bang, Gaia, and other modern origin stories. (Also offered as Physics 80C. Students cannot receive credit for both courses.) (General Education Code(s): T7-Natural Sciences or Social Sciences.) *J. Primack*

80G. Ethics and the New Eugenics. W

A reading/writing/seminar discussion that compares the intellectual premises and social/cultural context of the early 20th-century American eugenics movement to the new eugenics currently emerging from the science of human bioengineering. Enrollment limited to 25. (General Education Code(s): T3-Social Sciences.) *E. Cummins*

80J. Cyborg Society: Myths, Realities, Choices. S

Examines content and methodologies of the emerging field of cyborgology. Includes social studies of science, anthropology, sociology, philosophy, politics, art, biology, and informatics. Enrollment limited to 25. (General Education Code(s): T5-Humanities and Arts or Social Sciences.) *C. Gray*

80S. Undergraduate Seminar in Science, Technology, and Society. S

An honors seminar for first year students on selected topics that examine the relationship between science, technology, and society. Precise focus of each seminar varies and is announced by the college. Preference given to Crown College students. Enrollment restricted to first-year and sophomore students. Enrollment limited to 20. (General Education Code(s): T2-Natural Sciences.) *The Staff*

93. Field Study. F,W,S

Provides for individual programs of study sponsored by the college and performed off campus. Students should review plans with an appropriate fellow of the college. A proposal should be presented to the college academic preceptor no later than the seventh week of the preceding quarter. Credit is granted by the sponsor upon approval of the work performed. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

93F. Field Study (2 credits). F,W,S

Provides for individual field study in the vicinity of the campus under the direct supervision of a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99F. Tutorial (2 credits). F,W,S

Individual study for lower-division students directed by a fellow of Crown College. Students submit petition to sponsoring agency. Enrollment restricted to college members. *The Staff*

Upper-Division Courses

123. Science and Human Values. S

Study of how we acquire the values by which we make choices, and of the impact of science and science-based technology on our values. A writing-intensive, primarily lecture course. In daily writings students respond to what happened that day in class. Weekly writing assignments are introspective. They are designed for students to explore and better understand their own values and decision making. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; permission of

instructor after written application and personal interview during the preceding winter quarter. Enrollment limited to 40. (General Education Code(s): W.) *F. Andrews*

170A. Leadership and Teamwork in the Workplace A (2 credits). W

Supports students in reflecting on and enhancing experiential learning in a profession training program (PTP) internship matching their career goals. Subjects include techniques for maximizing the internship experience with a focus on preparing for leadership in the workplace. Enrollment by interview only. Enrollment limited to 20. *B. Silverthorne*

170B. Leadership and Teamwork in the Workplace B (2 credits). S

Supports students in reflecting on and enhancing experiential learning in a profession training program (PTP) internship matching their career goals. Subjects include techniques for maximizing the internship experience with a focus on preparing for leadership in the workplace. Prerequisite(s): course 170A and permission of instructor. Enrollment limited to 20. *B. Silverthorne*

185. Profession Training Program: Internship Preparation (2 credits). F

For all students preparing for an internship; exploration of career objectives, tools and resources to assist in finding and securing the ideal internship, and techniques for maximizing the benefits of the internship experience. Enrollment by consent of instructor. Enrollment limited to 40. *B. Silverthorne*

198. Independent Field Study. F,W,S

Provides for college-sponsored individual study programs off campus. Approval of student's faculty sponsor and college academic provost required. *The Staff*

199. Tutorial. F,W,S

Individual study for upper-division students directed by a fellow of Crown College. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Individual study for upper-division students directed by a fellow of Crown College. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Digital Arts and New Media

Porter D-121 (831) 459-1554 http://digitalarts.ucsc.edu

Faculty | Course Descriptions

(There were no substantive changes to the Digital Arts and New Media Program Description from the General Catalog 2006-08.)

Program Description

New technologies have profoundly changed contemporary culture and inevitably altered the role of the arts in society. The Digital Arts and New Media MFA Program serves as a center for the development and study of digital media and the cultures that they have helped create. Faculty and students are drawn from a variety of backgrounds, such as the arts, computer engineering, humanities, the sciences, and social sciences, to pursue interdisciplinary artistic and scholarly research and production in the context of a broad examination of digital arts and cultures.

The Digital and New Media MFA Program (DANM) is a two-year program. Seventy-six credits of academic course work are required. Students will normally take three five-credit courses each term – one 5-credit course in each of these interdependent and equally important program areas:

New Praxis—The term "Praxis" has many meanings, which include "translating ideas into action" and "action and reflection upon the world in order to change it." New Praxis in DANM is comprised of "critique" and "practicum" which provide students with both the practical training and critical dialogue necessary to pursue their own individual goals as artists and cultural practitioners.

Studies—DANM "Studies" include required core seminars that allow students first, to explore an array of recent methods and approaches in Digital Arts and Culture, and then pursue the construction of specific genealogies and theories with a sustained focus on a particular topic, before beginning to develop a thesis project and paper by engaging in various dialogues at the intersection of theory and practice.

Collaborative Research—Faculty lead students in major collaborative research projects that will result in publications and exhibitions. The following are descriptions of three current areas of DANM faculty reasearch: participatory culture, performative technologies, and mechatronics. We ask that prospective students identify their working relationships with one or more of these areas in their application and statement of purpose. As new research emphases arise, other categories for potential project groups will be formed.

Participatory Culture

DANM's participatory culture studies and research explore the role of information and communication technologies in what has sometimes been described as the shift from "top-down" culture to a "lateral" or "heterarchical" culture of participation and social engagement. In many social domains and practices, the human/computer interface acts as both a boundary and a bridge. Participatory culture research in DANM may encompass a range of projects in social computing, community-media activism and other modes of engagement that involve the design of new technologies and/or technologies that address social issues and help to democratize participation in culture and politics.

Performative Technologies

Research in performative technologies explores new methods for combining media and technology to create the visual, aural and connective material of performance. DANM performance research generates new public and performative spaces where

digital media, communication networks, and interactive systems may be fused with lighting, movement, stage and sound design to create mixes of real-time/recorded shared multimedia experiences shared by audiences and performers at both local and remote locations. Ongoing projects in this area may include work in telematics, performance-driven real-time graphics, algorithmic composition of sound and image, computer vision and motion capture, and studies of ritual, performativity, embodiment, interactivity, and subjectivity.

Mechatronics

Mechatronics is the functional integration of mechanical, electronic, and information technologies. In DANM this framework may be employed for the development and production of physical, systems-based artwork that incorporates elements of robotics, motion control, software engineering, and hardware design. DANM mechatronics research involves the use of a variety of media that may include video, performance, and sculpture, for the creation of complex, kinetic, audio-visual systems for the exploration of temporality, materiality, experience, perception, as well as relations between biological/life-like forms and environmental worlds.

Pedagogy—DANM trains future arts academics through practical experience. Students are awarded teaching assistantships as part of their overall support package as well as opportunities to assist faculty in workshops.

Thesis Requirement

Students are required to complete a thesis project and written paper under the supervision of their thesis committee. The thesis will be an arts project with digital documentation accompanied by a written paper. Thesis projects may be individual or collaborative and are expected to grow out of the research pursued in the project groups during the three quarters prior as well as work developed in new praxis courses. Each student will be expected to complete a 20- to 30-page paper discussing the student's preparatory research as well as the theoretical significance of the project. In the case of collaborative projects each student will be required to submit his or her own paper. During the thesis year, students will make at least two progress presentations to their thesis committee. The chair and at least one other member of the three-person committee will be senate faculty and members of the DANM program faculty. A completed thesis project and paper must be submitted to and approved by the thesis committee before the degree can be awarded.

Digital Arts and New Media Program Planner

The following is the required academic plan for completion of the Digital Arts and New Media Program.

Year	Fall	Winter	Spring
1st	DANM 201	DANM 202	DANM 203
	DANM 210	DANM 211A/220	DANM 211B/219
	DANM 249	Elective	DANM 250A
2nd	DANM 212	DANM 213A	DANM 213B
	DANM 250B	DANM 250C	DANM Thesis
	Elective	Elective	DANM Thesis

Applications

Prospective students in the Digital Arts and New Media program will have a foundation in the arts with some demonstrated interest in technology or a foundation in technology with demonstrated background in the arts. Many, but not all, entering students will have completed a Bachelor of Arts program in one or more of the arts disciplines (art or art history, film, multimedia, music, theater, video, etc.) or a Bachelor of Science program in computer science or computer or electrical engineering. Other successful applicants will have a BA or BS in another field but will be able to show substantial achievement in the arts, in technology or in digital arts.

In certain cases, students who demonstrate excellent potential for the program but lack proficiency in a "cross discipline" will be admitted to the program with the understanding that they will take courses during their first two quarters of study to make up that deficiency. An arts student lacking sufficient programming experience, for example, will be expected to take one or two programming courses in their first two quarters in addition to the DANM program requirements.

Students will apply online through the Division of Graduate Studies web site between October and February for the following fall quarter. In addition to submitting an on-line application, students will be expected to submit a non-returnable representative sample of their work, i.e., a portfolio, on a CD, CD-ROM or DVD. Further information can be found at: http://graddiv.ucsc.edu.

Home : Publications and Scheduling : Enrollment : Fees : Transcripts : Special Programs : Graduation

Digital Arts New Media

<u>Program Description | Course Descriptions</u>

Faculty and Professional Interests

Ralph H. Abraham, Professor Emeritus, Mathematics

Elliot W. Anderson, Assistant Professor, Art

Electronic art, digital arts/new media

Lawrence Andrews, Associate Professor, Film and Digital Media

Film, video, installation and media art

Tandy Beal, Lecturer, Theater Arts (Dance)

Choreography, improvisation, technique, performance skills, collaborations with classical and jazz composers, circus, theater and video, children's productions

James H. Bierman, Professor, Theater Arts (Drama)

Playwriting, theater history and literature, classical and Renaissance drama, Chicano theater, digital media

Benjamin L. Carson, Assistant Professor, Music

Theories of consciousness and cognition, rhythm perception, Schoenberg, history of compositional method, subjectivity and identity

David H. Cope, Professor, Music

Composition; 20th-century music history, with focus on the avant-garde; 18th- and 19th-century theory; analysis; Experiments in Music Intelligence

David W. Crane, Assistant Professor, Film and Digital Media

Film and media theory, discourses on technology, digital culture, experimental media, critical and psychoanalytic theory

David L. Cuthbert, Assistant Professor, Theater Arts

Lighting design, CADD, projection design, scenic design

Sharon A. Daniel, Associate Professor, Film and Digital Media

Community-based public art in information and communications environments, social and political aspects of information technology, community networks, participatory culture, digital inclusion, net art, human-computer interface design

James E. Davis, Assistant Professor, Computer Science

Computer graphics and computer vision, methods for acquiring and manipulating complex graphical models from the real world

Teresa De Lauretis, Professor, History of Consciousness

Semiotics, psychoanalysis, feminism, film theory, literary theory, queer studies

Peter Q. Elsea, Lecturer, Music

Electronic music and music technology

Shelly E. Errington, Professor, Anthropology

Globalization of folk art, visual and social semiotics, photography, film, the Internet and digital media, Southeast Asia, and Latin America

Mary K. Foley, Professor, Theater Arts (Drama)

Asian theater, Southeast Asian studies, performance studies, maskwork, puppetry, multicultural theater

Mark Franko, Professor, Theater Arts (Dance)

Dance history and theory, choreography, technique, performance studies, theatrical theory in

historical and critical perspective

Frank R. Galuszka, Professor, Art

Painting, book arts

Jennifer A. Gonzalez, Associate Professor, History of Art and Visual Culture Contemporary theories of visual culture, semiotics, critical museum studies, photography, public and activist art in the U.S.

Eli E. Hollander, Professor, Film and Digital Media

Film and video directing; ethnographic documentary directory, editing, cinematography, and videography; digital image generation; screenwriting

Donna M. Hunter, Associate Professor, History of Art and Visual Culture

European painting (especially French) from 1600 to the 1960s; German art and visual culture between the two world wars; art as social practice, portraiture

David E. Jones, Professor, Music; Provost, Porter College

Composition and analysis, chamber opera, Balkan music, language and music, timbre and orchestration

Norman Locks, Professor, Art

Photography

Suresh K. Lodha, Professor, Computer Science

Geo-spatial visualization, scientific visualization, sensor and computer vision, data mining

Charles L. Lord, Professor, Film and Digital Media

Film and video directing and editing, video theory and history, video installation, screenwriting, documentary production

Dominic W. Massaro, Professor, Psychology

Understanding language, speech perception and reading, language learning and speech technology, pattern recognition, psychology of interactive media, psychology of art and new media, human-machine interface

Michael J. Mateas, Assistant Professor

Artificial Intelligence (AI) in art and entertainment, computer games, interactive story, autonomous characters, story generations, game AI, and AI-based art

Charles E. McDowell, Professor, Computer Science

Programming languages, parallel computing, and computer science education

Margaret E. Morse, Professor, Film and Digital Media

Digital and electronic media theory and criticism, media art, media history, technology and culture, film history and theory, German cinema, documentary, science fiction, and silent comedy

Paul Nauert, Associate Professor, Music

Theory, composition; rhythm and meter; music cognition; mathematical and computer models of the compositional process

Dard A. Neuman, Assistant Professor, Music; Kamil and Talat Hasan Endowed Chair in Classical Indian Music

Ethnomusicology; Hindustani music; colonialism, nationalism, technology and performance; sitar

Edward P. Osborn, Assistant Professor, Art

Electronic art, digital arts/new media

Alex Pang, Professor, Computer Science

Uncertainty visualization, tensor visualization, scientific visualization, collaboration software, virtual reality interfaces

Warren Sack, Assistant Professor, Film and Digital Media

Software design and media theory

Daniel Scheie, Professor, Theater Arts (Drama)

Acting, directing, dramatic literature, theater history, Shakespeare, Wagner, gay studies

Barry R. Sinervo, Professor, Ecology and Evolutionary Biology Animal behavior, evolution, physiological ecology

Catherine M. Soussloff, Professor, History of Art and Visual Culture (UC Presidential Chair)

European cultural theory, aesthetics, and the historiography of art; performance studies; early modern Italian art; media history including film; Jewish identity and representation

Elizabeth Stephens, Associate Professor, Art

Intermedia, electronic art, sculpture, and performance art

Hai Tao, Assistant Professor, Computer Engineering

Image and video processing, computer vision, vision-based graphics, and human-computer interaction

Edward C. Warburton, Assistant Professor, Theater Arts

Development of dance thought in action, creative processes, and technology in theater arts; dance technique, movement research and composition, and applied dance practices

Lewis G. Watts, Associate Professor, Art Photography

Emmet J. Whitehead, Associate Professor, Computer Science

Software engineering, software configuration management, web, hypertext, collaborative authoring, hypertext versioning, Internet information systems

Digital Arts and New Media

Porter D-121 (831) 459-1554 http://digitalarts.ucsc.edu

Program Description | Faculty

Graduate Courses

201. Recent Methods and Approaches to Digital Arts and Culture. F

Students examine methods and approaches to research and writing in Digital Media Art and Culture, and explore key theories concerning digital media and cultures. The course may focus on the interaction between digital technologies and socio/cultural formations. Enrollment restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor. *M. Morse*

202. Genealogies and Theories of Digital Arts and Culture. W

Provides examination of a particular theoretical and/or historical premise related to issues of media, art, and mediatization, as a means of teaching a common approach to the construction of genealogies within digital art and culture. Enrollment restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 15. *D. Hunter*

203. Dialogues and Questions in Digital Arts and Culture. S

Students engage in dialogues at the intersection of theory and practice with the goal of producing a pre-thesis proposal and essay. Readings and seminar discussions inform the development of project proposals and essays, which theoretically contextualize students' work. Enrollment restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 18. *D. Crane*

210. Project Design Studio. F

Students work on the design of individual projects by developing project proposals, budgets, "proof of concept" design documents and/or prototypes and exploring tools, technologies, programming languages, hardware, software, and electronics techniques relevant to their projects. Enrollment restricted to graduate students. Enrollment limited to 18. *E. Osborn*

211A. Critique / Lecture I (2 credits). W

First-year students present work-in-progress based on the projects developed in the project design course in both individual studio and group critiques, participate in group critique discussions and attend guest lectures. Enrollment restricted to graduate students. Enrollment limited to 18. *M. Foley*

211B. Critique / Lecture II (2 credits). S

First-year students present work-in-progress based on the projects developed in the project design course in both individual studio and group critiques, participate in group critique discussions and attend guest lectures. Enrollment restricted to graduate students. Enrollment limited to 18. (S) The Staff

212. Thesis Proposal (no credit). F

Second-year DANM students work on the development and completion of their thesis project proposal and abstract under the supervision of the program director and their thesis committees. Enrollment restricted to second-year DANM students. Enrollment limited to 18. *The Staff*

213A. Critique / Lecture III (2 credits). W

Second-year students present thesis project work-in-progress during group critiques, participate in group discussion, and attend guest lectures. Students schedule one or more meetings with members of their thesis committee for in-progress review. Enrollment restricted to graduate students. Enrollment limited to 18. *M. Foley*

213B. Critique / Lecture IV (2 credits). S

Second-year students present thesis project work-in-progress during group critiques, participate in group discussion, and attend guest lectures. Students schedule one or more meetings with members of their thesis committee for in-progress review. Enrollment restricted to graduate students. Enrollment limited to 18. (S) The Staff

215. Digital Architectures. *

Critical examination of intersections in architecture, public space, and digital cultures. Traces how new technologies have transformed architectural practice and theory since the 1960s and how spatial concepts have been engaged, as material and metaphor, by designers working between architecture and new media. Enrollment restricted to juniors, seniors, and graduate students. Enrollment limited to 18. *The Staff*

216. Digital Bodies. *

Explores the appearance, form, and theoretical status of the human body/political subject in online art. Focuses on representations of race and gender, family resemblances, and local communities, as well as the political and colonial metaphors of spatial interaction operating on the World Wide Web. Visual representations of bodies that take the form of avatars, advertising, robots, and anime studied in their contextual usage. Enrollment restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 17. *J. Gonzalez*

217. Concepts in Electronic Art. *

Study of concepts developed in contemporary conceptual art practice and their application to technological media. Review a broad spectrum of electronic art—the Internet, digital video, interactive systems, kinetics and robotics, biotechnological work—that hold conceptual art practice in the foreground. Use concepts cultivated by early conceptual artists and apply them to individual projects using electronic media. Enrollment restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 17. *I. Reichert*

218. Interactive Game Design. *

As a team, students design a working prototype of a game including the Design Document, Prototypes, and Game Implementation. Introduced to advanced media types including 3D animation, principles of object-oriented programming, digital music, and video. Strongly recommended that students have a working knowledge of programming language, preferably an object-oriented language (Macromedia Lingo preferred). Enrollment restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 17. May be repeated for credit. *B. Sinervo*

219. Introduction to Electronics for Artmaking (3 credits). S

Series of workshops serve as introduction to electronic devices used in artmaking, providing hands-on experience with sensors, motors, switches, gears, lights, simple circuits, microprocessors, and hardware store devices to create kinetic and interactive works of art. Students are billed a materials fee. Enrollment restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 18. *E. Anderson*

220. Introduction to Programming for the Arts (3 credits). S

Intensive introduction to programming for digital art projects for students with a basic understanding of the fundamentals of programming. Students learn how to create and manipulate digital media using program control and generate web applications. Enrollment restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 10. *R. Abraham*

223. Electronic Sound Synthesis. W

Graduate-level techniques and procedures of electronic music composition. Practical experience in the UCSC electronic music studio with computer composition systems and software, multi-track recording equipment, and interactive performance systems. Prerequisite(s): permission of instructor; appropriate undergraduate experience; students with no previous electroacoustic experience may be asked to attend lectures for course 123. Enrollment restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor. (Also offered as Music 223. Students cannot receive credit for both courses.) Enrollment limited to 12. May be repeated for credit. *P. Elsea*

225. Theater, Drama, and the Pixar Feature. *

Viewing of the Pixar Animation Studios canon combined with lectures on the major art history movements within discipline of theater history and its attendant dramatic literature: The Marxist Epic: A Bug's Life and the Backstage Musical; Shakespeare's Comedic Weltanschauung: Finding Nemo; Postmodern Criticism: Toy Story; French Romanticism and the Hugo Hero: Monsters, Inc.; Alger, Albee, and The Incredibles' American Dream. Enrollment restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 17. D. Scheie

226. Creativity, Collaboration, and Professionalism in Art. *

Exploration of the practice of making a living, as well as a life, in art. Examines strategies for connecting with the community using outreach projects and the joys and sorrows of working collaboratively. Compares corporate and nonprofit funding paths and the business of showing work while maintaining creative challenges. Enrollment restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 17. May be repeated for credit. *T. Beal*

227. Projected Light in Performance. *

Exploration of projected light in performance and art. The history of lighting as art is covered in a hands-on demystifying format from the shadow of a bare light bulb to the latest in automated and projection equipment and techniques. Enrollment restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 20. *D. Cuthbert*

228. Techniques of Modernity and Aesthetic Formations. F

Explores the transformations and aesthetic possibilities of the digital age through a study of perceptual shifts of the past, from orality to literacy, gift to commodity, precolonial to colonial, "pre-modern" to "modern," and the technological revolutions that accompanied these shifts. (Also offered as Music 228. Students cannot receive credit for both courses.) Enrollment restricted to graduate students; upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 18. *D. Neuman*

229. Interactive Digital Design for Theater. *

Examination of the integration of graphic and sound designs with live theatrical performance. Create a dazzling array of images, animations, video, and sounds that work as an ensemble to create a performance environment that responds to the cues of the performers. Offered in conjunction with Theater Arts 151 and results in a live performance. Enrollment restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 20. May be repeated for credit. *J. Bierman*

247. Performance/Performativities. *

Performance acts and theories of performativity in visual culture from modernity to present. Major theoretical positions subtending the emergence of performances/performativities: subjectivity, identity, temporality, media, ritual, the event, the body and embodiment, collaboration, and politics. (Also offered as History of Consciousness 247. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. Qualified seniors accepted with permission of instructor. Enrollment limited to 15. *C. Soussloff*

249. Faculty Seminar (2 credits). F

Faculty lectures to familiarize first-year DANM graduate students with program faculty members and their creative work and research so the students can select their faculty advisers and thesis committee members. Enrollment restricted to graduate students. Enrollment limited to 18. *The Staff*

250A. Collaborative Research Project Groups. S

Three-quarter collaborative research project group in one of three focus areas that represent the current research of DANM faculty: participatory culture, mechatronics, and performative technology. Students and faculty engage in research collaborations resulting in publications and exhibitions. Enrollment restricted to graduate students. Enrollment limited to 8. May be repeated for credit. *The Staff*

250B. Collaborative Research Project Groups. F

A three-quarter collaborative research project group in one of three focus areas that represent the current research of DANM faculty: Participatory Culture, Mechatronics, and Performative Technology. Students and faculty engage in research collaborations resulting in publications and exhibitions. Enrollment restricted to graduate students. Enrollment limited to 8. May be repeated for credit. *The Staff*

250C. Collaborative Research Project Groups. W

Three-quarter collaborative research project group in one of three focus areas that represent the current research of DANM faculty: participatory culture, mechatronics, and performative technology. Students and faculty engage in research collaborations resulting in publications and exhibitions. Enrollment restricted to graduate students. Enrollment limited to 8. May be repeated for credit. *The Staff*

254I. Empirical Approaches to Art Information. *

Reading and practice in empirical methods, as applied to the study of music, visual art, multimedia production, and performance arts. Topics include semiotics, critiques of empiricism, cultural determinants and contingents of perception, the psychophysics of information, sensory perception (visual and auditory), memory, pattern recognition, and awareness. Students apply existing knowledge in the cognitive sciences to a developing creative project, or develop and conduct new experiments. (Formerly course 251I.) (Also offered as Music 254I. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. Enrollment limited to 17. May be repeated for credit. *B. Carson*

290. Interactivity in Performance. *

Examines use of interactive technologies to bring about collaboration among visual, performance, and sound art. Goal is to collaboratively produce an interactive live-performance work. Explores methodologies and technologies of interactivity, space, and time and addresses aesthetic and compositional concerns that arise when using interactive digital tools, including critical discussions about how technology itself shapes form and content of an artwork. Meets 3 1/2 hours/week for combination lab and lecture. Enrollment restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor. *E. Anderson*

297. Independent Study. F,W,S

Independent digital arts and new media research project under the guidance of a digital arts and new media faculty member or other faculty with approval of adviser. Project includes readings, research, and a written report. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. Maximum 10 credits. May be repeated for credit. *D. Massaro*

297G. Independent Study (3 credits). F,W,S

Independent digital arts and new media research project under the guidance of a digital arts and new media faculty member or other faculty with approval of adviser. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May not be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Students carry out a master's of fine arts thesis in digital arts and new media research, under the guidance of a thesis committee. The thesis will be an arts project with digital documentation accompanied by a written paper discussing the student's preparatory research as well as the theoretical significance of the project. Enrollment restricted to graduate students. Maximum 10 credits. May be repeated for credit. *The Staff*

* Not offered in 2007-08

Dual-Degree Engineering

Baskin School of Engineering 335 Baskin Engineering Building (831) 459-2158

http://www.soe.ucsc.edu

Changes to 2006-08 Catalog Highlighted

Program Description

Prior to establishing the Jack Baskin School of Engineering (SOE), UC Santa Cruz developed a dual-degree program with the College of Engineering at UC Berkeley (UCB) to meet the growing demand for engineers with both solid technical training and a broad liberal arts education. In addition to the challenging engineering majors offered at Baskin SOE, interested students may still pursue the dual-degree program option. As dual- degree majors, students spend three years at UCSC completing major requirements for a bachelor's degree in the social sciences, humanities, or the arts. Students also complete their engineering prerequisite courses in science, mathematics, and engineering for admission to UCB while at UC Santa Cruz. Students who maintain a grade point average of 3.2 or higher in their engineering preparatory courses are eligible to transfer to UCB and complete their fourth and fifth years in the dual- degree program. Once admitted to UCB, students complete requirements for a degree in a chosen engineering specialty, while also completing any remaining courses for their UCSC non-engineering major and general education. Students complete one major from each of the following lists:

UCB Engineering Majors

Bioengineering
Civil and environmental engineering
Engineering sciences
Industrial engineering and operations research
Manufacturing engineering
Materials science
Mechanical engineering
Nuclear engineering

Recommended UCSC Majors

Sociology

American studies Anthropology Business management economics Community studies **Economics** Environmental studies Feminist Studies Film and digital media History History of art and visual culture Legal studies Linguistics Literature Philosophy **Politics** Psychology

Upon completion of the program, the student receives two bachelor's degrees: a B.A. in a social science, humanities, or arts field from UCSC and a B.S. in engineering from UCB. Although the UCSC major cannot be in the Division of Physical and Biological Sciences or the School of Engineering, many combinations of fields are possible in the dual-degree program; examples include engineering along with economics, sociology, or philosophy. Specific curriculum and

education plans for dual-degree students are developed in consultation with an engineering adviser and tailored to the needs of individual students. A committee composed of faculty from both UC Santa Cruz and UC Berkeley jointly provide direction and oversight of the program. Students must enter the dual-degree program as first-quarter freshmen, beginning their course work at UCSC in the fall quarter.

Admission

In addition to completing the courses required for UC admission, high school students who plan to pursue the dual-degree engineering route at UCSC should develop a strong background in mathematics and physics.

Prospective students who wish to be considered for the dual-degree program should indicate it as their first choice of major on the UC Application for Undergraduate Admission. When the application is received by the Office of Admissions, additional information about the dual-degree program will be sent to the applicant in late January, along with a request for the applicant's specific choice of majors at UC Berkeley and UC Santa Cruz. Admission to the campus does not guarantee admission to the dual-degree program.

The admissions committee for the dual-degree program reviews each application on an individual basis. Criteria for selection includes the applicant's strong performance in academic courses (particularly science and math), the applicant's essay, and excellent test scores. Dual-degree program applicants will also need to complete a formal application to UC Berkeley as a transfer student at the appropriate point in their UCSC studies.

Preparation for Dual-Degree Engineering Program

Dual-degree students typically enroll in a variety of classes while at UCSC due to the need to congruently fulfill their UCSC major and their required preparation for their UCB major. Following are example classes that dual-degree students may take as preparation for the engineering major while at UCSC.

Applied Mathematics and Statistics 27/L, Mathematical Methods for Engineers/ Laboratory

Applied Mathematics and Statistics 131, Introduction to Probability Theory

Chemistry 1B/M and 1C/N, General Chemistry/Laboratories

Computer Science 12A/L, Introduction to Programming/Laboratory; or 60N,

Beginning Programming: Natural Sciences

Earth Sciences 10, Geologic Principles

Earth Sciences 142, Soil Properties and Mechanics

Electrical Engineering 70/L, Introduction to Electronic Circuits/Laboratory

Engineering 50/L, Engineering Mechanics/Laboratory

Mathematics 19A-B, Calculus for Science, Engineering, and Mathematics

Mathematics 23A-B, Multivariable Calculus

Physics 5A/L, 5B/M, and 5C/N, Introduction to Physics series/Laboratories; or

Physics 6A/L, 6B/M, and 6C/N, Introductory Physics series/Laboratories

Physics 160, Practical Electronics

Dual-Degree Engineering

Baskin School of Engineering 335 Baskin Engineering Building (831) 459-2158 http://www.soe.ucsc.edu

Program Description

Program Description

To meet the growing demand for engineers with an education that combines a solid technical background with a broad liberal arts base, the UCSC campus has developed a dual-degree program with the College of Engineering at UC Berkeley. In this long-standing program, students spend three years at UCSC completing most of the requirements for a bachelor's degree in one of the fields in the social sciences, humanities, or arts. While attending UCSC, students also take science, mathematics, and engineering courses that are prerequisites for admission to UCB's engineering majors, and they are expected to maintain a grade point average of 3.2 or better in these engineering preparatory courses. Students apply to transfer to UCB for the fourth and fifth years of the dual-degree program. If admitted, they complete requirements for a degree in a chosen engineering specialty, and they also take any remaining courses for the UCSC major. Students complete one major from each of the following lists:

Prior to establishing the Jack Baskin School of Engineering (SOE), UC Santa Cruz developed a dual-degree program with the College of Engineering at UC Berkeley (UCB) to meet the growing demand for engineers with both solid technical training and a broad liberal arts education. Earth and Planetary Sciences

A232 Earth and Marine Sciences Building (831) 459-4089

http://www.es.ucsc.edu

Changes to 2006-08 Catalog Highlighted | Faculty | Course Descriptions

Program Description

The study of Earth and planetary sciences encompasses a broad exploration and understanding of the origin and evolution of Earth, its sister planets and satellites, life. Earth science has been unified by the theory of plate tectonics, which considers Earth's surface to be broken into a number of interlocking plates. Plate movements result in ocean basin formation, mountain building, and plate translation along great faults such as the San Andreas, only 15 kilometers east of Santa Cruz. Most earthquakes and volcanic activity occur at modern plate boundaries. Energy, mineral, and water resources, geologic hazards, climate change, and earthquake hazard reduction comprise some pressing societal concerns of the Earth sciences. A large question in planetary sciences is whether Earth-like tectonics operate on other planets and satellites, and, if not, how their interiors and surfaces have evolved.

Students who have a strong background in Earth sciences and related disciplines will be prepared for a wide variety of employment opportunities in teaching, research, government, consulting, and industry.

Faculty and research staff cover many subdisciplines, including petrology, geochemistry, paleobiology, paleoceanography, climatology and paleoclimatology, hydrology, geomorphology, glaciology, tectonics, mineral physics, seismology, paleomagnetism, and planetary sciences.

On-campus research facilities include laboratories in seismology, paleomagnetism, mineral physics, stable and radiogenic isotope geochemistry, surface processes, hydrology and hydrogeology, high performance computing for climate modeling and planetary sciences, atmospheric chemistry, electron microscopy, and a wide variety of chemical analysis facilities for rock and water samples (XRF, ICP, microprobe, and XRD spectroscopies). Many laboratory activities are associated with UCSC's Institute of Geophysics and Planetary Physics (IGPP). Research scientists associated with IGPP add significantly to the intellectual and teaching resources available in Earth and planetary sciences at UCSC.

Earth and planetary sciences is also associated with the Institute of Marine Sciences (IMS), a group of physical, geological, chemical, and biological oceanographers. As with IGPP, IMS adds to the intellectual, research, and teaching resources. IMS also includes numerous affiliated researchers from the nearly U.S. Geological Survey Coastal Branch and the Monterey Bay Aquarium Research Institute.

The Earth and Planetary Sciences Department offers both bachelor of arts (when combined or doubled with another major) and bachelor of science degrees. Combined majors leading to a B.A. degree in Earth sciences/anthropology or environmental studies/ Earth sciences are also offered; for the latter program description, see page 243. A minor in Earth sciences is also available. Students planning to transfer into the program are strongly encouraged to satisfy prerequisites to upper-division courses for the B.S. or B.A. degree before transferring to UCSC.

Earth and planetary sciences instruction at UCSC encompasses geology, geochemistry, and geophysics, as applied to surficial and internal processes and to geological oceanography. Undergraduate courses integrate these subdisciplines and applications, with a focus on modern frontiers and career opportunities in the field. A core set of three foundation courses is available to all majors; these provide rigorous development of the central concepts in Earth and planetary sciences. All upper-division Earth and planetary sciences courses involve intensive written work, which most students find helpful in developing skills useful in the job market. In addition, there is a requirement to take two upper-division courses that provide hands-on experience with data acquisition and analysis, which is also valuable training for the job market and for graduate research.

The remaining requirements for the major are designed with sufficient flexibility to tailor each degree to particular student interests and career intentions. Through appropriate selection of elective courses, students can develop a focus in any of a wide variety of areas, emphasizing, for example, environmental issues, geologic hazards, water resources, global change, or traditional areas such as geology, geophysics, or geochemistry. Some of the many course combinations that can be constructed to prepare for various career directions are discussed below. Obtaining advice from the department to clarify career opportunities is strongly recommended.

Many related courses are offered by the Ocean Sciences Department. Weekly seminars by visiting lecturers provide an opportunity for undergraduates to gain exposure to leading researchers and research topics in Earth and planetary sciences. An internship program provides opportunities for undergraduate (and graduate) students to gain practical work experience, which may prove beneficial in the industrial and governmental job market. The department also offers an optional mentorship course (course 190, 1 credit) which introduces students to research programs and analytical facilities in the department and helps them to prepare for professional life after graduation. The small class format allows students close interaction with three faculty members during each offering.

Those interested in the M.S. or Ph.D. degree should see the description below and request further information and applications through the Division of Graduate Studies. The Earth and Planetary Sciences Department web site offers valuable information about the graduate program: http://es.ucsc.edu/grad/gradprog.html.

Academic Advising

A student who wants to become an Earth sciences major should contact the Earth and Planetary Sciences Department undergraduate degree adviser as soon as possible. After developing a formal study plan on a declaration of major petition, students are required to meet with a faculty adviser who can help the student plan his or her program in detail and provide information about independent study, thesis research, advanced study, career options, and other educational opportunities. For the combined major with environmental studies, students begin the advising process with the Department of Environmental Studies; after which they meet with the Earth and Planetary Sciences Department for dual advising. Relevant courses taken at UCSC or other institutions may be substituted for required electives by approved petition. Please see the undergraduate adviser for the substitution petition form and more information about this process.

Transfer Students

Transfer students planning to major in Earth sciences are encouraged to call for advice about courses they should complete before arrival at UCSC. It is important that students have completed as many as possible of the required chemistry, calculus, and calculus-based physics courses. Having this course work completed elsewhere allows students greater flexibility in scheduling and completing their UCSC Earth and planetary sciences courses. Junior transfer Earth and planetary sciences majors and prospective majors should meet with department advisers during summer orientation or shortly after their arrival on campus to plan their next two years' schedule of courses.

Bachelor of Science Degree

The B.S. program is designed for students who intend to pursue professional careers in Earth and planetary sciences, engineering, policy, law, teaching, or business or who otherwise desire the broad, quantitative training available at UCSC. In addition to providing comprehensive preparation in the basic physical sciences, and particular breadth and depth in Earth and planetary sciences, the curriculum is structured to prepare students for the competitive graduate school and career marketplace.

The core of the major includes calculus, physics, chemistry, and a group of comprehensive Earth and planetary sciences courses. For the standard B.S., students then select at least four additional courses from a diverse list of upper-division electives, with at least two that involve significant laboratory or field data acquisition and analysis. These electives, often in combination with additional upper-division courses from this and related departments, provide the student with expertise in one or more subdisciplines within Earth sciences.

Elective distributions can be designed to emphasize earthquake and faulting studies, Earth surface processes, Earth system sciences, geologic hazards, geology, crustal and deep-Earth geophysics, marine geophysics, and water resources. Three formal concentrations, all with specific course requirements and leading to an Earth and planetary sciences B.S., are available: environmental geology, ocean sciences, and planetary sciences. A senior comprehensive experience (senior thesis, or geologic field camp, or exemplary performance in a graduate course) is required of all majors.

Preparation for the Standard Major (B.S.)

Chemistry 1A, 1B/M and 1C/N

- · Mathematics 11A or 19A, or 11B or 19 B, and 22 or 23A or Earth Sciences 111
- Physics 6A/L and 6B/M (preferred), or 5A/L and 5B/M, and 6C/N or 5C/N or Chemistry 108A/L or 112A/L

Requirements for the Standard Major (B.S.)

- Courses 5/L, 10/L, or 20/L; 110A/L, 110B/M, and 110C/N, 190 (optional 1-unit)
- At least four elective courses from upper-division Earth and planetary sciences offerings, or Ocean Sciences 102 or 120, must be completed. Two of the four upper-division electives must be selected from this subset of courses, which involve significant laboratory or field data acquisition/analysis: 109/L, 116, 117/L, 119, 120/L, 130/L, 140/L, 142, 146, 148, 150/L; 168.
- Five (5) credits of internship (course 198) or independent study (199) may be substituted for one upper-division elective.

Students also complete the comprehensive requirement described below.

Students are encouraged to take more than the minimum number of elective courses and may craft an elective distribution from many areas of specific research and career interests. The following are examples of suggested elective distributions that develop expertise in important areas (* indicates that the course satisfies the lab or field data acquisition/analysis requirement).

Earth system sciences. Focuses on terrestrial, marine, and atmospheric processes and their relations through time; may include paleoclimatic and paleoenvironmental dynamics, global change issues, and surface geological processes such as weathering, erosion, and hydrology: 100/L, 101/L, 102, 107, 109/L*, 116*, 119*, 120/L*, 121, 128, 148*, 208, Ocean Sciences 102, 120

Earthquake and faulting studies. Focuses on crustal deformation and faulting processes and related phenomena such as plate motions, earthquakes, and stress in the lithosphere: 109/L*, 117/L*, 119*, 150/L*, 162, 168*, 172

Geologic hazards. Focuses on Earth processes that impact society, including earthquakes, volcanoes, coastal erosion, and landslides: 104, 105, 107, 109/L*, 116*, 140/L*, 142*, 146*

Geology. Emphasizes a traditional broad background with field skills, rock genesis and interpretation, and structural relations: 109/L*, 117/L*, 120/L*, 130/L*, 140/L*, 150/L*

Geophysics. Develops breadth in geophysical techniques, composition and structure of Earth's deep interior, and gravitational and magnetic fields: 117/L*, 119*, 150/L*, 160, 162, 168*, 172 Marine geophysics. Emphasizes a breadth of geological and geophysical background for continuing study of the processes involved in the growth, evolution, and destruction of the ocean floor and margins: 107, 117/L*, 146*, 150/L*, 152*, 168*

Surface processes. Emphasizes understanding the fluxes of energy, water, mass, and chemicals within and across Earth's surface and the relations to climatic and tectonic forcing processes: 107, 109/L*, 116*, 119*, 120/L*, 140/L*, 128, 142*, 146*, 148*, 163, Environmental Toxicology 144.

Water resources. Focuses on water resources quality and quantity and relations between climate and water in and on the crust: 105, 109/L*, 116*, 119*, 121, 140/L*, 142*, 146*, 148*, Environmental Toxicology 144, Ocean Sciences 120

Comprehensive Requirement (B.S.)

Students complete one of the following three options:

- Satisfactory completion of courses 188A-B, Senior Field Internship
- Satisfactory completion of a senior thesis, which must include a significant element of independent research or original work and can only be undertaken after agreement is obtained from a faculty member to supervise it (approximately three quarters in advance of completion)
- Exemplary performance, including a major written report, in a 5-credit graduate course or seminar (which requires permission from the instructor in order to enroll)

Earth Sciences Standard B.S. Major Planner

Students planning a professional career in the Earth and planetary sciences should take more than the minimum number of courses required for the major if possible. Four-year students have ample flexibility to take additional electives if they begin with the required courses in their second year. Junior transfers also have flexibility if they have taken most of their preparatory courses in calculus, chemistry, and physics before entry. Further advice can be obtained from the undergraduate adviser and from faculty members.

Note: Chemistry 1A, 1B/M and 1C/N are offered fall-winter-spring and winter-spring-fall. Physics 6A/L and 6B/M and 6C/N are offered fall-winter-spring and winter-spring-fall, and Mathematics 11A-B and 19A-B and 22 and 23A are offered every quarter.

Year	Fall	Winter	Spring
1st (frsh)	Chem 1A Math 3 college core	Math 11A or 19A Math 11B or 19B Chem 1B/M	Eart 10/L Chem 1C/N

^{*} Eart 109/L, 110A/L, and 110B/M are required for participation in Eart 188A-B.

Earth Sciences Major with Concentration in Environmental Geology (B.S.) The environmental geology concentration is designed to provide quantitative preparation for career pathways involving interdisciplinary study of the environment with a geological emphasis. Additional biology and environmental studies courses are required for this concentration along with other distributions of upper-division requirements and electives.

Required Lower-Division Courses

- Earth Sciences 20/L (recommended) or 10/L or 5/L
- Environmental Studies 25
- Biology 20A, 20B, 20C (Environmental Studies 24 may be substituted for Biology 20C)
- · Chemistry 1A, 1B/M and 1C/N
- Mathematics 11A or 19A and 11B or 19B
- Physics 6A/L and 6B/M (preferred), or 5A/L and 5B/M

Required Upper-Division Courses

- Courses 110A/L, 110B/M, Biology 150
- At least four of the following Earth and planetary sciences courses: 100/L, 101/L, 102, 104, 105, 107, 109/L, 110C/N, 111, 116, 119, 120/L, 121, 128, 140/L, 142, 146, 148, 150/L
- Two additional upper-division electives with environmental topics from biology, chemistry, Earth and planetary sciences, environmental studies, environmental toxicology, or ocean sciences

Students also complete an Earth and planetary sciences comprehensive requirement from the list described above.

^{*} Eart 109/L, 110A/L, and 110B/M are required for participation in Eart 188A-B.

Earth Sciences Major with Concentration in Planetary Sciences (B.S.)

The planetary sciences concentration is designed to provide students with a quantitative background appropriate for career pathways in the interdisciplinary study of planets and their satellites. The upper-division elective courses can be tailored for students interested in planetary interiors, atmospheres, and/or surfaces.

Required Lower-Division Courses

- Earth Sciences10/L (preferred) or 5/L or 20/L
- Astronomy 14 or 16 or 18
- Chemistry 1A, 1B/M, 1C/N
- Mathematics 19A-B (preferred) or 11A-B
- Mathematics 22 or 23A or Earth Sciences 111
- Physics 5A/L, 5B/M, 5C/N (preferred), 5D recommended; or 6A/L, 6B/M, 6C/N

Required Upper-Division Courses

- Courses 110A/L, 110B/M, 110C/N, 119, 160
- Two electives from the following courses: 161, 162, 163, 164
- Two electives from the following: courses 107, 109/L, 116, 117/L, 121, 128, 130/L, 140/L, 148, 150/L, 152, 172, 209, 210; Astronomy 112, 118; Mathematics 130, and 162, 163, 164 (if not already taken)

Students also complete the comprehensive requirement from the list described above.

Earth Sciences (Planetary Sciences) B.S. Major Planner

[†] Students expecting to write a senior thesis for their comprehensive requirement are required to contact the department approximately three quarters before graduation to identify the intended project and faculty adviser. Senior theses usually require two or three quarters for completion.

^{*} Eart 109/L, 110A/L, and 110B/M are required for participation in Eart 188A-B.

Bachelor of Arts Degree

The B.A. program encourages connections between the Earth and planetary sciences and other disciplines, and the degree is granted only as part of a double major or for the combined major with anthropology or environmental studies. Students can prepare for careers in environmental engineering, management, remediation, and policy; education; law; medicine; and interdisciplinary science fields. The B.A. can be granted together with any major field. The preparatory courses in chemistry, mathematics, and physics and four of the six basic courses required for the standard B.S. degree are required for the Earth sciencesB.A.; but only two additional electives, which can be chosen from the entire list of upper-division courses, are required.

Note that B.A. students who want to take courses 188A-B, *Senior Field Internship*, must first complete courses 109/L, 110A/L, and 110B/M.

Preparation for the Standard Major (B.A.)

- · Chemistry 1A, 1B/M and 1C/N
- · Mathematics 11A or 19A and 11B or 19B
- Physics 6A/L and 6B/M (preferred), or 5A/L and 5B/M

Requirements for the Standard Major (B.A.)

 Courses 5/L, 10/L or 20/L; 110A/L, 110B/M, 110C/N, plus two additional upper-division Earth sciences courses

Comprehensive Requirement for the Standard Major (B.A.)

Students complete one of the following two options:

- Satisfactory completion of courses 188A-B, Senior Field Internship
- Satisfactory completion of a senior thesis, which must include a significant element of independent research or original work and can only be undertaken after agreement is obtained from a faculty member to supervise it (approximately three quarters in advance of completion).

Combined Major in Environmental Studies/Earth Sciences (B.A.)

The combined major in environmental studies and Earth sciences is designed to provide enhanced exposure to geological concepts and processes for students emphasizing environmental policy and social science topics. For the requirements of the combined environmental studies/Earth sciences B.A., see page XXX.

[†] Students expecting to write a senior thesis for their comprehensive requirement are required to contact the department approximately three quarters before graduation to identify the intended project and faculty adviser. Senior theses usually require two or three quarters for completion.

Combined Major in Earth Sciences/Anthropology (B.A.)

The Earth sciences/anthropology combined major is intended for students with interests in Earth sciences and the laboratory-based aspect of anthropology. These include anthropology students interested in archaeology or paleoanthropology who desire more intensive training in natural sciences and Earth sciences students interested in paleobiology or archaeology. The combined major provides a rigorous training in both anthropology and Earth sciences and will permit students to enter graduate programs in Earth sciences, archaeology, or paleoanthropology. The combined major has a significantly different set of cognate science and required lower- and upper-division courses than the standard major; therefore, students are advised to plan carefully and to contact academic advisers in the Earth and Planetary Sciences and Anthropology Departments early if they have questions.

Required Lower-Division Courses

- Anthropology 1, 2, and 3
- Earth Sciences 5/L, 10/L, or 20/L
- Mathematics 11A-B
- Five lower-division science cognate courses (plus laboratories) chosen from the following: Biology 20A, 20B, 20C or 21A, 21B, 21C
 Chemistry 1A, 1B/M and 1C/N
 Physics 6A/L and 6B/M (preferred), or 5A/L and 5B/M

Required Upper-Division Courses

- Anthropology 102A or 107/L or 185
- Earth Sciences 110A/L

Three upper-division electives in anthropology from the following:

 Any three upper-division electives listed under the Anthropology Department's Physical Anthropology and Archaeology Courses subdivision (see page XXX).

Three upper-division electives in Earth sciences from the following:

Earth Sciences 100/L, 101/L, 102, 105, 107, 109/L, 110B/M, 117/L, 119, 120/L, 128, 130/L, 142, 148, 150/L, 152

Comprehensive Requirement

One of the following:

- Anthropology 194-series (any senior seminar in physical anthropology) or
- Earth Sciences 188A-B* or
- · Earth Sciences 195 and a senior thesis with faculty readers from both departments or

Any approved anthropology or Earth sciences field program

(sr)	sr comp	sr comp	sr comp

Double Majors (B.A. or B.S.)

Each Earth sciences double major is required to complete the full requirements of another UCSC major. If a student elects to major in the environmental geology concentration and the environmental biology (biological sciences) or environmental chemistry (chemistry) concentrations, the lower-division preparatory courses will count toward both majors since they are identical. All other double majors in Earth sciences prohibit counting any upper-division course toward both majors.

^{*} Earth Sciences 188A-B has as prerequisites courses 109/L, 110A/L, and 110B/M.

Minor Requirements

Students can earn a minor in Earth sciences by taking courses 5/L or 10/L or 20/L and five upper-division Earth sciences courses. Two of the five upper-division courses may be substituted by two of courses 1, 6, 7, 65, any of the 80 series, or Environmental Toxicology 80E. Courses offering less than 5 credits (such as Eart 190 or 3-unit labs and independent studies) may not be counted toward the minor requirements, although additional course work is always encouraged. Courses taken for any major may not be double-counted toward meeting the minor requirements.

Graduate Program

The graduate program in Earth and planetary sciences is designed to prepare students for careers in research, industry, consulting, teaching, and numerous other career paths, including business and law. The aim is to develop habits of critical analysis and thorough documentation, skills in quantitative field, computational, and/or laboratory research, and proficiency in one or more fields of research. The fundamental requirement for admission to the program is substantial evidence of superior scholarship, dedication and determination to do quality work, and aptitude for original research. Preparation in the basic sciences and in Earth and planetary sciences equivalent to the requirements for the Earth sciences bachelor's degree at UCSC is expected, but graduates in chemistry, physics, engineering, biology, or other disciplines who meet the requirement of superior scholarship are eligible and encouraged to apply. Deficiencies can be made up by additional course work. Prospective students should take the Graduate Record Examination (GRE) General Test and have the scores sent to the UCSC Division of Graduate Studies.

UCSC awards both the M.S. and the Ph.D. degrees. The M.S. degree may be the terminal degree for some of those seeking careers in industry, government, and teaching at the secondary level. It may also be an initial step toward the Ph.D. degree, in which the student gains knowledge and confidence in carrying out and completing a more complex scientific project. The master's degree is awarded on the basis of a thesis, course work, or an examination.

Thesis Track (Ph.D., M.S.). In their first year, all thesis-track graduate students register for courses 203, *Introductory Teaching Seminar*; 205, *Introductory Graduate Seminar*; 206, *Great Papers in the Earth Sciences*; and, in consultation with the graduate preliminary interview committee, choose at least one from among courses 207, *Tectonics*; 208, *Methods in Paleoclimatology*; 209, *Solid Earth Geochemistry*; 210, *Overview of Stellar and Planetary Formation and Evolution*; or 220, *Ground Water Modeling*. In subsequent years, all students participate in course 293, Graduate Research Seminar. Other course requirements are tailored to the individual student's academic background, professional experience, and plans for research. No specific number of course credits is required for the Ph.D., but, ordinarily, students put more of their effort into course work during at least the first year of graduate study. It is recommended that all thesis-track graduate students attain some teaching experience while at UCSC.

Late in the fall quarter, each first-year thesis track student has an interview with a representative committee of the faculty. Interview topics are drawn from the broad field of Earth and planetary sciences and can include elementary mathematics, physics, chemistry, or biology. The interview is used to determine the student's understanding of basic scientific principles and ability to apply these principles to specific problems. Following the interview, students will be given a list of course requirements and recommendations.

To qualify for candidacy in the Ph.D. program, each student must pass an oral examination in his or her area of specialization by the end of their third year of graduate study, although students are strongly encouraged to take the exam earlier. The exam is based on a research proposal presenting one or more specific questions to be researched by the student in the course of completing their Ph.D. thesis. Students are expected to have in-depth knowledge of fields, relevant to the proposal, including familiarity with the professional literature.

The Ph.D. dissertation is a scholarly contribution to knowledge that embodies the results of original and creative effort by the student. Students are urged to prepare their dissertations for publication in peer-reviewed professional journals. A public oral defense of the thesis is required prior to completion of the Ph.D.

The M.S. thesis is a scholarly contribution consisting of results of an original research project by the student. Students are strongly encouraged to prepare their results for publication in the peer-reviewed literature. The M.S. thesis must be completed by the end of the third year after entering the program and students are strongly encouraged to complete their thesis earlier and to present the results of this work publicly.

Course Work M.S. Track. The course work M.S. track is a professional program designed to allow students to increase their breadth, quantitative depth, or emphasis on a particular specialty; to provide the student with a stronger background toward competition for jobs or an enhancement of skills for current employment (e.g., K–14 teaching); and to allow students from other disciplines (e.g., biology, physics, chemistry, mathematics, environmental studies) to acquire advanced training in Earth and planetary sciences. Prior to the first quarter of study,

students have a meeting with their faculty adviser in which they develop a study plan of at least nine courses, no more than one of which may be 297 or 298, and a statement of objectives. The plan must be approved by the graduate representative. Students are also limited to one Earth Sciences 290 pro-seminar course. It is expected that the course plan will comprise mainly graduate-level and quantitative upper-level undergraduate elective courses.

Course work master's students are required to fulfill one of the following capstone options: a substantial review/research manuscript or a comprehensive oral examination based on their course work.

There is no foreign language requirement for either the M.S. or Ph.D. degree. However, many students in the Earth and planetary sciences find knowledge of one or more foreign languages necessary in their particular research and therefore study the appropriate language.

Details regarding admission to graduate standing, financial aid, examinations, and the requirements for the master of science and doctor of philosophy degrees are available from the Division of Graduate Studies. For more information, see Graduate Studies, page XXX.

Earth and Planetary Sciences

A232 Earth and Marine Sciences Building (831) 459-4089 http://www.es.ucsc.edu

<u>Program Description</u> | <u>Faculty</u> | <u>Course Descriptions</u>

Program Description

The study of Earth and planetary sciences encompasses a broad exploration and understanding of the origin and evolution of Earth, its sister planets and satellites, and its lifeforms. These Earth science endeavors have has been unified by the theory of plate tectonics, which considers Earth's surface to be broken into a number of interlocking plates. Plate movements result in ocean basin formation, mountain building, and plate translation along great faults such as the San Andreas, only 15 kilometers east of Santa Cruz. Most earthquakes and volcanic activity occur at modern plate boundaries. Energy, mineral, and water resources, geologic hazards, climate change, and earthquake hazard reduction comprise some pressing societal concerns of the Earth sciences. A large question in planetary sciences is whether Earth-like tectonics operate on other planets and satellites, and, if not, how their interiors and surfaces have evolved.

Earth sciences thus presents a broad range of career opportunities. Students obtaining a good who have a strong background in geology Earth sciences and related disciplines will be prepared for a wide variety of employment opportunities in teaching, research, government, consulting, and industry.

Faculty and research staff cover many Earth sciences subdisciplines, including igneous and sedimentary petrology, trace element and isotope geochemistry, paleontology and paleoecology, mineral physics, geomorphology, hydrology, geologic hazards, plate tectonics, earthquake and global seismology, crustal seismology, paleomagnetism, paleoceanography, paleoclimatology, planetary sciences, and global climate modeling. petrology, geochemistry, paleobiology, paleoceanography, climatology and paleoclimatology, hydrology, geomorphology, glaciology, tectonics, mineral physics, seismology, paleomagnetism, and planetary sciences.

On-campus research facilities at UCSC include laboratories in seismology, paleomagnetism, mineral physics, stable and radiogenic isotope geochemistry, surface processes, hydrology and hydrogeology, high performance computing for climate modeling and planetary sciences, atmospheric chemistry, electron microscopy, and a wide variety of chemical analysis facilities for rock and water samples (XRF, ICP, microprobe, and XRD spectroscopies). Many laboratory activities are associated with UCSC's Institute of Geophysics and Planetary Physics (IGPP). Research scientists associated with IGPP add significantly to the intellectual and teaching resources available in Earth and planetary sciences at UCSC.

Earth and planetary sciences is also associated with the Institute of Marine Sciences (IMS), a group of physical, geological, chemical, and biological oceanographers. As with IGPP, IMS adds to the intellectual, research, and teaching resources available to the UCSC Earth sciences community. IMS also includes numerous affiliated researchers from the nearly U.S. Geological Survey Coastal Branch and the Monterey Bay Aquarium Research Institute.

The Earth and Planetary Sciences Department offers both bachelor of arts (when combined or doubled with another major) and bachelor of science degrees.

Combined majors leading to a B.A. degree in <u>Earth sciences/anthropology</u> or <u>environmental studies/Earth sciences</u> are also offered; for the latter program description, see page 243. A <u>minor in Earth sciences</u> is also available. Students planning to transfer into the program are strongly encouraged to satisfy prerequisites to upper-division courses for the B.S. or B.A. degree before transferring to UCSC.

Earth and planetary sciences instruction at UCSC encompasses geology, geochemistry, and geophysics, as applied to surficial and internal processes and to geological oceanography. Undergraduate courses integrate these subdisciplines and applications, with a focus on modern frontiers and career opportunities in the field. A core set of three foundation courses is available to all majors; these provide rigorous development of the central concepts in Earth and planetary sciences. All upperdivision Earth and planetary sciences courses involve intensive written work, which most students find helpful in developing skills useful in the job market. In addition, there is a requirement to take two upper-division courses that provide hands-on experience with data acquisition and analysis, which is also valuable training for the job market and for graduate research.

The remaining requirements for the major are designed with sufficient flexibility to tailor each degree to particular student interests and career intentions. Through appropriate selection of elective courses, students can develop a focus in any of a wide variety of areas, emphasizing, for example, environmental issues, geologic hazards, water resources, global change, or traditional areas such as geology, geophysics, or geochemistry. Some of the many course combinations that can be constructed to prepare for various career directions are discussed below. Obtaining advice from the department to clarify career opportunities is strongly recommended.

Many related courses are offered by the Ocean Sciences Department. The large research staffs of the IGPP and the IMS further augment the research and teaching program. Weekly seminars by visiting lecturers provide an opportunity for undergraduates to gain exposure to leading researchers and research topics in Earth and planetary sciences. An internship program provides opportunities for undergraduate (and graduate) students to gain practical work experience, which may prove beneficial in the industrial and governmental Earth sciences—job market. Earth sciences—The department also offers an optional mentorship course (course 190, 1 credit) which introduces students to research programs and analytical facilities in the department and helps them to prepare for professional life after graduation. The small class format allows students close interaction with three faculty members during each offering.

Those interested in the M.S. or Ph.D. degree should see the description below and request further information and applications through the <u>Division of Graduate Studies</u>. The Earth <u>and Planetary</u> Sciences Department web site offers valuable information about the graduate program: http://es.ucsc.edu/grad/gradprog.html.

Academic Advising

A student who wants to become an Earth sciences major should contact the Earth and Planetary Sciences Department undergraduate degree adviser as soon as possible. After developing a formal study plan on a declaration of major petition, students are required to meet with a faculty adviser who can help the student plan his or her program in detail and provide information about independent study, thesis research, advanced study, career options, and other educational opportunities. For the combined major with environmental studies, students begin the advising process with the Department of Environmental Studies; after which they meet with the Earth and Planetary Sciences Department for dual advising. Relevant courses taken at UCSC or

other institutions may be substituted for required electives by approved petition. Please see the undergraduate adviser for the substitution petition form and more information about this process.

Transfer Students

Transfer students planning to major in Earth sciences are encouraged to call for advice about courses they should complete before arrival at UCSC. It is important that students have completed as many as possible of the required chemistry, mathematics calculus, and calculus-based physics courses. Having this course work completed elsewhere allows students greater flexibility in scheduling and completing their UCSC Earth and planetary sciences courses. Junior transfer Earth and planetary sciences majors and prospective majors should meet with department advisers during summer orientation or shortly after their arrival on campus to plan their next two years' schedule of courses.

Bachelor of Science Degree

The B.S. program is designed for students who intend to pursue professional careers in Earth and planetary sciences, engineering, policy, law, teaching, or business or who otherwise desire the broad, quantitative training available at UCSC. In addition to providing comprehensive preparation in the basic physical sciences, and particular breadth and depth in Earth <u>and planetary</u> sciences, the curriculum is structured to prepare students for the competitive graduate school and career marketplace.

The core of the major includes calculus, physics, chemistry, and a group of comprehensive Earth <u>and planetary</u> sciences courses. For the standard B.S., students then select at least four additional courses from a diverse list of upper-division electives, with at least two that involve significant laboratory or field data acquisition and analysis. These electives, often in combination with additional upper-division courses from this and related departments, provide the student with expertise in one or more subdisciplines within Earth <u>and planetary</u> sciences.

Elective distributions can be designed to emphasize earthquake and faulting studies, Earth surface processes, Earth system sciences, geologic hazards, geology, crustal and deep-Earth geophysics, marine geophysics, and water resources. Three formal concentrations, all with specific course requirements and leading to an Earth and planetary sciences B.S., are available: environmental geology, ocean sciences, and planetary sciences. A senior comprehensive experience (senior thesis, or geologic field camp, or exemplary performance in a graduate course) is required of all majors.

Preparation for the Standard Major (B.S.)

- Chemistry 1A, 1B/M and 1C/N
- Mathematics 11A or 19A, or 11B or 19B, and 22 or 23A or Earth Sciences 111
- Physics 6A/L and 6B/M (preferred), or 5A/L and 5B/M, and 6C/N or 5C/N or Chemistry 108A/L or 112A/L

Requirements for the Standard Major (B.S.)

- Courses 5/L, 10/L, or 20/L; 110A/L, 110B/M, and 110C/N, 190 (optional 1-unit)
- At least four elective courses from upper-division Earth <u>and planetary</u> sciences offerings, or Ocean Sciences 102 or 120, must be completed. Two of the four

- upper-division electives must be selected from this subset of courses, which involve significant laboratory or field data acquisition/analysis: 109/L, 116, 117/L, 119, 120/L, 130/L, 140/L, 142, 146, 148, 150/L; 168.
- Five (5) credits of internship (course 198) or independent study (199) may be substituted for one upper-division elective.

Students also complete the comprehensive requirement described below.

Students are encouraged to take more than the minimum number of elective courses and may craft an elective distribution from many areas of specific research and career interests. The following are examples of suggested elective distributions that develop expertise in important areas (* indicates that the course satisfies the lab or field data acquisition/analysis requirement).

Earth system sciences. Focuses on terrestrial, marine, and atmospheric processes and their relations through time; may include paleoclimatic and paleoenvironmental dynamics, global change issues, and surface geological processes such as weathering, erosion, and hydrology: 100/L, 101/L, 102, 107, 109/L*, 116*, 119*, 120/L*, 121, 128, 148*, 208, Ocean Sciences 102, 120, 200

Earthquake and faulting studies. Focuses on crustal deformation and faulting processes and related phenomena such as plate motions, earthquakes, and stress in the lithosphere: 109/L*, 117/L*, 119*, 150/L*, 162, 168*, 172

Geologic hazards. Focuses on Earth processes that impact society, including earthquakes, volcanoes, coastal erosion, and landslides: 104, 105, 107, 109/L*, 116*, 140/L*, 142*, 146*

Geology. Emphasizes a traditional broad background with field skills, rock genesis and interpretation, and structural relations: 109/L*, 117/L*, 120/L*, 130/L*, 140/L*, 150/L*

Geophysics. Develops breadth in geophysical techniques, composition and structure of Earth's deep interior, and gravitational and magnetic fields: 117/L*, 119*, 150/L*, 160, 162, 168*, 172

Marine geophysics. Emphasizes a breadth of geological and geophysical background for continuing study of the processes involved in the growth, evolution, and destruction of the ocean floor and margins: 107, 117/L*, 146*, 150/L*, 152*, 168*

Surface processes. Emphasizes understanding the fluxes of energy, water, mass, and chemicals within and across Earth's surface and the relations to climatic and tectonic forcing processes: 107, 109/L*, 116*, 119*, 120/L*, 140/L*, 128, 142*, 146*, 148*, 163, Environmental Toxicology 144.

Water resources. Focuses on water resources quality and quantity and relations between climate and water in and on the crust: 105, 109/L*, 116*, 119*, 121, 140/L*, 142*, 146*, 148*, Environmental Toxicology 144, Ocean Sciences 120

Comprehensive Requirement (B.S.)

Students complete one of the following three options:

- Satisfactory completion of courses 188A-B, Senior Field Internship
- Satisfactory completion of a senior thesis, which must include a significant element of independent research or original work and can only be undertaken

- after agreement is obtained from a faculty member to supervise it (approximately three quarters in advance of completion)
- Exemplary performance, including a major written report, in a 5-credit graduate course or seminar (which requires permission from the instructor in order to enroll)

Earth Sciences Standard B.S. Major Planner

Students planning a professional career in the Earth <u>and planetary</u> sciences should take more than the minimum number of courses required for the major if possible. Four-year students have ample flexibility to take additional electives if they begin with the required courses in their second year. Junior transfers also have flexibility if they have taken most of their preparatory courses in calculus, chemistry, and physics before entry. Further advice can be obtained from the undergraduate adviser and from faculty members.

Note: Chemistry <u>1A.</u> 1B/M and 1C/N are offered fall-winter<u>-spring</u> and winter-spring<u>-fall</u>. Physics 6A/L and 6B/M and 6C/N are offered fall-winter-spring and winterspring-fall, and Mathematics 11A-B and 19A-B and 22 and 23A are offered every quarter.

Year	Fall	Winter	Spring
1st (frsh)	Eart 5/L Chem 1A Math 3 college core	Math 11A or 19A Chem 1B/M	Math 11B or 19B Eart 10/L Chem 1C/N

^{*} Eart 109/L, 110A/L, and 110B/M are required for participation in Eart 188A-B.

Earth Sciences Major with Concentration in Environmental Geology (B.S.)

The environmental geology concentration is designed to provide quantitative preparation for career pathways involving interdisciplinary study of the environment with a geological emphasis. Additional biology and environmental studies courses are required for this concentration along with other distributions of upper-division requirements and electives.

Required Lower-Division Courses

- Earth Sciences 20/L (recommended) or 10/L or 5/L
- Environmental Studies 25
- Biology 20A, 20B, 20C (Environmental Studies 24 may be substituted for Biology 20C)

[†] Students expecting to write a senior thesis for their comprehensive requirement are required to contact the department approximately three quarters before graduation to identify the intended project and faculty adviser. Senior theses usually require two or three quarters for completion.

- Chemistry 1A, 1B/M and 1C/N
- Mathematics 11A or 19A and 11B or 19B
- Physics 6A/L and 6B/M (preferred), or 5A/L and 5B/M

Required Upper-Division Courses

- Courses 110A/L, 110B/M, Biology 150
- At least four of the following Earth <u>and planetary</u> sciences courses: <u>100/L</u>, 101/L, 102, 104, 105, 107, 109/L, 110C/N, 111, 116, <u>119</u>, 120/L, 121, <u>128</u>, <u>140/L</u>, 142, 146, 148, <u>150/L</u>
- Two additional upper-division electives with environmental topics from biology, chemistry, Earth <u>and planetary</u> sciences, environmental studies, environmental toxicology, or ocean sciences

Students also complete an Earth <u>and planetary</u> sciences comprehensive requirement from the list described above.

[†] Students expecting to write a senior thesis for their comprehensive requirement are required to contact the department approximately three quarters before graduation to identify the intended project and faculty adviser. Senior theses usually require two or three quarters for completion.

- Courses 110A/L, 110B/M, 110C/N; Chemistry 108A/L and 108B/M or 112A/L and 112B/M and 112C/N; Ocean Sciences 101 or 102
- Four electives from the following list: Courses 101/L, 102, 105, 107, 109/L, 111, 116, 119, 120/L, 121, 122, 128, 130/L, 148, 172; Chemistry 122; Ocean Sciences 101, 102, 118, 120, 130, 142, 156, 200, 220, 238
- Students also complete the comprehensive requirement from the list described above. A topic emphasizing ocean sciences is recommended.

Earth Sciences (Ocean Sciences) B.S. Major Planner

^{*} Eart 109/L, 110A/L, and 110B/M are required for participation in Eart 188A-B.

† Students expecting to write a senior thesis for their comprehensive requirement are required to contact the department approximately three quarters before graduation to identify the intended project and faculty adviser. Senior theses usually require two or three quarters for completion.

Earth Sciences Major with Concentration in Planetary Sciences (B.S.)

The planetary sciences concentration is designed to provide students with a quantitative background appropriate for career pathways in the interdisciplinary study of planets <u>and their satellites</u>. The upper-division elective courses can be tailored for students interested in planetary interiors, atmospheres, and/or surfaces.

Required Lower-Division Courses

- Earth Sciences10/L (preferred) or 5/L or 20/L
- Astronomy 14 or 16 or 18
- Chemistry 1A, 1B/M, 1C/N
- Mathematics 19A-B (preferred) or 11A-B
- Mathematics 22 or 23A or Earth Sciences 111
- Physics 5A/L, 5B/M, 5C/N (preferred), 5D recommended; or 6A/L, 6B/M, 6C/N

Required Upper-Division Courses

- Courses 110A/L, 110B/M, 110C/N, 119, 160
- Two electives from the following courses: 161, 162, 163, 164
- Two electives from the following: courses 107, 109/L, 116, 117/L, 121, 128, 130/L, 140/L, 148, 150/L, 152, 172, 209, 210: Astronomy 112, 118; Mathematics 130, and 162, 163, 164 (if not already taken)

Students also complete the comprehensive requirement from the list described above.

Bachelor of Arts Degree

The B.A. program encourages connections between the Earth <u>and planetary</u> sciences and other disciplines, and the degree is granted only as part of a double major or for the combined major with anthropology or environmental studies. Students can prepare for careers in environmental engineering, management, remediation, and policy; education; law; medicine; and interdisciplinary science fields. The B.A. can be granted together with any major field.

The preparatory courses in chemistry, mathematics, and physics and four of the six basic courses required for the standard B.S. degree are required for the Earth sciencesB.A.; but only two additional electives, which can be chosen from the entire list of upper-division courses, are required.

The combined major in environmental studies and Earth sciences is designed to provide enhanced exposure to geological concepts and processes for students emphasizing environmental policy and social science topics. For the requirements of the combined environmental studies/Earth sciences B.A., see the Environmental Studies program.

Note that B.A. students who want to take courses 188A-B, *Senior Field Internship*, must first complete courses 109/L, 110A/L, and 110B/M.

Preparation for the Standard Major (B.A.)

- Chemistry 1A, 1B/M and 1C/N
- Mathematics 11A or 19A and 11B or 19B
- Physics 6A/L and 6B/M (preferred), or 5A/L and 5B/M

Requirements for the Standard Major (B.A.)

• Courses 5/L, 10/L or 20/L; 110A/L, 110B/M, 110C/N, plus two additional upper-division Earth sciences courses

Comprehensive Requirement for the Standard Major (B.A.)

Students complete one of the following two options:

- Satisfactory completion of courses 188A-B, Senior Field Internship
- Satisfactory completion of a senior thesis, which must include a significant element of independent research or original work and can only be undertaken after agreement is obtained from a faculty member to supervise it (approximately three quarters in advance of completion).

Combined Major in Environmental Studies/Earth Sciences (B.A.)

The combined major in environmental studies and Earth sciences is designed to provide enhanced exposure to geological concepts and processes for students emphasizing environmental policy and social science topics. For the requirements of the combined environmental studies/Earth sciences B.A., see Environmental studies/Earth sciences.

Combined Major in Earth Sciences/Anthropology (B.A.)

The Earth sciences/anthropology combined major is intended for students with interests in Earth sciences and the laboratory-based aspect of anthropology. These include anthropology students interested in archaeology or paleoanthropology who desire more intensive training in natural sciences and Earth sciences students interested in paleobiology or archaeology. The combined major provides a rigorous training in both anthropology and Earth sciences and will permit students to enter graduate programs in Earth sciences, archaeology, or paleoanthropology. The combined major has a significantly different set of cognate science and required lower- and upper-division courses than the standard major; therefore, students are advised to plan carefully and to contact academic advisers in the Earth and Planetary Sciences and Anthropology Departments early if they have questions.

Required Lower-Division Courses

- Anthropology 1, 2, and 3
- Earth Sciences 5/L, 10/L, or 20/L
- Mathematics 11A-B
- Five lower-division science cognate courses (plus laboratories) chosen from the following:

Biology 20A, 20B, 20C or 21A, 21B, 21C

Chemistry 1A, 1B/M and 1C/N

Physics 6A/L and 6B/M (preferred), or 5A/L and 5B/M

Required Upper-Division Courses

- Anthropology 101 or 180/L <u>102A or 107/L</u> or 185
- Earth Sciences 110A/L

Three upper-division electives in anthropology from the following:

• Any three upper-division electives listed under the Anthropology Department's Physical Anthropology and Archaeology Courses subdivision.

Three upper-division electives in Earth sciences from the following:

• Earth Sciences 100/L, 101/L, 102, 105, 107, 109/L, 110B/M, 117/L, 119, 120/L, 128, 130/L, 142, 148, 150/L, 152

Comprehensive Requirement

One of the following:

- Anthropology 194A 194-series (any senior seminar in physical anthropology) or
- Earth Sciences 188A-B* or
- Earth Sciences 195 and a senior thesis with faculty readers from both departments or

Any approved anthropology or Earth sciences field program

* Earth Sciences 188A-B has as prerequisites courses 109/L, 110A/L, and 110B/M.

Earth Sciences/Anthropology Combined Major Planner

Year	Fall	Winter	Spring
1st (frsh)	Anth 1 college core	Anth 2	Anth 3 Eart 10/L
2nd (soph)	Math 11A science cognate	Math 11B science cognate	science cognate science cognate
3rd (jr)	Eart 110A/L science cognate	Anth 101 elective elective	elective Anth 107/L elective
4th (sr)	elective sr comp	elective sr comp	elective sr comp

Double Majors (B.A. or B.S.)

Each Earth sciences double major is required to complete the full requirements of another UCSC major. If a student elects to major in the environmental geology concentration and the environmental biology (biological sciences) or environmental chemistry (chemistry) concentrations, the lower-division preparatory courses will count toward both majors since they are identical. All other double majors in Earth sciences prohibit counting any upper-division course toward both majors.

Minor Requirements

Students can earn a minor in Earth sciences by taking courses 5/L or 10/L or 20/L and five upper-division Earth sciences courses. Two of the five upper-division courses may be substituted by two of courses 1, 6, 7, 65, any of the 80 series, or Environmental Toxicology 80E. Courses offering less than 5 credits (such as Eart 190 or 3-unit labs and independent studies) may not be counted toward the minor. Courses such as Earth Sciences 190 or laboratories (under 5 credits) cannot be used to fill any of the minor, requirements, although additional course work is always encouraged. Courses taken for any major may not be double-counted toward meeting the minor requirements.

Graduate Program

The graduate program in Earth <u>and planetary</u> sciences is designed to prepare students for careers in research, <u>industry</u>, <u>consulting</u>, teaching, <u>and numerous other career paths</u>, <u>including business and law</u>. The aim is to develop habits of critical analysis and thorough documentation, skills in <u>industry</u>, quantitative field, <u>computational</u> and/or laboratory research, and proficiency in one or more fields of research. The fundamental requirement for admission to the program is substantial evidence of superior

scholarship, <u>dedication and determination to do quality work</u>, and aptitude for original research. Preparation in the basic sciences and in Earth <u>and planetary sciences</u> equivalent to the requirements for the Earth sciences bachelor's degree at UCSC is expected, but graduates in chemistry, physics, engineering, biology, or other disciplines who meet the requirement of superior scholarship are eligible and encouraged to apply. Deficiencies can be made up by additional course work. Prospective students should take the Graduate Record Examination (GRE) General Test and have the scores sent to the UCSC Division of Graduate Studies.

UCSC awards both the M.S. and the Ph.D. degrees. The M.S. degree may be the terminal degree for some of those seeking careers in industry, government, and teaching at the secondary level. It may also be an initial step toward the Ph.D. degree, in which the student gains knowledge and confidence in carrying out and completing a more complex scientific project. The master's degree is awarded on the basis of a thesis, course work, or an examination.

Thesis Track (Ph.D., M.S.). In their first year, all thesis-track graduate students register for courses 203, *Introductory Teaching Seminar*; 205, *Introductory Graduate Seminar*; 206, *Great Papers in the Earth Sciences*; and, in consultation with the graduate preliminary interview committee, choose at least one from among courses 207, *Tectonics*; 208, *Methods in Paleoclimatology*; 209, *Solid Earth Geochemistry*; 210, *Overview of Stellar and Planetary Formation and Evolution*; or 220, *Ground Water Modeling*. In subsequent years, all students participate in course 293, Graduate Research Seminar. Other course requirements are tailored to the individual student's academic background, professional experience, and plans for research. No specific number of course credits is required for the Ph.D., but, ordinarily, students put more of their effort into course work during at least the first year of graduate study. It is recommended that all thesis-track graduate students attain some teaching experience while at UCSC.

Late in the fall quarter, each first-year thesis track student has an interview with a representative committee of the faculty. Interview topics are drawn from the broad field of Earth and planetary sciences and can include elementary mathematics, physics, chemistry, or biology. The interview is used to determine the student's understanding of basic scientific principles and ability to apply these principles to specific problems. Following the interview, students will be given a list of course requirements and recommendations.

To qualify for candidacy in the Ph.D. program, each student must pass an oral examination in his or her area of specialization by the end of their third year of graduate study, although students are strongly encouraged to take the exam earlier. The exam is based on a research proposal presenting one or more specific questions to be researched by the student in the course of completing their Ph.D. thesis. Students are expected to have in-depth knowledge of fields, relevant to the proposal, including familiarity with the professional literature.

The Ph.D. dissertation is a scholarly contribution to knowledge that embodies the results of original and creative effort by the student. Students are urged to prepare their dissertations for publication in peer-reviewed professional journals. A public oral defense of the thesis is required prior to completion of the Ph.D.

The M.S. thesis is a scholarly contribution consisting of results of an original research project by the student. Students are strongly encouraged to prepare their results for publication in the peer-reviewed literature. The M.S. thesis must be

completed by the end of the third year after entering the program and students are strongly encouraged to complete their thesis earlier and to present the results of this work publicly.

Course Work M.S. Track. The course work M.S. track is a professional program designed to allow students to increase their breadth, quantitative depth, or emphasis on a particular specialty; to provide the student with a stronger background toward competition for jobs or an enhancement of skills for current employment (e.g., K–14 teaching); and to allow students from other disciplines (e.g., biology, physics, chemistry, mathematics, environmental studies) to acquire advanced training in Earth and planetary sciences. Prior to the first quarter of study, students have a meeting with their faculty adviser in which they develop a study plan of at least nine courses, no more than one of which may be 297 or 298, and a statement of objectives. The plan must be approved by the graduate representative. Students are also limited to one Earth Sciences 290 pro-seminar course. It is expected that the course plan will comprise mainly graduate-level and quantitative upper-level undergraduate elective courses.

Course work master's students are required to fulfill one of the following capstone options: a substantial review/research manuscript or a comprehensive oral examination based on their course work.

There is no foreign language requirement for either the M.S. or Ph.D. degree. However, many students in the Earth <u>and planetary</u> sciences find knowledge of one or more foreign languages necessary in their particular research and therefore study the appropriate language.

Details regarding admission to graduate standing, financial aid, examinations, and the requirements for the master of science and doctor of philosophy degrees are available from the Division of Graduate Studies. For more information, see the Division of Graduate Studies web site.

<u>Program Description | Course Descriptions</u>

Faculty and Professional Interests

Craig Agnor, Assistant Research Planetary Scientist, IGPP/CODEP Planetary collision and gravitational processes

Erik Asphaug, Professor

Asteroids and comets, impact cratering, planetary sufrace evolution

Emily E. Brodsky, Associate Professor

Earthquakes; volcanoes; flow in fractured media

Kenneth L. Cameron, Emeritus

Patrick Y. Chuang, Assistant Professor

Atmospheric aerosols, cloud physics, climate change, atmospheric chemistry, air quality

Matthew E. Clapham, Assistant Professor

Paleobiology, paleoecology, geobiology

Robert S. Coe, Professor

Geophysics, paleomagnetism, tectonics

Andrew T. Fisher, Professor

Hydrogeology, crustal studies, coupled flows, modeling

Robert E. Garrison, Professor Emeritus

James B. Gill, Professor

Igneous petrology, geochemistry of island arcs

Gary A. Glatzmaier, Professor

Computer simulation of geodynamics and planetary dynamics

Gary B. Griggs, Professor, Earth Sciences; Director, Institute of Marine Sciences Coastal processes, hazards and engineering

Jeremy K. Hourigan, Assistant Professor

Tectonics, structural geology, and thermochronology

Mikhail Kreslavsky, Assistant Research Planetary Scientist

Mars surface evolution and planetary data analysis

Elise Knittle, Professor

Mineral physics, experimental geophysics

Paul L. Koch, Professor

Isotope biogeochemistry, vertebrate paleontology

Leo F. Laporte, Professor Emeritus

Thorne Lay, Professor, Earth Sciences; Director, Institute of Geophysics and Planetary

Physics

Seismology, geophysics

Karen C. Mc Nally, Emerita

Marcia K. McNutt, Professor

Tectonic marine geophysics

James C. Moore, Emeritus

Francis Nimmo, Associate Professor

Planetary interiors and evolution of silicate and icy solar system bodies

Susan Y. Schwartz, Professor

Seismology, geophysics, active tectonics

Hilde L. Schwartz, Lecturer

Vertebrate paleontology, sedimentology, paleoecology, chemosynthetic ecosystems

Eli A. Silver, Professor

Marine geology and geophysics, active tectonics, remote sensing

Lisa Sloan, Professor

Paleoclimatology, climate change, Earth system science, surficial processes

Othmar T. Tobisch, Emeritus

Slawomir M. Tulaczyk, Associate Professor

Glaciology and glacial geology, geomorphology, soil mechanics

Steven N. Ward, Lecturer, Earth Sciences; Research Geophysicist Seismology, geophysics

Gerald E. Weber, Lecturer Emeritus

Quentin Williams, Professor

Mineral physics, tectonophysics, experimental geochemistry

Ru-Shan Wu, Research Geophysicist

Seismology, geophysics; wave propagation and subsurface imaging

James C. Zachos, Professor

Paleoceanography, marine stratigraphy, geochemistry

Xixi Zhao, Lecturer, Earth Sciences; Research Geophysicist, IGPP

Paleomagnetism and rock magnetism and their application to the hisotry of Earth's magnetic field

Kenneth W. Bruland, Professor, Ocean Sciences

Chemical oceanography, biogeochemistry of trace metals and radionuclides, aquatic chemistry, geochemistry

Weixin Cheng, Associate Professor, Environmental Studies

Soil ecology, agroecology, biogeochemistry, global change ecology

Margaret L. Delaney, Professor, Ocean Sciences

Paleoceanography, marine geochemistry

A R. Flegal, Professor, Environmental Toxicology

Anthropogenic perturbations of biogeochemical cycles, applications of isotopic tracers in anthropology and archaeology

Ana C. Ravelo, Professor, Ocean Sciences

Stable isotope geochemistry and chemical oceanography, paleoclimatology

Program Description | Changes to 2006-08 Catalog Highlighted | Faculty

Lower-Division Courses

1. Oceanography. W

An introduction to the physical environment of the ocean. Origin and evolution of ocean basins; sea-floor morphology; origin, distribution, historical record, and economic significance of marine sediments; ocean currents, waves, tides, and changing sea level; beaches, shorelines, and coastal processes; marine resources, pollution, and human impacts on the oceans. Students may also enroll in and receive credit for Ocean Sciences 1. Laboratory/discussion-1.5 hours. (General Education Code(s): IN.) *G. Griggs*

3. Geology of National Parks. S

Geologic concepts and processes responsible for shaping our national parks including mountain building, volcanic and earthquake activity, sedimentation, weathering, erosion, and glaciation. An understanding of how geology impacts our lives is emphasized. Appropriate for both science and non-science majors who wish to enhance their knowledge, enjoyment, and appreciation of our national parks. (General Education Code(s): IN.) *S. Schwartz*

5. California Geology. F

An introduction to physical geology emphasizing the minerals, rocks, volcanoes, mountains, faults, and earthquakes of California. In-class field trips to study the caves, rocks, and landforms of the campus and the Monterey Bay area. Discussion-1 hour. Concurrent enrollment in 5L required for majors and minors. (General Education Code(s): IN.) *E. Knittle*

5L. California Geology Laboratory (1 credit). F

Laboratory sequence illustrating topics covered in course 5 with particular emphasis on rock and mineral identification and map interpretation. Field trip. Laboratory three hours. Students are billed a materials fee. *E. Knittle*

6. Concepts in Environmentalism. *

Learn scientific concepts required to be an informed environmentalist. Topics include urban smog; water resources and pollution; waste treatment; acid rain; global climate change; fossil fuel, nuclear, and renewable energy; overpopulation; and how an individual can minimize his or her environmental impact. Offered in alternate academic years. (General Education Code(s): IN.) *P. Chuang*

7. The History of Life. W

An examination of the major events in the history of life, from the origin of life approximately four billion years ago, to the wave of extinctions that has decimated plants and animals around the globe over the past 30,000 years. Offered in alternate academic years. (General Education Code(s): IN.) *M. Clapman*

10. Geologic Principles. S

Introduction to the scientific study of Earth, the materials composing it, and the processes shaping it. Topics include minerals and rocks, Earth's internal structure, plate tectonics, earthquakes and volcanoes, oceans and the atmosphere, the formation of landscapes and global change. A one-day, optional field trip is included. Concurrent enrollment in 10L required for majors and minors. (General Education Code(s): IN.) *A. Fisher*

10L. Geologic Principles Laboratory (1 credit). S

Laboratory sequence illustrating topics covered in course 10, with particular emphasis on rock and mineral identification and map interpretation. Laboratory 3 hours. In-lab field trips. Students are billed a materials fee. A. Fisher

20. Environmental Geology. W

Introduction to aspects of geology which affect and are affected by humans. Addresses a broad range of topics including resource management, geologic hazards, air and water issues, population and land use, energy costs and effectiveness, and global change, all from a unique geological/environmental perspective. Lectures include strategies for mitigating these issues. Includes a one-day field trip. Concurrent enrollment in 20L required for majors and minors. (General Education Code(s): IN.) *The Staff*

20L. Environmental Geology Laboratory (1 credit). W

Laboratory sequence illustrating topics covered in course 20, with emphasis on rock and mineral identification, geologic hazard assessment, geologic resource management, and land use planning. In-lab field trip. Laboratory 3 hours. Students are billed a materials fee. *The Staff*

65. Natural History of Dinosaurs. S

Origin, evolution, and extinction of dinosaurs with emphasis on paleobiology and paleoecology. Covers fundamental paleontological and evolutionary principles, dinosaur anatomy and behavior, the hot-blooded/cold-blooded debate, dinosaur-bird relationships, diversity, exploits of the great dinosaur hunters, and dinosaurs' prospects. One and a half hour of discussion each week. Offered in alternate academic years. (General Education Code(s): IN.) *H. Schwartz*

80A. Earth Catastrophes. F

The role of catastrophic processes in shaping Earth and the environment in which we live. The physical processes causing earthquakes, volcanic eruptions, tsunamis, floods, windstorms, landslides, and meteorite impacts will be described, along with the role played by these rapid processes in the geological and biological evolution of the planet. Interdisciplinary approaches to understanding these phenomena will be discussed. The entire time scale from formation of the universe to the present Earth system will be considered. (General Education Code(s): T2-Natural Sciences.) *T. Lay*

80B. Earthquakes. W

Causes and effects of earthquakes. How do we measure, mitigate, and try to predict earthquakes? Plate motion, frictional faulting, earthquake triggering, wave propagation, earthquake damage, related hazards, and other social effects. Hazard reduction through earthquake forecasting and earthquake-resistant design. Class includes one full day weekend field trip to local faults. Advanced algebra and high school geometry recommended. Students are billed a materials fee. (General

80C. Introduction to Weather and Climate. F

Many meteorological phenomena are familiar to us: clouds, fog, rain, snow, wind, lightning, and severe storms. Climate is the sum of weather over long periods and is changing (e.g., greenhouse warming, ozone depletion, urban smog) due to mankind's activities. Conceptual understanding of how and why the present-day atmosphere behaves as it does and how this may change in the future is the primary goal of this course. Offered in alternate academic years. (General Education Code(s): T2-Natural Sciences.) *P. Chuang*

80D. Earth Sciences and the Cinema. *

Exploration of cinema's role in defining societal awareness of Earth sciences (underlying concepts and factual basis) for disaster and adventure movies and in more subtle presentations. Topics include evolution of life, surface environment and the planet's deep interior, natural hazards, global warming, and meteorite impacts. (General Education Code(s): T2-Natural Sciences.) *T. Lay*

80G. Planetary Discovery. *

An introductory look at modern solar system exploration, focusing on spacecraft missions presently underway. We will examine the scientific context of each mission, the instrumentation and dynamics of each voyage, and the importance of their discoveries. Open to all students. Will be offered in 2008–09 academic year. (General Education Code(s): T2-Natural Sciences.) *E. Asphaug*

98. Earth Sciences Internship. F,W,S

A supervised learning experience involving practical application of lower division Earth sciences knowledge while working with approved companies, governmental agencies, or research organizations. Students consult weekly with supervising faculty and prepare a final report of their work, to be evaluated both by the sponsoring agency and the faculty supervisor. Consult sponsoring agency for enrollment criteria; after instruction on resume preparation and interview skills, student must interview and be selected for internship by approved sponsoring organizations. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

Upper-Division Courses

100. Vertebrate Paleontology. W

Introduction to vertebrate history, with an emphasis on vertebrate relationships and the co-evolution of organisms and environments. Specific topics include vertebrate origins, systematics and classification, adaptive revolutions, mass extinctions, and the rise and fall of dinosaurs. Students are billed a materials fee. Prerequisite(s): course 10, 20, 5, Biology 20C, or Anthropology 1. Concurrent enrollment in course 100L is required. Offered in alternate academic years. *H. Schwartz*

100L. Vertebrate Paleontology Laboratory (2 credits). W

Comparative anatomy and functional morphology of vertebrates, and preservation of vertebrate hard parts, using modern and fossil specimens. Laboratory three hours and one 1-day field trip. Concurrent enrollment in course 100 is required. Offered in alternate academic years. *H. Schwartz*

101. The Fossil Record. *

An introduction to paleobiology; the use of fossil evidence to pose and solve evolutionary and geologic questions. Prerequisite(s): course 10 or 5 or 20 or Biology 20C or Anthropology 1. Concurrent enrollment in course 101L is required. Offered in alternate academic years. *The Staff*

101L. The Fossil Record Laboratory (1 credit). *

Systematics, ecology, and evolutionary history of the major groups of fossil-forming animals. Laboratory 3 hours and one 1-day field trip. Concurrent enrollment in course 101 is required. Offered in alternate academic years. *The Staff*

102. Marine Geology. F

Geology of the marine environment. Topics include controls on the types, origin, and distribution of marine sediments; geology of oceanic crust; evolution of continental margins and plate boundaries; introduction to paleoceanography. Discussion: 1 hour. Students cannot receive credit for this course and Ocean Sciences 280. Prerequisite(s): course 5 or 10 or 20 or Biology 20C. *M. Delaney*

104. Geologic Hazards. F

The recognition, evaluation, and mitigation of geologic hazards: earthquakes and faulting, tsunamis, volcanism, landslides and mass movements, flooding, subsidence, and coastal erosion. Students are billed a materials fee. Prerequisite(s): course 10/L or 5/L or 20/L. S. Schwartz

105. Coastal Geology. S

An investigation of the evolution, morphology, and processes in the coastal zone including the terrestrial (marine terraces, dunes, estuaries, sea cliffs) and marine (beaches, continental shelves, sea level changes, shoreline erosion and protection, waves, tides) components and their interaction. Laboratory: 3 hours. Students are billed a materials fee. Prerequisite(s): course 10 or 5 or 20. Course 10L or 5L or 20L is suggested as an optional preparation for non-Earth sciences majors. *G. Griggs*

107. Remote Sensing of the Environment. W

Introduction to geographic information systems (GIS) and remote sensing (RS) as valuable tools in the study of geology. Covers application of GIS/RS to study of surface processes, including landslides, hydrologic basins, coastal erosion, modern floods, volcanic activity and surface deformation. Prerequisite(s): course 5 or 10 or 20. Enrollment limited to 36. *E. Silver*

109. Elements of Field Geology. F,S

Basic tools and techniques used in geologic fieldwork. Preparation, analysis, and interpretation of geologic maps. Nine days of weekend field trips required, including a six-day geologic mapping exercise. Laboratory: 2 hours. Recommended for courses 120, 130, 150, and required for 188A-B. May not be taken concurrently with course 120. Students are billed a materials fee. (General Education Code(s): W satisfied by taking this course and courses 188A and 188B.) Prerequisite(s): Satisfaction of the Entry Level Writing Requirement, course 10 or 5 or 20, and 10L or 5L or 20L. Concurrent enrollment in 109L is required. Enrollment limited to 25. (*F*) *H. Schwartz,* (*S*) *J. Hourigan*

109L. Field Geology Laboratory (2 credits). F,S

Laboratory exercises essential to the successful completion of fieldwork required in course 109. Topics include topographic maps, Brunton compass, rock identification and description, structure sections, and landslide recognition. Concurrent enrollment

110A. Evolution of the Earth. F

Investigation of the processes and mechanisms that have produced the present Earth system, with an emphasis on the temporal evolution of the earth from the Archean to the present. Specific topics covered include cyclicity in Earth processes and the evolution of, and interplay between the planet's crust, atmosphere, hydrosphere, and biosphere. Prerequisite(s): courses 5 or 10 or 20, and 5L or 10L or 20L, and Mathematics 11A or 19A. *J. Zachos, Q. Williams*

110B. Earth as a Chemical System. W

The chemical properties of Earth materials and the chemical processes by which the planet has evolved to its present state. Specific topics covered include properties of minerals; the genesis of igneous, metamorphic, and sedimentary rocks; and the linkage between the solid Earth and the hydrosphere. Enrollment is permitted by permission code with equivalent or exceptional background, or if enrolled concurrently in Chemistry 1B. Prerequisite(s): courses 5, or 10, or 20, and 5L, or 10L, or 20L, and Chemistry 1B. *E. Knittle*

110C. The Dynamic Earth. S

Physical processes occurring in the interior of the earth, at its surface and in the oceans and atmospheres including plate tectonics, structural deformation of rocks, and material and heat transport. Students are billed a materials fee. Prerequisite(s): course 5 or 10; or 20 and 5L or 10L or 20L; and course 111 or Mathematics 22 or 23A; and Physics 6A or 5A. *E. Brodsky*

110L. Evolution of the Earth Laboratory (2 credits). F

Laboratory sequence illustrating topics covered in course 110A. Emphasis is on quantifying and evaluating different phenomena related to thermal, tectonic, climatic, and evolutionary processes. Prerequisite(s): concurrent enrollment in course 110A. *J. Zachos, Q. Williams*

110M. Earth as a Chemical System Laboratory (2 credits). W

Laboratory sequence illustrating topics covered in course 110B. Emphasizes identification of the major rock-forming minerals and common rock types; principles of basic crystallography. Prerequisite(s): concurrent enrollment in course 110B. *E. Knittle*

110N. The Dynamic Earth Laboratory (2 credits). S

Laboratory sequence illustrating topics covered in course 110C. Prerequisite(s): concurrent enrollment in course 110C. *E. Brodsky*

111. Mathematics in the Earth Sciences. F

Series and sequences, vectors, 3D analytic geometry, partial differentiation, matrix algebra, and differential equations with applications in the Earth sciences. Topics include matrix manipulation, systems of linear equations, least-squares, Taylor series, gradients, optimization, analytic and numerical solutions to differential equations. Prerequisite(s): courses 5 or 10 or 20 and Mathematics 11B or 19B. (General Education Code(s): Q.) (F) W. Nimmo

116. Hydrology. *

Introduces processes involving water on and near Earth's surface, including meteorology, water properties, surface flows in steams and runoff, flood analysis, ground water, water budgets, sediment transport, erosion, and water quality. Problem

set and laboratory each week. Laboratory/field: 3 hours. Students are billed a materials fee. Alternates annually with course 146. Prerequisite(s): course 10 or 5 or 20, and Mathematics 11A or 19A. Course 5L or 10L or 20L recommended. A. Fisher

117. Paleomagnetism. F

How the fossil magnetism of rocks is used to decipher Earth's history: applications to tectonics, geochronology, stratigraphy, structural geology, geomagnetism, and archeology. Includes an overnight field trip to collect samples for a class research project. Students are billed a materials fee. Prerequisite(s): course 5, 10 or 20; Mathematics 11A or 19A; course 117L must be taken concurrently. *R. Coe*

117L. Paleomagnetism Laboratory (2 credits). F

A hands-on research project in the Paleomagnetic Laboratory. Students collectively drill oriented cores in the field (one–two days), prepare and measure the samples, and analyze and interpret the data. Each student writes an individual final report based on the class results. Prerequisite(s): concurrent enrollment in course 117 is required. *R. Coe*

119. Introduction to Scientific Computing. W

Introduction to solving scientific problems using computers. A series of simple problems from Earth sciences, physics, and astronomy are solved using a user-friendly scientific programming language (IDL). Prerequisite(s): Mathematics 11A or 19A. (General Education Code(s): IN.) *G. Glatzmaier*

120. Sedimentology and Stratigraphy. S

Stratigraphic principles used in classifying sedimentary rocks. Fundamentals of sedimentary mechanics. Analysis and interpretation of facies and depositional systems. Introduction to seismic facies and basin analysis. Course includes four Saturday field exercises. Students are billed a materials fee. Prerequisite(s): course 110A. Course 110B is recommended as preparation. May not be taken concurrently with course 109. *J. Zachos*

120L. Sedimentology and Stratigraphy Laboratory (2 credits). S

Laboratory sequence illustrating topics in course 120, including sedimentary petrology, sedimentary structures, sequence stratigraphy, and geohistory analysis. Prerequisite(s): concurrent enrollment in course 120. *J. Zachos*

121. The Atmosphere. *

Course focuses on understanding basic atmospheric weather and climate phenomena starting from the fundamentals of physics and chemistry. Using this approach, covers topics such as atmospheric circulation, precipitation, clouds, storms, urban and regional air quality, atmospheric aerosols, and climate and global change. Prerequisite(s): Mathematics 11B or 19B, and Chemistry 1C. Offered in alternate academic years. *P. Chuang*

128. Isotopes: Fundamentals and Applications in Earth and Marine Sciences. * Explores the fundamentals and concepts of stable, radiogenic, and cosmogenic isotope chemistry with applications relevant to Earth, marine, and biological sciences. Prerequisite(s): course 110B or permission of instructor. *J. Zachos, J.*

130. Magmas and Volcanoes. S

Hourigan

Introduction to the relationship between tectonic environments and the genesis of

rock assemblages, primarily igneous and metamorphic. Examples from California and elsewhere are used to illustrate petrogenetic processes and characteristic petrologic features of rocks from all major tectonic settings. Students are billed a materials fee. Prerequisite(s): course 110B. Concurrent enrollment in course 130L is required. *J. Gill*

130L. Magmas and Volcanos Laboratory (2 credits). S

An introduction to optical mineralogy and the petrography of igneous rocks. Concurrent enrollment in course 130 required. Prerequisite(s): course 110B. Concurrent enrollment in 130 is required. *J. Gill*

140. Geomorphology. S

An introduction to the evolution of the Earth's landscape, with emphasis on the processes responsible. Review of climatic and tectonic forcing followed by detailed discussion of weathering, glaciers, hillslopes, wind, rivers, and coastal processes with emphasis on their geographic distribution. One single day and one three-day field trip. Students are billed for a materials fee. Prerequisite(s): course 110A. Concurrent enrollment in 140L is required. *S. Tulaczyk*

140L. Geomorphology Laboratory (2 credits). S

Laboratory sequence illustrating topics covered in course 140. These extensive laboratory exercises emphasize the quantification of the geomorphic processes and forms, and on the writing of concise summaries of the science in the form of abstracts. Students are billed a materials fee. Prerequisite(s): Concurrent enrollment in course 140 is required. *S. Tulaczyk*

142. Engineering Geology for Environmental Scientists. *

Introduction to the formation, composition, and classification of soils; the chemical interaction of soil and groundwater; and basic soil mechanics: stress-strain behavior, effective stress concept, consolidation, soil testing methods. Applications to problems including slope stability, landslides, liquefaction, subsidence, soil creep, debris flows. Laboratory: 3 hours. Students are billed a materials fee. Prerequisite(s): course 5 or 10 or 20; Mathematics 11A or 19A. Offered in alternate academic years. *S. Tulaczyk*

146. Ground Water. W

Explores saturated and unsaturated fluid flow below Earth's surface, well hydraulics, and recourse evaluation and development. Introduces modeling, field techniques, geochemistry, and contaminant transport and remediation. Problem set and laboratory each week; final paper. Laboratory: 3 hours. Students are billed a materials fee. Alternates annually with course 116. Prerequisite(s): course 5 or 10 or 20, and Mathematics 11A or 19A. Course 5L or 10L or 20L recommended. *A. Fisher*

148. Glaciology. W

Introduction to the role of snow and ice in the dynamics of the earth surface system. Snow deposition and metamorphosis. Heat and mass balance at snow and ice surfaces. Flow of glaciers, ice sheets, and sea ice. Methods of climate reconstruction. Ice age theories. Students are billed a materials fee. Prerequisite(s): courses 5 or 10 or 20; Mathematics 11A or 19A. Offered in alternate academic years. *S. Tulaczyk*

150. Structural Geology. W

Principles and methods of analysis of brittly and ductily deformed rocks. Includes descriptions of structures, field analysis of structures, and mechanics of deformation. Three day-long field trips on weekends. Students are billed a materials fee.

Prerequisite(s): course 110A or 110B; course 109 recommended; concurrent enrollment in course 150L is required. *J. Hourigan*

150L. Structural Geology Laboratory (2 credits). W

Structural analysis of faults, folds, and maps. Use of stereographic projections. Cross section construction and balancing from field data. Concurrent enrollment in course 150 is required. *J. Hourigan*

152. Active Tectonics. S

The processes, techniques, and interpretations involved in the study of active crustal movements; constraints from plate tectonics; horizontal and vertical motions and rates; geodesy, including GPS; stress measurement; image interpretation; fault system analysis; paleoseismicity; fluid effects. Examples from the circum-Pacific. Laboratory-2 hours. Students cannot receive credit for this course and course 207. Prerequisite(s): course 10 or 5 or 20 and 10L or 5L or 20L, and Physics 5A or 6A; course 110C recommended. *E. Silver*

160. Planetary Science. W

Broad introduction to planetary science. Topics include the fundamental characteristics of solar system bodies; space exploration of these bodies; formation and evolution of surfaces, atmospheres and interiors of planets, satellites and small bodies. Prerequisite(s): Math 11B or 19B, and Physics 5A or 6A. *The Staff*

162. Planetary Interiors. S

The chemical and thermal structure and evolution of silicate planet interiors. Topics include equation of state of mantle and core materials, thermal history of the mantle and core, dynamics of mantle convection, geophysical determination of interior structure. Students cannot receive credit for this course and course 262. Prerequisite(s): course 160; and course 111 or Mathematics 22 or 23; and Physics 5C or 6C. Offered in alternate academic years. *W. Nimmo*

163. Planetary Surfaces. *

Comparative study of surfaces and atmospheres of planetary bodies in solar system, focusing on comparative planetology and geophysical processes at work, including impact cratering, atmospheric evolution, and exobiology. Explores terrestrial planets, giant planets and their moons. Students cannot receive credit for this course and course 263. Prerequisite(s): course 160. *E. Asphaug*

164. Planetary Atmospheres. *

A quantitative study of the origin, chemistry, dynamics, and observations of the atmospheres of terrestrial and gas-giant planets. Students cannot receive credit for this course and course 264. Prerequisite(s): course 160. Enrollment limited to 18. *E. Asphaug*

168. Reflection Seismology. *

Introduction to reflection seismology, presenting an overview of data acquisition, processing, and interpretation; common depth point method; velocity determinations; filtering; migration; display. Applications to seismic stratigraphy and structure of the crust and of continental margins. Laboratory: 3 hours. Prerequisite(s): course 111 or Mathematics 11A-B or 19A-B. Offered in alternate academic years. *The Staff*

172. Geophysical Fluid Dynamics. S

Introduces fluid motion influenced by rotation. Topics include the Coriolis force, geostrophic flow, potential vorticity, the shallow water model, quasigeostrophic

approximation, planetary waves, Ekman theory, thermal wind, models of the large-scale oceanic and atmospheric circulation, and equatorial dynamics. Taught in conjunction with course 272. Students cannot receive credit for this course and course 272. (Also offered as Ocean Sciences 172. Students cannot receive credit for both courses.) Prerequisite(s): Physics 107 or Applied Mathematics and Statistics 107; Mathematics 22 or 23B recommended. Offered in alternate academic years. *C. Edwards*

188A. Summer Field Internship, Part A. S

Three weeks of summer field study in geologically complex regions in the White-Inyo Mountains of eastern California. Activities include geologic field mapping on topographic and photographic base maps, stratigraphy, petrology, and structure analysis. A fee is required for participation. Contact sponsoring agency for details. (General Education Code(s): W satisfied by taking this course and courses 109 and 188B.) Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 110A/L, 110B/M, and 109/L. Enrollment restricted to Earth sciences majors. Concurrent enrollment in course 188B is required. *H. Schwartz*

188B. Geographic Information Systems with Applications to the Earth Sciences. S

Introduction to basic principles of geographic information systems (GIS). Visualization of earthscapes with applications to problem-solving in the Earth sciences. Laboratory exercises in loading, manipulation, and interpretation of data sets. Field investigations of phenomena visualized in laboratory, including geological description, interpretation, and written report preparation. Lecture and laboratory portions of course occur during spring quarter. Field investigations and report-writing occur in 10 days immediately following spring quarter. A fee is required for participation. Contact sponsoring agency for details. (General Education Code(s): W satisfied by taking this course and courses 188A and 109.) (Formerly *Summer Field Internship, Part B.*) Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 110A/L, 110B/M, and 109/L. Enrollment restricted to Earth sciences majors. Concurrent enrollment in course 188A is required. *C. Moore*

190. Earth Sciences Mentorship (1 credit). F

Faculty research activity, analytic facilities, and career counseling in three separate Earth sciences laboratories are offered with varied formats including field trips, discussions, and equipment demonstrations. Three different faculty participate in each offering. Enrollment restricted to Earth sciences, Earth sciences/anthropology, and environmental studies/Earth sciences majors. Enrollment limited to 24. May be repeated for credit. *The Staff*

195. Senior Thesis. F,W,S

Students submit petition to sponsoring agency. Enrollment restricted to seniors. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. May be repeated for credit. (General Education Code(s): W.) *The Staff*

196A. Introductory Teaching Seminar (2 credits). F

Training for undergraduates in practical teaching skills. Focus on preparation, assessment, and feedback. Classroom techniques, organizational and time management strategies, practice teaching sessions. Students cannot receive credit for this course and course 203. Future participation in 196B is encouraged. Course may not be counted toward upper-division major requirements. Enrollment restricted to Earth sciences, Earth sciences/anthropology, and environmental studies/Earth

196B. Teaching Earth Sciences in the University. F,W,S

Students facilitate laboratory and field exercises in conjunction with faculty and teaching assistants in various Earth sciences courses. May not count toward upper-division major requirements. Approval of sponsoring agency; interview and selection by primary instructor of specific courses required. Participation in course 196A is expected. Enrollment restricted to Earth sciences, Earth sciences/anthropology, and environmental studies/Earth sciences majors. *The Staff*

196C. Teaching Earth Sciences in the University (2 credits). F,W,S

Students facilitate laboratory and field exercises in conjunction with faculty and teaching assistants in various Earth sciences courses. May not count toward upperdivision major requirements. Approval of sponsoring agency; interview and selection by primary instructor of specific courses required. Participation in course 196A is expected. Enrollment restricted to Earth sciences, Earth sciences/anthropology, and environmental studies/Earth sciences majors. May be repeated for credit. *The Staff*

198. Earth Sciences Internship. F,W,S

A supervised learning experience involving practical application of Earth sciences through working with approved companies, governmental agencies, or research organizations. Students consult weekly with supervising faculty and prepare a final report of their work. Consult sponsoring agency for enrollment criteria. After instruction on resume preparation and interview skills, students must interview and be selected for internship by approved sponsoring organizations. Enrollment restricted to Earth sciences, Earth sciences/anthropology, and environmental studies/Earth sciences majors. May be repeated for credit. *The Staff*

198F. Earth Sciences Internship (2 credits). F,W,S

A supervised learning experience involving practical application of Earth sciences through working with approved companies, governmental agencies, or research organizations. Students consult weekly with supervising faculty and prepare a final report of their work. May not be counted toward upper-division major requirements. Consult sponsoring agency for enrollment criteria. After instruction on resume preparation and interview skills, student must interview and be selected for internship by approved sponsoring organizations. Enrollment restricted to Earth sciences, Earth sciences/anthropology, and environmental studies/Earth sciences majors. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Introduction to research in laboratory, field, or theoretical subjects. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Introduction to research in laboratory, field, or theoretical subjects. May not be counted toward upper-division major requirements. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

203. Introductory Teaching Seminar (2 credits). F

Intended for new Earth sciences graduate students. Focus on preparation, assessment, and feedback. Classroom techniques, organizational and time management strategies, practice teaching sessions specific to laboratory and/or science instruction. Required

follow-up meetings to discuss practical teaching experience. Students cannot receive credit for this course and course 196A. Enrollment restricted to graduate students. *A. Fisher*

205. Introductory Graduate Seminar. F

Lecture and- seminar-style class intended to welcome new graduate students to the department; review fundamental concepts in Earth sciences; introduce students to research and interests of departmental faculty and researchers; develop skills in reading scientific abstracts and papers, and write abstracts and a proposal; and prepare graduate students for the preliminary interview. Features lectures on fundamental topics and assigned reading from scientific papers and texts for the first half of the course, lectures on faculty and researcher interests in the second half of the course, and tutorials on abstracts, papers, and proposals. Two weekend field trips. Students are billed a materials fee. Enrollment restricted to graduate students. *A. Fisher*

206. Great Papers in the Earth Sciences. W

Exposure to the most important ideas in the Earth sciences through exploration of the primary literature. Seminal papers in different subdisciplines of the Earth sciences are read and analyzed to provide breadth and improve students' ability to think critically. Enrollment restricted to Earth sciences graduate students. *Q. Williams, E. Brodsky*

207. Tectonics. S

An overview of tectonic theory and processes for application to the Earth sciences. The course explores the primary tools of tectonic interpretation including plate kinematics, rheology, plate boundary dynamics, and the behavior of active fault systems. Taught in conjunction with course 152. Students cannot receive credit for this course and course 152. Prerequisite(s): graduate standing or permission of instructor. *E. Silver*

208. Methods in Paleoclimatology. *

Addresses methods used to reconstruct aspects of paleoclimates and paleoenvironments from the geologic record, focusing primarily on terrestrial records. Topics to be covered include dendrochronology and dendroclimatology, paleopalynology, paleobotany, ice cores, and paleosol studies. Lectures, discussions, and laboratory work. Enrollment restricted to graduate students. Offered in alternate academic years. *L. Sloan*

209. Solid Earth Geochemistry. *

Origin and distribution of the elements in the earth and meteorites; bulk and isotopic composition and differentiation of terrestrial planets, core, mantle, and crust; Sr-Nd-Pb-Hf-U isotopic tracers. Course designed for graduate students, but available to qualified earth sciences majors per instructor permission. Will be offered in 2007–08 academic year. Enrollment restricted to graduate students. *J. Gill*

210. Overview of Stellar and Planetary Formation and Evolution. *

Overview of current understanding of star and planet formation and evolution. Examines our solar system in the context of the galactic planetary census. Provides a uniform introduction to astronomy and Earth science planetary students. Enrollment restricted to graduate students. *The Staff*

213. Biogeochemical Cycles. *

Overview of biogeochemical cycles, present and past, and geochemical models.

Topics include: marine, terrestrial, and global views of the carbon, nitrogen, phosphorus, silicon, sulfur, and oxygen cycles, and the evolution of these cycles and Earth's redox balance through geologic time. (Also offered as Ocean Sciences 213. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. Upper-division undergraduates may enroll with instructor approval. College-level chemistry and an upper-division course in at least one relevant discipline are recommended. *M. Delaney*

220. Ground Water Modeling. *

Introduction to building and using models to solve hydrogeologic problems. Modeling methods include mainly analytical and finite-difference. Emphasis on using models rather than the details of their functioning, although some coding is required. Comfort with mathematical methods and computers expected. Course designed for graduate students, but available to qualified Earth science majors. Prerequisite(s): graduate standing or permission of instructor required. One year of calculus and courses in differential equations and basic hydrologic principles are recommended as preparation. Offered in alternate academic years. *A. Fisher*

231. Igneous Petrology. *

Systematic study of the major igneous rock suites, combining petrography, experimental petrology, major and trace elements, volatiles, and isotopic characteristics. Laboratory: three hours. Course designed for graduate students but available to qualified earth sciences majors. Course 130 is recommended as preparation. *J. Gill*

254. The Climate System. *

Focuses on atmospheric and oceanic processes that are important within the Earth's climate system, especially those that operate on annual to centennial time scales. Format includes lectures by the instructors, paper readings, and discussion. Enrollment restricted to graduate students. *A. Ravelo, P. Chuang*

256. Paleoclimate Modeling: Methods and Applications. *

Addresses methods of paleoclimate modeling on global and regional scales, from both surface and atmospheric perspectives. Applications of models to current significant paleoclimate problems will be examined. Includes both lecture and seminar formats. Enrollment restricted to graduate students; undergraduates by permission of instructor only. *The Staff*

261. Astrobiology. *

Study of the evolution and diversification of life on this planet; and factors affecting habitability of other bodies in this solar system and elsewhere. Enrollment restricted to graduate students in Earth sciences, physics, biology, or chemistry. *P. Koch, W. Nimmo*

262. Planetary Interiors. S

The chemical and thermal structure and evolution of silicate planet interiors. Topics include equation of state of mantle and core materials, thermal history of the mantle and core, dynamics of mantle convention, geophysical determination of interior structure. Students cannot receive credit for this course and course 162. Enrollment restricted to graduate students. Enrollment limited to 20. Offered in alternate academic years. *W. Nimmo*

263. Planetary Surfaces. *

Comparative study of surfaces of planetary bodies in our solar system, focusing on

comparative planetology and geophysical processes at work, including on-impact cratering, atmospheric evolution, and exobiology. Explores terrestrial planets, giant planets and their moons, and trans-Neptunian objects, focusing on modern exploration. Students cannot receive credit for this course and course 163. Enrollment restricted to graduate students. Enrollment limited to 20. Offered in alternate academic years. *E. Asphaug*

263L. Planetary Field Course (2 credits). *

Field class in comparative planetology. Three- to four -day field trip plus planning and debriefing sessions. Students are billed a materials fee. Enrollment restricted to graduate students. Enrollment limited to 12. Offered in alternate academic years. *E. Asphaug*

264. Planetary Atmospheres. *

Quantitative study of the origin, chemistry, dynamics, and observations of the atmospheres of terrestrial and gas giant planets. Students cannot receive credit for this course and course 164. Enrollment restricted to graduate students. *E. Asphaug*

265. Order of Magnitude Estimation. W

Practice in making rough estimates and leading-order approximations in physical and chemical processes. Enrollment restricted to graduate students. *P. Chuang, W. Nimmo*

269. Advanced Marine Stratigraphy: Techniques and Applications. *

Explores concepts and methods of correlating marine sedimentary sequences. Emphasis on the integration of techniques and development of the Cenozoic stratigraphic record. One 2-hour laboratory each week. Upper-division students who have completed course 120 may enroll in this course. Enrollment restricted to graduate students. *J. Zachos*

270. Global Seismology. *

Introduction to quantitative earthquake and global Earth structure seismology. Topics include basic elasticity, wave characteristics, seismic ray theory, wave reflection, surface waves, normal modes, seismic instrumentation, application of seismic waves to reveal Earth structure and resulting models, representation of earthquake sources such as explosions and faulting, earthquake rupture scaling, modern methods of modeling seismic recordings to study source complexity, and an introduction to seismotectonics. Laboratory: 3 hours. Enrollment restricted to graduate students. Offered in alternate academic years. *T. Lay*

271. Current Research Topics in Deep Earth Processes. *

Students and instructor lead discussions of recent and significant publications in geophysics and chemistry of deep Earth. Articles structured around current theme of interest are selected by participants and approved by instructor. Emphasis on defining multidisciplinary significance of each article and its relationship to fundamental processes in deep Earth, including core and mantle. Designed for graduate students but available to qualified Earth sciences majors. May be repeated for credit. *T. Lay*

272. Geophysical Fluid Dynamics. S

Introduces fluid motion influenced by rotation. Topics include the Coriolis force, geostrophic flow, potential vorticity, the shallow water model, quasigeostrophic approximation, planetary waves, Ekman theory, thermal wind, models of the large-scale oceanic and atmospheric circulation, and equatorial dynamics. Students cannot receive credit for this course and course 172. (Also offered as Ocean Sciences 272.

Students cannot receive credit for both courses.) Physics 227 is recommended as preparation. Enrollment restricted to graduate students. Offered in alternate academic years. *C. Edwards*

275. Magnetohydrodynamics. *

Study of fluid dynamics and magnetic fields with a focus on convection and magnetic field generation in planets and stars. Students develop a computer program for modeling magneto-convection. Computer programming experience recommended. Enrollment restricted to graduate students. Offered in alternate academic years. *G. Glatzmaier*

276. Geology of the Peopling of the Americas. *

Using a multidisciplinary approach, examines physical geology, paleoenvironment, human biology, linguistics, and culture history of Americas at end of last Ice Age. Particular emphasis on reconstructing timing, routes, and context of first peopling of the American continents. Taught in conjunction with Anthropology 276D. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. Enrollment limited to 15. *P. Koch*

278A. Advanced Seismology. W

Elastic wave propagation. Advanced topics in ray theory, WKBJ solutions in seismology, singularities and nonlinearities, surface wave theory, propagating matrices, normal modes, and inversion theory. Selected topics in time series analysis and seismic signal processing, seismic wave dispersion. Course designed for graduate students but available to qualified Earth sciences majors. Physics 110B and 114B are recommended as preparation. Enrollment restricted to graduate students. May be repeated for credit. *T. Lay*

278B. Advanced Seismology. *

Special topics in wave propagation in heterogeneous, three-dimensional media, applications for determination of Earth's structure, kinematics and dynamics of the seismic source, near field phenomena, engineering applications, current problems. Course designed for graduate students but available to qualified Earth sciences majors. Physics 110B and 116B are recommended as preparation. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

278C. Advanced Seismology. *

Special topics of interest in current research by the seismology group. Discussion of new developments in earthquake mechanics, wave propagation, tectonics, earthquake prediction. Course designed for graduate students but available to qualified Earth sciences majors. Physics 110B and 116B are recommended as preparation. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

290. Proseminar.

Special topics offered from time to time by visiting professors or staff members. May be repeated for credit.

290A. Tectonic Hydrogeology. *

Analysis of tectonics and hydrogeology of modern plate boundaries and continental margins. Discussion of structural styles, physical and chemical processes from modern environments as a basis for interpretation of ancient equivalents. Topics vary from year to year. May be repeated for credit with consent of instructor. Course designed for graduate students but available to qualified Earth sciences majors. *J.*

290B. Topics in Glaciology. S

Advanced review of the physics and chemistry of ice and snow. Mass and heat balance of ice masses. Motion of glaciers and ice sheets. Subglacial and englacial hydrology. Thermodynamics of ice masses and the linkage to climate. Enrollment restricted to graduate students. May be repeated for credit. *S. Tulaczyk*

290C. Topics in Geophysics. W

Different problems and approaches will be stressed from year to year such as geotectonics, paleomagnetism, or properties and processes in the mantle and core. Course designed for graduate students but available to qualified Earth sciences majors. *R. Coe*

290D. Petrology and Plate Tectonics. W

Selected topics illustrating relationships between igneous and metamorphic rocks and plate tectonics are explored in detail. Designed for graduate students but available to qualified Earth sciences majors. May be repeated for credit. *J. Gill*

290E. Topics in Planetary Science. *

We examine one well-defined topic in planetary science, beginning with a summary of current knowledge and concluding with the latest research literature. Topics will vary from year to year and may include planetary collisions, terrestrial planets, origin of planetary systems, small bodies, the New Mars, and satellites of Jupiter. Achievement will be evaluated based on class participation, exams, and a research project. Open to undergraduate majors with permission of instructor. Enrollment restricted to graduate students. May be repeated for credit. *E. Asphaug*

290F. Topics in Coastal Processes (2 credits). F,W,S

Instructor and students lead discussions and make presentations on current research, problems, and publications in coastal processes. These topics include littoral drift, sediment transport and storage on the inner shelf, shoreline erosion/change and its documentation, and related issues. Enrollment restricted to graduate students. May be repeated for credit. *G. Griggs*

290G. Topics in Global Tectonics. *

Explores different problems of special interest in global tectonics with the approach of integrating marine and terrestrial geologic and geophysical information. Course designed for graduate students but available to qualified Earth sciences majors. May be repeated for credit. *E. Silver*

290H. Topics in Hydrogeology. *

Selected topics in groundwater, hydrothermal systems, and related subjects. Discussion of theoretical models, field and laboratory approaches, and recent research. Topics vary from year to year. Course designed for graduate students but available to qualified Earth sciences majors. May be repeated for credit. *A. Fisher*

290J. Topics in Earthquake Physics. *

Why do earthquakes happen? Topics include friction, fracture, earthquake triggering, stress in the crust, observed source scalings, and seismicity statistics. Emphasis on observations and current research topics. Enrollment restricted to graduate students and advanced undergraduates. *E. Brodsky*

290K. Paleontology Seminar (3 credits). F

Seminar discussion based on current readings in the literature around some topic in the history and evolution of life. Course designed for graduate students but available to qualified upper-division science students. Offered in alternate academic years. May be repeated for credit. *P. Koch*

290L. Topics in Climate Change. *

Explores current issues and recent developments in the field of past, present, and future climate change. Topic is different each year, but focuses on the interaction between different components of Earth's environment and the effect of that interaction on climate change. Designed for graduate students but open to qualified undergraduates. Enrollment restricted to graduate students. Enrollment limited to 20. May be repeated for credit. *L. Sloan*

290M. Topics in Atmospheric Chemistry. S

Fundamentals of chemical processes determining the composition of the atmosphere on scales from urban smog to climate change. Topics include carbon, nitrogen, sulfur biogeochemical cycles; atmospheric aerosols; urban air pollution; greenhouse effect; stratospheric ozone depletion; impacts on humankind and ecosystems. Enrollment restricted to graduate students, undergraduates with permission of instructor. May be repeated for credit. *P. Chuang*

290N. Topics in Mineral Physics. *

Selected topics encompassing the physics and chemistry of Earth's interior, planetary physics, high-pressure experimental geophysics and material properties at high pressure and temperature. Topics vary from year to year. Designed for graduate students but available to qualified Earth sciences majors. May be repeated for credit. *E. Knittle*

290P. Interdisciplinary Topics in the Earth Sciences. S

An understanding of the chemical and physical properties and processes in the earth is sought by integrating information from several subdisciplines in the Earth sciences. Topics vary from year to year, focusing on areas of active research. Course designed for graduate student but available to qualified Earth sciences majors. Prerequisite(s): graduate student but available to qualified Earth sciences majors. May be repeated for credit. *S. Schwartz*

290Q. Topics in Outer Solar System. *

Exploration of the planets and satellites beyond the asteroid belt, with an emphasis on the underlying physical processes at work. Course includes lectures, computer practicals, and student presentations. Enrollment restricted to graduate students. May be repeated for credit. *W. Nimmo*

290R. Topics in the Chemistry and Physics of the Earth. *

Explores problems and current research developments in the application of physics and chemistry to planetary interiors. Topics differ from year to year and include, but are not limited to, research related to the accretion, differentiation, evolution, and structure of the terrestrial planets. Course designed for graduate students but available to qualified Earth sciences majors. May be repeated for credit. *Q. Williams*

290T. Current Research Topics in Paleoceanography and Paleoclimatology. W

Students and instructor lead discussions of recent and significant problems in paleoceanography and paleoclimatology. Articles structured around current themes of interest are selected by the instructor. Emphasis on major climatic transitions or events which noticeably influenced evolution of biota. Course designed for graduate students but available to qualified Earth sciences majors. *J. Zachos, P. Koch*

292. Seminar (no credit). F,W,S

Weekly seminar attended by faculty, graduate students, and upper-division undergraduate students. *The Staff*

293. Graduate Research Seminar (1 credit). S

Weekly seminar series covering a broad spectrum of topics in the Earth sciences. Graduate students give 15- to 20-minute oral presentations on current or anticipated research. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

296. Special Student Seminar. F,W,S

Permission of instructor required. The Staff

297. Independent Study. F,W,S

Permission of instructor required. The Staff

298. Earth Sciences Internship. F,W,S

A supervised learning experience involving practical, graduate-level application of Earth sciences through working with approved companies, governmental agencies, or research organizations. Students consult weekly with supervising faculty and prepare a final report of their work. Consult sponsoring agency for enrollment criteria. After instruction on resume preparation and interview skills, students must interview and be selected for internship by approved sponsoring organizations. *The Staff*

299. Thesis Research. F,W,S

Permission of instructor required. The Staff

* Not offered in 2007-08

East Asian Studies

Department of History 201 Humanities (831) 459-2982 http://history.ucsc.edu

(There were no substantive changes to the East Asian Studies Program Description from the General Catalog 2006-08.)

Program Description

Students interested in pursuing an education in East Asian studies at UCSC may select from among the following programs:

- A minor in Chinese or Japanese Studies, with a major in any discipline in any division. The student is expected to acquire a speaking and reading ability in Chinese or Japanese sufficient to pursue advanced studies in China or Japan and use Chinese or Japanese source material for research. A student who wishes to complete the East Asian Studies program should enroll in beginning Chinese or Japanese no later than the sophomore year. Students seeking further information about the minor should contact the History Department office, located at 201 Humanities. Requirements for the minor are outlined below.
- A major or minor in the Chinese or Japanese concentration of Language Studies.
 Requirements for this are found at the Language Studies website. Requirements for this major are found under Language Studies in the catalog.
- An individual major in East Asian Studies is another option. Currently, this option is only available in Chinese studies. Students may pursue intensive study in Chinese language and accompanying courses, including study abroad, to gain a broad social, political and cultural understanding of China. Students interested should contact either the Language Program or their college advising office.

Requirements for the Minor

Language. Nine courses of Chinese or Japanese language, two of which must be upper division.

Required courses. History 40 - The Making of Modern East Asia (East Asian studies core course).

Three additional upper-division courses in the chosen area of China or Japan, one of which may be an individual study (course 199). These three courses must be in fields outside the student's major.

The following are among the courses that meet the upper division requirement. (Check the *Schedule of Classes* or consult with the program coordinator for courses added during the academic year that meet the requirement.)

Chinese Studies

Chinese, all upper-division courses

History 140 A-B-C-D, History of China

History 141A, Classical Chinese Culture and Literature, Tenth-Century b.c.e.through Sixth-Century c.e.

History 141B, Classical Chinese Culture and Literature, Sixth Century c.e. through Sixteenth Century

History 194N, Comparative Studies in Modern Asian History

History of Art and Visual Culture 114, Buddhist Visual Worlds

History of Art and Visual Culture 121C, Later Chinese History

History of Art and Visual Culture190D, The World of the Lotus Sutra

History of Art and Visual Culture 190G, Word and Image in Chinese Culture

World Literature and Cultural Studies 123, The 1960's

Feminist Studies 154 Revolutionary Tales: Women in Modern China

Japanese Studies

History 150A, Ancient Japan

History 150B, Tokugawa Japan

History 150C, Modern Japan

History 194N, Comparative Studies in Modern Asian History

Study Abroad

Study abroad, though not a requirement, is strongly encouraged. At present there are UC Education Abroad programs in China, Japan, Hong Kong, and Taiwan. For more information on the program, see UC Education Abroad Program.

Students may apply to the Volunteers in Asia program to teach English in China; contact the Kresge College office for information on this program.

Faculty

More information can be obtained from faculty involved in the program: Dilip K. Basu (History), Raoul Birnbaum (History of Art and Visual Culture), Nancy Chen (Anthropology), Alan S. Christy (History), Christopher Connery (Literature), Sakae Fujita (Language Program), K. C. Fung (Economics), John Hay (History of Art and Visual Culture), Gail B. Hershatter (History), Emily Honig (Feminist Studies and History), Junko Ito (Linguistics), Earl Jackson, Jr. (Literature), David Keenan (Language Program), Bruce D. Larkin (Politics), Lisa Rofel (Anthropology), Neferti Tadiar (History of Consciousness), Dana Y. Takagi (Sociology), Alice Yang Murray (History).

Economics

401 Engineering 2 (831) 459-2743 http://econ.ucsc.edu

Changes to 2006-08 Catalog Highlighted | Faculty | Course Descriptions

Program Description

An understanding of economics is a vital component of a liberal arts education and a necessity for anyone interested in such areas as business, environmental policy, welfare reform, unemployment, international competitiveness and trade, or transformations in the global economy.

The programs offered by the UCSC Economics Department are designed to acquaint students with the broad range of issues studied by economists and with the tools they use. The department offers four majors:

Economics B.A.

Business management economics B.A.

Global economics B.A.

Information systems management B.S. (a joint major sponsored by the Economics Department and School of Engineering)

A minor in economics is also available, as well as the following combined majors:

Economics/environmental studies B.A. Global economics/Latin American and Latino studies B.A.

Students majoring in other subjects will find that economics courses help them understand current affairs and satisfy their curiosity about the ways society allocates resources. The department provides topical courses in the 80 series for students who are interested in economics or business but do not plan to become majors.

The economics curriculum begins at the introductory level; no specific high school preparation is required. All economics majors study a substantial core of economic theory and mathematical and statistical methods, and then choose among a wide variety of upper-division electives.

Economics majors may combine their upper-division elective choices in a variety of ways to achieve specialization in a number of possible areas, including environmental economics, public policy, political economy, international economics, economic development, and quantitative methods. Highly qualified seniors may take appropriate graduate courses and earn an M.S. as well as a B.A. degree in five years.

General Requirements

Admission into an Economics Major and Minor

The Economics Department administers three undergraduate majors: economics, business management economics and global economics. The admission requirements are the same for the three.

Students must take two courses prior to petitioning for entry to an economics major: course 1 (principles of microeconomics) and course 2 (principles of macroeconomics).

Equivalent courses may be taken at other universities or at community colleges. Transfer students may have these requests reviewed by the department prior to matriculation at UCSC. All students with a combined grade point average (GPA) of 2.8 in courses 1 and 2 will be allowed to declare the major. Students with a GPA below 2.8 in these courses may be allowed to declare at the discretion of the department. Students may submit a GPA letter of appeal. GPA appeals will be reviewed three times per quarter; the third, the fifth, and the seventh week of instruction with

a four-day turnaround. Please come by the Economics Office, Engineering 2, Room 401, to receive guidelines on the appeal process.

Students should take courses 1 and 2 for letter grades. In the case of courses taken on a Pass/No Pass basis, the department will use unofficial grades assigned by the instructor but not reported to the Office of the Registrar, in its assessment of eligibility for the major.

Courses for which the grade of W is given are not counted in the computation of the GPA. If courses 1 or 2 are repeated, the department will evaluate the grades from the first attempt in determining whether students qualify for admittance into the major.

Students may petition for admission to the major by filling out the campus's Declaration of Major form and by supplying evidence of their performance in the two pre-major courses.

For purposes of advising, students who are interested in pursuing an economics major are encouraged to declare the pre-economics major with the understanding that this does not automatically provide entry to the economics major.

Appeal of Negative Decisions

Appeals of negative decisions must be submitted to the Economics Department in writing within 30 days of notification that entrance into the major was denied. Letters of appeal should describe any extenuating circumstances that might affect the student's record.

Core Requirements for all Economics Majors

Courses 1 and 2, 11A, 11B, 100A (or 100M), 100B (or 100N), 113, and Applied Mathematics and Statistics 5 are required for all economics majors and are prerequisites for most upper-division courses. Students are strongly urged to complete these courses as soon as possible. Students who are committed to the major early in their academic career, or who are considering the combined B.A./M.S. program, should plan to complete at least courses 1, 2, 11A, and 11B by the end of their sophomore year.

Mathematics Content Requirement

Successful completion of Economics 11A and 11B, also offered as Applied Mathematics and Statistics 11A and 11B, (or equivalent) is required of all economics majors and is prerequisite to courses 100A (or 100M), 100B (or 100N), and 113. (Course 11B can be taken concurrently with courses 100A (or 100M) and 100B (or 100N).) Therefore, students are advised to take courses 11A and 11B or their equivalent as early as possible in their undergraduate career. Mathematics 11A-B and 22 or 23A, or 19A-B and 22 or 23A, are acceptable equivalents to Economics 11A and 11B. Students should not attempt to meet the requirement by combining courses from the economics and math sequences. Students must complete whichever sequence they begin. Students planning to do graduate work in economics or business should seriously consider more intensive mathematical training; consult an adviser.

Comprehensive Requirement

The comprehensive requirement may be satisfied in one of the following ways: (1) by passing a comprehensive examination, administered by the Economics Department several times during the academic year; (2) in exceptional cases and with consent of an instructor, by completion of a senior thesis.

Minor Requirements

Students earn a minor in economics by completing all of the requirements for the major with the following differences:

- The number of additional upper-division courses is reduced from five to three.
- There is no comprehensive requirement.
- Courses 191, 192, 193, 193F, 198, and 198F may not be used to meet minor requirements.

Course 199 may be counted only once toward the upper-division minor requirements.

Independent Study

Students are encouraged to petition for independent study on topics of special interest to them. Economics 199, *Tutorial*, may be used as only one of the upper-division courses required for the major. The department encourages group tutorial study in which a small number of students join together in a seminar to pursue a common interest with faculty assistance. Such enterprises make economical use of faculty resources, and they also make it possible for students to learn from each other.

Field-Study Program

The Economics Department offers its majors the opportunity to integrate their academic knowledge with career-related work. The field-study program places students in internships under the supervision of a faculty sponsor and a professional at the workplace. Students can select from a wide variety of field placements such as accounting firms, community non-profits, government agencies, brokerage firms, marketing agencies, banks, and businesses in Santa Cruz and beyond. Students apply and prepare for field study a quarter in advance. Acceptance into the field-study program is determined by academic standing, class level, and successful completion of courses 100A (or 100M), 100B (or 100N), and 113. Students may earn a maximum of 10 academic credits and complete up to two quarters in a field placement. A field study requires 12 hours per week spent working on internship duties (i.e. not including time spent toward the academic requirements of their faculty sponsor) for 10 weeks.

Along with the training and supervision by a professional at the workplace, students receive guidance from a faculty sponsor who directs their academic project. Students earn credit through the completion of this project and the job supervisor's evaluation of performance. Economics field-study courses (193 and 198) do not satisfy any upper-division requirements for the major and are available as Pass/No Pass only.

Interested students should make an appointment or stop by the Economics Field Study office at 401B Engineering 2; or call (831) 459-2028; or e-mail econintern@ucsc.edu. Web address: http://econ.ucsc.edu.

Transfer Students

A student transferring to UCSC may fulfill some of the requirements for the major by completing equivalent courses, with a grade of C or better, at another recognized institution. Transfer students must present their Transfer Credit Summary (available on the student portal) and course syllabi or descriptions to an Economics Department adviser. The department approves courses applicable for economics prerequisites and major requirements. All transfer students must complete the comprehensive requirement at UCSC. Economics and global economics majors must take at least three of their upper-division economics electives at UCSC. Business management economics majors must take at least four of their upper-division economics electives at UCSC, one of which must be 101, 133, or 135. Courses taken for credit elsewhere may not be repeated for credit here.

Combined Majors

The Economics Department offers a combined major in environmental studies/economics. Global economics is offered in a combined major with Latin American and Latino studies. Information systems management, a stand-alone major combining elements of business management economics and computer science, is administered by the School of Engineering and leads to a bachelor of science degree. Requirements for these majors may be reviewed under their separate entries in this catalog.

Major Disqualification Policy

Students are expected to maintain good academic standing in the major. Only courses with a grade of P or a minimum letter grade of C or better will satisfy the major requirements. Students who fail any of the upper-division core courses (courses 100A (or 100M), 100B (or 100N), and 113) twice will be disqualified from the major. Students who are disqualified will be notified by the first day of instruction in the subsequent quarter following the disqualifying failure. The Office of the Registrar and the student's college will be notified of the disqualification.

Students may appeal their disqualification within the appeal period by submitting a letter to the economics undergraduate programs coordinator. This appeal must be filed no later than 15 days after the disqualification notification was mailed, or the 10th day of classes in the quarter of their disqualification, whichever is later.

Economics Program Description

Economics is the study of a vast range of human behavior and its social implications, ranging from how individuals make (or should make) personal financial and consumption decisions to how the business of organizing society's production and trade changes with time and place. Economists are at the forefront of understanding and trying to grapple with some of the most important issues faced by the world. Economics majors study a substantial core of economic theory and mathematical and statistical methods. The required core courses may be combined with electives in a general economics major program especially suitable for students who plan either to enter law school or to go into more specialized programs emphasizing areas such as applied economics, environmental economics, public policy, political economy, international economics, third world issues and economic development, and quantitative methods.

Economics Major Requirements

Students who major in economics are required to take the following courses:

- 1 Introductory Microeconomics: Resource Allocation and Market Structure
- 2 Introductory Macroeconomics: Aggregate Economic Activity
- 11A Mathematical Methods for Economists (or equivalent)
- 11B Mathematical Methods for Economists (or equivalent)
- 100A (or 100M) Intermediate Microeconomics
- 100B (or 100N) Intermediate Macroeconomics
- 113 Introduction to Econometrics

Applied Mathematics and Statistics 5 Statistics

and five additional upper-division economics courses, at least three of which must be selected from the following:

- 104 Is There Truth in Numbers: The Role of Statistics in Economics
- 106 Evolutionary Thought in the Social Sciences
- 107 Economic Justice
- 108 Business and Society
- 109 Business Ethics
- 114 Advanced Quantitative Methods
- 120 Economic Development
- 121 Economic Growth
- 125 Economic History of the U.S.
- 126 Why Economies Succeed or Fail
- 128 Poverty and Public Policy
- 130 Money and Banking
- 137 Performing Arts in the Public and Private Economy
- 140 International Trade
- 141 International Finance
- 142 Advanced Topics in International Finance
- 148 Latin American Economies
- 149 The Economies of East and Southeast Asia
- 150 Public Finance
- 152 Setting Domestic Priorities
- 153 Cost-Benefit Analysis
- 156 Health Care and Medical Economics
- 157 Economics of Aging
- 160A Industrial Organization
- 160B Government and Industry
- 165 Economics as an Experimental Science
- 169 Economic Analysis of the Law
- 170 Environmental Economics
- 171 Natural Resource Economics
- 175 Energy Economics
- 183 Women in the Economy
- 184 Labor Wars in Theory and Film
- 185 The Value and Support of the Arts: Challenges and Opportunities in

American Society

- 189 Political Economy of Capitalism
- 190 Senior Proseminar

Courses 191, 192, 193, 193F, 198, and 198F may not be used to meet major requirements. Either course 195 or 199 may be used to fill one of the five upper-division major requirements. Other electives are listed under the Business Management Economics program description.

Business Management Economics Program Description

The business management economics major provides students who are interested in careers in business or management with a foundation in economics and a selection of applied fields related to business management. Particular areas of strength of the program are accounting, finance, and technology management. This course of study prepares students for entrance into the business world or admission to graduate programs—either the master's program in applied economics and finance at UCSC or graduate programs in business and management at other universities.

The program provides a business and management education embedded within a broader economics and liberal arts context and is closely related to the economics and global economics majors and the information systems management major (page 239).

The UCSC business management economics curriculum begins at the introductory level; no specific high school preparation is required. All majors study a substantial core of economic theory and mathematical and statistical methods, and they are then able to choose among a wide range of business and management electives.

This major has several important elements. First, it combines the strong analytic approach of economics with the technical aspects of management. Second, it recognizes that computing is intrinsic to business and is an essential skill for those who wish to enter this field. Students in this major gain knowledge about using computing as a tool of analysis for economic, statistical, and financial data. Third, the major offers field placements (arranged with the economics field-study program coordinator) which provide an excellent way to apply academic economics, business, and management to issues and problems in the real world; they provide marketable skills as well as important job contacts. And fourth, students gain written and verbal communication skills, which are vitally important in business.

In cooperation with the UC Education Abroad Program (EAP), opportunities are available for students to take some business courses (taught in English) in Europe, Mexico, and Hong Kong. Students should ask the Economics Department for additional information about these programs.

Students who are committed to the major early in their academic career or who are considering the combined B.A./M.S. program should plan to complete courses 1, 2, 10A, 10B, 11A, and 11B no later than the end of their sophomore year.

Business Management Economics Major Requirements

Introductory and core requirements. Students who major in business management economics are required to take the following courses:

```
1 Introductory Microeconomics: Resource Allocation and Market Structure
```

2 Introductory Macroeconomics: Aggregate Economic Activity

10A Economics of Accounting (or equivalent, see under General Requirements)

10B Economics of Accounting (or equivalent, see under General Requirements)

11A Mathematical Methods for Economists (or equivalent)

11B Mathematical Methods for Economists (or equivalent)

100A (or 100M) Intermediate Microeconomics

100B (or 100N) Intermediate Macroeconomics

113 Introduction to Econometrics

Applied Mathematics and Statistics 5 Statistics

Computer literacy requirement. Students must complete a minimum of two courses from the following list (with department approval, a student may substitute other computing courses):

Computer Engineering 12/L, Computer Organization

Computer Engineering 80N, Introduction to Networking and the Internet

Computer Science 10, Introduction to Computer Science

Computer Science 12A/L, Introduction to Programming

Computer Science 60G, Beginning Programming: Social Sciences and Humanities

Computer Science 60N, Beginning Programming: Natural Sciences

Computer Science 80B, Systems and Simulation

Information Systems Management 50, Business Information Systems

Information Systems Management 58, Systems Analysis and Design

Linguistics 80G, Introduction to Unix

Economics 216, Applied Econometric Analysis I (with permission of instructor)

Upper-division electives. Students are required to take six additional courses: four in business management and two other economics electives. Students must choose four courses from the following list; at least one of these four must be a course designated with an asterisk (*).

- *101 Managerial Economics
- 102 Forecasting
- 110 Managerial Cost Accounting and Control
- 111A Intermediate Accounting I
- 111B Intermediate Accounting II
- 115 Introduction to Management Sciences
- 117 Tax Factors of Business and Investment
- 118 Fraud Examination
- 119 Advanced Accounting
- 131 International Financial Markets
- *133 Security Markets and Financial Institutions
- *135 Corporate Finance
- 136 Business Strategy
- 138 The Economics and Management of Technology and Innovation
- 139A Economics of Electronic Commerce
- 139B E-Commerce Strategy
- 161A Marketing
- 161B Marketing Research
- 162 Legal Environment of Business
- 164 Economics and the Telecommunications Industry
- 180 Labor Economics

- 181 Fconomics of Real Estate
- 188 Management in the Global Economy

Students must choose the remaining two courses from the upper-division economics electives listed for the economics major (see page 181).

Courses 191, 192, 193, 193F, 198, and 198F may not be used to meet major requirements. Either course 195 or 199 may be used to fill one of the six upper-division major requirements.

Field study. One quarter of field study is strongly recommended. Placements and credit for course 193 or 198 are arranged through the economics field-study coordinator. See above under Field-Study Program description.

Global Economics Program Description

Global economics is an interdisciplinary major designed to prepare students to participate in the global economy; the program aims to deepen the student's knowledge of economics within a culturally and linguistically diverse world. The major is particularly useful to students contemplating careers at home or overseas in international relations, in international business, or with international organizations. Hence the major requires overseas study, regional area study, and second-language proficiency in addition to the basic economics requirements.

The UCSC global economics curriculum begins at the introductory level; no specific high school preparation is required. The global economics major program is closely related to the economics major program. See above under the general economics program description for more information.

Global Economics Major Requirements

Introductory and core requirements. Students who major in global economics are required to take the following courses:

- Introductory Microeconomics: Resource Allocation and Market Structure
- Introductory Macroeconomics: Aggregate Economic Activity
- 11A Mathematical Methods for Economists (or equivalent, see below)
- 11B Mathematical Methods for Economists (or equivalent, see below)
- 100A (or 100M) Intermediate Microeconomics
- Intermediate Macroeconomics 100B (or 100N)
- Introduction to Econometrics

Applied Mathematics and Statistics 5 Statistics

Students are strongly urged to complete courses 100A (or 100M), 100B (or 100N), and 113 prior to study abroad. In addition, majors must have language study, area study, and overseas study, as described below.

Courses 191, 192, 193, and 198 may not be used to meet major requirements. Either course 195 or 199 may be used to fill one of the five upper-division major requirements.

Upper-division requirements. Five additional upper-division courses are required. Please see courses listed under the Economics and Business Management majors as well. These may include approved courses offered by other departments.

At least one of the five courses must be selected from the following three:

- 120 Economic Development
- 140 International Trade
- 141 International Finance

In addition, at least one course must be chosen from one of the following lists:

Economics

- 120 Fconomic Development
- 126 Why Economies Succeed or Fail: Lessons from Western and Japanese

History

- 131 International Financial Markets
- International Trade 140
- 141 International Finance
- 142 Advanced Topics in International Economics
- 148 Latin American Economies
- 149 The Economies of East and Southeast Asia
- Management in the Global Economy

Latin American and Latino Studies

- 165 Political Economy of Crisis and Transition in Latin America
- 168 Economic History of Latin America
- 169 Latin American Industrialization in a Global Perspective: Past, Present, Future

Politics

- 140B Comparative Post-Communist Politics
- 175 The New Europe
- 176 International Political Economy

Sociology

- 163 Global Corporations and National States
- 167 Development and Underdevelopment

The other three required upper-division electives are determined by the student's interests. The global economics major has three additional elements:

- 1. **Foreign Language Study:** The global economics major requires a foreign language since students who plan to work in the larger world must have fluency in a language other than English. This language should be relevant to their regional area of interest. Students can meet this requirement by completing two years of university-level language courses or by demonstrating an equivalent level of competence through a recognized language test.
- 2. **Area Study:** The major requires students to take two additional courses selected from the offerings of departments other than economics in order to learn about the history, political economy, or culture of some other part of the world. These can be lower- or upper-division courses; the courses should focus on the area of the student's language study and overseas study. The Economics Department provides a list of approved courses; substitute courses are welcomed when they are part of the student's overseas program or from other UCSC departments, but must be approved by the adviser for the global economics major.
- 3. **Study Abroad:** All students are required to spend at least one term abroad in an approved course of study in their regional area of concentration; students may also choose a year-long program. Typically, a student will do this through the UC Education Abroad Program (EAP). Numerous overseas study sites are available through EAP. Students desiring to fulfill their required study abroad through EAP must apply directly to the EAP office for the selected program and are subject to the admission requirements determined by UC EAP. In countries and at universities where EAP programs are not available, students may make their own arrangements for study with the permission of the director of the program. Students may use the time abroad to further their language study, to meet the area study course requirements, to meet some of the upper-division economics course requirements, or to take courses unrelated to the major. Students who are not accepted to an overseas program or who cannot meet the language or area course requirements are advised to complete the general economics major as an alternative.

Graduate Programs

Master's Program in Applied Economics and Finance

The master of science program in applied economics and finance is designed for students who wish to supplement their undergraduate work in economics with analytical graduate training that prepares them for careers in business, government, international and domestic banking, consulting firms, and nonprofit organizations. The program is unique in its focus on graduate-level economics training for practical application and its emphasis on communication skills. The curriculum stresses the application of micro and macro concepts, statistical techniques, finding and using data sources, working out substantial practical applications, developing writing and reporting skills, and presenting material orally before an audience. The program differs from typical M.B.A. programs by preparing students to meet the increasing technical demands of private and public sector employers through comprehensive course work in economic analysis. Requirements for admission include an undergraduate degree in economics or successful completion of undergraduate courses in intermediate microeconomics, macroeconomics, and statistics and adequate preparation in mathematics. At least two quarters of calculus and one of linear algebra are strongly recommended. Students are also expected to have basic computer skills

Students normally complete the master's program in two years. All students must complete 12 courses (60 credits) of graduate study, including the following core courses which are taken in the first year:

- 200 Microeconomic Analysis
- 201 Applications in Microeconomics

- 202 Macroeconomic Analysis
- 216 Applied Econometric Analysis I
- 217 Applied Econometric Analysis II
- 233 Finance

In addition, first-year students take a two-unit workshop (course 294) in fall. Students normally enroll for 15 units. The minimum for full-time is 12 units.

In the fourth and fifth quarters, students must take at least four elective courses numbered 200 or higher. Students may choose from among the following courses: finance (courses 234, 235, 236, and 239), international economics (courses 249A, 249B), public economics (courses 250, 259A, 259B), accounting (courses 209A, 209B), or any economics Ph.D. course. Note that these courses are not offered each year; elective courses vary from year to year and are dependent on the staffing capabilities of the Economics Department.

Second-year master's students may count no more than two upper-division economics courses toward the elective requirements.

Students may also satisfy elective requirements by taking relevant courses from another discipline. Students will need to file a departmental petition for review and approval of either their upper-division economics courses and/or courses from a related discipline. Please see the graduate adviser for the pre-approved list. Students should begin the approval process at least one quarter in advance.

In the final quarter, each candidate completes a major project in conjunction with course 291, Workshop in Applied Economics, and 10 units of course 297, Independent Study. Students with graduate credit from other institutions may submit a written request for course substitution and/or credit to the graduate committee for review.

Applied Economics and Finance B.A./M.S. Dual-Degree Program for Undergraduates

Students entering UCSC as undergraduates may complete a combined B.A./M.S. in applied economics and finance in five years. To qualify for this program, students must complete all of the core courses for their specific major: courses 1, 2, 11A, 11B, 100A (or 100M), 100B (or 100N), and 113. Business management economics majors must also complete 10A and 10B. In addition, students are strongly advised to complete a minimum of three upper-division economics electives (business management economics majors must complete four) as well as the general education requirements before the end of their junior year. Students are also advised to take a course in linear algebra (Mathematics 21). Students majoring in business management economics or global economics should refer to those sections for the respective dual-degree requirements.

Students must also take the Graduate Record Examination General Test during the fall quarter of their junior year. Advance planning for the program is essential, and interested students should consult with a faculty adviser well in advance of applying to the dual-degree program. A student in the program begins the first-year M.S. courses in the senior year while continuing to maintain undergraduate status. In the fifth year, the student is officially enrolled as a graduate student and completes the remaining graduate course work, culminating in the M.S. degree.

Admission to the dual-degree program is by formal application directly to the Department of Economics; the application deadline is February 15 of the junior year. Undergraduates who plan to apply to quantitative-oriented Ph.D. programs at other institutions may take some of the first-year M.S. classes with the permission of the instructor.

Ph.D. Program in International Economics

The Ph.D. program in international economics provides students with training in modern microeconomics, macroeconomics, and econometrics, combined with specialized training in the fields of international finance and international trade. Students learn to bring an international perspective to all areas of economics and to conduct research on current and emerging international economic issues. The program offers more intensive course work in international trade and finance, as well as greater faculty depth in various aspects of international economics, than do traditional Ph.D. programs in economics that offer international economics as a single subfield. The large number of internationally recognized faculty in the department who are actively engaged in research in international economics provides a unique focus to the program and the department. While the core emphasis is on international trade and finance, the program also offers courses in economic development and in special topics, and students in the program have conducted research on a wide variety of topics in other areas; examples include monetary economics, experimental economics, environmental economics, and economic growth and development. This makes graduates of the program particularly well prepared for academic careers and for research careers in both domestic and international policy institutions.

Courses and Program Requirements

Year	Fall	Winter	Spring
1st	204A Advanced	204B Advanced	204C

	Micro Theory 205A Advanced Macro Theory 210B Math Methods Econ Analysis AMS 205 (highly recommended)	Micro Theory 205B Advanced Macro Theory 211A Advanced Econometrics	Advanced Micro Theory 205C Advanced Macro Theory 211B Advanced Econometrics Micro & Macro Prelim Exams
2nd	240A Advanced International Trade 241A Advanced International Finance 211C* Empirical Research	240B Advanced International Trade 241B Advanced International Finance 243** History of International Economy 212 Empirical Project	240C Advanced International Trade 241C Empirical Applications Trade & Finance Field Exams
3rd	295A Directed Reading 296A Third Year Seminar 212 Empirical Project Qualifying Exam (QE)	295B Directed Reading 296B Third Year Seminar	295C Directed Reading296C Third Year Seminar
4th	298 Dissertation Research 297A Independent Study	298 Dissertation Research 297B Independent Study	298 Dissertation Research 297C Independent Study Last qtr to challenge QE without academic probation

^{*}ECON 211C is not required, but is strongly suggested; it can fulfill the empirical project if Econ 211C project is done independently and not as a team effort.

Course requirements are satisfied by a letter grade of B or better or a grade of S (satisfactory). A letter grade of C in a course is not satisfactory for meeting a course requirement for the Ph.D. program.

Preliminary Requirements

Preliminary examinations are given in two parts: one test in micro theory and one test in macro theory. Students are expected to pass both exams before the beginning of their second year. Preliminary exams are currently offered in June and September, although scheduling is subject to change.

Field examinations are given in two parts: one test in international trade and one test in international finance. These exams are roughly based on the courses Econ 240A, B, C and 241A, B, C, but they are not restricted to only material taught in a particular year at UCSC. The purpose of the exams is to test adequate knowledge of international economics as a qualification for the Ph.D. program. Students are expected to pass both exams by the beginning of their third year. Field exams are currently offered in June and September, although scheduling is subject to change.

An econometrics paper is due at the end of the first full week of fall quarter of the third year. In the winter quarter of the second year and again in the fall quarter of the third year, each student must enroll in Econ 212 with the faculty adviser. The graduate handbook of the department details the evaluation procedure for the paper.

Students who do not pass both preliminary exams, both field exams and the econometrics paper requirement will not be allowed to continue in the Ph.D. program.

Qualifying Examination

Advancement to candidacy for the Ph.D. degree requires completion with satisfactory grades or better of the required coursework, preliminary examinations, field examinations, the econometrics paper and an oral examination. The oral examination is taken after all of the other requirements have been completed. A student cannot advance to candidacy before clearing any incomplete grades from their record.

^{**}ECON 243 is not offered every year; it may be taken in the 2nd or 3rd year.

Dissertation

The final requirement for the Ph.D. degree is acceptance of the student's dissertation under the rules of the Academic Senate. A three-member dissertation advisory committee, headed by the student's research advisor, evaluates the dissertation for the department. The dissertation advisory committee must be approved by both the Economics Ph.D. Committee and the Graduate Council. The committee may require a formal public defense of the dissertation.

Economics

401 Engineering 2 (831) 459-2743 http://econ.ucsc.edu

<u>Program Description</u> | <u>Faculty</u> | <u>Course Descriptions</u>

Program Description

An understanding of economics is a vital component of a liberal arts education and a necessity for anyone interested in such areas as business, environmental policy, welfare reform, unemployment, international competitiveness and trade, or transformations in the global economy.

The programs offered by the UCSC Economics Department are designed to acquaint students with the broad range of issues studied by economists and with the tools they use. The department offers four majors:

Economics B.A.

Business management economics B.A.

Global economics B.A.

Information systems management B.S. (a joint major sponsored by the Economics Department and School of Engineering)

A minor in economics is also available, as well as the following combined majors:

Economics/environmental studies B.A. Global economics/Latin American and Latino studies B.A.

Students majoring in other subjects will find that economics courses help them understand current affairs and satisfy their curiosity about the ways society allocates resources. The department provides topical courses in the 80 series for students who are interested in economics or business but do not plan to become majors.

The economics curriculum begins at the introductory level; no specific high school preparation is required. All economics majors study a substantial core of economic theory and mathematical and statistical methods, and then choose among a wide variety of upper-division electives.

Economics majors may combine their upper-division elective choices in a variety of ways to achieve specialization in a number of possible areas, including environmental economics, public policy, political economy, international economics, economic development, and quantitative methods. Highly qualified seniors may take appropriate graduate courses and earn an M.S. as well as a B.A. degree in five years.

General Requirements

Admission into an Economics Major and Minor

The Economics Department administers three undergraduate majors: economics, business management economics and global economics. The admission requirements are the same for the three.

Students must take two courses prior to petitioning for entry to an economics major: course 1 (principles of microeconomics) and course 2 (principles of macroeconomics).

Requests for entry into the major will be reviewed within two weeks of receipt. Equivalent courses may be taken at other universities or at community colleges. Transfer students may have these requests reviewed by the department prior to matriculation at UCSC.

All students with a combined grade point average (GPA) of 2.8 in courses 1 and 2 will be allowed to declare the major. Students with a GPA below 2.8 in these courses may be allowed to declare at the discretion of the department. Students may submit a GPA letter of appeal. GPA appeals will be reviewed three times per quarter; the third, the fifth, and the seventh week of instruction with a four-day turnaround. Please come by the Economics Office, Engineering 2, Room 401, to receive guidelines on the appeal process.

Students should take courses 1 and 2 for letter grades. In the case of courses taken on a Pass/No Pass basis, the department will use shadow unofficial grades assigned by the instructor but not reported to the Office of the Registrar, in its assessment of eligibility for the major.

Courses for which the grade of W is given are not counted in the computation of the GPA. If courses 1 or 2 are repeated, the department will evaluate the grades from the first attempt in determining whether students qualify for admittance into the major.

Students may petition for admission to the major by filling out the campus's Declaration of Major form and by supplying evidence of their performance in the two pre-major courses.

For purposes of advising, students who are interested in pursuing an economics major are encouraged to declare the pre-economics major with the understanding that this does not automatically provide entry to the economics major.

Appeal of Negative Decisions

Appeals of negative decisions must be submitted to the Economics Department in writing within 30 days of notification that entrance into the major was denied. Letters of appeal should describe any extenuating circumstances that might affect the student's record.

Core Requirements for all Economics Majors

Courses 1 and 2, 11A, 11B, 100A (or 100M), 100B (or 100N), 113, and Applied Mathematics and Statistics 5 are required for all economics majors and are prerequisites for most upper-division courses. Students are strongly urged to complete these courses as soon as possible. Students who are committed to the major early in their academic career, or who are considering the combined B.A./M.S. program, should plan to complete at least courses 1, 2, 11A, and 11B by the end of their sophomore year.

Mathematics Content Requirement

Successful completion of Economics 11A and 11B, also offered as Applied Mathematics and Statistics 11A and 11B, (or equivalent) is required of all economics majors and is prerequisite to courses 100A (or 100M), 100B (or 100N), and 113. (Course 11B can be taken concurrently with courses 100A (or 100M) and 100B (or

100N).) Therefore, students are advised to take courses 11A and 11B or their equivalent as early as possible in their undergraduate career. Mathematics 11A-B and 22 or 23A, or 19A-B and 22 or 23A, are acceptable equivalents to Economics 11A and 11B. Students should not attempt to meet the requirement by combining courses from the economics and math sequences. Students must complete whichever sequence they begin. Students planning to do graduate work in economics or business should seriously consider more intensive mathematical training; consult an adviser.

Comprehensive Requirement

The comprehensive requirement may be satisfied in one of the following ways: (1) by passing a comprehensive examination, administered by the Economics Department several times during the academic year; (2) in exceptional cases and with consent of an instructor, by completion of a senior thesis.

Minor Requirements

Students earn a minor in economics by completing all of the requirements for the major with the following differences:

- The number of additional upper-division courses is reduced from five to three.
- There is no comprehensive requirement.
- Courses 191, 192, 193, 193F, 198, and 198F may not be used to meet minor requirements.

As for the major, Course 199 may be counted only once toward the upper-division minor requirements.

Independent Study

Students are encouraged to petition for independent study on topics of special interest to them. Economics 199, *Tutorial*, may be used as only one of the upper-division courses required for the major. The department encourages group tutorial study in which a small number of students join together in a seminar to pursue a common interest with faculty assistance. Such enterprises make economical use of faculty resources, and they also make it possible for students to learn from each other.

Field-Study Program

The Economics Department offers its majors the opportunity to integrate their academic knowledge with career-related work. The field-study program places students in internships under the supervision of a faculty sponsor and a professional at the workplace. Students can select from a wide variety of field placements such as accounting firms, community non-profits, government agencies, brokerage firms, marketing agencies, banks, and businesses in Santa Cruz and beyond. Students apply and prepare for field study a quarter in advance. Acceptance into the field-study program is determined by academic standing, class level, and successful completion of courses 100A (or 100M), 100B (or 100N), and 113. Students may earn a maximum of 10 academic credits and complete up to two quarters in a field placement. A field study requires 12 hours per week spent working on internship duties (i.e. not including time spent toward the academic requirements of their faculty sponsor) for 10 weeks.

Along with the training and supervision by a professional at the workplace, students receive guidance from a faculty sponsor who directs their academic project. Students

earn credit through the completion of this project and the job supervisor's evaluation of performance. Economics field-study courses (193 and 198) do not satisfy any upper-division requirements for the major and are available as Pass/No Pass only.

Interested students should make an appointment or stop by the Economics Field Study office at 401B Engineering 2; or call (831) 459-2028; or e-mail econintern@ucsc.edu. Web address: http://econ.ucsc.edu.

Transfer Students

A student transferring to UCSC may fulfill some of the requirements for the major by completing equivalent courses, with a grade of C or better, at another recognized institution. Transfer students must present their Transfer Credit Summary (available from college offices on the student portal) and course syllabi or descriptions to an Economics Department adviser. The department approves courses applicable for economics prerequisites and major requirements. All transfer students must complete the comprehensive requirement at UCSC. Economics and global economics majors must take at least three of their upper-division economics electives at UCSC. Business management economics majors must take at least four of their upper-division economics electives at UCSC, one of which must be 101, 133, or 135. Courses taken for credit elsewhere may not be repeated for credit here.

Combined Majors

The Economics Department offers a combined major in environmental studies/economics. Global economics is offered in a combined major with Latino studies. Information systems management, a stand-alone major combining elements of business management economics and computer science, is administered by the Computer Science Department School of Engineering and leads to a bachelor of science degree. Requirements for these majors may be reviewed under their separate entries in this catalog.

Major Disqualification Policy

Students are expected to maintain good academic standing in the major. Only courses with a grade of P or a minimum letter grade of C or better will satisfy the major requirements. Students who fail any of the upper-division core courses (courses 100A (or 100M), 100B (or 100M), and 113) twice will be disqualified from the major. Students who are disqualified will be notified by the first day of instruction in the subsequent quarter following the disqualifying failure. The Office of the Registrar and the student's college will be notified of the disqualification.

Students may appeal their disqualification within the appeal period by submitting a letter to the economics undergraduate programs coordinator. This appeal must be filed no later than 15 days after the disqualification notification was mailed, or the 10th day of classes in the quarter of their disqualification, whichever is later.

Economics Program Description

Economics is the study of a vast range of human behavior and its social implications, ranging from how individuals make (or should make) personal financial and consumption decisions to how the business of organizing society's production and trade changes with time and place.

Economists are at the forefront of understanding and trying to grapple with some of the most important issues faced by the world. Economics majors study a substantial core of economic theory and mathematical and statistical methods. The required core courses may be combined with electives in a general economics major program especially suitable for students who plan either to enter law school or to go into more specialized programs emphasizing areas such as applied economics, environmental economics, public policy, political economy, international economics, third world issues and economic development, and quantitative methods.

Economics Major Requirements

Students who major in economics are required to take the following courses:

- 1 Introductory Microeconomics: Resource Allocation and Market Structure
- 2 Introductory Macroeconomics: Aggregate Economic Activity
- 11A Mathematical Methods for Economists (or equivalent)
- 11B Mathematical Methods for Economists (or equivalent)
- 100A (or 100M) Intermediate Microeconomics
- 100B (or 100N) Intermediate Macroeconomics
- 113 Introduction to Econometrics

Applied Mathematics and Statistics 5 Statistics

and five additional upper-division economics courses, at least three of which must be selected from the following:

- 104 Is There Truth in Numbers: The Role of Statistics in Economics
- 106 Evolutionary Thought in the Social Sciences
- 107 Economic Justice
- 108 Business and Society
- 109 Business Ethics
- 114 Advanced Quantitative Methods
- 120 Economic Development
- 121 Economic Growth
- 125 Economic History of the U.S.
- 126 Why Economies Succeed or Fail
- 128 Poverty and Public Policy
- 130 *Money and Banking*
- 137 Performing Arts in the Public and Private Economy
- 140 International Trade
- 141 International Finance
- 142 Advanced Topics in International Finance
- 148 Latin American Economies
- 149 The Economies of East and Southeast Asia
- 150 Public Finance
- 152 Setting Domestic Priorities
- 153 Cost-Benefit Analysis
- 156 Health Care and Medical Economics
- 157 Economics of Aging
- 160A Industrial Organization
- 160B Government and Industry
- 165 Economics as an Experimental Science
- 169 Economic Analysis of the Law
- 170 Environmental Economics
- 171 Natural Resource Economics
- 175 Energy Economics

- 183 *Women in the Economy*
- 184 Labor Wars in Theory and Film
- 185 The Value and Support of the Arts: Challenges and Opportunities in American Society
- 189 Political Economy of Capitalism
- 190 Senior Proseminar

Courses 191, 192, 193, 193F, 198, and 198F may not be used to meet major requirements. Either course 195 or 199 may be used to fill one of the five upper-division major requirements. Other electives are listed under the Business Management Economics program description.

Business Management Economics Program Description

The business management economics major provides students who are interested in careers in business or management with a foundation in economics and a selection of applied fields related to business management. Particular areas of strength of the program are accounting, finance, and technology management. This course of study prepares students for entrance into the business world or admission to graduate programs—either the master's program in applied economics and finance at UCSC or graduate programs in business and management at other universities.

The program provides a business and management education embedded within a broader economics and liberal arts context and is closely related to the economics and global economics majors and the information systems management major.

The UCSC business management economics curriculum begins at the introductory level; no specific high school preparation is required. All majors study a substantial core of economic theory and mathematical and statistical methods, and they are then able to choose among a wide range of business and management electives.

This major has several important elements. First, it combines the strong analytic approach of economics with the technical aspects of management. Second, it recognizes that computing is intrinsic to business and is an essential skill for those who wish to enter this field. Students in this major gain knowledge about using computing as a tool of analysis for economic, statistical, and financial data. Third, the major offers field placements (arranged with the economics field-study program coordinator) which provide an excellent way to apply academic economics, business, and management to issues and problems in the real world; they provide marketable skills as well as important job contacts. And fourth, students gain written and verbal communication skills, which are vitally important in business.

In cooperation with the <u>UC Education Abroad Program (EAP)</u>, opportunities are available for students to take some business courses (taught in English) in Europe, Mexico, and Hong Kong. Students should ask the Economics Department for additional information about these programs.

Students who are committed to the major early in their academic career or who are considering the combined B.A./M.S. program should plan to complete courses 1, 2, 10A, 10B, 11A, and 11B no later than the end of their sophomore year.

Business Management Economics Major Requirements

Introductory and core requirements. Students who major in business management economics are required to take the following courses:

- 1 Introductory Microeconomics: Resource Allocation and Market Structure
- 2 Introductory Macroeconomics: Aggregate Economic Activity
- 10A *Economics of Accounting* (or equivalent, see under General Requirements)
- 10B Economics of Accounting (or equivalent, see under General Requirements)
- 11A Mathematical Methods for Economists (or equivalent)
- 11B Mathematical Methods for Economists (or equivalent)
- 100A (or 100M) Intermediate Microeconomics
- 100B (or 100N) Intermediate Macroeconomics
- 113 Introduction to Econometrics

Applied Mathematics and Statistics 5 Statistics

Computer literacy requirement. Students must complete a minimum of two courses from the following list (with department approval, a student may substitute other computing courses):

Computer Engineering 12/L, Computer Organization

Computer Engineering 80N, Introduction to Networking and the Internet

Computer Science 10, Introduction to Computer Science

Computer Science 12A/L, Introduction to Programming

Computer Science 60G, Beginning Programming: Social Sciences and Humanities

Computer Science 60N, Beginning Programming: Natural Sciences

Computer Science 80B, Systems and Simulation

Information Systems Management 50, *Business Information Systems* Information Systems Management 58, *Systems Analysis and Design* Linguistics 80G, *Introduction to Unix*

Economics 216, *Applied Econometric Analysis I* (with permission of instructor)

Upper-division electives. Students are required to take six additional courses: four in business management and two other economics electives. Students must choose four courses from the following list; at least one of these four must be a course designated with an asterisk (*).

- *101 Managerial Economics
- 102 Forecasting
- 110 Managerial Cost Accounting and Control
- 111A Intermediate Accounting I
- 111B Intermediate Accounting II
- 115 Introduction to Management Sciences
- 117 Tax Factors of Business and Investment
- 118 Fraud Examination
- 119 Advanced Accounting
- 131 International Financial Markets
- *133 Security Markets and Financial Institutions
- *135 Corporate Finance
- 136 Business Strategy
- 138 The Economics and Management of Technology and Innovation
- 139A Economics of Electronic Commerce
- 139B *E-Commerce Strategy*

- 161<u>A</u> Marketing
- 161B Marketing Research
- 162 Legal Environment of Business
- 164 Economics and the Telecommunications Industry
- 180 Labor Economics
- 181 Economics of Real Estate
- 188 Management in the Global Economy

Students must choose the remaining two courses from the upper-division economics electives listed for the economics major (see page 181).

Courses 191, 192, 193, 193F, 198, and 198F may not be used to meet major requirements. Either course 195 or 199 may be used to fill one of the six upper-division major requirements.

Field study. One quarter of field study is strongly recommended. Placements and credit for course 193 or 198 are arranged through the economics field-study coordinator. See above under Field-Study Program description.

Global Economics Program Description

Global economics is an interdisciplinary major designed to prepare students to participate in the global economy; the program aims to deepen the student's knowledge of economics within a culturally and linguistically diverse world. The major is particularly useful to students contemplating careers at home or overseas in international relations, in international business, or with international organizations. Hence the major requires overseas study, regional area study, and second-language proficiency in addition to the basic economics requirements.

The UCSC global economics curriculum begins at the introductory level; no specific high school preparation is required. The global economics major program is closely related to the economics major program. See above under the general economics program description for more information.

Global Economics Major Requirements

Introductory and core requirements. Students who major in global economics are required to take the following courses:

- 1 Introductory Microeconomics: Resource Allocation and Market Structure
- 2 Introductory Macroeconomics: Aggregate Economic Activity
- 11A Mathematical Methods for Economists (or equivalent, see below)
- 11B Mathematical Methods for Economists (or equivalent, see below)
- 100A (or 100M) Intermediate Microeconomics
- 100B (or 100N) Intermediate Macroeconomics
- 113 Introduction to Econometrics

Applied Mathematics and Statistics 5 Statistics

Students are strongly urged to complete courses 100A (or 100M), 100B (or 100N), and 113 prior to study abroad. In addition, majors must have language study, area study, and overseas study, as described below.

Courses 191, 192, 193, and 198 may not be used to meet major requirements. Either course 195 or 199 may be used to fill one of the five upper-division major

requirements.

Upper-division requirements. Five additional upper-division courses are required. Please see courses listed under the Economics and Business Management majors as well. These may include approved courses offered by other departments.

At least one of the five courses must be selected from the following three:

- 120 Economic Development
- 140 International Trade
- 141 International Finance

In addition, at least one course must be chosen from one of the following lists:

Economics

- 120 Economic Development
- 126 Why Economies Succeed or Fail: Lessons from Western and Japanese History
- 131 International Financial Markets
- 140 International Trade
- 141 International Finance
- 142 Advanced Topics in International Economics
- 148 Latin American Economies
- 149 The Economies of East and Southeast Asia
- 188 Management in the Global Economy

Latin American and Latino Studies

- 140 Rural Mexico in Crisis
- 165 Political Economy of Crisis and Transition in Latin America
- 168 Economic History of Latin America
- 169 Latin American Industrialization in a Global Perspective: Past, Present, Future

Politics

- 140B Comparative Post-Communist Politics
- 175 The New Europe
- 176 International Political Economy

Sociology

- 163 Global Corporations and National States
- 167 Development and Underdevelopment

The other three required upper-division electives are determined by the student's interests.

The global economics major has three additional elements:

1. **Foreign Language Study:** The global economics major requires a foreign language since students who plan to work in the larger world must have fluency in a language other than English. This language should be relevant to their regional area of interest. Students can meet this requirement by completing two years of university-level language

courses or by demonstrating an equivalent level of competence through a recognized language test.

- 2. **Area Study:** The major requires students to take two additional courses selected from the offerings of departments other than economics in order to learn about the history, political economy, or culture of some other part of the world. These can be lower- or upper-division courses; the courses should focus on the area of the student's language study and overseas study. The Economics Department provides a list of approved courses; substitute courses are welcomed when they are part of the student's overseas program or from other UCSC departments, but must be approved by the adviser for the global economics major.
- 3. **Study Abroad:** All students are required to spend at least one term abroad in an approved course of study in their regional area of concentration; students may also choose a year-long program. Typically, a student will do this through the UC Education Abroad Program (EAP). Numerous overseas study sites are available through EAP. Students desiring to fulfill their required study abroad through EAP must apply directly to the EAP office for the selected program and are subject to the admission requirements determined by UC EAP. In countries and at universities where EAP programs are not available, students may make their own arrangements for study with the permission of the director of the program. Students may use the time abroad to further their language study, to meet the area study course requirements, to meet some of the upper-division economics course requirements, or to take courses unrelated to the major. Students who are not accepted to an overseas program or who cannot meet the language or area course requirements are advised to complete the general economics major as an alternative.

Graduate Programs

Master's Program in Applied Economics and Finance

The master of science program in applied economics and finance is designed for students who wish to supplement their undergraduate work in economics with analytical graduate training that prepares them for careers in business, government, international and domestic banking, consulting firms, and nonprofit organizations. The program is unique in its focus on graduate-level economics training for practical application and its emphasis on communication skills. The curriculum stresses the application of micro and macro concepts, statistical techniques, finding and using data sources, working out substantial practical applications, developing writing and reporting skills, and presenting material orally before an audience. The program differs from typical M.B.A. programs by preparing students to meet the increasing technical demands of private and public sector employers through comprehensive course work in economic analysis.

Requirements for admission include an undergraduate degree in economics or successful completion of undergraduate courses in intermediate microeconomics, macroeconomics, and statistics and adequate preparation in mathematics. At least two quarters of calculus and one of linear algebra are strongly recommended. Students are also expected to have basic computer skills.

Students normally complete the master's program in two years. All students must complete 12 courses (60 credits) of graduate study, including the following core

courses which are taken in the first year:

- 200 Microeconomic Analysis
- 201 Applications in Microeconomics
- 202 Macroeconomic Analysis
- 216 Applied Econometric Analysis I
- 217 Applied Econometric Analysis II
- 233 Finance

In addition, first-year students take a 2-credit workshop (course 294) in fall. Students normally enroll for 15 credits. The minimum for full-time is 12. Courses that are approved electives include: Economics 110, 119, 138, 149, 169, 170, 183, Field Study, and Ph.D. courses.

In the fourth and fifth quarters, students must take four master's elective courses numbered 200 or higher. Students may choose from among the following courses: finance (courses 234, 235, 236, and 239), international economics (courses 249A, 249B), public economics (courses 259A, 259B), accounting (courses 209A, 209B) or any economics Ph.D. course. Note that these courses are not offered each year; elective courses vary from year to year and are dependent on the staffing capabilities of the Economics Department.

Second year master's students may count one or two upper-division undergraduate economics courses toward the four elective requirements with the proviso that the instructor will require extra work from students who receive master's credit for such courses. Also note that some undergraduate courses have a graduate-level course that is taught concurrently.

Students may also satisfy elective requirements by taking relevant courses from another discipline. In both of these cases, students will need to file a departmental petition for review and approval of either their upper-division undergraduate economics courses and/or courses from a related discipline. Students should begin the approval process at least one quarter in advance.

In the final quarter, each candidate completes a major project in conjunction with course 291, Workshop in Applied Economics, and 10 credits of course 297, Independent Study.

Students with graduate credit from other institutions may submit a written request for course substitution and/or credit to the graduate committee for review.

In addition, first-year students take a two-unit workshop (course 294) in fall. Students normally enroll for 15 units. The minimum for full-time is 12 units.

In the fourth and fifth quarters, students must take at least four elective courses numbered 200 or higher. Students may choose from among the following courses: finance (courses 234, 235, 236, and 239), international economics (courses 249A, 249B), public economics (courses 250, 259A, 259B), accounting (courses 209A, 209B), or any economics Ph.D. course. Note that these courses are not offered each year; elective courses vary from year to year and are dependent on the staffing capabilities of the Economics Department.

<u>Second-year master's students may count no more than two upper-division economics courses toward the elective requirements.</u>

Students may also satisfy elective requirements by taking relevant courses from another discipline. Students will need to file a departmental petition for review and approval of either their upper-division economics courses and/or courses from a related discipline. Please see the graduate adviser for the pre-approved list. Students should begin the approval process at least one quarter in advance.

In the final quarter, each candidate completes a major project in conjunction with course 291. Workshop in Applied Economics, and 10 units of course 297. Independent Study. Students with graduate credit from other institutions may submit a written request for course substitution and/or credit to the graduate committee for review.

Applied Economics and Finance B.A./M.S. Dual-Degree Program for Undergraduates

Students entering UCSC as undergraduates may complete a combined B.A./M.S. in applied economics and finance in five years. To qualify for this program, students must complete all of the core courses for their specific major: (courses 1, 2, 10A, 10B for business management economics majors only, 11A, 11B, 100A, 100B, and 113) and courses 1, 2, 11A, 11B, 100A (or 100M), 100B (or 100N), and 113. Business management economics majors must also complete 10A and 10B. In addition, students are strongly advised to complete a minimum of three upper-division economics electives (business

management economics majors must complete four) as well as the general education requirements before the end of their junior year. Students are also advised to take a course in linear algebra (Mathematics 21). Students majoring in business management economics or global economics should refer to those sections for the respective dual-degree requirements.

Students must also take the Graduate Record Examination General Test during the fall quarter of their junior year. Advance planning for the program is essential, and interested students should consult with a faculty adviser well in advance of applying to the dual-degree program.

A student in the program begins the first-year M.S. courses in the senior year while continuing to maintain undergraduate status. In the fifth year, the student is officially enrolled as a graduate student and completes the remaining graduate course work, culminating in the M.S. degree.

Admission to the dual-degree program is by formal application directly to the Department of Economics; the application deadline is February 15 of the junior year. Undergraduates who plan to apply to quantitative-oriented Ph.D. programs at other institutions may take some of the first-year M.S. classes with the permission of the instructor.

Ph.D. Program in International Economics

The Ph.D. program in international economics provides students with training in modern microeconomics, macroeconomics, and econometrics, combined with specialized training in the fields of international finance and international trade. Students learn to bring an international perspective to all areas of economics and to conduct research on current and emerging international economic issues. The program offers more intensive course work in international trade and finance, as well as greater faculty depth in various aspects of international economics, than do traditional Ph.D. programs in economics that offer international economics as a single subfield. The large number of internationally recognized faculty in the department who are actively engaged in research in international economics provides a unique focus to the program and the department. While the core emphasis is on international trade and finance, the program also offers courses in economic development and in special topics, and students in the program have conducted research on a wide variety of topics in other areas; examples include monetary economics, experimental economics, environmental economics, and economic growth and development. This makes graduates of the program particularly well prepared for academic careers and for research careers in both domestic and international policy institutions.

Courses and Program Requirements

Year	Fall	Winter	Spring
1st	204A Advanced Micro Theory 205A Advanced Macro Theory 210B Math Methods Econ Analysis AMS 205 (highly recommended)	204B Advanced Micro Theory 205B Advanced Macro Theory 211A Advanced Econometrics	204C Advanced Micro Theory 205C Advanced Macro Theory

			211B Advanced Econometrics Micro & Macro Prelim Exams
2nd	240A Advanced International Trade 241A Advanced International Finance 211C* Empirical Research	240B Advanced International Trade 241B Advanced International Finance 243** History of International Economy 212 Empirical Project	240C Advanced International Trade 241C Empirical Applications Trade & Finance Field Exams
3rd	295A Directed Reading 296A Third Year Seminar 212 Empirical Project Qualifying Exam (QE)	295B Directed Reading 296B Third Year Seminar	295C Directed Reading296C Third Year Seminar
4th	298 Dissertation Research 297A Independent Study	298 Dissertation Research 297B Independent Study	298 Dissertation Research 297C Independent Study Last qtr to challenge QE without academic probation

*ECON 211C is not required, but is strongly suggested; it can fulfill the empirical project if Econ 211C project is done independently and not as a team effort.

**ECON 243 is not offered every year; it may be taken in the 2nd or 3rd year.

Course requirements are satisfied by a letter grade of B or better or a grade of S (satisfactory). A letter grade of C in a course is not satisfactory for meeting a course requirement for the Ph.D. program.

Preliminary Requirements

Preliminary examinations are given in two parts: one test in micro theory and one test in macro theory. Students are expected to pass both exams before the beginning of their second year. Preliminary exams are currently offered in June and September, although scheduling is subject to change.

Field examinations are given in two parts: one test in international trade and one test in international finance. These exams are roughly based on the courses Econ 240A, B, C and 241A, B, C, but they are not restricted to only material taught in a particular year at UCSC. The purpose of the exams is to test adequate knowledge of international economics as a qualification for the Ph.D. program. Students are

expected to pass both exams by the beginning of their third year. Field exams are currently offered in June and September, although scheduling is subject to change.

An econometrics paper is due at the end of the first full week of fall quarter of the third year. In the winter quarter of the second year and again in the fall quarter of the third year, each student must enroll in Econ 212 with the faculty adviser. The graduate handbook of the department details the evaluation procedure for the paper.

Students who do not pass both preliminary exams, both field exams and the econometrics paper requirement will not be allowed to continue in the Ph.D. program.

Qualifying Examination

Advancement to candidacy for the Ph.D. degree requires completion with satisfactory grades or better of the required coursework, preliminary examinations, field examinations, the econometrics paper and an oral examination. The oral examination is taken after all of the other requirements have been completed. A student cannot advance to candidacy before clearing any incomplete grades from their record.

Dissertation

The final requirement for the Ph.D. degree is acceptance of the student's dissertation under the rules of the Academic Senate. A three-member dissertation advisory committee, headed by the student's research advisor, evaluates the dissertation for the department. The dissertation advisory committee must be approved by both the Economics Ph.D. Committee and the Graduate Council. The committee may require a formal public defense of the dissertation.

<u>Program Description | Course Descriptions</u>

Faculty and Professional Interests

Professor

Robert F. Adams, Emeritus

Joshua Aizenman

International economics, economic development

Yin-Wong Cheung

Econometrics, applied econometrics, exchange rate dynamics, financial price behavior, aggregate output dynamics

Frank C. Child, Emeritus

Michael P. Dooley

International finance, monetary theory and policy

Daniel Friedman

Microeconomic theory, experimental economics, evolution and learning, behavioral economics, financial markets

K.C. Fung

International trade, WTO, multinational corporations, and Asia/Pacific economies

Ronald E. Grieson, Emeritus

Michael M. Hutchison

International finance, macroeconomics, Japanese financial system, European monetary integration

John W. Isbister, Emeritus

David E. Kaun

Political economy of capitalism (and the impact of the conservative think tanks on public dialogue and policy), labor economics, economics of art and culture

Kenneth Kletzer

International economics, macroeconomics, economic development

Lori G. Kletzer

Employment and wage determination, impact of globalization on the domestic labor market, industrial relations, government labor market policies, higher education and the labor market

Jacob B. Michaelsen, Emeritus

Peggy B. Musgrave, Emerita

Nirvikar Singh

Industrial organization, political economy, economic development, technology and innovation, South Asian immigrants in the U.S.

Carl E. Walsh

Monetary theory and policy, macroeconomics

Donald A. Wittman

Economic theory, politics, law

Associate Professor

Bernard L. Elbaum

Economic history

Robert W. Fairlie

Labor economics, public policy, entrepreneurship, applied econometrics

Phillip McCalman

International trade, intellectual property rights, industrial organization

Assistant Professor

Ai-Ru Cheng

Finance (asset pricing) and econometrics

Carlos E. Dobkin

Public health, public policy, and econometrics

Ricard Gil

Industrial organization, organizational economics, and applied microeconomics

Justin G. Marion

Public economics, empirical industrial organization

Ryan Oprea

Experimental economics, industrial organization, applied game theory, and financial markets

Federico Ravenna

Open economy macroeconomics, international finance, monetary economics

Thomas Wu

International finance, macroeconomics, Brazilian macroeconomic policy

Huibin Yan

Economic theory, game theory, applied microeconomic theory, industrial organization

Acting Assistant Professor

Jennifer Poole

International trade; Latin American economics; applied microeconomics

Jonathan Robinson

Economic development, with an emphasis on field experiments and data collection

Alan Spearot

International trade; industrial organization

Lecturer

Mary Flannery

Economics of the telecommunications industry, applied microeconomics, business strategy and marketing

Robert J. Shepherd

Financial, managerial, cost accounting; intermediate accounting; and certified public accountant examination

David Goodman, Professor of Environmental Studies

Political economy of international environmental issues, global agri-food systems, technology, North-South relations and sustainable development, Brazilian economy and society

Paul M. Lubeck, Professor of Sociology

Political sociology; political economy of development, globalization, labor and work; logics of methodology; religion and social movements; Islamic society and identities; information and networks

John T. Musacchio, Assistant Professor of Information Systems Management Control, analysis, and pricing of communications networks; applications of game theory in networking; wireless ad-hoc networks; and management of technology

Manuel Pastor Jr., Professor of Latin American and Latino Studies
Urban poverty and regional development, Latinos in the urban U.S., environmental justice,
macroeconomic stabilization in Latin America; distribution and growth in the developing world;
Cuban economic reform; Mexican economic reform

Kevin G. Ross, Assistant Professor of Information Systems Management Service engineering and management; resource allocation; operations research, pricing, scheduling; queueing theory; networks

Helen Shapiro, Associate Professor of Sociology

Political economy, Latin American economic history and development (with an emphasis on Brazil), industrial policy, the auto industry, the state and transnational corporations

Yi Zhang, Acting Assistant Professor of Information Systems Management Information retrieval, knowledge management, natural language processing, machine learning

Program Description | Changes to 2006-08 Catalog Highlighted | Faculty

Lower-Division Courses

1. Introductory Microeconomics: Resource Allocation and Market Structure. F,W,S

For all interested students as well as prospective economics majors. Examines how markets allocate resources in different kinds of economies. Topics include competitive markets, monopoly, financial markets, income distribution, market failures, the environment, and the role of government. (General Education Code(s): IS.) *The Staff*

2. Introductory Macroeconomics: Aggregate Economic Activity. F,W,S

For all interested students and prospective economics majors. Examines how the overall level of national economic activity is determined, including output, employment, and inflation. Explores the roles of monetary and fiscal policies in stabilizing the economy and promoting growth, with a focus on contemporary policy debates. (General Education Code(s): IS.) *The Staff*

10A. Economics of Accounting. F,W

Introduction to accounting principles and practice; preparation and analysis of financial statements; study of internal control procedures. Courses 10A and 10B satisfy the Accounting 1A-B requirement at UC Berkeley. *The Staff*

10B. Economics of Accounting. W,S

Managerial accounting emphasizing analysis and control; accounting for corporations; introduction to taxation, budgeting, and equity/debt financing; management decision making. Courses 10A and 10B satisfy the Accounting 1A-B requirement at UC Berkeley. Prerequisite(s): course 10A. *The Staff*

11A. Mathematical Methods for Economists. F,W,S

An introduction to mathematical tools and reasoning, with applications to economics. Topics are drawn from precalculus and calculus and include functions and graphs, techniques of differentiation, relative extrema, logarithms and exponents, and differentials. Students who have already taken Mathematics 11A and 19A should not take this course. (Also offered as Applied Math and Statistics 11A. Students cannot receive credit for both courses.) Prerequisite(s): score of 31 or higher on Math Placement Exam. Students who do not place into precalculus should enroll in Mathematics 2. (General Education Code(s): IN, Q.) *The Staff*

11B. Mathematical Methods for Economists. F,W,S

Mathematical tools and reasoning, with applications to economics. Topics are drawn from integral calculus, multivariable calculus, and linear algebra and include definite integrals, partial derivatives, Lagrange multipliers, matrix algebra, and solving systems of linear equations. (Also offered as Applied Math and Statistics 11B.

Students cannot receive credit for both courses.) Prerequisite(s): course 11A or Applied Mathematics and Statistics 11A. (General Education Code(s): IN, Q.) (FWS) The Staff

42. Student-Directed Seminar. F,W,S

Seminars taught by upper-division students under faculty supervision. (See course 192.) *The Staff*

80A. The Theory, Hope, and Crisis of Capitalism. *

Assessment of modern-day capitalism from the three major economic paradigms-liberal, conservative, radical. Theories of Smith, Marx, and Keynes are explored in contemporary writing, with focus on the U.S. from WW II to present. Students cannot receive credit for this course and course 189. (General Education Code(s): T3-Social Sciences.) *D. Kaun*

80G. Money and the Arts: Two All-Consuming Passions. F

Analysis of the performing arts: a commodity providing a rich and varied source of satisfaction, an occupation for thousands of talented and creative individuals, and an activity whose funding (public versus private) is the source of significant controversy. Students cannot receive credit for this course and course 137. (General Education Code(s): T3-Social Sciences.) *D. Kaun*

80H. Wall Street and the Money Game. S

Provides a demystifying introduction to financial markets. Examines the theory of stock market investment, the workings of the international money market, the implications of corporate takeovers, and the regulation of the economy by the Federal Reserve Board. (General Education Code(s): T3-Social Sciences.) *The Staff*

80J. Value and Support of the Arts: Challenges and Opportunities in American Society. *

Considers the value of the arts in an era of increasing budgetary duress, along with focus on specific funding concerns arising in such an environment. Students cannot receive credit for this course and course 185. (General Education Code(s): T5-Humanities and Arts or Social Sciences.) *D. Kaun*

93. Field Study. F,W,S

Supervised fieldwork experience, off campus, in an area connected with economics or business. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

93F. Field Study (2 credits). F,W,S

Supervised off-campus fieldwork experience in an area connected with economics or business. Prerequisite(s): permission of instructor; students submit petition to sponsoring agency. *The Staff*

99. Tutorial. F,W,S

May be repeated for credit. The Staff

Upper-Division Courses

100A. Intermediate Microeconomics. F,W,S

Covers major theoretical issues arising in the study of resource allocation, the function of markets, consumer behavior, and the determination of price, output, and profits in competitive, monopolistic, and oligopolistic market structures. Also

considers issues of welfare and public policy. Students cannot receive credit for this course and course 100M. Prerequisite(s): courses 1, 2 and 11A or Applied Mathematics and Statistics 11A or Mathematics 11A or 19A; Course 11B is strongly recommended. *The Staff*

100B. Intermediate Macroeconomics. F,W,S

Covers major theoretical issues arising in the study of income, employment, interest rates, and the price level. Examines the role of monetary and fiscal policy in economic stabilization. Also considers these issues as they relate to the global economy. Prerequisite(s): courses 1, 2, and 11A or Applied Mathematics and Statistics 11A or Mathematics 11A or 19A. Course 100A is strongly recommended as preparation. *The Staff*

100M. Intermediate Microeconomics, Math Intensive. W

Mathematically sophisticated version of course 100A. Provides analytically rigorous treatment of the subject using a calculus-intensive presentation of microeconomic theory. For specific topics, see course 100A. Students cannot receive credit for this course and course 100A. Prerequisite(s): courses 1, 2, and 11A or Mathematics 11A or 19A or Applied Mathematics and Statistics 11A. *The Staff*

100N. Intermediate Macroeconomics, Math Intensive. W

Provides rigorous, mathematical-intensive treatment of topics covered in course 100B. Core is devoted to model-based analysis of questions in macroeconomics. Use of mathematical tools allows study of advanced topics and data-intensive applications. See course 100B for specific topics. Prerequisite(s): courses 1, 2, and 11A or Applied Mathematics and Statistics 11A or Mathematics 11A or 19A. *The Staff*

101. Managerial Economics. F,W

Analysis of the theory and practice of decision making in business firms, applying the concepts and techniques of microeconomics. Topics may include pricing schemes, non-price competition, internal organization of firms, incentive contracts, asymmetric information, and game theory. Case studies are used to illustrate some topics. Prerequisite(s): courses 100A or 100M, and 113. *The Staff*

102. Forecasting. *

Theory and analysis of long-run and short-run forecasts of economic activity. Emphasis is on empirical applications. Applications of forecasting techniques in organizational settings. Prerequisite(s): courses 100B or 100N, and 113. *The Staff*

104. Is There Truth in Numbers: The Role of Statistics in Economics. S

Applies the techniques of econometrics and experimental economics to the understanding of economics. A "hands-on" course where real economic data is used in an interactive way so that students develop the art of empirical analysis. Prerequisite(s): courses 100A or 100M, 100B or 100N, and 113. *The Staff*

105. Topics in Macroeconomic Theory. S

A seminar in advanced macroeconomics focusing on a selection of theoretical issues. Emphasis is on detailed modeling and analysis of macroeconomic processes. Prerequisite(s): course 100B or 100N, and 113. *The Staff*

106. Evolutionary Thought in the Social Sciences. S

Emphasizes class discussion and term papers for social science, philosophy, and biology majors. Covers the development and recent trends of evolutionary thought in

biology and social sciences including social Darwinism, sociobiology, evolutionary psychology, and evolutionary game theory. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. (General Education Code(s): W.) *D. Friedman*

107. Economic Justice. S

Theories of justice, equity, and rights in economics and their applications to such issues as wages, taxation, property rights, welfare programs, and globalization. Students get extensive practice in writing persuasive, argumentative essays. Prerequisite(s): course 1, satisfaction of the Entry Level Writing and Composition requirements. (General Education Code(s): W.) *The Staff*

108. Business and Society. F

Examine how public policies and social forces affect business, how managers influence these forces; analyze social responsibility and ethical behavior of individuals, business and government regulation, environmental protection, employee —employer relations. *The Staff*

109. Business Ethics. W

Critical examination of ethical principals, theories, and their application to business, nonprofit, and public organizations; exploration of the process of ethical decision making and ethical problems facing managers, including corporate social responsibility, work place democracy, consumer safety, environmental protection and international business conduct. Prerequisite(s): course 1. *The Staff*

110. Managerial Cost Accounting and Control. S

Focuses on how cost data are used by managers in the planning and control of both private- and public-sector organizations. Specific topics include organization of the management and control function, use of cost data for the pricing of goods and services, the effect of cost systems on management performance, and capital budgeting. Prerequisite(s): course 10B. *The Staff*

111A. Intermediate Accounting I. F

Principles, control, and theory of accounting for assets; accounting as an information system; measurement and determination of income. Projects involving spreadsheet software required. Students cannot receive credit for this course and course 209A. Prerequisite(s): course 10B. *R. Shepherd*

111B. Intermediate Accounting II. W

Principles, control, and theory of accounting for liabilities and equities; preparation and analysis of cash flow statements and earnings per share computation. Projects involving spreadsheet software required. Students cannot receive credit for this course and course 209B. Prerequisite(s): course 10B. *R. Shepherd*

113. Introduction to Econometrics. F,W,S

Practical methods for organizing and analyzing economic data, testing economic hypotheses, and measuring economic relationships. Regression analysis is the main empirical method, and basic statistical and probability theory is included. Students gain hands-on computer experience with an econometric software package. Students cannot receive credit for this course and Engineering 113. Prerequisite(s): courses 1, 2, and either course 11B, Applied Mathematics and Statistics 11B, Mathematics 22, or Mathematics 23A. Courses 100A or 100B strongly recommended as preparation. (General Education Code(s): Q.) *The Staff*

114. Advanced Quantitative Methods. *

Application of statistical methods to estimating and testing economic relationships, i.e., econometric techniques. Topics include the effects of misspecification, choice of functional form, serial correlation, heteroscedasticity, limited dependent variables, and simultaneous equations. Includes discussion of existing empirical work and econometric projects by students. Prerequisite(s): courses 100A or 100M, and 113. *The Staff*

115. Introduction to Management Sciences. S

The scientific study of management decision making. Topics include linear, integer, and non-linear programming. Special emphasis on a wide variety of practical applications, including production scheduling, optimal transportation assignments, and optimal inventory policy. Prerequisite(s): course 100A or 100M. *The Staff*

117. Tax Factors of Business and Investment. W

Focuses on various tax subjects providing a strong foundation in tax concepts and preparation for work in either public or corporate accounting. Topics include historical perspective of the U.S. tax system, introduction to estate and gift taxes, employment and self-employment taxes, tax concepts and laws, business expenses, capital recovery, tax credits, capital gains and losses, capital investments, and corporate operations. Prerequisite(s): course 10B. *T. Moschetti*

118. Fraud Examination. F

Covers the principles and methodology of fraud detection and deterrence. Includes topics such as skimming, cash larceny, check tampering, register disbursement schemes, billing schemes, payroll and expense reimbursement schemes, non-cash misappropriations, corruption, accounting principles and fraud, fraudulent financial statements, and interviewing witnesses. Prerequisite(s): course 10B. *D. Gusarson*

119. Advanced Accounting. S

Accounting for business organizations; partnerships; government and non-profit organization funds; branches, consolidations, and installment sales. Projects involving spreadsheet software required. Prerequisite(s): courses 111A and 111B. *The Staff*

120. Economic Development. F,S

A comparative approach to the study of the economic development of low-income countries. Various obstacles to growth are identified, and different types of solutions are analyzed. Prerequisite(s): courses 1 and 2. (General Education Code(s): E.) *The Staff*

121. Economic Growth. S

Studies economic growth from theoretical, empirical, and historical perspectives. Topics include: theories of economic growth and their empirical importance, technology and innovation, social institutions and growth, and competing explanations of the global distribution of wealth. Prerequisite(s): courses 1, 2, 11A, and 11B (or the equivalent); course 100B is strongly recommended. *The Staff*

125. Economic History of the U.S. W

The development of the American economy from colonial times to the present, with emphasis on the interaction between institutional structure and economic development. Topics include the economics of slavery, the rise of big business, and the causes of the Great Depression. Prerequisite(s): courses 1 and 2. Related course work in history also helpful. *B. Elbaum*

126. Why Economies Succeed or Fail: Lessons from Western and Japanese History. F

Examines the emergence of capitalism and the world's first industrial revolution in Britain, continental Europe industrialization, Soviet economic growth and collapse, and the Japanese economic miracle. Asks about the historical sources of long-run economic development, stagnation, and decline. Draws lessons for current debates over free market versus more interventionist policies, economic reform in the former Communist nations, and economic rivalry between the U.S. and Japan. Prerequisite(s): courses 1 and 2. Related course work in history also helpful. *B. Elbaum*

128. Poverty and Public Policy. *

Studies the causes, consequences, and governmental response to urban poverty in the U.S. Topics include how public policy, the macroeconomy, race, gender, discrimination, marriage, fertility, child support, and crime affect and are affected by urban poverty. Emphasizes class discussion and research. (Also offered as Legal Studies 128. Students cannot receive credit for both courses.) Prerequisite(s): satisfaction of Entry Level Writing & Composition requirement; courses 100A or 100M; and course 113. Enrollment restricted to economics, business management economics, global economics, legal studies, or economics combined majors. Enrollment limited to 35. (General Education Code(s): W, E.) *The Staff*

130. Money and Banking. W

The institutional structure of central banking and of bank and nonbank financial intermediation in the U.S.; theoretical and empirical investigations of the role of monetary policy in macroeconomic stabilization and economic growth. Prerequisite(s): courses 100B or 100N, and 113. *The Staff*

131. International Financial Markets. W

International financial management analyzes the key financial markets and instruments that facilitate trade and investment activity on a global scale. Inquiry spans two areas: (1) economic determinants of prices in international financial markets; and (2) decisions facing private individuals and enterprises, with topics including capital financing, investment, and risk management. Prerequisite(s): courses 100A or 100M, and 100B or 100N. *The Staff*

133. Security Markets and Financial Institutions. F,S

An examination of all major financial markets: equities, bonds, options, forwards, and futures. Uses modern financial theory, including asset pricing models such as CAPM and APT. Prerequisite(s): courses 100A or 100M, and 113. *The Staff*

135. Corporate Finance. W,S

An analysis of financial policies of business enterprises. Topics include cash flow analysis, stock and bond valuation, asset pricing models, capital budgeting, financial market institutions, and financial planning. Prerequisite(s): courses 10A, 100A or 100M, and 113. *The Staff*

136. Business Strategy. F,W

The strategic management process, techniques for analyzing single-business and diversified companies, implementing strategy, organization, business planning, financial strategy, competitive analysis, entrepreneurial skills. Prerequisite(s): courses 10A and either 100A or 100M. *The Staff*

136L. Laboratory Business Strategy (2 credits). F,W

Laboratory sequence discussing business simulation game associated with course 136. One three-hour session in microcomputer lab. Prerequisite(s): concurrent enrollment in course 136. *The Staff*

137. Performing Arts in the Public and Private Economy. F

Analysis of the performing arts: a commodity satisfying a rich and varied source of satisfaction, an occupation for thousands of talented and creative individuals, and an activity whose funding (public versus private) is the source of significant controversy. Economics 1 is strongly recommended as a preparation. Students cannot receive credit for this course and course 80G. *D. Kaun*

138. The Economics and Management of Technology and Innovation. F

Examines the analytics of issues in technology and innovation, including cooperation in research and development (R&D), standardization and compatibility, patents and intellectual property rights, and strategic management, using economic models and firm case studies. Prerequisite(s): course 100A or 100M, or permission of instructor. *The Staff*

139A. The Economics of Electronic Commerce. S

An analysis of the broad spectrum of issues affecting commercial uses of the Internet and the next-generation information infrastructure. Uses economics to examine market structure, pricing quality, intellectual property rights, security, electronic payments and currencies, and public policy implications. Prerequisite(s): course 100A or 100M, or permission of instructor. *N. Singh*

139B. E-Commerce Strategy. *

Introduction and review of economic principles for e-commerce. Overview of trends in e-commerce. Online retailing of physical products; digital products; financial services; housing and related markets. Online business-to-business transactions. Internet infrastructure industry. Government regulation of e-commerce and business strategy responses. Prerequisite(s): course 139A. *N. Singh*

140. International Trade. F,W

The theory of international production and trade. The effects of tariffs and quantitative trade restrictions; the nature of economic integration; multinational firms; effects of trade and protection on economic stability and welfare. Prerequisite(s): course 100A or 100M. *The Staff*

141. International Finance. F

Topics include national accounting, balance of payments theories, parity conditions in international finance, exchange rate determination models, forward-looking financial instruments, international monetary systems, country interdependence and exchange rate regimes, international monetary integration, and Eurocurrency market. Prerequisite(s): course 100B or 100N. *The Staff*

142. Advanced Topics in International Economics. S

Selected issues in contemporary international economics: theory, empirical evidence, and public policy. Seminar emphasizing discussion and individual research. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, courses 100A or 100M, and 100B or 100N; course 113 strongly recommended. (General Education Code(s): W.) *The Staff*

143. Policy Issues in the International Economy. F

Covers selected issues concerning the international economy. Topics include: U.S. competitiveness; U.S. trade policy; immigration; trade and the environment; developing countries; foreign investment; foreign exchange markets; and international economic institutions. Prerequisite(s): courses 1, 2, and 100A or 100M. *The Staff*

148. Latin American Economies. F

This course is designed to familiarize students with the economic and business environment in Latin America. Prerequisite(s): courses 1 and 2. *The Staff*

149. The Economies of East and Southeast Asia. S

Examines the pattern of international trade, investment, and industrial structure in Asia. Examines competing explanations of rapid growth of Japan, Korea, and Taiwan; presents an overview of economic developments in China, Hong Kong, and Taiwan. Concludes with an analysis of high technology trade and multinationals in Asia in 2000 and beyond. Prerequisite(s): courses 1 and 2. *The Staff*

150. Public Finance. F

Economics of taxation, including incidence, equity issues, efficiency, and supply side effects. Close attention to taxes in the U.S. system and tax-reform issues. Students cannot receive credit for this course and course 250. Prerequisite(s): course 100A or 100M, and course 100B or 100N. *The Staff*

152. Setting Domestic Priorities. W

Analysis of the economics and political economy of a number of contemporary policy issues facing the U.S.: immigration, affirmative action programs, health care reform, welfare reform, income inequality, education and training, entitlement spending, taxes, and government budgets. Prerequisite(s): course 100A or 100M. Course 100B strongly recommended as preparation. *The Staff*

153. Cost-Benefit Analysis. W

Study of techniques used in evaluating expenditures in the public sector, including the identification and measurement of benefits and costs and a survey of welfare-theory concepts underlying the analysis. A substantial part of the course is assigned to specific case studies. Students cannot receive credit for this course and course 259A. Prerequisite(s): courses 100A or 100M, and 100B or 100N. *The Staff*

156. Health Care and Medical Economics. *

Health economics theory and review of studies of the health industry, including current topics. Focuses on the structure of the U.S. health care system, including analysis of health policy issues. Relationship to models of perfect competition and efforts at reform. Prerequisite(s): courses 100A or 100M and 113. *C. Dobkin*

157. Economics of Aging. *

Explores economic issues of aging, emphasizing the interconnectedness of concerns over the entire life course but focusing especially on old age. Covers theories of exchange, cumulative advantage/disadvantage, feminization of poverty, political economy of aging, and the social construction of dependency. Prerequisite(s): course 100A or 100M or consent of instructor. *The Staff*

160A. Industrial Organization. F

The structure and conduct of American industry with strong emphasis on the role of government, regulation, anti-trust, etc. The evolution of present-day industrial structure. The problems of overall concentration of industry and of monopoly power

of firms. Pricing, output decisions, profits, and waste. Approaches include case study, theory, and statistics. (Also offered as Legal Studies 160. Students cannot receive credit for both courses.) Prerequisite(s): course 100A or 100M. *The Staff*

160B. Government and Industry. *

The influence of government regulation on industry and the allocation of resources is rigorously examined using theory and statistics. Areas of regulation include transportation and power, pollution and congestion, rent control, and liability insurance regulation. Both optimal and actual regulation are examined from the point of view of effectiveness, efficiency, social welfare, and re-distribution. Prerequisite(s): course 100A or 100M. *The Staff*

161A. Marketing. W,S

The evolution of markets and marketing; market structure; marketing cost and efficiency; public and private regulation; the development of marketing programs including decisions involving products, price, promotional distribution. (Formerly course 161.) Prerequisite(s): course 100A or 100M. *The Staff*

161B. Marketing Research. W

Prepares students to conduct market research and use it in solving real management problems. Students work with a company to solve marketing-based problems. Students conduct research, process data, and make a presentation to the company's management. Course work involves marketing, statistics, and communications; material is both qualitative and quantitative. Prerequisite(s): courses 113 and 161A. *The Staff*

162. Legal Environment of Business. F

A study of law and the legal process, emphasizing the nature and function of law within the U.S. federal system. Attention is given to the legal problems pertaining to contracts and related topics, business association, and the impact of law on business enterprise. (Also offered as Legal Studies 162. Students cannot receive credit for both courses.) Prerequisite(s): course 100A or 100M. *R. Bosso*

164. Economics and the Telecommunications Industry. W

Covers the economics of the telecommunications industry including telephone, cellular telephone, and data communications. Particular emphasis on the Internet, satellite, paging, cable television, radio and television broadcasting. Examines the industry structure and implications of moving from a regulated environment to competition. Topics examined from a competitive strategic standpoint as well as public policy perspective. Prerequisite(s): courses 100A or 100M, and 113. *The Staff*

165. Economics as an Experimental Science. F

The design, execution, and analysis of laboratory experiments in economics. Students study experimental methodology, critically survey the published literature, and design an experiment. Literature includes lab studies of investigations in auctions, markets, social choice theory, and game theory. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; course 100A or 100M. Enrollment limited to 20. (General Education Code(s): W.) *D. Friedman*

169. Economic Analysis of the Law. W

The application of the theories and methods of neoclassical economics to the central institutions of the legal system, including the common law doctrines of negligence, contract, and property; bankruptcy and corporate law; and civil, criminal, and administrative procedure. (Also offered as Legal Studies 169. Students cannot

receive credit for both courses.) Prerequisite(s): course 100A or 100M or permission of instructor. *D. Wittman*

170. Environmental Economics. S

Economic analysis of environmental issues. Environmental pollution and deterioration as social costs. Economic policy and institutions for environmental control. Influences of technology, economic growth, and population growth on environmental quality. Prerequisite(s): courses 100A or 100M, and 113. *The Staff*

171. Natural Resource Economics. W

The application of economic analysis to the use of renewable and nonrenewable natural resources. Efficiency and distributional aspects of natural resource scarcity. Measurement of the benefits and costs. Optimal extraction or use policies. Common property and externalities. Government policies. Prerequisite(s): course 100A or 100M. *The Staff*

175. Energy Economics. S

Applications of micro, welfare, and international economic theory and methodology to the energy field. Questions considered include optimal allocation of natural resources; pricing and investment; regulations and taxes; import and export control; redistributional policies. Prerequisite(s): course 100A or 100M. *The Staff*

180. Labor Economics. W

A study of the changing nature and composition of the U.S. labor force. Topics include the demand for and supply of labor; wage determination; the role and impact of unions in the labor market; racial, ethnic, and gender differences in job and income opportunities and the role of discrimination in explaining these differences; and the theory of human capital, all considered from the traditional neoclassical as well as institutional and radical perspectives. Prerequisite(s): courses 1 and 2; courses 100A or 100M, and 113 are strongly recommended as preparation. *The Staff*

181. Economics of Real Estate. *

The economics of real estate, including development, financing, construction and land costs, zoning, land use, externalities, and planning. Also considers speculation and real estate appreciation. Prerequisite(s): courses 100A or 100M, and 100B or 100N. *The Staff*

183. Women in the Economy. W

Study of gender roles in economic life, past and present. Topics include occupational structure, human capital acquisition, income distribution, poverty, and wage differentials. The role of government in addressing economic gender differentials is examined. (Also offered as Legal Studies 183. Students cannot receive credit for both courses.) Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements; courses 1, 2, and 100A or 100M; course 113 strongly recommended. (General Education Code(s): W.) *The Staff*

184. Labor Wars in Theory and Film. W,S

This seminar focuses on the impact of trade unions and labor-market discrimination on the U.S. work force. The neo-classical, institutional, and radical/Marxist approaches to these questions are employed in the analysis. Films, both fictional and documentary, are utilized as primary source material. Prerequisite(s): permission of instructor based on quality of work in economics; courses 100A or 100M, 100B or 100N, and 113; satisfaction of the Entry Level Writing and Composition requirements. Enrollment limited to 20. (General Education Code(s): W.) *D. Kaun*

185. Value and Support of the Arts: Challenges and Opportunities in American Society. **

Considers the value of the arts in an era of increasing budgetary duress, along with focus on specific funding concerns arising in such an environment. Students cannot receive credit for this course and course 80J. Course 1 is strongly recommended as preparation. *D. Kaun*

186. Mathematical Methods for Economic Analysis. F

Presents mathematical methods commonly used in graduate-level economic analysis: basic matrix algebra, real analysis, functions, continuity concepts, differentiation, Taylor expansions, and implicit function theorem and optimization. Prerequisite(s): interview only: admitted to M.S. or Pathway Programs. *The Staff*

188. Management in the Global Economy. S

An overview of how firms do business in the global economy. Focus is on the firm, but also explores the impact of corporate decision-making on national welfare. Emphasizes how national economic policies and international institutions influence firm strategy and industrial structure. Prerequisite(s): courses 2 and 100A or 100M; course 100B or 100N strongly recommended as preparation. *The Staff*

189. Political Economy of Capitalism. *

An assessment of modern day capitalism from the three major economics paradigms-liberal, conservative, radical. Theories of Smith, Marx, and Keynes are explored in contemporary writing, with focus on the U.S. from WW II to present. Students cannot receive credit for this course and course 80A. Prerequisite(s): courses 1 and 2; courses 100A or 100M, and 100B or 100N are recommended as preparation. *D. Kaun*

190. Senior Proseminar. *

Courses focus on problems of interest to advanced students of economics. They offer a flexible framework, so those interested in specific issues can read, present papers, and develop their ideas. *The Staff*

191. Economics Teaching Practicum. F,W,S

Each student serves as facilitator for small discussion group in connection with core economics courses. Facilitators complete course readings and meet with instructor as a group to discuss the teaching process. May *not* be counted toward upper-division major requirements. May be repeated for credit. *The Staff*

192. Directed Student Teaching. F,W,S

Teaching of a lower-division seminar, course 42, under faculty supervision. May *not* be counted toward the upper-division major requirements. Students submit petition to sponsoring agency. *The Staff*

193. Field Study. F,W,S

Provides for department-sponsored individual field study in the vicinity of the campus under the direct supervision of a faculty sponsor (in contrast to course 198 where faculty supervision is by correspondence). May *not* be counted toward the upper-division major requirements. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

193F. Field Study (2 credits). F,W,S

Provides for department-sponsored individual field study in the vicinity of the

campus under the direct supervision of a faculty sponsor. May *not* be counted toward the upper-division major requirements. Students spend 8-10 hours per week at job site. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

194. Advanced Topics in Management. *

Honors course providing detailed analysis of specialized topics in management. Possible topics include: venture capital, the financial services industry, e-business, behavioral finance, advanced consumer behavior, entrepreneurship, high-tech marketing, risk management, and option value approaches to business strategy. Students cannot receive credit for this course and course 194F. Prerequisite(s): courses 100A or 100M, 100B or 100N, and 113. Enrollment by permission of instructor, and review of performance in economics courses. Enrollment restricted to senior and junior business management economics majors. (Formerly *Advanced Topics in Business Management Economics*.) Enrollment limited to 30. *The Staff*

194F. Advanced Topics in Management (2 credits). *

Detailed analysis of specialized topics in management. Possible topics include: venture capital, the financial services industry, e-business, behavioral finance, advanced consumer behavior, entrepreneurship, high-tech marketing, risk management, and option value approaches to business strategy. Students cannot receive credit for this course and course 194F. Prerequisite(s): courses 100A or 100M, 100B or 100N, and 113. Enrollment by permission of instructor, and review of performance in economics courses. Enrollment restricted to senior and junior business management economics majors. Enrollment limited to 30. *The Staff*

195. Senior Thesis. F,W,S

A supervised research project. If the project is of unusual scope, the course may be repeated for credit. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, students submit petition to sponsoring agency. (General Education Code(s): W.) *The Staff*

198. Independent Field Study. F,W,S

Provides for department-sponsored individual study program off campus for which faculty supervision is not in-person, but by correspondence. May *not* be counted toward the upper-division major requirements. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198F. Independent Field Study (2 credits). F,W,S

Provides for department-sponsored individual study program off campus for which faculty supervision is not in person, but by correspondence. May *not* be counted toward the upper-division major requirements. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

May be repeated for credit, but may be counted only once toward the upper-division major requirements. Undergraduates may not take graduate courses for credit as 199. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Specialized study with individual faculty. May not be applied toward the major requirements. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

200. Microeconomic Analysis. F

Survey of partial equilibrium analysis, market distortions, consumer choice and production and trade theory, perfect and imperfect competition, price discrimination, and intertemporal choice theory. *The Staff*

201. Applications in Microeconomics. S

Applies concepts and tools developed in course 200 to problems encountered in private- and public-sector output and labor markets. The focus is empirical; topics include analysis of labor supply and labor demand and the role of government labor market policies, analysis of pricing policies and regulation, estimation of the returns to schooling, estimation of demand and cost functions, and the role of unions in the economy. Course 200 is strongly recommended as preparation. *The Staff*

202. Macroeconomic Analysis. W

Aggregate economic analysis: determinants of aggregate expenditures and output, the roles of monetary and fiscal policy, recent developments in macro theory; macro policy issues. *The Staff*

204A. Advanced Microeconomic Theory. F

Economic theory of individual and market behavior, including constrained optimization, duality, theory of the consumer, theory of the producer, dynamic optimization, behavior under uncertainty, intertemporal choice, asymmetric information, game theory, partial and general equilibrium, pure and applied welfare economics, public goods and externalities. Illustrative examples emphasize international applications. Courses must be taken in sequence. *The Staff*

204B. Advanced Microeconomic Theory. W

Economic theory of individual and market behavior, including constrained optimization, duality, theory of the consumer, theory of the producer, dynamic optimization, behavior under uncertainty, intertemporal choice, asymmetric information, game theory, partial and general equilibrium, pure and applied welfare economics, public goods and externalities. Illustrative examples emphasize international applications. Courses must be taken in sequence. Prerequisite(s): course 204A. *The Staff*

204C. Advanced Microeconomic Theory. S

Economic theory of individual and market behavior, including constrained optimization, duality, theory of the consumer, theory of the producer, dynamic optimization, behavior under uncertainty, intertemporal choice, asymmetric information, game theory, partial and general equilibrium, pure and applied welfare economics, public goods and externalities. Illustrative examples emphasize international applications. Courses must be taken in sequence. Prerequisite(s): course 204B. *The Staff*

205A. Advanced Macroeconomic Theory. F

Modern macroeconomic theory: determination of national income; employment, inflation, and exchange rates; theories of growth and business cycle fluctuations; international transmission of inflation and other disturbances; recent developments in the analysis of macroeconomic policy; modern theoretical and empirical analysis of aggregate relationships. Courses must be taken in sequence. *The Staff*

205B. Advanced Macroeconomic Theory. W

Modern macroeconomic theory: determination of national income; employment, inflation, and exchange rates; theories of growth and business cycle fluctuations; international transmission of inflation and other disturbances; recent developments in the analysis of macroeconomic policy; modern theoretical and empirical analysis of aggregate relationships. Courses must be taken in sequence. Prerequisite(s): course 205A. *The Staff*

205C. Advanced Macroeconomic Theory. S

Modern macroeconomic theory: determination of national income; employment, inflation, and exchange rates; theories of growth and business cycle fluctuations; international transmission of inflation and other disturbances; recent developments in the analysis of macroeconomic policy; modern theoretical and empirical analysis of aggregate relationships. Courses must be taken in sequence. Prerequisite(s): course 205B. *The Staff*

209A. Accounting 1. F

Principles, control, and theory of accounting for assets; accounting as an information system; measurement and determination of income. M.S. level projects required. Students cannot receive credit for this course and course 111A. Enrollment restricted to graduate students. *R. Shepherd*

209B. Accounting II. W

Principles, control, and theory of accounting for liabilities and equities; preparation and analysis of cash flow statements and earnings per share computation. M.S. level projects required. Students cannot receive credit for this course and course 111B. *R. Shepherd*

210A. Mathematical Methods for Economic Analysis. *

Mathematical methods commonly used in economic analysis are discussed. Covers basic matrix algebra, real analysis, functions, continuity concepts, differentiation, Taylor expansion, implicit function theorem, and optimization. Prerequisite(s): qualifications as determined by instructor; inquire at department office. *The Staff*

210B. Mathematical Methods for Economic Analysis. F

A course in introductory mathematical economics which covers standard optimization problems, difference and differential equations, optimal control theory, decisions under uncertainty, game theory, and stochastic calculus. Course 210A or equivalent is strongly recommended as preparation. *The Staff*

211A. Advanced Econometrics. W

Advanced econometric methods are introduced. Topics include the standard regression analysis, simultaneous equation estimation, nonlinear models, qualitative response models, panel data analysis, and univariate and multivariate time series analysis. *The Staff*

211B. Advanced Econometrics. S

Advanced econometric methods are introduced. Topics include the standard regression analysis, simultaneous equation estimation, nonlinear models, qualitative response models, panel data analysis, and univariate and multivariate time series analysis. Course 211A is strongly recommended as preparation for course 211B. *The Staff*

211C. Topics in Empirical Research. F

A topic course in econometrics designed for graduate students interested in

quantitative analysis. Selected topics, including standard and recently developed econometric techniques, are critically and thoroughly discussed. In addition to methodology, focuses on exploring the research potential and applications of advanced econometric techniques. Courses 211A and 211B are strongly recommended as preparation. *The Staff*

212. Empirical Project in Econometrics (2 credits). F,W

Empirical project or paper in econometrics to demonstrate student's ability to conduct applied econometric analysis. Ph.D. requirement to be completed by beginning of student's third year of study. Prerequisite(s): courses 211A and 211B. May be repeated for credit. *The Staff*

216. Applied Econometric Analysis I. F

The use of statistical techniques for the testing of economic hypotheses and the estimation of parameters, with emphasis on regression analysis. Includes methods of dealing with serial correlation, errors in variables, multicollinearity, and heteroscedasticity. Experience with common statistical packages. *The Staff*

217. Applied Econometric Analysis II. W

Focuses on the application of advanced econometric and time series techniques to economic issues. Computer assignments and empirical applications are used to discuss and illustrate the practical aspects of simultaneous equation systems, nonlinear models, qualitative response models, time series model specification, unit root test, and cointegration analysis. Course 216 is strongly recommended as preparation. *The Staff*

220A. Development Economics: Theory and Cases. F

Surveys traditional development economics and the neoclassical resurgence in development theory. Topics include sources of growth, income distribution, population and human capital development, savings, fiscal and monetary mobilization and allocation, foreign investment and aid, and macroeconomic policies. Case study focus in the second quarter. Courses 204A and 205A are strongly recommended as preparation. *The Staff*

220B. Development Economics: Theory and Cases. W

Surveys traditional development economics and the neoclassical resurgence in development theory. Topics include sources of growth, income distribution, population and human capital development, savings, fiscal and monetary mobilization and allocation, foreign investment and aid, and macroeconomic policies. Case study focus in the second quarter. Courses 204A and 205A are strongly recommended as preparation. *The Staff*

233. Finance I. S

Applications of economic analysis in private finance. Topics include risky choice and intertemporal choice theory, asset pricing models, efficient market hypotheses, market institutions, and derivative securities. Course 200 is strongly recommended as preparation. *The Staff*

234. Financial Institutions and Markets. F

This course examines the evolving microstructure of financial markets, instruments, and institutions. Topics include the role of banks and other financial intermediaries and the trading practices for domestic and international financial instruments, including equity, debts, futures, and options. Prerequisite(s): course 233. *The Staff*

235. Corporate Finance. W

Application of modern financial theory to corporate decision making. Topics covered include capital budgeting and the firm's investment decision, capital structure, dividend policies, and the implications of corporate governance for enterprise financial goals. Prerequisite(s): course 233. *The Staff*

236. Financial Engineering. *

This course surveys the financial risks faced by corporation, banks, and other financial institutions that arise from changes in interest rates, foreign exchange rates, commodity prices, and stock prices. It examines the characteristics, payoffs, and pricing of financial derivatives and other instruments for managing risk, including options, forwards, futures, swaps, structured notes, and asset-backed securities. Several cases will be used to illustrate how actual firms solve financial risk management problems. Prerequisite(s): course 233. *The Staff*

239. Current Topics in Finance. *

Topics in finance selected by the instructor. Prerequisite(s): course 233. The Staff

240A. Advanced International Trade Theory I. F

The theory of international trade and commercial policy. Both traditional analyses and recent developments are covered. Topics include both normative and positive theoretical analyses, as well as empirical testing of theory. Enrollment restricted to graduate students. Courses 204A-B-C are strongly recommended as preparation. *The Staff*

240B. Advanced International Trade Theory II. W

This is the second quarter of a two-quarter sequence. It deals with most major current advanced research topics in trade. It is both theoretical and empirical and is designed to acquaint students with recent research in the field. Research topics include models of political economy of trade policies; trade and labor markets; regionalism and multilateralism; trade and environment; theories, determinants, and implications of foreign direct investments; economic geography. Prerequisite(s): course 240A. *The Staff*

240C. Advanced International Trade Theory III. S

Covers the empirical aspects of international trade issues. Topics include the testing and estimation of various trade models such as the Ricardian model, Heckscher-Ohlin-Vanek model, intra-industry trade models, trade models associated with multinational corporations, models of trade and intellectual property rights, the impact of trade on income inequality, and trade between developed and developing economies. Prerequisite(s): course 240B. Enrollment restricted to graduate students. *The Staff*

241A. Advanced International Finance I. F

Financial aspects of aggregate capital and trade flows and income determination in open economies. Specific topics include financial risk in the international setting, international borrowing and lending, money and exchange rate regimes, income determination and macroeconomic policy, current issues in international monetary reform. *The Staff*

241B. Advanced International Finance II. W

An examination of the formulation and implementation of international economic policy from both theoretical and empirical perspectives. Topics include case studies in fiscal, monetary, exchange rate, tariff, and other regulatory policies. *The Staff*

241C. Advanced International Finance III. S

Focuses on empirical applications in international finance. Topics include structural and reduced form models of exchange rates, interest parity conditions, purchasing power parity, capital controls, capital flows to emerging markets, and government intervention in foreign exchange markets. Courses 202 and 203 or 205A-B-C strongly recommended as preparation. *The Staff*

243. History of the International Economy. S

Studies the evolution and functioning of the international economy from the days of the gold standard to the present. Particular attention is paid to the interwar period with its problems of structural transformations and their relation to the Great Depression and its immediate aftermath, the rise and fall of the Bretton Woods system, the experience of floating exchange rate regimes, the rise of the "new industrial countries," and the problems of international indebtedness. Courses 204A and 205A are strongly recommended as preparation. *The Staff*

249A. International Trade and Development Policy I. W

Focuses on a range of real-life issues in international trade and development. Topics include North American Free Trade Agreement (NAFTA), the semiconductor industry, the Boeing-Airbus aircraft trade problems, the World Trade Organization (WTO) and developing countries, U.S./Japan trade, trade and the environment, and U.S./China trade. Enrollment restricted to graduate students. *The Staff*

249B. International Trade and Development Policy II. *

Emphasizes government policies to promote growth. Topics include the "Washington Consensus," the East Asian "model," and recent policy changes in East Asia, Latin America, Eastern Europe, and the former Soviet Union. Prerequisite(s): course 249A. Enrollment restricted to graduate students. *The Staff*

250. Advanced Public Finance. F

Theory of the role of public sector expenditures and taxes in market economies. Analyzes efficiency and equity arguments for government intervention. Topics include the role of public debt and deficits in economies, international effects of tax and spending policies, and economic theories of public sector decision making. Courses 204A and 205A are strongly recommended as preparation. Students cannot receive credit for this course and course 150. *The Staff*

259A. Cost-Benefit Analysis. W

Applications of economic analysis in public finance, largely from the revenue side: taxation. The issues considered include the effects of taxation on consumer welfare, consumption, labor, capital, production, growth. Course 200 is strongly recommended as preparation. Students cannot receive credit for this course and course 153. *The Staff*

259B. Public Policy Analysis. *

Applications of welfare and microeconomic theory and methodology to the public expenditure question: cost-benefit. Effects of the taxes discussed in course 259A and sophisticated tools used in the face of these and other distortions with regard to measurement of benefits, costs, and the discount rate. Course 200 strongly recommended as preparation. *The Staff*

270. Advanced Topics in Applied Microeconomics. *

Advanced topics and current research in microeconomic theory, including game

theory and general equilibrium analysis. Courses 204A-B and 205A are strongly recommended as preparation. (Formerly *Advanced Topics in Microeconomic Theory*.) *The Staff*

271. Advanced Topics in Macroeconomic Theory. *

Advanced topics and current research in macroeconomic theory, including DSGE models, empirical issues, and optimal policy analysis. Prerequisite(s): courses 204A-B-C, 205A-B-C, and 211A-B-C are strongly recommended as preparation. *The Staff*

272. Evolutionary Game Theory. *

Reviews static equilibrium concepts, games of incomplete information, and the traditional theory of dynamic games in discrete time. Develops recent evolutionary game models, including replicator and best reply dynamics, and applications to economics, computer science, and biology. Prerequisite(s): upper-division math courses in probability theory are strongly recommended. (Also offered as Computer Science 272. Students cannot receive credit for both courses.) *M. Warmuth, D. Friedman, B. Sinervo*

273. Advanced Applied Microeconomics. *

Covers topics in applied microeconomics, including labor economics, public economics, and demography. Discusses advanced econometric techniques and theory commonly used in applied microeconomics and microeconomic theory. Students make extensive use of statistical packages and large data sets to complete course assignments. Upper-division econometric and microeconomics courses strongly recommended. *R. Fairlie*

290. Topics in International Economics. *

Covers several advanced topics in the history of international economics, international trade, and international finance. Topics include imperfect competition and trade, strategic trade policies, increasing returns, and the pattern of trade, economic geography, exchange rate target zones, and balance of payment crises. Topics vary from year to year. Courses 204A-B-C and 205A-B-C are strongly recommended as preparation. *The Staff*

291. Workshop in Applied Economics. S

Experience in applied projects, report writing and presentation, drawing on previous course work. *The Staff*

293. Field Study. F,W,S

Students will undertake analytical projects in public or private institutions. May be taken once to meet course requirements for the master's degree. The material covered must be different from that of the thesis topic. *The Staff*

294A. Applied Economics Laboratory (2 credits). F

Practical experience in managing computerized data sets and running statistical packages. Covers SAS, RATS, TSP, Bridge Equity System, LIMDEP, GAUSS, and MAPLE programs; and internet, IFS, OECD, and SPIRS EconLit databases. May be repeated for credit. *The Staff*

294B. Applied Economics Seminar (2 credits). *

Weekly seminar designed to present students with current working applications in various fields of applied economics and finance. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

295A. Directed Reading. F

Reading in research area of student interest, with faculty supervision through weekly discussion. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

295B. Directed Reading. W

Reading in research area of student interest, with faculty supervision through weekly discussion. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

295C. Directed Reading. S

Reading in research area of student interest, with faculty supervision through weekly discussion. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

296A. Third Year Ph.D. Seminar. F

Student presentations of literature and/or original research in areas of student research interest. Student discussion of presentations under faculty supervision. Prerequisite(s): courses 204C, 205C, 211B, 240A, 240B, 241A, and 241B are required preparation. *The Staff*

296B. Third Year Ph.D. Seminar. W

Student presentations of literature and/or original research in areas of student research interest. Student discussion of presentations under faculty supervision. Prerequisite(s): courses 204C, 205C, 211B, 240A, 240B, 241A, and 241B are required preparation. *The Staff*

296C. Third Year Ph.D. Seminar. S

Student presentations of literature and/or original research in areas of student research interest. Student discussion of presentations under faculty supervision. Prerequisite(s): courses 204C, 205C, 211B, 240A, 240B, 241A, and 241B are required preparation. *The Staff*

297. Independent Study. F,W,S

Independent study and research under faculty supervision. Students submit petition to sponsoring agency. *The Staff*

298. Dissertation Research. F,W,S

Research toward Ph.D. dissertation under faculty supervision. Prerequisite(s): advancement to candidacy and students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

May be taken once to meet course requirements for the master's degree. Students submit petition to sponsoring agency. *The Staff*

* Not offered in 2007-08

Changes to 2006-08 Catalog Highlighted | Faculty | Course Descriptions

Program Description

The purpose of the Education Department's instructional programs is to prepare all students, undergraduates and graduates, to engage in the analysis and integration of educational theory, research, and practice for an increasingly diverse society. The department's primary intellectual and practical focus is on fostering equitable and effective schooling for all students. In working toward this goal, the department seeks to understand the profound issues involved in transforming public education so that it better meets the needs of students from diverse language, ethnic, racial, and class backgrounds. We are a small department with the large agenda of developing educational leaders and pursuing educational research that will affect the future of teaching and learning both inside and outside of schools. Our commitment lies in three essential and interrelated domains: 1) school, families, and communities; 2) teacher education and development; and 3) mathematics and science. Undergirding them all is a focus on the sociocultural context in which learning and teaching takes place and an understanding of the power of language and literacy in both formal and informal educational settings.

The Education Department has a growing Ph.D. program that attracts students who have exemplary preparation as well as experience working in educational settings; a model teacher-education program; and a vibrant minor that serves over 300 undergraduates each year. The department is developing and Ed.D. program to further its involvement in educational communities

Minor in Education

The UCSC undergraduate courses in education engage students in the study of the history of educational thought and philosophy, the politics and economics of education, learning theory and pedagogy, and issues of cultural and linguistic diversity in education.

Because an academic major in education is not permitted in the state of California, UCSC offers a minor in education for those students who are considering a career in teaching and also for those who hold a general interest in educational studies. Please note that the minor in education does not provide a California Teaching Credential. Additionally, the UCSC teaching credential program is a graduate program and course work taken in the minor cannot be substituted for credential requirements.

The minor in education consists of six courses: EDUC 92A, EDUC 92B, EDUC 92C, EDUC 180, and two upper-division education courses (please refer to the Education Department's web site for a list of approved upper-division courses for the education minor, http://education.ucsc.edu). To declare a minor, students must file a Proposed Plan and Declaration of Major/Minor form at the Education Department. Students pursuing a minor in education should meet with the Education Department's Academic Adviser as early as possible. The adviser will assist students in filing the Proposed Study Plan and the Declaration of a Major/Minor form.

For specific insturctions about how to delcare a minor in education, please refer to the Education Department's web site http://education.ucsc.edu.

Graduate Programs

Master of Arts in Education and California Teacher Credential Program

Please note that students are not admitted into the program for a stand-alone M.A. in education

or a stand-alone credential.

Because program requirements are authorized by statutes and regulated by a state entity, the California Commission of Teacher Certification, program requirements must be responsive to new legislation and regulatory policies. Admission requirements and programs of study referred are subject to change to comply with regulatory mandates.

The master of arts in education and California teacher credential program prepares prospective teachers to work with California's culturally and linguistically diverse student population. Students in this program earn a master's degree and are eligible to apply for a Preliminary California Credential upon completing a five-quarter program comprised of two summers and one academic year. Graduates of the program are prepared to teach English language learners enrolled in K–12 public schools. The program also offers the Bilingual, Cross-cultural, Language, and Academic Development (BCLAD) emphasis. The UCSC BCLAD emphasis authorizes primary language instruction or dual language immersion instruction in a K–12 setting. The UCSC BCLAD language of emphasis is Spanish.

Students who complete the program are eligible to apply for a California Preliminary Multiple Subjects teaching credential or a California Preliminary Single Subject teaching credential. The Multiple Subjects teaching credential authorizes the holder to teach in a K–12, self-contained public school classroom, where all subjects are taught by the same teacher. The Single Subject teaching credential authorizes the holder to teach in his/her credential subject area in a departmentalized setting within a public school system.

The UCSC single subject teacher credential program offers the following subject areas: mathematics, English, social science, and science. Programs of study are subject to change.

Prerequisite Admission Requirements

All candidates must have preparation in the following areas:

- 1. A course, or equivalent experience, that addresses cultural and linguistic diversity. The following UCSC undergraduate education courses are examples of courses that meet this requirement: EDUC 128, *Immigrants and Education*; EDUC 141, *Bilingualism and Schooling*; EDUC 164, *Urban Education*; EDUC 181, *Race, Class, and Culture in Education*; and EDUC 92C *Introduction to Issues in Diversity and Education*. Other courses offered outside the Education Department may be acceptable.
- 2. A documented field experience with children or youth in an educational setting. Experiences such as directed observation, substitute teaching, school tutoring, work in after-school programs, camp counseling, instructional aide, or the equivalent are acceptable experiences. When applying to the program, please describe your field experience in the designated area of the application titled, PERSONAL STATEMENT.

Application Selection Criteria

Admission to the program is competitive. Candidates for admission are selected, in part, on the following criteria:

Academic record

College course work is evaluated with attention to content and grades or narrative evaluations. The appropriateness of courses taken for the credential sought is also taken into consideration. For the multiple subjects credential, students should have an extensive breadth of courses in the core subject areas taught in elementary school—math, science, social science, and English. For the single subject credential, students should have an extensive body of course work in the content area.

Statement of purpose, writing sample, letters of recommendation, and résumé

Information provided in these documents is used in the selection of candidates. All documents must be submitted by the application deadline.

The statement of purpose should discuss the following:

- an explanation of why you want to become a teacher;
- how your experience has contributed to your motivation and potential to be an educational leader;
- a description of your experiences related to youth, cultural and linguistic diversity, and community involvement.

Writing Sample: a sample of your writing (no more than 10 pages), ideally on an educational or related topic. Applicants may submit an academic paper or other work previously written; alternatively, applicants may choose to write a brief piece specially for this application.

Letters of Recommendation: Three letters of recommendation are required. It is recommended that these letters address your qualifications in the following areas:

- a) academic performance
- b) field work with youth
- c) experience in culturally and linguistically diverse settings and with student populations who have traditionally been underserved in schools and classrooms.

Résumé: a résumé that includes an employment history; any relevant volunteer or community work, especially in schools and/or with children; and experiences in multicultural and multilingual settings. Include information on languages (other than English) in which you have competence.

BCLAD Essay (BCLAD applicants only): Candidates must submit an essay in Spanish as described in the online application.

Admission Requirements

Testing

All required exams must be met by the stated deadlines.

California Basic Educational Skills Test (CBEST): All admitted applicants must verify completion of the CBEST requirement and submit a passing status verification by June 1 in order to enroll in the program. **NOTE:** Additional information can be found at CBEST Registration (*state requirement and subject to change*). It is recommended that passing verification be submitted with the application.

Subject Matter Competence

California state law mandates that all teachers provide evidence of their subject matter knowledge (state requirement and subject to change).

Admitted Multiple Subject applicants must submit verification of having passed the California Subject Exam for Teachers (CSET) Multiple Subjects Subtests by June 1 <u>prior to enrollment in the program</u>. However, it is <u>highly recommended that documentation of passing CSET scores be submitted with the application.</u> Multiple subject applicants must pass each section of the CSET; no coursework or "waiver" program can substitute for passing CSET scores.

<u>Deadline to complete this requirement</u>: June 1, 2008, prior to enrollment into the program. However, applicants are encouraged to complete this requirement prior to applying to the program.

Additional information can be found at the CSET Registration web site, http://www.cset.nesinc.com/.

Single Subject

The California Subject Exam for Teachers (CSET), or verification of an approved subject matter program from the applicant's undergraduate institution is required. Admitted applicants must submit verification of having passed the CSET exam for their subject (e.g., mathematics), or confirmation of 100 percent completion of an approved subject matter program.

<u>Deadline to complete this requirement</u>: June 1, 2008, prior to enrollment into the program. However, it is <u>highly recommended that documentation of subject matter competence be submitted with the application.</u> Additional information can be found at the CSET Registration web site

Program and State of California Requirements (Not Required for Initial Admission in the Program)

These requirements may be met prior to or while enrolled in the program, but they must be met to be eligible for a California teaching credential.

BCLAD Candidates

The BCLAD language requirement is met by passing Test 6 of the BCLAD exam, which is administered by National Evaluation Systems (NES). Admitted BCLAD candidates must take the first available exam after enrolling in the program if they have not done so prior to admission.

Certificate of Clearance

In accordance with Education Code Section 44320(b), each credential candidate for an initial credential, prior to admission to any credential program, must obtain a *Certificate of Clearance*. A Certificate of Clearance is a document that indicates that the individual has completed the fingerprint and character and identification process and has been cleared by the California Commission on Teacher Credentialing to begin student teaching. *To comply with this regulation the UCSC Education Department must have on file a copy of the Certificate of Clearance before allowing a person to begin public school fieldwork or student*

teaching. If you hold or have applied for a credential from the California Commission on Teacher Credentialing (such as an emergency substitute teaching permit) you are not required to apply for another Certificate of Clearance. Please submit a photo copy of your prior credential for your application to the program by mail to: Graduate Application Processing, U.C. Santa Cruz, 1156 High St., Santa Cruz, CA, 95064. Applicants who do not hold a valid California credential or have not previously applied for a Certificate of Clearance through the Commission on Teacher Credentialing must apply for the Certificate of Clearance through the Education Department. Please refer to the UCSC Graduate School online application for further information and instructions regarding this process. Please send an e-mail to the Education Department, edma@ucsc.edu, for further instructions regarding your Certificate of Clearance Application.

Deadline for completing this requirement: TBD (please check the Education Department web site for the deadline.

U.S. Constitution Requirement

A course on the U.S. Constitution (or completion of an exam offered by the Education Department to enrolled students) is required. UCSC-approved courses that meet this requirement are Politics 20, *Democracy and Liberalism in American Politics*; Politics 111, *Problems in Constitutional Law*; Politics 120A, *Congress, President, and the Court in American Politics*; and History 25A, *United States History to 1877*.

Reading Instruction Competence Assessment (RICA)

Multiple subjects candidates are required—prior to completion of the program and in order to be recommended for a preliminary credential—to pass the RICA exam. The RICA measures the knowledge, skills, and abilities essential to offer effective reading instruction to K–12 students. Candidates should not take this exam prior to completing EDUC 211A.

CPR

A certified cardiopulmonary resuscitation (CPR) course (infant, child, and adult) must be completed prior to applying for the credential.

Student Teaching

The successful development of teaching skills in the classrooms is the culmination of a teacher education program. Therefore, candidates must demonstrate, by the end of their program, teaching competence in the classroom. Credentialed public school teachers are responsible for the nurturing of children and youth. Therefore, teaching credential candidates must consistently display conduct befitting the profession. To this end, the candidate must be able to cope with the demands and responsibilities of teaching as outlined below:

- Meet university and program requirements and deadlines (including school expectations during field experiences).
- · Plan ahead to anticipate needs and potential student teaching problems.
- Be able to adapt to institutional and/or professional expectations and policies.
- Relate appropriately to children, parents, and school staff.
- Demonstrate sensitivity to the social, cultural, economic context of the school environment.
- Adhere to school expectations for dress, appearance, and personal hygiene.

Candidates whose professional behavior does not meet these minimal standards may be recommended for dismissal from the program.

Beginning student teaching, which begins during the Summer Bridge between the university summer and fall quarters, constitutes the first classroom observation experience for students in the program. Student Teachers are in their classroom placements from 10–14 hours a week depending on the school site schedule. To enroll in this course, students must have a Certificate of Clearance issued and on file with the California Commission on Teacher Credentialing.

Intermediate and advanced student teaching is a two-quarter experience (winter/spring) in which student teachers are placed with cooperating teachers in local schools. Students are in the classroom placements 14 or more hours a week in winter quarter leading toward full time in the classroom by spring quarter. They gradually assume responsibility for preparation, instruction, and evaluation of the class during this two-quarter period. Supervisors of teacher education give ongoing and frequent support to students in their classroom placements and in seminars at UCSC. Multiple Subjects candidates obtain classroom experience in both primary and intermediate grades. Single Subjects candidates obtain classroom experience in middle school/junior high and high school.

Admission to course 283, *Intermediate Student Teaching*, and courses 284A-B-C, *Advanced Student Teaching*, is based on an assessment of academic performance, experience, leadership, and initiative shown in public school placements and required courses taken earlier in the program.

Capstone Requirements

Students will complete a capstone portfolio, which includes a teaching performance assessment and reflective papers. Prompts for these assignments may vary from year to year as they reflect the most current California state credentialing requirements.

Multiple Subject Course Requirements

```
EDUC 203 Applied Classroom Analysis and Methods: Beginning Student Teaching
EDUC 211A Reading and Language Arts for Elementary Classrooms
EDUC 212A Science Learning and Teaching in Elementary Classrooms
EDUC 213A Mathematics Learning and Teaching in Elementary Classrooms
EDUC 220 Introduction to Technology in Schools
EDUC 242A (BCLAD students only) Promoting Biliteracy and Bilingualism
EDUC 250 Teaching, Learning, and Schooling
EDUC 253 Methods of English Language Development
EDUC 265A Creating Supportive, Healthy Environments for Student Learning
EDUC 265B Teaching Special Populations
EDUC 281 Social Foundations of Education
EDUC 283 Intermediate Student Teaching
EDUC 284A, B, and C Advanced Student Teaching

```

For Further Information

Phone the Education Department Credential Analyst at (831) 459-2200, send e-mail to edma@ucsc.edu, or view the department's home page on the web at http://education.ucsc.edu where potential applicants can obtain full details about the programs.

Ph.D. in Education

Overview

The goal of the Ph.D. in Education is to support graduate students in becoming creative scholars who engage in research focused on the educational needs of students from linguistic and cultural groups that have historically not fared well in our nation's public schools. To achieve this goal, this program provides students with grounding in the varieties of interdisciplinary theorizing, research methods, and applications needed to advance the study of learning and teaching for diverse student populations. The courses and research experiences are closely related to practice in K-12 classrooms. Students in this interdisciplinary program apply tools and perspectives from education, anthropology, linguistics, philosophy, psychology, sociology, cognitive science, and cultural historical activity theory. The program integrates theory and practice to examine learning and teaching within the multiple contexts of classroom, school, family, and community. Education faculty members utilize both macro- and micro-level frameworks and draw on both quantitative and qualitative methodologies in their research. Graduates of this program will be qualified to teach and to conduct the kinds of educational research demanded by tenure-track positions in

research and regional universities. Graduates may also work in non-university based institutions that focus on teacher professional development, curriculum development, and related areas of educational research and development.

Areas of Specialization

Ph.D. students choose from one of the following three areas as their area of specialization:

- The Language and Literacy specialization focuses on the numerous inter-relationships among language, learning, culture, and teaching, and foregrounds the reciprocal nature of social practices and language use inside and outside schools. Particular emphasis is paid to issues of equity and social justice for culturally and linguistically diverse students.
- The Mathematics and Science Education specialization focuses on cognition, learning, and teaching in mathematics or science with an emphasis on equity, informal learning, and language issues in these two content areas.
- The Social Context and Policy Studies specialization focuses on the complex interrelations between educational processes within schools and the social, cultural, political, and economic contexts in which they operate.

Together with his or her faculty academic adviser, each student develops an integrated program of study that includes advanced coursework, seminars, and electives. Courses may be taken in other departments, when appropriate.

Program Requirements

During the first two years of study, all students are expected to enroll in a set of required courses, including core seminars, methodology courses, the first- and second-year professional development seminars, and a research apprenticeship. The student and his/her adviser will also design a course of study within one of the three areas of specialization. The overall number courses and seminars taken varies depending on the student's preparation, interests, and plans, which are determined in consultation with relevant faculty and the department chair. The program encourages interdisciplinary study.

To achieve Ph.D. candidacy, students are expected to pass an annual review of their written work, maintain satisfactory academic progress, complete all required courses, attend department colloquia, complete a second-year research project, pass a Qualifying Examination (QE), and meet the specific requirements of the Division of Graduate Studies.

The QE is intended to assess a student's depth and breadth of knowledge in his or her areas of specialization and his/her competence to do extended dissertation-level research and analysis. Normally taken during the third year of enrollment, the QE consists of both written and oral components. For the written portion, the student prepares three papers, two of which are position papers on a theoretical topic; the third is a dissertation prospectus. The student presents and defends his/her work to at the oral examination.

A dissertation based on original research is required. After the dissertation has been completed and submitted, students must defend the dissertation in an oral exam.

Course Requirements and Sequencing

The following courses are required. Incoming students should consult with their faculty adviser to determine the most appropriate order in which to fulfill core course requirements and requirements in the specialization area. All required courses must be completed prior to advancement to candidacy.

```
EDUC 200A Introduction to Educational Inquiry (required Year 1)
```

EDUC 200B Quantitative Methods in Educational Research (offered alternate years)

EDUC 200C Qualitative Research Methods (required Year 1)

EDUC 261 Thinking, Learning, and Teaching

EDUC 262 Social and Cultural Context of Education Core Seminar

EDUC 293A or 293B Research Apprenticeship (5 units required in Year 1 or 2)

EDUC 269ABC First Year Proseminar (required Year 1)

EDUC 270ABC Second Year Proseminar (required Year 2)

EDUC 294 Second Year Research Project (required in Year 2)

One additional methods course, approved by the faculty adviser.

A minimum of four specialization courses, approved by the faculty adviser.

Elective courses (no set number required).

Requirements for the M.A. Degree

Although applications for a master's degree are not accepted, students in the Ph.D. program may obtain a M.A. degree after successfully completing a minimum of three quarters residency, 60

course units including EDUC 200A, 200C, 269ABC, 270ABC, 293A or 293B, 294, and a second-year research project. Students seeking an M.A. degree must adhere to the guidelines set out by the Graduate Division for filing for a degree.

Other Requirements

Students are required to attend the Education Department's colloquium series during their first and second years in the program.

The Education Ph.D. program emphasizes teaching experience, and all students are required to complete one TAship in Education prior to advancement to candidacy.

Financial Support

Financial support for students includes a variety of fellowships, research assistantships, and teaching assistantships in the Education Department. Students may participate in research projects under the auspices of several interdisciplinary research centers, including the Center for the Mathematics Education of Latinos/as (CEMELA), the Center for Justice, Tolerance, and Community (CJTC), Chicano/Latino Research Center (CLRC), the New Teacher Center (NTC), and the Vocabulary in Nearly Everything (VINE) project.

General Admission Requirements

To be admitted to this program the applicant must have received a bachelor's degree or its equivalent from an accepted university prior to the quarter for which admission is sought, have a grade point average or equivalent of 3.0 or better, submit scores on the GRE Graduate Records Exam (GRE) taken within the past five years, and have experience working with culturally and linguistically diverse communities. Experience working in K-12 classrooms is preferred.

Admission Preference for Students Concentrating in Language and Literacy Studies

Preference is given to students with prior course work and/or experience in linguistics, language learning and/or educational settings. Competence in a second language is also preferred.

Preferred Prerequisites for Mathematics and Science Education Specialization

B.S. or B.A. degree in a mathematical or natural science discipline (mathematics, applied mathematics, biology, chemistry, computer science, physics, etc.) or equivalent upper division coursework.

Joint Doctoral Program in Collaborative Educational Leadership

Due to actions taken by the statewide California State University system, the Joint Ed.D. Program in Collaborative Leadership has been terminated and we are no longer accepting applications for this program.

The Education Department and UCSC are moving assertively to revise the curriculum and launch an independent UCSC Ed.D. program; we expect to accept applications in the fall of 2007.

This program will continue to be accessible to working professionals.

Program Description | Faculty | Course Descriptions

Program Description

The purpose of the Education Department's instructional programs is to prepare all students, undergraduates and graduates, to engage in the analysis and integration of educational theory, research, and practice for an increasingly diverse society. Our primary intellectual and practical focus is on fostering equitable and effective schooling for all students. In working toward this goal, we are committed to the development of teachers with theoretical and practical perspectives responsive to the diverse cultural, social, and linguistic backgrounds of the children who comprise the current and future populations of K-12 students in California's schools. This commitment is reflected in principles addressed in the course work, placements, and advising that constitute our programming in teacher education.

The purpose of the Education Department's instructional programs is to prepare all students, undergraduates and graduates, to engage in the analysis and integration of educational theory, research, and practice for an increasingly diverse society. The department's primary intellectual and practical focus is on fostering equitable and effective schooling for all students. In working toward this goal, the department seeks to understand the profound issues involved in transforming public education so that it better meets the needs of students from diverse language, ethnic, racial, and class backgrounds. We are a small department with the large agenda of developing educational leaders and pursuing educational research that will affect the future of teaching and learning both inside and outside of schools. Our commitment lies in three essential and interrelated domains: 1) school, families, and communities: 2) teacher education and development: and 3) mathematics and science. Undergirding them all is a focus on the sociocultural context in which learning and teaching take place and an understanding of the power of language and literacy in both formal and informal educational settings.

The Education Department has a growing Ph.D. program that attracts students who have exemplary preparation as well as experience working in educational settings; a model teacher-education program; and a vibrant minor that serves over 300 undergraduates each year. The department is developing and Ed.D. program to further its involvement in educational communities.

Minor in Education

The UCSC undergraduate courses in education engage students in the study of the history of educational thought and philosophy, the politics and economics of education, learning theory and pedagogy, and issues of cultural and linguistic diversity in education.

Because an academic major in education is not permitted in the state of California, UCSC offers a minor in education for those students who are considering a career in teaching and also for those who hold a general interest in educational studies. Please note that the minor in education does not provide a California Teaching Credential. Additionally, the UCSC teaching credential program is a graduate program and course work taken in the minor cannot be substituted for credential requirements.

The minor in education consists of six courses: EDUC 92A, EDUC 92B, EDUC 92C, EDUC 180, and two upper-division education courses (please refer to the Education Department's web site for a list of approved upper-division courses for the education minor, http://education.ucsc.edu).

To declare a minor, students must file a Proposed Plan and Declaration of Major/Minor form at the Education Department. Students pursuing a minor in education should meet with the Education Department's Academic Adviser as early as possible. The adviser will assist students in filing the Proposed Study Plan and the Declaration of a Major/Minor form.

For specific instructions about how to declare a minor in education, please refer to the Education Department's web site, http://education.ucsc.edu.

Graduate Programs

Master of Arts in Education and California Teacher Credential Program

Please note that students are not admitted into the program for a stand-alone M.A. in education or a stand-alone credential.

Because program requirements are authorized by statutes and regulated by a state entity, the California Commission of Teacher Certification, program requirements must be responsive to new legislation and regulatory policies. Admission requirements and programs of study referred are subject to change to comply with regulatory mandates.

The master of arts in education and California teacher credential program prepares prospective teachers to work with California's culturally and linguistically diverse student population. Students in this program earn a master's degree and are eligible to apply for a Preliminary California Credential upon completing a five-quarter program comprised of two summers and one academic year. Graduates of the program are prepared to teach English language learners enrolled in K–12 public schools. The program also offers the Bilingual, Cross-cultural, Language, and Academic Development (BCLAD) emphasis. The UCSC BCLAD emphasis authorizes primary language instruction or dual language immersion instruction in a K–12 setting. The UCSC BCLAD language of emphasis is Spanish.

Students who complete the program are eligible to apply for a California Preliminary Multiple Subjects teaching credential or a California Preliminary Single Subject teaching credential. The Multiple Subjects teaching credential authorizes the holder to teach in a K–12, self-contained public school classroom, where all subjects are taught by the same teacher. The Single Subject teaching credential authorizes the holder to teach in his/her credential subject area in a departmentalized setting within a public school system.

The UCSC single subject teacher credential program offers the following subject areas: mathematics, English, social science, and science. Programs of study are subject to change.

Prerequisite Admission Requirements

All candidates must have preparation in the following areas:

1. A course, or equivalent experience, that addresses cultural and linguistic diversity. The following UCSC undergraduate education courses are examples of courses that meet this requirement: EDUC 128, *Immigrants and Education*; EDUC 141, *Bilingualism and Schooling*; EDUC 164, *Urban Education*; EDUC 181, *Race, Class, and Culture in Education*; and EDUC 92C *Introduction to Issues in Diversity and*

Education. Other courses offered outside the Education Department may be acceptable.

2. Supporting documentation of field experience with children or youth in a multicultural educational setting. Experiences working in a responsible role with children in the age group or in the subject area you intend to teach are preferred. Applicants are to address their field experience in their statement of purpose.

2. A documented field experience with children or youth in an educational setting. Experiences such as directed observation, substitute teaching, school tutoring, work in after-school programs, camp counseling, instructional aide, or the equivalent are acceptable experiences. When applying to the program, please describe your field experience in the designated area of the application titled, PERSONAL STATEMENT.

Application Selection Criteria

Admission to the program is competitive. Candidates for admission are selected, in part, on the following criteria:

Academic record

College course work is evaluated with attention to content and grades or narrative evaluations. The appropriateness of courses taken for the credential sought is also taken into consideration. For the multiple subjects credential, students should have an extensive breadth of courses in the core subject areas taught in elementary school —math, science, social science, and English. For the single subject credential, students should have an extensive body of course work in the content area.

Statement of purpose, writing sample, letters of recommendation, and résumé

Information provided in these documents is used in the selection of candidates. All documents must be submitted by the application deadline.

The statement of purpose should discuss the following:

- an explanation of why you want to become a teacher:
- how your experience has contributed to your motivation and potential to be an educational leader;
- a description of your experiences related to youth, cultural and linguistic diversity, and community involvement.

Writing Sample: a sample of your writing (no more than 10 pages), ideally on an educational or related topic. Applicants may submit an academic paper or other work previously written; alternatively, applicants may choose to write a brief piece specially for this application.

Letters of Recommendation: Three letters of recommendation are required. It is recommended that these letters address your qualifications in the following areas:

- academic performance
- field work with youth
- experience in culturally and linguistically diverse settings and with student populations who have traditionally been underserved in schools and classrooms.

Résumé: a résumé that includes an employment history; any relevant volunteer or community work, especially in schools and/or with children; and experiences in

multicultural and multilingual settings. Include information on languages (other than English) in which you have competence.

BCLAD Essay (BCLAD applicants only): Candidates must submit an essay in Spanish as described in the online application.

Admission Requirements

Testing

All required exams must be met by the stated deadlines.

California Basic Educational Skills Test (CBEST): All admitted applicants must verify completion of the CBEST requirement and submit a passing status verification by June 1 in order to enroll in the program. NOTE: Additional information can be found at CBEST Registration (state requirement and subject to change). It is recommended that passing verification be submitted with the application.

Subject Matter Competence

California state law mandates that all teachers provide evidence of their subject matter knowledge (state requirement and subject to change).

Admitted Multiple Subject applicants must submit verification of having passed the California Subject Exam for Teachers (CSET) Multiple Subjects Subtests by June 1 in order to enroll in the program. It is recommended that passing verification be submitted with the application by the January 15th application deadline.

Single Subject admitted applicants must submit verification of having passed the required CSET Subtests exams or submit verification of 100 percent completion of an approved subject matter program by June 1 in order to enroll in the program.

It is strongly recommended that all testing be completed prior to January 15, the application deadline. Admission priority may be given to applicants with test scores and/or subject matter programs completed and verified at the time of the application.

Admitted Multiple Subject applicants must submit verification of having passed the California Subject Exam for Teachers (CSET) Multiple Subjects Subtests by June 1 prior to enrollment in the program. However, it is highly recommended that documentation of passing CSET scores be submitted with the application. Multiple subject applicants must pass each section of the CSET; no coursework or "waiver" program can substitute for passing CSET scores.

Deadline to complete this requirement: June 1, 2008, prior to enrollment into the program. However, applicants are encouraged to complete this requirement prior to applying to the program.

Additional information can be found at the CSET Registration web site.

Single Subject: The California Subject Exam for Teachers (CSET), or verification of an approved subject matter program from the applicant's undergraduate institution is required. Admitted applicants must submit verification of having passed the CSET exam for their subject (e.g., mathematics), or confirmation of 100 percent completion of an approved subject matter program.

Deadline to complete this requirement: June 1, 2008, prior to enrollment into the program. However, it is highly recommended that documentation of subject matter competence be submitted with the application. Additional information can be found at the CSET Registration web site.

Program and State of California Requirements (Not Required for <u>Initial</u> Admission in the <u>Program</u>)

These requirements may be met prior to or while enrolled in the program, but they must be met to be eligible for a California teaching credential.

BCLAD Candidates

The BCLAD language requirement is met by passing Test 6 of the BCLAD exam, which is administered by National Evaluation Systems (NES). Admitted BCLAD candidates must take the first available exam after enrolling in the program if they have not done so prior to admission.

Certificate of Clearance

In accordance with Education Code Section 44320(b), each candidate for an initial credential, prior to student teaching must obtain a Certificate of Clearance. A Certificate of Clearance is a document that indicates that the individual has completed the fingerprint and character and identification process and has been cleared by the California Commission on Teacher Credentialing to begin student teaching. To comply with this regulation the UCSC Education Department must receive, by January 15, evidence that the applicant has had his/her fingerprints scanned (live scan). See the online application for form 41-LS Request for Live Scan service. Applicants are to contact their local County Office of Education to arrange for live-scan services. The department will apply for a Certificate of Clearance on behalf of the applicant once it has received documentation of the live-scan. Please not that the Certificate of Clearance expires after five years.

In accordance with Education Code Section 44320(b), each credential candidate for an initial credential, prior to admission to any credential program, must obtain a Certificate of Clearance. A Certificate of Clearance is a document that indicates that the individual has completed the fingerprint and character and identification process and has been cleared by the California Commission on Teacher Credentialing to begin student teaching. To comply with this regulation the UCSC Education Department must have on file a copy of the Certificate of Clearance before allowing a person to begin public school fieldwork or student teaching. If you hold or have applied for a credential from the California Commission on Teacher Credentialing (such as an emergency substitute teaching permit) you are not required to apply for another Certificate of Clearance. Please submit a photo copy of your prior credential for your application to the program by mail to: Graduate Application Processing, U.C. Santa Cruz, 1156 High St., Santa Cruz, CA, 95064. Applicants who do not hold a valid California credential or have not previously applied for a Certificate of Clearance through the Commission on Teacher <u>Credentialing must apply for the Certificate of Clearance through the Education Department.</u> Please refer to the UCSC Graduate School online application for further information and instructions regarding this process. Please send an e-mail to the Education Department, edma@ucsc.edu, for further instructions regarding your Certificate of Clearance Application.

Deadline for completing this requirement: TBD (please check the Education Department web site for the deadline.

U.S. Constitution Requirement

A course on the U.S. Constitution (or completion of an exam offered by the Education Department to enrolled students) is required. UCSC-approved courses that meet this requirement are Politics 20, *Democracy and Liberalism in American Politics*; Politics 111, *Problems in Constitutional Law*; Politics 120A, *Congress, President, and the Court in American Politics*; and History 25A, *United States History to 1877*.

Reading Instruction Competence Assessment (RICA)

Multiple subjects candidates are required—prior to completion of the program and in order to be recommended for a preliminary credential—to pass the RICA exam. The RICA measures the knowledge, skills, and abilities essential to offer effective reading instruction to K–12 students. Candidates should not take this exam prior to completing EDUC 211A.

CPR

A certified cardiopulmonary resuscitation (CPR) course (infant, child, and adult) must be completed prior to applying for the credential.

Student Teaching

The successful development of teaching skills in the classrooms is the culmination of a teacher education program. Therefore, candidates must demonstrate, by the end of their program, teaching competence in the classroom. Credentialed public school teachers are responsible for the nurturing of children and youth. Therefore, teaching credential candidates must consistently display conduct befitting the profession. To this end, the candidate must be able to cope with the demands and responsibilities of teaching as outlined below:

- Meet university and program requirements and deadlines (including school expectations during field experiences).
- Plan ahead to anticipate needs and potential student teaching problems.
- Be able to adapt to institutional and/or professional expectations and policies.
- Relate appropriately to children, parents, and school staff.
- Demonstrate sensitivity to the social, cultural, economic context of the school environment.
- Adhere to school expectations for dress, appearance, and personal hygiene.

Candidates whose professional behavior does not meet these minimal standards may be recommended for dismissal from the program.

Beginning student teaching, which begins during the Summer Bridge between the university summer and fall quarters, constitutes the first classroom observation experience for students in the program. Student Teachers are in their classroom placements from 10–14 hours a week depending on the school site schedule. To enroll in this course, students must have a Certificate of Clearance issued and on file with the California Commission on Teacher Credentialing.

Intermediate and advanced student teaching is a two-quarter experience (winter/spring) in which student teachers are placed with cooperating teachers in local schools. Students are in the classroom placements 14 or more hours a week in winter quarter leading toward full time in the classroom by spring quarter. They gradually assume responsibility for preparation, instruction, and evaluation of the class during this two-quarter period. Supervisors of teacher education give ongoing and frequent support to students in their classroom placements and in seminars at UCSC. Multiple Subjects candidates obtain classroom experience in both primary and intermediate grades. Single Subjects candidates obtain classroom experience in middle school/junior high and high school.

Admission to course 283, *Intermediate Student Teaching*, and courses 284A-B-C, *Advanced Student Teaching*, is based on an assessment of academic performance, experience, leadership, and initiative shown in public school placements and required courses taken earlier in the program.

Capstone Requirements

Students will complete a capstone portfolio, which includes a teaching performance assessment and reflective papers. Prompts for these assignments may vary from year

to year as they reflect the most current California state credentialing requirements.

Multiple Subject Course Requirements

EDUC 203 Applied Classroom Analysis and Methods: Beginning Student Teaching

EDUC 211A Reading and Language Arts for Elementary Classrooms

EDUC 212A Science Learning and Teaching in Elementary Classrooms

EDUC 213A Mathematics Learning and Teaching in Elementary Classrooms

EDUC 220 Introduction to Technology in Schools

EDUC 242A (BCLAD students only) *Promoting Biliteracy and Bilingualism*

EDUC 250 Teaching, Learning, and Schooling

EDUC 253 Methods of English Language Development

EDUC 265A Creating Supportive, Healthy Environments for Student Learning

EDUC 265B Teaching Special Populations

EDUC 281 Social Foundations of Education

EDUC 283 Intermediate Student Teaching

EDUC 284A, B, and C Advanced Student Teaching

EDUC 288A Topics in Elementary Education: Physical Education

EDUC 288B Topics in Elementary Education: Visual Arts

EDUC 288C Topics in Elementary Education: Performing Arts

EDUC 295 Portfolio Development

EDUC Assessment Course, 5 credits (proposed for Summer 2007)

Single Subject Course Requirements

EDUC 203 Applied Classroom Analysis and Methods: Beginning Student Teaching

EDUC 211B Reading Across the Curriculum in Middle School and Secondary

EDUC 220 Introduction to Technology in Schools

EDUC 242A (BCLAD students only) *Promoting Biliteracy and Bilingualism*

EDUC 250 Teaching, Learning, and Schooling

EDUC 283 Intermediate Student Teaching

EDUC 283A Intermediate Student Teaching: Single Subject

EDUC 284A, B, and C Advanced Student Teaching

EDUC 295 Portfolio Development

Single subject credential students enroll in the two methods courses related to their subject area:

EDUC 210A Writing Across the Curriculum for Secondary

EDUC 212B Science Education: Research and Practice

EDUC 212C Teaching Science in the Secondary Classroom

EDUC 213B Math Education: Research and Practice

EDUC 213C Teaching Mathematics in the Secondary Classroom

EDUC 214A English Teaching: Theory and Curriculum
EDUC 214B English Teaching for Secondary Classrooms
EDUC 215A Social Science: Theory and Curriculum
EDUC 215B Social Science Teaching for Secondary Classrooms

For Further Information

Phone the Education Department Advising Center Credential Analyst at (831) 459-2589 2200, send e-mail to edma@ucsc.edu, or view the department's home page on the web at

http://education.ucsc.edu for dates and times of workshops where potential applicants can obtain full details about the programs.

Ph.D. in Education

Overview

The goal of the Ph.D. in Education is to support graduate students in becoming creative scholars who engage in research focused on the educational needs of students from linguistic and cultural groups that have historically not fared well in our nation's public schools. To achieve this goal, this program provides students with grounding in the varieties of interdisciplinary theorizing, research methods, and applications needed to advance the study of learning and teaching for diverse student populations. The courses and research experiences are closely related to practice in K-12 classrooms. Students in this interdisciplinary program apply tools and perspectives from education, anthropology, linguistics, philosophy, psychology, sociology, cognitive science, and cultural historical activity theory. The program integrates theory and practice to examine learning and teaching within the multiple contexts of classroom, school, family, and community. Education faculty members utilize both macro- and micro-level frameworks and draw on both quantitative and qualitative methodologies in their research. Graduates of this program will be qualified to teach and to conduct the kinds of educational research demanded by tenure-track positions in research and regional universities. Graduates may also work in non-university based institutions that focus on teacher professional development, curriculum development, and related areas of educational research and development.

Areas of Specialization

Ph.D. students choose from one of the following three areas as their area of specialization:

- The Language and Literacy specialization focuses on the numerous interrelationships among language, learning, culture, and teaching, and foregrounds the reciprocal nature of social practices and language use inside and outside schools. Particular emphasis is paid to issues of equity and social justice for culturally and linguistically diverse students.
- The Mathematics and Science Education specialization focuses on cognition, learning, and teaching in mathematics or science with an emphasis on equity, informal learning, and language issues in these two content areas.
- The Social Context and Policy Studies specialization focuses on the complex interrelations between educational processes within schools and the social, cultural, political, and economic contexts in which they operate.

Together with his or her faculty academic adviser, each student develops an integrated program of study that includes advanced coursework, seminars, and

electives. Courses may be taken in other departments, when appropriate.

Program Requirements

During the first two years of study, all students are expected to enroll in a set of required courses, including core seminars, methodology courses, the first- and second-year professional development seminars, and a research apprenticeship. The student and his/her adviser will also design a course of study within one of the three areas of specialization. The overall number courses and seminars taken varies depending on the student's preparation, interests, and plans, which are determined in consultation with relevant faculty and the department chair. The program encourages interdisciplinary study.

To achieve Ph.D. candidacy, students are expected to pass an annual review of their written work, maintain satisfactory academic progress, complete all required courses, attend department colloquia, complete a second-year research project, pass a Qualifying Examination (QE), and meet the specific requirements of the Division of Graduate Studies.

The QE is intended to assess a student's depth and breadth of knowledge in his or her areas of specialization and his/her competence to do extended dissertation-level research and analysis. Normally taken during the third year of enrollment, the QE consists of both written and oral components. For the written portion, the student prepares three papers, two of which are position papers on a theoretical topic; the third is a dissertation prospectus. The student presents and defends his/her work to at the oral examination.

A dissertation based on original research is required. After the dissertation has been completed and submitted, students must defend the dissertation in an oral exam.

Course Requirements and Sequencing

The following courses are required. Incoming students should consult with their faculty adviser to determine the most appropriate order in which to fulfill core course requirements and requirements in the specialization area. All required courses must be completed prior to advancement to candidacy.

EDUC 200A Introduction to Educational Inquiry (required Year 1)

EDUC 200B Quantitative Methods in Educational Research (offered alternate years)

EDUC 200C Qualitative Research Methods (required Year 1)

EDUC 261 Thinking, Learning, and Teaching

EDUC 262 Social and Cultural Context of Education Core Seminar

EDUC 293A or 293B Research Apprenticeship (5 units required in Year 1 or 2)

EDUC 269ABC First Year Proseminar (required Year 1)

EDUC 270ABC Second Year Proseminar (required Year 2)

EDUC 294 Second Year Research Project (required in Year 2)

One additional methods course, approved by the faculty adviser.

A minimum of four specialization courses, approved by the faculty adviser.

Elective courses (no set number required).

Requirements for the M.A. Degree

Although applications for a master's degree are not accepted, students in the Ph.D. program may obtain a M.A. degree after successfully completing a minimum of three quarters residency, 60 course units including EDUC 200A, 200C, 269ABC, 270ABC, 293A or 293B, 294, and a second-year research project. Students seeking an M.A. degree must adhere to the guidelines set out by the Graduate Division for filing for a degree.

Other Requirements

Students are required to attend the Education Department's colloquium series during all registered quarters prior to advancement to candidacy their first and second years in the program.

The Education Ph.D. program emphasizes teaching experience, and all students are required to serve as teaching assistants (or the equivalent) for a minimum of two quarters. Each student is required to complete one TAship in Education prior to advancement to candidacy.

Financial Support

Financial support for students includes a variety of fellowships, research assistantships, and teaching assistantships in the Education Department. Students may participate in research projects under the auspices of several interdisciplinary research centers, including the Center for the Mathematics Education of Latinos/as (CEMELA), the Center for Justice, Tolerance, and Community (CJTC), Chicano/Latino Research Center (CLRC), the New Teacher Center (NTC), and the Vocabulary in Nearly Everything (VINE) project.

General Admission Requirements

To be admitted to this program the applicant must have received a bachelor's degree or its equivalent from an accepted university prior to the quarter for which admission is sought, have a grade point average or equivalent of 3.0 or better, submit scores on the GRE Graduate Records Exam (GRE) taken within the past five years, and have experience working with culturally and linguistically diverse communities. Experience working in K-12 classrooms is preferred.

Admission Preference for Students Concentrating in Language and Literacy Studies

Preference is given to students with prior course work and/or experience in linguistics, language learning and/or educational settings. Competence in a second language is also preferred.

Preferred Prerequisites for Mathematics and Science Education Specialization

B.S. or B.A. degree in a mathematical or natural science discipline (mathematics, applied mathematics, biology, chemistry, computer science, physics, etc.) or equivalent upper division coursework.

Joint Doctoral Program in Collaborative Educational Leadership

Overview

The Joint Doctoral Program in Collaborative Leadership is a joint graduate study program with the University of California, Santa Cruz (UCSC), San Jose State University (SJSU), and California State University, Monterey Bay (CSUMB). The participating units are: the Department of Education at UCSC, the College of Education at SJSU, and the College of Professional Studies at CSUMB. The purpose of the Joint Ed.D. program is to prepare to assist educational leaders working in the culturally and linguistically diverse schools of California Education Region 5 (which encompasses Monterey, San Benito, Santa Clara, and Santa Cruz counties, and similar culturally and linguistically diverse regions in other states), in their attempt to transform schools to provide greater academic access and success for all students.

This program recruits local educators from traditionally underserved schools and communities. Candidates will have strong academic preparation and demonstrate leadership capabilities, primarily at the school level, but also at district and/or community levels. Many students will be drawn from existing collaborative school/university research and development programs, plus graduate programs at UCSC, SJSU, and CSUMB.

A distinguishing feature of this program is the preparation of leaders, including teachers and site administrators who have, as their focus, the improvement of education in complex school systems. Collaborative leaders prepared in this Joint Ed.D. Program will focus on three major areas: 1) serving traditionally underserved school populations, focusing on the power of collaborative applied research; 2) school transformation; and 3) providing replicable models with the school, classroom, and/or community as the focus of change.

Admission Requirements

Successful applicants to the program will have:

- Received a master's degree that includes a research course and research project in a field related to this Joint Ed.D. Program from an accredited university prior to admission or the equivalent; or in exceptional cases, the equivalent of the M.A.
- Maintained a grade point average of 3.0 or above.
- Official Graduate Record Exam (GRE) general (not subject specific) scores taken within the last five years.
- Experience in, and commitment to, working with culturally and linguistically diverse student populations, traditionally underrepresented communities, and collaborative leadership.
- · Shared research interested with this Joint Ed.D. in Collaborative Leadership program.
- Three letters of reference indicating their high level of professional practice and ability to work productively with others.
- · Writing ability appropriate for students for students entering doctoral study.
- Formulate a research question.
- Support from the site of the proposed research project.

Required Application Materials

The following materials will be required from applicants seeking admission to the program:

- Joint Program Application Form.
- UCSC Graduate Division Application.
- Statement of Purpose, which includes an explanation of research interests.
- Resumé or vita.
- Official transcripts (sealed) from all undergraduate and graduate study.
- Three letters of recommendation.
- Official GRE score report taken within the last five years.
- Writing sample based on a case study or abstract from M.A. research.
- Evidence of the M.A. project or research.
- A non-refundable application fee.
- Documentation of a second language.

Course Requirements and Sequencing

The Joint Ed.D. Program of study consists of 24 required courses, 120 credits, including coursework, supervised dissertation research, and dissertation writing to be completed over three years, including summer terms. All courses will count for five units. All course credits are represented in quarter units. All Ed.D. students are expected to earn letter grades of A or B. The formal oral Qualifying Examination (QE) will consist of an oral defense of the dissertation proposal. All students will write a dissertation.

Courses will be offered at one of the participating campuses each quarter, beginning with the tentative plan for the first quarter, summer 2005, to be offered on the UCSC campus. Fall and winter quarters will be at SJSU and spring quarter at CSUMB. Students will be expected to meet at the site for that quarter. Ed.D students are not seen as students of any one institution, but rather individuals who are participating in a regional doctorate. They are not located at one institution and commuting to another. They are full-time employees who will be commuting to the site where the program is being offered that quarter.

EDUC 279A Supervised Dissertation Writing

EDUC 279B Supervised Dissertation Writing

EDUC 279C Supervised Dissertation Writing

EDUC 279D Supervised Dissertation Writing

Qualifying Examination

Students will be required to orally defend their dissertation proposals to the core faculty. The purpose of the oral defense is to review and assess students' research plans. During the oral defense, students will present the research problem, theoretical orientation, related literature, research design and procedures. Proposals will be discussed and assessed by the faculty who may require students to make revisions to their proposals before granting final approval for their research to begin. A successful oral defense of the dissertation proposal is the qualifying exam for advancement to candidacy. If the proposed dissertation involved human subjects, students must obtain appropriate clearances from the UCSC human subjects board.

Qualifying Examination Committee

The Qualifying Examination Committee is formed when a student has completed her or his coursework. The Qualifying Examination Committee ensures that the admissions to candidacy requirements are met on each campus. The committee will consist of five ladder (tenured and tenure-track) faculty members, with at least two from the University of California and two from the California State University, who are part of the core or affiliated faculty. The candidacy Committee will conform to the procedures and policies of the UCSC Division of Graduate Studies.

Dissertation

The purpose of the dissertation is to improve educational practices and policies in and around students' professional work environments. The first three stages of the dissertation will be completed in the first year; data collection and analysis will be completed during the second year. A first draft of the dissertation will be expected at the end of students' third summer in the program (ninth quarter). The remainder of the third year is dedicated to the refinement of the research findings, analysis, and completion of a publishable manuscript. The final manuscript will be one of article length that could be submitted to any one of the leading journals in education, including American Educational Research Journal, Educational Evaluation and Policy Analysis, Urban Review, Teachers College Press, Anthropology and Education Quarterly Educational Leadership, Phi Beta Kappan, or Urban Education, to name but a few. Dissertations are intended to mark the culmination of research conducted during the first two years of the program under

the auspices of the Research Seminar.

Dissertation Committee Composition

Dissertation committees will be composed of a minimum of four tenure-track faculty members, with at least two members representing UCSC. One member of the dissertation committee will serve as the committee chair and dissertation adviser. Additional members may be nominated to serve on students' dissertation committees. These members will meet the same criteria for graduate faculty and have the same voting rights and responsibilities as other committee members.

Dissertation Standards

Students will be expected to develop a dissertation that includes several key components: a clear statement of a problem regarding an educational policy and/or practice, an appropriate theoretical orientation/perspective, clear implementation of intervention, methodical collection of original data, critical analysis of data, a clear representation of findings, and a discussion of results that derive implications from the relationship of findings to theory and research and for practice and/or policy. The dissertation must reflect originality and contribute to practice and/or policy and to the knowledge base. Ed.D. dissertations will be held to the same standards of academic rigor and quality as all other UC doctoral dissertations. Students will follow UCSC's existing policies and procedures regarding report format, mechanics, submission, fees, and binding requirements.

Writing the Dissertation

Students will complete the final drafts of their dissertations by the winter quarter of their last year in the program, in order to allow time for revisions and the completion of graduation requirements. Dissertations will include the following elements: an abstract, copyright page, title page, acknowledgements, table of contents, list of tables and figures, references, and, when appropriate, appendices. Meeting all the requirements for human subjects research is required. The dissertation must adhere to the guidelines specified in the UCSC Dissertation and Thesis Preparation Guidelines. APA format is required.

The Final Oral Defense

Students will be required to orally defend their dissertations. The defense has three purposes:

- 1. To review and assess the quality of the research and its relevance to educational practices and/or policies.
- 2. To assess students' ability to present their research in a scholarly manner.
- 3. To provide students with the opportunity to share their work with the broader campus communities.

Submitting the Final Manuscript and Graduation

Students will follow directions for preparing and submitting their final dissertations that are outlined in the *Dissertation and Thesis Preparation Guidelines*, which is published by the UCSC Division of Graduate Studies and available at

http://graddiv.ucsc.edu/student_affairs/PDF/Diss_Guidelines.pdf. Students will be responsible for the cost of copying and binding and/or preparing electronic storage of dissertations. This Ed.D. degree will be awarded jointly by the Regents of the University of California and the Trustees of the California State University in the names of their cooperating institutions.

Requirements Over and Above Graduate Division Minimums

Presently, this proposed program has no requirements that exceed those currently published in the UCSC Graduate Student Handbook, http://graddiv.ucsc.edu/regulations/handbook.php. However, the following variance should be noted: because most students will be employed as full-time educational professionals, the minimum residency requirement for the program will be three consecutive summer terms.

Normative Time from Matriculation to Degree

Expected time to degree for students in this proposed Joint Ed.D. Program will be three years from the date of matriculation. UCSC, SJSU, and CSUMB will set a maximum time limit of five years for Joint Ed.D. students to complete all degree requirements. Each student's progress will be reviewed each quarter and before the proposal is presented. Students who are unable to complete coursework during a year will be given the option of joining the cohort the following year. Students who produce work below grade B level will have their file reviewed by the core and affiliated faculty and face potential dismissal from the program.

Due to actions taken by the statewide California State University system, the Joint Ed.D. Program in Collaborative Leadership has been terminated and we are no longer accepting applications for this program.

The Education Department and UCSC are moving assertively to revise the curriculum and launch

an independent UCSC Ed.D. program: we expect to accept applications in the fall of 2007. This program will continue to be accessible to working professionals.

Education

<u>Program Description | Course Descriptions</u>

Faculty and Professional Interests

Professor

Margaret (Greta) A. Gibson

Immigrants and education; minority status and schooling; community-school relationships; ethnicity, class, gender, and educational processes; qualitative research methods

Rodney Ogawa

Educational leadership, educational reform, and the impact of social institutions on the structure of school organization

Art Pearl, Emeritus

David Swanger, Emeritus

Trish Stoddart

Teacher education, science education, educational reform

Roland G. Tharp, Emeritus

C. Gordon Wells

Language and literacy development, analysis of discourse in learning and teaching, inquiry-oriented curriculum; socio-cultural theory and education, collaborative action research

Associate Professor

Ron Glass

Moral and political philosophy and education, ideology and education, race and education, urban school reform

June A. Gordon

Urban comparative education; sociology of education; schooling and society in Japan, China, the U.K., and the U.S.A.; marginalized youth and economic conditions

Judit Moschkovich

Mathematics cognition and learning; student conceptions of linear functions; discourse in mathematics and science classroom; everyday mathematical practices; and bilingual mathematics learners

Lucinda Pease-Alvarez

Language and literacy development, language-minority education, bilingualism, informal learning

Judith Scott

Literacy and language learning; academic language; reading, writing, vocabulary development; teachers' professional development through collaboration and inquiry

Kip Téllez

Preparation of teachers for linguistic and cultural diversity, second language learning, studies of the school curriculum, educational assessment

Assistant Professor

Doris Ash

Informal science learning, teacher professional development, science discourse in and out of the classroom

Lora Bartlett

Educational policy and school reform, schools as workplaces for teachers, the conditions of teachers' commitment

George Bunch

Language and education in linguistically diverse settings, preparation of teachers for linguistic diversity, language policy, and bilingualism

Eduardo Mosqueda

Mathematics education of English learners; large-scale dataset quantitative analysis; urban education issues

Kysa Nygreen

Urban education; youth organizing; political identity formation; participatory action research

Brad Olsen

Teacher development (with emphasis on knowledge and identity), English education, and sociolinguistics

Jerome Shaw

Scientific inquiry, specifically examining the science education experiences of English language learners and their teachers; includes examining ways in which assessments in English measure content knowledge versus language proficiency

Director of New Teacher Center

Ellen R. Moir

Bilingual education, English language development, new teacher development and support

Professor

Catherine R. Cooper (Psychology)

Cultural perspectives on child and adolescent development; linkages among families, peers, schools, and work; issues of diversity, ethnicity, and gender in identity; research, practice, and policy in university outreach programs; linking qualitative and quantitative research

Bruce N. Cooperstein (Mathematics)

Algebra, algebraic number theory

Barbara Rogoff (Psychology)

Human development in sociocultural activity; informal and formal arrangements for learning; adult/child and peer communication in families and schools in diverse cultural communities; learning through observation; cognitive development, especially problem solving, planning, and attention

Senior Lecturer

Donald L. Rothman (Writing)

Literacy education and democracy; UC/K-12 partnerships; writing, persuasion, and nonviolence; writing pedagogy; connections between beauty and justice

Program Description | Changes to 2006-08 Catalog Highlighted | Faculty

Lower-Division Courses

50A. CAL Teach 1: Science and Mathematics (2 credits).

Introductory seminar exploring secondary students, teaching, and schools in the context of science and/or mathematics instruction. Concurrent participation in a secondary school internship required. Course material supports and enhances students' placement experiences. Prerequisite(s): Acceptance into CAL Teach and concurrent participation in a secondary school internship in a science or math classroom. Enrollment limited to 25. *The Staff*

50B. CAL Teach 1: Mathematics (2 credits). F,W

Introductory seminar exploring secondary students, teaching, and schools in the context of mathematics instruction. Concurrent participation in a secondary school internship required. Course material supports and enhances students' placement experiences. Prerequisite(s): Acceptance into CAL Teach and concurrent participation in a secondary school internship in a math classroom. Enrollment limited to 25. *The Staff*

50C. CAL Teach 1: Science (2 credits). F,W

Introductory seminar exploring secondary students, teaching, and schools in the context of science instruction. Concurrent participation in a secondary school internship required. Course material supports and enhances students' placement experiences. Prerequisite(s): Acceptance into CAL Teach and concurrent participation in a secondary school internship in a science classroom. Enrollment limited to 25. *The Staff*

75A. CAL Teach 2: Science and Mathematics (2 credits).

Examines students, schools, and science and/or mathematics instruction with emphasis on developing an instructional project aligned with state-mandated content standards. Course content supports and enhances students' placement experiences. Prerequisite(s): CAL Teach 1 (course 50A, 50B, or 50C), and acceptance into CAL Teach 2 and concurrent participation in a secondary school internship in a mathematics classroom. Enrollment limited to 25. *The Staff*

75B. CAL Teach 2: Mathematics (2 credits). F,S

Examines students, schools, and mathematics instruction with emphasis on developing an instructional project aligned with state-mandated content standards. Course content supports and enhances students' placement experiences. Prerequisite(s): CAL Teach 1 (course 50A, 50B, or 50C), and acceptance into CAL Teach 2 and concurrent participation in a secondary school internship in a mathematics classroom. Enrollment limited to 25. *The Staff*

75C. CAL Teach 2: Science (2 credits). F,S

Examines students, schools, and science instruction with emphasis on developing an instructional project aligned with state-mandated content standards. Student must concurrently participate in a K-12 school internship. Course content supports and enhances students' placement experiences. Prerequisite(s): CAL Teach 1 (course 50A, 50B, or 50C), and acceptance into CAL Teach 2 and concurrent participation in a secondary school internship in a science classroom. Enrollment limited to 25. *The Staff*

92A. The Evolution of Education. F

Introduction to educational theory, Plato through Freire. A survey of major ideas and issues in education, ranging from the purposes of education and the organization of knowledge to the nature of teaching, compulsion in schooling, and questions concerning developmental theory, moral education, and aesthetic education. Course enrollment is unrestricted. (General Education Code(s): IS.) *R. Glass*

92B. Introduction to Theories of Education. W

A general survey of theories and partial theories of education organized into three recurrent topics: teaching and learning, schooling, and education in society. Each is considered in terms of the partial theories of James, Dewey, and Skinner; cognitive constructivism, particularly the theories of cognitive science; and, finally, an integrated sociocultural theory of education. (General Education Code(s): IS.) *C. Wells*

92C. Introduction to Issues in Diversity and Education. S

Examines the impact on schools and students of social/ethnic status, social class, and gender, with attention to historical, cultural, and psychological variables. An introduction to the theory, research, and reform movements in education in response to our state's and our nation's increasing diversity. (General Education Code(s): E.) *K. Nygreen*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

Upper-Division Courses

102. Education, Media, and Society. F

Focusing on ways the media (both news and the entertainment industry) portrays schools, teachers, and students to the public, investigates the way society views education, the way education is presented in the media, and the way education is influenced by society. Enrollment restricted to juniors and seniors. Enrollment limited to 50. *B. Olsen*

115. K-12 Student Assessment. *

Provides an overview of educational testing. Appropriate use and interpretation of standardized, classroom achievement and special needs assessments are examined. Issues on fair testing of diverse populations of students are discussed within each topic area. Enrollment restricted to juniors and seniors. Enrollment limited to 50. *The Staff*

120. The Arts in Schools: Aesthetic Education Theory and Practice. S

Explores the historical legacy of the arts within education; considers aesthetic education as an inter-arts philosophical and practical endeavor; studies alternatives to the current situation of the arts in education; develops theory, curricula and

methods necessary to teach the arts. Addresses both elementary and secondary teaching in the arts. Meets third-course requirements. Enrollment restricted to juniors and seniors. Enrollment limited to 50. B. Olsen

125. Introduction to Teaching Children's Literature in Grades K-8.

Offers opportunities for undergraduate and graduate students to learn about fundamental aspects of children's literature, increase their knowledge of range and quality of children's literature, enhance their understanding of multicultural children's literature, and develop ways to integrate children's literature into elementary- and middle-school curriculum areas. Enrollment restricted to juniors and seniors. Enrollment limited to 50. *J. Scott*

128. Immigrants and Education.

Research and theory on the education of immigrant students. Major topics include the Americanization movement and America's changing demography, identity maintenance and change, home-school relations, and educators' roles in meeting the needs of culturally and linguistically diverse student populations. Enrollment restricted to juniors and seniors. Enrollment limited to 50. (General Education Code(s): E.) *M. Gibson*

135. Gender and Education. *

Addresses the changing but continuing patterns of unequal expectations, opportunities, and treatment throughout the educational system for all students, female and male, who do not match a standard model of gender performance. Fieldwork required. Prerequisite(s): course 92C. Enrollment restricted to juniors and seniors. Enrollment limited to 50. *D. Ash*

141. Bilingualism and Schooling. *

Introduces participants to issues related to the schooling of students who speak languages other than or in addition to English. Uses a multidisciplinary perspective to understand the circumstances these students face in schools and considers approaches and policies that best meet their needs. Enrollment restricted to juniors, seniors and graduate students. Enrollment limited to 50. (General Education Code(s): E.) *L. Pease-Alvarez, G. Bunch*

160. Issues in Educational Reform. W

Explores a variety of perspectives on key educational policy issues including desegregation, bilingual education, affirmative action, charter schools, national and state curriculum standards, student assessment and the assessment and certification of teachers. Enrollment restricted to juniors and seniors. Enrollment limited to 50. *L. Bartlett*

164. Urban Education. S

Focuses on urban schooling through critical readings, fieldwork, group projects, and extensive writing. Students explore how socialization, marginalization, and assimilation impede or support academic success, how class intersects with "race", and how "culture" affects one's orientation to education. Prerequisite(s): course 92C. Enrollment restricted to juniors and seniors. Enrollment limited to 50. Satisfies American History and Institutions Requirement. (General Education Code(s): E.) *J. Gordon*

170. Schools and Asian Cultures. F

Focuses on a historical and contemporary study of education in East, Southeast, and South Asia as well as the negotiation of public and private schooling within the

Asian immigrant population in California. Specific topics include language acquisition; the role of religious affiliation and other culturally specific schooling; patterns of family life; and the effects of socioeconomic status, career aspirations, and parental participation in schools. Enrollment restricted to juniors and seniors. Enrollment limited to 50. *J. Gordon*

173. Seminar in Critical Pedagogy.

Philosophical and pedagogical exploration of relationships among oppression, power, society, education, and change. Examines how history, power, economics, and discrimination shape societal perspectives and schooling practices, and considers ways to transform education. Enrollment restricted to juniors and seniors. Enrollment limited to 50. May be repeated for credit. *B. Olsen*

175. Language, Culture, and the Classroom.

Offers students an opportunity to think about the ways that language and culture intersect with classroom learning. Includes the linguistic and cultural diversity of students and teacher alike. Implications for practice, research, and policy will be discussed. Enrollment restricted to juniors and seniors. Enrollment limited to 50. (General Education Code(s): E.) *J. Scott*

176. Learning to Talk and Talking to Learn.

Learning to talk and talking to learn are closely related. They are also the chief medium of education. Through practical work combined with reading and discussion, investigates ways in which adults can help children/students to learn. Enrollment restricted to juniors and seniors. *C. Wells*

177. Teaching Culturally and Linguistically Diverse Students Math and Science . W

Examines equity issues in the learning and teaching of math and science in culturally and linguistically diverse school settings. Draws on multicultural, bilingual, and math/science education perspectives. Intended for undergraduate majors considering a K–12 teaching career. Satisfies an elective requirement for the minor in education program. Prior completion of courses 92B and 80 is advised. Enrollment limited to 25. *E. Mosqueda*

180. Introduction to Teaching. F,W

Designed to encourage students to think about teaching in new ways. Assumptions about teaching and schooling are examined as well as considering what it takes to teach so that children learn and understand. Not a course in how to teach, but an opportunity to reconsider what teaching should try to accomplish and what kinds of learning teachers should foster. Practicum in the schools of 30 hours per quarter required. Enrollment restricted to juniors and seniors. Enrollment limited to 120. (F) T. Marchese, S. Roe; (W) D. Martin

180A. Introduction to Teaching: CAL Teach 3. W

Analyzes student learning of mathematics and science in formal and informal settings. Assumptions about learning, teaching and schooling are examined as well as considering the contexts and practices that best support the development of students' scientific learning and conceptual development and apply these in their classroom practicum. Students must concurrently participate in a CAL Teach secondary school internship. Prerequisite(s): CAL Teach 1 (courses 50A, 50B, or 50C); CAL Teach 2 (courses 75A, 75B, or 75C); and acceptance into CAL Teach 3 and concurrent participation in secondary school internship in a science or math classroom. Enrollment limited to 25. *The Staff*

181. Race, Class, and Culture in Education. W

Examines the schooling experience and educational attainment of racial/ethnic minority students in the U.S. Focuses primarily on domestic minorities. Addresses issues of variability between and within minority groups and the role of cultural, structural, and psychological factors in the educational attainment of these students. Enrollment restricted to juniors and seniors. Enrollment limited to 50. (General Education Code(s): E.) *K. Nygreen*

182. American Teacher. W

Examines multiple and competing images of "teachers" and, more specifically, notions of the "good teacher"; also explores social, cultural, historical, and policy context of teachers' work in the U.S. Enrollment restricted to juniors and seniors. Enrollment limited to 50. *L. Bartlett*

185B. Introduction to Teaching Mathematics. W

Provides an introduction to principles and practices for teaching mathematics in secondary classrooms; examines theoretical and practical approaches to teaching mathematics; provides an introduction to national and state standards and an overview of mathematics curricula and current issues in mathematics teaching. Enrollment restricted to junior and senior majors in mathematics, physics, computer science, computer engineering, and electrical engineering. Enrollment limited to 30. *The Staff*

185C. Introduction to Teaching Science. **

An introduction to the principles and practices for teaching science in secondary classrooms. Course examines theoretical and practical approaches to teaching science, provides an introduction to national and state standards and an overview of science curricula and current issues in science teaching. Enrollment restricted to junior and senior science majors. Enrollment limited to 40. *D. Ash*

187. Cognition and Instruction. *

Addresses the question, "How do people learn?" by examining theories of learning and research on cognition, learning, and instruction. Enrollment restricted to junior and senior education minors. Enrollment limited to 60. *J. Moschkovich*

194. Group Projects. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

194F. Group Projects (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

198. Independent Field Study. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

198F. Independent Field Study (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

199. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

199F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

200A. Introduction to Educational Inquiry. F

Addresses foundational knowledge needed to understand and conduct educational inquiry and research. Topics include epistemology in the human sciences, philosophical foundations of modern research strategies, and general classes of research investigations in education. Enrollment restricted to education graduate students. Enrollment limited to 15. *R. Ogawa*

200B. Quantitative Methods in Educational Research. S

Promotes intermediate-level knowledge of quantitative research methods in educational settings. Students learn the foundations of quantitative data theory, general logic behind statistical inference, and specific methods of data analysis in educational contexts. Prerequisite(s): course 200A. Enrollment restricted to graduate students. Enrollment limited to 15. *E. Mosqueda*

200C. Qualitative Research Methods. W

Graduate level introduction to qualitative methods, with special attention to ethnographic research on schooling. Moves from overview of different methods, through examination of selected studies, to discussion of issues in research design, data collection, analysis, and writing. Enrollment restricted to graduate students; priority is given to graduate students in education. Enrollment limited to 12. *L. Bartlett*

200D. Advanced Topics in Qualitative Research. W,S

Analyzes topics, which vary systematically from year to year, including analysis of classroom interaction, video recording and transcription, coding and analysis of discourse data, and software programs for qualitative analysis. Prerequisite(s): course 200C. Enrollment restricted to graduate students. Enrollment limited to 12. May be repeated for credit. (W) J. Moschkovich; (S) B. Olsen

203. Applied Classroom Analysis and Methods: Beginning Student Teaching. F A required course that introduces students to the diverse cultural and linguistic

A required course that introduces students to the diverse cultural and linguistic settings of today's classrooms. Classroom practices, instructional strategies, and analysis are emphasized. First course in the student teaching placement series. Placements are used to examine and apply teaching methods while developing classroom management skills. Class meetings include discussion and demonstration of teaching methods. Enrollment restricted to graduate students. Enrollment limited to 50. *The Staff*

210A. Writing Across the Curriculum for Secondary (2 credits). Su

Reviews issues of literacy and writing in secondary content areas. Students write in several genre and prepare lesson plans for teaching writing within the discourse of their respective curricular area. Enrollment restricted to education graduate students. Enrollment limited to 45. *The Staff*

211A. Reading and Language Arts for Elementary Classrooms. F

This course provides both a theoretical and practical foundation for literacy instruction, emphasizing reading and language arts instruction in grades K–8. Interactive instruction and field experience will be used to examine curricula, methods, materials, and literacy evaluation. Enrollment restricted to graduate students. Enrollment limited to 30. (*F*) *L. Pease-Alvarez*

211B. Reading Across the Curriculum in Middle School and Secondary. Su

Provides a theoretical and practical foundation for teaching reading within content area instruction in middle school and secondary classrooms. Field experiences and interactive instruction will facilitate learning about strategies, curricula, methods, materials, and observation. Intended for students pursuing a single subject credential. Enrollment restricted to graduate students. Enrollment limited to 30. *The Staff*

212A. Science Learning and Teaching in Elementary Classrooms. W

Examines constructivist and sociocultural approaches to the learning and teaching of science in elementary classrooms, including beliefs about the nature of science and theories of how children learn science. Provides a critical overview of curricula, instructional theories, and multiple approaches to teaching the "big ideas" in elementary science. Enrollment restricted to graduate students admitted to the credential program. Enrollment limited to 50. *The Staff*

212B. Science Education: Research and Practice. F

Examines theoretical approaches to the learning and teaching of science including the nature of scientific knowledge, theories of how children learn science, approaches to scientific discourse, and perspectives on addressing diversity in science classrooms. Course is required for single subjects science credential. Enrollment restricted to program enrollees. Enrollment limited to 50. *D. Ash*

212C. Teaching Science in the Secondary Classroom. W

Examines constructivist and sociocultural approaches to teaching science in secondary classrooms. Course will provide a critical overview of curricula, instructional theories, and multiple approaches to teaching the "big ideas" in science. Enrollment restricted to program enrollees. Enrollment limited to 50. *The Staff*

213A. Mathematics Learning and Teaching in Elementary Classrooms. F

This course is required for the multiple subject credential. Examines constructivist and sociocultural approaches to the learning and teaching of mathematics in elementary classrooms, including the nature of mathematics and theories of how children learn mathematics. Provides an introduction to mathematics teaching standards and a critical overview of curricula, instructional theories, and multiple approaches to teaching the "big ideas" in elementary mathematics. Enrollment restricted to graduate students admitted to the credential program. Enrollment limited to 50. *The Staff*

213B. Math Education: Research and Practice. F

Examines theoretical approaches to the learning and teaching of mathematics. Topics include the nature of mathematical knowledge, theories of how children learn mathematics, approaches to mathematical discourse, and perspectives on addressing diversity in mathematics classrooms. Course is required for secondary mathematics credential. Enrollment restricted to graduate students admitted to the credential program. Enrollment limited to 50. *J. Moschkovich*

213C. Teaching Mathematics in the Secondary Classroom. W

Examines constructivist and sociocultural approaches to teaching mathematics in the secondary classroom. Course will provide an introduction to mathematics teaching standards and a critical overview of curricula, instructional theories, and multiple approaches to teaching the "big ideas" in secondary mathematics. Required for mathematics secondary credential. Prerequisite(s): course 213B. Enrollment restricted to graduate students admitted to the credential program. Enrollment limited to 50. *M. Melville*

214A. English Teaching: Theory and Curriculum. F

Required for the single subject English credential student. Examines sociocultural approaches to the learning and teaching of English in secondary classrooms, including theories of how children learn English language, literature, and composition. Enrollment restricted to education graduate students. *B. Olsen*

214B. English Teaching for Secondary Classrooms. W

Prepares English single subject credential candidates for student teaching in winter and spring. Course focuses on developing curricula and strategies in the content area. Through classroom placements, students observe and apply techniques to develop curriculum units used in student teaching. Enrollment restricted to graduate students. Enrollment limited to 50. *L. Baker*

215A. Social Science: Theory and Curriculum. F

Required for the single subject social science credential student. Tracks both the implicit and explicit connections between theory and practice, illustrating that theory suggests best practice while practice informs theory-formation and testing. Enrollment restricted to education graduate students. *D. Martin*

215B. Social Science Teaching for Secondary Classrooms. W

Prepares social science single subject credential candidates for student teaching in winter and spring. Course focuses on developing curricula and strategies in the content area. Through classroom placements, students observe and apply techniques to develop curriculum units that are used in student teaching. Enrollment restricted to graduate students. Enrollment limited to 50. *S. Roe*

220. Introduction to Technology in Schools (2 credits). Su

This course is required for prospective teachers. It provides an overview of the use of technology in the K–12 classroom. Topics covered include using the Internet and the web, building a web page, and using resources for educators on the web. Students will review software applications in a particular content area, use technology to develop lesson plans, and create integrated, thematic curricula in which technology is utilized to promote higher-order thinking, creativity, and problem-solving. Enrollment restricted to graduate students admitted to the credential program. Enrollment limited to 50. *The Staff*

242. Promoting Biliteracy and Bilingualism.

Designed to meet specific goals for students pursuing the Bilingual Crosscultural, Language and Academic Emphasis Credential (BCLAD). Provides a forum for students to examine the role of the bilingual teacher in the classroom and society with an overview of current bilingual methodology and philosophy for literacy and content instruction in Spanish/English bilingual classes. To enhance participants' Spanish language development, the class is conducted in Spanish. Enrollment restricted to graduate students admitted into the credential program. *The Staff*

242A. Language, Literacy, and Diversity. S

Designed to prepare students to teach reading/language arts in a way that addresses the needs and circumstances of a culturally and linguistically diverse student population. Topics include the following: exploration of the literacy development of native and non-native speakers of English, understanding the theoretical perspectives on language and literacy development, learning instructional approach that enhance development of literacy, and learn to assess students' literacy development. Enrollment restricted to graduate students admitted into the credential program. *T. Marchese*

250. Teaching, Learning, and Schooling. Su

Required for master's students in education. Three basic units comprise the subject matter: teaching/learning, with such topics as development, learning, pedagogy, and socialization theories; second, schooling, as the context of teaching/learning both in its existent structures and its reform movements; third, the sociocultural context in which educational institutions exist, topics such as cultural and historical forces, political and economic condition, family, and community structures. Enrollment restricted to graduate students. *C. Wells, L. Johnson*

253. Methods of English Language Development. F,W

This course will help future educators develop a practical theory for teaching English in the elementary and secondary schools to students who speak other languages. Topics include current trends in the field, language assessment, and the design of instructional units. Enrollment restricted to program enrollees. Enrollment limited to 30. *K. Tellez, G. Bunch, N. Winkler*

260A. Math Education and Latinos (2 credits). F

Introduction to research literature relevant to mathematics education and Latinos and topics such as "Language and Mathematics Learning" and "Teaching Mathematics in Bilingual Classrooms." Intended for education Ph.D. students working with the Center for Mathematics Education and Latinos (CEMELA). Seminar extends over three quarters (fall, winter, spring). Enrollment restricted to graduate students. Enrollment limited to 10. *J. Moschkovich*

260B. Math Education and Latinos (2 credits). W

Introduction to research literature relevant to mathematics and Latinos and topics such as "Language and Mathematics Learning" and "Teaching Mathematics in Bilingual Classrooms." Intended for education Ph.D. students working with the Center for Mathematics Education and Latinos (CEMELA). Seminar extends over three quarters (fall, winter, spring). Enrollment restricted to graduate students. Enrollment limited to 10. *J. Moschkovich*

260C. Math Education and Latinos (2 credits). S

Introduction to research literature relevant to mathematics education and Latinos and topics such as "Language and Mathematics Learning" and Teaching Mathematics in Bilingual Classrooms." Intended for education Ph.D. students working with the Center for Mathematics Education and Latinos (CEMELA). Seminar extends over three quarters (fall, winter, spring). Enrollment restricted to graduate students. Enrollment limited to 10. *K. Tellez*

261. Thinking, Learning, and Teaching. F

Examines multiple theoretical perspectives on thinking, learning, and teaching; the development of the whole person in a variety of cultural contexts; the roles thinking, learning, and teaching play in that development; and how researchers' and educators' conceptions shape instruction. Enrollment restricted to education graduate students. Enrollment limited to 15. *C. Wells*

262. Social and Cultural Context of Education. W

Application of anthropological and sociological theories to study of education. Examines social, cultural, and linguistic context of schooling with particular attention to role of race, class, culture, power, and language in influencing schooling outcomes. Enrollment restricted to graduate students. Enrollment limited to 15. *M. Gibson*

263. Foundations of Educational Reform. W

Core course in Ph.D. program in education providing students with multiple analytic perspectives from which to examine important educational issues by analyzing political, historical, and philosophical origins of educational reform in the U.S. and internationally. Enrollment restricted to graduate students. Enrollment limited to 10. *R. Glass*

264. Research on Teacher Development and Teacher Education.

Addresses personal and professional development of teachers. Explores models of teacher education with specific attention to methods and processes by which teachers can be better prepared to work with culturally and linguistically diverse students. Enrollment restricted to graduate students. Enrollment limited to 20. *P. Stoddart*

265A. Topics in Elementary Education: Creating a Supportive, Healthy Environment for Student Learning (2 credits). Su

Addresses the preparation of teachers for creating a supportive, healthy environment for student learning. Covers topics related to physical, emotional, and social health. Enrollment restricted to graduate students. *J. Gordan*

265B. Topics in Elementary Education: Teaching Special Populations (2 credits). F

Addresses the preparation of teachers for meeting needs of special populations within the general education setting. Covers basic knowledge, skills, and strategies. Enrollment restricted to graduate students. Enrollment limited to 50. *The Staff*

266A. Theoretical Perspectives on Learning and Using Literacy. *

Examines theoretical perspectives, educational issues, and scholarship related to use and development of literacy among diverse populations, particularly those who have not fared well in U.S. schools. Enrollment restricted to graduate students. Enrollment limited to 12. *L. Pease-Alvarez*

266B. Sociolinguistics in Education.

Investigates discipline of sociolinguistics and explores actual ways in which sociolinguistics has become a useful lens for better understanding teaching, learning, and schooling. Conduct own sociolinguistic analyses of data collected for culminating project. Enrollment restricted to graduate students. Enrollment limited to 15. *B. Olsen*

266C. Language Acquisition, Bilingualism, and Education.

Foundations of first- and second-language acquisition and bilingualism with emphasis on implications for education in linguistically diverse settings. Topics include linguistic, cognitive, sociolinguistic, and sociocultural approaches to development of languages and the nature of individual and societal bilingualism. Enrollment restricted to graduate students. Enrollment limited to 20. *G. Bunch*

266D. Language and Power in Education.

Examines relationships between sociopolitical struggles and language/language practices. Students study ways in which Marxism, critical theory, and post structuralism have represented links between language and power, and investigate contemporary studies of language and power in education. Enrollment restricted to graduate students. Enrollment limited to 15. *B. Olsen*

266F. Theory and Practice of Writing. F

Explores first and second language-writing theory, research, and practice, especially relating to language minority students and others considered academically underprepared. Focuses on educational settings from pre-school settings including families and communities. Enrollment restricted to graduate students. Enrollment limited to 15. *L. Pease-Alvarez, G. Bunch*

266G. Critical Exploration of Reading Theory and Practice. W

Doctoral seminar that examines historical and current research on reading processes and instructional practices. Intensive study of factors affecting the development of proficient, engaged, and reflective readers who can acquire new knowledge from text. Enrollment restricted to graduate students. Enrollment limited to 15. *J. Scott*

267A. Conceptual Change in Science and Mathematics.

Examines approaches in cognitive science, mathematics education, and science education to documenting student conceptions in science and mathematics, defining conceptual change, and describing relationship between conceptual change and learning with understanding. Enrollment restricted to graduate students. Enrollment limited to 12. *J. Moschkovich*

267B. Informal Learning in Sciences and Mathematics. S

Explores research on learning outside of school in multiple settings such as museums, after-school clubs, aquariums, workplaces, and homes. Readings draw from multiple fields and disciplines, including cognitive psychology, cognitive anthropology, cognitive science, education, museum education and evaluation, science, and mathematics education. Examine theoretical approaches to describing and understanding how people learn science and mathematics outside of school, empirical studies documenting learning in multiple non-school settings, and diversity issues in out-of-school settings. Enrollment restricted to graduate students. Enrollment limited to 20. *D. Ash*

267C. Equity and Social Justice in Mathematics and Science Education.

Examines the theory, research, policy and practice of social justice and equity in mathematics and science education in local, national, and international contexts. Emphasizes the promotion of equity and critical mathematics and science literacy in schools and communities. Enrollment restricted to graduate students. *J. Shaw*

267D. Gender in Mathetmatics and Science Education.

Explores basic aspects of gender in the fields of mathematics and science education. Discusses historical trends, current dilemmas, and how science and mathematics block or enable access for women. Enrollment restricted to graduate students. Enrollment limited to 15. *D. Ash*

268A. Ethnographies of Education. W

Offers opportunity to critique a range of book-length ethnographic studies of education focusing on relationship between culture, learning, and schooling in the U.S. with comparative studies from other countries. Enrollment restricted to graduate students. Enrollment limited to 12. *M. Gibson*

268B. School Organization. S

Applies multiple perspectives drawn from organizational theory, highlighting important aspects of organization of schools, including their operational environment, instructional organization, and professional and bureaucratic dimensions. Enrollment restricted to graduate students. Enrollment limited to 12. *R. Ogawa*

268C. CHAT and Educational Practice and Research.

Introduction to cultural-historical activity theory (CHAT) based on work of Vygotsky, Bakhtin, and contemporary developments of their ideas. Explores the utility of CHAT as a framework for thinking about educational practice and research. Enrollment restricted to graduate students. Enrollment limited to 15. *C. Wells*

268D. Comparative and International Education.

Examines educational access and advancement in several nations affected by globalization, national policies, and localized identity and opportunity structures. Attention to language and cultural expectations relevant to research in international contexts and how this knowledge provides reflection on the American condition. Enrollment restricted to graduate students. Enrollment limited to 15. *J. Gordon*

268E. Ideology and Education.

Philosophical study of the theory of ideology from Marx to the present and how ideologies (racism, sexism, classism, linguicism, abilityism) become embodied, reproduced, resisted, and transformed (and particularly the role of education therein). Enrollment restricted to graduate students. Enrollment limited to 22. *R. Glass*

268F. Critical Theories of Education.

Investigates critical theories in education. Situates the themes against and within critical theory and philosophic foundations of Paulo Freire's theory of liberation education. Elaborates these themes within the discourses on critical race theory and education, and feminism and education. Enrollment restricted to graduate students. Enrollment limited to 15. *R. Glass*

269A. First-Year Doctoral Proseminar (2 credits). F

This three-quarter seminar supports professional development for first-year doctoral students. Students develop essential skills for success as scholars, discuss issues in educational research and practice, and are introduced to research by Education Department faculty. Enrollment restricted to graduate students. Enrollment limited to 15. *L. Pease-Alvarez*

269B. First-Year Doctoral Proseminar (2 credits). W

This three-quarter seminar supports professional development for first-year doctoral students. Students develop essential skills for success as scholars, discuss issues in educational research and practice, and are introduced to research by Education Department faculty. Enrollment restricted to graduate students. Enrollment limited to 15. *L. Pease-Alvarez*

269C. First-Year Doctoral Proseminar (2 credits). S

This three-quarter seminar supports professional development for first-year doctoral students. Students develop essential skills for success as scholars, discuss issues in educational research and practice, and are introduced to research by Education Department faculty. Enrollment restricted to graduate students. Enrollment limited to 15. *R. Ogawa*

270A. Second-Year Professional Development Seminar (2 credits). F

Three-quarter seminar supports professional development for second-year doctoral students. Activities include preparation of research and conference proposals, presentation of second-year project findings, and attendance at department colloquia. Enrollment restricted to second-year Ph.D. students. Enrollment limited to 12. *J. Scott*

270B. Second-Year Professional Development Seminar (2 credits). W

Three-quarter seminar supports professional development for second-year doctoral students. Activities include preparation of research and conference proposals, presentation of second-year project findings, and attendance at department colloquia. Enrollment restricted to second-year Ph.D. students. Enrollment limited to 12. *J. Scott*

270C. Second-Year Professional Development Seminar (2 credits). S

Three-quarter seminar supports professional development for second-year doctoral students. Activities include preparation of research and conference proposals, presentation of second-year project findings, and attendance at department colloquia. Enrollment restricted to second-year Ph.D. students. Enrollment limited to 12. *J. Scott*

271. Social, Political, and Economic Contexts of Schooling.

Explores educational leaders' response to the interactions of SES, race, ethnicity, regionalism, immigrant status, religion, gender as they impact attitudes and aspirations of students, parents, and communities. Enrollment restricted to graduate students in the Ed.D program. Enrollment limited to 20. *R. Glass*

275F. Research Seminar in Educational Reform: Supporting Data Collection 277B. F

Familiarizes students with the basic concepts of educational research and facilitates progress toward completion of dissertation while identifying faculty and community resources available to assist in research. Enrollment restricted to Ed.D. graduate students. *S. Parsons*

275G. Research Seminar in Educational Reform: Supporting Data Collection 277C. W

Familiarizes students with the basic concepts of educational research and facilitates progress toward completion of dissertation while identifying faculty and community resources available to assist in research. Enrollment restricted to Ed.D. graduate students. *R. Glass*

275H. Research Seminar in Educational Reform: Supporting Data Collection 277D. S

Familiarizes students with the basic concepts of educational research and facilitates progress toward completion of dissertation while identifying faculty and community resources available to assist in research. Enrollment restricted to Ed.D. graduate students. *R. Glass*

275I. Research Seminar in Educational Reform: Supporting Dissertation Writing 279A.

Familiarizes students with the basic concepts of educational research and facilitates progress toward completion of dissertation while identifying faculty and community resources available to assist in research. Enrollment restricted to Ed.D. graduate students. *The Staff*

275J. Research Seminar in Educational Reform: Supporting Dissertation Writing 279B. F

Familiarizes students with the basic concepts of educational research and facilitates progress toward completion of dissertation while identifying faculty and community resources available to assist in research. Enrollment restricted to Ed.D. graduate students. *The Staff*

275K. Research Seminar in Educational Reform: Supporting Dissertation Writing 279C.

Familiarizes students with the basic concepts of educational research and facilitates progress toward completion of dissertation while identifying faculty and community resources available to assist in research. Enrollment restricted to Ed.D. graduate students. *The Staff*

275L. Research Seminar in Educational Reform: Supporting Dissertation Writing 279D.

Familiarizes students with the basic concepts of educational research and facilitates progress toward completion of dissertation while identifying faculty and community resources available to assist in research. Enrollment restricted to Ed.D. graduate students. *The Staff*

277A. Data Collection and Fieldwork.

Data collection in the field is required of all joint Ed.D. students for four quarters in the second year. Students are assigned to a faculty member who supervises data collection, liaises with district mentors, and conducts problem-solving seminars. Enrollment restricted to Ed.D. graduate students. Enrollment limited to 20. *The Staff*

277B. Data Collection and Fieldwork. F

Data collection in the field is required of all joint Ed.D. students for four quarters in the second year. Students are assigned to a faculty member who supervises data collection, liaises with district mentors, and conducts problem-solving seminars. Enrollment restricted to Ed.D. graduate students. Enrollment limited to 20. *C. Sleeter*

277C. Data Collection and Fieldwork. W

Data collection in the field is required of all joint Ed.D. students for four quarters in the second year. Students are assigned to a faculty member who supervises data collection, liaises with district mentors, and conducts problem-solving seminars. Enrollment restricted to Ed.D. graduate students. Enrollment limited to 20. *The Staff*

277D. Data Collection and Fieldwork. S

Data collection in the field is required of all joint Ed.D. students for four quarters in the second year. Students are assigned to a faculty member who supervises data collection, liaises with district mentors, and conducts problem-solving seminars. Enrollment restricted to Ed.D. graduate students. Enrollment limited to 20. S. Waltz

279A. Dissertation Supervision for Ed.D..

Supervision of Ed.D. candidate through third year of research analysis, writing, and editing of dissertation. Preparation for oral defense and assistance with bringing dissertation to standards of publication and conference presentation. Enrollment restricted to Ed.D. graduate students. Enrollment limited to 20. *R. Ogawa, J. Gordon*

279B. Dissertation Supervision for Ed.D.. F

Supervision of Ed.D. candidate through third year of research analysis, writing, and editing of dissertation. Preparation for oral defense and assistance with bringing dissertation to standards of publication and conference presentation. Enrollment restricted to Ed.D. graduate students. Enrollment limited to 20. *G. Arriaza*

279C. Dissertation Supervision for Ed.D.. W

Supervision of Ed.D. candidate through third year of research analysis, writing, and

editing of dissertation. Preparation for oral defense and assistance with bringing dissertation to standards of publication and conference presentation. Enrollment restricted to Ed.D. graduate students. Enrollment limited to 20. *N. Reis*

279D. Dissertation Supervision for Ed.D. S

Supervision of Ed.D. candidate through third year of research analysis, writing, and editing of dissertation. Preparation for oral defense and assistance with bringing dissertation to standards of publication and conference presentation. Enrollment restricted to Ed.D. graduate students. Enrollment limited to 20. *C. Sleeter*

281. Social Foundations of Education. Su

A sustained inquiry into the social, political, economic, and historical foundations of schools with an emphasis on community attitudes toward education. Student narratives of engagement and resistance will provide a basis for insights and interventions useful to educators. Enrollment restricted to program enrollees. Enrollment limited to 50. S. Flinspach, M. Gibson, J. Gordon

283. Intermediate Student Teaching. W

Designed to provide students enrolled in the UCSC teacher education program a coherent, integrated, pre-professional experience in public school classrooms. Students assume part-time student teaching responsibilities totalling 14–16 hours per week under the direct supervision of an exemplary classroom teacher. Weekly seminars and ongoing supervision by department staff are required. Prerequisite(s): course 203. Enrollment restricted to graduate students majoring in education. Enrollment limited to 50. *The Staff*

283A. Intermediate Student Teaching: Single Subject. W

Provides advanced pre-professional experience for single subject teaching candidates who progressively assume full-time responsibility for public school student teaching beginning in winter quarter. Taken concurrently with course 283. Weekly supervision and seminars with teacher supervisors are required. Enrollment restricted to masters of art in education teacher credential students. Enrollment limited to 20. *The Staff*

284A. Advanced Student Teaching. S

Designed for students who have completed course 283, have extensive field and course experience in education, and who wish to qualify for the single-subject or multiple-subject teaching credential by undertaking a quarter of full-time, supervised student teaching. Enrollment restricted to education graduate students. *The Staff*

284B. Advanced Student Teaching. S

Designed for students who have completed course 283, have extensive field and course experience in education, and who wish to qualify for the single-subject or multiple-subject teaching credential by undertaking a quarter of full-time, supervised student teaching. Enrollment restricted to education graduate students. *The Staff*

284C. Advanced Student Teaching. S

Designed for students who have completed course 283, have extensive field and course experience in education, and who wish to qualify for the single-subject or multiple-subject teaching credential by undertaking a quarter of full-time, supervised student teaching. Enrollment restricted to education graduate students. *The Staff*

286. Research and Practice in Science Teaching for Research.

Designed for graduate students who will teach as professionals and are currently teaching assistants. Offers background on research and practical methods for

teaching science to all ages. Enrollment restricted to science graduate students. Enrollment limited to 15. *The Staff*

288A. Topics in Elementary Education: Physical Education (2 credits). Su

Examines pedagogical understanding in teaching physical education. Introduces candidates to theoretical and research basis in physical education and content standards and frameworks. Also investigates and presents instructional practices. Enrollment restricted to graduate education master's/credential majors. Enrollment limited to 40. *C. Johnston*

288B. Topics in Elementary Education: Visual Arts (2 credits). Su

Examines pedagogical understanding in teaching visual arts. Introduces candidates to theoretical and research basis for teaching visual arts and content standards and frameworks. Also investigates and presents instructional practices. Enrollment restricted to graduate education master's/credential majors. Enrollment limited to 40. *S. Megordan*

288C. Topics in Elementary Education: Performing Arts (2 credits). Su

Examines pedagogical understanding in teaching performing arts. Introduces candidates to theoretical and research basis for teaching performing arts and content standards and frameworks. Also investigates and presents instructional practices. Enrollment restricted to graduate education master's/credential majors. Enrollment limited to 40. *C. Johnston*

293A. Research Apprenticeship (2 credits). F,W,S

Research apprenticeship under guidance of faculty member during first or second year of doctoral studies. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

293B. Research Apprenticeship. F,W,S

Research apprenticeship under guidance of faculty member during first or second year of doctoral studies. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

294. Second-Year Research Project. F,W,S

Doctoral students work with faculty advisors to plan, carry out, and write up small independent research project during second year of graduate studies. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

295. Portfolio Development (2 credits). *

Provides student and faculty adviser with time to confer over the completion of the required portfolio. Enrollment restricted to graduate students. *The Staff*

297. Independent Study. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

297F. Independent Study (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

299. Thesis Research. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Electrical Engineering

Baskin School of Engineering 335 Baskin Engineering Building (831) 459-2158

http://www.soe.ucsc.edu

Changes to 2006-08 Catalog Highlighted | Faculty | Course Descriptions

Mission Statement

The mission of the Electrical Engineering Department is to build and sustain a teaching and research program to provide undergraduate and graduate students with inspiration and quality education in the theory and practice of hardware- and information-processing-oriented electrical engineering; serving industry, science, and government; and bringing faculty and staff a rewarding career in teaching, research, and service. The electrical engineering program is accredited by the Engineering Accreditation Committee of the Accreditation Board for Engineering and Technology (ABET).

Summary of Objectives

The educational objectives that the Electrical Engineering Department strives to provide for students are focused in five areas: fundamental prerequisites in theory, design, and basic science for a career based on electrical engineering; a scope of application that provides theory and practical knowledge as well as specialized training in hardware- and information-oriented electrical engineering; a professional approach to engineering in terms of high quality work skills in communication, teamwork, responsibility, high ethical standards, and participation in lifelong learning and the professional engineering community; encouragement and motivation based on a milieu of readily available opportunities, mentoring, and advising; and the basis for a successful transition to an engineering career, including an ability to apply research to engineering and opportunities for experience in an industry setting.

Engineering is a profession that emphasizes analysis and design, and electrical engineers apply their knowledge to an expanding array of technical, scientific, and mathematical questions. A good engineering education has three parts: a sound foundation in mathematics and science, substantial design experience to develop skills and engineering aesthetics, and a focus in the humanities and social sciences to learn how and where to apply the skills developed. Electrical engineering is a very broad discipline; the program at UCSC complements existing campus programs, emphasizing three general areas: electronics/optics (including digital and analog circuits and devices); communications (including signal and image processing and control); and VLSI design, micro-technology, nanotechnology, and biomedical devices.

The undergraduate curriculum provides a balance of engineering science and design. For the first two years, all electrical engineering students are expected to take a basic set of lower-division mathematics, physical science, and engineering courses. After the first two years, electrical engineering students focus on topics within the discipline and specialize in one of two options: electronics/optics, including digital and analog circuits and devices, VLSI design, optoelectronics, electromagnetics, and biomedical device engineering; or communications, signals, systems, and control, including optical, wireless communication, signal and image processing, networks signal processing, instrumentation, and control. Students interested in admission to the electrical engineering major should contact the Baskin School of Engineering Undergraduate Advising office, (831) 459-5840 or advising@soe.ucsc.edu.

Electrical Engineering Policies

Admissions Policy

Admission to the electrical engineering major is selective. First-year applicants may receive direct admission at the time they apply to UCSC based on their high school record and test scores. Otherwise, students apply to the major based on performance in the foundation courses:

Mathematics 19A-B, Applied Mathematics and Statistics 27, Physics 5A, 5B, and 5C. Please refer to the School of Engineering section of the catalog for the full admissions policy. Transfer students are evaluated on their equivalents of the foundation courses listed above.

Course Substitution

Please refer to the School of Engineering section of the catalog for the policy regarding course substitution.

Disqualification Policy

Please refer to the School of Engineering section of the catalog for the Major Disqualification Policy.

Letter Grade Policy

The Electrical Engineering Department requires letter grading for all courses applied toward the B.S. degree, with the exception of two lower-division courses, which students may elect to take Pass/No Pass. This exception does not include course 70/L, which must be taken for a letter grade.

Transfer Students

Please refer to the School of Engineering section of the catalog for the policy regarding transfer students and admission of transfer students to the electrical engineering major.

School of Engineering Policies

Please refer to the School of Engineering section of the catalog for additional policies that apply to all School of Engineering programs.

Major Requirements

In addition to completing UCSC's general education requirements, students must complete 15 lower-division science and engineering courses, plus associated laboratories; eight upper-division engineering courses, plus associated laboratories; four engineering electives; and a comprehensive senior design project course. To plan for completion of these requirements within the normative time, students should consult with an adviser at the Baskin School of Engineering Undergraduate Advising office as early as possible.

Lower-Division Requirements

Students gain a solid foundation in calculus, engineering mathematics, physics, computer science, and computer engineering during their first two years. Majors must complete the following 15 lower-division courses (including corresponding laboratories). These courses form part of the prerequisite sequence and should be completed during the first two years at UCSC. The requirements are rigorous; students must be prepared to begin these courses early in their studies.

Electrical Engineering

70/L, Introduction to Electronic Circuits /Laboratory 80T, Modern Electronic Technology and How It Works

Computer Engineering

16, Applied Discrete Mathematics; or 16H, Honors Applied Discrete Mathematics 12/L, Computer Systems and Assembly Language/ Laboratory 80E, Engineering Ethics

Computer Science

12A/L, Introduction to Programming/Laboratory; or 13H, Introduction to Programming and Data Structures (Honors)/Laboratory

Mathematics

19A-B, Calculus for Science, Engineering, and 23A-B, Multivariable Calculus

Applied Mathematics and Statistics

27/L, Mathematical Methods for Engineers/Laboratory (formerly Mathematics 27)

Physics

5A/L, 5B/M, 5C/N, Introduction to Physics/Laboratories 5D, Heat, Thermodynamics, and Kinetics

Ethics

Students must take one of the following courses:

Computer Engineering 80E, Engineering Ethics

Philosophy 22, Introduction to Ethical Theory Philosophy 24, Introduction to Ethics: Contemporary Moral Issues

Philosophy 28, Environmental Ethics

Biomolecular Engineering 80G/Philosophy 80G, Bioethics in the 21st Century:

Science, Business, and Society

This course is required even for transfer students who have had their general education requirements waived.

Upper-Division Requirements

Thirteen upper-division courses along with associated 1- or 2-credit laboratories are required for the major. The course requirements include both depth and breadth, technical writing, and a comprehensive capstone design project.

All students are required to take the following eight upper-division courses, with associated laboratories:

Electrical Engineering

103, Signals and Systems

135/L, Electromagnetic Fields and Waves/Laboratory

145/L, Properties of Materials/Laboratory

151, Communications Systems

171/L, Analog Electronics/Laboratory

Computer Engineering

100/L, Logic Design/Laboratory

107, Mathematical Methods of Systems Analysis: Stochastic

185, Technical Writing for Computer Engineers

Required Electives. In addition to completing the above required courses, electrical engineering majors must complete four elective courses chosen from the list below. At least three must be from one of the depth-sequence tracks listed. Certain graduate-level courses as well as those courses taught in conjunction with graduate courses may also be used to fulfill an elective requirement as listed below. No course may be counted twice. See the electrical engineering web site for course descriptions: www.ee.ucsc.edu/academics.htm.

Electronics/Optics Track

Electrical Engineering

115, Introduction to Micro-Electro-Mechanical-Systems Design

130L/230, Introduction to Optoelectronics and Photonics and Optical Fiber Communication/Laboratory

136, Engineering Electromagnetics (strongly recommended)

154, Feedback Control Systems

172/221 Advanced Analog Circuits/Advanced Analog Integrated Circuits

178, Device Electronics

211, Introduction to Nanotechnology

231, Optical Electronics

Computer Engineering

118/L, Introduction to Mechatronics/Laboratory

121/L, Microprocessor System Design/Laboratory (strongly recommended)

173/L, High Speed Digital Design/Laboratory

Applied Mathematics and Statistics

147, Computational Methods and Applications

Communications, Signals, Systems, and Controls Track

Electrical Engineering

130L/230, Introduction to Optoelectronics and Photonics, and Optical Fiber Communication/Laboratory

136, Engineering Electromagnetics (strongly recommended)

152/252, Introduction to Wireless Communications

153/250, Digital Signal Processing

154/241, Feedback Control Systems and Introduction to Feedback Control Systems 262, Statistical Signal Processing 264, Image Processing and Reconstruction

Computer Engineering

118/L, Introduction to Mechatronics/Laboratory 150, Introduction to Computer Networks 251, Error-Control Coding

Applied Mathematics and Statistics

- 147, Computational Methods and Applications
- 162, Design and Analysis of Computer Simulation Experiments

The senior-year curriculum enables students to pursue independent study with a faculty member. Electrical engineering students are encouraged to take advantage of the opportunity to work within a faculty member's research group as part of their educational experience. Internship programs with local industry are available.

Comprehensive Requirement

The senior comprehensive requirement for electrical engineering majors is in two parts: a project course and assessment options.

Project Course

Students must complete one capstone design course that spans two quarters, Electrical Engineering 123A and 123B, or complete a senior thesis. These senior-level courses encompass an in-depth project, including analysis, design, testing, and documentation, requiring students to call upon knowledge acquired throughout their undergraduate studies. Current course choices include the following:

Electrical Engineering

123A and 123B, Engineering Design Project I and Engineering Design Project II (5 credits each)

195, Senior Thesis Project (10 credits over two quarters)

Outcomes Assessment Options

The Electrical Engineering Department requires an outcomes assessment. All students are required to complete an exit survey and meet with a faculty member for an exit interview. The specifics of the outcomes assessment may change from year to year; for this catalog year, students must complete one of the following options:

- maintenance of a 2.5 grade point average in all required and elective courses for the major; or
- · senior thesis submission; or
- · portfolio review.

Portfolios must include the following:

- project report(s);
- a one- or two-page overview of the student's contribution to the project(s);
- a two-page essay concerning the relationship of engineering to society (specific topics will be provided by the Electrical Engineering Department).

The portfolios must be submitted electronically at least seven days before the end of the instruction in the quarter of graduation. Portfolios will not be returned.

Electrical Engineering Major Planners

The following are two sample academic plans for students to complete during their first two years as preparation for the electrical engineering major.

Year	Fall	Winter	Spring
1st (frsh)	Math 19A Phys 5A/L	Math 19B Phys 5B/M EE 80T	Ams 27/L Phys 5C/N
2nd (soph)	Phys 5D EE 70/L Cmpe 12A/L	Math 23A Cmpe 12/L	Math 23B EE 171/L

Year	Fall	Winter	Spring
1st (frsh)	AMS 3 Cmpe 3	Math 19A Cmpe 12/L EE 80T	Math 19B Cmps 12A/L
2nd (soph)	Phys 5A/L Cmpe 16 or 16H	Phys 5B/M Math 23A Cmpe 100/L	Phys 5C/N AMS 27/L Cmpe 80E

Additional information about this program can be found on the department's web site at www.soe.ucsc.edu/programs/undergraduate/.

Graduate Programs

The Department of Electrical Engineering (EE) at the University of California, Santa Cruz (UCSC) offers M.S. and Ph.D. degree programs and conducts research in:

- Photonics and Electronics focusing on VLSI, electronic and optoelectronic materials, devices, circuits and systems for information transmission, storage, processing, and display, especially for optical fiber communications and lower power, high performance systems, biomedical device instrumentation and MEMS;
- Signal Processing and Communications, including wireless and optical communications, coding, digital signal processing, image and video processing;
- Remote Sensing including wave propagation and scattering radar oceanography, and microwave remote sensing.
- Nanotechnology including applications to bio-medicine, integrated optics for biomedical imaging, opto-thermo-electric energy conversion, near-field scanning optical microscopy, nano-magneto-optics, and micro-fluidics.

EE enjoys a close relationship with the Departments of Applied Mathematics and Statistics, Computer Science, Computer Engineering, Biomolecular Engineering, Chemistry, Physics, Astronomy, and Molecular, Cell and Developmental Biology faculty. The Electrical Engineering faculty are affiliated with: 1) several federally funded and nationally recognized centers such as the Center for Biomimetic MicroElectronic Systems, the Center for Adaptive Optics, and the Center for Biomolecular Science and Engineering; 2) state-funded centers such as the Institute for Quantitative Biology (QB3), the Center for Information Technology Research in the Interest of Society (CITRIS), and the Institute for Regenerative Medicine (CIRM); and 3) many EE faculty participate in the University Affiliated Research Center (UARC) at NASA-Ames, which is managed by UCSC. The department also has ties to nearby industry, employing electrical engineering professionals as visiting and adjunct faculty and arranging for students to gain practical research experience through work in industrial labs. Indeed, the department strongly encourages students of all nationalities to seek practical training as part of their graduate education.

Students begin the program with the completion of courses in a core area of interest and then proceed to do research in their area of specialization. The M.S. degree can be completed in two years. M.S. students must complete a master's thesis. A Ph.D. degree is usually completed in four to six years. Ph.D. students are required to take a preliminary exam within their first two years of study. After completing the course requirements, students must pass an oral qualifying exam and write a dissertation. Part-time study is possible for students working in industry while attending school.

Requirements for the Master's Degree

Course Requirements

Each student is required to take 45 units which must consist of:

- At least 15 units in one of the four core areas of emphasis defined above.
- At least 25 of the total 45 units must be satisfied through EE graduate courses.
- At most 10 units of independent study (EE 297, EE 299) are counted toward the EE course requirements.

Total units required for the M.S. degree = 45.

Note that each graduate course satisfying the above requirements typically covers 5 units.

Thesis

Completion of a master's thesis is required for the Master's degree. To fulfill this requirement, the student submits a written proposal to a faculty member, usually by the third academic quarter. By accepting the proposal, the faculty member becomes the thesis adviser. In consultation with the adviser, the student forms a Master's Thesis Reading Committee with at least two additional faculty members, each of whom is provided a copy of the proposal. Upon completion of the thesis work, the student presents an expository talk on the thesis research, and the final thesis must be accepted by the review committee before the award of the Master of Science degree.

MS students admitted to continue to the Ph.D. program must pass an oral preliminary exam covering fundamental undergraduate course work and a research topic (see below).

Requirements for the Ph.D. Degree

Course Requirements*

Each student is required to take 50 units which must consist of:

- At least 20 units in one of the four core areas of emphasis defined above.
- At least 30 of the total 50 units must be satisfied through EE graduate courses.
- At most 10 units of independent study (EE297, EE299) are counted toward EE course requirements.

Total units required for the PhD. degree = 50

* For students already holding an MSEE or equivalent degree, at most 20 units of transfer credit may be granted for equivalent course work performed at the students' M.S. granting institution. Credit transfer is subject to approval by the adviser and the electrical engineering graduate committee.

Preliminary Examination

The Preliminary Exam will be an oral exam. The candidate will prepare a 30-minute presentation on a research topic of their choice, approved by his/her adviser. The presentation slides will be available to the committee members one week before the exam. During the oral presentation, the committee will ask questions about the presentation topics. After the presentation, the committee may ask further questions pertinent to the candidate's course of study. The exam should take about 1½ to 2 hours. The exam committee has three options for exam outcome: 1) pass, 2) pass conditionally (more courses), 3) fail. In the event of a failure, with the committee's consent, the candidate may take the exam again within the next quarter. The exam committee shall consist of the student's adviser, and at least two members (other than the student's adviser) of the EE Preliminary Exam standing committee chosen by the EE graduate director. The standing committee will consist of 4 EE ladder rank faculty who will serve staggered one-year terms.

These new exam rules will be effective starting Fall '05. This exam must be attempted within the first calendar year after matriculation.

After the student passes the preliminary examination, the student begins work on a thesis prospectus in preparation for the qualifying examination. During this period, the student finds an adviser willing to supervise the student's thesis research; works with the adviser to prepare for the qualifying examination; and assembles a dissertation reading committee, consisting of the student's research supervisor (chair of the committee) and three or four appropriate faculty members in Electrical Engineering and other relevant departments. The committee must consist of at least two electrical engineering faculty members in addition to the student's supervisor.

Students scheduled for the preliminary exam will be notified 1 month prior to the exam by both their SOE email account and by hard-copy in their SOE mailbox. Students are expected to appear at their scheduled time. Students should email their slides (maximum 15) for the presentation to the EE Graduate Director 1 week prior to the scheduled examination. Non-appearance at the preliminary examination will result in failing the examination. The EE Graduate Director can make exceptions in only the most exceptional circumstances.

Qualifying Examination

This oral examination is a defense of the student's thesis prospectus and a test of the student's knowledge in advanced technical areas of relevance to the dissertation topic. This oral examination consists of a seminar-style talk before the examining committee, where the student describes the thesis prospectus, followed by questions from the committee on the substance of the talk or the areas of presumed expertise of the student. The exam, taken typically in the third year of Ph.D. study, is administered by a Ph.D. qualifying exam committee, consisting of at least four examiners. The composition of the committee is proposed by the department (in consultation with the student and his/her adviser) to the dean of graduate studies at least one month before the date of the exam. The composition of the committee must be approved by the dean of graduate studies, whereupon the student and the committee are notified.

If the student does not pass the qualifying exam, the student may be asked to complete additional course work, or other research-related work, before retaking the exam. The student may be allowed to retake the qualifying exam once, and the composition of the examining committee will remain the same for the second try. Students who fail the qualifying exam twice may be dismissed from the Ph.D. program.

Ph.D. students who have not advanced to candidacy by the end of the fourth year may be recommended for academic probation.

Dissertation and Advancement to Ph.D. Degree Candidacy

Advancement to candidacy requires that the student:

- (A) pass the preliminary exam;
- (B) complete all course requirements prior to taking the qualifying exam;
- (C) clear all Incompletes from the student's record;
- (D) pass the qualifying exam; and
- (E) have an appointed Ph.D. dissertation reading committee.

After advancement to candidacy, work on the thesis research progresses until the dissertation is completed. The Ph.D. dissertation must show the results of in-depth research, be an original contribution of significant knowledge to the student's field of study, and include material worthy of publication. The student is strongly advised to submit research work for publication in advance of completing the thesis so that the latter requirement is clearly satisfied. The Ph.D. thesis results are presented in both oral and written forms, the oral form being a dissertation defense (see below) and the written form being the Ph.D. dissertation. The student must submit his or her written Ph.D. dissertation to the dissertation reading committee at least one month before the defense.

Dissertation Defense

Each Ph.D. candidate submits the completed dissertation to a Ph.D. thesis reading committee at least one month prior to the dissertation defense. The appointment of the dissertation reading committee is made immediately after the qualifying exam and is necessary for advancing to candidacy. The candidate presents his or her research results in a public seminar sponsored by the dissertation supervisor. The seminar is followed by a defense of the dissertation to the reading committee (only), who will then decide whether the dissertation is acceptable or requires revision. Successful completion of the dissertation fulfills the final academic requirement for the Ph.D. degree.

Transfer Credit

For students already holding an MSEE or equivalent degree, at most 20 credits of transfer credit may be granted for equivalent course work performed at the student's M.S. granting institution. Credit transfer is subject to approval by the adviser and the electrical engineering graduate committee.

Students not already holding an MSEE degree, who are studying for the Ph.D. degree, may apply to be granted a M.S. degree when they have fulfilled all the M.S. degree requirements (including an M.S. thesis).

Review of Progress

Each year, the faculty reviews the progress of every student. Students not making adequate progress toward completion of degree requirements (see the Graduate Student Handbook for the policy on satisfactory academic progress) are subject to dismissal from the program. Students with academic deficiencies may be required to take additional courses. Full-time students with no academic deficiencies are normally expected to complete the degree course requirements at the rate of at least two courses each quarter. Full-time students must complete all course requirements within two years for the M.S. and three years for the Ph.D. Students receiving two or more grades of U (unsatisfactory) or below B in the School of Engineering courses are not making adequate progress and will be placed on academic probation for the following three quarters of registered enrollment. Withdrawing or taking a leave of absence does not count as enrollment. Part-time enrollment is counted as a half-quarter of enrollment.

If an electrical engineering graduate student fails a School of Engineering course while on probation, the Electrical Engineering Department may request the graduate dean to dismiss that student from the graduate program. If after being removed from probation, the student again fails a School of Engineering course, he or she will return immediately to academic probation. Graduate students experiencing circumstances or difficulties that impact their academic performance should contact their adviser and the graduate director immediately. Students may appeal their dismissal to the graduate committee.

Materials Fee

Please see the section on fees under School of Engineering.

Mission Statement

The mission of the Electrical Engineering Department is to build and sustain a teaching and research program to provide undergraduate and graduate students with inspiration and quality education in the theory and practice of hardware- and information-processing-oriented electrical engineering; serving industry, science, and government; and bringing faculty and staff a rewarding career in teaching, research, and service. The electrical engineering program is accredited by the Engineering Accreditation Committee of the Accreditation Board for Engineering and Technology (ABET).

Summary of Objectives

The educational objectives that the Electrical Engineering Department strives to provide for students are focused in five areas: fundamental prerequisites in theory, design, and basic science for a career based on electrical engineering; a scope of application that provides theory and practical knowledge as well as specialized training in hardware- and information-oriented electrical engineering; a professional approach to engineering in terms of high quality work skills in communication, teamwork, responsibility, high ethical standards, and participation in lifelong learning and the professional engineering community; encouragement and motivation based on a milieu of readily available opportunities, mentoring, and advising; and the basis for a successful transition to an engineering career, including an ability to apply research to engineering and opportunities for experience in an industry setting.

Engineering is a profession that emphasizes analysis and design, and electrical engineers apply their knowledge to an expanding array of technical, scientific, and mathematical questions. A good engineering education has three parts: a sound foundation in mathematics and science, substantial design experience to develop skills and engineering aesthetics, and a focus in the humanities and social sciences to learn how and where to apply the skills developed. Electrical engineering is a very broad discipline; the program at UCSC complements existing campus programs, emphasizing three general areas: electronics/optics (including digital and analog circuits and devices); communications (including signal and image processing and control); and VLSI design, micro-technology, nanotechnology, and biomedical devices.

The undergraduate curriculum provides a balance of engineering science and design. For the first two years, all electrical engineering students are expected to take a basic set of lower-division mathematics, physical science, and engineering courses. After the first two years, electrical engineering students focus on topics within the discipline and specialize in one of two options: *electronics/optics*, including digital and analog circuits and devices, VLSI design, optoelectronics, electromagnetics, and biomedical device engineering; or communications, signals, systems, and control,

including optical, wireless communication, signal and image processing, networks signal processing, instrumentation, and control. Students interested in admission to the electrical engineering major should contact the Baskin School of Engineering Undergraduate Advising office, (831) 459-5840 or advising@soe.ucsc.edu.

Electrical Engineering Policies

Admissions Policy

Admission to the electrical engineering major is selective. First-year applicants may receive direct admission at the time they apply to UCSC based on their high school record and test scores. Otherwise, students apply to the major based on performance in the foundation courses: Mathematics 19A-B, Applied Mathematics and Statistics 27, Physics 5A, 5B, and 5C. Please refer to the School of Engineering section of the catalog for the full admissions policy. Transfer students are evaluated on their equivalents of the foundation courses listed above.

Course Substitution

Please refer to the <u>School of Engineering</u> section of the catalog for the policy regarding course substitution.

Disqualification Policy

Please refer to the <u>School of Engineering</u> section of the catalog for the Major Disqualification Policy.

Letter Grade Policy

The Electrical Engineering Department requires letter grading for all courses applied toward the B.S. degree, with the exception of two lower-division courses, which students may elect to take Pass/No Pass. This exception does not include course 70/L, which must be taken for a letter grade.

Transfer Students

Please refer to the <u>School of Engineering</u> section of the catalog for the policy regarding transfer students and admission of transfer students to the electrical engineering major.

School of Engineering Policies

Please refer to the <u>School of Engineering</u> section of the catalog for additional policies that apply to all School of Engineering programs.

Major Requirements

In addition to completing UCSC's general education requirements, students must complete 15 lower-division science and engineering courses, plus associated laboratories; eight upper-division engineering courses, plus associated laboratories; four engineering electives; and a comprehensive senior design project course. To plan for completion of these requirements within the normative time, students should consult with an adviser at the Baskin School of Engineering Undergraduate Advising office as early as possible.

Lower-Division Requirements

Students gain a solid foundation in calculus, engineering mathematics, physics, computer science, and computer engineering during their first two years. Majors must complete the following 15 lower-division courses (including corresponding laboratories). These courses form part of the prerequisite sequence and should be completed during the first two years at UCSC. The requirements are rigorous; students must be prepared to begin these courses early in their studies.

Electrical Engineering

70/L, Introduction to Electronic Circuits/Laboratory 80T, Modern Electronic Technology and How It Works

Computer Engineering

16, Applied Discrete Mathematics; or 16H, Honors Applied Discrete Mathematics

12/L, Computing Computer Systems and Assembly Language/ Laboratory 80E, Engineering Ethics

Computer Science

12A/L, Introduction to Programming/Laboratory; or 13H, Introduction to Programming and Data Structures (Honors)/Laboratory

Mathematics

19A-B, *Calculus for Science, Engineering*, and 23A-B, *Multivariable Calculus*

Applied Mathematics and Statistics

27/L, *Mathematical Methods for Engineers/Laboratory* (formerly Mathematics 27)

Physics

5A/L, 5B/M, 5C/N, Introduction to Physics/Laboratories 5D, Heat, Thermodynamics, and Kinetics

Ethics

Students must take one of the following courses:

Computer Engineering 80E, Engineering Ethics Philosophy 22, Introduction to Ethical Theory

Philosophy 24, Introduction to Ethics: Contemporary Moral Issues

Philosophy 28, Environmental Ethics

Biomolecular Engineering 80G/Philosophy 80G/Chemistry 80G, Bioethics in the 21st Century: Science, Business, and Society

This course is required even for transfer students who have had their general education requirements waived.

Upper-Division Requirements

Thirteen upper-division courses along with associated 1- or 2-credit laboratories are required for the major. The course requirements include both depth and breadth, technical writing, and a comprehensive capstone design project.

All students are required to take the following eight upper-division courses, with associated laboratories:

Electrical Engineering

103, Signals and Systems

135/L, Electromagnetic Fields and Waves/Laboratory

145/L, Properties of Materials/Laboratory

151, Communications Systems

171/L, Analog Electronics/Laboratory

Computer Engineering

100/L, *Logic Design/Laboratory*

107, Mathematical Methods of Systems Analysis: Stochastic

185, Technical Writing for Computer Engineers

Required Electives. In addition to completing the above required courses, electrical engineering majors must complete four elective courses chosen from the list below. At least three must be from one of the depth-sequence tracks listed. Certain graduate-level courses as well as those courses taught in conjunction with graduate courses may also be used to fulfill an elective requirement as listed below. No course may be counted twice. See the electrical engineering web site for course descriptions: www.ee.ucsc.edu/academics.htm.

Electronics/Optics Track

Electrical Engineering

115, Introduction to Micro-Electro-Mechanical-Systems Design

130L/230, Introduction to Optoelectronics and Photonics and Optical

Fiber Communication/Laboratory

136, Engineering Electromagnetics (strongly recommended)

154, Feedback Control Systems

172/221 Advanced Analog Electronics Circuits/Advanced Analog Integrated Circuits

178, Device Electronics

211, Introduction to Nanotechnology

231, Optical Electronics

Computer Engineering

118/L, Introduction to Mechatronics/Laboratory

121/L, *Microprocessor System Design/Laboratory* (strongly recommended)

172/L, Linear and Nonlinear Circuits/Laboratory

173/L, High Speed Digital Design/Laboratory

Applied Mathematics and Statistics

147, Computational Methods and Applications

Communications, Signals, Systems, and Controls Track

Electrical Engineering

130L/230, Introduction to Optoelectronics and Photonics, and Optical Fiber Communication/Laboratory

136, Engineering Electromagnetics (strongly recommended)

152/252, Introduction to Wireless Communications

153/250, Digital Signal Processing

154/241, Feedback Control Systems and Introduction to Feedback

Control Systems

230, Optical Fiber Communication

250, Digital Signal Processing

262, Statistical Signal Processing

264, Image Processing and Reconstruction

Computer Engineering

118/L, Introduction to Mechatronics/Laboratory

150, Introduction to Computer Networks

251, Error-Control Coding

Applied Mathematics and Statistics

147, Computational Methods and Applications

162, Design and Analysis of Computer Simulation Experiments

The senior-year curriculum enables students to pursue independent study with a faculty member. Electrical engineering students are encouraged to take advantage of the opportunity to work within a faculty member's research group as part of their educational experience. Internship programs with local industry are available.

Comprehensive Requirement

The senior comprehensive requirement for electrical engineering majors is in two parts: a project course and assessment options.

Project Course

Students must complete one capstone design course that spans two quarters, Electrical Engineering 123A and 123B, or complete a senior thesis. These senior-level courses encompass an in-depth project, including analysis, design, testing, and documentation, requiring students to call upon knowledge acquired throughout their undergraduate studies. Current course choices include the following:

Electrical Engineering

123A and 123B, Engineering Design Project I and Engineering Design Project II (5 credits each)
195, Senior Thesis Project (10 credits over two quarters)

Outcomes Assessment Options

The Electrical Engineering Department requires an outcomes assessment. All students are required to complete an exit survey and meet with a faculty member for an exit interview. The specifics of the outcomes assessment may change from year to year; for this catalog year, students must complete one of the following options:

- maintenance of a 2.5 grade point average in all required and elective courses for the major; or
- senior thesis submission; or
- portfolio review.

Portfolios must include the following:

- project report(s);
- a one- or two-page overview of the student's contribution to the project(s);
- a two-page essay concerning the relationship of engineering to society (specific topics will be provided by the Electrical Engineering Department).

The portfolios must be submitted electronically at least seven days before the end of the instruction in the quarter of graduation. Portfolios will not be returned.

Electrical Engineering Major Planners

The following are two sample academic plans for students to complete during their first two years as preparation for the electrical engineering major.

Plan One					
Year	Fall	Winter	Spring		
1st (frsh)	Math 19A Phys 5A/L	Math 19B Phys 5B/M	Ams 27/L Phys 5C/N		
(11511)	11198 31112	EE 80T	EE 80T		
2nd (soph)	Phys 5D EE 70/L Cmpe 12 <u>A</u> /L	Math 23A Cmpe 12/L EE 171/L	Math 23B EE 171/L Cmps 12A		
Plan Two	0				
Year	Fall	Winter	Spring		
1st	AMS 3	Math 19A	Math 19B		
(frsh)	Cmpe 3	Cmpe 12/L EE 80T	Cmps 12A <u>/</u> ∟		
2nd	Phys 5A/L	Phys 5B/M	Phys 5C/N		
(soph)	Cmpe 16 or 16H	Math 23A	AMS 27/L		
		Cmpe 100/L	Math 23A		
			Cmpe 80E		

Additional information about this program can be found on the department's web site at www.soe.ucsc.edu/programs/undergraduate/.

Graduate Programs

The Department of Electrical Engineering (EE) at the University of California, Santa Cruz (UCSC) offers M.S. and Ph.D. degree programs and conducts research in:

- Photonics and Electronics focusing on VLSI, electronic and optoelectronic
 materials, devices, circuits and systems for information transmission, storage,
 processing, and display, especially for optical fiber communications and lower
 power, high performance systems, biomedical device instrumentation and
 MEMS:
- **Signal Processing and Communications**, including wireless and optical communications, coding, digital signal processing, image and video

- processing;
- **Remote Sensing** including wave propagation and scattering radar oceanography, and microwave remote sensing.
- **Nanotechnology** including applications to bio-medicine, integrated optics for biomedical imaging, opto-thermo-electric energy conversion, near-field scanning optical microscopy, nano-magneto-optics, and micro-fluidics.

EE enjoys a close relationship with the Departments of Applied Mathematics and Statistics, Computer Science, Computer Engineering, Biomolecular Engineering, Chemistry, Physics, Astronomy, and Molecular, Cell and Developmental Biology faculty. The Electrical Engineering faculty are affiliated with: 1) several federally funded and nationally recognized centers such as the Center for Biomimetic MicroElectronic Systems, the Center for Adaptive Optics, and the Center for Biomolecular Science and Engineering; 2) state-funded centers such as the Institute for Quantitative Biology (QB3), the Center for Information Technology Research in the Interest of Society (CITRIS), and the Institute for Regenerative Medicine (CIRM); and 3) many EE faculty participate in the University Affiliated Research Center (UARC) at NASA-Ames, which is managed by UCSC. The department also has ties to nearby industry, employing electrical engineering professionals as visiting and adjunct faculty and arranging for students to gain practical research experience through work in industrial labs. Indeed, the department strongly encourages students of all nationalities to seek practical training as part of their graduate education.

Students begin the program with the completion of courses in a core area of interest and then proceed to do research in their area of specialization. The M.S. degree can be completed in two years. M.S. students must complete a master's thesis. A Ph.D. degree is usually completed in four to six years. Ph.D. students are required to take a preliminary exam within their first two years of study. After completing the course requirements, students must pass an oral qualifying exam and write a dissertation. Part-time study is possible for students working in industry while attending school.

Requirements for the Master's Degree

Course Requirements

Each student is required to take 45 units which must consist of:

- At least 15 units in one of the four core areas of emphasis defined above.
- At least 25 of the total 45 units must be satisfied through EE graduate courses.
- At most 10 units of independent study (EE 297, EE 299) are counted toward the EE course requirements.

Total units required for the M.S. degree = 45.

Note that each graduate course satisfying the above requirements typically covers 5 units.

Thesis

Completion of a master's thesis is required for the Master's degree. To fulfill this requirement, the student submits a written proposal to a faculty member, usually by the third academic quarter. By accepting the proposal, the faculty member becomes the thesis adviser. In consultation with the adviser, the student forms a Master's Thesis Reading Committee with at least two additional faculty members, each of whom is provided a copy of the proposal. Upon completion of the thesis work, the

student presents an expository talk on the thesis research, and the final thesis must be accepted by the review committee before the award of the Master of Science degree.

MS students admitted to continue to the Ph.D. program must pass an oral preliminary exam covering fundamental undergraduate course work and a research topic (see below).

Requirements for the Ph.D. Degree

Course Requirements*

Each student is required to take 50 units which must consist of:

- At least 20 units in one of the four core areas of emphasis defined above.
- At least 30 of the total 50 units must be satisfied through EE graduate courses.
- At most 10 units of independent study (EE297, EE299) are counted toward EE course requirements.

Total units required for the PhD. degree = 50

* For students already holding an MSEE or equivalent degree, at most 20 units of transfer credit may be granted for equivalent course work performed at the students' M.S. granting institution. Credit transfer is subject to approval by the adviser and the electrical engineering graduate committee.

Preliminary Examination

At the end of the first year, i.e., no later than the fall quarter in the following year after their entry, students admitted to the Ph.D. program must take an exam covering basic knowledge in electrical engineering. This examination covers material from the following technical areas:

- devices and circuits at the level of courses 171, 178, and 145;
- electromagnetics at the level of courses 135 and 136;
- systems and signals at the level of courses 103 and 153;
- optics and optoelectronics at the level of course 130;
- applied mathematics and statistics at the level of Computer Engineering 107 and Applied Mathematics and Statistics 27.

The student chooses three areas from the above list in which to be examined. If the student does not pass the preliminary examination, the electrical engineering graduate committee may allow the student to repeat the preliminary examination once. If the student is to leave the Ph.D. program, and the student wishes to obtain an M.S. degree prior to departure, all requirements for the M.S. degree listed above (including an M.S. thesis) must still be satisfied.

After the student passes the preliminary examination, the student begins work on a thesis prospectus in preparation for the qualifying examination. During this period, the student finds an adviser willing to supervise the student's thesis research; works with the adviser to prepare for the qualifying examination; and assembles a dissertation reading committee, consisting of the student's research supervisor (chair of the committee) and three or four appropriate faculty members in Electrical Engineering and other relevant departments. The committee must consist of at least two electrical engineering faculty members in addition to the student's supervisor.

The preliminary examination will be an oral exam. The candidate will prepare a 30-minute presentation on a research topic of their choice, approved by his/her adviser. The presentation slides will be available to the committee members one week before the exam. During the oral presentation, the committee will ask questions about the presentation topics. After the presentation, the committee may ask further questions pertinent to the candidate's course of study. The exam should take about 1½ to 2 hours. The exam committee has three options for exam outcome: 1) pass, 2) pass conditionally (more courses), 3) fail. In the event of a failure, with the committee's consent, the candidate may take the exam again within the next quarter. The exam committee shall consist of the student's adviser, and at least two members (other than the student's adviser) of the EE Preliminary Exam standing committee chosen by the EE graduate director. The standing committee will consist of 4 EE ladder rank faculty who will serve staggered one-year terms.

These new exam rules will be effective starting fall 2005. This exam must be attempted within the first calendar year after matriculation.

After the student passes the preliminary examination, the student begins work on a thesis prospectus in preparation for the qualifying examination. During this period, the student finds an adviser willing to supervise the student's thesis research: works with the adviser to prepare for the qualifying examination; and assembles a dissertation reading committee, consisting of the student's research supervisor (chair of the committee) and three or four appropriate faculty members in Electrical Engineering and other relevant departments. The committee must consist of at least two electrical engineering faculty members in addition to the student's supervisor.

Students scheduled for the preliminary examination will be notified one month prior to the exam by both their SOE email account and by hard-copy in their SOE mailbox. Students are expected to appear at their scheduled time. Students should email their slides (maximum 15) for the presentation to the EE Graduate Director one week prior to the scheduled examination. Non-appearance at the preliminary examination will result in failing the examination. The EE Graduate Director can make exceptions in only the most exceptional circumstances.

Qualifying Examination

This oral examination is a defense of the student's thesis prospectus and a test of the student's knowledge in advanced technical areas of relevance to the dissertation topic. This oral examination consists of a seminar-style talk before the examining committee, where the student describes the thesis prospectus, followed by questions from the committee on the substance of the talk or the areas of presumed expertise of the student. The exam, taken typically in the third year of Ph.D. study, is administered by a Ph.D. qualifying exam committee, consisting of at least four examiners. The composition of the committee is proposed by the department (in consultation with the student and his/her adviser) to the dean of graduate studies at least one month before the date of the exam. The composition of the committee must be approved by the dean of graduate studies, whereupon the student and the committee are notified.

If the student does not pass the qualifying exam, the student may be asked to complete additional course work, or other research-related work, before retaking the exam. The student may be allowed to retake the qualifying exam once, and the composition of the examining committee will remain the same for the second try. Students who fail the qualifying exam twice may be dismissed from the Ph.D. program.

Ph.D. students who have not advanced to candidacy by the end of the fourth year may be recommended for academic probation.

Dissertation and Advancement to Ph.D. Degree Candidacy

Advancement to candidacy requires that the student:

- (A) pass the preliminary exam;
- (B) complete all course requirements prior to taking the qualifying exam;
- (C) clear all Incompletes from the student's record;
- (D) pass the qualifying exam; and
- (E) have an appointed Ph.D. dissertation reading committee.

After advancement to candidacy, work on the thesis research progresses until the dissertation is completed. The Ph.D. dissertation must show the results of in-depth research, be an original contribution of significant knowledge to the student's field of study, and include material worthy of publication. The student is strongly advised to submit research work for publication in advance of completing the thesis so that the latter requirement is clearly satisfied. The Ph.D. thesis results are presented in

both oral and written forms, the oral form being a dissertation defense (see below) and the written form being the Ph.D. dissertation. The student must submit his or her written Ph.D. dissertation to the dissertation reading committee at least one month before the defense.

Dissertation Defense

Each Ph.D. candidate submits the completed dissertation to a Ph.D. thesis reading committee at least one month prior to the dissertation defense. The appointment of the dissertation reading committee is made immediately after the qualifying exam and is necessary for advancing to candidacy. The candidate presents his or her research results in a public seminar sponsored by the dissertation supervisor. The seminar is followed by a defense of the dissertation to the reading committee (only), who will then decide whether the dissertation is acceptable or requires revision. Successful completion of the dissertation fulfills the final academic requirement for the Ph.D. degree.

Transfer Credit

For students already holding an MSEE or equivalent degree, at most 20 credits of transfer credit may be granted for equivalent course work performed at the student's M.S. granting institution. Credit transfer is subject to approval by the adviser and the electrical engineering graduate committee.

Students not already holding an MSEE degree, who are studying for the Ph.D. degree, may apply to be granted a M.S. degree when they have fulfilled all the M.S. degree requirements (including an M.S. thesis).

Review of Progress

Each year, the faculty reviews the progress of every student. Students not making adequate progress toward completion of degree requirements (see the <u>Graduate Student Handbook</u> for the policy on satisfactory academic progress) are subject to dismissal from the program. Students with academic deficiencies may be required to take additional courses. Full-time students with no academic deficiencies are normally expected to complete the degree course requirements at the rate of at least two courses each quarter. Full-time students must complete all course requirements within two years for the M.S. and three years for the Ph.D.

Students receiving two or more grades of U (unsatisfactory) or below B in the School of Engineering courses are not making adequate progress and will be placed on academic probation for the following three quarters of registered enrollment. Withdrawing or taking a leave of absence does not count as enrollment. Part-time enrollment is counted as a half-quarter of enrollment.

If an electrical engineering graduate student fails a School of Engineering course while on probation, the Electrical Engineering Department may request the graduate dean to dismiss that student from the graduate program. If after being removed from probation, the student again fails a School of Engineering course, he or she will return immediately to academic probation.

Graduate students experiencing circumstances or difficulties that impact their academic performance should contact their adviser and the graduate director immediately. Students may appeal their dismissal to the graduate committee.

Materials Fee

Please see the section on fees under **School of Engineering**.

<u>Program Description | Course Descriptions</u>

Faculty and Professional Interests

Professor

Benjamin Friedlander

Digital communications, wireless communication system, array processing, adaptive signal processing

Claire Gu

Fiber sensors for bio-applications, optical fiber communications, volume holographic data storage, liquid crystal displays, nonlinear optics, optical information processing

Michael Isaacson

Nano- and microfabrication technology and applications to biomedical and diagnostic devices, nanocharacterization of materials with emphasis on the development of microscopy tools, novel modes of imaging, electron and light optics

Gretchen Kalonji

Materials science; innovations in science and engineering education; multinational project-based approaches to integrating research and education

Wentai Liu

Retinal prosthesis, biomimetic systems, integrated neuro-electronics, molecular electronics, CMOS and SOI transceiver design, current mode band limited signaling, microelectronic sensor, timing/clock recovery and optimization, noise characterization and modeling, and computer vision/image processing

Peyman Milanfar

Statistical signal image/video processing and reconstruction; modeling and inverse problems in imaging; detection and estimation theory; applied mathematics

Ali Shakouri

Quantum electronics; nano- and microscale heat and current transport in semiconductor devices; thermoelectric/thermionic energy conversion; renewable energy sources; thermal imaging; micro-refrigerators on a chip; and optoelectronic integrated circuits

John F. Vesecky

HF radar design and construction and observation of ocean surface winds, waves and currents with applications to coastal and deep water ocean processes; project MEDSAT

Donald Wiberg, Emeritus

Associate Professor

Joel Kubby

Micro-Electro-Mechanical-Systems (MEMS), adaptive optics, integrated optics, bio-MEMS

Kenneth Pedrotti

Optical communications, high-speed electronics for lightwave systems, devices for all optical networking and imaging

Hamid Sadjadpour

Wireless communication systems, coding and information theory, ad hoc and sensor networks

Holger Schmidt

Integrated optics for biomedicine and quantum optics, nano-magneto-optics, single-particle spectroscopy, ultrafast optics

Acting Associate Professor

Nobuhiko P. Kobayashi

Physics and chemistry of hybrid functional nanomaterials and nanometer-scale functional surfaces; study of III-IV compound semi-conductor nanometer-scale structures and related optoelectronic devices; study of mixed oxide nanometer-scale structures and related electronic devices

Assistant Professor

Ravi Narasimhan

Wireless communication; multi-user communication theory; information theory; bioinformatics

Adjunct Professor

Ephraim Suhir

Physical design, reliability and packaging of micro- and optoelectronic systems, materials engineering, applied probability, predictive modeling, nanoengineering

Heinz Erzberger

Air traffic control

Adjunct Associate Professor

Christopher R. Moylan

Photonic materials and devices

Professor

Sue Carter (Physics)

Experimental condensed matter physics, polymer physics, molecular electronics, phase transitions, electronic and optical properties of materials

David W. Dreamer, Emeritus (Chemistry and Biochemistry)

J. Joaquín García-Luna-Aceves (Computer Engineering)

Wireless networks, Internet, multimedia information systems

Darrell D. E. Long (Computer Science)

Storage systems, distributed computing systems, operating systems, mobile computing, performance evaluation, fault tolerance, computer security, multimedia, and video-on-demand systems

Patrick E. Mantey (Computer Engineering)

Image systems, image processing, visualization, image and multimedia systems, digital signal processing, real-time control

Claire Max (Astronomy)

Adaptive optics, planetary science

Jerry Nelson (Astronomy)

Design and construction of large telescopes; project scientist for the Keck telescope and Thirty Meter telescope

B. Shastry (Physics)

Condensed matter physics, strongly correlated matter, Mott-Hubbard physics, high Tc superconductivity, quantum magnetism, exactly integrable systems, exactly solvable models of many-body systems and in statistical mechanics, quantum chaos, geometric frustration

William T. Sullivan (Biology)

Genetics, cell biology, development of the Drosophila embryo

Jin Z. Zhang (Chemistry)

Design, synthesis, characterization, and application of nanomaterials, including semiconductor and metal nanoparticles; femtosecond laser spectroscopy; ultrafast dynamics on surfaces and at interfaces; cancer biomarker detection; surface-enhanced Raman spectroscopy

Associate Professor

Roberto Manduchi (Computer Engineering)

Sensor processing and image analysis with application to assistive technology and environmental modeling

Hai Tao (Computer Engineering)

Image and video processing, computer vision, vision-based graphics, and human-computer interaction

Assistant Professor

William Dunbar (Computer Engineering)

Theory and application of feedback control, air traffic control, nanopore sensors, dynamics and control of biomolecules

Gabriel Elkaim (Computer Engineering)

Embedded systems; robust software architectures for real-time reactive systems; sensor fusion; guidance, navigation, and control (GNC) system identification; robust and advanced control schemes; feedback control systems; robotics; unmanned autonomous vehicles (UAVs); and cooperative control

Matthew R. Guthaus (Computer Engineering)

VLSI, systems-on-a-chip, design automation, design for variability/robustness, mixed-signal system

Jose Renau (Computer Engineering)

Computer architecture, chip multiprocessors, energy/performance trade-offs, thread level speculation, interaction between architecture and compilers, Linux kernel

Program Description | Changes to 2006-08 Catalog Highlighted | Faculty

Lower-Division Courses

70. Introduction to Electronic Circuits. F,W

Introduction to the physical basis and mathematical models of electrical components and circuits. Topics include circuit theorems, constant and sinusoidal inputs, natural and forced response of linear circuits. Introduction to circuit/network design, maximum power transfer, and analog filters. Topics in elementary electronics: diode and transistor devices, linear models, amplifiers, feedback. Nonlinear elements and devices also introduced. Prerequisite(s): Physics 5C/N or 6C/N, and Mathematics 24 or Applied Mathematics and Statistics 27. Students must enroll concurrently in course 70L. *H. Schmidt, P. Mantey, K. Pedrotti, A. Shakouri, W. Liu, J. Kubby*

70L. Introduction to Electronic Circuits Laboratory (1 credit). F,W

Laboratory sequence illustrating topics covered in course 70. One two-hour laboratory session per week. Students are billed a materials fee. Prerequisite(s): Physics 5C/N or 6C/N, and Mathematics 24 or Applied Mathematics and Statistics 27. Students must enroll concurrently in course 70. *H. Schmidt, P. Mantey, K. Pedrotti, A. Shakouri, W. Liu, J. Kubby*

80J. Renewable Energy Sources. S

Introduction to energy storage conversion with special emphasis on renewable sources. Fundamental energy conversion limits based on physics and existing material properties. Various sources, such as solar, wind, hydropower, geothermal, and fuel cells described. Cost-benefit analysis of different alternative sources performed, and key roadblocks for large-scale implementation examined. Latest research on solar cells and applications of nanotechnology on energy conversion and storage introduced. (General Education Code(s): T2-Natural Sciences.) *A. Shakouri*

80S. Sustainability Engineering and Practice. F

Topical introduction to principles and practices of sustainability engineering and ecological design with emphasis on implementation in society. Provides an understanding of basic scientific, engineering, and social principles in the design, deployment, and operation of resource-based human systems, and how they can be maintained for this and future generations. No specialized background in engineering, science, or social sciences is assumed. (General Education Code(s): T7-Natural Sciences or Social Sciences.) *A. Shakouri*

80T. Modern Electronic Technology and How It Works. W

Basic knowledge of electricity and "how things work," how technology evolves, its impact on society and history, and basic technical literacy for the non-specialist. Broad overview of professional aspects of engineering and introduction and overview of basic systems and components. Topics include electrical power, radio,

television, radar, computers, robots, telecommunications, and the Internet. (General Education Code(s): T7-Natural Sciences or Social Sciences, Q.) *K. Pedrotti*

94. Group Tutorial. F,W,S

A means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

94F. Group Tutorial (2 credits). F,W,S

A means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

99F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. The Staff

Upper-Division Courses

103. Signals and Systems. F,S

The course covers the following topics: characterization and analysis of continuous-time signals and linear systems, time domain analysis using convolution, frequency domain analysis using the Fourier series and the Fourier transform, the Laplace transform, transfer functions and block diagrams, continuous-time filters, sampling of continuous time signals, examples of applications to communications and control systems. Prerequisite(s): courses 70 and 70L. *H. Sadjadpour, B. Friedlander, R. Narasimhan*

115. Introduction to Micro-Electro-Mechanical-Systems Design. W

Introduction to Micro-Electro-Mechanical-Systems (MEMS) design. Course begins with overview of MEMS devices and processes that are used to fabricate them. The basic governing equations for MEMS devices in different energy domains (mechanical, electrical, optical, thermal, and fluidic) reviewed, and both analytical and finite element coupled-domain modeling is used to design MEMS devices. Students work in teams to design, lay out, and fabricate MEMS devices and test structures using a standard multi-user process available through a foundry service. A presentation and term paper describing the design and layout will be required. Prerequisite(s): courses 70/L, 135/L, 145/L, Mathematics 19A and 19B, Mathematics 23A and 23B, Applied Mathematics and Statistics 27/L, Physics 5A, 5B, 5C, and 5D. Enrollment limited to 15. *J. Kubby*

123A. Engineering Design Project I. F,W

First of a two-course sequence that is the culmination of the engineering program. Students apply knowledge and skills gained in elective track to complete a major design project. Students complete research, specification, planning, and procurement for a substantial project. Includes technical discussions, design reviews, and formal presentations; engineering design cycle, engineering teams, and professional practices. Formal technical specification of the approved project is presented to faculty. Prerequisite(s): Electrical Engineering 171 or Computer Engineering 121; previous or concurrent enrollment in Computer Engineering 185; permission of department and instructor. Students are billed a materials fee. (Also offered as Computer Engineering 123A. Students cannot receive credit for both courses.) *The*

123B. Engineering Design Project II (7 credits). W,S

Second of two-course sequence in engineering system design. Students fully implement and test system designed and specified in course 123A. Formal written report, oral presentation, and demonstration of successful project to review panel of engineering faculty required. Students are billed a materials fee. (Also offered as Computer Engineering 123B. Students cannot receive credit for both courses.) Prerequisite(s): course 123A and Computer Engineering 185. Enrollment limited to 35. *The Staff*

130. Introduction to Optoelectronics and Photonics. W

Introduction to optics, photonics and optoelectronics, fiber optic devices and communication systems: Topics include: ray optics, electromagnetic optics, resonator optics, interaction between photons and atoms, dielectric waveguides and fibers, semiconductor light sources and detectors, modulators, amplifiers, switches, and optical fiber communication systems. Taught in conjunction with course 230. Students cannot receive credit for this course and course 230. Prerequisite(s): Physics 5B and 5C, or 6B and 6C; concurrent enrollment in course 130L. *C. Gu*

130L. Introduction to Optoelectronics Laboratory (1 credit). W

Includes a series of projects to provide hands-on experience needed for basic concepts and laboratory techniques of optical fiber technology. Students are billed a materials fee. Prerequisite(s): Physics 5L-M-N, or 6L-M-N; concurrent enrollment in course 130. Enrollment limited to 30. *C. Gu*

135. Electromagnetic Fields and Waves. W

Vector analysis. Electrostatic fields. Magnetostatic fields. Time-varying fields and Maxwell's equations. Plane waves. Students must concurrently enroll in course 135L. Prerequisite(s): course 70/L, Mathematics 23B or 26 or Physics 14, and Applied Mathematics and Statistics 27. Students must concurrently enroll in course 135L. *M. Isaacson*

135L. Electromagnetic Fields and Waves Laboratory (1 credit). W

Laboratory sequence illustrating topics in course 135. One two-hour laboratory session per week. Students must concurrently enroll in course 135. Students are billed a materials fee. Prerequisite(s): course 70/L; Mathematics 23B or 26 or Physics 14; and Applied Mathematics and Statistics 27. Students must concurrently enroll in course 135. *M. Isaacson*

136. Engineering Electromagnetics. S

Course will cover electromagnetic wave propagation, transmission lines, waveguides, and antennas. Prerequisite(s): course 135 and 135L. Enrollment restricted to School of Engineering and Division of Physical and Biological Sciences majors or permission of instructor. *The Staff*

145. Properties of Materials. F

The fundamental electrical, optical, and magnetic properties of materials, with emphasis on metals and semiconductors: chemical bonds, crystal structures, elementary quantum mechanics, energy bands. Electrical and thermal conduction. Optical and magnetic properties. Prerequisite(s): Physics 5A/L, 5B/M, and 5C/N or 6A/L, 6B/M, and 6C/N. Students must also concurrently enroll in course 145L. *H. Schmidt, A. Shakouri, J. Kubby*

145L. Properties of Materials Laboratory (1 credit). F

Laboratory sequence illustrating topics covered in course 145. One two-hour laboratory per week. Students are billed a materials fee. Prerequisite(s): Physics 5A/L, 5B/M, and 5C/N or 6A/L, 6B/M, and 6C/N. Students must also concurrently enroll in course 145. *H. Schmidt, A. Shakouri, J. Kubby*

151. Communications Systems. W

An introduction to communication systems. Analysis and design of communication systems based on radio, transmission lines, and fiber optics. Topics include fundamentals of analog and digital signal transmission in the context of baseband communications, including concepts such as modulation and demodulation techniques, multiplexing and multiple access, channel loss, distortion, bandwidth, signal-to-noise ratios and error control. Digital communication concepts include an introduction to sampling and quantization, transmission coding and error control. Prerequisite(s): courses 103, 70/L, and Computer Engineering 107 or probability theory and random variables background. Enrollment restricted to School of Engineering and Division of Physical and Biological Sciences majors or permission of instructor. *B. Friedlander, P. Mantey, R. Narasimhan*

152. Introduction to Wireless Communications. *

Introduction to the principles of wireless communications systems. Wireless propagation channels and their impact on digital communications. Modulation techniques for wireless systems and their performance. Multi-antenna systems and diversity. Multicarrier and spread spectrum. Multi-access methods: FDMA, TDMA, CDMA. The structure of cellular systems. Students cannot receive credit for this course and course 252. Prerequisite(s): Computer Engineering 107 and course 151, or by consent of instructor. Enrollment restricted to juniors and seniors. *B. Friedlander, R. Narasimhan*

153. Digital Signal Processing. W

Introduction to the principles of signal processing, including discrete-time signals and systems, the z-transform, sampling of continuous-time signals, transform analysis of linear time-invariant systems, structures for discrete-time systems, the discrete fourier transform, computation of the discrete fourier transform, and filter design techniques. Taught in conjunction with Electrical Engineering 250. Students cannot receive credit for this course and Electrical Engineering 250. (Also offered as Computer Engineering 153. Students cannot receive credit for both courses.) Prerequisite(s): course 103. Enrollment restricted to School of Engineering and Division of Physical and Biological Sciences majors or permission of instructor. *H. Sadjadpour, P. Milanfar*

154. Feedback Control Systems. W

Analysis and design of continuous linear feedback control systems. Essential principles and advantages of feedback. Design by root locus, frequency response, and state space methods and comparisons of these techniques. Applications. Prerequisite(s): course 103. Enrollment restricted to School of Engineering and Division of Physical and Biological Sciences majors or permission of instructor. Enrollment limited to 30. *P. Milanfar, P. Mantey, W. Dunbar*

171. Analog Electronics. W

Introduction to (semiconductor) electronic devices. Conduction of electric currents in semiconductors, the semiconductor p-n junction, the transistor. Analysis and synthesis of linear and nonlinear electronic circuits containing diodes and transistors. Biasing, small signal models, frequency response, and feedback. Operational

amplifiers and integrated circuits. Prerequisite(s): course 70/L; previous or concurrent enrollment in course 171L required. C. Gu, K. Pedrotti, A. Shakouri, W. Liu

171L. Analog Electronics Laboratory (1 credit). W

Laboratory sequence illustrating topics covered in course 171. One two-hour laboratory session per week. Students are billed a materials fee. Prerequisite(s): 70/L; previous or concurrent enrollment in course 171 required. *C. Gu, K. Pedrotti, A. Shakouri, W. Liu*

172. Advanced Analog Circuits. F

Analog circuit design covering the basic amplifier configurations, current mirrors, differential amplifiers, frequency response, feedback amplifiers, noise, bandgap references, one- and two-stage operational amplifier design, feedback amplifier stability, switch capacitor circuits and optionally the fundamentals of digital-to-analog and analog-to-digital converters. Emphasis throughout will be on the development of approximate and intuitive methods for understanding and designing circuits. Cannot receive credit for this course and course 221. Prerequisite(s): course 171. *K. Pedrotti*, *W. Liu*

178. Device Electronics. S

This course reviews the fundamental principles, device's materials, and design and introduces the operation of several semiconductor devices. Topics include the motion of charge carriers in solids, equilibrium statistics, the electronic structure of solids, doping, the pn junction, the junction transistor, the Schottky diode, the field-effect transistor, the light-emitting diode, and the photodiode. Prerequisite(s): courses 145/L and 171/L. Enrollment restricted to School of Engineering and Division of Physical and Biological Sciences majors or permission of instructor. *C. Gu, K. Pedrotti*

193. Field Study. F,W,S

Provides for individual programs of study with specific academic objectives carried out under the direction of a faculty member of the electrical engineering program and a willing sponsor at the field site and using resources not normally available on campus. Credit is based on the presentation of evidence of achieving the objectives by submitting a written and oral presentation. May not normally be repeated for credit. *The Staff*

193F. Field Study (2 credits). F,W,S

Provides for individual programs of study with specific academic objectives carried out under the direction of a faculty member of the electrical engineering program and a willing sponsor at the field site and using resources not normally available on campus. Credit is based on the presentation of evidence of achieving the objectives by submitting a written and oral presentation. May not normally be repeated for credit. *The Staff*

195. Senior Thesis Research. F,W,S

Individual directed study for upper-division undergraduates. Students submit petition to sponsoring agency. *The Staff*

195F. Senior Thesis Research (2 credits). F,W,S

Prerequisite(s): petition on file with sponsoring agency. Students submit petition to sponsoring agency. *The Staff*

198. Individual Study or Research. F,W,S

Provides for department-sponsored individual study program off campus, for which faculty supervision is not in person, but by correspondence. Students submit petition to sponsoring agency. *The Staff*

198F. Independent Field Study (2 credits). F,W,S

Provides for department-sponsored individual study program off campus for which faculty supervision is not in person, but by correspondence. Students submit petition to sponsoring agency. *The Staff*

199. Tutorial. F,W,S

Individual directed study for upper-division undergraduates. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Individual directed study for upper-division undergraduates. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

200. Research and Teaching in Electrical Engineering (3 credits). *

Basic teaching techniques for TAs: responsibilities and rights, resource materials, computer security, leading discussion or lab sessions, presentations techniques, maintaining class records, electronic handling of homework, and grading. Examines research and professional training: use of library and online databases, technical typesetting, writing journal and conference papers, publishing, giving talks, and ethical issues. Enrollment restricted to graduate students. *C. Gu*

211. Introduction to Nanotechnology. W

Introduction to underlying principles of the emerging field of nanotechnology. Intended for multidisciplinary audience with a variety of backgrounds. Introduces scientific principles and laws relevant on the nanoscale. Discusses applications in engineering, physics, chemistry, and biology. Prerequisite(s): course 145 or consent of instructor. Enrollment limited to 35. *H. Schmidt*

212. Introduction to BioMEMS. *

Oriented to general engineering and science students. Topics included are: 1) microfabrication of silicon, glass, and polymer materials; 2) microfluidics and electrokinetics; 3) sensors, actuators, and drug-delivery systems; 4) micro total-analysis systems and lab-on-a-chip devices; 5) detection and measuring systems; 6) genomics, proteomics, DNA, and protein microarrays; 7) emerging applications in medicine, research, and homeland security; 8) packaging, power systems, data communication, and RF safety; and 9) biocompatibility and standards. Recommended for advanced undergraduates and graduate students in bioengineering, electrical engineering, chemistry, and health-related fields including biochemistry, molecular and cellular biology, physiology, and genetics. Enrollment restricted to graduate students, or by permission of the instructor. *J. Kubby*

215. Micro-Electro-Mechanical Systems (MEMS) Design. S

Introduction to MEMS technology: covers basic microfabrication technologies, the governing physics for MEMS devices in different energy domains (mechanical, electrical, optical, thermal, and fluidic). Fabrication and design of MEMS devices illustrated using examples of existing research prototypes and commercial products. Students design, lay out, and fabricate an optical MEMS deformable mirror device

for applications in adaptive optics. Prerequisite(s): courses 135, 145, and 211; and Physics 5A, 5B, and 5C. Enrollment restricted to seniors and graduate students. May be repeated for credit. *J. Kubby*

221. Advanced Analog Integrated Circuits. F

Analog integrated circuit design with emphasis on fundamentals of designing linear circuits using CMOS. Covers MOS devices and device modeling, current mirrors, op-amp design, op-amp compensation, comparators, multipliers, voltage references, sample-and-holds, noise, and an introduction to more complicated systems using these building blocks, such as phase locked loops and analog-to-digital converters. If time permits, integrated circuit layout issues and device/circuit fabrication. Students cannot receive credit for this course and course 172. Prerequisite(s): course 171 or equivalent; course 178 or equivalent recommended. Enrollment limited to 20. *K. Pedrotti, W. Liu*

222. High-Speed Low-Power Integrated Circuit Design. *

Digital integrated circuit design covered with an emphasis on high-speed and low-power applications. Covers signaling techniques and circuits including transmitters and receivers, with emphasis on on-chip interconnect, timing fundamentals and timing circuits. Theoretical fundamentals of phase locked loops and design issues of implementation addressed. Course has a project design component. Interview to assess technical skills of student. Enrollment restricted to electrical engineering and computer engineering graduate students. Enrollment limited to 20. May be repeated for credit. *W. Liu*

224. Physical Design of Micro- and Opto-Electronic Packages. *

Micro- and opto-electronic packaging and materials; mechanical properties and behavior, thermal stress in dissimilar materials, and predictive modeling. Design for reliability, dynamic response to shocks and vibrations; reliability evaluations and testing; plastic packages of IC devices; photonics packages, fiber optics structures, and new frontiers. Enrollment restricted to graduate students. *The Staff*

230. Optical Fiber Communication. W

Components and system design of optical fiber communication. Topics include step-index fibers, graded-index fibers, fiber modes, single-mode fibers, multimode fibers, dispersion, loss mechanics, fiber fabrication, light-emission processes in semiconductors, light-emitting diodes, laser diodes, modulation response, source-fiber coupling, photodetectors, receivers, receiver noise and sensitivity, system design, power budget and rise-time budget, fiber-optic networks (FDDI, SONET, etc), wavelength division multiplexing (WDM). Students cannot receive credit for this course and course 130. Enrollment restricted to graduate students. May be repeated for credit. *C. Gu*

231. Optical Electronics. *

Introduction to phenomena, devices, and applications of optoelectronics. Main emphasis is on optical properties of semiconductors and semiconductor lasers. Prerequisite(s): course 145/L. May be repeated for credit. *H. Schmidt, C. Gu, A. Shakouri*

232. Quantum Electronics. *

Covers basic theory of interaction of electromagnetic radiation with resonant atomic transitions; density matrix treatment; Rabi oscillation, laser mode-locking, Q-switching; parametric oscillation, stimulated Brillouin and Raman scattering, coherent radiation; and noise in photodetectors and lasers. Prerequisite(s): course 231

233. Fiber Optics and Integrated Optics. F

Concepts and analysis of optical wave propagation in optical fibers and waveguides. Topics include geometrical optics description and electromagnetic theory of slab waveguides; modes, dispersion, and birefringence in optical fibers; mode coupling and gratings in fibers; wavelength-division multiplexing; nonlinear optics in fibers and solitons; semiconductor optical amplifiers and Er doped fiber amplifiers. Prerequisite(s): courses 135 and 145. *C. Gu*

234. Liquid Crystal Displays. *

Introduction to principle of operation, components and systems of liquid crystal displays (LCDs). Topics include basic LCD components, properties of liquid crystals, polarization of optical waves, optical wave propagation in anisotropic media, Jones matrix method, various display systems, active matrix addressing, and color LCDs. Prerequisite(s): course 135 and 136. Enrollment restricted to seniors and graduate students. *C. Gu*

235. Optical Information Storage and Processing. *

Introduction to applications of optical technologies in data storage and information processing. Topics include basic principles of Fourier optics; electro-optic, acousto-optic, and magneto-optic effects and devices; planar and volume holography; optical data storage systems; and optical information processing, interconnecting, and switching systems. Enrollment restricted to graduate students, or undergraduates having completed Physics 5B and 5C and course 103. *C. Gu*

241. Introduction to Feedback Control Systems. W

Graduate-level introduction to control of continuous linear systems using classical feedback techniques. Design of feedback controllers for command-following error, disturbance rejection, stability, and dynamic response specifications. Root locus and frequency response design techniques. Extensive use of Matlab for computer-aided controller design. Course has concurrent lectures with Electrical Engineering 154. (Also offered as Computer Engineering 241. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. *G. Elkaim, W. Dunbar, J. Cortes*

250. Digital Signal Processing. *

In-depth study of signal processing techiques, including discrete-time signals and systems, the z-transform, sampling of continuous-time signals, transform analysis of linear time-invariant systems, structures for discrete-time systems, the discrete fourier transform, computation of the discrete fourier transform, filter design techniques. Students cannot receive credit for this course and course 153. *H. Sadjadpour, B. Friedlander, P. Milanfar, R. Narasimhan*

251. Principles of Digital Communications. W

A core course on digital communications theory. Provides an introduction to digital communication, including source coding, characterization of communication signals and systems, modulation and demodulation for the additive Gaussian channel, digital signaling, and over bandwidth constrained linear filter channels and over fading multipath channels. Prerequisite(s): course 151 and 153 (or Computer Engineering 153) and Computer Engineering 107. *B. Friedlander*

252. Wireless Communications. *

In-depth study of the physical layer of wireless communications. Wireless propagation channels and their impact on digital communications. Modulation

techniques for wireless systems and their performance. Multi-antenna systems and diversity. Multicarrier and spread spectrum. Multi-access methods: FDMA, TDMA, CDMA. The structure of cellular systems. Students cannot receive credit for this course and course 152. Prerequisite(s): course 251. *B. Friedlander, R. Narasimhan*

253. Introduction to Information Theory. W

An introduction to information theory including topics such as entropy, relative entropy, mutual information, asymptotic equipartition property, channel capacity, differential entropy, rate distortion theory, and universal source coding. (Also offered as Computer Science 250. Students cannot receive credit for both courses.) Prerequisite(s): Computer Engineering 107, or Applied Mathematics and Statistics 131 or equivalent course, or permission of instructor. Enrollment restricted to graduate students. *H. Sadjadpour*

255. Multiple-Antenna Wireless Communications. S

Basic theory of multiple-antenna wireless systems. Introduction to space-time propagation models, capacity of multiple-input multiple-output (MIMO) channels, space-time coding, transmitter CSI, and multiuser space-time systems. Includes discussion of multiple antennas in emerging systems and standards. Prerequisite(s): course 252 and Computer Engineering 107, or Applied Mathematics and Statistics 131, or equivalent. *R. Narasimhan*

261. Error Control Coding. S

Covers the following topics: introduction to algebra; linear block code; cyclic codes; BCH code; RS codes; spectral domain study of codes; CRC; and product codes. Enrollment restricted to graduate students. May be repeated for credit. *H. Sadjadpour*

262. Statistical Signal Processing I. W

Covers fundamental approaches to designing optimal estimators and detectors of deterministic and random parameters and processes in noise, and includes analysis of their performance. Binary hypothesis testing: the Neyman-Pearson Theorem. Receiver operating characteristics. Deterministic versus random signals. Detection with unknown parameters. Optimal estimation of the unknown parameters: least square, maximum likelihood, Bayesian estimation. Will review the fundamental mathematical and statistical techniques employed. Many applications of the techniques are presented throughout the course. Note: While a review of probability and statistics is provided, this is not a basic course on this material. Prerequisite(s): course 103 and Computer Engineering 107, or permission of instructor. *P. Milanfar*

263. Advanced Topics in Coding Theory. *

Covers convolutional codes and its principles, maximum likelihood decoding and Viterbi decoding, performance evaluation of convolutional codes, trellis coded modulation (TCM), rotationally invariant convolutional codes, turbo codes, turbo decoding principles, performance evaluation of turbo codes, interleaver design for turbo codes, topics on turbo codes, space-time codes, and LDPC. Prerequisite(s): course 261. Enrollment restricted to electrical engineering, computer engineering, and computer science graduate students. Enrollment limited to 10. *H. Sadjadpour*

264. Image Processing and Reconstruction. S

Fundamental concepts in digital image processing and reconstruction. Continuous and discrete images; image acquisition, sampling. Linear transformations of images, convolution and superposition. Image enhancement and restoration, spatial and spectral filtering. Temporal image processing: change detection, image registration,

motion estimation. Image reconstruction from incomplete data. Applications. Students that have completed Computer Engineering 261 may not take this course for credit. Prerequisite(s): course 153 or permission of instructor. *P. Milanfar*

265. Introduction to Inverse Problems (3 credits). *

Fundamental approaches and techniques in solving inverse problems in engineering and applied sciences, particularly in imaging. Initial emphasis on fundamental mathematical, numerical, and statistical formulations and known solution methods. Sampling of applications presented from diverse set of areas (astronomical, medical and optical imaging, and geophysical exploration). Enrollment restricted to graduate students. *P. Milanfar*

270. Neural Implant Engineering. W

Advanced studies of the basic neuroscience-engineering design requirements and technological issues associated with implantable neural prostheses, with particular emphasis on retinal and cortical function. Course is team-taught via remote web cast. A basic understanding of physics, circuit theory, and electronics is required. Enrollment restricted to graduate students; juniors and seniors may enroll by permission of instructor. *W. Liu*

280B. Seminar on Integrated Bioelectronics (2 credits). W,S

Weekly seminar covering current research in integrated bioelectronics. May be repeated for credit. W. Liu

280I. Seminar on Microscopy and Nanotechnology (1 credit). *

Weekly seminar series covering research topics and experimental research in microscopy and nanotechnology. Current research and literature are discussed. Students lead discussion and participate in all meetings. Enrollment restricted to graduate students. Enrollment by permission of instructor. Enrollment limited to 10. May be repeated for credit. *M. Isaacson*

280M. Seminar on Micro-Electro-Mechanical Systems (MEMS) (2 credits). F,S Weekly seminar series covering topics of current research interest in Micro-Electro-Mechanical Systems (MEMS) design, fabrication and applications. Current research work and literature in these areas are discussed. Enrollment restricted to graduate students. Undergraduates may enroll with permission of instructor. May be repeated for credit. *J. Kubby*

280O. Seminar on Applied Optics (2 credits). F,W

Weekly seminar series covering topics of current research in applied optics, including integrated, quantum, nonlinear, and nano-optics. Current research work and literature in these areas are discussed. Enrollment restricted to graduate students. Undergraduates may enroll with permission of instructor. May be repeated for credit. *H. Schmidt*

280Q. Seminar on Quantum Electronics and Nanoelectronics (2 credits). F,W,S Weekly series covers current research in quantum electronics including electron and photon transport in nanostructures; nanoscale heat transport; optoelectronic integrated circuits; nanoscale devices for energy conversion; micro-refrigeration; thermal and acoustic imaging of nanostructures. Current research work and recent literature are discussed. Enrollment restricted to graduate students; undergraduates may enroll by permission of instructor. May be repeated for credit. *A. Shakouri*

Distinguished speakers from industry, universities, and government discuss current developments in electrical engineering and related fields. Emphasis on research questions that may lead to collaborative work with faculty and graduate students. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

283. Special Topics in Electrical Engineering (3 credits). *

Graduate seminar on a research topic in electrical engineering that varies with the particular instructor. Topics may include, but are not limited to, electromagnetics, antennas, electronics biotechnology, nanotechnology, signal processing, communications, VLSI, MEMS, and radio frequency. Enrollment restricted to graduate students and consent of instructor. Enrollment limited to 25. May be repeated for credit. *The Staff*

290. EE Graduate Seminar (1 credit). F,W,S

Research seminar at the graduate level regarding technical areas of electrical engineering activity that are of interest to the research and/or commercial communities. Enrollment restricted to computer engineering, electrical engineering, or physics graduate students, or by permission of instructor. Enrollment limited to 30. May be repeated for credit. *The Staff*

291. Tomorrow's Professor: Preparing for an Academic Career in Science and Engineering (3 credits). *

The aim of this course is two-fold: (1) inform, motivate, and prepare graduate students for a possible career in academia; (2) expose both undergraduate and graduate students to the academic enterprise, possible career options for those who pursue advanced degrees in engineering and science. Restricted to graduate students. Appropriate for graduate students in all fields of engineering, science, and mathematics; advanced undergraduates in good standing may enroll with permission of instructor. *P. Milanfar*

293. Advanced Topics in Electrical Engineering. F,W

Graduate seminar course on a research topic in electrical engineering that varies with the particular instructor. Typical topics include, but are not limited to, electromagnetics, antennas, electronics biotechnology, nanotechnology, signal processing, communications, VLSI, and MEMS. Prerequisite(s): Consent of instructor. Enrollment restricted to graduate students. Enrollment limited to 25. May be repeated for credit. *The Staff*

297. Independent Study or Research. F,W,S

Independent study or research under faculty supervision. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Thesis research conducted under faculty supervision. Students submit petition to sponsoring agency. *The Staff*

Baskin School of Engineering

The Baskin School of Engineering has a high-technology focus incorporating programs and curricula that educate students to meet the changing demands of society and a high-technology global marketplace. The school offers a stimulating academic environment that provides a foundation for professional growth as well as a lifetime of learning. The Baskin School's programs and courses prepare students for the human aspects, as well as the technical challenges, of careers in engineering, computer science, and bioinformatics. The Baskin School of Engineering includes the Department of Applied Mathematics and Statistics, the Department of Biomolecular Engineering, Department of Computer Engineering, the Department of Computer Science, and the Department of Electrical Engineering. The Department of Technology and Information Management is awaiting approval.

Graduate Study

The Baskin School of Engineering offers 10 graduate programs designed to prepare students for advanced study and research in major areas of biomolecular, computer, and electrical engineering, as well as computer science and statistics and stochastic modeling:

- Bioinformatics M.S. and Ph.D.
- Computer engineering M.S. and Ph.D.
- Computer science M.S. and Ph.D.
- · Electrical engineering M.S. and Ph.D.
- Statistics and stochastic modeling M.S. and Ph.D

These programs are described in subsequent sections. The aim of these programs is to develop professionals who can address the complex scientific and technological problems of today and tomorrow.

Undergraduate Study

The School of Engineering offers 15 undergraduate degree programs. Students may choose from the following options:

Bioengineering B.S.

Bioinformatics B.S. or combined B.S./Graduate

Bioinformatics minor

Computer engineering B.S. or combined B.S./M.S.

Computer engineering minor

Computer science B.A. and B.S.

Computer science: computer game design B.S.

Computer science minor

Computer technology minor

Electrical engineering B.S.

Information systems management B.S.

Statistics minor

Also available is a dual degree engineering program that allows a student to obtain a B.A. in the social sciences, humanities, or arts from UCSC and a B.S. degree in engineering from UC Berkeley [excluding EECS] by attending UCSC for three years followed by UC Berkeley for two years.

Bioengineering. The bioengineering program prepares graduates for a rewarding career at the interfaces between engineering, medicine and biology. UCSC Bioengineering graduates will have a thorough grounding in the principles and practices of bioengineering and the scientific and mathematical principles upon which they are built; they will be prepared for further education (both formal and informal) and for productive employment in industry The program includes a broad range of courses in the sciences, engineering, ethics, and other topics, and is co-sponsored by the Departments of Biomolecular Engineering, Computer Engineering, Electrical Engineering, and Molecular, Cell & Developmental Biology.

Bioinformatics. The bioinformatics curriculum combines mathematics, the physical sciences, computer science, and engineering to explore and understand biological data from high-throughput experiments, such as genome sequencing and gene expression chips. The immense growth of biological information stored in computerized databases has led to a critical need for people who can understand the languages, tools, and techniques of mathematics, science, and engineering. The undergraduate bioinformatics degree program prepares students for graduate school or a career in the fast-paced pharmaceutical or biotechnology industries.

Computer Engineering. The computer engineering curriculum focuses on making digital systems that work. It overlaps with computer science on one end (software systems) and with electrical engineering on the other (digital hardware). The emphasis of our program is on design rather than analysis—on making things work, rather than on explaining the abstract theory of computation or electronics. The program's emphasis on problem solving provides both excellent training for future engineers and a strong foundation for graduate study. The computer engineering program is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET). The combined B.S./M.S. program provides an opportunity for outstanding undergraduates to begin advanced study and earn both degrees in five years.

Computer Science. The computer science curriculum has options that include topics in hardware and software, giving students a solid grounding in both theoretical and practical aspects of computer technology and computer usage. Students become proficient in many areas, with a good academic foundation for various careers in the software industry, as well as preparation for graduate school.

Computer Science: Computer Game Design. The computer game design curriculum is a four-year interdisciplinary program that focuses on the technical, dramatic, and artistic elements of computer games. The program provides a rigorous education in computer science, in concert with a broad introduction to those aspects of art, music, narrative, digital media, and computer engineering most relevant to games. An intensive year-long game design studio sequence permits students to create substantial video games as part of a multi-student team. Students receive proficiency in many aspects of computer science, a good academic foundation for careers in the computer game industry or information technology industry, or for the pursuit of graduate studies in computer science, or computer game design.

Computer Technology. The computer technology minor is intended for students outside the School of Engineering interested in exploring computer software and hardware. It is particularly recommended for students interested in the use of computer technology in another discipline or in K-12 teaching.

Electrical Engineering. The electrical engineering curriculum provides a balance of engineering science and design and allows students to specialize in both the traditional topics and the latest subjects in electrical engineering. Students may concentrate their electives in the areas of electronics and optics, communications, or signals and systems. The major is designed to attract motivated students who, upon graduation, will be sought by employers in the high-tech industry. The electrical engineering program is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

Information Systems Management. The information systems management (ISM) curriculum is multidisciplinary and focuses on the fusion of information systems, technology, and business management for two purposes: the use of information systems to solve business problems and the management of technology, which includes new product development and enterprise management. Students must learn the mathematics, science, and technical fundamentals of computer science and engineering as well as understand the environment in which information technology (IT) solutions will be applied—through economics, business, and management of technology courses. It is a rigorous, challenging major for those students wanting to pursue careers in information systems management and the management of technology.

Statistics. The statistics curriculum is an interdisciplinary program with formal training in the quantification of uncertainty. The minor is designed to give students statistical skills that they can use on applications in their primary major. MS students obtain preparation for careers in technical fields with strong quantitative components. PhD students obtain skills for original state-of-the-art research

Dual Degree Engineering. The 3/2 program, a five-year program in association with UC Berkeley, enables students to receive two bachelor's degrees: a B.A. in a subject within the social sciences, humanities, or arts at UCSC, and a B.S. in engineering from the College of Engineering at Berkeley (excluding EECS). Many combinations of fields are possible, such as economics, environmental studies or philosophy with civil, mechanical, or industrial engineering.

Undergraduate Advising Office

The Baskin School of Engineering Undergraduate Advising office offers general advising for prospective and declared undergraduates majoring in School of Engineering programs. The office handles major declarations, transfer credits, course substitutions, articulations, and degree certifications. Undergraduate students obtain and submit all paperwork requiring departmental approval to the Undergraduate Advising office. Students may obtain additional information and assistance on the School of Engineering web site: www.soe.ucsc.edu/advising/undergraduate/.

Admission to School of Engineering Majors

High School Preparation for Engineering Students

It is recommended that high school students intending to apply to a School of Engineering major have completed four years of mathematics (through advanced algebra and trigonometry) and three years of science in high school. Comparable college mathematics and science courses completed at other institutions also serve to properly prepare students for these majors.

College Board Advanced Placement Credit

Prospective students are encouraged to take the College Entrance Examination Board (CEEB) Advanced Placement (AP) Examinations in computer science, mathematics, economics, chemistry, or biology, because an acceptable score on these examinations may satisfy both university and major degree requirements. Students must provide verification of exam scores to the School of Engineering Undergraduate Advising office and other course-sponsoring departments to be granted credit toward course prerequisites or degree requirements as follows:

Biology: a score of 3, 4, or 5 on the AP Biology exam can be substituted for Biology 3, *Concepts in Biology*, and exempt student from the biology placement exam. A score of 5, 6, or 7 on the IBH Biology exam can be substituted for Biology 3, *Concepts in Biology*, and exempt student from the biology placement exam.

Chemistry: a score of 5 on the AP Chemistry exam fulfills the prerequisite for enrollment in Chemistry 1B/M; a score of 5 satisfies Chemistry 1A.

Computer Science: a score of 4 or 5 on Exam A satisfies Computer Science 12A, *Introduction to Programming*, and the associated lab, Computer Science 12L; a score of 4 or 5 on Exam AB satisfies both Computer Science 12A, *Introduction to Programming*, and Computer Science 12B, *Introduction to Data Structures*, and the associated labs, Computer Science 12L, and Computer Science 12M. A score of 5 on the IBH Computer Science exam satisfies Computer Science 12A, *Introduction to Programming*, and the associated lab, Computer Science 12L; a score of 6 or 7 on

the IBH Computer Science exam satisfies Computer Science 12A, *Introduction to Programming*, and Computer Science 12B, *Introduction to Data Structures*, and the associated labs, Computer Science 12L, and Computer Science 12M.

Economics: a score of 4 or 5 on the Microeconomics exam satisfies Economics 1, *Introductory Microeconomics*; a score of 4 or 5 on the Macroeconomics exam satisfies Economics 2, *Introductory Macroeconomics*.

Mathematics: a score of 4 or 5 on the Calculus AB exam satisfies Mathematics 19A, *Calculus for Science, Engineering, and Mathematics*, or Economics 11A, *Mathematical Methods for Economists*; a score of 4 or 5 on the Calculus BC exam satisfies both Mathematics 19A-B. Students may check with the Office of Admissions for details about other AP examinations that also satisfy university requirements.

Admission as First-Year Students

Students interested in declaring a School of Engineering major are encouraged to do so during their first year at UCSC. Some students may be admitted directly into their School of Engineering major of choice at the time they are admitted to UCSC. Students not directly admitted may still apply during their first year and their acceptance into their selected major will be based upon their School of Engineering GPA (described below), their high school grade point average, courses completed in mathematics and sciences, and scores on standardized tests. First-year applicants to UCSC may apply for direct acceptance to a School of Engineering major by indicating the major as their first or second choice on the application. Applicants will be granted direct acceptance based on their high school grade point average, courses completed in mathematics and sciences, scores on standardized tests, and/or their personal statement. To take advantage of direct acceptance, first-year students must complete the declaration of major process in their first term at UCSC or forfeit their direct acceptance status.

Post First-Year Current Students Acceptance to Majors

Any student admitted to UCSC as a lower-division student that has completed 3 or more quarters at UCSC can apply to declare a School of Engineering major upon completion (with a grade of C or better) of all the foundation courses for that major. Application details can be found at http://www.soe.ucsc.edu/advising/undergraduate.

School of Engineering GPA Calculation

The School of Engineering GPA is calculated on grades received for all School of Engineering and Physical and Biological Sciences courses. Students are advised not to request Pass/No Pass grading in any School of Engineering or Division of Physical and Biological Sciences courses since a grade of P is treated as a C for calculating the School of Engineering GPA regardless of the content of the evaluation. No Pass grades are treated as an F. Although the campus GPA excludes the first 15 units of repeated courses from the GPA calculation, all attempts are included in the School of Engineering GPA calculation. The School of Engineering GPA is used in determining acceptance into School of Engineering majors and the School of Engineering disqualification process described later in this section.

Junior Transfer Acceptance to Majors

The School of Engineering strongly encourages applications from transfer students. Due to the prerequisite structure for upper-division courses, prospective transfer students should have completed as many of the lower-division requirements for the respective majors as possible to complete the degree within a reasonable time. Students must plan carefully because many courses must be taken sequentially.

Transfer students should **not** follow the Intersegmental General Education Transfer Curriculum (IGETC) because it will not provide transfer students with enough mathematics and engineering courses to allow them to complete School of Engineering programs at UCSC in two years. Students who apply as transfer students with junior status (90 quarter credits or more of transfer credit) who wish to earn a degree from the School of Engineering must indicate a School of Engineering major as their first choice on their UC application. (Students may also indicate an alternative School of Engineering major as their second choice.)

Junior transfers who do not list a School of Engineering major on their application to UCSC will not be considered for admission to such majors after the first day of their first quarter on campus.

Acceptance into the major is based on the student's academic college record. Applicants are encouraged to take and excel in as many courses that are equivalent to the department's foundation courses as possible. For many School of Engineering majors, completion of a year of calculus (accepted as equivalent to Mathematics 19A-B), linear algebra, differential equations, a year of calculus-based physics courses (accepted as equivalent to Physics 5A, 5B, 5C), and two programming courses (accepted as equivalent to Computer Science 12A Computer Science 12B, or Computer Engineering 12/L) are strongly recommended. An applicant will be approved, conditionally approved, or declined. Only students who have completed most or all of the foundation courses will be approved or conditionally approved for the major.

Students who are approved for acceptance and who have course credit for all the foundation courses for their major must declare the major in their first term of enrollment at UCSC. The status of students who are approved for acceptance but who, upon review of their transcripts, are found not to have course credit for all the foundation courses for their major will be changed to conditionally approved.

Students who are conditionally approved must complete the remaining required foundation courses for their major in their first term at UCSC and declare the major at the beginning of the following term at UCSC. Conditionally approved students will be evaluated based upon their performance in the foundation courses attempted during their first term at UCSC. Students who are conditionally approved for the major should be prepared to declare an alternative major outside of the School of Engineering in case they are unsuccessful in their attempt to complete their remaining foundation courses.

Students whose petitions are denied may still be admitted to UCSC, but they may not reapply for acceptance to engineering major(s) for which they were originally considered.
