UCSC General Catalog Updates 2009-10

The 2009-10 catalog updates are available on this web site. These updates include a revision to the entire Programs and Courses section as well as revisions to the selected sections listed below. Quarterly updates to course and program information are also reflected in the [Schedule of Classes](#).

Programs and Courses

- Program statements. Changes to each program for 2009-10, are presented in pdf form with additions in underlined green type and deletions in ~~red strikethrough type~~. Program statements with changes also appear in their finalized version in black type without additions and deletions highlighted. Program statements with no changes for 2009-10 are also provided.
- Courses. All active courses for the academic year 2009-10.
- Faculty. Faculty listings by department for the academic year 2009-10.

Fields of Study

Revised chart showing changes for 2009-10.

Undergraduate Admission

Admissions information is as published in the [2008-10 General Catalog](#), except for the following revised sections for 2009-10:

- Admission
- Admission Procedures
- Admission as a Freshman
- Admission as a Transfer Student
- Admission of International Students
- Nondiscrimination Policy Statement/Student-Related Matters

Undergraduate Expenses and Financial Resources for 2009-10

General Education Requirements

Revised list of 2009-10 courses that fulfill general education requirements.

The Colleges

At UCSC, all undergraduate students and most faculty are affiliated with one of the 10 colleges. College descriptions are as published in the 2008-10 General Catalog, except for the following colleges, which have revised their descriptions for 2009-10:

- (There were no changes to the Cowell College)
- (There were no changes to the Stevenson College)
- (There were no changes to the Crown College)
- (There were no changes to the Merrill College program)
- [Porter College](#)
- Kresge College
- [College Eight](#)
- [College Nine](#)
- [College Ten](#)

Combined majors. In addition, students may complete a combined major leading to a B.A. degree in a number of designated fields. Combined majors currently available include those in Earth sciences/anthropology, economics/mathematics, environmental studies/biology, environmental studies/Earth sciences, environmental studies/economics, Latin American and Latino studies/global economics, Latin American and Latino studies/literature, Latin American and Latino studies/politics, and Latin American and Latino studies/sociology. Students also have the option of pursuing a **double major**.

c = concentration, or emphasis, within a program. Some programs give students the option of following a general course of study or selecting a concentration; other programs require students to choose a concentration. Consult the particular program description in the section indicated.

1 Combined B.A./M.S. programs in economics, business management economics, or global economics with applied economics and finance are also available.

2 A combined B.S./M.S. program in computer engineering is also available.

3 A master of fine arts (M.F.A.) degree is awarded in digital arts and new media.

4 Because California state law requires prospective teachers to earn a bachelor's degree in an academic discipline other than education, no undergraduate major is offered. All teaching credentials are earned postbaccalaureate. UCSC offers the professional clear Crosscultural, Language and Academic Development (CLAD) and Bilingual Crosscultural, Language and Academic Development (BCLAD) multiple subjects credentials,

which are used in self-contained elementary classrooms (K-6) where all subjects are taught by the same teacher. UCSC also offers the CLAD and BCLAD single subjects credentials, which are used in departmentalized settings where the teacher is responsible for one subject (7-12). A doctor of education (Ed.D) degree in collaborative leadership is also available.

5 An intensive major is also available.

6 A B.M. degree in music is also available. A doctorate of musical arts (D.M.A.) degree in composition is available.

7 Graduate parenthetical degree notations are available in this area. See program statement for more information.

*Not offered in 2008-09

Undergraduate Admission

[Application Filing Periods](#) | [High School Preparation for University Work](#) | [High School Proficiency Examination](#) | [Transfer Credit](#) | [Credit for Courses Taken Elsewhere](#)

To read an updated copy of this page with strikeouts and additions highlighted, see 2009-10 Undergraduate Admission, highlighted copy.

Please note that sections under this topic that contained no changes from the General Catalog 2008-10 are not included. For the complete section, go to 2008-10 Undergraduate Admission.

Admission

Undergraduate admission to the University of California is based on two principles: that the best predictor of a student's success in the university is high scholarship in previous work and that the study of certain subjects gives a student good preparation for university work. Minimum admission requirements are the same for each UC campus, but each sets additional standards when the number of qualified applicants exceeds capacity.

If you are considering applying to UC Santa Cruz, the Office of Admissions wants to help you learn more about the campus and its distinctive educational programs. For more information, see admissions.ucsc.edu.

If you are able to visit the campus, you may wish to take a student-led tour. The Office of Admissions offers tours on weekdays and selected Saturdays, and reservations are required. Visit our web site at admissions.ucsc.edu/campustours for information and reservations for campus tours. Please see admissions.ucsc.edu/transferworkshops for information and reservations for transfer workshops. If you do not have Internet access, please call (831) 459-4008.

The University of California, Santa Cruz, continues to take positive steps to increase the diversity of the student population, including applicants coming from low socioeconomic backgrounds, students with disabilities, veterans, and non-traditionally aged students. The university does not discriminate on the basis of race, color, national origin, religion, sex, gender identity, pregnancy (pregnancy, childbirth, and medical conditions related to childbirth), disability, age, medical condition (cancer-related), ancestry, marital status, citizenship, sexual orientation, or status as a Vietnam-era veteran or special disabled veteran in admission to or participation in its programs, activities, or services.

Educational Opportunity Programs at UCSC are designed to encourage students from educationally and/or economically disadvantaged backgrounds to prepare for and enter the university. For a description of these programs.

Admission by Exception. Special consideration may be given to a limited number of applicants who do not meet standard admission requirements. Admission by Exception is granted to a very small percentage of those considered for admission each quarter. Such factors as academic accomplishments in light of a person's life experiences and/or special circumstances, socioeconomic background, special talents and/or achievements, contributions to the community, and the quality of the applicant's personal statement are taken into consideration when reviewing applicants seeking Admission by Exception.

Graduation rates. The following graduation-rate information is listed in compliance with the 1990 Title I: Federal Right-to-Know Act, Section 103. Forty-eight percent of the students who entered as first-year students in 2003 graduated in four years; 67 percent of those who entered in 2002 graduated in five years; and 68 percent of those who entered in 2001 graduated in six years. In recent years, students who entered as first-year students took an average of 4.19 years to graduate, and students transferring to UCSC as juniors averaged 2.29 years. These graduation rates are well above the national averages.

In accord with the Education Amendments of 1976, Section 493A, more detailed information regarding retention is available on the Institutional Research web site at planning.ucsc.edu/irps/retengrad.asp.

Admission Procedures

The University of California Application for Undergraduate Admission and Scholarships may be accessed through admissions.ucsc.edu.

In addition to the application, the above site includes a wealth of information for prospective UC students about undergraduate education, admission, financial aid, and various topics of interest. If you do not have web access, e-mail ucinfo@ucapplication.net for a printed application.

Application Filing Periods

You should submit an application for admission during the filing period for the quarter in which you want to attend the university. Enrollment opportunities for winter are more limited than for fall. Check with the Office of Admissions to see if UCSC is accepting applications for winter quarter.

Quarter of Attendance	Filing Period
Fall quarter 2010	November 1–30, 2009
Winter quarter 2011	July 1–31, 2010
Fall quarter 2011	November 1–30, 2010
Winter quarter 2012	July 1–31, 2011

Application Fees

The application fee is \$60 (\$70 for international nonimmigrant applicants) to apply to one campus of the university. For each additional campus you select, you must pay an extra \$60 fee (\$70 for international nonimmigrant applicants). These fees are subject to change and are not refundable. The online application includes payment instructions.

Fee Waivers

The University of California will waive application fees for up to four campuses for certain students who otherwise would be unable to apply for admission. To qualify for the fee waiver, you must meet specific requirements related to your family income and size. *The fee waiver is for U.S. citizens and permanent residents only.*

Students who qualify for fee waivers and who select more than four campuses must pay \$60 for each additional choice.

There are several ways to apply for a fee waiver, as described below. To qualify, you must meet the same income and family-size guidelines, regardless of the application method you use.

An online fee waiver form is available to applicants when they apply. The application automatically determines if you are eligible for the fee waiver as soon as it is complete.

Other methods for waiving the application fee are listed below.

- High school students: Use the College Board fee waiver. It is available from your school counselor.
- EOPS community college students: If you are enrolled in Extended Opportunity Programs and Services (EOPS) at a California community college, obtain a fee waiver authorization from the EOPS Office.
- Other applicants: Qualified students may obtain a UC fee waiver authorization at a UC campus Admissions, Relations with Schools, or Educational Opportunity Programs Office. When requesting a fee waiver authorization, be prepared to answer questions about your gross family income and family size.

If you are unable to obtain a UC fee waiver authorization due to time constraints, you may attach a letter to your application for admission stating your gross family income and the number of family members supported by that income, and requesting consideration for an application fee waiver.

Subject Requirements

a. History/social science—two years required. Two years of history/social science, including one year of world history, cultures, and geography; and one year of U.S. history or one half year of U.S. history and one half year of civics or American government.

b. English—four years required. Four years of college preparatory English that include frequent and regular writing, and reading of classic and modern literature. No more than one year of ESL-

type courses can be used to meet this requirement.

c. Mathematics—three years required, four years recommended. Three years of college preparatory mathematics that include the topics covered in elementary and advanced algebra and two- and three-dimensional geometry. Approved integrated math courses may be used to fulfill part or all of this requirement, as may math courses taken in the seventh and eighth grades that your high school accepts as equivalent to its own math courses.

d. Laboratory science—two years required, three years recommended. Two years of laboratory science providing fundamental knowledge in at least two of these three foundational subjects: biology, chemistry, and physics. Advanced laboratory science courses that have biology, chemistry, or physics as prerequisites and offer substantial additional material may be used to fulfill this requirement. The last two years of an approved three-year integrated science program that provides rigorous coverage of at least two of the three foundational subjects may be used to fulfill this requirement.

e. Language other than English—two years required, three years recommended. Two years of the same language other than English. Courses should emphasize speaking and understanding, and include instruction in grammar, vocabulary, reading, composition, and culture. Courses in languages other than English taken in the seventh and eighth grades may be used to fulfill part of this requirement if your high school accepts them as equivalent to its own courses.

f. Visual and performing arts discipline (VPA)—one year required. A single yearlong approved arts course from a single discipline: dance, drama/theater, music, or visual art.

g. College preparatory electives—one year required. One year (two semesters), in addition to those required in “a–f” above, chosen from the following areas: visual and performing arts (non-introductory level courses), history, social science, English, advanced mathematics, laboratory science, and a language other than English (a third year in the language used for the “e” requirement or two years of another language).

Admission as a Freshman

High School Preparation for University Work.

Carefully planned high school course work provides you with the best preparation for your undergraduate university studies, and allows for advanced preparation for your chosen field of study. Most important, students who master certain basic knowledge and skills in high school substantially increase their chances of success at the university. (Requirements for transfer students are explained in the Admission as a Transfer Student section.)

The basic foundation of UC eligibility is the completion of the high school courses required for admission (see “a–g” Subject Requirement). However, you should take courses beyond the minimum levels in reading, writing, and mathematics in order to be adequately prepared for basic university courses that you may be expected to take freshman year.

A well-prepared student will have mastered the equivalent of four years of English composition and literature with a focus on expository writing; four years of mathematics, including a precalculus course in the senior year; two to three years of a language other than English; two to three years of laboratory science; two or more years of history and social sciences; and one or more years of visual or performing arts.

You should also give careful thought to the general field of study, and perhaps the specific major, you want to pursue at the university. By making this decision in advance, you can plan to take additional courses in high school related to the field.

Senior-Year Program. The senior year should be used to prepare you for your first year at the university and should include honors and advanced courses, as well as courses that will strengthen overall preparation. A challenging, successfully completed senior-year program is a natural bridge between high school and university course work in the intended major. A strong senior program will also strengthen your chances for admission to UC Santa Cruz.

Reading. University students must be able to read and understand scholarly publications, analyze what they read, and question themselves about an author’s intentions, viewpoint, arguments, and conclusions. You should read commentaries and essays as well as textbooks, and a wide variety of other material—including literature, biography, nonfiction, and criticism—in addition to what you are required to read in class.

Writing. You must learn to write clearly and skillfully in English and to think critically and analyze what you learn in class and in your reading, so that you can present your ideas in a clear and persuasive manner.

University students proficient in composition must be able to understand the assigned topic, select and develop a theme by argument and example, use words and sentences that clearly and precisely express what they mean, demonstrate an understanding of the rules of standard English, and punctuate and spell correctly.

Mathematics. A number of fields of study require preparation in mathematics beyond the three years necessary for admission to UCSC. All majors in engineering and the physical, mathematical, and life sciences include courses in calculus, as do programs leading to professional degrees in

medicine, dentistry, optometry, and pharmacy. Moreover, many majors in the social sciences, business and economics require statistics and/or calculus.

The recommended four years of high school mathematics should include basic operations with numerical and algebraic functions; operations with exponents and radicals; linear equations and inequalities; polynomials and polynomial equations; functions and their graphs; trigonometry, logarithms, and exponential functions; and applications and word problems.

The university considers you a freshman applicant if you have graduated from high school and have not enrolled in a regular session at any college or university. If you attend a summer session immediately after graduating from high school, you are still a freshman applicant.

The admission and selection process for freshmen to UC Santa Cruz reflects the academic rigor and preparation needed for admission to a major research institution. Meeting the minimum eligibility requirements for the university *does not* guarantee you admission as a freshman. Students are encouraged to achieve well beyond the minimum requirements to enhance their chances for selection.

Information regarding the admission and selection process for UC Santa Cruz can be accessed at admissions.ucsc.edu. This site provides information on establishing UC eligibility for both residents and nonresidents of California. If you are unable to access the online information, please call the Admissions Office at (831) 459-4008.

Please note: The minimum requirements for freshmen entering in fall 2012 will be different from those listed here. For more information, see www.universityofcalifornia.edu/news/eligibilitychanges/.

High School Proficiency Examination

While the University of California expects freshman applicants to have graduated from high school, in lieu of the regular high school diploma, the university will accept the following:

- Certificate of Proficiency, awarded by the State Board of Education upon successful completion of the California High School Proficiency Examination
- General Educational Development (GED) Certificate
- Proficiency tests from other states

Transfer Credit

Transfer credit may be granted to a freshman applicant for an acceptable college course taken while still in high school if an official transcript is received from the college that conducted the course.

Transfer credit is granted for specified College Board Advanced Placement Examinations completed with a score of 3, 4, or 5 and for specified International Baccalaureate Higher Level Exams completed with a score of 5, 6, or 7. A score of 30 or higher on the International Baccalaureate Diploma is also accepted for transfer credit.

Admission as a Transfer Student

The University of California defines a *transfer applicant* as a student who has been a registered student in a college or university, or in college-level extension classes following high school graduation. Summer session attended immediately following high school graduation is excluded in this determination. If you are a transfer applicant, you cannot disregard your college record and apply for admission as a freshman.

The admission and selection process for transfer students reflects the academic rigor and preparation needed for admission to a major research institution. UC Santa Cruz gives highest priority to junior-level transfers from California community colleges.

Information regarding the admission and selection process for UC Santa Cruz can be accessed at admissions.ucsc.edu. This site provides information on eligibility and selection for both residents and nonresidents of California. If you are unable to access the online information, please call the Admissions Office at (831) 459-4008.

Credit for Courses Taken Elsewhere

The university gives unit credit to transfer students for courses they have completed at other accredited colleges and universities, including courses taken at recognized institutions outside of the U.S. To be accepted for credit, your courses must be comparable to those offered at the university, as determined by the UC Santa Cruz Admissions Office. The UC Santa Cruz department sponsoring your major decides which transfer courses may be used to satisfy major requirements.

Because a total of 70 semester units (105 quarter units) of credit toward a university degree may

be earned at a community (two-year) college, only subject credit will be granted for courses taken in excess of these amounts.

Applicants will not be considered for admission if they have completed 90 semester units (135 quarter units) or more of UC-transferable credit because it is not usually possible for these students to complete a bachelor's degree within UC Santa Cruz graduation requirements. Advanced Placement (AP) or International Baccalaureate Higher Level (IBH) credit is permitted to exceed the 90 semester unit maximum by the number of AP or IBH units granted.

Opportunities to take courses at UC Santa Cruz as a nonmatriculated student are available through Summer Session, Concurrent Enrollment through UC Extension, and Intersegmental Cross-Enrollment.

UC Santa Cruz Transfer Services

The Admissions Office provides information to all students who wish to transfer to UC Santa Cruz. Student-led guided tours happen year-round and both require advance reservations. Please see admissions.ucsc.edu/campustours to make a reservation. If you do not have Internet access, please call (831) 459-4008.

For prospective junior transfer students and their families, we offer transfer admission workshops on selected Fridays. This is your chance to sit down with a small group and have your junior transfer-related questions answered by an adviser in the Office of Admissions. Please note that pre-evaluations of transcripts are not available as part of the workshop. See admissions.ucsc.edu/transferworkshops for information and reservations.

In addition, UCSC counselors visit many community colleges in California. Check with your counseling department or transfer center to determine whether a UCSC counselor will be visiting your community college.

Admission of International Students

The University of California welcomes applications from international students. The academic credentials of applicants from other countries are evaluated in accordance with the general regulations governing admission.

UC Santa Cruz accepts applications from international students for the fall quarter, and students should begin application inquiries a year before the quarter of desired admission. Openings for the winter quarter may be limited. If you are interested in applying for winter, check with the Office of Admissions. For information, write to admissions@ucsc.edu or the International Admissions Specialist, Office of Admissions, University of California, Santa Cruz, 1156 High Street, Santa Cruz, CA 95064.

If your native language is not English, you must certify proficiency in English by one of the following methods: earning a score of 83 or higher on the Internet-based Test of English as a Foreign Language (minimum 550 if paper-based TOEFL; minimum 220 if computer-based TOEFL), or earning a minimum score of 7.0 on the International English Language Testing System (IELTS) exam, or completing two transferable English composition courses with grades of B or higher in a U.S. college or university.

A financial certificate and official academic records will be required if you are admitted to the university. Generally, nonimmigrant students must provide documentation that sufficient funds will be available to cover nonresident tuition, educational fees, and living expenses. The university does not offer financial assistance to international students.

For information about services for international students, see [Office of International Education](#).

Readmission

If you are an undergraduate who wants to return to UC Santa Cruz after an absence of a portion of a quarter or more, you must file an Application for Readmission. The application form is available online at advising.ucsc.edu/student/read and from your college office. The completed application should be filed, along with the nonrefundable \$60 application fee, with the Office of Admissions during the appropriate period:

Quarter of Attendance

Fall quarter
Winter quarter
Spring quarter

Filing Period*

November 1–July 31
July 1–October 31
October 1–January 31

*Filing deadlines for priority enrollment: fall, April 1; winter, October 1; spring, January 1.

If during your absence you attended another UC campus, an official transcript must be submitted to the Office of Admissions before your application will be sent to your college for approval. If you attended another collegiate institution, your UC Santa Cruz college may require a transcript. If you left for health reasons, clearance from the Cowell Student Health Center is required. *You must pay all outstanding bills owed to the university before you will be permitted to register.*

Admission to Special Categories

For information on applying for admission in the categories described below, please contact the Office of Admissions at admissions@ucsc.edu or University of California, Santa Cruz, 1156 High Street, Santa Cruz, CA 95064, (831) 459-2131.

Second Bachelor's Degree

Applications from students interested in pursuing a second baccalaureate or limited-status program will be considered as campus enrollment allows. Priority is given to applicants who have not yet had the opportunity to complete a bachelor's degree.

If your educational goals have changed substantially since receiving your bachelor's degree, you may be eligible to pursue a second undergraduate degree in an established major at UCSC.

You must meet regular university admission requirements, and your experience or previous scholarship record must show potential for academic success in your proposed area of study. Additional selection criteria may be applied. Admission is also subject to approval by the appropriate department and the college.

For a second degree, you must fulfill major and residence requirements, as well as system-wide requirements in American history and institutions and the Entry Level Writing Requirement (see pages 25–26). You must enroll for at least three quarters and are usually restricted to six quarters total.

Limited Status

If you have already completed an undergraduate degree and you have a particular reason to take specific undergraduate university classes, you may be eligible to enroll in a nondegree program as a limited-status student.

Your proposed program of study must either prepare you for graduate or professional school or satisfy some definite educational need or interest. Participants generally enroll full-time for a specified period that does not exceed three quarters. You must meet regular university admission requirements, and your experience or previous academic record must show potential for success in your proposed program. Additional selection criteria may be applied. Admission is subject to approval by the appropriate department or college.

Nondiscrimination and Affirmative Action Policies

Student-Related Matters

The University of California, in accordance with applicable Federal and State law and University policy, does not discriminate on the basis of race, color, national origin, religion, sex, gender identity, pregnancy, disability, medical condition (cancer related), ancestry, marital status, age, citizenship, sexual orientation, status as a Vietnam-era veteran or special disabled veteran. The University also prohibits sexual harassment. This nondiscrimination policy covers admission, access, and treatment in University programs and activities.

Inquiries regarding UCSC's student-related nondiscrimination policies may be directed to Student Judicial Affairs at (831) 459-1738, or e-mail sja@ucsc.edu.

Inquiries regarding the UCSC *Policy on Sexual Assault*, the UC *Policy on Sexual Harassment and Procedures for Reports of Sexual Assault(s) and Sexual Harassment* and/or violations of Title IX may be directed to the Title IX Coordinator/Sexual Harassment Officer at (831) 459-2462, or e-mail rew@ucsc.edu.

Inquiries regarding UCSC's affirmative action, equal employment opportunity, and nondiscrimination policies for staff and student employment may be directed to the Equal Employment Opportunity/Affirmative Action Office at (831) 459-3676, or e-mail cbene@ucsc.edu. For academic employment, contact the Assistant Vice Chancellor for Academic Personnel at (831) 459-4300, or e-mail apo@ucsc.edu.

Student inquiries regarding disability or disability accommodations may be addressed to the Director, Disability Resource Center at (831) 459-2089 (voice), (831) 459-4806 (TTY), or e-mail drc@ucsc.edu.

Admission

Undergraduate admission to the University of California is based on two principles: that the best predictor of a student's success in the university is high scholarship in previous work and that the study of certain subjects gives a student good preparation for university work. Minimum admission requirements are the same for each UC campus, but each sets additional standards when the number of qualified applicants exceeds capacity. ~~In 2008, UCSC received more than 33,000 applications for 3,700 places in the freshman class and 850 in the transfer class.~~

If you are considering applying to UC Santa Cruz, the Office of Admissions wants to help you learn more about the campus and its distinctive educational programs. [For more information, see admissions.ucsc.edu.](http://admissions.ucsc.edu) ~~Admissions counselors from UCSC visit many high schools and community colleges throughout California and are available to answer your questions about Santa Cruz.~~

If you are able to visit the campus, you may wish to take a student-led tour. The Office of Admissions offers tours on weekdays and selected Saturdays, and reservations are required. Visit our web site at admissions.ucsc.edu/campustours for information and reservations for campus tours. [Please see admissions.ucsc.edu/transferworkshops for information and reservations for transfer workshops.](http://admissions.ucsc.edu/transferworkshops) If you do not have Internet access, please call (831) 459-4008.

The University of California, Santa Cruz, continues to take positive steps to increase the diversity of the student population, including applicants coming from low socioeconomic backgrounds, students with disabilities, veterans, and non-traditionally aged students. The university does not discriminate on the basis of race, color, national origin, religion, sex, gender identity, pregnancy (pregnancy, childbirth, and medical conditions related to childbirth), disability, age, medical condition (cancer-related), ancestry, marital status, citizenship, sexual orientation, or status as a Vietnam-era veteran or special disabled veteran in admission to or participation in its programs, activities, or services.

Educational Opportunity Programs at UCSC are designed to encourage students from educationally and/or economically disadvantaged backgrounds to prepare for and enter the university. For a description of these programs, see pages 37–38.

Admission by Exception. Special consideration may be given to a limited number of applicants who do not meet standard admission requirements. Admission by Exception is granted to a very small percentage of those considered for admission each quarter. Such factors as academic accomplishments in light of a person's life experiences and/or special circumstances, socioeconomic background, special talents and/or achievements, contributions to the community, and the quality of the applicant's personal statement are taken into consideration when reviewing applicants seeking Admission by Exception.

Graduation rates. The following graduation-rate information is listed in compliance with the 1990 Title I: Federal Right-to-Know Act, Section 103. Forty-eight percent of the students who entered as first-year students in 2003 graduated in four years; 67 percent of those who entered in

2002 graduated in five years; and 68 percent of those who entered in 2001 graduated in six years. In recent years, students who entered as first-year students took an average of 4.19 years to graduate, and students transferring to UCSC as juniors averaged 2.29 years. These graduation rates are well above the national averages.

In accord with the Education Amendments of 1976, Section 493A, more detailed information regarding retention is available on the Institutional Research web site at planning.ucsc.edu/irps/retengrad.asp.

Admission Procedures

The University of California Application for Undergraduate Admission and Scholarships may be accessed through admissions.ucsc.edu.

In addition to the application, the above site includes a wealth of information for prospective UC students about undergraduate education, admission, financial aid, and various topics of interest.

~~The application can also be printed from this web site if you are unable to apply via the web. If you do not have web access, you can either e-mail ucinfo@ucapplication.net or call (831) 459-4008 for a printed application mailed to you.~~

Application Filing Periods

You should submit an application for admission during the filing period for the quarter in which you want to attend the university. Enrollment opportunities for winter are more limited than for fall. Check with the Office of Admissions to see if UCSC is accepting applications for winter quarter.

Quarter of Attendance

Fall quarter ~~2009~~2010

Winter quarter 201~~1~~0

July 1–31, 201~~1~~0

Application Fees

The application fee is \$60 (\$70 for international nonimmigrant applicants) to apply to one campus of the university. For each additional campus you select, you must pay an extra \$60 fee (\$70 for international nonimmigrant applicants). These fees are subject to change and are not refundable. The online application includes payment instructions.

Fee Waivers

The University of California will waive application fees for up to four campuses for certain students who otherwise would be unable to apply for admission. To qualify for the fee waiver, you must meet specific requirements related to your family income and size. *The fee waiver is for U.S. citizens and permanent residents only.*

Students who qualify for fee waivers and who select more than four campuses must pay \$60 for each additional choice.

There are several ways to apply for a fee waiver, as described below. To qualify, you must meet the same income and family-size guidelines, regardless of the application method you use.

~~An online fee waiver form is available to applicants who apply for admission on the web.~~ An online fee waiver form is available to applicants when they apply. The ~~online~~ application automatically ~~can~~ determines if an you are ~~applicant is~~ eligible for the fee waiver as soon as ~~the necessary form~~ it is complete.

Other methods for waiving the application fee are listed below.

- High school students: Use the College Board fee waiver. It is available from your school counselor.
- EOPS □ community college students: If you are enrolled in Extended Opportunity Programs and Services (EOPS) at a California community college, obtain a fee waiver authorization from the EOPS Office.
- Other applicants: Qualified students may obtain a UC □ fee waiver authorization at a UC campus Admissions, Relations with Schools, or Educational Opportunity Programs Office. When requesting a fee waiver authorization, be prepared to answer questions about your gross family income and family size.

If you are unable to obtain a UC □ fee waiver authorization due to time constraints, you may attach a letter to your application for admission stating your gross family income and the number of family members supported by that income, and requesting consideration for an application fee waiver.

Admission as a Freshman

High School Preparation for University Work. ~~High School Preparation for University Work~~
~~A carefully planned program of~~ Carefully planned high school ~~study course work~~ provides you with the best preparation for your undergraduate university work studies, and allows for. ~~It can give you a definite edge in your undergraduate course work and the opportunity to do~~ advanced preparation for your chosen field of study. Most important, students who master certain basic knowledge and skills in high school substantially increase their chances of success at the university. (Requirements for transfer students are explained in the Admission as a Transfer Student section on page 16.)

~~Prospective university students should give priority to completing~~ The basic foundation of UC eligibility is the completion of the high school courses required for admission—~~the~~ (see “a–g” Subject ~~R~~Requirement)s section. ~~You should understand, h~~ However, you should take courses beyond the minimum levels in reading, writing, and mathematics in order to be adequately prepared for basic university courses that you may be expected to take freshman year. ~~that the~~

~~“a-g” requirements represent minimum admission standards. Demonstrating proficiency in these subjects will not automatically prepare you for freshman work in every discipline, much less in your major or program of study. The university strongly recommends, but does not require, that you complete advanced study in many of the “a-g” subjects.~~

A ~~student who is~~ well-prepared ~~student for university work~~ will have mastered the equivalent of four years of English composition and literature with a focus on expository writing; four years of mathematics, including a precalculus course in the senior year; two ~~to to~~ three years of a language other than English; two to three years of laboratory science; two or more years of history and social sciences; and one or more years of visual or performing arts.

You should also give careful thought to the general field of study, and perhaps the specific major, you want to pursue at the university. ~~If you are able to make~~ By making this decision in advance, you can plan to take additional courses in high school related to the field.

~~You should take courses beyond the minimum levels in reading, writing, and mathematics in order to be adequately prepared for basic university courses, such as English composition and calculus, that you may be expected to take in the freshman year. A lack of basic preparation can cause problems for students who do not choose a major until after they enroll or for those who prepare for one major and then decide to change to another.~~

~~Good study habits and skills are also essential for success at the university. These are often developed in more advanced courses in high school, but can also be gained in self-directed learning methods. University students are expected to know how to read a textbook effectively and master background material, how to take notes, and how to plan a proper study schedule.~~

Senior-Year Program. ~~The more challenging your high school program, the better prepared you will be for university work. Prospective students should take particular care in planning the senior-year program.~~ The senior year should be used to prepare ~~students~~ you for ~~their~~ your first year at the university and should include honors and advanced courses, as well as courses that will strengthen overall preparation. A challenging, successfully completed senior-year program is a natural bridge between high school and university course work in the intended major. A strong senior program will also strengthen your chances for admission to UC Santa Cruz.

Reading. ~~Prospective u~~ University students must be able to read and understand scholarly publications, analyze what they read, and need to develop the ability to read and understand scholarly publications. ~~You will have to do more reading and more writing than in high school and will be required to learn more material in shorter periods of time. You should be able to analyze what you read and question yourself~~ themselves about an author’s intentions, viewpoint, arguments, and conclusions. You should ~~have experience~~ reading commentaries and essays as well as textbooks, and ~~–You should read~~ a wide variety of other material—including literature, biography, nonfiction, and criticism—in addition to what you are required to read in class. ~~You should become familiar and comfortable with the conventions of standard English and with various writing strategies and techniques.~~

Writing. ~~Prospective university students~~ You must learn to write clearly and skillfully in English and to think. ~~You will be expected to write papers for many university classes, and many examinations will include essays. You will have to think~~ critically and analyze what you learn in class and in your ~~outside~~ reading, and so that you can present your ideas in a clear and persuasive manner.

UBy university ~~standards, a student~~ students proficient in composition ~~is~~ must be able to understand the assigned topic, select and develop a theme by argument and example, use words and sentences that clearly and precisely express what ~~he or she means~~ they mean, demonstrate an understanding of the rules of standard English, and punctuate and spell correctly.

~~Students who plan to attend UC Santa Cruz must take English courses in high school that require the development and practice of these skills. You must take at least four years of English composition and literature with a focus on expository writing—the development of persuasive critical thinking on the written page.~~

Mathematics. ~~Many students are unaware of the large number of fields that require~~ A number of fields of study require preparation in mathematics beyond the three years necessary for admission to UCSC. All majors in engineering and the physical, mathematical, and life sciences include c Courses in calculus ~~are included in all majors in engineering and the physical, mathematical, and life sciences~~, as well as in ~~do~~ -programs leading to professional degrees in in ~~fields such as~~ medicine, dentistry, optometry, and pharmacy. ~~Moreover, many~~ Many majors in the social sciences, business, and economics require statistics and/or calculus, ~~and sometimes both~~.

The ~~university highly recommended~~ ~~edds that students take~~ four years of high school mathematics ~~in high school, including precalculus in the senior year. Courses in mathematics~~ should include basic operations with numerical and algebraic functions; operations with exponents and radicals; linear equations and inequalities; polynomials and polynomial equations; functions and their graphs; trigonometry, logarithms, and exponential functions; and applications and word problems.

Subject Requirements

a. History/social science—two years required. Two years of history/social science, including one year of world history, cultures, and geography; and one year of U.S. history or one half year of U.S. history and one half year of civics or American government.

b. English—four years required. Four years of college preparatory English that include frequent and regular writing, and reading of classic and modern literature. No more than one year of ESL-type courses can be used to meet this requirement.

c. Mathematics—three years required, four years recommended. Three years of college preparatory mathematics that include the topics covered in elementary and advanced algebra and two- and three-dimensional geometry. Approved integrated math courses may be used to fulfill

part or all of this requirement, as may math courses taken in the seventh and eighth grades that your high school accepts as equivalent to its own math courses.

d. Laboratory science—two years required, three years recommended. Two years of laboratory science providing fundamental knowledge in at least two of these three foundational subjects: biology, chemistry, and physics. Advanced laboratory science courses that have biology, chemistry, or physics as prerequisites and offer substantial additional material may be used to fulfill this requirement. The last two years of an approved three-year integrated science program that provides rigorous coverage of at least two of the three foundational subjects may be used to fulfill this requirement.

e. Language other than English—two years required, three years recommended. Two years of the same language other than English. Courses should emphasize speaking and understanding, and include instruction in grammar, vocabulary, reading, composition, and culture. Courses in languages other than English taken in the seventh and eighth grades may be used to fulfill part of this requirement if your high school accepts them as equivalent to its own courses.

f. Visual and performing arts discipline (VPA)—one year required. A single yearlong approved arts course from a single ~~VPA~~-discipline: dance, drama/theater, music, or visual art.

g. College preparatory electives—one year required. One year (two semesters), in addition to those required in “a–f” above, chosen from the following areas: visual and performing arts (non-introductory level courses), history, social science, English, advanced mathematics, laboratory science, and a language other than English (a third year in the language used for the “e” requirement or two years of another language).

~~Admission as a Freshman~~

The university considers you a freshman applicant if you have graduated from high school and have not enrolled in a regular session at any college or university. If you attend a summer session immediately after graduating from high school, you are still a freshman applicant.

The admission and selection process for freshmen to UC Santa Cruz reflects the academic rigor and preparation needed for admission to a major research institution. Meeting the minimum eligibility requirements for the university *does not* guarantee you admission as a freshman. Students are encouraged to achieve well beyond the minimum requirements to enhance their chances for selection.

Information regarding the admission and selection process for UC Santa Cruz can be accessed at admissions.ucsc.edu. This site provides information on establishing UC eligibility for both residents and nonresidents of California. If you are unable to access the online information, please call the Admissions Office at (831) 459-4008.

Please note: The minimum requirements for freshmen entering in fall 2012 will be different from those listed here. For more information, see

| www.universityofcalifornia.edu/news/eligibilitychanges.

High School Proficiency Examination

While the University of California expects freshman applicants to have graduated from high school, in lieu of the regular high school diploma, the university will accept the following:

- Certificate of Proficiency, awarded by the State Board of Education upon successful completion of the California High School Proficiency Examination
- General Educational Development (GED) Certificate
- Proficiency tests from other states

Transfer Credit

Transfer credit may be granted to a freshman applicant for an acceptable college course taken while still in high school if an official transcript is received from the college that conducted the course.

Transfer credit is granted for specified College Board Advanced Placement Examinations completed with a score of 3, 4, or 5 and for specified International Baccalaureate Higher Level Exams completed with a score of 5, 6, or 7. A score of 30 or higher on the International Baccalaureate Diploma is also accepted for transfer credit.

Admission as a Transfer Student

The University of California defines a *transfer applicant* as a student who has been a registered student in a college or university, or in college-level extension classes following high school graduation. Summer session attended immediately following high school graduation is excluded in this determination. If you are a transfer applicant, you cannot disregard your college record and apply for admission as a freshman.

The admission and selection process for transfer students reflects the academic rigor and preparation needed for admission to a major research institution. UC Santa Cruz gives highest priority to junior-level transfers from California community colleges.

Information regarding the admission and selection process for UC Santa Cruz can be accessed at admissions.ucsc.edu. This site provides information on eligibility and selection for both residents and nonresidents of California. If you are unable to access the online information, please call the Admissions Office at (831) 459-4008.

Credit for Courses Taken Elsewhere

The university gives unit credit to transfer students for courses they have completed at other accredited colleges and universities, including courses taken at recognized institutions outside of the U.S. To be accepted for credit, your courses must be comparable to those offered at the university, as determined by the UC Santa Cruz Admissions Office. The UC Santa Cruz department sponsoring your major decides which transfer courses may be used to satisfy major requirements.

Because a total of 70 semester units (105 quarter units) of credit toward a university degree may be earned at a community (two-year) college, only subject credit will be granted for courses taken in excess of these amounts.

Applicants will not be considered for admission if they have completed 90 semester units (135 quarter units) or more of UC-transferable credit because it is not usually possible for these students to complete a bachelor's degree within UC Santa Cruz graduation requirements. Advanced Placement (AP) or International Baccalaureate Higher Level (IBH) credit is permitted to exceed the 90 semester unit maximum by the number of AP or IBH units granted.

Opportunities to take courses at UC Santa Cruz as a nonmatriculated student are available through Summer Session, Concurrent Enrollment through UC Extension, and Intersegmental Cross-Enrollment (see page 44).

UC Santa Cruz Transfer Services

The Admissions Office provides information to all students who wish to transfer to UC Santa Cruz. Student-led guided tours happen year-round and ~~both~~ require advance reservations. Please see admissions.ucsc.edu/campustours to make a reservation. If you do not have Internet access, please call (831) 459-4008.

For prospective junior transfer students and their families, we offer transfer admission workshops on selected Fridays. This is your chance to sit down with a small group and have your junior transfer-related questions answered by an adviser in the Office of Admissions. Please note that pre-evaluations of transcripts are not available as part of the workshop. See admissions.ucsc.edu/transferworkshops for information and reservations.

In addition, UCSC counselors ~~make regular visits to~~ visit many community colleges in California. Check with your counseling department or transfer center to determine whether a UCSC counselor will be visiting your community college.

Admission of International Students

The University of California welcomes applications from international students. The academic credentials of applicants from other countries are evaluated in accordance with the general regulations governing admission.

UC Santa Cruz accepts applications from international students for the fall quarter, and students should begin application inquiries a year before the quarter of desired admission. Openings for the winter quarter may be limited. If you are interested in applying for winter, check with the Office of Admissions. For information, write to admissions@ucsc.edu or the International Admissions Specialist, Office of Admissions, University of California, Santa Cruz, 1156 High Street, Santa Cruz, CA 95064.

~~Students whose~~ If your native language is not English, you must certify proficiency in English by one of the following methods: earning a score of 83 or higher on the Internet-based Test of English as a Foreign Language (minimum 550 if paper-based TOEFL; minimum 220 if

computer-based TOEFL), or earning a minimum score of 7.0 on the International English Language Testing System (IELTS) exam, or completing two transferable English composition courses with grades of B or higher in a U.S. college or university.

A financial certificate and official academic records will be required if you are admitted to the university. Generally, nonimmigrant students must provide documentation that sufficient funds will be available to cover nonresident tuition, educational fees, and living expenses. The university does not offer financial assistance to international students.

For information about services for international students, see Office of International Education, page 40.

Readmission

If you are an undergraduate who wants to return to UC Santa Cruz after an absence of a portion of a quarter or more, you must file an Application for Readmission. The application form is available online at advising.ucsc.edu/student/read and from your college office. The completed application should be filed, along with the nonrefundable \$60 application fee, with the Office of Admissions during the appropriate period:

Quarter of Attendance

Fall quarter

Winter quarter

Spring quarter

Filing Period*

November 1–July 31

July 1–October 31

October 1–January 31

*Filing deadlines for priority enrollment: fall, April 1; winter, October 1; spring, January 1.

If during your absence you attended another UC campus, an official transcript must be submitted to the Office of Admissions before your application will be sent to your college for approval. If you attended another collegiate institution, your UC Santa Cruz college may require a transcript. If you left for health reasons, clearance from the Cowell Student Health Center is required. *You must pay all outstanding bills owed to the university before you will be permitted to register.*

Admission to Special Categories

For information on applying for admission in the categories described below, please contact the Office of Admissions at admissions@ucsc.edu or University of California, Santa Cruz, 1156 High Street, Santa Cruz, CA 95064, (831) 459-2131.

Second Bachelor's Degree

Applications from students interested in pursuing a second baccalaureate or limited-status program will be considered as campus enrollment allows. Priority is given to applicants who have not yet had the opportunity to complete a bachelor's degree.

If your educational goals have changed substantially since receiving your bachelor's degree, you may be eligible to pursue a second undergraduate degree in an established major at UCSC.

You must meet regular university admission requirements, and your experience or previous scholarship record must show potential for academic success in your proposed area of study. Additional selection criteria may be applied. Admission is also subject to approval by the appropriate department and the ~~selected~~ college.

For a second degree, you must fulfill major and residence requirements, as well as system-wide requirements in American history and institutions and the Entry Level Writing Requirement (see pages 25–26). You must enroll for at least three quarters and are usually restricted to six quarters total.

Limited Status

If you have already completed an undergraduate degree and you have a particular reason to take specific undergraduate university classes, you may be eligible to enroll in a nondegree program as a limited-status student.

Your proposed program of study must either prepare you for graduate or professional school or satisfy some definite educational need or interest. Participants generally enroll full-time for a specified period that does not exceed three quarters. You must meet regular university admission requirements, and your experience or previous academic record must show potential for success in your proposed program. Additional selection criteria may be applied. Admission is subject to approval by the appropriate department or college.

Nondiscrimination Policy Statement/Student-Related Matters

The University of California, in accordance with applicable federal and state law and university policy, does not discriminate on the basis of race, color, national origin, religion, sex, gender identity, pregnancy, physical or mental disability, medical condition (cancer related or genetic characteristics), ancestry, marital status, age, citizenship, sexual orientation, or service in the uniformed services as defined by the Uniformed Services Employment and Reemployment Rights Act of 1994. The university also prohibits sexual harassment. This nondiscrimination policy covers admission, access, and treatment in university programs and activities and employment.

~~University policy also prohibits retaliation for bringing a complaint of discrimination or participating in a complaint process or investigation pursuant to this policy.~~

Inquiries regarding UCSC's student-related nondiscrimination policies may be directed to Student Judicial Affairs at (831) 459-1738, or e-mail sja@ucsc.edu.

Inquiries regarding UCSC's *Sex Offense Policy and Procedures for Reports of Sexual Assault(s) and Sexual Harassment* and/or violations of Title IX may be directed to the Title IX Coordinator/Sexual Harassment Officer at (831) 459-2462, or e-mail rew@ucsc.edu.

Inquiries regarding UCSC's affirmative action, equal employment opportunity, and nondiscrimination policies for staff and student employment may be directed to the Equal Employment Opportunity/Affirmative Action Office at (831) 459-3676, or e-mail

cbene@ucsc.edu. For academic employment, contact the Assistant Vice Chancellor for Academic Human Resources at (831) 459-4300, or e-mail pgpeters@ucsc.edu.

Student inquiries regarding disability or disability accommodations may be addressed to the Director, Disability Resource Center at (831) 459-2089 (voice), (831) 459-4806 (TTY), or e-mail drc@ucsc.edu.

Please note that sections under this topic that contained no changes from the General Catalog 2008-10 are not included. For the complete section, go to 2008-10 Undergraduate Expenses and Financial Resources.

Expenses and Financial Resources

Expenses

In determining the cost of attending UCSC each quarter, students should consider both required fees and personal expenses. The figures below are provided to help you draw develop a realistic personal budget. If you then conclude that you will need financial assistance in order to attend UCSC, you should read the Financial Aid section below. Fees and additional financial information for graduate students can be found at [Graduate Expenses](#). *Tuition, fees, and other charges are subject to change without notice by the UC Regents. For the most current fee information, check reg.ucsc.edu.*

Required Fees

Required fees are due and payable before the start of each quarter. At the beginning of each quarter, you will need sufficient funds to cover housing charges and book costs. For many financial aid recipients, however, fees and on-campus housing charges are paid automatically from approved student aid funds. If you are a financial aid recipient, please note that checks and direct deposits for scholarships, grants, and loans in excess of university charges are not available to you until after registration and enrollment each quarter.

The **University Registration Fee** funds student services that provide a supportive and enriching learning environment and that are complementary to, but not part of, the instructional program. Programs include, but are not limited to, services related to the physical and psychological health and well-being of students; social and cultural activities and programs; services related to campus life; and educational and career support.

The **Educational Fee** helps support student financial aid and related programs; admissions; registration; administration; libraries; operation and maintenance of plant; the university's operating budget; and all costs related to instruction, including faculty salaries.

Santa Cruz campus fees help support a wide range of student services, including college and campuswide student government, extracurricular programs and recreation -facilities, campus child care, community and public service projects, Educational Opportunity Programs and scholarships, and free-fare use of the local transit systems. Campus fees paid by graduate students are provided on page 51.

In addition, all students, including foreign students, are assessed a mandatory **Health Insurance Premium**. The Cowell Student Health Center provides the primary care services for the plan while a contracted insurance company provides major medical and hospitalization insurance. There is an annual deductible, with most expenses covered at 80 percent of the customary and usual charge. Coverage includes, but is not limited to, hospital stays; surgical services; physician visits; emergency treatment; outpatient care; and pregnancy. Dependent coverage is also available. Detailed information is on the web at www2.ucsc.edu/healthcenter/billing/insurance.shtml or contact the Student Health Insurance Office, (831) 459-2389.

Waivers from the mandatory health insurance premium are available if you can show that your private insurance provides coverage equal to or better than the student health insurance plan. Deadlines for applying for a waiver are listed in the *Schedule of Classes* (reg.ucsc.edu/soc).

Some courses charge an additional **Course Materials Fee**. These fees recover the cost of materials, supplies, equipment, and support services not covered by the normal instructional budget. The fees are reviewed and approved annually by the Miscellaneous and Course Materials Fee Advisory Committee. The list of specific courses charging fees in 2009-10 is available in the

Estimated Undergraduate Budget, 2009–10				
	California Residents		Nonresidents	
On Campus	One Quarter	F-W-S Quarters	One Quarter	F-W-S Quarters
Required Fees				
University Registration Fee	\$300.00	\$900.00	\$300.00	\$900.00

Room and board	\$4,547.00	\$13,641.00	\$4,547.00	\$13,641.00
Books and supplies	464.00	1,392.00	464.00	1,392.00
Miscellaneous	504.00	1,512.00	504.00	1,512.00
Transportation (d)	289.00	867.00	289.00	867.00
Subtotal	\$5,804.00	\$17,412.00	\$5,804.00	\$17,412.00
Total Budget CA Residents	\$9,169.00	\$27,507.00		
Nonresident Tuition			\$7,340.00	\$22,020.00
Total Budget CA Nonresidents			\$16,725.00	\$50,175.00
a) Undergraduates who are unable to maintain a full-time program of study because of employment responsibilities, family obligations, or health problems may be eligible for a 50 percent reduction in the Educational Fee.				
b) One quarter at \$336.60; two quarters at \$336.55.				
c) Estimated personal expenses for students living off campus total \$4,932 per quarter or \$14,796 for three quarters. Estimated personal expenses for students living with family total \$3,157 per quarter or \$9,471 for three quarters.				
d) Expenses of owning a car and parking on campus are not included here. For parking fees, see www2.ucsc.edu/taps/pdf/rates08-09.pdf .				

Nonresident Tuition

If you are a resident of a state other than California or of another country, you must pay nonresident tuition, the nonresident educational fee, and other required fees (university registration and Santa Cruz campus fees). The criteria for residency appear in Appendix A.

Non-U.S. citizens note: Regardless of how long you live in California, only U.S. citizens and holders of immigrant visas may become qualified for resident classification.

Late Fees

You may be assessed late fees if you fail to make university payments or enroll by the specified deadlines. For example, *late fees are assessed on a graduated basis for each month there is an unpaid balance on your university account*, and at \$50 each for a late registration payment and/or late enrollment and \$25 for a late housing payment. Deadlines are published in *The Navigator* (the undergraduate campus handbook) and the *Schedule of Classes*, both online at reg.ucsc.edu, and they appear on the Statement of Account.

Estimated Personal Expenses

The figures given for estimated personal expenses are for a single undergraduate living on campus. Expenses will be higher for married students, students with children, and graduate students. The information is as current and realistic as possible; however, expenses for students vary in accordance with lifestyles, priorities, and obligations.

Room and board (in college residences). Rates for room and board in the college residence halls are expected to range from about \$10,341 to \$14,211 per year, depending on the type of accommodation and meal plan. The room and board amount of **\$13,641** in the Undergraduate Budget table is based on the weighted average of on-campus contracts and includes an allowance for additional meals and phone service. Anticipated rates for college apartments are comparable once food and phone costs are added.

Rates are paid quarterly. The rate ranges listed above do not cover periods of academic recess, nor does the budget on page 19. Housing charges are normally payable at the beginning of each quarter. However, students may arrange with the Campus Housing Office to pay monthly.

More detailed information on room and board expenses for the individual colleges appears in a brochure distributed as part of the admission process or available from the Campus Housing Office, 104 Hahn Student Services Building, (831) 459-2394.

Miscellaneous. This budget item covers a broad range of expenses including clothing, laundry, personal grooming, recreation, and health maintenance. It also covers minimum expenses for modest travel to visit family.

Schedules of Refunds	
All Continuing and Readmitted Students and New Students Not Receiving Federal Financial Aid	
Number of calendar days	Percentage of fees refunded*
1st day of instruction	100
2-7	90
8-18	50
19-35	25
36 and over	0
New Students Who Receive Federal Financial Aid and Withdraw during Their First Academic Term	
Number of calendar days	Percentage of fees refunded*
1st day of instruction	100
2-7	90
8-14	80
15-21	70
22-28	60
29-35	50
36-42	40
43 and over	0
* For new students, the nonrefundable \$100 Undergraduate Acceptance of Admission Fee is withheld from the University Registration Fee; the schedule of refunds applies to the balance of fees. Percentages listed (days 1-35 or days 1-42) should be applied individually to Nonresident Tuition, the Educational Fee, the University Registration Fee, and Santa Cruz campus fees. The Health Insurance Fee is nonrefundable.	

Fee Refunds

Students who cancel their registration before the first day of instruction in a given quarter are refunded all required fees minus a \$10 service charge. New undergraduate students who cancel their registration before the first day of instruction are entitled to a refund of all required fees except the nonrefundable \$100 undergraduate acceptance of admission fee (applied toward the university registration fee).

Once the quarter has begun, students must petition for withdrawal. The percentage of fees

refunded is determined by the effective date of the withdrawal, according to the schedule at the left, in which day 1 is the first day of instruction. A student is not eligible for university services after the effective date of withdrawal.

A student entering the armed forces before the sixth week of the quarter is entitled to a full refund of the university registration fee—provided no course credit is received.

More detailed information on withdrawal and refund procedures is included in the quarterly *Schedule of Classes* and *The Navigator*, both online at reg.ucsc.edu, and in the *Graduate Student Hand-book* (graddiv.ucsc.edu). Information on refunds of room and board charges is contained in the campus housing contract, provided to all applicants for on-campus housing. For more information on how withdrawing affects your financial aid, refer to *Your Guide to Financial Aid* (www2.ucsc.edu/fin-aid) or contact the Financial Aid Office.

Deferred Payment Plan

The Deferred Payment Plan (DPP) provides an alternative method of budgeting and paying registration fees. It allows these fees, to the extent not covered by scholarships, loans, or other financial aid, to be paid in monthly installments. Students have a choice of applying for a three-month plan for individual quarterly fees, or, at the beginning of the fall quarter only, for a nine-month plan to be used for the fall, winter, and spring quarters. A nonrefundable application fee of \$25 for the three-month plan, or \$60 for the nine-month plan, is required. Any student in good financial and academic standing may apply for DPP. Students receiving financial aid sufficient to cover registration fees in full are not eligible for this plan. For more information about how to apply for DPP, application deadlines, and campus policies regarding the program, contact the Office of Student Business Services, 203 Hahn Student Services Building, (831) 459-2107, e-mail oarinfo@ucsc.edu, or visit the web site at sbs.ucsc.edu.

Financial Aid

For undergraduate students who require financial assistance, the university maintains a broad-based financial aid program of grants, scholarships, loans, and part-time employment. Administered by the Financial Aid Office, these resources help bridge the gap between the cost of education and what parents and students can reasonably contribute.

If you are a dependent student, the amount of the contribution expected from you and your parents is determined through a careful analysis of your family's financial strength, considering such variables as income, number of dependents, allowable expenses, and assets (excluding the home you live in). Federal, state, and university policies are used in the evaluation. The same policies apply to married and independent students.

Application Deadlines

The Free Application for Federal Student Aid (FAFSA) may be filed beginning on January 1 preceding the academic year in which you wish to enroll. The deadline for applications is March 2 of the preceding academic year for which you are requesting aid. The FAFSA can be filled out online and filed electronically at www.fafsa.ed.gov. A "FAFSA on the Web Worksheet" is available online and in high school guidance and college financial aid offices throughout the country. You can also download and print a FAFSA at www.fafsa.ed.gov. Prior-year FAFSA applicants can use their PIN number to access their information and to complete their FAFSA on the web.

In some cases, the Financial Aid Office will require additional information from applicants. These applicants will be sent an e-mail instructing them to log onto the student portal at my.ucsc.edu and view their "To Do List," which will specify the required documents (e.g., copies of student and parent tax returns or other forms). These are mandatory requirements with a due date for each requested item on the "To Do List." Please be sure to keep your e-mail address current at my.ucsc.edu.

Applications received after the deadline will be reviewed after those received on time have been processed. Late applicants will be considered on a funds-available basis.

The admission notification date is the financial aid application deadline for students seeking to transfer to UCSC during the winter or spring quarter of the following academic year. Required supporting documents must be submitted by December 20.

First-year student applications will be processed first, and every effort will be made to provide frosh with an aid offer by May 1. All other applicants will be notified as applications are processed after that date. If you are applying for winter or spring quarter, you will receive notification of your award as soon as possible after you are admitted and your aid application file is complete.

Types of Aid

Two types or categories of financial aid are available to students who apply and meet all deadlines

listed above. Scholarships and grants are referred to as gift aid, since these funds do not need to be repaid. Self-help aid includes work-study and loans. Your own “package” may include a combination of both.

Grants

The following grants are available to undergraduates.

Cal Grants

Cal Grant awards are funded by the State of California and are awarded by the California Student Aid Commission. To be eligible, you must be a California resident. There are two types of awards:

- **Cal Grant A**

Awarded to students based on academic achievement and need. It is a fee-paying award; maximum award for 2009–10 is expected to be \$7,788.

- **Cal Grant B**

Awarded to students based on academic achievement and financial need. Freshman recipients receive an Access grant (stipend) that helps pay for personal living expenses; this is expected to be \$1,551 in 2009–10. Second-year and continuing recipients receive both the Access award and the fee-paying award, expected to be \$9,339 in 2009–10 (\$1,551 Access and \$7,788 fee-paying).

Federal Pell Grants

Awarded to students with substantial financial need. Maximum awards in 2009–10 are expected to be \$5,350.

Federal Supplemental Educational Opportunity Grants

Awarded to students based on exceptional need. The maximum award is \$4,000. Funds are limited so, even if you qualify, you may not receive the award.

Federal Academic Competitiveness Grants (ACG)

Awarded to Federal Pell Grant–eligible freshmen and/or sophomores who are enrolled full-time. Freshmen must have completed a program of rigorous high school course work as defined by the state. (All California residents who are regularly admitted UCSC students meet the rigorous high school criteria.) Sophomores must have achieved a 3.0 GPA by the end of their freshman year. ACG provides up to \$750 for first-year college students and up to an additional \$1,300 for second-year students.

National Science and Mathematics Access to Retain Talent (SMART) Grants

Awarded to Federal Pell Grant–eligible juniors and seniors who are enrolled full-time. Recipients must be in a federally designated science, technology, math, or critical foreign language majors and maintain a 3.0 GPA *each* term during the year. SMART Grants provide up to \$4,000 for the year.

UC Santa Cruz Grants

Awarded to students based on need and funded by the University of California. To qualify, you must meet UCSC financial aid application deadlines.

Scholarships

A variety of scholarships, ranging from \$250 per year to an amount that covers full financial need, are available to undergraduates. Funding comes from many sources—private donors, corporations, professional associations, alumni, and the university itself.

The amount of the scholarship award is generally based on the student’s demonstrated financial need. In cases where the student’s established financial need exceeds the amount of the scholarship, the award may be supplemented by other types of financial aid.

Merit scholarships are awarded competitively on the basis of high academic achievement and potential. Other scholarships are restricted to students from particular geographic areas or family backgrounds or are limited to students in particular majors, classes, or colleges. The donors have different reasons for giving, and their varied interests are reflected in the wide range of scholarships available. Merit and restricted scholarship awards range up to \$1,500.

Regents Scholarships are awarded for periods of four years to entering frosh and for periods of two years to continuing or transfer students beginning their junior year at the university. These awards are based on academic achievement and promise, irrespective of financial need. For freshmen, the Regents Scholarship is \$20,000 paid over four years. For entering junior transfers, the Regents Scholarship is \$10,000 paid over two years. For continuing students, the amount varies based on grade level and year appointed. [The Regents Scholarship is the most prestigious one awarded to undergraduates at the University of California.](#)

Entering UCSC students apply for scholarships using the University of California Application for Undergraduate Admission. When filling out your UC application, answer the questions in the scholarship section. Your application essay will serve as your scholarship essay.

All continuing students will be automatically considered for UCSC scholarships based on cumulative

GPA. Notifications will be e-mailed in August.

Types of Self-Help

Federal College Work-Study

Work-study is awarded to undergraduate students based on need. It enables students to earn part of their financial aid through part-time employment and provides employment opportunities on and off campus for qualified students. Students must apply for posted positions and funds are given directly to the student in the form of a monthly paycheck for hours worked. To qualify, you must meet UCSC financial aid application deadlines. For more information about the work-study program and for a listing of employment opportunities, visit the Career Center web site at www2.ucsc.edu/careers or contact them at (831) 459-4420 or 459-3283.

Federal Perkins Loans

Perkins loans are awarded to first- and second-year undergraduate students based on need. Loan interest (fixed 5%) and repayment begins nine months after graduation, your last enrollment, or after you enroll less than half time. Payments are made to UCSC. Portions of a Perkins Loan may be canceled and/or payments deferred for specified activities, including teaching, full-time duty in the armed forces, law enforcement, Peace Corps, VISTA, or Head Start programs. A Perkins Master Promissory Note is required. To qualify, you must meet UCSC financial aid application deadlines.

William D. Ford Federal Direct Loans

Federal Direct Loans are awarded to undergraduate and graduate students. Repayment on these loans begins six months after graduation, your last enrollment, or after you enroll less than half time. **Subsidized** loans are interest-free while you are in school and are awarded based on need. **Unsubsidized** loans begin accruing interest at the date of the first disbursement and are not contingent on need. Students who borrow funds under the Direct Loan Program are required to complete a Master Promissory Note (MPN) online at www.dlenote.ed.gov. The MPN can be used to cover one or more loans for one or more academic years (up to 10 years). In 2009–10, loans will have an origination fee of .05% and fixed interest rates of 5.6% for subsidized loans and 6.8% for unsubsidized loans. The amount you may borrow depends on your grade level and dependency status (see chart below).

William D. Ford Federal Direct Loans		
	Dependent Student	Independent Student (*)
1st-year undergraduate	\$3,500 / \$2,000	\$3,500 / \$6,000 (**)
2nd-year undergraduate	\$4,500 / \$2,000	\$4,500 / \$6,000
3rd- and 4th-year undergraduate	\$5,500 / \$2,000	\$5,500 / \$7,000
Graduate/Professional	NA	\$8,500 / \$12,000
*1 This includes dependent students whose parents are unable to borrow a PLUS loan.		
**2 The first number is the base amount, which may be any combination of subsidized and unsubsidized loan funds. It also represents the maximum amount of subsidized loan a student who qualifies may receive each year, according to their grade level. The second number is the amount of additional unsubsidized loan funds available.		

Federal Direct Parent Loans for Undergraduate Students (PLUS)

Federal PLUS loans are provided to qualified parent applicants to be used for the educational expenses of undergraduate students. Parents may borrow up to the full cost of education less any financial assistance the student receives. Students must submit a FAFSA. Credit approval for parents is required. In 2009–10, PLUS loans will have a fixed interest rate of 7.9% and a fee of 2.5% of the loan amount. For more information on parent PLUS loans, visit www.studentaid.ed.gov.

Other Loans

Upon request, the UCSC Financial Aid Office can provide information about other privately sponsored education loans for students and parents. Check our web site for more information at <http://financialaid.ucsc.edu>.

Further Information

For more information about applying for financial aid, deadlines for filing applications and supporting documents, and campus policy regarding refunds of overpayments, contact the Financial Aid Office, 205 Hahn Student Services Building, (831) 459-2963, or visit <http://financialaid.ucsc.edu>, where you will find comprehensive information and where you may download and print the publication *Your Guide to Financial Aid*.

Expenses and Financial Resources

Expenses

In determining the cost of attending UCSC each quarter, students should consider both required fees and personal expenses. The figures below are provided to help you **draw up** a realistic personal budget. If you then conclude that you will need financial assistance in order to attend UCSC, you should read the Financial Aid section below. Fees and additional financial information for graduate students appear on pages 51–52. *Tuition, fees, and other charges are subject to change without notice by the UC Regents. For the most current fee information, check reg.ucsc.edu.*

Required Fees

Required fees are due and payable before the start of each quarter. At the beginning of each quarter, you will need sufficient funds to cover housing charges and book costs. For many financial aid recipients, however, fees and on-campus housing charges are paid automatically from approved student aid funds. If you are a financial aid recipient, please note that checks and direct deposits for scholarships, grants, and loans in excess of university charges are not available to you until after registration and enrollment each quarter.

The **University Registration Fee** funds student services that provide a supportive and enriching learning environment and that are complementary to, but not part of, the instructional program. Programs include, but are not limited to, services related to the physical and psychological health and well-being of students; social and cultural activities and programs; services related to campus life; and educational and career support.

The **Educational Fee** helps support student financial aid and related programs; admissions; registration; administration; libraries; operation and maintenance of plant; the university's operating budget; and all costs related to instruction, including faculty salaries.

Santa Cruz campus fees help support a wide range of student services, including college and campuswide student government, extracurricular programs and recreation - facilities, campus child care, community and public service projects, Educational Opportunity Programs and scholarships, and free-fare use of the local transit systems. Campus fees paid by graduate students are provided on page 51.

In addition, all students, including foreign students, are assessed a mandatory **Health Insurance Premium**. The Cowell Student Health Center provides the primary care services for the plan while a contracted insurance company provides major medical and hospitalization insurance. There is an annual deductible, with most expenses covered at 80 percent of the customary and usual charge. Coverage includes, but is not limited to, hospital stays; surgical services; physician visits; emergency treatment; outpatient care;

and pregnancy. Dependent coverage is also available. Detailed information is on the web at www2.ucsc.edu/healthcenter/billing/insurance.shtml or contact the Student Health Insurance Office, (831) 459-2389.

Waivers from the mandatory health insurance premium are available if you can show that your private insurance provides coverage equal to or better than the student health insurance plan. Deadlines for applying for a waiver are listed in the *Schedule of Classes* (reg.ucsc.edu/soc).

Some courses charge an additional **Course Materials Fee**. These fees recover the cost of materials, supplies, equipment, and support services not covered by the normal instructional budget. The fees are reviewed and approved annually by the Miscellaneous and Course Materials Fee Advisory Committee. The list of specific courses charging fees in ~~2008-09~~2009-10 is available in the quarterly *Schedule of Classes* and on the web at reg.ucsc.edu/coursefees.html.

Nonresident Tuition

If you are a resident of a state other than California or of another country, you must pay nonresident tuition, the nonresident educational fee, and other required fees (university

registration and Santa Cruz campus fees). The criteria for residency appear in Appendix A.

Non–U.S. citizens note: Regardless of how long you live in California, only U.S. citizens and holders of immigrant visas may become qualified for resident classification.

Late Fees

You may be assessed late fees if you fail to make university payments or enroll by the specified deadlines. For example, *late fees are assessed on a graduated basis for each month there is an unpaid balance on your university account*, and at \$50 each for a late registration payment and/or late enrollment and \$25 for a late housing payment. Deadlines are published in *The Navigator* (the undergraduate campus handbook) and the *Schedule of Classes*, both online at reg.ucsc.edu, and they appear on the Statement of Account.

Estimated Personal Expenses

The figures given for estimated personal expenses are for a single undergraduate living on campus. Expenses will be higher for married students, students with children, and graduate students. The information is as current and realistic as possible; however, expenses for students vary in accordance with lifestyles, priorities, and obligations.

Room and board (in college residences). Rates for room and board in the college residence halls are expected to range from about ~~\$9,500~~ 10,341 to ~~\$13,275~~ 14,211 per year, depending on the type of accommodation and meal plan. The room and board amount of \$13, ~~038~~ 641 in the Undergraduate Budget table on page 19 is based on the weighted average of on-campus contracts and includes an allowance for additional meals and phone service. Anticipated rates for college apartments are comparable once food and phone costs are added.

Rates are paid quarterly. The rate ranges listed above do not cover periods of academic recess, nor does the budget on page 19. Housing charges are normally pay-able at the beginning of each quarter. However, students may arrange with the Campus Housing Office to pay monthly.

More detailed information on room and board expenses for the individual colleges appears in a brochure distributed as part of the admission process or available from the Campus Housing Office, 104 Hahn Student Services Building, (831) 459-2394.

Miscellaneous. This budget item covers a broad range of expenses including clothing, laundry, personal grooming, recreation, and health maintenance. It also covers minimum expenses for modest travel to visit family.

*For new students, the nonrefundable \$100 Undergraduate Acceptance of Admission Fee is withheld from the University Registration Fee; the schedule of refunds applies to the balance of fees. Percentages listed (days 1–35 or days 1–42) should be applied individually to Nonresident Tuition, the Educational Fee, the University Registration Fee, and Santa Cruz campus fees. The Health Insurance Fee is nonrefundable.

Fee Refunds

Students who cancel their registration before the first day of instruction in a given quarter are refunded all required fees minus a \$10 service charge. New undergraduate students who cancel their registration before the first day of instruction are entitled to a refund of all required fees except the nonrefundable \$100 undergraduate acceptance of admission fee (applied toward the university registration fee).

Once the quarter has begun, students must petition for withdrawal. The percentage of fees refunded is determined by the effective date of the withdrawal, according to the schedule at the left, in which day 1 is the first day of instruction. A student is not eligible for university services after the effective date of withdrawal.

A student entering the armed forces before the sixth week of the quarter is entitled to a full refund of the university registration fee—provided no course credit is received.

More detailed information on withdrawal and refund procedures is included in the quarterly *Schedule of Classes* and *The Navigator*, both online at reg.ucsc.edu, and in the *Graduate Student Hand-book* (graddiv.ucsc.edu). Information on refunds of room and board charges is contained in the campus housing contract, provided to all applicants for on-campus housing. For more information on how withdrawing affects your financial aid, refer to *Your Guide to Financial Aid* (www2.ucsc.edu/fin-aid) or contact the Financial Aid Office.

Deferred Payment Plan

The Deferred Payment Plan (DPP) provides an alternative method of budgeting and paying registration fees. It allows these fees, to the extent not covered by scholarships, loans, or other financial aid, to be paid in monthly installments. Students have a choice of

applying for a three-month plan for individual quarterly fees, or, at the beginning of the fall quarter only, for a nine-month plan to be used for the fall, winter, and spring quarters. A nonrefundable application fee of \$25 for the three-month plan, or \$60 for the nine-month plan, is required. Any student in good financial and academic standing may apply for DPP. Students receiving financial aid sufficient to cover registration fees in full are not eligible for this plan. For more information about how to apply for DPP, application deadlines, and campus policies regarding the program, contact the Office of Student Business Services, 203 Hahn Student Services Building, (831) 459-2107, e-mail oarinfo@ucsc.edu, or visit the web site at sbs.ucsc.edu.

Financial Aid

For undergraduate students who require financial assistance, the university maintains a broad-based financial aid program of grants, scholarships, loans, and part-time employment. Administered by the Financial Aid Office, these resources help bridge the gap between the cost of education and what parents and students can reasonably contribute.

If you are a dependent student, the amount of the contribution expected from you and your parents is determined through a careful analysis of your family's financial strength, considering such variables as income, number of dependents, allowable expenses, and assets (excluding the home you live in). Federal, state, and university ~~procedures and campus policies~~ are used in the evaluation. The same policies apply to married and independent students.

Application Deadlines

The Free Application for Federal Student Aid (FAFSA) may be filed beginning on January 1 preceding the academic year in which you wish to enroll. The deadline for applications is March 2 of the preceding academic year for which you are requesting aid. The FAFSA can be filled out online and filed electronically at www.fafsa.ed.gov. A "FAFSA on the Web Worksheet" is available ~~online and~~ in high school guidance and college financial aid offices throughout the country. You can also download and print a FAFSA at www.fafsa.ed.gov. Prior-year FAFSA applicants can use their PIN number to access their information and to complete their FAFSA on the web.

In some cases, the Financial Aid Office will require additional information from applicants. These applicants will be sent an e-mail instructing them to log onto the student portal at my.ucsc.edu and view their "To Do List," which will specify the required documents (e.g., copies of student and parent tax returns or other forms). These are mandatory requirements with a due date for each requested item on the "To Do List." Please be sure to keep your e-mail address current at my.ucsc.edu.

Applications received after the deadline will be reviewed after those received on time have been processed. Late applicants will be considered on a funds-available basis.

The admission notification date is the financial aid application deadline for students seeking to transfer to UCSC during the winter or spring quarter of the following

academic year. Required supporting documents must be submitted by December 20.

First-year student applications will be processed first, and every effort will be made to provide frosh with an aid offer by May 1. ~~The earlier the FAFSA is submitted after January 1, the earlier you will receive an offer.~~ All other applicants will be notified as applications are processed after that date. If you are applying for winter or spring quarter, you will receive notification of your award as soon as possible after you are admitted and your aid application file is complete.

Types of Aid

Two types or categories of financial aid are available to students who apply and meet all deadlines listed above. Scholarships and grants are referred to as gift aid, since these funds do not need to be repaid. Self-help aid includes work-study and loans. Your own "package" may include a combination of both.

~~If you apply for financial aid and you meet the application deadlines, as outlined above, you are considered for all the types of assistance described below. Depending on funds available and your financial need, your financial aid package may include a combination of grants, scholarships, loans, and work opportunities.~~

Grants

The following grants are available to undergraduates.

Cal Grants

Cal Grant awards are funded by the State of California and are awarded by the California Student Aid Commission. To be eligible, you must be a California resident. There are two types of awards:

- **Cal Grant A**

Awarded to students based on academic achievement and need. It is a fee-paying award; maximum award for 2009–10 is expected to be \$7,788.

- **Cal Grant B**

Awarded to students based on academic achievement and financial need. Freshman recipients receive an Access grant (stipend) that helps pay for personal living expenses; this is expected to be \$1,551 in 2009–10. Second-year and continuing recipients receive both the Access award and the fee-paying award, expected to be \$9,339 in 2009–10 (\$1,551 Access and \$7,788 fee-paying).

Federal Pell Grants

Awarded to students with substantial financial need. Maximum awards in 2009–10 are expected to be \$5,350.

Federal Supplemental Educational Opportunity Grants

Awarded to students based on exceptional need. The maximum award is \$4,000. Funds are limited so, even if you qualify, you may not receive the award.

Federal Academic Competitiveness Grants (ACG)

Awarded to Federal Pell Grant-eligible freshmen and/or sophomores who are enrolled full-time. Freshmen must have completed a program of rigorous high school course work as defined by the state. (All California residents who are regularly admitted UCSC students meet the rigorous high school criteria.) Sophomores must have achieved a 3.0 GPA by the end of their freshman

year. ACG provides up to \$750 for first-year college students and up to an additional \$1,300 for second-year students.

National Science and Mathematics Access to Retain Talent (SMART) Grants

Awarded to Federal Pell Grant-eligible juniors and seniors who are enrolled full-time. Recipients must be in a federally designated science, technology, math, or critical foreign language majors and maintain a 3.0 GPA each term during the year. SMART Grants provide up to \$4,000 for the year.

UC Santa Cruz Grants

Awarded to students based on need and funded by the University of California. To qualify, you must meet UCSC financial aid application deadlines.

~~The Cal Grant A program, open only to California residents, will provide a maximum award of \$7,126 in 2008–09 to help offset mandatory registration fees for the academic year. Students are selected on the basis of academic achievement and financial need.~~

~~The Cal Grant B program, designed for California students from low-income families, will provide an annual living stipend of \$1,551 to all eligible freshman students in 2008–09. In 2008–09, to help offset mandatory registration fees and aid with annual living expenses, this grant will provide \$8,677 to students at the sophomore level and above.~~

~~All California residents seeking financial aid must apply for a Cal Grant by submitting a FAFSA by March 2 and listing a California college in the information release section of the FAFSA. New applicants for the Cal Grant must also file a GPA Verification form directly to the California Student Aid Commission by March 2. More information is available at www.csac.ca.gov.~~

~~Federal Pell Grants will provide a maximum of \$4,731 during 2008–09.~~

~~Federal Supplemental Educational Opportunity Grants are available to students with substantial financial need. The grants range from \$100 to \$4,000.~~

~~Federal Academic Competitiveness Grants provide up to \$750 for first-year college students and up to an additional \$1,300 for second-year students. To receive an Academic Competitiveness Grant, freshmen and sophomores must be Federal Pell Grant-eligible and have completed a program of rigorous high school course work as defined by their state (all regularly admitted UCSC students meet these criteria). In addition, sophomores must have earned a 3.0 GPA by the end of their freshman year. Visit federalstudentaid.ed.gov for more details.~~

~~Federal National Science and Mathematics Access to Retain Talent (SMART) Grants provide up to \$4,000. To receive a SMART Grant, juniors and seniors must be Federal Pell Grant-eligible majoring in designated science, technology, math, or critical foreign languages, and maintain a 3.0 GPA each term during the year. Visit federalstudentaid.ed.gov for more details.~~

~~UC Santa Cruz Grants are designed for students with substantial financial need. Funds for this grant program come in part from the educational fees paid quarterly by students at all campuses of the university.~~

Scholarships

A variety of scholarships, ranging from \$250 per year to an amount that covers full financial need, are available to undergraduates. Funding comes from many sources—private donors, corporations, professional associations, alumni, and the university itself.

The amount of the scholarship award is generally based on the student's demonstrated financial need. In cases where the student's established financial need exceeds the amount of the scholarship, the award may be supplemented by other types of financial aid.

Merit scholarships are awarded competitively on the basis of high academic achievement and potential. Other scholarships are restricted to students from particular geographic areas or family backgrounds or are limited to students in particular majors, classes, or colleges. The donors have different reasons for giving, and their varied interests are reflected in the wide range of scholarships available. Merit and restricted scholarship awards range up to \$1,500.

~~Regents Scholarships~~ are awarded for periods of four years to entering frosh and for periods of two years to continuing or transfer students beginning their junior year at the university. These awards are based on academic achievement and promise, irrespective of financial need. For freshmen, the Regents Scholarship is \$20,000 paid over four years. For entering junior transfers, the Regents Scholarship is \$10,000 paid over two years. For continuing students, the amount varies based on grade level and year appointed. The Regents Scholarship is the most prestigious one awarded to undergraduates at the University of California.

Entering UCSC students apply for scholarships using the University of California Application for Undergraduate Admission. When filling out your UC application, answer the questions in the scholarship section. Your application essay will serve as your scholarship essay.

All continuing students will be automatically considered for UCSC scholarships based on cumulative GPA. Notifications will be e-mailed in August.

Need-Based Loans

~~Student loan funds are administered by UC in accordance with the regulations of the federal government. There is no interest on need-based student loans as long as the student is enrolled in college at least half-time. To qualify, students must be enrolled in a degree program and demonstrate financial need. To apply for these loans, students must submit the FAFSA.~~

~~Through the Federal Perkins Loan Program, students who demonstrate financial need may borrow up to \$20,000 for undergraduate study. Repayment begins nine months after graduation or withdrawal from higher education. The interest rate is 5 percent per year.~~

~~William D. Ford Federal Direct Subsidized Student Loans are administered by the UCSC Financial Aid Office. Students must demonstrate financial need, and annual limits for dependent students are \$3,500 for first-year students, \$4,500 for second-year students, and \$5,500 for all other undergraduates. The annual limit for graduate students is \$8,500. Students may borrow up to \$23,000 for undergraduate study and up to \$65,500 for undergraduate and graduate study combined. Students pay an origination fee of up to 2.0 percent. Repayment begins six months after graduation or withdrawal from higher education. The interest rate is 6.0 percent fixed on all loans made in 2008–09.~~

Non-Need-Based Loans

~~William D. Ford Federal Direct Unsubsidized Student Loans are administered by the Financial Aid Office. These loans are available to students who do not qualify for the subsidized loans (above), and students must first be determined ineligible for a Federal Direct Subsidized Student Loan. Interest is charged on unsubsidized loans from the date the loan is made. The interest rate is fixed at 6.0 percent on all loans made in 2008–09.~~

~~The borrower must pay an origination fee of up to 2.5 percent, which is deducted from the amount of the loan. Eligibility is calculated by subtracting any financial assistance awarded the student from the cost of education as defined by the Financial Aid Office (see Undergraduate Budget, page 19). Dependent students may borrow \$2,000 in Federal Direct Unsubsidized Student Loans in addition to the annual subsidized loan limits. The aggregate total loan limit for undergraduate study is \$31,500.~~

~~Independent students have higher combined Federal Direct Subsidized and Unsubsidized Student Loan limits than do dependent students. The annual limits for independent students are as follows: \$9,500 for first-year students; \$10,500 for second-year students; \$12,500 for other undergraduates; and \$20,500 for graduate students. Students may borrow up to \$57,500 for undergraduate study and \$138,500 for undergraduate and graduate study combined.~~

~~Students may begin repaying principal and interest on Federal Direct Unsubsidized Student Loans immediately, pay only interest immediately, or defer both principal and interest until they are no longer enrolled in school at least half-time.~~

~~Through *Federal Direct Parent Loans for Undergraduate Students*, parents may borrow up to the full cost of education as defined by the UCSC Financial Aid Office, less any financial assistance the student receives. Parents must demonstrate creditworthiness for loan approval. Borrowers pay an origination fee of up to 4 percent, which is deducted from the loan amount. Loan payments begin 60 days after the last disbursement. The interest rate is fixed at 7.9 percent on all loans made in 2008–09.~~

~~Other loans. The UCSC Financial Aid Office provides information about other privately sponsored education loans at www2.ucsc.edu/fin-aid or upon request.~~

Types of Self-Help

Federal College Work-Study

Work-study is awarded to undergraduate students based on need. It enables students to earn part of their financial aid through part-time employment and provides employment opportunities on and off campus for qualified students. Students must apply for posted positions and funds are given directly to the student in the form of a monthly paycheck for hours worked. To qualify, you must meet UCSC financial aid application deadlines. For more information about the work-study program and for a listing of employment opportunities, visit the Career Center web site at www2.ucsc.edu/careers or contact them at (831) 459-4420 or 459-3283.

Federal Perkins Loans

Perkins loans are awarded to first- and second-year undergraduate students based on need. Loan interest (fixed 5%) and repayment begins nine months after graduation, your last enrollment, or after you enroll less than half time. Payments are made to UCSC. Portions of a Perkins Loan may be canceled and/or payments deferred for specified activities, including teaching, full-time duty in the armed forces, law enforcement, Peace Corps, VISTA, or Head Start programs. A Perkins Master Promissory Note is required. To qualify, you must meet UCSC financial aid application deadlines.

William D. Ford Federal Direct Loans

Federal Direct Loans are awarded to undergraduate and graduate students. Repayment on these loans begins six months after graduation, your last enrollment, or after you enroll less than half time.

Subsidized loans are interest-free while you are in school and are awarded based on need.

Unsubsidized loans begin accruing interest at the date of the first disbursement and are not contingent on need. Students who borrow funds under the Direct Loan Program are required to complete a Master Promissory Note (MPN) online at www.dlenote.ed.gov. The MPN can be used to cover one or more loans for one or more academic years (up to 10 years). In 2009–10, loans will have an origination fee of .05% and fixed interest rates of 5.6% for subsidized loans and 6.8% for unsubsidized loans. The amount you may borrow depends on your grade level and dependency status (see chart below).

	<u>Dependent student</u>	<u>Independent student¹</u>
<u>1st- year undergraduate</u>	<u>\$3,500 / \$2,000²</u>	<u>\$3,500 / \$6,000²</u>
<u>2nd-year undergraduate</u>	<u>\$4,500 / \$2,000</u>	<u>\$4,500 / \$6,000</u>
<u>3rd- and 4th- year undergraduate</u>	<u>\$5,500 / \$2,000</u>	<u>\$5,500 / \$7,000</u>
<u>Graduate/professional</u>	<u>NA</u>	<u>\$8,500 / \$12,000</u>

¹ This includes dependent students whose parents are unable to borrow a PLUS loan.

²The first number is the base amount, which may be any combination of subsidized and unsubsidized loan funds. It also represents the maximum amount of subsidized loan a student who qualifies may receive each year, according to their grade level. The second number is the amount of additional unsubsidized loan funds available.

Federal Direct Parent Loans for Undergraduate Students (PLUS)

Federal PLUS loans are provided to qualified parent applicants to be used for the educational expenses of undergraduate students. Parents may borrow up to the full cost of education less any financial assistance the student receives. Students must submit a FAFSA. Credit approval for parents is required. In 2009–10, PLUS loans will have a fixed interest rate of 7.9% and a fee of 2.5% of the loan amount. For more information on parent PLUS loans, visit www.studentaid.ed.gov.

Other Loans

Upon request, the UCSC Financial Aid Office can provide information about other privately sponsored education loans for students and parents. Check our web site for more information at <http://financialaid.ucsc.edu>.

Further Information

For more information about applying for financial aid, deadlines for filing applications and supporting documents, and campus policy regarding refunds of overpayments, contact the Financial Aid Office, 205 Hahn Student Services Building, (831) 459-2963, [e-mail fin_aid@ucsc.edu](mailto:fin_aid@ucsc.edu), or visit ~~www2.ucsc.edu/fin-aid~~<http://financialaid.ucsc.edu>, where you will find comprehensive information and where you may download and print the publication *Your Guide to Financial Aid*.

Graduate Education | Fees and Expenses | Financial Support | Fellowships, Assistantships, Grants | Student Loans | Loan Forgiveness Programs

To read an updated copy of this page with strikeouts and additions highlighted, see 2009-10 Graduate Studies, highlighted copy.

Please note that sections under this topic that contained no changes from the General Catalog 2009-10 are not included. For the complete Graduate Studies section as printed in the 2008-10 printed catalog, go to 2008-10 Graduate Studies.

Graduate Education

For 2008-10 graduate studies information, see www.graddiv.ucsc.edu.

UC Santa Cruz offers graduate study in more than 30 academic fields. About 1,500 graduate students are enrolled at the certificate, master's, and doctoral levels. The small size of the UCSC graduate programs encourages close working relations between students and faculty in an informal atmosphere conducive to rapid learning and professional growth. Many graduate programs have interdisciplinary components, and students are encouraged to explore the conceptual connections between related fields as they acquire mastery in their areas of specialization.

Research facilities at UCSC are excellent, and there are extensive opportunities for graduate students to engage in significant independent study and research (see Resources for Learning and Research, pages 53–75). Graduate students are also encouraged to obtain teaching experience, primarily as supervised teaching assistants. They are highly valued members of the UCSC community, contributing substantially to the research and teaching conducted on the campus.

Degrees and Programs

The University of California, Santa Cruz, offers graduate programs leading to advanced degrees or certificates in the following areas:

Anthropology..... Ph.D.
Astronomy and Astrophysics..... Ph.D.
Bioinformatics..... M.S./Ph.D.
Biology
 Ecology and Evolutionary ... M.A./Ph.D.
 Molecular, Cell, and Developmental M.A./Ph.D.
Chemistry and Biochemistry. M.S./Ph.D.
Computer Engineering..... M.S./Ph.D.
Computer Science..... M.S./Ph.D.
Digital Arts/New Media..... M.F.A.
Earth & Planetary Sciences... M.S./Ph.D.
Economics
 Applied..... M.S.
 International..... Ph.D.
Education
 Teaching (Credential Program).... M.A.
 Research..... Ed.D/Ph.D.
Electrical Engineering..... M.S./Ph.D.
Environmental Studies.....Ph.D
History..... M.A./Ph.D.
History of Consciousness..... Ph.D.
Linguistics..... M.A./Ph.D.
Literature..... M.A./Ph.D.
Mathematics..... M.A./Ph.D.
Microbiology and Environmental
 Toxicology..... M.S./Ph.D.
Music..... M.A./D.M.A./Ph.D.
Ocean SciencesM.S./Ph.D.

Philosophy	M.A./Ph.D.
Physics	M.S./Ph.D.
Politics	Ph.D.
Program in Biomedical Sciences & Engineering Ph.D	
Psychology (with emphasis in social, developmental, or cognitive)	Ph.D.
Science Communication (writing) ...	Certificate
Social Documentation	M.A.
Sociology	Ph.D.
Statistics and Applied Mathematics ...	M.S./Ph.D.
Theater Arts	Certificate

Program Descriptions

Descriptions of individual programs appear under the specific disciplines in the programs and courses section, which begins on page 109. Application materials for all programs are available online at graddiv.ucsc.edu.

All of our graduate programs have information on the web at <http://graddiv.ucsc.edu/programs/>. Inquiries about part-time study should be directed to the individual departments. If there are any problems with the online application process, please e-mail gradadm@ucsc.edu.

Administration

At UCSC, the individual graduate programs are directed by departments. Overall policy is determined by the Graduate Council, and coordination and record keeping for matters common to all graduate students—such as admission applications, fellowships, and advancement to candidacy—are the responsibility of the Division of Graduate Studies. The dean of graduate studies is the chief administrative officer. The *Graduate Student Handbook*—containing graduate policies and other information—can be found online at graddiv.ucsc.edu/regulations/handbook.php.

Catalog Rights

Students matriculating in a given graduate program will select the *UCSC General Catalog* they will follow to meet their requirements to be either the one published the year they enter the program, or any subsequent catalog published prior to the year they are awarded the sought degree. Should the student choose to follow catalog requirements for a year for which the catalog is not printed in hard copy, the requirements will include any online catalog update for that year. A student must follow the chosen catalog in its entirety, including both the individual degree program and general university requirements. General university requirements may be found in the Graduate Student Handbook, graddiv.ucsc.edu/regulations/handbook.php.

Evaluation of Performance

Graduate students are graded Satisfactory/ Unsatisfactory/Incomplete (S/U/I) Graduate students also have the option of receiving a letter grade of A, B, C, D or I in most courses. The grade A, B, or S is awarded for satisfactory work. A graduate student receiving a grade of C, D, or U will not be able to use the credit for that course to satisfy any course requirement for a graduate degree. Courses in which a graduate student receives a grade of C, D, F, or U may be repeated. Credits will be counted once, and the most recently earned grade will determine whether a degree requirement has been met. Repeating a course more than once requires the prior written approval of the dean of graduate studies.

Graduate student performance in all courses taken for credit at UC Santa Cruz is also evaluated according to the Narrative Evaluation System. A narrative evaluation usually runs from one to four paragraphs in length and describes (1) the nature and requirements of the course, (2) the student's strengths and weaknesses in the various aspects of the course (e.g., discussion, laboratory work, term papers, and examinations), and (3) the student's general understanding of the course content. Evaluations may be used by academic advisers and become part of the student's official academic record.

Please also refer to the statement on Academic Integrity, page 35; Appendix F, Graduate Student-Faculty Adviser Relationship Guide-lines, page 481; and Appendix O, Official University Policy on Academic Integrity for Graduate Students, published in the Student Policies and Regulations Handbook at www2.ucsc.edu/judicial/handbook06-07/appendixo.htm.

Diversity-Enhancement Programs

The Eugene Cota-Robles Fellowship is a merit-based diversity-enhancement program that provides financial support for students from diverse backgrounds to pursue and successfully complete a graduate degree. This fellowship is awarded to entering doctoral students who have overcome significant obstacles to achieve a baccalaureate-level degree, and whose economic,

educational, or social background contributes to intellectual diversity of the graduate student population. Applicants should refer to the information under Financial Support in the application to gain a better understanding of this fellowship. Fellowship recipients must be U.S. citizens or permanent residents.

The Eugene Cota-Robles Fellowship and the Dissertation-Year Fellowship are part of the University of California's Academic Career Development Program. The Dissertation-Year Fellowship is available to continuing students. Enrolled students are assisted through formal and informal group orientations, individual advice about academic matters, financial aid, postdoctoral opportunities, and the provision of information about career planning, health care, and housing. If you have questions, call the Division of Graduate Studies, (831) 459-4108.

Intercampus Exchange Program

A graduate student in good standing at Santa Cruz who wishes to take advantage of educational opportunities available only at another campus of the university may become an intercampus exchange graduate student for a quarter or more. This program also permits students to take courses on more than one campus of the university during the same quarter.

To participate in the program, a student must have the approval of his or her faculty adviser, the dean of the Division of Graduate Studies at UC Santa Cruz, and the graduate dean on the campus to be visited. Application forms may be obtained from the Division of Graduate Studies and should be submitted three weeks before the quarter in which the exchange begins.

Student Life

The campus offers a variety of programs to enhance the quality of student life, all available to graduate students. These include child care, sports and recreation, health services, cultural events, transportation services, and the UCSC Women's Center. See pages 76–106 for information on these services and a description of the local community. See page 39 for services available to students with disabilities.

College Affiliation

Graduate students at Santa Cruz have the opportunity to affiliate with one of the 10 colleges on campus (college descriptions begin on page 77). Participation in the activities of a college may include taking an occasional meal there, living at the college, or participating in the college's educational and preceptorial programs or in its extracurricular activities.

Graduate Student Association

The Graduate Student Association (GSA) is an organization of all graduate students at UCSC. It seeks to advance the general welfare of the graduate student body and is responsible for promoting extracurricular activities on campus.

Graduate students elect a GSA steering committee, which coordinates activities and their funding. In past years, the steering committee has sponsored student social gatherings, musical events, poetry readings, lectures by visiting scholars, and other activities of special interest to graduate students. A portion of the college student government fee, paid by all students, is available to the association for this purpose. The steering committee also recommends graduate students for appointment to university committees.

Housing

As at all other UC campuses, finding housing is a challenge. Students who wish to reside on campus should submit their application as soon as possible, to secure housing in a timely manner. Likewise, students who wish to live off campus will find this task challenging. Often, single students share housing as a means of lowering expenses. However, married students or students with dependent children do not always have the option of sharing housing with other students.

Twenty apartments for single graduate students are located on the west side of campus between Kresge College and the Baskin Engineering Building. City and campus bus stops are nearby. On-site parking is available.

The apartments were designed with privacy, energy conservation, and aesthetics in mind. The wood-frame units have cedar exteriors and are bordered by redwood forest on two sides.

Four students share each apartment, which has a living and dining room, a kitchen, two bathrooms, four single bedrooms, an outdoor deck, and abundant closet and cabinet space. The units contain solid oak and maple furniture, although residents must supply their own linens, cooking utensils, and household supplies. Common facilities include a laundry room and lounges with computer terminals and a large-screen television.

The apartment rental rate is \$898 per single room per month for the 2009–10 academic year. Students may stay for the summer at additional cost. First-year graduate students are usually given priority.

Graduate students may also apply to the individual colleges for a limited number of resident preceptorships. These positions offer an on-campus apartment as a stipend and the opportunity to participate in a college community.

Married students and students with dependent children may live in Family Student Housing, a complex of two-bedroom unfurnished apartments located on the west side of campus. These apartments are in great demand, and students often wait up to a year for a vacancy. Interested students should apply as soon as possible.

Another on-campus option is UCSC's 42-space camper park, available to students who own appropriate recreational vehicles.

To assist students in locating living accommodations in the surrounding communities, the Community Rentals Office maintains a list of available rentals. Students intending to live off campus should begin their search at least four weeks before classes begin.

Application and Admission

Application Deadlines

Students may apply for *only one* UCSC graduate program at a time. The list below shows the date set by each program as the final deadline for submission of all documents. Applications are limited to programs of study beginning in fall quarter (except the M.A. program in education). Please visit our web site at graddiv.ucsc.edu for the most current information on applying to UCSC graduate programs and for application deadlines for 2010–11.

Anthropology	December 15, 2009
Astronomy and Astrophysics	January 5, 2010
Bioinformatics	December 15, 2009
Biology	
Ecology and Evolutionary	December 15, 2009
Molecular, Cell, and Developmental	December 15, 2009
Chemistry and Biochemistry	January 15, 2010
Computer Engineering	January 2, 2010
Computer Science	January 2, 2010
Digital Arts/New Media	February 15, 2010
Earth Sciences	January 5, 2010
Economics	
Applied	February 1, 2010
International	January 15, 2010
Education	
Teaching (credential program) (M.A.)	January 15, 2010
Research (Ph.D.)	December 15, 2009
Collaborative Leadership (Ed.D.)	December 22, 2009
Electrical Engineering	January 2, 2010
Environmental Studies	December 15, 2009
History	December 15, 2009
History of Consciousness	December 1, 2009
Linguistics	December 15, 2009
Literature	December 15, 2009
Mathematics	January 15, 2010
Microbiology and Environmental Toxicology	January 2, 2010
Music	January 15, 2010
Ocean Sciences	January 15, 2010
Philosophy	January 15, 2010
Physics	January 15, 2010
Politics	January 15, 2010
Program in Biomedical Sciences and Engineering ..	December 15, 2009
Psychology	December 15, 2009
Science Communication (writing)	April 1, 2009
Social Documentation	January 15, 2009
Sociology	December 19, 2009
Statistics and Applied	
Mathematics	January 2, 2009
Theater arts	March 1, 2009

The dates listed here are the official deadlines, but students are strongly advised to submit

applications in October or November. If an application deadline falls on a weekend or holiday, materials should arrive **before** the deadline.

To be considered for fellowship support for fall quarter, the admission application and all supporting materials must arrive at the Division of Graduate Studies by the program's deadline or by February 1, 2009, **whichever is earlier**.

Admission Requirements

To be admitted with graduate status at UCSC, **a student must have completed a bachelor's degree or its equivalent from an accredited undergraduate institution of acceptable standing** and demonstrate ability to pursue a program of study leading toward an advanced degree. Preparation must provide an adequate foundation for advanced study, as determined by the department for the program in which the student intends to enroll. If the bachelor's degree is not in the same discipline as the graduate program, the student must have sufficient preparation in the intended area of study to undertake graduate-level work.

To apply for admission, the items described below must be submitted before the deadline date to the Division of Graduate Studies. UC Santa Cruz requires that applicants complete an online application to be considered for admission to a graduate program. The Graduate Studies Division will provide access to a printed version for those who qualify under the Americans with Disabilities Act. The application and the accompanying materials should be complete and accurate.

1. Admission application form. Application materials for all programs are available online at graddiv.ucsc.edu. The completed application is paid for online with either a credit card or e-check. This application fee is not refundable. Application fee waivers are available for cases of hardship. International applicants are not eligible for fee waivers.

Applicants to the programs in anthropology, computer engineering, computer science, and electrical engineering also need to conform to the admission guidelines posted on the web pages for these departments. These pages can be accessed from the graduate studies home page: graddiv.ucsc.edu.

2. Statement of purpose. This should be a concise, well-written account of the applicant's background and reasons for pursuing graduate study in the field chosen. Selection committees place particular importance on the statement of purpose. It exhibits the applicant's ability to present ideas in clear, coherent language. The statement of purpose should indicate all of the following:

- How knowledgeable the applicant is in the desired field of study
- How undergraduate studies and other experiences (work, community involvement, and so forth) serve as a foundation for graduate study
- How and why the applicant intends to build on this foundation of knowledge and apply the training to social or theoretical problems

3. Personal History Statement

The Personal History Statement is required of all applicants. This statement will be used in conjunction with your application for graduate admission and financial support. Please note that the Personal History Statement should not duplicate the Statement of Purpose.

UC Santa Cruz is interested in a diverse and inclusive graduate student population. In an essay, discuss how your personal background informs your decision to pursue a graduate degree. Please include any educational, familial, cultural, economic, or social experiences, challenges, or opportunities relevant to your academic journey; how you might contribute to social or cultural diversity within your chosen field; and/or how you might serve underrepresented segments of society with your degree.

4. Official transcripts. Official transcripts of all previous course work since high school, including certification of degrees received or documentation of status upon leaving each institution, should be obtained. UC Santa Cruz requires only one transcript from each institution. **Official evidence that the applicant has received a bachelor's degree from an accredited institution of higher education must be presented. All of the official transcripts and documentation should be requested well in advance of the program deadline to be sent to Graduate Application Processing.** Only official transcripts bearing the signature of the registrar and the seal of the issuing institution will be accepted. If work is in progress at the time of application, a final transcript of such work must be submitted before the student can be officially enrolled at UC Santa Cruz. If the bachelor's degree is in a field other than that in which the student intends to apply, evidence of course work sufficient to prepare for graduate study in the intended field must be shown.

5. Letters of recommendation. Three letters of recommendation are required. Additional letters will be reviewed, but will not help or hurt your application.

Letters of recommendation must be submitted electronically. You must register your recommender(s) on Step 4 of the online application. An e-mail will then be sent to your recommender(s) with document upload instructions. Letters sent via a letter service are the only exception to the above.

Letters should be prepared by professors, professional contacts, or others who may best speak to your abilities and academic potential in your chosen field of study.

6. Graduate Record Examination scores. Individual departmental requirements for the Graduate Record Examination (GRE) follow:

Anthropology: GRE General Test required

Astronomy and astrophysics: GRE General Test; GRE Subject Test in Physics recommended

Bioinformatics: GRE General Test required; Computer Science or Subject Test in major recommended

Biology (Ecology and Evolutionary) : GRE General Test required

(Molecular, Cell, and Developmental): GRE General Test and Biology Test OR Biochemistry, Cell, and Molecular Biology Test recommended

Chemistry and Biochemistry: GRE General Test required; GRE Subject Test in any of the following strongly recommended: Biochemistry, Cell, and Molecular Biology; Chemistry; Computer Science; Physics

Computer Engineering: GRE General Test required; Engineering Test or Subject Test in major recommended

Computer Science: GRE General Test required; GRE Computer Science Test or Subject Test in major recommended

Digital Arts and New Media: No GRE required

Earth Sciences: GRE General Test required

Economics:

Applied: GRE General Test required

International: GRE General Test required

Education:

Teaching (M.A.): No GRE required

Research (Ph.D.): GRE General Test required

Electrical Engineering: GRE General Test required; GRE Subject Test in major recommended

Environmental Studies: GRE General Test required; GRE Subject Test in disciplinary field of student's choice recommended

History: GRE General Test required

History of Consciousness: GRE General Test required

Linguistics: GRE General Test required

Literature: GRE General Test required

Mathematics: GRE General Test and GRE Mathematics Test required

Microbiology and Environmental Toxicology: GRE General Test required; GRE Subject Test in major recommended

Music: GRE General Test required

Ocean Sciences: GRE General Test and GRE Subject Test in major required

Philosophy: GRE General Test required

Physics: GRE General Test and GRE Physics Test required

Politics: GRE General Test required

Program in Biomedical Sciences and Engineering: GRE General Test required; GRE Computer Science Test or Subject Test in major recommended

Psychology: GRE General Test required

Science Communication (writing): GRE General Test required; for applicants without a Ph.D. the Subject Test in one of the following areas is required: Biochemistry, Cell and Molecular Biology; Chemistry; Computer Science; Geology; Mathematics; or Physics.

Social Documentation: No GRE required

Sociology: GRE General Test required

Statistics and Applied Mathematics: GRE General Test required; Subject test in Math recommended

Theater arts: No GRE required

If the applicant is applying for admission to a program that requires the GRE, *the scores must be received by UC Santa Cruz Graduate Application Processing before the application deadline*. It is strongly recommended that all applicants complete testing by November, since December test scores will not reach the division prior to application deadlines.

The Educational Testing Service should be asked to forward the test scores directly to the division. UC Santa Cruz's school code is **4860**. *Test results are electronically submitted to UC Santa Cruz Division of Graduate Studies four to six weeks after the exam has been taken.*

7. Additional required material. Many of the graduate programs have special application requirements, such as writing samples, portfolios, auditions, or personal interviews. Please read the web site or brochure for the program to which you are applying carefully and fulfill all the requirements it specifies. Unless otherwise instructed, writing samples and résumés should be attached to your online application in the space provided. Items not a part of your online application should be sent directly to the department.

- *Anthropology* requires a writing sample
- *Digital Arts and New Media* requires one or more recent original compositions
- *Education*

M.A. Program: A writing sample, and résumé

Ph.D.: A writing sample, preferably in education or a related field, and résumé

Ed.D.: Writing sample, preferably in education or a related field, and resume

- *Environmental studies* requires that a substantial writing project (undergraduate or master's level) be submitted with the application materials. Also, as part of the application process, applicants are required to contact faculty regarding sponsorship.
- *History* requires a writing sample of up to 30 pages.
- *History of Consciousness* requires a writing sample of up to 10 pages.
- *Linguistics* requires a demonstrated ability to conduct original research. Applicants should enclose a sample of written work. The work need not be in the area of linguistics, but should ideally reveal the applicant's ability to address abstract issues and formulate and investigate precise hypotheses.
- *Literature* requires a writing sample of 15-20 pages.
- *Music*

M.A.: 1. Writing sample for applicants in ethnomusicology or performance practice (e.g., term paper, senior thesis, or other research paper) or compositions (applicants in composition who wish to emphasize electronic music may include two recordings without scores, but one score, with recording if available, must also be included). **2.** A 10- to 20-minute unedited recording on CD, DVD, VHS, etc., of one or more recent performances as instrumentalist, vocalist, or conductor; or of performances of original compositions.

D.M.A.: 1. Three composition scores with recordings (if available) on CD, DVD, VHS, etc. For works involving improvisation, digital audio, or other approaches, one of the three compositions may be submitted in the form of a recording with brief notes on the media and/or performance conditions. Applicants to the computer-assisted composition track should include either an example of a computer program they have written (a source code for the program plus documentation describing its use) or other evidence of technical competence with computers. **2.** Writing sample (e.g., term paper, thesis, or other research paper)

Ph.D.: *applicants with a bachelor's degree:* writing sample (e.g., term paper, senior thesis, or other class paper) and optional materials demonstrating musical skills (e.g., compositions, a performance or lecture-recital on CD, DVD, or VHS, etc.); *applicants with a master's degree:* writing sample of substantial length (e.g., an excerpt from a master's thesis or a set of class research papers) and optional materials demonstrating musical skills (e.g., compositions, a performance or lecture-recital on CD, DVD, or VHS, etc.)

- *Philosophy* requires a 10- to 15-page writing sample
- *Politics* An abstract of a scholarly written work (1200-1500 words) should represent the applicant's best research and capacity to engage in scholarly inquiry. The work need not be in the area of politics, but should reveal an ability to address abstract issues and formulate and investigate precise hypotheses. The abstract may represent a term paper, thesis, article, conference paper, or problem solution. The entire work upon which the abstract is based should be available to be sent electronically to the admissions committee upon request.
- *Social documentation* requires an analytical writing sample (e.g., research paper, professional report, or substantial essay). Sample documentary production work is recommended but not required (e.g., a video or audio recording, photographic essay, web page). Preferred format for submission of production work is web, DVD, or CD-ROM (provide URLs to publications and documentary productions where possible).
- *Sociology* requests a writing sample 25 pages, preferably in sociology or a related field (This sample can be a term paper, a field report, a research proposal, or an essay written especially for the application.)
- *Theater arts* applicants may be asked to submit a videotape of their performance work, a design portfolio or a sample of their written work.

Duplication of Higher Degrees

It is the policy of the Santa Cruz campus to prohibit the pursuit of duplicate advanced degrees. However, applicants may petition the graduate dean for an exception to this policy if the degree sought is in a field of study distinctly different from the field in which the original advanced degree was attained.

In order for a student who already holds the doctorate to be admitted or readmitted to work toward a second Ph.D.—or toward an academic master's degree—all of the following conditions must be met:

1. The applicant must petition the graduate dean in writing prior to the application deadline for the program in question.
2. The department sponsoring the program to which admission is sought must support the applicant's petition.
3. The department must present the graduate dean with a clear and complete outline of the program required for the degree sought, and must explain the intellectual separateness of the proposed program from that completed by the applicant in attaining the earlier degree.

The graduate dean will review all materials submitted and decide whether or not to admit the applicant, consulting with the Graduate Council when appropriate. Admission to a professional master's program after a Ph.D.—or to an academic master's program after a professional doctorate—is not subject to these

restrictions.

Transfer of Credit

UC Santa Cruz does not automatically grant credit for graduate-level work undertaken at other universities. Each department determines credit transferability on an individual basis.

International Applicants

Applicants from other countries must meet standard admission requirements and provide satisfactory evidence of financial support before they may obtain the necessary visa documents. Because it normally takes much longer to process international applications, such students are urged to apply as early as possible. A Certificate of Eligibility (I-20) will not be issued by the UC Santa Cruz Office of International Education until all requirements are satisfied and the student has been formally admitted. **Please note that international students are not eligible for need-based financial aid or application fee waivers.**

Applicants from countries where English is not the primary language must take the Test of English as a Foreign Language (TOEFL). A minimum score on the paper-based TOEFL of 550, 220 on the computer-based test, 83 on the NEW Internet-based test is required for admission. Chemistry and Biochemistry, Computer Engineering, Computer Science, and Electrical Engineering require 570 on the paper-based test or 230 on the computer-based test and 89 on the NEW Internet-based test.

All official academic records must be issued in the original language and be accompanied by English translations prepared by the issuing institution. If translations are not available from the institution itself, translations may be prepared by government or official translators. In order for translations to be acceptable, they must bear the stamp or seal of the issuing institution or governmental agency and the original signature of the translator. They must be complete and exact word-for-word translations of the original documents, not interpretations. Grades must not be converted to the American scale. Specially prepared English versions are not acceptable in place of documents issued in the original language. Records submitted to the Division of Graduate Studies may not be borrowed, returned, or sent elsewhere.

Application Processing

The Division of Graduate Studies receives most application materials and sets up a file for each applicant. Once the application is submitted online, it will be available to the appropriate department for review and recommendation. Applicants are admitted by the graduate dean following recommendations by the departments. Applicants will be notified by e-mail whether or not they have been admitted for graduate study at UCSC after all reviews are complete. Under no circumstances will UCSC give out this information over the phone, in person, or by proxy. E-mail notifications are sent throughout the month of March. By a general agreement to which UC Santa Cruz and most graduate schools in the U.S. are signatories, applicants admitted to graduate schools have until April 15 to reply with their acceptance of fellowship offers. Any information about the completeness of the file can be found at apply.graddiv.ucsc.edu. Specific questions about the evaluation of the application should be directed to the graduate representative of the department.

Fees and Expenses

Fees and expenses for graduate students are shown below. *Tuition, fees, and other charges are subject to change without notice by the Regents of the University of California. For current fee information, check reg.ucsc.edu.*

Graduate Student Fees, 2009–10		
	One Quarter	F-W-S Quarters
University Registration Fee	\$300.00	\$900.00
Educational Fee(a)	\$2,612.00	\$7,836.00
Santa Cruz campus fees	\$329.00	\$989.00
Health Insurance (waivable)	\$959.00	\$2,878.00
Total for California Residents	\$4,200.00	\$12,603.00
Nonresident Tuition (b)	\$4,898.00	\$14,694.00
Educational Fee Differential (c)	\$114.00	\$342.00
Total for		

Nonresidents of California	\$9,212.00	\$27,639.00
a) Graduate students who have been approved to enroll in part-time study may be eligible for a 50 percent Educational Fee reduction. b) A limited number of Nonresident Tuition Fellowships are available. c) California residents pay an annual Educational Fee (EF) of \$7,836 (three quarters at \$2,612 per quarter). For nonresidents of California, the annual EF is \$8,178 (three quarters at \$2,726). Graduate students who have been approved to enroll in part-time study may be eligible for 50-percent EF reduction..		

Estimated Graduate Student Budget, 2009-10		
	California Resident	Nonresident
Fees	\$12,603	\$27,639
Books and supplies	\$1,464	\$1,464
Room and board (on or off campus)(a)	\$14,979	\$14,979
Transportation (b)	\$1,791	\$1,791
Personal	\$2,565	\$2,565
Total	\$33,402	\$48,438
a) Estimated room and board for graduate students living with family is \$4,368. a) Expenses of owning a car and parking on campus are not included here. For parking fees, see www2.ucsc.edu/taps .		

Minimum annual expenses, including registration fees, for a single graduate student living on campus are estimated to be \$33,402 per academic year. Students should not plan to undertake graduate study without assured funding, since outside employment in the Santa Cruz community can be difficult to obtain. Here is an estimated sample student budget for the 2009–10 academic year. Non-California residents should add \$15,036 in nonresident tuition and fees to the total. Living expenses and fees are likely to increase for 2010–11.

Financial Support

The University of California, Santa Cruz, makes a strong effort to provide financial support to all graduate students who make normal progress in their program of studies. Certain kinds of support are awarded on the basis of academic merit, and others are granted on the basis of need. Students are encouraged to apply for both kinds of assistance by submitting the Free Application for Federal Student Aid (FAFSA). This form must be submitted after January 1 prior to the academic year for which you are requesting aid. The FAFSA may be filled out online and filed electronically at www.fafsa.gov. To receive need-based support for the fall quarter, the FAFSA should be submitted no later than three weeks prior to the end of spring quarter.

Applications for student loans for each academic year will be accepted until April of that academic year. More detailed information about the application process and loans appears on pages 21–22. Students may also contact the Financial Aid Office, 205 Hahn Student Services Building, (831) 459-2963. Web: <http://financialaid.ucsc.edu>.

Fellowships, Assistantships, Grants

Cal Grant A and B Programs. Students who received one of these awards as undergraduates may request a one-year extension from the California Student Aid Commission to attend a teacher credential program. The Cal Grant A program is expected to pay a maximum of \$8,736, and the Cal Grant B program is expected to pay a maximum of \$10,287 per year for study at the University of California in 2009–10. Renewal of these awards requires the student to submit the FAFSA by March 2.

Teaching Assistantships. For the 2009–10 academic year, half-time teaching assistantships provide a salary of \$5,546 per quarter.

Graduate Student Researchships. For the 2009–10 academic year, half-time researchships provided a salary ranging from \$4,053 to \$7,944 per quarter, depending on the student's academic level and department.

The application for fellowships, assistantships, and researchships is part of the Graduate Division's online admission application. No other application is needed.

The division and the UCSC Career Center can provide information about external graduate fellowships and grants.

Student Loans

Graduate students may apply for student loans through the Financial Aid Office. Students who apply using the FAFSA are eligible for loans funded by the federal government. Students who demonstrate financial need qualify for the William D. Ford Federal Direct Subsidized Student Loan, and students who do not demonstrate need or who want an additional loan qualify for the William D. Ford Federal Direct Unsubsidized Student Loan. Subsidized loans are interest-free while the student is enrolled; interest accrues on unsubsidized loans during enrollment. Graduate students may also be eligible to borrow through the Federal Direct Graduate PLUS loan program.

Loan Forgiveness Programs

The federal government will forgive all or part of a student loan under certain circumstances. Examples of these include (1) performing volunteer work or military service and (2) practicing medicine in certain communities. For a summary of such exemptions, visit <http://www.finaid.org/loans/forgiveness.phtml>.

The Assumption Program of Loans for Education (APLE) is offered by the California Student Aid Commission. This program serves students who plan to become public schoolteachers. Students must be nominated by the UCSC Education Department. Under the program, the commission may assume up to \$11,000 in educational loan balances in return for service as a public schoolteacher in California, in either a designated subject-shortage area or at a school serving large populations of students from low-income families. In addition, participants who teach mathematics, science, or special education in the lowest-performing schools may have a total of \$19,000 in debt assumed. To receive full benefits, you must provide four consecutive years of teaching at a California public school. Additional eligibility criteria include California residence, U.S. citizenship or eligible noncitizenship, academic ability, and financial need. Contact the Education Department at (831) 459-3249 for more information. The funding status of the program for 2009–10 is subject to California budget deliberations. Call the California Student Aid Commission at (888) 224-7268 for an update.

Graduate Education

UC Santa Cruz offers graduate study in more than 30 academic fields. About 1,500 graduate students are enrolled at the certificate, master's, and doctoral levels. The small size of the UCSC graduate programs encourages close working relations between students and faculty in an informal atmosphere conducive to rapid learning and professional growth. Many graduate programs have interdisciplinary components, and students are encouraged to explore the conceptual connections between related fields as they acquire mastery in their areas of specialization.

Research facilities at UCSC are excellent, and there are extensive opportunities for graduate students to engage in significant independent study and research (see Resources for Learning and Research, pages 53–75). Graduate students are also encouraged to obtain teaching experience, primarily as supervised teaching assistants. They are highly valued members of the UCSC community, contributing substantially to the research and teaching conducted on the campus.

Degrees and Programs

The University of California, Santa Cruz, offers graduate programs leading to advanced degrees or certificates in the following areas:

Anthropology	Ph.D.
Astronomy and astrophysics	Ph.D.
Bioinformatics	M.S./Ph.D.
Biology	
ecology and evolutionary	M.A./Ph.D.
molecular, cell, and developmental	M.A./Ph.D.
Chemistry and biochemistry	M.S./Ph.D.
Computer engineering	M.S./Ph.D.
Computer science	M.S./Ph.D.
Digital arts/new media	M.F.A.
Earth and <u>planetary</u> sciences	M.S./Ph.D.
Economics	
applied	M.S.
international	Ph.D.
Education	
teaching (<u>credential program</u>)	M.A.
research	<u>Ed.D</u> /Ph.D.
Electrical engineering	M.S./Ph.D.
<u>Environmental studies</u>	<u>Ph.D</u>
History	M.A./Ph.D.
History of consciousness	Ph.D.
Linguistics	M.A./Ph.D.
Literature	M.A./Ph.D.
Mathematics	M.A./Ph.D.
Microbiology and environmental	
toxicology	M.S./Ph.D.
Music	M.A./D.M.A./Ph.D.
Ocean sciences	M.S./Ph.D.
Philosophy	M.A./Ph.D.
Physics	M.S./Ph.D.
Politics	Ph.D.
<u>Program in biomedical Sciences and Engineering</u>	<u>Ph.D</u>
Psychology (with emphasis in social,	

developmental, or cognitive).....Ph.D.
 Science communication (writing)...Certificate
 Social documentation.....M.A.
 Sociology.....Ph.D.
 Statistics and applied mathematics... M.S./Ph.D.
 Theater arts.....Certificate

Program Descriptions

Descriptions of individual programs appear under the specific disciplines in the programs and courses section, which begins on page 109. Application materials for all programs are available online at graddiv.ucsc.edu.

All of our graduate programs have information on the web at <http://graddiv.ucsc.edu/programs/> ~~www.ucsc.edu/academics~~. Inquiries about part-time study should be directed to the individual departments. If there are any problems with the online application process, please e-mail gradadm@ucsc.edu.

Administration

At UCSC, the individual graduate programs are directed by departments. Overall policy is determined by the Graduate Council, and coordination and record keeping for matters common to all graduate students—such as admission applications, fellowships, and advancement to candidacy—are the responsibility of the Division of Graduate Studies. The dean of graduate studies is the chief administrative officer. The *Graduate Student Handbook*—containing graduate policies and other information—can be found online at graddiv.ucsc.edu/regulations/handbook.php.

Catalog Rights

Students matriculating in a given graduate program will select the *UCSC General Catalog* they will follow to meet their requirements to be either the one published the year they enter the program, or any subsequent catalog published prior to the year they are awarded the sought degree. Should the student choose to follow catalog requirements for a year for which the catalog is not printed in hard copy, the requirements will include any online catalog update for that year. A student must follow the chosen catalog in its entirety, including both the individual degree program and general university requirements. General university requirements may be found in the *Graduate Student Handbook*, graddiv.ucsc.edu/regulations/handbook.php.

Evaluation of Performance

Graduate students are graded Satisfactory/ Unsatisfactory/~~Incomplete~~ (S/U/I) ~~or, at student~~ Graduate students also have the option of receiving a letter grade of A, B, C, D ~~or I in most courses~~ F. The grade A, B, or S is awarded for satisfactory work. A graduate student receiving a grade of C, D, or U will not be able to use the credit for that course to satisfy any course requirement for a graduate degree. Courses in which a graduate student receives a grade of C, D, F, or U may be repeated. Credits will be counted once, and the most recently earned grade will determine whether a degree requirement has been met. Repeating a course more than once requires the prior written approval of the dean of graduate studies.

Graduate student performance in all courses taken for credit at UC Santa Cruz is also evaluated according to the Narrative Evaluation System. A narrative evaluation usually runs from one to four paragraphs in length and describes (1) the nature and requirements of the course, (2) the student's

strengths and weaknesses in the various aspects of the course (e.g., discussion, laboratory work, term papers, and examinations), and (3) the student's general understanding of the course content. Evaluations may be used by academic advisers and become part of the student's official academic record.

Please also refer to the statement on Academic Integrity, page 35; Appendix F, Graduate Student–Faculty Adviser Relationship Guide-lines, page 481; and Appendix O, Official University Policy on Academic Integrity for Graduate Students, published in the *Student Policies and Regulations Handbook* at www2.ucsc.edu/judicial/handbook06-07/appendixo.htm.

Graduate Opportunity Program

~~Applicants assisted by the Graduate Opportunity Program must be U.S. citizens or permanent residents. During the application process, the Graduate Opportunity Program can help students by requesting an application fee waiver for cases of hardship, by providing insight into the application process, and by distributing information about the various graduate academic and fellowship programs. The primary goals of the program are to increase the number of applicants through extensive outreach and to increase the number of enrolled students from diverse backgrounds through effective recruitment. Applicants who feel that their acceptance into the academic community at UC Santa Cruz will contribute to the diversity of the institution should call (831) 459-4108 early in the application process.~~

Diversity-Enhancement Programs

The Eugene Cota-Robles Fellowship is a merit-based diversity-enhancement program that provides financial support for students from diverse backgrounds to pursue and successfully complete a graduate degree. This fellowship is awarded to entering doctoral students who have overcome significant obstacles to achieve a baccalaureate-level degree, and whose economic, educational, or social background contributes to intellectual diversity of the graduate student population. Applicants should refer to the information under Financial Support in the application to gain a better understanding of this fellowship. Fellowship recipients must be U.S. citizens or permanent residents.

The Eugene Cota-Robles Fellowship and the Dissertation-Year Fellowship are part of the University of California's Academic Career Development Program. The Dissertation-Year Fellowship is available to continuing students. Enrolled students are assisted through formal and informal group orientations, individual advice about academic matters, financial aid, postdoctoral opportunities, and the provision of information about career planning, health care, and housing.

If you have questions, call the Division of Graduate Studies, (831) 459-4108.

Intercampus Exchange Program

A graduate student in good standing at Santa Cruz who wishes to take advantage of educational opportunities available only at another campus of the university may become an intercampus exchange graduate student for a quarter or more. This program also permits students to take courses on more than one campus of the university during the same quarter.

To participate in the program, a student must have the approval of his or her faculty adviser, the dean of the Division of Graduate Studies at UC Santa Cruz, and the graduate dean on the campus to be visited. Application forms may be obtained from the Division of Graduate Studies and should be submitted three weeks before the quarter in which the exchange begins.

Student Life

Campus life is all about learning, discussion, and debate; meeting people from diverse backgrounds; making new and lasting friendships; attending cultural celebrations and artistic and musical performances; and getting involved with student organizations and clubs. UCSC provides a wealth of opportunity for personal growth within the context of a rich and meaningful academic experience. You will live, study, and socialize with other students in your college. You will also meet students from the other colleges—in your classes and at the many campuswide events that take place throughout the year. The colleges (described in the previous section) and the various campuswide units provide a wide range of student services to respond to individual needs, interests, and levels of personal development. In addition, students can take advantage of the campus's stunning natural setting, the friendly and engaging local community, and easy access to the Monterey and San Francisco Bay Areas.

Santa Cruz Community

Located on the northern tip of Monterey Bay, Santa Cruz is famous for its Mediterranean climate, forested state parks, and miles of scenic beaches. Recreational opportunities abound—hiking through redwood forests, bicycling along mountain roads, and surfing, sailing, and scuba diving. The Santa Cruz Mountains are minutes away; the majestic Sierra Nevada is a four-hour drive to the east.

The metropolitan centers of the San Francisco Bay Area are easily accessible. By car, Berkeley and San Francisco are less than two hours from campus. San Jose, Monterey, and Carmel are one hour away.

The city of Santa Cruz, with a population of about 56,000, was originally founded as a Spanish mission. Santa Cruz is a small community with cosmopolitan appeal and a strong awareness of environmental and political issues. Art exhibits, local theater companies, a symphony orchestra, fine restaurants, and a lively contemporary music scene combine to make Santa Cruz an interesting place to live.

Housing**College Residences**

All undergraduate students, whether they live on campus or not, are affiliated with one of 10 residential colleges at UC Santa Cruz. Each college provides academic support, organizes student activities, and sponsors events that enhance the intellectual and social life of the campus in addition to housing students in small-scale residential communities. About 45 percent of single undergraduate students live in university housing.

Freshmen and new transfer students entering in fall quarter are guaranteed university housing for their first two years at UCSC. Transfer students entering in fall quarter have a one-year guarantee. All deadlines must be met to qualify for guarantees.

You must be admitted as a full-time student before applying for housing. All new single students who state a preference for university housing as part of the admissions acceptance process and submit the required advance housing fee by the stated deadline will be sent housing information after college assignments are made. The housing packet will include additional information about your affiliated college and instructions for completing the online housing application/contract process.

The room and board rates for the 2008–09 academic year range from \$9,449 to \$13,464, depending upon the type of accommodation and meal plan (see [Expenses and Financial Resources](#) for more detailed information on rates).

The colleges at UC Santa Cruz offer two kinds of living accommodations—residence halls and apartments, both with access to common dining facilities. Nine of the colleges have both residence halls and apartments, while Kresge College has all apartments. Most frosh are housed in double, triple, or quad rooms, but some colleges occasionally house them in single rooms.

Except for Kresge and Oakes, apartments are generally reserved for sophomores, juniors, and seniors. (See [The Colleges](#) for more detailed descriptions of college housing facilities.)

The residence hall floors, typically shared by 12 to 20 students, have common bathrooms and lounge areas. Students can request to live in a gender-neutral or single-gender area. Apartments, typically shared by four to seven students, have common living/dining rooms, kitchens and bathrooms, and a combination of shared and private bedrooms. Each community provides accessible housing for students with disabilities.

In addition to the room options, there are also a variety of theme-housing options for those who are interested. Based on academic pursuits, hobbies, individual backgrounds, and lifestyle preferences, these living/learning options serve to complement a student's experience in residence.

All housing contracts for residence halls and apartments at the colleges and at the University Inn include meal plans. Students with meal plans may use their student ID cards to access any of the five dining halls on campus, as well as the University Inn dining hall in downtown Santa Cruz. Meal plans include Flexi Dollars (a dollar-for-dollar exchange for "food dollars" that can be used at college coffee shops, campus restaurants, and all dining halls). Additional Flexi Dollars may be added to any meal plan.

Each college's residential program is a team effort. Professional staff (coordinators of residential education) work with students trained as resident assistants. They help organize activities and events, provide referral information about academic or personal concerns, and assist with roommate problems.

For more information on the colleges, refer to the brochure titled UC Santa Cruz, The Colleges: Communities of Learning, or contact the Campus Housing Office.

The Village

Located in the Lower Quarry, the Village houses a mix of continuing undergraduates, transfer undergraduates, and graduate students. Each of the 17 houses has nine single bedrooms with Internet connections, three bathrooms, and a kitchenette. A meal plan is optional. A manager's apartment, office, laundry facility, community kitchen, and community lounge are located on site. The live-in manager and residential assistants are available to assist students. The Village housing fee for academic year 2008–09 is \$7,992. Call (831) 459-4388 or e-mail village@ucsc.edu for more information.

University Town Center

The University Town Center (UTC), located at the corner of Pacific and Cathcart in downtown Santa Cruz, provides housing for continuing and transfer students in two- and three-person studio apartments. A meal plan is optional. Contact the UTC Housing Office for more information, (831) 502-0031 or utc@ucsc.edu.

University Inn and Conference Center

The Inn, located on Ocean Street in downtown Santa Cruz, provides housing for continuing and transfer students during the academic year. Students living at the University Inn have a meal plan that may be used at any dining hall on campus, in addition to the Inn dining hall. Contact the University Inn Housing Office for more information, (831) 466-1181 or inn@ucsc.edu.

Family Student Housing

Family Student Housing, located on the west side of campus, has apartments for students and their families (see the [Child Care and Youth Programs](#) section for information on child care and youth programs).

The apartments are unfurnished, and each has two bedrooms, a bathroom, a small study, a combined living-dining area, and an electric kitchen. Several apartments are accessible to people with mobility impairments. For 2008–09 the monthly rent is \$1,210, not including utilities and phone. There is a \$500 refundable security deposit and a \$25 nonrefundable application fee.

If you are interested in an apartment, download an application form at housing.ucsc.edu/fsh and submit it with the application fee. Early application is advisable as these apartments are in great demand. Students with children are given priority. The waiting time for families with children is typically three to six months and for families without children it is typically six to nine months. For more information, contact the Family Student Housing Office, (831) 459-2549, or fsh@ucsc.edu.

Camper Park

A 42-space camper park on the north side of campus is available to students who own recreational vehicles. All have water and electrical hookups; eight also have sewer hookups. Rates for 2008-09 are \$428; or \$476 with sewer hookup. The community includes a small central facility with rest rooms, showers, a meeting room, and a laundry room. For more information about the park and the vehicle requirements, or to request an application, contact the Village Office, (831) 459-4388, rvpark@ucsc.edu.

Graduate Student Housing

Four-bedroom apartments for single graduate students are located on the west side of campus, between Kresge College and the Baskin Engineering Building. See the [Student Life](#) area of the Graduate Studies section for a more detailed description. For more information, contact the Graduate Student Housing Office, (831) 459-5712, gradhsg@ucsc.edu.

Campus Housing Office

This office is responsible for the application and contract records for all single students living in college residence halls and apartments, the Village, University Town Center, University Inn, and Graduate Student Housing. Staff are available to advise students about room and board billing, payment plans, and contractual responsibilities. Students can purchase meal plans or Flexi Dollars online at studenthousing.ucsc.edu. Centrally located at 104 Hahn Student Services Building, Campus Housing is open 8 a.m. to 5 p.m. Monday through Friday, (831) 459-2394, e-mail: housing@ucsc.edu, Web: housing.ucsc.edu.

Community Rentals Office

The Community Rentals Office (CRO) maintains current rental listings accessible on the CRO web site. Students can post and search for potential housemates and register for automatically matched rental listings to be sent to their e-mail accounts. Currently enrolled and new students access the listings for free. UCSC Extension and Summer Session students and alumni pay a small user fee to access listings. Verification of UCSC status by office staff is required.

Other services include online renters' workshop, rental forms and resource information, and basic advising about tenants' rights and responsibilities.

The Santa Cruz area offers a variety of housing options. Locating suitable housing can take from one to four weeks, depending upon specific requirements and restrictions. The cost of housing varies according to individual lifestyle and preferences. Price ranges are available at housing.ucsc.edu/cro/costs.html.

The Community Rentals Office, located at 104 Hahn Student Services (North Entrance), is open 8 a.m. to 5 p.m., Monday through Friday. For further information, call (831) 459-4435, e-mail communityrentals@ucsc.edu, or visit the web site: communityrentals.ucsc.edu.

Program In Community and Agroecology (PICA)

PICA is a unique collaboration that integrates classroom instruction and community-based experience for UCSC students. PICA seeks to engage students with critical issues in the development of sustainable food systems and sustainable communities. We provide ways of exploring the theory and practice of sustainability through an array of academic course work, community-based activities, and hands-on living and learning.

Academics. PICA offers classes and training in agroecology, horticulture, and organic agriculture through UCSC's Environmental Studies Department. PICA students and faculty work closely in both the classroom and in the field, addressing topics such as:

- Ecological design of farming, landscaping, and gardening practices
- The impact of consumer choice within a global food system
- Food equity for diverse urban communities
- Social justice and empowerment in agricultural communities
- Environmental education focused on sustainability

Many PICA classes incorporate on-farm experience as a vital component of the academic curriculum. The various campus gardens and the world-renowned farm at UCSC serve as outdoor classrooms for hands-on learning. Through PICA, students are finding unique ways to learn and participate in sustainable food systems and communities.

On-campus living at PICA. The PICA residential program offers students an alternative to standard dorm living. At the Village in the Lower Quarry, students from across academic

disciplines come together to create a sustainable living environment on campus. PICA residents grow organic food at the nearby Foundational Roots Garden, come together to share in weekly community meals, implement ecological landscaping projects around their housing units, and direct a Village-wide composting program. This living/learning experience allows students a way to link healthy communities with healthy food systems.

Internships and Field Studies. Through internship and field studies programs, students participate in community partnerships and placements in agricultural communities that span geographic and cultural situations ranging from local to international. PICA continues to broaden its network of partnerships with nonprofit, government, community-based, and private agencies and farms working toward sustainability. These internship and field-studies opportunities are an important way of engaging students with issues facing food systems and farming communities around the world.

For further information, please contact Bee Vadakan at vvadakan@ucsc.edu.

Student-Run Cooperatives

Co-ops are an alternative form of organizing a group of people or a business. Here at UCSC, the co-ops are entirely student run and operated. Although memberships in the Bike and Kresge Food Co-ops are available, anyone, student or otherwise, is welcome to use them.

Kresge Food Co-op

Mission statement: "We are a group of students whose goal is to run a natural food store through consensus decision-making and group responsibility. We embrace cooperation as our tool for social change. We are not for profit; we are for collective power. As a cooperative business we seek to educate all members of the community, including ourselves. We use our buying power to reflect our ideals regarding ecological, social, and political issues. For this reason we carry healthy, locally based, cruelty-free, organic products. We focus on products that are good for the earth, the people who produce them, and the people who consume them. Open to all, we provide a space where good food and revolutionary action meet at the checkout line." Call (831) 426-1506 for more information.

Bike Co-op

The co-op is student owned and operated, run cooperatively, and nonprofit. Whether you need to purchase a bike, repair a bike, or want to learn, the co-op can accommodate your needs. People are encouraged to attend meetings, learn more about cooperatives, and get involved. The Bike Co-op is located at the Student Union. For information, come by or call (831) 457-8281.

Housing Co-ops

The Santa Cruz Student Housing Cooperative is committed to providing affordable housing, a supportive community, and student empowerment. There are two democratically owned and operated houses where a diverse group of people come together, learn how to communicate, cooperate, and live well. The houses have communal dinners six nights a week, weekly meetings with agreements by consensus, and nice rooms in big Victorians—and they are near the university bus lines. Both houses provide housing for Summer Session students. Call (831) 457-2181 for the Cesar Chavez House, or (831) 471-9098 for Zami House.

Transportation and Parking Services

The UCSC campus strives for an academic environment disturbed as little as possible by automobile traffic. The university has chosen to reserve flatlands for future buildings, natural areas, and social and recreational spaces; as a result, parking is a limited resource on campus. UCSC requests that students not bring cars.

Comprehensive transportation systems have been developed to reduce traffic and eliminate the need for a car. Movement on the spacious campus is made easier by the care with which buildings have been located, a network of foot and bicycle paths, and an extensive intracampus shuttle system that links the colleges, central core facilities, and the two remote parking lots. Shuttle buses operate on 10- to 30-minute frequencies from 7:30 a.m. to 6 p.m. weekdays (except on academic holidays). During summer and quarter breaks, day shuttle service is provided at 12- to 15-minute intervals. In addition, a night shuttle service, operating at 10- to 30-minute intervals, runs seven nights a week between 6 p.m. and 12:30 a.m. during the academic year. The night shuttle provides curb-to-curb transportation to the colleges. Both day and night shuttles provide wheelchair-accessible services and are free of charge. Transportation and Parking Services (TAPS) also operates the Disability Van Service, which provides transportation to those with mobility impairments.

Shuttle routes and schedules are available at the colleges and at campus Transportation

Information Centers.

The Santa Cruz Metropolitan Transit District (Metro) provides regular and convenient bus transportation to campus and to outlying areas from Boulder Creek to Watsonville, as well as to the Santa Cruz community. Metro provides service to UCSC every five to eight minutes on weekdays during academic sessions. Metro "Night Owl" buses provide late-night service to campus until 3 a.m. on Friday and Saturday nights. Sunday-through-Thursday-night service to campus operates until 2 a.m. This service is funded by a mandatory student fee. Students may ride any Metro bus without additional charge by showing their current UCSC identification card to the driver.

Bicycles are a popular means of transportation on campus and in Santa Cruz. UCSC offers bicycle programs including licensing, a bike trailer for commuters, and bike racks on the shuttles. Multigeared bicycles are advisable because of the hilly terrain, and helmets are required.

Permits for on-campus parking are limited. Parking in the residential areas adjacent to the campus is restricted and strictly enforced. Due to lack of space, storage of vehicles for on-campus residents is limited, and the majority of remote-lot spaces are available to commuting students. Parking on campus for first- and second-year students living on campus is available by exception only. Parking regulations are strictly enforced; all students who bring a car to campus must purchase a permit in advance. UCSC requests that students not bring vehicles to campus if they are not eligible to purchase an on-campus parking permit.

UCSC offers a weekend shuttle between the campus and the Fremont BART Station. Use the shuttle to connect with BART, which offers rail service throughout the north bay, including stops in San Francisco, Berkeley, Pittsburg, Pleasanton, Concord, and Richmond. The UCSC Fremont BART Connector provides service on Fridays and Sundays during the academic year. Reservations are required and can be made weekdays 10 a.m. to 3 p.m. at (831) 459-3779.

Santa Cruz is served by commercial bus lines on a regularly scheduled basis. The nearest commercial airport is in San Jose, approximately 35 miles from Santa Cruz. The San Francisco Airport is about 70 miles from campus. Both airports are accessible by commercial van and limousine services.

For the occasional need of a car to travel off campus, go to the beach, go shopping, or even go home for the weekend, UC Santa Cruz has contracted with Zipcar to provide car sharing services to all eligible UCSC students 18 years of age and older. Zipcar is a membership-based car rental program providing self-service access to a variety of vehicles located on and off campus, 24/7. Reserve a car online by the hour or day, just "pay as you go"; low fees include rental costs, gas, mileage and insurance. Join Zipcar even before arriving campus at www.zipcar.com/ucsc.

Services can change, so it is recommended that you get up-to-date information from TAPS. Call (831) 459-2190, e-mail taps@ucsc.edu, or visit the web: www2.ucsc.edu/taps.

Student Health Services

Located on McLaughlin Drive across from Colleges Nine and Ten, the Student Health Center provides quality health care focused on the particular needs of students. All registered students have access to the Student Health Center regardless of their insurance plan, as services are partially supported by their university registration fee. Care is provided by board-certified physicians, nurse practitioners, and physician assistants. Students can be seen by appointment or, in cases of acute illness or injury, on the same day in Urgent Care. In case of emergencies, either during the day or after normal operating hours, please call 911.

In addition, the Student Health Center offers psychiatry services, nutritional counseling, health promotion, x-ray, and laboratory and pharmacy services on site. The center is open daily and Saturday mornings during the regular academic year. (For summer services and hours, see the Student Health Center's web site.) For more information about the Health Center, call (831) 459-2780; e-mail healthcenter@ucsc.edu; web: www2.ucsc.edu/healthcenter.

Student Health Insurance

To ensure emergencies and other health care costs do not interfere with a student's education, all University of California students are required to carry medical insurance. A comprehensive and inexpensive program specifically designed for students is available through the university via the Undergraduate Health Insurance Plan (USHIP). All students are automatically enrolled in USHIP and billed quarterly through their student account, unless they choose to waive this coverage by providing proof of comparable insurance by the specified deadline. For detailed information regarding insurance coverage and the waiver process, see the web at www2.ucsc.edu/healthcenter. You may also contact the insurance office at insure@ucsc.edu or (831) 459-2389.

Mandatory Hepatitis B Immunization

California state law mandates that all entering students under 19 years old must be immunized against Hepatitis B. These students are required to provide the Student Health Center with documentation proving their compliance with this law. Those not in compliance at the beginning of the quarter may be dropped from their classes. For more information, see the web at www2.ucsc.edu/healthcenter or call (831) 459-2211.

Student Health Outreach and Promotion

Student Health Outreach and Promotion (SHOP) provides opportunities for students to explore and enhance their health and wellness as they pursue their academic and personal goals. Our various programs and services offer UCSC students culturally sensitive, nonjudgmental information, education, resources, and support around issues related to alcohol and other drug use, sexuality and sexual health, holistic health, and other health concerns. Students can get involved with SHOP by becoming peer educators, HIV test counselors, Volunteers for the Condom Co-op, and/or CUIP Interns. For more information about these positions, visit SHOP at Kresge College in the Piazzetta (across from STARS), view the SHOP web site at www2.ucsc.edu/healthcenter/shop, e-mail us at shop@ucsc.edu, or call (831) 459-4679.

Alcohol and Other Drug Education. SHOP coordinates alcohol and other drug (AOD) education, prevention, and early intervention efforts on campus. Staff members work collaboratively with students to help identify relevant information and facilitate informed decision making. Educators provide formal and informal sessions and workshops for students, college residential staff, and other campus groups. Staff also serve on the campuswide AOD Advisory Committee, which develops, implements, and assesses policies.

HIV and Other STI Prevention. Helping students explore their options around the sexual choices that they make, SHOP seeks to reduce students' risk of HIV, other sexually transmitted infections (STIs), and unplanned pregnancy. SHOP offers the following: free and anonymous HIV testing, run by highly trained student test counselors; the Condom Co-op, selling safer-sex supplies at a reduced cost; SLUG LOVE workshops and other presentations addressing STIs, safer sex, and values clarification and communication; and academic classes. SHOP also cosponsors special events such as the annual Santa Cruz AIDS Walk.

Student Health Advisory Committee. The Student Health Advisory Committee (SHAC) is composed of students interested in health care at UCSC. The group serves as a liaison between students and the Health Center staff; creates and supports campus health initiatives and other educational opportunities; and provides a fun, practical way for students to get involved and make connections with other students and health care practitioners.

Counseling and Psychological Services

Psychological counseling is available from professional staff at various locations on campus, including the colleges, Family Student Housing, and Kresge Annex B. Counseling psychologists come from a variety of backgrounds and are experienced in helping students clarify their sense of direction, set realistic goals, and better understand their personal problems.

You can meet with a counseling psychologist individually or join one of the many counseling groups offered throughout the year. Both individual and group counseling services are aimed at helping you gain greater personal effectiveness.

Information communicated to a counseling psychologist is confidential and cannot be released without a student's permission except in specific circumstances involving risk and safety. Counseling psychologists are available to consult with individuals, groups, committees, and campus departments and organizations in such areas as psychological problem solving, conflict resolution, ethnic and multicultural matters, and organizational development.

You may obtain further information regarding counseling services from the central Counseling and Psychological Services Office at Kresge Annex B, (831) 459-2628. Visit our web site www2.ucsc.edu/counsel.

(For information on academic and career advising, see [Undergraduate Academic Program](#).)

Rape Prevention Education Program

UCSC pioneered the establishment of Rape Prevention Education in 1979 to address issues of rape, especially acquaintance rape.

During their orientation to the campus, students are encouraged to attend educational presentations that use theater, video, and discussion to encourage respect, responsibility, and mutuality among students. Evening workshops are organized in the residence halls and apartments throughout the year. A wide variety of films and videos are shown campuswide to discuss the politics of gender and the causes and prevention of sexual assault. Resources are available for class papers. A peer education program is offered to both male and female students. Posters, pamphlets, newsletters, and resource booklets are distributed throughout the

campus. Both male and female students take advantage of these educational resources. In addition, excellent self-defense classes for women are offered quarterly.

The coordinator of Rape Prevention Education is available for individual appointments and provides nonjudgmental support for those who have been raped as well as for their

friends and loved ones. The campus also has police officers available 24 hours a day, a network of emergency phones, guards at both campus entrances from 8 p.m. until 3 a.m., and frequent shuttles and buses.

Rape Prevention Education works with other campus units to try to ensure that the physical environment is as safe as possible. Fortunately, the external UCSC environment has been relatively safe and reported rapes or attempted rapes by strangers have been rare. UCSC is similar to other campuses in that over 90 percent of student rapes that occur on campus are committed by acquaintances and are vastly underreported. For more information, contact the Rape Prevention Education Office at Kresge College, (831) 459-2721; e-mail: g_g@ucsc.edu; web: www2.ucsc.edu/rape-prevention.

Resource Centers

African American

The African American Resource and Cultural Center (AARCC) develops and fosters cocurricular initiatives that promote academic success, leadership training, and student development. Since the center's inception in 1991, the program's primary mission has been to serve as a key resource to acclimate students to general campus life and academic culture. In addition, the program provides advocacy and support in helping to monitor students' academic progress and subsequent achievement of their educational goals. AARCC works closely with overall campus outreach to enhance the recruitment and retention of students of African descent.

AARCC welcomes volunteers and student interns to serve as members of TEAM AARCC Outreach Program or on our Advisory Council. Academic clubs include Black Science Network, Student National Medical Association, UCSC Gospel Choir, Honors and Scholars Club, and National Society of Black Engineers. Other organizations affiliated with the center include African/Black Student Alliance, African American Theater Arts Troupe, Black Sistars United, Black Men's Alliance, Alpha Kappa Alpha Sorority, Destination Higher Education, Rainbow Theatre, University Brothers/Sisters, MLK Youth Classic, and Delta Sigma Theta Sorority. AARCC works collaboratively with others on campus and in the surrounding community to enhance cultural and ethnic diversity initiatives on the UCSC campus. The center, located on the third floor of the Bay Tree Building in Quarry Plaza, is open Monday through Friday from 9 a.m. to 5 p.m. For more information, call (831) 459-3207, fax (831) 459-2469, e-mail african@ucsc.edu, or consult our web site at www2.ucsc.edu/aasl.

American Indian

The American Indian Resource Center (AIRC) works in collaboration with the Student Alliance of North American Indians (SANAI), the University of California American Indian Counselors/Recruiters Association, and native faculty and staff, as well as the indigenous tribal community leaders of the region to develop information, programs, and events that assist public understanding of native peoples. Invested in creating a campus climate that supports all students, the center provides mentoring and personal and academic advising. AIRC is located on the third floor of the Bay Tree Building in Quarry Plaza. For more information, call (831) 459-2881 or e-mail dtibbett@ucsc.edu or native@ucsc.edu.

Asian American/Pacific Islander

The Asian American/Pacific Islander Resource Center (AA/PIRC) provides and enhances opportunities for education and dialogue on issues affecting Asian Americans and Pacific Islanders, as well as opportunities for leadership development and community building. AA/PIRC aims to address students' multiple and diverse academic, social, cultural, and other cocurricular needs through programs and services. Programs include Asian American/Pacific Islander Heritage Month, Year-End Ceremony for graduating seniors, leadership skills workshops, graduate school panels, and community receptions. AA/PIRC events also highlight writers, performance artists, scholars, and community leaders. AA/PIRC sponsors academic and paid internships for students interested in gaining professional experience. Through AA/PIRC, students benefit from networking with individuals and resources such as alumni, faculty and staff, off-campus community-based organizations, and on-campus student organizations.

AA/PIRC is located on the third floor of the Bay Tree Building with the African American, American Indian, and Chicano Latino Resource Centers. Add your e-mail address to AA/PIRC's listserv to receive announcements on leadership, scholarship, internship opportunities, events, and community news. For more information, call (831) 459-5349; e-mail aapirc@ucsc.edu, or visit www2.ucsc.edu/aapirc.

Chicano Latino

The Chicano Latino Resource Center (El Centro) is a hub of organized activities and resources that support Chicano and Latino student transition, retention, and academic advancement at the university. Through collaborative efforts with campus partners, students can participate in a host of activities that encourage intellectual growth, leadership development, preparation for graduate or professional school, and career options. El Centro encourages and supports student and community development through cultural and educational programming. Programs include the following: New Student Welcome Program; Chicana Latina Pipeline Project; César Chavez Convocation; dialogue on academic, social, cultural, and personal issues that affect the Chicano and Latino community; and a weekly online newsletter, CHISME E-news. El Centro offers student internships that support leadership-skills development while students help to organize events and activities. For more information or to schedule an appointment, call (831) 459-5449 or e-mail cab@ucsc.edu. Web: www2.ucsc.edu/raza

Gay, Lesbian, Bisexual, Transgender, Intersex

The Lionel Cantú Gay, Lesbian, Bi, Trans, Intersex (GLBTI) Resource Center, located in a beautiful redwood building near Crown and Merrill Colleges, is a friendly, welcoming place to the entire community. The center's mission is to provide educational, social, and support services to students, staff, and faculty on GLBTI issues. The Lionel Cantú GLBTI Resource Center is home to several student organizations that meet weekly; a host of exciting programs; and a library offering books, magazines, and DVDs. Safer-sex information and supplies and other GLBTI-related materials are also on hand. Information and referral to campus and community GLBTI resources is available by phone or in person. Throughout the year, the Lionel Cantú GLBTI Resource Center coordinates student programming with a queer focus. Education of the nonGLBTI campus population is another function of the resource center; volunteers offer workshops for groups, classes, and dorms about unlearning heterosexism and transphobia. Everyone is welcome to use the center's cozy lounge, full kitchen, and study center to relax, study, socialize, and become involved in the campus's queer community. The center is open Monday–Friday; usual hours are 10 a.m. to 5 p.m. Stop by and meet the center's friendly staff and find out about internship and volunteer opportunities. You can reach the center at (831) 459-2468 or via e-mail at queer@ucsc.edu. The center's web site, queer.ucsc.edu features an extensive Queer Calendar. To get on the listserv for latest updates, e-mail the center with your name and e-mail address.

Women's Center

Located in Cardiff House, a historic farmhouse near the main entrance to campus, the Women's Center is devoted to helping students maximize their success at UCSC. Resource referrals and informal advising are always available from center staff, and weekly events include films, readings, and talks. The center also sponsors student-oriented workshops on topics ranging from money management and car care to assertiveness and stress reduction.

The Women's Center is home base for a variety of student groups and student-run community-service efforts. Other opportunities for involvement include internships, independent study, and work-study jobs. Students can become involved in such Women's Center projects as the 51% Pipeline Project (leadership), That Takes Ovaries (theater), Inside Out Writing Project (Women in jail)—or create projects with the support and mentorship of staff.

The center's meeting rooms, kitchen, and garden are ideal places to study, relax, or connect with students, staff, faculty, and community members. Rotating art exhibits bring the center's walls to life, and students are encouraged to inquire about showing their work.

For more information, check the center's weekly calendar, visit the center's web site at www2.ucsc.edu/wmcenter, e-mail women@ucsc.edu, or call (831) 459-2072.

Physical Education, Recreation, Sports, and Wellness

The physical education, recreation, sports, and wellness programs provide a variety of interesting and challenging activities intended to attract you to becoming an active participant. The emphasis is on giving you an opportunity to develop knowledge, skills, and habits related to wellness to last through a lifetime of enjoyable physical and recreational activity.

Obtain further information about the programs described below from the Office of Physical Education, Recreation, and Sports, located at the East Field House, (831) 459-2531. The web address is <http://opers.ucsc.edu>.

Physical Education Courses

Regularly scheduled courses, which carry no academic credit but are recorded on your transcript, are available in a broad range of physical activities. Many classes are small, and all offer expert instruction and carefully designed practice periods so that you can accomplish much in sessions

of two to three hours per week. Most activities have intermediate and advanced sections as well as courses for beginners. Subjects offered include swimming, scuba, sailing, rowing, basketball, racquetball, tennis, volleyball, ballet, folk dance, jazz dance, modern dance, fencing, soccer, aerobics, tai chi chuan, weight training, yoga, aikido, and tae kwon do.

Web: <http://opers.ucsc.edu/homepage/physicaleducation.html>.

Intramurals

The intramural sports program includes competitive leagues, tournaments, and special one-day events. Many of the activities are coeducational. The leagues feature basketball, flag football, floor hockey, indoor and outdoor soccer, softball, ultimate frisbee, and volleyball. Some of the leagues are divided into different skill levels. There are tournaments in basketball, racquetball, and tennis. Special events include a 5-k and 10-k run, and an annual triathlon. Prospective participants are encouraged to form their own teams. Individuals looking to be placed on a team are also welcome. Web: <http://www.ucsc.intramurals.com>.

Sports Clubs

The sports club program offers a variety of sports depending on student interest. Currently, active clubs include men's and women's rugby, lacrosse, and ultimate frisbee; men's soccer, baseball, cross-country, and track and field; and coed Special Olympics, cheerleading, dance, equestrian, triathlon, disc golf, cycling, sailing, water polo, badminton, and fencing. Web: <http://www.ucscsportsclubs.com/>.

Intercollegiate Teams

UC Santa Cruz offers the only National Collegiate Athletic Association (NCAA) Division III program in the UC system. As a Division III member, the program offers no scholarships or grants in aid that are based on athletic ability. Both men's and women's NCAA intercollegiate teams compete in the following sports: basketball, soccer, swimming and diving, tennis, and volleyball. Women's teams compete in golf and cross-country. For information on teams, rosters, schedules and Booster Club, go to www.goslugs.com.

Wellness Center

Located within the East Field House complex and overlooking Monterey Bay, the Wellness Center offers two floors of state-of-the-art cardiovascular and strength-training equipment. Classes, workshops, fitness testing, and personal training are available to assist everyone in reaching their fitness goals. Web: <http://www2.ucsc.edu/opers/wellness/index.html>

Recreation

The Recreation Program is designed to fulfill the diverse needs and interests of all members of the UCSC community. More than 100 activities, workshops, classes, off-campus outings, and special events are scheduled quarterly. In addition, the program offers a 10-day Wilderness Orientation (WO) prior to the start of school. WO is an invaluable experience for incoming college students, serving as an introduction to mountain travel and the "journey" of college education. The beautiful settings of the Sierra Nevada provide students an opportunity to form new friendships and discuss their hopes and fears about entering college while learning outdoor skills. No previous backpacking experience is necessary.

The Outdoor Equipment Rental Center offers recreational equipment including surfboards, wetsuits, and high-quality backpacking and camping gear. If you are interested in planning your own outing, contact the Recreation Program Office for assistance. The office has extensive files, and staff members act as consultants, planning with people as well as for them. The office sells international student ID cards, provides bicycle licensing, and offers a free weekly drop-in bicycle maintenance program.

Open recreation hours are scheduled quarterly; you are strongly encouraged to use the facilities. Sports equipment may be borrowed without charge. There are also recreation clubs if you are primarily interested in organized recreation and individual performance. Clubs are coed and feature some combination of recreational participation, advanced instruction, and individual competition. For a list of currently active clubs, go to ucscrecreation.com.

Banana Slug Mascot

The Banana Slug, a bright yellow, slimy, shell-less mollusk found in the campus's redwood forest, was the unofficial mascot for UC Santa Cruz's coed teams since the university's early years. In 1981, when some campus teams wanted more organized participation in extramural competition, UCSC joined Division III of the NCAA. Since the application required an official team name, UCSC's then chancellor polled the student players, and out of this small group emerged a

consensus for a new moniker—the sea lions. It was a choice that the chancellor considered more dignified and suitable to serious play than the Banana Slugs. But the new name did not find favor with the majority of students, who continued to root for the Slugs even after a sea lion was painted in the middle of the basketball floor. After five years of dealing with the two-mascot problem, an overwhelming pro-Slug straw vote by students in 1986 convinced the chancellor to make the lowly but beloved Banana Slug UCSC's official mascot.

Facilities

To make it convenient for you to utilize campus physical education, recreation, and sports facilities, field houses are located on the east and west sides of the campus. At both the East Field House and the West Field House, you will find the following: gymnasium, tennis courts, outdoor basketball and volleyball courts, and locker rooms. The East Field House also has a dance studio, martial arts room, handball/racquetball courts, equipment center, fitness center, 50-meter swimming pool, half-mile jogging track, and sports fields. A strength-training and cardiovascular-fitness court is located near the east jogging track.

The UCSC Boating Center is located at the Santa Cruz Small Craft Harbor, about five miles from the campus. The boating program offers instruction and recreation using sailing and rowing vessels, such as Moore-24 sloops, Laser dinghies, C-15 dinghies, rowing dories, and sea kayaks. Web: <http://www2.ucsc.edu/opers/boating/index.html>

All facilities are open daily during academic terms and are available for individual recreation whenever they are not being used for classes or other scheduled activities.

Student Union

The Student Union is a student-governed facility located at the center of campus where students can take a break and lounge, play pool or ping pong, use computers, meet, or watch television. The Student Union is also home to registered student organizations, campuswide student government, the Student Union Governance Board, the Bike Co-op, and Engaging Education.

Located in Quarry Plaza across from the Bay Tree Bookstore, the Union complements college facilities by providing an alternative social, recreational, and educational gathering place for all students and members of the campus community. Student-support offices located at the Union include Student Union administration, Engaging Education, and Student Activities.

The Union is open Monday through Friday 9 a.m. to 10:30 p.m. and has limited weekend hours. The Union is closed holidays and quarter breaks. For up-to-date information, call (831) 459-3167.

Student Activities

Campuswide Student Organizations

Expand your horizons and your academic life by joining one of over 150 student organizations. Get involved in one or more cultural, ethnic, religious, Greek, political, service, or social organizations. Gain valuable life experience in leadership and develop rewarding and lifelong friendships.

Student organization membership is open to all UCSC students. Learn more about UCSC's campuswide groups or start your own at the Student Organization Advising and Resources (SOAR) office. Contact SOAR at (831) 459-2934, e-mail soar@ucsc.edu, or visit the web site: www.soar.ucsc.edu. SOAR is located on the second floor of the Student Union.

Sports or recreation organizations can be contacted through the Office of Physical Education, Recreation, Sports, and Wellness (OPERS): sports clubs at (831) 459-4220; recreation clubs at (831) 459-2806. Broadcast or print media clubs can be reached at (831) 459-2840.

Community Service Opportunities

Community service is a vital part of the university's mission. It is possible for individual students, as well as campuswide student organizations, to develop service projects that link the university with the broader Santa Cruz County community. With the financial support of the campus's Community Service Project funding, students have aided local groups such as Students Toward Achievement in Writing Success, the Strange Queer Youth Conference, and renovation of the Siena House.

The Student Volunteer Connection in the main lobby of the Academic Resources Center connects interested students with the community to volunteer their time to tutor children, mentor youth, feed the homeless, and train people with developmental disabilities.

Service programs also exist through some colleges; check with your college office about opportunities. All the student resource centers also coordinate volunteer efforts on and off campus.

For more information about service opportunities, contact the Student Volunteer Connection, (831) 459-3363 or 459-5707, or your college.

UCSC Student Voice

Santa Cruz offers you a unique variety of opportunities to participate in university governance at the college, campus, systemwide, and national levels. Regardless of what level you choose, participating in student government will provide you with a wonderful chance to practice leadership skills, meet others who share your interests, and learn a great deal about yourself and the university.

Advisory Committees

Serving on a campus advisory committee is a recognized channel for student involvement in the university's decision-making processes. Advisory committees, composed of faculty, staff, and student representatives, are established to develop and recommend policies on a wide range of subjects. Annually, the Student Committee on Committees (composed of one student appointed by each college and chaired by the Internal Vice-Chair of the Student Union Assembly) nominates more than 100 students to serve on over 50 administrative and Academic Senate committees.

For information about the selection process, contact Student Committee on Committees, (831) 459-5533, or the Student Union Assembly, (831) 459-4838.

College Student Governments

Each college has its own form of student government, enabling students to gain experience in planning, budgeting, executing, and evaluating a wide range of college programs and policies. Like the colleges themselves, each college governing body has its own character, structure, and meeting times and dates. For information, inquire in your college office or talk to our college programs coordinator.

Campuswide Student Government

The Student Union Assembly (SUA) is the undergraduate advocacy organization and the official student voice of UCSC. It comprises three representatives from each college government; six elected officers: chair, internal vice chair, external vice chair, organizing director, commissioner of academic affairs, and commissioner of diversity; and one appointed representative from each of the following student organizations that represent historically underrepresented people within the UC system: African/Black Student Alliance; Asian Pacific Islander Student Alliance; The Network (Gay, Lesbian, Bisexual, Transgender, and Intersex Students); Movimiento Estudiantil Chicano de Aztlan; Student Alliance of North American Indians; and Ethnic Student Organization Council. The SUA also provides paid part-time internship opportunities for students each year. These internships include but are not limited to field organizers, treasurers, outreach and publicity, and strategy and planning. The SUA conducts open meetings that are held every Tuesday at 6 p.m. in Bay Tree Conference Room Cervantez and Velazquez throughout the academic year. Students interested in advocacy, activism, and politics, as well as those concerned with their own and their friends' lives, are invited to get involved. The assembly operates via issue-specific campaigns and around general campus concerns. In the past, the SUA has formed campaigns around fighting fee-hikes, defending affirmative action, saving financial aid on a national and state level, striving for reasonable campus growth, and reforming UC Regents' procedures. Current issues have been fighting to make a UC education affordable, fighting to stop balancing budgets on the backs of students, fighting for the rights of UC workers, and working with community groups because UCSC students are also Santa Cruz residents. The SUA also works with the UC Student Association and the United States

Student Association on system, state, and national issues and will host the 2006 Statewide Womyn of Color Conference. For more information, contact the SUA at (831) 459-4838, or visit the SUA office on the second floor of the Student Union.

The Graduate Student Association (GSA) provides governance and representation for graduate students, and its Steering Committee coordinates student-life programs and activities for graduate students. For more information, contact the SGSA, (831) 459-3142, or visit the SUA office on the second floor of the Student Union.

Systemwide Student Government

The UC Student Association (UCSA) is the statewide association of graduate and undergraduate student governments from the 10 UC campuses. UCSA is the officially recognized voice of the students to the UC Board of Regents, various UC administrative offices, and the UC Office of the President. Issues covered by UCSA include UC fees and financial aid, comprehensive admissions policies, and academic policies, as well as broader issues of social responsibility such as environmental concerns and civil rights. UCSA coordinates the yearly selection of the UC Student Regent.

The SUA external office provides grassroots membership and support for the two main UCSA offices in Oakland and Sacramento. The campus office organizes students to run the grassroots campaigns that are adopted each summer during the UCSA Congress. At this session, delegates from the 10 UC campuses come together and choose the critical issues to be worked on for the next year. Issues in the past have included voter registration drives, letter-writing campaigns on particular UC issues, and increases in financial aid. UCSA provides a thorough introduction to UC politics and student representation. Students may also serve on systemwide committees through UCSA and gain a wide knowledge of the entire UC system through their service.

Two officers help to coordinate UCSA activities on our campus. The external vice-chair (EVC) is the official representative to the UCSA Board of Directors. This position has voting rights for UCSC, is the primary contact regarding all UCSA issues, and coordinates all lobbying of UCSA and local, state, and Federal governments on behalf of UCSC students. The organizing director (OD) coordinates with the EVC to effectively run the grassroots campaigns that are sponsored by UCSA every year. These positions are elected for one-year terms during spring quarter every year.

The Student Union Assembly officers in charge of UCSA activities can be reached at (831) 459-4838.

Student Media

UCSC Student Media comprises 25 print publications; KZSC 88.1, the campus radio station serving the campus as well as the tricity Monterey Bay Area; and campus Student Cable Television (SCTV Channel 28). Over 300 students enrich their cocurricular involvement through internships academic credit, as well as fellowship and employment opportunities.

With the greatest broadcasting power of the UC stations, KZSC broadcasts diverse music, news, and public affairs programming. KZSC is a student-governed station with more than 20 students serving in management and leadership positions.

The state and national award-winning student newspaper of record, the weekly City on a Hill Press, covers campus, local, national, and international news and offers reviews and commentary. Fish Rap Live! publishes twice monthly and provides an alternative forum for free expression of ideas, coverage of local and campus events, and personal journalism. Campus newsmagazines include EyeCandy, TWANAS, Kresge Town Krier, Leviathan, Disorientation Guide, and The Project.

Annual literary journals offer poetry, prose, photography, and art. Examples are Chinquapin, Big Q, Red Wheelbarrow, La Revista, Alay, Las Girlfriends, Yellowt, Matchbox, and the Black African Voice.

SCTV is a student-governed campus cable television station, which programs and broadcasts artistic, narrative, experimental, documentary, and public-service announcement submissions of video and film by 10 broadcasting organizations; these include Banana Slug News, Rainbow TV, Film Production Coalition, Moxie Production Group, Barn TV, SCTV Events, the Community Service Documentation Project, and others. Many of the students are affiliated with the film and digital media major; however, students from all disciplines are encouraged to participate.

If you are interested in contacting any of the Student Media print or broadcast organizations, call the Press Center at (831) 459-2840, KZSC at (831) 459-3811, or SCTV at (831) 459-3917. Visit the web site for links to print and broadcast organizations: studentmedia.ucsc.edu.

Campus Cultural Programs

Throughout the year, UCSC offers frequent and varied cultural opportunities. Students, faculty, and staff have the opportunity to participate as audience members, performers, or behind-the-scenes support crew.

The considerable range of offerings includes art exhibits, lectures, films, concerts, recitals, and dance and drama presentations; programs vary from single performances to weeklong cultural celebrations. The colleges host a number of events, and the departments frequently engage speakers of particular academic interest to address the campus community or present lecture-demonstrations.

Arts & Lectures (A&L), a series of public performances and residencies by artists of international stature, is presented by University Relations during the year. Past appearances have included the

vocalist Bobby McFerrin, the Ailey II dance company, performance artist Laurie Anderson, musician Bonnie Raitt, and the Guarneri String Quartet. Lecturers have included documentary filmmaker Michael Moore, NPR's David Sedaris, the late political columnist Molly Ivins, and environmental advocate Robert F. Kennedy Jr. A&L collaborates with the colleges and academic units in the development of workshops, lecture-demonstrations, and seminars offered by visiting artists, with the common goal of broadening cultural perspectives through the arts. The Arts & Lectures phone number is (831) 459-3861.

The Arts Division maintains a high profile in the community with performances by faculty, student, and guest artists: music recitals are offered regularly, and several major theater, dance, and music presentations are mounted each quarter in conjunction with the academic program.

Full-scale productions by the Theater Arts Department have included the Sondheim musical *Merrily We Roll Along*, *The Good Person of Sezvan* by Bertolt Brecht, and a new translation of Victor Hugo's *Ruy Blas*, *The Princess and the Pea* (coproduced with Shakespeare Santa Cruz). Recent student productions have included classic and contemporary plays such as *Equus* by Peter Shaffer, *In the Blood* by Suzan-Lori Parks, *Bent* by Martin Sherman, and *Language of Angels* by Naomi Iizuku, as well as the annual showcase of student choreography, *Random with a Purpose*.

The Music Department sponsors a variety of concerts by the University Orchestra, Wind Ensemble, Chamber Singers, and Concert Choir, as well as fully staged operas and periodic faculty recitals. Recent performances have featured works such as Mozart's *Requiem*, Rossini's *Petite Messe Solennelle*, and the operas *Don Giovanni* and *The Magic Flute*, Lou Harrison's *Mass for St. Cecilia's Day*, Leonard Bernstein's *Chichester Psalms*, and Morten Lauridsen's *Lux Aeterna*. The department also sponsors concerts by the Jazz Ensembles and Big Band, Percussion Ensemble, and Electronic Music Studios, and ethnomusicology groups such as the West Javanese Gamelan Ensemble and Latin American Ensembles. In addition, the department sponsors a growing number of performances of Indian classical music, with recent appearances by sarod master Rajeev Taranath and sitar player Pandit Habib Khan, as well as the Pacific Rim Festival of Music in alternate years. Student recitals, class open rehearsals, and informal "Friday at Four" showings round out the calendar.

All students, not just majors, are encouraged to audition for Theater Arts Department and Music Department productions and ensembles. For information about how to get involved, call the Theater Arts Department at (831) 459-2974 and/or the Music Department at (831) 459-2292.

The Music Center, including the 396-seat Recital Hall and Indonesian gamelan and electronic music studios, houses all Music Department programs, as well as performances by visiting artists.

The Theater Arts Center is the setting for a year-round program of drama, dance, and special events. The 528-seat Theater Arts Mainstage, 215-seat Second Stage, 400-seat Media Theater, and modular Experimental Theater, as well as supporting studios and shops provide professional facilities for campus and visiting artists and productions. Other on-campus performance venues include the 153-seat Barn Theater, the Kresge Town Hall, the outdoor Upper Quarry Amphitheater, and the colleges' dining commons. Ticket information is available from the UCSC Ticket Office, located at the Theater Arts Center, (831) 459-2159 (voice or TDD). For additional information about performing arts events, contact the Arts Division Events Office, (831) 459-2787. Online calendar: events.ucsc.edu/calendar.

Shakespeare Santa Cruz

Shakespeare Santa Cruz (SSC), recognized by USA Today as one of the 10 "most influential" Shakespeare festivals nationally, is a professional theater company in residence at UCSC, which unites scholarship with academic endeavor. Every July and August, SSC produces a summer season that includes two plays by William Shakespeare as well as non-Shakespeare productions carefully chosen by the artistic director to complement the season. In late November and early December, SSC stages a holiday production, providing high-quality family entertainment. UCSC students are an integral part of this collaboration between SSC and the Theater Arts Department. Students act, build sets, hang lights, work as assistant directors, and run the show under the guidance of SSC's professional artistic team.

SSC offers courses through the university Summer Session; sponsors conferences for scholars, teachers, and passionate theatergoers; and provides opportunities for the community to get involved in the intellectual and theatrical components of Shakespeare. The summer acting company is composed of professional Equity actors and top nonunion talent from throughout the United States, local professionals, and college-age interns. Production crews are made up of regional and local professionals and also include university students and interns.

Every spring, SSC sends out a touring group of 10 student actors and a stage manager to local schools in Santa Cruz, Monterey, and San Benito Counties. This program, *Shakespeare to Go*, performs a 50-minute version of one of the plays to be produced in the summer.

For further information, contact the Shakespeare Santa Cruz Office in the Theater Arts Center, (831) 459-2121, or visit the web site: shakespearesantacruz.org.

Bay Tree Bookstore

UCSC's Bay Tree Bookstore is located in the Quarry Plaza complex in the center of campus, at the intersection of Hagar Drive and Steinhart Way. The bookstore serves as the campus resource for UCSC course materials, including new and used course books and customized faculty publications, general reading and reference books, a wide variety of school and personal supplies (including computers and computer supplies), and many other items such as backpacks, emblematic apparel, art supplies, posters, gifts, greeting cards, and academic regalia. Services include online reservations for course materials, student debit accounts, special ordering of books, book buyback services, fax services, and limited check cashing. The bookstore also houses the campus's convenience store (the Express Store), Student ID Card Services, and UCSC's Digital Copy Services (Express It!). For more information, call (831) 459-4544 or visit the web: slugstore.ucsc.edu/.

Child Care and Early Education Services

Child Care and Early Education Services offers programs for children of students, faculty, and staff. Enrollment is limited and early application is encouraged since most programs have waiting lists. Free or reduced rates are available to low-income students who qualify.

All programs offer nurturing, homelike environments that are safe and developmentally appropriate. The programs stress the importance of meeting children's needs in all areas of development: social, emotional, physical, cognitive, and creative. The curriculum emphasizes play as a learning process and provides environments that are rich and challenging.

Programs are open to all children without regard to religion, color, ethnicity, gender, and

physical or mental ability. Full- and half-day schedules are offered. The majority of spaces are reserved for students who meet low-income requirements; these spaces are free or have a sliding-scale fee, depending on income. A few spaces with flat monthly fees are reserved for faculty and staff families. Fee-for-service spaces at a reduced rate may be available to student parents whose income exceeds state-subsidy requirements.

Information on all programs, fees, and applications is available from the Child Care and Early Education Services Office in the Community Building at Family Student Housing, (831) 459-2967, or e-mail childcareservices@ucsc.edu. Web: housing.ucsc.edu/childcare

Infant Toddler Center

Located in Family Student Housing, the Infant Toddler Center cares for children from 3 to 36 months. Small groups, low child-to-adult ratios, and primary caregivers ensure consistent and individualized care and nurturing. The Infant Toddler Center operates year-round, with closures for administrative holidays, academic breaks, and staff development.

Granary Child Development Center

Located near the main entrance to campus, the Granary Child Development Center provides care and education for preschool children ages 2–4 years. The Granary operates year-round, with closures for administrative holidays, academic breaks, and staff development.

Children's Center

Located in Family Student Housing, the Children's Center provides care for prekindergarten children ages 4 to 6 and after-school care for children in kindergarten. The Children's Center program provides a rich curriculum that prepares children for kindergarten and school. The Children's Center operates year-round with closure for administrative holidays, academic breaks, and staff development.

School Age Center

Located in Family Student Housing, the School Age Center is an after-school recreation program for children in kindergarten through sixth grade during the academic year. The program provides developmentally appropriate arts and crafts, life-skills and sports activities, occasional community outings, and quiet time for homework. Extended service hours are available on a preregistration basis for elementary school holidays or in-service days. An all-day Summer Recreation Program is also offered for children of UCSC students, faculty, and staff.

UCSC Alumni Association

UCSC's graduates—more than 70,000 of them—can maintain a lifelong connection to the campus

through the UCSC Alumni Association. Through the dues they pay, Association members contribute to the living-learning environments at each college and the enrichment of the entire campus. Thirty percent of annual membership dues directly support student programs, special activities, and other projects at the colleges and campuswide.

The association promotes excellence at UCSC by making three annual awards. It supports students by offering two types of awards (college service and financial need), and enriches campus and college intellectual life through its Distinguished Visiting Professor program and endowment.

Hundreds of alumni return to campus during the annual Reunion Weekend to enjoy receptions, tours, panel discussions, and other programs through which they reconnect with old friends, faculty, and students. Thousands more reconnect through the association's Online Community (alumni.ucsc.edu), which offers an online alumni directory, association event information and RSVP services, and much more.

Alumni are keenly interested in career issues. More than 1,000 of them act as career mentors online through the Online Community and Career Services' Career Advice Network, and in person at the annual Multicultural Career Conference and similar events. The Alumni Association, in partnership with other UC Alumni Associations, brings politically minded graduates to Sacramento for an annual legislative conference aimed at increasing support for UC.

Alumni reconnect at events offered by regional groups across the nation and by six affinity groups.

Members of the Alumni Association enjoy a range of benefits. These include use of the campus pool and recreation facilities, an alumni affinity e-mail account, insurance coverage, use of a UC vacation center, UC Extension discounts statewide, library privileges across the entire UC system, the online Digital Library, invitations to alumni events, and more.

News of alumni is featured in the campus's magazine, the UCSC Review, in the association's exclusive membership newsletter, the Banana Slug Bulletin, and its e-mail newsletter, the eSlug Bulletin.

Information about the Alumni Association is available at its campus headquarters in the Carriage House, locally at (831) 459-2530, toll-free at (800) 933-SLUG, via e-mail at alumni@ucsc.edu, and on the web: alumni.ucsc.edu/.

Student Life

The campus offers a variety of programs to enhance the quality of student life, all available to graduate students. These include child care, sports and recreation, health services, cultural events, transportation services, and the UCSC Women's Center. See pages 76–106 for information on these services and a description of the local community. See page 39 for services available to students with disabilities.

College Affiliation

Graduate students at Santa Cruz have the opportunity to affiliate with one of the 10 colleges on campus (college descriptions begin on page 77). Participation in the activities of a college may include taking an occasional meal there, living at the college, or participating in the college's educational and preceptorial programs or in its extracurricular activities.

Graduate Student Association

The Graduate Student Association (GSA) is an organization of all graduate students at UCSC. It seeks to advance the general welfare of the graduate student body and is responsible for promoting extracurricular activities on campus.

Graduate students elect a GSA steering committee, which coordinates activities and their funding. In past years, the steering committee has sponsored student social gatherings, musical events, poetry readings, lectures by visiting scholars, and other activities of special interest to graduate students. A portion of the college student government fee, paid by all students, is available to the association for this purpose. The steering committee also recommends graduate students for appointment to university committees.

Housing

As at all other UC campuses, finding housing is a challenge. Students who wish to reside on campus should submit their application as soon as possible, to secure housing in a timely manner. Likewise, students who wish to live off campus will find this task challenging. Often, single students share housing as a means of lowering expenses. However, married students or students with dependent children do not always have the option of sharing housing with other students.

Twenty apartments for single graduate students are located on the west side of campus between Kresge College and the Baskin Engineering Building. City and campus bus stops are nearby. On-site parking is available.

The apartments were designed with privacy, energy conservation, and aesthetics in mind. The wood-frame units have cedar exteriors and are bordered by redwood forest on two sides.

Four students share each apartment, which has a living and dining room, a kitchen, two bathrooms, four single bedrooms, an outdoor deck, and abundant closet and cabinet space. The units contain solid oak and maple furniture, although residents must supply their own linens, cooking utensils, and household supplies. Common facilities include a laundry room and lounges with computer terminals and a large-screen television.

The apartment rental rate is ~~\$898~~ ~~\$7,510~~ per single room per month for the ~~2008-09~~ 2009-10 academic year. Students may stay for the summer at additional cost. First-year graduate students are usually given priority.

Graduate students may also apply to the individual colleges for a limited number of resident

preceptorships. These positions offer an on-campus apartment as a stipend and the opportunity to participate in a college community.

Married students and students with dependent children may live in Family Student Housing, a complex of two-bedroom unfurnished apartments located on the west side of campus. These apartments are in great demand, and students often wait up to a year for a vacancy. Interested students should apply as soon as possible.

Another on-campus option is UCSC's 42-space camper park, available to students who own appropriate recreational vehicles.

To assist students in locating living accommodations in the surrounding communities, the Community Rentals Office maintains a list of available rentals. Students intending to live off campus should begin their search at least four weeks before classes begin.

See pages 98–99 for more detailed information about on- and off-campus housing.

Application and Admission

Application Deadlines

Students may apply for *only one* UCSC graduate program at a time. The list below shows the date set by each program as the final deadline for submission of all documents. Applications are limited to programs of study beginning in fall quarter (except the M.A. program in education). Please visit our web site at graddiv.ucsc.edu for the most current information on applying to UCSC graduate programs and for application deadlines for 2010–11.

Theater arts	March 1, 2009

The dates listed here are the official deadlines, but students are strongly advised to submit applications in October or November. If an application deadline falls on a weekend or holiday, materials should arrive **before** the deadline.

To be considered for fellowship support for fall quarter, the admission application and all supporting materials must arrive at the Division of Graduate Studies by the program's deadline or by February 1, 2009, **whichever is earlier**.

Admission Requirements

To be admitted with graduate status at UCSC, **a student must have completed a bachelor's degree or its equivalent from an accredited undergraduate institution of acceptable standing** and demonstrate ability to pursue a program of study leading toward an advanced degree. Preparation must provide an adequate foundation for advanced study, as determined by the department for the program in which the student intends to enroll. If the bachelor's degree is not in the same discipline as the graduate program, the student must have sufficient preparation in the intended area of study to undertake graduate-level work.

To apply for admission, the items described below must be submitted before the deadline date to the Division of Graduate Studies. UC Santa Cruz requires that applicants complete an online application to be considered for admission to a graduate program. The Graduate Studies Division will provide access to a printed version for those who qualify under the Americans with Disabilities Act. The application and the accompanying materials should be complete and accurate.

1. Admission application form. Application materials for all programs are available online at graddiv.ucsc.edu. The completed application is paid for online with either a credit card or e-check. This application fee is not refundable. Application fee waivers are available for cases of hardship. International applicants are not eligible for fee waivers.

Applicants to the programs in anthropology, computer engineering, computer science, and electrical engineering also need to conform to the admission guidelines posted on the web pages for these departments. These pages can be accessed from the graduate studies home page: graddiv.ucsc.edu.

2. Statement of purpose. This should be a concise, well-written account of the applicant's background and reasons for pursuing graduate study in the field chosen. Selection committees place particular importance on the statement of purpose. It exhibits the applicant's ability to present ideas in clear, coherent language. The statement of purpose should indicate all of the following:

- How knowledgeable the applicant is in the desired field of study
- How undergraduate studies and other experiences (work, community involvement, and so forth) serve as a foundation for graduate study
- How and why the applicant intends to build on this foundation of knowledge and apply the training to social or theoretical problems

3. Personal History Statement

The Personal History Statement is required of all applicants. This statement will be used in conjunction with your application for graduate admission and financial support. Please note that the Personal History Statement should not duplicate the Statement of Purpose.

UC Santa Cruz is interested in a diverse and inclusive graduate student population. In an essay, discuss how your personal background informs your decision to pursue a graduate degree. Please include any educational, familial, cultural, economic, or social experiences, challenges, or opportunities relevant to your academic journey; how you might contribute to social or cultural diversity within your chosen field; and/or how you might serve underrepresented segments of society with your degree.

4. Official transcripts. Official transcripts of all previous course work since high school, including certification of degrees received or documentation of status upon leaving each institution, should be obtained. UC Santa Cruz requires only one transcript from each institution. **Official evidence that the applicant has received a bachelor's degree from an accredited institution of higher education must be presented. All of the official transcripts and documentation should be requested well in advance of the program deadline to be sent to Graduate Application Processing.** Only official transcripts bearing the signature of the registrar and the seal of the issuing institution will be accepted. If work is in progress at the time of application, a final transcript of such work must be submitted before the student can be officially enrolled at UC Santa Cruz. If the bachelor's degree is in a field other than that in which the student intends to apply, evidence of course work sufficient to prepare for graduate study in the intended field must be shown.

5. Letters of recommendation. Three letters of recommendation are required. Additional letters will be reviewed, but will not help or hurt your application.

Letters of recommendation must be submitted electronically. You must register your recommender(s) on Step 4 of the online application. An e-mail will then be sent to your recommender(s) with document upload instructions. Letters sent via a letter service are the only exception to the above.

Letters should be prepared by professors, professional contacts, or others who may best speak to your abilities and academic potential in your chosen field of study. ~~Three letters of recommendation should be included in the online application packet, or the applicant should have them forwarded to Graduate Application Processing. These letters should be prepared by professors or others who are in a position to analyze the applicant's abilities and academic promise in the chosen field of graduate study.~~

6. Graduate Record Examination scores. Individual departmental requirements for the Graduate Record Examination (GRE) follow:

Anthropology: GRE General Test required

Astronomy and astrophysics: GRE General Test; GRE Subject Test in Physics ~~or Mathematics strongly~~ recommended

Bioinformatics: GRE General Test required; Computer Science or Subject Test in major ~~strongly~~ recommended

Biology (Ecology and Evolutionary) ~~or~~ : GRE General Test required

(Molecular, Cell, and Developmental): GRE General Test and Biology Test OR Biochemistry, Cell, and Molecular

~~Biology Test recommended GRE Biology Test or Bio-chemistry, Cell, and Molecular Biology Test~~

Chemistry and Biochemistry: GRE General Test required; GRE Subject Test in any of the following strongly recommended: Biochemistry, Cell, and Molecular Biology; Chemistry; Computer Science; Physics

Computer Engineering: GRE General Test required; ~~GRE Computer Science~~ Engineering Test or Subject Test in major ~~strongly~~ recommended

Computer Science: GRE General Test required; GRE Computer Science Test or Subject Test in major ~~strongly~~ recommended

Digital arts/new media: No GRE required

Earth Sciences: GRE General Test required

Economics

Applied: GRE General Test required

International: GRE General Test required

Education:

Teaching (M.A.): No GRE required

Research (Ph.D.): GRE General Test required

Electrical Engineering: GRE General Test ~~required~~; GRE Subject Test in major ~~strongly~~ recommended

Environmental studies: GRE General Test ~~required~~; GRE Subject Test in disciplinary field of student's choice ~~strongly~~ recommended

History: GRE General Test required

History of consciousness: GRE General Test required

Linguistics: GRE General Test required

Literature: GRE General Test required

Mathematics: GRE General Test and GRE Mathematics Test required

Microbiology and Environmental Toxicology: GRE General Test required; GRE Subject Test in major ~~strongly~~ recommended

Music: GRE General Test ~~and UCSC's Music Graduate Entrance Examination for M.A., D.M.A., and Ph.D. applicants with a bachelor's degree; GRE General Test for Ph.D. applicants with a master's degree~~ required

Ocean sciences: GRE General Test and GRE Subject Test in major required

Philosophy: GRE General Test required

Physics: GRE General Test and GRE Physics Test required

Politics: GRE General Test required

Program in Biomedical Sciences and Engineering: GRE General Test required; GRE Computer Science Test or Subject Test in major recommended

Psychology: GRE General Test required

Science communication (writing): GRE General Test required; for applicants without a Ph.D. the Subject Test in one of the following areas is required: Biochemistry, Cell and Molecular Biology; Biology; Chemistry; Computer Science; Geology; Mathematics; or Physics. ~~and GRE Subject Test in Biochemistry, Cell, and Molecular Biology; Biology; Chemistry; Computer Science; Geology; Mathematics; or Physics~~

Social documentation: No GRE required

Sociology: GRE General Test required

Statistics and applied mathematics: GRE General Test required; Subject test in Math recommended ~~See Computer Science for details~~

Theater arts: No GRE required

If the applicant is applying for admission to a program that requires the GRE, *the scores must be received by UC Santa Cruz Graduate Application Processing before the application deadline*. It is strongly recommended that all applicants complete testing by November, since December test scores will not reach the division prior to application deadlines.

The Educational Testing Service should be asked to forward the test scores directly to the division. UC Santa Cruz's school code is **4860**. *Test results are electronically submitted to UC Santa Cruz Division of Graduate Studies four to six weeks after the exam has been taken.*

7. Additional required material. Many of the graduate programs have special application requirements, such as writing samples, portfolios, auditions, or personal interviews. Please read the web site or brochure for the program to which you are applying carefully and fulfill all the requirements it specifies. Unless otherwise instructed, writing samples and résumés should be

attached to your online application in the space provided. Items not a part of your online application should be sent directly to the department. ~~Many of the graduate programs have special application requirements, such as writing samples, portfolios, auditions, or personal interviews.~~

- Anthropology - a writing sample
- Digital Arts and New Media - One or more recent original compositions

• ~~Education~~ _____

M.A. Program A writing sample, and ~~résumé~~

Ph.D. A writing sample, preferably in education or a related field, and ~~résumé~~

Ed.D. Writing sample, preferably in education or a related field, and

~~resume requires a supplemental application.~~

- *Environmental studies* requires that a substantial writing project (undergraduate or master's level) be submitted with the application materials. Also, as part of the application process, applicants are required to contact faculty regarding sponsorship.

• *History* requires a writing sample of up to 30 pages.

• *History of Consciousness* requires a writing sample of ~~not more than~~ up to 10 pages.

• *Linguistics* ~~requires a demonstrated ability to conduct original research.~~ ~~Applicants should enclose a sample of written work. The work need not be in the area of linguistics, but should ideally reveal the applicant's ability to address abstract issues and formulate and investigate precise hypotheses.~~

• *Literature* requires a writing sample of ~~10 to~~ 15-20 pages.

~~• Ocean sciences requires that applicants contact faculty directly about sponsorship as part of the application process.~~

• *Music*

–M.A.:

1. Writing sample for applicants in ethnomusicology or performance practice (e.g., term paper, senior thesis, or other research paper) or compositions (applicants in composition who wish to emphasize electronic music may include two recordings without scores, but one score, with recording if available, must also be included).

2. A 10- to 20-minute unedited recording on CD, DVD, VHS, etc., of one or more recent performances as instrumentalist, vocalist, or conductor; or of performances of original compositions.

~~writing or composition sample (e.g., term paper or senior thesis, scores, or other projects) and a CD, DVD, or audio or videocassette of one or more recent performances as instrumentalist, vocalist, conductor, or performances of original compositions.~~

–D.M.A.:

1. Three composition scores with recordings (if available) on CD, DVD, VHS, etc. For works involving improvisation, digital audio, or other approaches, one of the three compositions may be submitted in the form of a recording with brief notes on the media and/or performance conditions. Applicants to the computer-assisted composition track should include either an example of a computer program they have written (a source code for the program plus documentation describing its use) or other evidence of technical competence with computers.

2. Writing sample (e.g., term paper, thesis, or other research paper)

~~writing or composition sample (e.g., term paper or senior thesis, scores, or other projects) and three composition scores with recordings (if available) on CD, DVD, or VHS. For works involving~~

~~improvisation, digital audio, or other approaches, one of the three compositions may be submitted in the form of a recording with brief notes on the media and/or performance conditions. Applicants interested in the computer-assisted composition track should include an example of a computer program they have written (a source code for the program plus documentation describing its use) or other evidence of technical competence with computers.~~

–Ph.D.: *applicants with a bachelor's degree*: writing sample (e.g., term paper, senior thesis, or other class paper) and optional materials demonstrating musical skills (e.g., compositions, a performance or lecture-recital on CD, DVD, or VHS, etc.); *applicants with a master's degree*: writing sample of substantial length (e.g., an excerpt from a master's thesis or a set of class research papers) and optional materials demonstrating musical skills (e.g., compositions, a performance or lecture-recital on CD, DVD, or VHS, etc.)

- *Philosophy* requires a 10- to 15-page writing sample
- *Politics* An abstract of a scholarly written work (1200-1500 words) should represent the applicant's best research and capacity to engage in scholarly inquiry. The work need not be in the area of politics, but should reveal an ability to address abstract issues and formulate and investigate precise hypotheses. The abstract may represent a term paper, thesis, article, conference paper, or problem solution. The entire work upon which the abstract is based should be available to be sent electronically to the admissions committee upon request.~~requests that the writing sample (ideally not to exceed 20 pages) be a term paper, thesis, article, conference paper, or problem solution; it need not be in politics~~
- *Social documentation* requires an analytical writing sample (e.g., research paper, professional report, or substantial essay). Sample documentary production work is recommended but not required (e.g., a video or audio recording, photographic essay, web page). Preferred format for submission of production work is web, DVD, or CD-ROM (provide URLs to publications and documentary productions where possible).
- *Sociology* requests a writing sample 25 pages, preferably in sociology or a related field (This sample can be a term paper, a field report, a research proposal, or an essay written especially for the application.)
- *Theater arts* Applicants may be asked to submit a videotape of their performance work, a design portfolio or a sample of their written work.~~requires a portfolio of projects along with the application. The brochure or web site for the program to which the student is applying should be consulted and all of the requirements specified should be fulfilled.~~

Duplication of Higher Degrees

It is the policy of the Santa Cruz campus to prohibit the pursuit of duplicate advanced degrees. However, applicants may petition the graduate dean for an exception to this policy if the degree sought is in a field of study distinctly different from the field in which the original advanced degree was attained.

In order for a student who already holds the doctorate to be admitted or readmitted to work toward a second Ph.D.—or toward an academic master's degree—all of the following conditions must be met:

1. The applicant must petition the graduate dean in writing prior to the application deadline for the program in question.
2. The department sponsoring the program to which admission is sought must support the

applicant's petition.

3. The department must present the graduate dean with a clear and complete outline of the program required for the degree sought, and must explain the intellectual separateness of the proposed program from that completed by the applicant in attaining the earlier degree.

The graduate dean will review all materials submitted and decide whether or not to admit the applicant, consulting with the Graduate Council when appropriate.

Admission to a professional master's program after a Ph.D.—or to an academic master's program after a professional doctorate—is not subject to these restrictions.

Transfer of Credit

UC Santa Cruz does not automatically grant credit for graduate-level work undertaken at other universities. Each department determines credit transferability on an individual basis.

International Applicants

Applicants from other countries must meet standard admission requirements and provide satisfactory evidence of financial support before they may obtain the necessary visa documents. Because it normally takes much longer to process international applications, such students are urged to apply as early as possible. A Certificate of Eligibility (I-20) will not be issued by the UC Santa Cruz Office of International Education until all requirements are satisfied and the student has been formally admitted. **Please note that international students are not eligible for ~~neither~~ need-based financial aid ~~nor~~ application fee waivers.**

Applicants from countries where English is not the primary language must take the Test of English as a Foreign Language (TOEFL). A minimum score ~~of 550~~ on the paper-based TOEFL of 550, or 220 on the computer-based test, 83 on the NEW ~~i~~Internet-based test is required is required for admission. Chemistry and ~~B~~iochemistry, ~~C~~omputer ~~E~~ngineering, ~~C~~omputer ~~S~~cience, and ~~E~~lectrical ~~E~~ngineering require 570 on the paper-based test or 230 on the computer-based test and 89 on the NEW ~~i~~Internet-based test.

All official academic records must be issued in the original language and be accompanied by English translations prepared by the issuing institution. If translations are not available from the institution itself, translations may be prepared by government or official translators. In order for translations to be acceptable, they must bear the stamp or seal of the issuing institution or governmental agency and the original signature of the translator. They must be complete and exact word-for-word translations of the original documents, not interpretations. Grades must not be converted to the American scale. Specially prepared English versions are not acceptable in place of documents issued in the original language. Records submitted to the Division of Graduate Studies may not be borrowed, returned, or sent elsewhere.

Application Processing

The Division of Graduate Studies receives most application materials and sets up a file for each applicant. Once the application is submitted online, it will be available to the appropriate department for review and recommendation. Applicants are admitted by the graduate dean following recommendations by the departments. Applicants will be notified by e-mail whether or not they have been admitted for graduate study at UCSC after all reviews are complete. Under no circumstances will UCSC give out this information over the phone, in person, or by proxy. E-mail notifications are sent throughout the month of March. By a general agreement to which UC Santa Cruz and most graduate schools in the U.S. are signatories, applicants admitted to graduate schools have until April 15 to reply with their acceptance of fellowship offers. Any information about the completeness of the file can be found at apply.graddiv.ucsc.edu. Specific questions about the evaluation of the application should be directed to the graduate representative of the department.

Undergraduate Academic Program

To read an updated copy of this page with strikeouts and additions highlighted, see 2009-10 Undergraduate Academic Program, highlighted copy.

Please note that sections under this topic that contained no changes from the General Catalog 2008-10 are not included. For the complete section, go to 2008-10 Undergraduate Admission.

Graduation Requirements

To qualify for a bachelor's degree, you must meet the following conditions, which are explained in more detail in the following sections:

- Earn a minimum of 180 credits, each with a grade of D or better (or Pass)
- Satisfy the university requirements in American history and institutions and in Entry Level Writing (English composition)
- Meet the UCSC residence requirement
- Satisfy each of the campus general education requirements with a course grade of C or better (or Pass)
- Satisfy requirements of your UCSC college
- Complete an approved major program, including its comprehensive requirement, with grades of Pass, C, or better in all courses satisfying major requirements. In some majors, courses graded Pass may not be used to satisfy major requirements.
- Have a grade-point average of at least 2.0 in all letter-graded courses taken at UCSC and other University of California campuses
- Have no more than 25 percent of your UCSC credits graded on a Pass/No Pass basis. This includes any credits completed in the Education Abroad Program or on another UC campus in an intercampus exchange program. Departments may require that some or all courses used to satisfy the major must be taken for a letter grade.

As a UC Santa Cruz student, you are responsible for selecting the courses necessary to fulfill graduation requirements and prepare for advanced study or a career. It is essential that you consult regularly with academic advisers about course selection.

Keep copies of your own records, including your transcripts from other institutions, admission test scores, transfer credit information, UCSC quarterly academic record reports, and performance evaluations.

Transfer students may be able to use some of the courses they completed at other schools to help meet the 180-credit requirement. (Semester-system credits can be multiplied by 1.5 to derive equivalent quarter-system credits.) The UCSC Office of Admissions determines which courses are transferable.

University Requirements

The Santa Cruz campus administers three requirements for graduation from the University of California: (1) American history and institutions, (2) Entry Level Writing Requirement, and (3) UCSC residence. These requirements are described in detail below.

American History and Institutions

Every candidate for a bachelor's degree must demonstrate a knowledge of American history and institutions. You may fulfill this requirement in *one* of the following ways:*

- By achieving a score of 550 or higher on the SAT Subject Examination in U.S. History
- By achieving a score of 3, 4, or 5 on the College Board Advanced Placement Examination in U.S. History, or by achieving a score of 5, 6, or 7 on the IBH History of the Americas Examination
- By satisfactorily completing a college-level course in U.S. history and institutions
- By certification of completion of the requirement on a transcript from an accredited California institution of higher education
- By completing an acceptable history or government course in high school that

satisfies the subject requirement for admission to the university, described on page 15

Entry Level Writing Requirement

Every candidate for a bachelor's degree must demonstrate an acceptable level of ability in English composition. Before your fourth quarter of enrollment, you must fulfill this requirement in one of the following ways:

- By achieving a score of 680 or higher on the Writing component of the SAT Reasoning Examination
- By achieving a score of 3, 4, or 5 on the College Board Advanced Placement Examination in English Language or English Literature, or by achieving a score of 5, 6, or 7 on the IBH English Language A1 Examination
- By achieving a score of 8 or higher on the systemwide UC Analytical Writing Placement Examination
- By demonstrating an acceptable level of proficiency on UCSC's Writing Placement Examination, given several times each year
- Prior to first enrollment at UC, by completing at another institution an acceptable college-level course of at least 4 quarter credits, or the equivalent, in English composition with a grade of C or better.

California high school seniors who have been admitted to UCSC must take the systemwide UC Analytical Writing Placement Examination given in May, unless they have already satisfied the requirement.

*Alternatives for satisfying this requirement vary among the campuses of the University of California. If you plan to transfer to another UC campus, consult its general catalog for information on this point.

Residence

Every candidate for a bachelor's degree must be registered at UCSC for a minimum of three terms. (A term is a fall, winter, or spring quarter in which a student completes 6 or more credits. Each UCSC Summer Session in which you complete at least 2 credits is the equivalent of half a term's residence.) In addition, of the final 45 quarter credits, 35 must be in regular courses of instruction that you have taken as a registered student at UCSC. No more than 18 of the 35 credits may be completed in Summer Session. Courses taken through University Extension or the Intercampus Visitor Program do not constitute regular courses and therefore do not satisfy residence requirements.

The credit requirement for residence is applied differently to students participating in the Education Abroad Program (EAP) and the University of California in Washington, D.C. (UCDC), program. Students may satisfy the requirement in either of two ways. The first way is for students to complete 35 of their final 45 credits before leaving the Santa Cruz campus to participate in EAP or UCDC. In this scenario, students do not have to return to Santa Cruz for any additional course work after they have finished EAP or UCDC. The second way to fulfill the residence requirement is for students to complete 35 of their last 90 credits at the Santa Cruz campus, with a minimum of 12 credits completed at UCSC after their return from EAP or UCDC.

General Education Requirements

The general education requirements are designed to introduce you to various kinds of information, reasons for learning, and approaches to acquiring knowledge, as well as to promote responsible use of what is learned. Obviously, general education requirements alone cannot achieve these ends. You are urged to look for as many opportunities as possible to gain a richer understanding of your own cultural heritage and social situation; insight into countries, societies, and eras besides your own; proficiency in another language; understanding of the nature of ethical and moral choice; and expanded knowledge of science and technology. The formal requirements described here should be considered foundations for exploration.

There are nine categories of general education requirements (see table below, Types of General Education Requirements). Each category has a general education code associated with it, and only those courses carrying that code satisfy the requirement. The codes appear in the course descriptions in this catalog and in the Schedule of Classes. A list of Courses That Fulfill General Education Requirements appears on pages 29–30. The list is subject to change. You should check the Schedule of Classes (reg.ucsc.edu/soc) each quarter for the most up-to-date information. Some courses satisfy more than one general education requirement, so the total number of required courses may be 10 to 15.

Types of General Education Requirements

Category	General Education Code	Number of Required Credits

Introductions to disciplines-humanities and arts area* (from two different disciplines)	IH	10
Introductions to disciplines-natural sciences and engineering area* (from two different disciplines)	IN	10
Introductions to disciplines-social sciences area (from two different disciplines)	IS	10
Topical courses (one course from each of the three academic areas; appropriately designated college courses fulfill this requirement)	T	15
Quantitative course	Q	5
Composition course**	C or C1/C2	5–10
Writing-intensive course	W	5
Arts course	A	5
U.S. Ethnic minorities/non-Western society course	E	5

*For purposes of the general education requirements, humanities and arts are combined in one academic area, as are natural sciences and engineering.

**Students who entered in fall 2005 or thereafter are required, in addition to satisfying the entry level writing requirement, to complete a sequence of two 5-credit courses (C1, C2), or the equivalent in composition and rhetoric. These courses shall usually be taken in a student's first year and must be completed before the student enrolls in the seventh quarter.

Students admitted prior to fall quarter 2005 are required to complete one 5-credit course in English composition in addition to satisfying the entry level writing requirement.

Introductions to disciplines (IH, IN, and IS codes). These courses introduce a discipline's content, scope, and methodology. Introductory courses from two different departments are required in each of three academic areas: humanities and arts (IH code), natural sciences and engineering (IN code), and social sciences (IS code). Only one language course may be used to satisfy an IH requirement, as all languages are considered to be part of the same discipline. Similarly, only one literature course may be used, and English (transfer) courses are considered to be literature. Only one of the two IH courses may be from the arts (art, film and digital media, history of art and visual culture, music, and theater arts). Transfer courses designated IN from Anatomy, Botany, Physiology, and Zoology Departments are considered to be "biology" courses for general education purposes.

Topical courses (T code). These courses expose students to introductory-level themes of broad social or intellectual relevance. Three courses are required, no more than one from each academic area. For information on which disciplines are in each area, see Arts, page 129; Engineering, page 207; Humanities, page 312; Physical and Biological Sciences, page 384; and Social Sciences, page 418; see also the list of courses on pages 29–30. College core courses are labeled topical and carry the designation of the appropriate academic area.

Quantitative course (Q code). These courses provide methods for acquiring quantitative reasoning that involve use of advanced algebra, statistics, or calculus. One course is required.

Writing courses (C, C1, C2, and W codes). These courses stress explicit attention to the craft of writing. Having satisfied the Entry Level Writing Requirement by the end of your first year of enrollment at UCSC (see page 25 for a description of the Entry Level Writing Requirement), you must complete two to three courses in writing. One of these must be a writing-intensive course (W code) that provides instruction and extensive practice in writing applied to a particular subject. For some courses, only certain sections are writing intensive (look for the "W" in the *Schedule of Classes* when enrolling). You must take this course at UCSC.

Students satisfy the other part of the writing requirement through a placement exam, by passing a composition course (C code), or by passing two composition courses (C1 and C2 codes). You must fulfill the composition requirement prior to the seventh quarter of enrollment and before you can enroll in a writing-intensive course.

Arts course (A code). These courses provide the exposure to creative or artistic expression necessary for a liberal arts education. One designated arts course is required; most are offered through art, film and digital media, history of art and visual culture, music, and theater arts.

Ethnic minorities/non-Western society course (E code). These courses are intended to increase knowledge of ethnic minorities in the United States and non-Western cultures, improve cross-cultural awareness, and explore relationships between ethnicity and other aspects of a liberal arts curriculum. One course is required. For additional ways to pursue ethnic studies, see page 270.

Courses of fewer than 5 credits. Students usually meet the general education requirements

with 5-credit courses. Several related arts courses of fewer than 5 credits with the same code may be used to satisfy the arts (A) general education requirement if they total at least 5 credits.

Advanced Placement (AP)/International Baccalaureate Higher Level (IBH) Examinations, 2009–10

AP credit earned with a score of 3, 4, or 5 is applicable toward the total credits required for graduation and the UCSC campuswide general education (GE) requirements as indicated below. Please note restrictions. IBH credit requires a score of 5, 6, or 7. If AP and IBH exams and/or college courses are taken in the same subject area, credit may be limited.

Subject Exam	Quarter Credits	General Education Requirements
IBH Visual Arts	8	Satisfies the A.
AP Studio Art Drawing, 2-D Design, or 3-D Design	8	Any AP exam satisfies the A. Maximum of 8 credits granted for all AP exams.
AP Art History	8	Satisfies one IH and the A.
IBH Biology or AP Biology	8	Satisfies one IN.
IBH Chemistry or AP Chemistry	8	Satisfies one IN.
IBH Classical Languages Latin, Greek, Virgil	8	Does not satisfy any GE.
AP Latin:	4	Does not satisfy any GE. Both AP exams may be taken for credit.
IBH Computer Science	8	Satisfies one IN.
AP Computer Science A AB	2 4	AB exam satisfies one IN. Maximum of 4 credits granted for both AP exams
IBH Economics	8	Satisfies one IS.
AP Economics Microeconomics or Macroeconomics	4	Either AP exam satisfies one IS. Both earn credit.
IBH English Language A1	8	Satisfies one IH, Entry Level Writing Requirement, and C1.
AP English Language and Composition or Literature and Composition	8	Either AP exam satisfies one IH and Entry Level Writing Requirement. AP score of 4 or 5 satisfies the C1. Maximum of 8 credits granted for both AP exams.
AP Environmental Science	4	Does not satisfy any GE.
IBH Film	8	Satisfies one IH and A.
IBH Geography	8	Does not satisfy any GE.
AP Human Geography	4	Does not satisfy any GE.
AP Government and Politics United States or Comparative	4	Either exam satisfies one IS. Both earn credit.
IBH History Africa, Americas, East & Southeast Asia/Oceania, South Asia/Middle East, Europe	8 8	Satisfies one IH. Any AP exam satisfies one IH. All exams earn credit

AP History: European, United States, or World		
IBH Language A1, A2, B, Second Language	8	Does not satisfy any GE. All languages earn credit.
AP French, German, Spanish Language	8	Does not satisfy any GE. All languages earn credit.
AP French, Spanish Literature	8	Does not satisfy any GE. Both languages earn credit.
AP Chinese, AP Italian, AP Japanese Language and culture	8	Does not satisfy any GE. All languages may be taken for credit.
IBH Mathematics	8	Satisfies one IN [†] and the Q.
AP Mathematics Calculus AB	4	Either AP exam satisfies one IN [†] and the Q. Maximum of 8 credits granted for both AP exams.
Calculus BC	8	
IBH Music or AP Music Theory	8	Satisfies A.
IBH Philosophy	8	Satisfies one IH.
IBH Physics	8	Satisfies one IN.
AP Physics B	8	Any one AP exam satisfies one IN. Maximum of 8 credits granted for all AP exams.
C Mechanics or C Electricity and Magnetism	4	
IBH Psychology	8	Satisfies one IS.
AP Psychology	4	Satisfies one IS.
IBH Social/Cultural Anthropology	8	Satisfies one IS.
AP Statistics	4	Satisfies one IN and Q.
IBH Theater Arts	8	Satisfies one IH and A.
Note: A maximum of one IH will be granted from the arts (art history, film and theater arts). A maximum of one IN will be granted from mathematics and statistics. No credit is granted for lower-division language and literature other than English if it is the student's native language and at least nine years of education have been completed in that language.		

Advanced Placement and International Baccalaureate Examinations

The university grants credit for College Board Advanced Placement (AP) Examinations on which a student scores 3, 4, or 5 and for International Baccalaureate Higher Level (IBH) Examinations on which a student scores 5, 6, or 7. The university does not grant credit for IB standard or subsidiary level exams. Students completing the International Baccalaureate Diploma with a score of 30 or higher receive 30 quarter credits. The credit is applied toward the total credits required for graduation and toward the UCSC campuswide general education requirements, as indicated in the table at left, Advanced Placement (AP)/International Baccalaureate Higher Level (IBH) Examinations. Students should be aware that AP, IB, and college-level courses will not be granted duplicate credit. In these cases, the university will award credit for only one.

AP and IBH Examination Credit Toward Degree Requirements

Certain departments also allow prospective majors to obtain waivers for prerequisite courses. (Please see table, page 28). In all cases, a student should contact the particular department to discuss his or her plans with an adviser. Please note that approval is not automatic; a petition must be filed with most departments.

Advanced Placement (AP)/International Baccalaureate Higher Level (IBH) Examinations: Prerequisite Course Waivers, 2009–10

Academic departments use certain scores on specific AP/IBH examinations in granting waivers or substitutions for prerequisite courses. **Unit-level credit is not affected by these equivalencies.** Students should contact the department as noted below to discuss their academic plans.

Subject Exam	Score	UCSC Course Equivalency	Advisory Notes
AP Art History	3, 4, 5	One lower-division art history course	One course may be waived for the Art major but may not be used in lieu of lower-division courses for the History of Art and Visual Culture major.
AP Studio Art	3, 4, 5		One course may be waived for the Art major but may not be used in lieu of lower-division courses for the History of Art and Visual Culture major.
AP Chemistry	4,5	Environmental Studies 23	Contact the Environmental Studies Department.
	5		Allows enrollment into Chemistry 1B
IBH Computer Science	5	Computer Science 12A Computer Science 12L	
	6, 7	Computer Science 12A Computer Science 12L Computer Science 12B Computer Science 12M	
AP Computer Science A	3	Computer Science 5J	Contact the School of Engineering.
	4, 5	Computer Science 12A Computer Science 12L	Contact the School of Engineering.
AP Computer Science AB	4, 5	Computer Science 12A Computer Science 12L Computer Science 12B Computer Science 12M	
AP Economics: Macroeconomics	4, 5	Economics 2	
AP Economics: Microeconomics	4, 5	Economics 1	
IBH Mathematics	5, 6, 7		Allows enrollment in Math 20A, 22, or 23A. Contact the Math Department.
AP Mathematics: Calculus AB	3	Applied Mathematics and Statistics 3 Mathematics 3	Allows enrollment in Math 11A or 19A.
	4, 5	Applied Mathematics and Statistics 3 Mathematics 3 Mathematics 11A Mathematics 19A	Allows enrollment in Math 11B, 19B, or 20A. Enrollment in first quarter calculus is recommended for

			proposed majors in mathematics or the physical and biological sciences.
AP Mathematics: Calculus BC	3	Applied Mathematics and Statistics 3 Mathematics 3 Mathematics 11A Mathematics 19A	Allows enrollment in Math 11B, 19B, or 20A. Enrollment in first quarter calculus is recommended for proposed majors in mathematics, physical and biological sciences, and the School of Engineering.
	4, 5	Applied Mathematics and Statistics 3 Mathematics 3 Mathematics 11A Mathematics 11B Mathematics 19A Mathematics 19B	Allows enrollment in Math 20A, 22, or 23A. Enrollment in Mathematics 23A is recommended for proposed majors in the School of Engineering.
AP Psychology	4, 5	Psychology 1	
AP Statistics	4, 5	Applied Mathematics and Statistics 5 Psychology 2	

Credits for Transfer Students

General Education Requirements

Transfer students may apply courses taken at other institutions toward the general education requirements with two exceptions: The writing-intensive course (W code) must be taken at UCSC. Also, transfer courses are not applied to the topical requirement (T code), but topical courses are waived at entrance according to the following formula: 45–83.9 transferable quarter credits, one course waived; 84–104.9 transferable quarter credits, two courses waived; 105 or more transferable quarter credits, all three courses waived. If one topical course is required in residence at UCSC, it may be chosen from any of the three academic areas (humanities and arts, natural sciences and engineering, and social sciences). If two are required, they must be from two different areas.

If you are currently attending one of the California community colleges, see the ASSIST web site at www.assist.org, or consult with the UCSC Office of Admissions or your current counselor to determine which college courses satisfy UCSC general education requirements.

Transfer students who have satisfied the general education or breadth requirements of another UC campus prior to transfer will be considered to have completed the UCSC general education requirements. Completion of the Intersegmental General Education Transfer Curriculum (IGETC) prior to enrollment at UCSC will also be accepted in lieu of the campus general education requirements.

Intersegmental General Education Transfer Curriculum (IGETC)

The Intersegmental General Education Transfer Curriculum (IGETC) is a series of courses prospective California community college transfer students may complete to satisfy the lower-division breadth/general education requirements at any University of California or California State University (CSU) campus (see table, this page). This curriculum is the result of an agreement, by the University of California, the California State University, and the California community colleges, aimed at simplifying the transfer process for community college students. The IGETC is intended exclusively for California community college transfers and is not an option for continuing UCSC students or for students transferring from four-year colleges or universities.

Students must *complete* the IGETC prior to transfer or they will be required to satisfy the UCSC general education requirements. All courses must be completed with a grade of C (2.0) or better. A grade of Credit or Pass may be used if the community college's policy states that it is equivalent to a grade of C (2.0) or better.

IGETC is not recommended for majors that require extensive course preparation, such as any major in the Jack Baskin School of Engineering or the Division of Physical and Biological Sciences.

Major Requirements and Course Prerequisites

Students who believe they have taken courses at other institutions that satisfy major requirements

or UCSC course prerequisites should contact the sponsoring department for review.

IGETC Subject and Unit Requirements

Subject Area	Courses Required	Units/Credits Required
1. English Communication One course in English composition and one course in critical thinking/English composition. (Students transferring to CSU must take an additional course in oral communication.)	2 courses	6 semester units or 8-10 quarter units
2. Mathematical Concepts and Quantitative Reasoning	1 course	3 semester units or 4-5 quarter units
3. Arts and Humanities Three courses with at least one from the arts and one from the humanities.	3 courses	9 semester units or 12-15 quarter units
4. Social and Behavioral Sciences Three courses from at least two disciplines or an interdisciplinary sequence.	3 courses	9 semester units or 12-15 quarter units
5. Physical and Biological Sciences One physical science course and one biological science course, at least one of which includes a laboratory.	2 courses	7-9 semester units or 9-12 quarter units
6. Language Other Than English Proficiency equivalent to two years of high school in the same language. (Not required of students transferring to CSU.)	Proficiency	Proficiency
Total	11 courses	34 semester units

Source: Student Academic Services, Office of the President, University of California, 1991.

College Requirements

College Eight

- College Eight 80A, *Introduction to University Discourse*, fall quarter, or College Eight 80B, *Rhetoric and Inquiry*, fall quarter; and College Eight 81A, *The Environment and Us*, fall quarter.
- College Eight 81B, *Principles of Environmental Science*, winter quarter.
- College Eight 81C, *Technological Innovation and Environmental Challenges*, spring quarter.

Note: College Eight 81A, and either 80A or 80B are mandatory for all incoming students. College Eight 81B and 81C also satisfy many of UCSC's general education requirements, and admission to these courses is selective.

College Nine

- College Nine 80A, *Introduction to University Discourse: International and Global Issues*, fall quarter, or College Nine 80B, *Rhetoric and Inquiry: International and Global Issues*, fall quarter

College Ten

- College Ten 80A, *Introduction to University Discourse: Social Justice and Community*, fall quarter, or College Ten 80B, *Rhetoric and Inquiry: Social Justice and Community*, fall quarter

Kresge

- Kresge 80A, *Introduction to University Discourse: Power and Representation*, fall quarter, or Kresge 80B, *Rhetoric and Inquiry: Power and Representation*, fall quarter;
- Kresge 80T, *Power and Representation*, transfer section, satisfies the general education W and T.

Note: Other colleges' requirements did not change from the 2008-10 catalog

Major and Minor Requirements

Additional Majors or Minors

To complete multiple majors and minors, you must fulfill all of the requirements for all majors and

minors declared, including the comprehensive requirement for each major. In general, a single thesis may not be used for more than one major. You may count courses for more than one major or minor, as long as each major includes 40 upper-division credits not used to satisfy the minimum upper-division credits of any other major or minor, and each minor includes at least 25 upper-division credits not used to satisfy the minimum upper-division credits of any other major or minor.

The diploma of a student who has completed a double major in history and music, for example, would read "Bachelor of Arts with Majors in History and Music."

Advising: From Course Selection to Careers

Attending Summer Orientation is one of the most important steps a new student takes in preparing for the transition to university life. Summer Orientation provides the academic advising you need to make informed decisions about classes and majors, and the opportunity to ask questions regarding financial aid and housing.

Orientation begins the process of academic advising and provides a comprehensive introduction to all aspects of UCSC. While at Orientation, you will be introduced to continuing students, faculty, and staff who will assist you in attaining academic and personal success at the university.

Summer Orientation is held several times over the course of the summer and includes separate programs for first-year and transfer students, as well as concurrent programs for parents and family members.

New students reserve their place in Summer Orientation online through the UC Santa Cruz portal at my.ucsc.edu.

Fall Welcome Week, occurring during the first week of fall quarter, is the next step in the orientation and advising process for new students entering fall quarter. It provides you with an opportunity to settle into life at UCSC, take advantage of important services, and continue your academic advising.

For new students entering in the winter quarter, an Orientation session is offered in December. Questions can be directed to the Office of Campus Orientation Programs at (831) 459-5468, or via e-mail to <mailto:orientation@ucsc.edu>. Web: admissions.ucsc.edu/orientation.

Important information on particular majors may be viewed on individual departmental web sites. The sites will give you contact information and office hours. Advisers provide detailed information regarding requirements for the major and assist you in planning a program of study. The department adviser can also assign you to an appropriate faculty adviser who may serve as a mentor in your field, recommending courses and helping you refine your educational goals.

It is also important to seek departmental advising for assistance in planning your overall academic program. For transfer students and for students in many majors (such as those in the physical and biological sciences, engineering, arts, and environmental studies), it is necessary to obtain departmental advising prior to or at the start of the first quarter on campus.

For more general academic questions, make an appointment with a college adviser. Each college has specialized staff members, called academic preceptors, who advise students on everything from general education requirements to choosing a major.

For help in assessing career interests and exploring and choosing career options, contact the Career Center. The staff also will assist with choosing a major, résumé preparation, interviewing skills, applying for an internship, and job-search strategies. Many students find that participation in internships and field programs gives them a practical basis for making career decisions. The Career Center offers workshops, an online database, and publications on many internship opportunities. The office's Career Advice Network (CAN) will connect you with UCSC alumni professionals who help students achieve their career goals.

If you plan to go on to graduate school, consult with faculty in your major. Faculty advisers are the best people to ask about the quality of graduate programs in your field of interest. In addition, the Career Center offers advising and workshops on applying to graduate school. A letter-of-reference service enables you to maintain your recommendation letters at the Career Center.

If you intend to pursue graduate study in a field not offered as a major at Santa Cruz, you can prepare for your intended program through one of the campus's regular majors. You must plan your studies carefully, however, and advising will be especially important. The Career Center library has information that will help prepare you for graduate and professional programs. The following are some fields in which UCSC alumni have pursued graduate study and successful careers:

- Architecture
- Business
- Conservation
- Film
- Finance
- Guidance and counseling

Health Fields
High-tech industry
Human resources
Industrial and labor relations
International relations
Law
Marketing
Museum administration
Public administration
Urban planning

If you plan to pursue a career in medicine or another health-related field (including dentistry, nursing, nutrition, occupational therapy, optometry, osteopathic medicine, pharmacology, physical therapy, public health, and veterinary medicine), contact the Health Sciences Career Adviser in the Career Center at (831) 459-5705. Ethnic-minority students may also be eligible for the MARC/MBRS Programs, described below.

If you are interested in the field of law, the prelaw adviser for UCSC is at the Career Center, (831) 459-2957.

A number of programs provide additional academic advising and comprehensive support services to students with specific needs. Educational Opportunity Programs (EOP), Services for Transfer and Re-Entry Students (STARS), the Disability Resource Center, and International Programs are described below. If you need assistance in another area, check to see if it is listed in the Index, pages 483–487. For additional information, check with your college office or consult The Navigator or Schedule of Classes (reg.ucsc.edu).

Counseling on personal and family issues is available through [Counseling and Psychological Services](#).

Career Center

UC Santa Cruz graduates find success in many different career fields, and their superior education is the foundation for this success. The staff at the Career Center will help you link your educational experience to the world of work. The center provides a variety of employment and career-development services to help students obtain rewarding and successful careers.

Students are encouraged to visit the Career Center early during their first year on campus. The first step is to meet with a career adviser to begin developing a focused career plan. Simply sign in at the reception desk for a drop-in advising appointment. Your career adviser will show you how to research and discover the many opportunities that are available to UC Santa Cruz students and graduates. Workshops offered by the Career Center include Selecting an Internship, Résumé and Cover Letter Writing, Job-Interviewing Techniques, the Graduate and Professional School Information Workshop, Applying to Law School, and special workshops on specific majors or career fields.

Your college experience is likely to include a part-time job or internship in your area of interest. The Career Center has hundreds of opportunities available. Off-campus and on-campus employment opportunities (both work-study and non-work-study) are posted on the Career Center's web site. For your convenience, you may apply for on-campus jobs online.

An internship is one of the best ways to gain practical work experience in your area of interest. The Career Center has a database with hundreds of internship opportunities in a wide variety of career fields. The center's resource library contains internship directories listing local, national, and international opportunities. While visiting the center, be sure to check out the Professions Training Program (PTP) and the **Chancellor's Undergraduate Internship Program** (CUIP). This unique internship program is designed to give participants a professionally enriching work experience on campus in one of the university's colleges, administrative units, or academic departments. For information, visit the web: intern.ucsc.edu.

Another interesting and challenging position is the UC Student Regent, with an annual recruitment process. For information, e-mail mailto:cyndi@ucsc.edu or visit the web: www2.ucsc.edu/careers/jobs/regent.html.

The Career Center's resource library contains material organized in the following manner: Career Exploration, Graduate and Professional Schools, Job Search, Career Fields, Internships, and Employer Information. A computer lab links you to the top career-development sites on the web. However, the most exciting part of the computer lab is the Career Advice Network database. The Career Advice Network (CAN) contains career profiles of over 500 UCSC alumni. The members of the network have volunteered to answer questions and give career advice pertaining to their particular career field. You may contact CAN members to obtain information on educational preparation, job responsibilities, résumé preparation, and tips on how to conduct your job search.

UC Santa Cruz students and alumni looking for full-time career opportunities need look no further than SlugQuest—an online site that lists job openings targeted to UCSC graduates. You may connect to SlugQuest on the Career Center web site. Another way to obtain a career position is to participate in the On-Campus Interview Program. Corporate recruiters visit campus every fall,

winter, and spring to interview and hire students. The Career Center web site has a list of participating companies.

The Career Center sponsors several major events every academic year. The Graduate and Professional School Fair brings hundreds of graduate and professional school representatives from the nation's top universities to campus to share information about their advanced-degree programs. Job fairs, which bring hiring companies to campus, take place several times a year. Students looking for a job or internship will want to come prepared with a great résumé. Other events include the Student Employment Recognition Awards Program Ceremony, where outstanding student employees are recognized and rewarded for their hard work and dedication, and the Multicultural Career Conference, which brings students and alumni together to develop mentor relationships and explore careers.

The Career Center—located at the Bay Tree Building, Room 305, in Quarry Plaza—can be reached at (831) 459-4420. Office hours are 8 a.m. to 5 p.m. Visit the center's web site at www2.ucsc.edu/careers.

Educational Opportunity Programs (EOP)

EOP represents the University of California's effort to identify, retain, and graduate a diverse student body. With that in mind, EOP provides a variety of academic and personal support programs designed to promote the retention, academic success, and graduation rates of California residents who are first generation college students from low-income and educationally disadvantaged backgrounds. EOP programs and services are designed to ensure that students successfully complete their undergraduate education and acquire the skills that will prepare them for leadership roles and graduate or professional schools opportunities. Below are the programs and services offered through EOP.

Bridge

For a select group of entering first-year EOP students, Bridge is an admission opportunity that provides academic support services to ensure a successful first-year experience. The program introduces students to the University's academic expectations—specifically in writing and mathematics—provides students with frequent and on-going advising, introduces students to university resources and academic success strategies, and builds a strong and supportive community among the Bridge students. Bridge includes a summer orientation program, a fall learning community with academic advising, learning support, and community building activities throughout the academic year.

Advising Programs and Services

EOP advising programs are designed to facilitate personal growth and development for the purpose of achieving institutional acculturation, academic achievement, and exposure to opportunities beyond the baccalaureate degree. These programs and services include academic advising and personal counseling, time management and study skills strategies, academic workshops, referrals to resources, programs and opportunities, peer advising, and community events. EOP students have access to three EOP Academic Counselors who work closely with the college, department, and academic enrichment programs to ensure that students access and utilize all available resources to become "B or Better Scholars."

Pregraduate Programs

EOP pregraduate programs are designed to increase student interest and preparation for graduate and professional school opportunities. The two pregraduate programs are the Faculty Mentor Program (FMP) and the Graduate Information Program (GIP).

GIP offers general graduate and professional school advising. GIP activities focus on informing and preparing students for educational opportunities beyond the baccalaureate degree. Through workshops and individual sessions, GIP outlines the process of how to apply to graduate school and helps students make important faculty, staff, and resource connections. The GIP web site offers a comprehensive step-by-step guide to all aspects of the process of preparing for and applying to graduate school including identifying research interests, searching for graduate schools, securing letters of recommendation, as well as identifying internships, undergraduate research opportunities and Summer Research Opportunity Programs (SROPs). GIP also maintains a graduate school resource library and sponsors trips to conferences and forums within the local area.

Academic Excellence Program (ACE)

ACE is supported by the Division of Physical and Biological Sciences and has as its goal to increase diversity among students receiving bachelor's degrees in science, technology, engineering, and mathematics (STEM) by offering discussion sections for selected mathematics and science courses. These discussion sections replace secondary discussion sections for ACE students.

The program received the 1999 Presidential Award for Excellence in Science, Mathematics, and Engineering Mentoring. This award, presented by the White House and administered by the National Science Foundation, is given to individuals or programs that have demonstrated outstanding and sustained mentoring efforts for students underrepresented in science, mathematics, and engineering.

Helping students excel in gateway mathematics and science courses is ACE's focus. The ACE sections provide a structured, workshop setting where students learn by teaching each other. This collaborative method reinforces critical thinking and problem-solving skills. Enrollment in ACE is limited. A professional section leader with an academic background in the subject facilitates these workshops. In addition, undergraduate coleaders/peer mentors who have excelled in the course assist the section leader. This brings the student to teacher ratio to approximately 12:1. Students also meet with a peer mentor, who shares study tips and techniques, as well as opportunities for undergraduate teaching and research internships. Other opportunities available through ACE include office hours, study groups, and career counseling. ACE scholars join a community of scholars dedicated to academic excellence and success.

Applications are accepted quarterly for the upcoming term. Priority is given to students who are studying STEM disciplines and who are first generation to attend college. For more information, visit the web site: ace.ucsc.edu.

Multicultural Engineering Program (MEP)

The Baskin School of Engineering's Multicultural Engineering Program (MEP) promotes diversity and facilitates the success of engineering students.

MEP provides academic and personal support for engineering students who are first-generation college students, are the first in the family to pursue engineering or computer science studies, or are from a low-income (limited financial resources) or educationally disadvantaged background. MEP's academic learning community supplements students' undergraduate experience and encourages students to continue their education into graduate school. MEP has a strong support system and engages students' full participation in a variety of services and activities. These include academic advising, personal counseling, tutorial services, drop-in assistance, individual and small-group study, study-skills workshops, peer-support networks, community-building activities, scholarships, and an engineering Summer Bridge program for a select group of entering first-year students.

MEP's well-equipped study center and computer lab provides 24-hour access to computer workstations and printer, textbooks, individual lockers, and a place for students to gather and study. Students who have participated in pre-university service programs (e.g., Early Academic Outreach, Upward Bound, MESA, Talent Search, Puente, Smith Scholastic Society) are encouraged to apply to MEP.

For further information, call (831) 459-2868, visit the web site, mep.soe.ucsc.edu, or drop by the School of Engineering Undergraduate Affairs Office, 225 Baskin Engineering Building.

Part-Time Program

If you are unable to attend the university full-time because of family obligations, employment responsibilities, or a medical condition, or you are in your final quarter before graduation, you may qualify for the Part-Time Program. This program enables students to pursue a bachelor's degree part-time in any major offered at UC Santa Cruz. To participate, undergraduate students must file a Part-Time Program application by the appropriate deadline. Full-time students normally take three 5-credit courses per quarter; part-time students may enroll in a maximum of 10 credits.

Students approved for enrollment on a part-time basis pay the same fees as full-time students but pay only one-half of the educational fee. Part-time nonresidents pay one-half of nonresident tuition. Financial aid awards may be affected by enrolling part-time. Students who use the part-time fee reduction may not also use the UC employee reduction.

Applications for undergraduates are available from the Office of the Registrar, 190 Hahn Student Services Building. For more information, call (831) 459-4412 or e-mail registrar@ucsc.edu. Web: reg.ucsc.edu/students/part-time.html.

Disability Resource Center (DRC)

The campus accommodates students with documented disabilities and welcomes their attendance at UCSC. The Disability Resource Center (DRC) provides the following to help meet the needs of students with disabilities: counseling and advising; assistance with enrollment; testing accommodations; alternative media such as audio books; adaptive equipment loans; notetaker and interpreter services; and liaison and referrals to appropriate resources, services, and agencies.

The Disability Resource Center is located at 146 Hahn Student Services Building and can be reached by telephone at (831) 459-2089 (voice) or (831) 459-4806 (TTY), or by e-mail at drc@ucsc.edu. Web: drc.ucsc.edu.

Campus access for people with mobility impairments. Transportation and Parking Services, in coordination with the DRC and Cowell Student Health Center, provides accessibility maps, vans equipped with wheelchair lifts that can transport students throughout campus, and authorization to use disabled or medical parking spaces, which are adjacent to all campus buildings. Most buildings on campus have wheelchair-accessible ramps, modified rest rooms, and other facilities. If

necessary, classes are rescheduled to meet accessibility needs.

Questions and concerns about:

- program accessibility should be addressed to the director of the Disability Resource Center, at (831) 459-2089 (voice); (831) 459-4806 (TTY)
- transportation, physical, or computing access to the campus should be directed to (831) 459-3759 (voice/TTY)
- accommodating job applicants or current employees with disabilities should be directed to (831) 459-4602 (voice)

ROTC and Military Affairs

Reserve Officer Training Corps (ROTC) is not available on the UC Santa Cruz campus. However, interested UCSC students have the option of attending programs at Santa Clara University, San Jose State University, and UC Berkeley.

To find out about the Army ROTC program, contact the Department of Military Science, Santa Clara University, 500 El Camino Real, Santa Clara, CA 95053-0631 or (408) 554-4034, e-mail Captain Vince Mucker at <mailto:vmucker@scu.edu>, or visit <http://scurotc.com>.

For information on the Air Force ROTC program, contact the Department of Aerospace Studies, AFROTC Det 045, One Washington Square, San Jose State University, San Jose, CA 95192-0051 (408) 924-2960, e-mail <mailto:mDet045@maxwell.af.mil> or visit the web: www.sjsu.edu/depts/AFROTC/homepage.html. Students may call or inquire about program prerequisites, scholarship availability, and class schedules at the Department of Aerospace Studies.

UC Berkeley offers a variety of courses in military affairs, including those offered by the Departments of Naval Science, Military Science, and Aerospace Studies, subject to departmental approval. (See UC Berkeley General Catalog, Military Officers' Education Program, sis.berkeley.edu/gc/curricula.html.) These courses are offered to cadets and non-cadets. Arrangements for all ROTC programs are made on an individual basis with the appropriate sponsoring campus.

[\[Return to top.\]](#)

Graduation Requirements

To qualify for a bachelor's degree, you must meet the following conditions, which are explained in more detail in the following sections:

- Earn a minimum of 180 credits, each with a grade of D or better (or Pass)
- Satisfy the university requirements in American history and institutions and in Entry Level Writing (English composition)
- Meet the UCSC residence requirement
- Satisfy each of the campus general education requirements with a course grade of C or better (or Pass)
- Satisfy requirements of your UCSC college
- Complete an approved major program, including its comprehensive requirement, with grades of Pass, C, or better in all courses satisfying major requirements. In some majors, courses graded Pass may not be used to satisfy major requirements.
- Have a grade-point average of at least 2.0 in all letter-graded courses taken at UCSC and other University of California campuses
- Have no more than 25 percent of your UCSC credits graded on a Pass/No Pass basis. This includes any credits completed in the Education Abroad Program or on another UC campus in an intercampus exchange program. Departments may require that some or all courses used to satisfy the major must be taken for a letter grade.

As a [UC Santa Cruz](#) student, you are responsible for selecting the courses necessary to fulfill graduation requirements and prepare for advanced study or a career. It is essential that you consult regularly with academic advisers about course selection (see pages 36–40).

Keep copies of your own records, including your transcripts from other institutions, admission test scores, ~~Transfer Credit Summary~~[transfer credit information](#), UCSC quarterly academic record reports, and performance evaluations.

Transfer students may be able to use some of the courses they completed at other schools to help meet the 180-credit requirement. (Semester-system credits can be multiplied by 1.5 to derive equivalent quarter-system credits.) The UCSC Office of Admissions determines which courses are transferable.

University Requirements

The Santa Cruz campus administers three requirements for graduation from the University of California: (1) American history and institutions, (2) Entry Level Writing Requirement, and (3) UCSC residence. These requirements are described in detail below.

American History and Institutions

Every candidate for a bachelor's degree must demonstrate a knowledge of American history and institutions.* You may fulfill this requirement in *one* of the following ways:†

- By achieving a score of 550 or higher on the SAT Subject Examination in U.S. History
- By achieving a score of 3, 4, or 5 on the College Board Advanced Placement Examination in U.S. History, or by achieving a score of 5, 6, or 7 on the IBH History of the Americas Examination
- [by achieving a score of 3, 4, or 5 on the College Board Advanced Placement](#)

Examination in U.S. History or Government & Politics: United States

- ~~• By achieving a score of 3, 4, or 5 on the College Board Advanced Placement Examination in American History, or by achieving a score of 5, 6, or 7 on the IBH History of Americas Examination~~
- By satisfactorily completing a college-level course in ~~American~~ U.S. history and institutions
- By certification of completion of the requirement on a transcript from an accredited California institution of higher education
- By completing an acceptable history or government course in high school that satisfies the subject requirement for admission to the university, described on page 15

Entry Level Writing Requirement

Every candidate for a bachelor's degree must demonstrate an acceptable level of ability in English composition. Before your fourth quarter of enrollment, you must fulfill this requirement in one of the following ways:

- By achieving a score of 680 or higher on the Writing component of the SAT Reasoning Examination
- By achieving a score of 3, 4, or 5 on the College Board Advanced Placement Examination in English Language or English
- ~~—Literature, or by achieving a score of 5, 6, or 7 on the IBH English Language A1 Examination~~
- By achieving a score of 8 or higher on the systemwide UC Analytical Writing Placement Examination
- By demonstrating an acceptable level of proficiency on UCSC's Writing Placement Examination, given several times each year
- Prior to first enrollment at UC, by completing at another institution an acceptable college-level course of at least 4 quarter credits, or the equivalent, in English composition with a grade of C or better.

California high school seniors who have been admitted to UCSC must take the systemwide UC Analytical Writing Placement Examination given in May, unless they have already satisfied the requirement.

~~*Foreign students with an F (student) or J (exchange visitor) visa are exempted from the American history and institutions requirement at the time they declare their candidacy for graduation. You can verify your exemption by bringing your passport to the Office of International Education, 205 Classroom Unit Building. Call (831) 459-2858 for more information.~~

~~*†~~ Alternatives for satisfying this requirement vary among the campuses of the University of California. If you plan to transfer to another UC campus, consult its general catalog for information on this point.

Credits for Transfer Students

General Education Requirements

Transfer students may apply courses taken at other institutions toward the general education requirements with two exceptions: The writing-intensive course (W code) must be taken at UCSC. Also, transfer courses are not applied to the topical requirement (T code), but topical

courses are waived at entrance according to the following formula: 45–83.9 transferable quarter credits, one course waived; 84–104.9 transferable quarter credits, two courses waived; 105 or more transferable quarter credits, all three courses waived. If one topical course is required in residence at UCSC, it may be chosen from any of the three academic areas (humanities and arts, natural sciences and engineering, and social sciences). If two are required, they must be from two different areas.

~~Please note that beginning with students entering UCSC in fall quarter 2010, the topical requirements will need to be satisfied with specific transfer courses. UCSC is currently in the process of identifying appropriate courses offered through California community colleges (www.assist.org) beginning in September 2007.~~

If you are currently attending one of the California community colleges, [see the ASSIST web site at www.assist.org](http://www.assist.org), or consult with the UCSC Office of Admissions or your current counselor to determine which college courses satisfy UCSC general education requirements.

Transfer students who have satisfied the general education or breadth requirements of another UC campus prior to transfer will be considered to have completed the UCSC general education requirements. Completion of the Intersegmental General Education Transfer Curriculum (IGETC) prior to enrollment at UCSC will also be accepted in lieu of the campus general education requirements.

Academic departments use certain scores on specific AP/IBH examinations in granting waivers or substitutions for prerequisite courses. ***Unit-level credit is not affected by these equivalencies.*** Students should contact the department as noted below to discuss their academic plans.

Advanced Placement (AP)/International Baccalaureate Higher Level (IBH) Examinations: Prerequisite Course Waivers, 2009-10

Subject Exam	Score	UCSC Course Equivalency	Advisory Notes
AP Art History	3,4,5	One lower-division art history course	One course waived for the Art major but not for the History of Art and Visual Studies major.
AP Studio Art	3,4,5		One course may be waived for the Art major in lieu of lower-division courses for the History of Art and Visual Studies major.
IBH Biology	5,6,7	Biology 3	Enrollment in the Biology 20 series
AP Biology	3,4,5	Biology 3	Enrollment in the Biology 20 series
AP Chemistry	4,5 ----- - 5	Environmental Studies 23 ----- -----	Contact the Environmental Studies Department ----- ----- Allows enrollment into Chemistry
IBH Computer Science	5 ----- - 6,7	Computer Science 12A Computer Science 12L ----- Computer Science 12A Computer Science 12L Computer Science 12B Computer Science 12M	Contact the School of Engineering

Enrollment in first quarter calculus majors in mathematics, physical and chemical sciences, and the School of Engineering. ----- ----- Allows enrollment in Math 20A, 20B, 20C. Enrollment in Mathematics 23A is required for all students in the School of Engineering.
AP Psychology	4,5	Psychology 1	
AP Statistics	4,5	Applied Math and Statistics 5 Psychology 2	

College Requirements

College Eight

- College Eight 80A, *Introduction to University Discourse*, fall quarter, or College Eight 80B, *Rhetoric and Inquiry*, fall quarter; and College Eight 81A, *The Environment and Us*, fall quarter.
- College Eight 81B, *Principles of Environmental Science*, winter quarter.
- College Eight 81C, *Technological Innovation and Environmental Challenges*, spring quarter.

Note: College Eight 81A, and either 80A or 80B are mandatory for all incoming students. College Eight 81B and 81C also satisfy many of UCSC's general education requirements, and admission to these courses is selective.

Kresge

- Kresge 80A, *Introduction to University Discourse: Power and Representation*, fall quarter, or Kresge 80B, *Rhetoric and Inquiry: Power and Representation*, fall quarter;
- Kresge 80T, *Power and Representation*, transfer section, satisfies the general education W and T.

Additional Majors or Minors

To complete multiple majors and minors, you must fulfill all of the requirements for all majors and minors declared, including the comprehensive requirement for each major. In general, a single thesis may not be used for more than one major. You may count courses for more than one major or minor, as long as each major includes 40 ~~unique (not double-counted) credits of upper-division course work and each minor includes 25 unique (not double-counted) credits of upper-division course work.~~ upper-division credits not used to satisfy the minimum upper-division credits of any other major or minor, and each minor includes at least 25 upper-division credits not used to satisfy the minimum upper-division credits of any other major or minor.

Advising: From Course Selection to Careers

Attending Summer Orientation is one of the most important steps a new student takes in preparing for the transition to university life. Summer Orientation provides the academic advising you need to make informed decisions about classes and majors, and the opportunity to ask questions regarding financial aid and housing.

Orientation begins the process of academic advising and provides a comprehensive introduction to all aspects of UCSC. While at Orientation, you will be introduced to continuing students, faculty, and staff who will assist you in attaining academic and personal success at the university.

Summer Orientation is held several times over the course of the summer and includes separate programs for first-year and transfer students, as well as concurrent programs for parents and family members.

New students reserve their place in Summer Orientation online through the UC Santa Cruz portal at my.ucsc.edu.

Fall Welcome Week, occurring during the first week of fall quarter, is the next step in the orientation and advising process for new students entering fall quarter. It provides you with

an opportunity to settle into life at UCSC, take advantage of important services, and continue your academic advising.

For new students entering in the winter quarter, an Orientation session is offered in December.

Questions can be directed to the Office of Campus Orientation Programs at (831) 459-5468, or via e-mail to orientation@ucsc.edu. Web: admissions.ucsc.edu/orientation.

Important information on particular majors may be viewed on individual departmental web sites. The sites will give you contact information and office hours. Advisers provide detailed information regarding requirements for the major and assist you in planning a program of study. The department adviser can also assign you to an appropriate faculty adviser who may serve as a mentor in your field, recommending courses and helping you refine your educational goals.

It is also important to seek departmental advising for assistance in planning your overall academic program. For transfer students and for students in many majors (such as those in the physical and biological sciences, engineering, arts, and environmental studies), it is necessary to obtain departmental advising prior to or at the start of the first quarter on campus.

For more general academic questions, make an appointment with a college adviser. Each college has specialized staff members, called academic preceptors, who advise students on everything from general education requirements to choosing a major.

For help in assessing career interests and exploring and choosing career options, contact the Career Center. The staff also will assist with [choosing a major](#), résumé preparation, interviewing skills, applying for an internship, and job-search strategies. Many students find that participation in internships and field programs, described on pages 41–43, gives them a practical basis for making career decisions. The Career Center offers workshops, an online database, and publications on many internship opportunities. The office's Career Advice Network (CAN) will connect you with UCSC alumni professionals who help students achieve their career goals.

If you plan to go on to graduate school, consult with faculty in your major. Faculty advisers are the best people to ask about the quality of graduate programs in your field of interest. In addition, the Career Center offers advising and workshops on applying to graduate school. A letter-of-reference service enables you to maintain your recommendation letters at the Career Center.

If you intend to pursue graduate study in a field not offered as a major at Santa Cruz, you can prepare for your intended program through one of the campus's regular majors. You must plan your studies carefully, however, and advising will be especially important. The Career Center library has information that will help prepare you for graduate and professional programs. The following are some fields in which UCSC alumni have pursued graduate study and successful careers:

- Architecture
- Business
- Conservation
- Film
- Finance
- Guidance and counseling
- [Health Fields](#)
- High-tech industry

Human resources
Industrial and labor relations
International relations
Law
Marketing
Museum administration
Public administration
Urban planning

If you plan to pursue a career in medicine or another health-related field (including dentistry, nursing, nutrition, occupational therapy, optometry, osteopathic medicine, pharmacology, physical therapy, public health, and veterinary medicine), contact the [Health Sciences Career Adviser in the Career Center at \(831\) 459-5705](#). Ethnic-minority students may also be eligible for the MARC/MBRS Programs, described below.

If you are interested in the field of law, the prelaw adviser for UCSC is at the Career Center, (831) 459-2957.

A number of programs provide additional academic advising and comprehensive support services to students with specific needs. Educational Opportunity Programs (EOP), Services for Transfer and Re-Entry Students (STARS), the Disability Resource Center, and International Programs are described below. If you need assistance in another area, check to see if it is listed in the Index, pages 483–487. For additional information, check with your college office or consult *The Navigator* or *Schedule of Classes* (reg.ucsc.edu).

Counseling on personal and family issues is available through Counseling and Psychological Services, described on page 101.

Career Center

UC Santa Cruz graduates find success in many different career fields, and their superior education is the foundation for this success. The staff at the Career Center will help you link your educational experience to the world of work. The center provides a variety of employment and career-development services to help students obtain rewarding and successful careers.

Students are encouraged to visit the Career Center early during their first year on campus. The first step is to meet with a career adviser to begin developing a focused career plan. Simply sign in at the reception desk for a drop-in advising appointment. Your career adviser will show you how to research and discover the many opportunities that are available to UC Santa Cruz students and graduates. Workshops offered by the Career Center include Selecting an Internship, Résumé and Cover Letter Writing, Job-Interviewing Techniques, the Graduate and Professional School Information Workshop, Applying to Law School, and special workshops on specific majors or career fields.

Your college experience is likely to include a part-time job or internship in your area of interest. The Career Center has hundreds of opportunities available. Off-campus and on-campus employment opportunities (both work-study and non-work-study) are posted on the Career Center's web site. For your convenience, you may apply for on-campus jobs online.

An internship is one of the best ways to gain practical work experience in your area of interest. The Career Center has a database with ~~over 1,000~~ [hundreds of](#) internship opportunities in a wide variety of career fields. The center's resource library [contains some of the best internship directories available](#) listing local, national, and international

opportunities. While visiting the center, be sure to check out the Professions Training Program (PTP) and the **Chancellor's Undergraduate Internship Program (CUIP)**. ~~These unique internship programs are~~ This unique internship program is designed to give participants a professionally enriching work experience on campus in one of the university's colleges, administrative units, or academic departments. For information, visit the web: intern.ucsc.edu.

Another interesting and challenging position is the UC Student Regent, with an annual recruitment process. For information, e-mail cyndi@ucsc.edu or visit the web: www2.ucsc.edu/careers/jobs/regent.html.

The Career Center's resource library contains material organized in the following manner: Career Exploration, Graduate and Professional Schools, Job Search, Career Fields, Internships, and Employer Information. A computer lab links you to the top career-development sites on the web. However, the most exciting part of the computer lab is the Career Advice Network database. The Career Advice Network (CAN) contains career profiles of over 500 UCSC alumni. The members of the network have volunteered to answer questions and give career advice pertaining to their particular career field. You may contact CAN members to obtain information on educational preparation, job responsibilities, résumé preparation, and tips on how to conduct your job search.

UC Santa Cruz students and alumni looking for full-time career opportunities need look no further than ~~NACELink~~ **SlugQuest**—an online site that lists job openings targeted to UCSC graduates. You may connect to ~~NACELink~~ **SlugQuest** on the Career Center web site. Another way to obtain a career position is to participate in the On-Campus Interview Program. Corporate recruiters visit campus every fall, winter, and spring to interview and hire students. The Career Center web site has a list of participating companies.

The Career Center sponsors several major events every academic year. The Graduate and Professional School Fair brings hundreds of graduate and professional school representatives from the nation's top universities to campus to share information about their advanced-degree programs. Job fairs, which bring hiring companies to campus, take place several times a year. Students looking for a job or internship will want to come prepared with a great résumé. Other events include the Student Employment Recognition Awards Program Ceremony, where outstanding student employees are recognized and rewarded for their hard work and dedication, and the Multicultural Career Conference, which brings students and alumni together to develop mentor relationships and explore careers.

The Career Center—located at the Bay Tree Building, Room 305, in Quarry Plaza—can be reached at (831) 459-4420. Office hours are 8 A.M. to 5 P.M. Visit the center's web site at www2.ucsc.edu/careers.

Educational Opportunity Programs (EOP)

~~The Educational Opportunity Programs (EOP) provide a variety of academic and personal support programs designed to promote the retention, academic success, and graduation rates of California residents who are first-generation college students from low-income and educationally disadvantaged backgrounds. EOP programs and services are designed to ensure that students successfully complete their undergraduate education and acquire the skills that will prepare them for leadership roles and graduate or professional school opportunities.~~

Academic Support Programs

EOP advising programs work to enhance student academic and personal success. These programs and services include academic and personal counseling; time management and study skills strategies; academic workshops; referrals to resources, programs, and opportunities; peer advising; and community events. Students have access to three EOP academic counselors who provide academic advising and personal counseling to facilitate the students' academic, social, and personal transition/adjustment to the university. The counselors also work closely with the college, department, and financial aid advisers to ensure that students access and utilize all available resources to become "B or Better Scholars." EOP also organizes programs and events to promote and support the students' achievement and advancement. The events include Academic Success Workshops, a Holiday Event, and an Academic Excellence Reception. Other academic programs include the EOP Bridge Program for a select group of entering first-year students. Bridge is an academic-year program to help frosh make a smooth transition from high school to the university. The program includes a summer orientation and instruction, academic advising, learning support, and community-building activities throughout the academic year.

Pregraduate Programs

The pregraduate programs are designed to increase the placement of EOP students in doctoral programs in preparation for the pursuit of academic careers. The two pregraduate programs are the Faculty Mentor Program (FMP) and the Graduate Information Program (GIP).

GIP offers general graduate and professional school advising. GIP activities focus on informing and preparing students for educational opportunities beyond the baccalaureate degree. Through workshops and individual sessions, GIP outlines the process of how to apply to graduate school and helps students make important faculty, staff, and resource connections. The GIP web site offers a comprehensive step-by-step guide to all aspects of the process of preparing for and applying to graduate school, including identifying research interests, searching for graduate schools, securing letters of recommendation, and identifying internships. GIP also maintains a graduate school resource library and sponsors field trips to conferences and forums within the local area to connect to UC-wide resources. Students can visit the GIP web site at www2.ucsc.edu/eop/gip.

The Faculty Mentor Program is a two-quarter undergraduate research program designed to encourage and prepare students to undertake future graduate study within the arts, humanities, and social sciences. FMP includes research writing, workshops on applying to graduate school, and hands-on research experience under the guidance of a UCSC faculty sponsor. Students receive academic credit for participation in a weekly seminar along with a 10–15-hour commitment to faculty-sponsored research.

For more information about the Educational Opportunity Programs, drop by the Academic Resources Center, call (831) 459-2296, or visit the web site: www2.ucsc.edu/eop.

EOP represents the University of California's effort to identify, retain, and graduate a diverse student body. With that in mind, EOP provides a variety of academic and personal support programs designed to promote the retention, academic success, and graduation rates of California residents who are first generation college students from low-income and

educationally disadvantaged backgrounds. EOP programs and services are designed to ensure that students successfully complete their undergraduate education and acquire the skills that will prepare them for leadership roles and graduate or professional schools opportunities. Below are the programs and services offered through EOP.

Bridge

For a select group of entering first-year EOP students, Bridge is an admission opportunity that provides academic support services to ensure a successful first-year experience. The program introduces students to the University's academic expectations—specifically in writing and mathematics—provides students with frequent and on-going advising, introduces students to university resources and academic success strategies, and builds a strong and supportive community among the Bridge students. Bridge includes a summer orientation program, a fall learning community with academic advising, learning support, and community building activities throughout the academic year.

Advising Programs and Services

EOP advising programs are designed to facilitate personal growth and development for the purpose of achieving institutional acculturation, academic achievement, and exposure to opportunities beyond the baccalaureate degree. These programs and services include academic advising and personal counseling, time management and study skills strategies, academic workshops, referrals to resources, programs and opportunities, peer advising, and community events. EOP students have access to three EOP Academic Counselors who work closely with the college, department, and academic enrichment programs to ensure that students access and utilize all available resources to become “B or Better Scholars.”

Pregraduate Programs

EOP pregraduate programs are designed to increase student interest and preparation for graduate and professional school opportunities. The two pregraduate programs are the Faculty Mentor Program (FMP) and the Graduate Information Program (GIP).

GIP offers general graduate and professional school advising. GIP activities focus on informing and preparing students for educational opportunities beyond the baccalaureate degree. Through workshops and individual sessions, GIP outlines the process of how to apply to graduate school and helps students make important faculty, staff, and resource connections. The GIP web site offers a comprehensive step-by-step guide to all aspects of the process of preparing for and applying to graduate school including identifying research interests, searching for graduate schools, securing letters of recommendation, as well as identifying internships, undergraduate research opportunities and Summer Research Opportunity Programs (SROPs). GIP also maintains a graduate school resource library and sponsors trips to conferences and forums within the local area to connect to primary resources beyond UCSC. Students can visit the GIP web site at <http://eop.ucsc.edu/gip/>

The Faculty Mentor Program is a two-quarter undergraduate research program designed to encourage and prepare students for future graduate study within the arts, humanities, and social sciences. FMP includes a two-quarter, five-unit research writing seminar and hands-on research experience under the guidance of a UCSC faculty mentor. Students can use the FMP seminar to fulfill their W writing requirement.

For more information about the Educational Opportunity Programs, drop by the Academic Resources Center, call (831) 459-2296, e-mail us at eop@ucsc.edu, or visit our web site at <http://eop.ucsc.edu/>.

Academic Excellence Program (ACE)

ACE is supported by the Division of Physical and Biological Sciences and has as its goal to increase diversity among students receiving bachelor's degrees in science, technology, engineering, and mathematics (STEM), ~~science, and engineering~~ by offering discussion sections for selected mathematics and science courses. These discussion sections replace ~~registrar-scheduled~~ secondary discussion sections for ACE students.

The program received the 1999 Presidential Award for Excellence in Science, Mathematics, and Engineering Mentoring. This award, presented by the White House and administered by the National Science Foundation, is given to individuals or programs that have demonstrated outstanding and sustained mentoring efforts for students underrepresented in science, mathematics, and engineering.

Helping students excel in gateway mathematics and science courses is ACE's focus. The ACE sections provide a structured, workshop setting where students learn by teaching each other. This collaborative method reinforces critical thinking and problem-solving skills. Enrollment in ACE is limited. A professional section leader with an academic background in the subject facilitates these workshops. In addition, undergraduate coleaders/peer mentors who have excelled in the course assist the section leader. This brings the student to teacher ratio to approximately 12:1. Students also meet with a peer mentor, who shares study tips and techniques, as well as opportunities for undergraduate teaching and research internships. Other opportunities available through ACE include office hours, study groups, and career counseling. ACE scholars join a community of scholars dedicated to academic excellence and success.

Applications are accepted quarterly for the upcoming term. Priority is given to students who are studying STEM disciplines and who are first generation to attend college. For more information, visit the web site: ace.ucsc.edu.

Multicultural Engineering Program (MEP)

The Baskin School of Engineering's Multicultural Engineering Program (MEP) promotes diversity and facilitates the success of engineering students.

MEP provides academic and personal support for engineering students who are first-generation college students, are the first in the family to pursue engineering or computer science studies, or are from a low-income (limited financial resources) or educationally disadvantaged background. MEP's academic learning community supplements students' undergraduate experience and encourages students to continue their education into graduate school. MEP has a strong support system and engages students' full participation in a variety of services and activities. These include academic advising, personal counseling, tutorial services, drop-in assistance, individual and small-group study, study-skills workshops, peer-support networks, community-building activities, scholarships, and an engineering Summer Bridge program for a select group of entering first-year ~~and transfer students~~ students.

MEP's well-equipped study center and computer lab provides 24-hour access to computer workstations and printer, textbooks, individual lockers, and a place for students to gather and study. Students who have participated in pre-university service programs (e.g., Early Academic Outreach, Upward Bound, MESA, Talent Search, Puente, ~~DEEP~~, Smith Scholastic Society) are encouraged to apply to MEP.

For further information, call (831) 459-2868, visit the web site mep.soe.ucsc.edu, or drop by the School of Engineering Undergraduate Affairs Office, 225 Baskin Engineering Building.

Part-Time Program

If you are unable to attend the university full-time because of family obligations, employment responsibilities, or ~~health problems~~ a medical condition, or you are in your final quarter before graduation, you may qualify for the Part-Time Program. This program enables students to pursue a bachelor's degree part-time in any major offered at UC Santa Cruz. To participate, undergraduate students must file a Part-Time Program application by the appropriate deadline. Full-time students normally take three 5-credit courses per quarter; part-time students may enroll in a maximum of 10 credits.

Students approved for enrollment on a part-time basis pay the same fees as full-time students but pay only one-half of the educational fee. Part-time nonresidents pay one-half of nonresident tuition. Financial aid awards may be affected by enrolling part-time. Students who use the part-time fee reduction may not also use the UC employee reduction.

Applications for undergraduates are available from the Office of the Registrar, 190 Hahn Student Services Building. For more information, call (831) 459-4412 or e-mail registrar@ucsc.edu. Web: reg.ucsc.edu/students/part-time.html.

Disability Resource Center (DRC)

The campus accommodates students with documented disabilities and welcomes their attendance at UCSC. The Disability Resource Center (DRC) provides the following to help meet the needs of students with disabilities: counseling and advising; ~~parking accommodations~~; assistance with ~~registration and~~ enrollment; testing accommodations; alternative media such as audio books; adaptive equipment loans; notetaker and interpreter services; and liaison and referrals to appropriate resources, services, and agencies.

The Disability Resource Center is located at 146 Hahn Student Services Building and can be reached by telephone at (831) 459-2089 (voice) or (831) 459-4806 (TTY), or by e-mail at drc@ucsc.edu. Web: drc.ucsc.edu.

Campus access for people with mobility impairments. Transportation and Parking Services, in coordination with the DRC and Cowell Student Health Center, provides accessibility maps, vans equipped with wheelchair lifts that can transport students ~~to any point on~~ throughout campus, and authorization to use disabled or medical parking spaces ~~for the disabled~~, which are adjacent to all campus buildings. Most buildings on campus have wheelchair-accessible ramps, modified rest rooms, and other facilities. If necessary, classes are rescheduled to meet accessibility needs.

Questions and concerns about

- program accessibility should be addressed to the director of the Disability Resource Center, at (831) 459-2089 (voice); (831) 459-4806 (TTY)
- transportation, physical, or computing access to the campus should be directed to (831) 459-3759 (voice/TTY)
- accommodating job applicants or current employees with disabilities should be directed to (831) 459-~~2349~~ 4602 (voice)

ROTC and Military Affairs

Reserve Officer Training Corps (ROTC) is not available on the UC Santa Cruz campus. However, interested UCSC students have the option of attending programs at Santa Clara University, San Jose State University, and UC Berkeley.

To find out about the Army ROTC program, contact the Department of Military Science, Santa Clara University, 500 El Camino Real, Santa Clara, CA 95053-0631 or (408) 554-4034, e-mail Captain ~~Alex Kerkow~~ Vince Mucker at ~~akerkow~~ vmucker@scu.edu, or visit ~~www.scu.edu/rotc~~ http://scurotc.com.

For information on the Air Force ROTC program, contact the Department of Aerospace Studies, AFROTC Det 045, One Washington Square, San Jose State University, San Jose, CA 95192-0051 (408) 924-2960, e-mail Det045@maxwell.af.mil, or visit the web: www.sjsu.edu/depts/AFROTC/homepage.html. Students may call or inquire about program prerequisites, scholarship availability, and class schedules at the Department of Aerospace Studies.

UC Berkeley offers a variety of courses in military affairs, including those offered by the Departments of Naval Science, Military Science, and Aerospace Studies, subject to departmental approval. (See UC Berkeley General Catalog, Military Officers' Education Program, sis.berkeley.edu/gc/curricula.html.) These courses are offered to cadets and non-cadets.

Arrangements for all ROTC programs are made on an individual basis with the appropriate sponsoring campus.

~~Arrangements for all ROTC programs are made on an individual basis with the appropriate sponsoring campus.~~

Courses That Fulfill General Education Requirement

Refer to the course listings beginning in the Class Listings section of the [Schedule of Classes](#) to identify general education courses offered.

Introductions to Disciplines, Humanities, and Arts (IH code)—two courses from different departments required (10 credits)

Only one IH requirement may be satisfied with a course (equivalent to 5 credits) from the Arts Division (art, film and digital media, history of art and visual culture, music, theater arts); only one language course may be used to satisfy an IH requirement; and only one literature course may be used to satisfy an IH requirement. *Note:* Transfer courses designated IH from English departments are considered to be literature courses for general education purposes.

Topical Courses (T code)—Three courses required (15 credits)

Students entering UCSC with fewer than 45 transferable credits must take three topical courses in residence at UCSC. UCSC Summer Session courses can be used to satisfy topical requirements.

Choose one course from each academic area: natural sciences (2), social sciences (3), and humanities and arts (4). Courses labeled 5, 6, and 7 satisfy topical requirements in two different academic areas; students can apply this kind of topical course to either academic area indicated. The three topical course requirements must be satisfied with three different courses. In the Schedule of Classes, courses that carry a T general education code are listed as follows:

2—Natural Sciences Area
3—Social Sciences Area
4—Humanities and Arts Area
5—Humanities and Arts or Social Sciences Area
6—Natural Sciences or Humanities and Arts Area
7—Natural Sciences or Social Sciences Area

The Colleges

To read an updated copy of this page with strikeouts and additions highlighted, see 2009-10 The Colleges, highlighted copy.

Please note that Cowell, Crown, Merrill, Oakes, and Stevenson Colleges contained no changes from the General Catalog 2008-10 and are not included. For the complete Colleges section, go to 2008-10 The Colleges.

Porter College

The Porter College theme, Arts in a Multicultural Society, reflects the consensus among Porter College fellows that the creative process is an inseparable aspect of a broad-minded and rigorous education. The seminars, cocurricular activities, and cultural environment at Porter encourage creativity in all fields—from composition to community studies to computer programming.

Academic Emphases

Porter's faculty includes most of the campus's practicing artists and art scholars, though some of the college's faculty (and half of its students) specialize in the humanities or in the physical and biological or social sciences. The college is the administrative home of the Division of the Arts and the History of Art and Visual Culture Department. The Digital Arts and New Media Program also has offices here.

Porter 80, the core course focuses on writing across the arts, with concentration on literature and arts of California and the Pacific Rim. Those who are admitted as transfer students are exempt from the core course requirement but may take the core course at their option pending available space; lower-division transfer students who, prior to enrolling, have not completed at least one UC-transferable college English composition course with a minimum grade of C (2.0) or better are permitted to take the core course to satisfy the C1 requirement. Students meet with their faculty member in a seminar, attend regular lecture/performances, and participate in writing groups, advising, and other sessions that introduce some of the academic issues they will confront at the university. The course emphasizes critical reading, writing, and close intellectual contact with faculty and other students.

The college also offers 2-credit courses in a variety of areas connected to the arts. These are small classes in the practice or theory of the arts; they may include investigation of a particular style of music or dance, visits to Bay Area theaters and museums, working in the arts, or creation of a show in one of the college galleries. These diverse offerings allow Porter students to understand the significance of creativity in a university education.

The college provides fellowship funds each year to talented students pursuing original research and creative projects.

College Community and Facilities

The traditional residence halls and apartments play an important role in bringing the college community together. Students are encouraged to spend their beginning years in residence in the college, where housing is available for 1,125 students. The residence halls are divided into smaller units, with from 35 to 45 students sharing common lounges and other facilities. Theme halls include Performing Arts, Film and Digital Media, Gender Studies, Visual Arts, and Outdoors Experiences. Students also have a choice of Quiet/Intensive-Study, Same-Gender, Gender-Neutral, or Substance-Free halls. The six-person apartments are reserved for upper-division students.

In addition to traditional classrooms, Porter has many specialized facilities such as a fireside lounge, student and faculty art galleries, a study center, and a dining hall that converts to a theater space. The Arts Instructional Computing Laboratories, located at Porter College, consist of two high-end labs oriented toward the arts.

Adjacent to the college are the campus's Theater Arts Center, the Elena Baskin Visual Arts Center, and the Music Center.

Porter provides social and educational programs to balance the intellectual demands of a university

education. The Porter Activities Office, in conjunction with the Porter Student Senate, organizes formal and informal events, including dances, College Nights, and social activities, which augment campuswide activities in these areas. For relaxation, Porter students and faculty gather at the college's coffeehouse.

Many students and faculty perform or exhibit their work at Porter, and cultural events are a constant feature of life at the college. The dining commons has been the site of performances by artists such as El Teatro Campesino, lectures and readings by contemporary authors such as Amiri Baraka, and performances by artists such as Komar & Melamid and Nina Wise.

Porter College facilities were constructed through a partnership of public funds and a gift from the Porter-Sesnon family of Santa Cruz. Part of the gift was used to establish an endowment for the college.

For more information, call (831) 459-2273 or visit the web site: www2.ucsc.edu/porter.

Kresge College

Kresge's motto is *Independence, Creativity, Community*

Academic Emphases

Kresge's core course 80, *Power and Representation*, is a writing class that explores the relationships between individuals and their communities—communities as small as families and friendship, colleges and cities; communities as large as nations and the world. Our goal is to empower each individual to think beyond easy answers, to express themselves clearly, to feel at home in writing, and to feel powerful in representing themselves on the page. In *Power and Representation*, we examine the many ways we constitute ourselves (and are constituted) as individuals in relation to communities. First, we will study ideas about representation as a theoretical grounding, and then focus on representations of nationality, ethnicity, sexual orientation, gender, and race in many genres—critical theory, film, fiction, theater, and nonfiction. Our purpose is to create a dialogue of ideas about ourselves and our relationship to our communities as it is, as it might be, and as we might help make it.

In addition to section meetings, on Tuesday nights all students come together to watch core-related films or performers or listen to lectures. All students will complete a final creative project that engages with the theme of the course.

Those who are admitted as transfer students are exempt from the core course requirement but may take the core course transfer section; lower-division transfer students who, prior to enrolling, have not completed at least one UC-transferable college English composition course with a minimum grade of C (2.0) or better are permitted to take the core course to satisfy the C1 requirement.

In addition to the core course, Kresge offers a series of courses taught by guest faculty, alumni and faculty affiliated with the college. These courses give students a chance to study in small groups on topics close to faculty or alumni research interests and offer students the opportunity to enrich the standard curriculum. A new array of classes is offered each year. For example, Kresge has offered journalism, comic writing, documentary film, gardening, and service learning.

Perhaps because Kresge is known for its creativity and independent spirit, it's also known for its association with writing. We house the Writing Program and The Science Writing Program, and are associated with Literature. Our co-provost, Micah Perks, is co-director of the Creative Writing Program at UCSC. Kresge is the home of *Rapt* and *The Kresge Town Krier*, two literary journals, as well as *City On A Hill*, UCSC's student-run newspaper. Writers House is a residential option for students with an interest in journalism and/or creative writing, regardless of their prospective majors.

Residential Life

Kresge was the sixth college to be built on the UCSC campus. The college was founded on the principle of participatory democracy as a means of encouraging a strong sense of community. Architecturally renowned, Kresge has apartments rather than residence halls.

The Kresge apartments attract students with a sense of independence and community participation. Distinctively designed, the apartments at Kresge proper are configured for four to 10 people. Kitchen and living areas look out onto the street, with other rooms facing the surrounding redwood forest. At Kresge East, apartments face the forest for greater quiet. These apartments, with three single and one double bedroom, are typically reserved for continuing upper-division students, although some buildings are also available to new, first-year residents. Kresge's three-to-four-person "in-fill" apartments, Buildings J and K, which are situated between Kresge and Porter colleges, are primarily reserved for continuing upper-division students. These two-bedroom apartments have an efficiency-style kitchen and living area.

The Residential Life and College Programs staff at Kresge work to bring students of similar interests together, academically and socially, by designing fun and unique programming based on student interest. Programs that focus on celebrating the diversity of the residential community, on multicultural community-building, and on enhancing academic success, through film series, music events, mural painting, food-centered events, and field trips are highlighted.

Community Life

There are a wide variety of events and activities at the college that shape community life: Lectures, workshops, trips, plays, dances, concerts, and films are a regular part of student life at the college. The nature and tenor of these events are a reflection of the interests of students and staff, who are committed to providing voice and opportunity for all community members.

Students actively shape the college community through participation in Kresge Parliament, an openly structured student organization responsible for voting the allocation of all college membership fees in support of activities and events. Parliament and Town Meetings also serve as a forum for the discussion of college and campuswide issues with college staff and faculty.

Transfer Students

In recognition of the wealth of diversity that transfer students bring to the community—in terms of culture and experience—Kresge is the home of the Transfer Center for campuswide transfer students regardless of college affiliation. This is a staffed facility where students can gather to relax, socialize, hold meetings, and obtain campus information and resource support in a central location. The resource center offers workshops, social evenings, and special events that are tailored to meet the needs of transfer students.

Kresge also offers special advising workshops and 2- and 3-credit courses designed to help transfers in the process of entering the university and moving forward in their careers from here.

Facilities

At the entrance to the college is the restful Piazzetta with a beautiful, architecturally designed fountain. Leading off from the Piazzetta are the Transfer Center, the Commuter Lounge, and a student lounge, equipped with television and VCR. In addition to the Transfer Center, as a unique facility on the campus, the Commuter Lounge is a place for off-campus students who want to use a kitchen, shower, or lockers while on campus. Kresge's Photo Lab Co-op is above the Piazzetta and offers 24-hour accessibility to darkroom equipment. Adjacent to the nearby meadow are a racquetball court and an outdoor basketball court. The college includes a study center with soaring ceilings and walls of glass overlooking the forest, a computer lab equipped with PCs for student use, and a student-run Food Co-op, where organic produce is sold and working memberships are available. At the top of the college are the Town Hall performance facility, the Music Co-op, and a cafe.

For more information, call (831) 459-2071 or visit the web site: www2.ucsc.edu/kresge.

College Eight

The theme of College Eight is "Environment and Society," and the college has been one of the central anchors of UCSC's world-renowned green programs. Its graduates rank among the nation's top environmental professionals, and, as the college celebrates its first 35 years and looks forward to the future, College Eight is poised to play a pioneering role in educating a new generation of green entrepreneurs.

College Eight has a vigorous intellectual life. During the course of the academic year, UCSC faculty, and renowned professionals from the Silicon Valley and beyond, offer seminars, lectures, and guest classes on environmental issues and a wide range of other topics, ranging from philosophy to business. College Eight also affords students a sense of community, and offers opportunities to augment academic training with a wide range of extra-curricular activities. Its students major in nearly every discipline offered at UCSC, while being strongly committed to environmental stewardship.

Academic Emphases

College Eight is in the process of launching a number of exciting new initiatives aimed at furthering its mission. In fall 2009, a pioneering new three-quarter core course, entitled *Nurturing Environmental Citizenship*, is being introduced. The course is taught by senior faculty from the departments of Environmental Studies, Ecology and Evolutionary Biology, Earth and Planetary Sciences, and Electrical Engineering. The course is designed to provide all students, regardless of their eventual major, a solid foundation for success in the emerging green economy. The fall-quarter course is mandatory for all incoming students, and its goal is to introduce students to environmental issues, past, present, and future. The winter-quarter course takes on the principles of environmental science, and the spring quarter course, the ability of technological innovation to address environmental challenges.

[\[Return to top.\]](#)

College Nine

At College Nine, we introduce students to our increasingly interconnected world. Students can learn about the impact of economic globalization. We also expect them to come to appreciate the diversity of cultural traditions.

**—Campbell Leaper,
College Nine Founding Provost**

Academic Emphases

College Nine's theme of International and Global Issues emphasizes the impact of our increasingly interconnected world. We consider how people around the world affect one another through global economies, education, mass media, jet travel, and computers. Some specific issues that our academic and cocurricular programs consider are economic and cultural globalization, immigration, ethnic conflicts, genocide, and human rights. Our programs seek to respect both diversity and unity in understanding individuals and societies. Students interested in these issues either as their major focus or as part of their general education are invited to join the College Nine community.

Writing Seminar

In the first-quarter frosh course, *Introduction to University Discourse: International and Global Issues* (see page 164), students examine current issues pertinent to the college's intellectual theme. Topics address issues such as globalization, inequities in wealth and poverty across the world, human rights, and regional conflicts.

The seminar emphasizes the development of students' writing skills. Being able to write well is a valuable asset for success in college and in most careers. Students write several reflective and analytical papers during the quarter. Each paper undergoes at least one revision after the student receives constructive feedback from the instructor. Thus, the instructors work closely with each student throughout the quarter.

All students who enter as frosh are required to pass the college writing seminar with a grade of C or better. Those who are admitted as transfer students are exempt from the core course requirement but may take the core course at their option pending available space; lower-division transfer students who, prior to enrolling, have not completed at least one UC-transferable college English composition course with a minimum grade of C (2.0) or better are permitted to take the core course to satisfy the C1 requirement.

Global Action

In this workshop facilitated by peer instructors, students will learn about current international and global issues through interactive exercises, small group discussions and faculty presentations. Students will develop an "action plan" to raise awareness about one or more of these concerns and take practical steps to create positive change in the world.

Global Issues Colloquium Series

Through weekly presentations by leading experts, students learn about global challenges and also consider possible solutions. There is often an informal dinner following the presentation that allows for discussion with the speaker. Students have the option of taking this as a 1-credit class or of occasionally attending the presentations on a drop-in basis.

Special Academic Programs

Optional programs are available to involve College Nine students in academic and cocurricular activities beyond the first-quarter course. They are designed to promote students' academic achievement and success by connecting them with faculty mentors and helping them pursue leadership experiences in particular contexts.

Service Learning: Espirit de Corps

Students can extend their learning beyond the classroom by getting practical experience and course credit working as an intern for a nonprofit or school in the Santa Cruz Community. Examples include assisting in a classroom or at a homeless shelter. College Nine has its own service-learning program. This indicates a class called Espirit de Corps (110 and 110B). The service-learning supervisor guides the student at the practicum site and helps the student reflect on the experience as well as develop a final project.

Students as Teachers and Mentors

College Nine students have special opportunities to become course assistants, tutors, and student mentors for course credit. Students gain independent experience as teachers leading their own discussion sections of a College Nine course. They receive close supervision that emphasizes a collaborative approach to developing and enhancing teaching, communication, and leadership skills. The College Nine academic advisers can also direct students to other opportunities for student-teaching and peer-mentoring programs on campus. These are excellent opportunities to work closely with a faculty member and to develop one's own skills as a teacher and a leader.

Global Information Internship Program

The Global Information Internship Program (GIIP) places highly motivated students in internships with nongovernmental organizations and community groups. Students in GIIP help these organizations and groups in the use of Internet-based information and communications technologies. Interns acquire leadership and organizational skills through the "learning-by-doing" method. For more information, see page 42 and visit the web site at www2.ucsc.edu/giip.

Practical Activism: Lessons in Local and Global Change

This annual one-day conference focuses on international social justice concerns in the local context. Students gain valuable leadership skills in developing and implementing this exceptional program, which involves collaboration among faculty, staff, and the local community.

Education Abroad

The UC Education Abroad Program places students at a university in another country for one or more quarters. Studying abroad can be a valuable way to expand one's understanding of the world. Given the international focus at College Nine, students are encouraged (but not required) to develop a second language or to study abroad.

Research Opportunities

The faculty at UC Santa Cruz are ranked high in their quality of research. College Nine students are encouraged to take advantage of the many excellent opportunities available to work closely with faculty as research apprentices. Students will find many internship, independent study, or senior thesis programs in the departments of most majors. The College Nine academic advisers will help link students with these programs.

College Nine Pathways to Distinction

Another feature of College Nine is that qualified students may graduate with College Nine Distinction. This recognition is intended to serve as an incentive for students to pursue activities that are especially apt to help them succeed in college and beyond. Two pathways are possible:

Research and scholarship. In this pathway, students pursue research with faculty by completing three quarters (15 credits) of work on a senior thesis or a research internship. Students may be recognized with College Nine Distinction if they do a thesis or a research internship in their major on a topic related to international or global issues.

Language and culture. Students who enroll in at least three quarters (15 credits) in either Education Abroad or a foreign language (or a combination) may qualify for College Nine Distinction.

College Community and Facilities

Founded in fall 2000, College Nine is one of the newest colleges at UCSC. Consistent with UCSC's founding vision, College Nine creates an integrated living and learning environment through

engaging academic and extracurricular programs focusing on the theme of International and Global Perspectives. Students and staff collaborate to develop an array of programs exploring the many aspects of the college's theme. Some of the programs include faculty presentations, guest speakers, debates, films, arts events, and interactive workshops. These programs bring together members of our community to learn, debate, and challenge ourselves about important issues facing us today in an atmosphere of mutual respect and engagement.

College Nights

Several times a quarter, the college community comes together to plan a College Night, which is a large-scale community celebration held in the dining commons and open to all College Nine students whether or not they live on campus. These events are planned by students and focus on some element of international and global issues. College Nights include food, entertainment, and educational materials related to the theme. Some past College Nights have been Winter Holidays from Around the World, Carnival, and Asian Traditions.

International Living Center

The International Living Center (ILC) at College Nine offers a unique living environment fostering understanding, cooperation, and friendship among upper-division students from different nations, cultures, and backgrounds. Half of the residents are students from the United States, and the other half are students from various countries around the world. Students reside in the College Nine Apartments. Based out of the International Living Center, the International Affairs Group (IAG) offers College Nine and College Ten community members the opportunity to engage in lively discussions about important current international issues with one another through guest speakers, film, literature, media, and personal experience.

Cocurricular Programs and Opportunities

Getting involved in cocurricular activities is a predictor of college success. Not only do college activities help students make friends, they foster leadership and group cooperation skills. There are many opportunities at College Nine for student involvement. These include the following groups as well as many other programs, activities, and clubs.

Global Leadership Development

Global Leadership and Development (GLAD) meets weekly throughout the fall quarter and provides a wide range of exercises, guest speakers, and programs designed to foster and develop participants' efficacy as world citizens and leaders of College Nine.

Model United Nations

In the UCSC Model United Nations, students step into the shoes of the world's ambassadors. They discuss real international issues and resolve problems that affect countries all over the world. Throughout the school year, the group travels to other universities and attends conferences with other students aimed at re-creating the actual UN.

Student Government

Student Government represents the students in the college. It appoints students to campus and college committees, consults with college administration on policy development, and provides monetary support to student organizations.

CREATE

CREATE (Cultural Resources to Educate and to Empower) offers a community at College Nine for students of color to find support and empowerment through mentorship and friendship.

PHAT

PHAT (Programming House Activities Team) is a planning committee for the apartment residents who are interested in getting people out of their rooms and into their communities. Programs include the annual Haunted House and the Battle of the Buildings.

WATER

WATER (White Allies To End Racism) tackles issues of diversity and racism through the exploration of white racial identity. The group provides a safe and open space for dialogue and the opportunity to work with students of color groups on collaborative action projects.

Alternative Spring Break (ASB)

Students may apply to this program, in which participants spend part of their spring break in New Orleans helping to rebuild the community.

Praxis (Student Volunteer Community)

Praxis is an organization geared toward community building and social justice. By participating in Praxis, students gain exposure to a variety of Santa Cruz community agencies and explore what it means to be agents of social change.

Intercultural Communication Retreat

This two-day retreat provides international and American students from diverse backgrounds the opportunity to explore various components of intercultural communication. Through a series of structured exercises and small-group discussions, students share perspectives on issues such as multiculturalism, values orientation, and diversity. The goal of the workshop is to build community and friendship among international and American students as well as to increase students' understanding of the complexity of communicating across cultures. The Intercultural

Communication Retreat is optional; students apply for this opportunity in the fall.

Physical Surroundings

College Nine is situated in a redwood grove next to the Social Sciences 1 and 2 Buildings near the heart of campus. One of the campus's Instructional Computing Labs is conveniently located in the Social Sciences 2 Building.

A nature preserve serves as College Nine's "backyard." College Nine students have immediate access to hiking, running, and mountain bike trails in the adjacent forest.

Residence halls with approximately 500 single, double, and triple bedrooms opened in fall 2002. These fully furnished residence halls include student lounges, recreational spaces, and Internet connections. In addition, a state-of-the-art dining hall with an adjoining multipurpose room and recreation lounge for both Colleges Nine and Ten opened in fall 2002.

Colleges Nine and Ten also house approximately 300 upper-division students in apartments, with 190 students in single, double, and triple rooms. All apartments have full kitchens, living rooms, bathrooms, and Internet connections. Ground-floor apartments have decks, and most upper apartments have private balconies.

For more information about academic or general college programs, call (831) 459-5034, e-mail dslater@ucsc.edu, or visit the web site: collegenine.ucsc.edu.

College Ten

Our goal at College Ten is to foster students' concerns for social justice and their respect for diversity. This appreciation develops through both understanding and practice. Students can study the roots of social problems such as prejudice, ethnic hatreds, poverty, and political oppression. Another form of learning can occur through involvement in community organizations and other agencies. In these ways, we hope our students can contribute to the makings of a better world.

**—Campbell Leaper,
College Ten Founding Provost**

Academic Emphases

College Ten's theme of Social Justice and Community addresses a range of social problems and their impact on all members of society. In particular, the academic and cocurricular programs consider the injustices that many people confront in their lives. Possible community and governmental policies for addressing social, political, and economic inequalities are also examined. In addition, the college provides students with opportunities to make their own positive contributions to social change through community involvement or scholarly research.

The college curriculum will explore the causes and consequences of social injustice in several ways. Students will examine the roots of prejudice, discrimination, and violence directed toward groups based on their ethnicity, skin color, gender, sexual orientation, religious beliefs, or political views. They will also consider the causes and consequences of poverty both within the United States and across the world.

Writing Seminar

In the first-quarter frosh course, *Introduction to University Discourse, Social Justice and Community* (see page 165), students examine current issues pertinent to the college's intellectual theme. Topics address issues such as poverty, discrimination, and economic injustice. Ways that communities, governments, and businesses can address inequities in society are also examined.

The seminar emphasizes the development of students' writing, reading, and speaking skills. Being able to write well is a valuable asset for success in college and later in most careers. Students write several reflective and analytical papers during the quarter. Each paper undergoes at least one revision after the student receives constructive feedback from the instructor. Thus, the instructors work closely with each student throughout the quarter.

All students who enter as frosh are required to pass the college writing seminar with a grade of C or better. Those who are admitted as transfer students are exempt from the core course requirement but may take the core course at their option pending available space; lower-division

transfer students who, prior to enrolling, have not completed at least one UC-transferable college English composition course with a minimum grade of C (2.0) or better are permitted to take the core course to satisfy the C1 requirement.

Special Academic Programs

Optional programs are available to involve College Ten students in academic and cocurricular activities beyond the first-quarter core course. They are designed to promote students' academic achievement and success by connecting them with faculty mentors and helping them pursue leadership experiences in particular contexts.

Social Justice Issues Workshop

College Ten students have the option of enrolling in the *Social Justice Issues Workshop* in winter quarter. This 2-credit course meets once per week and can be taken in addition to a regular 15-credit academic load. The workshop offers a small, dynamic learning community in which members explore important issues of personal and cultural identity; social, political, and environmental concerns; and community-mindedness. The class emphasizes small-group experiential learning through structured exercises and group activities, and also includes discussions, film presentations, and guest speakers. The course is offered to both first-year and upper-division students.

Service Learning: Esprit de Corps

Students can extend their learning beyond the classroom by getting practical experience and course credit as an intern for a nonprofit or school in the Santa Cruz community. This type of hands-on experience is known as service learning or field study. Examples include assisting in a classroom or at a homeless shelter. College Ten has its own service-learning program. The service-learning supervisor teaches a class, *Esprit de Corps*, in which students meet weekly to reflect upon their experiences, discuss readings, and listen to speakers from the community. To culminate the service experience, students develop a final project related to civic engagement. Other service-learning opportunities include Praxis, a service-learning organization, and a service-learning trip to Mexico for alternative spring break.

Practical Activism: Lessons in Local and Global Change

This annual one-day conference focuses on international social justice concerns in the local context. Students gain valuable leadership skills in developing and implementing this exceptional program, which involves collaboration among faculty, staff, and the local community.

Students as Teachers and Mentors

College Ten students have special opportunities to become course assistants, tutors, and student mentors for course credit. Students gain independent experience as teachers leading their own discussion sections of a College Ten course. They receive close supervision that emphasizes a collaborative approach to developing and enhancing teaching, communication, and leadership skills. The College Ten academic advisers can also direct students to other opportunities for student-teaching and peer-mentoring programs on campus. These are excellent opportunities to work closely with a faculty member and to develop one's own skills as a teacher and a leader.

Research Opportunities

The UC Santa Cruz faculty are ranked high in their quality of research. College Ten students are encouraged to take advantage of the many excellent opportunities available to work closely with faculty as research apprentices. Students will find many internship, independent study, or senior thesis programs in the departments of most majors. The College Ten academic advisers will help link students with these programs.

College Ten Pathways to Distinction

We understand that learning styles and educational commitments are unique and personal. Therefore, students are recognized with College Ten Distinction upon successful completion of three quarters (15 Credits) of experiential course work in **Service and Leadership** and/or

Research and Scholarship focused on social justice and diversity issues. Applicable courses in service-learning and research opportunities with faculty can fulfill the criteria for distinction. This recognition is intended to serve as an incentive for students to pursue activities that are apt to help them succeed in college and beyond.

College Community and Facilities

Founded in fall 2002, College Ten is the newest college at UCSC. Consistent with UCSC's founding vision, College Ten creates an integrated living-and-learning environment through engaging academic and extracurricular programs focusing on the theme of Social Justice and Community. Students and staff collaborate to develop an array of programs exploring the many aspects of social justice. Some of the programs include faculty presentations, guest speakers, debates, films, arts events, and interactive workshops. These programs bring together members of our community to learn, debate, and challenge ourselves about important issues facing us today in an atmosphere of mutual respect and engagement.

College Nights

Every so often, students and staff work together to plan College Nights, which are large-scale

community celebrations held in the dining commons and open to all College Ten students whether or not they live on campus. College Nights include food, entertainment, and educational materials related to a college's theme.

Student Government

Student Government represents the students in the college. It appoints students to campus and college committees, consults with college administration on policy development, and provides monetary support to student organizations.

Cocurricular Programs and Opportunities

Getting involved in cocurricular activities is a predictor of college success. Not only do college activities help students make friends, they foster leadership and group cooperation skills. There are many opportunities at College Ten for student involvement. These include the following groups as well as many other programs, activities, and clubs.

CREATE

The purpose of CREATE (Cultural Resources to Educate and to Empower) is to facilitate the ongoing discussion of diversity issues at College Ten and in our living communities, learn about and promote multiculturalism, plan activities, and help students and staff have a resource for inclusiveness and training.

ENGAGE

ENGAGE (Explore New Growth and Gain Experience) offers students the opportunity to explore and develop their own beliefs, values, and feelings about current issues and social concerns through a wide range of exercises, guest speakers, discussions, and debates. Participants develop leadership skills and increase their efficacy as world citizens and leaders at College Ten. ENGAGE meets weekly throughout fall quarter.

PHAT

PHAT (Programming House Activities Team) is a planning committee for the apartment residents who are interested in getting people out of their rooms and into their communities. Programs include the annual Haunted House, the Battle of the Buildings, and Freestyle Fridays.

WATER

WATER (White Allies To End Racism) tackles issues of diversity and racism through the exploration of white racial identity. The group provides a safe and open space for dialogue and the opportunity to work with students of color groups on collaborative action projects.

Alternative Spring Break (ASB)

Students may apply to this program, in which participants spend part of their spring break in New Orleans helping to rebuild the community.

Multicultural Community Weekend

This two-day retreat provides students from diverse backgrounds the opportunity to explore various components of multicultural communication. Through a series of structured exercises and small-group discussions, students share perspectives on issues such as multiculturalism, values orientation, and diversity. The goal of the workshop is to build community and friendship among students as well as to increase students' understanding of the complexity of communicating across diverse backgrounds. The Multicultural Community Weekend is optional; students apply for this opportunity in the fall.

Café Revolución

Located at College Ten, Café Revolución is a favorite gathering place. It is open nightly for social justice performances, music, and social interaction.

Physical Surroundings

College Ten is situated in a redwood grove next to the Social Sciences 1 and 2 Buildings near the heart of campus. One of the campus's Instructional Computing Labs is conveniently located in Social Sciences 2.

A nature preserve serves as College Ten's "backyard." College Ten students have immediate access to hiking, running, and mountain bike trails in the adjacent forest.

Residence halls with approximately 500 single, double, and triple bedrooms opened in fall 2002. These fully furnished residence halls include student lounges, recreational spaces, and Internet connections. In addition, a state-of-the-art dining hall with an adjoining multipurpose room and recreation lounge for both Colleges Nine and Ten opened in fall 2002.

Colleges Ten and Nine also house approximately 300 upper-division students in apartments, with students in single, double, and triple rooms. All apartments have full kitchens, living rooms, bathrooms, and Internet connections. Ground-floor apartments have decks, and most upper apartments have private balconies.

Porter College

The Porter College theme, Arts in a Multicultural Society, reflects the consensus among Porter College fellows that the creative process is an inseparable aspect of a broad-minded and rigorous education. The seminars, cocurricular activities, and cultural environment at Porter encourage creativity in all fields—from composition to community studies to computer programming.

Academic Emphases

Porter's faculty includes most of the campus's practicing artists and art scholars, though some of the college's faculty (and half of its students) specialize in the humanities or in the physical and biological or social sciences. The college is the administrative home of the Division of the Arts and the History of Art and Visual Culture Department. The Digital Arts and New Media Program also has offices here.

Porter 80, the core course focuses on writing across the arts, with concentration on literature and arts of California and the Pacific Rim. Those who are admitted as transfer students are exempt from the core course requirement but may take the core course at their option pending available space; lower-division transfer students who, prior to enrolling, have not completed at least one UC-transferable college English composition course with a minimum grade of C (2.0) or better are permitted to take the core course to satisfy the C1 requirement. Students meet with their faculty member in a seminar, attend regular lecture/performances, and participate in writing groups, advising, and other sessions that introduce some of the academic issues they will confront at the university. The course emphasizes critical reading, writing, and close intellectual contact with faculty and other students.

The college also offers 2-credit courses in a variety of areas connected to the arts. These are small classes in the practice or theory of the arts; they may include investigation of a particular style of music or dance, visits to Bay Area theaters and museums, working in the arts, or creation of a show in one of the college galleries. These diverse offerings allow Porter students to understand the significance of creativity in a university education.

The college provides fellowship funds each year to talented students pursuing original research and creative projects.

College Community and Facilities

The traditional residence halls and apartments play an important role in bringing the college community together. Students are encouraged to spend their beginning years in residence in the college, where housing is available for ~~845~~ 1,125 students. The residence halls are divided into smaller units, with from ~~20 to 35~~ 35 to 45 students sharing common lounges and other facilities. Theme halls include Performing Arts, Film and Digital Media, Gender Studies, Visual Arts, and Outdoors Experiences. Students also have a choice of quiet/intensive-study, same-gender, gender-neutral, or substance-free halls. The six-person apartments are reserved for upper-division students.

In addition to traditional classrooms, Porter has many specialized facilities such as a

fireside lounge, student and faculty art galleries, a study center, and a dining hall that converts to a theater space. The Arts Instructional Computing Laboratories, located at Porter College, consist of two high-end labs oriented toward the arts.

Adjacent to the college are the campus's Theater Arts Center, the Elena Baskin Visual Arts Center, and the Music Center.

Porter provides ~~constructive opportunities for relaxation and recreation~~ social and educational programs to balance the intellectual demands of a university education. The Porter Activities Office, in conjunction with the Porter Student Senate, organizes formal and informal events, including dances, ~~and recreational activities~~, College Nights, and social activities, which augment campuswide activities in these areas. For relaxation, Porter students and faculty gather at the college's coffeehouse—the ~~Hungry Slug~~.

Many students and faculty perform or exhibit their work at Porter, and cultural events are a constant feature of life at the college. The dining commons has been the site of performances by artists such as El Teatro Campesino, lectures and readings by contemporary authors such as Amiri Baraka, and performances by artists such as Komar & Melamid and Nina Wise.

Porter College facilities were constructed through a partnership of public funds and a gift from the Porter-Sesnon family of Santa Cruz. Part of the gift was used to establish an endowment for the college.

For more information, call (831) 459-2273 or visit the web site: www2.ucsc.edu/porter.

Kresge College

Kresge's motto is Independence, Creativity, Community

Academic Emphases

Kresge's core course 80, *Power and Representation* (see page 316), is a writing class that explores the relationships between individuals and their communities—communities as small as families and friendship, colleges and cities; communities as large as nations and the world. Our goal is to empower each individual to think beyond easy answers, to express themselves clearly, to feel at home in writing, and to feel powerful in

representing themselves on the page. In *Power and Representation*, we examine the many ways we constitute ourselves (and are constituted) as individuals in relation to communities. First, we will study ideas about representation as a theoretical grounding, and then focus on representations of nationality, ethnicity, sexual orientation, gender, and race in many genres—critical theory, film, fiction, theater, and nonfiction. Our purpose is to create a dialogue of ideas about ourselves and our relationship to our communities as it is, as it might be, and as we might help make it.

In addition to section meetings, on Tuesday nights all students come together to watch core-related films or performers or listen to lectures. All students will complete a final creative project that engages with the theme of the course.

Those who are admitted as transfer students are exempt from the core course requirement but may take the core course transfer section; lower-division transfer students who, prior to enrolling, have not completed at least one UC-transferable college English composition course with a minimum grade of C (2.0) or better are permitted to take the core course to satisfy the C1 requirement.

In addition to the core course, Kresge offers a series of courses taught by guest faculty, alumni and faculty affiliated with the college. These courses give students a chance to study in small groups on topics close to faculty or alumni research interests and offer students the opportunity to enrich the standard curriculum. A new array of classes is offered each year. For example, Kresge has offered journalism, comic writing, documentary film, gardening, and service learning.

Perhaps because Kresge is known for its creativity and independent spirit, it's also known for its association with writing. We house the Writing Program and The Science Writing Program, and are associated with Literature. Our co-provost, Micah Perks, is co-director of the Creative Writing Program at UCSC. Kresge is the home of *Rapt* and *The Kresge Town Krier*, two literary journals, as well as *City On A Hill*, UCSC's student-run newspaper. Writers House is a residential option for students with an interest in journalism and/or creative writing, regardless of their prospective majors.

Residential Life

Kresge was the sixth college to be built on the UCSC campus. The college was founded on the principle of participatory democracy as a means of encouraging a strong sense of community. Architecturally renowned, Kresge has apartments rather than residence halls.

The Kresge apartments attract students with a sense of independence and community participation. Distinctively designed, the apartments at Kresge proper are configured for four to ten people. Kitchen and living areas look out onto the street, with other rooms facing the surrounding redwood forest. At Kresge East, apartments face the forest for greater quiet. These apartments, with three single and one double bedroom, are typically reserved for continuing upper-division students, although some buildings are also available to new, first-year residents. Kresge's three-to-four-person "in-fill" apartments, Buildings J and K, which are situated between Kresge and Porter colleges, are primarily reserved for continuing upper-division students. These two-bedroom apartments have an efficiency-style kitchen and living area.

The Residential Life and College Programs staff at Kresge work to bring students of similar interests together, academically and socially, by designing fun and unique programming based on student interest. Programs that focus on celebrating the diversity

of the residential community, on multicultural community-building, and on enhancing academic success, through film series, music events, mural painting, food-centered events, and field are highlighted.

Community Life

There are a wide variety of events and activities at the college that shape community life: Lectures, workshops, trips, plays, dances, concerts, and films are a regular part of student life at the college. The nature and tenor of these events are a reflection of the interests of students and staff, who are committed to providing voice and opportunity for all community members.

Students actively shape the college community through participation in Kresge Parliament, an openly structured student organization responsible for voting the allocation of all college membership fees in support of activities and events. Parliament and Town Meetings also serve as a forum for the discussion of college and campuswide issues with college staff and faculty.

Transfer Students

In recognition of the wealth of diversity that transfer students bring to the community—in terms of culture and experience—Kresge is the home of the Transfer Center for campuswide transfer students regardless of college affiliation. This is a staffed facility where students can gather to relax, socialize, hold meetings, and obtain campus information and resource support in a central location. The resource center offers workshops, social evenings, and special events that are tailored to meet the needs of transfer students.

Kresge also offers special advising workshops and 2- and 3-credit courses designed to help transfers in the process of entering the university and moving forward in their careers from here.

Facilities

At the entrance to the college is the restful Piazzetta with a beautiful, architecturally designed fountain. Leading off from the Piazzetta are the Transfer Center, the Commuter Lounge, and a student lounge, equipped with television and VCR. In addition to the Transfer Center, as a unique facility on the campus, the Commuter Lounge is a place for off-campus students who want to use a kitchen, shower, or lockers while on campus. Kresge's Photo Lab Co-op is above the Piazzetta and offers 24-hour accessibility to darkroom equipment. Adjacent to the nearby meadow are a racquetball court and an outdoor basketball court. The college includes a study center with soaring ceilings and walls of glass overlooking the forest, a computer lab equipped with PCs for student use, and a student-run Food Co-op, where organic produce is sold and working memberships are available. At the top of the college are the Town Hall performance facility, the Music Co-op, and a cafe.

If people are looking for an atmosphere that is accepting to different personalities and mind frames, and want the independence to work with other students, Kresge

offers that. Kresge really strives to have a community of people, but leaves space to assert your independence.

—Diem Do, Community Studies

For more information, call (831) 459-2071 or visit the web site: www2.ucsc.edu/kresge.

College Eight

The theme of College Eight is “Environment and Society,” and the college has been one of the central anchors of UCSC’s world-renowned green programs. Its graduates rank among the nation’s top environmental professionals, and, as the college celebrates its first 35 years and looks forward to the future, College Eight is poised to play a pioneering role in educating a new generation of green entrepreneurs.

College Eight has a vigorous intellectual life. During the course of the academic year, UCSC faculty, and renowned professionals from the Silicon Valley and beyond, offer seminars, lectures, and guest classes on environmental issues and a wide range of other topics, ranging from philosophy to business. College Eight also affords students a sense of community, and offers opportunities to augment academic training with a wide range of extra-curricular activities. Its students major in nearly every discipline offered at UCSC, while being strongly committed to environmental stewardship.

Academic Emphases

College Eight is in the process of launching a number of exciting new initiatives aimed at furthering its mission. In fall 2009, a pioneering new three-quarter core course, entitled *Nurturing Environmental Citizenship*, is being introduced. The course is taught by senior faculty from the departments of Environmental Studies, Ecology and Evolutionary Biology, Earth and Planetary Sciences, and Electrical Engineering. The course is designed to provide all students, regardless of their eventual major, a solid foundation for success in the emerging green economy. The fall-quarter course is mandatory for all incoming students, and its goal is to introduce students to environmental issues, past, present, and future. The winter-quarter course takes on the principles of environmental science, and the spring quarter course, the ability of technological innovation to address environmental challenges.

Kresge College

Kresge is an experience that will allow you to learn a lot about yourself, be independent and learn to take responsibility for yourself.

—Yvette Keller, Psychology and Modern Literature (double major)

Kresge's motto is Independence, Creativity, Community

Academic Emphases

Kresge faculty are primarily from the humanities; they include anthropologists, artists, writers, dramatists, journalists, and political theorists. The college houses the Departments of Literature and Women's Studies, the Writing Program, the journalism minor, and the Dickens Project.

Kresge's core course 80, Power and Representation (see page 316), invites active participation in the creation of new social possibilities. The Kresge core course is an examination of key moments at the middle and end of the 20th century. The class focuses on Hiroshima and the dawn of the atomic age; and the social movements of the late 1950s, 1960s, and early 1970s, including civil rights, the Vietnam War, the women's movement, and the gay and lesbian movement. Each instructor has a special two-week period to examine topics the instructor is well versed in, and which reflect the overall focus of the core curriculum. The last part of the course deals with the economic downturn of the 1990s. In addition to section meetings, on Tuesday nights all students come together to watch core-related films or performers or listen to lectures.

The core course seeks to open avenues to new ways of thinking and to various academic disciplines at the university, as it integrates the student's intellectual, social, and personal lives in a stimulating and supportive environment. The core course develops critical writing and thinking skills that prepare students for the rapidly changing multicultural world of the year 2006 and beyond. Special sections of the core course are designed specifically for transfer students, who can enroll in this course as an elective. These sections emphasize the same issues and skills development within a context that explores a transfer student's particular concerns on entering the university. Those who are admitted as transfer students are exempt from the core course requirement but may take the core course at their option pending available space; lower-division transfer students who, prior to enrolling, have not completed at least one UC-transferable college English composition course with a minimum grade of C (2.0) or better are permitted to take the core course to satisfy the C1 requirement.

In addition to the core course, Kresge offers a series of courses taught by faculty affiliated with the college. These courses give students a chance to study in small groups with faculty on topics close to faculty research interests and provide training in skills

~~helpful to students as they begin their majors. A new array of classes is offered each year. Some of the courses in the past have been taught by senior faculty in mathematics, anthropology, history, literature, and journalism.~~

Kresge's core course 80, *Power and Representation* (see page 316), is a writing class that explores the relationships between individuals and their communities—communities as small as families and friendship, colleges and cities; communities as large as nations and the world. ~~Living at Kresge] takes a person who is confident with who they are . . . someone who is independent. You cook your own meals, live in a house environment with others who don't necessarily share the same view as you. It is a lot of work, but it has a big payoff. The people I lived with are still my best friends today.~~

~~———Samantha Vincent, Psychology~~

Community Life

There are a wide variety of events and activities at the college that shape community life: Lectures, workshops, trips, plays, dances, concerts, and films are a regular part of student life at the college. The nature and tenor of these events are a reflection of the interests of students and staff, who are committed to providing voice and opportunity for all community members.

Students actively shape the college community through participation in Kresge Parliament, an openly structured student organization responsible for voting the allocation of all college membership fees in support of activities and events. Parliament and Town Meetings also serve as a forum for the discussion of college and campuswide issues with college staff and faculty.

Transfer Students

In recognition of the wealth of diversity that transfer students bring to the community—in terms of culture and experience—Kresge is the home of the Transfer Center for campuswide transfer students regardless of college affiliation. This is a staffed facility where students can gather to relax, socialize, hold meetings, and obtain campus information and resource support in a central location. The resource center offers workshops, social evenings, and special events that are tailored to meet the needs of transfer students.

~~Kresge has provided a place for me, as a transfer student, where my questions and concerns have been addressed. As a Peer Adviser, it has become my commitment~~

~~to work with the Kresge community to provide students with an environment where they can experience the richness of university life.~~

~~—Julie Taylor, Literature; Chancellor's Undergraduate Internship Program~~

Kresge also offers special advising workshops and 2- and 3-credit courses designed to help transfers in the process of entering the university and moving forward in their careers from here.

Facilities

At the entrance to the college is the restful Piazzetta ~~with its “un-fountain.” Spinning off from the Piazzetta~~ with a beautiful, architecturally designed fountain. Leading off from the Piazzetta are the Transfer Center, the Commuter Lounge, and a student lounge, equipped with television and VCR. In addition to the Transfer Center, as a unique facility on the campus, the Commuter Lounge is a place for off-campus students who want to use a kitchen, shower, or lockers while on campus. Kresge's Photo Lab Co-op is above the Piazzetta and offers 24-hour accessibility to darkroom equipment. Adjacent to the nearby meadow are a racquetball court and an outdoor basketball court. College Eight

~~The theme of College Eight—Environment and Society—is concern for social, political, scientific, and ethical issues, recognizing the essential interconnections among human beings and between humans and all other forms of life. College Eight faculty are drawn primarily from the Environmental Studies and Sociology Departments, but also include faculty from other disciplines, such as Biology, Computer Engineering, Computer Science, Earth Sciences, Mathematics, Physics, and Psychology.~~

~~The students who come to College Eight bring with them a wide variety of life, work, and educational experiences. They represent all the disciplines in their choices of major. They also represent a rich diversity of cultural backgrounds. A large number of transfer students attend College Eight and tend to have a clear sense of their educational and professional objectives. For first-year students, the college fosters an exciting, interdisciplinary intellectual atmosphere in which to explore their academic interests and potential. This mix of ages and backgrounds creates a refreshingly easy fellowship among faculty, staff, and students.~~

Academic Emphases

~~The College Eight core course 80, Environment and Society, examines different perspectives on environment and community in the contemporary world. (See page 164 for the course description.) Through a series of lectures, films, readings, and small-group discussions, the course provides an opportunity for first-year students to study issues of vital importance and to share their diverse backgrounds, cultural heritage, and points of view. The course, which is required of all first-year students, features guidance and practice in the critical reading and writing skills necessary for successful study at the university level. Those who are admitted as transfer students are exempt from the core course requirement but may take the core course at their option pending available space; lower-division transfer students who, prior to enrolling, have not completed at least one UC-transferable college English composition course with a minimum grade of C (2.0) or better are permitted to take the core course to satisfy the C1 requirement.~~

~~College Eight students and faculty are encouraged to develop courses, conferences, and field projects. Internships and field studies offer an opportunity to link classroom theory with action in the community.~~

The theme of College Eight is “Environment and Society,” and the college has been one of the central anchors of UCSC’s world-renowned green programs. Its graduates rank among the nation’s top environmental professionals, and, as the college celebrates its first 35 years and looks forward to the future, College Eight is poised to play a pioneering role in educating a new generation of green entrepreneurs.

College Eight has a vigorous intellectual life. During the course of the academic year, UCSC faculty, and renowned professionals from the Silicon Valley and beyond, offer seminars, lectures, and guest classes on environmental issues and a wide range of other topics, ranging from philosophy to business. College Eight also affords students a sense of community, and offers opportunities to augment academic training with a wide range of extra-curricular activities. Its students major in nearly every discipline offered at UCSC, while being strongly committed to environmental stewardship.

Academic Emphases

College Eight is in the process of launching a number of exciting new initiatives aimed at furthering its mission. In fall 2009, a pioneering new three-quarter core course, entitled *Nurturing Environmental Citizenship*, is being introduced. The course is taught by senior faculty from the departments of Environmental Studies, Ecology and Evolutionary Biology, Earth and Planetary Sciences, and Electrical Engineering. The course is designed to provide all students, regardless of their eventual major, a solid foundation for success in the emerging green economy. The winter-quarter course takes on the principles of environmental science, and the spring quarter course, the ability of technological innovation to address environmental challenges.

College Nine

At College Nine, we introduce students to our increasingly interconnected world. Students can learn about the impact of economic globalization. We also expect them to come to appreciate the diversity of cultural traditions.

—Campbell Leaper,
College Nine Founding Provost

Academic Emphases

College Nine's theme of International and Global Issues emphasizes the impact of our increasingly interconnected world. We consider how people around the world affect one another through global economies, education, mass media, jet travel, and computers. Some specific issues that our academic and cocurricular programs consider are economic and cultural globalization, immigration, ethnic conflicts, genocide, and human rights. Our programs seek to respect both diversity and unity in understanding individuals and societies. Students interested in these issues either as their major focus or as part of their general education are invited to join the College Nine community.

Writing Seminar

In the first-quarter frosh course, *Introduction to University Discourse: International and Global Issues* (see page 164), students examine current issues pertinent to the college's intellectual theme. Topics address issues such as globalization, inequities in wealth and poverty across the world, human rights, and regional conflicts.

The seminar emphasizes the development of students' writing skills. Being able to write well is a valuable asset for success in college and in most careers. Students write several reflective and analytical papers during the quarter. Each paper undergoes at least one revision after the student receives constructive feedback from the instructor. Thus, the instructors work closely with each student throughout the quarter.

All students who enter as frosh are required to pass the college writing seminar with a grade of C or better. Those who are admitted as transfer students are exempt from the core course requirement but may take the core course at their option pending available space; lower-division transfer students who, prior to enrolling, have not completed at least one UC-transferable college English composition course with a minimum grade of C (2.0) or better are permitted to take the core course to satisfy the C1 requirement.

Global Action

In this workshop facilitated by peer instructors, students will learn about current international and global issues through interactive exercises, small group discussions and faculty presentations. Students will develop an "action plan" to raise awareness about one or more of these concerns and take practical steps to create positive change in the world.

Global Issues Colloquium Series

Through weekly presentations by leading experts, students learn about global challenges and also consider possible solutions. There is often an informal dinner following the presentation that allows for discussion with the speaker. Students have the option of taking this as a 1-credit class or of occasionally attending the presentations on a drop-in

basis.

Special Academic Programs

Optional programs are available to involve College Nine students in academic and cocurricular activities beyond the first-quarter course. They are designed to promote students' academic achievement and success by connecting them with faculty mentors and helping them pursue leadership experiences in particular contexts.

Service Learning: Espirit de Corps

Students can extend their learning beyond the classroom by getting practical experience and course credit working as an intern for a ~~community or business organization~~ non-profit or school in the Santa Cruz Community. ~~This type of practical experience is known as service learning or field study.~~ Examples include assisting in a classroom or at a homeless shelter. College Nine has its own service-learning program. ~~This indicates a class called Espirit de Corps (110 & 110B).~~ The service-learning supervisor guides the student at the practicum site and helps the student ~~develop a reading list and paper topic related to the placement.~~ reflect upon the experience as well as develop a final project.

Students as Teachers and Mentors

College Nine students have special opportunities to become course assistants, tutors, and student mentors for course credit. Students gain independent experience as teachers leading their own discussion sections of a College Nine course. They receive close supervision that emphasizes a collaborative approach to developing and enhancing teaching, communication, and leadership skills. The College Nine academic advisers can also direct students to other opportunities for student-teaching and peer-mentoring programs on campus. These are excellent opportunities to work closely with a faculty member and to develop one's own skills as a teacher and a leader.

Global Information Internship Program

The Global Information Internship Program (GIIP) places highly motivated students in internships with nongovernmental organizations and community groups. Students in GIIP help these organizations and groups in the use of Internet-based information and communications technologies. Interns acquire leadership and organizational skills through the "learning-by-doing" method. For more information, see page 42 and visit the web site at www2.ucsc.edu/giip.

Practical Activism: Lessons in Local and Global Change

This annual one-day conference focuses on international social justice concerns in the local context. Students gain valuable leadership skills in developing and implementing this exceptional program, which involves collaboration among faculty, staff, and the local community.

Education Abroad

The UC Education Abroad Program (see page 40) places students at a university in another country for one or more quarters. Studying abroad can be a valuable way to expand one's understanding of the world. Given the international focus at College Nine, students are encouraged (but not required) to develop a second language or to study

abroad.

Research Opportunities

The faculty at UC Santa Cruz are ranked high in their quality of research. College Nine students are encouraged to take advantage of the many excellent opportunities available to work closely with faculty as research apprentices. Students will find many internship, independent study, or senior thesis programs in the departments of most majors. The College Nine academic advisers will help link students with these programs.

College Nine Scholars Program

~~Eligible College Nine frosh may apply to the Scholars Program. This may include enrolling in an honors section of the frosh writing seminar in the fall quarter, the 2-credit workshop in the winter, and a special seminar with a social sciences faculty member in the spring.~~

College Nine Pathways to Distinction

Another feature of College Nine is that qualified students may graduate with College Nine Distinction. This recognition is intended to serve as an incentive for students to pursue activities that are especially apt to help them succeed in college and beyond. Two pathways are possible:

Research and scholarship. In this pathway, students pursue research with faculty by completing three quarters (15 credits) of work on a senior thesis or a research internship. Students may be recognized with College Nine Distinction if they do a thesis or a research internship in their major on a topic related to international or global issues.

Language and culture. Students who enroll in at least three quarters (15 credits) in either Education Abroad or a foreign language (or a combination) may qualify for College Nine Distinction.

College Community and Facilities

Founded in fall 2000, College Nine is one of the newest colleges at UCSC. Consistent with UCSC's founding vision, College Nine creates an integrated living and learning environment through engaging academic and extracurricular programs focusing on the theme of International and Global Perspectives. Students and staff collaborate to develop an array of programs exploring the many aspects of the college's theme. Some of the programs include faculty presentations, guest speakers, debates, films, arts events, and interactive workshops. These programs bring together members of our community to learn, debate, and challenge ourselves about important issues facing us today in an atmosphere of mutual respect and engagement.

College Nights

~~Each month~~ Several times a quarter, the college community comes together to plan a College Night, which is a large-scale community celebration held in the dining commons and open to all College Nine students whether or not they live on campus. These events are planned by students and focus ~~es~~ on particular regions of the world the same some element of international and global perspective issues. . College Nights include food, entertainment, and educational materials related to the theme. Some past College Nights have been Winter Holidays from Around the World, Carnival, and Asian Traditions.

International Living Center

The International Living Center (ILC) at College Nine offers a unique living environment fostering understanding, cooperation, and friendship among upper-division students from different nations, cultures, and backgrounds. Half of the residents are students from the United States, and the other half are students from various countries around the world. Students reside in the College Nine Apartments. Based out of the International Living Center, the International Affairs Group (IAG) offers is an opportunity for all College Nine and College Ten community members the opportunity to engage in lively discussions about important current international issues with one another through guest speakers, film, literature, media, and personal experience.

Cocurricular Programs and Opportunities

Getting involved in cocurricular activities is a predictor of college success. Not only do college activities help students make friends, they foster leadership and group cooperation skills. There are many opportunities at College Nine for student involvement. These include the following groups as well as many other programs, activities, and clubs.

Fall-Global Leadership Institute Development

Global Leadership and Development (GLAD) meets weekly throughout the fall quarter and provides a wide range of exercises, guest speakers, and programs designed to foster and develop participants' efficacy as world citizens and leaders of College Nine.

Model United Nations

~~Student leadership and involvement are key to successfully building the new College Nine community. The Fall Leadership Institute offers students the opportunity to develop leadership skills and to develop efficacy as world citizens and leaders at College Nine. The institute meets weekly throughout fall quarter, providing a wide range of exercises, guest speakers, discussions, and debates.~~ In the UCSC Model United Nations, students step into the shoes of the world's ambassadors. They discuss real international issues and resolve problems that affect countries all over the world. Throughout the school year, the group travels to other universities and attends conferences with other students aimed at re-creating the actual UN.

Student Government

Student Government represents the students in the college. It appoints students to campus and college committees, consults with college administration on policy development, and provides monetary support to student organizations.

CREATE

CREATE (Cultural Resources to Educate and to Empower) offers a community at College Nine for students of color to find support and empowerment through mentorship and friendship.

PHAT

PHAT (Programming House Activities Team) is a planning committee for the apartment residents who are interested in getting people out of their rooms and into their

communities. Programs include the annual Haunted House and the Battle of the Buildings.

WATER

WATER (White Allies To End Racism) tackles issues of diversity and racism through the exploration of white racial identity. The group provides a safe and open space for dialogue and the opportunity to work with students of color groups on collaborative action projects.

Rainbow Club

~~The Rainbow Club provides opportunities for gay, lesbian, bisexual, transgender, intersex, queer, and questioning students and their allies to join together for self-awareness and social activities in a fun, relaxed atmosphere.~~

Alternative Spring Break (ASB)

Students may apply to this program, in which participants spend part of their spring break in ~~Mexico building a house and helping in the community.~~ New Orleans helping to rebuild the community.

Praxis (Student Volunteer Community)

Praxis is an organization geared toward community building and social justice. By participating in Praxis, students gain exposure to a variety of Santa Cruz community agencies and explore what it means to be ~~social~~ agents of social change.

Intercultural Communication Retreat

This two-day retreat provides international and American students from diverse backgrounds the opportunity to explore various components of intercultural communication. Through a series of structured exercises and small-group discussions, students share perspectives on issues such as multiculturalism, values orientation, and diversity. The goal of the workshop is to build community and friendship among international and American students as well as to increase students' understanding of the complexity of communicating across cultures. The Intercultural Communication Retreat is optional; students apply for this opportunity in the fall.

Physical Surroundings

College Nine is situated in a redwood grove next to the Social Sciences 1 and 2 Buildings near the heart of campus. One of the campus's Instructional Computing Labs is conveniently located in the Social Sciences 2 Building.

A nature preserve serves as College Nine's "backyard." College Nine students have immediate access to hiking, running, and mountain bike trails in the adjacent forest.

Residence halls with Approximately 500 ~~Residence halls with 400~~ single, and double, and triple bedrooms opened in fall 2002. These fully furnished residence halls include student lounges, recreational spaces, and Internet connections. In addition, a state-of-the-art dining hall with an adjoining ~~game room and student lounge~~ multi-purpose room and recreation lounge for both Colleges Nine and Ten opened in fall 2002.

Colleges Nine and Ten also house approximately 300 upper-division students in

apartments, with 190 students in single, ~~bedrooms and the balance in~~ double, and triple rooms. All apartments have full kitchens, living rooms, bathrooms, and Internet connections. Ground-floor apartments have decks, and most upper apartments have private balconies.

For more information about academic or general college programs, call (831) 459-5034, e-mail dslater@ucsc.edu, or visit the web site: collegenine.ucsc.edu.

College Ten

Our goal at College Ten is to foster students' concerns for social justice and their respect for diversity. This appreciation develops through both understanding and practice. Students can study the roots of social problems such as prejudice, ethnic hatreds, poverty, and political oppression. Another form of learning can occur through involvement in community organizations and other agencies. In these ways, we hope our students can contribute to the makings of a better world.

—Campbell Leaper,
College Ten Founding Provost

Academic Emphases

College Ten's theme of Social Justice and Community addresses a range of social problems and their impact on all members of society. In particular, the academic and cocurricular programs consider the injustices that many people confront in their lives. Possible community and governmental policies for addressing social, political, and economic inequalities are also examined. In addition, the college provides students with opportunities to make their own positive contributions to social change through community involvement or scholarly research.

The college curriculum will explore the causes and consequences of social injustice in several ways. Students will examine the roots of prejudice, discrimination, and violence directed toward groups based on their ethnicity, skin color, gender, sexual orientation, religious beliefs, or political views. They will also consider the causes and consequences of poverty both within the United States and across the world.

Writing Seminar

In the first-quarter frosh course, *Introduction to University Discourse, Social Justice and*

Community (see page 165), students examine current issues pertinent to the college's intellectual theme. Topics address issues such as poverty, discrimination, and economic injustice. Ways that communities, governments, and businesses can address inequities in society are also examined.

The seminar emphasizes the development of students' writing, reading, and speaking skills. Being able to write well is a valuable asset for success in college and later in most careers. Students write several reflective and analytical papers during the quarter. Each paper undergoes at least one revision after the student receives constructive feedback from the instructor. Thus, the instructors work closely with each student throughout the quarter.

All students who enter as frosh are required to pass the college writing seminar with a grade of C or better. Those who are admitted as transfer students are exempt from the core course requirement but may take the core course at their option pending available space; lower-division transfer students who, prior to enrolling, have not completed at least one UC-transferable college English composition course with a minimum grade of C (2.0) or better are permitted to take the core course to satisfy the C1 requirement.

Special Academic Programs

Optional programs are available to involve College Ten students in academic and cocurricular activities beyond the first-quarter core course. They are designed to promote students' academic achievement and success by connecting them with faculty mentors and helping them pursue leadership experiences in particular contexts.

Social Justice Issues Workshop

College Ten students have the option of enrolling in the *Social Justice Issues Workshop* in winter quarter. This 2-credit course meets once per week and can be taken in addition to a regular 15-credit academic load. The workshop offers a small, dynamic learning community in which members explore important issues of personal and cultural identity; social, political, and environmental concerns; and community-mindedness. The class emphasizes small-group experiential learning through structured exercises and group activities, and also includes discussions, film presentations, and guest speakers. The course is offered to both first-year and upper-division students.

Service Learning: Espirit de Corps

Students can extend their learning beyond the classroom by ~~volunteering for a local nonprofit or school in the community for credit~~ getting practical experience and course credit as an intern for a non-profit or school in the Santa Cruz community. This type of hands-on experience is known as service learning or field study. Examples include assisting in a classroom or at a homeless shelter. College Ten has its own service-learning program. The service-learning supervisor teaches a class, *Espirit de Corps*, in which students meet weekly to reflect upon their experiences, discuss readings, and listen to speakers from the community. To culminate the service experience, students develop a final project related to civic engagement. Other service-learning opportunities include Praxis, a service-learning organization, and a service-learning trip to Mexico for alternative spring break.

Practical Activism: Lessons in Local and Global Change

This annual one-day conference focuses on international social justice concerns in the local context. Students gain valuable leadership skills in developing and implementing this exceptional program, which involves collaboration among faculty, staff, and the local community.

Students as Teachers and Mentors

College Ten students have special opportunities to become course assistants, tutors, and student mentors for course credit. Students gain independent experience as teachers leading their own discussion sections of a College Ten course. They receive close supervision that emphasizes a collaborative approach to developing and enhancing teaching, communication, and leadership skills. The College Ten academic advisers can also direct students to other opportunities for student-teaching and peer-mentoring programs on campus. These are excellent opportunities to work closely with a faculty member and to develop one's own skills as a teacher and a leader.

Research Opportunities

The UC Santa Cruz faculty are ranked high in their quality of research. College Ten students are encouraged to take advantage of the many excellent opportunities available to work closely with faculty as research apprentices. Students will find many internship, independent study, or senior thesis programs in the departments of most majors. The College Ten academic advisers will help link students with these programs.

College Ten Scholars Program

~~Eligible College Ten frosh may apply to the Scholars Program. This may include enrolling in an honors section of the frosh writing seminar in the fall, the 2-credit workshop in the winter, and a special seminar with a social sciences faculty member in the spring.~~

College Ten Pathways to Distinction

~~Another feature of College Ten is that qualified students may graduate with College Ten Distinction. This recognition is intended to serve as an incentive for students to pursue activities that are especially apt to help them succeed in college and beyond. Two pathways are possible:~~

~~**Research and scholarship.** In the first pathway, students are encouraged to pursue research opportunities with faculty by completing three quarters (15 credits) of work on a senior thesis or a research internship. Students may be recognized with College Ten Distinction if they do a thesis or a research internship in their major on a topic related to the theme of social justice and community.~~

~~**Service and leadership.** The second route to graduating with College Ten Distinction is through completing three quarters (15 credits) of service-learning internships, teaching, or other forms of community service. We understand that learning styles and educational commitments are unique and personal. Therefore, students are recognized with College Ten Distinction upon successful completion of three quarters (15 Credits) of experiential course work in **Service and Leadership** and/or **Research and Scholarship** focused on social justice and diversity issues. Applicable courses in service-learning and research opportunities with faculty can fulfill the criteria for distinction. This recognition is intended to serve as an incentive for students to pursue activities that are especially apt to~~

| help them succeed in college and beyond.

College Community and Facilities

Founded in fall 2002, College Ten is the newest college at UCSC. Consistent with UCSC's founding vision, College Ten creates an integrated living-and-learning environment through engaging academic and extracurricular programs focusing on the theme of Social Justice and Community. Students and staff collaborate to develop an array of programs exploring the many aspects of social justice. Some of the programs include faculty presentations, guest speakers, debates, films, arts events, and interactive workshops. These programs bring together members of our community to learn, debate, and challenge ourselves about important issues facing us today in an atmosphere of mutual respect and engagement.

College Nights

| Every ~~quarter~~ so often, students and staff work together to plan College Nights, which are large-scale community celebrations held in the dining commons and open to all College Ten students whether or not they live on campus. College Nights include food, entertainment, and educational materials related to a college's theme. ~~a theme.~~

Student Government

Student Government represents the students in the college. It appoints students to campus and college committees, consults with college administration on policy development, and provides monetary support to student organizations.

Cocurricular Programs and Opportunities

Getting involved in cocurricular activities is a predictor of college success. Not only do college activities help students make friends, they foster leadership and group cooperation skills. There are many opportunities at College Ten for student involvement. These include the following groups as well as many other programs, activities, and clubs.

CREATE

The purpose of CREATE (Cultural Resources to Educate and to Empower) is to facilitate the ongoing discussion of diversity issues at College Ten and in our living communities, learn about and promote multiculturalism, plan activities, and help students and staff have a resource for inclusiveness and training.

ENGAGE

ENGAGE (Explore New Growth and Gain Experience) offers students the opportunity to explore and develop their own beliefs, values, and feelings about current issues and social concerns through a wide range of exercises, guest speakers, discussions, and debates. Participants develop leadership skills and increase their efficacy as world citizens and leaders at College Ten. ENGAGE meets weekly throughout fall quarter.

PHAT

PHAT (Programming House Activities Team) is a planning committee for the apartment residents who are interested in getting people out of their rooms and into their

communities. Programs include the annual Haunted House, the Battle of the Buildings, and Freestyle Fridays.

WATER

WATER (White Allies To End Racism) tackles issues of diversity and racism through the exploration of white racial identity. The group provides a safe and open space for dialogue and the opportunity to work with students of color groups on collaborative action projects.

Rainbow Club

~~The Rainbow Club provides opportunities for gay, lesbian, bisexual, transgender, intersex, queer, and questioning students and their allies to join together for self-awareness and social activities in a fun, relaxed atmosphere.~~

Alternative Spring Break (ASB)

Students may apply to this program, in which participants spend part of their spring break in ~~Mexico building a house and helping in the community.~~ New Orleans helping to rebuild the community.

Multicultural Community Weekend

This two-day retreat provides students from diverse backgrounds the opportunity to explore various components of multicultural communication. Through a series of structured exercises and small-group discussions, students share perspectives on issues such as multiculturalism, values orientation, and diversity. The goal of the workshop is to build community and friendship among students as well as to increase students' understanding of the complexity of communicating across diverse backgrounds. The Multicultural Community Weekend is optional; students apply for this opportunity in the fall.

Café Revolución

Located at College Ten, Café Revolución is a favorite gathering place. It is open nightly for social justice performances, music, and social interaction.

Physical Surroundings

College Ten is situated in a redwood grove next to the Social Sciences 1 and 2 Buildings near the heart of campus. One of the campus's Instructional Computing Labs is conveniently located in Social Sciences 2.

A nature preserve serves as College Ten's "backyard." College Ten students have immediate access to hiking, running, and mountain bike trails in the adjacent forest.

Residence halls with approximately 500 ~~400~~ single-~~and double,~~ and tripple bedrooms opened in fall 2002. These fully furnished residence halls include student lounges, recreational spaces, and Internet connections. In addition, a state-of-the-art dining hall with an adjoining ~~game room~~ multi-purpose room and ~~student recreation~~ lounge for both Colleges Nine and Ten opened in fall 2002.

Colleges Ten and Nine also house approximately 300 upper-division students in apartments, with ~~190~~ students in single-~~bedrooms and the balance in,~~ double, and triple rooms. All apartments have full kitchens, living rooms, bathrooms, and Internet connections. Ground-floor apartments have decks, and most upper apartments have

private balconies.

Appendixes

To read an updated copy of this page with strikeouts and additions highlighted, see 2009-10 Appendixes, highlighted copy.

Please note that sections under this topic that contained no changes from the General Catalog 2008-10 are not included. For the complete section, go to 2008-10 Appendixes.

Appendix A: California Residency and Nonresident Tuition Fee

If you do not meet the University of California requirements for residence for tuition purposes on the residence determination date for each term in which you propose to attend the university, you must pay a Nonresident Tuition Fee in addition to all other fees. The residence determination date is the day instruction begins at the last of the University of California campuses to open for the quarter, and for schools on the semester system, the day instruction begins for the semester.

Law Governing Residence

The rules regarding residence for tuition purposes at the University of California are governed by the California Education Code and implemented by Standing Orders of the Regents of the University of California. Under these rules, adult citizens and certain classes of aliens can establish residence for tuition purposes. There are particular rules that apply to the residence classification of minors (see below).

Note: Registered domestic partners are included in rules that apply to spouses.

Who Is a Resident?

If you are an adult student (at least 18 years of age), you may establish residence in California if

- (1) You are a U.S. citizen.
- (2) You are a permanent resident or other immigrant.
- (3) You are a nonimmigrant who is not precluded from establishing a domicile in the U.S. This includes nonimmigrants who hold valid visas of the following types: A, E, G, H-1B, H-4, I, K, L, N, O-1, O-3, R, T, U, or V.

To establish residence you must be physically present in California for more than one year, and you must come here with the intent to make California your home as opposed to coming to this state to go to school. Physical presence within the state solely for educational purposes does not constitute the establishment of California residency, regardless of the length of stay. You must demonstrate your intention to make California your home by severing your residential ties with your former state of residence and establishing those ties with California. If these steps are delayed, the one-year durational period will be extended until you have demonstrated both presence and intent for one full year. If your parents are not California residents, you are required to be financially independent in order to be a resident for tuition purposes. Your residence cannot be derived from your spouse, a registered domestic partner or a parent.

Requirements for Financial Independence

You are considered "financially independent" if one or more of the following applies:

- (1) You are at least 24 years of age by December 31 of the calendar year of the term for which you are requesting resident classification.
- (2) You are a veteran of the U.S. Armed Forces.
- (3) You are a ward of the court or both parents are deceased.

(4) You have legal dependents other than a spouse or a registered domestic partner.

(5) You are married, a registered domestic partner, or a graduate student, and you were not/will not be claimed as an income tax deduction by any individual other than your spouse or domestic partner for the tax year immediately preceding the term for which you request resident classification.

(6) You are a single undergraduate student and you were not claimed as an income tax deduction by your parents or any other individual for the two tax years immediately preceding the term for which you request resident classification, and you can demonstrate self-sufficiency for those years and the current year.

Note: Financial independence is not a factor in determining residence status for graduate student instructors, graduate student teaching assistants, research assistants, junior specialists, postgraduate researchers, graduate student researchers, and teaching associates who are employed 49 percent or more of full time or awarded the equivalent in university-administered funds (e.g., grants, stipends, fellowships) for the term for which resident classification is sought.

Establishing Intent for California Residency

Indications of your intent to make California your permanent residence can include the following: registering to vote and voting in California elections; designating California as your permanent address on all school and employment records, including military records if you are in the military service; obtaining a California driver's license or, if you do not drive, a California identification card; obtaining California vehicle registration; paying California income taxes as a resident, including taxes on income earned outside California from the date you establish residence; establishing a home in California where you keep your personal belongings; and licensing for professional practice in California. The absence of these indicia in other states during any period for which you claim California residence can also serve as an indication of your intent. Documentary evidence is required and all relevant indications will be considered in determining your classification. Your intent will be questioned if you return to your prior state of residence when the university is not in session.

General Rules Applying to Minors

If you are an unmarried minor (under age 18), the residence of the parent with whom you live is considered to be your residence. If you live with neither parent, your residence is that of the parent with whom you last lived. Unless you are a minor alien present in the U.S. under the terms of a nonimmigrant visa which precludes you from establishing domicile in the U.S., you may establish your own residence when both parents are deceased and a legal guardian has not been appointed. If you derive California residence from a parent, that parent must satisfy the one-year durational/intent requirement.

Specific Rules Applying to Minors

(1) Parent of minor moves from California. You may be entitled to resident status if you are a minor and a U.S. citizen or eligible alien whose parent(s) was a resident of California who left the state within one year of the residence determination date if

- (a) you remained in California after your parent(s) departed;
- (b) you enrolled in a California public postsecondary institution within one year of your parent(s)' departure; and
- (c) once enrolled, you maintain continuous attendance in that institution. Financial independence is not required in this case.

(2) Self-support. You may be entitled to resident status if you are a minor and a U.S. citizen or eligible alien and can prove the following:

- (a) you lived in California for the entire year immediately preceding the residence determination date;
- (b) you have been self-supporting for that year; and
- (c) you intend to make California your permanent home.

(3) Two-year care and control. You may be entitled to resident status if you are a minor and a U.S. citizen or eligible alien and you have lived continuously with an adult who is not your parent for at least two years prior to the residence determination date. The adult with whom you are living must have been responsible for your care and control for the entire two-year period and must have been residing in California during the one year immediately preceding the residence determination

date.

Exceptions that either Confer Residence Status or Exemption from Nonresident Tuition

You may be entitled to an exception conferring residence status or exemption from nonresident tuition if one of the following applies to you.

Some of the exceptions conferring residence status and exemptions are for a limited period of time. Check with the Campus Residence Deputy for more information:

(1) *Member of the military; spouse, registered domestic partner, or other dependents of military personnel.* An undergraduate student who is a member of the U.S. military stationed in California on active duty (unless assigned for educational purposes to a state-supported institution of higher education) is eligible for resident status. A graduate student will be eligible for resident status for two years during which the student must take steps to fulfill the UC resident requirements.

An undergraduate student who is the spouse, registered domestic partner, or natural or adopted child or stepchild of a member of the U.S. military stationed in California on active duty is entitled to resident status. A military dependent who is a graduate student is entitled to resident status only until the student has lived in California the minimum time necessary to become a resident (366 days).

(2) *Child, spouse, or registered domestic partner of a faculty member.* To the extent that university funds are available, a student who is the unmarried, dependent child under the age of 21 or the spouse or registered domestic partner of a University of California faculty member who is a member of the Academic Senate may be eligible for an exemption.

(3) *Child, spouse, or registered domestic partner of a university employee.* A full-time UC employee assigned to work outside the State of California in an institution or state agency and the unmarried, dependent child under the age of 21 or the spouse or registered domestic partner of such an employee may be eligible for resident status. This provision most often applies to employees of Los Alamos National Laboratory.

(4) *Child, spouse, or registered domestic partner of a deceased public law enforcement or fire suppression employee.* A student who is a child, spouse or registered domestic partner of a deceased public law enforcement or fire suppression employee, who was a California resident and was killed in the course of law enforcement or fire suppression duties may be eligible for an exemption.

(5) *Dependent child of a California resident.* A student who has not been an adult resident for more than one year and is the natural or adopted dependent child of a California resident who has been a resident for more than one year immediately prior to residence determination date may be entitled to resident status until the student has lived in California the minimum time necessary to become a resident, so long as continuous attendance is maintained at a California public postsecondary institution.

(6) *Graduate of a California school operated by the Federal Bureau of Indian Affairs (B.I.A.).* A student who is a graduate of a California school operated by the B.I.A. (e.g., Sherman Indian High School) may be eligible for a resident classification.

(7) *Employee of California public school district.* A student holding a valid credential authorizing service in California public schools and employed by a school district in a full-time certificate position may be exempt from nonresident tuition and may be eligible for resident status.

(8) *Student athlete in training at U.S. Olympic Training Center, Chula Vista.* An amateur student athlete in training at the U.S. Olympic Training Center in Chula Vista may be eligible for resident status until he or she has resided in California the minimum time necessary to become a resident.

(9) *Graduate of California high school.* A student who attended high school in California for three or more years (9th grade included) and graduated from a California high school (or attained the equivalent) may be exempt from nonresident tuition. You are not eligible for this exemption if you are a nonimmigrant alien.

(10) *Congressional Medal of Honor recipient.* An undergraduate student under age 28 who is the recipient of the Congressional Medal of Honor or a child of a recipient who at the time of his or her death was a California resident may be eligible for an exemption.

(11) *Surviving dependent of California resident killed in 9/11 terrorist attacks.* An undergraduate student who is the surviving dependent of a California resident who

was killed in the 9/11/01 terrorist attacks on the World Trade Center, the Pentagon Building, or the crash of United Airlines Flight 93 may be eligible for an exemption.

Temporary Absences

If you are a nonresident student who is in the process of establishing a residence for tuition purposes and you return to your former home during noninstructional periods, your presence in the state will be presumed to be solely for educational purposes and only convincing evidence to the contrary will rebut this presumption. Students who are in the state solely for educational purposes will not be classified as residents for tuition purposes regardless of the length of their stay.

If you are a student who has been classified as a resident for tuition purposes and you leave the state temporarily, your absence could result in the loss of your California residence. The burden will be on you (or on your parents if you are a minor) to verify that you did nothing inconsistent with your claim of a continuing California residence during your absence. Steps that you (or your parents) should take to retain a California residence include:

- (1) Continue to use a California permanent address on all records—educational, employment, military, etc.
- (2) Continue to satisfy California tax obligations. If you are claiming California residence, you are liable for payment of income taxes on your total income from the date that you establish your residence in the state, including income earned in another state or country.
- (3) Retain your California voter's registration and vote by absentee ballot.
- (4) Maintain a California driver's license and vehicle registration. If it is necessary to change your driver's license or vehicle registration, you must change them back within the time prescribed by law.

Petitioning for Change of Classification

You must petition in person at the Office of the Registrar for a change of classification from nonresident to resident status. All changes of status must be initiated prior to the first day of classes for the term for which you intend to be classified as a resident.

Time Limitation on Providing Documentation

If additional documentation is required for residence classification but is not readily accessible, you will have until the end of the applicable term to provide it.

Incorrect Classification

If you are incorrectly classified as a resident, your classification will be corrected and you will be required to pay all nonresident tuition not paid. If you concealed information or furnished false information and were classified incorrectly as a result, you are also subject to university discipline. Resident students who become nonresidents must immediately notify the campus residence deputy.

Inquiries and Appeals

Inquiries regarding residence requirements, determination, and/or recognized exceptions should be directed to the Residence Deputy, Office of the Registrar, 190 Hahn Student Services Building, University of California, Santa Cruz, 1156 High Street, Santa Cruz, CA 95064-1077, reg_fees@ucsc.edu, or to the Residence Specialist, Office of the General Counsel, 1111 Franklin Street, 8th Floor, Oakland, CA 94607-5200. No other university personnel are authorized to supply information relative to residence requirements for tuition purposes.

You are cautioned that this summary is not a complete explanation of the law regarding residence. Note that changes may be made in the residence requirements between the publication of this statement and the relevant residence determination date. Any student, following a final decision on residence classification by the residence deputy, may appeal in writing to the residence specialist within 30 days of notification of the residence deputy's final decision.

Privacy Notice

All of the information requested on the Statement of Legal Residence form is required [by the authority of Standing Order 110.2 (a)–(d) of the Regents of the University of California] for determining whether or not you are a legal resident for tuition purposes. You have the right to inspect university records containing the residence information requested on this form. The records

are maintained by the Office of the Registrar, 190 Hahn Student Services Building, University of California, Santa Cruz, 1156 High Street, Santa Cruz, CA 95064-1077.

Appendix A: California Residency and Nonresident Tuition Fee

If you do not meet the University of California requirements for residence for tuition purposes on the residence determination date for each term in which you propose to attend the university, you must pay a Nonresident Tuition Fee in addition to all other fees. The residence determination date is the day instruction begins at the last of the University of California campuses to open for the quarter, and for schools on the semester system, the day instruction begins for the semester.

Law Governing Residence

The rules regarding residence for tuition purposes at the University of California are governed by the California Education Code and implemented by Standing Orders of the Regents of the University of California. Under these rules, adult citizens and certain classes of aliens can establish residence for tuition purposes. There are particular rules that apply to the residence classification of minors (see below).

Note: Registered domestic partners are included in rules that apply to spouses.

Who Is a Resident?

If you are an adult student (at least 18 years of age), you may establish residence in California if

- (1) You are a U.S. citizen.
- (2) You are a permanent resident or other immigrant.
- (3) You are a nonimmigrant who is not precluded from establishing a domicile in the U.S. This includes nonimmigrants who hold valid visas of the following types: A, E, G, H-1B, H-4, I, K, L, N, O-1, O-3, R, T, U, or V.

To establish residence you must be physically present in California for more than one year, and you must come here with the intent to make California your home as opposed to coming to this state to go to school. Physical presence within the state solely for educational purposes does not constitute the establishment of California residency, regardless of the length of stay. You must demonstrate your intention to make California your home by severing your residential ties with your former state of residence and establishing those ties with California. If these steps are delayed, the one-year durational period will be extended until you have demonstrated both presence and intent for one full year. If your parents are not California residents, you are required to be financially independent in order to be a resident for tuition purposes. Your residence cannot be derived from your spouse. ~~Likewise, a registered domestic partner does not derive residence from the other registered domestic partner or parent.~~

Requirements for Financial Independence

~~If you are not financially dependent on a parent who meets the university's requirements for residence for tuition purposes, you are required to be financially independent in order to be a resident for tuition purposes.~~ You are considered "financially independent" if one or more of the following applies:

- (1) You are at least 24 years of age by December 31 of the calendar year of the term for which you are requesting resident classification.
- (2) You are a veteran of the U.S. Armed Forces.
- (3) You are a ward of the court or both parents are deceased.
- (4) You have legal dependents other than a spouse or a registered domestic partner.
- (5) You are married, a registered domestic partner, or a graduate student ~~or a professional student~~, and you were not/will not be claimed as an income tax deduction by any individual other than your spouse or domestic partner for the tax year immediately preceding the term for which you ~~are requesting~~ resident classification.
- (6) You are a single undergraduate student and you were not claimed as an income tax deduction by your parents or any other individual for the two tax years immediately preceding the term for which you ~~are requesting~~ resident classification, and you can demonstrate self-sufficiency for those years and the current year.

Note: Financial independence is not a factor in determining residence status for graduate student instructors, graduate student teaching assistants, research assistants, junior specialists, postgraduate researchers, graduate student researchers, and teaching associates who are employed 49 percent or more of full time or awarded the equivalent in university-administered funds (e.g., grants, stipends, fellowships) for the term for which resident classification is sought.

Establishing Intent for California Residency

Indications of your intent to make California your permanent residence can include the following: registering to vote and voting in California elections; designating California as your permanent address on all school and employment records, including military records if you are in the military service; obtaining a California driver's license or, if you do not drive, a California identification card; obtaining California vehicle registration; paying California income taxes as a resident, including taxes on income earned outside California from the date you establish residence; establishing a home in California where you keep your personal belongings; and licensing for professional practice in California. The absence of these indicia in other states during any period for which you claim California residence can also serve as an indication of your intent. Documentary evidence is required and all relevant indications will be considered in determining your classification. Your intent will be questioned if you return to your prior state of residence when the university is not in session.

General Rules Applying to Minors

If you are an unmarried minor (under age 18), the residence of the parent with whom you live is considered to be your residence. If you live with neither parent, your residence is that of the parent with whom you last lived. Unless you are a minor alien present in the U.S. under the terms of a nonimmigrant visa, which precludes you from establishing domicile in the U.S., you may establish your own residence when both parents are deceased and a legal guardian has not been appointed. If you derive California residence from a parent, that parent must satisfy the one-year durational/intent requirement.

Specific Rules Applying to Minors

(1) *Parent of minor moves from California.* You may be entitled to resident status if you are a minor and a U.S. citizen or eligible alien whose parent(s) was a resident of California who left the state within one year of the residence determination date if

- (a) you remained in California after your parent(s) departed;
- (b) you enrolled in a California public postsecondary institution within one year of your parent(s)' departure; and
- (c) once enrolled, you maintain continuous attendance in that institution. Financial independence is not required in this case.

(2) *Self-support.* You may be entitled to resident status if you are a minor and a U.S. citizen or eligible alien and can prove the following:

- (a) you lived in California for the entire year immediately preceding the residence determination date;
- (b) you have been self-supporting for that year; and
- (c) you intend to make California your permanent home.

(3) *Two-year care and control.* You may be entitled to resident status if you are a minor and a U.S. citizen or eligible alien and you have lived continuously with an adult who is not your parent for at least two years prior to the residence determination date. The adult with whom you are living must have been responsible for your care and control for the entire two-year period and must have been residing in California during the one year immediately preceding the residence determination date.

Exceptions that either Confer Residence Status or Exemption from Nonresident Tuition

You may be entitled to an exception conferring residence status or exemption from nonresident tuition if one of the following applies to you.

Some of the exceptions conferring residence status and exemptions are for a limited period of time. Check with the Campus Residence Deputy for more information:

- (1) ~~(1)~~ *Member of the military; spouse, registered domestic partner, or ~~any other~~ other dependents of military personnel.* An undergraduate student who is a member of the U.S. military stationed in California on active duty, (unless assigned for educational purposes to a state-supported institution of higher education,) is eligible for resident status. A graduate student will be eligible for resident status for two years during which the student must take steps to fulfill the UC resident requirements.
- An undergraduate student who is the spouse, registered domestic partner, or dependent natural or adopted child or stepchild ~~who is a dependent of~~ of a member of the U.S. military stationed in California on active duty is entitled to resident status. A military dependent who is a graduate student is entitled to ~~classification~~ status ~~may be conferred only~~ until the student has lived in California ~~long enough~~ the minimum time necessary to become a resident (366 days).

(2) *Child, spouse, or registered domestic partner of a faculty member.* To the extent that university funds are available, a student who is the unmarried, dependent child under the

age of 21 or the spouse or registered domestic partner of a University of California faculty member who is a member of the Academic Senate may be eligible for an exemption.

(3) *Child, spouse, or registered domestic partner of a university employee.* A full-time UC employee assigned to work outside of the State of California in an institution or state agency and ~~A student who is~~ the unmarried, dependent child under the age of 21 or the spouse or registered domestic partner of ~~a full-time~~ such an employee ~~employee of the University of California who is permanently assigned to work outside the state of California (e.g., Los Alamos National Laboratory)~~ may be eligible for ~~a resident classification~~ status. This provision most often applies to employees of Los Alamos National Laboratory.

(4) *Child, spouse, or registered domestic partner of a deceased public law enforcement or fire suppression employee.* A student who is a child, spouse or registered domestic partner of a deceased public law enforcement or fire suppression employee, who was a California resident and was killed in the course of law enforcement or fire suppression duties may be eligible for an exemption.

(5) *Dependent child of a California resident.* A student who has not been an adult resident for more than one year and is the natural or adopted dependent child of a California resident who has been a resident for more than one year immediately prior to residence determination date may be entitled to resident status until the student has lived in California the minimum time necessary to become a resident, so long as continuous ~~The student must also maintain full-time attendance is maintained at in~~ a California public postsecondary institution. ~~A resident classification may be conferred until the student has lived in California long enough to become a resident.~~

(6) *Graduate of a California school operated by the Federal Bureau of Indian Affairs (B.I.A.).* A student who is a graduate of a California school operated by the B.I.A. (e.g., Sherman Indian High School) ~~and who enrolls at the University of California~~ may be eligible for a resident classification.

(7) *Employee of California public school district.* A student holding a valid credential authorizing service in California public schools and employed by a school district in a full-time certificate position may be exempt from nonresident tuition and may be eligible for ~~a resident classification~~ status.

(8) *Student athlete in training at U.S. Olympic Training Center, Chula Vista.* An amateur student athlete in training at the U.S. Olympic Training Center in Chula Vista may be ~~exempt from nonresident tuition~~ eligible for resident status until he or she has resided in California the minimum time necessary to become a resident ~~may be eligible for a resident classification.~~

(9) *Graduate of California high school.* A student who attended high school in California for three or more years (9th grade included) and graduated from a California high school (or attained the equivalent) may be exempt from nonresident tuition. You are not eligible for this exemption if you are a nonimmigrant alien.

(10) *Congressional Medal of Honor recipient.* An undergraduate student under age ~~27~~ 28 who is the recipient of the Congressional Medal of Honor or a child of a recipient who at

the time of his or her death was a California resident may be eligible for an exemption.

(11) Surviving dependent of California resident killed in 9/11 terrorist attacks. An undergraduate student who is the surviving dependent of a California resident who was killed in the 9/11/01 terrorist attacks on the World Trade Center, the Pentagon Building, or the crash of United Airlines Flight 93 may be eligible for an exemption.

Temporary Absences

If you are a nonresident student who is in the process of establishing a residence for tuition purposes and you return to your former home during noninstructional periods, your presence in the state will be presumed to be solely for educational purposes and only convincing evidence to the contrary will rebut this presumption. Students who are in the state solely for educational purposes will not be classified as residents for tuition purposes regardless of the length of their stay.

If you are a student who has been classified as a resident for tuition purposes and you leave the state temporarily, your absence could result in the loss of your California residence. The burden will be on you (or on your parents if you are a minor) to verify that you did nothing inconsistent with your claim of a continuing California residence during your absence. Steps that you (or your parents) should take to retain a California residence include:

(1) Continue to use a California permanent address on all records—educational, employment, military, etc.

(2) Continue to satisfy California tax obligations. If you are claiming California residence, you are liable for payment of income taxes on your total income from the date that you establish your residence in the state, including income earned in another state or country.

(3) Retain your California voter's registration and vote by absentee ballot.

(4) Maintain a California driver's license and vehicle registration. If it is necessary to change your driver's license or vehicle registration, you must change them back within the time prescribed by law.

Petitioning for Change of Classification

You must petition in person at the Office of the Registrar for a change of classification from nonresident to resident status. All changes of status must be initiated prior to the first day of classes for the term for which you intend to be classified as a resident.

Time Limitation on Providing Documentation

If additional documentation is required for residence classification but is not readily accessible, you will have until the end of the applicable term to provide it.

Incorrect Classification

If you are incorrectly classified as a resident, your classification will be corrected and you will be required to pay ~~the~~ all nonresident tuition ~~you have~~ not paid. If you concealed information or furnished false information and were classified incorrectly as a result, you are also subject to university discipline. Resident students who become nonresidents must immediately notify the campus residence deputy.

Inquiries and Appeals

Inquiries regarding residence requirements, determination, and/or recognized exceptions should be directed to the Residence Deputy, Office of the Registrar, 190 Hahn Student Services Building, University of California, Santa Cruz, 1156 High Street, Santa Cruz, CA 95064-1077, ~~(831) 459-2754~~ reg_fees@ucsc.edu, or to the ~~Legal Analyst~~ Residence ~~Specialist~~ **Matters**, Office of the General Counsel, 1111 Franklin Street, 8th Floor, Oakland, CA 94607-5200. No other university personnel are authorized to supply information relative to residence requirements for tuition purposes.

You are cautioned that this summary is not a complete explanation of the law regarding residence. Note that changes may be made in the residence requirements between the publication of this statement and the relevant residence determination date. Any student, following a final decision on residence classification by the residence deputy, may appeal in writing to the ~~Legal Analyst~~ [residence specialist](#) within 30 days of notification of the residence deputy's final decision.

Privacy Notice

All of the information requested on the Statement of Legal Residence form is required [by the authority of Standing Order 110.2 (a)–(d) of the Regents of the University of California] for determining whether or not you are a legal resident for tuition purposes. You have the right to inspect university records containing the residence information requested on this form. The records are maintained by the Office of the Registrar, 190 Hahn Student Services Building, University of California, Santa Cruz, 1156 High Street, Santa Cruz, CA 95064-1077, ~~(831) 459-2754~~.

Programs and Courses

Programs and Courses

The academic programs offered at UC Santa Cruz are described in detail in this section. Curricula, courses, and degrees listed in this catalog are subject to change through normal academic channels. New proposals and changes are initiated by the relevant departments, divisions, or colleges and approved by the appropriate academic dean and by the Committee on Educational Policy or the Graduate Council. The designations F (fall), W (winter), S (spring), or Summer that appear at the end of each course indicate the intentions of the academic units; however, on occasion, the actual scheduling of classes may change.

For changes and additions to courses listed in this catalog, consult the Schedule of Classes, published each quarter and available on the web at reg.ucsc.edu/soc/. Students may also view the university catalog on the web at reg.ucsc.edu/catalog/. Course syllabi, when provided by faculty, can be accessed via Advance Course Information (ACI) at reg.ucsc.edu/soc/aci/. The Office of the Registrar also provides detailed information on its pages at reg.ucsc.edu.

Course Credit

Unless otherwise specified in the course description, each course earns 5 quarter credits. Therefore, regardless of course format or scheduling, each course makes approximately equal demands on enrolled students. Five (5)-credit courses usually meet for four to five hours per week.

All physical education courses are noncredit. Other noncredit courses include certain graduate seminars. Laboratory courses, music courses involving individual lessons or ensemble participation, as well as some special-interest seminars and individual studies courses carry less than 5 credits and are designated accordingly.

The normal UCSC undergraduate program of study is three 5-credit courses per quarter or equivalent. In 12 quarters at UC Santa Cruz, most students complete 180 credits. With a college's approval, a student may be allowed to vary the course load. See also [Part-Time Program](#).

Course Numbering

Undergraduate courses are classified as lower division or upper division. Lower-division courses (numbered 1–99) are designed for first-year and sophomore students but may be taken by more advanced students. Upper-division courses (numbered 100–199) are designed for junior and senior students but are open to first-year and sophomore students who have sufficient background and the consent of the instructor in charge.

Graduate courses (numbered 200–299) are either restricted to graduate students or open only to students who can show the instructor that they have completed sufficient upper-division course work basic to the subject matter of the course.

Footnotes

Courses marked with an asterisk (*) will not be offered in the 2004–05 academic year. Courses marked with a dagger (†) will be offered, with the quarter as yet to be determined.

General Education Codes

The general education codes that appear in some course descriptions are explained in the section on general education requirements, page 30.

Course Format

Most courses at UC Santa Cruz are taught as lectures or, when the class is small enough for considerable discussion, as seminars. A large number of courses require enrollment in a secondary discussion section scheduled at a different time from the primary course. Sometimes there is laboratory or fieldwork associated with a course.

Occasionally, a student may wish to do an individual project as part of the work for a course. UC Santa Cruz instructors are usually quite willing to consider and evaluate such work, time

permitting. The campus's system of evaluation of student performance makes such individual work a natural option, even in larger classes.

[\[Return to top.\]](#)

Prerequisite Policy

When applicable, prerequisites are listed in this catalog within the course description for each course. There are many courses that meet general education requirements and do not require a prerequisite.

Prerequisites come in many forms—for example, specific courses, placement examinations, or "satisfaction of the Subject A requirement" for writing courses. Some course descriptions also specify that students must be declared majors or seniors in order to enroll. Other course descriptions recommend the appropriate background for a course—for example, "ability to use algebra and solve problems."

Questions concerning prerequisites should be directed to the instructor of the course or the respective department office. Students who have not met all prerequisites may be excluded from a course. Alternatively, the instructor or a department adviser may waive the prerequisite based on demonstrated competence or equivalent academic experience.

Class Size

A student's class level plays a large part in how many small classes are available. Introductory classes tend to be large, although they are usually accompanied by required small sections or labs. Many small classes have prerequisite courses that enroll large numbers of students. Also, certain large classes fulfill campuswide general education requirements. First-year students experience at least one small seminar in conjunction with the college core course, and they are likely to experience an increasing proportion of small classes as they progress to senior status.

Individual Study

Especially in the upper division, students are encouraged to devise special courses to pursue independently, under the guidance of faculty members. A study plan should be discussed with a faculty member in the general subject area of interest. This faculty member will ultimately be responsible for evaluating the work done. The study plan must also be approved by the appropriate program and the student's college; it should be noted that not all proposed plans are accepted.

Field Study

Independent, off-campus field study is available through many departments. It is handled in much the same way as individual study. In addition, there are several established field programs that offer a variety of full- or part-time off-campus field placements as part of the regular program of academic study. For more information on these programs, see page 41.

Apprentice Teaching

An upper-division or graduate student may apply for approval to teach an undergraduate seminar of his or her own design. The seminar is supervised by a faculty member and carries normal academic credit for the students and the apprentice teacher. Interested students should initiate a proposal with a faculty member in the appropriate subject area.

Credit by Petition

Regularly enrolled students may obtain full academic credit for a course by challenging the course. Challenging the course entails passing an examination or completing an appropriate body of work supervised by a regular instructor for the course. The petition for such credit must be approved by the instructor of the course, the chair of the department offering the course (or provost, if it is a course offered by a college), and the provost of the student's college. Some courses are not considered appropriate for credit by petition.

For foreign language students, credit by petition may not be used by students whose language ability greatly exceeds the course level proposed for challenge. Petitions for credit for levels 4 and 5 cannot be filed in the same quarter. Contact the Language Program, 239 Cowell, 459-2054, for more information.

Auditing of Classes

Instructors may permit nonenrolled students to attend their classes when space is available after all students who wish to enroll officially have done so. An instructor is not obligated to devote time to the work of students who are not officially enrolled in the class.

Additional Courses of Interest

Sometimes, following the official course listings for a program, related courses offered by other academic units are listed under the heading Additional Courses of Interest. Some of these courses

may be accepted in partial satisfaction of the major requirements. Students should consult with the chair of the program offering the major about the availability of major credit for enrollment in related courses. The full descriptions of the related courses should also be checked for prerequisites.

[Changes to 2009-10 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Program Description

The American studies program is committed to a self-critical and historically grounded examination of the United States and its diverse people, viewed within a local and global context. The major is designed to be comparative along a number of axes. First, it is an interdisciplinary project, drawing on a mix of methodological and theoretical approaches. Second, it compares the United States with other imperial enterprises and states. And third, it compares different social groups and identities in historical context. The program aims to help students develop critical thinking, research, and writing skills so that they will be able to function effectively in an ever-changing, complicated, and culturally diverse world.

Students will take courses and work closely with faculty who are committed to interdisciplinary, multicultural, and transnational work and who include these interlocking themes in their courses: (1) Political Culture and Economy addresses the ways in which global capitalism structures everyday life and life chances in the United States; (2) Comparative Race, Ethnicity, and Diaspora Studies features research concerning the myriad relations among different racial, ethnic, and diasporic groups; and (3) Cultural Representations and Practices support research into the history, aesthetics, and politics of different cultural forms, including music, visual culture, literature, film, mass media, popular culture, and vernacular performance.

Because of their broad-based exposure to the United States, collective learning experience, and ability to focus on topics of particular interest to them, American studies students find the major a useful preparation for careers in education, law, journalism, social work, community organizing, business, and government. The major also offers an excellent liberal education for students interested in exploring their responsibilities and opportunities as American citizens. Students who intend to go on to graduate school, whether in American studies or another discipline, should determine an appropriate selection of courses with their American studies faculty adviser.

Requirements for the Major

Students wishing to pursue a major in American studies must submit a proposed study plan specifying courses of study that satisfy the requirements for the major in a coherent manner and, at the same time, enable efficient pursuit of their particular interests. The study plan must be approved by the American Studies Department before the student is formally accepted into the major. Students are urged to submit their study plan no later than the third quarter of their sophomore year or, in the case of transfer students, no later than the first quarter of their junior year. Forms and information about the major are available from the American Studies Department office in 209 Humanities 1.

Upon acceptance to the major, each student should meet first with the departmental staff adviser and then a faculty adviser from the department. Through periodic conferences with these advisers, students can make appropriate revisions in their major plans and decide on the best way to fulfill the comprehensive requirement.

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement will normally be met within 1-3 courses already required for the major. For detailed information on this major's DC requirement, consult your major adviser or see the 2010-11 General Catalog.

Course Requirements

To graduate with a major in American studies, a student is required to complete 12 courses with the approval of the department:

- American studies 10;
- one lower-division course chosen from the American studies 80 series;
- nine upper-division courses chosen from 100–189. Two courses outside the program that are integrated and related to American studies may be used to meet this requirement: e.g., two language courses in the same language at level 4 or above or two Education Abroad Program (EAP) courses or two upper-division courses in the same department or two upper-division courses in an area of U.S. ethnic study or 10 credits of fieldwork or internship;
- one senior seminar from the 190 series to fulfill the comprehensive exit requirement in the major; students may petition to complete a senior thesis project or teach a senior-directed seminar in lieu of taking the senior seminar.

Graduate Studies

Graduate students in the Literature and History of Consciousness Departments may work toward a parenthetical annotation in American studies on their Ph.D. degree documents. Students in other departments must initiate the request through their home departments. Guidelines and application forms are available in the American Studies Department office in 209 Humanities 1. The following are required for the annotation:

- a designated graduate adviser who is a faculty member of the American Studies Department and who will serve on the student's qualifying examination or dissertation committee;
- submission of a significant piece of scholarly writing in the area of American studies;
- five graduate courses in American studies selected from relevant offerings of any UCSC department or program, with at least three courses taught by faculty members of the American Studies Department;
- teaching experience as a teaching assistant or instructor in an American studies course.

The American studies program is committed to a self-critical and historically grounded examination of the United States and its diverse people, viewed within a local and global context. The major is designed to be comparative along a number of axes. First, it is an interdisciplinary project, drawing on a mix of methodological and theoretical approaches. Second, it compares the United States with other imperial enterprises and states. And third, it compares different social groups and identities in historical context. The program aims to help students develop critical thinking, research, and writing skills so that they will be able to function effectively in an ever-changing, complicated, and culturally diverse world.

Students will take courses and work closely with faculty who are committed to interdisciplinary, multicultural, and transnational work and who include these interlocking themes in their courses: (1) Political Culture and Economy addresses the ways in which global capitalism structures everyday life and life chances in the United States; (2) Comparative Race, Ethnicity, and Diaspora Studies features research concerning the myriad relations among different racial, ethnic, and diasporic groups; and (3) Cultural Representations and Practices support research into the history, aesthetics, and politics of different cultural forms, including music, visual culture, literature, film, mass media, popular culture, and vernacular performance.

Because of their broad-based exposure to the United States, collective learning experience, and ability to focus on topics of particular interest to them, American studies students find the major a useful preparation for careers in education, law, journalism, social work, community organizing, business, and government. The major also offers an excellent liberal education for students interested in exploring their responsibilities and opportunities as American citizens. Students who intend to go on to graduate school, whether in American studies or another discipline, should determine an appropriate selection of courses with their American studies faculty adviser.

Requirements for the Major

Students wishing to pursue a major in American studies must submit a proposed study plan specifying courses of study that satisfy the requirements for the major in a coherent manner and, at the same time, enable efficient pursuit of their particular interests. The study plan must be approved by the American Studies Department before the student is formally accepted into the major. Students are urged to submit their study plan no later than the third quarter of their sophomore year or, in the case of transfer students, no later than the first quarter of their junior year. Forms and information about the major are available from the American Studies Department office in 209 Humanities 1.

Upon acceptance to the major, each student should meet first with the departmental staff adviser and then a faculty adviser from the department. Through periodic conferences with these advisers, students can make appropriate revisions in their major plans and decide on the best way to fulfill the comprehensive requirement.

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement will normally be met within 1-3 courses already required for the major. For detailed information on this major's DC requirement, consult your major adviser or see the 2010-11 general catalog.

Course Requirements

To graduate with a major in American studies, a student is required to complete 12 courses with the approval of the department:

American studies 10;

one lower-division course chosen from the American studies 80 series;

nine upper-division courses chosen from 100–189. Two courses outside the program that are integrated and related to American studies may be used to meet this requirement: e.g., two language courses in the same language at level 4 or above or two Education Abroad Program (EAP) courses or two upper-division courses in the same department or two upper-division courses in an area of U.S. ethnic study or 10 credits of fieldwork or internship;

one senior seminar from the 190 series to fulfill the comprehensive exit requirement in the major; students may petition to complete a senior thesis project or teach a senior-directed seminar in lieu of taking the senior seminar.

Graduate Studies

Graduate students in the Literature and History of Consciousness Departments may work toward a parenthetical annotation in American studies on their Ph.D. degree documents. Students in other departments must initiate the request through their home departments. Guidelines and application forms

are available in the American Studies Department office in 209 Humanities 1. The following are required for the annotation:

a designated graduate adviser who is a faculty member of the American Studies Department and who will serve on the student's qualifying examination or dissertation committee;

submission of a significant piece of scholarly writing in the area of American studies;

five graduate courses in American studies selected from relevant offerings of any UCSC department or program, with at least three courses taught by faculty members of the American Studies Department;

teaching experience as a teaching assistant or instructor in an American studies course.

Faculty and Professional Interests

Michael H. Cowan, Professor, American Studies

American cultural theory and history, history of American studies, symbolic expression in American life, urban cultural studies, American literary studies, studies in the institutional culture of higher education

John Dizikes, Professor Emeritus, American Studies

Kimberly J. Lau, Associate Professor; Provost Oakes College

Feminism, discourse, and power; feminist theory; discourse, analysis, and ethnographic methods; folklore and narrative; globalization

Amy Lonetree, Assistant Professor, American Studies

Indigenous history, museum studies, memory and American history, Native American cultural production, public history, and Ho-Chunk tribal history

Eric C. Porter, Professor, American Studies

Black cultural and intellectual history; U.S. cultural history and cultural studies; comparative ethnic studies; popular music and jazz studies

Catherine S. Ramírez, Associate Professor, American Studies

Chicana and U.S. Latino literature, culture, and history; gender studies and feminist theory; visual culture and style politics; cultural studies; popular and urban youth cultures; speculative fiction, Afrofuturism, and Chicanafuturism; science, technology, race, and gender; theories and methods of American studies

Renya K. Ramirez, Associate Professor, American Studies

Native American studies, Indian identity, Native Americans and anthropology, urban Indians, Native American women, cultural citizenship, expressive culture, and anti-racist education

Forrest G. Robinson, Professor, American Studies

Nineteenth- and 20th-century American literature, including Mark Twain, the American West, and popular culture; biography and American culture theory

Judith Yung, Professor Emerita, American Studies

David H. Anthony, Associate Professor, History

African and African American history, art, music, literature, and cinema; eastern and southern Africa; African languages; Indian Ocean world; African and African

American linkages; Islamic civilization; African diaspora studies; world history

Martin Berger, Professor, History of Art and Visual Culture

American studies and visual studies; construction of gender and race

Michael K. Brown, Professor, Politics

Inequality, race and African American politics, political economy, political development of welfare states, theories and methods of historical social science

David T. Brundage, Professor, Community Studies

American working-class and immigration history, history of U.S. social movements, Irish history and politics

George Bunch, Assistant Professor, Education

Language and education in linguistically diverse settings, preparation of teachers for linguistically diverse, language policy, and bilingualism

Benjamin Carson, Assistant Professor, Music

Theory and composition; music perception; empiricism and subjectivity; Schoenberg; popular music; improvisation

Pedro G. Castillo, Associate Professor, History

Chicano/a history and culture; American social and urban history; race, class, and gender in California history, immigration history, Latina/os in the U.S.

John Brown Childs, Professor, Sociology

Ethnic conflict and transcommunal cooperation; sociology of knowledge; African American, Native American, Latino interactions

Gina Dent

Africana literary and cultural studies, legal theory, popular culture

Barbara L. Epstein, Professor, History of Consciousness

Social movements and theories of social movements, 20th-century U.S. politics and culture, Marxism and related theories of social change

Rosa-Linda Fregoso

Cultural studies, feminist studies, film and visual culture, human-rights studies, and gender-based violence

Greta Gibson, Professor, Education

Immigrants and education; minority status and schooling; community-school relationships; ethnicity, class, gender, and educational processes; qualitative research methods

Susan Gillman, Professor, American Literature

Nineteenth-century American literature and culture; theories of culture, race, and gender; world literature and cultural studies

Herman S. Gray, Professor, Sociology

Cultural studies, media and television studies, black cultural politics, social theory

Miriam Greenberg,

Media studies, cultural studies, globalization, political and cultural economies of global cities, video production, and ethnography

Kirsten Silva Gruesz, Professor, Literature

Transnational Americas studies; Chicano/Latino literatures and cultures; 19th-

century U.S. and Latin American literature; poetry; history of the book; reading and literacy; bilingualism

Lisbeth Haas, Associate Professor, History

U.S.-Mexico borderlands, Chicano and Native American history; visual culture in the colonial Americas; the U.S. West and California; historical memory, theory, and historical methodology

Judith A. Habicht-Mauche, Professor, Anthropology

Precontact and early contact North American cross-cultural interaction and trade; ceramic technology; archaeology of gender, power, and identity; Southwest and Southern Plains

Susan F. Harding, Professor, Anthropology

Culture, politics, narrative, gender, local/global studies, ethnographic writing, fundamentalism, Christianity, state-making, aging, America, and Spain

Amelie Hastie, Associate Professor, Film and Digital Media

Film theory and history, feminist film and television studies, Chinese cinemas, issues of authorship, interdisciplinary approaches

Nathaniel E. Mackey, Professor, Literature

Twentieth-century American literature, Afro-American literature, creative writing

Olga Nájera-Ramírez, Professor, Anthropology

Folklore theory, ritual, festival, dance, greater Mexican culture, history and folklore, transnationalism, identity; expressive culture, ethnomusicology, bilingual communication, gender, history, and culture of Latin America, the U.S., and Mexico

Marcia Ochoa, Assistant Professor, Community Studies

Gender and sexuality, race and ethnicity, Latina/o studies, media and cultural studies, ethnography of media, feminism, queer theory, geography, multimedia production, graphic design, colonialism and modernity, Latin American studies—Colombia and Venezuela

Triloki Nath Pandey, Professor, Anthropology

Native peoples of North America, cultures of India, political anthropology, anthropological theories and comparisons; native North America; tribal India; Nepal

Mary Beth Pudup, Associate Professor, Community Studies

Regional studies, economic justice, public policy, historical geography of the U.S.

Shelley Stamp, Associate Professor, Film and Digital Media

Film history, theory, and criticism; silent cinema; women's filmmaking; film censorship; histories of moviegoing; feminist approaches to cinema

Dana Takagi, Professor, Sociology

Social inequality and identity, research methods, race relations, nationalism and social movements

Marilyn J. Westerkamp, Professor, History

British colonial and revolutionary America, early modern cultural and religious history, U.S. religious history, women's history, gender

Daniel J. Wirls, Professor, Politics

American politics, including national political institutions (Congress) and the

President; public policy (military and foreign policy) and political history

Matthew Wolf-Meyer, Assistant Professor, Anthropology

Medical anthropology; science studies; actor-network theory; American studies; popular culture, media studies, history of medicine and public health

Alice S. Yang-Murray, Associate Professor, History

Historical memory, Asian American history, gender history, race and ethnicity, 20th-century U.S., oral history

Patricia J. Zavella, Professor, Latin American and Latino Studies

Chicana/o-Latina/o studies, women's work and domestic labor, poverty, family, sexuality and social networks, feminist studies, ethnographic research methods, and transnational migration of Mexicana/o workers and U.S. capital

[Program Description](#) | [Changes to 2009-10 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses

10. Introduction to American Studies. F,W

Introduction to American studies through interdisciplinary examination of past and present California and its diverse peoples. Addresses social, political, and cultural issues, and examines California with attention to regional, national, and global contexts. (Formerly course 1, *America and Americans*.) Satisfies American History and Institutions Requirement. (General Education Code(s): IH, E.) (F) C. Ramirez, (W) K. Lau

42. Student-Directed Seminar. F,W,S

Seminars taught by upper-division students under faculty supervision. (See course 192.) *The Staff*

80E. U.S. Racial and Ethnic Histories and Formations. W,S

Introduces key concepts and debates in study of race and ethnicity in U.S. by focusing on a particular ethnoracial group (e.g., Native Americans, Mexican Americans, Asian Americans, African Americans) or by developing a comparative perspective. May be repeated for credit. (General Education Code(s): T5-Humanities and Arts or Social Sciences, E.) (W) *The Staff*, (S) R. Ramirez

80F. Introduction to U.S. Popular Cultures. F

Introduces key concepts and debates in popular culture and media studies and discusses their importance in relation to American studies. Surveys American popular music, from the beginnings of mass media to the late 20th century and beyond. (General Education Code(s): T5-Humanities and Arts or Social Sciences.) B. Carson

80G. Introduction to U.S. Political Cultures. S

Introduces key concepts and debates around topics such as political economy, nationalism, globalization, citizenship, class, and social movements and addresses their importance to American studies. Examines these issues through attention to political theory, social transformations, and cultural representations. (General Education Code(s): T5-Humanities and Arts or Social Sciences.) *The Staff*

93. Field Study. F,W,S

Various topics to be arranged. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Various topics to be arranged. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses

100. Key Concepts in American Studies. W,S

Provides majors with an in-depth introduction to American studies and the major at UCSC. Introduces key American studies concepts and highlights the emphases of this major. Careful attention paid to critical reading skills and analytical writing. Required of all American studies majors. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to American studies majors. Enrollment limited to 25. (General Education Code(s): W.) (W) *F. Robinson, (S) The Staff*

101. Race and Ethnicity. F

A critical examination of sociological and historical literature on race/ethnic formations and relations in U.S. society within the socioeconomic and political contexts of capitalism and colonization. Concepts and theories are applied to contemporary issues of race and ethnic relations. Course 1 or 10 recommended as preparation. Enrollment restricted to American studies majors. Enrollment limited to 24. (General Education Code(s): E.) *The Staff*

102A. Gender and U.S. Society. W

Introduction to the gendered analysis of U.S. society and culture from theoretical and historical perspectives. Particular attention given to the ways in which gender intersects with racial, ethnic, and class differences, focusing on the themes of work, politics, and sexuality. Course 1 or 10 is recommended prior to taking this course. *K. Lau*

102B. Sexuality and Culture. *

Examines how aspects of sexuality (such as sexual identities, preferences, roles, and desires) are fundamentally shaped by social-cultural and psychological factors. Topics include gender formation, the social construction of sexuality, and the historical emergence of the modern "gay" and "lesbian" identity of the U.S. Recommended for senior American studies majors. *The Staff*

102D. Criminal Queer. S

Through an investigation of the prison-industrial complex, examines how alternative genders and sexualities are policed and disciplined in the U.S. Working through theories of criminality, monstrosity, abjection, social death and "otherness," traces both forms of domination and spaces of resistance in relation to trans/gender variant/queer lives and the prison-industrial complex. *E. Stanley*

105A. Oral History. *

Study and application of the theories, methods, and ethical issues involved in the practice of oral history. Critical readings and writing exercises will culminate in a 20-page oral history project. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to American studies majors. Enrollment limited to 24. (General Education Code(s): W.) *K. Lau*

105B. Understanding "America" through Ethnography. *

Examines ethics and politics of ethnographic research and various methodologies. Students collect their own ethnographic data to be analyzed with relevant theory in a final capstone project. Enrollment restricted to senior American studies majors. Enrollment limited to 20. *R. Ramirez*

107A. U.S. Popular Culture: 1800–1918. *

A survey of major popular cultural forms and texts in the pre-WWI era including Minstrelsy, *Uncle Tom's Cabin*, P.T. Barnum, *Ramona*, *The Wizard of Oz*, and *Birth*

of a Nation, with attention to historical context and theory. *F. Robinson*

107B. U.S. Popular Culture: 1920–Present. *

Major popular cultural forms from the 1920s to the present. Topics include early "race" recordings; Depression radicalism; WWII entertainments; the Cold War; popular film genres; the 1970s and 1980s contemporary music (conjunto, jazz, rock, and rap). Particular attention to multicultural issues. Course 107A recommended. *E. Porter*

109A. Technology and American Culture. *

Assesses political conditions under which the U.S. became committed to certain technologies, discusses merits of recent accounts of "crisis" in our politics and environment, and examines alternatives to mainstream politics and technology. Enrollment restricted to sophomores, juniors, and seniors. *The Staff*

109B. Science Fiction in Multicultural America. *

Science fiction by authors and artists of diverse cultural backgrounds, contextualized within the political and economic conditions of the U.S. Enrollment restricted to sophomores, juniors, and seniors. *C. Ramirez*

111A. The West in American Culture. *

Features texts with Western settings and with representative casts of Western characters. The often contradictory patterns that emerge from this regional literature and the qualities that attach to its familiar hero are explored. *F. Robinson*

112. Immigration and Assimilation. W

Examines immigration to U.S. from colonial era to present with special emphasis on issues of citizenship, social identities, and social membership. *C. Ramirez*

113A. Imagining America. F

Examination of varied and often conflicting ways the ambiguous entity conventionally labeled "America" has been imagined, both positively and negatively, in political speeches, painting, fiction, film, television, music, drama, advertising, parades, and other modes of expression. *The Staff*

114A. Politics and American Culture. F

Examination of major conceptions of citizenship in the context of American society and culture, with particular attention both to the sources of these conceptions in Western political thought and to their elaboration and testing in specific historical situations. Enrollment restricted to juniors and seniors. *The Staff*

114B. Marxist Thought in American Culture. *

Explores history of Marxist thought and activism in the U.S. with special emphasis on uses and effects of Marxism within aggrieved communities of color. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. (General Education Code(s): W.) *The Staff*

114C. Labor in U.S. Society. *

Examines the history of work and class in U.S. society with particular attention to how race and gender inform the constructions of multiple working classes. Drawing upon primary and secondary materials, the course analyzes the formations of labor unions, regional labor patterns, and the development of the capitalist market economy. *The Staff*

121C. Mixed Race in America. *

Examines what it means to be of mixed race in America along historical, social,

political, and cinematic lines. Theories on racial and identity formation applied to understanding multiracial experiences of various racial groups in the U.S. (General Education Code(s): E.) *The Staff*

123. Native American Studies.

123F. Native American Women. W

Introduces students to the history of Native North American women's lives. Topics include the impact of colonization and Christianization on Native women, political activism, the role of Native women in tribal politics, and contemporary artistic production. (General Education Code(s): E.) *R. Ramirez*

123H. Native Americans: Decolonization, Identity, and Resistance. *

This course examines how Native Americans are constructed by the dominant discourse on race, culture, and gender and how they subvert these negative representations through autobiography, novels, and humor. (General Education Code(s): E.) *R. Ramirez*

123M. Celluloid Natives: American Indian History on Film. *

Examines how American Indian history and culture has been portrayed in Hollywood films, with an emphasis on films that represent Native Americans over the broad spectrum of Native American/white relations. (General Education Code(s): E.) *A. Lonetree*

123T. Inventing the Savage. W

Examines how colonialism is at the root cause of cultural trauma in Native American communities; how colonialism affects both the colonizer and the colonized; how Native American scholars have theorized cultural trauma; and using novels, how Native Americans create strategies to heal from the negative effects of colonialism. (General Education Code(s): E.) *R. Ramirez*

123X. American Indian History in the Twentieth Century. *

History of Native peoples of the U.S., from 1900 to present, with emphasis on Indian/white relations and continuing development of federal Indian policy and its impact. Attention also given to the persistence, change, and adaption of Native cultures to historical and contemporary social conditions. (General Education Code(s): E.) *A. Lonetree*

123Z. Native Americans and Museums. *

Provides an historical overview of the relationship between American Indians and museums. Current issues and practices in museums—primarily those associated with ethics, collecting practices, exhibitions, education/interpretation, and administration/governance—are explored. (General Education Code(s): E.) *A. Lonetree*

125. African American Studies.

125A. Aspects of African American Culture. F

A seminar examining the dominant and defining characteristics of African American culture, covering such areas as folklore, religion, politics, music, verbal arts, and social ritual, as well as more "everyday" manifestations of the culture. May be repeated for credit. (General Education Code(s): E.) *The Staff*

125E. Jazz Cultures. *

Explores the meaning of jazz in American culture, particularly the social and cultural forces that have produced different jazz styles and the various ways that social conflicts and ideals have been displaced onto jazz. A prior familiarity with the music itself will be helpful but is not required. (General Education Code(s): E.) *E. Porter*

125G. African American Life in the City. *

Examines social and cultural history of three black urban communities: Chicago, Los Angeles, and New York. Focusing primarily on the mid-to-late 20th century; considers black life through sociological, musical, literary, and historical sources. (General Education Code(s): E.) *The Staff*

125H. Black Feminism. *

Explores elements of African American feminist thought and its articulation in writings, music, literature, and practice/activism in 20th-century U.S. Sexuality and reproduction is a primary theme—especially motherhood, politics of reproduction, and sexual narratives.

Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to junior and senior American studies majors. Enrollment limited to 25. (General Education Code(s): W, E.) *The Staff*

125X. Hip Hop Music Culture. *

Examines hip hop music and culture since its inception and addresses the contexts for its emergence in U.S. cities: sampling, cultural crossings, market forces, aesthetics, popular culture debates, race, culture, gender, sexuality, and class. (General Education Code(s): E.) *The Staff*

126. Chicano Studies.**126B. Chicana/o Music. ***

Examines Chicana/o music. Topics include *corridos* and border rebellion, music and social movements, Chicano radio and record industries, Chicanas/os and the emergence of rock and roll, Latin American/Latino music, and contemporary Chicana/o music. (General Education Code(s): E.) *The Staff*

126C. Chicana/o Literature and Film. *

Examines the formations and contestations of social, political, and cultural identities for Chicanas and Chicanos through a critical study of select Mexican American texts and films. (General Education Code(s): E.) *The Staff*

126L. Chicana/o Literature. S

Focuses on Latino literature, including traditional and emergent literary forms. Mostly focuses on Latinas and Latinos in the U.S., although course may also highlight the convergences and divergences of U.S. Latino and Latin American literary production. Students may study traditional literary forms, such as poetry or the novel, or more emergent ones, including blogs, graphic novels, and performance. No previous background in Latino literature is necessary, although some familiarity with literary criticism and theory is useful. (General Education Code(s):

127. Asian American Studies.

127A. Aspects of Asian American Culture. *

Selected topics on Asian American culture, religion, music, foodways, literature, theater, film, and/or art. May be repeated for credit. (General Education Code(s): E.) *The Staff*

127C. Asian American Literature and Culture: Memories of War. *

Course assumes that war is key element in transpacific formation of Asian America and attempts to examine wars in Asia/Pacific region from Filipino-American through the Pacific, Korean, and Vietnam Wars U.S. has participated in and to ask how war memories have shaped the Asian American experience and reconfigured notion of the homeland. Looks at specific Asian American texts to discuss issues of ethnicity, politics of memory, immigration, and diaspora in respective war context and considers impact of cold war as transpacific structure of ideological determination. Enrollment limited to 60. (General Education Code(s): E.) *The Staff*

127D. Filipino Americans: History and Culture. S

Examines the history and culture of Filipinos in the U.S. from 1763 to present day within the context of colonial and postcolonial relations between the Philippines and the U.S. Topics include immigration, labor, community, identity, politics, and contemporary issues. (General Education Code(s): E.) *The Staff*

127E. Asian American Women. *

Examines the intersectionality of race, class, gender, and sexuality in the history and lives of Asian American women from a woman-centered perspective. Topics include immigration, work, family, identities, sexploitation, and political and social activism. Students cannot receive credit for this course and History 189. (General Education Code(s): E.) *The Staff*

127F. Chinese Americans: History and Culture. *

Examines the history, culture, and politics of Chinese Americans from the California Gold Rush to present day within the context of socioeconomic and political developments in China and the U.S. Topics include immigration and labor patterns; race, gender, and class dynamics; family and community development; identity politics; and cultural expressions. (General Education Code(s): E.) *The Staff*

127K. South Asian Americans. *

Examines South Asian migration to the U.S., with specific attention to historical and political contexts of immigration and to (re)configurations of culture, politics, and identity in the South Asian American diaspora. (General Education Code(s): E.) *The Staff*

141. The Great Book of America. *

The course will feature texts that were conceived as, or have been widely received as, expressions of themes and values that are especially or essentially American. *Moby Dick*, *Walden*, *Leaves of Grass*, and *Huckleberry Finn* are such books. *F. Robinson*

142. Melville. S

Lectures on a selection of Melville's major writings, including *Moby Dick*, *Pierre*, *The Confidence Man*, *Billy Budd*, and selected short works. Students are required to complete two critical essays. *F. Robinson*

145. Mark Twain and American Culture. *

A survey of Mark Twain's major writings with special attention to biography and historical content. The writer's status as a leading cultural spokesperson is also explored. Satisfies literature major requirement. Students cannot receive credit for this course and American Literature 120B. *F. Robinson*

146A. U.S. History and Literature. W

Seminar on American historical fiction, including works by Hawthorne, Twain, Faulkner, Cather, Stegner, Doctorow, and Morrison, and with some attention to relevant theoretical texts. Students are required to submit two critical essays. *F. Robinson*

157. Sexual Identities and Communities. F

Examines how gay, lesbian, bisexual, and transgendered people negotiate the intersections of their sexual and gender identities with their racial, ethnic, and class identities in the contemporary U.S. Considers the ramifications of these intersections for notions of "gay issues" and "queer communities." *The Staff*

180. Special Topics in American Studies. W,S

Highlights important, relevant, and topical themes in American studies and society. By closely examining one topic or theme, students connect larger issues and think across areas of study. Topics include: the prison industrial complex; radical traditions in America; race and cultural exchange; and citizenship in America. May be repeated for credit. *The Staff*

188. 9/11. F

Considers the events of September 11, 2001, and the subsequent changes in U.S. society and in the country's role across the globe. Focuses on three arenas where these transformations have occurred: politics, culture, popular culture, and racial and ethnic relations. *E. Porter*

190. Senior Seminars.

Capstone seminars enable American studies seniors to apply their overall training in interdisciplinary research and analysis to major problems in the field. Topics vary from year to year. Satisfies American studies senior comprehensive requirement. *The Staff*

190C. Debating American Culture. F

Examines major debates about national culture in the U.S., considered in the context of ethnic, class, gendered, and other subnational and transnational cultural formations and of relevant social, political, and cultural theory. Enrollment restricted to senior American studies majors. Enrollment limited to 20. *R. Ramirez*

190D. New Directions in American Studies. S

Examines the history and state of the field of American studies. Investigates current debates in the field, with a focus on recent calls for a "post-nationalist" American studies, and begins to chart some of the directions in which the field is moving. Encourages students to reflect on their education in American studies at UCSC. (Formerly *American Studies and Cultural Studies*.) Enrollment restricted to senior American studies majors. Enrollment limited to 20. *C. Ramirez*

190E. Rethinking American Studies. W

As a culminating experience in the major, the seminar intends to encourage seniors to meditate critically on what American studies is and what it will be in the future. Focuses much attention on recent calls for a "post-nationalist" American studies, considers the possibilities/problems such imperatives bring, and analyzes recent work in this direction. Enrollment limited to 20. *E. Porter*

190H. Race, Politics, and Region. *

Examines race relations in western U.S. with particular emphasis upon California since 1945. Students examine the experiences of African Americans, Asian Americans, European Americans, Mexican Americans, and Native Americans and how class and gender politics shape and, at times, become the language for race relations. Enrollment restricted to senior American studies majors. Enrollment limited to 20. (General Education Code(s): E.) *The Staff*

190L. Culture and Politics of Virtual Worlds. *

Explores the ways in which the virtual and the real overlap, constitute, and critique each other, and uses each to illuminate cultural and theoretical discussions around race, gender, sexuality, and labor. Enrollment restricted to senior American studies majors. Enrollment limited to 25. *K. Lau*

192. Directed Student Teaching. F,W,S

Teaching of a lower-division seminar under faculty supervision. (See course 42.) For students with upper-division standing who have submitted a proposal supported by a faculty member willing to supervise. *The Staff*

193. Field Study. F,W,S

Individual studies program undertaken off campus. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

194. Group Tutorial. F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

195A. Senior Project. F,W,S

For students continuing work on their senior thesis. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

195B. Senior Project. F,W,S

For students continuing work on their senior thesis. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198. Independent Field Study. F,W,S

Individual study program off campus for which faculty supervision is not in person (e.g., supervision is by correspondence). Up to three such courses may be taken for credit in any one quarter. Approval of student's adviser and certification of adequate preparation required. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Various topics to be arranged. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Various topics to be arranged. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

200. Proseminar in American Studies. S

Introduces graduate students to current theories and methods in American studies, to the history of the field, and to the faculty in the department. Required introductory seminar for all students wishing to pursue a parenthetical notation in American studies. Enrollment restricted to graduate students. Enrollment limited to 10. *C. Ramirez*

205. Theorizing American Culture. *

A selective examination of theoretical and methodological issues central to American studies, of the history of attempts to consider the U.S. as manifesting a cultural system, and of contemporary critiques that problematize the focusing of cultural analysis on a nation-state. Enrollment restricted to graduate students. *F. Robinson, H. Berger*

207. Politics of Popular Music. *

Engages a number of the critical theoretical and methodological issues raised in contemporary studies of popular music. Explores these issues while reading case studies that range across scholarly disciplines and musical genres. Enrollment restricted to graduate students. Enrollment limited to 10. *E. Porter*

208. Readings in the History of the U.S. West. *

Explores recent trends in historical scholarship on the U.S. West, including the use of Western resources, the relationship between urban and rural places in the West, and the diversity of Western peoples. In order to reflect on the variety of ways in which scholars communicate their understandings of history, students also read a variety of academic books. Enrollment limited to 20. *The Staff*

210. Studies in Early American Nationality. *

Examines the relationship of the attempts to legitimize U.S. nationhood in the late eighteenth and nineteenth centuries and the construction during this period of the concept of a national culture. Particular stress is given to the ideological functions served by the developing conception of American nation as both polity and culture. Enrollment restricted to graduate students. Enrollment limited to 8. *R. Ramirez*

211. Nativity, Culture, Race, and Space. *

This seminar examines the concept of "nativity" (of being or claiming to be native to a particular location) and how it functions in historical and contemporary conflicts, ranging from historical settler colonialism to contemporary gentrification of urban areas. Enrollment restricted to graduate students. Enrollment limited to 10. *The Staff*

222. Tradition and Modernity in Black Culture. *

Examines the interplay of past and present in expressive culture by, for, and about African Americans, especially in respect to artistic and social innovations and their relationships to history, collective memory, and tradition. Upper-division students may enroll via permission code from instructor. Enrollment restricted to graduate students. Enrollment limited to 15. *The Staff*

223. Cultural Citizenship. *

Seminar examines the right to be different and belong in a participatory, democratic sense. Explores vernacular definitions of what confers political and cultural entitlement, taking into consideration factors ranging from the economic to notions of dignity and respect. Enrollment restricted to graduate students. Enrollment limited to 10. *R. Ramirez*

225. Black Feminist Thought and Practice. *

Explores the development of African American feminist thought and its articulations in writing, music, literature, and practice in the 20th-century U.S. Black women's sexuality a major theme, especially motherhood, politics of reproduction, and sexual narratives. Enrollment restricted to graduate students. Enrollment limited to 10. *The Staff*

226. Comparative American Studies: Race and Difference in Global Perspective. *

Explores race and difference in global perspective. Examines the relationship between democracy and pluralism, with a focus on the movement of people between the global south and global north. Enrollment restricted to graduate students. Enrollment limited to 15. *C. Ramirez*

227. Studies in Black Cultural and Intellectual History. *

Examines key figures and movements in black intellectual and cultural history. Special consideration given to radical and avante-garde thought and expression. Specific focus varies from year to year. Enrollment restricted to graduate students. Enrollment limited to 10. *E. Porter*

295. Directed Reading. F,W,S

Directed reading which does not involve a term paper. Designed for graduate students. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

296. Special Student Seminar. F,W,S

A seminar study group for graduate students arranged between students and faculty member. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

297. Independent Study. F,W,S

Independent study for graduate students who need to establish a research area for their thesis. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Independent thesis research for graduate students. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

*Not offered in 2009-10

[Changes to 2009-10 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Program Description

Anthropology studies people throughout the world and through time. Because it covers a wide range of topics—physical evolution, material remains of the past, and the world that humans create through their ideas and practices in present-day societies—anthropology is an especially integrative discipline.

The anthropology program at UCSC offers courses that reflect the diversity of the field. Cultural anthropology explores the movements of people, objects, and ideas in diverse societies, including our own. Cultural anthropology courses examine such topics as race and ethnicity, medicine, science, gender, sexuality, the environment, religion, law, popular culture, and politics.

Archaeology uses the material evidence of human activities to understand past human lives. Archaeology at UCSC focuses on past people's interactions with one another at the local level and within their wider social and ecological contexts. Faculty research areas include the pre-colonial and early post-colonial history of East Africa and the American Southwest.

Physical anthropology traces the human journey from its beginnings in Africa over five million years ago. Physical anthropology courses look at fossil evidence, evolutionary theory, human variation, and the behavior of primate relatives in order to analyze biological, social, and cultural changes over time.

UCSC students have the opportunity to do independent library and field research in cultural anthropology, archaeology, and physical anthropology. Laboratory courses in archaeology and physical anthropology offer practical experience in the analysis of biological and cultural materials. Students may use the social science media laboratory to develop technical and creative skills in visual and audio media. In cultural anthropology courses, students learn to carry out anthropological research through interviews, participant observation, surveys, the collection of oral histories, and the interpretation of archives.

Because anthropology is concerned with understanding human interaction, it is a useful major for anyone planning a career that involves working with people, especially those from diverse cultures. Some UCSC anthropology graduates are in social work, many are in teaching, and others pursue careers in law, city planning, politics, medicine, public health, cultural resource management, and journalism. Students intending to specialize in anthropology usually go on to graduate school because professional employment in the field almost always demands an advanced degree.

Most anthropology faculty have their offices in Social Sciences 1 Building. Social Sciences 1 also houses the Visual Culture Research Laboratory and laboratories for archaeology and physical anthropology where space is provided for laboratory and individual studies courses and for collections of mammalian skeletal material, casts of fossil hominids, ceramics, stone tools, and other archaeological artifacts.

The Anthropology Society, a campus club, is open to all students interested in anthropology. The Anthropology Colloquium showcases guest speakers and gives faculty and students an opportunity to discuss new approaches to anthropological questions. Students and faculty interested in archaeology also gather informally at the Archaeology/ Physical Anthropology Forum to share information on fieldwork and employment opportunities.

Undergraduate Handbook

All undergraduate majors should obtain a copy of the Anthropology Department undergraduate handbook at UCSC from the department office (361 Social Sciences I Building). It outlines

information on department procedures and requirements, program planning, independent study, faculty interests, and campus resources for anthropology majors.

Major Requirements

The Anthropology Department urges students to seek faculty advice early in planning for the major. Faculty hold regular office hours weekly and encourage students to come in to talk about their program or course work. Peer advisers are also available.

To graduate with an anthropology major, students must take courses 1, 2, 3, and either course 4 or an 80s-level course as background for upper-division courses. They must take a minimum of nine upper-division courses, including at least one course selected from each of these five categories:

Anthropological Theory Courses

- 100 History and Theory of Physical Anthropology
- 150 Communicating Anthropology
- 152 Survey of Cultural Anthropological Theory
- 170 History of Archaeological Theory

Sociocultural Anthropology Courses

- 123 Psychological Anthropology
- 124 Anthropology of Religion
- 126 Sexuality and Society in Cross-Cultural Perspective
- 127 Ethnographies of Capitalism
- 128 Contemporary American Evangelical Culture
- 129 Other Globalizations: Cultures and Histories of Interconnection
- 131 Women in Cross-Cultural Perspective
- 132 Photography and Anthropology
- 133 Narratives of the Popular
- 134 Medical Anthropology
- 135A Cities
- 137 Consuming Culture
- 138 Political Anthropology
- 139 Language and Culture
- 142 Anthropology of Law
- 143 Performance and Power
- 145X Special Topics in Socio-Cultural Anthropology
- 146 Anthropology and the Environment
- 151 Workshop in Ethnography
- 154 Multimedia Ethnography
- 155 Cultural Encounters
- 157 Modernity and Its Others
- 159 Race and Anthropology
- 164 Anthropology of Dance
- 165 Anthropological Folklore

Ethnographic Area Studies Courses

- 130A Peoples and Cultures of Africa
- 130B Brazil
- 130C Politics and Culture in China
- 130E Culture and Politics of Island Southeast Asia
- 130F African Diasporas in the Americas
- 130G Asian Americans in Ethnography and Film
- 130H Ethnography of Russia and Eastern Europe
- 130I Cultures of India
- 130L Ethnographies of Latin America
- 130M Inside Mexico
- 130N Native Peoples of North America
- 130O Postcolonial Britain and France
- 130R Provincializing America
- 130T Anthropological Approaches to Islam
- 130X Special Topics in Ethnography

Physical Anthropology and Archaeology Courses

- 101 Human Evolution
- 102A Human Skeletal Biology
- 103 Forensic Anthropology
- 104 Human Adaptability
- 106 Primate Behavior and Ecology
- 107 Human Functional Anatomy
- 110 Comparative Functional Anatomy
- 111 Human Ecology
- 112 Life Cycles
- 172 Archaeological Research Design

- 173 Origins of Farming
- 174 Origins of Complex Societies
- 175A African Archaeology
- 175B African Archaeology: Development
- 175C African Diaspora Archaeology
- 176A North American Archeology
- 176B Meso-American Archaeology
- 178 Historical Archaeology: A Global Perspective
- 180 Ceramic Analysis in Archaeology
- 183 Introduction to Quantitative Methods in Archaeology
- 184 Zooarchaeology
- 185 Osteology of Mammals, Birds, and Fish

Senior Seminar Courses

- 190A Tropical Forest Ecology
- 190B Field Methods in Primatology
- 190C Independent Field Research
- 194A Community
- 194B Chimpanzees: Biology, Behavior and Evolution
- 194C Food and Medicine
- 194F Memory
- 194G Politics and Secularism
- 194I Consumption and Consumerism
- 194K Reading Ethnographies
- 194L Archaeology of the African Diaspora
- 194M Medical Anthropology
- 194N Comparison of Cultures
- 194P Space, Place, and Culture
- 194S The Anthropology of Sound
- 194T Poverty and Inequality
- 194U Environmental Anthropology: Nature, Culture, Politics
- 194V Picturing Cultures
- 194X Women in Politics: A Third World Perspective
- 194Y California Archaeology
- 194Z Emerging Worlds
- 196A/B Southwest American Archaeology

Two-credit courses do not count toward the nine upper-division courses required for the major. Only one 5-credit individual studies course (197, 198, or 199) may be counted toward the nine required upper-division courses. Course 107L does not count toward the nine upper-division courses required for the major. Theory courses can only be counted toward the theory requirement or an upper-division elective.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement will normally be met within one to three courses already required for the major. For detailed information on this major's DC requirement, consult your major adviser or see the 2010-11 general catalog.

Comprehensive Requirement

Students can fulfill the senior comprehensive requirement in anthropology either by passing an advanced senior seminar (194-series course, 190A-B-C, or 196A-B), by writing an acceptable independent senior thesis, or by passing an approved graduate-level topical seminar in anthropology.

Senior seminars are small, writing-intensive classes focusing on advanced topics in anthropology. The prerequisite for admission to a senior seminar is successful completion of courses 1, 2, and 3; senior seminars are restricted to anthropology majors.

Students considering an independent thesis must arrange for the sponsorship and support of a faculty member before beginning research. An independent senior thesis (not written within a senior seminar) should be based on original research and reflect the student's understanding of fundamental theories and issues in anthropology. The thesis should be comparable in content, style, and length (generally 25–30 pages) to a professional journal article in its subfield.

Students writing a senior thesis must complete five, instead of four, upper-division electives. Students who intend to satisfy the exit requirement by taking a graduate seminar must first get permission from the department. Not all graduate seminars are appropriate for fulfilling this requirement.

All majors, including double majors, must prepare a program of study in consultation with a member of the Anthropology Department. A combined major in anthropology and Earth and planetary sciences, leading to a B.A. degree, is also offered; for that program description, see

Earth and Planetary Sciences. Students going on to graduate school should plan course schedules in close consultation with faculty advisers.

Many anthropology majors whose studies emphasize archaeology have benefited from concurrent study in the Cabrillo College Archaeological Technology Certificate Program. This vocational certification program is sponsored entirely by Cabrillo College, but credit for its summer field survey and excavation component may be transferred for credit at UCSC. Although courses in the Archaeological Technology Certificate Program do not count toward the UCSC anthropology major, students who have obtained the certificate in tandem with their bachelor's degree in anthropology have expanded their employment and advanced degree program opportunities. Students interested in exploring this possibility are encouraged to consult with UCSC archaeology faculty and to visit the program's web site at <http://www.cabrillo.edu/academics/archtech/>.

Transfer Students

If possible, transfer students should complete lower-division requirements for the major before coming to UCSC by taking classes equivalent to courses 1, 2, and 3. Department policy also allows up to 10 quarter credits (equivalent to two UCSC courses) of upper-division transfer credit toward the major requirement. Transfer students should bring a copy of their UCSC Transfer Credit Summary and an unofficial copy of all pertinent transcripts to the undergraduate adviser in the department office (361 Social Sciences 1 Building) as soon as possible after reaching campus so that prerequisites can be verified and course enrollment can proceed smoothly.

Peer Advisers

The Anthropology Department has instituted a peer adviser program as a supplement to academic advising offered by faculty members. The peer advisers are juniors and seniors who have been trained to help students with questions and general guidance through the anthropology major. Peer advisers hold regularly scheduled office hours in the department office.

Honors

The Anthropology Department awards "honors in the major" based on a ranked departmental grade point average that is calculated using all upper-division courses taken in the major with the exception that only one independent-study course can be used in this calculation. For students who have taken multiple independent-study courses in the department, the independent-study course that has the highest grade is used for the calculation. Approximately 15 percent of the graduating class is considered for honors based on their cumulative GPA through the quarter before graduation.

"Highest honors in the major" is determined by faculty review of all the departmental narrative evaluations for all students considered for honors within a particular quarter. The criteria for awarding highest honors in the major are overall superlative performance in the major and general breadth of excellence across the subfields of anthropology as reflected in the narrative evaluations. Receiving honors on the senior exit requirement is also considered as a factor in awarding highest honors, but is not always determinative.

Minor Requirements

Students earn a minor in anthropology by completing all of the requirements for the major with the following differences:

The number of upper-division courses is reduced from nine to six. Of these, at least one must be from each of the following categories: (1) theory, (2) sociocultural anthropology, (3) ethnographic area studies, and (4) physical anthropology or archaeology.

Independent study courses cannot be used toward completion of the minor.

No senior seminar or thesis is required.

For more information regarding department policies, please consult the undergraduate adviser at the Anthropology Department office, 361 Social Sciences 1 Building. A handbook on the anthropology program is available there or on the anthropology web site.

Graduate Program

The anthropology doctoral program at UCSC consists of three tracks: cultural anthropology, anthropological archaeology, and physical anthropology. The majority of students are admitted to the cultural anthropology program. Smaller numbers of students are admitted to the programs in anthropological archaeology and physical anthropology.

Although applicants are accepted only for the Ph.D. program, students may obtain an M.A. degree after fulfilling specific requirements during the first two years.

The theme of emerging worlds—culture and power after progress unites the research interests of

many faculty in the cultural anthropology graduate program at UCSC. In recent years, anthropology's central concept of culture has been subjected to extraordinary ethnographic and theoretical pressures. Across the social sciences, scholars are responding to emergent scientific and social dilemmas by turning to the concept of culture and the ethnographic method. Such disciplinary turns grow from a challenging new set of social configurations, which affect both scholarly and lay understandings of the present, past, and future: the demise of certainties about progress and modernization and the need to understand newly emergent worlds. Nineteenth- and 20th-century ideas of progress and programs of modernization both created the concept of culture and relegated it to a nostalgic role as backward-looking sentiment. Anthropologists studied "vanishing worlds." In the last 30 years, however, such certainties have been challenged. Grand theories of human behavior that depended on the idea of a universal man have begun to fray around the edges. Heterogeneity and disjuncture have caught the attention of a wide range of social scientists, calling out for ethnographic investigation. In this context, scholarly discussions have turned toward culture, not as "tradition," but as the world-making networks, geographies, innovations, meanings, and assemblages that are carrying us into the future.

Our concentration on "emerging worlds" and on the construction of anthropological knowledge is especially well suited for drawing together diverse scholars and specialists in challenging and enriching conversations. Rather than reproduce the boundaries among the traditional subfields of anthropology, we explore how recombinations of these approaches can elucidate specific anthropological problems.

Working with their faculty advisory committee, students in cultural anthropology have considerable freedom to design their own programs of study after completing the two-quarter core course and the ethnographic practice course during the first year. To achieve Ph.D. candidacy, students are expected to pass a first-year review of their written work, take three additional 5-credit courses in anthropology (excluding independent study courses), maintain satisfactory academic progress, satisfy the ethnographic writing requirement and the foreign language requirement, pass a qualifying exam at the end of the third year, and meet the specific requirements of the Division of Graduate Studies. After advancing to Ph.D. candidacy, students carry out a sustained ethnographic fieldwork project and are expected to complete their dissertation within a year after returning from the field.

Graduate students in cultural anthropology may obtain a notation on the anthropology Ph.D. diploma indicating that they have specialized in feminist studies or Latin American and Latino studies (LALS) if they meet requirements spelled out by the individual committee composed of anthropology and feminist studies faculty or the anthropology and faculty from the program awarding the notation.

The Ph.D. program in archaeological anthropology is highly selective, focusing on the archaeology of late precolonial societies in East and West Africa and North America, especially the Southwest and California. The program also features an emerging concentration on the archaeology of colonial encounters among peoples of Europe, Africa, and the Americas. It is distinctive in insisting that theories of power, production and exchange, human ecology, gender, ethnicity, and technological practice be explored through rigorous laboratory and field research methods.

The Ph.D. program in physical anthropology combines a strong emphasis on hard and soft tissue anatomy with a broad evolutionary perspective. This highly selective track is characterized by intense mentoring of students, involvement of students in instruction as well as course work, and interdisciplinary training. Specific training is offered in skeletal biology, comparative primate anatomy, behavior and ecology, forensic anthropology, and evolutionary theory. Although the areas of study of the archaeological and physical anthropology programs are distinct, their paths toward the Ph.D. are similar. In the first year, students take two foundational theory courses and pass a review of their work. Within the first two years of study, students complete at least two foundational materials/methods courses or laboratory courses in other departments; two advanced laboratory apprenticeship courses or similar courses in other departments; two foundational courses in geographic/temporal areas or, in physical anthropology, topical areas; two graduate seminars with other anthropology or campus faculty; one quantitative methods course; and two terms of supervised teaching experience.

The third-year requirements are three laboratory apprenticeship courses, the grant writing seminar, and tutorials to prepare the student for the qualifying exams. All courses outside the department must be approved by the student's adviser. After advancing to Ph.D. candidacy, the student carries out a sustained laboratory or fieldwork project and is expected to complete the dissertation within a year after finishing research.

Major Requirements

The Anthropology Department urges students to seek faculty advice early in planning for the major. Faculty hold regular office hours weekly and encourage students to come in to talk about their program or course work. Peer advisers are also available.

To graduate with an anthropology major, students must take courses 1, 2, 3, and either course 4 or an 80s-level course as background for upper-division courses. They must take a minimum of nine upper-division courses, including at least one course selected from each of these five categories:

Anthropological Theory Courses

- 100 *History and Theory of Physical Anthropology*
- 150 *Communicating Anthropology*
- 152 *Survey of Cultural Anthropological Theory*
- 170 *History of Archaeological Theory*

Sociocultural Anthropology Courses

- 123 *Psychological Anthropology*

- 124 *Anthropology of Religion*
- 126 *Sexuality and Society in Cross-Cultural Perspective*
- 127 *Ethnographies of Capitalism*
- 128 *Contemporary American Evangelical Culture*
- 129 *Other Globalizations: Cultures and Histories of Interconnection*
- 131 *Women in Cross-Cultural Perspective*
- 132 *Photography and Anthropology*
- 133 *Narratives of the Popular*
- 134 *Medical Anthropology*
- 135A *Cities*
- 137 *Consuming Culture*
- 138 *Political Anthropology*
- 139 *Language and Culture*
- 142 *Anthropology of Law*
- 143 *Performance and Power*
- 145X *Special Topics in Socio-Cultural Anthropology*
- 146 *Anthropology and the Environment*
- 151 *Workshop in Ethnography*
- 154 *Multimedia Ethnography*
- 155 *Cultural Encounters*
- 157 *Modernity and Its Others*
- 159 *Race and Anthropology*
- 164 *Anthropology of Dance*
- 165 *Anthropological Folklore*

Ethnographic Area Studies Courses

- 130A *Peoples and Cultures of Africa*
- 130B *Brazil*
- 130C *Politics and Culture in China*
- 130E *Culture and Politics of Island Southeast Asia*
- 130F *African Diasporas in the Americas*
- 130G *Asian Americans in Ethnography and Film*
- 130H *Ethnography of Russia and Eastern Europe*
- 130I *Cultures of India*
- 130L *Ethnographies of Latin America*
- 130M *Inside Mexico*
- ~~130L *Ethnographies of Latin America*~~
- 130N *Native Peoples of North America*
- 130O *Postcolonial Britain and France*
- 130R *Provincializing America*
- 130T *Anthropological Approaches to Islam*
- 130X *Special Topics in Ethnography*

Physical Anthropology and Archaeology Courses

- 101 *Human Evolution*
- 102A *Human Skeletal Biology*
- 103 *Forensic Anthropology*
- 104 *Human Adaptability*
- 106 *Primate Behavior and Ecology*
- 107 *Human Functional Anatomy*
- 110 *Comparative Functional Anatomy*
- 111 *Human Ecology*
- 112 *Life Cycles*
- 172 *Archaeological Research Design*
- 173 *Origins of Farming*
- 174 *Origins of Complex Societies*
- 175A *African Archaeology*
- 175B *African Archaeology: Development*
- 175C *African Diaspora Archaeology*
- 176A *North American Archeology*
- 176B *Meso-American Archaeology*
- 178 *Historical Archaeology: A Global Perspective*
- 180 *Ceramic Analysis in Archaeology*
- 183 *Introduction to Quantitative Methods in Archaeology*
- 184 *Zooarchaeology*
- 185 *Osteology of Mammals, Birds, and Fish*

Senior Seminar Courses

- 190A *Tropical Forest Ecology*
- 190B *Field Methods in Primatology*
- 190C *Independent Field Research*
- 194A *Community*
- 194B *Chimpanzees: Biology, Behavior and Evolution*
- 194C *Food and Medicine*

194F *Memory*
 194G *Politics and Secularism*
~~194C *Food and Medicine*~~
 194I *Consumption and Consumerism*
 194K *Reading Ethnographies*
 194L *Archaeology of the African Diaspora*
 194M *Medical Anthropology*
 194N *Comparison of Cultures*
 194P *Space, Place, and Culture*
 194S *The Anthropology of Sound*
 194T *Poverty and Inequality*
 194U *Environmental Anthropology: Nature, Culture, Politics*
 194V *Picturing Cultures*
 194X *Women in Politics: A Third World Perspective*
 194Y *California Archaeology*
 194Z *Emerging Worlds*
 196A/B *Southwest American Archaeology*

Two-credit courses do not count toward the nine upper-division courses required for the major. Only one 5-credit individual studies course (197, 198, or 199) may be counted toward the nine required upper-division courses. Course 107L does not count toward the nine upper-division courses required for the major. Theory courses can only be counted toward the theory requirement or an upper-division elective.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement will normally be met within one to three courses already required for the major. For detailed information on this major's DC requirement, consult your major adviser or see the 2010-11 general catalog.

Comprehensive Requirement

Students can fulfill the senior comprehensive requirement in anthropology either by passing an advanced senior seminar (194-series course, 190A-B-C, or 196A-B), by writing an acceptable independent senior thesis, or by passing an approved graduate-level topical seminar in anthropology.

Senior seminars are small, writing-intensive classes focusing on advanced topics in anthropology. The prerequisite for admission to a senior seminar is successful completion of courses 1, 2, and 3; senior seminars are restricted to anthropology majors.

Students considering an independent thesis must arrange for the sponsorship and support of a faculty member before beginning research. An independent senior thesis (not written within a senior seminar) should be based on original research and reflect the student's understanding of fundamental theories and issues in anthropology. The thesis should be comparable in content, style, and length (generally 25–30 pages) to a professional journal article in its subfield. Students writing a senior thesis must complete five, instead of four, upper-division electives.

Students who intend to satisfy the exit requirement by taking a graduate seminar must first get permission from the department. Not all graduate seminars are appropriate for fulfilling this requirement.

All majors, including double majors, must prepare a program of study in consultation with a member of the Anthropology Department. ~~Students may arrange double majors in anthropology and another discipline by special petition.~~ A combined major in anthropology and Earth and planetary sciences, leading to a B.A. degree, is also offered; for that program description, see Earth and Planetary Sciences. Students going on to graduate school should plan course schedules in close consultation with faculty advisers.

Many anthropology majors whose studies emphasize archaeology have benefited from concurrent study in the Cabrillo College Archaeological Technology Certificate Program. This vocational certification program is sponsored entirely by Cabrillo College, but credit for its summer field survey and excavation component may be transferred for credit at UCSC. Although courses in the Archaeological Technology Certificate Program do not count toward the UCSC anthropology major, students who have obtained the certificate in tandem with their bachelor's degree in anthropology have expanded their employment and advanced degree program opportunities. Students interested in exploring this possibility are encouraged to consult with UCSC archaeology faculty and to visit the program's web site at <http://www.cabrillo.edu/academics/archtech/>.

Transfer Students

If possible, transfer students should complete lower-division requirements for the major before coming to UCSC by taking classes equivalent to courses 1, 2, and 3. Department policy also allows up to 10 quarter credits (equivalent to two UCSC courses) of upper-division transfer credit toward the major requirement. Transfer students should bring a copy of their UCSC Transfer Credit Summary and an unofficial copy of all pertinent transcripts to the undergraduate adviser in the department office (361 Social Sciences 1 Building) as soon as possible after reaching campus so that prerequisites can be verified and course enrollment can proceed smoothly.

Peer Advisers

The Anthropology Department has instituted a peer adviser program as a supplement to academic advising offered by faculty members. The peer advisers are juniors and seniors who have been trained to help students with questions and general guidance through the anthropology major. Peer advisers hold regularly scheduled office hours in the department office.

Honors

The Anthropology Department awards “honors in the major” based on a ranked departmental grade point average that is calculated using all upper-division courses taken in the major with the exception that only one independent-study course can be used in this calculation. For students who have taken multiple independent-study courses in the department, the independent-study course that has the highest grade is used for the calculation. Approximately 15 percent of the graduating class is considered for honors based on their cumulative GPA through the quarter before graduation.

“Highest honors in the major” is determined by faculty review of all the departmental narrative evaluations for all students considered for honors within a particular quarter. The criteria for awarding highest honors in the major are overall superlative performance in the major and general breadth of excellence across the subfields of anthropology as reflected in the narrative evaluations. Receiving honors on the senior exit requirement is also considered as a factor in awarding highest honors, but is not always determinative.

Minor Requirements

Students earn a minor in anthropology by completing all of the requirements for the major with the following differences:

The number of upper-division courses is reduced from nine to six. Of these, at least one must be from each of the following categories: (1) theory, (2) sociocultural anthropology, (3) ethnographic area studies, and (4) physical anthropology or archaeology.

Independent study courses cannot be used toward completion of the minor.

No senior seminar or thesis is required.

For more information regarding department policies, please consult the undergraduate adviser at the Anthropology Department office, 361 Social Sciences 1 Building. A handbook on the anthropology program is available there or on the anthropology web site.

Graduate Program

The anthropology doctoral program at UCSC consists of three tracks: cultural anthropology, anthropological archaeology, and physical anthropology. The majority of students are admitted to the cultural anthropology program. Smaller numbers of students are admitted to the programs in anthropological archaeology and physical anthropology.

Although applicants are accepted only for the Ph.D. program, students may obtain an M.A. degree after fulfilling specific requirements during the first two years.

The theme of emerging worlds—culture and power after progress unites the research interests of many faculty in the cultural anthropology graduate program at UCSC. In recent years, anthropology’s central concept of culture has been subjected to extraordinary ethnographic and theoretical pressures. Across the social sciences, scholars are responding to emergent scientific and social dilemmas by turning to the concept of culture and the ethnographic method. Such disciplinary turns grow from a challenging new set of social configurations, which affect both scholarly and lay understandings of the present, past, and future: the demise of certainties about progress and modernization and the need to understand newly emergent worlds. Nineteenth- and 20th-century ideas of progress and programs of modernization both created the concept of culture and relegated it to a nostalgic role as backward-looking sentiment. Anthropologists studied “vanishing worlds.” In the last 30 years, however, such certainties have been challenged. Grand theories of human behavior that depended on the idea of a universal man have begun to fray around the edges. Heterogeneity and disjuncture have caught the attention of a wide range of social scientists, calling out for ethnographic investigation. In this context, scholarly discussions have turned toward culture, not as “tradition,” but as the world-making networks, geographies, innovations, meanings, and assemblages that are carrying us into the future.

Our concentration on “emerging worlds” and on the construction of anthropological knowledge is especially well suited for drawing together diverse scholars and specialists in challenging and enriching conversations. Rather than reproduce the boundaries among the traditional subfields of anthropology, we explore how recombinations of these approaches can elucidate specific anthropological problems.

Working with their faculty advisory committee, students in cultural anthropology have considerable freedom to design their own programs of study after completing the two-quarter core course and the ethnographic practice course during the first year. To achieve Ph.D. candidacy, students are expected to pass a first-year review of their written work, take three additional 5-credit courses in anthropology (excluding independent study courses), maintain satisfactory academic progress, satisfy the ethnographic writing requirement and the foreign language requirement, pass a qualifying exam at the end of the third year, and meet the specific requirements of the Division of Graduate Studies. After advancing to Ph.D. candidacy, students carry out a sustained ethnographic fieldwork project and are expected to complete their dissertation within a year after returning from the field.

Graduate students in cultural anthropology may obtain a notation on the anthropology Ph.D. diploma indicating that they have specialized in feminist studies or Latin American and Latino studies (LALS) if they meet requirements spelled out by the individual committee composed of anthropology and feminist studies faculty or the anthropology and faculty from the program awarding the notation.

The Ph.D. program in anthropological archaeology is highly selective, focusing on the archaeology of late precolonial societies in East and West Africa and North America, especially the Southwest and California. The program also features an emerging concentration on the archaeology of colonial encounters among peoples of Europe, Africa, and the Americas. It is distinctive in insisting that theories of power, production and exchange, human ecology, gender, ethnicity, and technological practice be explored through rigorous laboratory and field research methods.

The Ph.D. program in physical anthropology combines a strong emphasis on hard and soft tissue anatomy with a broad evolutionary perspective. This highly selective track is characterized by intense mentoring of students, involvement of students in instruction as well as course work, and interdisciplinary training. Specific training is offered in skeletal biology, comparative primate anatomy, behavior and ecology, forensic anthropology, and evolutionary theory.

Although the areas of study of the archaeology and physical anthropology programs are distinct, their paths toward the Ph.D. are similar. In the first year, students take two foundational theory courses and pass a review of their work. Within the first two years of study, students complete at least two foundational materials/methods courses or laboratory courses in other departments; two advanced laboratory apprenticeship courses or similar courses in other departments; two foundational courses in geographic/temporal areas or, in physical anthropology, topical areas; two graduate seminars with other anthropology or campus faculty; one quantitative methods course; and two terms of supervised teaching experience.

The third-year requirements are three laboratory apprenticeship courses, the grant writing seminar, and tutorials to prepare the student for the qualifying exams. All courses outside the department must be approved by the student's adviser. After advancing to Ph.D. candidacy, the student carries out a sustained laboratory or fieldwork project and is expected to complete the dissertation within a year after finishing research.

Faculty and Professional Interests

Professor

Donald Brenneis

Linguistic anthropology, folklore, legal anthropology, ethnomusicology, overseas Indians, South Asia, disputing and dispute management, legal language, bureaucratic institutions

Nancy N. Chen

Medical anthropology, visual anthropology, urban anthropology, Asian American identity, mental health, food, China

May N. Diaz, Emerita

Shelly Errington

Globalization of folk art, visual and social semiotics, photography, film, the Internet and digital media, Southeast Asia, and Latin America

Alison Galloway

Skeletal biology, forensic anthropology, human variation, history and ethics of physical anthropology, reproductive energetics and aging

Diane Gifford-Gonzalez

Neolithic Africa and Eurasia, colonial New Mexico, origins of food production, pastoralists, zooarchaeology, history of archaeology, interpretive theory, visual anthropology

Judith A. Habicht-Mauche

Precontact and early contact North America; cross-cultural interaction and trade; ceramic technology; archaeology of gender, power, and identity; Southwest and Southern Plains

Susan Harding

Culture, politics, narrative, gender, local/global studies, ethnographic writing, fundamentalism, Christianity, state-making, aging, America, and Spain

Diane K. Lewis, Emerita

Daniel T. Linger

Psychological anthropology, self and identity, subjectivity and consciousness, politics, cultural theory, cities, violence, transnational experience, Brazil, Japan

Carolyn Martin Shaw

African societies, colonial discourse, social theory, anthropology of women, sexuality

Olga Nájera-Ramírez

Folklore theory, ritual, festival, dance, greater Mexican culture, history and folklore, transnationalism, identity; expressive culture, ethnomusicology, bilingual communication, gender, history, and culture of Latin America, the U.S., and Mexico

Triloki Nath Pandey

Native peoples of North America, cultures of India, political anthropology, anthropological theories and comparisons; native North America; tribal India; Nepal

Richard R. Randolph, Emeritus**Lisa Rofel**

Critical theory, anthropology of modernity, popular/public culture, gender and sexuality, cultures of capitalism, postcolonial feminist anthropology, China

Stuart A. Schlegel, Emeritus**Anna Tsing**

Culture and politics, feminist theory and gender in the U.S., social landscapes and tropical forest ethnoecologies, ethnicity, local power and relations to the state in Indonesia, Southeast Asia, and the U.S.

Adrienne L. Zihlman

Primate and human evolution, comparative functional anatomy of monkeys and apes, sex and gender, growth and development, life history and evolutionary theory, history of physical anthropology

Associate Professor**Melissa L. Caldwell**

Poverty and welfare, religious development work, food, transnationalism, socialism and postsocialism, Russia, the former Soviet Union, and Eastern Europe

Nathaniel J. Dominy

Ecology and foraging behavior of humans and non-human primates; sensory ecology; color vision; primate evolution; tropical forests

Danilyn Rutherford

Borders and frontiers, colonialism, nationalism, ethnicity, kinship, performance, Christianity, secularism, sovereignty, publics, affect, technology, governancy, theory and method in anthropology, West Papua, Indonesia, the U.S.

Assistant Professor**Mark Anderson**

Racial formation, diaspora, nationalism, transnationalism, culture and power; Latin America, African diaspora

Mayanthi Fernando

Anthropology of religion, secularism, Islam, multiculturalism/pluralism; colonial and post-colonial France, Europe

Andrew Salvador Mathews

Environmental anthropology, science and technology studies, conservation and development

J. Cameron Monroe

Historical archaeology, complex societies, political economy, architecture and landscape, Africa and the African diaspora

Megan Moodie

South Asian studies, feminist studies, reproductive and population politics, kinship, development, legal identities, tribal communities

Matthew Wolf-Meyer

Medical anthropology, science studies, actor-network theory, American studies, popular culture, media studies, history of medicine, and public health

Professor

Raoul Birnbaum (History of Art and Visual Culture)

Buddhist studies, especially Chinese practices from medieval times to the present; religion and visual culture in China

John Brown Childs, Emeritus (Sociology)

Ethnic conflict and transcommunal cooperation; sociology of knowledge; African American, Native American, Latino interactions

James T. Clifford (History of Consciousness)

History of anthropology, travel, and exoticism; transnational cultural studies, museum studies, indigenous studies

Carolyn Dean (History of Art and Visual Culture)

Cultural histories of the native Americas and colonial Latin America

A. Russell Flegal (Environmental Toxicology)

Anthropogenic perturbations of biogeochemical cycles, applications of isotopic tracers in anthropology and archaeology

Margaret (Greta) A. Gibson (Education)

Immigrants and education; minority status and schooling; community-school relationships; ethnicity, class, gender, and educational processes; qualitative research methods

Stephen R. Gliessman (Environmental Studies)

Agroecology, sustainable agriculture, tropical land use and development, alternative trade networks, sustainable livelihoods and conservation, community and agroecology

Donna Haraway (History of Consciousness and Feminist Studies)

Feminist theory, cultural and historical studies of science and technology, relation of life and human sciences, human-animal relations, and animal studies

Paul Koch (Earth Sciences)

Isotope biogeochemistry, vertebrate paleontology

Marc S. Mangel (Applied Mathematics and Statistics)

Mathematical modeling of biological phenomena, especially the evolutionary ecology of growth, aging, and longevity; quantitative issues in fishery management; mathematical and computational aspects of disease

Patricia Zavella (Latin American and Latino Studies)

Chicana/Latino studies, women's work and domestic labor, poverty, family, sexuality and social networks, feminist studies, ethnographic research methods, and transnational migration of Mexican/o workers and U.S. capital

Associate Professor

S. Ravi Rajan (Environmental Studies)

Environmental history and political ecology, risk and disaster studies, science and technology studies, North-South environmental conflicts, environmental social theory, environmental ethics

Assistant Professor

Renya Ramirez (American Studies)

Native American studies, Indian identity, Native Americans and anthropology, urban Indians, Native American women, cultural citizenship, expressive culture, and anti-racist education

Marcia Ochoa (Community Studies)

Gender and sexuality, race and ethnicity, Latina/o studies, media and cultural studies, ethnography of media, feminism, queer theory, geography, multimedia production, graphic design, colonialism and modernity, Latin American studies—Colombia and Venezuela

[Program Description](#) | [Changes to 2009-10 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses

1. Introduction to Human Evolution. F

Study of evolution illustrated by Pleistocene hominid fossils and variation in living human groups. Behavior and evolution of primates examined as they contribute to the understanding of human evolution. Required for all anthropology majors. (General Education Code(s): IN.) *A. Zihlman*

2. Introduction to Cultural Anthropology. S

A number of different peoples are studied and a variety of approaches to the nature of the culture and to the study of specific cultures presented. Required for all anthropology majors. (General Education Code(s): IS.) *T. Pandey*

3. Introduction to Archaeology. W

Overview of ways of learning about the human past beyond the scope of written history. Reviews development of archaeology, fundamental methods and theories, and archaeology's contribution to understanding human origins, the emergence of farming, and the origins of complex societies. (General Education Code(s): IS.) *J. Habicht-Mauche*

4. Public Life and Contemporary Issues. S

How can cultural anthropology help us to understand current events unfolding locally, nationally, and globally? Students learn how to "read" newspapers differently—that is, through the lens of cultural analysis. The world of everyday politics and society, as it unfolds in debates happening right now, forms the topical substance of the course. (General Education Code(s): IS.) *A. Mathews*

42. Student-Directed Seminar.

Seminars taught by upper-division students under faculty supervision. (See course 192.) *The Staff*

80B. African Women. *

Survey of the position and roles of women in African societies with different social, political, and economic organizations. Offered in alternate academic years. (General Education Code(s): T3-Social Sciences, E.) *C. Shaw*

80D. Africa Today. *

Present-day values and social life of selected sub-Saharan African people examined using anthropological studies and African literature. (General Education Code(s): T3-Social Sciences, E.) *The Staff*

80G. Barrio Popular Culture. F

Introduces students to a broad sampling of verbal and nonverbal forms of Mexican folklore. Concentrates on experiencing these forms through texts, film, and if possible, performances. Attention to how these forms have been used by scholars to comment on Mexican culture is an underlying theme. Knowledge of Spanish is useful but not required. (General Education Code(s): T3-Social Sciences, E.) *O. Nájera-Ramírez*

80H. Acoustic Culture. W

Explores relationships between culture and the acoustic worlds, including environmental, verbal, and musical, which humans inhabit. How can paying attention to cultures of listening and sound-making help us think about cultural life and experience in new ways? (General Education Code(s): T3-Social Sciences.) *D. Brenneis*

80I. Culture and Power in Latin America. *

Introduces key issues in the anthropology of Latin America, with emphasis on identity formation, cultural practices, and power. Major themes include race, class, and gender as intersecting forms of oppression, violence, and terror and indigenous social movements. (General Education Code(s): T3-Social Sciences, E.) *M. Anderson*

80J. Introduction to Visual Culture. *

Introduces current issues in cultural anthropology using film as a medium with which to explore culture. Raises questions about visual representations and the portrayal of cultural difference in the context of global inequalities. (General Education Code(s): T3-Social Sciences.) *S. Errington*

80K. Culture through Food. *

Examines anthropology of food and politics of eating. Cultural and social uses of food in rituals of solidarity or fasting, identities and meanings of food for individuals, and consumption in the global context are key components of study. (General Education Code(s): T3-Social Sciences.) *The Staff*

80L. Biology of Everyday Life. W

Addresses cross-cultural attitudes to the human body and its everyday biological concerns—sleeping, eating, breathing, sex, and defecation. (General Education Code(s): T3-Social Sciences.) *M. Wolf-Meyer*

80N. Anthropology of Globalization. *

Introduces anthropological concepts and approaches to historical and contemporary globalizations. Using ethnographies, films, and other cultural productions, raises questions about the impacts of transnational capitalism, colonialism, migration/movement, and media on "local" and "global" identities, cultures, and communities. (General Education Code(s): T3-Social Sciences.) *The Staff*

80P. India and Indian Diaspora through Films. F

Explores several themes of relevance in contemporary India and Indian diaspora, concentrating on anthropological research and various documentary and popular Bollywood films. Through films and ethnographies, students analyze the nature of anthropological contributions to the study of Indian societies. (General Education Code(s): T3-Social Sciences, E.) *A. Pandey*

80Y. Power, Politics, and Protest.

Examines the many ways in which organized groups engage in political protest against those whom they understand to dominate them. The course first establishes the framework for the discussion of power, politics, and protest, and then examines a

variety of forms taken by political protests worldwide. (General Education Code(s): T3-Social Sciences.) *The Staff*

80Z. The Good Life. W

Examines cultural constructions of meaningful living, with emphasis on ethnographic analysis, through comparative studies of how societies assign value to different formations of everyday life. Topics include: cultivation of taste; pleasure; hierarchies of values; social justice; and distinctions between work and leisure. (General Education Code(s): T3-Social Sciences.) *M. Caldwell*

81A. Mexican Folklórico Dance (2 credits). F

Provides instruction in the aesthetic, cultural, and historical dimensions of Mexican folklórico dance. Students taught choreographed dances from various regions of Mexico and also learn dance techniques (técnica) and stage make-up application. Additional workshops and lectures offered to supplement class. Open to all students; no previous experience required. (Also offered as Latin American&Latino Studies 81A. Students cannot receive credit for both courses.) May be repeated for credit. (General Education Code(s): A.) *O. Nájera-Ramírez*

81B. Mexican Folklórico Dance (2 credits). W

Second course in series. Provides instruction in the aesthetic, cultural, and historical dimensions of Mexican folklórico dance. (Also offered as Latin American&Latino Studies 81B. Students cannot receive credit for both courses.) May be repeated for credit. (General Education Code(s): A.) *O. Nájera-Ramírez*

81C. Mexican Folklórico Dance (2 credits). S

Third course in series. Provides instruction in the aesthetic, cultural, and historical dimensions of Mexican folklórico dance. (Also offered as Latin American&Latino Studies 81C. Students cannot receive credit for both courses.) Prerequisite(s): course 81A or 81B. May be repeated for credit. (General Education Code(s): A.) *O. Nájera-Ramírez*

81J. Introduction to Visual Culture Lab (2 credits). *

Optional digital photography lab. Students learn to compose shots, download photos, resize them, and put them into a meaningful sequence. Concurrent enrollment in Anthropology 80J required. Enrollment limited to 36. *S. Errington*

93. Field Study. F,W,S

Supervised research or organized projects on anthropological topics for lower-division students. Conducted either on or off campus. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses

100. History and Theory of Physical Anthropology. *

Provides an historical overview from the 18th century to the present of race, ape-human relationships, and human nature. Emergence of an evolutionary framework and of fossil, genetic, and primate information becomes the basis for reformulating ideas about human biology within anthropology. Prerequisite(s): courses 1, 2, and 3. *A. Zihlman*

101. Human Evolution. W

Study of human evolution covering the last five million years. Examines the fossil

evidence and emphasizes the reconstruction of behavior from the paleontological and anatomical evidence. Prerequisite(s): course 1. Offered in alternate academic years.

The Staff

102A. Human Skeletal Biology. *

Presents basic human osteology allowing students to identify skeletal material by element. Emphasizes the dynamic nature of bone by integrating anatomy with a discussion of bone physiology within the context of the human life cycle.

Prerequisite(s): course 1. Enrollment limited to 16. *The Staff*

104. Human Adaptability. S

Explores the major environmental factors (temperature, altitude, diet, and disease); how they are perceived by the human body; the physiological, micro- and macroanatomical responses; and how behavior and culture can modify the impact of these stresses. Course 1 is highly recommended as preparation. *The Staff*

106. Primate Behavior and Ecology. W

The nature of primate social systems and social bonds is examined in the light of evolutionary and ecological concepts. Students cannot receive credit for this course and course 206. Prerequisite(s): course 1. *A. Zihlman*

107. Human Functional Anatomy. S

Study of structure and function of the human body through lectures with an evolutionary perspective including regional anatomy and body systems. Students cannot receive credit for this course and Anthropology 207. (Also offered as Biology: Molecular Cell & Dev 135. Students cannot receive credit for both courses.) Prerequisite(s): course 1; concurrent enrollment in course 107L required. Enrollment restricted to anthropology and Earth sciences/anthropology combined majors. *N. Dominy*

107L. Human Functional Anatomy Laboratory. S

Study of structure and function of the human body using dissection, comparative vertebrate anatomy, anatomical models, and computer-assisted instruction. Students are billed a \$60.00 materials fee. Students cannot receive credit for this course and Anthropology 207L. (Also offered as Biology: Molecular Cell & Dev 135L. Students cannot receive credit for both courses.) Prerequisite(s): course 1; concurrent enrollment in course 107 required. Enrollment restricted to anthropology and Earth sciences/anthropology combined majors. Enrollment limited to 20. *N. Dominy*

110. Comparative Functional Anatomy. *

Comparative and evolutionary anatomy of human performance. Examines locomotor systems and their underlying structure and evolution through videos, skeletons, and dissections in a variety of mammals, primates, and humans. Students are billed a \$45 materials fee. *Anthropology of Movement.*) Prerequisite(s): courses 102A or 107 or 185; or by interview. Enrollment limited to 20. *A. Zihlman*

111. Human Ecology. *

Reviews the environmental, physiological, behavioral, and cultural ways that humans interact with their physical surroundings. The effects of human culture on the environment and of the environment on the shape of human culture is emphasized.

The Staff

112. Life Cycles. F

Examines the human life cycle using an evolutionary framework. Examines key aspects of the human life stages using findings and concepts from developmental biology, physiology, nutrition, evolutionary ecology, and life-history theory.

Prerequisite(s): course 1. *The Staff*

120. Culture in Film. F

Introduces current and historical issues in visual anthropology, using film as a medium with which to represent culture. Raises questions about visual representation and advocacy in the context of global inequalities. Prerequisite(s): course 2 or 80J or Film 20A or 20B, or History of Art and Visual Culture 10D, 10E, 10F or 10G. *S. Errington*

120L. Culture in Film Laboratory (2 credits). F

This lab in video production is to train students in *Culture in Film*. The video lab, through lectures, demonstrations, hands-on instruction, and review of students' work will enable students enrolled in *Culture in Film* to learn the fundamentals of film/video pre-production, production, and post-production skills. Portfolio review prior to enrollment and concurrent enrollment in course 120 required. Enrollment limited to 15. *The Staff*

123. Psychological Anthropology. S

An introduction to some of the central theoretical issues in psychological anthropology. Psychoanalytic, cognitive, and relativist perspectives on the link between person and society are discussed and compared. *D. Linger*

124. Anthropology of Religion. W

Study of the phenomenon of religion as manifested in ethnographic literature, with special attention to traditional and recent modes of analysis of religious behavior. Special topics include myth, religious healing, witchcraft and sorcery, ritual, and millenarian movements. *A. Pandey*

126. Sexuality and Society in Cross-Cultural Perspective. W

The meaning and social processes associated with sexuality in selected societies. Examination of variations in sexual expressions and control of sexuality, and in economic and political organizations, highlights the interrelationship of sex and society. Prerequisite(s): course 2. *C. Shaw*

127. Ethnographies of Capitalism. F

Challenges approaches to capitalism that treat it as socioeconomic relations separable from "culture." Readings include ethnographies demonstrating the inextricability of cultural meanings from capitalist practices. Topics include capitalism's relationship to colonialism, nationalism, socialism, gender, and the commodification of aesthetics. *L. Rofel*

128. Contemporary American Evangelical Cultures. S

Study of contemporary, American, born-again Protestant discourse using ethnographic materials and interpretive theories. Topics include biblical literalism, Christian conversion and self-fabulation, charismatic gifts, preaching, sacrificial giving, prosperity theology, apocalypticism, creationism, pro-family and pro-life rhetoric, and televangelism. (Formerly *Born-Again Religion and Culture*.) *S. Harding*

129. Other Globalizations: Cultures and Histories of Interconnection. S

The history of social and cultural interconnections at a global scale. Anthropological approaches to the study of cultural encounter are used to investigate topics such as trade, religion, and citizenship and to evaluate shifting concepts of civilization and barbarism. Prerequisite(s): course 2. *A. Tsing*

130. Ethnographic Area Studies.

130A. Peoples and Cultures of Africa. S

Survey of sub-Saharan societies. Analysis of principles of social organization and factors of cultural unity of selected western, eastern, central, and southern African peoples. (General Education Code(s): E.) *C. Shaw*

130B. Brazil. F

Examines Brazilian culture and its link to interpersonal relationships, religion, politics, and psychological experience. (General Education Code(s): E.) *D. Linger*

130C. Politics and Culture in China. *

Joins substantive information "about" Chinese society and culture with debates in social theory and rethinks conventional wisdom about colonialism and modernity. Topics include representations of "Chineseness," class revolution, Chinese diaspora, popular culture, family and kinship, nationalism, history/memory, race and gender. (General Education Code(s): E.) *The Staff*

130E. Culture and Politics of Island Southeast Asia. W

Southeast Asia includes a variety of societies exhibiting many ecological adaptations, religions, marriage systems, and experiences with colonial powers. Case studies of particular societies, chosen to reveal variety, are examined comparatively. Emphasis on religion and social organization. Prerequisite(s): course 2. (General Education Code(s): E.) *A. Tsing*

130F. African Diasporas in the Americas. F

Focuses on African diasporas of the Caribbean, United States, and Latin America. Themes include: theorizing diaspora, historical formations, slavery, analytical approaches to cultures of the African diaspora, religion, music, comparative identity formation and racism, gender dynamics, social movements, and transnationalism. (General Education Code(s): E.) *M. Anderson*

130H. Ethnography of Russia and Eastern Europe. *

Introduces students to the ethnography of Eurasia, with special attention to the lived experience and legacy of state socialism in this region. Topics include new ideas of personhood, changing economic practices, public health, and international development. (General Education Code(s): E.) *M. Caldwell*

130I. Cultures of India. W

An examination of anthropological studies of tribal, rural, and urban cultures of India and a look at changes taking place in India. Prerequisite(s): course 2. Offered in alternate academic years. (General Education Code(s): E.) *T. Pandey*

130L. Ethnographies of Latin America. S

A broad introduction to issues and areas of cultural production and transformation in the Caribbean, Mexico, and Central and South America. Colonial, neocolonial, class, ethnic, gender, religious, ecological, and political relations intersect as represented in ethnographies and film. Prerequisite(s): course 2. (General Education Code(s): E.) *The Staff*

130M. Inside Mexico. *

Examines various communities within the Republic of Mexico as represented in ethnographic texts and other forms of cultural production, particularly music and dance. Emphasis on the interplay between the concept of regionalism and national identity. Previous course work in Mexican culture and/or history strongly recommended. Some reading in Spanish is required. (General Education Code(s): E.) *The Staff*

130N. Native Peoples of North America. *

A survey of Native American cultures and experience during the past century, with emphasis on Pueblo cultures of the American Southwest. (General Education Code(s): E.) *T. Pandey*

130O. Postcolonial Britain and France. S

Examines politics and culture of postcolonial Britain and France. Topics include: immigration from South Asia and North Africa; racism and anti-racism; minority difference and citizenship practices, with special attention to Muslim minorities. Readings include social theory, ethnographies, novels, and films. (General Education Code(s): E.) *M. Fernando*

130R. Provincializing America. *

Addresses matters of postcolonialism, transnationalism, and sovereignty in the context of the U.S.'s changing status at the turn of the 21st century. Prerequisite(s): course 2. (General Education Code(s): E.) *M. Wolf-Meyer*

130T. Anthropological Approaches to Islam. W

Analyzes post-colonial forms of Islam, with particular attention to Muslim societies and cultures in the Middle East, North Africa, and Europe. Emphasizes the relationship between power, knowledge, and representation in anthropological approaches to Islam and Muslims. (General Education Code(s): E.) *M. Fernando*

130X. Special Topics in Ethnography. F,W,S

This course on special topics in ethnography will be taught on a rotating basis by various faculty members. Precise focus of each year's courses will vary according to the instructor and will be announced by the department. May be repeated for credit. *The Staff*

131. Women in Cross-Cultural Perspective. W

Examines the diversity of women's as well as men's roles, experiences, and self-conceptions in a number of societies to explore how women and men shape, and are shaped by, particular forms of social life. Prerequisite(s): course 2. Offered in alternate academic years. *The Staff*

132. Photography and Anthropology. *

Moving historically from woodcuts and paintings to the World Wide Web, but emphasizing the invention and development of documentary photography, this course explores the world of images depicting society and culture. Major theoretical approaches to "reading" pictures will be emphasized, and students must produce a final project incorporating visual images. Prerequisite(s): course 2 or History of Art and Visual Culture 10D or 10E or 10F or 10G or Art 30. *S. Errington*

132L. Photography and Anthropology Laboratory (2 credits). *

This still photography lab trains students in the basic operations and techniques of

the camera and the creation of a set of still photographs to use for social documentation. It includes lectures, demonstrations, hands-on instruction, and a continuous review of the students' work in progress. It does not include darkroom work. Concurrent enrollment in course 132 required. Enrollment restricted to anthropology majors. Enrollment limited to 30. *S. Errington*

133. Narratives of the Popular. *

Addresses the increasing importance of popular culture as the terrain upon which to address issues of culture and power. Emphasizes an ethnographic approach to popular culture as sociocultural phenomena. Students learn about a variety of activities including television and film viewing, music, fashion, photography, postcards, comic books, and urban spatial relations and architecture. Offered in alternate academic years. *The Staff*

134. Medical Anthropology: An Introduction. F

Cross-cultural study of health, disease, and illness behavior from ecological and ethnomedical perspectives. Implications for biomedical health care policy. Prerequisite(s): course 2. *M. Wolf-Meyer*

135A. Cities. *

Examines cities from an anthropological perspective. Reviews pertinent social scientific literature of the 19th and early 20th centuries. Surveys the concepts and methods used by contemporary anthropologists to investigate urban phenomena. *The Staff*

137. Consuming Culture. S

Explores consumption as a cultural form. Beginning with theories of capitalism and exchange, it then focuses on sites and modes of consumption and display such as department stores, museums and zoos, advertisements and photography, cultural tourism. Prerequisite(s): course 2. *M. Caldwell*

138. Political Anthropology. F

The ideas, in selected non-Western societies, about the nature of power, order, social cohesion, and the political organization of these societies. (Also offered as Legal Studies 138. Students cannot receive credit for both courses.) Offered in alternate academic years. *The Staff*

139. Language and Culture. W

Examination of language system and language use in relationship to cultural contexts of communication in Western and non-Western societies. Topics include the Sapir-Whorf linguistic relativity hypothesis; linguistic constructions of gender; speech variation in relation to class, ethnicity, and national identity; and the emergence of self in communicative acts. Prerequisite(s): course 2. *D. Brenneis*

142. Anthropology of Law. *

An ethnographically informed consideration of law, dispute management, and social control in a range of societies including the contemporary U.S. Topics include conflict management processes, theories of justice, legal discourse, and relations among local, national, and transnational legal systems. (Also offered as Legal Studies 142. Students cannot receive credit for both courses.) Enrollment restricted to anthropology and legal studies majors. *The Staff*

143. Performance and Power. S

Explores relationships between power and performance forms and media, both "traditional" and emergent. Links aesthetics with politics, and recent transcultural exchanges with local circumstances and consequences. *D. Brenneis*

145X. Special Topics in Socio-Cultural Anthropology. F

Taught annually on a rotating basis by faculty members. Each year's topic varies by instructor and is announced by the department. *The Staff*

146. Anthropology and the Environment. W

Examines recent approaches to study of nature and the environment. Considers historical relationship between nature, science, and colonial expansion as well as key issues of contemporary environmental concern: conservation, environmental justice, and social movements. Prerequisite(s): course 2. *A. Mathews*

150. Communicating Anthropology. S

Encourages anthropology majors to explore different means of communicating anthropology with much attention to individual writing and presentation skills. Intensive work on library research; recognizing, comparing, and making arguments; and analyzing ethnographies, articles, reviews, and films. Prerequisite(s): two of the following courses: 1, 2, or 3; satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to sophomore and junior anthropology majors. (General Education Code(s): W.) *C. Shaw*

151. Workshop in Ethnography. W

Through demonstration, practice, and participation, acquire skills in collecting and analyzing cultural data. Work with members of other cultures and with each other to learn to identify significant cultural patterns. Lectures and readings provide added perspective and a theoretical base. Prerequisite(s): course 2. Enrollment limited to 20. *S. Errington*

152. Survey of Cultural Anthropological Theory. W

Major figures, ideas, and writings in 19th- and 20th-century cultural anthropology surveyed. Prerequisite(s): course 2 and satisfaction of the Entry Level Writing and Composition requirements; enrollment restricted to anthropology majors. (General Education Code(s): W.) *D. Linger*

154. Multimedia Ethnography. *

Students learn the fundamentals of photography or video production and audio recording in order to create mini-ethnographies. Prerequisite(s): courses 1, 2, and 3. Concurrent enrollment in course 154L is required. Enrollment restricted to anthropology majors. Enrollment limited to 40. *S. Errington*

154L. Multimedia Laboratory (2 credits). *

Designed to instruct in aesthetics and technical production of a short digital slideshow. Using iMovie3 editing program, produce a digital slideshow incorporating sound (narration, music, and sound effects) and still images. Concurrent enrollment in course 154 required. Enrollment limited to 12. *S. Errington*

155. Cultural Encounters. *

Explores cross-cultural encounters through a combination of theoretical and ethnographic texts. Various faculty members teach on a rotating basis. The focus of each year's course(s) varies according to the instructor and will be announced by the department. Prerequisite(s): course 2 or permission of instructor. May be repeated for credit. *The Staff*

157. Modernity and Its Others. *

Beginning with the conquest of the Americas, considers how Western thinkers have explained seemingly "irrational" ways of being and thinking (like witchcraft, human sacrifice, and bodily mutilation), and asks how we interpret beliefs and practices

radically different from our own. *The Staff*

159. Race and Anthropology. F

Examines concept of race in anthropology. Begins with histories of race in anthropology; turns to contemporary analysis of racism, identity formation, and diaspora; and concludes with current debates on the validity of "race" as an object of analysis. *M. Anderson*

164. The Anthropology of Dance. *

An intense reading seminar which critically reviews anthropological works in dance ethnography and dance theory. Recommended for anthropology majors. Will be offered in 2010–11 academic year. Prerequisite(s): course 2. Enrollment limited to 25. Offered in alternate academic years. *O. Nájera-Ramírez*

165. Anthropological Folklore. *

Survey of the major forms of folklore with emphasis upon games, humor, superstitions, and folk-narratives (myth, legend, and folktales). Addresses methodological issues in folklore and theoretical approaches to the study of folklore. Will be offered in 2010–11 academic year. Prerequisite(s): course 2. Offered in alternate academic years. *O. Nájera-Ramírez*

170. History of Archaeological Theory. F

Historical review of prehistoric archaeology from antiquarianism to the present. Emphasis on development of archaeological theory and its relation to evolutionary and anthropological theory. Students cannot receive credit for this course and course 270. Prerequisite(s): course 3; satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to anthropology and Earth sciences/anthropology combined majors. Recommended for juniors. Offered in alternate academic years. (General Education Code(s): W.) *D. Gifford-Gonzalez*

172. Archaeological Research Design. *

Introduces theories and methods for recovering and analyzing archaeological data. Critically explores the nature of archaeological evidence and how archaeologists know what they know. Strongly recommended for those contemplating further studies in archaeology. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, course 3, and one upper-division archaeology course. Strongly recommended for those contemplating further studies in archaeology. Enrollment limited to 25. Offered in alternate academic years. (General Education Code(s): W.) *The Staff*

173. Origins of Farming. S

Survey of the ecological and archaeological evidence for the origins of plant and animal domestication in Africa, Eurasia, and the Americas. Discussion will center on the preconditions of this drastic alteration in human ecology and its consequences in transforming human societies. Open to nonmajors. Students cannot receive credit for this course and course 273. Offered in alternate academic years. *D. Gifford-Gonzalez*

174. Origins of Complex Societies. *

Deals with evidence and theories concerning the origins of complex society; the transition from egalitarian, foraging societies to the hierarchical, economically specialized societies often referred to as "civilizations." Focuses on both Old World and New World cultures. Prerequisite(s): course 3. *The Staff*

175A. African Archaeology: 2.5 Million BP to Farming. W

Archaeological history of Africa from the first 2.5 million-year-old artifacts to the

emergence of African pastoralism and farming. Disciplinary models and assumptions critically examined in their historic and political contexts. Students cannot receive credit for this course and course 275A. (Formerly *African Archaeology*.) Prerequisite(s): course 3 or by permission of instructor. Enrollment restricted to junior and senior anthropology and Earth sciences/anthropology combined majors. Enrollment limited to 45. *D. Gifford-Gonzalez*

175B. African Complex Societies. S

Introduces the evolution of African kingdoms and states from the emergence of farming communities to initial contact with Europe. Particular attention paid to the origins of social inequality and the evolution of centralized polities. Students cannot receive credit for this course and Anthropology 275B. Prerequisite(s): course 3; course 175A strong recommended. *J. Monroe*

176A. North American Archaeology. F

Development of Native cultures in North America. Topics include peopling of the New World, early foragers, spread of agriculture and complex societies in the Southwest and Eastern Woodlands, and review of cultural developments in the West and Far North. Prerequisite(s): course 3 or consent of instructor. *The Staff*

178. Historical Archaeology: A Global Perspective. S

Introduces archaeology of European colonialism and the early-modern world. Topics include historical archaeological methods; the nature of European colonial expansion in New and Old Worlds; culture contact and change; and power and resistance in colonial societies. Students cannot receive credit for this course and Anthropology 278. Prerequisite(s): course 3 or consent of instructor. *J. Monroe*

180. Ceramic Analysis in Archaeology. F

Focuses on theories and techniques used by archaeologists to bridge the gap between the recovery of ceramic materials and their interpretation within cultural contexts. Topics include the origins of pottery, production methods, classification and typology, seriation, functional analysis, materials analysis and description, organization of production, trade, and the analysis of style. Students are billed a \$25 materials fee. Students cannot receive credit for this course and course 280. Prerequisite(s): course 3. Concurrent enrollment in course 180L required. Enrollment restricted to anthropology majors. *The Staff*

180L. Ceramic Analysis Laboratory (2 credits). F

Practicum in ceramic materials analysis and description. Students perform material experiments in materials selection and processing, hand-building techniques, and open-pit firing. Demonstrations of standard techniques of attribute analysis and the mineralogical and chemical characterization of ceramic materials are presented. Students cannot receive credit for this course and course 280L. Prerequisite(s): course 3. Concurrent enrollment in course 180 required. Enrollment restricted to anthropology majors. Enrollment limited to 16. *The Staff*

182A. Lithic Technology. W

Introduction to lithic and ceramic analysis in archaeology. Includes lab analysis, discussions of classification and typology, and exploration of the concept of style as it relates to ceramics and lithics in archaeology. Prerequisite(s): course 3. Enrollment limited to 20. *The Staff*

183. Introduction to Quantitative Methods in Archaeology. *

An introduction to the use of statistics and other formal methods in solving archaeological problems. Teaches basic interests, terms, and concepts important in quantitative archaeological thought through lectures, assigned readings, problem sets,

and in-class discussions. Will be offered in 2010–11 academic year. Prerequisite(s): course 1 or 3. *The Staff*

184. Zooarchaeology. *

Lectures and seminar on archaeological faunal analysis. Topics include mammalian evolution and osteology, vertebrate taphonomy, reconstruction of human diet from faunal remains, foraging strategy theory, data collection and management, and methods of quantitative analysis. Students cannot receive credit for this course and course 284. Prerequisite(s): course 3. Offered in alternate academic years. *D. Gifford-Gonzalez*

185. Osteology of Mammals, Birds, and Fish. *

Practicum in archaeological faunal analysis. Students learn to identify bones of all larger mammal species of central California plus selected bird and fish species. Students cannot receive credit for this course and course 285. Prerequisite(s): courses 184 or 102 or Biology 138/L or Earth Sciences 100 or Environmental Studies 105/L, and permission of instructor. Enrollment limited to 16. Offered in alternate academic years. *D. Gifford-Gonzalez*

190A. Primate Field Ecology: Tropical Forest Ecology. *

Explores tropical forest ecology with emphases on plant-life history variation and patterns of diversity. Topics include: photosynthesis, competition, and plant-animal interactions, such as pollination, herbivory, and seed dispersal. Special focus on neotropical forests and adaptations to life in humid environments. Students cannot receive credit for this course and course 290A. Competitive selection based on application and interview during previous fall quarter. Concurrent enrollment in courses 190B and 190C required. Enrollment limited to 15. *N. Dominy*

190B. Primate Field Ecology: Field Methods in Primatology. *

Field-oriented course in primate behavioral ecology. Combines lectures on approaches and methodologies with practical field studies. Students complete field project in primate ecology and behavior and learn natural history of the plants and animals of Costa Rica. Students cannot receive credit for this course and course 290B. Competitive selection based on application and interview during previous fall quarter. Concurrent enrollment in courses 190A and 190C required. Students are billed a \$1700 materials fee. Enrollment limited to 15. *N. Dominy*

190C. Primate Field Ecology: Independent Field Research. *

Students carry out substantial field projects at two locations in Costa Rica under the supervision of course instructors. Students develop research proposals, analyze data, and prepare final research papers and oral presentations. Students cannot receive credit for this course and course 290C. Competitive selection based on application and interview during previous fall quarter. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Concurrent enrollment in courses 190A and 190B required. Enrollment limited to 15. (General Education Code(s): W.) *N. Dominy*

192. Directed Student Teaching. F,W,S

Teaching of a lower-division seminar under faculty supervision. (See course 42.) Students submit petition to sponsoring agency. *The Staff*

193. Field Study. F,W,S

Students submit petition to sponsoring agency. *The Staff*

194. Senior Seminar.

194A. Community. *

Critically considers four concepts of community: community as place, community of interests, community as social relations, and community as intentional goal. Students examine internal dynamics of communities, social relations between communities in complex societies, and the successes and failures of particular intentional communities.

Prerequisite(s): courses 1, 2, and 3, and satisfaction of the Entry Level Writing and Composition requirements. Enrollment limited to 20.

(General Education Code(s): W.) *C. Shaw*

194B. Chimpanzees: Biology, Behavior and Evolution. S

Explores studies on wild and captive chimpanzees with reference to other apes and humans. Topics include sociality, tool using, locomotion, traditions, and life history; social and physical dimensions of growth and development; language studies, genetics, and applications to human evolution. Prerequisite(s): courses 1, 2, and 3; satisfaction of the Entry Level Writing and Composition requirement. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.)

A. Zihlman

194C. Food and Medicine. *

Critically examines intersections of food, medicine, and culture. Special attention to "studying up" of industrial food system and pharmaceutical industry. Additional focus on anthropology of food, medicine, nutrition, and consumption. Will be offered in 2010–11 academic year.

Prerequisite(s): courses 1, 2, and 3; satisfaction of Entry Level Writing and Composition requirements. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.)

N. Chen

194F. Memory. *

Intensive and fast-paced seminar focusing on theoretical and ethnographic studies of memory as a means for dealing with the past. Examines how ordinary people and societies have coped with the past through acts of selective remembering and forgetting. Prerequisite(s): courses 1, 2, and 3; satisfaction of the Entry Level Writing and Composition requirement.

Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.)

D. Linger

194G. Politics and Secularism. F

Examines secularism as political doctrine and practice of government. Topics include: transformation of religion by secularization; forms of inclusion/exclusion enacted by secularism; relationship between secularism and colonial rule. Case studies drawn from Europe, South Asia, United States, and the Middle East. Prerequisite(s): courses 1, 2, and 3, and satisfaction of the Entry Level Writing and Composition requirements; enrollment restricted to senior anthropology majors.

Enrollment limited to 20. (General Education Code(s): W.) *M. Fernando*

194I. Consumption and Consumerism. S

Investigates cultural analysis of consumer society, commodities, and consumer practices. Students develop their own research projects.

Themes include: critiques of consumer society; symbolic analysis of goods, consumption as resistance, anthropologies of marketing, culture

jamming; consumption and (post) colonialism. Prerequisite(s): courses 1, 2, and 3; satisfaction of the Entry Level Writing and Composition requirement. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *M. Anderson*

194K. Reading Ethnographies. S

Explores issues in the representation of culture through reading and discussing ethnographies. Recent experimental ethnographies open topics including the relation between fieldwork and writing, textual strategies, and the politics of ethnographic writing and research. Prerequisite(s): courses 1, 2, and 3; satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *S. Harding*

194L. Archaeology of the African Diaspora. *

Senior seminar on African diaspora archaeology. Draws on archaeological, historical, and anthropological perspectives to examine the cultural, social, economic, and political lives of Africans and their descendants in the New World and West Africa from the 15th through 19th centuries. Prerequisite(s): courses 1, 2, 3; satisfaction of the Entry Level Writing and Composition requirement. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *J. Monroe*

194M. Medical Anthropology. W

Focuses on critical issues in the social sciences of health and healing. Designed for students pursuing graduate work in medical anthropology and/or public health. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 1, 2, 3, and 134. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *M. Wolf-Meyer*

194N. Comparison of Cultures. *

Seminar for upper-division students interested in theories and methodology of social and cultural anthropology. Devoted to critical discussion of different methods of comparison practiced in anthropology. Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements; courses 1, 2, and 3. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *T. Pandey*

194P. Space, Place, and Culture. *

Examines ways anthropologists have studied relationship between space, place, and culture. Covers early formulations acknowledging people in different cultural contexts ascribe particular meanings to places and to the concept of space and then traces the ways these questions have come to the fore in more recent scholarship. Will be offered in 2010–11 academic year. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *The Staff*

194S. Hearing Culture: The Anthropology of Sound. *

Explores relationships between culture and acoustic worlds—environmental, verbal, and musical—within which we live. How sound

is shaped by human belief and practice and the role sound plays in cultural and social life, both past and present. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 1, 2, and 3. Enrollment restricted to senior anthropology majors. Enrollment limited to 15. (General Education Code(s): W.) *D. Brenneis*

194T. Poverty and Inequality. W

Through ethnographies about homelessness, food deprivation, and unemployment, examines the institutions through which poverty is recognized, the systems of morality shaping debates about need and appropriate behavior, and the effects of community responses to poverty. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 1, 2, and 3. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *M. Caldwell*

194U. Environmental Anthropology: Nature, Culture, Politics. *

Presents key readings in environmental anthropology focusing on environmental conflicts. Students guided in developing research paper on a society environment topic of their choice. Class is writing intensive with in-class discussion and final presentations. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *A. Mathews*

194V. Picturing Cultures. W

A historical, analytical, and practical exploration of the uses of still and moving pictures in ethnographic representations, research, and production. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 1, 2, and 3; and course 80J, 120, 132, or 154. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *S. Errington*

194X. Women in Politics: A Third World Perspective. F

Focuses cross-culturally on the status of women in the Third World and their formal and informal participation in politics. Also discussed are organized efforts, through participation in both national and autonomous movements, for women's rights. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 1, 2, and 3. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *The Staff*

194Y. Archaeologies of Space and Landscape. F

Examines contemporary archaeological perspectives on space and landscape. Focuses on how archaeology can contribute to an appreciation of the economic, cultural, and political factors that shape human perception, use, and construction of the physical world. Prerequisite(s): courses 1, 2, 3, and satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *J. Monroe*

194Z. Emerging Worlds. *

Addresses encounters and contact zones between cultures that give rise to "emerging worlds." "Emerging worlds" refers to the cultural heterogeneity and diversity created within world-making networks,

geographies, innovations, and meanings, moving us beyond ideas about vanishing, autonomous cultures. Prerequisite(s): courses 1, 2, and 3, and satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *L. Rofel*

197. Laboratory Tutorial. F,W,S

Independent laboratory research on selected topics in archeology and physical anthropology. Interview with appropriate instructor required. May be repeated for credit. *The Staff*

197F. Laboratory Tutorial (2 credits). F,W,S

Independent laboratory research on selected topics in archaeology and physical anthropology. Interview with appropriate instructor required. Enrollment restricted to anthropology majors. May be repeated for credit. *D. Gifford-Gonzalez, A. Zihlman, J. Monroe, A. Galloway, N. Dominy, J. Habicht-Mauche*

198. Independent Field Study. F,W,S

Off-campus field study. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

200. Theoretical Foundations of Physical Anthropological Research. *

Provides historical and theoretical foundation of physical anthropology. Grounds students in the changing frameworks and perspectives during the last 150 years regarding questions in human biology, evolution, nature, and culture, by examining texts and scientific journals. Enrollment restricted to graduate students. Enrollment limited to 15. *A. Zihlman*

200A. Core Graduate Course (10 credits). F

Introduces history, ethnography, and theory of cultural anthropology with emphasis on awareness of construction of anthropological canon and areas of conflict within it, leading up to contemporary debates on a variety of issues. Two-term course: students must enroll in both quarters. Enrollment restricted to anthropology graduate students. Enrollment limited to 12. *M. Caldwell, D. Brenneis*

200B. Core Graduate Course. W

Introduces history, ethnography, and theory of cultural anthropology with emphasis on awareness of construction of anthropological canon and areas of conflict within it, leading up to contemporary debates on a variety of issues. Multiple-term course; students must enroll in both quarters to receive academic credit. Enrollment restricted to anthropology graduate students. Enrollment limited to 12. *S. Harding*

201. Human Evolution. *

Provides an overview of the first five million years of human evolution and a framework for studying evolution and reconstructing the human past. Emphasizes that all lines of evidence must be included: hominid fossils, archaeology, paleoecology, and molecular data. Enrollment restricted to graduate students. Enrollment limited to 15. *A. Zihlman*

202A. Skeletal Biology. *

Focuses on human skeletal biology, the identification of elements, physiology of hard

tissue formation, growth, and maintenance. Students are required to show competence in skeletal identification to pass this class. Prerequisite(s): course 102A or permission of instructor. Enrollment restricted to graduate students. Enrollment limited to 5. *The Staff*

206. Primate Behavior. W

An overview of primate evolution and review of the major groups of primates in terms of their ecological, locomotor, dietary, and social adaptations. Theoretical frameworks, such as behavioral ecology, sexual selection, and life history, are evaluated from long-term studies of primate behavior. Students cannot receive credit for this course and course 106. Enrollment restricted to graduate students. Enrollment limited to 15. *A. Zihlman*

207. Human Functional Anatomy. S

Study of the human body from molecules to organ systems, emphasizing evolution and medical applications. Students cannot receive credit for this course, course 107, and Biology 135. Concurrent enrollment in course 207L required. Enrollment restricted to graduate students. Enrollment limited to 15. *N. Dominy*

207L. Human Functional Anatomy Laboratory. S

Study of the human body using dissection and comparative anatomy exercises for advanced anatomy students. Students are billed a laboratory fee. Students cannot receive credit for this course, course 107L, and Biology 135L. Concurrent enrollment in course 207 required. Enrollment restricted to graduate students. Enrollment limited to 15. *N. Dominy*

208A. Ethnographic Practice. S

Introduces graduate students to the practice of fieldwork. Students design and carry out a quarter-long research project exploring a range of methods and producing an analytical case study. Readings and discussion emphasize both methodological critique and successful implementation. Enrollment restricted to anthropology graduate students. Enrollment limited to 15. *O. Nájera-Ramírez*

208L. Video Laboratory (2 credits). S

Provides students with hands-on training with a variety of audiovisual equipment. Through lectures, demonstrations, hands-on field exercises, and review of students' media exercises, students learn the fundamentals of photography, video production, and audio recording in the field. Concurrent enrollment in course 208A required. Enrollment restricted to anthropology graduate students. Enrollment limited to 15. *O. Nájera-Ramírez*

210. Comparative Functional Anatomy. *

Comparative and evolutionary anatomy of human performance examines locomotor systems and their underlying structure and evolution through videos, skeletons, and dissection in a variety of mammals, primates, and humans with applications to the fossil record. Will be taught in 2010–11 academic year. Enrollment restricted to graduate students. Enrollment limited to 15. *A. Zihlman*

211. Human Ecology. *

Reviews environmental, physiological, behavioral, and cultural ways that humans interact with their physical surroundings. Effects of human culture on the environment, and of the environment on the shape of human culture will be emphasized. Enrollment restricted to graduate students. Enrollment limited to 15. *The Staff*

212. The Human Life Cycle. F

Examines the human life cycle using an evolutionary framework. Examines key aspects of the human life stages using findings and concepts from developmental biology, physiology, nutrition, evolutionary ecology, and life history theory. These stages include: gestation, infancy, childhood, juvenile and adolescent periods, and senescence. Each stage of the life cycle is compared and contrasted with the developmental life of nonhuman primates and mammals. Other related topics include developmental plasticity and epigenetics. Enrollment restricted to graduate students. Enrollment limited to 15. *The Staff*

216. Methods in Physical Anthropology. *

Topical methodologies in physical anthropology. Particular emphasis placed on the use of molecular techniques, spatial pattern analysis, morphometrics, stable isotopes, and Bayesian statistics. Contact time structured as a weekly three-hour meeting. Will be taught in 2010–11 academic year. Enrollment restricted to graduate students. Enrollment limited to 15. *N. Dominy*

228. Grant Writing. F

Devoted entirely to writing grant proposals. Students either work on their graduate education fellowships or their doctoral dissertation grants or both. Reading materials consist of granting agency documents plus examples of successful applications. Enrollment restricted to anthropology graduate students. Enrollment limited to 15. May be repeated for credit. *L. Rofel*

229. Constructing Regions. *

Discusses centrality of the idea of "regions" in studies of culture, the history of "locating" social theory, and debates about area studies. Students develop area of transregional bibliographies. Primarily for second- or third-year anthropology graduate students reading "area" literatures. Enrollment restricted to graduate students. Enrollment limited to 15. *M. Anderson*

233. Politics of Nature. *

Advanced graduate seminar in environmental anthropology and science and technology studies, focusing on how nature is produced in the modern world and what political and practical significance this has in different contexts. Will be taught in 2010–11 academic year. Enrollment restricted to graduate students. Enrollment limited to 15. *A. Mathews*

238. Advanced Topics in Cultural Anthropology. S

Advanced topics in cultural anthropology. Current topics in anthropological theory and ethnography taught on a rotating basis by various faculty members. Precise focus of each seminar varies and will be announced by the department. Enrollment restricted to graduate students. Enrollment limited to 15. *D. Linger*

248. Shadowy Dealings: Anthropology of Finance, Money, and Law. W

Moves from a brief introduction to classic economic anthropology to recent work on histories of money and capitalism and cultures of financial markets, of accounting, and of legal and illegal trading practices. Enrollment restricted to graduate students. Enrollment limited to 15. *A. Mathews*

249. Ecological Discourses. S

Explores narratives of nature and their practical consequences in contests over "wild places" and their resources. Readings focus on the histories of forests and on analytic frameworks—ecology, social history, interpretation, cultural studies—with which to investigate competing constructions of the environment. Enrollment restricted to graduate students. Enrollment limited to 15. *A. Tsing*

252. Survey of Cultural Anthropological Theory. W

Major figures, ideas, and writing in 19th- and 20th-century cultural anthropology surveyed. Enrollment restricted to graduate students. Enrollment limited to 15. *D. Linger*

253. Advanced Cultural Theory. W

Examines cultural anthropology's interdisciplinary practices of knowledge formation at an advanced level. Drawing on various types of theoretical texts, the course elaborates on the relationship between culture and power, taking up different themes each time it is taught. Will be taught in 2010–11 academic year. Enrollment restricted to graduate students. Enrollment limited to 15. *M. Anderson*

255. Anthropology of Secularism. *

Examines secularism as a practice of government with a concomitant set of ethics. Topics include: the notion of religion necessary for secularism; forms of moral and political inclusion/exclusion enacted by secular governance; and the kind of ethical subject secularism engenders. Enrollment restricted to graduate students. Enrollment limited to 15. *The Staff*

256. International Developmental Aid. *

Explores theoretical and methodological issues in the field of international development, with an emphasis on ethnographic analysis. Topics include hierarchies of value, altruism and philanthropy, geographies of dependency and responsibility, ethics of compassion, and public anthropology. Enrollment restricted to graduate students. Enrollment limited to 15. *M. Caldwell*

257. Cultures of Science, Science as Culture. *

What makes the *anthropology* of science particular? To pose this question and seek answers, course considers early and contemporary ethnographies of science, medicine, and technology alongside contributions by philosophers of science. Enrollment restricted to graduate students. Enrollment limited to 15. *M. Wolf-Meyer*

258. Experimental Cultures. F

Addresses the use of experiments in anthropological research, theory, and writing. Enrollment restricted to graduate students. Enrollment limited to 15. *M. Wolf-Meyer*

270. History of Archaeology. F

Historical review of prehistoric archaeology from antiquarianism to the present. Emphasis on the development of archaeological theory, its relation to evolutionary and anthropological theory, and themes ongoing over time. Students cannot receive credit for this course and course 170. Enrollment restricted to graduate students. Enrollment limited to 15. *J. Monroe*

273. Origins of Farming. S

Survey of the ecological and archaeological evidence for the origins of plant and animal domestication in Africa, Eurasia, and the Americas. Discussion will center on the preconditions of this drastic alteration in human ecology and its consequences in transforming human societies. Students cannot receive credit for this course and course 173. Enrollment restricted to graduate students. Enrollment limited to 15. *D. Gifford-Gonzalez*

275A. Seminar on Early African Archaeology. W

Tutorial on archaeology of Africa, from 2.5 million years ago to emergence of African pastoralism and farming. Weekly examination of disciplinary models and assumptions in historic context, emphasizing overarching themes in prehistoric archaeology. Students cannot receive credit for this course and course 175A.

(Formerly *Tutorial on African Archaeology*.) Enrollment restricted to graduate students or by consent of instructor. Enrollment limited to 15. *D. Gifford-Gonzalez*

275B. Tutorial in Archaeology of African Complex Societies. S

Graduate tutorial on the archaeology of precolonial African kingdoms and states. Particular attention paid toward the origins of social inequality and the evolution of centralized polities. Students cannot receive credit for this course and course 175B. Prerequisite(s): Enrollment restricted to graduate students. Enrollment limited to 15. *J. Monroe*

276A. Advanced Topics in North American Archaeology. *

In-depth examination of development of Native cultures in North America from end of last ice age to time of European contact. Focuses on specific regional trajectories and problems of social change. Enrollment restricted to graduate students. Enrollment limited to 15. *The Staff*

278. Tutorial on Historical Archaeology. S

Tutorial on archaeology of European colonialism and the early-modern world. Focuses on the nature of European colonial expansion in New and Old Worlds; culture contact and change; and power and resistance in colonial societies. Students cannot receive credit for this course and course 178. Enrollment restricted to graduate students. Enrollment limited to 15. *J. Monroe*

280. Advanced Ceramic Analysis. F

Advanced graduate seminar that focuses on techniques and theories used to bridge the gap between the recovery of ceramic remains from archaeological contexts and their interpretation with respect to various anthropological issues and problems. Students cannot receive credit for this course and course 180. Enrollment restricted to graduate students. Concurrent enrollment in Anthropology 280L required. Enrollment limited to 5. *J. Habicht-Mauche*

280L. Advanced Ceramic Analysis Laboratory (2 credits). F

Emphasizes advanced techniques of ceramic analysis, including materials selection and processing, hand-building, and open-pit firings. Standard techniques for describing and measuring formal and technological attributes of pottery also presented. Students cannot receive credit for this course and course 180L. Enrollment restricted to graduate students. Concurrent enrollment in Anthropology 280 required. Enrollment limited to 5. *J. Habicht-Mauche*

281. Landscape Archaeology. *

Graduate seminar on contemporary archaeological perspectives about space and landscape. Focuses on archaeological contributions to understanding economic, cultural, and political factors that shape human perception, use, and construction of the physical world. Will be taught in 2010–11 academic year. Enrollment restricted to graduate students. Enrollment limited to 15. *J. Monroe*

284. Tutorial in Zooarchaeology. *

Lectures and seminar on archaeological faunal analysis. Topics include: mammalian evolution and osteology; vertebrate taphonomy; reconstruction of human diet from faunal remains; foraging strategy theory; data collection and management; and methods of quantitative analysis. Students cannot receive credit for this course and course 184. (Formerly *Zooarchaeological Research Design*.) Enrollment restricted to graduate students. *D. Gifford-Gonzalez*

285. Osteology of Mammals, Birds, and Fish. *

Practicum in vertebrate osteology, covering all larger mammal species of central

California, plus selected bird and fish species, and topics in evolution and ecology of selected taxa. Students cannot receive credit for this course and course 185.

Enrollment restricted to graduate students. Enrollment limited to 15. *D. Gifford-Gonzalez*

286. Zooarchaeological Research Design. *

Seminar on research design in zooarchaeology using archaeological monographs and clusters of related research papers. Students produce a research design in the form of a draft NSF research proposal based on the use of archaeofaunal materials.

Prerequisite(s): course 284; or an equivalent advanced course on zooarchaeological theory and method, and permission of the instructor. Enrollment restricted to graduate students. Enrollment limited to 15. *D. Gifford-Gonzalez*

289. Writing in the Anthropological Sciences. *

Workshop on writing styles in anthropological sciences, including specialized, general anthropological, and mainstream scientific journals, monographs, and public education pieces. Cultivates flexible writing skill through comparative analysis of data presentation and rhetoric, with drafts in different formats. Will be taught in 2010–11 academic year. Enrollment restricted to graduate students. Enrollment limited to 15. *D. Gifford-Gonzalez*

290A. Primate Field Ecology: Tropical Forest Ecology. *

Tropical forest ecology with emphases on plant-life history variation and patterns of diversity. Topics include: photosynthesis, competition, and plant-animal interactions, such as pollination, herbivory, and seed dispersal. Special focus on neotropical forests and adaptations to life in humid environments. Students cannot receive credit for this course and course 190A. Competitive selection based on application and interview during previous fall quarter. Enrollment restricted to graduate students. Concurrent enrollment in courses 290B and 290C required. Enrollment limited to 15. *N. Dominy*

290B. Primate Field Ecology: Field Methods in Primatology. *

Field-oriented course in primate behavioral ecology. Combines lectures on approaches and methodologies with practical field studies. Students complete field project in primate ecology and behavior and learn natural history of the plants and animals of Costa Rica. Students cannot receive credit for this course and course 190B. Competitive selection based on application and interview during previous fall quarter. Enrollment restricted to graduate students. Concurrent enrollment in courses 290A and 290C required. Students are billed a materials fee. Enrollment limited to 15. *N. Dominy*

290C. Primate Field Ecology: Independent Field Research. *

Students carry out substantial field projects at two locations in Costa Rica under the supervision of course instructors. Students develop research proposals, analyze data, and prepare final research papers and oral presentations. Students cannot receive credit for this course and course 190C. Competitive selection based on application and interview during previous fall quarter. Enrollment restricted to graduate students. Concurrent enrollment in courses 290A and 290B required. Enrollment limited to 15. *N. Dominy*

292. Graduate Colloquium (2 credits). F,W,S

Designed to offer an institutionalized mechanism for the presentation of research papers and teaching efforts by faculty and advanced graduate students. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

294N. Comparison of Cultures. *

Seminar for students interested in theories and methodology of social and cultural anthropology devoted to critical discussion of different methods of comparison practiced in anthropology. Enrollment restricted to graduate students. Enrollment limited to 15. *T. Pandey*

297. Independent Study. F,W,S

Students submit petition to sponsoring agency. *The Staff*

298. Advanced Laboratory Apprenticeship. F,W,S

Supervised tutorial in specialized analytic methods in archaeology or physical anthropology. Students collaborate on laboratory research with a departmental mentor or, with advisor's consent, with researchers on or off campus, preparing a manuscript for publication or an extensive literature review. Permission of instructor required. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Prerequisite(s): petition on file with sponsoring agency. *The Staff*

*Not offered in 2009-10

(831) 459-2158
<http://www.soe.ucsc.edu>

[Changes to 2009-10 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Program Description

Applied mathematics and statistics are disciplines devoted to the use of mathematical methods and reasoning to solve real-world problems of a scientific or decision-making nature in a wide variety of subjects, principally (but not exclusively) in engineering, medicine, the physical and biological sciences, and the social sciences. Applied mathematical modeling often involves the use of systems of (partial) differential equations to describe and predict the behavior of complex real-world systems that unfold dynamically in time. Statistics, construed broadly, is the study of uncertainty: how to measure it (using ideas and methods in probability theory), and what to do about it (using concepts from statistical inference and decision theory).

The Applied Mathematics and Statistics Department at UCSC offers master's and doctoral programs in Statistics and Applied Mathematics, or Applied Mathematics and Statistics, depending on chosen emphasis. The goal of these programs is to help students develop into independent scholars who are prepared for productive careers in research, teaching, and industry. The department also offers a parenthetical notation in statistics, a minor in statistics, and a minor in applied mathematics.

Additional information on these programs can be found on the department's web pages at www.soe.ucsc.edu.

Undergraduate Programs

Requirements for an Undergraduate Minor in Statistics

The statistics minor is available for students who wish to gain a quantitative understanding of how to (a) measure uncertainty and (b) make good decisions on the basis of incomplete or imperfect information, and to apply these skills to their interests in another field. This minor could also be combined with a major in mathematics as preparation for a graduate degree in statistics or biostatistics.

Students are required to take a two-quarter basic calculus sequence:

Basic calculus sequence:

- Applied Mathematics and Statistics 11A-B or Economics 11A-B or Mathematics 11A-B or Mathematics 19A-B or Mathematics 20A-B
- Plus one course from each of the following nine categories:
 - Statistical Concepts: Applied Mathematics and Statistics 5 or 7/L
 - Computer Programming: Bioinformatics 60/L or Computer Science 12A/L or 5C or 5J or 5P or Computer Engineering 13/L
 - Engineering Mathematics or Linear Algebra: Applied Mathematics and Statistics 27/L or Applied Mathematics and Statistics 10 or Mathematics 21
 - Multivariate Calculus: Mathematics 22 or 23A
 - Probability: Applied Mathematics and Statistics 131 or Computer Engineering 107
 - Statistical Inference: Applied Mathematics and Statistics 132
 - Computational Methods: Applied Mathematics and Statistics 147
 - Bayesian Statistics: Applied Mathematics and Statistics 206
 - Statistical Elective: Applied Mathematics and Statistics 198, or Applied Mathematics and Statistics 205A, or Biomolecular Engineering 205, or Computer Engineering 108, or Economics 114, or Electrical Engineering 151, or Mathematics 114, or Psychology 181, or Sociology 103A

Students planning graduate work in statistics are recommended to choose Mathematics 23A and

Applied Mathematics and Statistics 205A, and also to take Mathematics 23B and Mathematics 105A-B.

Requirements for an Undergraduate Minor in Applied Mathematics

The applied mathematics minor is available for students who wish to develop (1) proficiency in modeling real-life problems using mathematics and (2) knowledge of standard, practical analytical and numerical methods for the solution of these models. This minor could be combined with a major in any of the physical, biological, mathematical, or engineering sciences as preparation for a graduate degree in that field or in applied mathematics.

Students are required to take the four-quarter calculus sequence:

- *Calculus Sequence*: Mathematics 19A-B and Mathematics 23A-B
- Plus one of the following sequences:
 - Applied Mathematics and Statistics 10 and 20
Mathematics 21, Mathematics 24, and Applied Mathematics and Statistics 27L
Physics 116A, Physics 116B, and Applied Mathematics and Statistics 27L
- Plus one course from each of the following categories:
 - *Probability Theory*: Applied Mathematics and Statistics 131 or Computer Engineering 107
 - *Dynamical Systems*: Applied Mathematics and Statistics 114 or Applied Mathematics and Statistics 214
 - *Introduction to Numerical methods*: Applied Mathematics and Statistics 147, Physics 115, or Earth Sciences 119
 - *Partial Differential Equations*: Applied Mathematics and Statistics 212A, Physics 116C, or Mathematics 10
- Plus one applied-mathematics elective from the following list:
 - Applied Mathematics and Statistics 107/217, 115/215, 132, 198, 212B, 213, 216, 231, 290B

Students may also propose other electives which use applied mathematical methods, subject to approval by the department.

Graduate Programs (M.S., Ph.D.)

Requirements for a Graduate Degree in Statistics and Applied Mathematics

This track is for students emphasizing statistics. All students must complete the core courses described below.

Master's Program

Required core Applied Mathematics and Statistics courses:

200 *Research and Teaching in Applied Mathematics and Statistics*
205A *Mathematical Statistics* or 205B *Statistical Inference*
206 *Bayesian Statistics*
207 *Intermediate Bayesian Modeling*
211 *Applied Mathematical Methods I*
256 *Linear Statistical Models*
280B *Seminar in Statistics and Stochastic Modeling*

In addition to these 30 units, M.S. students must complete two additional 5-unit courses from the approved list, for a total requirement of 40 units.

Ph.D. Program

Required core Applied Mathematics and Statistics courses:

200 *Research and Teaching in Applied Mathematics and Statistics*
205B *Statistical Inference*
206 *Bayesian Statistics*
207 *Intermediate Bayesian Modeling*
211 *Applied Mathematical Methods I*
256 *Linear Statistical Models*
280B *Seminar in Statistics and Stochastic Modeling*

In addition to these 30 units, Ph.D. students must complete four additional 5-unit courses from the approved list, for a total requirement of 50 units.

Requirements for a Graduate Degree in Applied Mathematics and Statistics

This track is for students emphasizing Applied Mathematics. All students must complete the core courses described below.

Required core Applied Mathematics and Statistics courses:

200 *Research and Teaching in Applied Mathematics and Statistics*
205A *Mathematical Statistics* or 205B *Statistical Inference*
211 *Foundations of Applied Mathematics for Science and Engineering*
212A *Applied Mathematical Methods I*
212B *Applied Mathematical Methods II*
213 *Numerical Solutions Differential Equations*
214 *Applied Dynamical Systems*
280B *Seminar in Statistics and Stochastic Modeling*

In addition to these 35 units, Ph.D. students must complete four additional 5-unit courses from the approved list, for a total requirement of 55 units.

For both emphasis tracks, M.S. students will be allowed to substitute up to two courses with their required research project in which they conduct a research program in one or two of the quarters of their second year. The project will consist of solving a problem or problems from the selected area of application and will be presented to the sponsoring faculty member as a written document.

Ph.D. students will be required to serve as teaching assistants for at least two quarters during their graduate study. Certain exceptions may be permitted for those with extensive prior teaching experience or those who are not allowed to be employed due to visa regulations.

Qualifying Examinations

At the end of the first year, all students will take a pre-qualifying examination covering the five or six (non-seminar) core courses. This examination will have two parts: an in-class written exam, followed by a take-home project involving data analysis. Students who do not pass this exam will be allowed to retake it before the start of the following fall quarter; if they fail the second examination they will be dismissed from the program.

Ph.D. students must complete the oral proposal defense, through which they advance to candidacy, by the end of the spring quarter of their third year. The proposal defense is a public seminar as part of an oral qualifying examination given by the qualifying committee.

Thesis and/or Dissertation Requirements

A capstone project is required for the M.S. degree and a dissertation for the Ph.D. degree. For the M.S. degree, students will conduct a capstone research project in their second year (up to three quarters). Students must submit a proposal to the potential faculty sponsor by the start of the fourth academic quarter. If the proposal is accepted, the faculty member will become the sponsor and will supervise the research and writing of the project. The project will involve the solution of a problem or problems from the selected area of application. When the project is completed and written, it will be submitted to and must be accepted by a committee of two individuals, consisting of the faculty adviser and one additional reader. Additional readers will be chosen appropriately from within the Applied Mathematics and Statistics Department or outside of it. Either the adviser or the additional reader must be from within the Applied Mathematics and Statistics Department.

A dissertation is required for the Ph.D. degree. Ph.D. students must select a faculty research adviser by the end of the second year. A written dissertation proposal will be submitted to the adviser, and filed with the graduate secretary. A qualifying examination committee will be formed, consisting of the adviser and three additional members, approved by the Chair of the Graduate Program and the Dean of the Graduate Division. The student will submit the written dissertation proposal to all members of the committee and the graduate secretary no less than one month in advance of the qualifying examination. The dissertation proposal will be formally presented in a public oral qualifying examination with the committee, followed by a private examination. Students will advance to candidacy after they have completed all course requirements (including removal of all incompletes), passed the qualifying examination, and paid the filing fee. Under normal progress, a student will advance to candidacy by the end of the spring quarter of her/his third year. A student who has not advanced to candidacy by the start of the fourth year will be subject to academic probation. Upon advancement to candidacy, a dissertation reading committee will be formed, consisting of the dissertation supervisor and at least two additional readers appointed by the Graduate Program chair upon recommendation of the dissertation supervisor. At least one of these additional readers must be in the Applied Mathematics and Statistics Department. The committee is subject to the approval of the Graduate Division.

The dissertation will consist of a minimum of three chapters composed of material suitable for submission and publication in major professional journals in statistics and stochastic modeling. The completed dissertation will be submitted to the reading committee at least one month before the dissertation defense, which consists of a public presentation of the research followed by a private examination by the reading committee. Successful completion of the dissertation defense is the final requirement for the Ph.D. degree.

Relationship of Masters and Doctoral Programs

The M.S. and Ph.D. programs are freestanding and independent, so that students can be admitted to either. Students completing the M.S. program may proceed into the Ph.D. program, and students in the Ph.D. program can receive a M.S. degree upon completion of M.S. requirements, including the capstone research project. Each Ph.D. student will be required to have knowledge of statistics and applied mathematics equivalent to that required for the M.S. degree. In addition, Ph.D. candidates will be required to complete coursework beyond the M.S. level.

Transfer Credit

Up to three School of Engineering courses fulfilling the degree requirements of either the M.S. or Ph.D. degrees may be taken before beginning the graduate program through the concurrent enrollment program. Ph.D. students who have previously earned a master's degree in a related field at another institution may substitute courses from their previous university with approval of the adviser and the graduate committee. Courses from other institutions may not be applied to the M.S. degree course requirements.

Petitions should be submitted along with the transcript from the other institution or UCSC Extension. For courses taken at other institutions, copies of the syllabi, exams, and other course work should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UCSC. At most, a total of three courses may be transferred from concurrent enrollment and other institutions.

Review of Progress

Each year, the faculty reviews the progress of every student. Students not making adequate progress toward completion of degree requirements are subject to dismissal from the program (see the Graduate Handbook for the policy on satisfactory academic progress). For specific guidelines on the annual student reviews, please refer to <http://www.soe.ucsc.edu/programs/ssm/graduate/index.html>.

Requirements for a parenthetical annotation to an external degree program

Students from another degree program who meet the following requirements can have the parenthetical title of "statistics" annotated to their degree title. For example, a Ph.D. student in Electrical Engineering who meets the requirements would get a certification that read "Ph.D. Electrical Engineering (Statistics)." This certification is supplied for those students who effectively do a Statistics M.S. on their way to a Ph.D. in another program. To qualify for this, the degree granting department must sign an agreement with the AMS department regarding parenthetical annotations. The course requirements are:

Required core Applied Mathematics and Statistics courses:

205A *Mathematical Statistics* or 205B *Statistical Inference*

206 *Bayesian Statistics*

207 *Intermediate Bayesian Modeling*

256 *Linear Statistical Models*

and one other course from a list of approved courses in AMS (currently 211, 221, 223, 241, 245, 261, 274 although others will be added in the future)

Program Description

Applied mathematics and statistics are disciplines devoted to the use of mathematical methods and reasoning to solve real-world problems of a scientific or decision-making nature in a wide variety of subjects, principally (but not exclusively) in engineering, medicine, the physical and biological sciences, and the social sciences. Applied mathematical modeling often involves the use of systems of (partial) differential equations to describe and predict the behavior of complex real-world systems that unfold dynamically in time. Statistics, construed broadly, is the study of uncertainty: how to measure it (using ideas and methods in probability theory), and what to do about it (using concepts from statistical inference and decision theory).

The Applied Mathematics and Statistics Department at UCSC offers ~~both a master's program and a doctoral program in ~~statistics and stochastic modeling~~~~ ~~Statistics and Applied Mathematics, or Applied Mathematics and Statistics, depending on chosen emphasis.~~ The goal of these programs is to help students develop into independent scholars who are prepared for productive careers in research, teaching, and industry. The department also offers a parenthetical notation in statistics, a minor in statistics, and a minor in applied mathematics. Additional information on these programs can be found on the department's web pages at www.soe.ucsc.edu.

Undergraduate Programs

Requirements for an Undergraduate Minor in Statistics

The statistics minor is available for students who wish to gain a quantitative understanding of how to (a) measure uncertainty and (b) make good decisions on the basis of incomplete or imperfect information, and to apply these skills to their interests in another field. This minor could also be combined with a major in mathematics as ~~a~~ preparation for a graduate degree in statistics or biostatistics.

Students are required to take a two-quarter basic calculus sequence:

Basic calculus sequence:

Applied Mathematics and Statistics 11A-B or Economics 11A-B or Mathematics 11A-B or Mathematics 19A-B or Mathematics 20A-B

Plus one course from each of the following nine categories:

Statistical Concepts: Applied Mathematics and Statistics 5 or 7/L

Computer Programming: Bioinformatics 60/L or Computer Science 12A/L ~~or~~ 5C or 5J or 5P or Computer Engineering 13/L

Engineering Mathematics or Linear Algebra: Applied Mathematics and Statistics 27/L or Applied Mathematics and Statistics 10 or Mathematics 21

Multivariate Calculus: Mathematics 22 or 23A

Probability: Applied Mathematics and Statistics 131 or Computer Engineering 107

Statistical Inference: Applied Mathematics and Statistics 132 ~~or Applied Mathematics and Statistics 162~~

Computational Methods: Applied Mathematics and Statistics 147

Bayesian Statistics: Applied Mathematics and Statistics 206

Statistical Elective: Applied Mathematics and Statistics 198, or Applied Mathematics and Statistics 205A, or Biomolecular Engineering 205, or Computer Engineering 108, or Economics 114, or Electrical Engineering 151, or Mathematics 114, or Psychology 181, or Sociology 103A

Students planning graduate work in statistics are recommended to choose Mathematics 23A and Applied Mathematics and Statistics 205A, and also to take Mathematics 23B and Mathematics 105A-B.

Requirements for an Undergraduate Minor in Applied Mathematics

The applied mathematics minor is available for students who wish to develop (1) proficiency in modeling real-life problems using mathematics and (2) knowledge of standard, practical analytical and numerical methods for the solution of these models. This minor could be combined with a major in any of the physical, biological, mathematical, or engineering sciences as preparation for a graduate degree in that field or in applied mathematics.

Students are required to take the four-quarter calculus sequence:

Calculus Sequence: Mathematics 19A-B and Mathematics 23A-B

Plus one of the following sequences:

Applied Mathematics and Statistics 10 and 20

Mathematics 21, Mathematics 24, and Applied Mathematics and Statistics 27L

Physics 116A, Physics 116B, and Applied Mathematics and Statistics 27L

Plus one course from each of the following categories:

Probability Theory: Applied Mathematics and Statistics 131 or Computer Engineering 107

Dynamical Systems: Applied Mathematics and Statistics 114 or Applied Mathematics and Statistics 214

Introduction to Numerical methods: Applied Mathematics and Statistics 147, Physics 115, or Earth Sciences 119

Partial Differential Equations: Applied Mathematics and Statistics 212A, Physics 116C, or Mathematics 1076B

Plus one applied-mathematics elective from the following list:

Applied Mathematics and Statistics 107/217, 115/215, 132, 198, 212B, 213, 216, 231, 290B

Students may also propose other electives which use applied mathematical methods, subject to approval by the department.

Graduate Programs (M.S., Ph.D.)

Requirements for a Graduate Degree in Statistics and ~~Stochastic Modeling~~Applied

Mathematics

This track is for students emphasizing ~~S~~statistics. All students must complete the core courses described below. ~~below (30 units) and a 3-unit course on research and teaching, together with participation in a 2-unit research seminar (Applied Mathematics and Statistics 280B) for one quarter per year. M.S. students must complete two additional 5-unit courses from the approved list, for a total requirement of 43 units. Ph.D. students must complete four additional 5-unit courses from the approved list, for a total requirement of 53 units.~~

~~The core courses for the M.S. and Ph.D. in statistics and stochastic modeling are:~~

Masters Program

Required core Applied Mathematics and Statistics courses:

200 Research and Teaching in Applied Mathematics and Statistics ~~{course approval pending divisional approval}~~

205A *Mathematical Statistics* ~~(M.S.)~~ or 205B *Statistical Inference*

~~205B *Statistical Inference* (Ph.D.)~~

206 *Bayesian Statistics*

207 *Intermediate Bayesian Modeling*

211 *Applied Mathematical Methods I*

256 *Linear Statistical Models*

280B *Seminar in Statistics and Stochastic Modeling*

~~Computer Science~~

~~200 — *Research and Teaching in Computer Science and Engineering*~~

In addition to these 30 units, M.S. students must complete two additional 5-unit courses from the approved list, for a total requirement of 40 units.

Ph.D. Program

Required core Applied Mathematics and Statistics courses:

200 *Research and Teaching in Applied Mathematics and Statistics* ~~{course approval pending divisional approval}~~

205B *Statistical Inference*

206 *Bayesian Statistics*

207 *Intermediate Bayesian Modeling*

211 *Applied Mathematical Methods I*

256 *Linear Statistical Models*

280B *Seminar in Statistics and Stochastic Modeling*

In addition to these 30 units, Ph.D. students must complete four additional 5-unit courses from the approved list, for a total requirement of 50 units.

Requirements for a Graduate Degree in Applied Mathematics and Statistics

This track is for students emphasizing Applied Mathematics. ~~—~~All students must complete the core courses described below.

~~For students seeking a parenthetical degree notation in applied mathematics, the core courses for the Ph.D. in statistics and stochastic modeling are:~~

Required core Applied Mathematics and Statistics courses:

200 *Research and Teaching in Applied Mathematics and Statistics* ~~{course approval pending divisional approval}~~

205A *Mathematical Statistics* or 205B *Statistical Inference*

211 *Foundations of Applied Mathematics for Science and Engineering*

212A *Applied Mathematical Methods I*

212B *Applied Mathematical Methods II*

213 *Numerical Solutions Differential Equations*

214 *Applied Dynamical Systems*

280B *Seminar in Statistics and Stochastic Modeling*

Computer Science

200—~~Research and Teaching in Computer Science and Engineering~~

In addition to these 35 units, Ph.D. students must complete four additional 5-unit courses from the approved list, for a total requirement of 55 units.

~~M.S. students may substitute course 205B for 205A.~~ For both emphasis tracks, M.S. students will be allowed to substitute up to two courses with their required research project in which they conduct a research program in one or two of the quarters of their second year. The project will consist of solving a problem or problems from the selected area of application and will be presented to the sponsoring faculty member as a written document.

Ph.D. students will be required to serve as teaching assistants for at least two quarters during their graduate study. Certain exceptions may be permitted for those with extensive prior teaching experience or those who are not allowed to be employed due to visa regulations.

Qualifying Examinations

At the end of the first year, all students will take a pre-qualifying examination covering the ~~five~~ or six (non-seminar) core courses. This examination will have two parts: an in-class written exam, followed by a take-home project involving data analysis. Students who do not pass this exam will be allowed to retake it before the start of the following fall quarter; if they fail the second examination they will be dismissed from the program.

Ph.D. students must complete the oral proposal defense, through which they advance to candidacy, by the end of the spring quarter of their third year. The proposal defense is a public seminar as part of an oral qualifying examination given by the qualifying committee.

Thesis and/or Dissertation Requirements

A capstone project is required for the M.S. degree and a dissertation for the Ph.D. degree.

For the M.S. degree, students will conduct a capstone research project in their second year (up to three quarters). Students must submit a proposal to the potential faculty sponsor by the start of the fourth academic quarter. If the proposal is accepted, the faculty member will become the sponsor and will supervise the research and writing of the project. The project will involve the solution of a problem or problems from the selected area of application. When the project is completed and written, it will be submitted to and must be accepted by a committee of two individuals, consisting of the faculty adviser and one additional reader. Additional readers will be chosen appropriately from within the Applied Mathematics and Statistics Department or outside of it. Either the adviser or the additional reader must be from within the Applied Mathematics and Statistics Department.

A dissertation is required for the Ph.D. degree. Ph.D. students must select a faculty research adviser by the end of the second year. A written dissertation proposal will be submitted to the adviser, and filed with the graduate secretary. A qualifying examination committee will be formed, consisting of the adviser and three additional members, approved by the Chair of the Graduate Program and the Dean of the Graduate Division. The student will submit the written dissertation proposal to all members of the committee and the graduate secretary no less than one month in advance of the qualifying examination. The dissertation proposal will be formally presented in a public oral qualifying examination with the committee, followed by a private examination. Students will advance to candidacy after they have completed all course requirements (including removal of all incompletes), passed the qualifying examination, and paid the filing fee. Under normal progress, a student will advance to candidacy by the end of the spring quarter of her/his third year. A student who has not advanced to candidacy by the start of the fourth year will be subject to academic probation. Upon advancement to candidacy, a dissertation reading committee will be formed, consisting of the dissertation supervisor and at least two additional readers appointed by the Graduate Program chair upon recommendation of the dissertation supervisor. At least one of these additional readers must be in the Applied Mathematics and Statistics Department. The committee is subject to the approval of the Graduate Division.

The dissertation will consist of a minimum of three chapters composed of material suitable for submission and publication in major professional journals in statistics and stochastic modeling. The completed dissertation will be submitted to the reading committee at least one month before the dissertation defense, which consists of a public presentation of the research followed by a private examination by the reading committee. Successful completion of the dissertation defense is the final requirement for the Ph.D. degree.

Relationship of Masters and Doctoral Programs

The M.S. and Ph.D. programs are freestanding and independent, so that students can be admitted to either. Students completing the M.S. program may proceed into the Ph.D. program, and students in the Ph.D. program ~~will~~can receive a M.S. degree upon completion of M.S. requirements, including the capstone research project. Each Ph.D. student will be required to have knowledge of statistics and ~~stochastic modeling~~applied mathematics-equivalent to that required for the M.S. degree. In addition, Ph.D. candidates will be required to complete coursework beyond the M.S. level.

Transfer Credit

Up to three School of Engineering courses fulfilling the degree requirements of either the M.S. or Ph.D. degrees may be taken before beginning the graduate program through the concurrent enrollment program. Ph.D. students who have previously earned a master's degree in a related field at another institution may substitute courses from their previous university with approval of the adviser and the graduate committee. Courses from other institutions may not be applied to the M.S. degree course requirements.

Petitions should be submitted along with the transcript from the other institution or UCSC Extension. For courses taken at other institutions, copies of the syllabi, exams, and other course work should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UCSC. At most, a total of three courses may be transferred from concurrent enrollment and other institutions.

Review of Progress

Each year, the faculty reviews the progress of every student. Students not making adequate progress toward completion of degree requirements are subject to dismissal from the program (see the Graduate Handbook for the policy on satisfactory academic progress). For specific guidelines on the annual student reviews, please refer to <http://www.soe.ucsc.edu/programs/ssm/graduate/index.html>.

Requirements for a parenthetical annotation to an external degree program

Students from another degree program who meet the following requirements can have the parenthetical title of “~~Statistics~~” annotated to their degree title. For example, a Ph.D. student in Electrical Engineering who meets the requirements would get a certification that read “Ph.D. Electrical Engineering (Statistics)” ~~.” This~~ This certification is supplied for those students who effectively do a Statistics M.S. on their way to a Ph.D. in another program. To qualify for this, the degree granting department must sign an agreement with the AMS department regarding parenthetical annotations. The course requirements are:

Required core Applied Mathematics and Statistics courses:

205A *Mathematical Statistics* -or 205B Statistical Inference

206 *Bayesian Statistics*

207 *Intermediate Bayesian Modeling*

256 *Linear Statistical Models*

and one other course from a list of approved courses in AMS (currently 211, 221, 223, 241, 245, 261, 274 although others will be added in the future)

Faculty and Professional Interests

Professor

Nicholas Brummell

Fluid dynamics; magnetohydrodynamics; numerical simulations of geophysical and astrophysical dynamics, especially solar interior physics; supercomputing

David Draper

Bayesian statistics, hierarchical modeling, Bayesian nonparametric methods, model specification and model uncertainty, quality assessment, risk assessment, statistical applications in the environmental, medical, and social sciences

Herbert Lee

Bayesian statistics, computational statistics, spatial statistics, inverse problems, model selection and model averaging, nonparametric regression, neural networks, classification and clustering

Marc Mangel (Distinguished Professor of Mathematical Biology)

Mathematical modeling of biological phenomena, especially the evolutionary ecology of growth, aging, and longevity; quantitative issues in fishery management; mathematical and computational aspects of disease

Bruno Sansó

Bayesian spatio-temporal modeling, environmental and geostatistical applications, modeling of extreme values, statistical assessment of climate variability

Hongyun Wang

Molecular modeling and biophysics, numerical analysis, fluid mechanics, computer animation, partial differential equations, parallel computing, statistical physics, data structures, fast algorithms

Associate Professor

Athanasios Kottas

Bayesian nonparametrics, analysis of computer model experiments, mixture models, quantile regression, spatial statistics, survival analysis, applications in ecology and engineering

Raquel Prado

Bayesian non-stationary time series modeling, multivariate time series, biomedical signal processing and statistical genetics

Assistant Professor

Pascale Garaud

Astrophysics, geophysics, fluid dynamics, numerical resolutions of differential equations, mathematical modeling of natural flows

Qi Gong

Computational methods for real-time control systems, trajectory optimization and motion planning, nonlinear filtering and observer design, robust and adaptive control of nonlinear systems, industry applications of control theory

Dejan Milutinović

Stochastic dynamical systems and statistical signal processing, multi-agent systems/robotics, systems biology/immune system, optimal control, hybrid and discrete event systems

Abel Rodríguez

Bayesian nonparametrics, Bayesian time series and spatial models, public health, financial econometrics, structural proteomics

Associate Adjunct Professor**Robin Morris**

Bayesian analysis of scientific data, with applications in Earth remote sensing, particle and astroparticle physics, signal processing and engineering

Assistant Adjunct Professor**Eric Anderson**

Statistical methods in fisheries management and ecology, parentage inference, inference of species hybrids, genetic stock identification

Lecturer**Yonatan Katznelson**

Mathematical methods for economists, number theory

Bruno Mendes

Parameter and model uncertainty in geophysics and groundwater contamination modeling, Bayesian statistics, parallel computation

**William Dunbar (Computer Engineering)**

Theory and application of feedback control, air traffic control, nanopore sensors, dynamics and control of biomolecules

Gabriel Elkaim (Computer Engineering)

Embedded systems; robust software architectures for real-time reactive systems; sensor fusion; guidance, navigation, and control (GNC) system identification; robust and advanced control schemes; feedback control systems; robotics; unmanned autonomous vehicles (UAVs); and cooperative control

Andrew T. Fisher (Earth Sciences)

Hydrogeology, crustal studies, coupled flows, modeling

Gary A. Glatzmaier (Earth Sciences)

Computer simulation of geodynamics and planetary dynamics

David Haussler (Biomolecular Engineering; Distinguished Professor of

Biomolecular Engineering; Investigator, Howard Hughes Medical Institute; Director, Center for Biomolecular Science and Engineering; Scientific Co-Director, California

Institute for Quantitative Biosciences [QB3])

Molecular evolution, neurodevelopment, genomics, bioinformatics, computational molecular biology, statistical models, machine learning, neural networks

David P. Helmbold (Computer Science)

Machine learning, computational learning theory, analysis of algorithms

Roberto Manduchi (Computer Engineering)

Sensor processing and image analysis with application to assistive technology and environmental modeling

Richard Montgomery (Mathematics)

Celestial mechanics, differential geometry, gauge theory, mechanics (quantum and classical), and control theory

Katia Obraczka (Computer Engineering)

Computer networks, distributed systems, operating systems, Internet information systems, mobile computing, wireless networks

Hamid Sadjadpour (Electrical Engineering)

Wireless communication systems, coding and information theory, ad hoc and sensor networks

Manfred Warmuth (Computer Science)

Online learning, machine learning, statistical decision theory, game theory, analysis of algorithms

Peter Young (Physics)

Condensed matter theory, statistical mechanics

Yi Zhang (Information Systems Management)

Information retrieval, knowledge management, natural language processing, machine learning

Lower-Division Courses

2. Pre-Statistics. F

Reviews and introduces mathematical methods useful in the elementary study of statistics, including logic, real numbers, inequalities, linear and quadratic equations, functions, graphs, exponential and logarithmic functions, and summation notation. Prerequisite(s): Mathematics 2 or placement exam score of 20 or higher. (General Education Code(s): Q.) *B. Mendes, The Staff*

3. Precalculus for Science and Engineering. F,W

Includes real numbers, inequalities, linear and quadratic equations, functions, inverse graphs, exponential and logarithmic functions, trigonometry, and analytic geometry, and their use in real-world problems. Students cannot receive credit for both this course and Mathematics 3. Mathematics 3 can substitute for course 3. Prerequisite(s): score of 20 or higher on Mathematics Placement Exam or Mathematics 2. (General Education Code(s): Q.) *B. Mendes, The Staff*

5. Statistics. F,W,S

Introduction to statistical methods/reasoning, including descriptive methods, data-gathering (experimental design and sample surveys), probability, interval estimation, significance tests, one- and two-sample problems, categorical data analysis, correlation and regression. Emphasis on applications to the natural and social sciences. Students cannot receive credit for this course if they have already received credit for course 7. (General Education Code(s): IN, Q.) *A. Kottas, H. Lee, R. Morris, A. Rodriguez, B. Sanso, The Staff*

7. Statistical Methods for the Biological, Environmental, and Health Sciences. F,W,S

Case-study-based introduction to statistical methods as practiced in the biological, environmental, and health sciences. Descriptive methods, experimental design, probability, interval estimation, hypothesis testing, one- and two-sample problems, power and sample size calculations, simple correlation and simple linear regression, one-way analysis of variance, categorical data analysis. (Formerly *Statistical Methods for the Biological and Environmental Sciences*.) Prerequisite(s): score of 31 or higher on mathematics placement exam, course 2 or 3 or 11A or Mathematics 3 or 11A or 19A or by permission of instructor. Concurrent enrollment in course 7L is required. (General Education Code(s): IN, Q.) *D. Draper, H. Lee, R. Prado*

7L. Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory (2 credits). F,W,S

Computer-based laboratory course in which students gain hands-on experience in analysis of data sets arising from statistical problem-solving in the biological,

environmental, and health sciences. Descriptive methods, interval estimation, hypothesis testing, one-and two-sample problems, correlation and regression, one-way analysis of variance, categorical data analysis. (Formerly *Statistical Methods for the Biological and Environmental Sciences Laboratory*.) Prerequisite(s): score of 31 or higher on mathematics placement exam, course 2 or 3 or 11A or Mathematics 3 or 11A or 19A or by permission of instructor. Concurrent enrollment in course 7 is required. *D. Draper, H. Lee, R. Prado*

10. Mathematical Methods for Engineers I. F,S

Applications-oriented course on complex numbers and linear algebra integrating Matlab as a computational support tool. Introduction to complex algebra. Vectors, bases and transformations, matrix algebra, solutions of linear systems, inverses and determinants, eigenvalues and eigenvectors, and geometric transformations. Students cannot receive credit for this course and for courses 10A or 27L or Mathematics 21. (Formerly course 27, *Mathematical Methods for Engineers*.) Prerequisite(s): Score of 40 or higher on mathematics placement exam, or course 3, or Mathematics 3. (General Education Code(s): Q.) *N. Brummell, Y. Katznelson, B. Mendes, H. Wang, The Staff*

10A. Basic Mathematical Methods for Engineers I (3 credits). F,S

Applications-oriented course on complex numbers and linear algebra integrating Matlab as a computational support tool. Introduction to complex algebra. Vectors, bases and transformations, matrix algebra, solutions of linear systems, inverses and determinants. Students cannot receive credit for this course and courses 10 or 27L or Mathematics 21. Prerequisite(s): Score of 40 or higher on mathematics placement exam, or course 3, or Mathematics 3. *N. Brummell, Y. Katznelson, B. Mendes, H. Wang, The Staff*

10B. Mathematical Methods for Engineers IB (2 credits). F,S

Can only be taken by students who need a transition from course 10A to course 10. Students cannot receive credit for this course and for course 10 or Mathematics 21 or courses 27 and 27L. Prerequisite(s): course 10A. Enrollment by permission of instructor only. *N. Brummell, Y. Katznelson, B. Mendes, H. Wang, The Staff*

11A. Mathematical Methods for Economists I. F,W,S

Introduction to mathematical tools and reasoning, with applications to economics. Topics are drawn from differential calculus in one variable and include limits, continuity, differentiation, elasticity, Taylor polynomials, and optimization. (Also offered as Economics 11A. Students cannot receive credit for both courses.) Students who have already taken Mathematics 11A and 19A should not take this course. Prerequisite(s): score of 31 or higher on Math Placement Exam. Students who do not place into precalculus should enroll in Mathematics 2. (General Education Code(s): IN, Q.) *Y. Katznelson, M. Mangel, D. Milutinovic*

11B. Mathematical Methods for Economists II. F,W,S

Mathematical tools and reasoning, with applications to economics. Topics are drawn from multivariable differential calculus and single variable integral calculus, and include partial derivatives, linear and quadratic approximation, optimization with and without constraints, Lagrange multipliers, definite and indefinite integrals, and elementary differential equations. (Also offered as Economics 11B. Students cannot receive credit for both courses.) Prerequisite(s): course 11A, Economics 11A, Mathematics 11A, or Mathematics 19A. (General Education Code(s): IN, Q.) *Y. Katznelson*

15A. Case-Study Calculus I. W

Case-study-based, first-quarter introduction to single-variable calculus, with

computing labs/discussion sections featuring contemporary symbolic, numerical, and graphical computing tools. Case studies drawn from biology, environmental sciences, health sciences, and psychology. Includes functions, mathematical modeling, limits, continuity, tangents, velocity, derivatives, the chain rule, implicit differentiation, higher derivatives, exponential and logarithmic functions and their derivatives, differentiating inverse functions, the mean value theorem, concavity, inflection points, function optimization, and curve-sketching. Students cannot receive credit for this course and course 11A or Economics 11A or Mathematics 11A or 19A.

Prerequisite(s): course 3 or Mathematics 3 or score of 40 or higher on precalculus placement exam or by permission of instructor. Concurrent enrollment in course 15L required. (General Education Code(s): IN, Q.) *B. Mendes, The Staff*

15B. Case-Study Calculus II. S

Case-study based, second-quarter introduction to single-variable calculus, with computing labs/discussion sections featuring symbolic numerical, and graphical computing tools. Case studies are drawn from biology, environmental science, health science, and psychology. Includes indefinite and definite integrals of functions of a single variable; the fundamental theorem of calculus; integration by parts and other techniques for evaluating integrals; infinite series; Taylor series, polynomial approximations. Students cannot receive credit for this course and course 11B or Economics 11B or Mathematics 11B or 19B. Prerequisite(s): course 15A or 11A or Economics 11A or Mathematics 11A or 19A. (General Education Code(s): IN, Q.) *B. Mendes, The Staff*

20. Mathematical Methods for Engineers II. W,S

Applications-oriented class on ordinary differential equations (ODEs) and systems of ODEs using Matlab as a computational support tool. Covers linear ODEs and systems of linear ODEs; nonlinear ODEs using substitution and Laplace transforms; phase-plane analysis; introduction to numerical methods. Students cannot receive credit for this course and for courses 20A or 27L or Mathematics 24. Prerequisite(s): Mathematics 19B, and course 10 or 10A or Mathematics 21. *Q. Gong, Y. Katznelson*

20A. Basic Mathematical Methods for Engineers II (3 credits). W,S

Applications-oriented class on ordinary differential equations (ODEs) and systems of ODEs integrating Matlab as a computational support tool. Covers linear ODEs and systems of linear ODEs; nonlinear ODEs using substitution and Laplace transforms. Students cannot receive credit for this course and for courses 20 or 27L or Mathematics 24. Prerequisite(s): Mathematics 19B, and course 10 or 10A or Mathematics 21. *Q. Gong, Y. Katznelson*

20B. Mathematical Methods for Engineers IIB (2 credits). W,S

Can only be taken by students who need a transition from course 20A to course 20. Students cannot receive credit for this course and for course 20 or Mathematics 24 or course 27 and 27L. Prerequisite(s): course 20A. Enrollment by permission of instructor only. *Q. Gong, Y. Katznelson*

27L. Matlab for Engineers Laboratory (2 credits). *

Introduction to Matlab and elementary programming. Covers visualization of functions and data; linear algebra and numerical solutions of differential equations using the supplied Matlab routines. Previous knowledge of linear algebra and differential equation is expected. (Formerly *Mathematical Methods for Engineers Laboratory*) Prerequisite(s): Mathematics 21 and 24, or permission of instructor. Enrollment limited to 40. *The Staff*

80A. Gambling and Gaming. F

Games of chance and strategy motivated early developments in probability, statistics,

and decision theory. Course uses popular games to introduce students to these concepts, which underpin recent scientific developments in economics, genetics, ecology, and physics. (General Education Code(s): Q.) *A. Rodriguez*

Upper-Division Courses

100. Mathematical Methods for Engineers III. *

Applications-oriented course on complex analysis and partial differential equations using Maple as symbolic math software support. In addition, introduces Fourier analysis, special functions, and asymptotic methods. Students cannot receive credit for this course and Physics 116B or Physics 116C. Prerequisite(s): course 20, or by permission of instructor. Enrollment limited to 25. *The Staff*

107. Introduction to Fluid Dynamics. F

Covers fundamental topics in fluid dynamics: Euler and Lagrange descriptions of continuum dynamics; conservation laws for inviscid and viscous flows; potential flows; exact solutions of the Navier-Stokes equation; boundary layer theory; gravity waves. Students cannot receive credit for this course and Applied Mathematics and Statistics 217. (Also offered as Physics 107. Students cannot receive credit for both courses.) Prerequisite(s): course 27 or 20 or 20A, or Physics 116A and 116B and 116C, or equivalent. *N. Brummell, G. Glatzmaier*

114. Introduction to Dynamical Systems. W

Introduces continuous and discrete dynamical systems. Topics include: fixed points; stability; limit cycles; bifurcations; transition to and characterization of chaos; fractals. Examples are drawn from sciences and engineering. Students cannot receive credit for this course and course 214. (Formerly course 146.) Prerequisite(s): course 10 and 20, or Mathematics 21 and Mathematics 24. Enrollment restricted to sophomores, juniors and seniors. *P. Garaud*

115. Stochastic Modeling in Biology. W

Application of differential equations, probability, and stochastic processes to problems in cell, organismal, and population biology. Topics include life-history theory, behavioral ecology, and population biology. Students may not receive credit for this course and course 215. Prerequisite(s): course 131, a university-level course in biology, and operational knowledge of a programming language; or consent of instructor. *M. Mangel*

131. Introduction to Probability Theory. S

Introduction to probability theory and its applications. Combinatorial analysis, axioms of probability and independence, random variables (discrete and continuous), joint probability distributions, properties of expectation, Central Limit Theorem, Law of Large Numbers, Markov chains. Students cannot receive credit for this course and Computer Engineering 107. Prerequisite(s): course 11B or Economics 11B or Mathematics 11B or 19B. (General Education Code(s): Q.) *A. Kottas, M. Mangel, R. Prado, B. Sanso*

132. Statistical Inference. F

Introduction to statistical inference at a calculus-based level: maximum likelihood estimation, sufficient statistics, distributions of estimators, confidence intervals, hypothesis testing, and Bayesian inference. Prerequisite(s): course 131 or Computer Engineering 107. *A. Kottas, A. Rodriguez*

147. Computational Methods and Applications. W

Applications of computational methods to solving mathematical problems using Matlab. Topics include solution of nonlinear equations, linear systems, differential

equations, sparse matrix solver, and eigenvalue problems. Prerequisite(s): course 27 or 10 or 10A, or Mathematics 21. Knowledge of differential equations is recommended (course 20 or 20A, or Mathematics 24). *H. Wang*

156. Linear Regression. *

Covers simple linear regression, multiple regression, and analysis of variance models. Students learn to use the software package R to perform the analysis, and to construct a clear technical report on their analysis, readable by either scientists or nontechnical audiences. (Formerly *Linear Statistical Models*.) Prerequisite(s): course 132 and satisfaction of the Entry Level Writing and Composition requirements. Enrollment limited to 30. (General Education Code(s): W.) *H. Lee*

198. Independent Study or Research. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198F. Independent Study or Research (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

200. Research and Teaching in AMS (3 credits). F

Basic teaching techniques for teaching assistants, including responsibilities and rights; resource materials; computer skills; leading discussions or lab sessions; presentation techniques; maintaining class records; and grading. Examines research and professional training, including use of library; technical writing; giving talks in seminars and conferences; and ethical issues in science and engineering. Enrollment restricted to graduate students. *N. Brummell*

202. Linear Models in SAS. S

Case study-based course teaches statistical linear modeling using the SAS software package. Teaches generalized linear models; linear regression; analysis of variance/covariance; analysis of data with random effects and repeated measures. Prerequisite(s): course 156 or 256, or permission of instructor. Enrollment restricted to graduate students. *B. Mendes*

205A. Mathematical Statistics. F

Graduate introduction to topics in probability and statistical inference. Probabilities, random variables, common families of distributions; expectation and higher moments; multivariate distributions, marginals and conditionals; point estimation, methods and properties; interval estimation, methods and properties; and hypothesis testing, methods and properties. (Formerly course 205.) Prerequisite(s): Strongly recommended: course 131. Previous experience with univariate and multivariate calculus, and experience with elementary probability also recommended. Enrollment restricted to graduate students. *A. Rodriguez, B. Sanso*

205B. Statistical Inference. F

Statistical inference from a frequentist point of view. Properties of random samples; convergence concepts applied to point estimators; principles of statistical inference; obtaining and evaluating point estimators with particular attention to maximum likelihood estimates and their properties; obtaining and evaluating interval estimators; and hypothesis testing methods and their properties. Prerequisite(s): course 131 or equivalent. Enrollment restricted to graduate students. *B. Sanso*

206. Bayesian Statistics. W

Introduction to Bayesian statistical methods for inference and prediction; exchangeability; prior, likelihood, posterior, and predictive distributions; coherence

and calibration; conjugate analysis; Markov Chain Monte Carlo methods for simulation-based computation; hierarchical modeling; Bayesian model diagnostics, model selection, and sensitivity analysis. Prerequisite(s): graduate standing, or course 132, or permission of instructor. Enrollment restricted to juniors, seniors, and graduate students. *H. Lee*

207. Intermediate Bayesian Statistical Modeling. S

Hierarchical modeling, linear models (regression and analysis of variance) from the Bayesian point of view, intermediate Markov chain Monte Carlo methods, generalized linear models, multivariate models, mixture models, hidden Markov models. Prerequisite(s): course 206, and graduate standing or permission of instructor. *D. Draper, R. Prado, B. Sanso*

211. Foundations of Applied Mathematics. F

Accelerated class on applied mathematical methods for all sciences. Topics include: multivariate calculus, linear algebra, Fourier series, ordinary differential equations, complex analysis, and integral transforms. Enrollment restricted to graduate students. *N. Brummell*

212A. Applied Mathematical Methods I. W

Focuses on the analytical and numerical methods for solving differential equations. Topics include well-posed problems, Fourier transform, separation of variables, Green's functions, Huygen's principle, calculus of variation, numerical discretization, local truncation error, global error, error estimation, numerical stability, multigrid method. (Formerly course 211.) Enrollment restricted to graduate students. Undergraduates are encouraged to take this class with permission of instructor. *N. Brummell, P. Garaud, H. Wang*

212B. Applied Mathematical Methods II. S

Covers perturbation methods: asymptotic series, stationary phase and expansion of integrals, matched asymptotic expansions, multiple scales and the WKB method, Padé approximants and improvements of series. (Formerly course 212.) Prerequisite(s): course 212A. *H. Wang, N. Brummell, P. Garaud*

213. Numerical Solutions of Differential Equations. S

Focuses on numerical solutions of differential equations. Topics include Runge-Kutta methods; error estimation and error control; consistency, stability, and convergence; conjugate gradient method; multigrid method; CFL condition; and high-resolution methods for conservation laws. Enrollment restricted to graduate students or permission of instructor. *H. Wang, Q. Gong, N. Brummell, P. Garaud*

214. Applied Dynamical Systems. W

Introduces continuous and discrete dynamical systems. Topics include: fixed points; stability; limit cycles; bifurcations; transition to and characterization of chaos; and fractals. Examples drawn from sciences and engineering; founding papers of the subject are studied. Students cannot receive credit for this course and course 114. Enrollment restricted to graduate students. Enrollment of undergraduates by permission of instructor. Enrollment limited to 15. *P. Garaud, M. Mangel, H. Wang*

215. Stochastic Modeling in Biology. W

Application of differential equations and probability and stochastic processes to problems in cell, organismal, and population biology. Topics include: life-history theory, behavioral ecology, and population biology. Students may not receive credit for this course and course 115. Enrollment restricted to graduate students or permission of instructor. *M. Mangel*

216. Stochastic Differential Equations. W

Introduction to stochastic differential equations and diffusion processes with applications to biology, biomolecular engineering, and chemical kinetics. Topics include Brownian motion and white noise, gambler's ruin, backward and forward equations, and the theory of boundary conditions. Enrollment restricted to graduate students or consent of instructor. *H. Wang*

217. Introduction to Fluid Dynamics. F

Covers fundamental topics in fluid dynamics at the graduate level: Euler and Lagrange descriptions of continuum dynamics; conservation laws for inviscid and viscous flows; potential flows; exact solutions of the Navier-Stokes equation; boundary layer theory; gravity waves. Students cannot receive credit for this course and course 107. Enrollment restricted to graduate students. *N. Brummell, G. Glatzmaier*

221. Bayesian Decision Theory. *

Explores conceptual and theoretical bases of statistical decision making under uncertainty. Focuses on axiomatic foundations of expected utility, elicitation of subjective probabilities and utilities, and the value of information and modern computational methods for decision problems. Prerequisite(s): course 206. Enrollment restricted to graduate students. *B. Sanso*

223. Time Series Analysis. F

Graduate level introductory course on time series data and models in the time and frequency domains: descriptive time series methods; the periodogram; basic theory of stationary processes; linear filters; spectral analysis; time series analysis for repeated measurements; ARIMA models; introduction to Bayesian spectral analysis; Bayesian learning, forecasting, and smoothing; introduction to Bayesian Dynamic Linear Models (DLMs); DLM mathematical structure; DLMs for trends and seasonal patterns; and autoregression and time series regression models. Prerequisite: course 206. Enrollment restricted to graduate students. *R. Prado*

231. Nonlinear Control Theory. S

Covers analysis and design of nonlinear control systems using Lyapunov theory and geometric methods. Includes properties of solutions of nonlinear systems, Lyapunov stability analysis, effects of perturbations, controllability, observability, feedback linearization, and nonlinear control design tools for stabilization. Prerequisite(s): basic knowledge of mathematical analysis and ordinary differential equations is assumed. Enrollment restricted to graduate students or permission of instructor. *Q. Gong*

236. Motion Coordination of Robotic Networks. *

Comprehensive introduction to motion coordination algorithms for robotic networks. Emphasis on mathematical tools to model, analyze, and design cooperative strategies for control, robotics, and sensing tasks. Topics include: continuous and discrete-time evolution models, proximity graphs, performance measures, invariance principles, and coordination algorithms for rendezvous, deployment, flocking, and consensus. Techniques and methodologies are introduced through application setups from multi-agent robotic systems, cooperative control, and mobile sensor networks. Enrollment restricted to graduate students. Enrollment limited to 15. *The Staff*

241. Bayesian Nonparametric Methods. *

Theory, methods, and applications of Bayesian nonparametric modeling. Prior probability models for spaces of functions. Dirichlet processes. Pólya trees. Nonparametric mixtures. Models for regression, survival analysis, categorical data analysis, and spatial statistics. Examples drawn from social, engineering, and life

sciences. Prerequisite(s): course 207. Enrollment restricted to graduate students. *A. Kottas, The Staff*

245. Spatial Statistics. *

Introduction to the analysis of spatial data: theory of correlation structures and variograms; kriging and Gaussian processes; Markov random fields; fitting models to data; computational techniques; frequentist and Bayesian approaches. Prerequisite(s): course 207. Enrollment restricted to graduate students. *B. Sanso, H. Lee*

256. Linear Statistical Models. W

Theory, methods, and applications of linear statistical models. Review of simple correlation and simple linear regression. Multiple and partial correlation and multiple linear regression. Analysis of variance and covariance. Linear model diagnostics and model selection. Case studies drawn from natural, social, and medical sciences. Course 205 strongly recommended as a prerequisite. Undergraduates are encouraged to take this class with permission of instructor. Prerequisite(s): course 205A or 205B or permission of instructor. Enrollment restricted to graduate students. *B. Sanso, R. Prado*

261. Probability Theory with Markov Chains. *

Introduction to probability theory: probability spaces, expectation as Lebesgue integral, characteristic functions, modes of convergence, conditional probability and expectation, discrete-state Markov chains, stationary distributions, limit theorems, ergodic theorem, continuous-state Markov chains, applications to Markov chain Monte Carlo methods. Prerequisite(s): course 205B or by permission of instructor. Enrollment restricted to graduate students. *A. Kottas*

263. Stochastic Processes. S

Includes probabilistic and statistical analysis of random processes, continuous-time Markov chains, hidden Markov models, point processes, Markov random fields, spatial and spatio-temporal processes, and statistical modeling and inference in stochastic processes. Applications to a variety of fields. Prerequisite(s): course 205A, 205B, or 261, or by permission of instructor. *A. Kottas*

274. Generalized Linear Models. S

Theory, methods, and applications of generalized linear statistical models; review of linear models; binomial models for binary responses (including logistical regression and probit models); log-linear models for categorical data analysis; and Poisson models for count data. Case studies drawn from social, engineering, and life sciences. Prerequisite(s): course 205A, 205B, or 256. Enrollment restricted to graduate students. *A. Kottas*

280A. Seminar in Mathematical and Computational Biology (2 credits). F,W,S

Weekly seminar on mathematical and computational biology. Participants present research findings in organized and critical fashion, framed in context of current literature. Students present own research on a regular basis. Enrollment restricted to graduate students. Enrollment limited to 20. May be repeated for credit. *M. Mangel*

280B. Seminars in Statistical and Applied Mathematical Modeling (2 credits). F,W,S

Weekly seminar series covering topics of current research in applied mathematics and statistics. Permission of instructor required. Enrollment restricted to graduate students. (Formerly *Seminar in Applied Mathematics and Statistics*.) May be repeated for credit. *The Staff*

280C. Seminar in Geophysical and Astrophysical Fluid Dynamics (2 credits).

F,W,S

Weekly seminar/discussion group on geophysical and astrophysical fluid dynamics covering both analytical and computational approaches. Participants present research progress and findings in semiformal discussions. Students must present their own research on a regular basis. Enrollment restricted to graduate students. May be repeated for credit. *N. Brummell, P. Garaud*

285. Seminar in Career Skills (2 credits). *

Seminar in career skills for applied mathematicians and statisticians. Learn about professional activities such as the publication process, grant proposals, and the job market. Enrollment restricted to graduate students, typically within two years of their expected Ph.D. completion date. *The Staff*

290A. Topics in Mathematical and Computational Biology (2 credits). *

Focuses on applications of mathematical and computational methods with particular emphasis on advanced methods applying to organismal biology or resource management. Students read current literature, prepare critiques, and conduct projects. Enrollment restricted to graduate students. Enrollment limited to 20. May be repeated for credit. *M. Mangel*

290B. Advanced Topics in the Numerical Solution of PDEs. *

Modern practical methods for the numerical solution of partial differential equations. Methods considered depend on the expertise of the instructor, but are covered in-depth and up to the cutting-edge of practical contemporary implementation. Content could be method-based (e.g., spectral methods, finite-element methods) or topic-based (e.g., simulations of turbulence). Some programming and numerical analysis (e.g., course 213) highly recommended. Enrollment restricted to graduate students and undergraduates with permission of the instructor. *N. Brummell, P. Garaud, H. Wang*

291. Advanced Topics in Bayesian Statistics (3 credits). S

Advanced study of research topics in the theory, methods, or applications of Bayesian statistics. The specific subject depends on the instructor. Enrollment restricted to graduate students and by permission of instructor. May be repeated for credit. *E. Anderson*

296. Masters Project (2 credits). F,W,S

Independent completion of a masters project under faculty supervision. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

297. Independent Study or Research. F,W,S

Independent study or research under faculty supervision. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. *The Staff*

297F. Independent Study (2 credits). F,W,S

Independent study or research under faculty supervision. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Thesis research under faculty supervision. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. *The Staff*

Arabic

Language Program
239 Cowell College
(831) 459-2054
<http://language.ucsc.edu>

Course Descriptions

(There were no substantive changes to the Arabic Program Description from the General Catalog 2006-08.)

Program Description

For students interested in acquiring proficiency in the Arabic language, beginning level language courses are offered. The courses emphasize reading, writing, understanding, and speaking modern standard Arabic as used by educated native speakers of the language. In the beginning, the fundamental structures are emphasized with an aim toward developing the reading and writing skills and introducing the speaking and comprehension skills gradually.

Campus Language Laboratories and Placement Exams

Information about these topics can be found under the [Language Program](#).

[Changes to 2009-10 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Program Description

The Art Department offers an integrated program of study in theory and practice exploring the power of visual communication for personal expression and public interaction. The department provides students with the means to pursue this exploration through courses that provide the practical skills for art production in a variety of media within the contexts of critical thinking and broad-based social perspectives.

The art program at UCSC is composed of courses in drawing, painting, photography, sculpture, print media, intermedia, critical theory, electronic art, public art, and interactive technologies. Baskin visual arts studios provide world-class facilities for art production in these areas. The Art Department is committed to pursuing a continuing dialogue about what constitutes basic preparation in the arts while offering students experience in established practices, new genres, and new technologies. Foundation courses are open to all non-art students after priority enrollment. Art and pre-art majors have enrollment priority in all art courses. Non-art majors may enroll in art courses on the first day of class if space permits.

Students graduating with a major in art may become professional artists or pursue careers in such diverse areas as arts management, museum and gallery practices, communication technologies, public school teaching, media arts, and publishing. Many students who want to teach at the college level continue their education in graduate school.

Declaring the Pre-Art Major

Students must declare the pre-art major in order to enroll in introductory studio courses. Students should declare their pre-art major in the first quarter of their freshman year to insure their ability to enroll in studio courses, but may declare early in their sophomore year also. Juniors cannot declare pre-art. Students may declare the pre-art major at any time. Please note that students who have declared the pre-art major still need to follow the procedure for acceptance to the full major; a student may not graduate as a pre-art major.

Acceptance to the Art Major: Freshmen

Students may apply for admission to the art major after completing at least three lower-division studio courses at UCSC (not foundation courses) with grades of B or better. If one of these classes is graded B- or lower, the student must take a different lower-division studio course and receive a B to be eligible to declare art. Students cannot take more than four lower-division studio classes to obtain the requisite B grades. Failure to achieve three Bs in three attempts triggers a process of advising whose outcome is either an alternative path to success or exclusion from the major. While completing this lower-division course work, it is critical that each student meet with a faculty adviser regarding the student's potential to proceed to the major level.

Junior Transfer Students

Junior transfer students are accepted into the art major for fall quarter after passing a portfolio review in early April. Their acceptance is contingent upon their acceptance to UCSC. Acceptance to UCSC does not guarantee admittance to the art program, nor does passing the portfolio review guarantee that UCSC will accept the student to the university. Transfer students must identify themselves as potential art majors when applying to the university in order to receive information on the portfolio review deadlines and the materials required for the review. All junior transfers

will be required to take Art 60, Forms and Ideas, and one art seminar in their junior year at UCSC in lieu of the first-year foundation program requirements.

Requirements for the Art Major

The minimum requirements for the art major are completion of seven lower-division and nine upper-division courses and satisfaction of the senior comprehensive requirement. A maximum of three courses total from outside the Art Department (including EAP courses) may be substituted for regular art courses with the approval of a major adviser. In these courses, students must have received a grade of B or higher. Students should plan carefully when using this option.

Students plan their course of study in consultation with a faculty adviser.

Lower-Division Requirements (Freshmen)

Students complete seven courses as follows:

- the foundation series consists of two courses: 80C *Introduction to Visual Arts* (fall quarter), and 10G *2-D Foundation* (winter quarter)
or
10H *3-D Foundation* (spring quarter)
- three courses from the following list (with a grade of B or better):
 - 20 *Introduction to Drawing for the Major*
 - 21 *Introduction to Computer Art*
 - 22 *Introduction to Electronics for Intermedia*
 - 23 *Intermedia I*
 - 24A/B *Introduction to Painting. A: Oil, B: Acrylic**
 - 25 *Relief Printmaking*
 - 26 *Introduction to Printmaking*
 - 27 *Monoprinting/Mixed Media Printing*
 - 28 *Figurative Sculpture*
 - 30 *Introduction to Photography for Art Majors*
 - 39 *Public Art I: Community, Site, and Place*
 - 40 *Sculpture I*
- Students may apply either 24A or 24B, but not both, toward the lower-division course requirements for declaring the full art major.
- One course from history of art and visual culture with a non-Western focus.
- One course from either course 80F, course 80V, or a history of art and visual culture course with a Western focus.

Requirements (Junior Transfers)

In lieu of the foundation courses, junior transfers complete the following:

- 60 *Forms and Ideas*, and
One of the following art seminars:
 - 149A or B *Contemporary Visual Media: Issues of theory and Practice*,
 - or
 - 150C *Issues in Collaboration and Interactivity*
- Three lower-division studios (equivalent to those found in the above list) should be taken at the community college, college, or university in preparation for the mandatory portfolio review prior to acceptance to the art major.
- Two courses from history of art and visual culture, one with a Western focus and one with a non-Western focus, may be taken at the community college, college, or university, if available, or at UCSC.

Art Major Planner

The following is a recommended academic plan for freshmen to complete during their first two years as preparation for the art major.

Year	Fall	Winter	Spring
1st (frsh)	Art 80C	Art 10G* low-div studio	Art 10H* low-div studio
2nd (soph)	Low-div studio HAVC**	HAVC**	

*Students take only one foundation course of their choice

**Courses from history of art and visual culture, one with a Western focus, and one with a non-Western focus

Upper-Division Requirements

Students complete nine courses as follows:

five upper-division (100+ numbered) studio courses;

- 10 credits of senior studio courses or two upper-division studios in the area of focus;
- Two upper-division non-studio courses from history of art and visual culture, film and digital media theory, or art critical theory seminars. Students may choose two upper-division courses from another department relevant to the area of focus in consultation with a faculty adviser, however, courses from departments other than film and digital media or history of art and visual culture constitute substitutions, which will be counted toward the maximum number of three allowed.

The last three quarters of course work for the major must be completed in residence at UCSC.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement will normally be met within one to three courses already required for the major. For detailed information on this major's DC requirement, consult your major adviser or see the 2010-11 general catalog.

Comprehensive Requirement

Senior majors should meet with their faculty adviser about this requirement. Students may satisfy the comprehensive requirement with one of the following two options:

1. Completing 10 credits of senior studio course work in the area of focus;
2. Completing 10 credits of upper-division studio course work in the area of focus; and
 - a. Presenting an exhibition and, by appointment, meeting with a faculty member for review and critique of the exhibition; or
 - b. Submitting a portfolio and, by appointment, meeting with a faculty member for review and critique of the portfolio.

Study Abroad

The [UC Education Abroad Program \(EAP\)](#) offers students the opportunity for study abroad. Art majors may participate in EAP in their junior year. Pre-art majors are not approved to study abroad. Art students may not go abroad in their senior year, as the last three quarters of course work must be in residence at UCSC. When considering attending EAP, the student should be mindful that only three courses may be substituted in the art major and each must receive a grade of B or better.

Materials Fee

Art students should be aware of the materials fee required for some studio courses. The fee is billed to the student's account for specific course materials purchased by the Art Department through the university. Fees generally range from \$5 to \$150 per course. Students may incur additional expense purchasing individual supplies.

[Program Description](#) | [Changes to 2009-10 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses

10. Foundation Series in Art.

Introduces general education students and prospective majors to theory and practice of art and contemporary discourse surrounding it. Courses 10G and 10H comprise large lecture sections that meet once a week and smaller studio sections that meet once or twice a week. Courses include both lecture and studio components and are not intended to be technique-intensive studio classes. Students must register for both lecture and studio sections. *The Staff*

10G. 2D Foundation. W

Introduction to two-dimensional art practice and theory. Readings and lectures address both history and contemporary contexts of 2D art practice. Covers issues of content, representation, communication, and process. In the studio, students apply concepts covered in lecture to art projects. Students are billed a materials fee. Enrollment restricted to pre-art and art majors during priority enrollment. Enrollment limited to 100. (General Education Code(s): A.) *The Staff*

10H. 3D Foundation. S

Introduction to three-dimensional sculpture, intermedia, performance art, and technologically based contemporary art. Weekly lectures and section discussions introduce historical, theoretical, and critical methods of viewing and understanding contemporary art. Studio assignments introduce students to a range of contemporary techniques and materials used to make sculptural, performative, and technologically based work. Students are billed a materials fee. Enrollment restricted to pre-art and art majors during priority enrollment. Enrollment limited to 100. (General Education Code(s): A.) *W. Hibbert-Jones, J. Parker, E. Stephens*

20. Introduction to Drawing for the Major. F,W,S

Introduction to the methods, materials, and purposes of drawing to develop perceptual and conceptual skills through a series of assignments, providing various approaches to drawing as a tool for creative exploration. Discussions and critiques facilitate the development of critical skills. Designed for students considering the art major. Students are billed a materials fee. Enrollment restricted to pre-art and history of art and visual culture majors. Enrollment limited to 22. (General Education Code(s): A.) *The Staff, M. Gwyn, F. Galuszka*

21. Introduction to Computer Art. F,W

Basic introduction to the use of a computer as a fine art tool and medium. Addresses basic skills, concepts relevant to contemporary art theories, and practices. Provides a hands-on introduction to fundamentals of graphics, image acquisition, and

manipulation and programming with demonstrations of relevant software. Students work independently and in groups. Assignments include digital image acquisition and manipulation, basic scripting, hypertext and web publishing, and computer programming. Lectures, readings, and discussions examine new technology artwork and technology's relationship to contemporary culture. Enrollment restricted to pre-art and history of art and visual culture majors. Enrollment limited to 20. (General Education Code(s): A.) *E. Anderson, The Staff*

22. Introduction to Electronics for Intermedia. F,W

Provides basic introduction to electronic devices for use in making intermedia art. Provides hands-on experience working with sensors, motors, switches, gears, lights, simple circuits, and hardware store devices to create kinetic and interactive works of art. Produce sculptural or installation-based projects. Demonstrations, lectures, and critical discussion of work given to develop concepts and technical skills. Students are billed a materials fee. Enrollment restricted to pre-art and history of art and visual culture majors. Enrollment limited to 22. (General Education Code(s): A.) *E. Anderson, The Staff*

23. Intermedia I. W

Introduction to combining media, materials, and forms to explore contemporary art practices such as installation, time based work, performance, collaboration, and interactivity. Assignments encourage an exploration of conscious subject matter, process, and technique. Discussions, reading handouts, and critiques help develop perceptual and conceptual skills. Skill workshops introduce new techniques. Students are billed a materials fee. Enrollment restricted to pre-art and history of art and visual culture majors. Enrollment limited to 22. (General Education Code(s): A.) *The Staff, E. Crichton, E. Stephens*

24A. Introduction to Painting: Oil. F,W,S

Introduction to medium of oil painting and to painting process. Assignments develop understanding of potential of this medium as a tool for perceptual and conceptual exploration. Slide lectures introduce assignments and are basis for class discussion of contemporary and historical art activity in the field. Students are billed a materials fee. (Formerly course 24.) Prerequisite(s): course 20, or 80A with consent of instructor. Enrollment restricted to pre-art and history of art and visual culture majors. Enrollment limited to 22. (General Education Code(s): A.) *The Staff, M. Gwyn, F. Galuszka*

24B. Introduction to Painting: Acrylic. F

Introduction to acrylic painting and to painting process. Assignments develop understanding of this medium's potential as a tool for perceptual and conceptual exploration. Slide lectures introduce assignments and are basis for class discussion of contemporary and historical art activity in this field. Students are billed a materials fee. Prerequisite(s): course 20, or 80A with consent of instructor. Enrollment restricted to pre-art and history of art and visual culture majors. Enrollment limited to 22. (General Education Code(s): A.) *F. Galuszka*

25. Relief Printmaking. S

Introduction and development of relief printmaking. Course explores the traditions and contemporary issues of relief printmaking with emphasis on color work including reduction process, multiplate and viscosity printing. Students will build a portfolio using a wide spectrum of this complex relief process. Students are billed a materials fee. Prerequisite(s): courses 20, or 80A with consent of instructor. Enrollment restricted to pre-art and history of art and visual culture majors. Enrollment limited to 22. *P. Rangell, J. Lee*

26. Introduction to Printmaking. F

Survey of print medium: basic terminology, techniques, application of tools, materials, and condensed history of development of printmaking. Assignments consist of individual and collaborative projects aimed at building skills and gathering technical experience. Introduction to relief printing (black and white and color), intaglio, letterpress, and interface between photography/computer and the handmade print. Exploration of print media for communication of issues including formal aesthetics, social/psychological and personal narrative. Students are billed a materials fee. Prerequisite(s): course 20, or 80A with consent of instructor. Enrollment restricted to pre-art and history of art and visual culture majors. Enrollment limited to 22. (General Education Code(s): A.) *The Staff, P. Rangell, J. Lee*

27. Monoprinting/Mixed Media Printing. W

Explores crossover discipline that combines skills of drawing and painting with printmaking, offering a wide range of possibility for personal expression using both oil-based and water-based inks on a variety of plates. Registration and over-printing methods are demonstrated along with mixed media prints. Students are billed a materials fee. Prerequisite(s): course 20, or 80A with consent of instructor. Enrollment restricted to pre-art and history of art and visual culture majors. Enrollment limited to 22. (General Education Code(s): A.) *J. Lee*

28. Introduction to Figurative Sculpture. *

Introduction to a wide range of techniques for creating sculpture, based on and about the body/figure, through the exploration of contemporary concepts and ideas. Provides demonstrations, slide lectures, and critical discussion of work to develop concepts and technical skills. Students are billed a materials fee. Enrollment restricted to art, pre-art, and history of art and visual culture majors. Enrollment limited to 22. (General Education Code(s): A.) *J. Parker, W. Hibbert-Jones*

30. Introduction to Photography for Art Majors. F,W,S

Introduction to photography as an art form that explores visual ideas beginning with camera-ready use, negative development, and printing. Prepares for further work in photography or for collaboration with other media in art including computer arts and two- and three-dimensional mixed media. Critically examines photographic works while reading historical and theoretical texts. Students are billed a materials fee. Enrollment restricted to pre-art and history of art and visual culture majors. Enrollment limited to 20. (General Education Code(s): A.) *The Staff, N. Locks, L. Watts*

39. Public Art I: Community, Site, and Place. W

Introduces contemporary public art through studio practice, slides, and readings. Create public art works, design scale models, drawings, and project proposals. Includes a local community-based public art project and an ephemeral landscape project. Students are billed a materials fee. Enrollment restricted to pre-major art students and history of art and visual culture majors. Enrollment limited to 22. (General Education Code(s): A.) *W. Hibbert-Jones, The Staff*

40. Sculpture I. F,S

Introduction to a range of concepts and forms used to make contemporary sculpture. Assignments facilitate becoming familiar with sculptural techniques and materials to enable students to visually manifest their sculptural ideas. Combines lectures and demonstrations with work time in class. Students are billed a materials fee. Enrollment restricted to pre-art and history of art and visual culture majors. Enrollment limited to 22. (General Education Code(s): A.) *The Staff, J. Parker, E. Stephens, W. Hibbert-Jones*

42. Student-Directed Seminar. *

Seminars taught by upper-division students under faculty supervision. Does not fulfill major requirement. (See course 192.) *The Staff*

60. Forms and Ideas. F

Required for all junior transfer student art majors. Introduction to the art program, emphasizing awareness of contemporary visual practices and theory. Combines studio practice and theory. Students are billed a materials fee. Enrollment restricted to junior transfer art majors. Enrollment limited to 23. (General Education Code(s): A.) *D. Murray, The Staff*

80A. Introduction to Drawing. F,S

Introductory course for beginners and students not majoring in art. Covers the history of what are considered master drawings from prehistory to the present. Various media are examined and assigned in specific exercises. Course is a balance of historical study and practice through assigned homework exercises. A disciplined performance is expected. Students are billed a materials fee. Enrollment limited to 90. (General Education Code(s): T4-Humanities and Arts, A.) *The Staff*

80C. Introduction to Visual Arts. F

Surveys the major art forms and critical ideas that have shaped artistic practice globally from the 1980s to the present, including the many cultural forces that have inspired artists to articulate human experience in visual form. Enrollment restricted to pre-art majors during priority enrollment. Enrollment limited to 234. (General Education Code(s): T4-Humanities and Arts, A.) *D. Murray*

80D. Introduction to Photography. W

Introductory course for beginners and nonmajors. Various techniques examined and assigned in specific exercises. Work on projects using color film; this is a non-darkroom course. Examples given of photography from 1826 to the present. Balances historical study and practice through assigned homework exercises. Students are billed a materials fee. Enrollment limited to 190. (General Education Code(s): T4-Humanities and Arts, A.) *The Staff*

80F. Introduction to Issues in Digital Media. S

Digital media is revolutionizing ways in which artists create and exchange information. Introduces digital media through lectures, demonstrations, and exercises. Topics include networks, imaging, MIDI, interactivity, audio/video, and the World Wide Web. Enrollment limited to 120. (General Education Code(s): T6-Natural Sciences or Humanities and Arts, A.) *E. Anderson, The Staff*

80V. Issues and Artists. W,S

Focuses on key issues in contemporary art, art theory, and curatorial practice through lectures, discussions, and readings. Course consists of weekly series of lectures designed to familiarize students with theories and practice surrounding seven current topics of interest in the larger art world. Instructor introduces each topic theoretically and shows work of relevant artists and curators. Guest artists and curators present their work in relation to the topic. Enrollment limited to 144. (General Education Code(s): T4-Humanities and Arts, A.) *The Staff, E. Crichton, L. Watts, E. Stephens*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses

100. Gallery/Museum Practices (2 credits). *

Focuses on providing practical experience in all phases of exhibition design and implementation. General tasks of program operation supplemented with selective reading and written assignments designed to enhance theoretical understanding of broader issues in art administration. Includes field trips to galleries and museums as well as in-class visits by artists and arts professionals. (Formerly *Gallery/Museum Management and Practices*.) Enrollment restricted to art, pre-art, and history of art and visual culture majors. Enrollment limited to 20. *S. Graham*

101. Intermediate/Advanced Drawing. S

Work moves toward individual directions in drawing. A variety of media are explored. Each student is expected to do 150 hours of drawing over the quarter. Students are billed a materials fee. Prerequisite(s): course 20. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. *The Staff, M. Gwyn, F. Galuszka*

102. Figure Drawing. W

Focuses on drawing from the human figure and exploring the figure for the purpose of personal expression and social communication. Intended for the intermediate/advanced drawing student. Students are billed a materials fee. Prerequisite(s): course 20. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. (General Education Code(s): A.) *F. Galuszka, The Staff*

103. Intermediate/Advanced Painting. F,W,S

Continuation of the development of a basic foundation in painting with emphasis on the development of individual, experimental procedures. Students are billed a materials fee. Prerequisite(s): course 24A or 24B. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. *The Staff, M. Gwyn, F. Galuszka*

104. Special Topics in Painting. *

Special studies in painting as announced. Students are billed a materials fee. Prerequisite(s): course 24A or 24B, and 103. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. *M. Gwyn, F. Galuszka*

105. Special Topics in Drawing. F

Special topics in drawing as announced. Students are billed a materials fee. Prerequisite(s): courses 20 and 101. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. *M. Gwyn*

106A. Senior Studio in Drawing and Painting. W,S

An intensive studio experience for art majors, meeting three full days per week. Major emphasis is on the development of individual projects in preparation for the senior exhibition. Satisfies senior exit requirement. 106A and 106B must be taken concurrently. Students are billed a materials fee. Course is designed for senior art majors. Portfolio review prior to advance enrollment required; students should complete course 103 as preparation. Enrollment limited to 20. May be repeated for credit. *M. Gwyn, F. Galuszka*

106B. Senior Studio in Drawing and Painting. W,S

An intensive studio experience for art majors, meeting three full days per week. Major emphasis is on the development of individual projects in preparation for the senior exhibition. Satisfies senior exit requirement. Course is designed for senior art majors. Portfolio review prior to advance enrollment required; students should complete course 103 as preparation. Courses 106A and 106B must be taken concurrently. Enrollment limited to 20. May be repeated for credit. *M. Gwyn, F.*

107. Mixed Media Works on Paper. F

This course stresses alternative drawing processes, techniques, and materials. Intended for the intermediate or advanced student. Students are billed a materials fee. Prerequisite(s): course 20. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. (General Education Code(s): A.) *The Staff, P. Rangell, F. Galuszka*

107A. Outdoor Painter's Project. *

Along with an increasing general concern to preserve our natural environment, there has been the resurgence of interest in celebrating the landscape through painting. This impulse to strengthen the bond between art and nature has provided a degree of urgency, revitalizing a tradition that had once been a simple nostalgia for a romantic and rural past. Explores the potential for meaning in outdoor painting today. Emphasis is placed on group excursions and intensive discussion that includes visiting artists. Enrollment limited to 20. May be repeated for credit. *The Staff*

109. Intermedia II. W

Further investigation in combining media, materials, and forms to explore a variety of contemporary art practices. Students develop their projects thematically throughout the quarter. Assignments encourage experimentation with time and motion, text and images, collaboration, installation, performance, and interactivity. Discussions, reading handouts, and critiques further the development of perceptual and conceptual skills. Skill workshops introduce new techniques. Students are billed a materials fee. Prerequisite(s): course 22 or 23 or 29 or 39 or 40. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. (General Education Code(s): A.) *E. Crichton, E. Stephens*

110. Special Topics in Intermedia. F

Exploring interactive strategies for making art. Projects experiment with combining forms and mediums to engage an audience. Students are billed a materials fee. Prerequisite(s): course 23 or 29 or 39 or 40. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. *E. Crichton, E. Stephens*

112. Intaglio I. W

Introduces students to various methods used in making intaglio prints. Encourages individual artistic growth of imagery and technique through assignments designed to explore the medium. Includes discussion and critique of work with equal emphasis on technique and concept. Students are billed a materials fee. Prerequisite(s): course 25, 26, or 27. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. (General Education Code(s): A.) *J. Lee, The Staff*

113. Intaglio II. S

This presentation of advanced intaglio techniques emphasizes a variety of multi-plate color printing and photo etching processes. The course concentrates on individual development in style and concept through the intaglio process. Students are billed a materials fee. Prerequisite(s): course 25, 26, 27, or 112. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. (General Education Code(s): A.) *J. Lee*

114. Lithography I. F

Introduction to drawing, processing, and printing of lithographs from stone. Emphasis on discovery of tonal, textural, and expressive potential from the surface of the stone, while establishing individual directions in imagery. Condensed history of the medium, technical theory, and critique in lecture and demonstrations. Students

are billed a materials fee. Prerequisite(s): course 20, 25, 26, or 27. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. (General Education Code(s): A.) *P. Rangell*

115. Lithography II. W

Continuation of course 114. Introduction of tusche wash, aluminum plates, transfers, photo-lithography (computer interface), and multiple color techniques. Emphasis on experimentation, refinement of craft and approach, defining individual imagery, and expanding scale. Further investigation of the history of the medium and contemporary practice. Students are billed a materials fee. Prerequisite(s): course 114. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. *P. Rangell*

116A. Senior Studio in Print Media. S

An intensive studio experience for majors, meeting three full days per week. Provides an opportunity for in-depth practice in all print media in preparation for the senior exhibition. In addition to individual projects, students work collaboratively and in series. Prints incorporating multiple colors and concurrent media, and utilizing a larger scale are encouraged. Readings and research are required. Satisfies senior exit requirement. Students are billed a materials fee. Portfolio review prior to advance enrollment required; students should complete courses 113 and 114, or 112 and 115, as preparation. Courses A and B must be taken concurrently. (Formerly *Senior Studio in Printmaking*.) Enrollment limited to 20. May be repeated for credit. *P. Rangell, J. Lee*

116B. Senior Studio in Print Media. S

An intensive studio experience for majors, meeting three full days per week. Provides an opportunity for in-depth practice in all print media in preparation for the senior exhibition. In addition to individual projects, students work collaboratively and in series. Prints incorporating multiple colors and concurrent media, and utilizing a larger scale are encouraged. Readings and research are required. Satisfies senior exit requirement. Portfolio review prior to advance enrollment required; students should complete courses 113 and 114, or 112 and 115, as preparation. Courses A and B must be taken concurrently. Enrollment limited to 20. May be repeated for credit. *P. Rangell, J. Lee*

117. Special Topics in Printmaking. *

Special studies in printmaking, as announced. Students are billed for a materials fee. Prerequisite(s): course 25, 26, or 27. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. *The Staff, P. Rangell, J. Lee*

117X. Seminar in Printmaking: 1475-2008. *

Through a chronological overview, this course touches on topics regarding the history of printmaking from the late medieval period to the present. Covers commerce of art, censorship, propaganda, politics, issues of gender, and the distribution of art and ideas over the centuries. Enrollment restricted to junior and senior art majors. Enrollment limited to 20. *J. Lee, The Staff*

118. Computer Art: Theories, Methods, and Practices. W

Examines computer interactivity and interface in art making through theory and practice. Students develop interactive installation and sculptural works of art. Assignments may include the acquisition and creation of digital images, two-dimensional animation, programming with MAX/MSP/Jitter, basic electronics and sensors, and digital video and audio. Discussions, readings, and critiques address content, aesthetics, concepts, and expression as well as a practical grasp of relevant software. Students are encouraged to develop research projects and explore

experimental practices. Students are billed a materials fee. Prerequisite(s): course 21 or 22 or 109 or prior basic programming experience and permission of instructor. Enrollment limited to 20. May be repeated for credit. (General Education Code(s): A.) *E. Anderson, The Staff*

119. Digital Video. S

An exploration of the video medium including production using the digital video format. Digital video cameras will be used to produce digital source material to be manipulated in a non-linear digital editing system. Image manipulation, effects, and editing will be explored. A variety of video structures, theories, concepts, and forms will be examined through production, discussions, and viewing students' and artists' work. Prerequisite(s): course 21 or 22 or 23 or 80F or 118, or by permission of instructor. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. (General Education Code(s): A.) *E. Anderson, The Staff*

120. Advanced Projects in Computer Art I. *

Independent and collaborative creative projects using advanced computer methods. May include networking projects, virtual representations, interactive multimedia, installation, performance, robotics, and three-dimensional modeling. Emphasis on advanced critical and experimental approaches to computers as a unique art medium and contemporary research issues. Students are required to enroll in scheduled lab sections. Students are billed a materials fee. Prerequisite(s): course 118. Enrollment limited to 20. May be repeated for credit. *E. Anderson*

121. Advanced Projects in Computer Art II. *

Independent and collaborative creative projects using advanced computer methods, which may be a continuation of projects initiated in course 120. May include networking projects, virtual representations, interactive multimedia, installation, performance, 3D modeling and animation, or robotics. Emphasis on advanced critical and experimental approaches to computers as a unique art medium, and contemporary research issues. Students are required to enroll in scheduled lab section. Students are billed for a materials fee. Enrollment limited to 20. May be repeated for credit. *E. Anderson, The Staff*

123. Digital Printmaking in Contemporary Art Practice. F

Addresses electronic imaging, output, and transferring as means of producing prints. Students gain knowledge and experience in using computer equipment including digital cameras, scanners, printers, and a variety of software. Investigation of conceptual and technical identities between digital image-making and traditional methods, as well as crossing over them to contemporary trends in art practice. Students are billed a materials fee. Prerequisite(s): course 25 or 26 or 27, or permission of instructor. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. (General Education Code(s): A.) *The Staff*

126. Art of Bookmaking. F

Introduction to production of small edition books and multiples utilizing sequential visual imaging, narrative content, and mixed media in bookmaking. Provides instruction in conceptualizing, producing, and distributing printed artists' multiples. Ideas encouraged within a broad range of possibilities via the format of artists' books. Students are billed a materials fee. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. (General Education Code(s): A.) *The Staff*

127A. Visiting Artist Special Topics: A. F

Students work collaboratively with a professional visiting artist on his/her research to develop their studio skills, discuss current critical and theoretical readings, and learn

skills necessary to becoming a professional artist. Enrollment by portfolio review and restricted to junior and senior art majors. Concurrent enrollment in course 127B is required. Students are billed a materials fee. Enrollment restricted to junior art majors. Enrollment limited to 20. May be repeated for credit. *The Staff*

127B. Visiting Artist Special Topics: B, F

Students develop independent projects under the advice and guidance of a professional visiting artist during weekly studio classes and discussions. Enrollment by portfolio review and restricted to junior and senior art majors. Concurrent enrollment in course 127A required. Enrollment restricted to junior art majors. Enrollment limited to 20. May be repeated for credit. *The Staff*

130. Intermediate Photography. F,W,S

Continuation of course 30. Students explore visual ideas, directing their work toward individualized goals. Required work includes making photographic prints, reading historical and theoretical works, and examination of photographs. Students are billed a materials fee. Prerequisite(s): course 30. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. *The Staff, N. Locks, L. Watts*

131. Advanced Photography. *

Continuation of course 130. Students produce a portfolio of photographs, read historical and theoretical works, and study photographs and other art works. Students are billed a materials fee. Prerequisite(s): one of the following: course 130 and either course 132 or 134 or by passing 10 credits of 130. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. *The Staff, N. Locks, L. Watts*

132. Color in Photography. F,W

Concentration on making photographic works in color. Students produce a portfolio of color photographs, read historical and theoretical works, and study photographs and other art works. Individualized projects may include work with color transparencies, color xerox, computer-generated imagery, or mixed media. Students are billed for a materials fee. Prerequisite(s): course 130. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. *The Staff, N. Locks, L. Watts*

133A. Senior Studio in Photography. W,S

An intensive studio experience, with major emphasis on the development of individual projects leading to a required senior exhibition. Satisfies senior exit requirement. Students are billed a materials fee. Portfolio review prior to advance enrollment required. Courses 133A and 133B must be taken concurrently. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. *N. Locks, L. Watts*

133B. Senior Studio in Photography. W,S

An intensive studio experience, with major emphasis on the development of individual projects leading to a required senior exhibition. Satisfies senior exit requirement. Portfolio review prior to advance enrollment required. Courses 133A and 133B must be taken concurrently. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. *N. Locks, L. Watts*

134. Special Topics in Photography. F,S

Special studies in photography, concentrating on specific subject matter or media. Topics may include documentary photography, landscape, alternative processes, or mixed media. Students are billed a materials fee. Prerequisite(s): course 30. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. *The Staff, E. Crichton, N. Locks, L. Watts*

135. Introduction to Digital Photography. F,W,S

Introduction to basic theories behind the digital production, manipulation, and output of photographic images. Through readings and production, students address major issues specific to working with images in an increasingly digital environment. Students are billed a materials fee. Prerequisite(s): course 30. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. (General Education Code(s): A.) *The Staff, E. Crichton, L. Watts*

136. Advanced Digital Photography. *

A continuation of course 135 to further study the practice, theories, and criticisms of the digital production, manipulation, and output of photographic images. Major issues specific to the production of digital images will be addressed through readings and discussion, including techniques and theories drawn from a course reader and a textbook on advanced Photoshop skills. A final project is required. Students are billed a materials fee. Prerequisite(s): course 135 or portfolio review. Enrollment restricted to art majors. May be repeated for credit. (General Education Code(s): A.) *N. Locks*

139. Intermediate to Advanced Sculpture (Foundry). *

This intermediate/advanced course provides the information and facilities necessary to express ideas through the indirect process of metal casting. The "lost wax" method is used to manifest ideas in sculpture. Lectures and demonstrations are combined with work time in class. Students generate sculpture forms in wax then gate, invest, weld, chase, patina, and present at least one finished piece. Students are billed a materials fee. May be repeated for credit. Prerequisite(s): one of the following: course 23, 28, 29, 39, 40, or 41. Enrollment restricted to art majors. Enrollment limited to 17. May be repeated for credit. *W. Hibbert-Jones, J. Parker, E. Stephens*

140. Metal Sculpture. F

Focus on teaching intermediate to advanced students the processes and techniques of direct metal fabrication for contemporary sculpture. Explores a range of welding, cutting, and forming techniques and processes through demonstrations, slide lectures, field trips, and studio time. Demonstrations, slide lectures, and critical discussion of work help develop technical and conceptual skills. Students are billed a materials fee. Prerequisite(s): one of the following courses: 22, 23, 28, 29, 39, 40, or 41. Enrollment restricted to art majors. Enrollment limited to 16. May be repeated for credit. *The Staff, J. Parker, E. Stephens, W. Hibbert-Jones*

141. Sculpture II. F

More advanced fabrication techniques in sculpture using wood, metal, industrial, and other materials. Techniques include carpentry and woodshop skills, and an introduction to sculptural forms, processes, and ideas. Demonstrations, slide lectures, and critical discussion of work help develop technical and conceptual skills. Students are billed a materials fee. Prerequisite(s): course 23, 28, 29, 39, or 40. Enrollment restricted to pre-art, art, and history of art and visual culture majors. Enrollment limited to 20. May be repeated for credit. (General Education Code(s): A.) *W. Hibbert-Jones, J. Parker, E. Stephens*

146. Special Topics in Intermedia: Conceptual and Process-Oriented Approaches. *

Special subjects to be offered by regular staff or visiting artists as announced. Students are billed a materials fee. Prerequisite(s): one of the following courses: 23, 28, 29, 39, or 40. Enrollment restricted to junior and senior art majors. Enrollment limited to 20. May be repeated for credit. *The Staff, E. Crichton, E. Stephens*

148. Special Topics in Sculpture. W,S

Special topics in sculpture as announced, concentrating on specific aspects of subject matter and media. Students are billed a materials fee. Prerequisite(s): course 23 or 28 or 29 or 39 or 40 or 143 or 145. Enrollment restricted to art majors. Enrollment limited to 20. Offered in alternate academic years. May be repeated for credit. *The Staff, J. Parker, E. Stephens, W. Hibbert-Jones*

149A. Contemporary Visual Media: Issues of Theory and Practice. W

Examines selected issues in critical theory relevant to contemporary visual practices through writing assignments and class discussions of core readings. Specifically, thematically explores the relationship between visual art and film aesthetics. Prerequisite(s): Satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to juniors and seniors. Enrollment limited to 20. (General Education Code(s): W.) *D. Murray*

149B. Contemporary Visual Media: Issues of Theory and Practice. S

Examines selected issues in critical theory relevant to contemporary visual practices through writing assignments and class discussions of core readings. Specifically, focuses on the creative process: How do artists work and what informs their production? Prerequisite(s): Satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to juniors and seniors. Enrollment limited to 20. (General Education Code(s): W.) *D. Murray*

150. Seminar in Contemporary Art. F**150C. Critical Issues in Contemporary Art. F**

This writing-specific course offers a comprehensive overview of contemporary thought within the visual arts from an international perspective. Special emphasis placed on current trends and shifts in artistic production, theory, and criticism. (Formerly *Issues in Collaboration and Interactivity*.) Prerequisite(s): Satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to senior art majors. Enrollment limited to 20. (General Education Code(s): W.) *D. Murray*

151. Introduction to Gallery Management. *

Provides practical experience in all phases of an exhibition program's design and implementation including curation, registration, preparation, and publicity. The general tasks of program operation are supplemented with selected reading and written assignments designed to enhance theoretical understanding of broader issues in art administration, including an introduction to the political and ethical realities professionals face. Enrollment restricted to art majors. Enrollment limited to 20. *The Staff*

156. Topics in Public Art II: Memory, Landscape, and Artist as Activist. S

In-depth exploration of art in the public sphere. Students build an understanding of public art sparked by practical experience designing and developing projects. Theoretical aspects of contemporary public art, and an introduction to the range of current public art practices will be introduced through readings, lectures, and artist's talks. The combination of practical hands-on technique and theoretical ideology will enable students to fully develop their own project within the class. Students are billed a materials fee. Prerequisite(s): course 23, 39, 40, or by permission of instructor. Enrollment restricted to art majors. Enrollment limited to 20. May be repeated for credit. *W. Hibbert-Jones, The Staff*

159A. Senior Studio: Intermedia, Sculpture, Electronic Art, and Public Art. S

An intensive studio experience for art majors concentrating in the areas of intermedia, sculpture, public art, installation art, electronic art, and interactive art. Major emphasis is on development of individual and collaborative projects in preparation for the senior exhibition. Readings and research required. Class discussions focus on project work and critiques, assigned reading, and the development of a written component by each student. Satisfies senior exit requirement. Students are billed a materials fee. Portfolio review prior to advance enrollment required. Enrollment restricted to art majors. Courses 159A and 159B must be taken concurrently. Enrollment limited to 20. May be repeated for credit. *E. Anderson, W. Hibbert-Jones, E. Crichton, J. Parker, E. Stephens*

159B. Senior Studio: Intermedia, Sculpture, Electronic Art, and Public Art. S

An intensive studio experience for art majors concentrating in the areas of intermedia, sculpture, public art, installation art, electronic art, and interactive art. Major emphasis is on development of individual and collaborative projects in preparation for the senior exhibition. Readings and research required. Class discussions focus on project work and critiques, assigned reading, and the development of a written component by each student. Satisfies senior exit requirement. Portfolio review prior to advance enrollment required. Enrollment restricted to art majors. Courses 159A and 159B must be taken concurrently. Enrollment limited to 20. May be repeated for credit. *E. Anderson, W. Hibbert-Jones, E. Crichton, J. Parker, E. Stephens*

161. Picturing Identity: Document and Culture. *

Studio addresses issues of race, gender, culture, personal identity, and visual representation. Examines ways ideas of identity are given visual form and communicated in fine arts and mass media. Students research ways traditionally underrepresented groups in society have been and are being represented in mass media; they then visually interpret that information in forms of visual artifacts. This process and interpretation serve as springboard to examination of expanded ideas of identity, including personal and/or family culture and history, gender, and ethnicity. Encourages use of broad range of mediums available to construct visual representations of identity. Students are billed a materials fee. Enrollment restricted to pre-art, art, film and digital media, and history of art and visual culture majors. Enrollment limited to 20. (General Education Code(s): A.) *L. Watts*

191. Teaching Apprenticeship. F,W,S

Designed for art majors at the upper-division level. Each student assists in a lower-division art course under the direct supervision of a faculty member. Students assist in technical instruction, critiques, and class discussions. May not be repeated for credit. Does not count toward upper-division major requirements. Enrollment restricted to art majors. *The Staff*

192. Directed Student Teaching. F,W,S

Teaching of a lower-division seminar under faculty supervision. (See course 42.) Students should have upper-division standing with a proposal supported by a faculty member willing to supervise. Students submit petition to sponsoring agency. Enrollment limited to 5. *The Staff*

193. Field Study. F,W,S

Supervised off-campus study conducted under the immediate and direct guidance of a faculty supervisor. To be used primarily by upper-division students doing part-time off-campus study. Students submit petition to sponsoring agency. Petitions may be obtained in the Art Department Office. May be repeated for credit. *The Staff*

196. Senior Project. F,W,S

Student will concentrate on completing work for comprehensive exhibition under the direction of his or her art adviser, with help from other faculty as needed. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

197. Individual Study. F,W,S

Individual study in areas approved by sponsoring instructors. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198. Independent Field Study. F,W,S

Provides for department-sponsored independent study programs off campus for which faculty supervision is not in person (e.g., supervision is by correspondence). Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Individual study in areas approved by sponsoring instructors. Students submit petition to sponsoring agency. Students are billed a materials fee. May be repeated for credit. *The Staff*

Graduate Courses

297. Independent Study. F,W,S

Independent study or research for graduate students. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

*Not offered in 2008-09

Arts Division

D Building, Porter College
(831) 459-4940
<http://arts.ucsc.edu>

Changes to 2009-10 Catalog Highlighted

Program Description

The Division of the Arts offers both creative and critical studies of art and culture at the undergraduate and graduate level. Instruction in the arts inspires and develops the capacity for individual and collaborative creative thought, analysis, and action within and beyond the university. The Division of the Arts faculty consists of artists, historians, critics, and theorists working across the arts in a global, international, and national context. Undergraduate education in the arts includes programs in the production of art, film and digital media, music, theater (dance, drama, playwriting, design) as well as critical and historical studies in all these fields plus the history of art and visual culture. Established graduate programs include the interdisciplinary digital arts/new media MFA program, the music composition DMA, the music Ph.D., the music MA, and the fifth-year certificate in theater arts. New Ph.D. programs in film and digital media and in visual studies are expected to admit their first classes in 2010-11, while graduate programs in art and theater arts are currently in development.

The Division of the Arts provides students with access to excellent work spaces, including a new digital arts facility with two experimental media labs, along with a state-of-the-art music recital hall, practice rooms, electronic music studios, and recording facilities, three theaters for dramatic productions, filmmaking studios and editing suites, surround-sound screening theaters, drama and dance studios, painting and printmaking studios, a foundry, photography and computer laboratories, and specialized lecture and seminar classrooms. McHenry Library houses an extensive collection of books and periodicals on the arts, as well as an analogue and digital slide collection, music scores and recording, and one of the largest collections of films and DVDs in the University of California system. Exhibition space in the arts includes galleries for students and faculty shows; the Sesnon Gallery presents curated exhibitions to the university community and the general public. The Center for Art and Visual Studies (CAVS), a focus for interdisciplinary exhibitions, conferences, symposia, and seminars is currently in development.

The departments and majors in the Division of the Arts are listed in detail under Art, Film and Digital Media, History of Art and Visual Culture, Music, Theater Arts, and Digital Arts and New Media.

Among the Division of the Arts' many performing and fine arts programs, Shakespeare Santa Cruz is an internationally recognized professional repertory company. The campus hosts several film festivals each year, including the Women of Color Film and Video Festival and Cine Maiz. Student work is regularly broadcast on SCTV, and Eyecandy publishes student writing on film, television, and digital media. The Music Department hosts an annual Festival of Contemporary Music in April and presents a variety of solo and ensemble concert programs throughout the year. The Art Department hosts regularly scheduled public presentations as well as studio art courses taught by artists and critics through the visiting artists program. The digital arts and new media MFA program hosts an annual exhibition of thesis projects, engage students in interdisciplinary research collaborations with faculty that result in internationally recognized publications and exhibitions, and sponsors the Art, Technology, and Culture speakers series with the Division of the Arts. The History of Art and Visual Culture Department hosts a series of speakers and seminars each year on rotating topics that are supported by the Rebele Chair.

[Changes to 2009-10 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Program Description

The science of astronomy has the universe as its domain. Galaxies, stars, planets, and an ever-increasing variety of phenomena observed from ground- and space-based observatories are among the objects of study. Areas of special interest at UCSC include cosmology, the formation and evolution of planets, stars, and galaxies, high-energy astrophysics, active galaxies, supernovae and nucleo-synthesis, extra-solar planets, interstellar medium, intergalactic medium, solar system dynamics, and all aspects of observational optical and infrared astronomy. Astronomers use concepts from and contribute to the development of many other scientific disciplines, including optics, mechanics, relativity, atomic and nuclear physics, applied mathematics, chemistry, geology, and meteorology. The interdisciplinary nature of astronomy, including its historical and philosophical elements, makes its study valuable to those planning careers in a variety of fields.

The Astronomy and Astrophysics Department offers a broad undergraduate curriculum that fulfills the needs of students seeking a general education but also enables students wishing to obtain a minor or major in astrophysics to study the subject in greater depth.

The graduate program is intended for those with a professional interest in the subject. The interests of the faculty embrace a wide range of both theoretical and observational aspects of astronomy. Current research and course offerings include our solar system and other solar systems, stellar structure and evolution, stellar spectroscopy, the interstellar medium, galactic structure, active galaxies and quasars, cosmology, general relativity and gravitational radiation, the origin of the elements, infrared and radio astronomy, advanced astronomical instrumentation, astrobiology, high-energy astrophysics, and X-ray and gamma-ray astronomy. Graduate students have access to state-of-the-art instrument development and data reduction technology, the [UCO/Lick Observatory](#) computer network, and an unusually extensive [astronomical library](#) at the Lick Observatory headquarters on campus. Graduate students may conduct supervised research using selected telescopic facilities of the Lick Observatory on Mount Hamilton, 55 miles from Santa Cruz. The 10-meter [Keck Telescope](#) in Hawaii, the world's largest, is administered from the UCSC campus and is used for frontier research by UC astronomers.

The [Center for Adaptive Optics](#) (CfAO) is also headquartered at UCSC. Education is central to the CfAO's mission, and a key element of this is the support provided by the center to graduate students. In addition to research, the center provides interdisciplinary access to a nationwide network of scientists in astronomy and vision science.

Undergraduate Courses

Instruction in astronomy for undergraduates at UCSC is designed to meet the needs of several groups of students.

Courses 1, 2, 3, 4, 5, 8, 80A, 80B, and 80D, providing a general survey of the universe as now understood from historical and modern observations, are offered for those not specializing in a scientific discipline.

Courses 11, 12, 13, 14, 15, 16, and 18, emphasizing basic physical laws and theories as applied to astronomy, taken together provide a survey of modern astronomy for students with some facility in mathematics. Taken separately, these courses provide an in-depth introduction to gravitational interaction, stellar evolution, and extragalactic astrophysics. These courses are designed for students intending to major in a scientific subject, although qualified nonscience majors may enroll. A good high school background in mathematics and physics is required. Prior or concurrent enrollment in a basic calculus course (Mathematics 11A or 19A) and a basic physics course (Physics 5A/L or 6A/L) is helpful but not required.

Finally, a more thorough quantitative treatment of selected topics in astronomy and astrophysics at the upper-division level is provided by courses 112, 113, 117, and 118. Completion of course work in calculus of several variables (Mathematics 22 or 23A-B) and Physics 5B/M or 6B/M and 101A is required for these advanced courses.

Astrophysics Minor

For undergraduate students having a particular interest in the subject, a minor in astronomy and astrophysics is offered. Most students who minor in astronomy and astrophysics are majors in another science, though majors in other fields are also possible. The minor in astronomy and astrophysics requires that students take the Physics 5 or 6 series (with associated laboratories), a minimum of two courses from the Astronomy 11–18 series, and a minimum of three courses from the following, Astronomy 112–118, Physics 101A. A senior thesis on an astronomy-related topic is also encouraged. Interested students should contact the Astronomy Department office for further information.

Astrophysics Major

The UCSC major in astrophysics is administered by the Physics Department and combines a core physics major with advanced electives in astrophysics, an astrophysics laboratory course, and senior thesis work on a topic in astrophysics. It is a rigorous program designed to prepare students for a broad range of technical careers or for entry into graduate or professional programs. A full description of the major can be found in the physics section of this catalog. Preparation for Graduate Work in Astrophysics

The UCSC graduate program in astronomy and astrophysics is designed for Ph.D. students seeking a professional career in teaching and research. In view of the thorough preparation in mathematics and physics required for graduate study, most entering astronomy graduate students major in physics or astrophysics as undergraduates.

The suggested minimum requirements for admission to graduate standing at UCSC include the following undergraduate courses:

- *Basic physics.* Mechanics, wave motion, sound, light, electricity and magnetism, thermodynamics, atomic physics, and quantum mechanics (Physics 5A, 5B, and 5C).
- *Basic mathematics.* Calculus (Mathematics 19A-B and 23A-B or equivalent) and statistics (Mathematics and Statistics 5).
- *Intermediate-level physics.* Mechanics (Physics 105); electricity, magnetism, and optics (Physics 110A-B); mathematical methods in physics (Physics 116A-B-C); nuclear and particle physics (Physics 129); and quantum mechanics (Physics 139A-B).
- *Intermediate-level mathematics.* Linear algebra (Mathematics 21), complex analysis (Mathematics 103), and ordinary and partial differential equations (Mathematics 106 and 107).

Graduate Program

Graduate instruction is built upon a two-year cycle of 11 one-quarter courses in astronomy and physics that are required of all students.

Seven courses are specifically required:

Astronomy 202, *Radiative Processes*
Astronomy 204, *Astrophysical Flows*
Astronomy 205, *Introduction to Astronomical Research*
Astronomy 212, *Dynamical Astronomy*
Astronomy 220A, *Stellar Structure and Evolution*
Astronomy 230, *Diffuse Matter in Space*
Astronomy 233, *Physical Cosmology*

and four additional courses are chosen from the list of electives given below. In addition, students must fulfill the following requirements:

Students must meet at least quarterly with an assigned adviser.

Each student must also be a teaching assistant for at least one quarter.

By the end of their second year, students must:

- Complete one quarter of independent study with a faculty member and give a department talk on that work.
- Pass a preliminary examination based on course material, relevant physics, and general astronomical knowledge.
- Submit one lead-author paper to a refereed journal that is based on research conducted at UCSC. A one-year probation and extension will be allowed by department faculty vote at the board review meeting at the end of the second year, but such extension will not be

considered unless a reasonable first draft is submitted at the board review and accompanied by a proposed completion strategy which has been approved by the student's adviser.

By the end of the third year, students must complete a qualifying exam that presents and defends a proposed thesis topic.

After passing the board review based on the above-mentioned requirements and the qualifying exam, students pursue independent research leading to the doctoral dissertation. Upon completion of the Ph.D. dissertation, students must pass an oral dissertation defense. A completed draft of the thesis must be submitted to the dissertation committee at least two weeks before the date of the defense, and the defense itself must occur at least two weeks before the campus deadline for thesis submissions in that quarter. Exceptions to this policy will be granted only under exceptional circumstances and must be approved by the department chair, associate chair, and the department graduate advising committee.

The department has established five years as the normative time to degree. Normative time is the elapsed calendar time, in years, that, under normal circumstances, will be needed to complete all requirements for the Ph.D. A one-year extension may be granted if funding is available. Funding support will not, in general, be provided beyond six years. Exceptions for extension beyond six years will be granted only for exceptional extenuating circumstances, and will be decided upon by the department chair, associate chair, and the department graduate advising committee.

Electives (four required) may be drawn from this list:

Astronomy 207, *Future Directions/Future Missions*
Astronomy 214, *Special Topics in Cosmology*
Astronomy 220B, *Star Formation*
Astronomy 220C, *Advanced Stages of Stellar Evolution and Nucleosynthesis*
Astronomy 222, *Planetary Formation and Evolution*
Astronomy 223, *Planetary Physics*
Astronomy 225, *High-Energy Astrophysics*
Astronomy 231, *Diffuse Gas In and Between Galaxies*
Astronomy 235, *Numerical Techniques*
Astronomy 237, *Accretion Processes*
Astronomy 240A, *Galactic and Extragalactic Stellar Systems*
Astronomy 240B, *High Redshift Galaxies*
Astronomy 257, *Modern Astronomical Techniques*
Astronomy 260, *Instrumentation for Astronomy*
Astronomy 289, *Adaptive Optics and Its Applications*
Physics/Astronomy 224, *Origin and Evolution of the Universe*
Physics/Astronomy 226, *General Relativity*
Earth Sciences 275, *Magnetohydrodynamics*
Engineering 206, *Bayesian Statistics*
Engineering 214, *Applied Dynamical Systems*
Engineering 217, *Introduction to Fluid Dynamics*
Physics 210, *Classical Mechanics*
Physics 215, *Introduction to Non-Relativistic Quantum Mechanics*
Physics 216, *Advanced Topics in Non-Relativistic Quantum Mechanics*
Physics 217, *Quantum Field Theory I*
Physics 218, *Quantum Field Theory II*
Physics 227, *Advanced Fluid Dynamics*

Intermediate-level mathematics. Linear algebra (Mathematics 21), complex analysis (Mathematics 103), and ordinary and partial differential equations (Mathematics 106A and 106B/107).

Graduate Program

Graduate instruction is built upon a two-year cycle of 13-11 one-quarter courses in astronomy and physics that are required of all students.

~~Six~~ Seven courses are specifically required:

Astronomy ~~Astronomy~~ 202, ~~Electromagnetism and Plasma Physics~~ *Radiative Processes*

Astronomy ~~Astronomy~~ 204A, ~~Physics of Astrophysics I~~ *Astrophysical Flows*

~~Astronomy 204B, Physics of Astrophysics II~~

Astronomy ~~Astronomy~~ 205, *Introduction to Astronomical Research*

Astronomy 212, *Dynamical Astronomy*

Astronomy ~~Astronomy~~ 220A, *Stellar Structure and Evolution*

Astronomy 230, *Diffuse Matter in Space*

Astronomy 233, *Physical Cosmology*

~~Astronomy 240A, Galactic and Extragalactic Stellar Systems~~

~~Seven courses are chosen from the list of electives given below.~~ and four additional courses are chosen from the list of electives given below. In addition, students must fulfill the following requirements:

Students must meet at least quarterly with an assigned adviser.

Each student must also be a teaching assistant for at least one quarter.

By the end of their second year, students must

- ~~C~~omplete one quarter of independent study with a faculty member and give a department talk on that work. ~~Also toward the end of their second year, students must p~~
- Pass a ~~written~~ preliminary examination based on course material, relevant physics, and general astronomical knowledge.
- Submit one lead-author paper to a refereed journal that is based on research conducted at UCSC. A one-year probation and extension will be allowed by department faculty vote at the board review meeting at the end of the second year, but such extension will not be considered unless a reasonable first draft is submitted at the board review and accompanied by a proposed completion strategy which has been approved by the student's adviser.

By the end of the third year, students must complete a qualifying exam that presents and defends a proposed thesis topic.

After passing ~~a~~ the board review based on the above-mentioned requirements and ~~a~~ the qualifying exam, ~~based on a proposed thesis topic (expected to be taken before the end of the third year)~~, students pursue independent research leading to the doctoral dissertation. Upon completion of the Ph.D. dissertation, students must pass an oral dissertation defense. A completed draft of the theses must be submitted to the dissertation committee at least two weeks before the date of the defense, and the defense itself must occur at least two weeks before the campus deadline for thesis submissions in that quarter. Exceptions to this policy will be granted only under exceptional circumstances and must be approved by the department chair, associate chair, and the department graduate advising committee.

~~Students are encouraged to engage in research projects under the supervision of the faculty during the early part of their graduate career. Exceptions are rare and are granted on a case by case basis to individual students.~~ The department has established five years as the normative time to degree. Normative times is the elapsed calendar time, in years, that, under normal circumstances, will be needed to complete all requirements for the Ph.D. A one-year extension may be granted if funding is available. Funding support will not, in general, be provided beyond six years. Exceptions for extension beyond six years will be granted only for exceptional extenuating circumstances, and will be decided upon by the department chair, associate chair, and the department graduate advising committee.

Electives (four required) may be drawn from this list:

~~Galaxies and Cosmology (at least two):~~

~~Astronomy 214, Structure Formation in the Universe~~

~~Astronomy 224, Origin and Evolution of the Universe~~

~~Astronomy 230, Low-Density Astrophysics~~

~~Astronomy 233, Physical Cosmology~~

~~Astronomy 240B, Galactic and Extragalactic Stellar Systems~~

~~Astronomy 240C, Galactic and Extragalactic Stellar Systems~~

~~Astronomy 253, Stellar Dynamics~~

~~Stars and Planets (at least two):~~

~~Astronomy 212, Dynamical Astronomy~~

~~Astronomy 220B, Star and Planet Formation~~

~~Astronomy 220C, Advanced Stages of Stellar Evolution and Nucleosynthesis~~

~~Astronomy 222, Planetary Science~~

Faculty and Professional Interests

Professor/Astronomer

Peter H. Bodenheimer, Emeritus

Michael J. Bolte

Dynamics of star clusters, ages of star clusters, chemical enrichment history of the galaxy, observations of interacting galaxies

Jean P. Brodie

Extragalactic globular clusters, galaxy formation, near-field cosmology

Harland W. Epps

Astronomical optics and instrumentation

Sandra M. Faber

Galaxies, stellar populations, cosmology, instrumentation

Puragra (Raja) GuhaThakurta

Galaxy formation and evolution: resolved stellar populations in the Local Group and distant galaxies. Globular clusters. Interstellar dust.

Garth D. Illingworth

High redshift galaxies, galaxy formation/evolution, science policy

Burton F. Jones, Emeritus

David C. Koo

Cosmology, birth and evolution of galaxies and quasars

Robert P. Kraft, Emeritus

Claire Max

Adaptive optics and high spatial resolution imaging, colliding galaxies, active galactic nuclei and their supermassive black holes

Joseph S. Miller, Emeritus

Jerry E. Nelson

Design and construction of large telescopes; project scientist for the two Keck telescope and Thirty Meter telescope

Jason Prochaska

Damped Ly α systems in quasars, Lyman limit systems, stellar abundances, thick disk imaging of our galaxy

David M. Rank, Emeritus

Graeme H. Smith

Stellar populations, chromospheric activity among late-type stars

Steven S. Vogt

Stellar spectroscopy, instrumentation

Merle F. Walker, Emeritus

Astronomer

Lloyd B. Robinson, Emeritus

Associate Professor/Associate Astronomer

Rebecca Bernstein

Galaxy formation and evolution, astronomical instrumentation and optical design

Constance Rockosi

Galactic structure, stellar populations, CCD detectors, astronomical instrumentation

Professor

George R. Blumenthal

Cosmology, galaxy formation, high-energy astrophysics

Frank D. Drake, Emeritus

John Faulkner, Emeritus

Gregory Laughlin

Extra-solar planets, numerical astrophysics, astrophysical phenomena of the extremely distant future

Douglas N. C. Lin

Fluid dynamics, star formation, galactic structure, planetary systems, accretion disks

Piero Madau

Cosmology, high-energy astrophysics

Bruce H. Margon

High-energy astrophysics, space astronomy

William G. Mathews, Emeritus

Stephen E. Thorsett

Radio astronomy, high-energy astrophysics, compact objects, relativity

Stanford E. Woosley

Nuclear astrophysics, stellar structure

Assistant Professor

Jonathan Fortney

Planetary atmospheres and interiors, extrasolar planets

Mark Krumholz

Star formation, interstellar medium, numerical methods

Enrico Ramirez-Ruiz

Stellar explosions, gamma-ray bursts accretion physics, near compact stars

Adjunct Associate Professor

Rachel J. Dewey

Radio astronomy, pulsar astrophysics, VLBI astrometry

Adriane Steinacker

Planet formation, MHD simulations

Professor

Joel R. Primack (Physics)

Theory of fundamental particles, cosmology, astrophysics

Gary Glatzmaier (Earth and Planetary Sciences)

Computer simulation of geodynamics and planetary dynamics

Steven Ritz (Physics)

Particle physics and astrophysics

Associate Professor

Anthony N. Aguirre (Physics)

Cosmology of the early and late universe: inflation and the global structure of cosmological models; the intergalactic medium and its enrichment with heavy elements; galaxy formation, evolution, and feedback processes; dark matter; theories of modified gravity

David M. Smith

High-energy astrophysics; X-ray and gamma-ray detectors and instrumentation; solar, terrestrial, and planetary sources of gamma radiation

Assistant Professor

Pascale Garaud (Applied Mathematics)

Astrophysics, geophysics, fluid dynamics, numerical resolutions of differential equations, and mathematical modeling of natural flows

David Smith (Physics)

High-energy astrophysics; X-ray and gamma-ray detectors and instrumentation; solar, terrestrial, and planetary sources of gamma radiation

Research Astronomer

Donald Gavel

Adaptive optics

Robert B. Hanson

Astrometry, galactic structure, and statistical astronomy

Robert Kibrick

Development of computer software and wide-area networks in support of remote control and data-acquisition systems for telescopes and astronomical instruments

Remington Stone

Photometry, spectrophotometry, spectrophotometric standard stars, optical SETI

Richard Stover

Instrumentation, cataclysmic variables

Mingzhi Wei

Development of astronomical CCD detectors and CCD controllers

Associate Research Astronomer

Drew Phillips

Extragalactic star-formation, gas-phase abundances, galaxy kinematics, and galaxy formation and evolutions; development of astronomical optics and instrumentation

Research Physicist

Terry Mast

Astronomical instrumentation

[Program Description](#) | [Changes to 2009-10 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses

1. Introduction to the Cosmos. F

Overview of the main ideas in our current view of the universe and how these ideas originated. Galaxies, quasars, stars, black holes, and planets. Students cannot receive credit for this course and course 2. (General Education Code(s): IN.) *P. Guha Thakurta*

2. Overview of the Universe. F,W,S

An overview of the main ideas in our current view of the universe, and how they originated. Galaxies, quasars, stars, pulsars, and planets. Intended primarily for nonscience majors interested in a one-quarter survey of classical and modern astronomy. (General Education Code(s): IN, Q.) *The Staff, R. Bernstein, A. Steinacker*

3. Introductory Astronomy: The Solar System. W

Properties of the solar system, the sun, solar system exploration, the physical nature of the Earth and the other planets, comets and asteroids, origin of the solar system, possibility of life on other worlds, planet formation, and search for planets beyond the solar system. Intended for nonscience majors. Courses 3, 4, and 5 are independent and may be taken separately or sequentially. (General Education Code(s): IN, Q.) *J. Fortney*

4. Introductory Astronomy: The Stars. *

Stellar evolution: observed properties of stars, internal structure of stars, stages of a star's life including stellar births, white dwarfs, supernovae, pulsars, neutron stars, and black holes. Planet and constellation identification. Intended for nonscience majors. Courses 3, 4, and 5 are independent and may be taken separately or sequentially. (General Education Code(s): IN, Q.) *A. Steinacker*

5. Introductory Astronomy: The Formation and Evolution of the Universe. S

The universe explained. Fundamental concepts of modern cosmology (Big Bang, dark matter, curved space, black holes, star and galaxy formation), the basic physics underlying them, and their scientific development. Intended for non-science majors. Courses 3, 4, and 5 are independent and may be taken separately. (General Education Code(s): IN, Q.) *J. Brodie*

12. Stars and Stellar Evolution. W

Intended for science majors and qualified non-science majors. Knowledge of high school physics and an understanding of mathematics at the Math 2 level required. Offered in alternate academic years. (General Education Code(s): IN, Q.) *S. Woosley*

13. Galaxies, Cosmology, and High Energy Astrophysics. S

Intended for science majors and qualified non-science majors. Knowledge of high school physics and an understanding of mathematics at the Math 2 level required. (General Education Code(s): IN, Q.) *D. Koo*

14. Observational Astronomy. *

Intended for science majors and qualified non-science majors. Knowledge of high school physics and an understanding of mathematics at the Math 2 level required. Enrollment limited to 60. Offered in alternate academic years. (General Education Code(s): IN, Q.) *The Staff*

15. Dead Stars and Black Holes. F

Intended for science majors and qualified non-science majors. Knowledge of high school physics and an understanding of mathematics at the Math 2 level required. (General Education Code(s): IN, Q.) *E. Ramirez-Ruiz*

16. Astrobiology: Life in the Universe. F

Intended for science majors and qualified non-science majors. Knowledge of high school physics and an understanding of mathematics at the Math 2 level required. Enrollment limited to 50. (General Education Code(s): IN, Q.) *A. Steinacker*

18. Planets and Planetary Systems. *

Intended for science majors and qualified non-science majors. Knowledge of high school physics and an understanding of mathematics at the Math 2 level required. Offered in alternate academic years. (General Education Code(s): IN, Q.) *C. Max*

70. Honors Undergraduate Seminar in Astrophysical Research (2 credits). F

Explores current problems in astrophysical research and how they are being solved by practicing scientists. Each presentation-discussion focuses on a different problem or question, explaining how the problem relates to broader astronomical issues, describing the methods used to solve the problem and reviewing the hoped for, or anticipated outcome. Intended for students considering a career in the physical sciences. *S. Faber, G. Smith*

80A. The Space-Age Solar System. W

Exploration of the solar system during the space age: the early history of rocket development, the Apollo program and the exploration of the moon, studying the earth from space, and the planets of the solar system as revealed by unmanned spacecraft. Intended for nonscience majors. (General Education Code(s): T2-Natural Sciences.) *G. Smith*

80D. Historical Astronomy. *

Historical development of astronomical thought, from stone megaliths to the expanding universe; Western astronomy from ancient Greece to the 20th century; prehistorical and non-Western astronomy; role of astronomy in development of modern science; political, social, and cultural aspects of astronomy. Prerequisite(s) satisfaction of the Entry Level Writing and Composition requirements. (General Education Code(s): T2-Natural Sciences, W.) *A. Steinacker*

*Upper-Division Courses***112. Physics of Stars. F**

The leading observational facts about stars as interpreted by current theories of stellar structure and evolution. Spectroscopy, abundances of the elements, nucleosynthesis, stellar atmospheres, stellar populations. Final stages of evolution, including white dwarfs, neutron stars, supernovae. Prerequisite(s): Mathematics 22 or

23A, Physics 5B or 6B, and 101A. *M. Krumholz*

113. Physical Cosmology. W

Physical examination of our evolving universe: the Big Bang model; simple aspects of general relativity; particle physics in the early universe; production of various background radiations; production of elements; tests of geometry of the universe; dark energy and dark matter; and formation and evolution of galaxies and large-scale structure. Prerequisite(s): Mathematics 22 or 23A, Physics 5B or 6B, and 101A. *P. Madau*

117. High Energy Astrophysics. *

Theory and practice of space and ground-based x-ray and gamma-ray astronomical detectors. High-energy emission processes, neutron stars, black holes. Observations of x-ray binaries, pulsars, magnetars, clusters, gamma-ray bursts, the x-ray background. High-energy cosmic rays. Neutrino and gravitational-wave astronomy. Prerequisite(s): Mathematics 22 or 23A, Physics 5B or 6B, and 101A. *E. Ramirez-Ruiz*

118. Physics of Planetary Systems. S

Determination of the physical properties of the solar system, its individual planets, and extrasolar planetary systems through ground-based and space-based observations, laboratory measurements, and theory. Theories of the origin and evolution of planets and planetary systems. Prerequisite(s): Mathematics 22 or 23A or 23B, Physics 5B or 6B, and 101A. Offered in alternate academic years. *J. Fortney*

135. Astrophysics Advanced Laboratory. *

Introduction to the techniques of modern observational astrophysics at optical and radio wavelengths through hands-on experiments. Offered in some academic years as a multiple-term course: 135A in fall and 135B in winter, depending on astronomical conditions. (Also offered as Physics 135. Students cannot receive credit for both courses.) Prerequisite(s): Physics 133 and at least one astronomy course. Intended primarily for juniors and seniors majoring or minoring in astrophysics. *R. Dewey*

135A. Astrophysics Advanced Laboratory (3 credits). F

Introduction to techniques of modern observational astrophysics at optical and radio wavelengths through hands-on experiments. Intended primarily for juniors and seniors majoring or minoring in astrophysics. Offered in some academic years as single-term course 135 in fall, depending on astronomical conditions. (Also offered as Physics 135A. Students cannot receive credit for both courses.) Prerequisite(s): Physics 133 and at least one astronomy course. *R. Dewey*

135B. Astrophysics Advanced Laboratory (2 credits). W

Introduction to techniques of modern observational astrophysics at optical and radio wavelengths through hands-on experiments. Intended primarily for juniors and seniors majoring or minoring in astrophysics. Offered in some academic years as single-term course 135 in fall, depending on astronomical conditions. (Also offered as Physics 135B. Students cannot receive credit for both courses.) Prerequisite(s): Physics 133 and at least one astronomy course. *R. Dewey*

171. General Relativity, Black Holes, and Cosmology. F

Special relativity is reviewed. Curved space-time, including the metric and geodesics, are illustrated with simple examples. The Einstein equations are solved for cases of high symmetry. Black-hole physics and cosmology are discussed, including recent developments. (Also offered as Physics 171. Students cannot receive credit for both courses.) Prerequisite(s): courses 105, 110A, 110B, and 116A-B-C. *A. Aguirre*

199. Tutorial. F,W,S

May be repeated for credit. *The Staff*

*Graduate Courses***202. Radiative Processes. W**

Survey of radiative processes of astrophysical importance from radio waves to gamma rays. The interaction of radiation with matter: radiative transfer, emission, and absorption. Thermal and non-thermal processes, including bremsstrahlung, synchrotron radiation, and Compton scattering. Radiation in plasmas. (Formerly *Electromagnetism and Plasma Physics*.) Offered in alternate academic years. *E. Ramirez-Ruiz*

204. Astrophysical Flows. F

Explores how physical conditions in astrophysical objects can be diagnosed from their spectra. Discussion topics include how energy flows determine the thermal state of radiating objects and how the physics of radiative transfer can explain the emergent spectral characteristics of stars, accretion disks, Lyman-alpha clouds, and microwave background. (Formerly 204A *Physics of Astrophysics I* and 204B *Physics of Astrophysics II*.) Enrollment restricted to graduate students. Offered in alternate academic years. *G. Laughlin*

205. Introduction to Astronomical Research. F

Lectures by UCSC faculty on current areas of astronomical and astrophysical research being carried out locally. Enrollment restricted to graduate students. *H. Epps*

207. Future Directions/Future Missions. *

Examines possible key science goals for the the next decade, such as planet detection, galaxy formation, and "dark energy" cosmology; the means for addressing these goals, such as new space missions and/or ground-based facilities; and the political, technical, and scientific constraints on such research. Looks at the role of the Decadel Survey. Examines a few existing programs (DEEP, ALMA, SNAP, NGST) as examples. Enrollment restricted to graduate students. Offered in alternate academic years. *G. Illingworth*

212. Dynamical Astronomy. *

Surveys dynamical processes in astrophysical systems on scales ranging from the planetary to the cosmological, stability and evolution of planetary orbits, scattering processes and the few-body problem, processes in stellar clusters, spiral structure and galactic dynamics, galactic collisions, and evolution of large-scale structure. Enrollment restricted to graduate students. *G. Laughlin*

214. Special Topics in Cosmology. *

Survey of some principal areas of research on the origin and growth of cosmic structures and galaxies: the "dark ages," 21cm tomography; first galaxies; first stars and seed black holes; reionization and chemical enrichment of the intergalactic medium; the assembly of massive galaxies; quasi-stellar sources; interactions of massive black holes with their environment; extragalactic background radiation; numerical simulations and the nature of the dark matter; the dark halo of the Milky Way. (Formerly *Structure Formation in the Universe*) Enrollment restricted to graduate students. *P. Madau*

220A. Stellar Structure and Evolution. *

Survey of stellar structure and evolution. Physical properties of stellar material.

Convective and radiative energy transport. Stellar models and evolutionary tracks through all phases. Brown dwarfs and giant planets. Comparison with observations. Enrollment restricted to graduate students. Offered in alternate academic years. *J. Fortney*

220B. Star Formation. *

Theory and observations of star formation. Observational techniques used to study star formation, particularly millimeter line and continuum observations, and infrared, visible, and UV star-formation tracers. Physics of giant molecular clouds and galaxy-scale star formation. Gravitational instability, collapse, and fragmentation. Pre-main sequence stellar evolution. Protostellar accretion disks and jets. Radiative feedback and HII regions. (Formerly *Star and Planet Formation*) Prerequisite(s): course 220A. Offered in alternate academic years. *M. Krumholz*

220C. Advanced Stages of Stellar Evolution and Nucleosynthesis. *

The evolution of massive stars beyond helium burning; properties of white dwarf stars; physics and observations of novae, supernovae, and other high energy stellar phenomena; nuclear systematics and reaction rates; the origin and production of all the chemical elements. Prerequisite(s): course 220A. Enrollment restricted to graduate students. Offered in alternate academic years. *S. Woosley*

222. Planetary Formation and Evolution. W

Theory and observations of protoplanetary disks. Origin and evolution of the solar nebula. Formation and evolution of the terrestrial planets and the giant planets. (Formerly *Planetary Science*) Enrollment restricted to graduate students. Offered in alternate academic years. *D. Lin*

223. Planetary Physics. *

Survey of interiors, atmospheres, thermal evolution, and magnetospheres of planets, with focus on the astronomical perspective. Course covers exoplanets and solar system planets, both giant and terrestrial, with attention to current and future observations. Enrollment restricted to graduate students. *J. Fortney*

224. Origin and Evolution of the Universe. S

Introduction to the particle physics and cosmology of the very early universe: relativistic cosmology, initial conditions, inflation and grand unified theories, baryosynthesis, nucleosynthesis, gravitational collapse, hypotheses regarding the dark matter and consequences for formation of galaxies and large scale structure. (Also offered as Physics 224. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. Offered in alternate academic years. *J. Primack*

225. High-Energy Astrophysics. *

High-energy astrophysics and the final stages of stellar evolution: supernovae, binary stars, accretion disks, pulsars; extragalactic radio sources; active galactic nuclei; black holes. (Formerly *Physics of Compact Objects*) Offered in alternate academic years. *E. Ramirez-Ruiz*

226. General Relativity. W

Develops the formalism of Einstein's general relativity, including solar system tests, gravitational waves, cosmology, and black holes. (Also offered as Physics 226. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. Offered in alternate academic years. *A. Aguirre*

230. Diffuse Matter in Space. S

Fundamental physical theory of gaseous nebulae and the interstellar medium.

Ionization, thermal balance, theory and observation of emission spectra. Interstellar absorption lines, extinction by interstellar dust. Ultraviolet, optical, infrared, and radio spectra of gaseous nebulae. (Formerly *Low-Density Astrophysics*) Offered in alternate academic years. *M. Krumholz*

231. Diffuse Gas In and In Between Galaxies. *

Examines the observational data and theoretical concepts related to the interstellar medium (gas inside galaxies); intracluster medium (gas in between galaxies in clusters); and intergalactic medium (gas in between field galaxies). Emphases on the inferred physical conditions of this gas and its implications for cosmology and processes of galaxy formation. Enrollment restricted to graduate students. *J. Prochaska*

233. Physical Cosmology. *

Survey of modern physical cosmology, including Newtonian cosmology, curved space-times, observational tests of cosmology, the early universe, inflation, nucleosynthesis, dark matter, and the formation of structure in the universe. Prerequisite(s): course 202. Offered in alternate academic years. *P. Madau*

235. Numerical Techniques. W

Gives students a theoretical and practical grounding in the use of numerical methods and simulations for solving astrophysical problems. Topics include N-body, SPH and grid-based hydro methods as well as stellar evolution and radiation transport techniques. Enrollment restricted to graduate students. Offered in alternate academic years. *G. Laughlin*

237. Accretion Processes. *

Theories of spherical accretion, structure and stability of steady-state accretion disks, and the evolution of time-dependent accretion disks. Applications of these theories to the formation of the solar system as well as the structure and evolution of dwarf novae and X-ray sources are emphasized. (Formerly *Accretion in Early and Late Stages of Stellar Evolution*) Offered in alternate academic years. *D. Lin*

240A. Galactic and Extragalactic Stellar Systems. F

Structure and evolutionary histories of nearby galaxies. Stellar populations, galactic dynamics, dark matter, galactic structure and mass distributions. Peculiar galaxies and starbursting galaxies. Structure and content of the Milky Way. Evolution of density perturbations in the early universe. Hierarchical clustering model for galaxy formation and evolution. Offered in alternate academic years. *C. Rockosi*

240B. High Redshift Galaxies. S

Galaxy formation and evolution from observations of intermediate-to-high redshift galaxies (z 0.5-5). Complements and builds on 240A. Cluster galaxies and field galaxies. Foundation from classic papers on distant galaxies. Recent discoveries from IR and sub-mm measurements. Impact of AGNs and QSOs. Overview of modeling approaches. Identify theoretical and observational issues. (Formerly *Galactic and Extragalactic Stellar Systems*) Enrollment restricted to graduate students. Offered in alternate academic years. *G. Illingworth*

257. Modern Astronomical Techniques. F

Covers physical, mathematical, and practical methods of modern astronomical observations at all wavelengths at a level that prepares students to comprehend published data and to plan their own observations. Topics include: noise sources and astrophysical backgrounds; coordinate systems; filter systems; the physical basis of coherent and incoherent photon detectors; astronomical optics and aberrations; design and use of imaging and spectroscopic instruments; antenna theory; aperture

synthesis and image reconstruction techniques; and further topics at the discretion of the instructor. (Formerly *Modern Observational Techniques*) Offered in alternate academic years. *M. Bolte*

260. Instrumentation for Astronomy. *

An introduction to astronomical instrumentation for infrared and visible wavelengths. Topics include instrument requirements imposed by dust, atmosphere, and telescope; optical, mechanical, and structural design principles and components; electronic and software instrument control. Imaging cameras and spectrographs are described. Offered in alternate academic years. Enrollment restricted to graduate students. *C. Rockosi*

289. Special Topics in Astrophysics.

Occasional courses in particular areas of current interest. *The Staff*

289A. Adaptive Optics and Its Application. S

Introduction to adaptive optics and its astronomical applications. Topics include effects of atmospheric turbulence on astronomical images, basic principles of feedback control, wavefront sensors and correctors, laser guide stars, how to analyze and optimize performance of adaptive optics systems, and techniques for utilizing current and future systems for astronomical observations. (Formerly course 289C.) Enrollment restricted to graduate students. Offered in alternate academic years. *C. Max*

292. Seminar (no credit). F,W,S

Seminar attended by faculty, graduate students, and upper-division undergraduate students. *The Staff*

297. Independent Study. F,W,S

Independent study or research for graduate students who have not yet begun work on their theses. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. *The Staff*

299. Thesis Research. F,W,S

Students submit petition to sponsoring agency. *The Staff*

* Not offered in 2009-10

Program Description

Research at the macromolecular, molecular, and atomic levels is revolutionizing our understanding of the fundamental processes of life. Students interested in joining this search are best prepared by undertaking course work in biology, chemistry, physics, mathematics, and computer science. Toward this end, an undergraduate major in biochemistry and molecular biology (BMB) is offered by faculty who are actively engaged in research on biological systems.

Students who declare the BMB major earn a bachelor of science degree. The BMB major constitutes an integrated curriculum of basic instruction in biology, chemistry, mathematics, and physics, followed by the opportunity to pursue advanced study in specialized areas of interest. In modern, well-equipped laboratories, distinguished faculty are engaged in frontline research at UCSC. The Department of Chemistry and Biochemistry hosts a very active seminar series of national and international scholars in which advanced undergraduates are encouraged to participate.

The BMB program features close faculty-student interaction, small upper-division classes, stimulating learning environments, and opportunities for independent research and study. Students majoring in BMB are encouraged to become involved in research under the guidance of a faculty sponsor. Many students participating in this aspect of the program have made important contributions to the scientific literature.

Given the wide scope and interdisciplinary nature of this program, a considerable degree of flexibility has been incorporated into the major. All prospective majors should consult the Department of Chemistry and Biochemistry to be assigned a BMB adviser as early as possible. Junior transfer students or others with questions should consult the Department of Chemistry and Biochemistry undergraduate program adviser. To become a BMB major, a student must file a declaration of major petition through the Department of Chemistry and Biochemistry. A double major of BMB with the biological sciences majors or chemistry is not permitted. No minor is offered.

Requirements for the B.S. Degree

Core Courses

- Chemistry 1A, 1B/M, and 1C/N, *General Chemistry/ Laboratory*
- Biology: Molecular, Cell, and Developmental 20A, *Cell and Molecular Biology*, and Biology 20B, *Development and Physiology*
- Mathematics 11A-B, *Calculus with Applications* or 19A-B, *Calculus for Science, Engineering, and Mathematics*; and 22, *Introduction to Calculus of Several Variables*
- Physics 5A/L, 5B/M, 5CN or 6A/L, 6B/M, 6C/N, *Introductory Physics/Introductory Physics Laboratory*
- Biology 105, *Genetics*
- Biology 110, *Cell Biology*
- Biology 115, *Eukaryotic Molecular Biology*
- Chemistry 108A/L and 108B/M; or 112A/L, 112B/M, and 112C/N, *Organic Chemistry/Laboratory*
- Chemistry 163A, *Quantum Mechanics and Basic Spectroscopy* and 163B, *Thermodynamics and Kinetic Theory*
- Biochemistry and Molecular Biology 100A, 100B, and 100C, *Biochemistry*

Biochemistry and Molecular Biology Planner

The following is a recommended academic plan for students to complete the biochemistry and molecular biology major.

Year	Fall	Winter	Spring
1st (frsh)	MATH 11A or 19A college core CHEM 1A	MATH 11B or 19B CHEM 1B/M gen ed	MATH 22 CHEM 1C/N BIOL 20A
2nd (soph)	CHEM 108A/L PHYS 6A/L BIOE 20B	CHEM 108B/M PHYS 6B/M	PHYS 6C/N BIOL 105
3rd (jr)	BIOC 100A Lab elective	BIOC 100B BIOL 115	BIOC 100C BIOL 110
4th (sr)	CHEM 163A Lab elective	CHEM 163B	

Laboratory Elective

Two laboratory courses selected from the following list are required. Students should be sure to plan for completing appropriate prerequisites.

Biochemistry and Molecular Biology

110 *Biochemistry Laboratory*

Biology

100L *Biochemistry Laboratory*
 105L *Eukaryotic Genetics Laboratory*
 105M *Microbial Genetics*
 109L *Yeast Molecular Genetics Laboratory*
 110L *Cell Biology Laboratory*
 115L *Eukaryotic Molecular Biology Laboratory*
 180/L *Research Programming for Biologists and Chemists*
 119L *Microbiology Laboratory*
 186L *Undergraduate Research in MCD Biology*
 187L *Molecular Biotechnology Laboratory*

Chemistry

195A, B, C *Senior Research*

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement will normally be met within one to three courses already required for the major. For detailed information on this major's DC requirement, consult your major adviser or see the 2010-11 general catalog.

Comprehensive Requirement

Students have two options for fulfilling the senior comprehensive requirement: (a) achieving a score at or above the 50th percentile on the Graduate Record Examination (GRE) Biochemistry, Cell, and Molecular Biology Subject Test, or (b) completing a senior thesis sponsored or co-sponsored by a faculty member affiliated with the biochemistry and molecular biology program.

Program Planning Notes

Students who do not begin the lower-division requirements during their first year may have difficulty completing the program within four years. Transfer students may also have problems completing the program within the usual time, depending upon whether they took equivalent courses at their previous institutions. The department adviser works closely with students interested in pursuing the major to insure that they begin the program immediately and follow the appropriate steps toward its completion.

It is strongly recommended that students avail themselves of the opportunities to obtain firsthand research experience through either independent study or senior thesis research. A tutorial course or a senior thesis research course may not be substituted for the required laboratory elective.

A number of graduate courses in biochemistry and molecular biology are offered by the *molecular*, cell, and developmental (MCD) biology, and chemistry, and biochemistry programs. Advanced undergraduates with the necessary background may take one or more of these courses with the consent of the instructor; however, graduate courses may not be substituted for the required elective courses.

Letter Grade Policy

For all students entering UCSC in fall 2001 and later, all courses used to satisfy any of the biological sciences majors must be taken for a letter grade.

Major Disqualification Policy

All biochemistry and molecular biology majors are covered by the biology major disqualification and letter grade policies in the Biological Sciences section.

Materials Fee

Biochemistry and molecular biology students should be aware of the materials fee required for some laboratory courses. The fee is billed to the student's account for specific laboratory materials purchased by the Department of Chemistry and Biochemistry through the university. Fees generally range from \$15 to \$75 per course. Students may incur additional expenses purchasing individual supplies.

Program Description

Research at the macromolecular, molecular, and atomic levels is revolutionizing our understanding of the fundamental processes of life. Students interested in joining this search are best prepared by undertaking course work in biology, chemistry, physics, mathematics, and computer science. Toward this end, an undergraduate major in biochemistry and molecular biology (BMB) is offered by faculty who are actively engaged in research on biological systems.

Students who declare the BMB major earn a bachelor of science degree. The BMB major constitutes an integrated curriculum of basic instruction in biology, chemistry, mathematics, and physics, followed by the opportunity to pursue advanced study in specialized areas of interest. In modern, well-equipped laboratories, distinguished faculty are engaged in frontline research at UCSC. The Department of Chemistry and Biochemistry hosts a very active seminar series of national and international scholars in which advanced undergraduates are encouraged to participate.

The BMB program features close faculty-student interaction, small upper-division classes, stimulating learning environments, and opportunities for independent research and study. Students majoring in BMB are encouraged to become involved in research under the guidance of a faculty sponsor. Many students participating in this aspect of the program have made important contributions to the scientific literature.

Given the wide scope and interdisciplinary nature of this program, a considerable degree of flexibility has been incorporated into the major. All prospective majors should consult the Department of Chemistry and Biochemistry to be assigned a BMB adviser as early as possible. Junior transfer students or others with questions should consult the Department of Chemistry and Biochemistry undergraduate program adviser. To become a BMB major, a student must file a declaration of major petition through the Department of Chemistry and Biochemistry. A double major of BMB with the biological sciences majors or chemistry is not permitted. No minor is offered.

Requirements for the B.S. Degree

Core Courses

Chemistry 1A, 1B/M, and 1C/N, *General Chemistry/ Laboratory*

Biology: Molecular, Cell, and Developmental 20A, *Cell and Molecular Biology*, and Biology: ~~Ecology and Evolutionary~~-20B, *Development and Physiology*

Mathematics 11A-B, *Calculus with Applications* or 19A-B, *Calculus for Science, Engineering, and Mathematics*; and 22, *Introduction to Calculus of Several Variables*

Physics 5A/L, 5B/M, 5C/N or 6A/L, 6B/M, 6C/N, *Introductory Physics/Introductory Physics Laboratory*

Biology 105, *Genetics*

Biology 110, *Cell Biology*

Biology 115, *Eukaryotic Molecular Biology*

Chemistry 108A/L and 108B/M; or 112A/L, 112B/M, and 112C/N, *Organic Chemistry/Laboratory*

Chemistry 163A, *Quantum Mechanics and Basic Spectroscopy* and 163B, *Thermodynamics and Kinetic Theory*

Biochemistry and Molecular Biology 100A, 100B, and 100C, *Biochemistry*

Biochemistry and Molecular Biology Planner

The following is a recommended academic plan for students to complete the biochemistry and molecular biology major.

YEAR	FALL	WINTER	SPRING
1st (frsh)	Math-MATH 11A or 19A college core Chem-CHEM 1A	Math-MATH 11B or 19B Chem-CHEM 1B/M gen ed	Math-MATH 22 Chem-CHEM 1C/N Biol-BIOL 20A
2nd (soph)	Chem-CHEM 108A/L Phys-PHYS 6A/L Bioe-BIOE 20B	Chem-CHEM 108B/M Phys-PHYS 6B/M	Phys-PHYS 6C/N Biol-BIOL 105
3rd (jr)	Bioe-BIOC 100A Lab elective	Bioe-BIOC 100B Biol-BIOL 115	Bioe-BIOC 100C Biol-BIOL 110

4th (sr)	Chem -CHEM 163A Lab elective	Chem -CHEM 163B	
-------------	--	----------------------------	--

Laboratory Elective

Two laboratory courses selected from the following list are required. Students should be sure to plan for completing appropriate prerequisites.

Biochemistry and Molecular Biology

110 *Biochemistry Laboratory*

Biology

100L *Biochemistry Laboratory*

105L *Eukaryotic Genetics Laboratory*

105M *Microbial Genetics*

109L *Yeast Molecular Genetics Laboratory*

110L *Cell Biology Laboratory*

~~116L~~ 115L *Eukaryotic Molecular Biology Laboratory*

180/L *Research Programming for Biologists and Chemists*

119L *Microbiology Laboratory*

186L *Undergraduate Research in MCD Biology*

187L *Molecular Biotechnology Laboratory*

Chemistry

180A, B, C *Senior Research*

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement will normally be met within one to three courses already required for the major. For detailed information on this major's DC requirement, consult your major adviser or see the 2010-11 general catalog.

Comprehensive Requirement

Students have two options for fulfilling the senior comprehensive requirement: (a) achieving a score at or above the 50th percentile on the Graduate Record Examination (GRE) Biochemistry, Cell, and Molecular Biology Subject Test, or (b) completing a senior thesis sponsored or co-sponsored by a faculty member affiliated with the biochemistry and molecular biology program.

Program Planning Notes

Students who do not begin the lower-division requirements during their first year may have difficulty completing the program within four years. Transfer students may also have problems completing the program within the usual time, depending upon whether they took equivalent courses at their previous institutions. The department adviser works closely with students interested in pursuing the major to insure that they begin the program immediately and follow the appropriate steps toward its completion.

It is strongly recommended that students avail themselves of the opportunities to obtain firsthand research experience through either independent study or senior thesis research. A tutorial course or a senior thesis research course may not be substituted for the required laboratory elective.

A number of graduate courses in biochemistry and molecular biology are offered by the **molecular, cell, and developmental (MCD) biology, and chemistry, and biochemistry** programs. Advanced undergraduates with the necessary background may take one or more of these courses with the consent of the instructor; however, graduate courses may not be substituted for the required elective courses.

Letter Grade Policy

For all students entering UCSC in fall 2001 and later, all courses used to satisfy any of the biological sciences majors must be taken for a letter grade.

Major Disqualification Policy

All biochemistry and molecular biology majors are covered by the biology major disqualification and letter grade policies in the Biological Sciences section.

Materials Fee

Biochemistry and molecular biology students should be aware of the materials fee required for some laboratory courses. The fee is billed to the student's account for specific laboratory materials purchased by the Department of Chemistry and Biochemistry through the university. Fees generally range from \$15 to ~~\$50~~ **\$75** per course. Students may incur additional expenses purchasing individual supplies.

Faculty and Professional Interests

Manuel Ares, Molecular, Cell, and Developmental Biology
RNA processing, structure and function of RNA

Roberto A. Bogomolni, Chemistry and Biochemistry
Biophysical chemistry, photobiology, light energy conversion and signal transduction in biological systems

Barry J. Bowman, Molecular, Cell, and Developmental Biology
Membrane biochemistry and genetics, biochemistry and molecular biology of membrane proteins

Joshua Deutsch, Physics
Condensed matter theory

Ólöf Einarsson, Chemistry and Biochemistry
Time-resolved spectroscopy, biophysics and bioenergetics, heme-copper oxidases, electron transfer, proton translocation

Jerry F. Feldman, Emeritus

Lindsay Hinck, Molecular, Cell, and Developmental Biology
Neurobiology, cell biology, development

Theodore R. Holman, Chemistry and Biochemistry
Biochemistry and bioinorganic chemistry; lipoxygenase enzymology, protein engineering, inhibitor discovery, computer inhibitor design, mass spectroscopy, and electron paramagnetic resonance

Douglas Kellogg, Molecular, Cell, and Developmental Biology
Coordination of cell growth and cell division

Robert S. Lokey, Chemistry and Biochemistry
Organic chemistry; combinatorial synthesis, biotechnology, molecular cell biology

Robert A. Ludwig, Molecular, Cell, and Developmental Biology
Plant microbe interactions, photorespiration, genetic recombination in plants

Pradip Mascharak, Chemistry and Biochemistry
Bioinorganic chemistry, design of antitumor drugs, modeling of active sites of metalloenzymes, design of catalysts for hydrocarbon oxidation, studies on intermediates in non-heme oxygenase chemistry, design of NO-donors for

photodynamic therapy

Glenn L. Millhauser, Chemistry and Biochemistry

Electron spin resonance; nuclear magnetic resonance, melanocortin receptor signaling, agouti proteins, prions, peptide synthesis

Harry F. Noller, Robert L. Sinsheimer Professor, Molecular, Cell, and Developmental Biology

Ribosomes, RNA structure and function, RNA protein interaction

Clifton A. Poodry, Emeritus

Seth M. Rubin

Biomolecular mechanisms of cell-cycle regulation and cancer; structural biology and biochemistry; macromolecular x-ray crystallography; nuclear magnetic resonance

Thomas W. Schleich, Chemistry and Biochemistry

Biomedical magnetic resonance spectroscopy, magnetic resonance imaging, nuclear magnetic resonance spectroscopy, biophysical chemistry

William G. Scott, Chemistry and Biochemistry

Structure and function of RNA, proteins, and their complexes, origin of life

William Sullivan, Molecular, Cell, and Developmental Biology

Genetics, cell biology, development of the *Drosophila embryo*

Lincoln Taiz, Emeritus

Frank J. Talamantes, Emeritus

John W. Tamkun, Molecular, Cell, and Developmental Biology

Transcriptional regulation, molecular genetics of *Drosophila* development, regulation of gene expression

Alan M. Zahler, Molecular, Cell, and Developmental Biology

Molecular biology, splice site selection, and alternative pre-mRNA processing

Martha C. Zuniga, Molecular, Cell, and Developmental Biology

Molecular, cellular, and developmental biology of the immune system

Upper-Division Courses

100A. Biochemistry. F

Fundamentals of molecular biology, structure and function of nucleic acids, and protein structure. Designed for students preparing for research careers in biochemistry and molecular biology. Lecture: 3-1/2 hours; discussion: 1-1/4 hours. Prerequisite(s): Chemistry 108B or 112C; Biology 20A; Biology 105 strongly recommended as preparation. *H. Noller*

100B. Biochemistry. W

Covers enzyme mechanisms, kinetics, regulations, membrane composition and structure, specialized membrane functions, active transport and electro-chemical storage, excitable membranes and neurotransmitters, membrane receptors and sensory transduction mechanisms. Lecture: 3-1/2 hours; discussion: 1-1/4 hours. Prerequisite(s): course 100A *S. Rubin*

100C. Biochemistry. S

Biochemistry: intermediary metabolism and bioenergetics. How enzymatically catalyzed reactions are organized and regulated; how energy from molecules is extracted for chemical work. Lecture: 3-1/2 hours; discussion: 1-1/4 hours. prerequisite(s): course 100B *R. Ludwig*

110. Biochemistry Laboratory. S

An introduction to the major techniques used in the isolation and characterization of biological components. Laboratory: 8 hours; lecture: 1-1/4 hours. Students are billed a materials fee. Prerequisite(s): course 100B and satisfaction of the Entry Level Writing and Composition requirements. (General Education Code(s): W.) *O. Einarsdottir*

*Not offered in 2009-10

Changes to 2009-10 Catalog Highlighted | Faculty

Program Description

Bioengineering focuses on the application of engineering tools and techniques to the problems of medicine and the biological sciences. The UCSC program in bioengineering, through its participating faculty and departments, provides students with inspiration and quality education in the theory and practice of bioengineering.

The UC Santa Cruz B.S. in bioengineering program prepares graduates for a rewarding career at the interfaces between engineering, medicine, and biology. UCSC bioengineering graduates will have a thorough grounding in the principles and practices of bioengineering and in the scientific and mathematical principles upon which these principles and practices are built; graduates will be prepared for further education (both formal and informal) and for productive employment in industry.

Bioengineering is a particularly broad discipline, involving issues at many different levels. To guide students in their study, the faculty have developed three concentrations: bioelectronics, biomolecular, and rehabilitation. Bioelectronics is an ideal concentration for students interested in the interfacing of organisms with electronic instrumentation or implants. Biomolecular is an ideal concentration for students interested in drug design or biomolecular sensors. Rehabilitation is an ideal concentration for students interested in developing technology to aid the human experience.

In the UCSC bioengineering B.S. program, many undergraduates work on faculty research projects, analyzing ideas, developing technologies, and discovering new approaches. Areas include biomolecular sensors and systems, nanoelectronic implants, assistive technologies for the elderly and disabled, bioinformatics, microfluidics, nano-scale biotechnology, and other areas at the junction between engineering, medicine, and the life sciences. More information about bioengineering research and undergraduate research opportunities can be found on the *web* at www.cbse.ucsc.edu, biomedical.ucsc.edu, marcmbrs.ucsc.edu, surf-it.soe.ucsc.edu, and graddiv.ucsc.edu/ucleads.

The program is sponsored by the departments of biomolecular engineering, computer engineering, electrical engineering, and molecular, cell, and developmental biology, with additional participating faculty in the departments of applied mathematics and statistics, community studies, chemistry and biochemistry, philosophy, physics, and psychology. The program has extensive course requirements in mathematics, science, and engineering, and students potentially interested in bioengineering as a major should contact the School of Engineering Advising Office (advising@soe.ucsc.edu) before enrolling in any courses at UC Santa Cruz.

Bioengineering students may continue their research and studies at UC Santa Cruz in the graduate programs of the collaborating department and other departments. Programs and application information may be found at <http://www.graddiv.ucsc.edu>.

Courses for Nonmajors

The bioengineering program does not sponsor any courses. However, the program recommends the following courses to nonmajors interested in bioengineering. Computer Engineering 80A, *Universal Access: Disability, Technology, and Society* (T6-Natural Sciences or Social Sciences); Biomolecular Engineering/Philosophy 80G, *Bioethics in the 21st Century: Science, Business, and Society* (T5-Natural Sciences or Humanities and Arts); and Biomolecular Engineering 5, *Introduction to Biotechnology (Introduction to the Discipline, Natural Sciences/Engineering)*. Students planning careers in medicine should consider Biology 89, *Clinical Health Care: Organization and Financing* (IS). Students are also advised to consult the program discussions of

the collaborating departments for additional possibilities related to bioengineering.

Admissions Policy

Admission to the major is selective. First-year applicants may receive direct admission at the time they apply to UCSC, based on their high school record and test scores. Admission to the bioengineering major after a student has entered UCSC is based on performance in courses offered by the School of Engineering and the Division of Physical and Biological Sciences (the SOE GPA). An SOE GPA of 2.5 or better is expected at the time of major declaration. Progress in the major and ability to complete the major within campus limits will also be considered.

After the first year, at least six courses required for the major, and any associated laboratories, must be completed prior to declaration. Required courses are listed below.

Transfer Students

Transfer admission will be based on GPA and the level of completion of lower-division requirements. Most importantly, transfer students should have completed articulated calculus and differential equations, as well as at least three of the four other introductory areas (programming, biology, chemistry, and physics). Students may satisfy the bioethics requirement if they have completed a suitable ethics course at their community college.

Honors in the Major

Bioengineering majors are awarded "Honors in the Major" and "Highest Honors in the Major" based on major GPA and on results of undergraduate research. Students with an SOE GPA of 3.7 in most cases receive Highest Honors. Students with an SOE GPA of 3.3 in most cases receive Honors. Students with particularly significant accomplishments in undergraduate research may be considered with a lower SOE GPA.

Disqualification Policy

Please refer to the School of Engineering section of this catalog for the School of Engineering's Major Disqualification Policy.

Letter Grade Policy

The bioengineering program requires letter grading for all courses applied to the degree with the exception of two lower-division courses, which students may elect to take Pass/No Pass.

School of Engineering Policies

Please refer to the School of Engineering section of the catalog for additional policies that apply to all School of Engineering programs.

Materials Fee and Miscellaneous Fees

Please see the section on fees in the School of Engineering section.

Major Requirements

Advising and Elective Approval

Every major must have a bioengineering faculty adviser, assigned by the Baskin School of Engineering Undergraduate Advising Office, and with that adviser must formulate a program of proposed course work that meets the major requirements. All electives must be pre-approved by the Bioengineering Undergraduate Director.

Optional Courses for Majors

Bioengineering students planning a career in medicine may wish to take Biology 89, *Clinical Health Care*, which also satisfies the Introduction to the Discipline-Social Sciences (IS) general education requirement. Students desiring or needing an early introduction to the use of mathematics in engineering may wish to take Computer Engineering 8, *Robot Automation*, in their first quarter. Students pursuing the rehabilitation concentration may wish to include one or more psychology courses in their study plan.

Introductory Requirements, 16-17 courses

Mathematics 19A-B *Calculus for Science, Engineering, and Mathematics*
Applied Mathematics and Statistics 7/L *Statistical Methods for the Biological and Environmental Sciences/Laboratory*

Applied Mathematics and Statistics 10A and 20A *Basic Mathematical Methods for Engineers I & II* (3 units each); or *Applied Mathematics and Statistics 10 and 20 Mathematical Methods for Engineers I & II*; or *Mathematics 24 Ordinary Differential Equations*
Biomolecular Engineering 80G Bioethics in the 21st Century: Science, Business, and Society
Chemistry and Biochemistry 1A, 1B/M, and 1C/N General Chemistry, or (with preapproval) courses completed elsewhere that enable enrollment in 108A/L
Chemistry and Biochemistry 108A/L or 112A/L Organic Chemistry/Laboratory
Biology 20A Cell and Molecular Biology
Biology 20B Development and Physiology
Physics 5A/L or 6A/L Introduction to Physics I/Laboratory
Physics 5C/N or 6C/N Introduction to Physics II/Laboratory

Two (three for rehabilitation concentration, see below) of:

Computer Engineering 12/L Computer Systems and Assembly Language/Laboratory; or
Computer Engineering 13/L Computer Systems and C Programming/Laboratory; or
Computer Science 12A/L Introduction to Programming/Laboratory; or
Computer Science 12B/M, Introduction to Data Structures/Laboratory; or
Biomolecular Engineering 160/L Research Programming for Biologists and Biochemists/Laboratory

Advanced Requirements, 5-6 courses

Either *Biology 100 Biochemistry* or *Biochemistry and Molecular Biology 100A-B Biochemistry*
Biomolecular Engineering 150/L Molecular Biomechanics/Laboratory
Electrical Engineering 101/L Introduction to Electronic Circuits/Laboratory
Computer Engineering 9 Introduction to Statics, Dynamics, and Biomechanics
Computer Engineering 185 Technical Writing for Computer Engineers

Bioelectronics Concentration

Electrical Engineering 103 Signals and Systems

Electrical Engineering 104/L Measurement and Instrumentation in Physiology

Three pre-approved upper-division courses selected with your faculty adviser in the area of bioelectronics. Courses may include *Electrical Engineering 212 Introduction to BioMEMS*, *230 Implant Engineering*, and new courses in development.

Biomolecular Concentration

Biomolecular Engineering 5 Introduction to Biotechnology

Biomolecular Engineering 105 Genetics

Three pre-approved upper-division courses selected with your faculty adviser in the area of biomolecular engineering. Courses may include *Biomolecular Engineering 140/L Bioinstrumentation/Laboratory*, *155 Biotechnology and Drug Development*, and *110 Computational Biology Tools*.

Rehabilitation Concentration

Students in the rehabilitation concentration must complete *Computer Engineering 12/L*, *Computer Engineering 13/L*, or *Computer Science 12A/L*, and *Computer Science 12B/M*.

Computer Engineering 80A Universal Access: Disability, Technology, and Society

Computer Engineering 131 Human-Computer Interaction

Three pre-approved upper-division courses selected with your faculty adviser in the area of rehabilitation engineering. Students may wish to focus on systems or software for rehabilitation. Courses may include *Computer Engineering 118/L Mechatronics/Laboratory*, *167/L Sensing and Sensor Technology/Laboratory*, and *232 Human Factors*; or *Computer Science 109 Advanced Programming*.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement will normally be met within one to three courses already required for the major. For detailed information on this major's DC requirement, consult your major adviser or see the 2010-11 general catalog.

Capstone Project, 2 courses

All bioengineering students complete a senior design project in bioengineering as part of a multidisciplinary team solving a current problem. Students may satisfy this requirement with research in a faculty laboratory, concurrent with 123A and 195, or by forming a student team to address a problem of interest and challenge within 123A and 123B. The project proposal must be approved by the bioengineering undergraduate director as a bioengineering project. (Satisfies the campus comprehensive requirement.)

Biomolecular Engineering, *Computer Engineering*, or *Electrical Engineering 123A Engineering Design Project I*; *Biomolecular Engineering*, *Computer Engineering*, or *Electrical Engineering 123B Engineering Design Project II*; or *Biomolecular Engineering*, *Computer Engineering*, or *Electrical Engineering 195 Senior Thesis Research*

Exit Requirement

Students are required to submit a portfolio, exit survey, and exit interview. The portfolios must be turned in electronically by the last day of the quarter of graduation.

The portfolios will be reviewed quarterly by the bioengineering undergraduate committee and must include the following:

- The capstone project report
- A second project report of the student's selection
- A one- to two-page overview of the two projects, the student's contribution to them, and a narrative as specified at the submission site (<http://www.soe.ucsc.edu/programs/beng/>)
- Exit interviews are scheduled during the last week of the quarter.

Bioengineering Major Planners

The following sample academic plans show possible courses of study for a bioengineering major. Students should consider taking courses during the summer to ensure timely completion of the degree. Courses planned to be taken at institutions other than UC Santa Cruz require preapproval. The first plan follows the biomolecular concentration, the second plan follows the rehabilitation concentration and includes precalculus, and the third plan follows the bioelectronics concentration.

Program Description

Bioengineering focuses on the application of engineering tools and techniques to the problems of medicine and the biological sciences. The UCSC program in bioengineering, through its participating faculty and departments, provides students with inspiration and quality education in the theory and practice of bioengineering.

The UC Santa Cruz B.S. in bioengineering program prepares graduates for a rewarding career at the interfaces between engineering, medicine, and biology. UCSC bioengineering graduates will have a thorough grounding in the principles and practices of bioengineering and in the scientific and mathematical principles upon which these principles and practices are built; graduates will be prepared for further education (both formal and informal) and for productive employment in industry.

Bioengineering is a particularly broad discipline, involving issues at many different levels. To guide students in their study, the faculty have developed three concentrations: bioelectronics, biomolecular, and rehabilitation. Bioelectronics is an ideal concentration for students interested in the interfacing of organisms with electronic instrumentation or implants. Biomolecular is an ideal concentration for students interested in drug design or biomolecular sensors. Rehabilitation is an ideal concentration for students interested in developing technology to aid the human experience.

In the UCSC bioengineering B.S. program, many undergraduates work on faculty research projects, analyzing ideas, developing technologies, and discovering new approaches. Areas include biomolecular sensors and systems, nanoelectronic implants, assistive technologies for the elderly and disabled, bioinformatics, microfluidics, nano-scale biotechnology, and other areas at the junction between engineering, medicine, and the life sciences. More information about bioengineering research and undergraduate research opportunities can be found on the web at www.cbse.ucsc.edu, biomedical.ucsc.edu, marcmbrs.ucsc.edu, surf-it.soe.ucsc.edu, and graddiv.ucsc.edu/ucleads.

The program is sponsored by the departments of biomolecular engineering, computer engineering, electrical engineering, and molecular, cell, and developmental biology, with additional participating faculty in the departments of applied mathematics and statistics, community studies, chemistry and biochemistry, philosophy, physics, and psychology.

The program has extensive course requirements in mathematics, science, and engineering, and students potentially interested in bioengineering as a major should contact the School of Engineering Advising Office (advising@soe.ucsc.edu) before enrolling in any courses at UC Santa Cruz.

Bioengineering students may continue their research and studies at UC Santa Cruz in the graduate programs of the collaborating department and other departments. Programs and application information may be found at <http://www.graddiv.ucsc.edu>.

Courses for Nonmajors

The bioengineering program does not sponsor any courses. However, the program recommends the following courses to nonmajors interested in bioengineering. Computer Engineering 80A, *Universal Access: Disability, Technology, and Society* (T6-Natural Sciences or Social Sciences); Biomolecular Engineering/Philosophy 80G, *Bioethics in the 21st Century: Science, Business, and Society* (T5-Natural Sciences or Humanities and Arts); and Biomolecular Engineering 5, *Introduction to Biotechnology (Introduction to the Discipline, Natural Sciences/Engineering)*. Students planning careers in medicine should consider Biology 89, *Clinical Health Care: Organization and Financing* (IS). Students are also advised to consult the program discussions of the collaborating departments for additional possibilities related to bioengineering.

Admissions Policy

Admission to the major is selective. First-year applicants may receive direct admission at the time they apply to UCSC, based on their high school record and test scores.

Admission to the bioengineering major after a student has entered UCSC is based on performance in courses offered by the School of Engineering and the Division of Physical and Biological Sciences (the SOE GPA). An SOE GPA of 2.5 or better is expected at the time of major declaration. Progress in the major and ability to complete the major within campus limits will also be considered.

After the first year, at least six courses required for the major, and any associated laboratories, must be completed prior to declaration. Required courses are listed below.

Transfer Students

Transfer admission will be based on GPA and the level of completion of lower-division requirements. Most importantly, transfer students should have completed articulated calculus and differential equations,

as well as at least three of the four other introductory areas (programming, biology, chemistry, and physics). Students may satisfy the bioethics requirement if they have completed a suitable ethics course at their community college.

Honors in the Major

Bioengineering majors are awarded “Honors in the Major” and “Highest Honors in the Major” based on major GPA and on results of undergraduate research. Students with an SOE GPA of 3.7 in most cases receive Highest Honors. Students with an SOE GPA of 3.3 in most cases receive Honors. Students with particularly significant accomplishments in undergraduate research may be considered with a lower SOE GPA.

Disqualification Policy

Please refer to the School of Engineering section of this catalog for the School of Engineering’s Major Disqualification Policy.

Letter Grade Policy

The bioengineering program requires letter grading for all courses applied to the degree with the exception of two lower-division courses, which students may elect to take Pass/No Pass.

School of Engineering Policies

Please refer to the School of Engineering section of the catalog for additional policies that apply to all School of Engineering programs.

Materials Fee and Miscellaneous Fees

Please see the section on fees in the School of Engineering section.

Major Requirements

Advising and Elective Approval

Every major must have a bioengineering faculty adviser, assigned by the Baskin School of Engineering Undergraduate Advising Office, and with that adviser must formulate a program of proposed course work that meets the major requirements. All electives must be pre-approved by the Bioengineering Undergraduate Director.

Optional Courses for Majors

Bioengineering students planning a career in medicine may wish to take Biology 89, *Clinical Health Care*, which also satisfies the Introduction to the Discipline-Social Sciences (IS) general education requirement. Students desiring or needing an early introduction to the use of mathematics in engineering may wish to take Computer Engineering 8, *Robot Automation*, in their first quarter. Students pursuing the rehabilitation concentration may wish to include one or more psychology courses in their study plan.

Introductory Requirements, 16-17~~5~~ courses

Mathematics 19A-B *Calculus for Science, Engineering, and Mathematics*

Applied Mathematics and Statistics 7/L *Statistical Methods for the Biological and Environmental Sciences/Laboratory*

Applied Mathematics and Statistics 10A and 20A *Basic Mathematical Methods for Engineers I & II (3 units each)*; or *Applied Mathematics and Statistics 10 and 20 Mathematical Methods for Engineers I & II*; or *Mathematics 24 Ordinary Differential Equations*

Biomolecular Engineering 80G Bioethics in the 21st Century: Science, Business, and Society Chemistry and Biochemistry 1A, 1B/M, and 1C/N General Chemistry, or (with preapproval) courses completed elsewhere that enable enrollment in 108A/L

Chemistry and Biochemistry 108A/L or 112A/L Organic Chemistry/Laboratory

Biology 20A Cell and Molecular Biology

Biology 20B Development and Physiology

Physics 5A/L or 6A/L Introduction to Physics I/Laboratory

Physics 5C/N or 6C/N Introduction to Physics II/Laboratory

Two (three for rehabilitation concentration, see below) of:

Computer Engineering 12/L Computer Systems and Assembly Language/Laboratory; or

Computer Engineering 13/L Computer Systems and C Programming/Laboratory; or

Computer Science 12A/L Introduction to Programming/Laboratory; or

Computer Science 12B/M, Introduction to Data Structures/Laboratory; or

~~*Biomolecular Engineering 60/L Programming for Biologists and Biochemists/Laboratory; or*~~

Biomolecular Engineering 160/L Research Programming for Biologists and Biochemists/Laboratory

Advanced Requirements, 4-5-6 courses

Either *Biology 100 Biochemistry* or *Biochemistry and Molecular Biology 100A-B Biochemistry*

Biomolecular Engineering 150/L Molecular Biomechanics/Laboratory ~~(first offering 2008-09)~~

Electrical Engineering 101/L Introduction to Electronic Circuits/Laboratory

Computer Engineering- ~~229/L~~ *Introduction to Statics, Dynamics, and Biomechanics*~~Introduction to Statics, Dynamics and Biomechanics~~

~~Physiology and Measurement 1 course: Measurement and Instrumentation in Physiology (planned); or prior to its first offering, Biology 130/L Human Physiology/Laboratory or Biology 131/L Animal Physiology/Laboratory~~

Computer Engineering 185 *Technical Writing for Computer Engineers*

Bioelectronics Concentration

~~Electrical Engineering 101/L Introduction to Electronic Circuits/Laboratory~~

Electrical Engineering 103 *Signals and Systems*

Electrical Engineering 104/L *Measurement and Instrumentation in Physiology*

~~Four~~ Three pre-approved upper-division courses selected with your faculty adviser in the area of bioelectronics. Courses may include Electrical Engineering 212 *Introduction to BioMEMS*, 230 *Implant Engineering*, and new courses in development.

Biomolecular Concentration

Biomolecular Engineering 5- *Introduction to Biotechnology*

Biomolecular Engineering 105 *Genetics*

~~Four~~ Three pre-approved upper-division courses selected with your faculty adviser in the area of biomolecular engineering. Courses may include Biomolecular Engineering 140/L *Bioinstrumentation/Laboratory* ~~(planned for 2008-9)~~, *122 Cell and Protein Engineering (planned for 2008-9)*, 155 *Biotechnology and Drug Development*, and 110 *Computational Biology Tools*.

Rehabilitation Concentration

Students in the rehabilitation concentration must complete Computer Engineering 12/L, Computer Engineering 13/L, or Computer Science 12A/L, and Computer Science 12B/M.

Computer Engineering 80A *Universal Access: Disability, Technology, and Society*

Computer Engineering 131 *Human-Computer Interaction*

~~Four~~ Three pre-approved upper-division courses selected with your faculty adviser in the area of rehabilitation engineering. Students may wish to focus on systems or software for rehabilitation. Courses may include ~~Electrical Engineering 101/L Introduction to Electronic Circuits/Laboratory; or~~ Computer Engineering 118/L *Mechatronics/Laboratory*, 167/L *Sensing and Sensor Technology/Laboratory*, and 232 *Human Factors*; or Computer Science 109 *Advanced Programming*.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement will normally be met within one to three courses already required for the major. For detailed information on this major's DC requirement, consult your major adviser or see the 2010-11 general catalog.

Capstone Project, 2 courses

All bioengineering students complete a senior design project in bioengineering as part of a multidisciplinary team solving a current problem. Students may satisfy this requirement with research in a faculty laboratory, concurrent with 123A and 195, or by forming a student team to address a problem of interest and challenge within 123A and 123B. The project proposal must be approved by the bioengineering undergraduate director as a bioengineering project. (Satisfies the campus comprehensive requirement.)

Biomolecular Engineering, Computer Engineering, or Electrical Engineering 123A *Engineering Design Project I*; Biomolecular Engineering, Computer Engineering, or Electrical Engineering 123B *Engineering Design Project II*; or Biomolecular Engineering, Computer Engineering, or Electrical Engineering 195 *Senior Thesis Research*

~~Portfolio~~ Exit Requirement

Students are required to submit a portfolio, *exit survey*, and exit interview. The portfolios must be turned in electronically ~~at least seven days before the end of instruction in the quarter of graduation~~ *by the last day of the quarter of graduation*.

The portfolios will be reviewed quarterly by the bioengineering undergraduate committee and must include the following:

The capstone project report

A second project report of the student's selection

A one- to two-page overview of the two projects, the student's contribution to them,

and a narrative as specified at the submission site (<http://www.soe.ucsc.edu/programs/beng/>)

Exit interviews are scheduled during the last week of the quarter.

~~An exit interview~~

Bioengineering Major Planners

The following sample academic plans show possible courses of study for a bioengineering major. Students should consider taking courses during the summer to ensure timely completion of the degree. Courses planned to be taken at institutions other than UC Santa Cruz require preapproval. The first plan follows the biomolecular concentration, the second plan follows the rehabilitation concentration and includes precalculus, and the third plan follows the bioelectronics concentration.

[Program Description](#) | [Changes to 2009-10 Catalog Highlighted](#) | [Faculty](#)

Participating Faculty and Professional Interests

Mark Akeson (Biomolecular Engineering)
Undergraduate Director, Bioengineering
DNA structure and dynamics, single molecule biophysics, bioethics

Manuel Ares Jr. (Molecular, Cell, and Developmental Biology)
RNA processing, structure and function of RNA

Phillip Berman (Biomolecular Engineering, Department Chair)
Drug development, vaccines, AIDS, monoclonal antibody therapeutics, immunology, molecular cell/biology, recombinant protein production (commercial scale)

David Deamer (Biomolecular Engineering and Chemistry and Biochemistry; UC Davis Emeritus)
Membrane biophysics, nanopore analysis, DNA sequencing, biomolecular self-assembly

David Draper (Applied Mathematics and Statistics)
Bayesian statistics, hierarchical modeling, Bayesian nonparametric methods, model specification and model uncertainty, quality assessment, risk assessment, statistical applications in the environmental, medical, and social sciences

William Dunbar (Computer Engineering)
Theory and application of feedback control; air traffic control; nanopore sensors, dynamics and control of biomolecules

Camilla Forsberg (Biomolecular Engineering)
Hematopoietic stem cells, transcriptional regulation, chromatin, blood cell development, cell surface receptors, genomics

Dietlind L. Gerloff (Biomolecular Engineering)
Protein to protein interactions, protein function prediction, functional genomics, protein structure prediction

Alexander A. Grillo (SCIPP)
Neurophysiology, neural systems, high-energy particle physics

Grant Hartzog (Molecular, Cell, and Developmental Biology)
Biochemistry, genetics, chromatin and transcriptional regulation

David Haussler (Biomolecular Engineering; Distinguished Professor of Biomolecular Engineering; Investigator, Howard Hughes Medical Institute; Director, Center for Biomolecular Science and Engineering; Scientific Co-Director, California

Institute for Quantitative Biosciences [QB3])

Molecular evolution, neurodevelopment, genomics, bioinformatics, computational molecular biology, statistical models, machine learning, neural networks

Richard Hughey (Biomolecular Engineering and Computer Engineering)

(Chair, B.S. in Bioengineering)

Computer architecture, parallel processing, computational biology

Michael Isaacson (Electrical Engineering)

Nano- and microfabrication technology and applications to biomedical and diagnostic devices, nanocharacterization of materials with emphasis on the development of microscopy tools, novel modes of imaging, electron and light optics

Kevin Karplus (Biomolecular Engineering)

Protein structure prediction, protein design

Douglas Kellogg (Molecular, Cell, and Developmental Biology)

Coordination of cell growth and cell division

Joel Kubby (Electrical Engineering)

Micro-Electro-Mechanical-Systems (MEMS), adaptive optics (AO), optical-MEMS, bio-MEMS, bio-imaging, AO microscopy

Sri Kurniawan (Computer Engineering)

Human-computer interaction; human factors and ergonomics; accessibility; assistive technology; usability; empirical studies; user-centered design

Alan M. Litke (SCIPP)

Neural systems; retinal processing; development and prosthesis; technology development for neurophysiology; high-energy physics

Wentai Liu (Electrical Engineering)

Retinal prosthesis, biomimetic systems, integrated neuro-electronics, molecular electronics, CMOS and SOI transceiver design, current mode band limited signaling, microelectronic sensor, timing/clock recovery and optimization, noise characterization and modeling, and computer vision/image processing

Todd Lowe (Biomolecular Engineering)

Experimental and computation genomics, ncRNA gene finders, DNA microarrays to study the biology of Archaea

Roberto Manduchi (Computer Engineering)

Sensor processing and image analysis with application to assistive technology and environmental modeling

Dominic W. Massaro (Psychology, Emeritus)

Understanding language, speech perception and reading, language learning and speech technology, pattern recognition, psychology of interactive media, psychology of art and new media, human-machine interface

Glenn L. Millhauser (Chemistry and Biochemistry)

Electron spin resonance; nuclear magnetic resonance, melanocortin receptor signaling, agouti proteins, prions, peptide synthesis

Linda Ogren (Molecular, Cellular, and Developmental Biology)

Endocrinology

Nader Pourmand (Biomolecular Engineering)

Biosensors, microarray, nanotechnology, pathogens, sequencing, genotyping, DNA fingerprinting

Raquel Prado (Applied Mathematics and Statistics)

Bayesian non-stationary time series modeling, multivariate time series, biomedical signal processing and statistical genetics

Jacob Rosen (Computer Engineering)

Biorobotics; human-centered robotics; medical robotics; surgery and rehabilitation; wearable robotics (exoskeleton); teleoperation, haptics and virtual reality, biomechanics, neuromuscular control and human-machine interfaces

Wendy Rothwell (Biomolecular Engineering)

Biotechnology, molecular genetics

Holger Schmidt (Electrical Engineering)

Integrated optics for biomedicine and quantum optics, nano-magneto-optics, single-particle spectroscopy, ultrafast optics

Andrea Steiner (Community Studies and Molecular, Cellular, and Developmental Biology)

Health-care systems, health justice, critical public health, gerontology, ageism, long-term care

Joshua Stuart (Biomolecular Engineering)

Computational functional genomics, comparative analysis of gene regulation, cross-species inference of gene networks, probabilistic graphical models

Ellen Kappy Suckiel (Philosophy)

Ethics, William James, American philosophy, genetic ethics, ethics of biotechnology

John Tamkun (Molecular, Cell, and Developmental Biology)

Transcriptional regulation, molecular genetics of Drosophila development, regulation of gene expression

John F. Vesecky (Electrical Engineering)

HF radar design and construction and observation of ocean surface winds, waves and currents with applications to coastal and deep water ocean processes; project MEDSAT

Alan M. Zahler (Molecular, Cell, and Developmental Biology)

Molecular biology, splice site selection, and alternative pre-mRNA processing

Jin Z. Zhang (Chemistry and Biochemistry)

Design, synthesis, characterization, and application of nanomaterials, including semiconductor and metal nanoparticles; femtosecond laser spectroscopy; ultrafast dynamics on surfaces and at interfaces; cancer biomarker detection; surface-enhanced Raman spectroscopy

Yi Zuo (Molecular, Cell, and Developmental Biology)

Glia-synapse interaction and synaptic plasticity in vivo

Biological Sciences

The biological sciences at UC Santa Cruz are comprised of two academic departments: Ecology and Evolutionary Biology (courses BIOE) and Molecular, Cell, and Developmental Biology (courses BIOL). The two academic departments collectively sponsor the undergraduate program while each offers its own independent graduate program. Faculty within the biological sciences are affiliated with either Ecology and Evolutionary Biology, or Molecular, Cell, and Developmental Biology.

Undergraduate Program Description

The biological sciences have entered into an exciting new era in which phenomena that once seemed insoluble mysteries—such as embryonic development, the functions of the brain, and the dynamics of ecosystems—are now yielding their secrets as the technology to study them becomes more and more sophisticated. From molecular biology, with its potential to revolutionize medicine and agriculture, to ecology, with its lessons for the sustainable management of the environment, biologists are fully engaged in meeting the challenges of the future, helping to improve the quality of human life and to preserve habitats and biodiversity. Thus, it is no surprise that the biological sciences are at the heart of many of today's most pressing intellectual and social concerns.

The Departments of Ecology and Evolutionary Biology (EEB) and Molecular, Cell, and Developmental Biology (MCDB) offer a broad spectrum of courses that reflect the exciting new developments and directions in the field of biology. An outstanding group of faculty, each with a vigorous, internationally recognized research program, is available to teach courses in their specialties as well as core courses for the major. Areas of research strength within the departments include RNA molecular biology, molecular and cellular aspects of genetics and development, neurobiology, endocrinology, immunology, microbial biochemistry, plant biology, animal behavior, physiology, evolution, ecology, and marine biology. UCSC is unique in the UC system in providing exceptional opportunities for undergraduate research, allowing students to interact one-on-one with faculty and other researchers in a laboratory or field setting.

Biological Sciences Majors

Students may plan a program that leads to one of several B.A. or more advanced B.S. degrees. Students may choose from the following major options:

Majors jointly sponsored by Ecology and Evolutionary Biology (EEB) and Molecular, Cell, and Developmental Biology (MCDB):

Biology B.A. (general)
Biology B.S. (general)
Biology B.A. (education concentration)

Majors sponsored by Ecology and Evolutionary Biology (EEB):

Ecology and evolution B.S.
Marine biology B.S.
Plant sciences B.S.
Environmental studies/biology combined major B.A. (administered in conjunction with the Environmental Studies Department)

Majors sponsored by Molecular, Cell, and Developmental Biology (MCDB):

Health Sciences B.S.

Molecular, cell, and developmental biology B.S.

Neuroscience and behavior B.A.

Neuroscience and behavior B.S.

Biochemistry and molecular biology B.S. (administered in conjunction with the Chemistry and Biochemistry Department)

Bioinformatics B.S. (administered in conjunction with the School of Engineering)

Bioengineering B.S. (administered in conjunction with the School of Engineering)

Advanced undergraduates, with the guidance of faculty mentors, have access to extensive departmental laboratory facilities for independent research. Fieldwork draws on a remarkable variety of terrestrial habitats, as well as ready access to Monterey Bay and the open Pacific. Marine studies are supported by a coastal facility with running seawater, with a research vessel available for offshore work. Año Nuevo Island, north of Santa Cruz, is the site of extensive behavioral studies of marine mammals. Hospitals, convalescent and physical therapy centers, veterinary clinics, and other enterprises in the vicinity of the campus provide the opportunity to pursue field projects and internships comparable to on-the-job training. This array of opportunities for directed independent study enables biological science majors to enhance their upper-division programs to reflect and strengthen their own interests and goals in the sciences.

Prerequisites for the Biological Sciences

The introductory biology sequence is prerequisite to virtually all upper-division biology courses. BIOL 20A has a prerequisite of Chemistry 1B, Chemistry 1B has a prerequisite of Chemistry 1A, and thus students cannot enroll in BIOL 20A until they have completed Chemistry 1A and 1B. Therefore, it is essential for students considering a major in the biological sciences to start chemistry as soon as possible. Students who have not taken Chemistry 1A or 1B but are prepared to begin biology may begin the introductory sequence with BIOE 20C. The entire introductory biology sequence should be taken the first and second year, concurrently with or following the general chemistry sequence (Chemistry 1A, 1B/M and 1C/N).

The Mathematics Department offers a placement exam several times a year. Biological science majors are expected to take this exam. If the results indicate a need for precalculus, students need to take Mathematics 3 as soon as possible. Students with even less preparation may need to take college algebra at another institution.

Students intending to major in health sciences should take the Spanish placement exam, offered by the language program, to determine with which course they should begin the Spanish sequence.

Course Substitution/Transfer Credit Policy

At least half of the upper-division courses (numbered 100–190) required for each major must be taken through the biological sciences program at UCSC, not as transfer credits from another department or institution. Transfer students are advised to contact the Biological Sciences Undergraduate Advising office before enrolling in numerous upper-division courses at other institutions. For more information on transferring courses to UCSC, please consult the undergraduate web site at <http://undergrad.pbsci.ucsc.edu>.

A maximum of one upper-division course requirement may be met with a research-based independent study or graduate-level UCSC biology course or a course offered by another UCSC department.

Declaration Process for Biological Sciences Majors

Declaration guidelines for biology majors can be found on the undergraduate web site at <http://undergrad.pbsci.ucsc.edu>.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement will normally be met within one to three courses already required for the major. For detailed information on this major's DC requirement, consult your major adviser or see the 2010-11 general catalog.

Comprehensive Requirement

All majors in the biological sciences require a comprehensive requirement. This requirement can be satisfied in one of the following ways:

by passing course 190 Senior Seminar;

by receiving a passing grade in an internship, independent research laboratory, or field course:

Biological Sciences-EEB

BIOE 114L, *Field Methods in Herpetological Research*
BIOE 141L, *Behavioral Ecology Field Course*
BIOE 145L, *Field Methods in Plant Ecology*
BIOE 150L, *Ecological Field Methods*
BIOE 151, *Ecology and Conservation in Practice*
BIOE 158L, *Marine Ecology Lab*
BIOE 159, *Marine Ecology Field Quarter*
BIOE 161L, *Kelp Forest Ecology Lab*
BIOE 183, *Undergraduate Research in EEB*

Biological Sciences-MCDB

BIOL 100L, *Biochemistry Lab*
BIOL 105L, *Eukaryotic Genetics Lab*
BIOL 105M, *Microbial Genetics Lab*
BIOL 109L, *Yeast Molecular Genetics Lab*
BIOL 110L, *Cell Biology Lab*
BIOL 111L, *Immunology Lab*
BIOL 115L, *Eukaryotic Molecular Biology Lab*
BIOL 119L, *Microbiology Lab*
BIOL 120L, *Developmental Biology Lab*
BIOL 186, *Undergraduate Research in MCD*
BIOL 189, *Health Sciences Internship*

by completing a senior thesis.

by achieving a graduate record examination (GRE) score at or above the 50th percentile on the biology subject test or the biochemistry, cell, and molecular biology subject test. Reports of GRE scores must be submitted to the biological sciences advising office before the last day of the graduating quarter;

by obtaining an medical college admission test (MCAT) score at or above the 50th percentile on the biological sciences section. Reports of MCAT scores must be submitted to the biological sciences advising office before the last day of the graduating quarter.

Letter Grade Policy

For all students entering UCSC in fall 2001 and later, all courses used to satisfy any of the biological sciences majors must be taken for a letter grade.

Major Disqualification Policy

The biological sciences departments have adopted a major disqualification policy that is intended to encourage students to take their performance in the introductory requirements seriously and to make a strong effort to pass the introductory courses.

Students who receive more than one No Pass, D, and/or F in the following introductory major requirements will not be permitted to major in any of the biological sciences majors:

BIOL 20A, *Cell and Molecular Biology*
BIOE 20B, *Development and Physiology*
BIOE 20C, *Ecology and Evolution*
Chemistry 1A, *General Chemistry*
Chemistry 1B, *General Chemistry*
Chemistry 1C, *General Chemistry*
Mathematics 11A, *Calculus with Applications*
Mathematics 11B, *Calculus with Applications*
Mathematics 19A, *Calculus for Science, Engineering, and Mathematics*
Mathematics 19B, *Calculus for Science, Engineering, and Mathematics*

Students will be assessed for disqualification after grades are submitted each quarter and at the end of each summer session.

Students may appeal their disqualification within the appeal period by writing a letter to the department chair. This appeal must be submitted to the advising office no later than 15 days from the date the disqualification notification was mailed, or the 10th day of classes in the quarter of their disqualification, whichever is later. The advising office will subsequently notify the student, the college, and the Office of the Registrar of the decision, no later than 15 days after the submission of the appeal.

A student who has been disqualified from the major may, no earlier than three months from the date of the disqualification, petition to be reinstated. This application will be considered only if

there is substantial new evidence that the student is capable of making normal progress in the major.

Academic Advising

Academic advising is available at the Biological Sciences Undergraduate Advising office. Students should take full advantage of this opportunity and should keep in frequent touch with the office to stay informed about late announcements of courses, changes in scheduling, and opportunities for special study.

The undergraduate web site (<http://undergrad.pbsci.ucsc.edu>) serves as the program handbook containing advice and information pertinent to students' most frequently voiced questions. Each student in the major should review the information posted on the web site; for further assistance, contact the advising office.

Transfer Students

The faculty encourages applications from transfer students in the biological sciences. It is imperative transfer students complete science prerequisite courses before they transfer, especially a complete sequence of calculus, general chemistry, and introductory biology. Students should also take organic chemistry, if possible. Students who transfer without having completed the prerequisite coursework may have difficulty enrolling in courses and may require more than two years to complete a biological sciences degree. Prospective transfer students should review the transfer guidelines at <http://undergrad.pbsci.ucsc.edu> or contact the undergraduate advising office for further information.

Honors

Honors in the biological sciences majors are awarded to graduating students whose academic performance demonstrates excellence at a GPA of 3.5 or above. Highest honors are awarded to those students whose performance demonstrates the highest level of excellence and results in a GPA of 3.8 or above.

Medical and Professional School Admission

Medical and professional school admissions requirements vary; students should verify that their coursework will satisfy the admissions requirements of the programs to which they plan to apply.

Education Abroad Opportunities

The UC education abroad program (EAP) offers qualified students unique opportunities to broaden their educational horizons. The biological sciences departments encourage interested students to participate. Many programs are in English-speaking countries or use English for advanced courses. Many programs offer small classes, extensive laboratories, and/or field research experience.

There are excellent programs for biological science students in Costa Rica, Australia, New Zealand, the United Kingdom, Denmark, and Germany, among others. The Costa Rica Tropical Biology Program is of note to students interested in tropical biology and ecology. Held spring and fall quarters at the Monteverde research station, this program gives students experience with hands-on field research, offers a homestay program, and carries credit for two upper-division biology courses. The University of Queensland (Australia) offers an intensive, full-semester marine science program, which includes stays at research stations on the Great Barrier Reef, and in sheltered mangrove and seagrass habitats near Brisbane.

Students interested in study abroad need to get an early start on their basic science requirements, including chemistry, mathematics, and introductory biology and must declare their major prior to applying to go abroad. Visit the EAP office as soon as possible to begin planning, and seek advice about your schedule from the biological sciences undergraduate adviser and/or faculty adviser.

General Biology Majors and Minor

The general biology majors permit flexibility, but demand careful attention to one's own interests and plans. Each student should select courses on the basis of up-to-date information in consultation with a biology faculty adviser whose interests reflect the student's interests.

General Biology B.A. Major Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B, and 20C
General Chemistry: Chemistry 1A, 1B/M and 1C/N

Organic Chemistry: Chemistry 108A/L and 108B/M; or 112A/L, 112B/M, and 112C/N

Calculus: Mathematics 11A-B or 19A-B

Physics: Physics 7A/L and 7B/M

Advanced Requirements

A total of eight upper-division biology courses, as follows:

Biochemistry: BIOL 100 or the series BIOC 100A, and 100B, and 100C

(Upon completion of the series, BIOC 100C may be used to satisfy one elective)

Genetics: BIOL 105

Evolution: BIOE 109

Students must complete one upper-division biology course that includes regular laboratory or fieldwork

Students must fulfill the major distribution requirement, which includes one course from each of the following groups:

Cell/Developmental biology:

BIOL 110, *Cell Biology*

BIOL 111, *Immunology*

BIOL 115, *Eukaryotic Molecular Biology*

BIOL 119, *Microbiology*

BIOL 120, *Developmental Biology*

Physiology:

BIOE 131/L, *Animal Physiology/Laboratory*

BIOE 135, *Plant Physiology*

BIOL 113, *Endocrinology*

BIOL 125, *Introduction to Neuroscience*

BIOL 130/L, *Human Physiology/Laboratory*

Ecology:

BIOE 107, *Ecology*

BIOE 108, *Marine Ecology*

BIOE 125, *Marine Microbial Ecology*

BIOE 140, *Behavioral Ecology*

BIOE 141L, *Behavioral Ecology Field Course*

BIOE 145L, *Field Methods in Plant Ecology*

BIOE 145, *Plant Ecology*

BIOE 147, *Community Ecology*

BIOE 149, *Disease Ecology*

BIOE 155, *Freshwater Ecology*

BIOE 161, *Kelp Forest Ecology*

Students must complete two additional upper-division biology electives chosen from Biological Sciences-EEB or Biological Sciences-MCDB.

General Biology B.A. Sample Planners

Plan One is for first-year students placing into Mathematics 3 and taking Chemistry 1A:

Plan One			
Year	Fall	Winter	Spring
1st (frsh)	MATH 3 core	CHEM 1A MATH 11A gen ed	CHEM 1B/M MATH 11B gen ed
2nd (soph)	BIOL 20A CHEM 1C/N gen ed	BIOE 20B CHEM 108A/L gen ed	BIOE 20C CHEM 108B/M gen ed

Plan Two is for first-year students placing into Mathematics 11A and taking Chemistry 1A:

Plan Two			
Year	Fall	Winter	Spring
1st (frsh)	CHEM 1A	CHEM 1B/M	CHEM 1C/N

	MATH 11A core	MATH 11B gen ed	BIOL 20A gen ed
2nd (soph)	BIOE 20B CHEM 108A/L* gen ed	BIOE 20C CHEM 108B/M* gen ed	elective BIOL 105 gen ed

*Students may use the three-quarter Chemistry 112 series to fulfill the organic chemistry requirement.

General Biology, Bioeducation Concentration, B.A.

The General Biology, Bioeducation Concentration, B.A. major is designed to meet the needs of students who plan careers as K-12 science teachers. It provides students with a rigorous education in biology through science breadth courses to prepare them for the state credentialing examinations (CSET) in biology/life sciences and general science, and courses covering education theory and practical teaching experience through internships in local schools.

General Biology, Bioeducation Concentration, B.A. Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B, and 20C

General Chemistry: Chemistry 1A, 1B/M, and 1C/N

Organic Chemistry: Chemistry 108A/L and 108B/M

Calculus: Mathematics 11A-B or 19A-B

Physics: Physics 7A/L and 7 B/M

Earth Sciences: Earth Sciences 20/L

Education: Education 50C

Astronomy: Astronomy 2

Advanced Requirements

A total of seven upper-division biology courses, as follows:

BIOL100, *Biochemistry*

BIOL 105, *Genetics*

BIOE 109, *Evolution*

BIOE 107, *Ecology*

Students must fulfill the major distribution requirement, which includes one course from each of the following groups:

Cell/developmental biology:

BIOL 110, *Cell Biology*

BIOL 115, *Eukaryotic Molecular Biology*

BIOL 119, *Microbiology*

BIOL 120, *Developmental Biology*

Physiology:

BIOE 131, *Animal Physiology*

BIOE 135, *Plant Physiology*

BIOL 113, *Endocrinology*

BIOL 130, *Human Physiology*

Biology Laboratory:

One five-credit upper-division biology laboratory course, or

BIOL 130L, *Human Physiology Laboratory*

BIOL 131L, *Animal Physiology Laboratory*

(Note: BIOL 130L and 131L do not carry W credit, nor do they satisfy the exit requirement. BIOL 135 cannot be used to satisfy the laboratory requirement in the Bioeducation concentration.)

General Biology, Bioeducation Concentration, B.A. Sample Planners

Plan One is for first-year students placing into Mathematics 3 and BIOE 3:

Plan One			
Year	Fall	Winter	Spring
1st (frsh)	CHEM 1A	CHEM 1B/M	CHEM 1C/N

General Biology B.S. Major Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B, and 20C

General Chemistry: Chemistry 1A, 1B/M and 1C/N

Organic Chemistry: Chemistry 108A/L and 108B/M or 112A/L, 112B/M, and 112C/N

Calculus: Mathematics 11A-B or 19A-B; and 22

Physics: Physics 6A/L, 6B/M, and 6C/N

Advanced Requirements

A total of nine upper-division biology courses, as follows:

Biochemistry: BIOL 100 or the series BIOE 100A, and 100B, and 100C

(Upon completion of the series, BIOE 100C may be used to satisfy one elective)

Genetics: BIOL 105

Evolution: BIOE 109

Students must complete two upper-division biology courses that include regular laboratory or fieldwork

Students must fulfill the major distribution requirement, which includes one course from each of the following groups:

Cell/developmental biology:

BIOL 110, *Cell Biology*

BIOL 111, *Immunology*

BIOL 115, *Eukaryotic Molecular Biology*

BIOL 119, *Microbiology*

BIOL 120, *Developmental Biology*

Physiology:

BIOE 131/L, *Animal Physiology/Laboratory*

BIOE 135, *Plant Physiology*

BIOL 113, *Endocrinology*

BIOL 125, *Introduction to Neuroscience*

BIOL 130/L, *Human Physiology/Laboratory*

Ecology:

BIOE 107, *Ecology*

BIOE 108, *Marine Ecology*

BIOE 125, *Marine Microbial Ecology*

BIOE 140, *Behavioral Ecology*

BIOE 141L, *Behavioral Ecology Field Course*

BIOE 145, *Plant Ecology*

BIOE 147, *Community Ecology*

BIOE 149, *Disease Ecology*

BIOE 155, *Freshwater Ecology*

BIOE 161, *Kelp Forest Ecology*

Students must complete three additional upper-division biology electives chosen from Biological Sciences-EEB courses or Biological Sciences-MCDB courses.

General Biology B.S. Sample Planners

Plan One is for first-year students placing into Mathematics 3 and taking Chemistry 1A:

Plan One			

Year	Fall	Winter	Spring
1st (frsh)	gen ed MATH 3 core	CHEM 1A MATH 11A gen ed	CHEM 1B/M MATH 11B gen ed
2nd (soph)	CHEM 1C/N MATH 22 gen ed	BIOE 20A CHEM 108A/L gen ed	BIOE 20B CHEM 108B/M gen ed

Plan Two is a more rigorous schedule for first-year students placing into Mathematics 11A and taking Chemistry 1A:

Plan Two			
Year	Fall	Winter	Spring
1st (frsh)	CHEM 1A MATH 11A core	CHEM 1B/M MATH 11B gen ed	CHEM 1C/N MATH 22 BIOL 20A
2nd (soph)	BIOL 20B CHEM 108A/L* gen ed	BIOE 20C CHEM 108B/M* gen ed	elective BIOL 105 gen ed

*Students may use the three-quarter Chemistry 112 series to fulfill the organic chemistry requirement.

General Biology Minor Requirements

In addition to the introductory biology, chemistry, mathematics, and physics (as listed above), students are required to take a total of five upper-division biology courses including courses BIOL 100, BIOL 105, and the three distribution requirement courses; one must include a laboratory. There is no senior comprehensive requirement for the minor. Please contact the Biological Sciences Undergraduate Advising office for further information.

Degree Programs Sponsored by Ecology and Evolutionary Biology

Ecology and Evolution Major

Program Description

The ecology and evolution major provides students with interdisciplinary skills necessary for understanding and solving complex problems in ecology, evolution, behavior, and physiology. While some of these disciplines focus on molecular or chemical mechanisms, they all address questions on larger spatial and temporal scales that can be applied to important environmental problems, including genetic and ecological aspects of conservation biology and biodiversity.

Students majoring in ecology and evolution will receive a B.S. degree based on an integrated series of courses providing breadth in fundamental areas of biology and allied sciences that enhance understanding of evolutionary and ecological processes. The capstone of this curriculum is a suite of field courses providing students unique opportunities to learn and conduct research in a host of ecological systems. Students are encouraged to take field courses in their areas of specialization. Other opportunities include participation in research projects with faculty sponsors and the intensive Education Abroad Programs in Costa Rica (tropical biology) and Australia (marine sciences).

Ecology and Evolution B.S. Major Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B, and 20C

General Chemistry: Chemistry 1A, 1B/M and 1C/N

Calculus: Mathematics 11A-B or 19A-B

Biostatistics: Applied Mathematics and Statistics 7/L

Physics: Physics 7A/L and 7B/M

Advanced Requirements

A total of eleven upper-division courses; two must include laboratory or fieldwork.

Genetics: BIOL 105
Ecology: BIOE 107
Evolution: BIOE 109

One of the following physiology courses:

BIOE 131/L, *Animal Physiology/Laboratory*
BIOE 135, *Plant Physiology*

One of the following organism courses:

BIOE 117/L, *Systematic Botany of Flowering Plants/Laboratory*
BIOL 119/L, *Microbiology/Laboratory*
BIOE 120/L, *Marine Botany/Laboratory*
BIOE 122/L, *Invertebrate Zoology/Laboratory*

Elective list for Ecology and Evolution Major

Three topical electives chosen from the following:

BIOE 108, *Marine Ecology*
BIOE 112/L, *Ornithology/Laboratory*
BIOE 114/L, *Herpetology/Laboratory*
BIOE 117/L, *Systematic Botany/Laboratory*
BIOE 120/L, *Marine Botany/Laboratory*
BIOE 122/L, *Invertebrate Zoology/Laboratory*
BIOE 125, *Marine Microbial Ecology*
BIOE 127/L, *Ichthyology/Laboratory*
BIOE 129/L, *Biology of Marine Mammals/Laboratory*
BIOE 131/L, *Animal Physiology/Laboratory*
BIOE 135, *Plant Physiology*
BIOE 140, *Behavioral Ecology*
BIOE 141L, *Behavioral Ecology Field Course*
BIOE 145, *Plant Ecology*
BIOE 145L, *Field Methods in Plant Ecology*
BIOE 147, *Community Ecology*
BIOE 149, *Disease Ecology*
BIOE 150, *Ecological Field Methods*
BIOE 150L, *Ecological Field Methods Laboratory*
BIOE 151ABCD, *Ecology and Conservation in Practice*
BIOE 155, *Freshwater Ecology*
BIOE 158L, *Marine Ecology Laboratory*
BIOE 159ABCD, *Marine Ecology Field Quarter*
BIOE 161, *Kelp Forest Ecology*
BIOE 161L, *Kelp Forest Ecology Laboratory*
BIOE 163, *Ecology of Reefs, Mangroves, and Seagrasses*
BIOE 165, *Marine Conservation Biology*
BIOE 172/L, *Population Genetics/Laboratory*
BIOL 100, *Biochemistry*
BIOL 110, *Cell Biology*
BIOL 115, *Eukaryotic Molecular Biology*
BIOL 119, *Microbiology*
BIOL 119L, *Microbiology Laboratory*
BIOL 120, *Development*
BIOL 120L, *Development Laboratory*

Three general electives chosen from the following:

Biological Sciences-EEB

any BIOE course numbered 100-180

Biological Sciences-MCDB

BIOL 100, *Biochemistry*
BIOL 110, *Cell Biology*
BIOL 115, *Eukaryotic Molecular Biology*
BIOL 119, *Microbiology*
BIOL 119L, *Microbiology Laboratory*
BIOL 120, *Development*
BIOL 120L, *Development Laboratory*

Chemistry

CHEM 108A, *Organic Chemistry*
CHEM 108B, *Organic Chemistry*

Earth Sciences

EART 100/L, *Vertebrate Paleontology*
EART 102, *Marine Geology*
EART 105, *Coastal Geology*
EART 122, *Paleoceanography*

Environmental Studies

ENVS 104A, *Introduction to Environmental Field Methods*
ENVS 108/L, *General Entomology/Laboratory*
ENVS 115A/L, *GIS and Environmental Applications/Exercises in GIS*
ENVS 120, *Conservation Biology*
ENVS 122, *Tropical Ecology and Conservation*
ENVS 123, *Animal Ecology and Conservation*
ENVS 129, *Integrated Pest Management*
ENVS 130A/L, *Agroecology and Sustainable Agriculture/Laboratory*
ENVS 130B, *Principles of Sustainable Agriculture*
ENVS 131/L, *Insect Ecology/Laboratory*
ENVS 138/L, *Field Ethnobotany/Laboratory*
ENVS 160, *Restoration Ecology*
ENVS 161A/L, *Soils and Plant Nutrition/Laboratory*
ENVS 162, *Plant Physiological Ecology*
ENVS 163/L, *Plant Disease Ecology/Laboratory*
ENVS 167, *Freshwater and Wetland Ecology*
ENVS 168, *Biochemistry and the Global Environment*

Psychology

PSYC 123, *Behavioral Neuroscience*

One of the following may also be used as an upper-division general elective:

Biological Sciences-EEB

BIOE 183L, *Undergraduate Research in EEB*
BIOE 195, *Senior Thesis*
BIOE 198, *Independent Field Study*
BIOE 199, *Tutorial*

Environmental Studies

ENVS 183, *Environmental Studies Internship*

Ecology and Evolution B.S. Sample Planners

Plan One is for first-year students placing into Mathematics 3 and taking Chemistry 1A:

Plan One

Marine Biology Major

Program Description

UCSC is situated within five miles of Monterey Bay and its great diversity of coastal marine ecosystems; nature reserves; state, federal, and private marine research institutions and resource management agencies. These resources, combined with on-campus computing and analytical facilities and the Long Marine Laboratory, make UCSC an exceptional campus for the study of marine biology and its application to coastal conservation and management. Descriptions of nearby environments, institutions, and facilities are available through the Ecology and Evolutionary Biology Department web site at <http://www.biology.ucsc.edu/eeb/index.html>.

The marine biology major is designed to introduce students to marine organisms and the biological and physical processes that affect these organisms, their populations, and their coastal and oceanic ecosystems. The emphasis is on basic principles that help us understand the processes that shape life in marine environments. The marine biology major is a demanding program that offers a B.S. degree and requires several more courses than the general biology B.A. major.

Marine Biology B.S. Major Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B, and 20C

General Chemistry: Chemistry 1A, 1B/M and 1C/N

Calculus: Mathematics 11A-B or 19A-B

Biostatistics: Applied Mathematics and Statistics 7/L

Physics: Physics 7A/L and 7B/M

Advanced Requirements

A total of 11 upper-division courses; two must include laboratory or fieldwork.

Genetics: BIOL 105

Evolution: BIOE 109

One ecology course:

BIOE 107, *Ecology*

BIOE 108, *Marine Ecology*

One marine environment course:

BIOE 168, *Biological Oceanography*

Ocean Sciences 101, *Marine Environment*

One marine course:

BIOE 120/L, *Marine Botany/Laboratory*

BIOE 122/L, *Invertebrate Zoology/Laboratory*

BIOE 127/L, *Ichthyology/Laboratory*

BIOE 129/L, *Biology of Marine Mammals/Laboratory*

Elective list for Marine Biology Major

Three topical electives chosen from the following:

BIOE 108, *Marine Ecology*

BIOE 120/L, *Marine Botany/Laboratory*

BIOE 122/L, *Invertebrate Zoology/Laboratory*

BIOE 125, *Marine Microbial Ecology*

BIOE 127/L, *Ichthyology/Laboratory*

BIOE 129/L, *Biology of Marine Mammals/Laboratory*

BIOE 155, *Freshwater Ecology*

BIOE 158L, *Marine Ecology Laboratory*

BIOE 159ABCD, *Marine Ecology Field Quarter*

BIOE 161, *Kelp Forest Ecology*

BIOE 161L, *Kelp Forest Ecology Laboratory*

BIOE 163, *Ecology of Reefs, Mangroves, and Seagrasses*

BIOE 165, *Marine Conservation Biology*

BIOE 168, *Biological Oceanography*

EART 102, *Marine Geology*

EART 105, *Coastal Geology*
EART 122, *Paleoceanography*

Three general electives chosen from the following:

Biological Sciences-EEB

Any BIOE course numbered 100-180

Biological Sciences-MCDB

BIOL 100, *Biochemistry*
BIOL 110, *Cell Biology*
BIOL 115, *Eukaryotic Molecular Biology*
BIOL 119, *Microbiology*
BIOL 119L, *Microbiology Laboratory*
BIOL 120, *Development*
BIOL 120L, *Development Laboratory*

Chemistry

CHEM 108A, *Organic Chemistry*
CHEM 108B, *Organic Chemistry*

Earth Sciences

EART 100/L, *Vertebrate Paleontology*

Plant Sciences Major

Program Description

UCSC has a strong program in the plant sciences (sometimes called botany). A fine natural environment, the campus Arboretum, the facilities under the Center for Agroecology and Sustainable Food Systems (especially the Farm and Garden), and an excellent greenhouse collection all enhance the resources that support our botanical programs.

The plant sciences major is designed for students with an interest in plant biology and its associated curricular fields such as plant ecology, plant physiology, plant pathology, plant molecular biology, soils, and applied plant sciences. After completion of the core courses, students can proceed in one of several directions depending on their interest. For example, a more in-depth study of physiology and molecular biology courses can serve as preparation for work in the biotechnology field or for graduate school; further studies in plant ecology, tropical ecology, or restoration ecology can lead to careers such as resource ecologist or naturalist or to the pursuit of related fields in graduate school; upper-division training in agroecology can lead to careers in agriculture or food systems. A special feature of this major is a one-quarter internship and/or independent research requirement. There are many opportunities for internships both on the UCSC campus and in the community at large.

Plant Sciences B.S. Major Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B, and 20C

General Chemistry: Chemistry 1A, 1B/M and 1C/N

Calculus: Mathematics 11A-B or 19A-B

Biostatistics: Applied Mathematics and Statistics 7/L

Physics: Physics 7A/L and 7B/M

Advanced Requirements

A total of eleven upper-division courses; two of which must include laboratory or fieldwork.

Genetics: BIOL 105

Ecology: BIOE 107

Evolution: BIOE 109

One plant physiology course from the following:

BIOE 135, *Plant Physiology*

Environmental Studies 162, *Plant Physiological Ecology*

One botany course from the following:

BIOE 117/L, *Systematic Botany*

BIOE 120/L, *Marine Botany/Laboratory*

Elective list for Plant Sciences Major

Three topical electives chosen from the following:

Biological Sciences-EEB

BIOE 117/L, *Systematic Botany/Laboratory*
BIOE 120/L, *Marine Botany/Laboratory*
BIOE 135, *Plant Physiology*
BIOE 145, *Plant Ecology*
BIOE 145L, *Field Methods in Plant Ecology*
BIOE 149, *Disease Ecology*
BIOE 151ABCD, *Ecology and Conservation in Practice*

Biological Sciences-MCDB

BIOL 110, *Cell Biology*
BIOL 115, *Eukaryotic Molecular Biology*

Environmental Studies

ENVS 104A, *Introduction to Environmental Field Methods*
ENVS 129, *Integrated Pest Management*
ENVS 130A/L, *Agroecology and Sustainable Agriculture/Laboratory*
ENVS 130B, *Principles of Sustainable Agriculture*
ENVS 131/L, *Insect Ecology/Laboratory*
ENVS 138/L, *Field Ethnobotany/Laboratory*
ENVS 160, *Restoration Ecology*
ENVS 161A/L, *Soils and Plant Nutrition/Laboratory*
ENVS 162, *Plant Physiological Ecology*
ENVS 163/L, *Plant Disease Ecology/Laboratory*

Three general electives chosen from the following:

Biological Sciences-EEB

Any BIOE course numbered 100-180

Biological Sciences-MCDB

BIOL 100, *Biochemistry*
BIOL 110, *Cell Biology*

Degree Programs Sponsored by Molecular, Cell, and Developmental Biology

Health Sciences Major

Program Description

The B.S. major in health sciences is designed for students interested in careers in medicine or biomedical research and satisfies the admission requirements for most U.S. medical schools. It is based on the existing B.S. degree in molecular, cell, and developmental biology, with similar course requirements in chemistry, physics, and mathematics. Students are required to take five courses directly relevant to human health in addition to genetics, biochemistry, and cell biology. Students in this program must also fulfill Spanish language and health care internship requirements.

Health Sciences B.S. Major Requirements*

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B, and BIOL 20L

General Chemistry: Chemistry 1A, 1B/M and 1C/N

Organic Chemistry: Chemistry 108A/L and 108B/M, 108C recommended for pre-med students, or 112A/L, 112B/M, and 112C/N

Calculus: Mathematics 11A-B or 19A-B; and 22 (three quarters)

Physics: Physics 6A/L, 6B/M, and 6C/N

Advanced Requirements

A total of eight upper-division biology courses, as follows:

Four core courses:

Biochemistry: BIOL 100 or BIOC 100A, 100B, and 100C

Genetics: BIOL 105

Cell Biology: BIOL 110

Human Physiology with Lab: BIOL 130/L

Three of the following lecture courses:

BIOL 111, *Immunology*

BIOL 113, *Mammalian Endocrinology*

BIOL 114, *Cancer Cell Biology*

BIOL 115, *Eukaryotic Molecular Biology*

BIOL 119, *Microbiology*

BIOL 120, *Development*

BIOL 125, *Neuroscience*

BIOL 126, *Advanced Neural Development*

BIOL 127, *Neurodegenerative Disease*

BIOL 135/L, *Anatomy of the Human Body/Laboratory*

BIOL 178, *Stem Cell Biology*

BIOL 179, *Biotechnology and Drug Development*

Internship Requirement: BIOL189, *Health Sciences Internship*. The student must participate in a community health care service activity approved by the health sciences internship coordinator. Credit may be earned over multiple quarters.

Language Requirement: Spanish 1–4 or the equivalent and one quarter of Spanish for health care workers (Spanish 5M).

* Medical and professional school admissions requirements vary; students should verify that their coursework will satisfy the admissions requirements of the programs to which they plan to apply.

Health Sciences B.S. Sample Planners

Plan One is for first-year students placing into Mathematics 3 and taking Chemistry 1A:

Plan One			
Year	Fall	Winter	Spring
1st (frsh)	gen ed	CHEM 1A	CHEM 1B/M

	CHEM 108A/L*	CHEM 108B/M*	elective**
	gen ed	gen ed	gen ed

* Students may use the three-quarter Chemistry 112 series to fulfill the organic chemistry requirement.

**Students should take either an elective, a Spanish course, or the third quarter of organic

chemistry.

Molecular, Cell, and Developmental Biology Major

Program Description

The molecular, cell, and developmental (MCD) biology major is designed for students interested in medical or other professional graduate programs and those preparing for careers in biotechnology industries. This major is more structured than the general biology major and requires that students pay careful attention to the prerequisites required for upper-division biology courses.

Molecular, Cell, and Developmental Biology B.S. Major Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B, and 20C

General Chemistry: Chemistry 1A, 1B/M and 1C/N

Organic Chemistry: Chemistry 108A/L and 108B/M or 112A/L, 112B/M, and 112C/N

Calculus: Mathematics 11A-B or 19A-B; and 22

Physics: Physics 6A/L, 6B/M, and 6C/N

Advanced Requirements

A total of nine upper-division biology courses, as follows:

Four core courses:

Biochemistry: BIOL 100 or the series BIOE 100A, and 100B, and 100C

(Upon completion of the series, BIOE 100C may be used to satisfy one elective)

Genetics: BIOL 105

Cell Biology: BIOL 110

Eukaryotic Molecular Biology: BIOL 115

Three of the following lecture courses:

BIOL 111, *Immunology*

BIOL 113, *Mammalian Endocrinology*

BIOL 114, *Cancer Cell Biology*

BIOL 119, *Microbiology*

BIOL 120, *Development*

BIOL 125, *Neuroscience*

BIOL 126, *Advanced Neural Development*

BIOL 127, *Neurodegenerative Disease*

BIOL 130/L, *Human Physiology/Laboratory*

BIOL 178, *Stem Cell Biology*

BIOL 179, *Biotechnology and Drug Development*

BIOE 109, *Evolution*

BIOE 135, *Plant Physiology*

Two of the following laboratory courses:

BIOL 100L, *Biochemistry Laboratory*

BIOL 105L, *Eukaryotic Genetics Laboratory*

BIOL 105M, *Microbial Genetics Laboratory*

BIOL 109L, *Yeast Molecular Genetics Laboratory*

BIOL 110L, *Cell Biology Laboratory*

BIOL 111L, *Immunology Laboratory*

BIOL 115L, *Eukaryotic Molecular Biology Laboratory*

BIOL 119L, *Microbiology Laboratory*

BIOL 120L, *Development Laboratory*

BIOL 130/L, *Human Physiology/Laboratory**

BIOL 178L, *Protocols in Stem Cell Biology*

BIOL 180/L, *Research Programming for Biologists and Biochemists/Laboratory*

BIOL 181, *Computational Biology Tools*

BIOL 186L, *Undergraduate Research in MCD*

BIOL 187L, *Molecular Biotechnology Laboratory*

BIOC 110, *Biochemistry Laboratory*

*BIOL 130/L meets either one lecture or one laboratory requirement, but not both.

Molecular, Cell and Developmental Biology B.S. Sample Planners

Plan One is for first-year students placing into Mathematics 3 and taking Chemistry 1A:

* Students may use the three-quarter Chemistry 112 series to fulfill the organic chemistry requirement.

Neuroscience and Behavior Majors

Program Description

Neuroscience, the study of the nervous system and behavior of animals, is a frontier area in biology, touching psychology on the one hand and computer science on the other. The neuroscience and behavior majors provide students with rigorous preparation for graduate studies and research in the fields of neuroscience and behavior. The brain and determinants of behavior are studied at all levels, from biological molecules to individual nerve cells to functioning organisms to social behavior. The majors emphasize the interrelationship between the two fields, building on a common core of general and biological science course work. Students select a pathway in either behavior or molecular neuroscience. Rigorous course work is supplemented by opportunities for hands-on laboratory and field courses and independent research.

Neuroscience and Behavior B.A. Major Requirements

Introductory Course Requirements

Introductory Biology: BIOL 20A, BIOE 20B, and 20C

General Chemistry: Chemistry 1A, 1B/M and 1C/N

Organic Chemistry: Chemistry 108A/L and 108B/M or 112A/L, 112B/M, and 112C/N

Calculus: Mathematics 11A-B or 19A-B

Biostatistics: Applied Mathematics and Statistics 7/L

Physics: Physics 7A/L and 7B/M

Advanced Course Requirements

Five upper-division core courses to include:

Biochemistry: BIOL 100 or the series BIOE 100A, and 100B, and 100C

(Upon completion of the series, BIOE 100C may be used to satisfy one elective)

Genetics: BIOL 105

Cell Biology: BIOL 110

Neuroscience: BIOL 125

Behavioral Ecology: BIOE 140

Plus additional elective courses chosen from one of two areas of concentration:

Molecular Neuroscience Pathway (four courses)

BIOL 115, *Eukaryotic Molecular Biology*

BIOL 126, *Advanced Molecular Neuroscience*

One of the following electives:

BIOL 127, *Neurodegenerative Disease*

BIOL 130/L, *Human Physiology*

Psychology 121, *Perception*

Psychology 123, *Behavioral Neuroscience*

One of the following laboratory courses:

BIOL 100L, *Biochemistry Laboratory*

BIOL 105L, *Eukaryotic Genetics Laboratory*

BIOL 109L, *Yeast Molecular Genetics Laboratory*

BIOL 110L, *Cell Biology Laboratory*

BIOL 111L, *Immunology Laboratory*

BIOL 115L, *Eukaryotic Molecular Biology Laboratory*

BIOL 120L, *Development Laboratory*

BIOL 130/L, *Human Physiology/Laboratory**

BIOL 178L, *Protocols in Stem Cell Biology*

BIOL 180/L, *Research Programming for Biologists and Biochemists/Laboratory*

BIOL 181, *Computational Biology Tools*

BIOL 186L, *Undergraduate Research in MCD*

BIOL 187L, *Molecular Biotechnology Laboratory*

Behavior Pathway (four courses)

BIOL 113, *Mammalian Endocrinology*

One of the following:

BIOE 112/L, *Ornithology/Laboratory*

BIOE 114/L, *Herpetology/Laboratory*

BIOE 129/L, *Marine Mammals/Laboratory*

BIOE 141L, *Behavioral Ecology Field Course*

BIOE 150, *Ecological Field Methods*

One of the following electives:

BIOE 122/L, *Invertebrate Zoology/Laboratory*

BIOE 131/L, *Animal Physiology/Laboratory*

BIOL 120, *Development*

BIOL 127, *Neurodegenerative Disease*

BIOL 130/L, *Human Physiology/Laboratory*

Psychology 121, *Perception*

Psychology 123, *Behavioral Neuroscience*

Psychology 133, *Psychology and Evolutionary Theory*

One of the following laboratory courses:

BIOE 122/L, *Invertebrate Zoology/Laboratory*

BIOE 131/L, *Animal Physiology/Laboratory*

BIOE 141L, *Behavioral Ecology Field Course*

BIOE 150L, *Ecological Field Methods*

BIOL 105L, *Eukaryotic Genetics Laboratory*

BIOL 130/L, *Human Physiology Laboratory*

BIOL 180/L, *Research Programming for Biologists and Biochemists/Laboratory*

BIOL 181, *Computational Biology Tools*

Computer Science 5C, *Introduction to Programming in C/C++*

Computer Science 5J, *Introduction to Programming in Java*

Computer Science 5P, *Introduction to Programming in Python*

*BIOL 130/L meets either a physiology or a laboratory requirement, but not both.

Neuroscience and Behavior B.A. Sample Planners

Plan One is for first-year students placing into Mathematics 3 and taking Chemistry 1A:

* Students may use the three-quarter Chemistry 112 series to fulfill the organic chemistry requirement.

Ecology and Evolutionary Biology

Ecology and Evolutionary Biology
A308 Earth and Marine Sciences
(831) 459-5358
<http://www.eeb.ucsc.edu/>

Graduate Program Description

The graduate program in ecology and evolutionary biology (EEB, courses BIOE) at UCSC is one of the premier programs in the country. This is due to the quality and commitment of the faculty, the long-standing tradition of the University of California, and the unique environment of the Santa Cruz campus. UCSC has been singularly blessed with varied and easily accessible marine and terrestrial resources for research. UCSC is ideal for marine research—having its own marine laboratory, a fleet of boats, and one of the most active scientific diving programs in the country. In close proximity to pinniped rookeries at the UC Reserve at Año Nuevo, the campus is located on Monterey Bay, which has the largest concentration of marine research programs in the country. In addition to state-of-the-art departmental laboratories, students have full access to the molecular ecology and evolutionary genetics (MEEG) facility and other analytical laboratories of the UCSC Institute of Marine Sciences.

Terrestrial biologists have access to all of California's natural environments through the University of California's natural reserve system; the diverse habitats on UCSC's 2,000-acre campus itself (mixed redwood forest, fossil sand dune associations, rolling pasture land, and chaparral) and on several adjacent preserves; the UCSC experimental farm and garden; extensive southern hemisphere plantings in the UCSC arboretum; and greenhouses and associated laboratory facilities. More than two-thirds of our faculty participate in field studies throughout the Pacific Basin (from Alaska to Antarctica), in Pacific Rim nations (in Latin America, the Far East, and Australia), and beyond.

The program in ecology and evolutionary biology is comprised of four core tracks: (1) population and community ecology, (2) evolutionary biology, (3) physiology and behavior including marine and terrestrial animals, and (4) systematics and biodiversity.

Degree Requirements

Ph.D. Requirements

Courses:

BIOE 200A, *Scientific Skills*
BIOE 200B, *Advanced Organismal Biology*
BIOE 279, *Evolutionary Ecology*
BIOE 293, *Readings in Ecology and Evolution* (or equivalent)
BIOE 294, *Ecology, Evolutionary Biology Seminar* (taken each quarter when in residence)

Each Ph.D. student should expect to complete at least two quarters as a teaching assistant during their graduate career.

During fall of the second year, students take a comprehensive examination. This is a two-part exam, written and oral, the goal of which is to examine the student's breadth and depth of knowledge of evolution, ecology, physiology, behavior, organismal, and general biology. A committee is comprised of four examiners selected by each student and the student's supervisor. Each student's area of research, together with the stated goal of the exam, should guide the composition of the student's committee.

During the sixth term, the student submits a dissertation research proposal to their dissertation committee and must defend it in a three-hour oral examination before the dissertation committee. The student advances to candidacy only after completing all course work, passing the written and oral portions of the comprehensive examination, writing and defending a dissertation research proposal, and presenting a candidacy seminar on his/her proposed research.

The student must submit his/her doctoral dissertation to the dissertation committee for tentative approval at least 60 days before presenting a formal, public doctoral research seminar. Also, the student must meet with the dissertation committee to defend the thesis at least one week prior to the public seminar. Before the dissertation is accepted for signature by the dissertation committee, at least one chapter must be submitted as a paper (not an abstract) to a refereed journal for publication.

M.A. Requirements

In addition to course work identified by the advisory committee or adviser, each student will be

required to take BIOE 279, two quarters of BIOE 293, BIOE 294 and the appropriate lab course when in residence at the university (not in the field), and BIOE 297, as needed, to come up with 15 credits. BIOE 200A and 200B are recommended but not required.

The student must submit their thesis draft to the thesis committee for tentative approval at least 60 days before presenting a formal, public research seminar. Also, the student must meet with the thesis committee to defend the thesis at least one week prior to the public seminar. At that time, the committee may sign the cover page of the student's dissertation.

There is no requirement, but it is highly recommended, that at least one thesis chapter be submitted as a paper (not an abstract) to a refereed journal for publication.

Molecular, Cell, and Developmental Biology

Molecular, Cell, and Developmental Biology
225 Sinsheimer Laboratories
(831) 459-4986
<http://www.mcd.ucsc.edu/>

Graduate Program Description

The program in molecular, cell, and developmental (MCD) biology (courses BIOL) leads to either the Ph.D. or the M.A. and is designed to prepare students for careers in research, teaching, and biotechnology. Current research in MCD biology focuses on such topics as the structure and function of RNA, gene expression, signaling, cell division, development, and pathogenesis. A unique focus of the department is the center for the molecular biology of RNA.

Degree Requirements

Ph.D. and master's students complete the graduate core courses, BIOL 200A, 200B, and 200C, and 200D in the first year. Additional undergraduate courses required to strengthen the student's background may be assigned by the advisory committee during the initial advising meeting. Typically, these courses are Biochemistry 100A and BIOL 115. Students are required to participate in lab research meetings and departmental seminar series every quarter.

First-year Ph.D. students complete three 10-week laboratory rotations. Students choose their rotation laboratories in consultation with the Graduate Advisory Committee. The lab rotations give students a chance to learn about the diverse fields and methods of inquiry and to interact with members of the department. At the end of each quarter, students present a short talk to the department on their rotation project. At the end of spring quarter, students consult with rotation faculty to identify a permanent thesis laboratory.

Second-year Ph.D. students are required to submit two proposals—one on their proposed thesis work and a second on an unrelated MCDB research topic. The Ph.D. qualifying exam, taken in spring quarter of the second year, is an oral examination before a committee comprised of three internal reviewers and one external reviewer.

Once the qualifying exam is passed, students, in conjunction with their faculty adviser, select a committee to consult with in the development of their thesis. This committee monitors the student's progress and ultimately approves the final draft of the student's dissertation. The student must meet with the thesis committee at least once a year after passing the qualifying exam.

Students are advanced to candidacy following presentation of their research to the department in a seminar. This takes place no later than spring of the third year.

Graduate students must take two approved advanced graduate electives. Students who enter the Ph.D. program with a Masters degree without doing rotations must complete an additional two approved graduate elective courses.

Ph.D. Requirements

Completion of the graduate core course
Completion of the *Practice of Science* course
Completion of an oral qualifying exam
Completion of an advancement to candidacy seminar
Completion of two advanced graduate elective courses
Yearly meetings with a thesis committee after the qualifying exam
Completion of two quarters of service as a teaching assistant
Completion of thesis research resulting in a dissertation of individual work
Presentation of thesis defense in departmental seminar

M.A. Requirements

Acceptance to the master's program requires a faculty sponsor. Interested applicants must contact faculty directly and procure sponsorship before beginning the application process.

Completion of the graduate core course

Completion of the *Practice of Science* course

Write a master's thesis based on original research

Presentation of thesis defense in departmental seminar

Biological Sciences

[2009-10 update to the *General Catalog*, changes highlighted]

The biological sciences at UC Santa Cruz are comprised of two academic departments: Ecology and Evolutionary Biology (courses BIOE) and Molecular, Cell, and Developmental Biology (courses BIOL). The two academic departments collectively sponsor the undergraduate program while each offers its own independent graduate program. Faculty within the biological sciences are affiliated with either Ecology and Evolutionary Biology, or Molecular, Cell, and Developmental Biology.

Undergraduate Program Description

The biological sciences have entered into an exciting new era in which phenomena that once seemed insoluble mysteries—such as embryonic development, the functions of the brain, and the dynamics of ecosystems—are now yielding their secrets as the technology to study them becomes more and more sophisticated. From molecular biology, with its potential to revolutionize medicine and agriculture, to ecology, with its lessons for the sustainable management of the environment, biologists are fully engaged in meeting the challenges of the future, helping to improve the quality of human life and to preserve habitats and biodiversity. Thus, it is no surprise that the biological sciences are at the heart of many of today's most pressing intellectual and social concerns.

The Departments of Ecology and Evolutionary Biology (EEB) and Molecular, Cell, and Developmental Biology (MCDB) offer a broad spectrum of courses that reflect the exciting new developments and directions in the field of biology. An outstanding group of faculty, each with a vigorous, internationally recognized research program, is available to teach courses in their specialties as well as core courses for the major. Areas of research strength within the departments include RNA molecular biology, molecular and cellular aspects of genetics and development, neurobiology, endocrinology, immunology, microbial biochemistry, plant biology, animal behavior, physiology, evolution, ecology, and marine biology. UCSC is unique in the UC system in providing exceptional opportunities for undergraduate research, allowing students to interact one-on-one with faculty and other researchers in a laboratory or field setting.

Biological Sciences Majors

Students may plan a program that leads to one of several B.A. or more advanced B.S. degrees. Students may choose from the following major options:

Majors jointly sponsored by Ecology and Evolutionary Biology (EEB) and Molecular, Cell, and Developmental Biology (MCDB):

Biology B.A. (general)

Biology B.S. (general)

[Biology B.A. \(education concentration\)](#)

Majors sponsored by Ecology and Evolutionary Biology (EEB):

Ecology and evolution B.S.

Marine biology B.S.

Plant sciences B.S.

Environmental studies/biology combined major B.A. (administered in conjunction with the Environmental Studies Department)

Majors sponsored by Molecular, Cell, and Developmental Biology (MCDB):

Health Sciences B.S.

Molecular, cell, and developmental biology B.S.

Neuroscience and behavior B.A.

Neuroscience and behavior B.S.

Biochemistry and molecular biology B.S. (administered in conjunction with the Chemistry- and Biochemistry Department)

Bioinformatics B.S. (administered in conjunction with the School of Engineering)

Bioengineering B.S. (administered in conjunction with the School of Engineering)

Advanced undergraduates, with the guidance of faculty mentors, have access to extensive departmental laboratory facilities for independent research. Fieldwork draws on a remarkable variety of terrestrial habitats, as well as ready access to Monterey Bay and the open Pacific. Marine studies are supported by a

coastal facility with running seawater, with a research vessel available for offshore work. Año Nuevo Island, north of Santa Cruz, is the site of extensive behavioral studies of marine mammals. Hospitals, convalescent and physical therapy centers, veterinary clinics, and other enterprises in the vicinity of the campus provide the opportunity to pursue field projects and internships comparable to on-the-job training. This array of opportunities for directed independent study enables biological science majors to enhance their upper-division programs to reflect and strengthen their own interests and goals in the sciences.

Prerequisites for the Biological Sciences

The introductory biology sequence is prerequisite to virtually all upper-division biology courses. BIOL 20A has a prerequisite of Chemistry 1B, Chemistry 1B has a prerequisite of Chemistry 1A, and thus students cannot enroll in BIOL 20A until they have completed Chemistry 1A and 1B. Therefore, it is essential for students considering a major in the biological sciences to start chemistry as soon as possible. Students who have not taken Chemistry 1A or 1B but are prepared to begin biology may begin the introductory sequence with BIOE 20C. The entire introductory biology sequence should be taken the first and second year, concurrently with or following the general chemistry sequence (Chemistry 1A, 1B/M and 1C/N).

~~The biology placement examination is an online self-assessment tool to help students assess their academic preparation for introductory biology. All students interested in majoring in the biological sciences should take the biology placement exam at: <http://biosci.ucsc.edu/bioplacex.html>. Students who score below 35 on the placement exam should consider taking the introductory preparation course, BIOE 3, Concepts in Biology, before enrolling in the introductory series. Students scoring 35 or higher may begin the introductory sequence with either course BIOL 20A, Cell and Molecular Biology or BIOE 20C, Ecology and Evolution.~~

The Mathematics Department offers a placement exam several times a year. Biological science majors are expected to take this exam. If the results indicate a need for precalculus, students need to take Mathematics 3 as soon as possible. Students with even less preparation may need to take college algebra at another institution.

Students intending to major in health sciences should take the Spanish placement exam, offered by the language program, to determine with which course they should begin the Spanish sequence.

Course Substitution/Transfer Credit Policy

At least half of the upper-division courses (numbered 100–190) required for each major must be taken through the biological sciences program at UCSC, not as transfer credits from another department or institution. Transfer students are advised to contact the Biological Sciences Undergraduate Advising office before enrolling in numerous upper-division courses at other institutions. For more information on transferring courses to UCSC, please consult the ~~biological sciences~~ undergraduate web site at <http://biosci.undergrad.pbsci.ucsc.edu/>.

A maximum of one upper-division course requirement may be met with a research-based independent study or graduate-level UCSC biology course or a course offered by another UCSC department.

Declaration Process for Biological Sciences Majors

Declaration guidelines for biology majors can be found on the ~~biological sciences~~ undergraduate web site at <http://biosci.undergrad.pbsci.ucsc.edu/>.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement will normally be met within one to three courses already required for the major. For detailed information on this major's DC requirement, consult your major adviser or see the 2010-11 general catalog.

Comprehensive Requirement

All majors in the biological sciences require a comprehensive requirement. This requirement can be satisfied in one of the following ways:

by passing course 190 Senior Seminar;

by receiving a passing grade in an internship, independent research laboratory, or field course:

Biological Sciences-EEB

BIOE 114L, *Field Methods in Herpetological Research*

BIOE 141L, *Behavioral Ecology Field Course*

BIOE 145L, *Field Methods in Plant Ecology*

BIOE 150L, *Ecological Field Methods*

BIOE 151, *Ecology and Conservation in Practice*

BIOE 158L, *Marine Ecology Lab*

BIOE 159, *Marine Ecology Field Quarter*

BIOE 161L, *Kelp Forest Ecology Lab*

BIOE 183, *Undergraduate Research in EEB*

Biological Sciences-MCDB

BIOL 100L, *Biochemistry Lab*

BIOL 105L, *Eukaryotic Genetics Lab*

BIOL 105M, *Microbial Genetics Lab*
BIOL 109L, *Yeast Molecular Genetics Lab*
BIOL 110L, *Cell Biology Lab*
BIOL 111L, *Immunology Lab*
BIOL 115L, *Eukaryotic Molecular Biology Lab*
BIOL 119L, *Microbiology Lab*
BIOL 120L, *Developmental Biology Lab*
~~BIOL 128L, *Neural Genetics Lab*~~
~~BIOL 185, *Hughes Undergraduate Research Lab*~~
BIOL 186, *Undergraduate Research in MCD*
BIOL 189, *Health Sciences Internship*

by completing a senior thesis. ~~See the biological sciences undergraduate web site for more information, including deadline, at <http://www.biology.ucsc.edu/advising/graduation/thesis.html>;~~

by achieving a graduate record examination (GRE) score at or above the 50th percentile on the biology subject test or the biochemistry, cell, and molecular biology subject test. Reports of GRE scores must be submitted to the biological sciences advising office before the last day of the graduating quarter;

by obtaining an medical college admission test (MCAT) score at or above the 50th percentile on the biological sciences section. Reports of MCAT scores must be submitted to the biological sciences advising office before the last day of the graduating quarter.

Letter Grade Policy

For all students entering UCSC in fall 2001 and later, all courses used to satisfy any of the biological sciences majors must be taken for a letter grade.

Major Disqualification Policy

The biological sciences departments have adopted a major disqualification policy that is intended to encourage students to take their performance in the introductory requirements seriously and to make a strong effort to pass the introductory courses.

Students who receive more than one No Pass, D, and/or F in the following introductory major requirements will not be permitted to major in any of the biological sciences majors:

BIOL 20A, *Cell and Molecular Biology*
BIOE 20B, *Development and Physiology*
BIOE 20C, *Ecology and Evolution*
~~BIOL 20L, *Experimental Biology Lab*~~[Chemistry 1A, *General Chemistry*](#)
Chemistry 1B, *General Chemistry*
Chemistry 1C, *General Chemistry*
Mathematics 11A, *Calculus with Applications*
Mathematics 11B, *Calculus with Applications*
Mathematics 19A, *Calculus for Science, Engineering, and Mathematics*
Mathematics 19B, *Calculus for Science, Engineering, and Mathematics*

Students will be assessed for disqualification after grades are submitted each quarter and at the end of each summer session.

Students may appeal their disqualification within the appeal period by writing a letter to the department chair. This appeal must be submitted to the advising office no later than 15 days from the date the disqualification notification was mailed, or the 10th day of classes in the quarter of their disqualification, whichever is later. The advising office will subsequently notify the student, the college, and the Office of the Registrar of the decision, no later than 15 days after the submission of the appeal.

A student who has been disqualified from the major may, no earlier than three months from the date of the disqualification, petition to be reinstated. This application will be considered only if there is substantial new evidence that the student is capable of making normal progress in the major.

Academic Advising

Academic advising is available at the Biological Sciences Undergraduate Advising office. Students should take full advantage of this opportunity and should keep in frequent touch with the office to stay informed about late announcements of courses, changes in scheduling, and opportunities for special study.

The ~~biological sciences~~ undergraduate web site (<http://biosei undergrad.pbsci.ucsc.edu>) serves as the program handbook containing advice and information pertinent to students' most frequently voiced questions. Each student in the major should review the information posted on the web site; for further assistance, contact the advising office.

Transfer Students

The faculty encourages applications from transfer students in the biological sciences. It is imperative transfer students complete science prerequisite courses before they transfer, especially a complete sequence of calculus, general chemistry, and introductory biology. Students should also take organic

chemistry, if possible. Students who transfer without having completed the prerequisite coursework may have difficulty enrolling in courses and may require more than two years to complete a biological sciences degree. Prospective transfer students should review the transfer guidelines at <http://biosci.undergrad.pbsci.ucsc.edu/advising/preparation/transfer.html> or contact the undergraduate advising office for further information.

Honors

Honors in the biological sciences majors are awarded to graduating students whose academic performance demonstrates excellence at a GPA of 3.5 or above. Highest honors are awarded to those students whose performance demonstrates the highest level of excellence and results in a GPA of 3.8 or above.

Double Majors

~~Students may not double major in general biology and any other biological sciences major; any combination of two EEB-sponsored majors (marine biology, ecology and evolution, plant sciences, environmental studies and biology combined); nor in the following combinations of MCDB-sponsored majors: molecular, cell and development biology and neuroscience and behavior; molecular, cell, and developmental biology and biochemistry and molecular biology; neuroscience and behavior and biochemistry and molecular biology.~~

Medical and Professional School Admission

Medical and professional school admissions requirements vary; students should verify that their coursework will satisfy the admissions requirements of the programs to which they plan to apply.

Education Abroad Opportunities

The UC education abroad program (EAP) offers qualified students unique opportunities to broaden their educational horizons. The biological sciences departments encourage interested students to participate. Many programs are in English-speaking countries or use English for advanced courses. Many programs offer small classes, extensive laboratories, and/or field research experience.

There are excellent programs for biological science students in Costa Rica, Australia, New Zealand, the United Kingdom, Denmark, and Germany, among others. The Costa Rica Tropical Biology Program is of note to students interested in tropical biology and ecology. Held spring and fall quarters at the Monteverde research station, this program gives students experience with hands-on field research, offers a homestay program, and carries credit for two upper-division biology courses. The University of Queensland (Australia) offers an intensive, full-semester marine science program, which includes a-stays at a-research stations on the Great Barrier Reef, and in near sheltered mangrove and seagrass habitats near Brisbane.

Students interested in study abroad need to get an early start on their basic science requirements, including chemistry, mathematics, and introductory biology and must declare their major prior to applying to go abroad. Visit the EAP office as soon as possible to begin planning, and seek advice about your schedule from the biological sciences undergraduate adviser and/or faculty adviser.

General Biology Majors and Minor

The general biology majors permit flexibility, but demand careful attention to one's own interests and plans. Each student should select courses on the basis of up-to-date information in consultation with a biology faculty adviser whose interests reflect the student's interests.

General Biology B.A. Major Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B, and 20C

General Chemistry: Chemistry 1A, 1B/M and 1C/N

Organic Chemistry: Chemistry 108A/L and 108B/M; or 112A/L, 112B/M, and 112C/N

Calculus: Mathematics 11A-B or 19A-B

Physics: Physics 7A/L and 7B/M

Advanced Requirements

A total of eight upper-division biology courses, as follows:

Biochemistry: BIOL 100 or the series BIOE 100A, and 100B, and 100C

(Upon completion of the series, BIOE 100C may be used to satisfy one elective)

Genetics: BIOL 105

Evolution: BIOE 109

Students must complete one upper-division biology course that includes regular laboratory or fieldwork. Students must fulfill the major distribution requirement, which includes one course from each of the following groups:

Cell/Developmental biology:

BIOL 110, *Cell Biology*

BIOL 111, *Immunology*

BIOL 115, *Eukaryotic Molecular Biology*

BIOL 119, *Microbiology*

BIOL 120, *Developmental Biology*

Physiology:BIOE 131/L, *Animal Physiology/Laboratory*~~BIOE 133/L, *Exercise Physiology/Laboratory*~~BIOE 135, *Plant Physiology*BIOL 113, *Endocrinology*BIOL 125, *Introduction to Neuroscience*BIOL 130/L, *Human Physiology/Laboratory***Ecology:**BIOE 107, *Ecology*BIOE 108, *Marine Ecology*~~BIOE 110/L, *Biology and Ecology of Vertebrates/Laboratory*~~~~BIOE 122/L, *Invertebrate Zoology/Laboratory*~~BIOE 125, *Marine Microbial Ecology*BIOE 140, *Behavioral Ecology*BIOE 141L, *Behavioral Ecology Field Course*BIOE 145L, *Field Methods in Plant Ecology*BIOE 145, ~~-~~*Plant Ecology*BIOE 147, *Community Ecology*BIOE 149, *Disease Ecology*BIOE 155, *Freshwater Ecology*BIOE 161, *Kelp Forest Ecology*

Students must complete two additional upper-division biology electives chosen from Biological Sciences-EEB ~~100-180~~ or Biological Sciences-MCDB.

General Biology B.A. Sample Planners

Plan One is for first-year students placing into Mathematics 3 and taking Chemistry 1A:

<u>Plan One</u>			
<u>Year</u>	<u>Fall</u>	<u>Winter</u>	<u>Spring</u>
<u>1st</u> (frsh)	<u>MATH 3</u> core	<u>CHEM 1A</u> <u>MATH 11A</u> gen ed	<u>CHEM 1B/M</u> <u>MATH 11B</u> gen ed
<u>2nd</u> (soph)	<u>BIOL 20A</u> <u>CHEM 1C/N</u> gen ed	<u>BIOE 20B</u> <u>CHEM 108A/L</u> gen ed	<u>BIOE 20C</u> <u>CHEM 108B/M</u> gen ed

Plan Two is for first-year students placing into Mathematics 11A and taking Chemistry 1A:

<u>Plan Two</u>			
<u>Year</u>	<u>Fall</u>	<u>Winter</u>	<u>Spring</u>
<u>1st</u> (frsh)	<u>CHEM 1A</u> <u>Math 11A</u> core	<u>CHEM 1B/M</u> <u>MATH 11B</u> gen ed	<u>CHEM 1C/N</u> <u>BIOL 20A</u> gen ed
<u>2nd</u> (soph)	<u>BIOE 20B</u> <u>CHEM 108A/L*</u> gen ed	<u>BIOE 20C</u> <u>CHEM 108B/M*</u> gen ed	<u>elective</u> <u>BIOL 105</u> gen ed

*Students may use the three-quarter Chemistry 112 series to fulfill the organic chemistry requirement. ~~courses numbered 100-187L.~~

General Biology, Bioeducation Concentration, B.A.

The General Biology, Bioeducation Concentration, B.A. major is designed to meet the needs of students who plan careers as K-12 science teachers. It provides students with a rigorous education in biology through science breadth courses to prepare them for the state credentialing examinations (CSET) in biology/life sciences and general science, and courses covering education theory and practical teaching experience through internships in local schools.

General Biology, Bioeducation Concentration, B.A. Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B, and 20C

General Chemistry: Chemistry 1A, 1B/M, and 1C/N

Organic Chemistry: Chemistry 108A/L and 108B/M

Calculus: Mathematics 11A-B or 19A-B

Physics: Physics 7A/L and 7 B/M

Earth Sciences: Earth Sciences 20/L

Education: Education 50C

Astronomy: Astronomy 2

Advanced Requirements

A total of seven upper-division biology courses, as follows:

BIOL100, Biochemistry

BIOL 105, Genetics

BIOE 109, Evolution

BIOE 107, Ecology

Students must fulfill the major distribution requirement, which includes one course from each of the following groups:

Cell/developmental biology:

BIOL 110, Cell Biology

BIOL 115, Eukaryotic Molecular Biology

BIOL 119, Microbiology

BIOL 120, Developmental Biology

Physiology:

BIOE 131, Animal Physiology

BIOE 135, Plant Physiology

BIOL 113, Endocrinology

BIOL 130, Human Physiology

Biology Laboratory:

One five-~~unit~~credit upper-division biology laboratory course, or

BIOL 130L, Human Physiology Laboratory

BIOL 131L, Animal Physiology Laboratory

(Note: BIOL 130L and 131L do not carry W credit, nor do they satisfy the exit requirement. BIOL 135 cannot be used to satisfy the laboratory requirement in the Bioeducation concentration.)

General Biology, Bioeducation Concentration, -B.A. Sample Planners

Plan One is for first-year students placing into Mathematics 3 and BIOE 3:

Year	Fall	Winter	Spring
1st (frsh)	CHEM 1A MATH 3 core	CHEM 1B/M MATH 11A BIOE 3	CHEM 1C/N MATH 11B gen ed
2nd (soph)	BIOL 20A gen ed EDUC 50C	BIOE 20B CHEM 108A/L gen ed	BIOE 20C CHEM 108B/M gen ed

Plan Two is a more rigorous schedule for first-year students placing into Mathematics 11A and BIOE/BIOL 20A:

Plan Two			
Year	Fall	Winter	Spring
1st (frsh)	CHEM 1A Math 11A core	CHEM 1B/M MATH 11B gen ed	CHEM 1C/N BIOL 20A gen ed

~~*Students may use the three-quarter chemistry 112 series to fulfill the organic chemistry requirement.~~

General Biology B.S. Major Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B, and 20C

General Chemistry: Chemistry 1A, 1B/M and 1C/N

Organic Chemistry: Chemistry 108A/L and 108B/M or 112A/L, 112B/M, and 112C/N

Calculus: Mathematics 11A-B or 19A-B; and 22

Physics: Physics 6A/L, 6B/M, and 6C/N

Advanced Requirements

A total of nine upper-division biology courses, as follows:

Biochemistry: BIOL 100 or the series BIOC 100A, and 100B, and 100C

(Upon completion of the series, BIOC 100C may be used to satisfy one elective)

Genetics: BIOL 105

Evolution: BIOE 109

Students must complete two upper-division biology courses that include regular laboratory or fieldwork

Students must fulfill the major distribution requirement, which includes one course from each of the following groups:

Cell/developmental biology:

BIOL 110, *Cell Biology*

BIOL 111, *Immunology*

BIOL 115, *Eukaryotic Molecular Biology*

BIOL 119, *Microbiology*

BIOL 120, *Developmental Biology*

Physiology:

BIOE 131/L, *Animal Physiology/Laboratory*

~~BIOE 133/L, Exercise Physiology/Laboratory~~

BIOE 135-, *Plant Physiology*

BIOL 113, *Endocrinology*

BIOL 125, *Introduction to Neuroscience*

BIOL 130/L, *Human Physiology/Laboratory*

Ecology:

BIOE 107, *Ecology*

BIOE 108, *Marine Ecology*

~~BIOE 110/L, Biology and Ecology of Vertebrates/Laboratory~~

~~BIOE 122/L, Invertebrate Zoology/Laboratory~~

BIOE 125, *Marine Microbial Ecology*

BIOE 140, *Behavioral Ecology*

BIOE 141L, *Behavioral Ecology Field Course*

BIOE 145, ~~-Plant Ecology~~

BIOE 147, *Community Ecology*

BIOE 149, Disease Ecology

BIOE 155, Freshwater Ecology

BIOE 161, ~~-Kelp Forest Ecology~~

Students must complete three additional upper-division biology electives chosen from Biological Sciences-EEB courses ~~numbered 100-180~~ or Biological Sciences-MCDB courses ~~numbered 100-187L~~.

General Biology B.S. Sample Planners

Plan One is for first-year students placing into Mathematics 3 and ~~BIOE-3~~ taking Chemistry 1A:

Plan One			
Year	Fall	Winter	Spring
1st (frsh)	Chem-1A <u>gen ed</u> Math-MATH 3 core	Chem 1B MA Math-MATH 11A BIOE-3 <u>gen ed</u>	Chem-CHEM 1C/NB/M Math-MATH 11B gen ed

Plan Two is a more rigorous schedule for first-year students placing into Mathematics 11A and taking Chemistry 1A ~~BIOE/BIOL-20~~:

Plan Two			
Year	Fall	Winter	Spring
1st (frsh)	Chem-CHEM 1A Math-MATH 11A core	Chem-CHEM 1B/M Math-MATH 11B gen ed	Chem-CHEM 1C/N Math-MATH 22 BIOL 20A
2nd (soph)	BIOL 20B Chem-CHEM 108A/L* gen ed	BIOE 20C Chem-CHEM 108B/M* gen ed	BIOL-100 <u>elective</u> BIOL 105 gen ed

*Students may use the three-quarter ~~C~~chemistry 112 series to fulfill the organic chemistry requirement.

General Biology Minor Requirements

In addition to the introductory biology, chemistry, mathematics, and physics (as listed above), students are required to take a total of five upper-division biology courses including courses BIOL 100, BIOL 105, and the three distribution requirement courses; one must include a laboratory. There is no senior comprehensive requirement for the minor. Please contact the Biological Sciences Undergraduate Advising office for further information.

Degree Programs Sponsored by Ecology and Evolutionary Biology

Ecology and Evolution Major

Program Description

The ecology and evolution major provides students with interdisciplinary skills necessary for understanding and solving complex problems in ecology, evolution, behavior, and physiology. While some of these disciplines focus on molecular or chemical mechanisms, they all address questions on larger spatial and temporal scales that can be applied to important environmental problems, including genetic and ecological aspects of conservation biology and biodiversity.

Students majoring in ecology and evolution will receive a B.S. degree based on an integrated series of courses providing breadth in fundamental areas of biology and allied sciences that enhance understanding of evolutionary and ecological processes. The capstone of this curriculum is a suite of field courses providing students unique opportunities to learn and conduct research in a host of ecological systems. Students are encouraged to take field courses in their areas of specialization. Other opportunities include participation in research projects with faculty sponsors and the intensive Education Abroad Programs in Costa Rica (tropical biology) and Australia (marine sciences).

Ecology and Evolution B.S. Major Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B, and 20C

General Chemistry: Chemistry 1A, 1B/M and 1C/N

Calculus: Mathematics 11A-B or 19A-B

Biostatistics: Applied Mathematics and Statistics 7/L

Physics: Physics 7A/L and 7B/M

Advanced Requirements

A total of eleven upper-division courses; two must include laboratory or fieldwork.

Genetics: BIOL 105

Ecology: BIOE 107

Evolution: BIOE 109

One of the following physiology courses:

BIOE 131/L, *Animal Physiology/Laboratory*

BIOE 135, *Plant Physiology*

One of the following organism courses:

~~BIOE 110/L, *Biology and Ecology of Vertebrates/Laboratory*~~

BIOE 117/L, *Systematic Botany of Flowering Plants/Laboratory*

BIOL 119/L, *Microbiology/Laboratory*

BIOE 120/L, *Marine Botany/Laboratory*

BIOE 122/L, *Invertebrate Zoology/Laboratory*

Elective list for Ecology and Evolution Major

Three topical electives chosen from the following:

BIOE 108, *Marine Ecology*

~~BIOE 110/L, *Biology and Ecology of Vertebrates/Laboratory*~~

BIOE 112/L, *Ornithology/Laboratory*

BIOE 114/L, *Herpetology/Laboratory*

BIOE 117/L, *Systematic Botany/Laboratory*

BIOE 120/L, *Marine Botany/Laboratory*

BIOE 122/L, *Invertebrate Zoology/Laboratory*

BIOE 125, *Marine Microbial Ecology*

Marine Biology Major

Program Description

UCSC is situated within five miles of Monterey Bay and its great diversity of coastal marine ecosystems; nature reserves; state, federal, and private marine research institutions and resource management agencies. These resources, combined with on-campus computing and analytical facilities and the Long Marine Laboratory, make UCSC an exceptional campus for the study of marine biology and its application to coastal conservation and management. Descriptions of nearby environments, institutions, and facilities are available through the Ecology and Evolutionary Biology Department web site at <http://www.biology.ucsc.edu/eeb/index.html>.

The marine biology major is designed to introduce students to marine organisms and the biological and physical processes that affect these organisms, their populations, and their coastal and oceanic ecosystems. The emphasis is on basic principles that help us understand the processes that shape life in marine environments. The marine biology major is a demanding program that offers a B.S. degree and requires several more courses than the general biology B.A. major.

Marine Biology B.S. Major Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B, and 20C

General Chemistry: Chemistry 1A, 1B/M and 1C/N

Calculus: Mathematics 11A-B or 19A-B

Biostatistics: Applied Mathematics and Statistics 7/L

Physics: Physics 7A/L and 7B/M

Advanced Requirements

A total of 11 upper-division courses; two must include laboratory or fieldwork.

Genetics: BIOL 105

Evolution: BIOE 109

One ecology course:

BIOE 107, *Ecology*

BIOE 108, *Marine Ecology*

One marine environment course:

~~BIOE-167, Ocean Ecosystems~~

BIOE 168, *Biological Oceanography*

Ocean Sciences 101, *Marine Environment*

One marine course:

BIOE 120/L, *Marine Botany/Laboratory*

BIOE 122/L, *Invertebrate Zoology/Laboratory*

BIOE 127/L, *Ichthyology/Laboratory*

BIOE 129/L, *Biology of Marine Mammals/Laboratory*

Elective list for Marine Biology Major

Three topical electives chosen from the following:

BIOE 108, *Marine Ecology*

BIOE 120/L, *Marine Botany/Laboratory*

BIOE 122/L, *Invertebrate Zoology/Laboratory*

~~BIOE 124/L, *Marine Plankton/Laboratory*~~

BIOE 125, *Marine Microbial Ecology*

BIOE 127/L, *Ichthyology/Laboratory*

BIOE 129/L, *Biology of Marine Mammals/Laboratory*

BIOE 155, *Freshwater Ecology*

BIOE 158L, *Marine Ecology Laboratory*

BIOE 159ABCD, *Marine Ecology Field Quarter*

BIOE 161, *Kelp Forest Ecology*

BIOE 161L, *Kelp Forest Ecology Laboratory*

Plant Sciences Major

Program Description

UCSC has a strong program in the plant sciences (sometimes called botany). A fine natural environment, the campus Arboretum, the facilities under the Center for Agroecology and Sustainable Food Systems (especially the Farm and Garden), and an excellent greenhouse collection all enhance the resources that support our botanical programs.

The plant sciences major is designed for students with an interest in plant biology and its associated curricular fields such as plant ecology, plant physiology, plant pathology, plant molecular biology, soils, and applied plant sciences. After completion of the core courses, students can proceed in one of several directions depending on their interest. For example, a more in-depth study of physiology and molecular biology courses can serve as preparation for work in the biotechnology field or for graduate school; further studies in plant ecology, tropical ecology, or restoration ecology can lead to careers such as

resource ecologist or naturalist or to the pursuit of related fields in graduate school; upper-division training in agroecology can lead to careers in agriculture or food systems. A special feature of this major is a one-quarter internship and/or independent research requirement. There are many opportunities for internships both on the UCSC campus and in the community at large.

Plant Sciences B.S. Major Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B, and 20C

General Chemistry: Chemistry 1A, 1B/M and 1C/N

Calculus: Mathematics 11A-B or 19A-B

Biostatistics: Applied Mathematics and Statistics 7/L

Physics: Physics 7A/L and 7B/M

Advanced Requirements

A total of eleven upper-division courses; two of which must include laboratory or fieldwork.

Genetics: BIOL 105

Ecology: BIOE 107

Evolution: BIOE 109

One plant physiology course from the following:

BIOE 135, *Plant Physiology*

Environmental Studies 162, *Plant Physiological Ecology*

One botany course from the following:

BIOE 117/L, *Systematic Botany*

BIOE 120/L, *Marine Botany/Laboratory*

Elective list for Plant Sciences Major

Degree Programs Sponsored by Molecular, Cell, and Developmental Biology

Health Sciences Major

Program Description

The B.S. major in health sciences is designed for students interested in careers in medicine or biomedical research and satisfies the admission requirements for most U.S. medical schools. It is based on the existing B.S. degree in molecular, cell, and developmental biology, with similar course requirements in chemistry, physics, and mathematics. Students are required to take five courses directly relevant to human health in addition to genetics, biochemistry, and cell biology. Students in this program must also fulfill Spanish language and health care internship requirements.

Health Sciences B.S. Major Requirements*

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B, and BIOL 20L

General Chemistry: Chemistry 1A, 1B/M and 1C/N

Organic Chemistry: Chemistry 108A/L and 108B/M, 108C recommended for pre-med students, or 112A/L, 112B/M, and 112C/N

Calculus: Mathematics 11A-B or 19A-B; and 22 (three quarters)

Physics: Physics 6A/L, 6B/M, and 6C/N

Advanced Requirements

A total of eight upper-division biology courses, as follows:

Four core courses:

Biochemistry: BIOL 100 or BIOE 100A, 100B, and 100C

Genetics: BIOL 105

Cell Biology: BIOL 110

Human Physiology with Lab: BIOL 130/L

Three of the following lecture courses:

~~BIOL 133/L, Exercise Physiology/Laboratory~~

BIOL 111, *Immunology*

BIOL 113, *Mammalian Endocrinology*

BIOL 114, *Cancer Cell Biology*

BIOL 115, *Eukaryotic Molecular Biology*

BIOL 119, *Microbiology*

BIOL 120, *Development*

BIOL 125, *Neuroscience*

BIOL 126, ~~Cancer Cell Biology~~Advanced Neural Development

BIOL 127, *Neurodegenerative Disease*

BIOL 135/L, *Anatomy of the Human*

Body/Laboratory

BIOL 178, *Stem Cell Biology*

BIOL 179, *Biotechnology and Drug Development*

Internship Requirement: BIOL189, *Health Sciences Internship*. The student must participate in a community health care service activity approved by the health sciences internship coordinator. Credit may be earned over multiple quarters.

Language Requirement: Spanish 1–4 or the equivalent and one quarter of Spanish for health care workers (Spanish 5M).

* Medical and professional school admissions requirements vary; students should verify that their coursework will satisfy the admissions requirements of the programs to which they plan to apply.

Health Sciences B.S. Sample Planners

Plan One is for first-year students placing into Mathematics 3 and [taking Chemistry 1A](#)~~BIOE 3~~:

* Students may use the three-quarter ~~C~~chemistry 112 series to fulfill the organic chemistry requirement.

**Students should take either an elective, a Spanish course, or the third quarter of organic chemistry.

Molecular, Cell, and Developmental Biology Major

Program Description

The molecular, cell, and developmental (MCD) biology major is designed for students interested in medical or other professional graduate programs and those preparing for careers in biotechnology industries. This major is more structured than the general biology major and requires that students pay careful attention to the prerequisites required for upper-division biology courses.

Molecular, Cell, and Developmental Biology B.S. Major Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B, and 20C

General Chemistry: Chemistry 1A, 1B/M and 1C/N

Organic Chemistry: Chemistry 108A/L and 108B/M or 112A/L, 112B/M, and 112C/N

Calculus: Mathematics 11A-B or 19A-B; and 22

Physics: Physics 6A/L, 6B/M, and 6C/N

Advanced Requirements

A total of nine upper-division biology courses, as follows:

Four core courses:

Biochemistry: BIOL 100 or the series BIOC 100A, and 100B, and 100C

(Upon completion of the series, BIOC 100C may be used to satisfy one elective)

Genetics: BIOL 105

Cell Biology: BIOL 110

Eukaryotic Molecular Biology: BIOL 115

Three of the following lecture courses:

BIOL 111, *Immunology*

BIOL 113, *Mammalian Endocrinology*

BIOL 114, *Cancer Cell Biology*

BIOL 119, *Microbiology*

BIOL 120, *Development*

BIOL 125, *Neuroscience*

BIOL 126, *Advanced Neural Development*

BIOL 127, *Neurodegenerative Disease*

BIOL 130/L, *Human Physiology/Laboratory*

BIOL 178, *Stem Cell Biology*

BIOL 179, *Biotechnology and Drug Development*

BIOE 109, *Evolution*

BIOE 135, *Plant Physiology*

Two of the following laboratory courses:

BIOL 100L, *Biochemistry Laboratory*

BIOL 105L, *Eukaryotic Genetics Laboratory*

BIOL 105M, *Microbial Genetics Laboratory*

BIOL 109L, *Yeast Molecular Genetics Laboratory*

BIOL 110L, *Cell Biology Laboratory*

BIOL 111L, *Immunology Laboratory*

BIOL 115L, *Eukaryotic Molecular Biology Laboratory*

BIOL 119L, *Microbiology Laboratory*

BIOL 120L, *Development Laboratory*

~~BIOL 128L, Neural Genetics Laboratory~~

BIOL 130/L, *Human Physiology/Laboratory**

BIOL 178L, Protocols in Stem Cell Biology

BIOL 180/L, *Research Programming for Biologists and Biochemists/Laboratory*

BIOL 181, *Computational Biology Tools*

~~BIOL 185L Hughes Undergraduate Research Laboratory~~

BIOL 186L, *Undergraduate Research in MCD*

BIOL 187L, *Molecular Biotechnology Laboratory*

BIOC 110, *Biochemistry Laboratory*

*BIOL 130/L meets either one lecture or one laboratory requirement, but not both.

Molecular, Cell and Developmental Biology B.S. Sample Planners

Plan One is for first-year students placing into Mathematics 3 and ~~BIOL 3~~taking Chemistry 1A:

Plan One			
Year	Fall	Winter	Spring
1st (frsh)	Chem 1A <u>gen ed</u> Math MATH 3 core	Chem CHEM 1A <u>B-M</u> Math MATH 11A BIOE 3	Chem CHEM 1B <u>M-CN</u> Math MATH 11B gen ed

* Students may use the three-quarter ~~C~~hemistry 112 series to fulfill the organic chemistry requirement.

Neuroscience and Behavior Majors

Program Description

Neuroscience, the study of the nervous system and behavior of animals, is a frontier area in biology, touching psychology on the one hand and computer science on the other. The neuroscience and behavior majors provide students with rigorous preparation for graduate studies and research in the fields of neuroscience and behavior. The brain and determinants of behavior are studied at all levels, from biological molecules to individual nerve cells to functioning organisms to social behavior. The majors emphasize the interrelationship between the two fields, building on a common core of general and biological science course work. Students select a pathway in either behavior or molecular neuroscience. Rigorous course work is supplemented by opportunities for hands-on laboratory and field courses and independent research.

Neuroscience and Behavior B.A. Major Requirements

Introductory Course Requirements

Introductory Biology: BIOL 20A, BIOE 20B, and 20C

General Chemistry: Chemistry 1A, 1B/M and 1C/N

Organic Chemistry: Chemistry 108A/L and 108B/M or 112A/L, 112B/M, and 112C/N

Calculus: Mathematics 11A-B or 19A-B

Biostatistics: Applied Mathematics and Statistics 7/L

Physics: Physics 7A/L and 7B/M

Advanced Course Requirements

Five upper-division core courses to include:

Biochemistry: BIOL 100 or the series BIOC 100A, and 100B, and 100C

(Upon completion of the series, BIOC 100C may be used to satisfy one elective)

Genetics: BIOL 105

Cell Biology: BIOL 110

Neuroscience: BIOL 125

Behavioral Ecology: BIOE 140

Plus additional elective courses chosen from one of two areas of concentration:

Molecular Neuroscience Pathway (four courses)

BIOL 115, *Eukaryotic Molecular Biology*

BIOL 126, *Advanced Molecular Neuroscience*

One of the following ~~physiology or psychology courses~~electives:

[BIOL 127, Neurodegenerative Disease](#)

BIOL 130/L, *Human Physiology*

Psychology 121, *Perception*

Psychology 123, *Behavioral Neuroscience*

One of the following ~~biology~~laboratory courses:

BIOL 100L, *Biochemistry Laboratory*

BIOL 105L, *Eukaryotic Genetics Laboratory*

BIOL 109L, *Yeast Molecular Genetics Laboratory*

BIOL 110L, *Cell Biology Laboratory*

BIOL 111L, *Immunology Laboratory*

BIOL 115L, *Eukaryotic Molecular Biology Laboratory*

BIOL 120L, *Development Laboratory*

~~BIOL 128L, Neural Genetics Laboratory~~

BIOL 130/L, Human Physiology/Laboratory*

BIOL 178L, Protocols in Stem Cell Biology

BIOL 180/L, Research Programming for Biologists and Biochemists/Laboratory

BIOL 181, Computational Biology Tools

~~BIOL 185L, Hughes Undergraduate Research Laboratory~~

BIOL 186L, Undergraduate Research in MCD

BIOL 187L, Molecular Biotechnology Laboratory

Behavior Pathway (four courses)

BIOL 113, Mammalian Endocrinology

One of the following:

BIOE 112/L, Ornithology/Laboratory

BIOE 114/L, Herpetology/Laboratory

BIOE 129/L, Marine Mammals/Laboratory

BIOE 141L, Behavioral Ecology Field Course

BIOE 150, Ecological Field Methods

One of the following ~~physiology or psychology courses~~electives:

~~BIOE 110/L, Biology and Ecology of Vertebrates/Laboratory~~

BIOE 122/L, Invertebrate Zoology/Laboratory

BIOE 131/L, Animal Physiology/Laboratory

~~BIOE 133/L, Exercise Physiology/Laboratory~~

BIOL 120, Development

BIOL 127, Neurodegenerative Disease

BIOL 130/L, Human Physiology/Laboratory

Psychology 121, Perception

Psychology 123, Behavioral Neuroscience

Psychology 133, Psychology and Evolutionary Theory

One of the following laboratory courses:

~~BIOE 110/L, Biology and Ecology of Vertebrates/Laboratory~~

BIOE 122/L, Invertebrate Zoology/Laboratory

BIOE 131/L, Animal Physiology/Laboratory

BIOE 141L, Behavioral Ecology Field Course

BIOE 150L, Ecological Field Methods

BIOL 105L, Eukaryotic Genetics Laboratory

BIOL 130/L, Human Physiology Laboratory

BIOL 180/L, Research Programming for Biologists and Biochemists/Laboratory

BIOL 181, Computational Biology Tools

Computer Science ~~12A, Introduction to Programming~~5C, Introduction to Programming in C/C++

Computer Science ~~12B, Introduction to Data Structures~~5J, Introduction to Programming in Java

Computer Science 5P, Introduction to Programming in Python

*BIOL 130/L meets either a physiology or a laboratory requirement, but not both.

Neuroscience and Behavior B.A. Sample Planners

Plan One is for first-year students placing into Mathematics 3 and ~~BIOE 3~~taking Chemistry 1A:

Plan One			
Year	Fall	Winter	Spring
1st (frsh)	Chem 1A <u>gen ed</u> Math MATH 3 core	Chem-CHEM 1AB-M Math-MATH 11A BIOE 3 <u>gen ed</u>	Chem 1B/M/C/N Math-MATH 11B gen ed
2nd	BIOL	BIOE 20B	BIOE 20C

Plan One			
(soph)	20A Chem HEM 1C/N AMS 7/L -BIOL 20A gen ed	Chem -CHEM 108A/L gen ed	Chem -CHEM 108B/M gen ed

Plan Two is a ~~more rigorous schedule~~ for first-year students placing into Mathematics 11A and ~~taking Chemistry 1A~~~~BIOE/BIOL 20~~:

Plan Two			
Year	Fall	Winter	Spring
1st (frsh)	Chem -CHEM 1A Math -MATH 11A core	Chem -CHEM 1B/M Math -MATH 11B gen ed	Chem -CHEM 1C/N BIOL 20A gen ed
2nd (soph)	BIOL 20B AMS 7/L Chem HEM 108A/L * gen ed	BIOL 20C Chem -CHEM 108B/M+L* gen ed	BIOL 105 Chem 108B /Melective gen ed

* Students may use the three-quarter ~~C~~chemistry 112 series to fulfill the organic chemistry requirement.

Neuroscience and Behavior B.S. Major Requirements

Introductory Course Requirements

Introductory Biology: BIOL 20A, BIOE 20B, and 20C

General Chemistry: Chemistry 1A, 1B/M and 1C/N

Organic Chemistry: Chemistry 108A/L and 108B/M or 112A/L, 112B/M, and 112C/N

Calculus: Mathematics 11A-B or 19A-B; and 22

Biostatistics: Applied Mathematics and Statistics 7/L

Physics: Physics 6A/L, 6B/M, and 6C/N

Advanced Course Requirements

Five upper-division core courses to include:

Biochemistry: BIOL 100 or the series BIOE 100A, and 100B, and 100C

(Upon completion of the series, BIOE 100C may be used to satisfy one elective)

Genetics: BIOL 105

Cell Biology: BIOL 110

Neuroscience: BIOL 125

Behavioral Ecology: BIOE 140

Plus additional elective courses chosen from one of two areas of concentration:

Molecular Neuroscience Pathway (five courses)

BIOL 115, *Eukaryotic Molecular Biology*

BIOL 126, *Advanced Molecular Neuroscience*

One of the following ~~physiology or psychology courses~~electives:

BIOL 130/L, *Human Physiology*

BIOL 127, *Neurodegenerative Disease*

Psychology 121, *Perception*

Psychology 123, *Behavioral Neuroscience*

Two of the following ~~biology~~-laboratory courses:

BIOL 100L, *Biochemistry Laboratory*

BIOL 105L, *Eukaryotic Genetics Laboratory*

BIOL 109L, *Yeast Molecular Genetics Laboratory*

BIOL 110L, *Cell Biology Laboratory*

BIOL 111L, *Immunology Laboratory*

BIOL 115L, *Eukaryotic Molecular Biology Laboratory*

BIOL 120L, *Development Laboratory*

~~BIOL 128L, Neural Genetics Laboratory~~

BIOL 130/L, *Human Physiology/Laboratory**

~~BIOL 178L, *Protocols in Stem Cell Biology*~~

BIOL 180/L, *Research Programming for Biologists and Biochemists/Laboratory*

BIOL 181, *Computational Biology Tools*

~~BIOL 185L, *Hughes Undergraduate Research Laboratory*~~

BIOL 186L, *Undergraduate Research in MCD*

BIOL 187L, *Molecular Biotechnology Laboratory*

Behavior Pathway (four courses)

BIOL 113, *Mammalian Endocrinology*

One of the following:

BIOE 112/L, *Ornithology/Laboratory*

BIOE 114/L, *Herpetology/Laboratory*

BIOE 129/L, *Marine Mammals/Laboratory*

BIOE 141L, *Behavioral Ecology Field Course*

BIOE 150, *Ecological Field Methods*

One of the following ~~physiology or psychology courses~~electives:

~~BIOE 110/L, *Biology and Ecology of Vertebrates/Laboratory*~~

BIOE 122/L, *Invertebrate Zoology/Laboratory*

BIOE 131/L, *Animal Physiology/Laboratory*

~~BIOE 133/L, *Exercise Physiology/Laboratory*~~

BIOL 120, *Development*

BIOL 130/L, *Human Physiology/Laboratory*

Psychology 121, *Perception*

Psychology 123, *Behavioral Neuroscience*

Psychology 133, *Psychology and Evolutionary Theory*

Two of the following laboratory courses:

~~BIOE 110/L, *Biology and Ecology of Vertebrates/Laboratory*~~

BIOE 122/L, *Invertebrate Zoology/Laboratory*

BIOE 131/L, *Animal Physiology/Laboratory*

BIOE 141L, *Behavioral Ecology Field Course*

BIOE 150L, *Ecological Field Methods*

BIOL 105L, *Eukaryotic Genetics Laboratory*

BIOL 130/L, *Human Physiology Laboratory*

BIOL 180/L, *Research Programming for Biologists and Biochemists/Laboratory*

BIOL 181, *Computational Biology Tools*

Computer Science 5C, *Introduction to Programming in C/C++*

Computer Science 5J, *Introduction to Programming in Java*

Computer Science 5P, *Introduction to Programming in Python*~~Computer Science 12A, *Introduction to Programming*~~

~~Computer Science 12B, *Introduction to Data Structures*~~

*BIOL 130/L meets either a physiology or a laboratory requirement, but not both.

Neuroscience and Behavior B.S. Sample Planners

Plan One is for first-year students placing into Mathematics 3 and BIOE 3:

Plan One			
Year	Fall	Winter	Spring
1st (frsh)	Chem 1A gen ed Math MATH 3 core	Chem CHEM 1AB-M Math MATH 11A BIOE 3 gen ed	Chem CHEM 1B/MCN Math MATH 11B gen ed

* Students may use the three-quarter ~~C~~hemistry 112 series to fulfill the organic chemistry requirement.

Ecology and Evolutionary Biology

Ecology and Evolutionary Biology
A308 Earth and Marine Sciences
(831) 459-5358
<http://www.eeb.ucsc.edu/>

Graduate Program Description

The graduate program in ecology and evolutionary biology (EEB, courses BIOE) at UCSC is one of the premier programs in the country. This is due to the quality and commitment of the faculty, the long-standing tradition of the University of California, and the unique environment of the Santa Cruz campus. UCSC has been singularly blessed with varied and easily accessible marine and terrestrial resources for research. UCSC is ideal for marine research—having its own marine laboratory, a fleet of boats, and one of the most active scientific diving programs in the country. In close proximity to pinniped rookeries at the UC Reserve at Año Nuevo, the campus is located on Monterey Bay, which has the largest concentration of marine research programs in the country. In addition to state-of-the-art departmental laboratories, students have full access to the molecular ecology and evolutionary genetics (MEEG) facility and other analytical laboratories of the UCSC Institute of Marine Sciences.

Terrestrial biologists have access to all of California's natural environments through the University of California's natural reserve system; the diverse habitats on UCSC's 2,000-acre campus itself (mixed redwood forest, fossil sand dune associations, rolling pasture land, and chaparral) and on several adjacent preserves; the UCSC experimental farm and garden; extensive southern hemisphere plantings in the UCSC arboretum; and greenhouses and associated laboratory facilities. More than two-thirds of our faculty participate in field studies throughout the ~~P~~acific ~~E~~basin (from Alaska to Antarctica), in ~~p~~acific ~~R~~im nations (in Latin America, the Far East, and Australia), and beyond.

The program in ecology and evolutionary biology is comprised of four core tracks: (1) population and community ecology, (2) evolutionary biology, (3) physiology and behavior including marine and terrestrial animals, and (4) systematics and biodiversity.

Degree Requirements

Ph.D. Requirements

~~Students must take BIOE 200A and 200B in the first year. BIOE 279 must be taken fall quarter of the first year; BIOE 293 is required four quarters thereafter. BIOE 294 must be taken every quarter that the student is in residence. Each Ph.D. student must complete at least two quarters as a teaching assistant during their graduate career.~~Courses:

~~BIOE 200A, Scientific Skills~~

~~BIOE 200B, Advanced Organismal Biology~~

~~BIOE 279, Evolutionary Ecology~~

~~BIOE 293, Readings in Ecology and Evolution (or equivalent)~~

~~BIOE 294, Ecology, Evolutionary Biology Seminar (taken each quarter when in residence)~~

~~Each Ph.D. student should expect to complete at least two quarters as a teaching assistant during their graduate career.~~

During fall of the second year, students take a comprehensive examination. This is a two-part exam, written and oral, the goal of which is to examine the student's breadth and depth of knowledge of evolution, ecology, physiology, behavior, organismal, and general biology. A committee is comprised of four examiners selected by each student and the student's supervisor. Each student's area of research, together with the stated goal of the exam, should guide the composition of the student's committee.

During the sixth term, the student submits a dissertation research proposal to their dissertation committee and must defend it in a three-hour oral examination before the dissertation committee. The student advances to candidacy only after completing all course work, passing the written and oral portions of the comprehensive examination, writing and defending a dissertation research proposal, and presenting a candidacy seminar on his/her proposed research.

The student must submit his/her doctoral dissertation to the dissertation committee for tentative approval at least 60 days before presenting a formal, public doctoral research seminar. Also, the student must meet with the dissertation committee to defend the thesis at least one week prior to the public seminar. Before the dissertation is accepted for signature by the dissertation committee, at least one chapter must be submitted as a paper (not an abstract) to a refereed journal for publication.

M.A. Requirements

In addition to course work identified by the advisory committee or adviser, each student will be required to take BIOE 279, two quarters of BIOE 293, BIOE 294 and the appropriate lab course when in residence at the university (not in the field), and BIOE 297, as needed, to come up with 15 credits. BIOE 200A and 200B are recommended but not required.

The student must submit their thesis draft to the thesis committee for tentative approval at least 60 days before presenting a formal, public research seminar. Also, the student must meet with the thesis committee to defend the thesis at least one week prior to the public seminar. At that time, the committee may sign the cover page of the student's dissertation.

There is no requirement, but it is highly recommended, that at least one thesis chapter be submitted as a paper (not an abstract) to a refereed journal for publication.

Molecular, Cell, and Developmental Biology

Molecular, Cell, and Developmental Biology
225 Sinsheimer Laboratories
(831) 459-4986
<http://www.mcd.ucsc.edu/>

Graduate Program Description

The program in molecular, cell, and developmental (MCD) biology (courses BIOL) leads to either the Ph.D. or the M.A. and is designed to prepare students for careers in research, teaching, and biotechnology. Current research in MCD biology focuses on such topics as the structure and function of RNA, gene expression, signaling, cell division, development, and pathogenesis. A unique focus of the department is the center for the molecular biology of RNA.

Degree Requirements

Ph.D. and master's students complete the graduate core courses, BIOL 200A, 200B, and 200C, [and 200D](#) in the first year. Additional undergraduate courses required to strengthen the student's background may be assigned by the advisory committee during the initial advising meeting. Typically, these courses are Biochemistry 100A and BIOL 115. Students are required to participate in lab research meetings and departmental seminar series every quarter.

First-year Ph.D. students complete three 10-week laboratory rotations. Students choose their rotation laboratories in consultation with the Graduate Advisory Committee. The lab rotations give students a chance to learn about the diverse fields and methods of inquiry and to interact with members of the department. At the end of each quarter, students present a short talk to the department on their rotation project. At the end of spring quarter, students consult with rotation faculty to identify a permanent thesis laboratory.

Second-year Ph.D. students are required to submit two proposals—one on their proposed thesis work and a second on an unrelated MCDB research topic. The Ph.D. qualifying exam, taken in spring quarter of the second year, is an oral examination before a committee comprised of three internal reviewers and one external reviewer.

Once the qualifying exam is passed, students, in conjunction with their faculty adviser, select a committee to consult with in the development of their thesis. This committee monitors the student's progress and ultimately approves the final draft of the student's dissertation. The student must meet with the thesis committee at least once a year after passing the qualifying exam.

Students are advanced to candidacy following presentation of their research to the department in a seminar. This takes place no later than spring of the third year.

Graduate students must take two approved advanced graduate electives. Students who enter the Ph.D. program with a Masters degree without doing rotations must complete an additional two approved graduate elective courses.

Ph.D. Requirements

Completion of the graduate core course
Completion of the *Practice of Science* course
Completion of an oral qualifying exam
Completion of an advancement to candidacy seminar
Completion of two advanced graduate elective courses
Yearly meetings with a thesis committee after the qualifying exam
Completion of two quarters of service as a teaching assistant
Completion of thesis research resulting in a dissertation of individual work
Presentation of thesis defense in departmental seminar

M.A. Requirements

Acceptance to the master's program requires a faculty sponsor. Interested applicants must contact faculty directly and procure sponsorship before beginning the application process.
Completion of the graduate core course
Completion of the *Practice of Science* course
Write a master's thesis based on original research
Presentation of thesis defense in departmental seminar

Lower-Division Courses

20B. Development and Physiology. F,W,S

Topics in morphology, physiology, development, genetics, and endocrinology selected to exemplify current issues and perspectives in organismic biology.
Prerequisite(s): BIOL 20A. *The Staff*

20C. Ecology and Evolution. F,W,S

Introduction to ecology and evolution covering principles of evolution at the molecular, organismal, and population levels. Evolutionary topics include genetic and phenotypic variation, natural selection, adaptation, speciation, and macroevolution. Also covers behavioral, population, and community ecology including applied ecological issues. *B. Marinovic*

75. Scientific Diving Certification (2 credits). F,S

Prerequisite for course 161/L, *Kelp Forest Ecology*, and all research diving performed under the auspices of UCSC or other academic institutions. Course work includes lectures and scuba diving. Topics include subtidal sampling techniques, navigation, low visibility diving, search and recovery, rescues, small boat use, oxygen administration for divers, technical blue water deep diving, physics, and physiology. Apply online at <http://www2.ucsc.edu/sci-diving>. Students are billed a course materials fee that covers costs for equipment use, materials, and transportation. Prerequisite(s): skill level equal to Advanced Scuba Diver Certification, pass scuba physical, provide own scuba gear, be certified in CPR and First Aid; and interview: pass swim test and scuba skills test. Enrollment limited to 16. *The Staff*

80N. Biology of Human Health and Nutrition. W,S

An introduction to the biology of human nutrition and its effects on human health. The course explores how nutrient balance, exercise, and age interact in their effects on human health, fitness, and disease. (General Education Code(s): T2-Natural Sciences.) *J. Thompson*

80P. Infectious Diseases and Human Populations. W,S

An overview of the biology of infectious diseases in human societies including why diseases vary in severity, how human bodies defend themselves, and how public health efforts cope with the problem of rapidly evolving pathogens. (General Education Code(s): T2-Natural Sciences.) *J. Thompson*

99. Tutorial. F,W,S

Individual, directed study for undergraduates. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

107. Ecology. W,S

Focuses on physiological, behavioral, and population ecology, and on linking ecological processes to evolution. It includes basic principles, experimental approaches, concepts of modeling, and applications to ecological problems.

Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. (W) *B. Lyon*, (S) *J. Moore*, (S) *D. Potts*

108. Marine Ecology. W

Paradigms and designs in marine ecology. A review of the paradigms that have shaped our understanding of marine ecology; analysis and discussion of experiments with these paradigms. Students cannot receive credit for this course and course 208.

Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C; BIOE 107 or 140 recommended. Enrollment restricted to juniors and seniors. *M. Carr*

109. Evolution. F,W

An examination of the history and mechanisms of evolutionary change. Topics include molecular evolution, natural and sexual selection, adaptation, speciation, biogeography, and macroevolution. Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C, and BIOL 105. (F) *G. Pogson*, (W) *G. Bernardi*

112. Ornithology. F

Introduction to the evolution, ecology, behavior, and natural history of birds, using exemplary case histories to illustrate key concepts in evolution, ecology, and behavior. Prerequisite(s): BIOE 107, BIOE 109, BIOE 140, ENVS 24 or ENVS 105. Concurrent enrollment in BIOE 112L is required. Enrollment limited to 20. *B. Lyon*

112L. Ornithology Field Studies (2 credits). F

Field trips introduce students to field identification skills and field investigation of census, foraging behavior, migration, social behavior, and communication. Examination of specimens in the laboratory will be used to highlight the diversity and taxonomy of birds. Students are billed a materials fee. Some field trips may require students to provide their own transportation. Prerequisite(s): BIOE 107, BIOE 109, BIOE 140, or ENVS 24 or 105. Concurrent enrollment in BIOE 112 is required. Enrollment limited to 20. Offered in alternate academic years. *B. Lyon*

114. Herpetology. *

Lectures introduce students to evolution, development, physiology, behavior, ecology, and life history of reptiles and amphibians. The materials integrate with conceptual and theoretical issues of ecology, evolution, physiology, and behavior. Prerequisite(s): BIOE 107, BIOE 109, BIOE 110, BIOE 140 or ENVS 105.

Concurrent enrollment in BIOE 114L required. Enrollment limited to 25. Offered in alternate academic years. *B. Sinervo*

114L. Field Methods in Herpetological Research (2 credits). *

Field trips introduce students to natural history, censusing techniques, physiological ecology, and behavioral analysis of reptiles and amphibians. Laboratories introduce students to techniques for analyzing behavior and physiology. Field studies culminate with a group project in a natural setting. Some field trips may be held on weekends due to weather considerations. Some field trips may require students to provide their own transportation, some transportation will be provided by UCSC. Students are billed a materials fee. Prerequisite(s): BIOE 107, 109, 110, 140 or ENVS 105. Concurrent enrollment in BIOE 114 is required. Offered in alternate academic years. *B. Sinervo*

117. Systematic Botany of Flowering Plants. S

An examination of the taxonomy and evolution of flowering plants. Special topics include phylogenetics and cladistics, plant species concepts, and modern methods of systematic research. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C; or ENVS 24. Must be taken concurrently with BIOE 117L. *K. Kay*

117L. Systematic Botany of Flowering Plants Laboratory (2 credits). S

Weekly laboratory concerned primarily with California flora and plant families. Several field trips. Students are billed a materials fee. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C; or ENVS 24. Must be taken concurrently with BIOE 117. *K. Kay*

120. Marine Botany. S

An introduction to the biology of marine algae, fungi, and angiosperms with regard to form and function. Major boreal, temperate, and tropical marine plant communities. Lecture format. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. Must be taken concurrently with BIOE 120L. *The Staff*

120L. Marine Botany Laboratory (2 credits). S

One laboratory weekly and several field trips. Focuses on marine algae, fungi, and angiosperms. Students are billed a materials fee. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. Must be taken concurrently with BIOE 120. Enrollment limited to 20. *The Staff*

122. Invertebrate Zoology. W

An examination of invertebrates and their habitats. Lecture format. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. BIOE 122L must be taken concurrently. Enrollment limited to 96. *B. Marinovic*

122L. Invertebrate Zoology Laboratory (2 credits). W

An examination of invertebrates and their habitats. Weekly laboratories or field trips. Students are billed a materials fee. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. BIOE 122 must be taken concurrently. Enrollment limited to 96. *B. Marinovic*

124. Marine Plankton. *

Review of morphology, systematics, and natural history of major marine planktonic taxa and evaluation of local plankton forms. Two lecture/lab sessions of three and one-half hours each, and two field trips during the quarter. (Also offered as Ocean Sciences 156. Students cannot receive credit for both courses.) Concurrent enrollment in BIOE 124L is required; one of the following recommended as preparation: OCEA 118, 142, or 242; or BIOE 120 or 122. Recommended for upper-division and graduate students. *M. Silver*

124L. Marine Plankton Laboratory (2 credits). *

Two lab meetings weekly. Concerned primarily with evaluation of local plankton forms. (Also offered as Ocean Sciences 156L. Students cannot receive credit for both courses.) Concurrent enrollment in BIOE 124 is required; one of the following recommended as preparation: OCEA 118, 142, or 242; or BIOE 120, or 122. *M. Silver*

125. Marine Microbial Ecology. S

The study of marine bacteria and their role in the marine ecosystem. Emphasis on biochemistry and physiology in relation to metabolic activity and elemental cycles, trophic interactions, and flows of material and energy in marine food webs. Exams and term paper required. Students cannot receive credit for this course and Ocean Sciences 218. (Also offered as Ocean Sciences 118. Students cannot receive credit

for both courses.) Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C, and CHEM 1C.
J. Zehr

127. Ichthyology. F

An introduction to the biology of jawless, cartilaginous, and bony fishes—their classification, evolution, form, physiology, and ecology. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. BIOE 127L must be taken concurrently. Offered in alternate academic years. *G. Bernardi*

127L. Ichthyology Laboratory (2 credits). F

One laboratory session a week and several field trips to study the biology of fish. Students are billed a materials fee. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. BIOE 127 must be taken concurrently. Offered in alternate academic years. *G. Bernardi*

129. Biology of Marine Mammals. S

A survey of cetaceans, pinnipeds, sirenians, and sea otters, including natural history, systematics, physiology, behavior, anatomy, and conservation. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C; BIOL 110 is recommended. *D. Costa*

129L. Biology of Marine Mammals Laboratory (2 credits). S

Covers the basics of marine mammal taxonomy, anatomy, and field methods with an emphasis on local field identification and understanding of local species. Will include field trips to Long Marine Lab, Ano Nuevo, and Monterey Bay. Students are billed a materials fee. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. Must be taken concurrently with BIOE 129. *D. Costa*

131. Animal Physiology. W

Principles and concepts underlying the function of tissues and organ systems in animals with emphasis on vertebrate systems. Students cannot receive credit for this course and BIOL 130. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. *The Staff*

131L. Animal Physiology Laboratory (2 credits). W

Experiments conducted with primary focus on quantitative physiological principles of organ systems and intact organisms. Students cannot receive credit for this course and course 130L. Students are billed a materials fee. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. Concurrent enrollment in BIOE 131 is required. Enrollment limited to 25. *The Staff*

135. Plant Physiology. S

Cellular and organismal functions important in the life of green plants. Prerequisite(s): BIOL 20A and BIOE 20B; BIOL 100 and BIOL 110 are highly recommended as preparation. *J. Pittermann*

140. Behavioral Ecology. F

An introduction to social and reproductive behavior. Emphasis on studies of vertebrates in their natural habitat. Ideas concerning the evolution of social behavior, mating systems, and individual reproductive strategies. Case histories of well-studied animals that illustrate key principles in courtship and mating, parental behavior, and food-getting behavior. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. *B. Sinervo*

141L. Behavioral Ecology Field Course. *

A field-based course introducing students to concepts and methods for studying behavioral ecology in nature. Students will conduct observations and field

experiments on various local model organisms including elephant seals, hummingbirds, sparrows, lizards, ants, bees, frogs, and salamanders. Students are billed a materials fee. Prerequisite(s): BIOE 107 or BIOE 140 or ENVS 105; satisfaction of the Entry Level Writing and Composition requirements. Enrollment limited to 25. Offered in alternate academic years. (General Education Code(s): W.) *B. Sinervo, B. Lyon*

145. Plant Ecology. F

An exploration of the ecology of plant form, function, distribution, abundance, and diversity. Topics include plant adaptations to environmental conditions, life history variation, competition, reproductive ecology, herbivory, and patterns of diversity. Lecture with discussions of original papers and independent field project. Students cannot receive credit for this course and course 245. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C; or ENVS 24. BIOE 107 is recommended. Enrollment limited to 30. *I. Parker*

145L. Field Methods in Plant Ecology. F

Hands-on exploration of the concepts and techniques of plant ecology. A combination of lab, greenhouse, and field-based exercises (irrespective of weather conditions). Statistical analysis and scientific writing. One required weekend field trip. Students cannot receive credit for this course and course 245L. Students are billed a materials fee. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; BIOL 20A, BIOE 20B, and BIOE 20C; or ENVS 24. Concurrent enrollment in BIOE 145 is required. BIOE 107 is recommended. Enrollment limited to 30. (General Education Code(s): W.) *I. Parker*

147. Community Ecology. S

Develops the major themes of community biology: structure, trophic dynamics, succession, complex interactions among species, herbivory, evolution and coevolution. Uses case histories of well-studied marine and terrestrial systems. Students cannot receive credit for this course and course 247. Prerequisite(s): BIOE 107 or 108 or 145 or 155 or 159A, or ENVS 24. Enrollment limited to 50. *L. Fox*

149. Disease Ecology. W

Focuses on the ecological and evolutionary processes that drive the transmission of pathogens between hosts; the impact of disease on host populations; and what causes the emergence of an infectious disease. Includes theoretical framework, description of field techniques, and discussion of wildlife and human diseases including malaria, West Nile virus, Lyme disease, HIV, avian influenza (bird flu), Chikungunya, tuberculosis, chytridiomycosis, and Ebola. Prerequisite(s): BIOL 20A, and BIOE 20B and 20C and 107. *A. Kilpatrick*

150. Ecological Field Methods. S

Lectures and laboratory computer exercises designed to familiarize students with research methods, study design, statistical approaches, and analysis tools for ecological research. Students cannot receive credit for this course and Environmental Studies 104A. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C; concurrent enrollment in BIOE 150L is required. BIOE 107, 108, 140, or 147 recommended. Enrollment limited to 25. *D. Croll*

150L. Ecological Field Methods Laboratory. S

Field-oriented course in the study of animal ecology and behavior. Combines overview of methodologies and approaches to field research with practical field studies. Students are billed a materials fee. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C; concurrent enrollment in BIOE 150 is required. BIOE 107, 108, 140, or 147 recommended. Enrollment limited to 25. (General Education Code(s): W.) *D.*

151A. Ecology and Conservation in Practice Supercourse: Ecological Field Methods. S

An intensive, on-site learning experience in terrestrial field ecology and conservation, using the University of California Natural Reserves. Students study advance concepts in ecology, conservation, and field methods for four weeks, then experience total immersion in field research at the UC Natural Reserves. Lectures, field experiments, and computer exercises familiarize students with research methods, study design, statistical approaches, and analytical tools for ecological research. Enrollment by application. Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C or ENVS 23, 24, 100; and AMS 7 and 7L. Concurrent enrollment in BIOE 151B-C-D or ENVS 109B-C-D is required. Satisfies the senior exit requirement for biological sciences majors and satisfies the senior exit requirement for environmental studies majors by prior approval. Students cannot receive credit for this course and BIOE 107, 107L, ENVS 104A or 196A. (Also offered as Environmental Studies 109A. Students cannot receive credit for both courses.) Enrollment limited to 25. *D. Croll, The Staff*

151B. Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory. S

Field-oriented course in ecological research. Combines overview of methodologies and approaches to field research with practical field studies. Students complete field projects in ecology and also learn the natural history of the flora and fauna of California. Students are billed a materials fee. Enrollment by application. Prerequisite(s): Entry Level Writing and Composition requirements; BIOL 20A, BIOE 20B, BIOE 20C or ENVS 23, 24, 100; and AMS 7 and 7L. Concurrent enrollment in BIOE 151A-C-D or ENVS 109A-C-D is required. Satisfies the senior exit requirement for biological sciences majors and satisfies the senior exit requirement for environmental studies majors by prior approval. Students cannot receive credit for this course and BIOE 150, 150L, ENVS 104A or 196A. (Also offered as Environmental Studies 109B. Students cannot receive credit for both courses.) Enrollment limited to 25. (General Education Code(s): W.) *D. Croll, The Staff*

151C. Ecology and Conservation in Practice Supercourse: Functions and Processes of Terrestrial Ecosystems. S

From lectures and discussion of terrestrial community and ecosystem ecology, students work individually or in small groups to present an idea for a project, review relevant literature, develop a research question/hypothesis, design and perform an experiment, collect and analyze data, and write a report. The instructor evaluates the feasibility of each student's project before it begins. Enrollment by application. Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C or ENVS 23, 24, 100; and AMS 7 and 7L. Concurrent enrollment in BIOE 151A-B-D or ENVS 109A-B-D is required. Satisfies the senior exit requirement for biological sciences majors and satisfies the senior exit requirement for environmental studies majors by prior approval. Students cannot receive credit for this course and BIOE 150, 150L, ENVS 104A or 196A. (Also offered as Environmental Studies 109C. Students cannot receive credit for both courses.) Enrollment limited to 25. *D. Croll, The Staff*

151D. Ecology and Conservation in Practice Supercourse: Conservation in Practice. S

Focuses on current issues in environmental and conservation biology and the emerging field methods used to address them. From field-oriented lectures about current issues in environmental and conservation biology, students pursue research project as individuals and small groups to develop hands-on experience with field

skills in conservation research and resource management. Enrollment by application. Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C or ENVS 23, 24, 100; and AMS 7 and 7L. Concurrent enrollment in BIOE 151A-B-C or ENVS 109A-B-C is required. Satisfies the senior exit requirement for biological sciences majors and satisfies the senior exit requirement for environmental studies majors by prior approval. Students cannot receive credit for this course and BIOE 150, 150L, ENVS 104A or 196A. (Also offered as Environmental Studies 109D. Students cannot receive credit for both courses.) Enrollment limited to 25. *D. Croll, The Staff*

155. Freshwater Ecology. F

Provides an overview of the physical, chemical, and biological processes that characterize inland waters such as lakes, streams, rivers, and wetlands. Also addresses relationships between humans and freshwater, and discusses these challenges in conservation. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. *J. Moore*

158L. Marine Ecology Laboratory. S

Supervised individual research projects in experimental marine biology. Students carry out a complete research project, including (1) the formation of hypotheses; (2) the design and implementation of experiments; (3) collection, analysis, and interpretation of data; and (4) write-up of an oral presentation. Students are billed a materials fee. Prerequisite(s): BIOE 108; satisfaction of the Entry Level Writing and Composition requirements. Enrollment limited to 20. Offered in alternate academic years. (General Education Code(s): W.) *M. Carr, P. Raimondi*

159A. Marine Ecology Field Quarter: Marine Ecology with Laboratory. *

Total immersion in marine ecology for very motivated students. Students develop a research project during first five weeks on campus and then spend five weeks of immersion in directed research without distraction in isolated locations off campus (past locations include the Gulf of California in Mexico and Moorea in French Polynesia). Not available through University Extension. No other courses may be taken during this quarter. Students must sign a contract agreeing to standards of behavior outlined in the *UCSC Rule Book* and by the instructors. Students are billed a materials, transportation (not airfare), and room and board fee. Paradigms and designs in marine ecology. A review of the paradigms that have shaped our understanding of marine ecology and analysis and discussion of experiments with these paradigms. Students carry out a complete research project, including the formation of hypotheses; the design and implementation of experiments; the collection, analysis, and interpretation of data; and the write-up and oral presentation of results. Admission by interview during previous winter quarter. BIOE 159A, 159B, 159C, and 159D are equivalent to BIOE 127, 127L, 108, and 158L for major requirements. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; BIOE 159A, 159B, 159C, and 159D must be taken concurrently. Enrollment limited to 26. Offered in alternate academic years. (General Education Code(s): W.) *P. Raimondi*

159B. Marine Ecology Field Quarter: Ichthyology with Laboratory. *

An introduction to the biology of jawless, cartilaginous, and bony fishes—their classification, evolution, form, physiology, and ecology. Admission by interview during previous winter quarter. BIOE 159A, 159B, 159C, and 159D are equivalent to BIOE 127, 127L, 108, and 158L for major requirements. BIOE 159A, 159B, 159C, and 159D must be taken concurrently. Enrollment limited to 26. Offered in alternate academic years. *G. Bernardi*

159C. Marine Ecology Field Quarter: Methods in Field Ecology. *

Students learn quantitative methods for field experiments and surveys. Emphasis will

be on marine environments, but there will also be exposure to terrestrial systems. This is the lecture component to course 159D. No text is required for this course; instead, readings from the current literature will be assigned. Students are evaluated on written independent field project proposals and class participation. Admission by interview during previous winter quarter. BIOE 159A, 159B, 159C, and 159D are equivalent to BIOE 127, 127L, 108, and 158L for major requirements. BIOE 159A, 159B, 159C, and 159D must be taken concurrently. Enrollment limited to 26. Offered in alternate academic years. *P. Raimondi*

159D. Marine Ecology Field Quarter: Methods in Field Ecology Laboratory. *

This is laboratory portion of course 159C. Students carry out independent field projects under the supervision of course instructors. All work is done during the 5–6 week off-campus portion of course 159. Students are evaluated on field techniques, the final write-up of their independent field projects, and class participation. Admission by interview during previous winter quarter. BIOE 159A, 159B, 159C, and 159D are equivalent to BIOE 127, 127L, 108, and 158L for major requirements. BIOE 159A, 159B, 159C, and 159D must be taken concurrently. Enrollment limited to 26. Offered in alternate academic years. *G. Bernardi*

161. Kelp Forest Ecology. F

Study of organization of kelp forests as models for examining biological communities. The physical and biotic factors responsible for community organization of kelp forests are explored using original literature and data collected in BIOE 161L. Class meets one full morning each week. Prerequisite(s): by interview only; BIOL 20A, BIOE 20B, and BIOE 20C are required. Students must pass the University Research Diving Certification (contact the diving safety officer, Institute of Marine Sciences, for further information). Enrollment restricted to seniors. BIOE 161L must be taken concurrently; BIOE 107, 120/L, 122/L are recommended. Enrollment limited to 24. Offered in alternate academic years. *M. Carr, P. Raimondi*

161L. Kelp Forest Ecology Laboratory. F

Fieldwork using SCUBA to quantitatively and qualitatively examine the abundance and distribution of organisms in kelp forests, with additional laboratory work. Culminates with a directed individual research project. Class meets one full morning each week. Students are billed a materials fee. Admission by interview. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C; satisfaction of the Entry Level Writing and Composition requirements; BIOE 161 must be taken concurrently; BIOE 107, 120/L, 122/L are recommended. Students must pass the University Research Diving Certification (contact the Diving Safety Officer, Institute of Marine Sciences, for further information). Enrollment limited to 24. Offered in alternate academic years. (General Education Code(s): W.) *M. Carr, P. Raimondi*

163. Ecology of Reefs, Mangroves, and Seagrasses. W

Integrated treatment of coral reefs, sea grasses, and mangroves emphasizing interactions and processes through time. Major topics: biological and geological history, biogeography, evolution and ecology of dominant organisms, biodiversity, community and ecosystem ecology, geology, biogeochemistry, global change, human impacts. (Also offered as Ocean Sciences 157. Students cannot receive credit for both courses.) Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. *D. Potts*

165. Marine Conservation Biology. F

Initially undertakes an in-depth comparison of the biology and conservation of marine versus terrestrial ecosystems. With this foundation, course examines marine biodiversity loss resulting from overexploitation, habitat loss, species introduction, and pollution, with particular emphasis on the resulting trophic cascades, biodiversity losses, and climate change. Students cannot receive credit for this course and

Environmental Studies 120. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C; OCEA 101 recommended. *The Staff*

168. Biological Oceanography. S

Biological description of sea, with emphasis on processes and patterns. Topics include microbial dynamics, phytoplankton and zooplankton production, and ecology of marine food webs. Emphasis placed on understanding how physical, chemical, and geological environment shapes biology and ecology of oceans, including such topics as harmful algal blooms, global estimates of productivity, and effects of humans on environment. Students may not receive credit for this course and Ocean Sciences 230. (Also offered as Ocean Sciences 130. Students cannot receive credit for both courses.) Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C; previous course in ocean sciences recommended. Enrollment restricted to juniors (with instructor approval), seniors, graduate students. *R. Kudela*

172. Population Genetics. *

Basic population genetics and selected topics will be covered, including genetics of speciation, tempo and mode of evolution, genetics of social behavior, natural selection in human populations, and the impact of molecular studies on evolutionary theory. Students cannot receive credit for this course and course 272. Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C, and BIOL 105. Concurrent enrollment in BIOE 172L is required. Offered in alternate academic years. *G. Pogson*

172L. Population Genetics Laboratory (2 credits). *

A companion course to 172, *Population Genetics*, that applies the theory developed in that course to related disciplines including conservation biology, ecology, agriculture, and population biology. Original scientific literature relating to the theory developed in course 172 is read, and applied problem sets are solved by the students. Students cannot receive credit for this course and course 272L. Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C, and BIOL 105. Concurrent enrollment in BIOE 172 is required. Offered in alternate academic years. *G. Pogson*

176A. Game Theory and Applications I. F

Introduces modern game theory, including applications in social science, biology, and engineering. Topics include extensive form, strategic form, mixed strategies, incomplete information, repeated games, evolutionary games, and simulation techniques. (Also offered as Computer Science 166A. Students cannot receive credit for both courses.) Prerequisite(s): Applied Math and Statistics 5 or 7 or Economics 113; and Economics 11B, Applied Math and Statistics 11B, or Mathematics 11B or 19B. Enrollment restricted to juniors and seniors. Enrollment limited to 100. *J. Musacchio, B. Sinervo*

176B. Game Theory and Applications II. W

Explores research frontiers in game theory, emphasizing applications in social science, biology, and engineering. Each interdisciplinary team develops a topic, and presents it to the class in oral and written reports and demonstrations. Students must have shown a strong performance in course 166A or equivalent. Students cannot receive credit for this course and Economics 272, Computer Science 272, or Biology: Ecology and Evolutionary 274. (Also offered as Computer Science 166B. Students cannot receive credit for both courses.) Prerequisite(s): course 176A, Economics 166A, or Computer Science 166A; satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to juniors and seniors. Enrollment limited to 40. (General Education Code(s): W.) *B. Sinervo*

183F. Undergraduate Research in Ecology and Evolutionary Biology (2 credits). F,W,S

Supervised undergraduate research on a project with an ecology and evolutionary biology faculty member for students considering a career based on biological research. Class reviews the philosophy of science, basic statistics, and library searches, and emphasizes how to input data, create graphs, and prepare results for publication, posters, and talks. Enrollment restricted to junior and senior EEB majors conducting research project with EEB faculty member. *The Staff*

183L. Undergraduate Research in Ecology and Evolutionary Biology. F,W,S

Supervised undergraduate research on a project with an ecology and evolutionary biology faculty member for students considering a career based on biological research. Class reviews the philosophy of science, basic statistics, and library searches, and emphasizes how to input data, create graphs, and prepare results for publication, posters, and talks. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; enrollment restricted to junior and senior EEB majors conducting research project with EEB faculty member. (General Education Code(s): W.) *The Staff*

188. Introduction to Science Writing. W,S

A rigorous examination and practice of the skills involved in writing articles about science, health, technology, and the environment for the general public. Covers the essential elements of news writing and explanatory journalism, including developing a story idea, interviewing scientists, fact checking, composition, and editing of multiple drafts about scientific research. (Also offered as Science Communication 160. Students cannot receive credit for both courses.) Prerequisite(s): satisfaction of the Entry Level Writing and C1, C2 requirements. Enrollment restricted to junior and senior biological sciences majors. Enrollment limited to 18. (General Education Code(s): W.) *The Staff*

190. Senior Seminar (2 credits). S

Satisfies the senior exit requirement for all biological sciences majors. (Also offered as Biology: Molecular Cell & Dev 190. Students cannot receive credit for both courses.) *The Staff*

195. Senior Thesis. F,W,S

An individually supervised course, with emphasis on independent research, to culminate in a senior thesis. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198. Independent Field Study. F,W,S

Provides for individual programs of study (a) by means other than the usual supervision in person, or (b) when the student is doing all or most of the course work off campus. With permission of the department, may be repeated for credit, or two or three courses taken concurrently. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198F. Independent Field Study (2 credits). F,W,S

Provides for two units of independent field study (a) by means other than the usual supervision in person, or (b) when the student is doing all or most of the course work off campus. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Reading, discussion, written reports, and laboratory research on selected biological topics, using facilities normally available on campus. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Two-unit Tutorial. Reading, discussion, written reports, and laboratory research on selected biological topics, using facilities normally available on campus. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

*Graduate Courses***200A. Scientific Skills. F**

Exposes graduate students to teaching skills, understanding the scientific method, searching and organizing literature, grant proposal and scientific writing, data management and presentation, and scientific speaking. Students are evaluated on their participation and the quality of a written research proposal. Enrollment restricted to graduate students. *M. Carr*

200B. Advanced Organismal Biology. F

Consists of lectures focusing on pivotal topics in ecology and evolution. Relevant background material is developed followed by a critical analysis of readings from the primary literature. Designed to give graduate (and advanced undergraduate) students direct contact with the major areas of research that are currently at the forefront of organismal biology. Enrollment restricted to graduate students. *The Staff*

208. Marine Ecology. W

Paradigms and designs in marine ecology. A review of the paradigms that have shaped our understanding of marine ecology; analysis and discussion of experiments with these paradigms. Students cannot receive credit for this course and course 108. Enrollment restricted to graduate students. *M. Carr*

245. Plant Ecology. F

An exploration of the ecology of plant form, function, distribution, abundance, and diversity. Topics include plant adaptations to environmental conditions, life history variation, competition, reproductive ecology, herbivory, and patterns of diversity. Lecture with discussions of original papers and independent field project. Students cannot receive credit for this course and course 145. Prerequisite(s): BIOE 107 or ENVS 24 or permission of instructor. Concurrent enrollment in BIOE 245L is required except by permission of instructor. Enrollment restricted to graduate students. *I. Parker*

245L. Field Methods in Plant Ecology Laboratory. F

Hands-on exploration of the concepts and techniques of plant ecology. A combination of lab, greenhouse, and field-based exercises (irrespective of weather conditions), statistical analysis, and scientific writing. One required weekend field trip. Students cannot receive credit for this course and course 145. Concurrent enrollment in BIOE 245 is required. Enrollment restricted to graduate students. Enrollment limited to 2. *I. Parker*

247. Community Ecology. S

Develops the major themes of community ecology: structure, trophic dynamics, succession, complex interactions among species, herbivory, evolution, and coevolution. Uses case histories of well-studied marine and terrestrial systems. Students cannot receive credit for this course and course 147. Enrollment restricted to graduate students. *L. Fox*

258L. Experimental Marine Ecology. S

Supervised individual research projects in experimental marine biology. Students carry out a complete research project, including (1) the formation of hypotheses, (2) the design and implementation of experiments, (3) collection, analysis, and

interpretation of data, and (4) the write-up of an oral presentation. Prerequisite(s): BIOE 208; and interview to assess ability to carry out field project. Enrollment limited to 20. Offered in alternate academic years. *M. Carr, P. Raimondi*

272. Population Genetics. *

Basic population genetics and selected topics are covered including genetics of speciation, tempo and mode of evolution, genetics of social behavior, natural selection in human populations, and the impact of molecular studies on evolutionary theory. Students cannot receive credit for this course and Biology 172. Concurrent enrollment in BIOE 272L is required. Enrollment restricted to graduate students. Offered in alternate academic years. *G. Pogson*

272L. Population Genetics Laboratory (2 credits). *

A companion course to 272, *Population Genetics*, that applies the theory developed in that course to related disciplines including conservation biology, ecology, agriculture, and population biology. Original scientific literature relating to the theory developed in course 272 is read, and applied problem sets are solved by the students. Students cannot receive credit for this course and course 172L. Must be taken concurrently with BIOE 272. Enrollment restricted to graduate students. Offered in alternate academic years. *G. Pogson*

274. Evolutionary Game Theory. *

Reviews static equilibrium concepts, games of incomplete information, and the traditional theory of dynamic games in discrete time. Develops recent evolutionary game models, including replicator and best reply dynamics, and applications to economics, computer science, and biology. Prerequisite(s): upper-division math courses in probability theory are strongly recommended. Cannot receive credit for this course and Economics 166B, Computer Science 166B, or Biology: Ecology and Evolutionary 176B. (Also offered as Computer Science 272. Students cannot receive credit for both courses.) *M. Warmuth, B. Sinervo, D. Friedman*

279. Evolutionary Ecology. W

Analysis of the ways in which ongoing evolution and coevolution shape the ecological structure and dynamics of populations, species, and species interactions across geographic landscapes. Enrollment restricted to graduate students. *J. Thompson*

281A. Topics in Basic and Applied Marine Ecology. F,W,S

Seminar focusing on concepts in basic and applied ecology. Structure rotates quarterly between graduate student research and readings of journal articles and textbooks. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. *M. Carr*

281B. Topics in Molecular Evolution (2 credits). F,W,S

A discussion of current research and literature review on the subject of molecular evolution. Primary focus on recent results on molecular phylogenetics and molecular population genetics. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *G. Bernardi*

281C. Topics in Physiological Ecology. F,W,S

An intensive seminar focusing on the interaction between physiological constraint and life history options and solutions employed by animals. Topics vary from comparative physiology to ecological theory. Participants are required to present results of their own research or review papers of interest. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor.

May be repeated for credit. *D. Costa*

281F. Ecological Research Topics. F,W,S

Intensive research and discussions on plant-animal interactions. All students undertake a research project and meet weekly with the faculty sponsor to monitor progress. The group meets weekly to discuss experimental design and analysis, specific problems related to the students' research, relevant research papers, or manuscripts that the group members are writing. Each student gives a formal presentation of research plans or progress each quarter. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *L. Fox*

281I. Topics in Plant Population and Disease Ecology. F,W,S

Selected topics in population biology and disease ecology. Students present results from their own research and discuss recent advances from the literature. Enrollment restricted to graduate students; qualified undergraduates may enroll by permission of instructor. Enrollment limited to 18. May be repeated for credit. *A. Kilpatrick*

281J. Topics in Research on Biochemical Ecology. F,W,S

Seminar in which students give critically evaluated presentations regarding current research on selected topics in plant ecology with an emphasis on biochemical ecology. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 12. May be repeated for credit. *J. Langenheim*

281K. Topics in Plant Evolution. F,W,S

Intensive seminar on selected topics in plant evolution. Students present results from their own research and discuss recent advances from the literature. Enrollment restricted to graduate students; qualified undergraduates may enroll by permission of instructor. Enrollment limited to 18. May be repeated for credit. *K. Kay*

281L. Topics in Behavioral and Evolutionary Ecology. F,W,S

An intensive seminar on selected topics in behavioral and evolutionary ecology. Students are expected to discuss the current literature and present literature reviews, research proposals, and preliminary results from their ongoing research. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. *B. Lyon*

281M. Topics in Aquatic Ecology (2 credits). W,S

Seminar focusing on the ecology of freshwaters. Discussion focuses on recent literature or on student presentations of their own research. (Formerly Biology 281M; formerly *Freshwater Ecology*.) Enrollment restricted to graduate students; undergraduates may enroll with permission of instructor. May be repeated for credit. *J. Moore*

281N. Topics in Marine Vertebrate Ecology. F,W,S

Seminar on the ecology of marine vertebrates. Topics vary from the factors that explain the distribution of marine predators to island biogeography and the ecosystem effects of introduced vertebrates on islands. Enrollment restricted to graduate students. Enrollment limited to 12. May be repeated for credit. *D. Croll*

281O. Topics in Plant-Water Relations. F,W,S

Intensive seminar focusing on fundamental and evolutionary concepts in plant-water relations. Students present results from their own research and discuss recent advances from the literature. Enrollment restricted to graduate students; qualified undergraduates may enroll by permission of instructor. Enrollment limited to 18.

May be repeated for credit. *J. Pittermann*

281P. Topics in Plant Population Ecology. F,W,S

An intensive seminar on selected topics in plant ecology and population biology. Students present results from their own research and discuss recent advances from the literature. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission from instructor. Enrollment limited to 12. May be repeated for credit. *I. Parker*

281Q. Topics in Molecular Evolutionary Genetics. F,W,S

An intensive seminar on selected topics in molecular evolutionary genetics. Students are required to present results from their own research projects, present a critical review paper at least once during the quarter, and submit a written research proposal. Enrollment restricted to graduate students; qualified undergraduate students may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *G. Pogson*

281R. Topics in Marine Ecology and Evolutionary Biology. F,W,S

An intensive seminar series focusing on fundamental concepts in marine ecology. Emphasis changes quarter to quarter. At least one quarter per year is devoted to discussion of graduate student research. Other quarters involve reading and evaluating current and classic literature on marine ecology and evolutionary biology. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *P. Raimondi*

281T. Species Interactions and Coevolution. F,W,S

The genetics and ecological structure of species interactions, and the role of coevolution between species in shaping biodiversity. Enrollment restricted to graduate students. Enrollment limited to 15. May be repeated for credit. *J. Thompson*

281U. Topics in Invertebrate Biology. F,W,S

An intensive study about concepts, theory, and techniques for graduate students conducting research on the ecology, genetics, evolution, systematics, or biodiversity of marine invertebrates. Enrollment restricted to graduate students; advanced undergraduates may enroll with permission of instructor. Enrollment limited to 15. May be repeated for credit. *D. Potts*

281V. Topics in Behavioral Ecology. F,W,S

A discussion of current topics and methods in behavioral ecology and life history evolution. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *B. Sinervo*

281W. Topics in Exercise and Environmental Physiology. F,W,S

A weekly seminar discussion on current research and techniques in mammalian exercise and environmental physiology. Areas covered include locomotor physiology, exercise testing and cardiovascular monitoring, and biomechanics. Oral presentation of ongoing research or current literature required from each student. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *T. Williams*

286. Experimental Design and Data Analysis. W

—from a graphical perspective; hands-on statistics; and graphical theory. Structured around a statistical analysis and graphics computer program to teach students to design their own surveys and experiments and analyze their data correctly. Students

cannot receive credit for this course and course 186. Prerequisite(s): one course in statistics or by permission of instructor. Enrollment restricted to graduate students. *P. Raimondi*

286L. Experimental Design and Data Analysis Lab (2 credits). W

Required lab that accompanys Biology 286. Lab will focus on hands-on statistical problem solving, graphical presentations and experimental design issues. Concurrent enrollment in course 286 is required. Enrollment restricted to graduate students. *P. Raimondi*

293. Readings in Ecology and Evolution (2 credits). W,S

Weekly readings and discussions of recent research papers in ecology, evolution, and related topics from organismal biology. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

294. Ecology, Evolutionary Biology Seminar (no credit). F,W,S

Selected topics of current interest to ecologists and evolutionary biologists presented by weekly guest speakers. Enrollment restricted to graduate students. *The Staff*

295. Advanced Ecology and Evolutionary Biology Seminar (no credit). F,W,S

Course consists of extended weekly meetings organized around an advanced theme in theoretical or applied evolutionary biology, ecology, physiology, behavior, or other aspect of organismal biology. Course is targeted at students who already have reached a professional level of expertise in their field and advanced master students. Enrollment restricted to graduate students. Enrollment limited to 24. *The Staff*

297. Independent Study. F,W,S

Independent study for graduate students who have not yet settled on a research area for their thesis. Students submit petition to sponsoring agency. *The Staff*

299. Thesis Research. F,W,S

Students submit petition to sponsoring agency. *The Staff*

*Not offered in 2009-10

Lower-Division Courses

15. Undergraduate Research Reports (1 credit). F,W,S

Undergraduate students who work in faculty research laboratories present the results of their projects. Organized by the Minority Undergraduate Research Program and the Minority Access to Research Careers Program. Designed for students with membership in the above-mentioned programs. Prerequisite(s): qualifications as determined by instructor at first class meeting. May be repeated for credit. *The Staff*

20A. Cell and Molecular Biology. F,W,S

Introduction to molecular biology, cell physiology, and genetics. Students cannot receive credit for this course and course 21A. Prerequisite(s): CHEM 1B (General Education Code(s): IN.) *The Staff*

20L. Experimental Biology Laboratory (2 credits). F,W,S

Provides biology majors with the theory and practice of experimental biology. A wide range of concepts and techniques used in the modern laboratory are included in the exercises. Designed to satisfy the introductory biology lab requirement of many medical and professional schools. Students are billed a materials fee. Prerequisite(s): BIOL 20A and previous or concurrent enrollment in BIOE 20B. Enrollment restricted to health sciences majors; other majors by permission. Enrollment limited to 20. *The Staff*

21L. Environmental Phage Genomics Laboratory (2 credits). F,W,S

Introduction to hypothesis-driven laboratory research. Students isolate and characterize both the structure and genome of a unique bacteriophage. Students gain experience in basic sterile technique, solution, manipulation of DNA, and bioinformatic analysis of a new genome. Enrollment restricted to first-year students and sophomores. Enrollment by online application and permission of instructor. Enrollment limited to 14. May be repeated for credit. *G. Hartzog, M. Ares*

80A. Female Physiology and Gynecology. F,S

Biochemical, medical, social, and clinical aspects of the female body. Emphasis will be on biological-chemical interactions in the female organs. Topics include female anatomy, cell physiology, endocrine functions, sexuality and intimacy, sexually transmitted diseases, puberty, pregnancy, menopause, birth control, abortion, immunity, cancer. (General Education Code(s): T2-Natural Sciences.) *M. Zavanelli*

80J. Biology of AIDS. W

An overview of the biology of the acquired immunodeficiency syndrome (AIDS) and

the social and legal issues that surround it are explored in a series of lectures by biology faculty and experts in the field. (General Education Code(s): T2-Natural Sciences.) *M. Zavanelli*

89. Clinical Health Care: Organization and Financing. *

Introduces students to the principles of health care organizations, including how they are paid for, and examines social constructions of health care in the U.S. Key concepts include access, quality of care, and cultural competence; also features hands-on research. Recommended for health science majors and community studies majors focusing on health. Cannot receive credit for this course and course 89W. (General Education Code(s): IS.) *A. Steiner*

Upper-Division Courses

100. Biochemistry. F,S

An introduction to biochemistry including biochemical molecules, protein structure and function, membranes, bioenergetics, and regulation of biosynthesis. Provides students with basic essentials of modern biochemistry and the background needed for upper-division biology courses. Students who plan to do advanced work in biochemistry and molecular biology should take the Biochemistry and Molecular Biology 100 series directly. Students cannot receive credit for this course after they have completed any two courses from the Biochemistry and Molecular Biology 100A, 100B, and 100C sequence with grades of Pass, C, or better. Prerequisite(s): BIOL 20A and BIOE 20B; and CHEM 108A or 112A. *The Staff*

100L. Biochemistry Laboratory. F

Basic techniques and principles of laboratory biochemistry including isolation and characterization of a natural product, manipulation of proteins and nucleic acids to demonstrate basic physical and chemical properties; and characterization of enzyme substrate interactions. Students are billed a materials fee. Prerequisite(s): previous or concurrent enrollment in BIOL 100; satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to biological sciences and affiliated majors; biology minors; non-majors by instructor permission. Enrollment limited to 20. (General Education Code(s): W.) *M. Dalbey*

105. Genetics. F,W,S

Mendelian and molecular genetics; mechanisms of heredity, mutation, recombination, and gene action. Prerequisite(s): BIOL 20A. (F) *N. Bhalla*, (W) *R. Kamakaka*, (S) *W. Sullivan*

105L. Eukaryotic Genetics Laboratory. F,S

Classical and newly developed molecular-genetic techniques used to explore genetic variation in wild populations of the fruit fly *Drosophila melanogaster*. Topics include Mendelian fundamentals, mapping, design of genetic screens, bio-informatic and database analysis, genetic enhancers, and population genetics. Students are billed a materials fee. Prerequisite(s): BIOL 105; BIOL 100 or BIOC 100A recommended; satisfaction of Entry Level Writing and Composition Requirements. Enrollment restricted to biological sciences and affiliated majors; biology minors; non-majors by instructor permission. (General Education Code(s): W.) *J. Lee*

105M. Microbial Genetics Laboratory. W

Exploration of basic genetics processes such as replication, mutation, DNA repair, recombination, gene exchange, population genetics, and evolution using microbial model organisms; classic techniques in microbial genetics and contemporary molecular techniques presented. Students are billed a materials fee. Prerequisite: BIOL 105; satisfaction of the Entry Level Writing and Composition requirements.

Enrollment restricted to biological sciences and affiliated majors; biology minors; other majors by instructor permission. Enrollment limited to 16. (General Education Code(s): W.) *M. Dalbey*

109L. Yeast Molecular Genetics Laboratory. *

The powerful genetic and molecular techniques available for yeast combined with the complete genomic DNA sequence offers opportunity for discovery of fundamental aspects of eukaryotic life. Lab providing practical experience in using yeast as an experimental system. Students are billed a materials fee. Prerequisite(s): BIOL 105; BIOL 115 strongly recommended; satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to biological sciences and affiliated majors; biology minors; other majors by instructor permission. Enrollment limited to 15. (General Education Code(s): W.) *The Staff*

110. Cell Biology. F,S

Covers the structure, organization, and function of eukaryotic cells. Topics include biological membranes, organelles, protein and vesicular trafficking, cellular interactions, the cytoskeleton, and signal transduction. Requires a good understanding of basic biochemistry and molecular biology. Prerequisite(s): BIOL 100 or BIOC 100A. (F) *L. Hinck*, (S) *M. Rexach*

110L. Cell Biology Laboratory. W

Fundamental aspects of cell biology explored through experimentation in a modern laboratory setting. Research topics include the structure and function of biological membranes; intracellular transport and organelle biogenesis; the cell cycle; and the cytoskeleton. Students are billed a materials fee. Prerequisite(s): BIOL 100 or BIOC 100A; previous/concurrent enrollment in course 110; satisfaction of the Entry Level Writing and Composition requirements. Restricted to biological sciences/affiliated majors; biology minors; other majors by permission. Enrollment limited to 16. (General Education Code(s): W.) *M. Rexach*

111. Immunology. W

Immune systems—their manifestations and mechanisms of action. Prerequisite(s): BIOL 20A, BIOE 20B, BIOL 105, and BIOL 110. *M. Zuniga*

111L. Immunology Laboratory. S

Techniques of current immunology applicable to both cellular and humoral mechanisms. (Formerly course 123L.) Students are billed a materials fee. Prerequisite(s): BIOL 111. Enrollment restricted to biological sciences and affiliated majors; biology minors; other majors by instructor permission. *M. Zuniga*

113. Mammalian Endocrinology. S

Introduction to the major endocrine organs, their hormones, and their receptors. Emphasis is on the following topics: structural analysis of the hormones and receptors at the protein and molecular level, regulation of expression of hormones and their receptors, and the biological functions of hormones. Prerequisite(s): BIOL 100 or BIOC 100A. *L. Ogren*

114. Cancer Cell Biology. S

Focuses on the molecular and cellular mechanisms behind cancer. Topics covered include oncogenes, tumor suppressor genes, cell growth genes, checkpoint genes, telomeres, and apoptosis. Students will gain experience in reading the primary scientific literature. Prerequisite(s): BIOL 110 or 115. *A. Zahler*

115. Eukaryotic Molecular Biology. W,S

Covers eukaryotic gene and genome organization; DNA, RNA, and protein

synthesis; regulation of gene expression; chromosome structure and organization; and the application of recombinant DNA technology to the study of these topics. Prerequisite(s): BIOL 100 or BIOC 100A, and BIOL 105. Enrollment restricted to biological sciences and affiliated majors, non-majors by permission of instructor. (W) *M. Jurica, (S) H. Boeger*

115L. Eukaryotic Molecular Biology Laboratory. W,S

A laboratory designed to provide students with direct training in basic molecular techniques. Each laboratory is a separate module which together builds to allow cloning, isolation, and identification of a nucleic acid sequence from scratch. Students cannot receive credit for this course and course 187L or 287L. Students are billed a materials fee. Prerequisite(s): BIOL 100 or BIOC 100A; previous/concurrent enrollment in course 115; satisfaction of the Entry Level Writing and Composition requirements. Restricted to biological sciences/affiliated majors; biology minors; other majors by permission. Enrollment limited to 20. (General Education Code(s): W.) *M. Zavanelli*

118. Biology of Disease. W

Primary objective is to provide an understanding of disease processes in humans. Integrates normal physiology and pathophysiology with the molecular and physiologic bases of diseases. Major emphasis on the physiological, molecular, and biochemical basis of diseases, with particular emphasis on the neuromuscular, cardiovascular, respiratory, renal, immune, and central nervous systems. Also addresses environmental risk factors in the etiology of diseases. Overviews provided, but covers selective topics considered most important in depth. (Also offered as Microbiol & Environ Toxicology 138. Students cannot receive credit for both courses.) Prerequisite(s): BIOL 20A and BIOE 20B or equivalent and BIOL 110. BIOL 130 is recommended. Offered in alternate academic years. *M. Camps*

119. Microbiology. F,W

Cell and molecular biology of bacteria and their viruses, including applications in medicine, public health, agriculture, and biotechnology. (Also offered as Microbiol & Environ Toxicology 119. Students cannot receive credit for both courses.) Prerequisite(s): BIOL 100 or BIOC 100A. *The Staff*

119L. Microbiology Laboratory. F,W,S

An introduction to the principles and practices of laboratory microbiology, with a substantial presentation of optical microscopy. Students are billed a materials fee. (Also offered as Microbiol & Environ Toxicology 119L. Students cannot receive credit for both courses.) Prerequisite(s): previous or concurrent enrollment in BIOL 119 is required; satisfaction of Entry Level Writing and Composition requirements. Enrollment restricted to biological sciences and affiliated majors; biology minors; other majors by permission. (General Education Code(s): W.) *The Staff*

120. Development. W

A description and analysis of selected developmental events in the life cycle of animals. Experimental approaches to understanding mechanisms are emphasized. Prerequisite(s): BIOL 100 or BIOC 100A, and BIOL 105. *J. Lee*

120L. Development Laboratory. W

Experimental studies of animal development using a variety of locally obtainable organisms. Approximately eight hours weekly, but it will often be necessary to monitor continuing experiments throughout the week. Previous or concurrent enrollment in course 120 required. Students are billed a materials fee. Prerequisite(s): BIOL 100 or BIOC 100A and BIOL 110. Previous or concurrent enrollment in BIOL 120 required. Enrollment restricted to biological sciences and affiliated majors;

biology minors; other majors by instructor permission. *J. Lee*

122. Cellular and Organismal Toxicology. W

Emphases of biochemical, cellular, and organ system basis of intoxication, including dose-response relationships, biotransformation of toxicants, biochemical mechanisms underlying toxicity, factors influencing toxic action, and biomarkers of exposure. Emphasizes effects of various classes of toxins, including heavy metals and persistent synthetic organics, with a focus on susceptible biochemical/cellular processes of the central nervous, immune, hepatic, and renal target organ systems. Designed for advanced undergraduates. Students cannot receive credit for this course and course 202. (Also offered as Microbiol & Environ Toxicology 102. Students cannot receive credit for both courses.) Prerequisite(s): BIOL 20A, BIOE 20B or equivalent; BIOL 100 and 110 are recommended. Enrollment restricted to juniors and seniors. *The Staff*

125. Introduction to Neuroscience. F

The structure and function of the nervous system. Topics include elementary electrical principles, biophysics and physiology of single nerve and muscle cells, signal transduction at synapses, development of the nervous system, and neural basis of behavior. Requires a good understanding of basic biochemistry, cell biology, and molecular biology. Prerequisite(s): BIOL 100. Concurrent enrollment in BIOL 105 or 110 is encouraged. *B. Chen*

126. Advanced Molecular Neuroscience. W

Explores in detail cellular and molecular events that underlay the function of the nervous system. Topics include neural development, axon guidance and regeneration, advanced electrical principles (synaptic transmission through a variety of receptors), synaptic plasticity, learning and memory, as well as several neural disorders. Prerequisite(s): BIOL 125. *Y. Zuo*

127. Mechanisms of Neurodegenerative Disease. S

Focuses on cellular and molecular processes that underlie neurodegenerative diseases. Includes lectures, student oral presentations, discussions, a term paper, and exams. Prerequisite(s): BIOL 105 and 110. *W. Saxton*

130. Human Physiology. F,W

Function, organization, and regulation of the major organ systems of humans, with emphasis on integration among systems. Students cannot receive credit for this course and course 131. Prerequisite(s): BIOL 20A, BIOE 20B, BIOL 100, and BIOL 110. *L. Ogren*

130L. Human Physiology Laboratory (2 credits). F,W

Examines fundamental principles of systemic physiology focusing on the human. Students cannot receive credit for this course and course 131L. Students are billed a materials fee. (General Education Code(s): W satisfied by taking this course and course 189.) Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; BIOL 20A, BIOE 20B, BIOL100, and BIOL 110. Previous or concurrent enrollment in BIOL130 is required. Enrollment restricted to biological sciences and affiliated majors; biology minors; other majors by instructor permission. *L. Ogren*

135. Human Functional Anatomy. S

Study of structure and function of the human body through lectures with an evolutionary perspective including regional anatomy and body systems. Students cannot receive credit for this course and Anthropology 207. (Also offered as Anthropology 107. Students cannot receive credit for both courses.) Prerequisite(s):

BIOL 20A and BIOE 20B; or ANTH 1. Concurrent enrollment in BIOL 135L is required. Enrollment restricted to biological sciences and affiliated majors, non-majors by permission of instructor. *N. Dominy*

135L. Human Functional Anatomy Laboratory. S

Study of structure and function of the human body using dissection, comparative vertebrate anatomy, anatomical models, and computer-assisted instruction. Students are billed a \$60.00 materials fee. Students cannot receive credit for this course and Anthropology 207L. (Also offered as Anthropology 107L. Students cannot receive credit for both courses.) Prerequisite(s): BIOL 20A and BIOE 20B. Concurrent enrollment in BIOL 135 is required. Enrollment restricted to biological sciences and affiliated majors; biology minors; other majors by instructor permission. Enrollment limited to 20. *N. Dominy*

178. Stem Cell Biology. W

Basic concepts, experimental approaches, and therapeutic potential are discussed. Students gain experience in reading the primary scientific literature. (Also offered as Biomolecular Engineering 178. Students cannot receive credit for both courses.) Prerequisite(s): BIOL 110; BIOL 115 recommended. *C. Forsberg*

179. Biotechnology and Drug Development. W

Recommended for students interested in careers in the biopharmaceutical industry. Focuses on recombinant DNA technology and the drug-development process, including discovery research; preclinical testing; clinical trials; and regulatory review, as well as manufacturing and production considerations. Students may not receive credit for this course and Biomolecular Engineering 255 and Chemistry 255. (Also offered as Biomolecular Engineering 155. Students cannot receive credit for both courses.) Prerequisite(s): BIOL 20A and BIOL 100 or BIOC 100A. Enrollment limited to 15. *P. Berman*

180. Research Programming for Biologists and Biochemists. W

No programming experience required, but basic computer skills assumed. Students without prior programming experience taught basic proficiency in Perl, BioPerl, and other Perl libraries needed to analyze, transform, and publish biological data. Students required to solve a research problem as a final project. Lectures and labs are shared with Biomolecular Engineering 60. Students cannot receive credit for this course and Biomolecular Engineering 60. (Also offered as Biomolecular Engineering 160. Students cannot receive credit for both courses.) Prerequisite(s): BIOL 20A or BIOL 21A. Concurrent enrollment in BIOL 180L is required. *J. Stuart*

180L. Research Programming for Biologists and Biochemists Laboratory (1 credit). W

Laboratory sequence illustrating topics covered in course 160. One two-hour laboratory per week. Students cannot receive credit for this course and Biomolecular Engineering 60L. (Also offered as Biomolecular Engineering 160L. Students cannot receive credit for both courses.) Prerequisite(s): BIOL 20A or BIOL 21A. Concurrent enrollment in BIOL 180 is required. *J. Stuart*

181. Computational Biology Tools. F,S

Hands-on laboratory geared to teach basic tools used in computational biology (motif searching, primer selection, sequence comparison, multiple sequence alignment, genefinders, phylogenetics analysis, X-ray crystallography software). Web- and Unix-based tools/databases are used. Open to all science students; no prior Unix experience required. (Also offered as Biomolecular Engineering 110. Students cannot receive credit for both courses.) Prerequisite(s): course 100, 105, or Biochemistry 100A or declared bioinformatics majors. Enrollment limited to 25. *D.*

186F. Undergraduate Research in MCD Biology (2 credits). F,W,S

Supervised undergraduate research in laboratory of an MCD biology faculty member accompanied by weekly lectures on ethical and practical scientific issues. Topics include laboratory safety; the scientific method; the collection, treatment, and presentation of data; critical evaluation of scientific literature; scientific misconduct; and peer review. Career issues, including how to apply for admission to graduate and professional schools, also discussed. Prerequisite(s): BIOL 20A and BIOE 20B; at least one of BIOL 100, BIOL 105, or BIOC 100A; and permission of instructor. May be repeated for credit. *The Staff*

186L. Undergraduate Research in MCD Biology. F,W,S

Supervised undergraduate research in laboratory of an MCD biology faculty member accompanied by weekly lectures on ethical and practical scientific issues. Topics include laboratory safety; the scientific method; the collection, treatment, and presentation of data; critical evaluation of scientific literature; scientific misconduct; and peer review. Career issues, including how to apply for admission to graduate and professional schools, also discussed. Prerequisite(s): satisfaction of the Entry-Level Writing and Composition requirements; courses BIOL 20A and BIOE 20B; at least one of BIOL 100, BIOL 105, or BIOC 100A; and permission of instructor. (General Education Code(s): W.) *The Staff*

187L. Molecular Biotechnology Laboratory. F

An intensive molecular biology laboratory that presents procedures used in molecular and biotechnology research. Topics and procedures include DNA/RNA isolation, cloning and library construction, southern and northern hybridization, DNA fingerprinting, PCR, manual and automated sequencing, and computer methods for analyzing molecular data. New procedures currently being developed in biotechnology industries are presented by industry representatives. Students cannot receive credit for this course and BIOL 116L or BIOL 287L. Students are billed a materials fee. Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C, BIOL 100, and BIOL 110. Enrollment limited to 20. *M. Zavanelli*

189. Health Sciences Internship. F,W,S

Structured off-campus learning experience providing hands-on experience and pre-professional mentoring in a variety of health-related settings. Interns are trained and supervised by a professional at their placement and receive academic guidance from their faculty sponsor. Students spend 10–12 hours per week at their placement, participate in weekly discussion meetings on campus, keep a reflective journal, and submit a final paper. Prerequisite(s): BIOL 20L; satisfaction of the Entry Level Writing and Composition requirements; students interview with health sciences internship coordinator; applications are due one quarter in advance to the Health Sciences Internship Office. Enrollment restricted to health sciences majors. (General Education Code(s): W satisfied by taking this course and BIOL 130L.) *The Staff*

189F. Health Sciences Internship (2 credits). F,W,S

Structured off-campus learning experience providing hands-on experience and pre-professional mentoring in a variety of health-related settings. Interns are trained and supervised by a professional at their placement, and receive academic guidance from their faculty sponsor. Students spend six hours per week at their placement, keep a reflective journal, and submit a final paper. Prerequisite(s): BIOL 20L; students interview with health sciences internship coordinator. Applications due one quarter in advance to the Health Sciences Internship Office. May be repeated for credit. *The Staff*

190. Senior Seminar (2 credits). S

Satisfies the senior exit requirement for all biological sciences majors. (Also offered as Biology:Ecology & Evolutionary 190. Students cannot receive credit for both courses.) *The Staff*

191. Teaching College Biology. F,W,S

Course designed to provide undergraduates at the upper-division level with an opportunity to participate in planning and teaching college-level biology. May not be repeated for credit. *The Staff*

195. Senior Thesis Research. F,W,S

An individually supervised course, with emphasis on independent research, to culminate in a senior thesis. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198. Independent Field Study. F,W,S

Provides for individual programs of study (a) by means other than the usual supervision in person, or (b) when the student is doing all or most of the course work off campus. With permission of the department, may be repeated for credit, or two or three courses taken concurrently. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198F. Independent Field Study (2 credits). F,W,S

Provides for two units of independent field study (a) by means other than the usual supervision in person, or (b) when the student is doing all or most of the course work off campus. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Reading, discussion, written reports, and laboratory research on selected biological topics, using facilities normally available on campus. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Two-unit Tutorial. Reading, discussion, written reports, and laboratory research on selected biological topics, using facilities normally available on campus. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

*Graduate Courses***200A. Critical Analysis of Scientific Literature. F**

Development of critical thinking skills via discussion of research articles on a broad range of topics. Prepares students to critically evaluate research publications, and improves their ability to organize effective oral presentations and to evaluate the oral presentations of other scientists. Enrollment restricted to graduate students in MCD biology, or by permission of instructor. (Formerly *Critical Analysis of Genetics and Molecular Biology*.) Enrollment limited to 20. *W. Saxton*

200B. Advanced Molecular Biology. F

An in-depth coverage of the structure, function, and synthesis of DNA, RNA, and proteins. Discussion of the roles of macromolecules in the regulation of information in the cell. Prerequisite(s): Enrollment restricted to graduate students. *The Staff*

200C. Advanced Cell Biology. W

An in-depth coverage of topics in cellular and subcellular organization, structure, and function in plants and animals. Emphasis on current research problems.

Prerequisite(s): BIOL 200B. Enrollment restricted to graduate students. *D. Kellogg*

200D. Developmental Biology. S

Key topics in developmental biology, including developmental genetics, epigenetics, stem cell biology, and developmental neurobiology. Lectures are accompanied by critical analysis and discussion of recent publications. Enrollment restricted to graduate students in MCD biology, or by permission of instructor. Enrollment limited to 20. *S. Strome, J. Tamkun*

201. RNA Processing. *

An advanced graduate-level course on biological aspects of RNA function and processing in eukaryotes. Lectures and discussions will be developed using the current literature. Prerequisite(s): BIOL 200B or permission of instructor. Enrollment restricted to graduate students. Enrollment limited to 15. *M. Ares*

202. Cellular and Organismal Toxicology. W

Emphasizes biochemical, cellular, and organ system basis of intoxication, including dose-response relationships, biotransformation of toxicants, biochemical mechanisms underlying toxicity, factors influencing toxic action, and biomarkers of exposure. Emphasizes effects of various classes of toxins, including heavy metals and persistent synthetic organics, with a focus on susceptible biochemical/cellular processes of the central nervous, immune, hepatic, and renal target organ systems. Students cannot receive credit for this course and Microbiology and Environmental Toxicology 102 or BIOL 122. (Also offered as Microbiol & Environ Toxicology 202. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. *D. Smith*

203. Ribosomes and Translation. *

Covers the field of ribosome research in depth, including the structure and function of ribosomes and the molecular mechanisms of protein synthesis. Begins with historical review of the ribosome field and proceeds to the most recent findings. Focus is on central questions: (1) How is the accuracy of the aminoacyl-tRNA selection determined? (2) What is "accommodation"? (3) What is the mechanism of peptide bond formation (peptidyl transferase)? (4) What is the mechanism of translocation? (5) What are the mechanistic roles of the ribosome and translation factor EF-G in translocation? (6) To what extent is the mechanism of translation determined by RNA? (7) Why is RNA so well suited for the ribosome? (8) How did translation evolve from an RNA world? Prerequisite(s): BIOC 100A, BIOL 200B or permission of instructor. Enrollment restricted to graduate students. *H. Noller*

204. Chromatin. *

Eukaryotic DNA is complexed with histones to form chromatin. This course focuses on the ways in which chromatin influences and is manipulated to regulate gene expression. Prerequisite(s): BIOL 105 and BIOL 115; undergrads by permission of instructor. Enrollment restricted to graduate students. Enrollment limited to 15. Offered in alternate academic years. *J. Tamkun, G. Hartzog*

205. Epigenetics. *

In-depth coverage of epigenetics focusing on how alterations in chromatin structure and DNA methylation establish and maintain heritable states of gene expression. Lectures are supplemented with critical discussion of recent publications. Prerequisite(s): BIOL 105 and BIOL 115, or permission of instructor. Enrollment restricted to graduate students. Enrollment limited to 20. *S. Strome, J. Tamkun*

206. Introduction to Stem Cell Biology. F

Fundamental issues and experimental approaches of stem cell biology research.

Course divides into three sections: basic principles, experimental approaches, and emerging areas of research. Topics covered include stem cell self-renewal and differentiation, the microenvironment, epigenetics, cell cycle regulation, as well as how basic research translates to medical therapeutics. Enrollment restricted to graduate students. *W. Sullivan*

206L. Current Protocols in Stem Cell Biology. S

Provides students with hands-on experience in embryonic stem cell culture methods. Enrollment restricted to graduate students; qualified undergraduates may enroll by permission of instructor. Enrollment limited to 10. *D. Feldheim*

208. Cellular Signaling Mechanisms. W

All eukaryotic cells utilize intricate signaling pathways to control such diverse events as cell-cell communication, cell division, and changes in cell morphology. This course covers the molecular basis of these cellular signaling pathways, focusing on the most current research. Prerequisite(s): BIOL 105, BIOL 110, and BIOL 115. Enrollment restricted to seniors and graduate students. Enrollment limited to 15. Offered in alternate academic years. *D. Kellogg*

210. Experimental Systems Biology. *

Topics include, but are not limited to, microarray production techniques, experimental strategies using microarrays, extraction and analysis of microarray data, DNA and protein arrays, SNP analysis, gene expression analysis, materials analysis, and advanced analysis of data using bioinformatic techniques. (Formerly *Application and Analysis of Microarrays*.) (Also offered as Biomolecular Engineering 210. Students cannot receive credit for both courses.) Enrollment limited to graduate students; undergraduates may enroll with permission of instructor. *The Staff*

214. Cancer Cell Biology. *

Focuses on molecular and cellular mechanisms behind cancer. Topics include oncogenes, tumor suppressor genes, cell growth genes, checkpoint genes, telomeres, and apoptosis. Students gain experience in understanding the cutting edge of cancer drug design and formulate their own proposals for applying molecular and cellular biological techniques toward cancer diagnosis and treatment. Enrollment restricted to graduate students. Enrollment limited to 10. *A. Zahler*

226. Advanced Molecular Neuroscience. W

Basis of neural behavior at the cellular, molecular and system levels. First half of course focuses on cellular, molecular, and developmental aspects of the nervous system and covers two sensory systems: olfaction and auditory. Last half of course concerns higher-level functions of the nervous system, such as processing and integrating information. Discusses human diseases and disorders. Enrollment restricted to graduate students. *Y. Zuo*

280A. Topics in Research on Molecular Genetics of Yeast (2 credits). F,W,S

Intensive research seminar on the structure and function of the gene expression machinery in the simple eukaryote *Saccharomyces cerevisiae* and its relationship to the human gene expression machinery. Enrollment restricted to graduate students; qualified undergraduates may enroll with approval of instructor. May be repeated for credit. *M. Ares*

280B. Chromatin Structure and Transcriptional Regulation (2 credits). F,W,S

Weekly seminar on structure and gene regulatory function of chromatin. Discusses research of participants and relevant scientific literature. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *H. Boeger*

280C. Mammalian Brain Development (2 credits). F,W,S

Seminar covers research into the development of the mammalian brain. Enrollment restricted to graduate students; undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *B. Chen*

280D. RNA Processing (2 credits). F,W,S

A discussion of current research and literature concerning the regulation of precursor messenger RNA processing. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *A. Zahler*

280E. Meiotic Chromosome Dynamics (2 credits). F,W,S

Intensive course on the molecular mechanisms underlying homolog pairing, synapses, and recombination; and how they are regulated, coordinated, and monitored to ensure accurate meiotic chromosome segregation. Enrollment restricted to graduate students; undergraduates may enroll with permission of instructor. May be repeated for credit. *N. Bhalla*

280F. Development of Vertebrate Neural Connections (2 credits). F,W,S

Intensive research seminar on molecular mechanisms by which neural connections are established during mouse development. Special focus on topographic maps and role of Eph receptors and ephrins in this process. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *D. Feldheim*

280H. Topics on Research into Chromatin and Transcription (2 credits). F,W,S

Seminar covering research into the effects of chromatin on transcription in yeast. Enrollment restricted to graduate students; undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *G. Hartzog*

280I. Epigenetic Gene Silencing and Insulators (2 credits). F,W,S

Intensive course on molecular mechanisms by which insulator elements regulate epigenetic gene silencing. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *R. Kamakaka*

280J. Structures of Macromolecular Complexes (2 credits). F,W,S

Focuses on structure and function of the spliceosome using electron microscopy and x-ray crystallography. Participants present results from their own research and relevant journal articles. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 20. May be repeated for credit. *M. Jurica*

280K. Topics in Cell Cycle Research (2 credits). F,W,S

An intensive seminar focusing on current research on the molecular mechanisms that control cell division. Participants are required to present results of their own research or to review journal articles of interest. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. *D. Kellogg*

280L. Topics on Neural Development (2 credits). F,W,S

Seminar covering research into the development of the embryonic nervous system. Enrollment restricted to graduate students. Enrollment limited to 12. May be repeated for credit. *L. Hinck*

280N. Structure and Function of Ribosomes (2 credits). F,W,S

An intensive and advanced course focusing on the structure and function of ribosomes. Participants present research findings in an organized, critical fashion, in the context of current research literature in the ribosome field. Enrollment restricted to graduate students; qualified undergraduate students may enroll with permission of the instructor. Enrollment limited to 20. May be repeated for credit. *H. Noller*

280O. Topics in Bacterial Pathogenesis (2 credits). F,W,S

Intensive seminar focusing on mechanisms of bacterial pathogenesis of the ulcer-causing bacterium *Helicobacter pylori*. Participants are required to present results from their own research and relevant journal articles. (Also offered as Microbiol & Environ Toxicology 281O. Students cannot receive credit for both courses.) Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 20. May be repeated for credit. *K. Ottemann*

280Q. Cell Biology of Oocytes, Embryos, and Neurons (2 credits). F,W,S

Weekly seminar and round-table discussion about research problems and recent advances in molecular motor proteins, cytoskeletons, and the control of force-producing processes. Each participant reports recent advances in their field from current literature, their own primary research questions, current approaches to answering those questions, and their research progress. Enrollment restricted to graduate students; undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *W. Saxton*

280R. Structure and Function of the Nuclear Pore Complex (2 credits). F,W,S

Intensive and advanced course focusing on structure and function of the nuclear pore complex. Participants present research findings in an organized critical fashion in the context of current research literature in the nucleo-cytoplasmic transport field. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *M. Rexach*

280S. Chromatin and RNA Regulation in *C. elegans* (2 credits). F,W,S

Intensive research seminar about regulators of chromatin organization; the composition and function of germ granules; and the roles of both levels of regulation in germline development in *C. elegans*. Participants present their research results and report on related journal articles. Enrollment restricted to graduate students; undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *S. Strome*

280T. Molecular Biology of *Drosophila* Development (2 credits). F,W,S

An intensive seminar concerning the molecular genetics of *Drosophila*. Recent research is discussed weekly, with an emphasis on gene regulation and development. Students present their own research or critical reviews of recent articles at least once during the quarter. Enrollment restricted to graduate students. Qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *J. Tamkun*

280U. Discussions on the Development of the *Drosophila* Embryo (2 credits). F,W,S

Involves a two-hour weekly meeting in which the students discuss topics concerning the cell cycle, early embryonic development, and the cytoskeleton. These discussions critically evaluate ongoing research in this area. Material is drawn from student research and recently published journal articles. Students are also expected to meet individually with the instructor two hours weekly. In addition to a three–five page

research proposal, each student gives two one-hour oral presentations. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *W. Sullivan*

280W. Membrane Proteins (2 credits). F,W,S

Seminar on recent research on membrane proteins, with an emphasis on ion-pumping ATPase. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 20. May be repeated for credit. *B. Bowman*

280Y. Activity-Dependent Synaptic Plasticity (2 credits). F,W,S

Research seminar covering the regulation of synaptic plasticity in the mammalian nervous system, focusing on how the activity regulates the structural and functional dynamics of synapses. Enrollment restricted to graduate students; undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *Y. Zuo*

288. Stem Cell Research: Scientific, Ethical, Social, and Legal Issues. W

Scientific, ethical, social, and legal dimensions of human embryonic stem-cell research, including the moral status of the embryo; the concept of respect for life; ethical constraints on oocyte procurement; creation of embryonic chimeras; federal policies; and political realities. (Also offered as Biomolecular Engineering 247. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. *E. Suckiel*

289. Practice of Science. W

Examination of ethical and practical scientific issues, including the collection and treatment of data, attribution of credit, plagiarism, fraud, and peer review. Career issues, including how to apply for grants and positions in industry or academia, will be discussed. Prerequisite(s): BIOL 200A, BIOL 200B, and BIOL 200C or permission of instructor. Enrollment restricted to graduate students; undergraduates may enroll with permission of the instructor. Enrollment limited to 20. *The Staff*

291. Molecular, Cellular, and Developmental Biology Seminar (2 credits). F,W,S

Topics of current interest in molecular, cellular, and developmental biology are presented weekly by graduate students, faculty, and guest speakers. Enrollment restricted to graduate students. Enrollment limited to 60. May be repeated for credit. *The Staff*

292. MCD Seminar (no credit). F,W,S

Various topics by weekly guest speakers. Enrollment restricted to graduate students. *The Staff*

296. Laboratory Research in Molecular, Cell, and Developmental Biology. F,W,S

Independent laboratory research in molecular, cellular, and developmental biology. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

297. Independent Study. F,W,S

Independent study for graduate students who have not yet settled on a research area for their thesis. Students submit petition to sponsoring agency. *The Staff*

299. Thesis Research. F,W,S

Students submit petition to sponsoring agency. *The Staff*

[Changes to 2009-10 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Program Description

The Department of Biomolecular Engineering is an interdisciplinary department that combines expertise from Biology, Mathematics, Chemistry, Computer Science, and Engineering to train students and develop technologies to address major problems at the forefront of biomedical and bio-industrial research. Students trained in the Department of Biomolecular Engineering can look forward to careers in Academia, the Information and Biotechnology Industries, Public Health, or Medical Sciences.

The department currently offers an undergraduate minor, B.S, M.S., and Ph.D. degrees in bioinformatics. The department co-sponsors the B.S. in Bioengineering program, described elsewhere in this catalog, with the Departments of Computer Engineering, Electrical Engineering, and Molecular, Cell, and Developmental (MCD) Biology.

Departmental faculty advise undergraduate and graduate researchers enrolled in the bioinformatics, bioengineering, and related degree programs. Members of the BME Department actively collaborate with faculty from other Baskin School of Engineering departments, such as Applied Mathematics & Statistics, Computer Engineering, Computer Science, and Electrical Engineering; and with the Physical & Biological Sciences departments of MCD Biology, Chemistry and Biochemistry, Microbiology and Environmental Toxicology, Ecology and Evolutionary Biology, and Ocean Sciences.

Bioinformatics

Bioinformatics combines mathematics, science, and engineering to explore and understand biological data from high-throughput experiments, such as genome sequencing, gene expression chips, and proteomics experiments. The program builds upon the research and academic strengths of the faculty in the Center for Biomolecular Science and Engineering, <http://cbse.ucsc.edu>.

The Human Genome Project, the international collaboration to determine the sequence of human DNA and understand its function, had its origin in a conference that took place at UCSC in 1985. One notable output from our research is that UCSC is the primary release site for the public version of the human genome: <http://genome.ucsc.edu>, as well as the repository for the ENCODE project, a national effort to annotate the entire human genome with multiple functional assays. We are also a major player in protein-structure prediction, and have a strong research group in DNA microarray analysis.

The undergraduate bioinformatics degree program prepares students for graduate school or a career in the pharmaceutical or biotechnology industries.

The immense growth of biological information stored in computerized databases has led to a critical need for people who can understand the languages, tools, and techniques of statistics, science, and engineering.

A classically trained scientist may be unfamiliar with the statistical and algorithmic knowledge required in this field. A classically trained engineer may be unfamiliar with the chemistry and biology required in the field.

Thus, this program strives for a balance of the two, an engineer focused on the problems of the underlying science or, conversely, a scientist focused on the use of engineering tools for analysis and discovery.

The undergraduate degree program in bioinformatics builds a solid foundation in the constituent areas of the field. Students complete core sequences in mathematics (including calculus, statistics, and discrete mathematics), science (including biology, chemistry, and biochemistry), and engineering (including programming, algorithms, and databases). The core topics are brought together in two bioinformatics courses: BME 110, *Computational Biology Tools*, and BME 205, *Bioinformatics Models and Algorithms*. Students have two electives for specialization within the fields of bioinformatics and are required to take a bioethics course (either BME 80G, *Bioethics in the Twenty-First Century: Science, Business, and Society* or PHIL 145, *Brave New World: Ethical Issues in Genetics*) to study the ethical, legal, and social implications of this new technology. As a comprehensive requirement, all students complete a graduate project course: BME 210, *Experimental Systems Biology*, BME 211, *Computational Systems Biology*, BME 220/L, *Protein Bioinformatics*, or BME 230/L, *Computational Genomics*. Students who work on independent research projects with faculty (as all students are encouraged to do) may substitute a senior thesis, BME 195, for the graduate project course.

Courses for Nonmajors

Biomolecular Engineering 5, *Introduction to Biotechnology*, presents a broad overview of the impact of biotechnology on the diagnosis and treatment of disease.

Biomolecular Engineering 60 and 160, *Programming for Biologists and Biochemists*, provide an introductory programming class using Perl and BioPerl to analyze, transform, and publish biological data.

Biomolecular Engineering 80G, *Bioethics in the Twenty-First Century: Science, Business, and Society*, is particularly appropriate to all students interested in the societal issues surrounding the revolutions in bioinformatics and biotechnology.

Biomolecular Engineering 110, *Computational Biology Tools*, provides an introduction to the tools and techniques of bioinformatics from a user's view. It is intended for biologists and biochemists who need to use bioinformatics tools, but are not primarily interested in building new bioinformatics tools.

Biomolecular Engineering 109, *Resource-efficient Programming*, provides advice and practice for people working at the limits of their computer hardware. It is of use for bioinformaticians, game programmers, and embedded-system designers.

Biomolecular Engineering 155, *Biotechnology and Drug Development*, examines the science and process of discovering, testing, and manufacturing new drugs within the pharmaceutical industry.

Bioinformatics Policies

Admissions Policy

Admission to the bioinformatics major is selective. First-year applicants may receive direct admission at the time they apply to UCSC, based on their high school record and test scores. Admission to the bioinformatics major after a student has entered UCSC is based on performance in courses offered by the School of Engineering and the Division of Physical and Biological Sciences (the SOE GPA). Due to the required graduate courses in the senior years, a School of Engineering GPA of 2.9 or better is expected at the time of major declaration. After the first year, the following foundation courses must be completed before admission to the major: Computer Science 12A/L (or 5J and 11 or Computer Engineering 12/L and 13/L) and Computer Science 12B, Chemistry 1A, 1B/M and 1C/N, and Mathematics 19A-B.

Courses Taken Elsewhere

Please refer to the School of Engineering section of the catalog for policies about taking courses at other institutions after enrolling at UCSC.

Disqualification Policy

Students who do not make adequate progress in the major (normally passing six required courses per year) may be disqualified from the major. All students not meeting the progress in the major or grade point average requirements must meet with the undergraduate director to discuss their options for continuing in the major. Please refer to the Engineering section of this catalog for the School of Engineering's Major Disqualification Policy.

Honors in the Major

Bioinformatics majors are considered for "Honors in the Major" and "Highest Honors in the Major" based on the School of Engineering GPA and on results of undergraduate research. Students with an SOE GPA of 3.7 in most cases receive Highest Honors. Students with an SOE GPA of 3.3 in most cases receive Honors. Students with particularly significant accomplishments in undergraduate research may be considered with a lower SOE GPA.

Transfer Students

Please refer to the School of Engineering section of the catalog for the policy regarding transfer students.

School of Engineering Policies

Please refer to the School of Engineering section of the catalog for additional policies that apply to all School of Engineering programs.

Preparation for the Major

Students applying for admission to the bioinformatics major should have completed four years of high school mathematics (through advanced algebra and trigonometry) and three years of science, including one year of chemistry and one year of biology. Comparable college mathematics and science courses completed at other institutions may be accepted in place of high school preparation. Students without this preparation may be required to take additional courses to prepare themselves for the program.

Bioinformatics Major Requirements

Every bioinformatics major must have a faculty adviser, assigned by the Baskin School of Engineering Undergraduate Advising office, and with that adviser must formulate a program of proposed course work that meets the major requirements. Because of the enormous breadth of requirements, bioinformatics majors are urged to take honors courses or sections whenever possible, to get as much as possible out of the courses they take in each field.

Lower-Division Requirements

Majors must complete the following lower-division courses:

Biology

20A, *Cell and Molecular Biology*

Biomolecular Engineering

80G, *Bioethics in the Twenty-First Century: Science, Business, and Society*; or
Philosophy 145, *Brave New World: Ethical Issues in Genetics*

Chemistry

1A, 1B/M, and 1C/N, *General Chemistry/Laboratory*

Computer Engineering

16, *Applied Discrete Mathematics*

Programming 1

Computer Science 12A/L, *Introduction to Programming/Laboratory*; or
Computer Science 5J, *Introduction to Programming in Java*, and 11, *Intermediate Programming*;
or
Computer Engineering 12/L, *Computer Systems and Assembly Language/Laboratory*, and 13/L,
Computer Systems and C Programming/Laboratory

Programming 2

Computer Science 12B/M, *Introduction to Data Structures/Laboratory*

Mathematics

20A-B, *Honors Calculus*; or
19A-B, *Calculus for Science, Engineering, and Mathematics* (Credit for one or both can be granted with adequate performance on the CEEB calculus AB or BC Advanced Placement examination.)
23A, *Multivariable Calculus*

Upper-Division Requirements

Majors must complete the following upper-division courses:

Applied Mathematics and Statistics

Computer Engineering 107, *Mathematical Methods of Systems Analysis: Stochastic*; or
Applied Mathematics and Statistics 131, *Introduction to Probability Theory*
Applied Mathematics and Statistics 206, *Bayesian Statistics*; or

Applied Mathematics and Statistics 132, *Statistical Inference*

Biochemistry and Molecular Biology

100A, *Biochemistry* (first in three-part sequence)

Bioinformatics

Biomolecular Engineering 110, *Computational Biology Tools*

Biomolecular Engineering 205, *Bioinformatics Models and Algorithms*

One of the following:

Biomolecular Engineering 210, *Experimental Systems Biology*; or

Biomolecular Engineering 211, *Computational Systems Biology*; or

Biomolecular Engineering 220/L, *Protein Bioinformatics/Laboratory*; or

Biomolecular Engineering 230/L, *Computational Genomics/Laboratory*; or

Biomolecular Engineering 195, *Senior Thesis Research*

Biology

Biology 105, *Genetics*

One of the following:

Biology 110, *Cell Biology*; or

Biology 115, *Eukaryotic Molecular Biology*; or

Biology 119, *Microbiology*; or

Biomolecular Engineering 155, *Biotechnology and Drug Development*

Chemistry

108A/L, *Organic Chemistry/Laboratory*; or

112A/L and 112B/M, *Organic Chemistry/Laboratory*

Computer Engineering

185, *Technical Writing for Computer Engineers*

Computer Science

One of the following:

182, *Introduction to Database Management Systems*, or

180, *Database Systems*. Note that CMPS 180 may require an additional course as a prerequisite, such as CMPS 101.

Advanced Programming

Computer Science 109, *Advanced Programming*

Required Electives

Students must select two additional courses as electives, justify their choices in writing, and get the choices approved by their faculty adviser. The following courses are typical of the ones chosen, but do not constitute a pre-approved list:

Applied Mathematics and Statistics 132, 162, 203, 205, 207, 215

Biochemistry 100B, 100C, 110

Biology 100L, 105L, 105M, 109L, 110, 115, 115L, 117A, 117B, 119, 119L, 187L, 200A, 200B

Biomolecular Engineering 102, 109, 130, 210, 220, 230

Chemistry 103, 108B/M, 112C/N, 200A, 200B, 200C

Computer Engineering 108, 177

Computer Science 101, 104A, 105, 115, 116, 130, 140, 142, 160/L

Information Systems Management 206, 250

Note: many of these courses are offered only once a year and have long prerequisite chains, so advance planning is necessary to make sure elective courses can be fit into the student's schedule.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement will normally be met within one to three courses already required for the major. For detailed information on this major's DC requirement, consult your major adviser or see the 2010-11 general catalog.

Comprehensive Requirement

The bioinformatics comprehensive requirement can be met by taking Biomolecular Engineering

210, *Experimental Systems Biology*, or Biomolecular Engineering 211, *Computational Systems Biology*, or Biomolecular Engineering 220/L, *Protein Bioinformatics*, or Biomolecular Engineering 230/L, *Computational Genomics*, which include substantial projects; or Biomolecular Engineering 195, *Senior Thesis Research*. Students electing the senior thesis must submit a written thesis proposal to the undergraduate director of bioinformatics for approval one quarter prior to submitting the final thesis.

The Bioinformatics Minor

Where the bioinformatics major is intended for people who wish to become bioinformaticians and create the tools needed to solve new problems in computational biology, the bioinformatics minor is intended primarily for bioinformatics tool users who are majoring in a biological or chemical specialty. The bioinformatics minor is also appropriate for computer science or computer engineering majors who are considering graduate work in bioinformatics. A bioinformatics minor consists of the following 15 courses:

Lower-division (10 courses)

Biology (2)

20A, *Cell and Molecular Biology*; and

One of the following:

Biology 20B, *Ecology and Evolutionary Biology*; or

Biology 110, *Cell Biology*; or

Biology 105, *Genetics*; or

Biology 115, *Eukaryotic Molecular Biology*; or

Biology 119, *Microbiology*

General chemistry (3)

Chemistry 1A, Chemistry 1B/M and Chemistry 1C/N

Single-Variable Calculus (2)

Mathematics 19A and Mathematics 19B—preferred; or

 engineering course

The bioinformatics minor requirements may satisfy the requirements of other majors or minors under the campus policy discussed in Major and Minor Requirements. Majors with substantial overlap include biochemistry, bioengineering, all biology majors, chemistry, computer science, and computer engineering. Students pursuing one of these majors are particularly encouraged to consider the bioinformatics minor.

The Bioinformatics Combined B.S./Graduate Degree Program

Because our bioinformatics B.S. program provides excellent preparation for a graduate program in bioinformatics, we offer a combined B.S./grad program that allows our B.S. students to complete the M.S. (or Ph.D.) somewhat sooner than students with a less tailored preparation. The current B.S. and graduate requirements have four courses in common:

Biomolecular Engineering 80G, *Bioethics in the 21st Century*; or Philosophy 145/245, *Brave New World: Ethical Issues in Genetics*
 Biomolecular Engineering 205, *Bioinformatics Models and Algorithms*
 Biomolecular Engineering 220, *Protein Bioinformatics*; or Biomolecular Engineering 230, *Computational Genomics*
 Applied Mathematics and Statistics 206, *Bayesian Statistics*

Masters students take nine courses, two seminars (four credits), Biomolecular Engineering 200, and two independent project courses (such as Biomolecular Engineering 220L and Biomolecular Engineering 230L). The course work for Ph.D. students is essentially the same, except that eight credits of seminars are required and three research lab rotations are required in place of the two project courses.

The combined B.S./graduate degree program does not make any changes to the undergraduate program, except that students must pass the four overlapping courses listed above for a grade of B- or better.

The requirements at the graduate level are changed to remove the four courses that overlap with the B.S. and to add two graduate electives to be chosen by the students with the approval of their advisers. Thus, the total number of full courses required is reduced from nine to seven. To apply for the combined program, students apply to the M.S. or Ph.D. program through the normal graduate admission process in the fall of their senior year. If admitted into the graduate program, they would automatically be included in the combined B.S./M.S. or B.S./Ph.D. program.

Bioinformatics Major Planners

Plan one is a suggested plan for students who are undecided between bioinformatics and another computing major. Plan two is suggested for students undecided between bioinformatics and some other field in biology or chemistry. As in all engineering and science programs, it is recommended that students spread their general education requirements out over all 12 quarters. Students considering pursuing a bioengineering degree should follow the biomolecular concentration of the bioengineering B.S. program and complete the programming sequence (Computer Science 12A and 12B) by the end of their second year.

Four-year plans require individual design to fit in the desired electives, so only the first two years of the academic plan are presented here. It is recommended that students reserve the summer after the junior year for undergraduate research. One popular plan involves taking organic chemistry and the associated labs in the summer after completing general chemistry, so that biochemistry may be started in the junior year.

Most students find it easiest to take Biomolecular Engineering 205, *Bioinformatics Models and Algorithms*, after Biomolecular Engineering 110, *Computational Biology Tools*.

Bioinformatics Graduate Program

The graduate program in bioinformatics offers both M.S. and Ph.D. degrees.

Course Requirements

Both masters and doctoral students must complete nine, 5-credit courses (seven core courses and two electives; see below) and a 3-credit research and teaching course. In addition, M.S. students must complete four seminar credits, while Ph.D. students must complete eight seminar credits. M.S. students must complete two (1-credit or 2-credit) research project courses (such as course 220L, 230L, 297F, or 297), and Ph.D. students must complete three research lab rotations (course 296) with different supervisors.

Core courses (5-credit)—seven are required

Biomolecular Engineering

205, *Bioinformatics Models and Algorithms*

Two other graduate bioinformatics courses (courses in the range 210-239)

80G, *Bioethics in the Twenty-First Century: Science, Business, and Society*; or Philosophy 245, *Brave New World: Ethical Issues in Genetics*; or 247, *Stem Cell Research: Scientific, Ethical, Social and Legal Issues*

One graduate course, approved by the faculty, in each of the following three areas:

Statistics (Applied Mathematics and Statistics 206 recommended)

Biology (Biology 200B recommended)

Chemistry (Chemistry 200B recommended)

Electives (5-credit)—two are required

The electives should be graduate-level courses selected with approval of the faculty to ensure a coherent, balanced program. For M.S. students, 5 credits of independent research (297) or thesis research (299) may count as electives toward the degree requirements upon approval of the faculty. For Ph.D. students, independent or thesis research cannot be counted as electives. Students must choose their electives with faculty guidance and approval to balance their preparation and make up for deficiencies in background areas. In addition to fulfilling background needs, students may choose to emphasize one of the breadth areas: molecular biology, biochemistry, statistics, computational biology, genetics, computer science, computer engineering, applied mathematics, cell biology, and computer graphics/visualization or may take a cross-sampling of the electives to achieve a broad knowledge base.

Other Curriculum Requirements

Biomolecular Engineering 200, *Research and Teaching in Bioinformatics*, 3 credits

Seminars

M.S. students: a minimum of two seminar courses, including at least one quarter of the 2-credit Biomolecular Engineering seminar, 280B

Ph.D. students: a minimum of four seminar courses, including at least two quarters of the 2-credit Biomolecular Engineering Seminar, 280B

Research experience

M.S. students: a minimum of two research project courses. This requirement can be met by taking course 220L, 230L, and/or independent study (course 297F or course 297).

Ph.D. Students: three quarters of lab rotations (course 296), generally within the first 12 months. One of the lab rotations must be with a faculty supervisor who does wet-lab research, though the student's rotation project may be purely computational.

Qualifying Exams

Ph.D. students are required to pass an oral qualifying exam by the end of their second year and to advance to candidacy by the end of their third year.

Adequate Progress

Graduate students receiving two or more U (unsatisfactory) grades or grades below B in courses relevant to the program are not making adequate progress and will be placed on academic probation for the next three quarters of registered enrollment.

Graduate students who fail (unsatisfactory or lower than B) a relevant course while on probation may be dismissed from the program. Students may appeal their dismissal. Graduate students who fail a relevant course after being removed from probation are immediately returned to academic probation.

Graduate students experiencing circumstances that may adversely affect their academic performance should consult with their adviser and the graduate director.

Thesis and Dissertation Requirements

In addition to completing the course requirements, students must fulfill the following thesis or dissertation requirements.

For M.S. students, a written thesis proposal must be submitted to a faculty member before the end of the fourth academic quarter. If the faculty member accepts the proposal, he or she will become the student's adviser and will be in charge of supervising the writing of the master's thesis. When the thesis is completed, it will be submitted to a faculty review committee consisting of the thesis adviser and at least two additional readers. The committee must include a School of Engineering faculty member, may include participants from the Division of Physical and Biological Sciences and from industry as appropriate, and must be approved by the bioinformatics program director. Students are required to present their thesis project in a public seminar.

Ph.D. students must pass an oral comprehensive exam by the end of the second year.

Ph.D. students must select a faculty research adviser by the end of the second year. A qualifying committee is then formed, which consists of the adviser and three additional members, and approved by the bioinformatics program director and the campus graduate dean. The student must submit a written dissertation proposal to all members of the committee and the graduate assistant one month in advance of the examination. The dissertation proposal is publicly and formally presented in an oral qualifying examination given by the qualifying committee. This exam must be completed within six months of a successful comprehensive exam.

Ph.D. candidates will submit the completed dissertation to a reading committee at least one month prior to the dissertation defense. The reading committee, formed upon advancement to candidacy, consists of the dissertation supervisor and two readers appointed by the program director upon the recommendation of the dissertation supervisor. The candidate will present his or her research in a public seminar. The seminar will be followed by a defense of the dissertation to the reading committee and attending faculty, who will then decide whether the dissertation is acceptable or requires revision.

Transfer Limitations

Up to two courses may be transferred from other graduate institutions, with the approval of the faculty adviser and the graduate director.

Biomolecular Engineering

[2009-10 update to the *General Catalog*, changes highlighted]

Baskin School of Engineering
335 Baskin Engineering Building
(831) 459-2158
<http://www.soe.ucsc.edu>

Program Description

The Department of Biomolecular Engineering is an interdisciplinary department that combines expertise from Biology, Mathematics, Chemistry, Computer Science, and Engineering to train students and develop technologies to address major problems at the forefront of biomedical and bio-industrial research. Students trained in the Department of Biomolecular Engineering can look forward to careers in Academia, the Information and Biotechnology Industries, Public Health, or Medical Sciences.

The department currently offers an undergraduate minor, B.S, M.S., and Ph.D. degrees in bioinformatics. The department co-sponsors the B.S. in Bioengineering program, described elsewhere in this catalog, with the Departments of Computer Engineering, Electrical Engineering, and Molecular, Cell, and Developmental (MCD) Biology.

Departmental faculty advise undergraduate and graduate researchers enrolled in the bioinformatics, bioengineering, and related degree programs. Members of the BME Department actively collaborate with faculty from other Baskin School of Engineering departments, such as Applied Mathematics & Statistics, Computer Engineering, Computer Science, and Electrical Engineering; and with the Physical & Biological Sciences departments of MCD Biology, Chemistry and Biochemistry, Microbiology and Environmental Toxicology, Ecology and Evolutionary Biology, and Ocean Sciences.

Bioinformatics

Bioinformatics combines mathematics, science, and engineering to explore and understand biological data from high-throughput experiments, such as genome sequencing, gene expression chips, and proteomics experiments. The program builds upon the research and academic strengths of the faculty in the Center for Biomolecular Science and Engineering, <http://cbse.ucsc.edu>.

The Human Genome Project, the international collaboration to determine the sequence of human DNA and understand its function, had its origin in a conference that took place at UCSC in 1985. One notable output from our research is that UCSC is the primary release site for the public version of the human genome: <http://genome.ucsc.edu>, as well as the repository for the ENCODE project, a national effort to annotate the entire human genome with multiple functional assays. We are also a major player in protein-structure prediction, and have a strong research group in DNA microarray analysis.

The undergraduate bioinformatics degree program prepares students for graduate school or a career in the pharmaceutical or biotechnology industries.

The immense growth of biological information stored in computerized databases has led to a critical need for people who can understand the languages, tools, and techniques of statistics, science, and engineering.

A classically trained scientist may be unfamiliar with the statistical and algorithmic knowledge required in this field. A classically trained engineer may be unfamiliar with the chemistry and biology required in the field.

Thus, this program strives for a balance of the two, an engineer focused on the problems of the underlying science or, conversely, a scientist focused on the use of engineering tools for analysis and discovery.

The undergraduate degree program in bioinformatics builds a solid foundation in the constituent areas of the field. Students complete core sequences in mathematics (including calculus, statistics, and discrete mathematics), science (including biology, chemistry, and biochemistry), and engineering (including programming, algorithms, and databases). The core topics are brought together in two bioinformatics courses: BME 110, *Computational Biology Tools*, and BME 205, *Bioinformatics Models and Algorithms*. Students have two electives for specialization within the fields of bioinformatics and are required to take a bioethics course (either BME 80G, *Bioethics in the Twenty-First Century: Science, Business, and Society* or PHIL 145, *Brave New World: Ethical Issues in Genetics*) to study the ethical, legal, and social implications of this new technology. As a comprehensive requirement, all students complete a graduate project course: BME 210, *Experimental Systems Biology*, BME 211, *Computational Systems Biology*, BME 220/L, *Protein Bioinformatics*, or BME 230/L, *Computational Genomics*. Students who work on independent research projects with faculty (as all students are encouraged to do) may substitute a senior thesis, BME 195, for the graduate project course.

Courses for Nonmajors

Biomolecular Engineering 5, *Introduction to Biotechnology*, presents a broad overview of the impact of biotechnology on the diagnosis and treatment of disease.

Biomolecular Engineering 60 and 160, *Programming for Biologists and Biochemists*, provide an introductory programming class using Perl and BioPerl to analyze, transform, and publish biological data.

Biomolecular Engineering 80G, *Bioethics in the Twenty-First Century: Science, Business, and Society*, is particularly appropriate to all students interested in the societal issues surrounding the revolutions in bioinformatics and biotechnology.

Biomolecular Engineering 110, *Computational Biology Tools*, provides an introduction to the tools and techniques of bioinformatics from a user's view. It is intended for biologists and biochemists who need to use bioinformatics tools, but are not primarily interested in building new bioinformatics tools.

Biomolecular Engineering 109, *Resource-efficient Programming*, provides advice and practice for people working at the limits of their computer hardware. It is of use for bioinformaticians, game programmers, and embedded-system designers.

Biomolecular Engineering 155, *Biotechnology and Drug Development*, examines the science and process of discovering, testing, and manufacturing new drugs within the pharmaceutical industry.

Bioinformatics Policies

Admissions Policy

Admission to the bioinformatics major is selective. First-year applicants may receive direct admission at the time they apply to UCSC, based on their high school record and test scores.

Admission to the bioinformatics major after a student has entered UCSC is based on performance in courses offered by the School of Engineering and the Division of Physical and Biological Sciences (the SOE GPA). Due to the required graduate courses in the senior years, a School of Engineering GPA of 2.9 or better is expected at the time of major declaration. After the first year, the following foundation courses must be completed before admission to the major: Computer Science 12A/L (or 5J and 11 or **Computer Engineering 12/L and 13/L**) and **Computer Science 12B**, Chemistry 1A, 1B/M and 1C/N, and Mathematics 19A-B.

Courses Taken Elsewhere

Please refer to the School of Engineering section of the catalog for policies about taking courses at other institutions after enrolling at UCSC.

Disqualification Policy

Students who do not make adequate progress in the major (normally passing six required courses per year) may be disqualified from the major. All students not meeting the progress in the major or grade point average requirements must meet with the undergraduate director to discuss their options for continuing in the major. Please refer to the Engineering section of this catalog for the School of Engineering's Major Disqualification Policy.

Honors in the Major

Bioinformatics majors are considered for "Honors in the Major" and "Highest Honors in the Major" based on the School of Engineering GPA and on results of undergraduate research. Students with an SOE GPA of 3.7 in most cases receive Highest Honors. Students with an SOE GPA of 3.3 in most cases receive Honors. Students with particularly significant accomplishments in undergraduate research may be considered with a lower SOE GPA.

Transfer Students

Please refer to the School of Engineering section of the catalog for the policy regarding transfer students.

School of Engineering Policies

Please refer to the School of Engineering section of the catalog for additional policies that apply to all School of Engineering programs.

Preparation for the Major

Students applying for admission to the bioinformatics major should have completed four years of high school mathematics (through advanced algebra and trigonometry) and three years of science, including one year of chemistry and one year of biology. Comparable college mathematics and science courses completed at other institutions may be accepted in place of high school preparation. Students without this preparation may be required to take additional courses to prepare themselves for the program.

Bioinformatics Major Requirements

Every bioinformatics major must have a faculty adviser, assigned by the Baskin School of Engineering Undergraduate Advising office, and with that adviser must formulate a program of proposed course work that meets the major requirements. Because of the enormous breadth of requirements, bioinformatics majors are urged to take honors courses or sections whenever possible, to get as much as possible out of the courses they take in each field.

Lower-Division Requirements

Majors must complete the following lower-division courses:

Biology

20A, *Cell and Molecular Biology*

~~One of the following:~~

~~Biology 110, *Cell Biology*; or~~

~~Biology 105, *Genetics*; or~~

~~Biology 115, *Eukaryotic Molecular Biology*; or~~

~~Biology 119, *Microbiology*; or~~

~~Biomolecular Engineering 155, *Biotechnology and Drug Development*~~

Biomolecular Engineering

80G, *Bioethics in the Twenty-First Century: Science, Business, and Society*; or

Philosophy 145, *Brave New World: Ethical Issues in Genetics*

Chemistry

1A, 1B/M, and 1C/N, *General Chemistry/Laboratory*

Computer Engineering

16, *Applied Discrete Mathematics*

Programming 1

Computer Science 12A/L, *Introduction to Programming/Laboratory*; or

Computer Science 5J, *Introduction to Programming in Java*, and 1I, *Intermediate Programming*; or

Computer Engineering 12/L, *Computer Systems and Assembly Language/Laboratory*, and 13/L, *Computer Systems and C Programming/Laboratory*

Programming 2

Computer Science 12B/M, *Introduction to Data Structures/Laboratory*

Mathematics

20A-B, *Honors Calculus*; or

19A-B, *Calculus for Science, Engineering, and Mathematics* (Credit for one or both can be granted with adequate performance on the CEEB calculus AB or BC Advanced Placement examination.)

23A, *Multivariable Calculus*

Upper-Division Requirements

Majors must complete the following upper-division courses:

Applied Mathematics and Statistics

Computer Engineering 107, *Mathematical Methods of Systems Analysis: Stochastic*; or

Applied Mathematics and Statistics 131, *Introduction to Probability Theory*

Applied Mathematics and Statistics 206, *Bayesian Statistics*; or

Applied Mathematics and Statistics 132, *Statistical Inference*

Biochemistry and Molecular Biology

100A, *Biochemistry* (first in three-part sequence)

Bioinformatics

Biomolecular Engineering 110, *Computational Biology Tools*

Biomolecular Engineering 205, *Bioinformatics Models and Algorithms*

One of the following:

Biomolecular Engineering 210, *Experimental Systems Biology*; or

Biomolecular Engineering 211, *Computational Systems Biology*; or

Biomolecular Engineering 220/L, *Protein Bioinformatics/Laboratory*; or

Biomolecular Engineering 230/L, *Computational Genomics/Laboratory*; or

Biomolecular Engineering 195, *Senior Thesis Research*

Biology

Biology 105, *Genetics*

One of the following:

Biology 110, *Cell Biology*; or

Biology 115, *Eukaryotic Molecular Biology*; or

Biology 119, *Microbiology*; or

Biomolecular Engineering 155, *Biotechnology and Drug Development*

Chemistry

108A/L, *Organic Chemistry/Laboratory*; or

112A/L and 112B/M, *Organic Chemistry/Laboratory*

Computer Engineering

185, *Technical Writing for Computer Engineers*

Computer Science

One of the following:

182, *Introduction to Database Management Systems*, or

180, *Database Systems*. Note that CMPS 180 may require an additional course as a prerequisite, such as CMPS 101.

Advanced Programming

Computer Science 109, *Advanced Programming*

Required Electives

Students must select two additional courses as electives, justify their choices in writing, and get the choices approved by their faculty adviser. The following courses are typical of the ones chosen, but do not constitute a pre-approved list:

Applied Mathematics and Statistics 132, 162, 203, 205, 207, 215

Biochemistry 100B, 100C, 110

Biology 100L, ~~105~~, 105L, 105M, 109L, 110, 115, 115L, 117A, 117B, 119, 119L, 187L, 200A, 200B

Biomolecular Engineering 102, 109, 130, 210, 220, 230

Chemistry 103, 108B/M, 112C/N, 200A, 200B, 200C

Computer Engineering 108, 177

Computer Science 101, 104A, 105, ~~109~~, 115, 116, 130, 140, 142, 160/L

Information Systems Management 206, 250

Note: many of these courses are offered only once a year and have long prerequisite chains, so advance planning is necessary to make sure elective courses can be fit into the student's schedule.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement will normally be met within one to three courses already required for the major. For detailed information on this major's DC requirement, consult your major adviser or see the 2010-11 general catalog.

Comprehensive Requirement

The bioinformatics comprehensive requirement can be met by taking Biomolecular Engineering 210, *Experimental Systems Biology*, or Biomolecular Engineering 211, *Computational Systems Biology*, or Biomolecular Engineering 220/L, *Protein Bioinformatics*, or Biomolecular Engineering 230/L, *Computational Genomics*, which include substantial projects; or Biomolecular Engineering 195, *Senior Thesis Research*. Students electing the senior thesis must submit a written thesis proposal to the undergraduate director of bioinformatics for approval one quarter prior to submitting the final thesis.

The Bioinformatics Minor

Where the bioinformatics major is intended for people who wish to become bioinformaticians and create the tools needed to solve new problems in computational biology, the bioinformatics minor is intended primarily for bioinformatics tool users who are majoring in a biological or chemical specialty. The bioinformatics minor is also appropriate for computer science or computer engineering majors who are considering graduate work in bioinformatics.

A bioinformatics minor consists of the following 15 courses:

Lower-division (10 courses)

Biology (2)

20A, *Cell and Molecular Biology*; and

One of the following:

Biology 20B, *Ecology and Evolutionary Biology*; or

Biology 110, *Cell Biology*; or

Biology 105, *Genetics*; or

Biology 115, *Eukaryotic Molecular Biology*; or

Biology 119, *Microbiology*

~~Biology: Molecular, Cell, and Developmental Biology 20A; and either~~

~~Biology: Ecology and Evolutionary Biology 20B;~~

~~or Biology: Molecular, Cell, and Developmental Biology 105~~

General chemistry (3)

Chemistry 1A, Chemistry 1B/M and Chemistry 1C/N

Single-Variable Calculus (2)

Mathematics 19A and Mathematics 19B—preferred; or

Mathematics 11A and Mathematics 11B; or

Mathematics 20A and Mathematics 20B

Programming 1 (1)

Computer Science 12A/L; or

Computer Science 5C; or

Computer Science 5J; or

Computer Science 5P; or

Computer Engineering 12/L and Computer Engineering 13/L

Programming 2 (1)

Biomolecular Engineering 160/L; or

Computer Science 12B/M

Bioethics (1)

Biomolecular Engineering 80G; or

Philosophy 145; or

Biomolecular Engineering 247

Upper-division (5 courses)

Organic chemistry (1)

Chemistry 108A; or

Chemistry 112A and CHEM 112-B

Biochemistry (1)

Biochemistry 100A; or
Biology 100

Statistics (1)

Computer Engineering 107; or
Applied Mathematics and Statistics 131

Bioinformatics (1)

Biomolecular Engineering- 110

Elective(1)

Applied Mathematics and Statistics 132; or
Biochemistry 100B; or
any other upper-division or graduate biomolecular
engineering course

The bioinformatics minor requirements may satisfy the requirements of other majors or minors under the campus policy discussed in Major and Minor Requirements (~~see page xxx~~). Majors with substantial overlap include biochemistry, bioengineering, all biology majors, chemistry, computer science, and computer engineering. Students pursuing one of these majors are particularly encouraged to consider the bioinformatics minor.

The Bioinformatics Combined B.S./Graduate Degree Program

Because our bioinformatics B.S. program provides excellent preparation for a graduate program in bioinformatics, we offer a combined B.S./grad program that allows our B.S. students to complete the M.S. (or Ph.D.) somewhat sooner than students with a less tailored preparation.

The current B.S. and graduate requirements have four courses in common:

Biomolecular Engineering 80G, *Bioethics in the 21st Century*; or Philosophy 145/245, *Brave New World: Ethical Issues in Genetics*

Biomolecular Engineering 205, *Bioinformatics Models and Algorithms*

Biomolecular Engineering 220, *Protein Bioinformatics*; or Biomolecular Engineering 230, *Computational Genomics*

Applied Mathematics and Statistics 206, *Bayesian Statistics*

Masters students take nine courses, two seminars (four credits), Biomolecular Engineering 200, and two independent project courses (such as Biomolecular Engineering 220L and Biomolecular Engineering 230L). The course work for Ph.D. students is essentially the same, except that eight credits of seminars are required and three research lab rotations are required in place of the two project courses.

The combined B.S./graduate degree program does not make any changes to the undergraduate program, except that students must pass the four overlapping courses listed above for a grade of B- or better.

The requirements at the graduate level are changed to remove the four courses that overlap with the B.S. and to add two graduate electives to be chosen by the students with the approval of their advisers. Thus, the total number of full courses required is reduced from nine to seven.

To apply for the combined program, students apply to the M.S. or Ph.D. program through the normal graduate admission process in the fall of their senior year. If admitted into the graduate program, they would automatically be included in the combined B.S./M.S. or B.S./Ph.D. program.

Bioinformatics Major Planners

Plan one is a suggested plan for students who are undecided between bioinformatics and another ~~School of Engineering~~ computing major. Plan two is suggested for students undecided between bioinformatics and some other field in biology or chemistry. As in all engineering and science programs, it is recommended that students spread their general education requirements out over all 12 quarters. ~~Students considering pursuing a bioengineering degree should follow the biomolecular concentration of the bioengineering B.S. program and complete the programming sequence (Computer Science 12A and 12B) by the end of their second year.~~

Four-year plans require individual design to fit in the desired electives, so only the first two years of the academic plan are presented here. It is recommended that students reserve the summer after the junior year for undergraduate research. One popular plan involves taking organic chemistry and the associated labs in the summer after completing general chemistry, so that biochemistry may be started in the junior year.

Most students find it easiest to take Biomolecular Engineering 205, *Bioinformatics Models and Algorithms*, after Biomolecular Engineering 110, *Computational Biology Tools*.

Bioinformatics Graduate Program

The graduate program in bioinformatics offers both M.S. and Ph.D. degrees.

Course Requirements

Both masters and doctoral students must complete nine, 5-credit courses (seven core courses and two electives; see below) and a 3-credit research and teaching course. In addition, M.S. students must complete four seminar credits, while Ph.D. students must complete eight seminar credits. M.S. students must complete two (1-credit or 2-credit) research project courses (such as course 220L, 230L, 297F, or 297), and Ph.D. students must complete three research lab rotations (course 296) with different supervisors.

Core courses (5-credit)—seven are required

Biomolecular Engineering

205, *Bioinformatics Models and Algorithms*

Two other graduate bioinformatics courses (courses in the range 210-239)

80G, *Bioethics in the Twenty-First Century: Science, Business, and Society*; or Philosophy 245, *Brave New World: Ethical Issues in Genetics*; or 247, *Stem Cell Research; Scientific, Ethical, Social and Legal Issues*

One graduate course, approved by the faculty, in each of the following three areas:

Statistics (Applied Mathematics and Statistics 206 recommended)

Biology (Biology 200B recommended)

Chemistry (Chemistry 200B recommended)

Electives (5-credit)—two are required

The electives should be graduate-level courses selected with approval of the faculty to ensure a coherent, balanced program. For M.S. students, 5 credits of independent research (297) or thesis research (299) may count as electives toward the degree requirements upon approval of the faculty. For Ph.D. students, independent or thesis research cannot be counted as electives.

Students must choose their electives with faculty guidance and approval to balance their preparation and make up for deficiencies in background areas. In addition to fulfilling background needs, students may choose to emphasize one of the breadth areas: molecular biology, biochemistry, statistics, computational biology, genetics, computer science, computer engineering, applied mathematics, cell biology, and computer graphics/visualization or may take a cross-sampling of the electives to achieve a broad knowledge base.

Other Curriculum Requirements

Biomolecular Engineering 200, *Research and Teaching in Bioinformatics*, 3 credits

Seminars

M.S. students: a minimum of two seminar courses, including at least one quarter of the 2-credit

Biomolecular Engineering seminar, 280B

Ph.D. students: a minimum of four seminar courses, including at least two quarters of the 2-credit

Biomolecular Engineering Seminar, 280B

Research experience

M.S. students: a minimum of two research project courses. This requirement can be met by taking course 220L, 230L, and/or independent study (course 297F or course 297).

Ph.D. Students: three quarters of lab rotations (course 296), generally within the first 12 months. One of the lab rotations must be with a faculty supervisor who does wet-lab research, though the student's rotation project may be purely computational.

Qualifying Exams

Ph.D. students are required to pass an oral qualifying exam by the end of their second year and to advance to candidacy by the end of their third year.

Adequate Progress

Graduate students receiving two or more U (unsatisfactory) grades or grades below B in courses relevant to the program are not making adequate progress and will be placed on academic probation for the next three quarters of registered enrollment.

Graduate students who fail (unsatisfactory or lower than B) a relevant course while on probation may be dismissed from the program. Students may appeal their dismissal. Graduate students who fail a relevant course after being removed from probation are immediately returned to academic probation.

Graduate students experiencing circumstances that may adversely affect their academic performance should consult with their adviser and the graduate director.

Thesis and Dissertation Requirements

In addition to completing the course requirements, students must fulfill the following thesis or dissertation requirements.

For M.S. students, a written thesis proposal must be submitted to a faculty member before the end of the fourth academic quarter. If the faculty member accepts the proposal, he or she will become the student's adviser and will be in charge of supervising the writing of the master's thesis. When the thesis is completed, it will be submitted to a faculty review committee consisting of the thesis adviser and at least two additional readers. The committee must include a School of Engineering faculty member, may include participants from the Division of Physical and Biological Sciences and from industry as appropriate, and must be approved by the bioinformatics program director. Students are required to present their thesis project in a public seminar.

Ph.D. students must pass an oral ~~comprehensive~~ **qualifying** exam by the end of the second year.

Ph.D. students must select a faculty research adviser by the end of the second year. ~~A written dissertation proposal is required before the end of the third year.~~ A qualifying committee is then formed, which consists of the adviser and three additional members, and approved by the bioinformatics program director and the campus graduate dean. The student must submit ~~his or her~~ **a** written dissertation proposal to all members of the committee and the graduate assistant one month in advance of the examination. The dissertation proposal is publicly and formally presented in an oral qualifying examination given by the qualifying committee. ~~This exam must be completed within six months of a successful comprehensive exam.~~

Ph.D. candidates will submit the completed dissertation to a reading committee at least one month prior to the dissertation defense. The reading committee, formed upon advancement to candidacy, consists of the dissertation supervisor and two readers appointed by the program director upon the recommendation of the dissertation supervisor. The candidate will present his or her research in a public seminar. The seminar will be followed by a defense of the dissertation to the reading committee and attending faculty, who will then decide whether the dissertation is acceptable or requires revision.

Transfer Limitations

Up to two courses may be transferred from other graduate institutions, with the approval of the faculty adviser and the graduate director.

Faculty and Professional Interests

Professor

Mark Akeson

DNA structure and dynamics, single-molecule biophysics, bioethics

Phillip Berman (Department Chair)

Drug development, vaccines, AIDS, monoclonal antibody therapeutics, immunology, molecular cell/biology, recombinant protein production (commercial scale)

David Haussler (Distinguished Professor of Biomolecular Engineering, Investigator, Howard Hughes Medical Institute; Director, Center for Biomolecular Science and Engineering; Scientific Co-Director, California Institute for Quantitative Biosciences [QB3])

Molecular evolution, neurodevelopment, genomics, bioinformatics, computational molecular biology, statistical models, machine learning, neural networks

Richard Hughey (joint with Computer Engineering)

Computer architecture, parallel processing, computational biology

Kevin Karplus

Protein structure prediction, protein design

Associate Professor

Todd Lowe

Experimental and computation genomics, ncRNA gene finders, DNA microarrays to study the biology of Archaea

Joshua Stuart

Computational functional genomics, comparative analysis of gene regulation, cross-species inference of gene networks, probabilistic graphical models

Assistant Professor

Camilla Forsberg

Hematopoietic stem cells; transcriptional regulation; chromatin; blood cell development; cell surface receptors; genomics

Dietlind L. Gerloff

Protein to protein interactions, protein function prediction, functional genomics, protein structure prediction

Nader Pourmand

Biosensors, microarray, nanotechnology, pathogens, sequencing, genotyping, DNA fingerprinting

Research Professor

David W. Deamer (joint with Chemistry and Biochemistry; UC Davis Emeritus)
Membrane biophysics, nanopore analysis, DNA sequencing, biomolecular self-assembly

Adjunct Professor

Jonathan Trent
Organic aggregates, marine snow, microbial physiology, microenvironments, robust proteins, genetic engineering for nanotechnology

Lecturer

Wendy Rothwell
Biotechnology, molecular genetics

Manuel Ares, Jr. (Molecular, Cell, and Developmental Biology)
RNA processing, structure and function of RNA

Manel Camps (Microbiology and Environmental Toxicology)
Molecular mechanisms of reactive DNA methylation toxicity

William Dunbar (Computer Engineering)
Theory and application of feedback control, air traffic control, nanopore sensors, dynamics and control of biomolecules

A. Russell Flegal (Microbiology and Environmental Toxicology)
Anthropogenic perturbations of biogeochemical cycles, applications of isotopic tracers in anthropology and archaeology

Robert S. Lokey (Chemistry and Biochemistry)
Organic chemistry, combinatorial synthesis, biotechnology, molecular cell biology

Marc Mangel (Applied Mathematics and Statistics, Distinguished Professor of Mathematical Biology)
Mathematical modeling of biological phenomena, especially the evolutionary ecology of growth, aging, and longevity; quantitative issues in fishery management; mathematical and computational aspects of disease

Glenn L. Millhauser (Chemistry and Biochemistry)
Electron spin resonance; nuclear magnetic resonance, melanocortin receptor signaling, agouti proteins, prions, peptide synthesis

Karen Ottemann (Microbiology and Environmental Toxicology)
Environmental responses of pathogenic bacteria

John W. Tamkun (Molecular, Cell, and Developmental Biology)
Transcriptional regulation, molecular genetics of Drosophila development, regulation of gene expression

Hongyun Wang (Applied Mathematics and Statistics)
Molecular modeling and biophysics, numerical analysis, fluid mechanics, computer animation, partial differential equations, parallel computing, statistical physics, data

structures, fast algorithms

Manfred K. Warmuth (Computer Science)

Online learning, machine learning, statistical decision theory, game theory, analysis of algorithms

W. Todd Wipke, Emeritus (Chemistry and Biochemistry)

Fitnat H. Yildiz (Microbiology and Environmental Toxicology)

Microbiology, molecular genetics, genomics; the mechanism of persistence of survival of *Vibrio cholerae*

Alan M. Zahler (Molecular, Cell, and Developmental Biology)

Molecular biology, splice site selection, and alternative pre-mRNA processing

Lower-Division Courses

5. Introduction to Biotechnology. F,W,S

Introduces the tools and applications of biotechnology in the fields of medicine, agriculture, the environment, and industry. (General Education Code(s): IN.) W. Rothwell, The Staff

60. Introductory Programming for Biologists and Biochemists. W

Lecture and lab-based course teaching programming skills needed by biologists and biochemists. No programming experience required, but basic computer skills assumed. Students without prior programming experience will be taught the basic proficiency in Perl, BioPerl, and other Perl libraries needed to analyze, transform, and publish biological data. Students cannot receive credit for this course and Biomolecular Engineering 160 or Biology 180. (Formerly *Programming for Biologists and Biochemists*.) Prerequisite(s): Biology 20A or 21A. Concurrent enrollment in course 60L required. J. Stuart, The Staff

60L. Introductory Programming for Biologists and Biochemists Laboratory (1 credit). W

Laboratory sequence illustrating topics covered in course 60. One two-hour laboratory per week. Concurrent enrollment in course 60 required. Students cannot receive credit for this course and Biomolecular Engineering 160L or Biology 180L. (Formerly *Programming for Biologists and Biochemists Laboratory*.) Prerequisite(s): Biology 20A or 21A. Concurrent enrollment in course 60 is required. J. Stuart, The Staff

80G. Bioethics in the 21st Century: Science, Business, and Society. F

Serves science and non-science majors interested in bioethics. Guest speakers and instructors lead discussions of major ethical questions having arisen from research in genetics, medicine, and industries supported by this knowledge. (Also offered as Philosophy 80G. Students cannot receive credit for both courses.) (General Education Code(s): T6-Natural Sciences or Humanities and Arts.) M. Akesson

80H. The Human Genome. W,S

Course will focus on understanding human genes. Accessible to non-science majors. Will cover principles of human inheritance and techniques used in gene analysis. The evolutionary, social, ethical, and legal issues associated with knowledge of the human genome will be discussed. (General Education Code(s): T2-Natural Sciences.) W. Rothwell, The Staff

83. The Genetic Revolution: Science and Technology (2 credits). F

Biotechnology of the genetic revolution. Overview of the scientific and engineering foundations of emerging technologies. Required supplement to the Crown College Core Courses 80A and 80B. Enrollment restricted to first-year Crown College students. *W. Rothwell*

94. Group Tutorial. F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

94F. Group Tutorial (2 credits). F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses

109. Resource-Efficient Programming. *

Writing programs that use computer resources efficiently. Learn to measure resource usage and modify programs to get better performance. Particularly appropriate for programmers working at limits of their hardware (bioinformaticians, game programmers, and embedded system programs). Prerequisite(s): Computer Science 12B and 12M or 13H and 13L, Computer Engineering 16 or 16H, and Mathematics 19A. Enrollment limited to 90. *K. Karplus*

110. Computational Biology Tools. F,S

Hands-on laboratory geared to teach basic tools used in computational biology (motif searching, primer selection, sequence comparison, multiple sequence alignment, genefinders, phylogenetics analysis, X-ray crystallography software). Web- and Unix-based tools/databases are used. Open to all science students; no prior Unix experience required. (Also offered as Biology: Molecular Cell & Dev 181. Students cannot receive credit for both courses.) Prerequisite(s): Biology 100, 105, or Biochemistry 100A or declared Bioinformatics majors. Enrollment limited to 25. *D. Gerloff, T. Lowe*

123A. Engineering Design Project I. F

First of a two-course sequence that is the culmination of the engineering program. Students apply knowledge and skills gained in elective track to complete a major design project. Students complete research, specification, planning, and procurement for a substantial project. Includes technical discussions, design reviews, and formal presentations; engineering design cycle, engineering teams, and professional practices. Formal technical specification of the approved project is presented to faculty. Prerequisite(s): Electrical Engineering 171 or Computer Engineering 121; previous or concurrent enrollment in Computer Engineering 185; permission of department and instructor. Students are billed a materials fee. (Also offered as Electrical Engineering 123A. Students cannot receive credit for both courses.) *K. Karplus*

123B. Bioengineering Project 2 (7 credits). W

Second of two-course sequence in engineering system design. Students fully

implement and test system designed and specified in course 123A. Formal written report, oral presentation, and demonstration of successful project to review panel of engineering faculty required. Students are billed a materials fee. Prerequisite(s): course 123A. Enrollment limited to 30. May be repeated for credit. *The Staff*

130. Genomes. W

Advanced elective for biology majors, examining biology on the genome scale. Topics include genome sequencing; large scale computational and functional analysis; features specific to prokaryotic, eukaryotic, or mammalian genomes; proteomics; SNP analysis; medical genomics; and genome evolution. Prerequisite(s): Biology 100 or Biochemistry 100A and Biology 105, or approval of instructor. Enrollment limited to 30. *T. Lowe*

140. Bioinstrumentation. F

Introduction to theory, design, and application of bioinstrumentation in clinical, pharmaceutical, and biotechnology laboratories. Highly recommended for students planning careers in the biomolecular industries. Typical topics and demonstrations include thermocycler, polymerase chain reaction (PCR), pyrosequencing, fabless nanofabrication, ion-sensitive measurements, microarray fabrication, and fluorescent-activated cell sorter (FACS). Prerequisite(s): course 5, or Biology 100, or Biochemistry and Molecular Biology 100A. *N. Pourmand*

150. Molecular Biomechanics. S

Considers how assemblies of macromolecules (molecular motors) convert chemical energy into mechanical work on the nanometer-to-Angstrom scale. Processes examined include ATP-dependent movement of organelles in the cytosol facilitated by kinesin; proton pumping by ATPases in the mitochondrial membrane; viral genome packaging; bacterial movement driven by flagella; processive addition of nucleotides by polymerases during replication and transcription; and protein synthesis by ribosomes. Cannot receive credit for this course and course 250. Prerequisite(s): Biology 20A; and Biology 20B or 105; and Biology 100 or Biochemistry 100A; and Physics 5C or 6C. Concurrent enrollment in course 150L required. *M. Akeson*

150L. Molecular Biomechanics Laboratory (2 credits). S

Students address a current scientific question about molecular motor function using techniques established in the UCSC Nanopore Laboratory. Specifically, students use recombinant DNA technology to produce an enzyme (e.g., a DNA polymerase) bearing a point mutation that is predicted to alter function in a defined manner. Students then use nanopore force spectroscopy to model the energy landscape for a mechanical or chemical step altered by the critical amino acid. Cannot receive credit for this course and course 250L. Prerequisite(s): Biology 20A; and Biology 20B or 105; and Biology 100 or Biochemistry 100A; and Physics 5C or 6C. Concurrent enrollment in course 150 required. *M. Akeson*

155. Biotechnology and Drug Development. W

Recommended for students interested in careers in the biopharmaceutical industry. Focuses on recombinant DNA technology and the drug-development process, including discovery research; preclinical testing; clinical trials; and regulatory review, as well as manufacturing and production considerations. Students may not receive credit for this course and Biomolecular Engineering 255 and Chemistry 255. (Also offered as Biology: Molecular Cell & Dev 179. Students cannot receive credit for both courses.) Prerequisite(s): Biology 20A and Biology 100 or Biochemistry and Molecular Biology 100A. Enrollment limited to 15. *P. Berman*

160. Research Programming for Biologists and Biochemists. W

No programming experience required, but basic computer skills assumed. Students without prior programming experience taught basic proficiency in Perl, BioPerl, and other Perl libraries needed to analyze, transform, and publish biological data. Students required to solve a research problem as a final project. Lectures and labs are shared with Biomolecular Engineering 60. Students cannot receive credit for this course and Biomolecular Engineering 60. (Also offered as Biology: Molecular Cell & Dev 180. Students cannot receive credit for both courses.) Prerequisite(s): Biology 20A or 21A. Previous or concurrent enrollment in course 160L is required. *J. Stuart, The Staff*

160L. Research Programming for Biologists and Biochemists Laboratory (1 credit). W

Laboratory sequence illustrating topics covered in course 160. One two-hour laboratory per week. Students cannot receive credit for this course and Biomolecular Engineering 60L. (Also offered as Biology: Molecular Cell & Dev 180L. Students cannot receive credit for both courses.) Prerequisite(s): Biology 20A or 21A. Previous or concurrent enrollment in course 160 is required. *J. Stuart, The Staff*

178. Stem Cell Biology. W

Basic concepts, experimental approaches, and therapeutic potential are discussed. Students gain experience in reading the primary scientific literature. (Also offered as Biology: Molecular Cell & Dev 178. Students cannot receive credit for both courses.) Prerequisite(s): Biology 110; Biology 115 recommended. *C. Forsberg*

193. Field Study. F,W,S

Provides for individual programs of study with specific aims and academic objectives carried out under the direction of a BME faculty member and a willing sponsor at a field site, using resources not normally available on campus. Credit is based upon written and oral presentations demonstrating the achievement of the objectives of the course. Students submit petition to sponsoring agency. *The Staff*

193F. Field Study (2 credits). F,W,S

Provides for individual programs of study with specific aims and academic objectives carried out under the direction of a BME faculty member and a willing sponsor at a field site, using resources not normally available on campus. Credit is based upon written and oral presentations demonstrating the achievement of the objectives of the course. Students submit petition to sponsoring agency. *The Staff*

194. Group Tutorial. F,W,S

A program of study arranged between a group of students and a faculty member. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

194F. Group Tutorial (2 credits). F,W,S

A program of independent study arranged between a group of students and a faculty member. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

195. Senior Thesis Research. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

195F. Senior Thesis or Research (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198. Individual Study or Research. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198F. Individual Study or Research (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

For fourth-year students majoring in bioinformatics or bioengineering. May be repeated for credit. *The Staff*

*Graduate Courses***200. Research and Teaching in Bioinformatics (3 credits). F**

Basic teaching techniques for teaching assistants, including responsibilities and rights of teaching assistants, resource materials, computer security, leading discussion or lab sessions, presentation techniques, maintaining class records, electronic handling of homework, and grading. Examines research and professional training, including use of library and online databases, technical typesetting, writing journal and conference papers, publishing in bioinformatics, giving talks in seminars and conferences, and ethical issues in science and engineering. Required for all teaching assistants. Enrollment restricted to graduate students. *T. Lowe*

205. Bioinformatics Models and Algorithms. F

Covers bioinformatics models and algorithms: the use of computational techniques to convert the masses of information from biochemical experiments (DNA sequencing, DNA chips, and other high-throughput experimental methods) into useful information. Emphasis is on DNA and protein sequence alignment and analysis. Enrollment restricted to graduate students. Undergraduates may enroll with prerequisite(s): Computer Science 12B; and Computer Engineering 107 or Applied Math and Statistics 131; and Biology 20A; and concurrent enrollment in Biochemistry 100A. *K. Karplus*

207. Biomolecular Recognition. F

Course is the core biomolecular-engineering emphasis graduate course. Focuses on the molecular mechanism enabling the flow of information within and between cells in living systems, and its application to engineering new tools for high-throughput molecular-biology research, improving biomedical diagnostics, and aiding treatment of human disease. Prerequisite(s): Equivalent of one full year of undergraduate biochemistry. Enrollment restricted to graduate students. *C. Forsberg, D. Gerloff, T. Lowe, N. Pourmand*

210. Experimental Systems Biology. *

Topics include, but are not limited to, microarray production techniques, experimental strategies using microarrays, extraction and analysis of microarray data, DNA and protein arrays, SNP analysis, gene expression analysis, materials analysis, and advanced analysis of data using bioinformatic techniques. (Formerly *Application and Analysis of Microarrays*.) (Also offered as Biology: Molecular Cell & Dev 210. Students cannot receive credit for both courses.) Enrollment restricted to graduate students; undergraduates by permission of instructor. *T. Lowe*

211. Computational Systems Biology. S

Teaches machine-learning methods relevant for the analysis of high-throughput molecular biology experiments. Students should be fluent in a programming language and should have taken basic molecular biology courses. Prerequisite(s): course 205. Enrollment restricted to graduate students; undergraduates may enroll if they have completed course 205, Computer Science 101, and any upper-division molecular biology or biochemistry course, such as Biochemistry 100 or 100A. *J. Stuart*

215. Applied Gene Technology. S

Detailed insight into the techniques and technological trends in genomics and transcriptomics, building the necessary foundations for further research in genetic association studies, population genetic association studies, population genetics, diagnostics, medicine, and drug development. Students should already have a deeper understanding of the basic tools of molecular biotechnology than acquired in introductory courses in biotechnology, biochemistry, and molecular biotechnology. Enrollment restricted to graduate students. *N. Pourmand*

220. Protein Bioinformatics. *

Covers the application of bioinformatics techniques to protein sequences and structures. Topics include protein sequence analysis, protein structure prediction, and sources of experimental data about proteins. Prerequisite(s): course 205, or Chemistry 200B; concurrent enrollment in course 220L, 296, or 297 is required. Enrollment restricted to graduate students; undergraduates may enroll if they have completed course 205 and Biochemistry 100A. *K. Karplus*

220L. Protein Bioinformatics Laboratory (1 credit). *

Project in protein bioinformatics. Prerequisite(s): course 205; concurrent enrollment in course 220 is required. *K. Karplus*

222. Applied Biotechnology: Protein and Cell Engineering. *

For students interested in careers in the biotech industry. Focus is applied technology, with particular emphasis on the application of cell engineering and protein engineering to solve problems encountered in the design and manufacturing of biopharmaceutical products and industrial enzymes produced by recombinant DNA technology. Prior course work in biochemistry, molecular biology, genetics, and cell biology highly recommended. Enrollment restricted to graduate students; undergraduates may enroll with permission of instructor. *P. Berman*

225. Protein Function in Biology and Bioinformatics. *

Reviews functional roles of proteins and computational methods used to predict functional aspects of proteins. Focus is on molecular function and structure-function relationships. Wider-reaching notions of function (pathways, interaction networks) are considered peripherally, as the context in which molecular function occurs. Course includes lectures, (computational) lab work, and discussions of topical publications. Prerequisite(s): Biochemistry and Molecular Biology 100A (or equivalent knowledge) and courses 205 and 220, or by instructor's permission. Enrollment limited to 15. *D. Gerloff*

230. Computational Genomics. W

Genomics databases: analysis of high-throughput genomics datasets; BLAST and related sequence comparison methods; pairwise alignment of biosequences by dynamic programming; statistical methods to discover common motifs in biosequences; multiple alignment and database search using motif models; constructing phylogenetic trees; hidden Markov models for finding genes, etc.; discriminative methods for analysis of bioinformatics data, neural networks, and support vector machines; locating genes and predicting gene function, including introduction to linkage analysis and disease association studies using SNPs; and modeling DNA and RNA structures. Prerequisite(s): course 205; concurrent enrollment in course 230L, 296, or 297 is required. Enrollment restricted to graduate students; undergraduates may enroll if they have completed course 205, Computer Science 101, and BIOC 100A. *D. Haussler, T. Lowe, J. Stuart*

230L. Computational Genomics Laboratory (1 credit). W

Project in computational genomics. Prerequisite(s): course 205; concurrent

enrollment in course 230 is required. *D. Haussler, T. Lowe, J. Stuart*

247. Stem Cell Research: Scientific, Ethical, Social, and Legal Issues. W

Scientific, ethical, social, and legal dimensions of human embryonic stem-cell research, including the moral status of the embryo; the concept of respect for life; ethical constraints on oocyte procurement; creation of embryonic chimeras; federal policies; and political realities. (Also offered as Biology: Molecular Cell & Dev 288. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. *E. Suckiel*

250. Molecular Biomechanics. S

Considers how assemblies of macromolecules (molecular motors) convert chemical energy into mechanical work on the nanometer-to-Angstrom scale. Processes examined in the course include ATP-dependent movement of organelles in the cytosol facilitated by kinesin; proton pumping by ATPases in the mitochondrial membrane; viral genome packaging; bacterial movement driven by flagella; processive addition of nucleotides by polymerases during replication and transcription; and protein synthesis by ribosomes. Cannot receive credit for this course and course 150. Enrollment restricted to graduate students. Concurrent enrollment in course 250L required. *M. Akeson*

250L. Molecular Biomechanics Laboratory (2 credits). S

Laboratory course taken in conjunction with course 250. Students address a current scientific question about molecular motor function using techniques established in the UCSC Nanopore Laboratory. Specifically, students use recombinant DNA technology to produce an enzyme (e.g., a DNA polymerase) bearing a point mutation that is predicted to alter function in a defined manner. Students then use nanopore force spectroscopy to model the energy landscape for a mechanical or chemical step altered by the critical amino acid. Cannot receive credit for this course and course 150L. Concurrent enrollment in course 250 required. Enrollment restricted to graduate students. *M. Akeson*

255. Biotechnology and Drug Development. W

Recommended for students interested in careers in the biopharmaceutical industry. Focuses on recombinant DNA technology and the drug-development process, including discovery research; preclinical testing; clinical trials; and regulatory review, as well as manufacturing and production considerations. Students may not receive credit for this course and Biomolecular Engineering 155 and Biology 179. (Also offered as Chemistry and Biochemistry 255. Students cannot receive credit for both courses.) Enrollment limited to graduate students. Enrollment limited to 15. *P. Berman*

280B. Seminar on Bioinformatics (2 credits). F,W,S

Weekly seminar series covering topics of current research in computational biology or bioinformatics. Current research work and literature in these areas are discussed in weekly meetings. May be repeated for credit. *M. Akeson, C. Forsberg, D. Gerloff, D. Haussler, T. Lowe, N. Pourmand, J. Stuart*

281A. Seminar on Processive Enzymes and Nanopores (2 credits). W,S

Weekly seminar series covering experimental research in nanopore technology and single-molecule analysis of polymerase function. Current research work and literature is discussed. Students lead some discussions and participate in all meetings. Enrollment restricted to graduate students. Qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *M. Akeson*

281B. HIV Vaccine Research (2 credits). W,S

Weekly seminar series covering topics of HIV vaccine research. Current research work and literature in this area discussed. Students lead some discussions and participate in all meetings. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *P. Berman*

281F. Blood Cell Development (2 credits). F,W,S

Weekly seminar covering topics in current research on blood cell development and stem cell biology. Current research and literature in these areas discussed. Students lead some discussions and participate in all meetings. Enrollment restricted to graduate students. Undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *C. Forsberg*

281G. Seminar on Protein Structure and Function (2 credits). F,W,S

Weekly seminar series covering topics of current computational and experimental research in protein structure prediction and design, structure-function relationships and protein evolution. Current research work and literature in these areas discussed. Students lead some discussions and participate in all meetings. (Formerly course 281R.) Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *D. Gerloff*

281H. Seminar in Comparative Genomics (2 credits). F,W,S

Weekly seminar series covering topics of current computational and experimental research in comparative genomics. Current research work and literature in this area discussed. Students lead some discussions and participate in all meetings. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *D. Haussler*

281K. Seminar on Protein Structure Prediction (2 credits). F,W,S

Weekly seminar series covering topics of current computational and experimental research in protein structure prediction. Current research work and literature in this area discussed. Students lead some discussions and participate in all meetings. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *K. Karplus*

281L. Seminar in Computational Genetics (2 credits). F,W,S

Weekly seminar series covering topics and experimental research in computational genetics. Current research work and literature in this area discussed. Students lead some discussions and participate in all meetings. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *T. Lowe*

281P. Seminar on Nanotechnology and Biosensors (2 credits). F,W,S

Weekly seminar covering topics of research in the development of new tools and technologies to detect and study genes and proteins. Latest research work and literature in these areas are discussed. Students lead some discussions and participate in all meetings. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *N. Pourmand*

281S. Seminar in Computational Functional Genomics (2 credits). F,W,S

Weekly seminar series covering topics of current computational and experimental research in computational functional genomics. Current research work and literature in this area discussed. Students lead some discussions and participate in all meetings. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *J. Stuart*

293. Seminar in Biomolecular Engineering. *

Weekly seminar series covering topics of bioinformatics and biomolecular engineering research. Current research work and literature in this area discussed. Students lead some discussions and participate in all meetings. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. *The Staff*

296. Research in Bioinformatics. F,W,S

Independent research in bioinformatics under faculty supervision. Although this course may be repeated for credit, not every degree program accepts a repeated course towards degree requirements. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

297. Independent Study or Research. F,W,S

Independent study or research under faculty supervision. Although course may be repeated for credit, not every degree program accepts a repeated course towards degree requirements. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

297F. Independent Study or Research (2 credits). F,W,S

Independent study or research under faculty supervision. Although course may be repeated for credit, not every degree program accepts a repeated course towards degree requirements. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Thesis research conducted under faculty supervision. Although course may be repeated for credit, not every degree program accepts a repeated course towards degree requirements. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

* Not offered in 2009-10

Program Description

Chemistry is central to modern science and, ultimately, most phenomena in biology, medicine, geology, and the environmental sciences can be described in terms of the chemical and physical behavior of atoms and molecules. Because of the wide appeal and utility of chemistry, UCSC offers many lower-division courses, differing in emphasis and style, to meet diverse needs. Students should also note the numerous upper-division course offerings and select those most suitable to their academic interests. The curriculum in chemistry exposes the student to the principal areas of modern chemistry, including organic, inorganic, physical, analytical, and biochemistry. The curriculum is designed to meet the needs of students who plan to end their formal education with a bachelor of arts or bachelor of science degree, as well as those who wish to go on for an advanced degree. The UCSC chemistry B.A. or B.S. graduate is well prepared to pursue a career in chemistry or an allied field.

Research in chemistry at UCSC is closely interwoven with graduate and undergraduate education. The chemistry and biochemistry program is active at the graduate level, and faculty also encourage undergraduates to become involved in research. Research is done for academic credit in Chemistry 195A-B-C, *Senior Research*; or in Chemistry 199, *Tutorial*. There are also opportunities for interdisciplinary research spanning, for example, chemistry/physics, chemistry/geology, chemistry/oceanography, chemistry/biology, chemistry/computer science, and chemistry/microbiology and environmental toxicology. At UCSC, it is not uncommon for students to see their own original work published in research journals.

Chemistry and biochemistry faculty and approximately 100 graduate students and 30 postdoctoral fellows are housed in the Physical Sciences Building near the Science Library. Standard and specialized spectrophotometric equipment, a number of instruments devoted to structural studies, instrumentation for specialized analytical purposes, and computer facilities used in studies of structure and reactivity are all available. The Science Library has an excellent collection of current journals, in print and electronic form, and reference works, as well as earlier volumes of all the major journals. Additional source material can be readily and rapidly obtained on interlibrary loan.

A degree in chemistry opens the door to a wide variety of academic careers. Some UCSC graduates are working as researchers in industry in areas such as electronic materials, biotechnology, medicinal chemistry, or laser technology. Others have entered government service, as research chemists in the Food and Drug Administration, the Environmental Protection Agency, or law enforcement crime laboratories. Fields such as patent law, commercial development, and scientific writing are open to graduates. Many chemistry majors go on to university graduate programs across the nation to prepare for careers in research, teaching, or a combination of the two. The degree in chemistry also provides a strong disciplinary background in preparation for a career in the important and much needed area of science teaching in high school. A major in chemistry is also an excellent beginning for one of the many opportunities in the health sciences.

The UCSC Chemistry and Biochemistry Department offers both B.S. and B.A. degree programs. The B.S. program has more requirements, and a student in this program earns a degree that meets the requirements of an American Chemical Society certified program. The B.S. degree should be the choice if a student is interested in getting a job in chemistry immediately after receiving his or her college degree. The B.S. program also provides a good background for graduate work in chemistry. The B.A. program has fewer requirements and should be considered by students who wish to take more science courses outside of chemistry to enter an interdisciplinary area. Examples might be chemical oceanography, geochemistry, chemical physics, environmental chemistry, and health sciences. The B.A. might also be a good choice for students who wish to become high school teachers. However, for either degree, the courses stress the fundamentals of chemistry and allow students to pursue independent research.

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement will normally be met within one to three courses already required for the major. For detailed information on this major's DC requirement, consult your major adviser or see the 2010-11 general catalog.

A minor in chemistry is also offered for those who wish to have a strong complementary program in chemistry while majoring in another course of study.

Requirements for the Chemistry B.A. Degree

The requirements for the bachelor of arts in chemistry have been kept to a minimum so that students may tailor their program to their own purposes, for example, to pursue a double major, to study areas of the humanities or social sciences, to complete major requirements late in their college career, or to concentrate study in a specific branch of chemistry. The minimum requirements (including prerequisites) constitute 54 percent of a student's total undergraduate program; consequently, there is ample time to explore and discover other interests within the university. To plan wisely, students are advised to refer to each course description for a detailed listing of prerequisites. Students who decide they want a professional career in chemistry are advised to meet with the chemistry undergraduate staff adviser.

Lower-Division Requirements

Chemistry 1A, 1B/M and 1C/N
Mathematics 11A-B and 22; or Mathematics 19A-B and 22
Physics 5A/L, 5B/M, and 5C/N; or 6A/L, 6B/M, and 6C/N

Upper-Division Requirements

Chemistry 108A/L and 108B/M; or 112A/L, 112B/M, and 112C/N
Chemistry 151A/L, 163A, 163B, 164A, 164B, and one of the following: 146A, 146B, 146C. (Students currently conducting senior thesis research are required to choose an advanced lab in the Chemistry 146 series that is outside their research area.)
Elective(s). At least two if 108A/L and 108B/M are taken; or at least one from the following list if 112A/L, 112B/M, and 112C/N are taken:

Chemistry 103 (can be used as elective only if Biochemistry and Molecular Biology 100A, 100B, and 100C are not taken as electives)
Chemistry 122, 143, 151B, 156C, 163C, and graduate-level lecture courses in chemistry
Biochemistry and Molecular Biology 100A, 100B, 100C
Computer Science 12A or 5C, or Biomolecular Engineering 60
Microbiology and Environmental Toxicology 101, or 102
Ocean Sciences 120 or 220
Physics 110A-B, 116A-B-C

Comprehensive Requirement. The Comprehensive Requirement is a part of all UCSC degrees. In the Department of Chemistry and Biochemistry, there are two options for satisfying this requirement:

- *Senior thesis.* A senior research project based on original experimental or theoretical research (Chemistry 195A-B-C). At the conclusion of the project, the student submits a satisfactory formal research paper to the faculty sponsor. Students arrange for a faculty sponsor by consulting with a relevant faculty member within the chemistry and biochemistry or the biochemistry and molecular biology major programs. In some cases, faculty outside these major programs (for example, in biology, ocean sciences, microbiology and environmental toxicology, or Earth sciences) may be an appropriate sponsor. Students who select a sponsor outside the chemistry or the biochemistry and molecular biology major programs should have the title and description of the proposed thesis reviewed by the undergraduate adviser in the Department of Chemistry and Biochemistry. Students, usually working in the laboratory of the faculty sponsor, acquire experimental and/or theoretical research experience and skills in the laboratory as well as instruction in the writing of a research paper. Students are expected to make satisfactory academic progress and be in good academic standing while they take 195 courses. Students who achieve excellence in both research and thesis may be awarded honors in the Senior Comprehensive Requirement upon graduation.
- *Senior essay.* An essay based on literature research (Chemistry 199). After agreeing in advance on an appropriate topic of interest and a format, the student submits a satisfactory essay on the topic. Students arrange for a faculty sponsor by consulting with a relevant faculty member within the chemistry and biochemistry major program. In some cases, faculty outside these major programs (for example, in biology, ocean sciences, microbiology and environmental toxicology, or Earth sciences) may be an appropriate sponsor. Students who select a sponsor outside the chemistry and biochemistry major program should have the title and description of the proposed essay reviewed by the undergraduate adviser in the Department of Chemistry and Biochemistry. Students acquire experience and skills in scientific literature research as well as in the writing of a research

paper.

Chemistry Major B.A. Planner

The following is the recommended academic plan for students to complete for the B.A. degree.

Year	Fall	Winter	Spring
1st (frsh)	CHEM 1A MATH 11A	CHEM 1B/M MATH 11B	CHEM 1C/N MATH 22
2nd (soph)	CHEM 112A/L or CHEM 108A/L PHYS 6A/L	CHEM 112B/M or CHEM 108B/M or CHEM 108A/L PHYS 6B/M	CHEM 112C/N or 108B/M PHYS 6C/N
3rd (jr)	CHEM 163A CHEM 164A	CHEM 163B CHEM 164B	CHEM 151A/L CHEM 146
4th (sr)	CHEM 164A CHEM elective*	CHEM 164B CHEM elective	

* Two electives required if 108 series taken; one elective required if 112 series taken

Requirements for the Chemistry B.S. Degree

The bachelor of science major program is designed for students who intend to pursue a professional career in chemistry. It is rigorous and broadly based, appropriate for that purpose. The course requirements for the B.S. major are as follows; please refer to each course description for a detailed listing of prerequisites.

Lower-Division Requirements

Chemistry 1A, 1B/M and 1C/N
Mathematics 19A-B and Mathematics 22; or Mathematics 11A-B and Mathematics 22, and either Applied Mathematics and Statistics 10, or Mathematics 21, or Mathematics 24
Physics 5A/L, 5B/M, and 5C/N; or 6A/L, 6B/M, and 6C/N

Upper-Division Requirements

Chemistry 112A/L, 112B/M, and 112C/N; or 108A/L, 108B/M, and 143
Chemistry 103
Chemistry 151A/L, 163A, 163B, 163C, 164A, 164B, and one of the following: 146A, 146B, 146C.
(Students currently conducting senior thesis research are required to choose an advanced lab in the Chemistry 146 series that is outside their research area.)

Electives. At least two from the following list (to receive certification from the American Chemical Society, you must complete Chemistry 122 as one of the two electives)
Chemistry 122, 143 (if not taken for the organic chemistry requirement), 151B, graduate-level lecture courses in chemistry (5 credits or two 3-credit lecture courses)
Biochemistry and Molecular Biology 100A, 100B, 100C (can substitute for Chemistry 103)
Microbiology and Environmental Toxicology 101 or 102
Ocean Sciences 120 or 220
Physics 110A-B, 116A-B-C

Comprehensive Requirement: Same as for the B.A. (see above)

B.S. Degree with Biochemistry Emphasis. The biochemistry pathway is designed for students who intend to pursue a career in biochemistry or in a related field such as biotechnology, and it provides an exceptionally rigorous chemistry emphasis.

Chemistry 1A, 1B/M and 1C/N
Mathematics 19A-B and 22; or Mathematics 11A-B and Mathematics 22, and either Applied Mathematics and Statistics 10 or Mathematics 21 or Mathematics 24
Physics 5A/L, 5B/M, and 5C/N; or 6A/L, 6B/M, and 6C/N
Chemistry 112A/L, 112B/M, and 112C/N; or 108A/L, 108B/M, and 143
Chemistry 151A/L, 163A, 163B, 163C
Biochemistry and Molecular Biology 100A, 100B, 100C, 110
Biology: Development and Physiology 20B
Biology: Molecular, Cell, and Developmental 20A, 20L, Experimental Biology Lab
Comprehensive Requirement: same as for the B.A. (see above)

Chemistry Major B.S. Planner

The following is the recommended academic plan for students to complete the B.S. degree.

Year	Fall	Winter	Spring
1st (frsh)	MATH 19A CHEM 1A	MATH 19B CHEM 1B/M	MATH 22 CHEM 1C/N
2nd (soph)	CHEM 112A/L or CHEM 108A/L PHYS 6A/L	CHEM 112B/M or CHEM 108B/M or CHEM 108A/L PHYS 6B/M	CHEM 112C/N CHEM 108B/M PHYS 6C/N
3rd (jr)	CHEM 163A CHEM 164A	CHEM 163B CHEM 164B	CHEM 163C CHEM 146 CHEM 151A/L
4th (sr)	CHEM elective	CHEM elective	CHEM 103

B.S. Degree with Environmental Chemistry Concentration

A concentration within the biology, chemistry and biochemistry, and Earth sciences degree programs, collectively identified as the environmental sciences program, is offered. Students will develop a core competence suitable for pursuing graduate work in the environmental chemistry area or in graduate environmental sciences programs.

Lower-Division Requirements

Biology: Molecular, Cell, and Developmental 20A
 Biology: Development and Physiology 20B
 Chemistry 1A, 1B/M and 1C/N
 Earth Sciences 20/L, 10/L, or 5/L
 Environmental Studies 25
 Mathematics 11A-B and 22; or 19A-B and 22
 Physics 5A/L, 5B/M, and 5C/N; or 6A/L, 6B/M, and 6C/N

Upper-Division Requirements

Microbiology and Environmental Toxicology 101, *Source of Pollutants* or 102, *Cellular and Organismal Toxicology*
 Chemistry 103, *Biochemical Structures, Reactions, and Energetics*
 Chemistry 108A/L, 108B/M, *Organic Chemistry*
 Chemistry 122, *Principles of Instrumental Analysis*
 Chemistry 151A/L, *Chemistry of Metals/Inorganic Lab*
 Chemistry 163A, *Quantum Mechanics and Basic Spectroscopy*; and 163B, *Thermodynamics and Kinetic Theory*; and 146A or 146B or 146C, *Advanced Laboratory*. (Students currently conducting senior thesis research are required to choose an advanced lab in the Chemistry 146 series that is outside their research area.)
 Chemistry 164A, *Physical Chemistry Laboratory I: Data Analysis*
 Chemistry 164B, *Physical Chemistry Laboratory II*
 Earth Sciences 110B/M, *Earth as a Chemical System/Laboratory*
 Ocean Sciences 120, *Aquatic Chemistry: Principles and Applications*; or 220, *Chemical Oceanography*
Comprehensive Requirement (choose one of the following):

Senior thesis: 195A, 195B, 195C, Senior Research
 Senior essay: 199, Tutorial

Environmental Chemistry Planner

The following is the recommended academic plan for students who wish to pursue the environmental chemistry concentration.

Year	Fall	Winter	Spring
1st (frsh)	CHEM 1A MATH 11A or 19A college core	CHEM 1B/M MATH 11B or 19B	CHEM 1C/N MATH 22 BIOL 20A
2nd (soph)	CHEM 108A/L PHYS 6A/L	CHEM 108B/M PHYS 6B/M	EART 10/L PHYS 6C/N

	BIOL 20B	ENVS 25	
3rd	Chem 163A	EART 110B/M	CHEM 151A/L
(jr)	CHEM 122	CHEM 163B	gen ed
	gen ed		
4th	CHEM 164A	CHEM 164B	CHEM 146B/C
(sr)	METX 101	OCEA 220	CHEM 103
	gen ed	gen ed	gen ed

Senior Research (Chemistry 195A-B-C) offers an opportunity to participate in the process whereby knowledge is discovered; it is recommended to students, regardless of their ultimate career interest. Students should note, however, that the time demands of *Senior Research* are greater than those of the usual course.

Requirements for the Minor

The course requirements for the minor, including electives, are the same as for the B.A. degree, with the exclusion of Chemistry 151A/151L, 164A, 164B, 146A, 146B, 146C. The minor has no senior comprehensive requirement.

Chemistry Major Disqualification Policy

The Chemistry and Biochemistry Department's major disqualification policy is intended to encourage students to take their performance seriously and to make a strong effort to pass the lower-division and beginning upper-division courses.

Students who receive more than one No Pass, D, and/or F in any combination of the following requirements will not be permitted to pursue any of the chemistry degrees:

Chemistry 1A, *General Chemistry*
 Chemistry 1B, *General Chemistry*
 Chemistry 1C, *General Chemistry*
 Chemistry 108A, *Organic Chemistry*
 Chemistry 108B, *Organic Chemistry*
 Chemistry 112A, *Organic Chemistry*
 Chemistry 112B, *Organic Chemistry*
 Chemistry 112C, *Organic Chemistry*
 Chemistry 163A, *Physical Chemistry*
 Chemistry 163B, *Physical Chemistry*
 Mathematics 11A, *Calculus with Applications*
 Mathematics 11B, *Calculus with Applications*
 Mathematics 19A, *Calculus for Science, Engineering, and Mathematics*
 Mathematics 19B, *Calculus for Science, Engineering, and Mathematics*
 Mathematics 22, *Introduction to Calculus of Several Variables*
 Physics 5A, *Introduction to Physics*
 Physics 5B, *Introduction to Physics*
 Physics 5C, *Introduction to Physics*
 Physics 6A, *Introductory Physics*
 Physics 6B, *Introductory Physics*
 Physics 6C, *Introductory Physics*

Students may appeal their disqualification within the appeal period by writing a letter to the department chair. This appeal must be submitted to the advising office no later than 15 days from the date the disqualification notification was mailed, or the 10th day of classes in the quarter of their disqualification, whichever is later. The advising office will subsequently notify the student, the college, and the Office of the Registrar of the decision, no later than 15 days after the submission of the appeal.

A student who has been disqualified from the major may, no earlier than three months from the date of the disqualification, petition to be reinstated. This application will be considered only if there is substantial new evidence that the student is capable of making normal progress in the major.

Advising and Chemistry Curriculum Guide

The chemistry and biochemistry adviser provides counsel to undergraduate majors. Students are encouraged to pick up a declaration of major form at their college office and declare their major at an early date so that advising and planning can commence. To assist with this advising, the Chemistry and Biochemistry Department has prepared a curriculum guide. Copies are available at the office and online at http://www.chemistry.ucsc.edu/undergrad/chem_handbook.html.

Prerequisites

Students who wish to obtain permission to take a course without having completed the listed prerequisites must make prior arrangements with the instructor. Courses are designed for students who have met all the prerequisites; those who have not are at a disadvantage.

High School Preparation

Prospective chemistry majors are encouraged to get a solid foundation in high school mathematics; familiarity with algebra, logarithms, trigonometry, and analytic geometry is particularly recommended. Students who take chemistry at UCSC begin with Chemistry 1A which requires a reasonable background in high school chemistry, and is part of a rigorous sequence in which introductory college-level material is distributed among Chemistry 1A, 1B, and 1C. Students without a high school chemistry background may begin with Chemistry 1P, *Essentials of Chemistry*. Starting with Chemistry 1P does not cause impediment to progress in the major.

Transfer Students

The Chemistry and Biochemistry Department encourages the admission of students from community colleges. Students who intend to transfer from other institutions, particularly community colleges, are urged to develop a strong background in general chemistry, organic chemistry, calculus, and physics. If the institution offers a physics course based on calculus as well as a non-calculus-based course, the student should take the calculus-based course. Prospective transfer students should consult with a community college adviser regarding details of course transferability, and soon after arrival at UCSC, they should meet with a UCSC adviser to clarify their transfer credit status.

Program for Students of the Health Sciences

Students intending to enter medical, dental, or another health science professional school can satisfy entrance requirements with a major program in chemistry supplemented with further courses, especially in biology, as specified by the particular school. Students are urged to contact the Health Science Career Adviser at the Career Center. A brochure about preparing for careers in the health sciences is available from that office on request and online at <http://www2.ucsc.edu/careers/health/index.html>.

Biochemistry Program

See the biochemistry and molecular biology program description and major requirements.

American Chemical Society Certification

The American Chemical Society (ACS) recognizes certain undergraduate programs, including those of UCSC, to be of such quality as to entitle graduates to become ACS members immediately upon graduation. Graduates must be individually certified to the ACS by the Chemistry and Biochemistry Department chair if they have satisfactorily completed an approved program of study. ACS certification standards are rigorous; a graduate who has met them carries a distinction that is well recognized in the profession. Broadly speaking, ACS certification requirements are satisfied by completing a B.S. major in chemistry (not including concentrations in biochemistry or environmental chemistry) at UCSC, including Chemistry 122 as an elective. A year of study in a major modern foreign language (preferably German) is recommended. More information is available from the chemistry undergraduate adviser.

Honors in the Major

The chemistry Honors in the Major program will require at least a 3.5 grade point average in all chemistry courses. Highest Honors will require at least a 3.8 GPA in all chemistry courses for the major. The biochemistry and molecular biology major, as part of the Biological Sciences program, will follow the honors criteria of the Molecular, Cell, and Developmental Biology undergraduate major.

Graduate Programs

The Chemistry and Biochemistry Department offers three graduate degrees: the Ph.D., a thesis M.S., and a coursework M.S. The Ph.D. and thesis M.S. programs are designed to help students develop into independent scholars while pursuing the excitement of scientific research in a personal, supportive environment. Both the Ph.D. and the research M.S. programs prepare students for careers in academia, industry, government laboratories, and other settings requiring an advanced education in chemistry and related disciplines. The coursework M.S. does not require research and is suited to teachers and others wishing to update or broaden their chemical expertise. Approximately 90 graduate students are currently enrolled in the graduate program.

Within the Ph.D. program students have the flexibility to design a course of study focused on personal research interests, and at the same time are expected to maintain the high intellectual standards associated with the doctoral degree. Research options include biochemistry, physical chemistry, biophysical chemistry, inorganic chemistry, bioinorganic chemistry, materials, organic chemistry and bio-organic chemistry. Collaborative research efforts are encouraged, both intra- and inter-departmentally. The interdisciplinary Center for Biomolecular Science and Engineering emphasizes bioinformatics, nanotechnology, and computational approaches to chemistry. Biochemists join geneticists, computer scientists, and biologists in the Center for the Molecular Biology of RNA. Productive interactions have developed between the Chemistry and Biochemistry Department and the departments of Microbiology and Environmental Toxicology, and Molecular Cell and Developmental Biology, and the School of Engineering. Several Chemistry and Biochemistry faculty members also participate in the new graduate program in biomolecular science and engineering.

Before beginning course work, Ph.D. students take attainment exams to confirm their level of preparation in four areas: organic, inorganic, physical, and biochemistry. First-year students take 292 and 296, and select a research adviser and research committee in spring quarter. In the first two years, students enroll in core courses and electives related to their specialization. Core courses are 200A, B, and C for biochemistry and biophysical chemistry; 234 and 256A, B, or C for inorganic and bioinorganic chemistry; the 240 series for organic chemistry; and 261, 262, and 263 for physical chemistry. Organic studies students must pass four cumulative exams based on assigned reading in current research journals. The Ph.D. candidate's research committee meets formally with the student to evaluate research progress at least once a year. Students are expected to finish all Ph.D. requirements in five years.

M.S. students and Ph.D. students who have not advanced to candidacy attend a weekly seminar (291A, B, C, or D). Speakers from UCSC, other universities, and research labs expose students to advances at the frontiers of chemical research, offering the opportunity for personal contact with leading scientists.

Teaching assistantships provide both financial support and the opportunity to put into practice the required pedagogical training offered in 296 (presentation techniques, discussion strategies, lab teaching skills, lab safety procedures, time management). Advanced doctoral students can also be supported as graduate student researchers.

Ph.D. Requirements

1. Pass all four attainment exams and meet any deficiencies as directed by spring of first year.
2. Take 292 and 296 in fall of first year.
3. Take 291A, B, C, or D, *Research Seminar*, every quarter until advanced to candidacy.
4. Organic studies students must pass four out of 12 "cumulative exams" based on reading lists of current published organic research.
5. Select adviser and nominate research committee in spring of first year.
6. Present second-year seminar on a topic of current interest in published research outside own research area.
7. TA at least three quarters in the first two years, before attempting the Ph.D. oral qualifying exam.
8. Pass six lecture courses: at least four at 200 level, at least four in chemistry and biochemistry; with departmental approval, up to two courses may be at upper-division undergraduate level.
9. In the fall of the third year, pass the Ph.D. oral qualifying exam before an examining committee consisting of three research committee members plus one outside member approved by the graduate dean. Candidate presents (a) a summary of current research results and possible future direction, and (b) an original research proposal on a chemistry or biochemistry topic either related or unrelated to the candidate's current thesis research.
10. Nominate Dissertation Reading Committee (DRC).
11. Submit research prospectus (outline of dissertation chapters) in spring of fourth year and meet with DRC to review research progress.
12. Submit updated research prospectus (outline of dissertation chapters) to DRC in winter of fifth year.
13. Present dissertation seminar.

The average time to degree is five and one-quarter years. Ph.D. candidates are expected to complete research and write the dissertation within nine quarters after advancing to candidacy following a successful Ph.D. oral qualifying exam. Financial support is not available after 18 quarters in the graduate program.

For both Ph.D. and M.S. students, the standard course load is three courses per quarter, or a total of 15 units per quarter.

M.S. Requirements: Research Thesis Path

1. Pass all four attainment exams in the first year.
2. Take 292.
3. Take 296 if enrolled as teaching assistant at any time.

4. Take 291A, B, C, or D each quarter.
5. Select adviser and nominate Research Committee in the first year.
6. Pass at least five Chemistry and Biochemistry lecture courses, of which at least three must be graduate level (200).
7. Conduct original laboratory research.
8. Capstone requirement: write thesis based on original research.

M.S. Requirements: Coursework Path

1. Pass all four attainment exams in the first year.
2. Take 296 if enrolled as teaching assistant at any time.
3. Take 291A, B, C, or D each quarter.
4. Pass nine courses. Of these, seven must be lecture courses (at least four at 200 level) from three of the four sub-disciplines.
5. Capstone requirement: present seminar on a topic of current interest in published research.

Materials Fee

Chemistry students should be aware of the materials fee required for some courses. The fee is billed to the student's account for specific laboratory materials purchased by the Department of Chemistry and Biochemistry through the university. Fees generally range from \$15 to \$50 per course. Students may incur additional expense, purchasing individual supplies.

Chemistry and Biochemistry

[2009-10 update to the *General Catalog*, changes highlighted]

230 Physical Sciences Building
(831) 459-4125
<http://chemistry.ucsc.edu>

Program Description

Chemistry is central to modern science and, ultimately, most phenomena in biology, medicine, geology, and the environmental sciences can be described in terms of the chemical and physical behavior of atoms and molecules. Because of the wide appeal and utility of chemistry, UCSC offers many lower-division courses, differing in emphasis and style, to meet diverse needs. Students should also note the numerous upper-division course offerings and select those most suitable to their academic interests. The curriculum in chemistry exposes the student to the principal areas of modern chemistry, including organic, inorganic, physical, analytical, and biochemistry. The curriculum is designed to meet the needs of students who plan to end their formal education with a bachelor of arts or bachelor of science degree, as well as those who wish to go on for an advanced degree. The UCSC chemistry B.A. or B.S. graduate is well prepared to pursue a career in chemistry or an allied field.

Research in chemistry at UCSC is closely interwoven with graduate and undergraduate education. The chemistry and biochemistry program is active at the graduate level, and faculty also encourage undergraduates to become involved in research. Research is done for academic credit in Chemistry 180A, 195A-B-C, *Senior Research*; or in Chemistry 199, *Tutorial*. There are also opportunities for interdisciplinary research spanning, for example, chemistry/physics, chemistry/geology, chemistry/oceanography, chemistry/biology, chemistry/computer science, and chemistry/microbiology and environmental toxicology. At UCSC, it is not uncommon for students to see their own original work published in research journals.

Chemistry and biochemistry faculty and approximately 100 graduate students and 30 postdoctoral fellows are housed in the Physical Sciences Building near the Science Library. Standard and specialized spectrophotometric equipment, a number of instruments devoted to structural studies, instrumentation for specialized analytical purposes, and computer facilities used in studies of structure and reactivity are all available. The Science Library has an excellent collection of current journals, in print and electronic form, and reference works, as well as earlier volumes of all the major journals. Additional source material can be readily and rapidly obtained on interlibrary loan.

A degree in chemistry opens the door to a wide variety of academic careers. Some UCSC graduates are working as researchers in industry in areas such as electronic materials, biotechnology, medicinal chemistry, or laser technology. Others have entered government service, as research chemists in the Food and Drug Administration, the Environmental Protection Agency, or law enforcement crime laboratories. Fields such as patent law, commercial development, and scientific writing are open to graduates. Many chemistry majors go on to university graduate programs across the nation to prepare for careers in research, teaching, or a combination of the two. The degree in chemistry also provides a strong disciplinary background in preparation for a career in the important and much needed area of science teaching in high school. A major in chemistry is also an excellent beginning for one of the many opportunities in the health sciences.

The UCSC Chemistry and Biochemistry Department offers both B.S. and B.A. degree programs. The B.S. program has more requirements, and a student in this program earns a degree that meets the requirements of an American Chemical Society certified program. The B.S. degree should be the choice if a student is interested in getting a job in chemistry immediately after receiving ~~their~~ his or her college degree. The B.S. program also provides a good background for graduate work in chemistry. The B.A. program has fewer requirements and should be considered by students who wish to take more science courses outside of chemistry to enter an interdisciplinary area. Examples might be chemical oceanography, geochemistry, chemical physics, environmental chemistry, and health sciences. The B.A. might also be a good choice for students who wish to become high school teachers. However, for either degree, the courses stress the fundamentals of chemistry and allow students to pursue independent research.

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement will normally be met within one to three courses already required for the major. For detailed information on this major's DC requirement, consult your major adviser or see the 2010-11 general catalog.

Opportunities for Nonmajors

~~In addition to its regular course offerings for majors, the Chemistry and Biochemistry Department offers courses for the nonmajor. These include 80H, Introduction to Wines and Wine Chemistry. These courses are taught by chemistry faculty and are designed to present various aspects of chemical science to the nonmajor. A minor in chemistry is also offered for those who wish to have a strong complementary program in chemistry while majoring in another course of study.~~

Requirements for the Chemistry B.A. Degree

The requirements for the bachelor of arts in chemistry have been kept to a minimum so that students may tailor their program to their own purposes, for example, to pursue a double major, to study areas of the humanities or social sciences, to complete major requirements late in their college career, or to concentrate study in a specific branch of chemistry. The minimum requirements (including prerequisites) constitute 54 percent of a student's total undergraduate program; consequently, there is ample time to explore and discover other interests within the university. To plan wisely, students are advised to refer to each course description for a detailed listing of prerequisites. Students who decide they want a professional career in chemistry are advised to meet with the chemistry undergraduate staff adviser.

Lower-Division Requirements

Chemistry 1A, 1B/M and 1C/N

Mathematics 11A-B and 22; or Mathematics 19A-B and 22

Physics 5A/L, 5B/M, and 5C/N; or 6A/L, 6B/M, and 6C/N

Upper-Division Requirements

Chemistry 108A/L and 108B/M; or 112A/L, 112B/M, and 112C/N

Chemistry 151A/L, 163A, 163B, 164A, 164B, and one of the following: 146A, 146B, 146C. (Students currently conducting senior thesis research are required to choose an advanced lab in the Chemistry 146 series that is outside their research area.)

Elective(s). At least two if 108A/L and 108B/M are taken; or at least one from the following list if 112A/L, 112B/M, and 112C/N are taken:

Chemistry 103 (can be used as elective only if Biochemistry and Molecular Biology 100A, 100B, and 100C are not taken as electives)

Chemistry 122, 143, 151B, 156C, 163C, and graduate-level lecture courses in chemistry

Biochemistry and Molecular Biology 100A, 100B, 100C

Computer Science 12A or 5C, or Biomolecular Engineering 60

Microbiology and Environmental Toxicology 101, or 102

Ocean Sciences 120 or 220

Physics 110A-B, 116A-B-C

Comprehensive Requirement. The Comprehensive Requirement is a part of all UCSC degrees. In the Department of Chemistry and Biochemistry, there are two options for satisfying this requirement:

Senior thesis. A senior research project based on original experimental or theoretical research (Chemistry ~~180A-195A~~ B-C). At the conclusion of the project, the student submits a satisfactory formal research paper to the faculty sponsor. Students arrange for a faculty sponsor by consulting with a relevant faculty member within the chemistry ~~and biochemistry~~ or the biochemistry and molecular biology major programs. In some cases, faculty outside these major programs (for example, in biology, ocean sciences, microbiology and environmental toxicology, or Earth sciences) may be an appropriate sponsor. Students who select a sponsor outside the chemistry or the biochemistry and molecular biology major programs should have the title and description of the proposed thesis reviewed by the undergraduate adviser in the Department of Chemistry and Biochemistry. Students, usually working in the laboratory of the faculty sponsor, acquire experimental and/or theoretical research experience and skills in the laboratory as well as instruction in the writing of a research paper. Students are expected to make satisfactory academic progress and be in good academic standing while they take ~~180-195~~ courses. Students who achieve excellence in both research and thesis may be awarded honors in the Senior Comprehensive Requirement upon graduation.

Senior essay. An essay based on literature research (Chemistry 199). After agreeing in advance on an appropriate topic of interest and a format, the student submits a satisfactory essay on the topic. Students arrange for a faculty sponsor by consulting with a relevant faculty member within the chemistry ~~or the biochemistry and molecular biology~~ ~~and biochemistry~~ major program. In some cases, faculty outside these major programs (for example, in biology, ocean sciences, microbiology and environmental toxicology, or Earth sciences) may be an appropriate sponsor. Students who select a sponsor outside the chemistry ~~or the biochemistry and molecular biology~~ ~~and biochemistry~~ major programs should have the title and description of the proposed essay reviewed by the undergraduate adviser in the Department of Chemistry and Biochemistry. Students acquire experience and skills in scientific literature research as well as in the writing of a research paper.

Chemistry Major B.A. Planner

The following is the recommended academic plan for students to complete for the B.A. degree.

Year	Fall	Winter	Spring
1st (frsh)	Chem-CHEM 1A Math-MATH 11A	Chem-CHEM 1B/M MATH 11B	Chem-CHEM 1C/N MATH 22
2nd (soph)	Chem-CHEM 112A/L or CHEM 108A/L PHYS 6A/L	CHEM 112B/M or CHEM 108B/M or CHEM 108A/L	Chem-CHEM 112C/N or 108B/M PHYS 6C/N

		PHYS hys -6B/M	
3rd (jr)	Chem -CHEM 163A CHEM hem 164A	Che HEM m 163B CHEM hem -164B	Chem -CHEM 151A/L CHEM hem 146
4th (sr)	Chem -CHEM 164A CHEM hem elective*	Chem -CHEM 164B CHEM hem elective	

* Two electives required if 108 series taken; one elective required if 112 series taken

Requirements for the Chemistry B.S. Degree

The bachelor of science major program is designed for students who intend to pursue a professional career in chemistry. It is rigorous and broadly based, appropriate for that purpose. The course requirements for the B.S. major are as follows; please refer to each course description for a detailed listing of prerequisites.

Lower-Division Requirements

Chemistry 1A, 1B/M and 1C/N

Mathematics 19A-B and Mathematics 22; or Mathematics 11A-B and Mathematics 22, and either Applied Mathematics and Statistics ~~274~~10, or Mathematics 21, or Mathematics 24

Physics 5A/L, 5B/M, and 5C/N; or 6A/L, 6B/M, and 6C/N

Upper-Division Requirements

Chemistry 112A/L, 112B/M, and 112C/N; or 108A/L, 108B/M, and 143

Chemistry 103

Chemistry 151A/L, 163A, 163B, 163C, 164A, 164B, and one of the following: 146A, 146B, 146C.

(Students currently conducting senior thesis research are required to choose an advanced lab in the Chemistry 146 series that is outside their research area.)

Electives. At least two from the following list (to receive certification from the American Chemical Society, you must complete Chemistry 122 as one of the two electives)

Chemistry 122, 143 (if not taken for the organic chemistry requirement), 151B, graduate-level lecture courses in chemistry (5 credits or two 3-credit lecture courses)

Biochemistry and Molecular Biology 100A, 100B, 100C (can substitute for Chemistry 103)

Microbiology and Environmental Toxicology 101 or 102

Ocean Sciences 120 or 220

Physics 110A-B, 116A-B-C

Comprehensive Requirement: Same as for the B.A. (see above)

B.S. Degree with Biochemistry Emphasis. The biochemistry pathway is designed for students who intend to pursue a career in biochemistry or in a related field such as biotechnology, and it provides an exceptionally rigorous chemistry emphasis.

Chemistry 1A, 1B/M and 1C/N

Mathematics 19A-B and 22; or Mathematics 11A-B and Mathematics 22, and either Applied Mathematics and Statistics ~~274~~10 or Mathematics 21 or Mathematics 24

Physics 5A/L, 5B/M, and 5C/N; or 6A/L, 6B/M, and 6C/N

Chemistry 112A/L, 112B/M, and 112C/N; or 108A/L, 108B/M, and 143

Chemistry 151A/L, 163A, 163B, 163C

Biochemistry and Molecular Biology 100A, 100B, 100C, 110

Biology: ~~Ecology and Evolutionary~~Development and Physiology 20B

Biology: Molecular, Cell, and Developmental 20A, 20L, Experimental Biology Lab

Comprehensive Requirement: same as for the B.A. (see above)

Chemistry Major B.S. Planner

The following is the recommended academic plan for students to complete ~~during their first two years as preparation for~~ the B.S. degree.

Year	Fall	Winter	Spring
1st (frsh)	MATH ath 19A CHEM hem 1A	MATH ath 19B CHEM hem 1B/M	MATH ath 22 CHEM hem 1C/N
2nd (soph)	Chem -CHEM 112A/L or CHEM hem 108A/L PHYS hys 6A/L	Chem -CHEM 112B/M or CHEM hem 108B/M or CHEM hem 108A/L PHYS hys 6B/M	Chem -CHEM 112C/N CHEM hem 108B/M PHYS hys 6C/N

3rd (jr)	Chem-CHEM 163A CHEMhem 164A	CHEMhem 163B CHEMhem 164B	CHEMhem 163C CHEMhem 146 CHEMhem 151A/L
4th (sr)	CHEMhem elective	Chem-CHEM elective	Chem-CHEM 103

B.S. Degree with Environmental Chemistry Concentration

A concentration within the biology, chemistry and biochemistry, and Earth sciences degree programs, collectively identified as the environmental sciences program, is offered. Students will develop a core competence suitable for pursuing graduate work in the environmental chemistry area or in graduate environmental sciences programs.

Lower-Division Requirements

Biology: Molecular, Cell, and Developmental 20A

Biology: ~~Development and Physiology~~~~Ecology and Evolutionary~~ 20B

Chemistry 1A, 1B/M and 1C/N

Earth Sciences 20/L, 10/L, or 5/L

Environmental Studies 25

Mathematics 11A-B and 22; or 19A-B and 22

Physics 5A/L, 5B/M, and 5C/N; or 6A/L, 6B/M, and 6C/N

Upper-Division Requirements

Microbiology and Environmental Toxicology 101, *Source of Pollutants* or 102, *Cellular and Organismal Toxicology*

Chemistry 103, *Biochemical Structures, Reactions, and Energetics*

Chemistry 108A/L, 108B/M, *Organic Chemistry*

Chemistry 122, *Principles of Instrumental Analysis*

Chemistry 151A/L, *Chemistry of Metals/Inorganic Lab*

Chemistry 163A, *Quantum Mechanics and Basic Spectroscopy*; and 163B, *Thermodynamics and Kinetic Theory*; and 146A or 146B or 146C, *Advanced Laboratory*. (Students currently conducting senior thesis research are required to choose an advanced lab in the Chemistry 146 series that is outside their research area.)

Chemistry 164A, *Physical Chemistry Laboratory I: Data Analysis*

Chemistry 164B, *Physical Chemistry Laboratory II*

Earth Sciences 110B/M, *Earth as a Chemical System/Laboratory*

Ocean Sciences 120, *Aquatic Chemistry: Principles and Applications*; or 220, *Chemical Oceanography*

Comprehensive Requirement (choose one of the following):

Senior thesis: ~~180A~~195A, ~~180B~~195B, ~~180C~~195C, Senior Research

Senior essay: 199, Tutorial

Environmental Chemistry Planner

The following is the recommended academic plan for students who wish to pursue the environmental chemistry concentration.

Year	Fall	Winter	Spring
1st (frsh)	Chem-CHEM 1A MATH ath 11A or 19A college core	Chem-CHEM 1B/M MATH ath 11B or 19B	Chem-CHEM 1C/N MATH ath 22 BIOL iol 20A
2nd (soph)	Chem-CHEM 108A/L PHYS hys 6A/L BIOL iol 20B	Chem-CHEM 108B/M PHYS hys 6B/M ENVS avs 25	EART art 10/L PHYS hys 6C/N
3rd (jr)	CHEMhem 163A CHEMhem 122 gen ed	EARTart 110B/M CHEMhem 163B	CHEMhem 151A/L gen ed
4th (sr)	CHEMhem 164A METX Etoc 101 gen ed	CHEMhem 164B OCEA ecn 220 gen ed	CHEMhem 146B/C CHEMhem 103 gen ed

Senior Research (Chemistry ~~180A~~195A-B-C) offers an opportunity to participate in the process whereby knowledge is discovered; it is recommended to students, regardless of their ultimate career interest.

Students should note, however, that the time demands of *Senior Research* are greater than those of the usual course.

Requirements for the Minor

The course requirements for the minor, including electives, are the same as for the B.A. degree, with the exclusion of Chemistry 151A/151L, 164A, 164B, 146A, 146B, 146C. The minor has no senior comprehensive requirement.

Chemistry Major Disqualification Policy

The Chemistry and Biochemistry Department's major disqualification policy is intended to encourage students to take their performance seriously and to make a strong effort to pass the lower-division and beginning upper-division courses.

Students who receive more than one No Pass, D, and/or F in any combination of the following requirements will not be permitted to pursue any of the chemistry degrees:

Chemistry 1A, *General Chemistry*
Chemistry 1B, *General Chemistry*
Chemistry 1C, *General Chemistry*
Chemistry 108A, *Organic Chemistry*
Chemistry 108B, *Organic Chemistry*
Chemistry 112A, *Organic Chemistry*
Chemistry 112B, *Organic Chemistry*
Chemistry 112C, *Organic Chemistry*
Chemistry 163A, *Physical Chemistry*
Chemistry 163B, *Physical Chemistry*
Mathematics 11A, *Calculus with Applications*
Mathematics 11B, *Calculus with Applications*
Mathematics 19A, *Calculus for Science, Engineering, and Mathematics*
Mathematics 19B, *Calculus for Science, Engineering, and Mathematics*
Mathematics 22, *Introduction to Calculus of Several Variables*
Physics 5A, *Introduction to Physics*
Physics 5B, *Introduction to Physics*
Physics 5C, *Introduction to Physics*
Physics 6A, *Introductory Physics*
Physics 6B, *Introductory Physics*
Physics 6C, *Introductory Physics*

Students may appeal their disqualification within the appeal period by writing a letter to the department chair. This appeal must be submitted to the advising office no later than 15 days from the date the disqualification notification was mailed, or the 10th day of classes in the quarter of their disqualification, whichever is later. The advising office will subsequently notify the student, the college, and the Office of the Registrar of the decision, no later than 15 days after the submission of the appeal.

A student who has been disqualified from the major may, no earlier than three months from the date of the disqualification, petition to be reinstated. This application will be considered only if there is substantial new evidence that the student is capable of making normal progress in the major.

Advising and Chemistry Curriculum Guide

The chemistry and biochemistry adviser provides counsel to undergraduate majors. Students are encouraged to pick up a declaration of major form at their college office and declare their major at an early date so that advising and planning can commence. To assist with this advising, the Chemistry and Biochemistry Department has prepared a curriculum guide. Copies are available at the office and online at http://www.chemistry.ucsc.edu/undergrad/chem_handbook.html.

Prerequisites

Students who wish to obtain permission to take a course without having completed the listed prerequisites must make prior arrangements with the instructor. Courses are designed for students who have met all the prerequisites; those who have not are at a disadvantage.

High School Preparation

Prospective chemistry majors are encouraged to get a solid foundation in high school mathematics; familiarity with algebra, logarithms, trigonometry, and analytic geometry is particularly recommended. Students who take chemistry at UCSC begin with Chemistry 1A which requires a reasonable background in high school chemistry, and is part of a rigorous sequence in which introductory college-level material is distributed among Chemistry 1A, 1B, and 1C. Students without a high school chemistry background may begin with Chemistry 1P, *Essentials of Chemistry*. Starting with Chemistry 1P does not cause impediment to progress in the major.

Transfer Students

The Chemistry and Biochemistry Department encourages the admission of students from community colleges. Students who intend to transfer from other institutions, particularly community colleges, are urged to develop a strong background in general chemistry, organic chemistry, calculus, and physics. If the institution offers a physics course based on calculus as well as a non-calculus-based course, the student should take the calculus-based course. Prospective transfer students should consult with a community college adviser regarding details of course transferability, and soon after arrival at UCSC, they should meet with a UCSC adviser to clarify their transfer credit status.

Program for Students of the Health Sciences

Students intending to enter medical, dental, or another health science professional school can satisfy entrance requirements with a major program in chemistry supplemented with further courses, especially in biology, as specified by the particular school. Students are urged to contact the Health [Science Career Adviser at the Career Center Resource office](#). A brochure about preparing for careers in the health sciences is available from that office on request and online at <http://www2.ucsc.edu/careers/health/index.html>.

Biochemistry Program

See the biochemistry and molecular biology program description and major requirements.

American Chemical Society Certification

The American Chemical Society (ACS) recognizes certain undergraduate programs, including those of UCSC, to be of such quality as to entitle graduates to become ACS members immediately upon graduation. Graduates must be individually certified to the ACS by the Chemistry and Biochemistry Department chair if they have satisfactorily completed an approved program of study. ACS certification standards are rigorous; a graduate who has met them carries a distinction that is well recognized in the profession. Broadly speaking, ACS certification requirements are satisfied by completing a B.S. major in chemistry (not including concentrations in biochemistry or environmental chemistry) at UCSC, including Chemistry 122 as an elective. A year of study in a major modern foreign language (preferably German) is recommended. More information is available from the chemistry undergraduate adviser.

Honors in the Major

The chemistry Honors in the Major program will require at least a 3.5 grade point average in all chemistry courses. Highest Honors will require at least a 3.8 GPA in all chemistry courses for the major. The biochemistry and molecular biology major, as part of the Biological Sciences program, will follow the honors criteria of the Molecular, Cell, and Developmental Biology undergraduate major.

Graduate Programs

The Chemistry and Biochemistry Department offers three graduate degrees: the Ph.D., a thesis M.S., and a coursework M.S. The Ph.D. and thesis M.S. programs are designed to help students develop into independent scholars while pursuing the excitement of scientific research in a personal, supportive environment. Both the Ph.D. and the research M.S. programs prepare students for careers in academia, industry, government laboratories, and other settings requiring an advanced education in chemistry and related disciplines. The coursework M.S. does not require research and is suited to teachers and others wishing to update or broaden their chemical expertise. Approximately 90 graduate students are currently enrolled in the graduate program.

Within the Ph.D. program students have the flexibility to design a course of study focused on personal research interests, and at the same time are expected to maintain the high intellectual standards associated with the doctoral degree. Research options include biochemistry, physical chemistry, biophysical chemistry, inorganic chemistry, bioinorganic chemistry, [materials](#), organic chemistry and bio-organic chemistry. Collaborative research efforts are encouraged, both intra- and inter-departmentally. The interdisciplinary Center for Biomolecular Science and Engineering emphasizes bioinformatics, nanotechnology, and computational approaches to chemistry. Biochemists join geneticists, computer scientists, and biologists in the Center for the Molecular Biology of RNA. Productive interactions have ~~also~~ developed between [the Chemistry and Biochemistry Department](#) and [the departments of Microbiology and Environmental Toxicology](#), [and Molecular Cell and Developmental Biology](#), and the School of Engineering. [Several Chemistry and Biochemistry faculty members also participate in the new graduate program in biomolecular science and engineering.](#)

Before beginning course work, Ph.D. students take attainment exams to confirm their level of preparation in four areas: organic, inorganic, physical, and biochemistry. First-year students take 292 and 296, and select a ~~research~~ adviser and research committee in spring quarter. In the first two years, students enroll in core courses and electives related to their specialization. Core courses are 200A, B, and C for biochemistry and biophysical chemistry; 234 and 256A, B, or C for inorganic and bioinorganic chemistry; the 240 series for organic chemistry; and 261, 262, and 263 for physical chemistry. Organic studies students must pass four cumulative exams based on assigned reading in current research journals. The Ph.D. candidate's research committee meets formally with the student to evaluate research progress at least once a year. Students are expected to finish all Ph.D. requirements in ~~five to six~~ years.

M.S. students and Ph.D. students who have not advanced to candidacy attend a weekly seminar (291A, B, C, or D). Speakers from UCSC, other universities, and research labs expose students to advances at the frontiers of chemical research, offering the opportunity for personal contact with leading scientists.

Teaching assistantships provide both financial support and the opportunity to put into practice the required pedagogical training offered in 296 (presentation techniques, discussion strategies, lab teaching skills, lab safety procedures, time management). Advanced doctoral students can also be supported as graduate student researchers.

Ph.D. Requirements

Pass all four attainment exams and meet any deficiencies as directed by spring of first year.

Take 292 and 296 in fall of first year.

Take 291A, B, C, or D, *Research Seminar*, every quarter until advanced to candidacy.

Organic studies students must pass four out of 12 "cumulative exams" based on reading lists of current published organic research.

Select adviser and nominate research committee in spring of first year.

Present second-year seminar on a topic of current interest in published research outside own research area.

TA at least three quarters in the first two years, before attempting the Ph.D. oral qualifying exam.

Pass six lecture courses: at least four at 200 level, at least four in chemistry and biochemistry; ~~on~~-with departmental approval, up to two courses may be at upper-division undergraduate level.

In the fall of the third year, pass the Ph.D. oral qualifying exam before an examining committee consisting of three research committee members plus one outside member approved by the graduate dean.

Candidate presents (a) a summary of current research results and possible future direction, and (b) an original research proposal on a chemistry or biochemistry topic either related or unrelated to the candidate's current thesis research.

Nominate Dissertation Reading Committee (DRC).

Submit research prospectus (outline of dissertation chapters) in spring of fourth year and meet with DRC to review research progress.

Submit updated research prospectus (outline of dissertation chapters) to DRC in winter of fifth year.

Present dissertation seminar.

The average time to degree is five and one-quarter years. Ph.D. candidates are expected to complete research and write the dissertation within nine quarters after advancing to candidacy following a successful Ph.D. oral qualifying exam. Financial support is ~~no longer~~not available after 18 quarters in the graduate program.

For both Ph.D. and M.S. students, the standard course load is three courses per quarter, or a total of 15 units per quarter.

M.S. Requirements: Research Thesis Path

Pass all four attainment exams in the first year.

Take 292.

Take 296 if enrolled as teaching assistant at ~~the~~ any time.

Take 291A, B, C, or D each quarter.

Select adviser and nominate Research Committee in the first year.

Pass at least five Chemistry and Biochemistry lecture courses, of which at least three must be graduate level (200).

Conduct original laboratory research.

Capstone requirement: write thesis based on original research.

M.S. Requirements: Coursework Path

Pass all four attainment exams in the first year.

Take 296 if enrolled as teaching assistant at any time.

Take 291A, B, C, or D each quarter.

Pass nine courses. Of these, seven must be lecture courses (at least four at 200 level) from three of the four sub-disciplines.

Capstone requirement: present seminar on a topic of current interest in published research.

Materials Fee

Chemistry students should be aware of the materials fee required for some courses. The fee is billed to the student's account for specific laboratory materials purchased by the Department of Chemistry and Biochemistry through the university. Fees generally range from \$15 to \$50 per course. Students may incur additional expense, purchasing individual supplies.

[Program Description](#) | [Changes to 2009-10 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Faculty and Professional Interests

Roger W. Anderson

Experiments and theory for low temperature, light-activated chemical vapor deposition, achromatic focusing of molecules with external electric fields, discrete orthogonal polynomials in molecular collision theory, fractal geometry structural measures for large molecules

Frank C. Andrews, Emeritus

Ilan Benjamin

Theoretical chemistry, molecular dynamics of chemical reactions in liquids and at interfaces

Claude F. Bernasconi

Kinetic studies of fast reactions, organic reaction mechanisms, acid-base catalysis, proton transfers, nucleophilic reactions, organometallic reactions, ab initio molecular orbital calculations

Roberto A. Bogomolni

Biophysical chemistry, photobiology, light energy conversion and signal transduction in biological systems

Joseph F. Bunnett, Emeritus

Philip O. Crews

Marine natural products chemistry, bioorganic chemistry, organic structural analysis by NMR, natural products of marine macro- and microorganisms

Ólöf Einarsson

Time-resolved spectroscopy, biophysics and bioenergetics, heme-copper oxidases, electron transfer, proton translocation

Theodore R. Holman

Biochemistry and bioinorganic chemistry; lipoxygenase enzymology, protein engineering, inhibitor discovery, computer inhibitor design, mass spectroscopy, electron paramagnetic resonance

David S. Kliger

Time-resolved laser spectroscopy, biophysics, studies of visual transduction, protein function, and protein folding

Joseph P. Konopelski

Synthetic organic chemistry; heterocyclic chemistry, bio-organic chemistry

Pradip Mascharak

Bioinorganic chemistry, design of antitumor drugs, modeling of active sites of metalloenzymes, design of catalysts for hydrocarbon oxidation, studies on intermediates in non-heme oxygenase chemistry, design of NO-donors for photodynamic therapy

Glenn L. Millhauser

Electron spin resonance; nuclear magnetic resonance, melanocortin receptor signaling, agouti proteins, prions, peptide synthesis

Thomas W. Schleich

Biomedical magnetic resonance spectroscopy, magnetic resonance imaging, nuclear magnetic resonance spectroscopy, biophysical chemistry

William G. Scott

Structure and function of RNA, proteins, and their complexes, origin of life

Bakthan Singaram

Organic synthesis, organoborane chemistry, heterocyclic chemistry, organometallic chemistry, asymmetric synthesis, biosensors, and natural products chemistry

Eugene Switkes

Quantum theory applied to problems in chemistry and biochemistry; visual information processing, spatial vision, color vision

Stanley M. Williamson, Emeritus

W. Todd Wipke, Emeritus

Molecular engineering for drug discovery, computational high-throughput screen, QSAR; virtual library design; improving cancer chemotherapy

Jin Z. Zhang

Design, synthesis, characterization, and application of nanomaterials, including semiconductor and metal nanoparticles; femtosecond laser spectroscopy; ultrafast dynamics on surfaces and at interfaces; cancer biomarker detection; surface-enhanced Raman spectroscopy

Associate Professor

Rebecca Braslau

Synthetic organic chemistry: new synthetic methodologies using free radicals; nitroxides, nitroxide mediated "living" polymerizations: design and functionalization of tailored polymers for biomedical applications and nanotechnology, profluorescent nitroxides as sensors

Shaowei Chen

Synthesis, characterization, and manipulation of novel functional nanomaterials (metals and semiconductors); their long-range ordered assemblies and related nanoscale electron transfer; applications in fuel cells, photovoltaics, and electronic devices

Scott R. Oliver

Inorganic materials: nanoporous materials for environmental cleanup and catalysis; polymer templating of thin-film semiconductors for solar cells

Assistant Professor

Yat Li

Experimental physical chemistry, materials chemistry, nanomaterials, nanoscale photonics and electronics, energy conversion

Roger G. Linington

Marine natural products; drugs for neglected diseases; chemical biology; chemical probes

Robert S. Lokey

Organic chemistry; combinatorial synthesis, biotechnology, molecular cell biology

Seth M. Rubin

Biomolecular mechanisms of cell-cycle regulation and cancer; structural biology and biochemistry; macromolecular x-ray crystallography; nuclear magnetic resonance

Michael Stone

Molecular basis of telomere length and telomerase-related diseases; biophysical characterization of nucleic acid-associated molecular motors; and development of novel approaches for imaging enzymes in cells

Lecturer

Daniel Palleros

Affiliate

David W. Deamer, Professor Emeritus (recalled)

Professor

Kenneth W. Bruland (Ocean Sciences)

Chemical oceanography, biogeochemistry of trace metals and radionuclides, aquatic chemistry, geochemistry

A. Russell Flegal (Environmental Toxicology)

Anthropogenic perturbations of biogeochemical cycles, applications of isotopic tracers in anthropology and archaeology

Donald R. Smith (Environmental Toxicology)

Neurotoxicity, cellular and organismal responses to environmental toxins

Lower-Division Courses

1A. General Chemistry. F,W

First term of an integrated study of general chemistry. Course 1A suitable for people who have a solid background in high school chemistry. Covers a range of topics including the atomic structure of matter; molecules; chemical reactions; acids and bases; gases; and equilibria in the gas and liquid phase. Lecture: 3-1/2 hours; discussion: 1-1/4 hours. Students expected to use algebra to solve problems. Prerequisite(s): high school level chemistry. (General Education Code(s): IN, Q.) (F) *R. Roland, (W) T. Schleich, (W) I. Benjamin*

1B. General Chemistry. W,S

Second term of an integrated study of general chemistry. Coverage includes quantum mechanics; the hydrogen atom; many-electron atoms and chemical periodicity; elementary covalent bonding; thermochemistry; and intermolecular forces and solutions, including colligative properties. Lecture: 3-1/2 hours, discussion: 1-1/4 hours. Prerequisite(s): course 1A or a grade of 5 on the AP chemistry examination. Concurrent enrollment in course 1M is required. Enrollment limited to 750. (General Education Code(s): IN, Q.) (W) *R. Anderson, (S) E. Switkes, (WS) R. Roland*

1C. General Chemistry. F,S

Third term of an integrated study of general chemistry. Coverage includes thermodynamics; chemical kinetics; oxidation-reduction and electrochemistry; liquids and solids; transition metals; and nuclear chemistry. Lecture: 3-1/2 hours; discussion: 1-1/4 hours. Prerequisite(s): course 1B. Concurrent enrollment in course 1N is required. (General Education Code(s): IN, Q.) (S) *R. Roland, (FS) R. Bogomolni*

1M. General Chemistry Laboratory (2 credits). W,S

Laboratory sequence illustrating topics covered in courses 1B and 1C and important experimental techniques. Laboratory: 3 hours; lecture: 1-1/4 hours. Students are billed a materials fee. Course 1M offered in winter and spring; 1N offered in spring and fall. Prerequisite(s): course 1A. Concurrent enrollment in course 1B is required. *R. Roland*

1N. General Chemistry Laboratory (2 credits). F,S

Laboratory sequence illustrating topics covered in courses 1B-1C, respectively, and important experimental techniques. Laboratory: 3 hours; lecture: 1-1/4 hours. Students are billed a materials fee. Course 1M offered in winter and spring; 1N offered in spring and fall. Prerequisite(s): course 1M. Concurrent enrollment in course 1C is required. *R. Roland*

1P. Chemistry Essentials (3 credits). F

Introduction to basic concepts required for the Chemistry 1 series. This course is for students who have little background in high school chemistry or equivalent. Covers elementary topics including units, conversions, the mole, chemical reactions, and balancing. Enrollment limited to 90. *R. Roland*

80H. Introduction to Wines and Wine Chemistry. *

Introduction to scientific aspects of winemaking and wine sensory evaluation. Overview of wines emphasizing chemical and biological principles appropriate for both non-science and science students. Aspects of wine presented including history, viticulture, fermentation, winery operations, and physiology of wine consumption. Students are billed a materials fee. (General Education Code(s): T2-Natural Sciences.) *P. Crews*

80L. Introduction to Chemistry of Wines and Musts (2 credits). *

An integrated course exploring elementary aspects of wine evaluation and modern winemaking. Topics: effects of grape varieties, vineyard locations, production techniques, aging practices on wine quality, and winemaking. Survey of commercial wine styles and lab methods of wine component analysis provide insights on how fine wines are made and analyzed. Students are billed a materials fee. Prerequisite(s): concurrent enrollment in or completion of course 80H. Enrollment limited to 32. *P. Crews*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

*Upper-Division Courses***103. Biochemical Structures, Reactions, and Energetics. S**

Introduces biochemical molecules that compose all living organisms. Focus on structure and function relationships in chemical components of cells, primary enzyme-catalyzed reactions of metabolism. Chemical principles of cell function at molecular level; molecular structure of nucleic acids discussed. Prerequisite(s): courses 1B and 1C; 108A-B or 112A-B-C or 7. *T. Schleich*

108A. Organic Chemistry. F,W

An integrated study of fundamental organic chemistry, with emphasis on materials especially relevant to the biological sciences. Students with credit for course 112A cannot receive credit for course 108A; students with credit for 112B or 112C cannot receive credit for 108B. Lecture: 3-1/2 hours, discussion: 1-1/4 hours. Prerequisite(s): course 1C or 4B. *C. Bernasconi, R. Lokey*

108B. Organic Chemistry. W,S

An integrated study of fundamental organic chemistry, with emphasis on materials especially relevant to the biological sciences. Students with credit for course 112A cannot receive credit for course 108A; students with credit for 112B or 112C cannot receive credit for 108B. Lecture: 3-1/2 hours, discussion: 1-1/4 hours. Prerequisite(s): course 108A or 112A. *P. Crews, B. Singaram*

108C. Organic Chemistry (3 credits). S

Integrated study of fundamental organic chemistry, with emphasis on materials especially relevant to biological sciences. Students with credit for course 112A cannot receive credit for course 108A; students with credit for course 112B cannot

receive credit for course 108B; students with credit for course 112C cannot receive credit for course 108C. Lecture: 2 hours, 20 minutes. Discussion: 1 hour.

Prerequisite(s): course 108B or equivalent. *D. Palleros*

108L. Organic Chemistry Laboratory (2 credits). F,W

Laboratory experience in organic chemistry associated with courses 108A-108B, respectively. Designed to introduce the student to the many techniques associated with organic chemistry while affording an opportunity to explore the concepts discussed in the lecture material. Laboratory: 4 hours, lecture: 1-1/4 hours. Students are billed a materials fee. Prerequisite(s): courses 1C/N and 108A or concurrent enrollment. *D. Palleros*

108M. Organic Chemistry Laboratory (2 credits). W,S

Laboratory experience in organic chemistry associated with courses 108A-108B, respectively. Designed to introduce the student to the many techniques associated with organic chemistry while affording an opportunity to explore the concepts discussed in the lecture material. Laboratory: 4 hours, lecture: 1-1/4 hours. Students are billed a materials fee. Prerequisite(s): courses 108A/L and 108B or concurrent enrollment. *D. Palleros*

112A. Organic Chemistry. F

An integrated study of fundamental organic chemistry, including principles, descriptive chemistry, synthetic methods, reaction mechanisms, and compounds of biological interest. These courses are coordinated with 112L-M-N respectively and are to be taken concurrently with them. Students with credit in course 108A can receive credit for courses 112B and 112C but not for 112A; students with credit in 108B cannot receive credit for 112B or 112C. Lecture: 3-1/2 hours; optional discussion section: 1-1/4 hours. Prerequisite(s): course 1C or 4B; and course 1N. Concurrent enrollment in course 112L is required. Enrollment limited to 80. *J. Konopelski*

112B. Organic Chemistry. W

An integrated study of fundamental organic chemistry, including principles, descriptive chemistry, synthetic methods, reaction mechanisms, and compounds of biological interest. These courses are coordinated with 112L-M-N respectively and are to be taken concurrently with them. Students with credit in course 108A can receive credit for courses 112B and 112C but not for 112A; students with credit in 108B cannot receive credit for 112B or 112C. Lecture: 3-1/2 hours; optional discussion section: 1-1/4 hours. Prerequisite(s): course 112A/L. Concurrent enrollment in course 112M is required. Enrollment limited to 80. *R. Braslau*

112C. Organic Chemistry. S

An integrated study of fundamental organic chemistry, including principles, descriptive chemistry, synthetic methods, reaction mechanisms, and compounds of biological interest. These courses are coordinated with 112L-M-N respectively and are to be taken concurrently with them. Students with credit in course 108A can receive credit for courses 112B and 112C but not for 112A; students with credit in 108B cannot receive credit for 112B or 112C. Lecture: 3-1/2 hours; optional discussion section: 1-1/4 hours. Prerequisite(s): courses 112B/M. Students should be concurrently enrolled in course 112N. Enrollment limited to 80. *R. Linington*

112L. Organic Chemistry Laboratory (2 credits). F

Laboratory experience in organic chemistry and associated principles. Experiments involve the preparation, purification, characterization, and identification of organic compounds and make use of modern as well as classical techniques. These courses are coordinated with 112A-B-C respectively, and are to be taken concurrently with

them. For courses 112L and 112M: lecture: 1-1/2 hours and laboratory: 4 hours; for course 112N: lecture: 1-1/4 hours and laboratory: 8 hours. Students are billed a materials fee. Prerequisite(s): courses 1C/N. Students should be concurrently enrolled in course 112A. Enrollment limited to 80. *D. Palleros*

112M. Organic Chemistry Laboratory (2 credits). W

Laboratory experience in organic chemistry and associated principles. Experiments involve the preparation, purification, characterization, and identification of organic compounds and make use of modern as well as classical techniques. These courses are coordinated with 112A-B-C respectively, and are to be taken concurrently with them. For courses 112L and 112M: lecture: 1-1/2 hours and laboratory: 4 hours; for course 112N: lecture: 1-1/4 hours and laboratory: 8 hours. Students are billed a materials fee. Prerequisite(s): course 112A/L. Concurrent enrollment in course 112B is required. Enrollment limited to 80. *D. Palleros*

112N. Organic Chemistry Laboratory (2 credits). S

Laboratory experience in organic chemistry and associated principles. Experiments involve the preparation, purification, characterization, and identification of organic compounds and make use of modern as well as classical techniques. These courses are coordinated with 112A-B-C respectively, and are to be taken concurrently with them. For courses 112L and 112M: lecture: 1-1/2 hours and laboratory: 4 hours; for course 112N: lecture: 1-1/4 hours and laboratory: 8 hours. Students are billed a materials fee. Prerequisite(s): courses 112B/M. Students should be concurrently enrolled in course 112C. Enrollment limited to 80. *D. Palleros*

122. Principles of Instrumental Analysis. F

A laboratory course designed to develop familiarity with techniques and instrumentation used in analytical chemistry, emphasizing determination of trace inorganic species. Primary emphasis on applications utilizing the absorption or emission of electromagnetic radiation and on voltammetry. Topics include molecular UV-visible absorption and fluorescence spectrometry; atomic absorption, emission and fluorescence spectrometry; and various forms of voltammetry. Lecture: 2 hours; laboratory: 8 hours. Students are billed a materials fee. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, course 108B or 112C. (General Education Code(s): W.) *S. Oliver*

143. Organic Chemical Structure and Reactions. F

Advanced topics such as the chemistry of terpenes, steroids, synthetic polymers, alkaloids, reactive intermediates, and reaction mechanisms are treated. Lecture: 4 hours. Prerequisite(s): course 108B or 112C. *B. Singaram*

146A. Advanced Laboratory in Organic Chemistry (2 credits). F

Exposes students to advanced laboratory techniques in organic chemistry. Designed for students without previous research background in organic chemistry. Experiments carry a research-like format and cover the areas of natural products and reaction chemistry. Modern methods of organic analysis are emphasized including chromatographic methods and organic structure determination by spectroscopy. Laboratory: 8 hours. Students billed a materials fee. (General Education Code(s): W satisfied by taking this course and courses 151L and 164B.) Prerequisite(s): courses 108B/M or 112C/N; satisfaction of Entry Level Writing and Composition requirements.; enrollment restricted to chemistry majors. Enrollment limited to 16. *R. Braslau*

146B. Advanced Laboratory in Inorganic Chemistry (2 credits). S

Designed to expose students to advanced synthetic and spectroscopic techniques in inorganic chemistry. Examples include anaerobic manipulations, characterization of

inorganic materials through spectral assignments and synthesis of coordination and organometallic complexes. Lecture: 1-1/4 hours; laboratory: 8 hours. Students billed a materials fee. (General Education Code(s): W satisfied by taking this course and courses 151L and 164B.) Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements; courses 108B/M or 112C/N; 163A. *T. Holman*

146C. Advanced Laboratory in Physical Chemistry (2 credits). S

Provides advanced and more open-ended laboratory experience in the areas of thermodynamics, kinetics, spectroscopy, and computer simulations. Lecture: 1-1/4 hours; laboratory: 4 hours. Students are billed a materials fee. (General Education Code(s): W satisfied by taking this course and courses 151L and 164B.) Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements; course 163B and 164B. Enrollment limited to 20. *Y. Li*

151A. Chemistry of Metals. S

Fundamental topics of inorganic chemistry are presented at the level of the standard texts of field. Special emphasis is given to maintain breadth in the areas of metallic, nonmetallic, and biological aspects of inorganic chemistry. Lecture: 3-1/2 hours; discussion: 1-1/4 hours. Prerequisite(s): courses 108B/M or 112C/N; 163A; students should be concurrently enrolled in course 151L. *T. Holman*

151B. Chemistry of the Main Group Elements. W

Fundamental aspects of inorganic chemistry of main group elements are discussed. The emphasis is placed on the chemistry of nontransition elements including noble gases and halogens. In addition, students are exposed to the concepts of extended structures, new materials, and solid-state chemistry. Lecture: 3-3/4 hours. Prerequisite(s): courses 108B/M or 112C/N, and 163A. Recommended for chemistry majors. *P. Mascharak*

151L. Inorganic Chemistry Laboratory (2 credits). S

Laboratory experience in inorganic chemistry. Experiments involve the preparation, purification, and characterization of inorganic compounds. In addition, experiments are designed to illustrate fundamental principles in inorganic chemistry and are coordinated with lectures in course 151A. Laboratory: 4 hours per week. Students are billed a materials fee. (General Education Code(s): W satisfied by taking this course and courses 164B and either course 146A, 146B, or 146C.) Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements; courses 108B/M or 112C/N; 163A; students should be concurrently enrolled in course 151A. *T. Holman*

156C. Advanced Topics in Inorganic Chemistry. W

Advanced topics in inorganic chemistry and an introduction to solid state chemistry. Synthesis and structure of materials discussed as well as their influence on properties for modern devices and applications. Recent developments in area of material science also explored. Taught in conjunction with course 256C. Prerequisite(s): course 151A. Enrollment restricted to seniors. *S. Oliver*

163A. Quantum Mechanics and Basic Spectroscopy. F

A detailed introduction to quantum theory and the application of wave mechanics to problems of atomic structure, bonding in molecules, and fundamentals of spectroscopy. Prerequisite(s): course 1C or 4B, Physics 5A-B-C or 6A-B-C and Mathematics 11C or 22 or 23B. Physics 6C can be taken concurrently. *G. Millhauser*

163B. Thermodynamics and Kinetic Theory. W

Fundamentals of thermodynamics and applications to chemical and biochemical

equilibria. Prerequisite(s): course 1C, Physics 6A or 5A, and Math 22 or 23A-B. *E. Switkes*

163C. Kinetic Theory and Reaction Kinetics, Statistical Mechanics, Spectroscopic Applications. S

Introduction to statistical mechanics, kinetic theory, and reaction kinetics and topics in spectroscopy. Prerequisite(s): courses 163A and 163B. *R. Anderson*

164A. Physical Chemistry Laboratory I: Data Analysis (2 credits). F

Introduction to data analysis and statistical treatment of errors for physical chemistry experiments. Emphasizes the use of computers for problem solving and data analysis of one required laboratory report. Lecture: 1 hour; laboratory: 4 hours.

Prerequisite(s): course 1C or 4B; Physics 6A-B-C or 5A-B-C; Mathematics 11C or 22. *S. Chen*

164B. Physical Chemistry Laboratory II (2 credits). W

Provides laboratory experience in the areas of thermodynamics, kinetics, and spectroscopy. Lecture: 1 hour; laboratory: 4 hours. Students are billed a materials fee. (General Education Code(s): W satisfied by taking this course and courses 151L and either course 146A, 146B, or 146C.) Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements; course 164A. *S. Chen*

195A. Senior Research. F

An individually supervised course with emphasis on independent research. Multiple-term course extending over two or three quarters; the grade and evaluation submitted for the final quarter apply to all previous quarters. Students submit petition to sponsoring agency; may not be repeated for credit. (General Education Code(s): W satisfied by taking two of the following courses--courses 195A, 195B, and 195C.) Prerequisite(s): satisfaction of the Entry Level and Composition requirements. (Formerly course 180A.) *The Staff*

195B. Senior Research. F

An individually supervised course with emphasis on independent research. Multiple-term course extending over two or three quarters; the grade and evaluation submitted for the final quarter apply to all previous quarters. Students submit petition to sponsoring agency; may not be repeated for credit. (General Education Code(s): W satisfied by taking two of the following courses--courses 195A, 195B, and 195C.) Prerequisite(s): satisfaction of the Entry Level and Composition requirements. (Formerly course 180B.) *The Staff*

195C. Senior Research. F

An individually supervised course with emphasis on independent research. Multiple-term course extending over two or three quarters; the grade and evaluation submitted for the final quarter apply to all previous quarters. Students submit petition to sponsoring agency; may not be repeated for credit. (General Education Code(s): W satisfied by taking two of the following courses--courses 195A, 195B, and 195C.) Prerequisite(s): satisfaction of the Entry Level and Composition requirements. (Formerly course 180C.) *The Staff*

199. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

200A. Advanced Biochemistry: Biophysical Methods. F

An introduction to the theory, principles, and practical application of biophysical methods to the study of biomolecules, especially proteins and nucleic acids. Emphasis on spectroscopic techniques. Topics include magnetic resonance, optical spectroscopy, fast reaction techniques, crystallography, and mass spectrometry. *W. Scott*

200B. Advanced Biochemistry: Protein Structure and Function. S

A detailed discussion of protein chemistry, ranging from the structure, thermodynamics, and folding of proteins to the relationship between structure and function, and encompassing the methods used to determine such information. *M. Stone*

200C. Advanced Biochemistry: Structure and Function of Nucleic Acids. W

A variety of contemporary problems in biochemistry and molecular biology are investigated in a detailed manner. Lecture: 3-1/2 hours. *W. Scott*

231. Enzyme Mechanisms and Kinetics. *

A study of enzyme kinetics, mechanisms, and factors involved in enzymic catalysis. Lecture: 3-1/2 hours. Offered in alternate academic years. *W. Scott*

234. Bioinorganic Chemistry. S

The role played by transition metals in biological systems is discussed through application of the principles of coordination chemistry and inorganic spectroscopy. Topics include metalloproteins involved in oxygen binding, iron storage, biological redox reactions, and nitrogen fixation, as well as metal complexes of nucleic acids. Lecture: 4 hours. Prerequisite(s): courses 151A/L, 163A; and Biochemistry and Molecular Biology 100A. *P. Mascharak*

238. Topics in Biophysical Chemistry. *

A discussion of the application of selected topics in biophysical chemistry to contemporary problems in biochemistry and molecular biology. Lecture: 3-1/2 hours. Offered in alternate academic years. *T. Schleich*

240A. Kinetics and Mechanisms of Organic Reactions (3 credits). W

Basic principles and methods of the kinetic study of reaction mechanisms are covered, including linear free energy relationships. Theories are examined concerning how reactions choose a mechanism. *C. Bernasconi*

240B. Combinatorial and High-Throughput Methods in Synthetic Chemistry (3 credits). S

Focuses on solid phase synthetic methods as applied to synthesis of compound libraries. Explores advances in laboratory automation, library synthesis, encoding and decoding schemes, and computational approaches to library design and virtual screening. Enrollment restricted to seniors and graduate students. *R. Lokey*

240C. Organic Structure Analysis from Spectra (3 credits). S

Determination of 2-D and 3-D structure and functionality of organic molecules from spectroscopic properties, including nuclear magnetic resonance, infrared, ultraviolet-visible and mass spectroscopy. *R. Linington*

240E. Modern Synthetic Methods (3 credits). F

An advanced study designed to provide the background and insight to enable the student to compare and contrast new reagents and reactions with existing methods. Prerequisite(s): course 143. *B. Singaram*

240F. Selectivity and Strategy in Organic Synthesis (3 credits). S

An advanced study on the use of chemoselectivity, regioselectivity, and stereoselectivity in organic transformations. Strategic planning in approaching the synthesis of complex molecules focuses primarily on retrosynthetic analysis and stereochemical control. Prerequisite(s): course 240E. *R. Braslau*

240G. Bioorganic Chemistry of Amino Acids and Peptides (3 credits). W

Chemistry of amino acids and secondary structure of amino acid polymers (peptides and proteins) discussed. Special emphasis placed on structure and function of the distinct amino acid side chain functionality as it contributes to structure and function. *J. Konopelski*

246. Advanced Topics in Organic Chemistry. *

A graduate course covering advanced topics in organic chemistry. Topics vary from year to year. *The Staff*

246A. Organic Reactions and Molecular Orbital Theory. *

Qualitative molecular orbital concepts, especially concerning aromaticity, orbital symmetry, and perturbation theory, and their application toward interpretation of reactivity and mechanism. Lecture: 3-1/2 hours. Prerequisite(s): courses 273 and 240A. Offered in alternate academic years. May be repeated for credit. *The Staff*

246B. Marine Organic Chemistry. *

A survey of organic natural products from marine sources. Organic chemical structural families unique to marine organisms are outlined. Pathways of their synthesis and interconversions; their role in the marine environment; approaches to their analysis; the distribution of organics in seawater. Lecture: 3-1/2 hours. Prerequisite(s): courses 108B/M or 112C/N. Offered in alternate academic years. May be repeated for credit. *P. Crews*

246C. Computers and Information Processing in Chemistry. *

An introduction to digital computers and their applications in chemistry. Includes Monte Carlo, artificial intelligence, pattern recognition, modeling, simulation, and optimization problem-solving methods. Applications to include structural analysis, spectroscopy, organic synthesis, and kinetics. Lecture: 3-1/2 hours; laboratory: 1-1/2 hours. Offered in alternate academic years. May be repeated for credit. *The Staff*

246F. Organoboranes in Organic Synthesis. *

An introduction to organoborane chemistry and its applications to synthetic organic chemistry, including principles, synthetic methods, reaction mechanisms, and asymmetric synthesis. A variety of topics including allylboration, boron-enolates, and asymmetric reductions are discussed. Enrollment restricted to seniors and graduate students. Offered in alternate academic years. May be repeated for credit. *B. Singaram*

246G. Heterocyclic Chemistry. *

Advanced study of synthesis and reactions of heterocyclic organic compounds; particular emphasis on structures with important medicinal value from natural products or pharmaceutical research. Prerequisite(s): course 143 or approval of instructor. *J. Konopelski*

246H. Organic Free Radical Chemistry. *

Covers a range of topics including radical stabilization, rates of fundamental radical reactions, methods of radical generation, synthetic applications of free radicals, persistent radicals, and some aspects of free radicals in biology. Prerequisite(s): course 143 or permission of instructor. *R. Braslau*

246I. Advanced Mechanistic Chemistry and Solution Kinetics. *

Kinetic approach to selected topics in mechanistic chemistry with emphasis on structure-reactivity relationships in organic as well as inorganic and biochemical systems. Discussion of significance and treatment of kinetic data illustrated with examples from various branches of chemistry. Prerequisite(s): permission of instructor. *C. Bernasconi*

255. Biotechnology and Drug Development. W

Recommended for students interested in careers in the biopharmaceutical industry. Focuses on recombinant DNA technology and the drug-development process, including discovery research; preclinical testing; clinical trials; and regulatory review, as well as manufacturing and production considerations. Students may not receive credit for this course and Biomolecular Engineering 155 and Biology 179. (Also offered as Biomolecular Engineering 255. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. Enrollment limited to 15. *P. Berman*

256A. Advanced Topics in Inorganic Chemistry. *

Advanced topics in inorganic chemistry are presented. Topics covered vary from year to year, and are announced in advance. Possible topics include A) organometallic chemistry; B) structural methods in inorganic chemistry; C) solid-state chemistry. Prerequisite(s): courses 151A/L and 146B or graduate standing. *The Staff*

256B. Advanced Topics in Inorganic Chemistry. *

Advanced topics in inorganic chemistry are presented. Topics covered vary from year to year, and are announced in advance. Possible topics include A) organometallic chemistry; B) structural methods in inorganic chemistry; C) solid-state chemistry. Prerequisite(s): courses 151A/L and 146B or graduate standing. *T. Holman*

256C. Advanced Topics in Inorganic Chemistry. W

Advanced topics in inorganic chemistry are presented. Topics covered vary from year to year, and are announced in advance. Possible topics include A) organometallic chemistry; B) structural methods in inorganic chemistry; C) solid-state chemistry. Prerequisite(s): courses 151A/L and 146B or graduate standing. *S. Oliver*

256D. X-ray Crystallography. *

Course in chemical crystallography focuses on the needs of small-molecule, single-crystal diffraction studies. Includes diffraction theory, space-group analysis, data collection, structure solution, and refinement. Practical component: use of diffraction equipment and solution/refinement software. Enrollment restricted to graduate students and seniors who have taken courses 151A, 151L, and 163A. *The Staff*

261. Foundations of Spectroscopy. W

The basic theory of time dependent processes is covered at an advanced level. The interaction of electromagnetic radiation and matter is described using both semiclassical and quantum field formulations. A variety of modern spectroscopic techniques are discussed both in terms of the basic processes and their use in the elucidation of chemical structure and dynamics. Prerequisite(s): course 163A. Offered in alternate academic years. *J. Zhang*

262. Statistical Mechanics. S

Theory and concepts of statistical mechanics with applications to ideal gases,

condensed systems, phase transition, and non-equilibrium thermodynamics. Lecture: 3-1/2 hours. Prerequisite(s): course 160B or 163A. Offered in alternate academic years. *I. Benjamin*

263. Quantum Mechanics. F

A rigorous introductory course: the Schrödinger equation, operator formalism, matrix mechanics, angular momentum, and spin. Perturbation and other approximate methods. Applications to atomic and molecular problems. Lecture: 3-1/2 hours. Prerequisite(s): courses 163A and Physics 114A-B. Offered in alternate academic years. *J. Zhang*

265. Computer Simulation in Statistical Mechanics. S

A detailed introduction of the use of computer simulation methods in physical and biophysical chemistry. Includes review of thermodynamics and statistical mechanics, molecular mechanics, molecular dynamics, and Monte-Carlo methods. Applications to liquid structure, reaction dynamics, and protein dynamics. Offered in alternate academic years. *I. Benjamin*

266. Advanced Topics in Physical Chemistry. *

A graduate course covering advanced topics in physical chemistry. Topics vary from year to year. *The Staff*

266A. Lasers and Their Chemical Applications. *

Introduces the basic theoretical principles of lasers and laser light. Various types of lasers and selected applications to chemistry are discussed. The use of lasers in photochemistry, spectroscopy, chemical kinetics, and chemical analysis is considered. Lecture: 3-1/2 hours. Prerequisite(s): course 163A and Physics 114A-B. Offered in alternate academic years. May be repeated for credit. *The Staff*

266B. Gas Phase Kinetics. *

A discussion of rate processes in gases. Descriptions of experimental and theoretical work on unimolecular, bimolecular, and termolecular reactions and energy transfer processes. Lecture: 3-1/2 hours. Prerequisite(s): course 262. Offered in alternate academic years. May be repeated for credit. *The Staff*

268. Solid State and Materials Chemistry. W

Topics include synthesis of solid-state materials and their characterization using experimental techniques: XRD, TEM spectroscopy, NMR, and their applications in technologies. Emphasis on new materials, e.g., polymer, biopolymers, nanomaterials, organic/inorganic composites, ceramics, superconductors, electronic, magnetic, and opto-electronic materials. Prerequisite(s): courses 163A and 163B. Enrollment restricted to senior and graduate chemistry majors. *Y. Li*

269. Electrochemistry. F

Designed to introduce basic principles and applications of electrochemistry to students at upper undergraduate and lower graduate levels in various fields including analytical, physical, and materials chemistry. Enrollment restricted to seniors and graduate students. *S. Chen*

273. Applications of Symmetry and Quantum Mechanics. S

Group theory and quantum mechanics are applied to problems of the electronic structure and spectra of molecules. A variety of topics including molecular orbital theory, reactivity, electronic structure calculations, and spectroscopy are discussed. Lecture: 3-1/2 hours. Prerequisite(s): course 163A. Offered in alternate academic years. *E. Switkes*

274. Proseminar in Synthetic and Polymer Chemistry. F,W,S

Weekly meetings devoted to study of synthetic organic chemistry and controlled polymer design for applications in nanotechnology. Topics drawn from current literature and research interests of participants. May be repeated for credit. *R. Braslau*

275. Proseminar in Biological Inorganic Chemistry. F,W,S

Weekly meetings devoted to biological inorganic chemistry and biochemistry. Topics are drawn from current literature. Papers and reviews are discussed, and participants give short seminars on their research interests. May be repeated for credit. *T. Holman*

282. Proseminar: Synthetic Methods. F,W,S

Weekly meetings devoted to the study of asymmetric and/or enantio-selective synthesis of optically active organic compounds of biological and medicinal significance. Topics drawn from the current literature and the research interests of the participants. May be repeated for credit. *B. Singaram*

283. Proseminar in Physical Organic Chemistry. F,W,S

Weekly meetings devoted to the study of physical and mechanistic organic chemistry. Topics drawn from the current literature and the research experiences of the participants. May be repeated for credit. *C. Bernasconi*

284. Proseminar in Synthetic Organic Chemistry. F,W,S

Weekly meetings devoted to the study of synthetic organic chemistry. Topics drawn from the current literature and the research interests of the participants. May be repeated for credit. *J. Konopelski*

285. Proseminar: Photobiochemistry and Photobiology. F,W,S

A detailed study of molecular mechanisms of light energy conversion and light-signal transduction processes in biological systems. Student participation in critical discussion of current literature examples are emphasized. Two-hour lecture and two-hour seminar weekly. Enrollment limited to 8. May be repeated for credit. *R. Bogomolni*

286. Proseminar in Natural Products Chemistry. F,W,S

Weekly meetings devoted to the study of natural products. Topics drawn from the current literature and research interests of the participants. May be repeated for credit. *P. Crews*

288. Proseminar in Bioinorganic Chemistry. F,W,S

Weekly meetings devoted to inorganic and bioinorganic research. Topics are drawn from current literature. Papers and reviews are discussed. Participants also give short seminars on topics of their research interests. May be repeated for credit. *P. Mascharak*

289. Proseminar: Biophysical Chemistry. *

Weekly meetings devoted to a detailed study of the theory and applications of nuclear magnetic resonance spectroscopy and imaging and related spectroscopic techniques to problems in biophysical chemistry. Topics are drawn from the current research literature and the research experiences of the participants. Enrollment limited to 20. May be repeated for credit. *T. Schleich*

291A. Organic Chemistry Research Seminar. F,W,S

Open to chemistry graduate students interested in organic chemistry. Weekly meetings are held to hear both local and external speakers discuss their work.

Enrollment restricted to graduate students. May be repeated for credit. (F) J. Konopelski, (W) P. Crews, (S) R. Linington

291B. Biochemistry and Molecular Biology Research Seminar. F,W,S

A weekly seminar series covering topics on the frontiers of biochemistry and molecular biology. The speakers include experts in these fields from other institutions. Enrollment restricted to graduate students. May be repeated for credit. (F) S. Rubin, (W) W. Scott, (S) M. Stone

291C. Inorganic Chemistry Research Seminar. F,W,S

For those interested in following the recent developments in the various areas of inorganic chemistry. External speakers; weekly discussion based on personal research or recent literature, led by the inorganic chemistry faculty, postdoctoral fellows, and students. Enrollment restricted to graduate students. May be repeated for credit. (F) P. Mascharak, (W) T. Holman, (S) S. Oliver

291D. Physical Chemistry Research Seminar. F,W,S

A weekly seminar series covering topics of current research in physical chemistry. Weekly meetings are held to hear both local and external speakers discuss their work. Enrollment restricted to graduate students. May be repeated for credit. (F) Y. Li, (W) S. Chen, (S) I. Benjamin

292. Seminar (2 credits). F

Enrollment restrictions: graduate standing or approval of the graduate adviser. *The Staff*

296. Teaching Chemistry (2 credits). F

University-level pedagogy in chemistry; examines the role of preparation, assessment, and feedback in teaching chemistry discussion and laboratory sections. Effective classroom techniques and organizational strategies discussed; oral presentations analyzed critically. Required of entering chemistry graduate students. *R. Roland*

297. Independent Study. F,W,S

A topic will be studied with faculty tutorial assistance to satisfy a need for the student when a regular course is not available. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Students submit petition to sponsoring agency. *The Staff*

*Not offered in 2009-10

(There were no substantive changes to the Program Description from the General Catalog 2008-10.)

Program Description

Students interested in acquiring proficiency in Chinese can enroll in language courses from beginning to advanced levels. Students may choose a major or minor in language studies, a minor in East Asian studies through the History Department, an individual major in East Asian studies through their college, or a global economics major.

The sequence of lower-division courses 1-6 is aimed at enabling students to gain proficiency in aural comprehension, speaking, reading, and writing skills. Instruction takes place mostly in Chinese from the second half of the first quarter.

Campus Language Laboratories and Placement Exams

Information about these topics can be found under [Language Program](#).

Study Abroad

Students may apply to study intensive Chinese language at one of China's finest universities-in Taipei, Hong Kong, or Beijing-for periods ranging from a summer up to a full year through the UC Education Abroad Program. Courses taken abroad can, with approval of an adviser, be applied to major requirements. For more information on the program, see UC Education Abroad Program. For information on credit applied to a major, please contact the appropriate department.

Lower-Division Courses

1. Instruction in the Chinese (Mandarin) Language. F

Instruction in elementary spoken and written Chinese (Mandarin), beginning with the sounds of Chinese and their representation in the pinyin romanization system. Conversation, structural analysis, and an introduction to character texts. Elementary sequence (1-2-3) begins only in fall quarter. Students interested in learning Chinese who are uncertain about where they should enter the sequence should meet with the instructor, prior to the first class meeting. *The Staff*

2. Instruction in the Chinese (Mandarin) Language. W

Continuation of Chinese 1, which assumes that students are familiar both with the pinyin romanization system and approximately 150 basic characters. Prerequisite(s): course 1, or equivalent. *The Staff*

3. Instruction in the Chinese (Mandarin) Language. S

Continuation of Chinese 2, which assumes that students are familiar both with the pinyin romanization system and approximately 300 basic characters. Prerequisite(s): course 2, or equivalent. *The Staff*

4. Intermediate Chinese (Mandarin). F

Instruction in intermediate spoken and written Chinese (Mandarin). Conversation, composition, and the reading of modern texts. Intermediate sequence (4-5-6) begins only in fall quarter. Students interested in improving their Chinese who are uncertain about where they should enter the sequence should meet with the instructor, prior to the first class meeting. Prerequisite(s): course 3, or equivalent. (General Education Code(s): IH.) *The Staff*

5. Intermediate Chinese (Mandarin). W

Continuation of Chinese 4. Conversation, composition, and the reading of modern texts. Prerequisite(s): course 4, or equivalent. (General Education Code(s): IH.) *The Staff*

6. Intermediate Chinese (Mandarin). S

Continuation of Chinese 5. Conversation, composition, and the reading of modern texts. Prerequisite(s): course 5, or equivalent. (General Education Code(s): IH.) *The Staff*

50. Preadvanced Chinese. F

Places additional emphasis in the areas of specialized vocabulary, sentence structure, and translation as well as conversational and compositional skills in preparation for advanced courses. Offered fall quarter only. Students interested in this course who have not taken the prerequisite should meet with the instructor prior to the first class

meeting. Prerequisite(s): course 6, or placement by examination. Enrollment limited to 20. May be repeated for credit. (General Education Code(s): IH.) *The Staff*

94. Group Tutorial. F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses

104. Advanced Chinese: Readings in Literature. *

Covers a body of Chinese literature of recognized merit from the modern or classical tradition. Students are introduced to the basic critical concepts, in Chinese, relating to narrative and/or poetry, revealed by the works under discussion. Students interested in this course who have not taken the prerequisite should meet with the instructor prior to the first class meeting. Prerequisite(s): course 6 or 50. May be repeated for credit. *The Staff*

105. Advanced Chinese: Readings in History. S

Offers an appreciation of some of the central issues in Chinese history as defined by Chinese historians of the 20th century. Through readings of graduated difficulty, the vocabulary, style, and form of modern Chinese historical writing are introduced. Students interested in this course who have not taken the prerequisite should meet with the instructor prior to the first class meeting. Prerequisite(s): course 6 or 50. *The Staff*

107. Introduction to Classical Chinese. *

Introduces the grammar and lexicon of classical Chinese and the language of China's pre-modern canonical writings in philosophy, religion, history, music, visual art, and literature. Reading from the Han and pre-Han era is featured. Prerequisite(s): course 50 or equivalent. (General Education Code(s): IH.) *The Staff*

108. Introduction to Classical Chinese. *

Introduces the grammar and lexicon of classical Chinese and the language of China's pre-modern canonical writings in philosophy, religion, history, music, visual art, and literature. Reading from the Han and pre-Han era is featured. Prerequisite(s): course 107. (General Education Code(s): IH.) *The Staff*

194. Group Tutorial. F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

[Changes to 2009-10 Catalog Highlighted | Faculty](#)

Program Description

"Classics" is a traditional designation for the study of the literature, history, and culture of ancient Greece and Rome. Classical studies at UCSC combines features of traditional programs, such as solid grounding in the ancient languages, with innovative, interdisciplinary approaches (literary theory, gender studies, performance, and film).

Classical studies is an interdisciplinary field. While the core of the major is focused on courses in the ancient Greek and Latin languages, the major also includes courses in history, history of art and visual culture, linguistics, literature, philosophy, politics, religious studies, and theater arts. Students are encouraged to study the literary and material artifacts of Greece and Rome within the larger context of ancient Mediterranean and Near Eastern cultures.

The classical studies major offers an opportunity to work in small classes with a dedicated teaching faculty and excellent fellow students. Classical studies is an excellent preparation for further study in a wide variety of graduate and professional programs including comparative literature, English, philosophy, law, and publishing.

The basic requirements for the classical studies major allow a variety of emphases and concentrations. For example, students with an interest in contemporary philosophy and political theory might want to concentrate in Greek, taking upper-division courses in Greek, history, philosophy, and politics. Students with an interest in European literature might want to concentrate in Latin, taking upper-division courses in Latin, history, and literature in translation. Students planning on pursuing a classics degree at the Ph.D. level should concentrate most of their course work in the Greek and Latin languages themselves.

Classical studies is administered by the History Department. For additional information on curriculum and advising, go to <http://history.ucsc.edu>.

Requirements for the Major

A prerequisite for the classical studies major is the lower-division sequence in elementary Greek or Latin language (Greek 1 and 2 or Latin 1 and 2). The major requires a total of ten courses plus a senior comprehensive exam and must include the following:

- one lower-division survey of ancient history or literature in translation;
- three upper-division courses in Greek or Latin literature;
- six additional approved upper-division courses (which may include additional courses in Greek or Latin literature);
- enrollment in a 2-credit comprehensive examination preparatory course, History 199F, is required in the same quarter that the senior comprehensive examination will be given. The preparatory course will be taken with the chair of the student's examination committee.

Disciplinary Communication Requirement. Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement will normally be met within one to three courses already required for the major. For detailed information on this major's DC requirement, consult your major adviser or see the 2010-11 general catalog.

Honors in the Classical Studies Major. All students who announce candidacy during the academic year are reviewed for honors or highest honors in the major. The classical studies faculty advisers determine honors based upon narrative evaluations in courses applied towards the classical studies major. Performance in courses taken elsewhere and being transferred towards the major will be considered when applicable. The minimum standard applied is excellence in most courses

for honors, and excellence in all courses for highest honors. Summer graduates are reviewed for honors in fall quarter.

Requirements for the Minor

A minor in classical studies requires the lower-division sequence in elementary Greek or Latin language (Greek 1 and 2 or Latin 1 and 2) and Greek or Latin Literature 100 plus any four of the upper-division courses listed as satisfying the classical studies major requirements.

Faculty and Professional Interests

Karen Bassi, Professor of Literature

Greek and Latin literatures; gender; literary and cultural theory; pre- and early modern studies; historiography; visual and performance studies

John Bowin, Assistant Professor of Philosophy

Ancient philosophy, metaphysics

Maria Evangelatou, Assistant Professor, History of Art and Visual Culture

Medieval visual culture, with emphasis on Byzantium and its periphery; manuscript illumination, Marian cult and iconography; ancient Greek and Roman visual culture; Islamic visual culture; gender studies

Mary-Kay Gamel, Professor of Literature

Performance studies, ancient Mediterranean performance, Greek and Latin literatures, myth, reception of Greek and Roman texts and artifacts, film, feminist approaches to literature and performance

Gildas Hamel, Lecturer

History of Judaism and Christianity; Hebrew and Greek Bible; classical languages

Charles W. Hedrick Jr., Professor of History

Greek and Roman history

Jennifer Lynn, Lecturer

Homer, Greek drama, Hellenistic and Augustan poetry

John P. Lynch, Professor of Literature, Emeritus

Dean Mathiowetz, Assistant Professor of Politics

Political theory, philosophy of language, political economy

Gary B. Miles, Professor of History, Emeritus

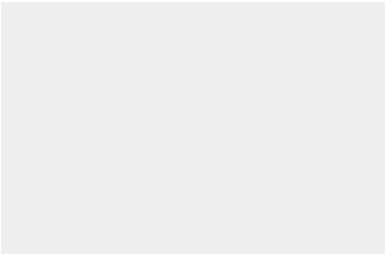

Daniel L. Selden, Professor of Literature

Afroasiatic languages and literatures, Greek and Latin, Hellenistic culture, the classical tradition, history of criticism, literary theory

Program Faculty Advisers

Karen Bassi, Professor of Literature

Mary-Kay Gamel, Professor of Literature

Charles W. Hedrick Jr., Professor of History

Daniel L. Selden, Professor of Literature

Lower-Division Courses

10. Academic Success (2 credits).

An interactive course providing students with the opportunity to assess and revise methods of and purposes in studying. Critical, effective approaches to reading, writing, participating in lectures and sections, taking exams, balancing competing responsibilities, and utilizing campus resources are all explored. Prerequisite(s): permission of college adviser. Enrollment limited to 30. *The Staff*

20A. Pueblo Indian Conceptions of Nature (2 credits). *

Explores traditional and contemporary Pueblo Indian beliefs about and interactions with non-human nature, including fundamental assumptions about space, time, matter, and mind. Enrollment restricted to first-year and sophomore college members. Enrollment limited to 25. *J. Todd*

20B. International Affairs and Global Issues (2 credits). *

Examines inter-related global issues: Colonialism and post-colonialism, trade, poverty, globalization, geopolitics, human rights, and the environment. Students choose a particular region on which to focus. Enrollment restricted to first-year and sophomore college members. Enrollment limited to 25. *The Staff*

20C. The Water Environment: Literature of the Sea (2 credits). S

Students consider the representation of the sea in selected texts, noting how it becomes the focal point for the fears, hopes, and prejudices of Western civilization. Students write critical papers and their own narratives. Enrollment restricted to first-year and sophomore college members. Enrollment limited to 25. *C. Calsoyas*

20D. College Students' Lives (2 credits). F

Students understand their peers and themselves better through an exploration of issues that affect the daily life of college students. Topics include campus/student cultures, the academic system, and other critical issues. Overview of campus resources also provided. Enrollment restricted to first-year and sophomore College Eight members. *T. Douglas*

20F. Justice on Earth (3 credits). W

Examines issues of oppression, privilege, and social justice within a global and environmental context through self-reflective and group work. May include an optional service-learning component requiring travel during spring break. Enrollment limited to 20. *The Staff*

20G. Peregrine Falcons Return (2 credits). W

Required training laboratory for students who wish to pursue a hands-on, two-credit service project (laboratory or field) that is focused on peregrine falcon conservation.

Enrollment limited to 26. *G. Stewart*

20H. Philosophy of Star Wars, the Epic Movie Series (2 credits). F

Draws from resources in the history of Western thought to interpret the six-film epic series, *Star Wars*. Explores ideas of the cosmos, the meaning of life, the struggle between good and evil, suffering, hope, redemption, and the messiah. *The Staff*

28. Peer Leadership in Higher Education (3 credits). S

Overview of theories of student development, critical student issues, and skills needed for appropriate peer leadership interventions. Utilizes a variety of learning modes including readings, discussions, case studies, lectures, and group projects. Interview only: approval of instructor; Resident Assistant (RA) pre-employment training course. Enrollment limited to 25. May be repeated for credit. *T. Douglas*

61. Education for Sustainable Living Program (2 credits). S

Analyzes sustainability and its application in daily life and on campus, involving collaboration between students, faculty, staff, administration, and the community. Guest lecturers, discussions, an optional UC-wide retreat, and essays allow engagement with aspects of ecological and social sustainability. *J. Borrego*

80A. Introduction to University Discourse: Environment and Society. F

Explores rhetorical principles and conventions of university discourse, providing intensive practice in analytical writing, critical reading, and speaking. Introduces students to environmental history, ethics, and policy options, and teaches them to analyze and interpret key literary texts. Students cannot receive credit for this course and course 80B. Concurrent enrollment in course 81A is required. Enrollment restricted to first-year college members who have not satisfied the C1 requirement. (General Education Code(s): T3-Social Sciences, C1.) *S. Rajan*

80B. Rhetoric and Inquiry: Environment and Society. F

Explores the intersections of investigation, interpretation, and persuasion and hones strategies for writing and research. Introduces students to environmental history, ethics, and policy options, and teaches them to analyze and interpret key literary texts. Students cannot receive credit for this course and course 80A. Prerequisite(s): satisfaction of the C1 requirement; concurrent enrollment in course 81A is required. Enrollment restricted to first-year college members. (General Education Code(s): T3-Social Sciences, C2.) *S. Rajan*

81A. The Environment and Us (3 credits). F

Takes students through a wide range of approaches to environmental citizenship and provides conceptual and practical tools to explore alternatives. Students also participate in a hands-on sustainability project designed to connect academic learning with practical applications. Concurrent enrollment in course 80A or 80B is required. Enrollment restricted to first-year college members. *S. Rajan*

81B. Fundamentals of Environmental Science. W

Addresses major issues in physical and biological environmental sciences and provides tools to critically evaluate, debate, and make informed choices regarding one's own impact on the environment. Topics include: climate change, water resources, air pollution, evolution, ecology (from populations to ecosystems), and conservation. Quantitative problem solving is an integral part of this course. Prerequisite(s): courses 80A or 80B, and 81A. Enrollment restricted to first-year and sophomore college members. (General Education Code(s): IN, Q.) *S. Rajan*

81C. Technological Innovation and Environmental Challenges. S

Introduces key technological solutions to environmental problems; discusses their

underlying principles; and examines their societal dimensions. Topics include: conventional and renewable energy; emerging technologies for transportation, energy efficiency clean water; planetary engineering; and lean manufacturing. Prerequisite(s): courses 80A or 80B, and 81A. Enrollment restricted to first-year and sophomore college members. (General Education Code(s): T2-Natural Sciences.) *S. Rajan*

90. College Eight Garden Internship (1 credit). F,W,S

One-credit internship in the College Eight Garden. Offers students of College Eight an opportunity to become involved in an experimental learning project focusing on application of concepts of sustainable agriculture. Enrollment restricted to members of College Eight. Enrollment limited to 10. May be repeated for credit. *S. Gliessman, C. Calsoyas*

93. Field Study. F,W,S

The Staff

99. Tutorial. F,W,S

May be repeated for credit. *The Staff*

99F. Tutorial (2 credits). F,W,S

Individual study for lower-division students directed by a faculty member affiliated with College Eight. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses

128. Advanced Peer Leadership Practicum (3 credits). S

Advanced practicum for the application of skills and theoretical knowledge studied in course 28. Uses many learning modes including readings, discussions, case studies, lectures, and group projects. Prerequisite(s): course 28. Enrollment by permission of instructor. Enrollment limited to 25. May be repeated for credit. *T. Douglas*

161. Education for Sustainable Living Program. S

Analyzes sustainability and its application in daily life and on campus, involving collaboration between students, faculty, staff, administration, and the community. Guest lecturers, discussions, an optional UC-wide retreat, and essays allow engagement with aspects of ecological and social sustainability. Enrollment limited to 25. *J. Borrego*

170A. UC Sacramento Seminar. F,W,S

Seminar provides a systematic understanding of the public policy and political process in California and involves students in creating a research-based paper on some aspect of public policy and/or politics in California. Interview only: enrollment in UC Sacramento program is required. Enrollment restricted to sophomores, juniors, and seniors. May be repeated for credit. *The Staff*

170B. UC Sacramento Internship. F,W,S

Provides students with a challenging opportunity to engage in experiential learning. Interview only: enrollment in UC Sacramento program is required. Enrollment restricted to sophomores, juniors, and seniors. May be repeated for credit. *The Staff*

170C. Law and Politics in California: Fundamental Perspectives and Current Controversies. F,W,S

Investigates California's current crisis of governance—in what sense is our state's

political process "broken," and how should it be "fixed?" Explores laws, legal issues, and the legal profession. Interview only: enrollment in UC Sacramento program is required. Enrollment restricted to sophomores, juniors, and seniors. Formerly *The Political Economy of California's Political Crisis*.) G. Dymski

193. Field Study. F,W,S

The Staff

193F. Field Study (2 credits). F,W,S

Provides for individual programs of study sponsored by the college and performed off campus. Must be sponsored by College Eight faculty. Approval of the student's adviser and the academic preceptor is needed to enroll. May be repeated three times for credit. Students submit petition to sponsoring agency. *The Staff*

195. Senior Thesis. F,W,S

May be repeated for credit. *The Staff*

198. Independent Field Study. F,W,S

The Staff

199. Tutorial. F,W,S

May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Individual study for upper-division students directed by a faculty member affiliated with College Eight. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

*Not offered in 2009-10

Lower-Division Courses

80A.Introduction to University Discourse: International and Global Issues.F

Explores rhetorical principles and conventions of university discourse and provides intensive practice in analytical writing, critical reading, and speaking. Topics address contemporary global issues including economic globalization, human rights, international and inter-ethnic conflicts, poverty, and immigration. Students cannot receive credit for this course and course 80B. Enrollment restricted to first-year college members who have not satisfied the C1 requirement. Enrollment limited to 22. (General Education Code(s): T3-Social Sciences, C1.) *The Staff*

80B. Rhetoric and Inquiry: International and Global Issues. F

Explores the intersection of investigation, interpretation, and persuasion and refines strategies for writing, research, and speaking. Topics address contemporary global issues including economic globalization, human rights, international and inter-ethnic conflicts, poverty, and immigration. Students cannot receive credit for this course and course 80A. Prerequisite(s): satisfaction of the Entry Level Writing and C1 requirements. Enrollment restricted to first-year college members. Enrollment limited to 22. (General Education Code(s): T3-Social Sciences, C2.) *The Staff*

85. Global Action (2 credits). W

Workshop facilitated by peer instructors. Students learn about current international and global issues through interactive exercises, small-group discussions, and faculty presentations. Students develop an "action plan" to raise awareness about one or more of these concerns and take practical steps to create positive change in the world. (Formerly *Global Leadership: A Model United Nations Workshop*.) Enrollment restricted to College Nine members. Enrollment limited to 20. *E. Ramsden*

86. College Leadership Development (2 credits). S

Students newly appointed into leadership positions at College Nine explore the concept of leadership relating to college's theme of International and Global Perspectives. Prerequisite(s): current College Nine student leader; permission of instructor. *J. Bosco*

91. Global Issues Colloquium (1 credit). F,W,S

Weekly colloquium on global issues with different topical focus each quarter. Presentations by UCSC faculty and invited speakers. Students must attend class, read an assigned article, and write a one-page synopsis. Co-sponsored by College Nine and The Center for Global, International, and Regional Studies. Enrollment limited to 50. May be repeated for credit. *R. Lipschutz*

Upper-Division Courses

191. Teaching Global Action. F,W

Undergraduates at upper-division level participate in teaching discussion groups for

College Nine 80 (F) or College Nine 85 (W). Prerequisite(s): permission of instructor: essay describing interest in becoming course assistant, copies of evaluations, and letter of recommendation from faculty member and/or college staff member. Enrollment restricted to College Nine juniors or seniors. (Formerly *Teaching International and Global Issues*.) *E. Ramsden*

199. Independent Study. F,W,S

Individual directed study for upper-division college members with college-affiliated faculty. Students must submit petition with one of the college academic advisers with accompanying letter from faculty adviser. Approval of provost required. Enrollment restricted to upper-division College Nine members. May be repeated for credit. *The Staff*

199F. Independent Study (2 credits). F,W,S

Individual directed study for upper-division college members with college-affiliated faculty. Students must submit petition with one of the college academic advisers with accompanying letter from faculty adviser. Approval of provost required. Enrollment restricted to upper-division College Nine members. May be repeated for credit. *The Staff*

Lower-Division Courses

80A. Introduction to University Discourse: Social Justice and Community. F

Explores rhetorical principles and conventions of university discourse and provides intensive practice in analytical writing, critical reading, and speaking. Examines social justice issues; topics include racism, sexism, and other forms of prejudice and discrimination; poverty and welfare; civil liberties; and community involvement and citizenship. Students cannot receive credit for this course and course 80B.

Enrollment restricted to first-year college members who have not satisfied the C1 requirement. Enrollment limited to 22. (General Education Code(s): T3-Social Sciences, C1.) *The Staff*

80B. Rhetoric and Inquiry: Social Justice and Community. F

Explores the intersection of investigation, interpretation, and persuasion and refines strategies for writing, research, and speaking. Examines social justice issues; topics include racism, sexism, and other forms of prejudice and discrimination; poverty and welfare; civil liberties; and community involvement and citizenship. Students cannot receive credit for this course and course 80A. Prerequisite(s): satisfaction of the Entry Level Writing and C1 requirements. Enrollment restricted to first-year college members. Enrollment limited to 22. (General Education Code(s): T3-Social Sciences, C2.) *The Staff*

80C. Introduction to University Discourse: Social Justice and Community Writing Intensive 1. F

Explores rhetorical principles and conventions of university discourse and provides intensive practice in analytical writing, critical reading, and speaking. Examines social-justice issues. Topics include: racism, sexism, and other forms of prejudice and discrimination; poverty and welfare; civil liberties; and community involvement and citizenship. More writing-intensive than 80A; prerequisite to 80D. Enrollment restricted to first-year college members who have not satisfied the Entry Level Writing and C1 requirement and who scored a 5 or lower on the AWPE (Analytical Writing and Placement Exam). Enrollment limited to 22. *The Staff*

80D. Introduction to University Discourse: Social Justice and Community Writing Intensive 2. W

Continues to provide practice in analytical writing, critical reading, and speaking, and to examine social-justice issues. Prerequisite(s): course 80C. Enrollment restricted to first-year college members who have not satisfied the C1 requirement. Enrollment limited to 22. (General Education Code(s): T3-Social Sciences, C1.) *The Staff*

85. Social Justice Issues Workshop (2 credits). W

Series of presentations, films, and workshops that address personal and cultural identity and examine social, cultural, political, environmental, and other justice concerns. Enrollment restricted to College Ten members. Enrollment limited to 20.

86. College Leadership Development (2 credits). S

Students newly appointed into leadership positions at College Ten explore the concept of leadership relating to program's theme of Social Justice and Community. Prerequisite(s): current College Ten student leader; permission of instructor. *J. Bosco*

91. Introduction to Nuclear Policy (1 credit). F

Introduces the key aspects of nuclear policy. Examines issues associated with nuclear weapons and civil nuclear power and the interplay between the two with regards to proliferation. Presentation will be given by guest speakers. Enrollment limited to 80. May be repeated for credit. *D. Hirsch*

Upper-Division Courses

110. Service-Learning Field Study (Esprit de Corps). F,W,S

Provides college members opportunity to apply their academic learning in a practical setting in the community. Students earn academic credit by volunteering in a non-profit agency or school for 10 hours per week. Students supervised by a professional on site. Students attend a weekly class, complete readings, listen to local leaders from the community, reflect upon their experiences with fellow students, and submit a final project related to their service-learning placement. Taught concurrently with course 110B. (Formerly course 193, *Field Study*.) Enrollment restricted to sophomore, junior, and senior College Nine and College Ten members. Enrollment limited to 22. May be repeated for credit. *A. Asher*

110B. Service-Learning Field Study (Esprit de Corps) (2 credits). F,W,S

Provides college members opportunity to apply their academic learning in a practical setting in the community. Students earn academic credit by volunteering in a non-profit agency or school for four hours per week. Students supervised by a professional on site. Students attend a weekly class, complete readings, listen to local leaders from the community, reflect upon their experiences with fellow students, and submit a final project related to their service-learning placement. Taught concurrently with course 110. (Formerly course 193F, *Field Study*.) Enrollment restricted to sophomore, junior, and senior College Nine and College Ten members. Enrollment limited to 22. May be repeated for credit. *The Staff*

121B. Dialogue Facilitation in Teaching and Community Building (2 credits). *

Designed to teach skills in a multicultural, social justice-oriented context. Students begin focused practice of effective intergroup facilitation skills including identifying and assessing multicultural group dynamics. Interview only. Prerequisite(s): College Nine 121A. Restricted to juniors and seniors. *The Staff*

191. Teaching Social Justice. F,W

Undergraduates at upper-division level participate in teaching discussion groups for College Ten 80 (F) or College Ten 85 (W). Prerequisite(s): permission of instructor: essay describing interest in becoming course assistant, copies of evaluations, and letter of recommendation from faculty member and/or college staff member. Enrollment restricted to College Ten juniors or seniors. *W. Baxter*

199. Independent Study. F,W,S

Individual directed study for upper-division college members with college-affiliated faculty. Students must submit petition with one of the college academic advisers with accompanying letter from faculty adviser. Approval of provost required. Enrollment restricted to upper-division College Ten members. May be repeated for

credit. *The Staff*

199F. Independent Study (2 credits). F,W,S

Individual directed study for upper-division college members with college-affiliated faculty. Students must submit petition with one of the college academic advisers with accompanying letter from faculty adviser. Approval of provost required. Enrollment restricted to upper-division College Ten members. May be repeated for credit. *The Staff*

Communication and Rhetoric

Writing Program
166 Kresge College
(831) 459-2431
<http://writing.ucsc.edu/>

(There were no substantive changes to the Program Description from the General Catalog 2008-10.)

Program Description

Admission to the minor in communication and rhetoric has been suspended. The following conditions will apply if it is reinstituted.

The Writing Program accepts students each quarter into the minor in communication and rhetoric. The minor consists of a series of courses that give students the opportunity to hone practical communication skills in a variety of contexts. It also provides a grounding in the analytical tools and critical theory that a rhetorical perspective provides.

A full description of the minor and forms for proposing a study plan and declaring the minor are available at the Writing Program office (166 Kresge).

Course Requirements

To earn a minor in communication and rhetoric, students must complete six courses after having satisfied the lower-division composition requirements:

- either Writing 70, Communication and Rhetoric: An Introduction; or Writing 101, An Introduction to the History, Theory, and Practice of Rhetoric;
- a course that concentrates on editing: either Writing 120, Editing English Prose; or Writing 163, Advanced Workshop in Expository Writing;
- four electives, at least three of which must be chosen from among the following upper-division writing courses: 101, 102, 103, 104, 106, 107, 108, 109, 110A, 163, 167, 169, and 191A–D. No more than one elective may be chosen from a list of courses offered by other departments (list is available from the program office).

Community Studies

231 Oakes Academic Building
(831) 459-2371
<http://communitystudies.ucsc.edu>

[Changes to 2009-10 Catalog Highlighted](#) | [Faculty](#) | [Courses](#)

Program Description

Community studies is an interdisciplinary major that integrates scholarship and community engagement in both research and teaching. Since its founding in 1969, and across radically changing political landscapes, the department has maintained a focus on identifying, analyzing, and helping to construct sites for social change and cultural transformation. To this end, the Community Studies Department addresses principles of social justice and the dynamics of racial and class inequity through courses that explore constructions of community and their implications.

The range of the faculty's disciplines, research interests, and arenas of civic engagement permits the department to delve into cross-cutting contemporary approaches that color every aspect of social life. The major offers community studies students a dynamic array of courses in areas such as public health and health politics, gender and sexuality, political economy and globalization, agriculture and food justice, race and racism, historical and contemporary social movements, immigration history and policy, and the theory and practice of documentary representation.

Pedagogically, community studies relies on developing a critical awareness of the relationship between the theoretical and practical issues involved in social change, and of the wider global contexts in which social justice is defined and achieved. A distinguishing feature of the community studies major is the six-month, full-time field study. The department's model of field study immersion requires undergraduate majors to spend six months engaging with specific communities through residence and participation (mostly) non-profit organizations with a social change and/or social justice mission. The undergraduate core curriculum focuses on the development of academic tools for social analysis and field observation/participation while deepening students' knowledge of specific histories and theoretical perspectives that are essential to the study of communities and transformation. Students complete their work in the major with a senior capstone project integrating academic course work, field study, and original research. The major usually takes about two years to complete.

With the shared guidance of a faculty adviser and a field study coordinator, community studies students choose field placements related to one of the department's areas of focus. Placements have been arranged in the past with health centers, immigrant rights organizations, newspapers, media centers, direct action mobilizations, sustainable development projects, city planning departments, neighborhood organizations, civil rights groups, farm-to-school programs, battered women's shelters, legal clinics, community-based cultural organizations, programs for seniors, tenant unions, government agencies and the offices of elected officials, trade unions, and other organizations committed to and working for social justice.

Facilities

The Community Studies Department maintains several unique resources for students. A media laboratory is available where majors can learn the use of video, audio, and photography as research and presentation tools. Two field-study coordinators work with students to develop part- and full-time field studies, and a field study resource office is available to assist students in selecting an appropriate organization. The field study office provides logistical and academic support during the field study, while also functioning as a liaison between students, faculty, and host organizations.

Major Program

The program for all students in the major includes courses that develop a substantive focus for the field study, courses that contextualize the field study in broader social forces, courses that

provide methodological tools for analyzing the field study, the field study itself, and the capstone requirement. Students who wish to pursue a major in Community Studies are recommended to satisfactorily complete course 10, *Introduction to Community Activism* prior to beginning their path through the sequential core curriculum, i.e., before they enroll in Community Studies (CMMU) 100 (A-Z).

It is important to emphasize community studies is a major with a sequential core curriculum. This means that some required courses *must* be successfully completed in a specified order, as indicated by the quarter(s) when those courses are offered.

To begin the major and declaration process, a student must be enrolled in one of the CMMU 100(A-Z) gateway seminars. Through these seminars students develop a substantive focus for their academic study plan, field study, and senior capstone requirement. Students in the 100 (A-Z) seminars are presented with recommended organizations from which to select their placements. Several sections of CMMU 100(A-Z) are offered each fall and winter quarter. Topics vary from year to year and may include economic justice; health-care inequities; immigration and social justice; sex, gender, and sexuality; politics of culture, agriculture, food, and social justice; and media and social change. Following (or concurrent with) the gateway seminar is course 101, *Communities, Social Movements, and the Third Sector*, offered only in winter quarter, and course 102, *Preparation for Field Study*, offered only in spring quarter. In addition, four directed electives must be taken, one each in the areas of 1) race, class, and privilege, 2) regional or historical background, 3) political economy, and 4) cultural politics and representation. Students must also complete at least two of the four directed electives before leaving for their field study: one class that addresses race, class, and privilege and one class that provides regional or historical background for their field study. These directed electives can be satisfied through courses either inside or outside the department; a complete list of directed electives for each area is posted on the department's web site <http://communitystudies.ucsc.edu/>.

Students are expected to arrange the rest of their academic program of study around the six-month, full-time field study (two quarters of 15 units each). Students must conduct their fieldwork in summer and fall quarters so that they can enroll in course 194, *Analysis of Field Materials* immediately upon their return because course 194 is offered only in winter quarter. The remaining two directed electives, one course in political economy (the 140 series) and one course focusing on cultural politics and representation, may be completed any quarter prior to finishing the major.

Language competency must be demonstrated by all students planning a field study in a non-English speaking country and, therefore, such students must plan appropriate language study well in advance of the field study. In addition, students must demonstrate knowledge of the history, culture, and political economy of the place where they will be carrying out their field study—whether that place is a neighborhood in Santa Cruz, New York City, or a small village in Guatemala. Students who find media production relevant to their fieldwork and are required to take course 80L prior to their field study; note that course 80L includes labs facilitated by the instructional staff of the Social Sciences Media Laboratory, located in 47 Social Sciences 2.

Admission to the Major

A general background or course work in politics, sociology, anthropology, and/or community activism is suggested for students considering the community studies major. Students are required to have enrolled in two community studies courses at the time they declare the major: one must be a CMMU 100(A-Z) seminar and the other may be any of five-credit, lower- or upper-division course except for the 42 series of student directed seminars or independent or field studies.

The process of declaring the community studies major begins when a student enrolls in a section of CMMU 100(A-Z), the gateway seminar series. Prospective majors must choose a seminar that matches their own academic and social justice focus. Because of their small size, the CMMU 100(A-Z) seminars are enrolled through an "interview only" procedure, which usually takes the form of attending the first class, participating in discussion, and completing a questionnaire regarding background and interests. Based on this interview, each CMMU 100 (A-Z) instructor will decide who gets priority in the class. Although they are open to all students, prospective community studies majors enjoy priority enrollment. You *must* attend the first class to be considered for enrollment.

It is wise to communicate with your potential CMMU 100 (A-Z) instructor to discuss your plans for the major prior to the beginning of the quarter to make sure that the Community Studies Department and the specific course you have chosen is appropriate for your interests and needs. Occasionally, a student is not accepted into the major because the student's social justice and field-study focus are poorly matched with the department's areas of expertise and/or the student's academic interests cannot be fulfilled by current department offerings.

Instructions for Applying to the Major

1. Attend a department orientation held at the beginning of each quarter (check the *Schedule of Classes* for date/time/location).

2. Choose and enroll in the appropriate Community Studies 100(A-Z) seminar. If you are accepted into the class, a permission number will allow you to register; you can then move on to the next step.

3. Print out a Declaration of Major petition from <http://advising.ucsc.edu>, fill in the University General Education and College Requirements portion, and obtain the signature of your college adviser. Complete the Application for Admission to Community Studies (available in the *Student Handbook*, found on the department web site: communitystudies.ucsc.edu). Prepare an academic study plan on a separate piece of paper with your plans for completing all requirements for the major including field study and selection of directed electives.

4. Write a three- to four-page essay (typewritten) explaining:

- Why you think that the community studies major is the best way for you to pursue your academic and social change interests and how your focus matches the emphasis of your gateway seminar.
- The type of social change or social justice organization with which you expect to work. The classes you have taken and/or plan to take, in addition to Community Studies 100(A-Z), to prepare you to work with this organization.
Your social location, defined as the intersections of nationality, immigration history, ethnicity, racial privilege, class, gender, age, urban/rural/suburban/ex-urban upbringing, and/or sexuality that affect how you perceive and act in the world.
- The ways your social location may influence and/or be influenced by your proposed six-month field placement.

Keep in mind that the department is interested in both the substance of your essay and your ability to express yourself in written form.

5. Meet with your Community Studies 100(A-Z) seminar professor to discuss your essay, electives, field-study plans, electives, and other application materials. Be prepared to be flexible on your elective choices as your faculty adviser may make other recommendations. Obtain the faculty signature on the application form. Bring any evaluations or progress reports from currently enrolled courses to support your application to the major.

6. Well before the deadline for the declaration of major, bring your completed Declaration of Major petition, draft study plan, signed application form, and essay to the Community Studies Department office (231 Oakes College) for final approval and processing. You are not officially declared until step 6 is finalized.

Note: you cannot begin course 102 without declaring the major. Failure to do so will defer your progress in the major until the following year when the 102 course is next offered (spring only).

Major Course Requirements

Summary of Core

Sequence Requirements

		Credits
10	<i>Introduction to Community Activism</i> (spring)	5
100(A-Z)	<i>Gateway Seminar</i> (fall or winter)	5
101	<i>Communities, Social Movements, and the Third Sector</i> (winter)	5
102	<i>Preparation for Field Studies</i> (spring)	5
120-129	<i>Race, Class, and Privilege Directed Elective</i> (can be satisfied within or outside the department) (any quarter before field study)	5
130-139	<i>Regional or Historical Directed Elective</i> (can be satisfied within or outside the department) (any quarter before field study)	5
140-149	<i>Political Economy Directed Elective</i> (can be satisfied within or outside the department) any quarter before finishing)	5
150-159	<i>Cultural Politics and Representation Directed Elective</i> (can be satisfied within or outside the department) (any quarter before finishing)	5
194	<i>Analysis of Field Materials</i> (winter)	5
198	<i>Independent Field Study</i> (summer/fall)	30

100(A-Z), Gateway Seminars

The CMMU 100 (A-Z) seminars provide students with a substantive focus for their academic work and field study. In each of these courses, students learn about the social, cultural, historical, geographic, and/or economic context of specific issues as well as efforts to change existing conditions.

101, Communities, Social Movements, and the Third Sector

This course critically engages with concepts central to the major including constructions of community in social change efforts and the institutionalization of social movements in third-sector organizations. It is designed to deepen students' understanding of the opportunities and obstacles embedded in various avenues of social action.

102, *Preparation for Field Study*

This course examines participatory and other social research methods including participant-observation, conducting interviews, writing ethnographic field notes, and collecting descriptive data. Students receive practical experience with developing research questions, methods, and writing field notes. The course also addresses ethical and logistical issues of research. The final project is a field study prospectus with articulated research questions and methods.

120-129, *Race, Class, and Privilege Electives*

These courses examine race, class, and other hierarchies of difference as they intersect with structural inequality, self-identification, and identity politics. The requirement may be satisfied within or outside the department from a pre-approved list of courses.

130-139, *Regional/Historical Electives*

Students have a choice of courses that provide historical/geographic knowledge of particular peoples, places, or regions in preparation for their field study. The requirement may be satisfied within or outside the department from a pre-approved list of courses, by petition, or through an approved independent study.

140-149, *Political Economy Electives*

Students have a choice of courses that examine the dynamics, logics, and/or institutions of colonialism, capitalism, neoliberalism, and/or globalization. The requirement may be satisfied within or outside the department from a pre-approved list of courses.

150-159, *Cultural Politics and Representation Electives*

Students have a choice of courses that examine ideas of discourse, social construction, knowledge, and representation as they help explain political and cultural contestation in the arts, science, medicine, media, and everyday life. The requirement may be satisfied within or outside the department from a pre-approved list of courses.

198, *Full-Time Independent Field Study*

During the full-time, six-month field study, students are enrolled at UCSC and receive full-time university credit. Students are required to submit field notes and several papers during the field study.

194, *Analysis of Field Materials*

This course is designed for students returning from their full-time field study. The course has two related goals: (1) to help students, both individually and collectively, analyze and gain perspective on their field experiences; and (2) to move students through the process of completing the senior capstone requirement. Students work with their field material to develop findings and arguments. For students completing the major with a senior essay, the essay is completed in course 194. For students doing a senior thesis, project, or student-directed seminar, the student completes at least three major pieces of writing; some or all of which will be incorporated into the completed thesis, project, or student-directed seminar.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement will normally be met within one to three courses already required for the major. For detailed information on this major's DC requirement, consult your major adviser or see the 2010-11 general catalog.

Senior Capstone Requirement

Each student must fulfill a senior capstone requirement, either through the senior essay, a senior thesis, a senior project, or a student-directed seminar. For a thesis, project, or student-directed seminar, the student must choose a faculty member to serve as his or her adviser.

Senior Essay: Students complete a senior essay that incorporates field study observations and contextualizes their findings historically and theoretically; the essay can incorporate writing completed in other courses, including CMMU 100(A-Z) and field study, along with essays written in course 194. The minimum length is 25 pages, plus bibliography. The senior essay is completed entirely in course 194, *Analysis of Field Materials*.

Senior Thesis: Some students may choose to complete a senior thesis, which is comprised of field-study observations, historical and theoretical contextualizations of the field study, and deeper analysis of the social justice issues at the heart of the field study. In general, a thesis involves a more tightly developed argument related to field study findings than the senior essay. It may also involve post-field-study research; typical length is 35–50 pages, including bibliography. Students begin the senior thesis during course 194 and should complete it in the

following quarter(s) by enrolling in course 195, *Senior Thesis*.

Senior Project: Students may choose to complete a senior project in other genres of social documentation including video production, photography, audio production, creative writing, and other formats such as grant proposals and organizing pamphlets. The senior project also requires a significant analytical essay of 20 pages, plus bibliography, describing the project conceptualization, rationale, methodology, and evaluation. Students begin the senior project during course 194 and complete it the following quarter by enrolling in course 195, *Senior Thesis*.

Student-Directed Seminar (SDS): The SDS capstone option is reserved for exceptional students. Under the direction of a faculty adviser, the student develops and teaches a Community Studies 42 course that relates to the student's field study and social justice focus, accompanied by a seminar completion report.

The department selects only a limited number of student-directed seminars each year. Selection is based on the excellence of the SDS proposal, the relevance of the subject matter to the major, the student's background preparation, and the total number of proposals submitted each quarter. The Committee on Educational Policy gives the final approval.

For students interested in teaching a student-directed seminar, it is recommended that they meet with their adviser early on—prior to the full-time field study—to begin the process of obtaining course approval. A short written work providing the theoretical basis for the project, giving a brief analysis of the connection between the student's field work and the project itself, a course syllabus, a bibliography, and copies of their evaluations are required, along with a letter from the sponsoring faculty.

Students must also take course 199, *Tutorial*, the quarter prior to teaching the SDS, to give them time to prepare the course material. A student-directed seminar guide, giving detailed information about preparing for and teaching an SDS, is available in the department office.

Honors in the Major

Honors in the community studies major are awarded to graduating seniors whose academic performance in their major coursework is judged to be consistently excellent to outstanding. Students must also do excellent work on their senior capstone requirement; an honors-eligible senior essay must be particularly outstanding. The senior capstone must have intellectual merit, a genuine social change/social justice focus, and evidence that the student gained insight into processes of social change. In accordance with UCSC policy, the Community Studies Department aims to award honors to approximately 15 percent of community studies graduates.

Community Studies

[2009-10 update to the *General Catalog*, changes highlighted]

231 Oakes Academic Building

(831) 459-2371

<http://communitystudies.ucsc.edu>

Program Description

Community studies is an interdisciplinary major that integrates scholarship and community engagement in both research and teaching. Since its founding in 1969, and across radically changing political landscapes, the department has maintained a focus on identifying, analyzing, and helping to construct sites for social change and cultural transformation. To this end, ~~we the Community Studies Department~~ addresses principles of social justice and the dynamics of racial and class inequity ~~as well as~~ through courses that explore constructions of community and their implications.

The range of the faculty's disciplines, research interests, and arenas of civic engagement permits the department to delve into cross-cutting contemporary approaches that color every aspect of social life. The major offers community studies students a ~~lively choice of concentrations in which to specialize,~~ including dynamic array of courses in areas such as public health and health politics, gender and sexuality, political economy and globalization, agriculture and food justice, race and racism, historical and contemporary social movements, immigration history and policy, and the theory and practice ~~globalization, politics of culture, and systems~~ of documentary representation.

~~Pedagogically, community studies relies on developing a dynamic critical awareness of the relationship between the theoretical and practical issues involved in social change, and of the wider global contexts in which social justice is defined and achieved. The department's model of specific communities through residence and participation in (mostly) non-profit organizations with a social change mission. The undergraduate core curriculum focuses on the development of academic tools for social analysis and field observation/participation while deepening students' knowledge of specific histories and theoretical perspectives that are essential to the student of communities and transformation. Students complete the major by preparing a senior capstone project integrating academic course work, field study, and original research work. The major usually takes about two years to complete.~~ Pedagogically, community studies relies on developing a critical awareness of the relationship between the theoretical and practical issues involved in social change, and of the wider global contexts in which social justice is defined and achieved. A distinguishing feature of the community studies major is the six-month, full-time field study. The department's model of field study immersion requires undergraduate majors to spend six months engaging with specific communities through residence and participation (mostly) non-profit organizations with a social change and/or social justice mission. The undergraduate core curriculum focuses on the development of academic tools for social analysis and field observation/participation while deepening students' knowledge of specific histories and theoretical perspectives that are essential to the study of communities and transformation. Students complete their work in the major with a senior capstone project integrating academic course work, field study, and original research. The major usually takes about two years to complete.

With the ~~intellectual~~ shared guidance of a faculty adviser and a field study coordinator, community studies students choose field placements related to one of the department's areas of focus. Placements have been arranged in the past with health centers, immigrant rights organizations, newspapers, ~~minority media outlets~~ centers, direct action mobilizations, sustainable development projects, city planning departments, neighborhood organizations, civil rights groups, farm-to-school programs, battered women's shelters, legal clinics, ~~community-based cultural organizations~~, programs for seniors, tenant unions, government agencies and the offices of elected officials, trade unions, and other organizations committed to and working for social justice ~~in communities~~.

Facilities

The Community Studies Department maintains several unique resources for students. A media laboratory is available ~~for where~~ majors ~~(and others in the social sciences) to~~ can learn the use of video, ~~radio, film, and graphic media~~ audio, and photography as research and presentation tools. Two field-study coordinators work with students to develop part- and full-time field studies, and a field study resource office is available to assist students in selecting an appropriate ~~field study~~ organization. The field study office provides logistical and academic support during the field study, while also functioning as a liaison between students, faculty, and host organizations.

Major Program

The program for all students in the major includes ~~preparatory courses, the field study itself, post field-study course work, electives chosen to broaden knowledge for the individual's senior capstone requirement, and the capstone requirement itself.~~ courses that develop a substantive focus for the field study, courses that contextualize the field study in broader social forces, courses that provide methodological tools for analyzing the field study, the field study itself, and the capstone requirement. Students who wish to pursue a major in Community Studies are ~~required~~ recommended to satisfactorily

complete ~~Community Studies~~ course 10, *Introduction to Community Activism* prior to beginning their path through the sequential core curriculum, i.e., before they enroll in Community Studies (CMMU) ~~CMMU 100 (A-Z)~~. It is recommended that students complete this course prior to beginning their path through the sequential core curriculum, i.e., before they enroll in Community Studies 100(A-Z). It is required that students satisfactorily complete *Introduction to Community Activism* prior to beginning Community Studies 198, the full-time field study.

It is important to emphasize community studies is a major with a sequential core curriculum. This means that some required courses *must* be successfully completed ~~taken~~ in a specified order, as indicated by ~~established by~~ the quarter(s) when those courses are offered.

To begin the major and declaration process, a student must be enrolled in one of the CMMU ~~Community Studies 100(A-Z)~~ : *Theory and Practice* gateway seminars. ~~These seminars are gateways into the community studies major. Students will learn about a distinct area of academic theory and social justice practice that will become the focus of their academic study plan, field study, and senior capstone requirement~~ Through these seminars students develop a substantive focus for their academic study plan, field study, and senior capstone requirement. Students in the 100 (A-Z) seminars ~~courses~~ are presented with recommended organizations from which to select their placements. Several sections of CMMU ~~Community Studies 100(A-Z)~~ are offered each fall and winter quarter. ~~Theory and practice~~ *Topics vary from year to year and may include economic justice; health-care inequities; ~~race and ethnicity~~; immigration, ~~social documentation, agriculture and food; Asian-American activism; resistance and social movements~~; and cultural work and social justice. Following the ~~Theory and Practice~~ seminars is Community Studies 102, *Preparation for Field Study*, offered only in spring quarter, and social justice; sex, gender, and sexuality; politics of culture, agriculture, food, and social justice; and media and social change. Following (or concurrent with) the gateway seminar is CMMU course 101, *Communities, Social Movements, and the Third Sector*, offered only in winter quarter, and CMMU course 102, *Preparation for Field Study*, offered only in spring quarter. In addition, four directed electives must be taken, one each in the areas of 1) race, class, and privilege, 2) regional or historical background, 3) political economy, and 4) cultural politics and representation. Students must also complete at least two of the four directed electives before leaving for their field study: one class that addresses race, class, and privilege ~~(the 120-129 series of courses within the department)~~ and one class that provides regional or historical background for their field study ~~(the 130-139 series of courses within the department)~~. These directed electives can be satisfied through courses either inside or outside the department; a complete list of directed electives for each area is posted on the department's web site <http://communitystudies.ucsc.edu/>.

Students are expected to arrange the rest of their academic program of study around the ~~two-quarter~~ ~~(six-month,)~~ full-time field study ~~(two quarters of 15 units each quarter)~~. Students must conduct their fieldwork in summer and fall quarters so that they can ~~immediately follow up with upon their return~~ enroll in ~~Community Studies~~ course 194, *Analysis of Field Materials*,—immediately upon their return because course 194 is offered only in winter quarter. The remaining two directed electives, one course in political economy (the 140 series) and one course focusing on cultural politics and representation, may be completed any quarter prior to finishing the major.

Language competency must be demonstrated by all students planning a field study in a non-English speaking country and, therefore, such students ~~Students~~ must plan appropriate language study well in advance of the field study. In addition, students must demonstrate knowledge of the history, culture, and political economy of the place where they will be ~~completing~~ carrying out their field study—whether that place is a neighborhood in Santa Cruz, New York City, or a small village in Guatemala. Students ~~may also~~ who find media production ~~skills useful in relevant~~ to their fieldwork and are ~~encouraged~~ required to take CMMU course 80L prior to their field study; note that course CMMU 80L includes labs facilitated by the instructional staff of the ~~visit the~~ Social Sciences Media Laboratory, located in 47 Social Sciences 2-~~early in their academic career~~.

Admission to the Major

A general background or course work in politics, sociology, anthropology, and/or community activism is suggested for students considering the community studies major. Students are required to have enrolled in two community studies courses at the time they declare the major: one must be a ~~Community Studies~~ CMMU 100(A-Z) seminar and the other may be any of ~~the five unit~~ credit, lower- or upper-division courses except for the 42 series of student directed seminars or independent or field studies.

The process of declaring the community studies major ~~properly~~ begins when a student enrolls in a section of CMMU ~~Community Studies 100(A-Z)~~, the *Theory and Practice* gateway seminar series. Prospective majors must choose a seminar that matches their own academic and social justice focus. Because of their small size, the CMMU ~~Community Studies 100(A-Z)~~ seminars are enrolled ~~by~~ through an “interview only” procedure, which usually takes the form of attending the first class, participating in discussion, and completing a questionnaire regarding background and interests. Based on this interview, each CMMU 100 (A-Z) instructor will decide who gets priority in the class. Although they are open to all students, prospective community studies majors enjoy priority enrollment. You *must* attend the first class to be considered for enrollment.

To fulfill the declaration of major process, prospective majors must prepare a three- to four-page essay outlining how their academic and social justice focus matches the emphasis of their theory and practice seminar. The essay should also describe their academic study plan, including relevant upper-division electives and their tentative field study plans. Students then meet with the professor in charge of their Community Studies 100(A-Z) seminar to review and discuss the essay and other application materials. It is wise to communicate with your potential CMMU 100 (A-Z) instructor to discuss your plans for the major prior to the beginning of the quarter to make sure that the Community Studies Department and the specific course you have chosen is appropriate for your interests and needs. Occasionally, a student is not accepted into the major because the student's social justice and field-study focus are poorly matched with the department's ~~theory and practice areas~~ areas of expertise and/or ~~his/her~~ the student's academic interests cannot be fulfilled by current department offerings.

Instructions for Applying to the Major

1. Attend a department orientation held at the beginning of each quarter (check the *Schedule of Classes* for date/time/location).
2. Choose and enroll in the appropriate Community Studies 100(A–Z) seminar. If you are accepted into the class, a permission number will ~~be given to you~~ allow you to register; you can then move on to the next step.
3. Print out a Declaration of Major petition from ~~your student portal (MyUCSC)~~ <http://advising.ucsc.edu>, fill in the University General Education and College Requirements portion, and obtain the signature of your college adviser. Complete the Application for Admission to Community Studies (available in the *Student Handbook*, found on the department web site: communitystudies.ucsc.edu). Prepare an academic study plan ~~(on a separate piece of paper)~~ with your plans for completing all requirements for the major including field study and ~~upper-division electives~~ selection of directed electives. ~~(Be prepared to be flexible on your elective choices as your faculty adviser may make other recommendations during step 5.)~~
4. Write a three- to four-page essay (typewritten) explaining:
 - Why you think that the community studies major is the best way for you to pursue your academic and social change interests. ~~The department is interested in both the substance of your essay and your ability to express yourself in written form~~ and how your focus matches the emphasis of your gateway seminar.
 - The type of social change or social justice organization with which you expect to work.
 - The classes you have taken and/or plan to take, in addition to Community Studies 100(A–Z), to prepare you to work with this organization.
 - Your social location, defined as the intersections of nationality, immigration history, ethnicity, racial privilege, class, gender, age, urban/rural/suburban/ex-urban upbringing, and/or sexuality that affect how you perceive and act in the world.
 - The ways your social location may influence and/or be influenced by your proposed six-month field placement. ~~in your background and current social status.~~

~~The ways your social location may influence and be influenced by your six-month field placement.~~ Keep in mind that the department is interested in both the substance of your essay and your ability to ~~express yourself in written form.~~

5. Meet with your Community Studies 100(A–Z) seminar professor to discuss your essay, ~~electives~~, field-study plans, electives, and other application materials. ~~Be prepared to be flexible on your elective choices as your faculty adviser may make other recommendations.~~ Obtain the faculty signature on the application form. Bring any evaluations or progress reports from currently enrolled courses to support your application to the major.
6. ~~Well b~~ Before the deadline for the declaration of major ~~deadline~~, bring your completed Declaration of Major petition, draft study plan, signed application form, and essay to the Community Studies Department office (231 Oakes College) for final approval and processing. You are not officially declared until step 6 is finalized.

Note: you cannot begin course 102 without ~~completing step 6~~ declaring the major. Failure to do so will defer your progress in the major until the following year when the 102 course is ~~again~~ next offered (spring only). CMMU 102 is offered only in spring quarter.

~~A student may be directed to another department of study on campus in those instances where his/her academic interests cannot be fulfilled by current department offerings.~~

Community Studies 100(A–Z) Enrollment Procedures

~~All Community Studies 100(A–Z) courses are “interview only.” Our goal is to provide access to these courses for those students who plan to become community studies majors. You must attend the first day of class. Each instructor will ask you to provide information from which they will decide who gets priority in the class. It is wise to meet with him or her to discuss your plans for the major prior to the beginning of course 100(A–Z) to make sure that Community Studies Department and the 100(A–Z) course you have chosen is appropriate for your needs.~~

Major Course Requirements

Summary of Core

Sequence Requirements

Credits

10	Introduction to Community Activism (spring)	5
10	Introduction to Community Activism (spring)	5
100(A–Z)	Theory and Practice Gateway Seminar (fall or winter)	5
101	Communities, Social Movements, and the Third Sector (winter)	5

102	<i>Preparation for Field Studies</i> (spring)	5
120-129	<i>Race, Class, and Privilege Directed Elective</i> (can be satisfied within or outside the department) (any quarter before field study)	5
130-139	<i>Regional or Historical Directed Elective</i> (can be satisfied within or outside the department) (any quarter before field study)	5
140-149	<i>Political Economy Directed Elective</i> (can be satisfied within or outside the department) (any quarter before finishing)	5
150-159	<i>Cultural Politics and Representation Directed Elective</i> (can be satisfied within or outside the department) (any quarter before finishing)	5
194	<i>Analysis of Field Materials</i> (winter)	5
102	<i>Preparation for Field Studies</i> (spring)	5
198	<i>Independent Field Study</i> (summer/fall)	30 30
194	<i>Analysis of Field Materials</i> (winter)	5
	Three upper division electives (all quarters)	15

10. Introduction to Community Activism

Community Studies 10 seeks to make sense of our contemporary era when community activism would seem so alive and well, and yet a shocking and sad number of people continue to lead lives of material deprivation and social exclusion. A goal of the course is resolving this seeming paradox by making clear and necessary distinctions among charity, empowerment, grass roots organizing, and human rights—put simply, activism designed to help people and activism designed to eliminate the need for help.

The course explores different kinds of community activism (e.g., volunteering, faith based activism, nonprofit based service provision and advocacy, community based organizing) and critically appraises their strengths and shortcomings and their interconnectedness. The aim is learning how certain desirable societal outcomes (e.g., ending hunger, eliminating homelessness, improving on the job working conditions) are made more or less possible through different activism strategies. A central goal is developing a critical perspective on the contemporary political economy of charity and so-called empowerment. Toward this end, we consider how the brave new world of neoliberalism has set in motion a devolution of responsibility for collective well-being to the individual through the efficacy of localized private organizations that now constitute sites where political struggle takes place and citizens are formed.

100(A–Z), ~~Theory and Practice~~ Gateway Seminars

Each of these courses explores the relationship between theory, practice, and social justice within a particular subject area. The Community Studies 100(A–Z) seminars are designed to raise questions about the relationships between different theoretical perspectives and social justice. For example, do social psychological, historical, or literary theories vary in their usefulness in helping us understand social justice work around race and racism? What is the relationship between activism and theory? How do social justice activists select, develop, and, sometimes, even seem to reject their own theoretical perspectives?

The primary course objective is demonstrating how current issues and problems can be researched by better understanding the relationship between theory and practice—how theory gives rise to certain kinds of issues and actions and, in turn, how practice can introduce new ways of thinking about the world. The goal is to expose students to different ways of perceiving and understanding the world and to engage them in an ongoing dialogue about the “practical implications of theory” and the “theoretical implications of practice.” The Community Studies CMMU 100 (A–Z) seminars provide students with a substantive focus for their academic work and field study. In each of these courses, students learn about the social, cultural, historical, geographic, and/or economic context of specific issues as well as efforts to change existing conditions.

101, Communities, Social Movements, and the Third Sector

This course critically engages with concepts central to the major including constructions of community in social change efforts and the institutionalization of social movements in third-sector organizations. It is designed to deepen students’ understanding of the opportunities and obstacles embedded in various avenues of social action.

102, Preparation for Field Study

This course immerses community studies majors who are planning full-time field study in the practical and theoretical work of field study with a focus on activist research—that is, study conducted by and with activists so as to participate in and learn from their work. A required part-time field study with a local community-based social justice organization is a central component of the course; this activity should

ideally approximate the kind of work students intend for their full-time field study. Other course components for 102 are organized around the part-time field study for this course. Community Studies 102 engages students in a range of issues common to all field studies and focuses on the relationship between theory, field methods, and on the ground fieldwork. It gives students the opportunity to develop interpersonal and organizational skills and to learn how to relate issues in the fieldwork within a community/region to those within the global society. Assignments are designed to rigorously prepare students for activist research in a social justice organization by fostering specific research and organizing skills. This course examines participatory and other social research methods including participant-observation, conducting interviews, writing ethnographic field notes, and collecting descriptive data. Students receive practical experience with developing research questions, methods, and writing field notes. The course also addresses ethical and logistical issues of research. The final project is a field study prospectus with articulated research questions and methods.

120-129, Race, Class, and Privilege Electives

These courses examine race, class, and other hierarchies of difference as they intersect with structural inequality, self-identification, and identity politics. The requirement may be satisfied within or outside the department from a pre-approved list of courses.

130-139, Regional/Historical Electives

Students have a choice of courses that provide historical/geographic knowledge of particular peoples, places, or regions in preparation for their field study. The requirement may be satisfied within or outside the department from a pre-approved list of courses, by petition, or through an approved independent study.

140-149, Political Economy Electives

Students have a choice of courses that examine the dynamics, logics, and/or institutions of colonialism, capitalism, neoliberalism, and/or globalization. The requirement may be satisfied within or outside the department from a pre-approved list of courses.

150-159, Cultural Politics and Representation Electives

Students have a choice of courses that examine ideas of discourse, social construction, knowledge, and representation as they help explain political and cultural contestation in the arts, science, medicine, media, and everyday life. The requirement may be satisfied within or outside the department from a pre-approved list of courses.

198, Full-Time Independent Field Study

A distinguishing feature of the community studies major is the six-month, full-time field study, an arrangement facilitated by the student's Community Studies 100(A-Z) instructor and the field study coordinators. During the field study, students are enrolled at UCSC and receive full-time university credit. Students in the 100(A-Z) courses are presented with recommended organizations from which to select their placements. The Field Study office provides full placement information and guidelines for setting up placements, along with logistical and academic support during the field study. During the full-time, six-month field study, students are enrolled at UCSC and receive full-time university credit. Students are required to submit field notes and several papers during the field study.

194, Analysis of Field Materials

This course is designed for community studies seniors returning from their full-time field study. The course has two related goals: (1) to help students, both individually and collectively, analyze and gain perspective on their field experiences; and (2) to move students through the process of completing the senior capstone requirement. A central question addressed in the course is how the student's theory and practice of social justice has been affected by his or her field experience. Each student has a unique field study experience; and, collectively, students have been involved with widely varying types of organizations with little or no relation to each other. Yet there is common ground, and students have much to learn from each other. Thus, a related objective of this course is to discover and travel the common ground. For students completing the major with a senior essay, the essay is completed in course 194. For students doing a senior thesis, project, or student-directed seminar, the student completes at least three major pieces of writing; some or all of which will be incorporated into the completed thesis, project, or student-directed seminar. This course is designed for students returning from their full-time field study. The course has two related goals: (1) to help students, both individually and collectively, analyze and gain perspective on their field experiences; and (2) to move students through the process of completing the senior capstone requirement. Students work with their field material to develop findings and arguments. For students completing the major with a senior essay, the essay is completed in course 194. For students doing a senior thesis, project, or student-directed seminar, the student completes at least three major pieces of writing; some or all of which will be incorporated into the completed thesis, project, or student-directed seminar.

Upper Division Electives

Each student in the major must complete three upper-division electives. The purpose of the elective requirement is to ensure that students have the necessary intellectual background for their field studies and senior capstone requirement. At least one of these courses must be from the Community Studies Department, but the other two may be from another campus program as long as the substantive content of the courses is related to the full-time field study and academic plan. Senior thesis and independent studies

do not fulfill the elective requirement. At least two of the three electives must be completed prior to the full time field study. Electives must be approved by the student's 100(A-Z) seminar professor.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement will normally be met within one to three courses already required for the major. For detailed information on this major's DC requirement, consult your major adviser or see the 2010-11 general catalog.

Senior Capstone Requirement

Each student must fulfill a senior capstone requirement, either through the senior essay, a senior thesis, a senior project, or a student-directed seminar. For a thesis, project, or student-directed seminar, the student must choose a faculty member to serve as his or her adviser.

Senior Essay: Students complete a senior essay that ~~analyzes local, global, and theoretical contextualizations of field study~~; incorporates field study observations and contextualizes their findings historically and theoretically; the essay ~~should can~~ incorporate ~~essays~~ writing completed in other courses, including ~~course~~ CMMU 100(A-Z) and field study, along with essays written in course 194. The minimum length is 25 pages, plus bibliography. The senior essay is completed entirely in course 194, *Analysis of Field Materials*.

Senior Thesis: Some students may choose to complete a senior thesis, which is comprised of ~~linked essays combining local and global contextualizations of field study and theoretical and historical analysis of social justice issues at the heart of the field study. The thesis can incorporate essays from other courses (including course 194), but must involve significant post field study research using primary source materials;~~ field study observations, historical and theoretical contextualizations of the field study, and deeper analysis of the social justice issues at the heart of the field study. In general, a thesis involves a more tightly developed argument related to field study findings than the senior essay. It may also involve post-field study research; typical length is 35–50 pages, including bibliography. Students begin the senior thesis during course 194 and ~~generally~~ should complete it in the following quarter(s) by enrolling in ~~CMMU~~ course 195, *Senior Thesis*.

Senior Project: Students may choose to complete a senior project in other genres of social documentation including ~~film and~~ video production, photography, ~~sound audio~~ production, creative writing, and other formats such as grant proposals and organizing pamphlets. The senior project also requires a significant analytical essay of 20 pages, plus bibliography, describing the project conceptualization, rationale, methodology, and evaluation. Students begin the senior project during ~~course~~ ~~course~~ CMMU 194 and complete it the following quarter~~(s)~~ by enrolling in ~~course~~ CMMU 195, *Senior Thesis*.

Student-Directed Seminar (SDS): The SDS capstone option is reserved for exceptional students. Under the direction of a faculty adviser, the student develops and teaches a Community Studies 42 course that relates to the student's field study and social justice focus, accompanied by a seminar completion report.

The department selects only a limited number of student-directed seminars each year. Selection is based on the excellence of the SDS proposal, the relevance of the subject matter to the major, the student's background preparation, and the total number of proposals submitted each quarter. The Committee on Educational Policy gives the final approval.

For students interested in teaching a student-directed seminar, it is recommended that they meet with their adviser early on—prior to the full-time field study—to begin the process of obtaining course approval. A short written work providing the theoretical basis for the project, giving a brief analysis of the connection between the student's field work and the project itself, a course syllabus, a bibliography, and copies of their evaluations are required, along with a letter from the sponsoring faculty.

Students must also take course 199, *Tutorial*, the quarter prior to teaching the SDS, to give them time to prepare the course material. A student-directed seminar guide, giving detailed information about preparing for and teaching an SDS, is available in the department office.

Honors in the Major

Honors in the community studies major are awarded to graduating seniors whose academic performance in their major coursework is judged to be consistently excellent to outstanding. Students must also do excellent work on their senior capstone requirement; an honors-eligible senior essay must be particularly outstanding. The senior capstone must have intellectual merit, a genuine social change/social justice focus, and ~~demonstrate~~ evidence that the student gained insight into processes of social change. In accordance with UCSC policy, the Community Studies Department aims to award honors to approximately 15 percent of community studies graduates.

Faculty and Professional Interests

Professor

David Brundage

American working-class and immigration history, history of U.S. social movements, Irish history and politics

William H. Friedland, Emeritus

B. Ruby Rich

Documentary film and video, post-9/11 culture, new queer cinema, feminist film history, Latin American and Latin/a cinema, U.S. independent film and video, the essay film, the politics of film festival proliferation and the marketing of foreign films in the U.S.

Nancy Stoller, Emerita

David T. Wellman

Working-class culture, American ethnic and racial diversity, social documentary studies, critical race theory, interrogations of whiteness, and qualitative research methods

Carter Wilson, Emeritus

Deborah A. Woo, Emerita

Associate Professor

Julie Guthman

Sustainable agriculture and alternative food movements, international political economy of food and agriculture, politics of obesity, political ecology, race and food, critical human geography

Paul Ortiz

African American history, U.S. social and political history, social documentary, oral history, subaltern studies and theories of resistance, U.S. South, Latino studies, social movements, working-class history; history of farm labor, African diaspora

Mary Beth Pudup

Regional studies, economic justice, public policy, historical geography of the U.S.

Renee Tajima-Peña

Documentary film and video focusing on Asian American and immigrant communities, media, and social change

Assistant Professor

John Leños

Social documentation, social art practice, community arts, Chicana/o cultural studies, fine arts and animation

Marcia Ochoa

Gender and sexuality, race and ethnicity, Latina/o studies, media and cultural studies, ethnography of media, feminism, queer theory, geography, multimedia production, graphic design, colonialism and modernity, Latin American studies—Colombia and Venezuela

Lecturer and Field Program Coordinator

Michael Rotkin

Marxist theory, capitalist system, community organizing, electoral politics, media, government and non-profit programs, community power structure, institutional analysis, and affirmative action

Lecturer

Andrea Steiner

Health policy, critical public-health studies, gerontology (aging), ageism, women's health, critical analysis of civically engaged education

Larry D. Trujillo

Chicana/o studies, ethnic studies, grassroots community organizations, prison-industrial complex, student development, Chicano music

Professor

John G. Borrego (Latin American and Latino Studies)

Global political economy, national development, urban and regional planning, community organizing, social change, ethnic minorities, Mexico and the Southwest

Dana Frank (History)

U.S. social and economic history; women, labor, and working-class history; contemporary political economy

[Program Description](#) | [Changes to 2009-10 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses

10. Introduction to Community Activism. S

Surveys different strategies of community activism including charity, volunteering, labor and community organizing, and recently emerging global activism with goal of demonstrating how certain strategies challenge existing social relations and arrangements while others typically (and often by design) reproduce them. (General Education Code(s): IS.) *S. Burns*

12. Youth and Social Movements. *

Examines roles young people have played and still play in social movements locally and internationally. Guiding questions are "Under what conditions do youth enter social movements?" and "What models do they create or adopt?" (Formerly course 20.) (General Education Code(s): E.) *The Staff*

42. Student-Directed Seminar. F,W,S

Seminars taught by upper-division or graduate students under faculty supervision. (See course 192.) *The Staff*

70. Video Laboratory (2 credits). F,W

Trains students in the techniques of documentary film making. Through lectures, demonstrations, hands-on instruction, and review of students' work in progress, students learn the fundamentals of film/video pre-production, production, and post-production skills. Concurrent enrollment in course 80L required. Enrollment limited to 25. *The Staff*

71. Basic Photography Laboratory (2 credits). F,W

Provides students with photography skills. Through lecture, demonstration, hands-on experience, and field sessions, students acquire technical and aesthetic training in basic darkroom skills, methods of photographing people, an introduction to alternative processes, and presentation of finished photographs. Concurrent enrollment in course 80L required. Enrollment limited to 20. *The Staff*

72. Audio Laboratory (2 credits). F,W

Trains students in the fundamental techniques of documentary audio production. Through lectures, documentary examples, demonstrations, hands-on instruction, and consultation with students regarding their work in progress, students gain the skills they need to produce their own audio documentaries. Concurrent enrollment in course 80L required. Enrollment limited to 20. *The Staff*

73. Digital Photo Lab (2 credits). F,W

Provides introduction to digital photography and social documentary photographic

techniques. Through lecture, demonstration, hands-on experience and field sessions, students learn camera operation, how to photograph people, photographic aesthetics, Adobe Photoshop, and arranging photos in essay form. Concurrent enrollment in CMMU 80L is required. Enrollment limited to 15. *The Staff*

75. Introduction to Peer Education (2 credits). *

Weekly interactive lecture/discussions and practicum participation develop student knowledge and skills on peer education theory and practice including advocacy, ethics, harm reduction, and environmental strategies. UCSC-related health issues such as substance use, sexual health, and social justice are discussed. Enrollment by interview to determine ability to handle confidentiality and other peer counseling issues. Enrollment limited to 25. *The Staff*

80A. Chicanos and Social Change. W

Introduction to study of Chicano political experience with selected U.S. institutions, e.g., education and health, beginning with historical overview and ending with consideration of Chicanos' political future in the 1990s. Weekly guest lecturers. (General Education Code(s): T3-Social Sciences, E.) *L. Trujillo*

80B. Civil Rights Movement: Grassroots Change and American Society. F

The civil rights movement of the 1950s–60s was one of the most important grassroots social movements in American history. Course examines this movement, focusing especially on the experiences of rank-and-file participants and on its effects on American society. (General Education Code(s): T3-Social Sciences, E.) *D. Brundage*

80H. Social Change and Asian Americans. *

Introduction to the study of social change and Asian Americans, with an emphasis on community and activist perspectives. Weekly film or guest lecturers. (General Education Code(s): T3-Social Sciences, E.) *The Staff*

80L. Social Documentation. F,W

Examines works from various media recognized as being drawn from "real life." Through film, photography, oral history, and other examples, develops critical understanding of social documentation as a process with implicit theories and conventions. Students create beginning documentaries in production collectives. (General Education Code(s): T3-Social Sciences.) *The Staff*

93. Field Study. F,W,S

Supervised research for lower-division students, conducted off campus within regular commuting distance of the campus. Petitions may be obtained in the Community Studies Office. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

93F. Field Study (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

93G. Field Study (3 credits). F,W,S

Supervised off-campus study conducted under the immediate and direct guidance of a faculty supervisor. For lower-division students doing part-time off-campus study. Petition must be obtained from the Community Studies Department. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Individual directed study for lower-division undergraduates. Petitions may be obtained in the Community Studies Office. Students submit petition to sponsoring

agency. May be repeated for credit. *The Staff*

99F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses

100. Theory and Practice.

Introduces students to different ways of perceiving and understanding social phenomena in an ongoing dialogue about practical implications of theory and theoretical implications of practice. Faculty introduce and discuss their own work in these terms. Topics vary from quarter to quarter. Enrollment priority given to proposed community studies majors. Permission of instructor required; see enrollment conditions in the *Schedule of Classes*.

100B. Media and Social Change. ‡

Uses case study approach to analyze use of films and videos in relation to social change movements. Students produce a video as final project. Interview only: admission determined at first class meeting. Enrollment restricted to sophomores and juniors. Concurrent enrollment in course 170 is required. Course 80L is recommended. Enrollment limited to 25. *R. Tajima*

100E. Economic Justice. F

Examines how markets operate within the political economy of contemporary capitalism to generate myriad and often chronic forms of economic and social inequality in the United States. Explores different approaches to addressing inequality within the multi-faceted economic justice movement. Interview only: admission determined at first class meeting. Enrollment limited to sophomores and juniors. (Formerly *Theory and Practice of Economic Justice*.) Enrollment limited to 25. (General Education Code(s): E.) *M. Pudup*

100J. Immigration and Social Justice. F

Introduction to contemporary U.S. immigration patterns and policies, to major problems facing immigrant communities, and to theory and practice of immigrants and their allies in confronting these problems and working for social justice. Interview only: admission determined at first class meeting. Enrollment limited to sophomores and juniors. Enrollment limited to 25. (General Education Code(s): E.) *D. Brundage*

100M. Health Care Inequalities. W

Examines system and non-system that is American health care with special attention to inequalities in access, financing, and quality of care. Covers concepts such as equality, fairness, and need as well as community organizing and community building for health. Interview only: admission determined at first class meeting. Enrollment limited to sophomores and juniors. Enrollment limited to 25. *A. Steiner*

100T. Agriculture, Food, and Social Justice. *

Examines the primary ways in which activists are attempting to resist, provide alternatives to, and/or transform aspects of the food system using social and environmental justice frameworks to evaluate such activism. Topics explored include organic farming, food charity, fair trade, relocalization, and farmworker organizing. Interview only: admission determined at first class meeting. Enrollment limited to

sophomores and juniors. Enrollment limited to 25. *J. Guthman*

100V. Politics of Culture. W

Contemporary history of community arts and public practices as they pertain to social movements, transformation, and community building from the Mexican Revolution through the Dadaist movement, the cultural movements of the Sixties, and up to the present. Course assignments involve practice as well as research. Enrollment limited to 25. *A. Berney*

100X. Sex, Gender, and Sexuality. W

How do people produce and politicize sex, gender, and sexuality on their bodies? How are these represented and disciplined? Topics include transgender, sex work, feminist and queer realities. Materials include testimonials, films, ethnography, social theory, and clinical texts. Interview only: admission determined at first class meeting. Enrollment limited to sophomores and juniors. Enrollment limited to 25. *M. Ochoa*

101. Communities, Social Movements, and the Third Sector. W

Engages with crosscutting ideas and concepts central to the major including constructions of community in social-change efforts and the institutionalization of social movements in third-sector organizations. Deepens students' understanding of the opportunities and obstacles embedded in various avenues of social action. Enrollment restricted to community studies majors. *The Staff*

102. Preparation for Field Studies. S

A practicum to prepare students for field study. Course must be successfully completed prior to the six-month field study. Prerequisite(s): course 10; submission of signed Goals and Objectives form and completion of admissions process to the major; signed approval of full-time field study. Enrollment limited to community studies majors. *M. Ochoa*

103. Field Study Practicum (2 credits). S

A practicum in social change work in which the students works for a social change organization on a part-time basis. Concurrent enrollment in course 102 required. *M. Ochoa*

110. Resistance and Social Movements. *

Where do ideas for democratic social change come from? How are new social movements formed? Emphasis will be placed on subaltern groups including slaves, peasants, workers, utopians, and "second-class citizens" of the global economy from 1492 to the present. (Formerly course 100P.) (General Education Code(s): E.) *The Staff*

114. Communities, Problems and Interventions. †

Prepares students to develop and design responses to problems affecting communities. Informed by the history of community interventions in Chicana/o, feminist, labor, civil rights, HIV/AIDS, and GLBT/queer movements, students research, design, and propose a community-level intervention. (Formerly course 160.) Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment limited to 25. (General Education Code(s): W.) *M. Ochoa*

116. Experiments in Community: Utopia and Communalism in Post-War California. *

Traces history and flowering of urban and rural communal experiments in postwar California. Critically examines the counterculture—both alternative and

revolutionary wings—and its legacy of, for example, sexual politics, childrearing, art and culture, foodways, environmentalism, architecture, and anticapitalism. (Formerly course 122.) *I. Boal*

118. Introduction to Grant Writing. ‡

Introduces students to non-profit organizations and grant writing. Through hands-on grant-writing experiences, students learn how to write a successful grant. Please bring a potential fundable project idea to the first class. (Formerly course 162.) *The Staff*

122. Whiteness, Racism, and Anti-Racism. F

Examines the social, cultural, institutional, and personal ways that white privilege and racial domination are constructed, maintained, and reproduced in U.S. society. Goal is to reveal the "hidden" quality of whiteness and illuminate effective strategies for anti-racist activism. (Formerly course 114.) Enrollment limited to 25. (General Education Code(s): E.) *D. Wellman*

124. Class in the United States. ‡

Explores politics and culture of class in contemporary U.S. from interdisciplinary perspective, drawing on social theory, political economy, and cultural forms (film, music, and literature) with special emphasis on race, ethnicity, and gender. (Formerly course 104.) *D. Frank*

132. American Cities and Social Change. ‡

Examines the historical development of and contemporary conditions within U.S. cities by focusing on social and economic restructurings of cities, cultural and political transformations, and spatial reorganizations of the urban landscape. Goal is understanding the changing nature of urban experience. (Formerly course 163.) *M. Pudup*

136. Northern Ireland: Communities in Conflict. *

Introduction to the so-called "troubles" in Northern Ireland, from the 1960s to the present. Examination of the historical background to the conflict, the patterns of conflict in the 1970s and 1980s, and the emergence of a peace process in the 1990s. (Formerly course 166.) *D. Brundage*

142. Introduction to Marxism. W

A close study of original texts by Marx and Engels and contemporary Marxists, focusing on the basic tenets of Marxism and their applicability to current community problems. An interdisciplinary course for students with little previous experience in Marxist method. *M. Rotkin*

143. Wal-Mart Nation. ‡

Examines origins and growth of Wal-Mart stores as powerful guides to understanding dynamics of contemporary global political economy and, relatedly, the changing fortunes of global social classes. (Formerly course 123.) *M. Pudup*

145. Globalization and Its Discontents. S

Provides an overview of the origins and existing character of major institutions, structures, and dynamics of the global political economy. Examines some social consequences of neoliberalism as well as political responses to it. (Formerly course 168.) *J. Guthman*

149. Political Economy of Food and Agriculture.

Intensive reading course, focusing on key concepts in agrarian political economy and

historical development of world food system. *J. Guthman*

152. Mediating Desire. F

Considers the ways Third World voices and bodies are understood, performed, embraced, commodified, exploited, and rejected through representations. Uses representations of, by, and for the margins to engage theories of communication, identity, and representation. Creative final projects encouraged. (Formerly course 132.) (General Education Code(s): E.) *M. Ochoa*

153. In the Eye of 9/11: Film Culture and National Catastrophe. ‡

Explore national/international history through selected screenings/readings, attempting to understand how representation intersects with history and governance. Learn about earlier times of national panic or confusion to understand the antecedents/aftereffects of 9/11. (Formerly course 112.) *B. Rich*

154. The Rise and Fall of the New Queer Cinema. ‡

Documents/interprets the phenomenon "New Queer Cinema." Seeks to understand its precedents, preconditions (social, political, medical) leading to its explosive growth, and forces (economic, aesthetic, medical) spelling the end of the artistic movement, though its influence seemed simultaneously to spill into every televisual medium. (Formerly course 147.) (General Education Code(s): A.) *B. Rich*

156. Politics of Obesity. *

Critically examines the construction and representation of the so-called epidemic of obesity, the major explanations for the rise in obesity and the interventions they beget, and the implications of naming obesity as a problem. (Formerly course 145.) *J. Guthman*

157. Ageism and Activism. *

Introduces students to gerontology, the study of aging. Taking a multidisciplinary approach, critically examines the theories, stereotypes, and realities of worldwide demographic transition and considers the many interesting implications for organizing social and personal life. (Formerly course 111.) *A. Steiner*

160. Public Health. *

Examination of community activism to address health issues: examples are drawn from a range of concerns, e.g., environmental racism, prison conditions, feminist health matters, the AIDS epidemic, violence, and alcoholism. Special attention is given to the social frameworks of health and to the utilization of social and political strategies for improving community well-being. (Formerly course 110.) *The Staff*

161. Women's Health Activism. F

Examines concrete aspects of women's health in social and political contexts, including such factors as environmental and occupational health, the role of race and nationality, diverse sexualities and health, American medical care systems, and international comparisons and organizing approaches. (Formerly course 148.) *A. Steiner*

162. Community Gardens and Social Change. S

Examines history, theory, and practice of community gardening, emphasizing contemporary garden projects using the transformative power of direct contact with nature to effect social change. Aims include understanding the nonprofit sector's response to social problems with novel programs and practices. (Formerly course 117.) Enrollment limited to 50. *The Staff*

170. Social Documentation. ‡

Provides advanced understanding of history of social documentation and corresponding theories and practices of social documentation. Students also required to advance skills in a practical aspect of social documentation (i.e., video, photography, audio, oral history). (Formerly course 100S.) *D. Wellman*

172. Documentary and Technology: Objectivity, Subjectivity, and Truth. ‡

Intended to provide a solid grounding in the documentary (largely film/video), its approaches over time, changes in thinking about the role that the machine has played in the nature of the medium, and an opportunity to think critically about practice, community, use, and reception. (Formerly course 125.) Enrollment limited to 25. (General Education Code(s): A.) *B. Rich*

173. Alternative Approaches to Documentary Film. *

Examines selected alternative documentary movements and their corresponding social politics, including the British Documentary movement, Cinéma Vérité American Direct Cinema, feminist counter cinema, and the contemporary self-reflexive documentary explosion. (Formerly course 127.) (General Education Code(s): A.) *The Staff*

178. Broadcast Journalism (2 credits). *

Focuses on writing radio news. Through lectures, hands-on instruction, and written assignments, students acquire technical and aesthetic training in broadcast news reporting, writing, and audio production. (Formerly course 118.) Enrollment restricted to first-year students, sophomores, and juniors. Enrollment limited to 25. *The Staff*

179. Banana Slug News (2 credits). F,W,S

Become a member of the Banana Slug News production team, and collaborate in the creation of news programs. Through hands-on training and production, readings, and show critiques, students develop an understanding of broadcast journalism tools, practices, and ethics. Attendance at studio sessions and training is required outside regular class meeting times. (Formerly course 119.) Enrollment limited to 25. May be repeated for credit. *The Staff*

181. Juvenile Justice. *

Students are placed in a community-based program, at Juvenile Hall or with a deputy probation officer, to intern 8-10 hours each week. Includes a weekly seminar to discuss readings and presentations on the juvenile-justice system and internship experiences. Background checks and fingerprinting are required to participate in this course. A two-quarter commitment is preferred. (Formerly course 130.) Enrollment limited to 20. May be repeated for credit. *The Staff*

185. Gender and Sexuality in Latin America. W

Advanced topics in gender and sexuality in Latin America and Latina/o studies. Analyzes role of power, race, coloniality, national and transnational processes in the production and analysis of genders and sexualities. Materials include memoir, fiction, ethnography, social documentary and history. (Formerly course 152.) Prerequisite(s): Latin American and Latino Studies 80S or equivalent. (General Education Code(s): E.) *M. Ochoa*

189. Methods of Teaching Community Studies. F,W,S

Each student serves as a facilitator for small discussion groups in connection with core community studies courses. Facilitators complete course readings and meet with instructor as a group to discuss the teaching process. May not be counted toward upper-division major requirements. Prerequisite(s): prior course work in the major. *The Staff*

192. Directed Student Teaching. F,W,S

Teaching of a lower-division seminar, course 42, under faculty supervision. Students submit petition to sponsoring agency. Approval by the Committee on Educational Policy the prior quarter. *The Staff*

193. Field Study. F,W,S

Supervised off-campus study conducted under the immediate and direct guidance of a faculty supervisor. To be used primarily by upper-division students doing part-time off-campus study. Petitions may be obtained in the Community Studies Department Office. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

193F. Field Study (2 credits). F,W,S

Supervised off-campus study conducted under the immediate and direct guidance of a faculty supervisor. For upper-division students doing part-time off-campus study. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

193G. Field Study (3 credits). F,W,S

Supervised off-campus study conducted under the immediate and direct guidance of a faculty supervisor. For upper-division students doing part-time off-campus study. Petition must be obtained from the Community Studies Department. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

194. Analysis of Field Materials. W

A seminar for students who have completed a full-time field study. Devoted to the systematic analysis of field materials, integrating appropriate concepts and relevant literature, as well as utilizing the experience of other students. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, course 198. Enrollment restricted to community studies majors. (General Education Code(s): W.) *The Staff, D. Wellman, J. Guthman, D. Brundage, A. Steiner*

195A. Senior Thesis. F,W,S

Individual study with a faculty member to complete the senior thesis. Petitions may be obtained in the Community Studies Department Office. Students submit petition to sponsoring agency. *The Staff*

195B. Senior Thesis. F,W,S

Individual study with a faculty member to complete the senior thesis. Petitions may be obtained in the Community Studies Department Office. Students submit petition to sponsoring agency. *The Staff*

195C. Senior Thesis. F,W,S

Individual study with a faculty member to complete the senior thesis. Petitions may be obtained in the Community Studies Department Office. Students submit petition to sponsoring agency. *The Staff*

198. Independent Field Study. F

Provides for department-sponsored individual study programs off campus for which faculty supervision is not in person (e.g., supervision is by correspondence). Community studies majors are required to take 30 credits of field study. Students engaging in full-time field study must complete all application procedures as described in the Community Studies handbook. Students submit petition to sponsoring agency. Prerequisite(s): course 102 must be successfully completed before enrollment in this course. May be repeated for credit. *M. Rotkin, The Staff*

199. Tutorial. F,W,S

Advanced directed reading and research for the serious student. May be repeated for credit with consent of instructor. Petitions may be obtained in the Community Studies Department Office. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Advanced directed reading and research for the serious student. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

*Graduate Courses***209. Ethnographic Writing. ***

Fleshes out social analysis. Prepares students entering or returning from fieldwork to represent people, places, and social processes in writing. Employs writing exercises, in-class workshop, and review of ethnographic literature. Enrollment restricted to graduate students. Enrollment limited to 30. *M. Ochoa*

297. Independent Study. F,W,S

Either study related to a course being taken or a totally independent study. Designed for graduate students. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

[Changes to 2009-10 Catalog Highlighted](#) | [Faculty](#) | [Courses](#)

Program Description

Computer engineering focuses on the design, analysis, and application of computers and on their applications as components of systems. The UCSC Department of Computer Engineering sustains and strengthens its teaching and research program to provide students with inspiration and quality education in the theory and practice of computer engineering. The department offers B.S., M.S. and Ph.D degrees as well as two undergraduate minors. A combined B.S./M.S. program allows students to complete both degrees in five years.

Undergraduate Program Description

The UCSC B.S. in computer engineering prepares graduates for a rewarding career in engineering. UCSC computer engineering graduates will have a thorough grounding in the principles and practices of computer engineering and the scientific and mathematical principles upon which they are built; they will be prepared for further education (both formal and informal) and for productive employment in industry.

Because computer engineering is so broad, we offer five specialized concentrations for completing the program: systems programming, computer systems, robotics and control, networks, and digital hardware. Descriptions of these concentrations follow in the section on major requirements.

The Department of Computer Engineering offers two undergraduate minors, described after the B.S. program below. The minor in computer technology provides a broad look at computer hardware, computer software, engineering design, and the interface between computer technology and society. This minor is particularly recommended for students interested in the use of computer technology in another discipline or in K-12 teaching. The minor in computer engineering focuses on the technical aspects of computer hardware, embedded system, and software design. This minor is particularly recommended for students interested in the design of computer technology for use in another discipline.

The Department co-sponsors the B.S. in bioengineering with the Departments of Biomolecular Engineering, Electrical Engineering, and Molecular, Cell and Developmental Biology.

Beyond the extensive research, design, and development projects taking place within courses required for the major, many computer engineering students join faculty labs to take part in cutting-edge research. The department sponsors the summer undergraduate research fellowship in information technology (SURF-IT, <http://surf-it.soe.ucsc.edu>), as well as many other research opportunities. The department holds regular faculty-undergraduate lunches to discuss research and other issues of interest.

Many computer engineering students continue their education through the M.S. degree. The Department of Computer Engineering offers an accelerated combined B.S./M.S. degree in computer engineering that enables eligible undergraduates to move without interruption to the graduate program. Interested computer engineering majors should contact their adviser for more details. The graduate program of the Department of Computer Engineering also offers both the standard M.S. and the Ph.D. degrees.

The computer engineering B.S. program is accredited by the [Engineering Accreditation Commission of ABET](#).

Courses for Nonmajors

The Department of Computer Engineering offers course 1, *Hands-on Computer Engineering*: a two-credit laboratory course designed to introduce students to computer engineering via many short fun projects; course 3, *Personal Computer Concepts: Software and Hardware*, providing students an introductory course on the design and use of computers from an engineering viewpoint; and course 8, *Robot Automation: Intelligence through Feedback Control*. Other computer engineering courses of interest to nonmajors include course 12, *Computing Systems and Assembly Language*, an introductory course on computer systems, system software, and machine-level programming; course 80N, *Introduction to Networking and the Internet*, an introduction to technological services of the Internet; course 80U, *Ubiquitous and Mobile Computing*; course 80E, *Engineering Ethics*; and course 80A, *Universal Access: Disability, Technology, and Society*.

Computer Engineering Policies

Admissions Policy

Lower-division students will be accepted into the computer engineering major on completion of the SOE major declaration process during any of their first three quarters at UCSC. See <http://www.soe.ucsc.edu/advising/undergraduate/> for quarterly deadlines and mandatory major declaration workshops. Students considering the computer engineering major among other possibilities are strongly encouraged to take course 1 (2 credits) or course 8 within the first two quarters, and course 12 within the first three quarters.

After the first three quarters, petitions to declare the major are reviewed individually. Students must have completed at least five courses required for the major, and are expected to have a GPA among School of Engineering and Division of Physical and Biological Sciences courses (the SOE GPA) of 2.5. Progress in the major and ability to complete the major within campus limits will also be considered.

Transfer Students

Admission to the computer engineering major for transfer students is based on performance in all transferable science, math, and engineering courses. To be admitted, at least four courses required for the major must transfer for a student to be eligible for admission. Requirements are listed below. We recommend, in particular, substantial completion of the mathematics series, as well as programming or physics.

Advising

Every major and minor must have a computer engineering faculty adviser, assigned by the Baskin School of Engineering undergraduate advising office, and with that adviser must formulate a program of proposed course work that meets the major or minor requirements (see <http://www.soe.ucsc.edu/advising/undergraduate/>).

Honors in the Major

Computer engineering majors are considered for "Honors in the Major" and "Highest Honors in the Major" based on the School of Engineering GPA and on results of undergraduate research and other significant contributions to the School of Engineering. Students with an SOE GPA of 3.7, in most cases, receive Highest Honors. Students with an SOE GPA of 3.3, in most cases, receive Honors. Students with particularly significant accomplishments in undergraduate research or contributions to the School of Engineering may be considered with a lower SOE GPA. Computer engineering juniors and seniors may also be eligible for election to the UCSC chapter of Tau Beta Pi, the national engineering honor society founded in 1885.

Progress in the Major

Declared majors must complete courses required for the major in a manner that will enable graduation within campus limits. Students not making sufficient progress may be required to take a higher course load, complete courses during summer, or otherwise adjust their study plan, at the discretion of the faculty. Students who do not complete required changes to the study plan may be disqualified from the major.

Disqualification Policy

Please refer to the Engineering section of this catalog for the School of Engineering's Major Disqualification Policy.

Letter Grade Policy

The Computer Engineering Department requires letter grading for all courses applied to the degree with the exception of two lower-division courses, which students may elect to take Pass/No Pass. This policy includes courses required for the computer engineering major but sponsored by other departments.

School of Engineering Policies

Please refer to the School of Engineering section of the catalog for additional policies that apply to all School of Engineering programs.

Materials Fee and Miscellaneous Fees

Please see the section on fees under the School of Engineering.

Computer Engineering Major Requirements

All students in the computer engineering major take the same core courses, which give the fundamentals of programming and hardware design, supported by the physics and mathematics necessary to understand them. Students must complete all of the courses listed within their selected concentration, and they must complete the capstone sequence. The senior comprehensive requirement for computer engineering majors is satisfied by completion of the capstone course and the portfolio exit requirement.

Lower-Division Core Requirements

Applied Mathematics and Statistics 10, *Mathematical Methods for Engineers I*; or Mathematics 21 *Linear Algebra*
Applied Mathematics and Statistics 20, *Mathematical Methods for Engineers II*; or Mathematics 24 *Ordinary Differential Equations*
Computer Engineering 12/L, *Computer Systems and Assembly Language/Laboratory*
Computer Engineering 13/L *Computer Systems and C Programming/Laboratory* (recommended); or Computer Science 12A/L *Introduction to Programming/Laboratory*
Computer Science 12B/M *Introduction to Data Structures/Laboratory*
Computer Engineering 16 *Applied Discrete Mathematics*
Mathematics 19A-B *Calculus for Science, Engineering, and Mathematics*
Mathematics 23A *Multivariable Calculus*
Physics 5A/L *Introduction Physics I/Laboratory I*; or Physics 6A/L, *Introductory Physics I/Laboratory*;
Physics 5B/M *Introduction to Physics II/Laboratory*; or 6B/M, *Introductory Physics II/Laboratory*; or Computer Engineering 9 *Statics, Dynamics, and Biomechanics* (recommended for robotics concentration); .
Physics 5C/N *Introduction Physics III/Laboratory*; or Physics 6C/N, *Introductory Physics III/Laboratory*;
Computer Engineering 80E *Engineering Ethics*; or another approved ethics course. This course is required even for transfer students who have had their general education requirements waived.

Upper-Division Core Requirements

Computer Engineering 100/L *Logic Design/Laboratory*
Computer Engineering 107 *Mathematical Methods of Systems Analysis: Stochastic*
Computer Engineering 110 *Computer Architecture*
Computer Engineering 121/L *Microprocessor System Design/Laboratory*
Computer Engineering 185 *Technical Writing for Computer Engineers*
Computer Science 101 *Abstract Data Types*
Electrical Engineering 101/L *Introduction to Electronics/Laboratory*
Electrical Engineering 103 *Signals and Systems*

Concentrations

The following concentrations are specializations for the computer engineering student. Students must complete all of the courses listed within their selected concentration.

Systems Programming Concentration

The systems programming concentration focuses on software systems: courses include operating systems, compilers, software engineering, and advanced programming. Students finishing this concentration are very well prepared for building large software systems of all types. This concentration is the closest one to a computer science major-the main differences are that it does not require computer science theory courses, but because of the core computer engineering requirements, includes more hardware and electronics than a computer science bachelor's degree.

- Computer Science 111, *Introduction to Operating Systems*
- Computer Science 115, *Software Methodology*
- Elective: Upper-division elective from the approved list
- Any two of the following courses:

Computer Engineering 113, *Parallel and Concurrent Programming*
Computer Engineering 117/L, *Embedded Software/ Laboratory*
Computer Engineering 118/L, *Introduction to Mechatronics/Laboratory*

Computer Engineering 156/L *Network Programming/Laboratory*
(requires Computer Engineering 150)
Computer Science 104A *Fundamentals of Compiler Design I*
Computer Science 104B *Fundamentals of Compiler Design II*
Computer Science 116 *Software Design Project*

Computer Systems Concentration

The computer systems concentration provides a balance between software and hardware design. Students are prepared for a large variety of different design tasks, especially those requiring the integration of hardware and software systems, but may need further training for any particular specialization.

- Computer Engineering 125/L, *Logic Design with Verilog/Laboratory*
- Computer Science 111, *Introduction to Operating Systems*
- Elective: Two upper-division or graduate electives from approved list

Robotics and Control Concentration

This concentration covers the hardware, software, sensing, and control aspects of autonomous and embedded systems. Students receive training in the theory, design, and realization of complex systems such as mobile robots. The concentration emphasizes integration of embedded software with hardware systems that interact with the environment. The Computer Engineering 9 option, above, is highly recommended.

Three out of the following four courses:

- Computer Engineering 117/L, *Embedded Software/Laboratory*
- Computer Engineering 118/L, *Mechatronics/Laboratory*
- Computer Engineering 167/L, *Sensing and Sensor Technologies/Laboratory*
- Electrical Engineering 154, *Feedback Control Systems*

Elective (three possibilities):

- Completion of all four courses listed above,
- Computer Engineering 174, *Tools for Digital Systems Design Lab* and any approved
- School of Engineering upper-division elective; or
- Completion of one of the following courses

Computer Engineering 153, *Digital Signal Processing*
Applied Mathematics and Statistics 146, *Chaotic Dynamical Systems*
Applied Mathematics and Statistics 162, *Design and Analysis of Computer Simulation Experiments*
Computer Engineering 242, *Applied Feedback Control*
Computer Engineering 240, *Introduction to Linear Dynamical Systems*
Information Systems Management 206, *Optimization Theory and Applications*

Networks Concentration

The networks concentration focuses on communication between computers, covering both network hardware and protocols. Students finishing this concentration are well prepared for the design of wired and wireless network systems.

- Computer Engineering 150/L, *Introduction to Computer Networks/Laboratory*
- Computer Engineering 151, *Network Administration*; or 156/L, *Network Programming/Laboratory*
- Computer Science 111, *Introduction to Operating Systems*
- Electives: Upper-division or graduate elective from approved list.

Digital Hardware Concentration

The digital hardware concentration focuses on hardware design and includes more electronics than the other concentrations. Students finishing this concentration are well prepared for building hardware systems. This concentration is the closest one to an electronics major; the main differences are that it does not require as much electronics theory or analog electronic design, but because of the core computer engineering requirements, requires more software skills.

- Computer Engineering 125/L, *Logic Design with Verilog/Laboratory*
- Computer Engineering 173/L, *High-Speed Digital Design/Laboratory*
- Computer Engineering 174, *Introduction to the EDA Tools for PCB Design* (three credits)
- Electrical Engineering 171/L, *Analog Electronics/Laboratory*
- Elective: Upper-division or graduate elective from approved list

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication

(DC) requirement. The DC requirement will normally be met within one to three courses already required for the major. For detailed information on this major's DC requirement, consult your major adviser or see the 2010-11 general catalog.

Capstone Requirement

All computer engineering students complete a two-quarter capstone project sequence. Working with students from different concentrations and majors, students apply the skills and techniques from their own chosen concentration to a major design problem.

Computer Engineering 123A, *Computer Engineering Design Project I*

Computer Engineering 123B, *Computer Engineering Design Project II*; or 195, *Senior Thesis Research*

Exit Requirement

Students are required to submit a portfolio, exit survey, and exit interview. Students whose submissions are deemed inadequate, either in presentation or in content, may be required to revise and rewrite the portfolio or to complete an additional project course. The portfolios must be turned in electronically via <http://www.ce.ucsc.edu/node/20> by the last day of the quarter of graduation.

The portfolios will be reviewed quarterly by the computer engineering undergraduate committee and must include the following:

- A hardware-oriented project report
- A software-oriented project report
- A third project report of the student's selection
- A one- to two-page overview of the three projects, the student's contribution to them, and a narrative as specified at <http://www.ce.ucsc.edu/node/20>.

If a project report is associated with a course, it must be an upper-division or graduate course. One of the reports must be the result of a multi-person project. One of the reports must be the result of an individual project. One of the reports must be the result of the student's capstone design project.

Exit interviews are scheduled during the last week of the quarter.

Computer Engineering Major Planners

The following are two sample academic plans for students to complete during their first two years as preparation for the computer engineering major. Plan One is suggested guidelines for students who are committed to the major early in their academic career. Plan Two is for students who are considering the major. Students who take precalculus at UCSC, or who have little programming experience, are strongly advised to take course 8, *Robot Automation* in the fall quarter.

Plan One			
Year	Fall	Winter	Spring
1st (frsh)	MATH 19A CMPS 12A/L core course	MATH 19B CMPE 12/L CMPE 1 (2 credit) gen ed	CMPE 80E CMPS 12B/M gen ed
2nd (soph)	PHYS 5A/L AMS 10 gen ed	AMS 20 CMPE 16 gen ed	PHYS 5C/N CMPE 100/L CMPE 80E

Plan Two			
Year	Fall	Winter	Spring
1st (frsh)	MATH 3 (pre-calc) CMPE 8 CMPE 1 (2 credit) core course	MATH 19A CMPE 12/L gen ed	MATH 19B CMPE 13/L gen ed
2nd (soph)	PHYS 5A/L CMPS 12B/M	CMPE 100/L CMPE 9	PHYS 5C/N AMS 10

Computer Engineering Minor

The computer engineering minor provides a solid foundation in digital hardware, electronics, and computer software, as well as the prerequisite material in mathematics and physics. The minor is well-suited to students who wish to take part in the design of computer and embedded systems in any discipline. Computer Engineering 121/L, *Microprocessor System Design and Laboratory*, provides a capstone engineering design experience for students pursuing the computer engineering minor.

Computer Engineering Minor Requirements

Requirements for the minor in computer engineering are the following:

Applied Mathematics and Statistics 20A or 20, (Basic) *Mathematical Methods for Engineers II* (requires prerequisite); or Mathematics 24, *Ordinary Differential Equations*
 Computer Engineering 12/L, *Computer Systems and Assembly Language/Laboratory*
 Computer Engineering 16, *Applied Discrete Mathematics*
 Computer Engineering 100/L, *Logic Design/Laboratory*
 Computer Engineering 110, *Computer Architecture*
 Computer Engineering 118/L *Introduction to Mechatronics/Laboratory* or 121/L, *Microprocessor System Design/Laboratory*
 Computer Engineering 13/L, *Computer Systems and C. Programming* (recommended); or
 Computer Science 12A/L, *Introduction to Programming/Laboratory*
 Computer Science 12B/M, *Introduction to Data Structures/Laboratory*; or 13H/L, *Introduction to Programming and Data Structures (Honors)/ Laboratory*
 Computer Science 101, *Abstract Data Types*
 Electrical Engineering 101/L, *Introduction to Electronics/Laboratory*
 Mathematics 19A-B, *Calculus for Science, Engineering, and Mathematics*
 Physics 5A/L, *Introduction Physics I/Laboratory*; or Physics 6A/L, *Introductory Physics I/Laboratory*
 Physics 5C/N, *Introduction Physics III/Laboratory*; or Physics 6C/N, *Introductory Physics III/Laboratory*

Computer Technology Minor

The computer technology minor provides a broad exposure to computer hardware and software technology. The minor is intended for non-engineering majors who would like to develop an understanding of the design and use of computer technology. The minor may be particularly valuable for students who expect to use computer technology in another discipline, who are interested in K-12 teaching, or who have a general interest in computer technology and how it works. The minor includes a required capstone essay. The computer technology minor is not available to computer engineering, computer science, electrical engineering or information systems management majors, or to computer engineering minors.

Computer Technology Minor Requirements

Computer Engineering 1, *Hands-On Computer Engineering*
 Computer Engineering 8, *Robot Automation: Intelligence through Feedback Control*
 Computer Engineering 12/L, *Computer Systems and Assembly Language/Laboratory*
 Computer Engineering 100/L, *Logic Design/Laboratory*
 Computer Engineering 80N, *Networking and the Internet*; or 80U, *Ubiquitous and Mobile Computing*; or 150/L, *Introduction to Computer Networks/Laboratory* (requires pre-requisites)
 Computer Engineering 80E, *Engineering Ethics*; or 80A, *Universal Access: Disability, Technology, and Society*
 Information Systems Management 101, *Management of Technology Seminar* (1 credit)

Two of the following courses:

- Biomolecular Engineering 60/L, *Programming for Biologists and Biochemists/Laboratory*
- Computer Engineering 13/L, *Computer Systems and C Programming/Laboratory*
- Computer Science 5C, *Introduction to Programming in C/C++*
- Computer Science 5J, *Introduction to Programming in Java*
- Computer Science 5P, *Introduction to Programming Python*
- Computer Science 11, *Intermediate Programming*
- Computer Science 12A/L, *Introduction to Programming/Laboratory*
- Computer Science 12B/M, *Introduction to Data Structures/Laboratory*

Elective Requirement

Two five-credit upper-division School of Engineering electives and any associated laboratories. Only one is required if Computer Engineering 150/L is used in satisfying the requirements above.

Capstone Requirement

194F, Group Tutorial (2 credits). A group tutorial completed during the winter quarter prior to graduation considering the impact of computer technology. Students will complete papers considering aspects of the impact of computer technology on the students' discipline. Contact the School of Engineering Undergraduate Advising office during fall quarter to join this course.

B.S./M.S. Undergraduate Program

The Department of Computer Engineering offers a combined bachelor and master of science degree program in computer engineering, providing the opportunity to earn both degrees in five years. The B.S./M.S. program offers a competitive edge to students who are completing their undergraduate degree at UCSC, by enabling those with advanced preparation to move directly from the undergraduate to the graduate program. The program assists qualified enrolled students with a simplified graduate application process and makes it possible to complete an M.S. degree with just seven courses beyond the B.S. program.

The program prepares students for engineering positions in industry, and it is particularly attractive for undergraduate students planning to engage in engineering research in industry or academia. The School of Engineering has many opportunities for undergraduate research, especially for honors-level students. B.S./M.S. students can continue their undergraduate research projects with the same research group. Upon advancement to graduate standing, B.S./M.S. students are eligible for support as graduate research assistants. The B.S./M.S. program provides knowledge and training in important and contemporary areas of computer engineering.

Particularly motivated B.S./M.S. students can complete the entire program in 14 quarters (or fewer with Advanced Placement credit); however, advance planning is essential. Interested students should contact the department and their faculty adviser early in their college career—no later than the start of their junior year. B.S./M.S. students retain undergraduate status until the completion of all undergraduate requirements, but may begin graduate course work in advance of graduate standing.

Admission to the B.S./M.S. Program

The undergraduate degree requirements are the same as those for other computer engineering majors; however, the B.S./M.S. program capitalizes on graduate-level courses that may apply toward both degree requirements. B.S./M.S. candidates may apply (at most) two graduate courses taken as undergraduates toward both the M.S. degree and B.S. degree electives. At the time graduate status is achieved, no more than three graduate courses taken as an undergraduate may count toward the nine courses required for the M.S. degree. B.S./M.S. students may not apply undergraduate courses toward the M.S. degree.

Admission to the B.S./M.S. program is by formal application. Undergraduate applicants seeking admission as graduate students generally apply in their last quarter of junior standing. To qualify, applicants must have completed the following:

- Computer Engineering 100/L, *Logic Design/Laboratory*
- Computer Engineering 110, *Computer Architecture*; or 121/L, *Microprocessor System Design/Laboratory*
- Computer Science 101, *Abstract Data Types*
- Electrical Engineering 101/L, *Introduction to Electronics/Laboratory*

At least one additional upper-division School of Engineering course

Applications will be considered until the student's first quarter of senior standing. This extension of the application period into the first quarter of the senior year is specifically geared to enable eligible transfer students to complete the courses required for admission.

Students who cannot meet the B.S./M.S. application requirements or who are not admitted into the program are encouraged to apply for admission to the standard M.S. or Ph.D. program during their senior year.

Additional information about this program can be found on the department's web pages at <http://www.ce.ucsc.edu/academics/undergraduate/bs-ms>

Graduate Programs

M.S. and Ph.D. Degree Programs

The graduate program in computer engineering accepts students for both the M.S. and the Ph.D. degrees. Graduate students in this program establish a solid foundation in computer algorithms and architectures and then proceed to a thorough study of recent developments in their selected area of specialization. This provides the basis for the M.S. degree and Ph.D. thesis work. The major areas of research concentration in computer engineering at UCSC are networks; embedded and autonomous systems; computer systems design and computer-aided design; and sensing and

interaction.

The computer engineering program benefits from a close relationship with, among others, the computer science and electrical engineering programs at UCSC and ties to industry in the Silicon Valley and Monterey Bay areas. Graduates of the program are prepared for careers in teaching and research as well as for positions in industrial research and development.

While in the program, most graduate students are supported as research assistants on faculty-sponsored projects or as teaching assistants for undergraduate courses.

Additional information on the computer engineering M.S. and Ph.D. degrees, including degree requirements and applications for admission, can be found on the department's web pages at <http://www.ce.ucsc.edu/academics/graduate/requirements>.

Requirements for the Master's Degree

Base Requirement

In their first year, graduate students must show proficiency in three fundamental subjects: 1. data structures; 2. computer architecture; and 3. one of the following three subjects—logic design, circuits, or software systems. Proficiency can be demonstrated by either completing one of the associated undergraduate courses, by establishing that an equivalent undergraduate course has been completed elsewhere, or by passing the final exam (or project when deemed appropriate by the faculty responsible) of an associated course. Students should obtain a computer engineering base worksheet for the list of associated courses and instructions on fulfilling this requirement.

The base requirement must be met by all graduate students (both M.S. and Ph.D.) by the end of the spring quarter of their first year in the program.

Course Requirements

Each student is required to complete a total of 48 credits. The course work must include

Computer Engineering 200, *Research and Teaching in Computer Science and Engineering*

Computer Science 201, *Analysis of Algorithms*

Computer Engineering 202, *Computer Architecture*

Up to 10 credits of Computer Engineering 297, *Independent Study or Research*; or Computer Engineering 299, *Thesis Research*

Up to 10 credits of either graduate courses (not seminars) in related disciplines outside the School of Engineering (requires adviser and computer engineering graduate committee approval) or upper-division undergraduate courses when necessary to strengthen the student's preparation for graduate studies (requires adviser approval)

All remaining credits must be graduate elective courses from computer engineering's list of approved graduate courses (available online or from the department)

In addition, the selection of graduate elective courses must show breadth by including a minimum of five credits in each of two categories from computer engineering's list of approved graduate electives. Computer Science 201 and Computer Engineering 202 cannot be used to satisfy the breadth requirement.

At least half of the credits from the graduate-level courses must be computer engineering graduate courses.

Thesis

Completion of a master's thesis is required for award of the master's degree. To fulfill this requirement, the student must submit a written proposal to a faculty member, usually by the third academic quarter. By accepting the proposal, the faculty member becomes the thesis adviser for the proposed thesis. In consultation with the adviser, the student must form a master's thesis reading committee with at least two additional faculty members, each of whom is provided a copy of the proposal. The student is required to present an expository talk on the thesis research, and the final thesis must be accepted by the review committee before the award of the master of science degree.

Requirements for the Ph.D. Degree

Base Requirement

In their first year, graduate students must show proficiency in three of five fundamental subjects: 1. data structures; 2. computer architecture; and 3. one of the following three subjects—logic design, circuits, and software systems. Proficiency can be demonstrated by either completing one of the associated undergraduate courses, by establishing that an equivalent undergraduate course has been completed elsewhere, or by passing the final exam (or project when deemed appropriate by the faculty responsible) of an associated course. Students should obtain a computer engineering base work sheet for the list of associated courses and instructions on fulfilling this requirement.

The base requirement must be met by all graduate students (both M.S. and Ph.D.) by the end of the spring quarter of the first year in the program.

Course Requirements

A Ph.D. student is required to take a total of 58 credits of graduate courses, which must consist of

Computer Engineering 200, *Research and Teaching in Computer Science and Engineering*;
Computer Science 201, *Analysis of Algorithms*;
Computer Engineering 202, *Computer Architecture*;
A minimum of 20 credits of graduate computer engineering courses from computer engineering's list of approved graduate courses (available online or from the department);
Up to 10 credits of Computer Engineering 297, *Independent Study or Research*; or Computer Engineering 299, *Thesis Research*;
Up to 10 credits of graduate courses (not seminars) in related disciplines outside the School of Engineering (requires adviser and computer engineering graduate committee approval);
All remaining credits must be graduate elective courses from computer engineering's list of approved graduate courses.

The selection of elective courses must show breadth by including either 10 credits in each of two categories or five credits in each of three separate categories from computer engineering's list of approved graduate courses. Computer Science 201 and Computer Engineering 202 cannot be used to satisfy the breadth requirement.

Course selection should form a coherent plan of study and requires adviser approval.

Undergraduate courses may not be used to satisfy Ph.D. course requirements.

Ph.D. students who have satisfied the requirements for the master's degree are eligible to receive a master's degree.

Examinations and Dissertation

To continue in the Ph.D. program, students must pass a preliminary examination in their chosen research area by the end of their third year. Preliminary examinations are held during the first three weeks of each spring quarter; students must petition the computer engineering graduate committee for an examination in their chosen area two weeks before the end of winter quarter. Examination committees consist of four faculty members, two chosen by the student and two by the computer engineering graduate committee. The format of this oral examination is up to the examination committee; the examination will typically evaluate both general knowledge of the chosen area and specific understanding of selected technical papers. The preliminary examination requirement is waived for students who advance to candidacy by the end of their third year.

Each student must write a Ph.D. dissertation. The dissertation must show the results of in-depth research, by an original contribution of significant knowledge, and include material worthy of publication. As the first step, a student must submit a written dissertation proposal to a School of Engineering faculty member. By accepting the proposal, the faculty member becomes the student's dissertation supervisor. The student may choose a faculty member outside the Computer Engineering Department within the School of Engineering as adviser only with approval from the computer engineering graduate committee. The dissertation proposal is publicly and formally presented in an oral qualifying examination given by a qualifying exam committee, approved by the computer engineering graduate committee and the graduate council. The student must submit his or her written dissertation proposal to all members of the qualifying exam committee and the graduate assistant one month in advance of the examination.

Students are advanced to candidacy after they have completed the course requirements, passed both the preliminary and qualifying examinations (or just the qualifying examination if passed prior to the end of the student's third year in the program), cleared all Incomplete grades from their records, have an appointed dissertation reading committee, and paid the filing fee. Students who have not advanced to candidacy by the end of their fourth year will be placed on academic probation.

Each Ph.D. candidate must submit the completed dissertation to a reading committee at least one month prior to the dissertation defense. The appointment of the dissertation reading committee is made immediately after the qualifying exam and is necessary for advancing to candidacy. The candidate must present his or her research results in a public seminar sponsored by the dissertation supervisor. The seminar is followed by a defense of the dissertation to the reading committee and attending faculty who will then decide whether the dissertation is acceptable or requires revision. Successful completion of the dissertation fulfills the final academic requirement for the Ph.D. degree.

Transfer Credit

Up to three School of Engineering courses fulfilling the degree requirements of either the M.S. or Ph.D. degrees may be taken before beginning the graduate program through the concurrent enrollment program.

M.S. students who have previously successfully completed graduate-level classes in a related field at another institution may substitute courses from their previous institution with the approval of the graduate committee. The number of courses that can be substituted is limited so that, in all cases, the students must complete a minimum of four graduate-level classes during their matriculation at UCSC. These classes must be graduate-level classes from the [list of approved graduate courses](http://www.ce.ucsc.edu/academics/graduate/approved-courses). <http://www.ce.ucsc.edu/academics/graduate/approved-courses>
Petitions for course substitutions should be submitted along with the transcript from the other institution or UCSC extension. For courses taken at other institutions copies of the syllabi, exams, and other course work should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UCSC.

Ph.D. students who have previously earned a master's degree or have successfully completed graduate-level classes as regular students in a graduate program in a related field at another institution may apply for a modified program of course requirements taking into account their previous coursework. Such a modified program should specify the coursework that will be completed at UCSC, which must include no fewer than four courses from the [list of approved graduate courses](http://www.ce.ucsc.edu/academics/graduate/approved-courses). These four courses must be taken while in the graduate program at UCSC. Application for a modified program of course requirements must be made within the first year of graduate study at UCSC, and will be reviewed by the graduate director and a committee of three faculty members approved by the graduate director. The application should be accompanied by copies of the syllabi, exams, and other course work, as well as the relevant transcript from the other institution. Interviews with the committee members may be required to properly assess the coursework.

Acceptance of prior work for course transfer and modified programs of study is at the discretion of the department.

Review of Progress

Each year, the computer engineering faculty reviews the progress of every student in the graduate program. Students not making adequate progress towards completion of degree requirements (see [UCSC Graduate Student Handbook](#) for policy on satisfactory academic progress) are subject to dismissal from the program. Students with academic deficiencies may be required to take additional courses. Full-time students with no academic deficiencies are normally expected to complete the degree requirements at the rate of at least two courses per quarter. Full-time students must complete Computer Science 201 and Computer Engineering 202 within two years and normally must complete all course requirements within two years for the M.S. and three years for the Ph.D. program.

Students receiving two or more grades of U (Unsatisfactory) or below B in School of Engineering courses are not making adequate progress and will be placed on academic probation for the following three quarters of registered enrollment. Withdrawing or taking a leave of absence does not count as enrollment. Part-time enrollment is counted as a half of a quarter of enrollment. Should any computer engineering graduate student fail a School of Engineering course while on probation, the Computer Engineering Department may request the graduate dean to dismiss that student from the graduate program. If, after being removed from probation, the student again fails a School of Engineering course, he or she will return immediately to academic probation.

Graduate students experiencing circumstances or difficulties that impact their academic performance should contact their adviser and the graduate director immediately. Students may appeal their dismissal.

Computer Engineering

[2009-10 update to the *General Catalog*, changes highlighted]

Baskin School of Engineering
335 Baskin Engineering Building
(831) 459-2158
<http://www.soe.ucsc.edu>

Program Description

Computer engineering focuses on the design, analysis, and application of computers and on their applications as components of systems. The UCSC Department of Computer Engineering sustains and strengthens its teaching and research program to provide students with inspiration and quality education in the theory and practice of computer engineering. The department offers B.S., M.S. and Ph.D degrees as well as two undergraduate minors. A combined B.S./M.S. program allows students to complete both degrees in five years.

Undergraduate Program Description

The UCSC B.S. in computer engineering prepares graduates for a rewarding career in engineering. UCSC computer engineering graduates will have a thorough grounding in the principles and practices of computer engineering and the scientific and mathematical principles upon which they are built; they will be prepared for further education (both formal and informal) and for productive employment in industry.

Because computer engineering is so broad, we offer five specialized concentrations for completing the program: systems programming, computer systems, robotics and control, networks, and digital hardware. Descriptions of these concentrations follow in the section on major requirements.

The Department of Computer Engineering offers two undergraduate minors, described after the B.S. program below. The minor in computer technology provides a broad look at computer hardware, computer software, engineering design, and the interface between computer technology and society. This minor is particularly recommended for students interested in the use of computer technology in another discipline or in K-12 teaching. The minor in computer engineering focuses on the technical aspects of computer hardware, embedded system, and software design. This minor is particularly recommended for students interested in the design of computer technology for use in another discipline.

The Department co-sponsors the B.S. in bioengineering with the Departments of Biomolecular Engineering, Electrical Engineering, and Molecular, Cell and Developmental Biology.

Beyond the extensive research, design, and development projects taking place within courses required for the major, many computer engineering students join faculty labs to take part in cutting-edge research. The department sponsors the summer undergraduate research fellowship in information technology (SURF-IT, <http://surf-it.soe.ucsc.edu>), as well as many other research opportunities. The department holds regular faculty-undergraduate lunches to discuss research and other issues of interest.

Many computer engineering students continue their education through the M.S. degree. The Department of Computer Engineering offers an accelerated combined B.S./M.S. degree in computer engineering that enables eligible undergraduates to move without interruption to the graduate program. Interested computer engineering majors should contact their adviser for more details. The graduate program of the Department of Computer Engineering also offers both the standard M.S. and the Ph.D. degrees.

The computer engineering B.S. program is accredited by the Engineering Accreditation Commission of ABET.

Courses for Nonmajors

The Department of Computer Engineering offers course 1, *Hands-on Computer Engineering*: a two-credit laboratory course designed to introduce students to computer engineering via many short fun projects; course 3, *Personal Computer Concepts: Software and Hardware*, providing students an introductory course on the design and use of computers from an engineering viewpoint; and course 8, *Robot Automation: Intelligence through Feedback Control*. Other computer engineering courses of interest to nonmajors include course 12, *Computing Systems and Assembly Language*, an introductory course on computer systems, system software, and machine-level programming; course 80N, *Introduction to Networking and the Internet*, an introduction to technological services of the Internet; course 80U, *Ubiquitous and Mobile Computing*; course 80E, *Engineering Ethics*; and course 80A, *Universal Access: Disability, Technology, and Society*.

Computer Engineering Policies

Admissions Policy

Lower-division students will be accepted into the computer engineering major on completion of the SOE major declaration process during any of their first three quarters at UCSC. See <http://www.soe.ucsc.edu/advising/undergraduate/> for quarterly deadlines and mandatory major declaration workshops. Students considering the computer engineering major among other possibilities are strongly encouraged to take course 1 (2 credits) or course 8 within the first two quarters, and course 12 within the first three quarters.

After the first three quarters, petitions to declare the major are reviewed individually. Students must have completed at least five courses required for the major, and are expected to have a GPA among School of Engineering and Division of Physical and Biological Sciences courses (the SOE GPA) of 2.5. Progress in the major and ability to complete the major within campus limits will also be considered.

Transfer Students

Admission to the computer engineering major for transfer students is based on performance in all transferable science, math, and engineering courses. To be admitted, at least four courses required for the major must transfer for a student to be eligible for admission. Requirements are listed below. We recommend, in particular, substantial completion of the mathematics series, as well as programming or physics.

Advising

Every major and minor must have a computer engineering faculty adviser, assigned by the Baskin School of Engineering undergraduate advising office, and with that adviser must formulate a program of proposed course work that meets the major or minor requirements (see <http://www.soe.ucsc.edu/advising/undergraduate/>).

Honors in the Major

Computer engineering majors are considered for "Honors in the Major" and "Highest Honors in the Major" based on the School of Engineering GPA and on results of undergraduate research and other significant contributions to the School of Engineering. Students with an SOE GPA of 3.7, in most cases, receive Highest Honors. Students with an SOE GPA of 3.3, in most cases, receive Honors. Students with particularly significant accomplishments in undergraduate research or contributions to the School of Engineering may be considered with a lower SOE GPA. Computer engineering juniors and seniors may also be eligible for election to the UCSC chapter of Tau Beta Pi, the national engineering honor society founded in 1885.

Progress in the Major

Declared majors must complete courses required for the major in a manner that will enable graduation within campus limits. Students not making sufficient progress may be required to take a higher course load, complete courses during summer, or otherwise adjust their study plan, at the discretion of the faculty. Students who do not complete required changes to the study plan may be disqualified from the major.

Disqualification Policy

Please refer to the Engineering section of this catalog for the School of Engineering's Major Disqualification Policy.

Letter Grade Policy

The Computer Engineering Department requires letter grading for all courses applied to the degree with the exception of two lower-division courses, which students may elect to take Pass/No Pass. This policy includes courses required for the computer engineering major but sponsored by other departments.

School of Engineering Policies

Please refer to the School of Engineering section of the catalog for additional policies that apply to all School of Engineering programs.

Materials Fee and Miscellaneous Fees

Please see the section on fees under the School of Engineering.

Computer Engineering Major Requirements

All students in the computer engineering major take the same core courses, which give the fundamentals of programming and hardware design, supported by the physics and mathematics necessary to understand them. Students must complete all of the courses listed within their selected concentration, and they must complete the capstone sequence. The senior comprehensive requirement for computer engineering majors is satisfied by completion of the capstone course and the portfolio exit requirement.

Lower-Division Core Requirements

Applied Mathematics and Statistics 10, *Mathematical Methods for Engineers I*; or Mathematics 21 *Linear Algebra*

Applied Mathematics and Statistics 20, *Mathematical Methods for Engineers II*; or Mathematics 24 *Ordinary Differential Equations*

Computer Engineering 12/L, *Computer Systems and Assembly Language/Laboratory*

Computer Engineering 13/L *Computer Systems and C Programming/Laboratory* (recommended); or Computer Science 12A/L *Introduction to Programming/Laboratory*; ~~and~~

Computer Science 12B/M *Introduction to Data Structures/Laboratory*; ~~or Computer Engineering 13H *Introduction to Programming and Data Structures (Honors)*~~

Computer Engineering 16 *Applied Discrete Mathematics*

~~Electrical Engineering 10170/L *Introduction to Electronics/Laboratory*~~

~~Computer Engineering 103 *Signals and Systems*~~

Mathematics 19A-B *Calculus for Science, Engineering, and Mathematics*

Mathematics 23A *Multivariable Calculus*

Physics 5A/L *Introduction Physics /Laboratory I*; or Physics 6A/L, *Introductory Physics I/Laboratory*;
Physics 5B/M *Introduction to Physics II/Laboratory*; or 6B/M, *Introductory Physics II/Laboratory*; or
Computer Engineering 9 *Statics, Dynamics, and Biomechanics* (recommended for robotics
concentration); .

Physics 5C/N *Introduction Physics III/Laboratory*; or Physics 6C/N, *Introductory Physics
III/Laboratory*;

~~Physics 5B/M *Introduction to Physics II/Laboratory*; or 6B/M, *Introductory Physics II/Laboratory*; or
Computer Engineering 9 *Statics, Dynamics, and Biomechanics* (recommended for robotics
concentration); or an upper division elective from the approved list.~~

Computer Engineering 80E *Engineering Ethics*; or another approved ethics course. This course is
required even for transfer students who have had their general education requirements waived.

Upper-Division Core Requirements

Computer Engineering 100/L *Logic Design/Laboratory*

Computer Engineering 107 *Mathematical Methods of Systems Analysis: Stochastic*

Computer Engineering 110 *Computer Architecture*

Computer Engineering 121/L *Microprocessor System Design/Laboratory*

~~Computer Engineering 110 *Computer Architecture*~~

~~Computer Engineering 107 *Mathematical Methods of Systems Analysis: Stochastic*~~

Computer Engineering 185 *Technical Writing for Computer Engineers*

Computer Science 101 *Abstract Data Types*

Electrical Engineering 101/L *Introduction to Electronics/Laboratory*

~~Electrical~~Electrical Engineering 103 *Signals and Systems*

Concentrations

The following concentrations are specializations for the computer engineering student. Students must
complete all of the courses listed within their selected concentration.

Systems Programming Concentration

The systems programming concentration focuses on software systems: courses include operating systems,
compilers, software engineering, and advanced programming. Students finishing this concentration are
very well prepared for building large software systems of all types. This concentration is the closest one to
a computer science major-the main differences are that it does not require computer science theory
courses, but because of the core computer engineering requirements, includes more hardware and
electronics than a computer science bachelor's degree.

Computer Science 111, *Introduction to Operating Systems*

Computer Science 115, *Software Methodology*

Elective: Upper-division elective from the approved list

Any two of the following courses:

Computer Engineering 113, *Parallel and Concurrent Programming*

Computer Engineering 117/L, *Embedded Software/ Laboratory*

Computer Engineering 118/L, *Introduction to Mechatronics/Laboratory*

Computer Engineering 156/L *Network Programming/Laboratory* (requires Computer Engineering
150)

Computer Science 104A *Fundamentals of Compiler Design I*

Computer Science 104B *Fundamentals of Compiler Design II*

Computer Science 116 *Software Design Project*

Computer Systems Concentration

The computer systems concentration provides a balance between software and hardware design. Students
are prepared for a large variety of different design tasks, especially those requiring the integration of
hardware and software systems, but may need further training for any particular specialization.

Computer Engineering 125/L, *Logic Design with Verilog/Laboratory*; ~~or 126/L, *Advanced Logic
Design/Laboratory*~~

Computer Science 111, *Introduction to Operating Systems*

Elective: Two upper-division or graduate electives from approved list

Robotics and Control Concentration

This concentration covers the hardware, software, sensing, and control aspects of autonomous and
embedded systems. Students receive training in the theory, design, and realization of complex systems
such as mobile robots. The concentration emphasizes integration of embedded software with hardware
systems that interact with the environment. **The Computer Engineering 9 option, above, is highly
recommended.**

Three out of the following four courses:

Computer Engineering 117/L, *Embedded Software/Laboratory*

Computer Engineering 118/L, *Mechatronics/Laboratory*

Computer Engineering 167/L, *Sensing and Sensor Technologies/Laboratory*

Electrical Engineering 154, *Feedback Control Systems*

Elective (three possibilities):

Completion of all four courses listed above,

Computer Engineering 174, *Tools for Digital Systems Design Lab* and any approved School of Engineering upper-division elective; or

Completion of one of the following courses

Computer Engineering 153, *Digital Signal Processing*

Applied Mathematics and Statistics 146, *Chaotic Dynamical Systems*

Applied Mathematics and Statistics 162, *Design and Analysis of Computer Simulation Experiments*

Computer Engineering 242, *Applied Feedback Control*

Computer Engineering 240, *Introduction to Linear Dynamical Systems*

Information Systems Management 206, *Optimization Theory and Applications*

Networks Concentration

The networks concentration focuses on communication between computers, covering both network hardware and protocols. Students finishing this concentration are well prepared for the design of wired and wireless network systems.

Computer Engineering 150/L, *Introduction to Computer Networks/Laboratory*

Computer Engineering 151, *Network Administration*; or 156/L, *Network Programming/Laboratory*

Computer Science 111, *Introduction to Operating Systems*

Electives: Upper-division or graduate elective from approved list.

Digital Hardware Concentration

The digital hardware concentration focuses on hardware design and includes more electronics than the other concentrations. Students finishing this concentration are well prepared for building hardware systems. This concentration is the closest one to an electronics major; the main differences are that it does not require as much electronics theory or analog electronic design, but because of the core computer engineering requirements, requires more software skills.

Computer Engineering 125/L, *Logic Design with Verilog/Laboratory*; ~~or 126/L, *Advanced Logic Design/Laboratory*~~

Computer Engineering 173/L, *High-Speed Digital Design/Laboratory*

Computer Engineering 174, *Introduction to the EDA Tools for PCB Design* (three credits)

Electrical Engineering 171/L, *Analog Electronics/Laboratory*

Elective: Upper-division or graduate elective from approved list

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement will normally be met within one to three courses already required for the major. For detailed information on this major's DC requirement, consult your major adviser or see the 2010-11 general catalog.

Capstone Requirement

All computer engineering students complete a two-quarter capstone project sequence. Working with students from different concentrations and majors, students apply the skills and techniques from their own chosen concentration to a major design problem.

Computer Engineering 123A, *Computer Engineering Design Project I*

Computer Engineering 123B, *Computer Engineering Design Project II*; or 195, *Senior Thesis Research*

~~Portfolio~~ Exit Requirement

Students are required to submit a portfolio, ~~and~~ exit survey, and exit interview. Students whose submissions are deemed inadequate, either in presentation or in content, may be required to revise and rewrite the portfolio or to complete an additional project course. The portfolios must be turned in electronically via <http://www.ce.ucsc.edu/node/20>

~~<http://www.soc.ucsc.edu/programs/ce/undergraduate/portfolio.php> at least seven days before the end of instruction in the quarter of graduation~~ by the last day of the quarter of graduation.

The portfolios will be reviewed quarterly by the computer engineering undergraduate committee and must include the following:

A hardware-oriented project report

A software-oriented project report

A third project report of the student's selection

A one- to two-page overview of the three projects, the student's contribution to them, and a narrative as specified at <http://www.ce.ucsc.edu/node/20>

~~<http://www.soc.ucsc.edu/programs/ce/undergraduate/portfolio.php>.~~

~~An exit survey~~

If a project report is associated with a course, it must be an upper-division or graduate course. One of the reports must be the result of a multi-person project. One of the reports must be the result of an individual project. One of the reports must be the result of the student's capstone design project.

Exit interviews are scheduled during the last week of the quarter.

Computer Engineering Major Planners

The following are two sample academic plans for students to complete during their first two years as preparation for the computer engineering major. Plan One is suggested guidelines for students who are committed to the major early in their academic career. Plan Two is for students who are considering the major. Students who take precalculus at UCSC, or who have little programming experience, are strongly advised to take course 8, *Robot Automation* in the fall quarter.

Plan One			
Year	Fall	Winter	Spring
1st (frsh)	Math 19A CMPE SCmp s 12A/L core course	Math 19B CMPE SCmp e 12/L CMPE SCmp e 1 (2 credit) gen ed	CMPE SCmp e 80E CMPS CMps s 12B/M gen ed
2nd (soph)	Phys 5A/L AMS 10 gen ed	AMS 20 CMPE SCmp e 16 gen ed	Phys 5C/N CMPE SCmp e 100/L CMpe - CMPE 80E

Plan Two			
Year	Fall	Winter	Spring
1st (frsh)	Math 3 (pre-calc) CMPE SCmp e 8 CMPE SCmp e 1 (2 credit) core course	Math 19A CMPE SCmp e 12/L gen ed	Math 19B CMPE SCmp s 13/L gen ed
2nd (soph)	Phys 5A/L CMPS CMps s 12B/M gen ed	CMPE SCmp e 100/L CMPE SCmp e 946 gen ed	Phys 5C/N AMS 10 CMPE SCmp e 80E

Computer Engineering Minor

The computer engineering minor provides a solid foundation in digital hardware, electronics, and computer software, as well as the prerequisite material in mathematics and physics. The minor is well-suited to students who wish to take part in the design of computer and embedded systems in any discipline. Computer Engineering 121/L, *Microprocessor System Design and Laboratory*, provides a capstone engineering design experience for students pursuing the computer engineering minor.

Computer Engineering Minor Requirements

Requirements for the minor in computer engineering are the following:

Applied Mathematics and Statistics 20A or 20, (Basic) *Mathematical Methods for Engineers II* (requires prerequisite); or Mathematics 24, *Ordinary Differential Equations*

Computer Engineering -12/L, *Computer Systems and Assembly Language/Laboratory*

Computer Engineering 16, *Applied Discrete Mathematics*

Computer Engineering -100/L, *Logic Design/Laboratory*

Computer Engineering -110, *Computer Architecture*

~~Computer Engineering 118/L, *Introduction to Mechatronics/Laboratory*; or 121/L, *Microprocessor System Design/Laboratory*~~

~~Computer Engineering 121/L, *Microprocessor System Design/Laboratory*~~

Computer Engineering 13/L, *Computer Systems and C. Programming* (recommended); or

Computer Science 12A/L, *Introduction to Programming/Laboratory*

Computer Science 12B/M, *Introduction to Data Structures/Laboratory*; or 13H/L, *Introduction to Programming and Data Structures (Honors)/ Laboratory*

Computer Science 101, *Abstract Data Types*

Electrical Engineering ~~101~~~~70~~/L, *Introduction to Electronics/Laboratory*

Mathematics 19A-B, *Calculus for Science, Engineering, and Mathematics*

Physics 5A/L, *Introduction Physics I/Laboratory*; or Physics 6A/L, *Introductory Physics I/Laboratory*

Physics 5C/N, *Introduction Physics III/Laboratory*; or Physics 6C/N, *Introductory Physics III/Laboratory*

~~At most, two of the upper division core courses and the lower division electrical engineering course may be used to satisfy the requirements of another major or minor degree.~~

Computer Technology Minor

The computer technology minor provides a broad exposure to computer hardware and software technology. The minor is intended for non-engineering majors who would like to develop an understanding of the design and use of computer technology. The minor may be particularly valuable for students who expect to use computer technology in another discipline, who are interested in K-12 teaching, or who have a general interest in computer technology and how it works. The minor includes a required capstone essay.

~~The computer technology minor is not available to computer engineering, computer science, electrical engineering, or information systems management majors, or to computer engineering minors.~~

Computer Technology Minor Requirements

Computer Engineering 1, *Hands-On Computer Engineering*

Computer Engineering 8, *Robot Automation: Intelligence through Feedback Control*

Computer Engineering 12/L, *Computer Systems and Assembly Language/Laboratory*

Computer Engineering 100/L, *Logic Design/Laboratory*

Computer Engineering 80N, *Networking and the Internet*; or 80U, *Ubiquitous and Mobile Computing*; or 150/L, *Introduction to Computer Networks/Laboratory* (requires pre-requisites)

Computer Engineering 80E, *Engineering Ethics*; or 80A, *Universal Access: Disability, Technology, and Society*

Information Systems Management 101, *Management of Technology Seminar* (1 credit)

Two of the following courses:

Biomolecular Engineering 60/L, *Programming for Biologists and Biochemists/Laboratory*

Computer Engineering 13/L, *Computer Systems and C Programming/Laboratory*

Computer Science 5C, *Introduction to Programming in C/C++*

Computer Science 5J, *Introduction to Programming in Java*

Computer Science 5P, *Introduction to Programming Python*

Computer Science 11, *Intermediate Programming*

Computer Science 12A/L, *Introduction to Programming/Laboratory*

Computer Science 12B/M, *Introduction to Data Structures/Laboratory*

Elective Requirement

Two five-credit upper-division School of Engineering electives and any associated laboratories. Only one is required if Computer Engineering 150/L is used in satisfying the requirements above.

Capstone Requirement

194F, Group Tutorial (2 credits). A group tutorial completed during the winter quarter prior to graduation considering the impact of computer technology. Students will complete papers considering aspects of the impact of computer technology on the students' discipline. Contact the School of Engineering Undergraduate Advising office during fall quarter to join this course.

B.S./M.S. Undergraduate Program

The Department of Computer Engineering offers a combined bachelor and master of science degree program in computer engineering, providing the opportunity to earn both degrees in five years. The B.S./M.S. program offers a competitive edge to students who are completing their undergraduate degree at UCSC, by enabling those with advanced preparation to move directly from the undergraduate to the graduate program. The program assists qualified enrolled students with a simplified graduate application process and makes it possible to complete an M.S. degree with just seven courses beyond the B.S. program.

The program prepares students for engineering positions in industry, and it is particularly attractive for undergraduate students planning to engage in engineering research in industry or academia. The School of Engineering has many opportunities for undergraduate research, especially for honors-level students. B.S./M.S. students can continue their undergraduate research projects with the same research group. Upon advancement to graduate standing, B.S./M.S. students are eligible for support as graduate research assistants. The B.S./M.S. program provides knowledge and training in important and contemporary areas of computer engineering.

Particularly motivated B.S./M.S. students can complete the entire program in 14 quarters (or fewer with Advanced Placement credit); however, advance planning is essential. Interested students should contact the department and their faculty adviser early in their college career-no later than the start of their junior year. B.S./M.S. students retain undergraduate status until the completion of all undergraduate requirements, but may begin graduate course work in advance of graduate standing.

Admission to the B.S./M.S. Program

The undergraduate degree requirements are the same as those for other computer engineering majors; however, the B.S./M.S. program capitalizes on graduate-level courses that may apply toward both degree requirements. B.S./M.S. candidates may apply (at most) two graduate courses taken as undergraduates toward both the M.S. degree and B.S. degree electives. At the time graduate status is achieved, no more than three graduate courses taken as an undergraduate may count toward the nine courses required for the M.S. degree. B.S./M.S. students may not apply undergraduate courses toward the M.S. degree.

Admission to the B.S./M.S. program is by formal application. Undergraduate applicants seeking admission as graduate students generally apply in their last quarter of junior standing. To qualify, applicants must have completed the following:

Computer Engineering 100/L, *Logic Design/Laboratory*

Computer Engineering 110, *Computer Architecture*; or 121/L, *Microprocessor System Design/Laboratory*

Computer Science 101, *Abstract Data Types*

Electrical Engineering 70101/L, *Introduction to Electronics/Laboratory*
at least one additional upper-division School of Engineering course

Applications will be considered until the student's first quarter of senior standing. This extension of the application period into the first quarter of the senior year is specifically geared to enable eligible transfer students to complete the courses required for admission.

Students who cannot meet the B.S./M.S. application requirements or who are not admitted into the program are encouraged to apply for admission to the standard M.S. or Ph.D. program during their senior year.

Additional information about this program can be found on the department's web pages at
<http://www.ce.ucsc.edu/academics/undergraduate/bs-ms>

~~<http://www.soe.ucsc.edu/programs/undergraduate/>~~

Graduate Programs

M.S. and Ph.D. Degree Programs

The graduate program in computer engineering accepts students for both the M.S. and the Ph.D. degrees. Graduate students in this program establish a solid foundation in computer algorithms and architectures and then proceed to a thorough study of recent developments in their selected area of specialization. This provides the basis for the M.S. degree and Ph.D. thesis work. The major areas of research concentration in computer engineering at UCSC are networks; embedded and autonomous systems; computer systems design and computer-aided design; and sensing and interaction.

The computer engineering program benefits from a close relationship with, among others, the computer science and electrical engineering programs at UCSC and ties to industry in the Silicon Valley and Monterey Bay areas. Graduates of the program are prepared for careers in teaching and research as well as for positions in industrial research and development.

While in the program, most graduate students are supported as research assistants on faculty-sponsored projects or as teaching assistants for undergraduate courses.

Additional information on the computer engineering M.S. and Ph.D. degrees, including degree requirements and applications for admission, can be found on the department's web pages at
<http://www.ce.ucsc.edu/academics/graduate/requirements>

~~<http://www.soe.ucsc.edu/programs/graduate/.html>~~

Requirements for the Master's Degree

Base Requirement

In their first year, graduate students must show proficiency in three fundamental subjects: 1. data structures; 2. computer architecture; and 3. one of the following three subjects—logic design, circuits, or software systems. Proficiency can be demonstrated by either completing one of the associated undergraduate courses, by establishing that an equivalent undergraduate course has been completed elsewhere, or by passing the final exam (or project when deemed appropriate by the faculty responsible) of an associated course. Students should obtain a computer engineering base worksheet for the list of associated courses and instructions on fulfilling this requirement.

The base requirement must be met by all graduate students (both M.S. and Ph.D.) by the end of the spring quarter of their first year in the program.

Course Requirements

Each student is required to complete a total of 48 credits. The course work must include

Computer Engineering 200, *Research and Teaching in Computer Science and Engineering*

Computer Science 201, *Analysis of Algorithms*

Computer Engineering 202, *Computer Architecture*

Up to 10 credits of Computer Engineering 297, *Independent Study or Research*; or Computer Engineering 299, *Thesis Research*

Up to 10 credits of either graduate courses (not seminars) in related disciplines outside the School of Engineering (requires adviser and computer engineering graduate committee approval) or upper-division undergraduate courses when necessary to strengthen the student's preparation for graduate studies (requires adviser approval)

All remaining credits must be graduate elective courses from computer engineering's list of approved graduate courses (available online or from the department)

In addition, the selection of graduate elective courses must show breadth by including a minimum of five credits in each of two categories from computer engineering's list of approved graduate electives. Computer Science 201 and Computer Engineering 202 cannot be used to satisfy the breadth requirement.

At least half of the credits from the graduate-level courses must be computer engineering graduate courses.

Thesis

Completion of a master's thesis is required for award of the master's degree. To fulfill this requirement, the student must submit a written proposal to a faculty member, usually by the third academic quarter. By accepting the proposal, the faculty member becomes the thesis adviser for the proposed thesis. In consultation with the adviser, the student must form a master's thesis reading committee with at least two additional faculty members, each of whom is provided a copy of the proposal. The student is required to present an expository talk on the thesis research, and the final thesis must be accepted by the review committee before the award of the master of science degree.

Requirements for the Ph.D. Degree

Base Requirement

In their first year, graduate students must show proficiency in three of five fundamental subjects: 1. data structures; 2. computer architecture; and 3. one of the following three subjects—logic design, circuits, and software systems. Proficiency can be demonstrated by either completing one of the associated undergraduate courses, by establishing that an equivalent undergraduate course has been completed elsewhere, or by passing the final exam (or project when deemed appropriate by the faculty responsible) of an associated course. Students should obtain a computer engineering base work sheet for the list of associated courses and instructions on fulfilling this requirement.

The base requirement must be met by all graduate students (both M.S. and Ph.D.) by the end of the spring quarter of the first year in the program.

Course Requirements

A Ph.D. student is required to take a total of 58 credits of graduate courses, which must consist of

Computer Engineering 200, *Research and Teaching in Computer Science and Engineering*;

Computer Science 201, *Analysis of Algorithms*;

Computer Engineering 202, *Computer Architecture*;

A minimum of 20 credits of graduate computer engineering courses from computer engineering's list of approved graduate courses (available online or from the department);

Up to 10 credits of Computer Engineering 297, *Independent Study or Research*; or Computer Engineering 299, *Thesis Research*;

Up to 10 credits of graduate courses (not seminars) in related disciplines outside the School of Engineering (requires adviser and computer engineering graduate committee approval);

All remaining credits must be graduate elective courses from computer engineering's list of approved graduate courses.

The selection of elective courses must show breadth by including either 10 credits in each of two categories or five credits in each of three separate categories from computer engineering's list of approved graduate courses. Computer Science 201 and Computer Engineering 202 cannot be used to satisfy the breadth requirement.

Course selection should form a coherent plan of study and requires adviser approval. Undergraduate courses may not be used to satisfy Ph.D. course requirements.

Ph.D. students who have satisfied the requirements for the master's degree are eligible to receive a master's degree.

Examinations and Dissertation

To continue in the Ph.D. program, students must pass a preliminary examination in their chosen research area by the end of their third year. Preliminary examinations are held during the first three weeks of each spring quarter; students must petition the computer engineering graduate committee for an examination in their chosen area two weeks before the end of winter quarter. Examination committees consist of four faculty members, two chosen by the student and two by the computer engineering graduate committee. The format of this oral examination is up to the examination committee; the examination will typically evaluate both general knowledge of the chosen area and specific understanding of selected technical papers. The preliminary examination requirement is waived for students who advance to candidacy by the end of their third year.

Each student must write a Ph.D. dissertation. The dissertation must show the results of in-depth research, by an original contribution of significant knowledge, and include material worthy of publication. As the first step, a student must submit a written dissertation proposal to a School of Engineering faculty member. By accepting the proposal, the faculty member becomes the student's dissertation supervisor. The student may choose a faculty member outside the Computer Engineering Department within the School of Engineering as adviser only with approval from the computer engineering graduate committee. The dissertation proposal is publicly and formally presented in an oral qualifying examination given by a qualifying exam committee, approved by the computer engineering graduate committee and the graduate council. The student must submit his or her written dissertation proposal to all members of the qualifying exam committee and the graduate assistant one month in advance of the examination.

Students are advanced to candidacy after they have completed the course requirements, passed both the preliminary and qualifying examinations (or just the qualifying examination if passed prior to the end of the student's third year in the program), cleared all Incomplete grades from their records, have an appointed dissertation reading committee, and paid the filing fee. Students who have not advanced to candidacy by the end of their fourth year will be placed on academic probation.

Each Ph.D. candidate must submit the completed dissertation to a reading committee at least one month prior to the dissertation defense. The appointment of the dissertation reading committee is made immediately after the qualifying exam and is necessary for advancing to candidacy. The candidate must present his or her research results in a public seminar sponsored by the dissertation supervisor. The seminar is followed by a defense of the dissertation to the reading committee and attending faculty who will then decide whether the dissertation is acceptable or requires revision. Successful completion of the dissertation fulfills the final academic requirement for the Ph.D. degree.

Transfer Credit

Up to three School of Engineering courses fulfilling the degree requirements of either the M.S. or Ph.D. degrees may be taken before beginning the graduate program through the concurrent enrollment program.

MS students who have previously successfully completed graduate-level classes in a related field at another institution may substitute courses from their previous institution with the approval of the graduate committee. The number of courses that can be substituted is limited so that, in all cases, the students must complete a minimum of 4 graduate-level classes during their matriculation at UCSC. These classes must

be graduate-level classes from the list of approved graduate courses.

<http://www.ce.ucsc.edu/academics/graduate/approved-courses>

Petitions for course substitutions should be submitted along with the transcript from the other institution or UCSC extension. For courses taken at other institutions copies of the syllabi, exams, and other course work should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UCSC.

Ph.D. students who have previously earned a master's degree or have successfully completed graduate-level classes as regular students in a graduate program in a related field at another institution may apply for a modified program of course requirements taking into account their previous coursework. Such a modified program should specify the coursework that will be completed at UCSC, which must include no fewer than 4 courses from the list of approved graduate courses. These 4 courses must be taken while in the graduate program at UCSC.

Application for a modified program of course requirements must be made within the first year of graduate study at UCSC, and will be reviewed by the graduate director and a committee of three faculty members approved by the graduate director. The application should be accompanied by copies of the syllabi, exams, and other course work, as well as the relevant transcript from the other institution. Interviews with the committee members may be required to properly assess the coursework.

Acceptance of prior work for course transfer and modified programs of study is at the discretion of the department.

Transfer Credit

~~Up to three School of Engineering courses fulfilling the degree requirements of either the M.S. or Ph.D. degrees may be taken before beginning the graduate program through the concurrent enrollment program.~~

~~Ph.D. students who have previously earned a master's degree in a related field at another institution may substitute courses from their previous university with approval of the adviser and the computer engineering graduate committee. Courses from other institutions may not be applied to the M.S. degree course requirements. Petitions for course substitutions must designate a specific graduate level course from the list of approved graduate courses. They should be submitted along with the transcript from the other institution or UCSC extension. For courses taken at other institutions, copies of the syllabi, exams, and other course work should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UCSC.~~

~~Up to three courses may be transferred from concurrent enrollment and other institutions on approval of the petition for course substitution by the computer engineering graduate committee. Two additional courses may be transferred if the student, in addition to submitting the petition, also takes the final examination and obtains a passing grade (B or better) in the computer engineering graduate course at UCSC equivalent to the course being transferred.~~

Review of Progress

Each year, the computer engineering faculty reviews the progress of every student in the graduate program. Students not making adequate progress towards completion of degree requirements (see UCSC Graduate Student Handbook for policy on satisfactory academic progress) are subject to dismissal from the program. Students with academic deficiencies may be required to take additional courses. Full-time students with no academic deficiencies are normally expected to complete the degree requirements at the rate of at least two courses per quarter. Full-time students must complete Computer Science 201 and Computer Engineering 202 within two years and normally must complete all course requirements within two years for the M.S. and three years for the Ph.D. program.

Students receiving two or more grades of U (Unsatisfactory) or below B in School of Engineering courses are not making adequate progress and will be placed on academic probation for the following three quarters of registered enrollment. Withdrawing or taking a leave of absence does not count as enrollment. Part-time enrollment is counted as a half of a quarter of enrollment.

Should any computer engineering graduate student fail a School of Engineering course while on probation, the Computer Engineering Department may request the graduate dean to dismiss that student from the graduate program. If, after being removed from probation, the student again fails a School of Engineering course, he or she will return immediately to academic probation.

Graduate students experiencing circumstances or difficulties that impact their academic performance should contact their adviser and the graduate director immediately. Students may appeal their dismissal.

Faculty and Professional Interests

Professor

Alexandre Brandwajn

Computer architecture, performance modeling, queueing network models of computer systems, operating systems

F. Joel Ferguson

Fault diagnosis, failure analysis, logic fault modeling, digital test pattern generation, design-for-test of digital circuits and systems

J. J. García-Luna-Aceves

Baskin Professor of Computer Engineering and Director of Networking Sciences Institute
Wireless networks, Internet, multimedia information systems

Richard Hughey, (Joint with Biomolecular Engineering)

Computer architecture, parallel processing, computational biology

Glen G. Langdon Jr., Emeritus

Tracy Larrabee

Test-pattern simulation and generation, fault modeling, fault diagnosis, design verification, technical writing, logic simulation

Patrick E. Mantey

**Baskin Professor of Computer Engineering
CITRIS Campus Director**

Image systems, image processing, visualization, image and multimedia systems, digital signal processing, real-time control

Katia Obraczka

Computer networks, distributed systems, operating systems, Internet information systems, mobile computing, wireless networks

Martine D. F. Schlag

VLSI design tools and algorithms, VLSI theory, field-programmable gate arrays, FPGA-based computing engines

Anujan Varma

Computer networking, computer architecture, optical networks

Associate Professor

Pak K. Chan

Placement and routing algorithms, field-programmable gate arrays, spectral-based partitioning, circuit theory, computer arithmetic

Gabriel Elkaim

Embedded systems; robust software architectures for real-time reactive systems; sensor fusion; guidance, navigation, and control (GNC) system identification; robust and advanced control schemes; feedback control systems; robotics; unmanned autonomous vehicles (UAVs); and cooperative control

Roberto Manduchi

Sensor processing and image analysis with application to assistive technology and environmental modeling

Jacob Rosen

Biorobotics; human-centered robotics; medical robotics, surgery and rehabilitation; wearable robotics (exoskeleton); teleoperation, haptics and virtual reality, biomechanics, neuromuscular control and human-machine interfaces

Hai Tao

Image and video processing, computer vision, vision-based graphics, and human-computer interaction

Assistant Professor

William Dunbar

Theory and application of feedback control, air traffic control, nanopore sensors, dynamics and control of biomolecules

Matthew R. Guthaus

VLSI, systems-on-a-chip, design automation, design for variability/robustness, mixed-signal systems

Sri Kurniawan

Human-computer interaction; human factors and ergonomics; accessibility; assistive technology; usability; empirical studies; user-centered design

Jose Renau

Computer architecture, including design effort and complexity estimators, infrared thermal measurements, thermal modeling, process variability, thread level speculation, and FPGA/ASIC design

Adjunct Professor

Renwick Curry

Control and optimization with special attention to aviation; air-traffic control; and collision-avoidance system design and analysis

Harwood G. Kolsky, Retired

Assistant Adjunct Professor

David Pease

File systems, operating systems, storage, programming languages

Bradley Smith

Computer communications, distributed systems, policy-based routine, routing protocols, security and trust in distributed systems

Cedric Westphal

Internet working and wireless networks, with special attention to analytical modeling

Lecturer

Cyrus Bazeghi

Computer architecture, VLSI, FPGA, embedded systems, and system architecture

Andrea Di Blas

Parallel computer architectures, parallel applications and programming models, combinatorial optimization

Gerald Moulds

Technical writing, professional communications

Stephen C. Petersen

Embedded controller systems, RF wireless systems, modulation and spectrum reuse, digital signal processing, circuit theory

Patrick Tantalo

Graph theory, combinatorics, optimization, algorithms

Linda Werner

Software engineering testing, educational and societal issues of computer science

Luca De Alfaro (Computer Science)

Formal methods, game theory, embedded systems, software engineering

Benjamin Friedlander (Electrical Engineering)

Digital communications, wireless communication system, array processing, adaptive signal processing

Qi Gong (Applied Mathematics and Statistics)

Computational methods for real-time control systems, trajectory optimization and motion planning, nonlinear filtering and observer design, robust and adaptive control of nonlinear systems, industry applications of control theory

Claire Gu (Electrical Engineering)

Fiber sensors for bio-applications, optical fiber communications, volume holographic data storage, liquid crystal displays, nonlinear optics, optical information processing

Kevin Karplus (Biomolecular Engineering)

Protein structure prediction, protein design

Suresh K. Lodha (Computer Science)

Visualization, vision, innovation, entrepreneurship

Darrell D. E. Long (Computer Science)

Storage systems, distributed computing systems, operating systems, mobile computing, performance evaluation, fault tolerance, computer security, multimedia, and video-on-demand systems

Dominic W. Massaro (Psychology)

Understanding language, speech perception and reading, language learning and speech technology, pattern recognition, psychology of interactive media, psychology of art and new media, human-machine interface

Charles E. McDowell (Computer Science)

Programming languages, parallel computing, and computer science education

Ethan L. Miller (Computer Science)

Archival storage systems, metadata management and information retrieval, file and

storage systems, distributed systems, computer security, reliability and fault tolerance

Peyman Milanfar (Electrical Engineering)

Statistical signal image/video processing and reconstruction; modeling and inverse problems in imaging; detection and estimation theory; applied mathematics

Dejan Milutinović (Applied Mathematics and Statistics)

Stochastic, dynamical systems and statistical signal processing, multi-agent systems/robotics, systems biology/immune system, optimal control, hybrid and discrete event systems

John Musacchio (Information Systems Management)

Control, analysis, and pricing of communications networks; applications of game theory in networking; wireless ad-hoc networks; and management of technology

Alex T. Pang (Computer Science)

Uncertainty visualization, tensor visualization, scientific visualization, collaboration software, virtual reality interfaces

Ira Pohl (Computer Science)

Artificial intelligence, programming languages, heuristic methods, educational and social issues, combinatorial algorithms

Kevin Ross (Information Systems Management)

Service engineering and management; resource allocation; operations research, pricing, scheduling; queueing theory; networks

Hamid Sadjadpour (Electrical Engineering)

Wireless communication systems, coding and information theory, ad hoc and sensor networks

E. James Whitehead, Jr. (Computer Science)

Software engineering, software evolution, software bug prediction, automated software construction, video game level design

Donald Wiberg, Emeritus (UCLA)

Yi Zhang (Information Systems Management)

Information retrieval, knowledge management, natural language processing, machine learning

[Program Description](#) | [Changes to 2009-10 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses

1. Hands-On Computer Engineering (2 credits). F,W,S

Hands-on introduction to computer engineering practice and research, including computer hardware, robotics, and embedded systems. Encourages interaction with UCSC's School of Engineering community. Designed for students without previous background in computer engineering. Enrollment restricted to first-year students and sophomores. Enrollment limited to 20. *T. Larrabee, S. Petersen, R. Hughey*

3. Personal Computer Concepts: Software and Hardware. F,W,S

Provides an introduction to computers. Personal computing is emphasized, and students are introduced to word processing, spreadsheets, database management, graphics, and programming. Covers fundamentals of computing and current and future uses of computer technology, PC hardware, Windows operating system, applications software, networking and the Internet, and developments in the computer industry. Designed for students with little or no experience using computers. Students cannot receive credit for this course and Computer Science 2. (General Education Code(s): IN.) *The Staff*

8. Robot Automation: Intelligence through Feedback Control. F

Introduction to dynamical systems, feedback control, and robotics. Fundamental concepts in dynamical systems, modeling, stability analysis, robustness to uncertainty, feedback as it occurs naturally, and the design of feedback-control laws to engineer desirable static and dynamic response. Course includes an introduction to MATLAB and programming in MATLAB. Priority enrollment restricted to first-year students and sophomores. (General Education Code(s): IN, Q.) *W. Dunbar, G. Elkaim*

9. Introduction to Statics, Dynamics, and Biomechanics. W

Theory and application of mathematical models to analyze statics and dynamics of mechanical and biomechanical systems (partials and rigid bodies) using a vector algebra. Covers: Newton's laws; free-body diagrams; structure analysis; friction; virtual work; energy and momentum methods; dynamics of bodies in two and three dimensions. Mathematics 19A, and Physics 5A/L or 6A/L. *G. Elkaim, J. Rosen, W. Dunbar*

12. Computer Systems and Assembly Language. F,W

Introduction to computer systems and assembly language and how computers compute in hardware and software. Topics include digital logic, number systems, data structures, compiling/assembly process, basics of system software, and computer architecture. May include C language. Prerequisite(s): course 3 or 8, or

Computer Science 10 or 12A or 5C or 5J or 5P, or Biomolecular Engineering 60, or suitable programming experience; previous or concurrent enrollment in course 12L required. (General Education Code(s): IN, Q.) *T. Larrabee, G. Elkaim, F. Ferguson, R. Hughey*

12L. Computer Systems and Assembly Language Laboratory (2 credits). F,W
Laboratory sequence in assembly language programming. The basics of logic design, both RISC and microcontroller programming. May include C language programming. Two two-hour laboratories per week. Prerequisite(s): course 3 or 8, or Computer Science 10 or 12A or 5C or 5J or 5P, or Biomolecular Engineering 60, or suitable programming experience; previous or concurrent enrollment in course 12 required. *T. Larrabee, G. Elkaim, F. Ferguson, R. Hughey*

13. Computer Systems and C Programming. S

Introduction to the C programming language as a means for controlling embedded and general computing systems. Continuing the exploration begun in course 12, students move to higher levels of abstraction in the control of complex computer systems. Prerequisite(s): courses 12 and 12L. Concurrent enrollment in course 13L is required. *R. Hughey*

13L. Computer Systems and C Programming Lab (2 credits). S

Laboratory sequence in C programming for embedded and general computing systems. Two 2-hour laboratories per week. Concurrent enrollment in course 13 is required. *R. Hughey*

16. Applied Discrete Mathematics. F,S

Introduction to applications of discrete mathematical systems. Topics include sets, functions, relations, graphs, trees, switching algebra, first order predicate calculus, mathematical induction, permutations, combinations, summation, and recurrences. Examples drawn from computer science and computer engineering. Prerequisite(s): eligibility to enroll in Mathematics 19A (completion of Mathematics 2B or 3 or Mathematics Placement Exam score of 40 or higher) or completion of Mathematics 19A or 11A. (General Education Code(s): Q.) *J. Garcia-Luna-Aceves, H. Tao, L. De Alfaro, M. Schlag, T. Larrabee*

80A. Universal Access: Disability, Technology, and Society. F,W

Overview of human-centered technology and of its potential for increasing the quality of life and independence of disabled individuals. A substantial portion of the course is devoted to studying physical, psychological, and psychosocial aspects of disability. Topics include: diversity and integration, legislation, accessibility, and universal design. (Formerly *Assistive Technology and Universal Access*.) (General Education Code(s): T7-Natural Sciences or Social Sciences.) *S. Kurniawan, R. Manduchi*

80E. Engineering Ethics. S

Ethical theories, analysis, and their application to issues in the practice of engineering, such as safety and liability, professional responsibility to clients and employers, codes of ethics, legal obligations, environmental issues, and social issues. Emphasis on developing independent ethical analysis through the use of case studies. (General Education Code(s): T6-Natural Sciences or Humanities and Arts.) *The Staff*

80H. History of Modern Computing. F

Presents a history of the development of computing technologies (CPUs and I/O devices, operating systems, and languages) through the latter half of the 20th century in order to build an understanding of how today's computing environment evolved. (General Education Code(s): T2-Natural Sciences.) *D. Pease*

80N. Introduction to Networking and the Internet. F,W,S

Introduction to the evolution, technological basis, and services of the Internet, with descriptions of its underlying communications structure, routing algorithms, peer-to-peer hierarchy, reliability, and packet switching. Network security, mail, multimedia and data compression issues, HTML, and digital images. Students who have completed course 150 cannot receive credit for this course. (General Education Code(s): T2-Natural Sciences.) *R. Manduchi, A. Varma, K. Obraczka*

80U. Ubiquitous and Mobile Computing. *

Ubiquitous computing integrates computer and communication technology with day-to-day life. Ubiquitous and mobile technology includes: MP-3 players, camera cell phones, Bluetooth headsets, sensor networks, and new emerging technologies. Course provides an overview of the technology and economics of ubiquitous computing. (General Education Code(s): T2-Natural Sciences.) *R. Manduchi, H. Tao*

94. Group Tutorial. F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

94F. Group Tutorial (2 credits). F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses**100. Logic Design. W,S**

Boolean algebra, logic minimization, finite-state machine design, sequential circuits, common logic elements, programmable logic devices, and an introduction to system level design. The electrical behavior of circuits including three state outputs, propagation delay, logic levels, and fanout. Prerequisite(s): courses 12 and 12L; previous or concurrent enrollment in course 100L required. Enrollment limited to 60. *T. Larrabee, M. Guthaus, S. Petersen, M. Schlag*

100L. Logic Design Laboratory (2 credits). W,S

Laboratory sequence illustrating topics covered in course 100. One two-hour laboratory session per week. Weekly laboratory assignments which require the use of the oscilloscopes, TTL circuits, computer-aided design and simulation tools, and programmable logic. Students are billed a materials fee. Prerequisite(s): courses 12 and 12L; previous or concurrent enrollment in course 100 required. Enrollment limited to 60. *T. Larrabee, M. Guthaus, S. Petersen, M. Schlag*

107. Mathematical Methods of Systems Analysis: Stochastic. F,W

Introduction to fundamental tools of stochastic analysis. Probability, conditional probability, Bayes Theorem, random variables, independence, Poisson processes, Bernoulli trials, and Markov chains. Instructor's choice of additional topics, most likely drawn from confidence measures, difference equations, transform methods, stability issues, applications to reliability, queues, and hidden Markov models.

Students cannot receive credit for this course and Applied Mathematics and Statistics 131. Prerequisite(s): course 16 or 16H and Mathematics 22 or 23A. *A. Brandwajn, R. Manduchi*

108. Data Compression. *

Basics of information theory, lossless coding (Huffman coding, arithmetic coding, dictionary coding), lossy coding (PCM, predictive coding, transform coding). Application to the compression of specific data set, which may include biological time series, DNA sequences, and multimedia streams. Programming experience is required. Prerequisite(s): course 107 or Applied Mathematics and Statistics 131. *R. Manduchi*

110. Computer Architecture. W

Introduction to computer architecture including examples of current approaches and the effect of technology and software. Computer performance evaluation, basic combinatorial and sequential digital components, different instruction set architectures with a focus on the MIPS ISA and RISC paradigm. Evolution of CPU microarchitecture from single-cycle to multi-cycle pipelines, with overview of super-scalar, multiple-issue and VLIW. Memory system, cache, virtual memory and relationship between memory and performance. Evolution of PC system architecture. May include advanced topics, such as parallel processing, MIMD, and SIMD. Prerequisite(s): courses 12/L, and courses 13/L or Computer Science 12A/L or Computer Science 11. Course 16 recommended. *A. Di Blas, R. Hughey, J. Renau, A. Brandwajn, F. Ferguson*

112. Computer and Game Console Architecture. *

Introduces computer and game console architecture, including examples of current approaches and the effect of technology and software. Computer performance evaluation; instruction-set architectures; RISC CPU and pipelining; cache and memory; multi-core, system-level architecture; video card; special console architectures. Pre-requisite(s): course 12. *A. Di Blas*

113. Parallel and Concurrent Programming. *

Introduction to parallel and concurrent programming. Topics include types of parallel computers and programming platforms, basic and advanced programming techniques in C with MPI and OpenMP, performance analysis and load balancing, and selected parallel algorithms. Students perform programming projects using clusters and shared memory platforms. Students must have a discrete working knowledge of the C programming language and a user-level familiarity with the Unix operating system. Prerequisite(s): Computer Science 12B. *A. Di Blas, L. De Alfaro, K. Obraczka, R. Hughey*

117. Embedded Software. S

Introduction to software design for embedded systems. Emphasis on real-time embedded systems as follows: fundamentals of scheduling for real-time systems, real-time operating systems, and real-time protocols for distributed real-time systems; time-triggered and event-triggered paradigms for embedded software development, their tradeoffs, and languages and tools for development of embedded software. Prerequisite(s): course 121 or Computer Science 111; previous or concurrent enrollment in course 117L required. Enrollment limited to 20. *L. De Alfaro*

117L. Embedded Software Laboratory (2 credits). S

Gain experience in the practical aspects of embedded programming by writing several programs for small robots. Emphasis is to provide experience in a spectrum of programming paradigms (even-triggered, time-triggered), communication

paradigms (synchronous and asynchronous programming), and programming languages (both C/C++ and more specialized languages for embedded programming). Students are billed a materials fee. Concurrent enrollment in course 117 is required. Enrollment limited to 30. *L. De Alfaro*

118. Introduction to Mechatronics. W

Technologies involved in mechatronics (intelligent electro-mechanical systems) and techniques necessary to integrate these technologies into mechatronic systems. Topics include electronics (A/D, D/A converters, opamps, filters, power devices), software program design (event-driven programming, state machine-based design), DC and stepper motors, basic sensing, and basic mechanical design (machine elements and mechanical CAD). Combines lab component of structured assignments with a large and open-ended team project. Cannot receive credit for this course and course 218. Prerequisite(s): Electrical Engineering 101/L and courses 12/L and 100/L. Concurrent enrollment in course 118L is required. Enrollment limited to 36. *G. Elkaim*

118L. Introduction to Mechatronics Laboratory (2 credits). W

Laboratory sequence illustrating topics covered in course 118. Two 2-hour laboratory sessions per week. Taught in conjunction with course 218L. Students are billed a materials fee. Cannot receive credit for this course and course 218L. Prerequisite(s): Concurrent enrollment in course 118 is required. Enrollment limited to 36. *G. Elkaim*

121. Microprocessor System Design. F,S

The design and use of microprocessor-based systems. Covers microprocessor and microcontroller architecture, programming techniques, bus and memory organization, DMA, timing issues, interrupts, peripheral devices, serial and parallel communication, and interfacing to analog and digital systems. Prerequisite(s): courses 12/L and 100/L; Electrical Engineering 101/L; previous or concurrent enrollment in course 121L required. Enrollment limited to 40. *P. Chan, S. Petersen, R. Hughey*

121L. Microprocessor System Design Laboratory (2 credits). F,S

Laboratory sequence illustrating topics covered in course 121. One two-hour laboratory session per week. Students design, build, program, debug, document, and demonstrate a microprocessor-based system. Students are billed a materials fee. Prerequisite(s): courses 12C/L and 100/L; Electrical Engineering 101/L; previous or concurrent enrollment in course 121 required. Enrollment limited to 40. *P. Chan, S. Petersen, R. Hughey*

123A. Engineering Design Project I. F,W

First of a two-course sequence that is the culmination of the engineering program. Students apply knowledge and skills gained in elective track to complete a major design project. Students complete research, specification, planning, and procurement for a substantial project. Includes technical discussions, design reviews, and formal presentations; engineering design cycle, engineering teams, and professional practices. Formal technical specification of the approved project is presented to faculty. Prerequisite(s): Electrical Engineering 171 or Computer Engineering 121; previous or concurrent enrollment in Computer Engineering 185; permission of department and instructor. Students are billed a materials fee. (Also offered as Biomolecular Engineering 123A. Students cannot receive credit for both courses.) *K. Karplus, J. Vesecky*

123B. Engineering Design Project II (7 credits). W,S

Second of two-course sequence in engineering system design. Students fully

implement and test system designed and specified in course 123A. Formal written report, oral presentation, and demonstration of successful project to review panel of engineering faculty required. Students are billed a materials fee. (Also offered as Electrical Engineering 123B. Students cannot receive credit for both courses.) Prerequisite(s): courses 123A and 185. Enrollment limited to 35. *J. Vesecky, The Staff*

125. Logic Design with Verilog. W

Verilog digital logic design with emphasis on ASIC and FPGA design. Students design and verify large-scale systems. Assignments and project use the Verilog Hardware Description Language with emphasis on verification and high-frequency ASIC/FPGA targets. Prerequisite(s): courses 100 and 100L. Concurrent enrollment in course 125L required. Enrollment limited to 40. *P. Chan, A. Varma, M. Guthaus, J. Renau, M. Schlag*

125L. Logic Design with Verilog Laboratory (2 credits). W

Laboratory sequence illustrating topics covered in course 125. One two-hour laboratory session per week. Students are billed a materials fee. Prerequisite(s): courses 100 and 100L. Concurrent enrollment in course 125 is required. Enrollment limited to 40. *P. Chan, A. Varma, M. Guthaus, J. Renau, M. Schlag*

131. Human-Computer Interaction. W

Theory and hands-on practice to understand what makes user interfaces usable and accessible to diverse individuals. Covers human senses and memory and their design implications, requirement solicitation, user-centered design and prototyping techniques, and expert and user evaluations. Interdisciplinary course for social science and engineering majors. Students cannot receive credit for this course and Computer Engineering 231 or Psychology 223. (Also offered as Psychology 131. Students cannot receive credit for both courses.) Prerequisite(s): Computer Science 12B or Psychology 3. *S. Kurniawan*

150. Introduction to Computer Networks. W

Addresses issues arising in organizing communications among autonomous computers. Network models and conceptual layers; Internet-working; characteristics of transmission media; switching techniques (packet switching, circuit switching, cell switching); medium access control (MAC) protocols and local area networks; error-control strategies and link-level protocols; routing algorithms for bridges and routers; congestion control mechanisms; transport protocols; application of concepts to practical wireless and wireline networks and standard protocol architectures. Students who have completed course 80N can take this course for credit. Students are billed for a materials fee. Prerequisite(s): course 16, and either courses 12 and 12L or Computer Science 12B and Computer Science 12M. *J. Garcia-Luna-Aceves, P. Mantey, A. Varma, K. Obraczka*

150L. Introduction to Computer Networks Laboratory (2 credits). W

Illustrates the concepts covered in course 150 and provides students with hands-on experience in computer networks. Prerequisite(s): courses 12, 12L, and 16. Concurrent enrollment in course 150 is required. *P. Mantey, K. Obraczka, J. Garcia-Luna-Aceves*

151. Network Administration. S

Projects include installing and configuring (client and server) machines, configuring network routing, setting up firewalls and network appliances, and setting up and using wireless networks. Includes lectures, projects presented, and discussions. Requires formal written reports, oral presentations, and demonstrations of projects. Students are billed a materials fee. Prerequisite(s): course 150. Enrollment limited to

30. K. Obraczka, B. Smith

153. Digital Signal Processing. *

The Staff

156. Network Programming. *

Methods and tools used for network programming. Topics include inter-process communication (IPC), facilities such as pipes, shared memory, semaphores, sockets, and remote procedure call (RPC); design of client and server sides of network applications; CGI programming; and programming projects. Prerequisites: course 150 and Computer Science 111. Concurrent enrollment in course 156L required. A. Varma, K. Obraczka

156L. Network Programming Laboratory (2 credits). *

Laboratory sequence illustrating concepts taught in course 156. Learn use of network programming tools and methods via programming exercises. Students are billed a materials fee. Prerequisites: course 150 and Computer Science 111. Concurrent enrollment in course 156 required. A. Varma, K. Obraczka

167. Sensing and Sensor Technologies. F

Introduces the fundamental issues in sensing and various sensor technologies including motion sensors, velocity sensors, GPS sensors, acoustic sensors, light and image sensors, and range sensors. Also demonstrates sensor technologies using a system approach to show how they can be integrated into a complete digital system. Prerequisite(s): course 100 and Electrical Engineering 101/L. Concurrent enrollment in course 167L is required. H. Tao, G. Elkaim, R. Manduchi

167L. Sensing and Sensor Technologies Lab (2 credits). F

Lab assignments reinforce the concepts and techniques learned in course 167. Assignments include measurement and estimation techniques, experiments with various sensors, and a course project in which students build digital sensing systems. Students are billed a materials fee. Prerequisite(s): course 100 and Electrical Engineering 101/L. Concurrent enrollment in course 167 is required. G. Elkaim, H. Tao

173. High-Speed Digital Design. S

Studies of analog circuit principles relevant to high-speed digital design: signal propagation, crosstalk, and electromagnetic interference. Topics include electrical characteristics of digital circuits, interfacing different logic families, measurement techniques, transmission lines, ground planes and grounding, terminations, power systems, connectors/ribbon cables, clock distribution, shielding, electromagnetic compatibility and noise suppression, and bus architectures. Prerequisite(s): Electrical Engineering 101/L and course 174. Electrical Engineering 171 and course 121 recommended. Previous or concurrent enrollment in course 173L required. Enrollment limited to 30. S. Petersen, P. Chan

173L. High-Speed Digital Design Laboratory (2 credits). S

Laboratory sequence illustrating topics covered in course 173. One two-hour laboratory session per week. Students are billed a materials fee. Prerequisite(s): Electrical Engineering 101/L and course 174. Electrical Engineering 171 and course 121 recommended. Previous or concurrent enrollment in course 173 required. Enrollment limited to 30. S. Petersen, P. Chan

174. Introduction to EDA Tools for PCB Design (3 credits). F

Focus on EDA tools for design of printed-circuit boards. Elements of design flow covered: schematic capture and simulation to final PCB layout. Final project is

required. Students are billed a materials fee. Prerequisite(s): Electrical Engineering 101/L or consent of instructor. *S. Petersen*

177. Applied Graph Theory and Algorithms. *

Basic concepts and algorithms are reviewed including trees, Eulerian and Hamiltonian graphs, and graph transversal. Algorithms are explored to solve problems in connectivity, routing, matching, and embedding of graphs. Graph theory and algorithms are developed around applications in computer engineering.

Prerequisite(s): Computer Science 101. *M. Schlag*

185. Technical Writing for Computer Engineers. F,W

Writing by engineers and computer scientists, not to general audiences, but to engineers, engineering managers, and technical writers. Exercises include job application and resume, in-code documentation, algorithm description, naive-user documentation, library puzzle, survey article, proposal, progress report, formal technical report, and oral presentation. Offered in alternate quarters. Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements; Computer Science 12B or Computer Engineering 12 or junior standing in a School of Engineering major. Enrollment limited to 60. (General Education Code(s): W.) *T. Larrabee, G. Moulds*

193. Field Study. F,W,S

Provides for individual programs of study with specific academic objectives carried out under the direction of a faculty member of the Computer Engineering Department and a willing sponsor at the field site using resources not normally available on campus. Credit is based on the presentation of evidence of achieving the objectives by submitting a written and oral presentation. May not normally be repeated for credit. Students submit petition to sponsoring agency. *The Staff*

193F. Field Study (2 credits). F,W,S

Provides for individual programs of study with specific academic objectives carried out under the direction of a faculty member of the Computer Engineering Department and a willing sponsor at the field site using resources not normally available on campus. Credit is based on the presentation of evidence of achieving the objectives by submitting a written and oral presentation. May not normally be repeated for credit. Students submit petition to sponsoring agency. *The Staff*

194. Group Tutorial. F,W,S

A program of independent study arranged between a group of students and a faculty member. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

194F. Group Tutorial (2 credits). F,W,S

A program of independent study arranged between a group of students and a faculty member. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

195. Senior Thesis Research. F,W,S

Students submit petition to sponsoring agency. Prerequisite: course 123A. *The Staff*

195F. Senior Thesis Research (2 credits). F,W,S

Students submit petition to sponsoring agency. Consent of instructor required. Prerequisite: course 123A. *The Staff*

198. Individual Study or Research. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198F. Individual Study or Research (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

For fourth-year students majoring in computer engineering. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

For fourth-year students majoring in computer engineering. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses**200. Research and Teaching in Computer Science and Engineering (3 credits). F**

Basic teaching techniques for teaching assistants including responsibilities and rights of teaching assistants, resource materials, computer security, leading discussion or lab sessions, presentation techniques, maintaining class records, electronic handling of homework, and grading. Examines research and professional training, including use of the library and online databases, technical typesetting, writing journal and conference papers, publishing in computer science and computer engineering, giving talks in seminars and conferences, and ethical issues in science and engineering. Required for all T.A.s. Enrollment restricted to graduate students. *T. Larrabee, M. Schlag, A. Brandwajn, S. Brandt*

202. Computer Architecture. F

Provides a thorough and fundamental treatment of the art of computer architecture. Topics include concepts of von Neumann architectures, methods of evaluating CPU performance, instruction-set design and examples, compiler issues, instruction pipelining, superscalar processors, methods for reduction of branch penalty, memory hierarchies, I/O systems, floating-point arithmetic, and current issues in parallel processing. Prerequisite(s): course 110 or 112. Enrollment restricted to graduate students; undergraduates may enroll if they have completed course 110 or 112 and with consent of instructor. Enrollment limited to 30. *P. Chan, J. Renau Ardevol, A. Varma, R. Hughey*

215. Models of Robotic Manipulation. S

Theory and application of mathematical models to analyze, design, and program serial kinematic chains (robot arms). Covers models of arbitrary articulated robotic or biological arms and their application to realistic arms and tasks, including the homogeneous coordinate model of positioning tasks; the forward and inverse kinematic models; the Jacobian matrix; trajectory generation; and dynamic models, including Newton-Euler and Lagrangian formulations. Enrollment restricted to graduate students; and to seniors who have taken electrical engineering 154, and applied mathematics and statistics 10 or 10A or mathematics 21; or by permission of instructor. *J. Rosen*

218. Mechatronics. *

Introduction to intelligent electro-mechanical systems, combining aspects of computer, electrical, mechanical, and software engineering. Students become proficient in all aspects of mechanical, electrical, computer system design, analysis, prototyping, presentation and team mentorship. Cannot receive credit for this course and course 118. Prerequisite(s): concurrent enrollment in course 218L. Enrollment restricted to graduate students. Enrollment limited to 36. *G. Elkaim*

218L. Mechatronics Lab (2 credits). *

Laboratory sequence illustrating topics covered in course 218. Two 2-hour laboratory sessions per week. Cannot receive credit for this course and course 118L. Students are billed a materials fee. Prerequisite(s): concurrent enrollment in course 218. Enrollment restricted to graduate students. Enrollment limited to 36. *G. Elkaim*

220. Advanced Parallel Processing. S

Introduction to programming advanced parallel computer architecture. Topics may include: SIMD massively parallel processor arrays; streaming parallel coprocessors, such as graphics cards used for general-purpose processing (GPGPU); or other hybrid MIMD/SIMD architectures. Course has programming lab component, a project, and student presentation on related topics. (Formerly *Parallel Processing*.) Enrollment restricted to graduate students; undergraduates may enroll with permission of instructor. *R. Hughey, A. Di Blas*

221. Advanced Microprocessor Design. *

Introduction to latest advances in computer architecture. Focuses on processor core design. Topics include simultaneous multithreading, thread level speculation, trace caches, novel out-of-order mechanisms, and energy-efficient processor core designs. Final project is modification/enhancement of an out-of-order processor on an FPGA development system. Prerequisite(s): course 202; and course 125, 225, or equivalent Verilog experience. Concurrent enrollment in course 221L required. Enrollment restricted to graduate students. Enrollment limited to 20. *J. Renau*

221L. Advanced Microprocessor Design Laboratory (3 credits). *

Laboratory sequence illustrating topics covered in course 221. Prerequisite(s): course 202; and course 125, 225, or equivalent Verilog experience. Concurrent enrollment in course 221 required. Enrollment restricted to graduate students. Enrollment limited to 20. *J. Renau*

222. VLSI Digital System Design. F

Introduction to Very Large Scale Integrated (VLSI) design, focusing on custom integrated circuits. Topics include logic families, FETs, interconnect models, simulation, and RC timing. Course covers the design flow from logic design to layout, with a focus on high performance and low power. Students should be familiar with RC circuit analysis. Enrollment restricted to seniors and graduate students. Undergraduates may enroll with permission of instructor. *M. Guthaus, The Staff*

223. VLSI System-on-a-Chip Design. W

Design methodologies for Application Specific Integrated Circuits (ASICs). Topics include: behavioral specification; logic synthesis; standard-cell libraries; advanced timing analysis; and physical design automation tools. Familiarizes students with real-world tools during the design of a small system-on-a-chip project. Students are encouraged to fabricate and test their chips in an independent study. Prerequisite(s): course 222 or permission of instructor. Enrollment restricted to graduate students. *M. Guthaus, The Staff*

224. Testing Digital Circuits. *

An introduction to the theory and practice of testing. Topics are chosen from fault and defect models, test generation for combinational and sequential circuits, fault simulation, scan-design and built-in self-test. Enrollment restricted to graduate students; undergraduates may enroll if they have completed Computer Science 101. *F. Ferguson, T. Larrabee*

225. Introduction to ASIC Systems Design. S

Introduction to system prototyping using field-programmable gate arrays (FPGAs).

Topics include architectures of FPGAs, behavioral design specification, system partitioning, synthesis tools, design verification, and studies of novel systems implemented with FPGAs. Intended to familiarize students with the techniques and tools in ASIC designs. Final project is the complete design of a small system using FPGAs. Students are billed a materials fee. Enrollment restricted to graduate students; undergraduates may enroll if they have completed courses 100/L and 202. Enrollment limited to 10. Offered in alternate academic years. *P. Chan*

229. Field-Programmable Gate Arrays Computer-Assisted Design. *

Design methods for Field-Programmable Gate Arrays (FPGAs), including algorithms for technology mapping, routability estimation, placement, and routing. The relationship between FPGA architectures and their computer-aided design tools. Course project involves the modification and analysis of an FPGA tool. Enrollment restricted to graduate students or by consent of instructor. Courses 100, 125, 126, 222, 225, or other digital design experience recommended. Enrollment limited to 20. *M. Schlag*

230. Computer Performance Evaluation. W

Introduction to methods of analysis of computer system performance. Predictive performance models with emphasis on queuing models; exact and appropriate solution methods, discrete-event simulation, and numeric iterative approaches; analytical solutions and their computation; separable queuing networks, decomposition approaches; examples of practical application; and performance measurement, model validation, robustness of models, and operational analysis. Enrollment restricted to graduate students. Enrollment limited to 20. Offered in alternate academic years. *A. Brandwajn*

231. Human-Computer Interaction. W

Theory and hands-on practice to understand what makes user interfaces usable and accessible to diverse individuals. Covers human senses and memory and their design implications, requirement solicitation, user-centered design and prototyping techniques, and expert and user evaluations. Individual research project. Interdisciplinary course for social science and engineering graduate students. Students cannot receive credit for this course and course 131. (Also offered as Digital Arts and New Media 231 and as Psychology 223. Students cannot receive credit for multiple courses.) Enrollment restricted to graduate students. *S. Kurniawan*

232. Arithmetic Processors. *

Concept of number systems: binary additions, multiplications, divisions; elementary function evaluations; algorithm acceleration; floating-point and significant arithmetics; IEEE standards; technology related issues; algorithm evaluation by implementation with gate arrays. Prerequisite(s): course 202. Enrollment restricted to graduate students. Enrollment limited to 15. *P. Chan*

233. Human Factors. S

Course focuses on theories, practices, and design of systems to optimize human well-being and system performance through consideration of psychological, social, physical, and biological factors. Covers human sensory systems and memory, workload management, error and reliability, performance measurement, and ergonomic design. Interdisciplinary course for social science and engineering graduate students. Enrollment restricted to graduate students; undergraduates may enroll if they have completed course 131. *S. Kurniawan*

235. User Evaluation of Technology. W

Presents a variety of evaluation methodologies to assess usability, acceptance, and

effectiveness of technology with the intended users. Combines lectures and exercises for students to gain first-hand experiences of these methodologies with real users. Enrollment restricted to graduate students. Seniors may enroll with completion of course 131. *S. Kurniawan*

240. Introduction to Linear Dynamical Systems. W

Introduction to applied linear algebra and linear dynamical systems with applications to circuits, signal processing, communications, and control systems. Topics include the following: Least-squares approximations of over-determined equations and least-norm solutions of underdetermined equations. Symmetric matrices, matrix norm and singular value decomposition. Eigenvalues, left and right eigenvectors, and dynamical interpretation. Matrix exponential, stability, and asymptotic behavior. Multi-input multi-output systems, impulse and step matrices; convolution and transfer matrix descriptions. Control, reachability, state transfer, and least-norm inputs. Observability and least-squares state estimation. Enrollment restricted to graduate students; undergraduates may enroll if they have completed Electrical Engineering 103 and Applied Math and Statistics 147. *G. Elkaim, W. Dunbar, K. Ross*

241. Introduction to Feedback Control Systems. F

Graduate-level introduction to control of continuous linear systems using classical feedback techniques. Design of feedback controllers for command-following error, disturbance rejection, stability, and dynamic response specifications. Root locus and frequency response design techniques. Extensive use of Matlab for computer-aided controller design. Course has concurrent lectures with Electrical Engineering 154. (Also offered as Electrical Engineering 241. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. *P. Milanfar, P. Mantey, J. Rosen, W. Dunbar, G. Elkaim*

242. Applied Feedback Control. *

Sequel to Electrical Engineering 154. After reviewing control design techniques examined in EE 154, this course explores state space control, discrete time control, and two case studies in control design. Students design and implement feedback controllers on an inverted pendulum experiment. Prerequisite(s): Electrical Engineering 154 or course 241. Enrollment restricted to juniors, seniors, and graduate students. *W. Dunbar*

243. System Identification. *

Course provides introduction to the construction of linear dynamical models from experimental data using parametric and non-parametric identification techniques. Theoretical and practical aspects of these techniques addressed. Prerequisite(s): course 240, or by permission of instructor. *W. Dunbar, G. Elkaim*

248. Games in Design and Control. S

Graduate-level introduction to game theory and its applications to system design, verification, analysis, and optimal control. Enrollment restricted to graduate students. Computer Science 101, 201, or equivalent recommended. *L. De Alfaro*

250. Multimedia Systems. F

Study of state-of-the-art technology for networked multimedia systems. Topics include audio, image, and video acquisition and compression standards (JPEG, MPEG, and ITU families); networking for multimedia; and digital television. Proficiency in C or C++ required. Prerequisite(s): Enrollment restricted to graduate students. *R. Manduchi*

251. Error-Control Coding. *

Overview of coding to protect messages against error during transmission or storage. Topics include channel models, linear algebra over finite fields, linear block codes and bounds, cyclic codes (BCH and RS), decoding algorithms, spectral analysis, codes on graphs, and low-complexity algorithms. Enrollment restricted to graduate students or consent of instructor. *H. Sadjadpour*

252A. Computer Networks. F

Issues resulting from organizing communication among autonomous computers. Includes network models and switching techniques; medium access control protocols and local area networks; error control and retransmission strategies; routing algorithms and protocols; congestion control mechanisms and end-to-end protocols; application-level protocols; and application of concepts to wireless and wireline networks, with emphasis on the Internet. Enrollment restricted to graduate students. *A. Varma, J. Garcia-Luna-Aceves*

252B. Modeling of Communications Protocols. *

Theory and practice of computer communication networks. Emphasis is on verification and performance analysis of network control processes. Topics include protocols for channel access, point-to-point and multipoint reliable transmission, routing, congestion control, network management, multicasting, and ATM networks. Prerequisite(s): courses 107 and 252A. *A. Varma, J. Garcia-Luna-Aceves*

253. Network Security. W

Fundamental mechanisms for network security and their application in widely deployed protocols. In-depth treatment of security mechanism at the data-link, network, and transport layers for both wired and wireless networks. Covers mechanisms for privacy and integrity, and methods for intrusion detection. Prerequisite(s): course 252A and Computer Science 201. Enrollment restricted to graduate students. *A. Varma*

254. High Speed Computer Networks. *

Fiber-optic technology; fiber-optic link design; network protocol concepts; coding and error control; high-speed local area and metropolitan area networks; gigabit networks; error and congestion control; photonic networks; research topics. Prerequisite(s): course 252B. *A. Varma*

256. Design Project in Computer Networks. S

Students develop a working implementation of a network protocol with the goal of obtaining hands-on experience in implementing real-world network protocols. Prerequisite(s): course 252A; enrollment restricted to graduate students. *A. Varma*

257. Wireless and Mobile Networks. S

An interdisciplinary course on wireless communication and mobile computing. Covers the physical aspects of wireless communication but emphasizes higher protocol layers. Topics include cellular networks, packet radio and ad hoc networks, wireless transport protocols, security, and application-level issues. Prerequisite(s): course 252A or permission of instructor. Enrollment limited to 20. *K. Obraczka, J. Garcia-Luna-Aceves*

258. Unix Networking Internals. *

In-depth treatment of the implementation of network protocols in typical open-source Unix systems. Topics include implementation of send and receive functions, buffer management, interrupt handling, locking, scheduling and timer management. Major implementation project required. Prerequisite(s): course 252A. Computer Science 111 recommended. Enrollment restricted to graduate students. *A. Varma*

259. Sensor Networks. F

Focus is on the networking aspects of sensor networks: protocols at the various layers and how they answer the specific requirements posed by these networks (e.g., data driven, energy efficient, etc.) and their applications (monitoring, tracking, etc.). Explore how physical layer and hardware issues may influence protocol design. Courses 252A and 257 recommended. *K. Obraczka*

263. Data Compression. *

Introduction to information theory and data compression. Lossless coding (Huffman, arithmetic, dictionary codes). Lossy coding (scalar and vector quantization, differential coding, transform coding). Applications to the compression of real data sets (DNA sequences, biological time series, multimedia streams). Concurrent lectures with course 108. Students cannot receive credit for both this course and course 108. Students must have basic knowledge of probability theory. Enrollment restricted to graduate students. *R. Manduchi*

264. Image Analysis and Computer Vision. *

Brief review of image processing. Binary images, thresholding, morphological operations; edge detection and segmentation; contours: digital curves and curve fitting; statistical texture analysis, shape from texture; depth cues, stereo matching, depth from stereo; color perception and segmentation; and shading and image radiance, surface orientation, and shape from shading. Electrical Engineering 264 encouraged, but not required. Undergraduate students who are interested in enrolling should meet with the instructor first. *H. Tao*

276. Software Engineering. *

Introduction to the general principles of software engineering. Covers current and classical topics from both practical and theoretical viewpoints. Topics include software evolution, project management, software inspections, design methods, requirements analysis and specification, software testing, maintenance, software implementation, human interfaces, and software engineering experimentation. Enrollment restricted to graduate students; undergraduates may enroll in this course if they have completed Computer Science 115. *L. De Alfaro, The Staff*

277. Graph Algorithms. S

Explores graph theory and algorithms for solving problems in engineering. A review of basic graph concepts and algorithms is followed by topics in network flow, partitioning, spectral analysis of graphs, graph isomorphism, and intractability. Prerequisite(s): Computer Science 101 and 102; or course 177; or Computer Science 201; or equivalent. Enrollment restricted to graduate students. Enrollment limited to 20. *M. Schlag*

278. Introduction to the Theory of Discrete Systems. *

Introduction to methods for modeling, analyzing, and reasoning about discrete systems, such as hardware and software designs. First part of course presents basic models for hardware and software systems and introduces methods for system specification, verification, abstraction, and stepwise refinement of a design into an implementation. Second part discusses role of structure: hierarchy, system composition, and interface specification. Prerequisite(s): some mathematical background is assumed. Enrollment restricted to graduate students or by permission of instructor. *L. De Alfaro*

280C. Seminar on Control (2 credits). F,W,S

Weekly seminar series covering topics of current research in theory and application of control to engineering systems. Current research work and literature in these areas discussed. Enrollment restricted to graduate students; undergraduates may enroll with

permission of instructor. May be repeated for credit. *G. Elkaim, J. Rosen, W. Dunbar, K. Ross*

280G. VLSI/CAD Seminar (2 credits). F,W,S

Weekly seminar on advanced topics in VLSI and computer-aided design (CAD). Students present and discuss modern issues in semiconductor design, fabrication, and CAD. Frequent guest speakers present pertinent results from industry and academia. Enrollment limited to 20. May be repeated for credit. *M. Guthaus*

280N. Seminar on Networks (2 credits). F,W,S

Weekly seminar series covering topics of current research in networks and networked systems. Current research work and literature in these areas are discussed. Prerequisite(s): permission of instructor. Enrollment restricted to graduate students. May be repeated for credit. *K. Obraczka, J. Garcia-Luna-Aceves*

280P. Seminar on Parallel Processing (2 credits). F,W,S

Weekly seminar series covering topics of current research in parallel systems, architectures, and algorithms. Current research work and literature in these areas are discussed. Enrollment restricted to graduate students. Enrollment limited to 20. May be repeated for credit. *R. Hughey, M. Guthaus, J. Renau Ardevol*

280T. Seminar on New Technologies (2 credits). *

Weekly seminar series in which distinguished speakers from industry, universities, and government discuss current developments in networking and computer technology. The emphasis is on open research questions that may lead to collaborative work with faculty and graduate students. *The Staff*

280V. Seminar on Computer Vision (2 credits). F,W,S

Weekly graduate-level seminar series discussing advanced topics in computer vision and image analysis. Current research and literature presented during each meeting. Enrollment limited to 20. May be repeated for credit. *R. Manduchi, H. Tao*

285. Technical Writing for Engineering Graduates. S

Writing skills development for graduate engineers. Students produce a major writing project with many subtasks. Exercises includes fellowship application; mathematical and algorithmic description; use of tables and graphs; experiment description; and producing technical web sites, presentations, and posters. Enrollment restricted to graduate biomolecular engineering, computer engineering, computer science, and electrical engineering majors. (Open to all School of Engineering graduate students.) Enrollment limited to 20. *T. Larrabee, The Staff*

290L. Advanced Topics in VLSI Computer-Aided Design. *

A graduate course on a research topic in VLSI computer-aided design. Topic varies according to instructor. Possible topics include, but are not limited to specification languages and formal verification, logic minimization, testing and verification, electrical simulation, layout synthesis, and behavioral synthesis. Course 100, 125, 126, 222, or 225 recommended. *P. Chan, M. Schlag, F. Ferguson, T. Larrabee*

290M. Topics in Parallel Computation. *

Investigates selected topics in applied parallel computation. Topics may include numerical methods, artificial intelligence and machine learning algorithms, graphics and image processing, systolic algorithms, and the interplay between hardware and algorithms. Students are encouraged to investigate and discuss the parallelization of their own research. Enrollment restricted to graduate students. *R. Hughey*

290N. Topics in Computer Performance. *

Selected topics of current interest in the area of computer system performance. Subjects may include aspects of large systems, performability, computer networks, storage subsystems, and nontraditional approaches and are subject to periodic revision. Enrollment restricted to graduate students. *A. Brandwajn*

290V. Advanced Topics in Visual Computing. *

Advanced course in image analysis and computer vision. Topics include motion analysis, multiple view geometry, 3D reconstruction, image-based rendering, vision-based graphics, face detection and recognition, tracking, image and video retrieval, and human-computer interface. Enrollment restricted to seniors and graduate students. Enrollment limited to 20. *S. Lodha, H. Tao*

293. Advanced Topics in Computer Engineering. *

A graduate seminar on a research topic in computer engineering which varies according to instructor. Possible topics include, but are not limited to, communication networks, data compression, special-purpose architectures, computer arithmetic, software reliability and reusability, systolic arrays. *J. Rosen*

297. Independent Study or Research. F,W,S

Independent study or research under faculty supervision. Students submit petition to sponsoring agency. *The Staff*

299. Thesis Research. F,W,S

Thesis research conducted under faculty supervision. Students submit petition to sponsoring agency. *The Staff*

299F. Thesis Research (2 credits). F,W,S

Independent study or research under faculty supervision. Enrollment restricted to graduate students. Recommended for part-time students. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Program Description

Computer science is the study of the theoretical and practical aspects of computer technology and computer usage. The Computer Science Department offers courses on a wide range of topics, many of which include a mathematical component, and offers undergraduate bachelor of arts and bachelor of science degrees in computer science, a bachelor of science in computer science: computer game design, as well as the master of science and doctor of philosophy degrees. Besides offering instructional courses, the department engages in a substantial research program in which both advanced undergraduates and graduate students participate.

The bachelor of arts program at UCSC is designed to give students a solid grounding in both theoretical and practical topics in computer science, computer engineering, and mathematics while leaving flexibility for a broad program of study, including many courses outside of science and engineering, or even for a double major in another discipline. The bachelor of science program is appropriate for students desiring a somewhat stronger concentration in the sciences, with more courses in computer science and computer engineering, as well as courses in physics or chemistry; this program also allows for electives outside of science and engineering.

The bachelor of science in computer game design builds on a rigorous core program of study in computer science, adding interdisciplinary study on the artistic, dramatic, and narrative elements of computer game design; a year-long game design project acts as a capstone learning experience. Because many courses in all three programs have prerequisites, students leaning toward any of these programs will enjoy greater scheduling flexibility if they begin some preparatory courses in their first year. The specific course requirements for each undergraduate degree are given below.

Applications of computer science are found in many other areas of study, from art and music to business and science. Thus, interdisciplinary activities are encouraged. For those students whose primary interest is in another area, a minor in computer science is offered.

Courses for Nonmajors

The Computer Science Department offers a wide range of courses intended for nonmajors as well as majors. These include course 2, *Computer Literacy*; course 10, *Introduction to Computer Science*; course 80B, *Systems and Simulation*; course 80C, *Computer Arts and Graphics*; course 80J, *Technology Targeted at Social Issues*; course 80S, *From Software Innovation to Social Entrepreneurship*; and course 80K, *Foundations of Interactive Game Design*. Course 10, *Introduction to Computer Science*, may be beneficial to students who are considering the major but have a limited background in computer science. There are also introductory programming classes intended for nonmajors: courses 5C, 5J, 5P, *Beginning Programming*.

Computer Science Policies

Admissions Policy

Admission to the computer science majors is selective. First-year applicants may receive direct admission at the time they apply to UCSC based on their high school record and test scores. Admission to the major after a student has entered UCSC is based on performance in all School of Engineering and Physical and Biological Sciences courses attempted at UCSC. Please refer to the School of Engineering section of the catalog for the full admissions policy.

Foundation Courses

The foundation courses for each computer science major are as follows:

Computer Science BS and BA: Computer Science 12A and 12B (or 13H); Computer Engineering 16; and Mathematics 19A-B, or 20A-B

Computer Game Design: Computer Science 12A and 12B, Computer Engineering 16; and Mathematics 19A-B, or 20A-B.

UCSC students that have completed three or more quarters at UCSC must complete the foundation courses before they can declare a computer science major.

Disqualification and Satisfactory Progress in the Major

Students who do not make adequate progress in the computer science major may be disqualified from the major. Adequate progress normally means passing a minimum of three courses required for the major over every three consecutive quarters. (For part-time students, 15 credits attempted equals one full term.) Students who do not expect to meet this requirement should consult their faculty adviser and/or the undergraduate director for their major beforehand.

Students who receive a total of three grades of D, F, or No Pass in the key courses, Computer Science 12A, 12B, 13H, 101; and Computer Engineering 12 and 16, may, at the discretion of the department, be disqualified from the major.

The department may, at its sole discretion, disqualify from the major any student making two unsuccessful attempts in any one of the following principal courses commonly used to satisfy degree requirements:

- Computer Science 12A, 12B, 13H, 101, 102, 104A, 104B, 105, 111, 112, 115, 116, 130, 132, 140, 160, 161, 180, 181, and 183;
- Computer Engineering 12, 16, 100, 107, and 110;
- Applied Mathematics and Statistics 10, 131, and 147;
- Physics 5A, 5B, 5C, 6A, 6B, and 6C;
- Chemistry 1B and 1C;
- Mathematics 19A-B or Mathematics 20A-B, and 23A.

Each grade of D, F, or No Pass counts as one unsuccessful attempt; each grade of W counts as one-half of an unsuccessful attempt.

The School of Engineering section contains additional disqualification policies, such as maintaining a 2.0 School of Engineering GPA and the ethics requirement, that apply to computer science majors.

Students at risk of disqualification must meet with an undergraduate adviser to discuss their options for continuing in the major.

Letter Grade Policy

The Computer Science Department requires letter grades for all courses applied toward the B.A., B.S., Computer Game Design, and minor in computer science with the exception of two lower-division courses which students may elect to take Pass/No Pass. This policy includes courses required for the computer science majors but sponsored by other departments.

Transfer Students

Most courses in the computer science program at UCSC have a strong theoretical component to prepare the student for designing, as opposed to simply using, computer systems. Often, courses taken at other institutions which emphasize applications of current languages and computers do not count toward the computer science major at UCSC.

At UCSC, students are first introduced to programming using the programming language Java. The core programming sequence, courses 12A/L and 12B/M (or 13H/L, which covers both 12A/L and 12B/M), exposes students to both Java and C. Many upper-division courses that involve programming use the C and C++ programming languages. Transfer students who are not familiar with both Java and C may need to take a remedial course. Students familiar with C++ and Unix should find the transition to Java and C relatively simple.

Please refer to the School of Engineering section of the catalog for the policy regarding transfer students.

School of Engineering Policies

Please refer to the School of Engineering section of the catalog for additional policies that apply to all School of Engineering programs. These policies include admission to the major, limits on the number of times courses can be attempted, and the need for computer science students to obtain preapproval before taking courses elsewhere.

Preparation for the Major

It is recommended that high school students intending to apply to the computer science major have completed four years of mathematics (through advanced algebra and trigonometry) and three years of science in high school. Comparable college mathematics and science courses completed at other institutions also serve to properly prepare a student for the computer science major.

B.A. Major Requirements

The aim of this program is to expose students to a rigorous curriculum in computer science while maintaining sufficient flexibility so that students can take courses outside computer science, pursue a minor in another discipline, or complete a double major. Every student must complete a minimum of 17 courses, eight lower-division and nine upper-division. Out of these, the eight lower-division courses and the first upper-division course are required preparatory courses for every student. Once these preparatory courses are completed, students tailor their own program by choosing eight additional upper-division elective courses. To provide an adequate balance in subject matter, these additional courses must be divided between those that emphasize the theoretical aspects of the field and those that have a more practical focus. To provide a depth of study in one aspect of computer science, students must complete one of the approved depth sequences.

Lower-Division Requirements

Each student must successfully complete the following nine required preparatory courses:

Computer Science

12A/L, *Introduction to Programming(Accelerated)/Laboratory* (or 5J *Introduction to Programming in Java* and 11 *Intermediate Programming*);
12B/M, *Introduction to Data Structures/Laboratory*;

Computer Engineering

12/L, *Computer Systems and Assembly Language/ Laboratory*
16 (or 16H), *Applied Discrete Mathematics* (or *Honors Applied Discrete Mathematics*)

Mathematics

19A-B, *Calculus for Science, Engineering, and Mathematics* (credit for one or both may be granted with adequate performance on the CEEB calculus AB or BC Advanced Placement exam);
or Mathematics 20A-B, *Honors Calculus*
23A, *Multivariable Calculus*

Applied Mathematics and Statistics

10, *Mathematical Methods for Engineers I* or Mathematics 21, *Linear Algebra*

Upper-Division Requirements

101, *Algorithms and Abstract Data Types*

In addition to the above nine required courses, students must complete eight upper division electives, by completing the requirements for one depth sequence. At least 50 percent of these upper-division courses must be completed at UCSC.

Depth Sequence Requirements

For the following depth sequences, students must take at least seven courses from the theory and practice course lists, as follows:

- a minimum of three courses from the theory course list and a minimum of three courses from the practice course list;
- the seven courses from the theory and practice course lists must include all of the courses of one of the depth sequences;
- the eighth upper-division elective must be selected from any upper-division (5-credit) School of Engineering course.

The depth sequence courses are:

- *Compilers and language theory*: Computer Science 104A, 112, and 104B or 130;
- *Operating systems and hardware*: Computer Engineering 100/L, Computer Science 111, and Computer Engineering 110 or 121/L;
- *Theory*: Computer Science 102, 130, and 132;
- *Software methodology*: Computer Science 115 and two of the following: Computer Science 104A, 112, and 116;

- *Graphics*: Computer Science 160/L, 161/L, and Applied Mathematics and Statistics 147;
- *Databases*: Computer Science 180, 181, and 183

For the interactive game design depth sequence only, students must satisfy the following requirements:

- *Core courses*: students must take Computer Science 130, 105, 140, 160/L, and 115.
- *Game design electives*: students must take two courses from the game design electives list.
- *Free elective*: any course from the theory and practice course lists.

Theory Course List

Computer Science

102	<i>Introduction to Analysis of Algorithms</i>
130	<i>Computational Models</i>
132	<i>Computability and Computational Complexity</i>
142	<i>Machine Learning and Data Mining</i>
166A	<i>Game Theory and Applications I</i>

Computer Engineering

107	<i>Mathematical Methods of Systems Analysis: Stochastic</i>
108	<i>Data Compression</i>
154	<i>Data Communications</i>
177	<i>Applied Graph Theory and Algorithms</i>

Electrical Engineering

103	<i>Signals and Systems</i>
153	<i>Digital Signal Processing</i> (formerly Computer Engineering 153)

Applied Mathematics and Statistics

131	<i>Introduction to Probability Theory</i>
146	<i>Introduction to Dynamical Systems</i>
147	<i>Computational Methods and Applications</i>
162	<i>Design and Analysis of Computer Simulation Experiments</i>

Mathematics

115	<i>Graph Theory</i>
117	<i>Advanced Linear Algebra</i>
126	<i>Mathematical Control Theory</i>
148	<i>Numerical Analysis</i>

Practice Course List

Computer Science

104A	<i>Fundamentals of Compiler Design I</i>
104B	<i>Fundamentals of Compiler Design II</i>
105	<i>Systems Programming</i>
109	<i>Advanced Programming</i>
111	<i>Introduction to Operating Systems</i>
112	<i>Comparative Programming Languages</i>
115	<i>Software Methodology</i>
116	<i>Software Design Project</i>
122	<i>Computer Security</i>
128	<i>Distributed Systems: File Sharing, Online Gaming, and More</i>
129	<i>Data Storage Systems</i>
140	<i>Artificial Intelligence</i>
146	<i>Game Artificial Intelligence</i>
148	<i>Interactive Storytelling</i>
160/L	<i>Introduction to Computer Graphics/Laboratory</i>
161/L	<i>Visualization and Computer Animation/Laboratory</i>
164/L	<i>Game Engines/Laboratory</i>
180	<i>Database Systems I</i>
181	<i>Database Systems II</i>
183	<i>Hypermedia and the Web</i>
190X	<i>Methods of Cryptography</i>
204	<i>Compiler Design</i>

Computer Engineering

100/L	<i>Logic Design/Laboratory</i>
-------	--------------------------------

- 110 *Computer Architecture*
- 112 *Computer and Game Console Architecture*
- 113 *Parallel and Concurrent Programming*
- 117/L *Embedded Software/Laboratory*
- 118/L *Introduction to Mechatronics/Laboratory*
- 121/L *Microprocessor System Design/Laboratory*
- 123A *Computer Engineering Design Project I*
- 123B *Computer Engineering Design Project II*
- 125/L *Logic Design with Verilog/Laboratory*
- 126/L *Advanced Logic Design/Laboratory*
- 150/L *Introduction to Computer Networks/Laboratory*
- 155/L *Computer Networks Project/Laboratory*
- 167/L *Sensing and Sensor Technologies/Laboratory*

Electrical Engineering

- 130/L *Introduction to Optoelectronics and Photonics/Laboratory*

Game Design Electives

Computer Science

- 102 *Introduction to Analysis of Algorithms*
- 116 *Software Design Project*
- 128 *Distributed Systems: File Sharing, Online Gaming, and More*
- 146 *Game Artificial Intelligence*
- 148 *Interactive Storytelling*
- 161/L *Visualization and Computer Animation/Laboratory*
- 164/L *Game Engines/Laboratory*
- 180 *Database Systems I*

Computer Engineering

- 112 *Computer and Game Console Architecture*
- 150 *Introduction to Computer Networks*
- 167/L *Sensing and Sensor Technologies/Laboratory*

Film and Digital Media

- 170A *Introduction to Digital Media Production*
- 171D *Social Information Spaces*
- 177 *Digital Media Workshop: Computer as Medium*

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement will normally be met within one to three courses already required for the major. For detailed information on this major's DC requirement, consult your major adviser or see the 2010-11 general catalog.

B.S. Major Requirements

This program is designed for students who wish to maximize exposure to computer science concepts and methods by taking a larger selection of upper-division computer science courses, as well as additional courses in the sciences and mathematics. A minimum of 22 courses must be completed for the B.S. in computer science, whereas a minimum of 17 courses must be completed for the B.A. in computer science. Out of the 22 courses, 10 are lower-division courses (including two science courses), and 12 are upper-division courses. The B.S. is more structured than the B.A.; 18 specific courses are required, and the remaining four are elective upper-division computer science or computer engineering courses.

Lower- and Upper-Division Requirements

Students are required to take the following 18 courses:

Computer Science

- 12A/L *Introduction to Programming(Accelerated)/Laboratory (or 5J Introduction to Programming in Java and 11 Intermediate Programming)*
- 12B/M *Introduction to Data Structures/Laboratory*
- 101 *Algorithms and Abstract Data Types*
- 102 *Introduction to Analysis of Algorithms*
- 104A *Fundamentals of Compiler Design I*
- 111 *Introduction to Operating Systems*
- 112 *Comparative Programming Languages*
- 130 *Computational Models*

Computer Engineering

12/L *Computer Systems and Assembly Language/Laboratory*
16 *Applied Discrete Mathematics*
107 *Mathematical Methods of Systems Analysis: Stochastic*, or AMS 131, *Introduction to Probability Theory*
110, *Computer Architecture*, or 112, *Computer and Game Console Architecture*

Mathematics

19A-B *Calculus for Science, Engineering, and Mathematics*, or Mathematics 20A-B, *Honors Calculus*
23A *Multivariable Calculus*

Applied Mathematics and Statistics

10 *Mathematical Methods for Engineers I*; or Mathematics 21, *Linear Algebra*
131 *Introduction to Probability Theory*; or Computer Engineering 107, *Mathematical Methods of Systems Analysis: Stochastic*

Physics or Chemistry

Either two physics or two chemistry courses, with their associated laboratories, from the following:

Physics 5A/L, *Introduction to Physics I/Laboratory* (or 6A/L);
and either Physics 5B/M, *Introduction to Physics II/Laboratory* (or 6B/M);
or Physics 5C/N, *Introduction to Physics III/Laboratory* (or 6C/N)
Chemistry 1B/M, *General Chemistry/Laboratory*
Chemistry 1C/N, *General Chemistry/Laboratory*

The remaining four courses must be upper-division computer science or computer engineering electives selected from the theory and practice course lists (see B.A. Major Requirements reference above). One of these courses may be replaced by an upper-division mathematics course from the theory course list.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement will normally be met within one to three courses already required for the major. For detailed information on this major's DC requirement, consult your major adviser or see the 2010-11 general catalog.

Comprehensive Requirement

In addition to the above B.A. or B.S. requirements, students in the computer science majors must satisfy one of the following three exit requirements: pass one of the capstone courses (see Capstone Courses below); obtain a scaled score of 600 or above on the graduate record examination (GRE) advanced computer science subject test; or successfully complete a senior thesis.

Capstone Courses

Students may choose from one of the following capstone courses to satisfy their exit requirement:

104B *Fundamentals of Compiler Design II*
116 *Software Design Project*
140 *Artificial Intelligence*
161/L *Visualization and Computer Animation/Laboratory*
181 *Database Systems II*
183 *Hypermedia and the Web*

Students taking one of the capstone courses will enroll normally. Students need to pass the capstone course to pass the exit requirement. No course may be attempted more than twice without prior approval from the chair of the department offering the course. W's count as an attempted class for this purpose. If a student fails to receive a passing score during these two attempts, he or she may still take the GRE Advanced Computer Science Subject Test and achieve a scaled score of 600 or above to satisfy the exit requirement.

The senior thesis consists of a self-contained project within the broad scope of computer science, but one that is not available in the regular course offerings. A student wishing to complete a senior thesis must successfully complete a minimum of 5 credits in course 195, Senior Thesis Research; submit a written thesis proposal; and have it accepted by a faculty supervisor. The supervision of a senior thesis student is always at the discretion of the faculty member. A written

report and an oral presentation to a faculty examining committee are required.

Students who elect to use the GRE advanced computer science subject test as their senior exit requirement must arrange to take the GRE test and have scores submitted to the department before graduation deadlines. Contact the UCSC Career Center for GRE information and application forms.

Honors in the Major

Students must obtain a GPA of 3.8 or higher in the courses in the major to be considered for the distinction of "Highest Honors in the Major." Students must obtain a GPA of 3.5 or higher in the courses in the major to be considered for the distinction of "Honors in the Major." The School of Engineering reserves the right to withhold honors based on other criteria, such as an incident of academic dishonesty.

Computer Science Major Planners

The following are four sample academic plans for first-year students as preparation for the computer science major. Plans One A and Two A are suggested guidelines for students who have some prior experience with programming. Plans One B and Two B are for students who are considering the major and have no prior programming experience. Students who plan carefully can still have several openings free to take other breadth courses they find interesting.

Plan One A, B.A. Degree			
Year	Fall	Winter	Spring
1st (frsh)	CMPS 10 MATH 19A	CMPS 12A/L MATH 19B	CMPS 12B/M MATH 23A
2nd (soph)	CMPE 16	CMPE 12/L	CMPS 101 AMS 10

Plan One B, B.A. Degree			
Year	Fall	Winter	Spring
1st (frsh)	AMS 3 CMPSs 10	MATH 19A CMPS 5J	MATH 19B CMPS 11
2nd (soph)	MATH 23A	CMPE 16 or 16H/L CMPS 12B/M	CMPS 101 AMS 10

Plan Two A, B.S. Degree			
Year	Fall	Winter	Spring
1st (frsh)	CMPS 12A/L MATH 19A	CMPS 12B/M MATH 19B	CMPE 12/L MATH 23A
2nd (soph)	CMPE 16 AMS 10	CMPE 100/L PHYS 6A/L	CMPS 101 PHYS 6C/N

Plan Two B, B.S. Degree			
Year	Fall	Winter	Spring
1st (frsh)	CMPS 10	MATH 19A CMPS 5J	CMPS 11 MATH 19B
2nd (soph)	MATH 23A	CMPS 12B/M CMPE 16	CMPE 12/L CMPS 101 or AMS 10

B.S. Computer Science: Computer Game Design Major Requirements

The goal of this degree is to provide students a deep understanding of the technical aspects of computer game engineering, and a broad background in the artistic, narrative, and dramatic elements of game design. The core of the degree program is a strong grounding in computer science and computer engineering, preceded by a foundation in math and physics. Classes in ethics, as well as courses in art, film, music, theater arts, and economics provide breadth in topics of special relevance to computer game design. In their upper division courses, students gain depth by taking upper division electives in computer science and computer engineering. Two advanced courses in digital media give students the ability to view computer software from an artistic framework. A year-long capstone game design studio class allows students to develop substantial computer games, and integrate materials from the rest of the program.

The curriculum has 124-141 credits in 24-25 courses (depending on whether a student enters as a transfer student). 12 of the courses are upper division. Students interested in the major should pay special attention to the overlap between general education requirements and major requirements, as the major covers up to six general education requirements.

Lower- and Upper-Division Requirements

Course requirements are divided into six conceptual areas:

Mathematics and Physics

Complete all of the following courses:

Mathematics 19A-B, *Calculus for Science, Engineering, and Mathematics* (students can alternately take, Mathematics 20A-B, *Honors Calculus*. Credit for one or both Mathematics 19A-B may be granted with adequate performance on the CEEB calculus AB or BC advanced placement exams). Mathematics 21, *Linear Algebra*, or Applied Mathematics and Statistics 10, *Mathematical Methods for Engineers I*

Computer Engineering 16, *Applied Discrete Mathematics* (or 16H, *Honors Applied Discrete Mathematics*)

Physics 5A/L, *Introduction to Physics I/Laboratory* (or 6A/L)

Computational Foundations

Complete all of the following courses:

Computer Science 12A/L, *Introduction to Programming(Accelerated)/Laboratory* (or 5J *Introduction to Programming in Java*, and 11 *Intermediate Programming*)

Computer Science 12B/M, *Introduction to Data Structures/Laboratory*

Computer Engineering 12/L, *Computer Systems and Assembly Language/Laboratory*

Computer Science 109, *Advanced Programming*

Computer Science 101, *Algorithms and Abstract Data Types*

Game Design

Complete all of the following courses.

Computer Science 20, *Game Design Experience*

Computer Science 170, *Game Design Studio I*

Computer Science 171, *Game Design Studio II*

Computer Science 172, *Game Design Studio III*

Computer Game Engineering

Complete five courses from the following list:

Computer Science 160/L, *Introduction to Computer Graphics/Laboratory*

Computer Science 161/L, *Visualization and Computer Animation/Laboratory*

Computer Science 164/L, *Game Engines/Laboratory*

Computer Science 140, *Artificial Intelligence*

Computer Science 146, *Game Artificial Intelligence*

Computer Science 148, *Interactive Storytelling*

Computer Science 166A, *Game Theory and Applications I*

Computer Engineering 110, *Computer Architecture*

Computer Science 128, *Distributed Systems, File Sharing, Online Gaming, and More*

Computer Science 105, *Systems Programming*

Computer Science 111, *Introduction to Operating Systems*

Computer Engineering 112, *Computer and Game Console Architecture*

Computer Engineering 150/L, *Introduction to Computer Networks/Laboratory*

Computer Engineering 113, *Parallel and Concurrent Programming*

Computer Engineering 118/L, *Introduction to Mechatronics/Laboratory*

Computer Science 180, *Database Systems I*

Computer Science 181, *Database Systems II*

Computer Science 183, *Hypermedia and the Web*

Computer Science 102, *Introduction to Analysis of Algorithms*

Computer Science 130, *Computational Models*

Computer Engineering 117/L, *Embedded Software/Laboratory*

Applied Mathematics and Statistics 131, *Introduction to Probability Theory*

Applied Mathematics and Statistics 147, *Computational Methods and Applications*

Applied Mathematics and Statistics 162, *Design and Analysis of Computer Simulation Experiments*

Digital Media

Complete two courses from the following list:

Film and Digital Media 170A, *Introduction to Digital Media Production*

Film and Digital Media 177, *Digital Media Workshop, Computer as Medium*

Film and Digital Media 171D, *Social Information Spaces*

Any 5-unit course offered in the digital arts new media (DANM) curriculum (requires approval of professor)

Art 118, *Computer Art: Theories, Methods, and Practices* (may require approval of instructor)

Theater Arts 157, *Playwriting*

Art and Social Foundations

Complete the ethics requirement and three of the following electives:

Ethics Requirement

One of:

Computer Engineering 80E, *Engineering Ethics*

Philosophy 22, *Introduction to Ethical Theory*

Philosophy 24, *Introduction to Ethics, Contemporary Moral Issues*

Philosophy 28, *Environmental Ethics*

Biomolecular Engineering 80G, *Bioethics in the 21st Century: Science, Business, and Society* (crosslisted as Philosophy 80G)

Art Elective

One of:

Art 10G, *2D Foundation*

Art 10H, *3D Foundation*

Art 80A, *Introduction to Drawing*

Art 80F, *Introduction to Issues in Digital Media*

Film Elective

One of:

Film and Digital Media 20A, *The Film Experience*

Film and Digital Media 20C, *Introduction to Digital Media*

Film and Digital Media 20P, *Introduction to Production Technique*

Theater Elective

One of:

Theater Arts 10, *Introduction to Theater Design and Technology*

Theater Arts 18, *Drafting for Theatrical Production*

Theater Arts 19, *Design Studio, Lighting Studio*

Theater Arts 20, *Introductory Studies in Acting*

Theater Arts 30, *Introduction to Modern Dance Theory and Technique*

Theater Arts 40, *Introduction to Directing*

Theater Arts 80E, *Stand-Up Comedy*

Theater Arts 80L, *Muppet Magic: Jim Henson's Art*

Music Elective

One of:

Music 11A, *Introduction to Western Art Music*

Music 11B, *Introduction to Jazz*

Music 11C, *Introduction to American Popular Music*

Music 11D, *Introduction to World Music*

Music 80C, *History, Literature, and Technology of Electronic Music*

Music 80L, *Artificial Intelligence and Music*

Music 80M, *Film Music*

Music 80R, *Music and the World Wide Web*

Economics Elective

One of:

Economics 1, *Introductory Microeconomics, Resource Allocation and Market Structure*

Economics 2, *Introductory Macroeconomics, Aggregate Economic Activity*

Economics 80H, *Wall Street and the Money Game*

Comprehensive Requirement

Students satisfy the senior comprehensive requirement by either receiving a passing grade in all three courses of the game design studio sequence or performing a senior thesis.

Computer Science: Computer Game Design Major Planners

The following are three sample academic plans that students can use to plan their sequence of courses in the major. Plans one and two are suggested guidelines for students who begin their studies in their freshman year. Such students, if they plan carefully will have several openings free to take other breadth courses they find interesting. Plan one is for a student entering UCSC in their freshman year who is prepared to go directly into Mathematics 19A/20A and Computer Science 12A. Plan two is for a student entering UCSC their freshman year who needs to take preparatory courses prior to Mathematics 19A or Computer Science 12A to ensure a successful outcome in those courses. Plan three is for students that transfer to campus at the beginning of their junior year.

Plan One—Enter UCSC Freshman Year			
Year	Fall	Winter	Spring
1st (frsh)	Core MATH 19A or 20A CMPS 12A/L	CMPS 20 (Game Design Experience) MATH 19B or 20B CMPS 12B/M	Art/Social Elective I CMPE 12/L Composition (C, or gen ed)
2nd (soph)	PHYS 5A/L or 6A/L gen ed MATH 21 or AMS 10	Art/Social Elective II CMPS 109 CMPE 16	Art/Social Elective III Ethics Requirement CMPS 101
3rd (jr)	gen ed Game Engineering Elective I Game Engineering Elective II	gen ed Game Engineering Elective III Game Engineering Elective IV	gen ed Game Engineering Elective V
4th (sr)	gen ed CMPS 170 (Game Design Studio I) Digital Media Elective I	gen ed CMPS 171 (Game Design Studio III)	gen ed CMPS 172 (Game Design Studio III) Digital Media Elective II

Plan Two—Enter UCSC Freshman Year, Need Math and Computer Science Preparation Classes (Mathematics 3, Computer Science 10)			
Year	Fall	Winter	Spring
1st (frsh)	Core MATH 3 CMPS 10	Writing (C, or gen ed) MATH 19A CMPS 12A/L	MATH 19B CMPS 12B/M Art/Social Elective I
2nd (soph)	Art/Social Elective II CMPE 12/L PHYS 6A/L	CMPS 20 (Game Design Experience) CMPE 16 CMPS 109	MATH 21 or AMS 10 Ethics Requirement Art/Social Elective III
3rd (jr)	CMPS 101 Digital Media Elective I gen ed	Game Engineering Elective I Game Engineering Elective II gen ed	gen ed Game Engineering Elective III Digital Media Elective II

	Elective IV		
--	-------------	--	--

Plan Three-Transfer Student			
Year	Fall	Winter	Spring
1st (frsh)	CMPS 101 CMPE 12/L Art/Social Elective I	CMPS 109 Game Engineering Elective I Digital Media Elective I	Ethics Requirement Game Engineering Elective II Digital Media Elective II
2nd (soph)	Art/Social Elective II CMPS 170 (Game Design Studio I) Game Engineering Elective III	Art/Social Elective III CMPS 171 (Game Design Studio II) Game Engineering Elective IV	gen ed CMPS 172 (Game Design Studio III) Game Engineering Elective V

Minor Requirements

Courses required for the computer science minor are Mathematics 19A-B or 20A-B, and 23A; Applied Mathematics and Statistics 10; Computer Science courses 12A/L and 12B/M (or 13H/L can be taken to cover both 12A/L and 12B/M) and course 101; Computer Engineering 12/L and 16; and four additional upper-division computer science courses from a list of approved electives (see the department's checklist for the computer science minor at www.soe.ucsc.edu/programs/cs/undergraduate/). In selecting the four upper-division courses, students may elect to focus on one subdiscipline of computer science by completing the courses in a BA depth sequence. Upper-division computer engineering and mathematics courses that generally apply toward the computer science major may not be applied toward the computer science minor. In addition, some upper-division computer science courses may not be applied toward the computer science minor. There is no comprehensive examination or senior thesis requirement for the minor.

Graduate Programs

Program Description

The Computer Science Department at UCSC offers both a master's program and a doctoral program. The goal of these programs is to help students develop into independent scholars who are prepared for productive careers in research, teaching, and industry. The master's degree may be used as a terminal degree or as the first step toward the Ph.D. degree. The student-faculty ratio is five to one, making it possible for students to receive individual attention and to pursue programs that fit their individual needs. The intellectual atmosphere is enriched by regular colloquia and seminars presented by eminent contributors to the field, many of whom are associated with other major universities and industrial research centers in the San Francisco Bay Area.

The Computer Science Department enjoys a close relationship with the Computer Engineering and Electrical Engineering Departments, the Bioinformatics Department, and the new Applied Mathematics and Statistics Department.

Most computer science graduate students are hired as teaching assistants helping with undergraduate courses, hired as research assistants working for computer science and other School of Engineering faculty, or awarded fellowships to pursue their research. Additional information on the computer science graduate programs can be found on the department's web pages at www.soe.ucsc.edu.

Requirements for the Master's Degree: Project Track

Course Requirements

Each student is required to take 50 credits as follows:

Computer Science

- 200, *Research and Teaching in Computer Science and Engineering*, 3 credits;
- 201, *Analysis of Algorithms*, 5 credits;
- 203, *Programming Languages*, 5 credits;
- 296, *Master's Project*, 2 credits;
- a base requirement in computer architecture must be met by taking Computer Engineering 110 or Computer Engineering 202 or equivalent elsewhere (approval required);
- one course each from three different breadth categories for a total of three courses (15

credits) — see www.cs.ucsc.edu/graduates/breadth/;

- all remaining units must be regular, 5-credit graduate courses from: computer science, within the School of Engineering (with adviser's approval); or outside the School of Engineering (with adviser's and grad director's approval); courses that do not count include all courses numbered 200, 280, 296, 297, and 299;
- at least 30 units must be in computer science;
- two upper-division undergraduate computer science courses (other than course 101) or a graduate course (not seminar) in related disciplines outside the list of approved graduate courses may be substituted for one graduate course, when necessary to strengthen a student's preparation for graduate studies, with prior approval from the adviser and the graduate director.

Project

Completion of a master's project is required for the master's degree. In consultation with the adviser, the student forms a master's project reading committee of at least two faculty members, each of whom is provided a copy of the project report. The final project must be accepted by the review committee before the award of the master of science degree.

Requirements for the Master's Degree: Thesis Track

Course Requirements

Each student is required to take 48 credits as follows:

Computer Science

- 200, *Research and Teaching in Computer Science and Engineering*, 3 credits;
- 201, *Analysis of Algorithms*, 5 credits;
- 203, *Programming Languages*, 5 credits;
- a base requirement in computer architecture must be met by taking Computer Engineering 110 or Computer Engineering 202 or equivalent elsewhere (approval required);
- one course each from three different breadth categories for a total of three courses (15 credits) — see www.cs.ucsc.edu/graduates/breadth/;
- up to 10 credits of course 297, *Independent Study or Research*; or course 299, *Thesis Research*;
- all remaining units must be regular, 5-credit graduate courses from: computer science, within the School of Engineering (with adviser's approval); or outside the School of Engineering (with adviser's and grad director's approval); courses that do not count include all courses numbered 200, 280, 296, 297, and 299;
- at least 28 units must be in computer science;
- two upper-division undergraduate computer science courses (other than course 101) or a graduate course (not seminar) in related disciplines outside the list of approved graduate courses may be substituted for one graduate course, when necessary to strengthen a student's preparation for graduate studies, with prior approval from the adviser and the graduate director.

Thesis

Completion of a master's thesis is required for the master's degree. To fulfill this requirement, the student submits a written proposal to a faculty member, usually by the third academic quarter. By accepting the proposal, the faculty member becomes the thesis adviser. In consultation with the adviser, the student forms a master's thesis reading committee with at least two additional faculty members, each of whom is provided a copy of the proposal. The student presents an expository talk on the thesis research, and the final thesis must be accepted by the review committee before the award of the master of science degree.

Requirements for the Ph.D. Degree

Course Requirements

Each student is required to take 58 credits as follows:

Computer Science

- 200, *Research and Teaching in Computer Science and Engineering*, 3 credits;
- 201, *Analysis of Algorithms*, 5 credits;
- 203, *Programming Languages*, 5 credits;
- a base requirement in computer architecture must be met by taking Computer Engineering 110 or Computer Engineering 202 or equivalent elsewhere (approval required);
- one course each from three different breadth categories for a total of three courses (15 credits) — see www.cs.ucsc.edu/graduates/breadth/;
- up to 10 credits of course 297, *Independent Study or Research*; or course 299, *Thesis Research*;
- all remaining units must be regular, 5-credit graduate courses from: computer science, within the School of Engineering (with adviser's approval); or outside the School of Engineering (with adviser's and grad director's approval); courses that do not count

- include all courses numbered 200, 280, 296, 297, and 299;
- at least 33 units must be in computer science;
- graduate courses (not seminars) in related disciplines outside the list of approved graduate courses may be substituted, when necessary to strengthen a student's preparation for graduate studies, with prior approval from the adviser and the graduate director. Course selection should form a coherent plan of study and requires adviser approval. Undergraduate courses may not be used to satisfy Ph.D. course requirements;
- each student is required to complete at least one quarter of teaching assistantship. This requirement can be met after advancement to candidacy. Certain exceptions may be permitted for those with extensive prior teaching experience or those who are not allowed to be employed due to visa regulations.

Ph.D. students who have satisfied the requirements for the master's degree are eligible to receive a master's degree.

Dissertation

Each student writes a Ph.D. dissertation. The dissertation must show the results of in-depth research, be an original contribution of significant knowledge, and include material worthy of publication. Where appropriate, research internships with companies, government labs, or elsewhere are recognized (and may be required) as an integral part of the research leading to the dissertation. As the first step, a student submits a written dissertation proposal to a School of Engineering faculty member. By accepting the proposal, the faculty member becomes the dissertation supervisor. The dissertation proposal is publicly and formally presented in an oral qualifying examination given by a qualifying exam committee, approved by the graduate committee and the Graduate Council. The student must submit his or her written dissertation proposal to all members of the committee and the graduate assistant one month in advance of the examination.

Students are advanced to candidacy after they have completed the course requirements, passed the qualifying examination, cleared all Incompletes from their records, have an appointed dissertation reading committee, and paid the filing fee. Students who have not advanced to candidacy by the end of their fourth year will be placed on academic probation.

Each Ph.D. candidate submits the completed dissertation to a reading committee at least one month prior to the dissertation defense. The appointment of the dissertation reading committee is made immediately after the qualifying exam and is necessary for advancing to candidacy. The candidate presents his or her research results in a public seminar sponsored by the dissertation supervisor. The seminar is followed by a defense of the dissertation to the reading committee and attending faculty, who will then decide whether the dissertation is acceptable or requires revision. Successful completion of the dissertation fulfills the final academic requirement for the Ph.D. degree.

Transfer Credit

Up to three School of Engineering courses fulfilling the degree requirements of either the M.S. or Ph.D. degrees may be taken before beginning the graduate program through the concurrent enrollment program.

Ph.D. students who have previously earned a master's degree in a related field at another institution may substitute courses from their previous university with approval of the adviser and the graduate committee.

Courses from other institutions may not be applied to the M.S. degree course requirements. Petitions should be submitted along with the transcript from the other institution or UCSC extension. For courses taken at other institutions, copies of the syllabi, exams, and other course work should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UCSC.

At most, a total of three courses may be transferred from concurrent enrollment and other institutions.

Review of Progress

Each year, the faculty reviews the progress of every student. Students not making adequate progress toward completion of degree requirements (see Graduate Handbook for policy on satisfactory academic progress) are subject to dismissal from the program. Students with academic deficiencies may be required to take additional courses. Full-time students with no academic deficiencies are normally expected to complete the degree requirements at the rate of at least two courses per quarter. Full-time students must complete course 201, Computer Engineering 202, and course 203 within two years and normally must complete all course requirements within two years for the M.S. and three years for the Ph.D.

Students receiving two or more grades of below B or U (fail) in the School of Engineering (SoE) courses are not making adequate progress and will be placed on academic probation for the following three quarters of registered enrollment. Withdrawing or taking a leave of absence does not count as enrollment. Part-time enrollment is counted as a half quarter of enrollment.

Should any computer science graduate student fail a SoE course while on probation, the Computer Science Department may request the graduate dean to dismiss that student from the graduate program. If after being removed from probation, the student again fails a SoE course, he or she will return immediately to academic probation.

Graduate students experiencing circumstances or difficulties that impact their academic performance should contact their adviser and the graduate director immediately. Students may appeal their dismissal.

Program Description

Computer science is the study of the theoretical and practical aspects of computer technology and computer usage. The Computer Science Department offers courses on a wide range of topics, many of which include a mathematical component, and offers undergraduate bachelor of arts and bachelor of science degrees in computer science, a bachelor of science in computer science: computer game design, as well as the master of science and doctor of philosophy degrees. Besides offering instructional courses, the department engages in a substantial research program in which both advanced undergraduates and graduate students participate.

The bachelor of arts program at UCSC is designed to give students a solid grounding in both theoretical and practical topics in computer science, computer engineering, and mathematics while leaving flexibility for a broad program of study, including many courses outside of science and engineering, or even for a double major in another discipline. The bachelor of science program is appropriate for students desiring a somewhat stronger concentration in the sciences, with more courses in computer science and computer engineering, as well as courses in physics or chemistry; this program also allows for electives outside of science and engineering.

The bachelor of science in computer game design builds on a rigorous core program of study in computer science, adding interdisciplinary study on the artistic, dramatic, and narrative elements of computer game design; a year-long game design project acts as a capstone learning experience. Because many courses in all three programs have prerequisites, students leaning toward any of these programs will enjoy greater scheduling flexibility if they begin some preparatory courses in their first year. The specific course requirements for each undergraduate degree are given below.

Applications of computer science are found in many other areas of study, from art and music to business and science. Thus, interdisciplinary activities are encouraged. For those students whose primary interest is in another area, a minor in computer science is offered.

Courses for Nonmajors

The Computer Science Department offers a wide range of courses intended for nonmajors as well as majors. These include course 2, *Computer Literacy*; course 10, *Introduction to Computer Science*; course 80B, *Systems and Simulation*; course 80C, *Computer Arts and Graphics*; course 80J, *Technology Targeted at Social Issues*; course 80S, *From Software Innovation to Social Entrepreneurship*; and course 80K, *Foundations of Interactive Game Design*. Course 10, *Introduction to Computer Science*, may be beneficial to students who are considering the major but have a limited background in computer science. There are also introductory programming classes intended for nonmajors: courses 5C, 5J, 5P, *Beginning Programming*.

Computer Science Policies

Admissions Policy

Admission to the computer science majors is selective. First-year applicants may receive direct admission at the time they apply to UCSC based on their high school record and test scores. Admission to the major after a student has entered UCSC is based on performance in all School of Engineering and Physical and Biological Sciences courses attempted at UCSC. Please refer to the School of Engineering section of the catalog for the full admissions policy.

Foundation Courses

The foundation courses for each computer science major are as follows:

Computer Science BS and BA: Computer Science 12A and 12B (or 13H); Computer Engineering 16; and Mathematics 19A-B, or 20A-B

Computer Game Design: Computer Science 12A and 12B, Computer Engineering 16; and Mathematics 19A-B, or 20A-B.

UCSC students that have completed three or more quarters at UCSC must complete the foundation courses before they can declare a computer science major.

Disqualification and Satisfactory Progress in the Major

Students who do not make adequate progress in the computer science major may be disqualified from the major. Adequate progress normally means passing a minimum of three courses required for the major over every three consecutive quarters. (For part-time students, 15 credits attempted equals one full term.) Students who do not expect to meet this requirement should consult their faculty adviser and/or the undergraduate director for their major beforehand.

Students who receive a total of three grades of D, F, or No Pass in the key courses, Computer Science 12A, 12B, 13H, 101; and Computer Engineering 12 and 16, may, at the discretion of the department, be disqualified from the major.

The department may, at its sole discretion, disqualify from the major any student making two unsuccessful attempts in any one of the following principal courses commonly used to satisfy degree requirements:

Computer Science 12A, 12B, 13H, 101, 102, 104A, 104B, 105, 111, 112, 115, 116, 130, 132, 140, 160, 161, 180, 181, and 183;

Computer Engineering 12, 16, 100, 107, and 110;

Applied Mathematics and Statistics 10, 131, and 147;

Physics 5A, 5B, 5C, 6A, 6B, and 6C;

Chemistry 1B and 1C;

Mathematics 19A-B or Mathematics 20A-B, and 23A.

Each grade of D, F, or No Pass counts as one unsuccessful attempt; each grade of W counts as one-half of an unsuccessful attempt.

The School of Engineering section contains additional disqualification policies, such as maintaining a 2.0 School of Engineering GPA and the ethics requirement, that apply to computer science majors.

Students at risk of disqualification must meet with an undergraduate adviser to discuss their options for continuing in the major.

Letter Grade Policy

The Computer Science Department requires letter grades for all courses applied toward the B.A., B.S., Computer Game Design, and minor in computer science with the exception of two lower-division courses which students may elect to take Pass/No Pass. This policy includes courses required for the computer science majors but sponsored by other departments.

Transfer Students

Most courses in the computer science program at UCSC have a strong theoretical component to prepare the student for designing, as opposed to simply using, computer systems. Often, courses taken at other institutions which emphasize applications of current languages and computers do not count toward the computer science major at UCSC.

At UCSC, students are first introduced to programming using the programming language Java. The core programming sequence, courses 12A/L and 12B/M (or 13H/L, which covers both 12A/L and 12B/M), exposes students to both Java and C. Many upper-division courses that involve programming use the C and C++ programming languages. Transfer students who are not familiar with both Java and C may need to take a remedial course. Students familiar with C++ and Unix should find the transition to Java and C relatively simple.

Please refer to the School of Engineering section of the catalog for the policy regarding transfer students.

School of Engineering Policies

Please refer to the School of Engineering section of the catalog for additional policies that apply to all School of Engineering programs. These policies include admission to the major, limits on the number of times courses can be attempted, and the need for computer science students to obtain preapproval before taking courses elsewhere.

Preparation for the Major

It is recommended that high school students intending to apply to the computer science major have completed four years of mathematics (through advanced algebra and trigonometry) and three years of science in high school. Comparable college mathematics and science courses completed at other institutions also serve to properly prepare a student for the computer science major.

B.A. Major Requirements

The aim of this program is to expose students to a rigorous curriculum in computer science while maintaining sufficient flexibility so that students can take courses outside computer science, pursue a minor in another discipline, or complete a double major. Every student must complete a minimum of 17 courses, eight lower-division and nine upper-division. Out of these, the eight lower-division courses and the first upper-division course are required preparatory courses for every student. Once these preparatory courses are completed, students tailor their own program by choosing eight additional upper-division elective courses. To provide an adequate balance in subject matter, these additional courses must be divided between those that emphasize the theoretical aspects of the field and those that have a more practical focus. To provide a depth of study in one aspect of computer science, students must complete one of the approved depth sequences.

Lower-Division Requirements

Each student must successfully complete the following nine required preparatory courses:

Computer Science

12A/L, *Introduction to Programming*(~~Accelerated~~)/~~Computer Programming~~ Laboratory (or 5J *Introduction to Programming in Java* and 11 *Intermediate Programming*);

12B/M, *Introduction to Data Structures/Laboratory*;

Computer Engineering

12/L, *Computer Systems and Assembly Language/ Laboratory*

16 (or 16H), *Applied Discrete Mathematics* (or *Honors Applied Discrete Mathematics*)

Mathematics

19A-B, *Calculus for Science, Engineering, and Mathematics* (credit for one or both may be granted with adequate performance on the CEEB calculus AB or BC Advanced Placement exam); or Mathematics

20A-B, *Honors Calculus*

23A, *Multivariable Calculus*

Applied Mathematics and Statistics

10, *Mathematical Methods for Engineers I* or Mathematics 21, *Linear Algebra*

Upper-Division Requirements

101, *Algorithms and Abstract Data Types*

In addition to the above nine required courses, students must complete eight upper division electives, by completing the requirements for one depth sequence. At least 50 percent of these upper-division courses must be completed at UCSC.

Depth Sequence Requirements

For the following depth sequences, students must take at least seven courses from the theory and practice course lists, as follows:

a minimum of three courses from the theory course list and a minimum of three courses from the practice course list;

the seven courses from the theory and practice course lists must include all of the courses of one of the depth sequences;

the eighth upper-division elective must be selected from any upper-division (5-credit) School of Engineering course.

The depth sequence courses are:

Compilers and language theory: Computer Science 104A, 112, and 104B or 130;

Operating systems and hardware: Computer Engineering 100/L, Computer Science 111, and Computer Engineering 110 or 121/L;

Theory: Computer Science 102, 130, and 132;

Software methodology: Computer Science 115 and two of the following: Computer Science 104A, 112, and 116;

Graphics: Computer Science 160/L, 161/L, and Applied Mathematics and Statistics 147;

Databases: Computer Science 180, 181, and 183

For the interactive game design depth sequence only, students must satisfy the following requirements:

Core courses: students must take Computer Science 130, 105, 140, 160/L, and 115.

Game design electives: students must take two courses from the game design electives list.

Free elective: any course from the theory and practice course lists.

Theory Course List

Computer Science

102 *Introduction to Analysis of Algorithms*

130 *Computational Models*

132 *Computability and Computational Complexity*

142 *Machine Learning and Data Mining*

166A *Game Theory and Applications I*

Computer Engineering

107 *Mathematical Methods of Systems Analysis: Stochastic*

108 *Data Compression*

154 *Data Communications*

177 *Applied Graph Theory and Algorithms*

Electrical Engineering

103 *Signals and Systems*

153 *Digital Signal Processing* (formerly Computer Engineering 153)

Applied Mathematics and Statistics

131 *Introduction to Probability Theory*

146 *Introduction to Dynamical Systems*

147 *Computational Methods and Applications*

162 *Design and Analysis of Computer Simulation Experiments*

Mathematics

115 *Graph Theory*

117 *Advanced Linear Algebra*

126 *Mathematical Control Theory*

148 *Numerical Analysis*

Practice Course List

Computer Science

104A *Fundamentals of Compiler Design I*

104B *Fundamentals of Compiler Design II*

105 *Systems Programming*

109 *Advanced Programming*
 111 *Introduction to Operating Systems*
 112 *Comparative Programming Languages*
 115 *Software Methodology*
 116 *Software Design Project*
 122 *Computer Security*
 128 *Distributed Systems: File Sharing, Online Gaming, and More*
 129 *Data Storage Systems*
 140 *Artificial Intelligence*
 146 *Game Artificial Intelligence*
 148 *Interactive Storytelling*
 160/L *Introduction to Computer Graphics/Laboratory*
 161/L *Visualization and Computer Animation/Laboratory*
 164/L *Game Engines/Laboratory*
 180 *Database Systems I*
 181 *Database Systems II*
 183 *Hypermedia and the Web*
 190X *Methods of Cryptography*
 204 *Compiler Design*

Computer Engineering

100/L *Logic Design/Laboratory*
 110 *Computer Architecture*
 112 *Computer and Game Console Architecture*
 113 *Parallel and Concurrent Programming*
 117/L *Embedded Software/Laboratory*
 118/L *Introduction to Mechatronics/Laboratory*
 121/L *Microprocessor System Design/Laboratory*
 123A *Computer Engineering Design Project I*
 123B *Computer Engineering Design Project II*
 125/L *Logic Design with Verilog/Laboratory*
 126/L *Advanced Logic Design/Laboratory*
 150/L *Introduction to Computer Networks/Laboratory*
~~152 *Analysis and Design of Communication Protocols*~~
 155/L *Computer Networks Project/Laboratory*
 167/L *Sensing and Sensor Technologies/Laboratory*

Electrical Engineering

130/L *Introduction to Optoelectronics and Photonics/Laboratory*

Game Design Electives

Computer Science

102 *Introduction to Analysis of Algorithms*
 116 *Software Design Project*
 128 *Distributed Systems: File Sharing, Online Gaming, and More*
 146 *Game Artificial Intelligence*
 148 *Interactive Storytelling*
 161/L *Visualization and Computer Animation/Laboratory*
 164/L *Game Engines/Laboratory*
 180 *Database Systems I*

Computer Engineering

112 *Computer and Game Console Architecture*
 150 *Introduction to Computer Networks*
 167/L *Sensing and Sensor Technologies/Laboratory*

Film and Digital Media

170A *Introduction to Digital Media Production*
 171D *Social Information Spaces*
 177 *Digital Media Workshop: Computer as Medium*

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement will normally be met within one to three courses already required for the major. For detailed information on this major's DC requirement, consult your major adviser or see the 2010-11 general catalog.

B.S. Major Requirements

This program is designed for students who wish to maximize exposure to computer science concepts and methods by taking a larger selection of upper-division computer science courses, as well as additional courses in the sciences and mathematics. A minimum of 22 courses must be completed for the B.S. in computer science, whereas a minimum of 17 courses must be completed for the B.A. in computer science. Out of the 22 courses, 10 are lower-division courses (including two science courses), and 12 are upper-division courses. The B.S. is more structured than the B.A.; 18 specific courses are required, and the remaining four are elective upper-division computer science or computer engineering courses.

Lower- and Upper-Division Requirements

Students are required to take the following 18 courses:

Computer Science

- 12A/L *Introduction to Programming(Accelerated)/Laboratory* (or 5J *Introduction to Programming in Java and 11 Intermediate Programming*)
12B/M *Introduction to Data Structures/Laboratory*
101 *Algorithms and Abstract Data Types*
102 *Introduction to Analysis of Algorithms*
104A *Fundamentals of Compiler Design I*
111 *Introduction to Operating Systems*
112 *Comparative Programming Languages*
130 *Computational Models*

Computer Engineering

- 12/L *Computer Systems and Assembly Language/Laboratory*
16 *Applied Discrete Mathematics*
107 *Mathematical Methods of Systems Analysis: Stochastic*, or AMS 131, *Introduction to Probability Theory*
110, *Computer Architecture*, or 112, *Computer and Game Console Architecture*

Mathematics

- 19A-B *Calculus for Science, Engineering, and Mathematics*, or Mathematics 20A-B, *Honors Calculus*
23A *Multivariable Calculus*

Applied Mathematics and Statistics

- 10 *Mathematical Methods for Engineers I*; or Mathematics 21, *Linear Algebra*
131 *Introduction to Probability Theory*; or Computer Engineering 107, *Mathematical Methods of Systems Analysis: Stochastic*

Physics or Chemistry

Either two physics or two chemistry courses, with their associated laboratories, from the following:

- Physics 5A/L, *Introduction to Physics I/Laboratory* (or 6A/L);
and either Physics 5B/M, *Introduction to Physics II/Laboratory* (or 6B/M);
or Physics 5C/N, *Introduction to Physics III/Laboratory* (or 6C/N)
Chemistry 1B/M, *General Chemistry/Laboratory*
Chemistry 1C/N, *General Chemistry/Laboratory*

The remaining four courses must be upper-division computer science or computer engineering electives selected from the theory and practice course lists (see B.A. Major Requirements reference above). One of these courses may be replaced by an upper-division mathematics course from the theory course list.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement will normally be met within one to three courses already required for the major. For detailed information on this major's DC requirement, consult your major adviser or see the 2010-11 general catalog.

Comprehensive Requirement

In addition to the above B.A. or B.S. requirements, students in the computer science majors must satisfy one of the following three exit requirements: pass one of the capstone courses (see Capstone Courses below); obtain a scaled score of 600 or above on the graduate record examination (GRE) advanced computer science subject test; or successfully complete a senior thesis.

Capstone Courses

Students may choose from one of the following capstone courses to satisfy their exit requirement:

- 104B *Fundamentals of Compiler Design II*
116 *Software Design Project*
140 *Artificial Intelligence*
161/L *Visualization and Computer Animation/Laboratory*
181 *Database Systems II*
183 *Hypermedia and the Web*

Students taking one of the capstone courses will enroll normally. Students need to pass the capstone course to pass the exit requirement. No course may be attempted more than twice without prior approval from the chair of the department offering the course. W's count as an attempted class for this purpose. If a student fails to receive a passing score during these two attempts, he or she may still take the GRE Advanced Computer Science Subject Test and achieve a scaled score of 600 or above to satisfy the exit requirement.

The senior thesis consists of a self-contained project within the broad scope of computer science, but one that is not available in the regular course offerings. A student wishing to complete a senior thesis must successfully complete a minimum of 5 credits in course 195, Senior Thesis Research; submit a written thesis proposal; and have it accepted by a faculty supervisor. The supervision of a senior thesis student is always at the discretion of the faculty member. A written report and an oral presentation to a faculty examining committee are required.

Students who elect to use the GRE advanced computer science subject test as their senior exit requirement must arrange to take the GRE test and have scores submitted to the department before graduation deadlines. Contact the UCSC Career Center for GRE information and application forms.

Honors in the Major

Students must obtain a GPA of 3.8 or higher in the courses in the major to be considered for the distinction of “Highest Honors in the Major.” Students must obtain a GPA of 3.5 or higher in the courses in the major to be considered for the distinction of “Honors in the Major.” The School of Engineering reserves the right to withhold honors based on other criteria, such as an incident of academic dishonesty.

Computer Science Major Planners

The following are four sample academic plans for first-year students as preparation for the computer science major. Plans One A and Two A are suggested guidelines for students who have some prior experience with programming. Plans One B and Two B are for students who are considering the major and have no prior programming experience. Students who plan carefully can still have several openings free to take other breadth courses they find interesting.

Plan One A, B.A. Degree			
Year	Fall	Winter	Spring
1st (frsh)	Cmps CMPS 10 Math MATH 19A	Cmps CMPS 12A/L Math MATH 19B	Cmps CMPS 12B/M Math MATH 23A
2nd (soph)	Cmpe CMPE 16	Cmpe CMPE 12/L	Cmps CMPS 101 AMS 10

Plan One B, B.A. Degree			
Year	Fall	Winter	Spring
1st (frsh)	AMS 3 Cmps CMPS 10	Math MATH 19A Cmps CMPS 5J	Math MATH 19B Cmps CMPS 11
2nd (soph)	Math MATH 23A	Cmpe CMPE 16 or 16H/L Cmps CMPS 12B/M	Cmps CMPS 101 AMS 10

Plan Two A, B.S. Degree			
Year	Fall	Winter	Spring
1st (frsh)	Cmps CMPS 12A/L Math MATH 19A	Cmps CMPS 12B/M Math MATH 19B	Cmpe CMPE 12/L Math MATH 23A

Plan Two B, B.S. Degree			
Year	Fall	Winter	Spring
1st (frsh)	Cmps CMPS10	Math MATH 19A Cmps CMPS 5J	Cmps CMPS 11 Math MATH 19B
2nd (soph)	Math MATH 23A	Cmps CMPS 12B/M Cmpe CMPE 16	Cmps 11 Math 19B Cmpe CMPE 12/L Cmps CMPS 101 or AMS 10

B.S. Computer Science: Computer Game Design Major Requirements

The goal of this degree is to provide students a deep understanding of the technical aspects of computer game engineering, and a broad background in the artistic, narrative, and dramatic elements of game design. The core of the degree program is a strong grounding in computer science and computer

engineering, preceded by a foundation in math and physics. Classes in ethics, as well as courses in art, film, music, theater arts, and economics provide breadth in topics of special relevance to computer game design. In their upper division courses, students gain depth by taking upper division electives in computer science and computer engineering. Two advanced courses in digital media give students the ability to view computer software from an artistic framework. A year-long capstone game design studio class allows students to develop substantial computer games, and integrate materials from the rest of the program.

The curriculum has 124-141 credits in 24-25 courses (depending on whether a student enters as a transfer student). 12 of the courses are upper division. Students interested in the major should pay special attention to the overlap between general education requirements and major requirements, as the major covers up to six general education requirements.

Lower- and Upper-Division Requirements

Course requirements are divided into six conceptual areas:

Mathematics and Physics

Complete all of the following courses:

Mathematics 19A-B, *Calculus for Science, Engineering, and Mathematics* (students can alternately take, Mathematics 20A-B, *Honors Calculus*. Credit for one or both Mathematics 19A-B may be granted with adequate performance on the CEEB calculus AB or BC advanced placement exams).

Mathematics 21, *Linear Algebra*, or Applied Mathematics and Statistics 10, *Mathematical Methods for Engineers I*

Computer Engineering 16, *Applied Discrete Mathematics* (or 16H, *Honors Applied Discrete Mathematics*)

Physics 5A/L, *Introduction to Physics I/Laboratory* (or 6A/L)

Computational Foundations

Complete all of the following courses:

Computer Science 12A/L, *Introduction to Programming(Accelerated)/Laboratory* (or 5J *Introduction to Programming in Java*, and 11 *Intermediate Programming*)

Computer Science 12B/M, *Introduction to Data Structures/Laboratory*

Computer Engineering 12/L, *Computer Systems and Assembly Language/Laboratory*

Computer Science 109, *Advanced Programming*

Computer Science 101, *Algorithms and Abstract Data Types*

Game Design

Complete all of the following courses.

~~Course 20, *Game Design Experience* is waived for transfer students.~~

Computer Science 20, *Game Design Experience*

Computer Science 170, *Game Design Studio I*

Computer Science 171, *Game Design Studio II*

Computer Science 172, *Game Design Studio III*

Computer Game Engineering

Complete five courses from the following list:

Computer Science 160/L, *Introduction to Computer Graphics/Laboratory*

Computer Science 161/L, *Visualization and Computer Animation/Laboratory*

Computer Science 164/L, *Game Engines/Laboratory*

Computer Science 140, *Artificial Intelligence*

Computer Science 146, *Game Artificial Intelligence*

Computer Science 148, *Interactive Storytelling*

Computer Science 166A, *Game Theory and Applications I*

Computer Engineering 110, *Computer Architecture*

Computer Science 128, *Distributed Systems, File Sharing, Online Gaming, and More*

Computer Science 105, *Systems Programming*

Computer Science 111, *Introduction to Operating Systems*

Computer Engineering 112, *Computer and Game Console Architecture*

Computer Engineering 150/L, *Introduction to Computer Networks/Laboratory*

~~Computer Engineering 152, *Analysis and Design of Communication Protocols*~~

Computer Engineering 113, *Parallel and Concurrent Programming*

Computer Engineering 118/L, *Introduction to Mechatronics/Laboratory*

Computer Science 180, *Database Systems I*

Computer Science 181, *Database Systems II*

Computer Science 183, *Hypermedia and the Web*

Computer Science 102, *Introduction to Analysis of Algorithms*

Computer Science 130, *Computational Models*

Computer Engineering 117/L, *Embedded Software/Laboratory*

Applied Mathematics and Statistics 131, *Introduction to Probability Theory*

Applied Mathematics and Statistics 147, *Computational Methods and Applications*

Applied Mathematics and Statistics 162, *Design and Analysis of Computer Simulation Experiments*

Digital Media

Complete two courses from the following list,

Film and Digital Media 170A, *Introduction to Digital Media Production*

Film and Digital Media 177, *Digital Media Workshop, Computer as Medium*

Film and Digital Media 171D, *Social Information Spaces*

Any 5-unit course offered in the digital arts new media (DANM) curriculum (requires approval of professor)

Art 118, *Computer Art: Theories, Methods, and Practices* (may require approval of instructor)

Theater Arts 157, *Playwriting*

Art and Social Foundations

Complete the ethics requirement and three of the following electives.

Ethics Requirement

One of:

Computer Engineering 80E, *Engineering Ethics*

Philosophy 22, *Introduction to Ethical Theory*

Philosophy 24, *Introduction to Ethics, Contemporary Moral Issues*

Philosophy 28, *Environmental Ethics*

Biomolecular Engineering 80G, *Bioethics in the 21st Century: Science, Business, and Society*
(crosslisted as Philosophy 80G)

Art Elective

One of:

Art 10G, *2D Foundation*

Art 10H, *3D Foundation*

Art 80A, *Introduction to Drawing*

Art 80F, *Introduction to Issues in Digital Media*

Film Elective

One of:

Film and Digital Media 20A, *The Film Experience*

Film and Digital Media 20C, *Introduction to Digital Media*

Film and Digital Media 20P, *Introduction to Production Technique*

Theater Elective

One of:

Theater Arts 10, *Introduction to Theater Design and Technology*

Theater Arts 18, *Drafting for Theatrical Production*

Theater Arts 19, *Design Studio, Lighting Studio*

Theater Arts 20, *Introductory Studies in Acting*

Theater Arts 30, *Introduction to Modern Dance Theory and Technique*

Theater Arts 40, *Introduction to Directing*

Theater Arts 80E, *Stand-Up Comedy*

Theater Arts 80L, *Muppet Magic: Jim Henson's Art*

Music Elective

One of:

Music 11A, *Introduction to Western Art Music*

Music 11B, *Introduction to Jazz*

Music 11C, *Introduction to American Popular Music*

Music 11D, *Introduction to World Music*

Music 80C, *History, Literature, and Technology of Electronic Music*

Music 80L, *Artificial Intelligence and Music*

Music 80M, *Film Music*

Music 80R➔, *Music and the World Wide Web*

Economics Elective

One of:

Economics 1, *Introductory Microeconomics, Resource Allocation and Market Structure*

Economics 2, *Introductory Macroeconomics, Aggregate Economic Activity*

Economics 80H, *Wall Street and the Money Game*

Comprehensive Requirement

Students satisfy the senior comprehensive requirement by either receiving a passing grade in all three courses of the game design studio sequence or performing a senior thesis.

Computer Science: Computer Game Design Major Planners

The following are three sample academic plans that students can use to plan their sequence of courses in the major. Plans one and two are suggested guidelines for students who begin their studies in their freshman year. Such students, if they plan carefully will have several openings free to take other breadth courses they find interesting. Plan one is for a student entering UCSC in their freshman year who is prepared to go directly into Mathematics 19A/20A and Computer Science 12A. Plan two is for a student entering UCSC their freshman year who needs to take preparatory courses prior to Mathematics 19A or Computer Science 12A to ensure a successful outcome in those courses. Plan three is for students that transfer to campus at the beginning of their junior year.

Plan One—Enter UCSC Freshman Year			
Year	Fall	Winter	Spring
1st (frsh)	Core Math -MATH 19A or 20A Cmps -CMPS 12A/L	Cmps -CMPS 20 (Game Design Experience) Math -MATH 19B or 20B Cmps -CMPS 12B/M	Art/Social Elective I Cmps -CMPE 12/L Composition (C, or gen ed)
2nd (soph)	Phys -PHYS 5A/L or 6A/L gen ed Math -MATH 21 or AMS 10	Art/Social Elective II Cmps -CMPS 109 Cmps -CMPE 16	Art/Social Elective III Ethics Requirement Cmps -CMPS 101
3rd (jr)	gen ed Game Engineering Elective I Game Engineering Elective II	gen ed Game Engineering Elective III Game Engineering Elective IV	gen ed Game Engineering Elective V
4th (sr)	gen ed Cmps -CMPS 170 (Game Design Studio I) Digital Media Elective I	gen ed gen edd Cmps -CMPS171 (Game Design Studio III)	gen ed Cmps -CMPS 172 (Game Design Studio III) Digital Media Elective II

Plan Two –Enter UCSC Freshman Year, Need Math and Computer Science Preparation Classes (Mathematics 3, Computer Science 10)			
Year	Fall	Winter	Spring
1st (frsh)	Core Math -MATH 3 Cmps -CMPS 10	Writing (C, or gen ed) Math -MATH 19A Cmps -CMPS 12A/L	Math -MATH 19B Cmps -CMPS 12B/M Art/Social Elective I
2nd (soph)	Art/Social Elective II	Cmps -CMPS 20 (Game Design Experience)	Math -MATH 21 or AMS 10 Ethics Requirement

Plan Two –Enter UCSC Freshman Year, Need Math and Computer Science Preparation Classes (Mathematics 3, Computer Science 10)			
	Cmps -CMPS 12/L Phys -PHYS 6A/L	Cmps -CMPE 16 Cmps -CMPS 109	Art/Social Elective III
3rd (jr)	Cmps -CMPS 101 Digital Media Elective I gen ed	Game Engineering Elective I Game Engineering Elective II gen ed	gen ed Game Engineering Elective III Digital Media Elective II
4th (sr)	gen ed Cmps -CMPS 170 (Game Design Studio I) Game Engineering Elective IV	gen ed Cmps -CMPS 171 (Game Design Studio II) Game Engineering Elective V	gen ed gen ed Cmps -CMPS 172 (Game Design Studio III)

Plan Three – Transfer Student			
Year	Fall	Winter	Spring
1st (frsh)	Cmps -CMPS 101 Cmps -CMPE 12/L Art/Social Elective I	Cmps -CMPS 109 Game Engineer- ing Elective I Digital Media Elective I	Ethics Requirement Game Engineering Elective II Digital Media Elective II
2nd (soph)	Art/Social Elective II Cmps -CMPS 170 (Game Design Studio I) Game Engineering Elective III	Art/Social Elective III Cmps -CMPS 171 (Game Design Studio II) Game Engineering Elective IV	gen ed Cmps -CMPS 172 (Game Design Studio III) Game Engineering Elective V

Minor Requirements

Courses required for the computer science minor are Mathematics 19A-B or 20A-B, and 23A; Applied Mathematics and Statistics 10;- Computer Science courses 12A/L and 12B/M (or 13H/L can be taken to cover both 12A/L and 12B/M) and course 101; Computer Engineering 12/L and 16; and four additional upper-division computer science courses from a list of approved electives (see the department's checklist for the computer science minor at www.soe.ucsc.edu/programs/cs/undergraduate/). In selecting the four upper-division courses, students may elect to focus on one subdiscipline of computer science by completing the courses in a BA depth sequence. Upper-division computer engineering and mathematics courses that generally apply toward the computer science major may not be applied toward the computer science minor. In addition, some upper-division computer science courses may not be applied toward the computer science minor. There is no comprehensive examination or senior thesis requirement for the minor.

Graduate Programs

Program Description

The Computer Science Department at UCSC offers both a master's program and a doctoral program. The goal of these programs is to help students develop into independent scholars who are prepared for productive careers in research, teaching, and industry. The master's degree may be used as a terminal degree or as the first step toward the Ph.D. degree. The student-faculty ratio is five to one, making it possible for students to receive individual attention and to pursue programs that fit their individual needs. The intellectual atmosphere is enriched by regular colloquia and seminars presented by eminent contributors to the field, many of whom are associated with other major universities and industrial research centers in the San Francisco Bay Area.

The Computer Science Department enjoys a close relationship with the Computer Engineering and Electrical Engineering Departments, the Bioinformatics Department, and the new Applied Mathematics and Statistics Department.

Most computer science graduate students are hired as teaching assistants helping with undergraduate courses, hired as research assistants working for computer science and other School of Engineering faculty, or awarded fellowships to pursue their research.

Additional information on the computer science graduate programs can be found on the department's web pages at www.soe.ucsc.edu.

Requirements for the Master's Degree: Project Track

Course Requirements

Each student is required to take 50 credits as follows:

Computer Science

200, *Research and Teaching in Computer Science and Engineering*, 3 credits;

201, *Analysis of Algorithms*, 5 credits;

203, *Programming Languages*, 5 credits;

296, *Master's Project*, 2 credits;

a base requirement in computer architecture must be met by taking Computer Engineering 110 or

Computer Engineering 202 or equivalent elsewhere (approval required);

one course each from three different breadth categories for a total of three courses (15 credits) — see www.soe.cs.ucsc.edu/programs/cs/graduate/graduates/breadth/;

all remaining credits must be regular, 5-credit graduate elective courses from: computer science CS, within the list of approved graduate School of Engineering OE (with adviser's approval); or outside the SOE School of Engineering (with adviser's and Grad D director's approval); — courses — see www.soe.ucsc.edu/programs/cs/graduate/; that do not count include all courses numbered 200, 280, 296, 297, and 299;

at least 30 units must be in CS computer science;

two upper-division undergraduate computer science courses (other than course 101) or a graduate course (not seminar) in related disciplines outside the list of approved graduate courses may be substituted for one graduate course, when necessary to strengthen a student's preparation for graduate studies, with prior approval from the adviser and the graduate director.

Project

Completion of a master's project is required for the master's degree. In consultation with the adviser, the student forms a master's project reading committee of at least two faculty members, each of whom is provided a copy of the project report. The final project must be accepted by the review committee before the award of the master of science degree.

Requirements for the Master's Degree: Thesis Track

Course Requirements

Each student is required to take 48 credits as follows:

Computer Science

200, *Research and Teaching in Computer Science and Engineering*, 3 credits;

201, *Analysis of Algorithms*, 5 credits;

203, *Programming Languages*, 5 credits;

a base requirement in computer architecture must be met by taking Computer Engineering 110 or

Computer Engineering 202 or equivalent elsewhere (approval required);

one course each from three different breadth categories for a total of three courses (15 credits) — see www.soe.cs.ucsc.edu/programs/cs/graduate/graduates/breadth/;

up to 10 credits of course 297, *Independent Study or Research*; or course 299, *Thesis Research*;

all remaining credits must be regular, 5-credit graduate elective courses from: CS computer science, within the list of approved graduate School of Engineering OE (with adviser's approval); or outside the SOE School of Engineering OE (with adviser's and Grad D director's approval); — courses — see www.soe.ucsc.edu/programs/cs/graduate/; that do not count include all courses numbered 200, 280, 296, 297, and 299;

at least 28 units must be in CS computer science;

two upper-division undergraduate computer science courses (other than course 101) or a graduate course (not seminar) in related disciplines outside the list of approved graduate courses may be substituted for one graduate course, when necessary to strengthen a student's preparation for graduate studies, with prior approval from the adviser and the graduate director.

Thesis

Completion of a master's thesis is required for the master's degree. To fulfill this requirement, the student submits a written proposal to a faculty member, usually by the third academic quarter. By accepting the proposal, the faculty member becomes the thesis adviser. In consultation with the adviser, the student forms a master's thesis reading committee with at least two additional faculty members, each of whom is provided a copy of the proposal. The student presents an expository talk on the thesis research, and the final thesis must be accepted by the review committee before the award of the master of science degree.

Requirements for the Ph.D. Degree

Course Requirements

Each student is required to take 58 credits as follows:

Computer Science

200, *Research and Teaching in Computer Science and Engineering*, 3 credits;

201, *Analysis of Algorithms*, 5 credits;

203, *Programming Languages*, 5 credits;

a base requirement in computer architecture must be met by taking Computer Engineering 110 or

Computer Engineering 202 or equivalent elsewhere (approval required);

one course each from three different breadth categories for a total of three courses (15 credits) — see www.soe.cs.ucsc.edu/programs/cs/graduate/graduates/breadth/;

up to 10 credits of course 297, *Independent Study or Research*; or course 299, *Thesis Research*;

all remaining units must be regular, 5-credit graduate courses from: CS computer science, within the School of Engineering OE (with adviser's approval); or outside the School of Engineering OE (with adviser's and Grad D director's approval); — courses that do not count include all courses numbered 200, 280, 296, 297, and 299;

at least 33 units must be in computer science;

~~all remaining credits must be graduate elective courses from the list of approved graduate courses—see www.soe.ucsc.edu/programs/cs/graduate/~~

graduate courses (not seminars) in related disciplines outside the list of approved graduate courses may be substituted, when necessary to strengthen a student's preparation for graduate studies, with prior approval from the adviser and the graduate director. Course selection should form a coherent plan of study and requires adviser approval. Undergraduate courses may not be used to satisfy Ph.D. course requirements;

each student is required to complete at least one quarter of teaching assistantship. This requirement can be met after advancement to candidacy. Certain exceptions may be permitted for those with extensive prior teaching experience or those who are not allowed to be employed due to visa regulations.

Ph.D. students who have satisfied the requirements for the master's degree are eligible to receive a master's degree.

Dissertation

Each student writes a Ph.D. dissertation. The dissertation must show the results of in-depth research, be an original contribution of significant knowledge, and include material worthy of publication. Where appropriate, research internships with companies, government labs, or elsewhere are recognized (and may be required) as an integral part of the research leading to the dissertation. As the first step, a student submits a written dissertation proposal to a School of Engineering faculty member. By accepting the proposal, the faculty member becomes the dissertation supervisor. The dissertation proposal is publicly and formally presented in an oral qualifying examination given by a qualifying exam committee, approved by the graduate committee and the Graduate Council. The student must submit his or her written dissertation proposal to all members of the committee and the graduate assistant one month in advance of the examination.

Students are advanced to candidacy after they have completed the course requirements, passed the qualifying examination, cleared all Incompletes from their records, have an appointed dissertation reading committee, and paid the filing fee. Students who have not advanced to candidacy by the end of their fourth year will be placed on academic probation.

Each Ph.D. candidate submits the completed dissertation to a reading committee at least one month prior to the dissertation defense. The appointment of the dissertation reading committee is made immediately after the qualifying exam and is necessary for advancing to candidacy. The candidate presents his or her research results in a public seminar sponsored by the dissertation supervisor. The seminar is followed by a defense of the dissertation to the reading committee and attending faculty, who will then decide whether the dissertation is acceptable or requires revision. Successful completion of the dissertation fulfills the final academic requirement for the Ph.D. degree.

Transfer Credit

Up to three School of Engineering courses fulfilling the degree requirements of either the M.S. or Ph.D. degrees may be taken before beginning the graduate program through the concurrent enrollment program.

Ph.D. students who have previously earned a master's degree in a related field at another institution may substitute courses from their previous university with approval of the adviser and the graduate committee.

Courses from other institutions may not be applied to the M.S. degree course requirements.

Petitions should be submitted along with the transcript from the other institution or UCSC extension. For courses taken at other institutions, copies of the syllabi, exams, and other course work should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UCSC.

At most, a total of three courses may be transferred from concurrent enrollment and other institutions.

Review of Progress

Each year, the faculty reviews the progress of every student. Students not making adequate progress toward completion of degree requirements (see Graduate Handbook for policy on satisfactory academic progress) are subject to dismissal from the program. Students with academic deficiencies may be required to take additional courses. Full-time students with no academic deficiencies are normally expected to complete the degree requirements at the rate of at least two courses per quarter. Full-time students must complete course 201, Computer Engineering 202, and course 203 within two years and normally must complete all course requirements within two years for the M.S. and three years for the Ph.D.

Students receiving two or more grades of below B or U (fail) in the School of Engineering (SoE) courses are not making adequate progress and will be placed on academic probation for the following three quarters of registered enrollment. Withdrawing or taking a leave of absence does not count as enrollment. Part-time enrollment is counted as a half quarter of enrollment.

Should any computer science graduate student fail a SoE course while on probation, the Computer Science Department may request the graduate dean to dismiss that student from the graduate program. If after being removed from probation, the student again fails a SoE course, he or she will return immediately to academic probation.

Graduate students experiencing circumstances or difficulties that impact their academic performance should contact their adviser and the graduate director immediately. Students may appeal their dismissal. See ~~www.soe.ucsc.edu/programs/cs/graduate/CSCurrentReq.html#progress for more information on this policy.~~

Faculty and Professional Interests

Professor

Martín Abadi

Computer and network security, principles of programming languages, specification and verification methods

Scott A. Brandt

Operating systems, storage systems, real-time systems

Cormac Flanagan

Programming languages, type systems, specification and verification methods, software engineering, concurrency

David P. Helmbold

Machine learning, computational learning theory, analysis of algorithms

Harry D. Huskey, Emeritus

Phokion G. Kolaitis

Logic in computer science, automated deduction, computational complexity, database theory

Robert A. Levinson

Artificial intelligence, machine learning, heuristic search, associative pattern retrieval, hierarchical reinforcement learning, semantic networks

Suresh K. Lodha

Visualization, vision, innovation, entrepreneurship

Darrell D. E. Long

Storage systems, distributed computing systems, operating systems, mobile computing, performance evaluation, fault tolerance, computer security, multimedia, and video-on-demand systems

Charles E. McDowell

Programming languages, parallel computing, and computer science education

Ethan L. Miller

Archival storage systems, metadata management and information retrieval, file and storage systems, distributed systems, computer security, reliability and fault tolerance

Alex T. Pang

Uncertainty visualization, tensor visualization, scientific visualization, collaboration software, virtual reality interfaces

Ira Pohl

Artificial intelligence, programming languages, heuristic methods, educational and social issues, combinatorial algorithms

R. Michael Tanner, Emeritus

Allen Van Gelder

Logic programming algorithms, parallel algorithms, complexity, programming languages, automated theorem proving, scientific visualization

Marilyn Walker

Dialogue systems, natural language processing, computer games, human-computer interaction, machine learning, artificial intelligence

Manfred K. Warmuth

Online learning, machine learning, statistical decision theory, game theory, analysis of algorithms

Associate Professor

Dimitris Achlioptas

Analysis of algorithms, machine learning, random structures

Luca de Alfaro

Formal methods, game theory, embedded systems, software engineering

James E. Davis

Computer graphics and computer vision, methods for acquiring digital representations of the real world, information technology targeted at world social issues

Michael Mateas

Artificial Intelligence (AI) for art and entertainment, game AI, AI and creativity, AI-based interactive storytelling, autonomous characters

Neoklis Polyzotis

Synopses for XML data, visual query interfaces, query processing, and optimization

Wang-Chiew Tan

Database systems: data provenance, information integration, scientific databases, database query languages, combinatorial optimization of database problems

E. James Whitehead Jr.

Software engineering, software evolution, software bug prediction, automated software construction, video game level design

Assistant Professor

Arnav Jhala

Artificial Intelligence: storytelling in games, intelligent machinima generation, smart graphics, and intelligent user interfaces

Noah Wardrip-Fruin

Digital media, computer games, electronic literature, software studies

Adjunct Professor

Don Chamberlin

Database languages and systems, document processing

Martin Griss

Software Engineering

James King

Adobe technology, digital publishing, program verification

Associate Adjunct

Thomas Schwarz

Reliability and security in storage systems

Assistant Adjunct Professor

John D. Funge

Artificial intelligence (AI); game AI; computer games; machine learning; knowledge representation and democratic methods

Carlos Maltzahn

Scalable file system data and metadata management; very long-term data preservation; network intermediaries; machine learning; information retrieval; cooperation dynamics

Lecturer

Paulo Franca

Computer programming teaching methodology; web-based development techniques, office automation, and paperless document management

Wesley Mackey

Compiler construction, programming languages

Patrick Tantalo

Graph theory, combinatorics, optimization, algorithms

Linda Werner

Software engineering, testing, educational and societal issues of computer science

Alexandre Brandwajn (Computer Engineering)

Computer architecture, performance modeling, queuing network models of computer systems, operating systems

Pak K. Chan (Computer Engineering)

Placement and routing algorithms, field-programmable gate arrays, spectral-based partitioning, circuit theory, computer arithmetic

Gabriel Elkaim (Computer Engineering)

Embedded systems; robust software architectures for real-time reactive systems; sensor fusion; guidance, navigation, and control (GNC) system identification; robust and advanced control schemes; feedback control systems; robotics; unmanned autonomous vehicles (UAVs); and cooperative control

F. Joel Ferguson (Computer Engineering)

Fault diagnosis, failure analysis, logic fault modeling, digital test pattern generation, design-for-test of digital circuits and systems

J. J. García-Luna-Aceves (Computer Engineering)

Baskin Professor of Computer Engineering and Director of Networking Sciences

Institute

Wireless networks, Internet, multimedia information systems

Jorge Hankamer (Linguistics)

Syntax, semantics, morphology, computational linguistics, Turkish

David Haussler (Biomolecular Engineering; Distinguished Professor of Biomolecular Engineering, Investigator, Howard Hughes Medical Institute; Director, Center for Biomolecular Science and Engineering; Scientific Co-Director, California Institute for Quantitative Biosciences [QB3])

Molecular evolution, neurodevelopment, genomics, bioinformatics, computational molecular biology, statistical models, machine learning, neural networks

Richard Hughey (Biomolecular Engineering and Computer Engineering)

Computer architecture, parallel processing, computational biology

Kevin Karplus (Biomolecular Engineering)

Protein structure prediction, protein design

Tracy Larrabee (Computer Engineering)

Test-pattern simulation and generation, fault modeling, fault diagnosis, design verification, technical writing, logic simulation

Patrick E. Mantey (Computer Engineering)

(Baskin Professor of Computer Engineering)

Image systems, image processing, visualization, image and multimedia systems, digital signal processing, real-time control

Katia Obraczka (Computer Engineering)

Computer networks, distributed systems, operating systems, Internet information systems, mobile computing, wireless networks

Warren Sack (Film and Digital Media)

Software design and media theory

Martine D. F. Schlag (Computer Engineering)

VLSI design tools and algorithms, VLSI theory, field-programmable gate arrays, FPGA-based computing engines

Barry Sinervo (Ecology and Evolutionary Biology)

Animal behavior, evolution, physiological ecology

Hai Tao (Computer Engineering)

Image and video processing, computer vision, vision-based graphics, and human-computer interaction

Anujan Varma (Computer Engineering)

Computer networking, computer architecture, optical networks

W. Todd Wipke, Emeritus (Chemistry and Biochemistry)

Lower-Division Courses

2. Computer Literacy. F,W,S

Introduction to how computers work and how to use them. Topics covered include network information systems, text editors, formatting, file and directory system, spreadsheets and databases. Computers as symbol manipulation devices. Introduction to programming concepts and computer languages. Impact of computers on society. Designed for students with little or no experience using computers. Preference is given to students who have not taken other computer engineering or computer science courses. Students cannot receive credit for this course and Computer Engineering 3. (General Education Code(s): IN.) *P. Franca*

5C. Introduction to Programming in C/C++. *

Introductory programming for students who have no prior programming experience. Students learn programming and documentation skills as well as algorithmic problem-solving and programming methodologies. Introduces computers, compilers, and editors. Students write medium-sized programs. This course and courses 5J and 5P cover the same material, but use different programming languages. (Formerly course 60N.) (General Education Code(s): IN.) *S. Brandt, C. McDowell*

5J. Introduction to Programming in Java. W

Introductory programming for School of Engineering majors who have no prior programming experience. Students learn programming and documentation skills, as well as algorithmic problem-solving and programming methodologies. Introduces computers, compilers, and editors. Students write medium-sized programs. The two-quarter sequence courses 5J and 11 cover in two quarters the same material as the accelerated introductory course and lab 12A/L cover in one quarter. (Formerly course 60G.) (General Education Code(s): IN.) *D. Helmbold, C. McDowell*

5P. Introduction to Programming in Python. F

Introduction to programming for engineering or science students who have no prior programming experience. Students learn programming and documentation skills, as well as algorithmic problem-solving and programming methodologies. Introduces students to computers, programming tools, and editors. Students write medium-sized programs to solve web-based and scientific problems. This course and courses 5C and 5J cover largely the same material, but use different programming languages. (General Education Code(s): IN.) *D. Long, E. Miller*

10. Introduction to Computer Science. F,W

An overview of the theory, foundations, and practice of computer science with emphasis on what computers can and cannot do, now and in the future. Topics

include algorithms and data, correctness and efficiency of algorithms, hardware, programming languages, limitations of computation, applications, and social issues. No programming skills are required as a prerequisite. Major concepts and open problems in computer science are presented without reliance on sophisticated mathematical tools. (General Education Code(s): IN.) *S. Lodha, P. Tantalo*

11. Intermediate Programming. S

Continuation of course 5J. Covers basic object-oriented programming, event-driven programming, graphical user interface (GUI) creation, recursion, two-dimensional arrays, and introduces programming in C and Java. The two-quarter sequence courses 5J and 11 cover in two quarters the same material as the accelerated introductory course and lab 12A/L cover in one quarter. Students cannot receive credit this course and course 12A. Prerequisite(s): course 5J and one of the following: eligibility to enroll in Mathematics 19A (Mathematics 2B or 3, or 40 or higher on mathematics placement exam), or Mathematics 19A or 11A, or Economics 11A, or Applied Mathematics and Statistics 11A. *C. McDowell*

12A. Introduction to Programming (Accelerated). F,S

Accelerated introduction to programming. Students write medium-sized programs. Topics include: functions; conditionals and loops; classes; event-driven programming and graphic user interfaces (GUIs); recursion; and arrays. Students who have no or very limited programming experience should consider courses 5J and 11 which cover the same material in two quarters. Students may not receive credit for both this course and course 11. Some prior programming experience in a language such as C, C++, Java, or C# strongly recommended. Prerequisite(s): eligibility to enroll in Mathematics 19A (Mathematics 2B or 3 or 40 or higher on mathematics placement exam) or completion of Mathematics 11A or 19A or Economics 11A or AMS 11A. Concurrent enrollment in 12L required. (General Education Code(s): IN.) *C. Flanagan, D. Helmbold, D. Long, C. McDowell*

12B. Introduction to Data Structures. F,W,S

Teaches students to implement common data structures and the algorithms associated with each data structure, through progressively difficult exercises. Topics include big "O" notation; pointers, recursion (induction), and dynamic allocation; linked lists and list processing; stacks, queues, binary trees and binary search trees; simple sorting techniques and simple search techniques. Students will gain a working knowledge of the elements of the Java and C programming languages. Prior experience with Unix is assumed. Prerequisite(s): course 11 or 12A or Computer Engineering 13. Concurrent enrollment in course 12M required. Enrollment limited to 150. (General Education Code(s): IN.) *W. Mackey*

12L. Computer Programming Laboratory (2 credits). F,S

Laboratory sequence complementing topics taught in course 12A by providing training and exposure to several software development tools and practices not covered in course 12A. In addition, the lab provides an initial exposure to a second programming language to reinforce concepts from course 12A. Prerequisite(s): eligibility to enroll in Mathematics 19A (Mathematics 2B or 3 or 40 or higher on mathematics placement exam) or completion of Mathematics 11A or 19A or Economics 11A or AMS 3 or 11A. Previous or concurrent enrollment in 12A required. *C. Flanagan, D. Helmbold, D. Long, C. McDowell*

12M. Data Structures Laboratory (2 credits). F,W,S

Complements course 12B, gaining additional competence with a number of important software development tools, languages, and techniques. Included are advanced Unix features and utilities such as grep, find, diff, the shell, and pipes; C programs utilizing I/O, arrays, pointers, and structures; a scripting language to perform simple

text and file manipulation; and the make utility. Prerequisite(s): course 11 or 12A or Computer Engineering 13. Concurrent enrollment in course 12B required. *W. Mackey*

13H. Introduction to Programming and Data Structures (Honors). *

Provides an accelerated introduction to programming and data structures. Includes a review of basic programming, including loop and conditional control structures, procedures and parameter passing, and arrays. Course goes on to cover same material as course 12B. Students cannot receive credit for this course and course 12A or 12B. Prerequisite(s): interview only; students must have completed a high school or college level programming course in Java, C, or C++. A short oral examination given to ascertain programming level. Concurrent enrollment in course 13L required. Enrollment limited to 25. (General Education Code(s): IN.) *S. Brandt, D. Long*

13L. Introduction to Programming and Data Structures Laboratory (2 credits).

Provides accelerated introduction to practical aspects of programming and data structures. Covers three areas: 1) common programming tools, including Unix commands, compilers and linkers, editors, debuggers, and Makefiles; 2) basic programming techniques, including design, testing, and debugging; and 3) C programming, focusing on the major differences between C and Java. Previous or concurrent enrollment in course 13H required. Prerequisite(s): interview only; students must have completed a high school or college level programming course in Java, C, or C++. A short oral examination given to ascertain programming level. *S. Brandt, D. Long*

20. Game Design Experience. W

Introduction to computer game development. Topics covered include: animating sprites; use of game development frameworks; collision detection; game audio; scrolling game worlds; basic artificial intelligence for games; and basic 3-D graphics. Also covers basic object-oriented design and software design patterns. Courses 12B and 80K recommended. (General Education Code(s): IN.) *A. Jhala, M. Mateas, J. Whitehead*

60M. Scientific Computation with Matlab and Maple. *

Basic concepts from calculus visualized using Matlab and Maple; plotting data and functions, integration, differentiation, limits; solving systems of equation; linear regression; and example applications from science and engineering. Prerequisite(s): Mathematics 19B, or 20B, or by consent of instructor. Enrollment limited to 60. *M. Warmuth*

80B. Systems and Simulation. *

An introduction to systems analysis as an approach to understanding and solving complex problems. The use of simulation as an aid in this problem solving. Examples are taken from ecology, economics, physics, computer science, and other fields. Intended as a generally accessible undergraduate course in which students can develop and explore computer simulation models matched to their individual interests. (General Education Code(s): T2-Natural Sciences, Q.) *R. Levinson*

80C. Computer Arts and Graphics. *

Covers the design and use of various computer graphics programs for painting, drawing, computer-aided design, modeling, and animation. Students create graphical images using available software and design programs. Exposure to peripherals such as mice, laser printers, and possibly video and experimental peripherals. Use of SGI graphics workstations. Includes discussion of computer art and its development over time, and includes slides and videos of computer graphics. Not intended for

computer science or computer engineering majors, who are advised to take course 160. (General Education Code(s): T2-Natural Sciences.) *S. Lodha*

80G. Introduction to Unix. *

Introduction to computing, the Internet, and the World Wide Web through the language of the Unix operating system. Oriented to the beginner, the course presupposes no previous acquaintance with any particular sort of computer. It covers the basic concepts of text editing and formatting, writing Web pages in basic HTML, and promotes a rigorous understanding of Unix commands and shell scripts. Views communication with a computer as a matter of learning a few simple though powerful languages. (Also offered as Linguistics 80G. Students cannot receive credit for both courses.) (General Education Code(s): T2-Natural Sciences.) *A. Van Gelder*

80J. Technology Targeted at Social Issues. F

Introduces the idea that engineering can be a means for addressing social issues. Case studies and guest speakers. Issues might include: economic development, privacy, activism, safe drinking water, inexpensive shelters, sustainable energy, education, and waste disposal. (General Education Code(s): T7-Natural Sciences or Social Sciences.) *J. Davis, S. Lodha*

80K. Foundations of Interactive Game Design. W

Surveys history, technology, narrative, ethics, and design of interactive computer games. Work in teams to develop novel game-design storyboards. Intended as a generally accessible undergraduate course in which students can explore the interplay of narrative, graphics, rule systems, and artificial intelligence in the creation of interactive games. Programming experience not required. Enrollment limited to 150. (General Education Code(s): T2-Natural Sciences.) *N. Wardrip-Fruin, J. Whitehead*

80S. From Software Innovation to Social Entrepreneurship. S

Emerging software innovations with emphasis on social software. Web 2.0 companies and services. Software that has social impact in a global context. Entrepreneurial plan including social, economic, and innovation value. Final group project on innovative software design and entrepreneurship plan. (General Education Code(s): T7-Natural Sciences or Social Sciences, E.) *S. Lodha*

80V. Creating Virtual Worlds on the Web. *

Project-oriented course about creating and publishing interactive 3D content on the web. Focuses on the creation of static and dynamic objects, such as characters, terrain, accessories, and works of art. Also covers inclusion of animation and sound effects with these objects. The objects created can be used in a stand-alone setting (e.g., a 3D document) or incorporated into existing virtual worlds (e.g., as part of a level design in a computer game or assets in massively multiplayer online games). Uses 3D authoring tools (pending availability of resources) like VRML, Second Life, Alice, and/or Acrobat 3D. (Formerly *VRML 3D Worlds on the Web*.) (General Education Code(s): T2-Natural Sciences.) *A. Pang*

94. Group Tutorial. F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

94F. Group Tutorial (2 credits). F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

*Upper-Division Courses***101. Algorithms and Abstract Data Types. F,W**

"O") notation is emphasized. Topics include sorting and searching techniques, basic graph algorithms, and algorithm design techniques. Abstract data types covered include priority queues, dictionaries, disjoint sets, heaps, balanced trees, and hashing. Familiarity with C, Java, and Unix is assumed. Prerequisite(s): course 12B or 13H; CMPE 16 or 16H; MATH 19B; and one course from the following: MATH 21, 22, 23A, or AMS 10. *D. Helmbold, P. Tantalo, A. Van Gelder*

102. Introduction to Analysis of Algorithms. S

Methods for the systematic construction and mathematical analysis of algorithms. Order notation, the RAM model of computation, lower bounds, and recurrence relations are covered. The algorithm design techniques include divide-and-conquer, branch and bound, and dynamic programming. Applications to combinatorial, graph, string, and geometric algorithms. Prerequisite(s): course 101. *D. Achlioptas, D. Helmbold, S. Lodha, A. Van Gelder, M. Warmuth*

104A. Fundamentals of Compiler Design I. F

An introduction to the basic techniques used in compiler design. Topics include compiler structure, symbol tables, regular expressions and languages, finite automata, lexical analysis, context-free languages, LL(1), recursive descent, LALR(1), and LR(1) parsing; and attribute grammars as a model of syntax-directed translation. Students use compiler building tools to construct a working compiler. Prerequisite(s): course 101 and Computer Engineering 12 and 12L. *W. Mackey*

104B. Fundamentals of Compiler Design II. *

Advanced study of compiler implementation. Topics include compiler structure back end, run-time environments, storage management, garbage collection, register allocation, code generation, basic blocks, control flow, data flow, local and global optimization, interpretation, and machine-code generation. Students may not receive credit for this course and course 204. Taught in conjunction with course 204. Prerequisite(s): course 104A. *W. Mackey*

105. Systems Programming. *

Covers fundamentals of systems programming including standard tools, shell programming, file I/O, files and directories, system data files and information, Unix processes, process control, synchronization, signals, event-driven programming, terminal I/O, daemons, interprocess communication, basic network programming, and basic user-interface programming. Prerequisite(s): course 101 and Computer Engineering 12 and 12L. Enrollment restricted to School of Engineering majors. *S. Brandt, D. Long, E. Miller*

109. Advanced Programming. W

An introduction to object-oriented techniques of software development including data abstraction, inheritance, polymorphism, and object-oriented design. Extensive practice using a computer to solve problems, including construction of graphical user interfaces and a multithreaded client/server applications. Prerequisite(s): course 12B/M. *W. Mackey
C. McDowell, I. Pohl*

111. Introduction to Operating Systems. S

Fundamental principles of operating systems: process synchronization, deadlocks, memory management, resource allocation, scheduling, storage systems, and study of several operating systems. A major programming project will be required.

Prerequisite(s): course 101, and Computer Engineering 110 or Computer Engineering 112. *S. Brandt, D. Long, E. Miller, W. Mackey*

112. Comparative Programming Languages. S

Covers several programming languages and compares styles, philosophy, and design principles. Principles underlying declarative, functional, and object-oriented programming styles are studied. Students write programs emphasizing each of these techniques. Prerequisite(s): course 101 or 109. *M. Abadi, C. Flanagan, D. Long, C. McDowell, W. Tan, A. Van Gelder*

115. Software Methodology. W

Emphasizes the characteristics of well-engineered software systems. Topics include requirements analysis and specification, design, programming, verification and validation, maintenance, and project management. Practical and research methods are studied. Imparts an understanding of the steps used to effectively develop computer software. Prerequisite(s): course 101. Enrollment restricted to computer science, computer engineering, and information systems management majors. Enrollment limited to 25. *C. Flanagan, L. Werner, J. Whitehead*

116. Software Design Project. S

Students in teams specify, design, construct, test, and document a complete software system in a specialized application domain. Class time is spent in technical discussions and ongoing design reviews. A formal presentation and demonstration of each project is required. An organizational meeting will be held during the preceding quarter. Projects may be drawn from industry and campus research groups.

Prerequisite(s): course 115. *L. De Alfaro, J. Whitehead*

122. Computer Security. S

Introduction to computer security (including selected topics in network security).

Access control. Security in programming languages. Basic cryptography. Security protocols. Prerequisite(s): course 111 or permission of instructor. Enrollment restricted to School of Engineering majors. Enrollment limited to 100. *M. Abadi, E. Miller*

128. Distributed Systems: File Sharing, Online Gaming, and More. *

Covers topics in distributed computing including communication, naming, synchronization, consistency and replication, fault tolerance, and security. Examples drawn from peer-to-peer systems, online gaming, the World Wide Web; other systems also used to illustrate approaches to these topics. Students implement simple distributed systems over the course of the quarter. Prerequisite(s): course 101 or Computer Engineering 150. Course 111 or 105 recommended. *S. Brandt, D. Long, E. Miller*

129. Data Storage Systems. *

Covers all aspects of storage systems technology from magnetic media up through system software, including principles of magnetic recording, hard drive technology and evolution, performance measurement, file systems, storage networking, disk arrays, network-attached storage, and alternative storage technologies.

Prerequisite(s): course 101, 111, and Physics 5A or 6A. *S. Brandt, D. Long, E. Miller*

130. Computational Models. F

Various representations for regular languages, context-free grammars, normal forms,

parsing, pushdown automata, pumping lemmas, Turing machines, the Church-Turing thesis. Prerequisite(s): course 101. *P. Kolaitis, R. Levinson, M. Warmuth*

132. Computability and Computational Complexity. S

Turing machines, general phase-structure grammars, the Chomsky hierarchy, recursive functions, diagonalization, the Halting problem, computability and unsolvability, computational complexity, time and space bounds, NP-completeness with emphasis on reductions between problems from various areas. Prerequisite(s): course 130. *D. Helmbold, P. Kolaitis, A. Van Gelder, M. Warmuth*

140. Artificial Intelligence. W

Introduction to the contemporary concepts and techniques of artificial intelligence, including any or all of: machine perception and inference, machine learning, optimization problems, computational methods and models of search, game playing and theorem proving. Emphasis may be on any formal method of perceiving, learning, reasoning, and problem solving which proves to be effective. This includes both symbolic and neural network approaches to artificial intelligence. Issues discussed include symbolic versus nonsymbolic methods, local versus global methods, hierarchical organization and control, and brain modeling versus engineering approaches. Lisp or Prolog may be introduced. Involves one major project or regular programming assignments. Prerequisite(s): course 101 and one of the following: course 130, Computer Engineering 177, or Mathematics 115. *R. Levinson, I. Pohl*

142. Machine Learning and Data Mining. W

Introduction to machine learning algorithms and their applications. Topics include classification learning, density estimation and Bayesian learning regression, and online learning. Provides introduction to standard learning methods such as neural networks, decision trees, boosting, and nearest neighbor techniques. Prerequisite(s): course 101 and one of Applied Mathematics and Statistics 5, 7, 113, 131, or Computer Engineering 107. Enrollment limited to 50. *D. Helmbold, M. Warmuth*

146. Game AI. *

Course provides a comprehensive introduction to the use of artificial intelligence (AI) in computer games. Building on fundamental principles of AI, course explains how to create non-player characters (NPCs) with progressively more sophisticated capabilities. Prerequisite(s): course 101; familiarity with C++. Enrollment restricted to sophomores, juniors, seniors, and graduate students. Enrollment limited to 50. *J. Funge, M. Mateas, I. Pohl*

148. Interactive Storytelling. W

Covers a range of design approaches and technologies including storytelling in games, interactive fiction, interactive drama, and artificial intelligence-based story generation. Through a mixture of readings, assignments, and project work, students explore the theoretical positions, debates, and technical and design issues arising from these approaches. Students may not receive credit for this course and course 248. Prerequisite(s): course 101. Enrollment restricted to juniors and seniors. Enrollment limited to 40. *M. Mateas*

160. Introduction to Computer Graphics. F

Introduces different techniques of modeling, transformation, and rendering to obtain computer generated imagery. Topics include 2D and 3D graphical primitives, line drawings, curves and surface modeling, projections, matrix composition, hidden surface removal, and shading algorithms. Several intensive programming assignments on bit-mapped raster scan displays and a major programming project are required. Prerequisite(s): course 101 and Mathematics 21 or Applied Mathematics

and Statistics 10. Concurrent enrollment in course 160L required. Enrollment limited to 50. *J. Davis, S. Lodha, A. Pang*

160L. Introduction to Computer Graphics Laboratory (2 credits). F

Complements course 160, gaining additional competence with a number of important software development tools, graphics libraries, and graphical user interfaces. Included are OpenGL program, utilizing rubberbanding, picking, trackballing, display lists, double buffering, lighting, shading, materials and textures; and FLTK program, utilizing sliders, buttons, and dialog boxes. Prerequisite(s): course 101 and Mathematics 21 or Applied Math 10. Concurrent enrollment in course 160 required. Enrollment restricted to all engineering majors. Enrollment limited to 50. *J. Davis, S. Lodha, A. Pang*

161. Visualization and Computer Animation. W

Introduction to standard techniques of computer animation and data visualization. Topics include mathematical foundations; creature and behavioral animation; scalar, vector and tensor visualization methods. Involves programming exercises, instruction in available software, and a project. Prerequisite(s): course 160 and 160L or equivalent. Enrollment restricted to students majoring in computer sciences, computer engineering, or electrical engineering. Concurrent enrollment in course 161L required. Enrollment limited to 35. *S. Lodha, A. Pang*

161L. Visualization and Computer Animation Laboratory (2 credits). W

Complements course 161, gaining additional competence with a number of important software development tools and techniques. Included are Visualization Toolkit (vtk) and Insight Toolkit (ITK); C, OpenGL, and FLTK programs utilizing visualization techniques of isosurfacing, transfer function, volumetric rendering, streamlines visualization; video capture for facial animation and pose estimation, group and behavioral animations. Prerequisite(s): courses 160 and 160L; concurrent enrollment in course 161 required. Enrollment restricted to all engineering majors. Enrollment limited to 35. *S. Lodha, A. Pang*

164. Game Engines. *

Covers the graphic elements in computer games. Topics include modifying, optimizing, adding components, and building a game engine. Course evaluation based on exams and several programming projects, including a game built using the student's game engine. Prerequisite(s): courses 160 and 160L. Concurrent enrollment in course 164L required. *A. Pang*

164L. Game Engines Lab (2 credits). *

Provides hands-on experience in using, designing, and building game engines. Students also explore different special effects, such as particle systems, spring systems, and game physics. Prerequisite(s): courses 160 and 160L. Concurrent enrollment in course 164 required. *A. Pang*

166A. Game Theory and Applications I. F

Introduces modern game theory, including applications in social science, biology, and engineering. Topics include extensive form, strategic form, mixed strategies, incomplete information, repeated games, evolutionary games, and simulation techniques. (Also offered as Biology:Ecology & Evolutionary 176A. Students cannot receive credit for both courses.) Prerequisite(s): Applied Math and Statistics 5 or 7 or Economics 113; and Economics 11B, Applied Math and Statistics 11B, or Mathematics 11B or 19B. Enrollment restricted to juniors and seniors. Enrollment limited to 100. *The Staff, D. Friedman, B. Sinervo*

166B. Game Theory and Applications II. W

Explores research frontiers in game theory, emphasizing applications in social science, biology, and engineering. Each interdisciplinary team develops a topic, and presents it to the class in oral and written reports and demonstrations. Students must have shown a strong performance in course 166A or equivalent. Students cannot receive credit for this course and Economics 272, Computer Science 272, or Biology: Ecology and Evolutionary 274. (Also offered as Biology: Ecology & Evolutionary 176B. Students cannot receive credit for both courses.) Prerequisite(s): course 166A, Economics 166A, or Biology: Ecology and Evolutionary 166A; satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to juniors and seniors. Enrollment limited to 40. (General Education Code(s): W.) *The Staff, D. Friedman, B. Sinervo*

170. Game Design Studio I. F

First of a three-course capstone sequence for the computer game design program. Students work in teams to develop a comprehensive game design for a substantial computer game, including detailed storyline, level design, artistic approach, implementation technologies, and art-asset pipeline. Emphasis placed on creating novel, artistic game design concepts. Includes design reviews and formal presentations. Companion lectures cover advanced topics in game design, game programming, and software project management. Students are billed a materials fee. Prerequisite(s): course 20 and 109, and any two of the following: courses 102, 105, 111, 128, 130, 140, 146, 148, 160/L, 161/L, 164/L, 180, 181, 183; Computer Engineering 110, 112, 113, 117/L, 118/L, 150. Enrollment limited to 50. *M. Mateas, N. Wardrip-Fruin, J. Whitehead*

171. Games Design Studio II. W

Second of a three-course capstone sequence for the computer game design program. Students work in teams on the software design, implementation, and testing of the computer game designed in course 170. Includes design reviews, progress reviews, and formal presentations. Companion lectures cover topics in software engineering, including design, testing, and project management. Game design and game programming also covered. Students are billed a materials fee. Enrollment restricted to senior computer game design majors. Enrollment limited to 50. *M. Mateas, N. Wardrip-Fruin, J. Whitehead*

172. Game Design Studio III. S

Third of a three-course capstone sequence for the computer game design program. Students work in teams on the software design, implementation and testing of the computer game designed in courses 170 and 171. Includes progress reviews and formal presentations. Companion lectures cover topics in software engineering, including user and software testing, release engineering and project management; also covered are game design and game programming. Students are billed a materials fee. Prerequisite(s): course 171. Enrollment restricted to senior computer game design majors. Enrollment limited to 50. *The Staff, M. Mateas, N. Wardrip-Fruin, E. Whitehead*

180. Database Systems I. F

Introduction to the concepts, approaches, tools, and methodology of database design. Covers the entity-relationship model, the relational model, relational algebra, relational calculus, commercial languages (such as SQL and QBE), functional dependencies, normal forms, and design theory. Other topics may include knowledge-bases, constraint databases, and alternative database models. Prerequisite(s): course 101. *W. Tan, P. Kolaitis, N. Polyzotis*

181. Database Systems II. *

Introduction to the architecture and implementation of database systems. Topics

covered include data storage, tree and hash indexes, storage management, query evaluation and optimization, transaction management, concurrency control, recovery, and XML data management. Prerequisite(s): course 180. Enrollment limited to 50. *N. Polyzotis, W. Tan*

182. Introduction to Database Management Systems. W

Concepts, approaches, tools, and methodology of database design. Topics include the entity-relationship model; the relational data model; normal forms; commercial languages such as SQL (SQL constraints, SQL triggers, and update languages); query-by-example (QBE); XML data model, and XML query language (XQuery); as well as relational database-management support for XML and object-relational features in database-management systems. Involves a database -application development project. Prerequisite(s): course 12B. Course intended for non-majors; computer science majors should enroll in course 180. *N. Polyzotis, W. Tan*

183. Hypermedia and the Web. S

An introduction to the construction of hypermedia systems and large-scale web applications. Topics covered include pre-web hypertext systems, hypermedia data models, namespaces, system architecture of the web, design of large linked information spaces, design and development of database-backed web applications, web site load testing, and web collaboration technologies. Students work in teams over the term to develop a significant web application. Prerequisite(s): course 180. Enrollment limited to 40. *J. Whitehead*

191. Computer Science and Technology Seminar (2 credits). *

Weekly talks by industry experts, university researchers, field practitioners, and video presentations provide an in-depth exposure to a specific or a broad area of computer science and technology. Topics include emerging ideas, opportunities, challenges, and future of the industry. May be repeated for credit. *The Staff*

192. Supervised Student Teaching/Tutoring. F,W,S

Students hold tutoring hours, run a lab, or lead discussion section in conjunction with a regularly offered course and under close supervision by the course's instructor. Weekly meetings with a regular faculty member to discuss teaching techniques, pedagogy, sensitivity to students' needs, maintaining a comfortable learning environment, and strategies for handling difficult situations. Students submit a report on their teaching experience. Enrollment by permission of instructor and restricted to sophomores, juniors, and seniors. *D. Helmbold*

192F. Supervised Student Teaching/Tutoring (2 credits). F,W,S

Students hold tutoring hours, run a lab, or lead discussion section in conjunction with a regularly offered course and under close supervision by the course's instructor. Weekly meetings with a regular faculty member to discuss teaching techniques, pedagogy, sensitivity to students' needs, maintaining a comfortable learning environment, and strategies for handling difficult situations. Students submit a report on their teaching experience. Enrollment by permission of instructor and restricted to sophomores, juniors, and seniors. *D. Helmbold*

193. Field Study. F,W,S

Provides for individual programs of study with specific academic objectives carried out under the direction of a member of the Computer Science Department and using resources not normally available on campus. Credit is based on the presentation of evidence of achieving the objectives, usually a term paper or project. Cannot normally be repeated for credit. Students submit petition to sponsoring agency. *The Staff*

193F. Field Study (2 credits). F,W,S

Provides for individual programs of study with specific academic objectives carried out under the direction of a faculty member of the Computer Science Department and a willing sponsor at the field site. Uses resources not normally available on campus. Credit is based on the presentation of evidence of achieving the objectives by submitting a written and oral presentation. Cannot normally be repeated for credit. Intended for students majoring in computer science. Students submit petition to sponsoring agency. *The Staff*

194. Group Tutorial. F,W,S

A program of independent study arranged between a group of students and a faculty member. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

194F. Group Tutorial (2 credits). F,W,S

A program of independent study arranged between a group of students and a faculty member. Intended for students majoring in computer science. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

195. Senior Thesis Research. F,W,S

Students submit petition to sponsoring agency. *The Staff*

195F. Senior Thesis Research (2 credits). F,W,S

Intended for majors. Students submit petition to sponsoring agency. *The Staff*

198. Individual Study or Research. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198F. Individual Study or Research (2 credits). F,W,S

Intended for majors. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

For fourth-year students majoring in computer science. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

For fourth-year students majoring in computer science. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

*Graduate Courses***200. Research and Teaching in Computer Science and Engineering (3 credits). F**

Basic teaching techniques for teaching assistants, including responsibilities and rights of teaching assistants, resource materials, computer security, leading discussion or lab sessions, presentation techniques, maintaining class records, electronic handling of homework, and grading. The course examines research and professional training, including use of the library and online databases, technical typesetting, writing journal and conference papers, publishing in computer science and computer engineering, giving talks in seminars and conferences, and ethical issues in science and engineering. Required for all teaching assistants. Enrollment restricted to graduate students. *C. Flanagan*

201. Analysis of Algorithms. F,S

Rigorous analysis of the time and space requirements of important algorithms,

including worst case, average case, and amortized analysis. Techniques include order-notation, recurrence relations, information-theoretic lower bounds, adversary arguments. Analysis of the key data structures: trees, hash tables, balanced tree schemes, priority queues, Fibonacci and binomial heaps. Algorithmic paradigms such as divide and conquer, dynamic programming, union-find with path compression, augmenting paths. Selected advanced algorithms. Introduction to NP-completeness. Enrollment restricted to graduate students; undergraduate students may enroll in this course if they have completed either course 102 or Computer Engineering 177 and have the consent of the instructor. *D. Achlioptas, D. Helmbold, M. Schlag, A. Van Gelder*

203. Programming Languages. W

Covers current issues in programming languages. Language topics include object oriented, concurrent, functional, and logic programming, and other programmable applications such as symbolic manipulators and simulation. Enrollment restricted to graduate students; undergraduate students may enroll for this course if they have completed course 112 and have the consent of the instructor. *C. Flanagan, C. McDowell, A. Van Gelder*

204. Compiler Design. *

Advanced study of compiler implementation. Topics include compiler structure back end, run-time environments, storage management, garbage collection, register allocation, code generation, basic blocks, control flow, data flow, local and global optimization, interpretation, machine code generation. Students may not receive credit for this course and course 104B. Taught in conjunction with 104B. Prerequisite(s): course 104A or equivalent. Enrollment restricted to graduate students. Offered in alternate academic years. *W. Mackey*

210. Computational Models and Complexity. *

Finite automata and regular expressions, universal models of computation, computability and unsolvability, relations between complexity classes, hierarchy theorems, reductions, complete problems for the major complexity classes (L, NL, P, NP, PSPACE). Other topics may include complexity of counting and enumeration problems, complexity of approximation, randomized complexity classes. Prerequisite(s): course 201. *D. Helmbold, P. Kolaitis, M. Warmuth*

211. Combinatorial Algorithms. *

Fundamental combinatorial algorithms, graph algorithms, flow problems, matching problems, linear programming, integer programming, NP-completeness, approximation algorithms for optimization problems. Prerequisite(s): course 201. Offered in alternate academic years. *D. Achlioptas, P. Kolaitis*

217. Logic in Computer Science. *

The applications and uses of formal systems to computer science. Covers the syntax and semantics of propositional logic and first-order logic, normal forms, soundness and completeness theorems, Herbrand's theorem, unification and resolution, foundations of logic programming, automated theorem proving. Other topics may include deductive databases, database query languages, nonmonotonic reasoning. Enrollment restricted to graduate students. Offered in alternate academic years. *P. Kolaitis, A. Van Gelder*

221. Advanced Operating Systems. F

A detailed study of the issues involved in operating systems design and implementation. Readings cover current research topics and systems of historical significance. Topics include (but are not restricted to) process and memory management, protection, security, synchronization, performance evaluation, file

systems, distributed systems. Enrollment restricted to graduate students; undergraduates by interview only. *S. Brandt, D. Long, E. Miller*

223. Advanced Computer Security. *

Overview of research topics in computer and network security. Topics may include cryptographic operations, security properties and policies, authentication and access control, attacks on computer systems and defenses against them, security in programming languages, and network protocols for security. Enrollment restricted to graduate students or consent of instructor. *M. Abadi, D. Long, E. Miller*

229. Storage Systems. S

Topics include storage devices, storage architectures, local file systems, high-performance file systems, and next-generation storage devices and architectures; covers issues of performance, reliability, scalability, robustness, and security. Prerequisite(s): course 221 or permission of instructor. *S. Brandt, D. Long, E. Miller*

232. Distributed Systems. W

Overview of research topics in distributed computer systems. Topics may include communication paradigms, process management, naming, synchronization and coordination, consistency and replication, fault tolerance, and security. Examples include distributed operating systems, distributed file and object systems, distributed document systems, and peer-to-peer systems. Prerequisite(s): course 221 or permission of instructor. *D. Long, E. Miller*

240. Artificial Intelligence. S

Prepares students for doing research in artificial intelligence. Major topics covered are search and heuristics, knowledge representation, planning, deduction and inference, reinforcement learning, associative pattern retrieval, and adaptive search. Discussion includes current research issues in AI problem-solving methods. Individualized projects. Undergraduates may enroll in this course if they have completed course 140. Enrollment limited to 30. *R. Levinson, I. Pohl*

241. Knowledge Engineering. *

Introduction to the acquisition, representation, and application of knowledge in expert systems. Topics include production systems, backward and forward chaining, dependency-directed backtracking, reasoning with uncertainty, certainty factors, fuzzy systems, knowledge representation (rules, frames, and semantic nets), inference engines, and metaknowledge. Discussion includes current research issues in adaptive expert systems. Involves one major project. Undergraduates may enroll in this course if they have completed course 140. Offered in alternate academic years. *R. Levinson*

242. Machine Learning. F

Introduction to machine learning algorithms. Covers learning models from fields of statistical decision theory and pattern recognition, artificial intelligence, and theoretical computer science. Topics include classification learning and the Probably Approximately Correct (PAC) learning framework, density estimation and Bayesian learning, EM, regression, and online learning. Provides an introduction to standard learning methods such as neural networks, decision trees, boosting, nearest neighbor, and support vector machines. Requirements include one major experimental learning project or theoretical paper. Enrollment restricted to graduate students. Enrollment limited to 30. *D. Helmbold, M. Warmuth*

244. Artificial Intelligence in Games. *

Artificial intelligence has long used game-playing as a metric for progress. Key algorithms such as alpha-beta and HPA search studied. Computer algorithms for

backgammon, poker, and chess examined. There will be individualized projects. Prerequisite(s): course 201; and course 211 or 240 or 242. Enrollment limited to 20. *M. Mateas, I. Pohl*

248. Interactive Storytelling. W

Covers wide range of practices including hypertext, interactive fiction, embedded narratives in games, interactive drama, and artificial intelligence-based story generation. Through a mixture of readings, assignments, and project work, explores the theoretical positions, debates, and technical and design issues arising from these different approaches. Students may not receive credit for this course and course 148. (Formerly *Interactive Narrative*.) Enrollment restricted to graduate students. Enrollment limited to 20. *M. Mateas*

250. Introduction to Information Theory. W

An introduction to information theory including topics such as entropy, relative entropy, mutual information, asymptotic equipartition property, channel capacity, differential entropy, rate distortion theory, and universal source coding. (Also offered as Electrical Engineering 253. Students cannot receive credit for both courses.) Prerequisite(s): Computer Engineering 107, or Applied Mathematics and Statistics 131 or equivalent course, or permission of instructor. Enrollment restricted to graduate students. *H. Sadjadpour*

253. Advanced Programming Languages. *

Covers issues in the design, implementation, analysis, and specification of programming languages. Topics include formal semantics (including operational, axiomatic, and denotational semantics), advanced type systems, program analysis (including abstract interpretation and model checking), specification, and verification. Prerequisite(s): course 203 or equivalent. *C. Flanagan*

260. Computer Graphics. *

Advanced course in computer graphics. Topics may vary depending on interests of students and research directions in the field. Main topics include in-depth study of curves and surface modeling, deformations, advanced ray tracing, and radiosity methods. Enrollment restricted to graduate students; undergraduates by interview only. Enrollment limited to 20. *S. Lodha, A. Pang*

261. Advanced Visualization. S

Covers advanced topics in visualization, e.g., tensor-field visualization, uncertainty visualization, information visualization. Topics vary with differing offerings of the course. Course includes lectures, exam, research paper reading/presentation, and projects. Final project is expected to be at a sufficiently advanced level for submission to a conference. Students work individually or in pairs. Enrollment by permission of instructor. Enrollment restricted to graduate students. *A. Pang*

262. Computer Animation. *

An in-depth treatment of computer animation, including its origins in conventional animation, 2-D animation, inbetweening, motion control, morphing, graphical motion editors, animation languages, motion blur, simulation of articulated body motion, realtime animation, and special-purpose animation hardware. Enrollment restricted to graduate students. Enrollment limited to 15. *J. Davis*

272. Evolutionary Game Theory. *

Reviews static equilibrium concepts, games of incomplete information, and the traditional theory of dynamic games in discrete time. Develops recent evolutionary game models, including replicator and best reply dynamics, and applications to economics, computer science, and biology. Prerequisite(s): upper-division math

courses in probability theory are strongly recommended. Cannot receive credit for this course and Economics 166B, Computer Science 166B, or Biology: Ecology and Evolutionary 176B. (Also offered as Biology:Ecology & Evolutionary 274. Students cannot receive credit for both courses.) *D. Friedman, B. Sinervo, M. Warmuth*

277. Principles of Database Systems. W

Advanced course on principles of database systems. Main topics include overview of the relational data model and relational query languages; recursive queries, datalog, and fixed-points; query processing and optimization; database design, dependencies, normal forms, and the chase procedure. Additional topics may include information integration, complex objects, semistructured data, and XML. (Formerly *Database Systems I.*) Prerequisite(s): course 180 (or equivalent) or consent of instructor. Enrollment restricted to graduate students. Enrollment limited to 20. Offered in alternate academic years. *W. Tan, P. Kolaitis, N. Polyzotis*

278. Design and Implementation of Database Systems. *

Advanced course in implementation techniques for database systems. For students who wish to do research in databases or to learn more about large-scale data processing. Topics include: indexing of complex data; techniques for high-volume concurrency control; query processing and optimization; database recovery; parallel database system architectures; database systems for streaming data; approximate query answering. Additional topics may include: self-managing database systems; advanced query optimization techniques; and query processing techniques for semi-structured data. (Formerly *Database Systems II.*) Prerequisite(s): course 277 or 181 (or equivalent) or consent of instructor. Enrollment restricted to graduate students. Enrollment limited to 20. *N. Polyzotis, W. Tan*

279. Software Reuse and Component-Based Software Engineering. *

Detailed study of interlocking business, organizational, and technical issues in large-scale software reuse and component-based software engineering. Topics include architecture, design for reuse, domain engineering, model-driven development, domain-specific kits, components, frameworks, software agents, generators, problem-oriented languages, library design, reuse tools, patterns, and aspects. Assumes prior exposure to software engineering topics. Prerequisite(s): computer engineering 276 or consent of instructor. Enrollment restricted to graduate students. Enrollment limited to 20. *C. McDowell*

280A. Seminar in Computer Science Research (2 credits). *

Weekly seminar covering topics of current research in computer science. Enrollment by permission of instructor. Enrollment limited to 30. May be repeated for credit. *The Staff*

280D. Seminar in Database Systems (2 credits). F,W,S

Covers advanced research topics from the recent literature in database systems and related fields. Involves presentations from UCSC students and faculty, and guest talks from researchers in industry and other academic institutions. Enrollment by permission of instructor. Enrollment by permission of instructor. Enrollment limited to 30. May be repeated for credit. *W. Tan, P. Kolaitis, N. Polyzotis*

280G. Seminar on Software Engineering (2 credits). F

Weekly seminar covering topics of current research in software engineering. Prerequisite(s): permission of instructor. Enrollment restricted to graduate students. Enrollment limited to 30. May be repeated for credit. *L. De Alfaro, C. Flanagan, C. McDowell, J. Whitehead*

280J. Seminar on Computer Graphics (2 credits). *

Weekly seminar covering topics of current research in computer graphics. Enrollment restricted to graduate students and by permission of instructor. Enrollment limited to 30. May be repeated for credit. *J. Davis*

280S. Seminar on Computer Systems (2 credits). F,W,S

Weekly seminar series covering topics of current research in computer systems. Enrollment by permission of instructor. Enrollment limited to 30. May be repeated for credit. *S. Brandt, D. Long, E. Miller*

280W. Seminar in Digital Media (2 credits). F,W,S

Covers advanced topics and current research in digital media—the interdisciplinary field at the intersection of computer science, media authoring, and models of interpretation from the humanities and social sciences. Focuses on student presentations and seminar participation. Enrollment restricted to graduate students. May be repeated for credit. *N. Wardrip-Fruin*

280X. Expressive AI (2 credits). F,W,S

Weekly seminar covering topics of current research in artificial intelligence applied to interactive art and entertainment, including computer games. Enrollment by permission of instructor. Enrollment restricted to graduate students. Enrollment limited to 30. May be repeated for credit. *M. Mateas*

290A. Topics in Algorithms and Complexity Theory: Probabilistic Algorithms and Average Case Analysis. *

Examines the use of probability theory both in the design and analysis of algorithms. Uses probability theory to analyze the average performance of deterministic algorithms on randomly chosen or "typical" inputs, rather than on worst case inputs. Also a look at algorithms that use randomization, such as random walk and simulated annealing techniques. Examples of specific topics include martingales, random graphs, and rapidly mixing Markov Chains. Enrollment restricted to graduate students. Enrollment limited to 15. Offered in alternate academic years. May be repeated for credit. *D. Achlioptas*

290B. Advanced Topics in Computer Graphics. F

A graduate seminar in computer graphics on topics from recently published research journal articles and conference proceedings. Topics vary from year to year depending on interests of students. Primary areas of interest are likely to be scientific visualization, modeling, rendering, scattered data techniques, wavelets, and color and vision models. Students read technical papers and present class lectures. Guest lecturers supplement the student presentations. A research project is required. Enrollment limited to 15. May be repeated for credit. *J. Davis, S. Lodha, A. Pang*

290C. Advanced Topics in Machine Learning. W

In-depth study of current research topics in machine learning. Topics vary from year to year but include multi-class learning with boosting and SUM algorithms, belief nets, independent component analysis, MCMC sampling, and advanced clustering methods. Students read and present research papers; theoretical homework in addition to a research project. Prerequisite(s): course 242. May be repeated for credit. *D. Helmbold, M. Warmuth*

290D. Neural Computation. *

An introduction to the design and analysis of neural network algorithms. Concentrates on large artificial neural networks and their applications in pattern recognition, signal processing, and forecasting and control. Topics include Hopfield and Boltzmann machines, perceptions, multilayer feed forward nets, and multilayer recurrent networks. Enrollment restricted to graduate students. Offered in alternate

academic years. May be repeated for credit. *M. Warmuth*

290E. Object-Oriented Programming Methodology. *

Object-oriented programming methodology is the application of abstract-data types and polymorphism to coding solution. Topics geared to beginning thesis research in this field. Prerequisite(s): courses 201 and 203. Enrollment restricted to graduate students. Enrollment limited to 20. May be repeated for credit. *C. McDowell, I. Pohl*

290F. Applications of Combinatorics. W

Combinatorial mathematics, including summation methods, working with binomial coefficients, combinatorial sequences (Fibonacci, Stirling, Eulerian, Harmonic, Bernoulli numbers), generating functions and their uses, Bernoulli processes, and other topics in discrete probability. Oriented toward problem solving, applications mainly to computer science, but also physics. Prerequisite(s): Computer Engineering 16 and Applied Mathematics and Statistics 10. Enrollment restricted to graduate students and upper-division undergraduates. Offered in alternate academic years. May be repeated for credit. *I. Pohl*

290G. Topics in Software Engineering. F

Research seminar on current topics in software engineering. Topics vary from year to year depending on the current research of the instructor(s) and interests of students. Students read technical papers from relevant journals and conference proceedings. Synthesis and understanding of materials is demonstrated by a required research project. Prerequisite(s): Computer Engineering 276 recommended. Enrollment restricted to graduate students; undergraduates may enroll with permission of instructor. Enrollment limited to 35. May be repeated for credit. *L. De Alfaro, C. Flanagan, C. McDowell, J. Whitehead*

290H. Topics in Database Systems. S

Focuses on current research topics in database systems. Different offerings cover different topics depending on current research of instructor(s) and the interests of students. Students read technical papers from journals and conference proceedings and present class lectures. A research project is required. Prerequisite(s): course 180 (or equivalent) or 277 or consent of instructor. Enrollment restricted to graduate students. Enrollment limited to 20. May be repeated for credit. *P. Kolaitis, N. Polyzotis, W. Tan*

290J. Playable Media. S

Focuses on media, such as computer games, that invite and structure play. Work includes building and critiquing a series of prototypes; studying major examples in the field; and discussing both theoretical and practice-oriented texts. (Also offered as Digital Arts and New Media 250D. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. May be repeated for credit. *N. Wardrip-Fruin*

290S. Advanced Topics in Computer Systems. *

Focuses on current research topics in computer systems. Topics vary from year to year depending on the current research of the instructor(s) and the interests of the students. Students read technical papers from current journals and conference proceedings, and present class lectures. A research project is required. Prerequisite(s): course 221 recommended. Enrollment restricted to graduate students; qualified undergraduates may enroll with instructor's consent. May be repeated for credit. *S. Brandt, D. Long, E. Miller*

290T. Topics in Computing for Society. F

Current research topics on computer technology that is intentionally targeted to

benefiting society. Topics vary year to year. Students read papers from current conferences and journals, and present class lectures. A research project is required. Enrollment restricted to graduate students. May be repeated for credit. *J. Davis*

290X. Cryptography and Computer Security. *

Research seminar on encryption and related technologies. Topics include theory of codes, random sequences and generators, public key cryptosystems, private key cyphers, key exchange protocols, quantum computing and cryptography. Major project required. Prerequisite: interview with instructor. Enrollment limited to 12. May be repeated for credit. *The Staff*

296. Masters Project (2 credits). F,W,S

Independent completion of a masters project under faculty supervision. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

297. Independent Study or Research. F,W,S

Independent study or research under faculty supervision. Although this course may be repeated for credit, not every degree program will accept a repeated course towards degree requirements. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

297F. Independent Study or Research (2 credits). F,W,S

Independent study or research under faculty supervision. Although this course may be repeated for credit, not every degree program will accept a repeated course toward degree requirements. Formerly offered as *Directed Readings in Machine Learning*. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Thesis research conducted under faculty supervision. Although the course may be repeated for credit, not every degree program will accept a repeated course towards degree requirements. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

*Not offered in 2009-10

[Program Description](#)

Lower-Division Courses

10. Becoming a Successful Student (2 credits). W

An interactive approach to effective studying, note-taking, critical thinking, and exams. Also explored: time management; good communication with staff and faculty; major and career exploration; and use of campus resources. Enrollment priority given to first-year students and sophomores. Enrollment restricted to college members, or by permission of instructor. Enrollment limited to 15. *The Staff*

42. Student-Directed Seminar. F,W,S

Seminars taught by upper-division students under faculty supervision. (See course 192.) *The Staff*

50. Library Skills for the Digital Age (2 credits). W

Intended to enhance students' skills in using the most powerful learning tool in any university: the library. Topics: organization of the library; how to begin researching; search engine and database use; judging the quality of sources; using sources responsibly. Disciplinary focus changes from quarter to quarter. Enrollment restricted to first-year and sophomore Cowell college members, or by permission of instructor. Enrollment limited to 22. *W. Martyna*

60. Social Justice and Diversity (2 credits). *

Perspectives and case studies on diversity, communication, and social recognition. Discusses instances of social "isms" and "phobias" (racism, sexism, homophobia, xenophobia), and raises issues of religious tolerance and inter-faith dialogue. Includes current events and diversity topics in university life. Enrollment restricted to college members. Admission by written application. Enrollment limited to 22. *T. Miller*

61. Critical Journeys (2 credits). *

For publication in a Cowell literary journal, students substantively revise one of their fall quarter essays by studying a major work that influences, acknowledges, or further clarifies a required reading of the Cowell core course. Prerequisite(s): course 80A or 80B; enrollment restricted to members of Cowell College. Enrollment limited to 20. *J. Wilson, C. Carlstroem*

64. Social Justice: Issues and Debates (2 credits). *

Focused followup on social justice topics and readings introduced in the Cowell core course. Allows first-year students to pursue social justice themes in greater depth. Students must have previously taken a Cowell core course (or equivalent). Enrollment restricted to first-year students. Enrollment limited to 20. *J. Christianson*

70A. Bookbinding. *

Students learn techniques of bookbinding, construction, and design, and

fundamentals of letterpress printing. Students are billed a materials fee. May not be used to fulfill art major requirements. Enrollment limited to 12. (General Education Code(s): A.) *The Staff*

70B. Printing I: Elements of Printing. W

Learn fundamental skills in fine letterpress printing, including hand typesetting and instruction in the operation of printing presses. Basic typography explored as students design and print a small edition of a selected text. Students are billed a materials fee. May not be used to fulfill art major requirements. Prerequisite(s): course 70A. Enrollment limited to 12. (General Education Code(s): A.) *The Staff*

70C. Printing II: Typography and Book Design. S

Students learn fundamental skills in fine letterpress printing, including hand typesetting and instruction in the operation of printing presses. Basic typography explored as students design and print a small edition of a selected text. Students are billed a materials fee. May not be used to fulfill art major requirements. Prerequisite(s): course 70B or by instructor permission. Enrollment limited to 12. May be repeated for credit. (General Education Code(s): A.) *The Staff*

80A. Introduction to University Discourse: Imagining Justice Past and Present. F

Explores rhetorical principles and conventions of university discourse, providing intensive practice in analytical writing, critical reading, and speaking. Focuses on conceptions of justice, historic and contemporary, and considers how literary and artistic media may transmit, question, or revise notions of the just. Students cannot receive credit for this course and course 80B. Enrollment restricted to first-year college members who have not satisfied the C1 requirement. Enrollment limited to 22. (General Education Code(s): T4-Humanities and Arts, C1.) *D. Shemek*

80B. Rhetoric and Inquiry: Imagining Justice Past and Present. F

Explores the intersections of investigation, interpretation, and persuasion and hones strategies for writing and research. Focuses on conceptions of justice, historic and contemporary, and considers how literary and artistic media may transmit, question, or revise notions of the just. Incorporates independent research. Students cannot receive credit for this course and course 80A. Prerequisite(s): satisfaction of the Entry Level Writing and C1 requirements. Enrollment restricted to first-year college members. Enrollment limited to 22. (General Education Code(s): T4-Humanities and Arts, C2.) *D. Shemek*

85. Introduction to Chinese Writing Systems. *

Gateway course illuminating the operation of the writing systems of greater China. Intended for students who are curious about the world's longest continually used symbol set as well as for those who may be considering a serious commitment to learning the language. *D. Keenan*

86. College Leadership Development (2 credits). S

Students newly appointed as residential life assistants in the college prepare for taking up their positions by studying identity and diversity issues; student development; community building; conflict resolution; intercultural competency; and leadership skills. Restricted to students selected for Cowell College Resident Assistantship, and by permission of instructor. *The Staff*

93. Field Study. F,W,S

Various topics to be arranged. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

93F. Field Study (2 credits). F,W,S

Various topics to be arranged. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

94. Group Tutorial. F,W,S

A program of independent study arranged between a group of students and a faculty instructor. Students submit petition to sponsoring agency. Enrollment limited to 10. May be repeated for credit. *The Staff*

94F. Group Tutorial (2 credits). F,W,S

A program of independent study arranged between a group of students and a faculty instructor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Various topics to be arranged. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99F. Tutorial (2 credits). F,W,S

Various topics to be arranged. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses

118B. Words & Music: Poetry, Musical Theater, Opera. W

Study of significant texts enhanced by music for performance. Topics vary annually. Course compares original texts in English translation with their adaptation to musical theater (*My Fair Lady*, *Oklahoma*, etc.) and opera (*Carmen*, etc.) May be repeated for credit. (General Education Code(s): IH.) *M. Ellis*

156M. Arts and Sciences. *

Seminar exploring the relations between scientific modes of understanding and those pertaining to the liberal and fine arts, including literature, philosophy, and the visual and performing arts. Winter 2009: literature and medicine. May help students preparing to take the MCAT (reading comprehension and writing sections). Enrollment restricted to juniors and seniors. Priority to Cowell College students. Enrollment limited to 15. May be repeated for credit. *D. Schultz*

184A. Leadership and Institution Building (2 credits). F

Through lectures by senior administrators and student consensus-and-recommendation teams, students learn how leaders work with constituent groups, build cooperation, and develop implementation plans in an institution such as the University of California, specifically, UC Santa Cruz. Enrollment restricted to undergraduates accepted in the Chancellor's Undergraduate Internship Program. Enrollment limited to 40. *W. Ladusaw*

184B. Leadership and Institution Building (2 credits).

Through lectures by senior administrators and student consensus-and-recommendation teams, students learn how leaders work with constituent groups, build cooperation, and develop implementation plans in an institution such as the University of California, specifically, UC Santa Cruz. Enrollment restricted to undergraduates accepted in the Chancellor's Undergraduate Internship Program. Enrollment limited to 40. *W. Ladusaw*

184C. Leadership and Institution Building (2 credits). S

Through lectures by senior administrators and student consensus-and-

recommendation teams, students learn how leaders work with constituent groups, build cooperation, and develop implementation plans in an institution such as the University of California, specifically, UC Santa Cruz. Enrollment restricted to undergraduates accepted in the Chancellor's Undergraduate Internship Program. Enrollment limited to 40. *W. Ladusaw*

192. Directed Student Teaching. F,W,S

Teaching of a lower-division seminar under faculty supervision. (See course 42.) Upper-division standing required and a proposal supported by a faculty member willing to supervise. *The Staff*

193. Field Study. F,W,S

Program of study arranged between a group of students and an instructor, which may involve work with an off-campus or non-departmental agency (e.g., internship or field work). Interview only; prior arrangement with instructor. Enrollment restricted to juniors and seniors. May be repeated for credit. *The Staff*

193F. Field Study (2 credits). F,W,S

Program of study arranged between a group of students and an instructor, which may involve work with an off-campus or non-departmental agency (e.g., internship or field work). Interview only; prior arrangement with instructor. Enrollment restricted to juniors and seniors. May be repeated for credit. *The Staff*

194. Group Tutorial. F,W,S

A program of independent study arranged between a group of students and an instructor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

194F. Group Tutorial (2 credits). F,W,S

A program of independent study arranged between a group of students and an instructor. Students submit petition to sponsoring agency. Enrollment restricted to juniors and seniors. May be repeated for credit. *The Staff*

195. Senior Thesis. F,W,S

Students submit petition to sponsoring agency. *The Staff*

198. Independent Field Study. F,W,S

Provides for college-sponsored individual study programs off campus, for which faculty supervision is not in person (e.g., supervision is by correspondence.) Up to three such courses may be taken for credit in any one quarter. Approval of student's adviser, certification of adequate preparation, and approval by provost required. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Various topics to be arranged. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Various topics to be arranged. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Lower-Division Courses

28. Crown Student Leadership Development Seminar (2 credits). W

Explore leadership as it relates to student development at Crown College. Examine how values, ethics, involvement, identity, and theory affect leadership in a variety of content areas. Evaluate student's leadership strengths to determine objectives for improvement. *The Staff*

31. Crown College Student Leadership in Action Seminar (2 credits). S

Focuses on developing and establishing leadership skills and styles for new leaders at Crown College. Explores communication styles, group dynamics, community development, programming, moral development and conflict resolution concepts and strategies. Applies theory to action. Enrollment limited to college members and by permission of instructor. *The Staff*

60. The Environment on Film: Rhetoric of Ecocriticism. W

Examines the overt as well as the subtle cinematic elements that depict, ponder, and persuade concerning issues of the environment and the role of humans regarding nature, animals, and the human-made landscape. Enrollment restricted to college members during priority enrollment. Enrollment limited to 24. (General Education Code(s): IH.) *M. Foster*

80A. University Discourse: Ethical Issues in Emerging Technologies. F

Explores rhetorical principles and conventions of university discourse, providing intensive practice in analytical writing, critical reading, and speaking. Examines ethical challenges brought about by rapidly changing science and technology. Students cannot receive credit for this course and course 80B. Concurrent enrollment in Biomolecular Engineering 83 required. Enrollment restricted to first-year college members who have not satisfied the C1 requirement. (General Education Code(s): T6-Natural Sciences or Humanities and Arts, C1.) *F. Ferguson*

80B. Rhetoric and Inquiry: Ethical Issues in Emerging Technologies. F

Explores intersection, interpretation, and persuasion and hones strategies for writing and research. Examines ethical challenges brought about by rapidly changing science and technology. Students cannot receive credit for this course and course 80A. Concurrent enrollment in Biomolecular Engineering 83 is required. Enrollment restricted to first-year Crown College members. (General Education Code(s): T6-Natural Sciences or Humanities and Arts, C2.) *F. Ferguson*

80F. Science Fiction/Science Fact. W

Examines the link between science fiction and "real" science. Does conflict exist between the confident optimism of scientists and the dystopic scenarios of sci-fi writers? Explores how science fiction influences actual technological possibilities and affects cultural attitudes. Enrollment restricted to college members or by

permission of instructor. Enrollment limited to 20. (General Education Code(s): T7-Natural Sciences or Social Sciences.) *A. Rava*

80G. Ethics and the New Eugenics. *

A reading/writing/seminar discussion that compares the intellectual premises and social/cultural context of the early 20th-century American eugenics movement to the new eugenics currently emerging from the science of human bioengineering. Enrollment limited to 25. (General Education Code(s): T3-Social Sciences.) *E. Cummins*

80J. Cyborg Society: Myths, Realities, Choices. S

Examines content and methodologies of the emerging field of cyborgology. Includes social studies of science, anthropology, sociology, philosophy, politics, art, biology, and informatics. Enrollment limited to 25. (General Education Code(s): T5-Humanities and Arts or Social Sciences.) *C. Gray*

80S. Undergraduate Seminar in Science, Technology, and Society. *

An honors seminar for first year students on selected topics that examine the relationship between science, technology, and society. Precise focus of each seminar varies and is announced by the college. Preference given to Crown College students. Enrollment restricted to first-year and sophomore students. Enrollment limited to 20. (General Education Code(s): T2-Natural Sciences.) *The Staff*

93. Field Study. F,W,S

Provides for individual programs of study sponsored by the college and performed off campus. Students should review plans with an appropriate fellow of the college. A proposal should be presented to the college academic preceptor no later than the seventh week of the preceding quarter. Credit is granted by the sponsor upon approval of the work performed. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

93F. Field Study (2 credits). F,W,S

Provides for individual field study in the vicinity of the campus under the direct supervision of a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99F. Tutorial (2 credits). F,W,S

Individual study for lower-division students directed by a fellow of Crown College. Students submit petition to sponsoring agency. Enrollment restricted to college members. *The Staff*

Upper-Division Courses

123. Science and Human Values. S

Study of how we acquire the values by which we make choices, and of the impact of science and science-based technology on our values. A writing-intensive, primarily lecture course. In daily writings students respond to what happened that day in class. Weekly writing assignments are introspective. They are designed for students to explore and better understand their own values and decision making. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; permission of instructor after written application and personal interview during the preceding winter quarter. Enrollment limited to 40. (General Education Code(s): W.) *F. Andrews*

185. Career and Internship Preparation (1 credit). S

For juniors and seniors preparing for an internship experience or career position.

Subjects include: self-assessment of career objectives and/or internship goals; exploration of resources and techniques for finding and evaluating potential positions; resume writing; interview techniques; techniques to maximize learning in an internship and advancement in a job; communication; conflict resolution and problem solving in the organizational setting. (Formerly *Profession Training Program: Internship Preparation.*) Enrollment limited to 40. *B. Silverthorne*

198. Independent Field Study. F,W,S

Provides for college-sponsored individual study programs off campus. Approval of student's faculty sponsor and college academic provost required. *The Staff*

199. Tutorial. F,W,S

Individual study for upper-division students directed by a fellow of Crown College. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Individual study for upper-division students directed by a fellow of Crown College. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

[Changes to 2009-10 Catalog Highlighted](#) | [Faculty](#) | [Courses](#)

Program Description

New technologies have profoundly changed contemporary culture and inevitably altered the role of the arts in society. The Digital Arts and New Media MFA Program serves as a center for the development and study of digital media and the cultures that they have helped create. Faculty and students are drawn from a variety of backgrounds, such as the arts, computer engineering, humanities, the sciences, and social sciences, to pursue interdisciplinary artistic and scholarly research and production in the context of a broad examination of digital arts and cultures. The Digital and New Media MFA Program (DANM) is a two-year program. Students take courses in each of these interdependent and equally important program areas:

New Praxis—The term “Praxis” has many meanings, which include “translating ideas into action” and “action and reflection upon the world in order to change it.” New Praxis in DANM is comprised of “critique” and “practicum” which provide students with both the practical training and critical dialogue necessary to pursue their own individual goals as artists and cultural practitioners.

Studies—DANM “Studies” include required core seminars that allow students first, to explore an array of recent methods and approaches in Digital Arts and Culture, and then pursue the construction of specific genealogies and theories with a sustained focus on a particular topic, before beginning to develop a thesis project and paper by engaging in various dialogues at the intersection of theory and practice.

Collaborative Research—Faculty lead students in major collaborative research projects that will result in publications and exhibitions. The following are descriptions of four current areas of DANM faculty research: mechatronics, participatory culture, performative technologies, and playable media. We ask that prospective students identify their working relationships with one or more of these areas in their application and statement of purpose. As new research emphases arise, other categories for potential project groups will be formed.

Mechatronics

Mechatronics is the functional integration of mechanical, electronic, and information technologies. In DANM this framework may be employed for the development and production of physical, systems-based artwork that incorporates elements of robotics, motion control, software engineering, and hardware design. DANM mechatronics research involves the use of a variety of media that may include video, performance, and sculpture, for the creation of complex, kinetic, audio-visual systems for the exploration of temporality, materiality, experience, perception, as well as relations between biological/life-like forms and environmental worlds.

Participatory Culture

DANM’s participatory culture studies and research explore the role of information and communication technologies in what has sometimes been described as the shift from “top-down” culture to a “lateral” or “heterarchical” culture of participation and social engagement. In many social domains and practices, the human/computer interface acts as both a boundary and a bridge. Participatory culture research in DANM may encompass a range of projects in social computing, community-media activism and other modes of engagement that involve the design of new technologies and/or technologies that address social issues and help to democratize participation in culture and politics.

Performative Technologies

Research in performative technologies explores new methods for combining media and technology to create the visual, aural and connective material of performance. DANM performance research generates new public and performative spaces where digital media, communication networks, and interactive systems may be fused with lighting, movement, stage and sound design to create mixes of real-time/recorded shared multimedia experiences shared by audiences and performers at both local and remote locations. Ongoing projects in this area may include work in telematics, performance-driven real-time graphics, algorithmic composition of sound and image, computer vision and motion capture, and studies of ritual, performativity, embodiment, interactivity, and subjectivity.

Playable Media

Playable Media research explores the potential of computational systems for the creation of new media forms that invite and structure play. This group works to understand and create new ways for computer games and related forms to engage audiences, make arguments, tell stories, and shape social space. Ongoing Playable Media work combines game design and artificial intelligence research with writing, art, and media authoring.

Pedagogy—DANM trains future arts academics through practical experience. Students are awarded teaching assistantships as part of their overall support package as well as opportunities to assist faculty in workshops.

Requirements

The DANM MFA Program requires 74 credits of academic course work. In the first year, students will generally take three courses each term—one course in each of the program areas, New Praxis, Studies, and Collaborative Research. In the second year, students primarily take elective courses, work with their thesis committees, and pursue independent and directed research leading to the completion of the thesis project and paper.

New Praxis

New Praxis in DANM is comprised of “critique” and “practicum.”

New Praxis—Year One

Practicum—This area of Praxis is designed to allow students to develop the conceptual, technical and practical skills they need to successfully complete projects that realize their own individual goals as digital media artists.

First-year students are required to take a Project Design Studio in the first quarter. This course guides the development of students’ individual studio practice, particularly in relation to the transition to digital media. First-year students also take basic courses in electronics and programming. In order to fulfill this credit requirement, students with advanced training in either area may choose to:

- serve as assistants in workshops for beginning students;
- Take electronics or programming electives offered in Computer Engineering; or
- Enroll in independent studies, as approved by their adviser.

Critique—This area of Praxis is designed to allow students to present their own work and review the work of their fellow students as a means of engaging in critical dialogue necessary to pursue their own individual goals as digital media artists. First-year students are required to present work-in-progress based on the projects developed in the project design course in both individual studio and group critiques, and participate in group critique discussion.

During the spring quarter first-year students identify and engage a thesis committee under the supervision of the program director.

New Praxis—Year Two

Practicum—During the fall quarter second-year students will work on the development of their thesis project proposal and abstract under the supervision of their thesis committee. Second-year students are encouraged to take practice-based electives and independent studies that facilitate the development of their thesis projects.

DANM 299—In the winter and spring quarters second-year students enroll in a minimum of 10 units of independent thesis research which is supervised by one or more members of their thesis committee.

DANM 215—Students work with faculty curator/coordinator on development of thesis projects specifically for the group exhibition context. Students contribute to development of exhibition design and collateral materials, while studying unique presentation and curatorial challenges of new media.

Studies

Students are required to take four Core Seminars over two years and have the option to take two Studies electives.

Studies—Year One

DANM 201 Recent Methods and Approaches to Digital Arts and Culture—In this seminar students examine an array of methods and approaches to research and writing in digital media art and culture and explore key theories concerning digital media and cultures.

DANM 249 Faculty Seminar—Series of DANM faculty lectures and panels designed to introduce first-year students to program faculty members and their creative work and research.

DANM 203 Dialogues and Questions in Digital Arts and Culture—A pre-thesis course in which students engage in dialogues at the intersection of theory and practice with the goal of producing a pre-thesis proposal and preparatory essay. Readings and seminar discussions will inform the development of pre-thesis project proposals and essays.

Studies—Year Two

DANM 202 Genealogies and Theories of Digital Arts and Culture—This seminar provides a sustained focus on a particular theoretical and/or historical premise—for example, an examination of “intermediality,” or the exploration of “framing stories” such as the history of perspective, or narratology—as a means of teaching a common approach to the construction of genealogies with digital art and culture. The course is intended to help students structure and develop their thesis papers as theoretical contextualizations of their thesis projects.

Elective—Students may choose to take an elective offered by the program or choose an elective from a broad array of graduate courses offered on campus with the approval of their adviser.

Collaborative Research

Students participate in a three quarter-long Collaborative Research Project group in one of four possible DANM research focus areas, which begins in the spring quarter of the first year. In the second year students continue with the final two quarters of their project group (fall and winter) in which they collaborate on faculty-initiated and directed research projects in a chosen focus area. This work is intended to provide the student with the opportunity to learn collaborative and practical research methodologies, and to participate in a professional level research project. The collaborative project group experience is intended to inform, but not necessarily contribute to, the student’s thesis project.

Thesis Requirement

Students are required to complete a thesis project and written paper under the supervision of their thesis committee. The thesis will be an arts project with digital documentation accompanied by a written paper. Thesis projects may be individual or collaborative and are expected to grow out of the research pursued in the project groups during the three quarters prior as well as work developed in new praxis courses. Each student will be expected to complete a 20- to 30-page paper discussing the student’s preparatory research as well as the theoretical significance of the project. In the case of collaborative projects each student will be required to submit his or her own paper. During the thesis year, students will make at least two progress presentations to their thesis committee. The chair and at least one other member of the three-person committee will be senate faculty and members of the DANM program faculty. A completed thesis project and paper must be submitted to and approved by the thesis committee before the degree can be awarded.

Applications

Prospective students in the Digital Arts and New Media program will have a foundation in the arts with some demonstrated interest in technology or a foundation in technology with demonstrated background in the arts. Many, but not all, entering students will have completed a Bachelor of Arts program in one or more of the arts disciplines (art or art history, film, multimedia, music, theater, video, etc.) or a Bachelor of Science program in computer science or computer or electrical engineering. Other successful applicants will have a BA or BS in another field but will be able to show substantial achievement in the arts, in technology or in digital arts.

In certain cases, students who demonstrate excellent potential for the program but lack proficiency in a “cross discipline” will be admitted to the program with the understanding that they will take courses during their first two quarters of study to make up that deficiency. An arts student lacking sufficient programming experience, for example, will be expected to take one or two programming courses in their first two quarters in addition to the DANM program requirements.

Students will apply online through the Division of Graduate Studies web site between October and February for the following fall quarter. In addition to submitting an on-line application, students

will be expected to submit a non-returnable representative sample of their work, i.e., a portfolio, on a CD, CD-ROM or DVD. Further information can be found at: <http://graddiv.ucsc.edu>.

Digital Arts and New Media

[2009-10 update to the *General Catalog*, changes highlighted]

Porter D-121
(831) 459-1554
<http://digitalarts.ucsc.edu>

Program Description

New technologies have profoundly changed contemporary culture and inevitably altered the role of the arts in society. The Digital Arts and New Media MFA Program serves as a center for the development and study of digital media and the cultures that they have helped create. Faculty and students are drawn from a variety of backgrounds, such as the arts, computer engineering, humanities, the sciences, and social sciences, to pursue interdisciplinary artistic and scholarly research and production in the context of a broad examination of digital arts and cultures.

The Digital and New Media MFA Program (DANM) is a two-year program. ~~The requirements of the program are being revised. Review the program requirements at www.danm.ucsc.edu for the most current information.~~ Students take courses in each of these interdependent and equally important program areas:

New Praxis—The term “Praxis” has many meanings, which include “translating ideas into action” and “action and reflection upon the world in order to change it.” New Praxis in DANM is comprised of “critique” and “practicum” which provide students with both the practical training and critical dialogue necessary to pursue their own individual goals as artists and cultural practitioners.

Studies—DANM “Studies” include required core seminars that allow students first, to explore an array of recent methods and approaches in Digital Arts and Culture, and then pursue the construction of specific genealogies and theories with a sustained focus on a particular topic, before beginning to develop a thesis project and paper by engaging in various dialogues at the intersection of theory and practice.

Collaborative Research—Faculty lead students in major collaborative research projects that will result in publications and exhibitions. The following are descriptions of ~~three~~ **four** current areas of DANM faculty research: **mechatronics**, participatory culture, performative technologies, and **playable media**. ~~mechatronics~~. We ask that prospective students identify their working relationships with one or more of these areas in their application and statement of purpose. As new research emphases arise, other categories for potential project groups will be formed.

Mechatronics

Mechatronics is the functional integration of mechanical, electronic, and information technologies. In DANM this framework may be employed for the development and production of physical, systems-based artwork that incorporates elements of robotics, motion control, software engineering, and hardware design. DANM mechatronics research involves the use of a variety of media that may include video, performance, and sculpture, for the creation of complex, kinetic, audio-visual systems for the exploration of temporality, materiality, experience, perception, as well as relations between biological/life-like forms and environmental worlds.

Participatory Culture

DANM’s participatory culture studies and research explore the role of information and communication technologies in what has sometimes been described as the shift from “top-down” culture to a “lateral” or “heterarchical” culture of participation and social engagement. In many social domains and practices, the human/computer interface acts as both a boundary and a bridge. Participatory culture research in DANM may encompass a range of projects in social computing, community-media activism and other modes of engagement that involve the design of new technologies and/or technologies that address social issues and help to democratize participation in culture and politics.

Performative Technologies

Research in performative technologies explores new methods for combining media and technology to create the visual, aural and connective material of performance. DANM performance research generates new public and performative spaces where digital media, communication networks, and interactive systems may be fused with lighting, movement, stage and sound design to create mixes of real-time/recorded shared multimedia experiences shared by audiences and performers at both local and remote locations. Ongoing projects in this area may include work in telematics, performance-driven real-time graphics, algorithmic composition of sound and image, computer vision and motion capture, and studies of ritual, performativity, embodiment, interactivity, and subjectivity.

Playable Media

Playable Media research explores the potential of computational systems for the creation of new media forms that invite and structure play. This group works to understand and create new ways for computer games and related forms to engage audiences, make arguments, tell stories, and shape social space. Ongoing Playable Media work combines game design and artificial intelligence research with writing, art, and media authoring.

Mechatronics

~~Mechatronics is the functional integration of mechanical, electronic, and information technologies. In DANM this framework may be employed for the development and production of physical, systems-based artwork that incorporates elements of robotics, motion control, software engineering, and hardware design. DANM mechatronics research involves the use of a variety of media that may include video, performance, and sculpture, for the creation of complex, kinetic, audio-visual systems for the exploration of temporality, materiality, experience, perception, as well as relations between biological/life-like forms and environmental worlds.~~

Pedagogy—DANM trains future arts academics through practical experience. Students are awarded teaching assistantships as part of their overall support package as well as opportunities to assist faculty in workshops.

Requirements

The DANM MFA Program requires 74 credits of academic course work. In the first year, students will generally take three courses each term—one course in each of the program areas, New Praxis, Studies, and Collaborative Research. In the second year, students primarily take elective courses, work with their thesis committees, and pursue independent and directed research leading to the completion of the thesis project and paper.

New Praxis

New Praxis in DANM is comprised of “critique” and “practicum.”

New Praxis—Year One

Practicum—This area of Praxis is designed to allow students to develop the conceptual, technical and practical skills they need to successfully complete projects that realize their own individual goals as digital media artists.

First-year students are required to take a Project Design Studio in the first quarter. This course guides the development of students’ individual studio practice, particularly in relation to the transition to digital media. First-year students also take basic courses in electronics and programming. In order to fulfill this credit requirement, students with advanced training in either area may choose to:

- serve as assistants in workshops for beginning students;
- Take electronics or programming electives offered in Computer Engineering; or
- Enroll in independent studies, as approved by their adviser.

Critique—This area of Praxis is designed to allow students to present their own work and review the work of their fellow students as a means of engaging in critical dialogue necessary to pursue their own individual goals as digital media artists. First-year students are required to present work-in-progress based on the projects developed in the project design course in both individual studio and group critiques, and participate in group critique discussion.

During the spring quarter first-year students identify and engage a thesis committee under the supervision of the program director.

New Praxis—Year Two

Practicum—During the fall quarter second-year students will work on the development of their thesis project proposal and abstract under the supervision of their thesis committee. Second-year students are encouraged to take practice-based electives and independent studies that facilitate the development of their thesis projects.

DANM 299—In the winter and spring quarters second-year students enroll in a minimum of 10 units of independent thesis research which is supervised by one or more members of their thesis committee.

DANM 215—Students work with faculty curator/coordinator on development of thesis projects specifically for the group exhibition context. Students contribute to development of exhibition design and collateral materials, while studying unique presentation and curatorial challenges of new media.

Studies

Students are required to take four Core Seminars over two years and have the option to take two Studies electives.

Studies—Year One

DANM 201 Recent Methods and Approaches to Digital Arts and Culture—In this seminar students examine an array of methods and approaches to research and writing in digital media art and culture and explore key theories concerning digital media and cultures.

DANM 249 Faculty Seminar—Series of DANM faculty lectures and panels designed to introduce first-year students to program faculty members and their creative work and research.

DANM 203 Dialogues and Questions in Digital Arts and Culture—A pre-thesis course in which students engage in dialogues at the intersection of theory and practice with the goal of producing a pre-thesis proposal and preparatory essay. Readings and seminar discussions will inform the development of pre-thesis project proposals and essays.

Studies—Year Two

DANM 202 Genealogies and Theories of Digital Arts and Culture—This seminar provides a sustained focus on a particular theoretical and/or historical premise—for example, an examination of “intermediality,” or the exploration of “framing stories” such as the history of perspective, or narratology—as a means of teaching a common approach to the construction of genealogies with digital art and culture. The course is intended to help students structure and develop their thesis papers as theoretical contextualizations of their thesis projects.

Elective—Students may choose to take an elective offered by the program or choose an elective from a broad array of graduate courses offered on campus with the approval of their adviser.

Collaborative Research

Students participate in a three quarter-long Collaborative Research Project group in one of four possible DANM research focus areas, which begins in the spring quarter of the first year. In the second year students continue with the final two quarters of their project group (fall and winter) in which they collaborate on faculty-initiated and directed research projects in a chosen focus area. This work is intended to provide the student with the opportunity to learn collaborative and practical research methodologies, and to participate in a professional level research project. The collaborative project group experience is intended to inform, but not necessarily contribute to, the student's thesis project.

Thesis Requirement

Students are required to complete a thesis project and written paper under the supervision of their thesis committee. The thesis will be an arts project with digital documentation accompanied by a written paper. Thesis projects may be individual or collaborative and are expected to grow out of the research pursued in the project groups during the three quarters prior as well as work developed in new praxis courses. Each student will be expected to complete a 20- to 30-page paper discussing the student's preparatory research as well as the theoretical significance of the project. In the case of collaborative projects each student will be required to submit his or her own paper. During the thesis year, students will make at least two progress presentations to their thesis committee. The chair and at least one other member of the three-person committee will be senate faculty and members of the DANM program faculty. A completed thesis project and paper must be submitted to and approved by the thesis committee before the degree can be awarded.

Applications

Prospective students in the Digital Arts and New Media program will have a foundation in the arts with some demonstrated interest in technology or a foundation in technology with demonstrated background in the arts. Many, but not all, entering students will have completed a Bachelor of Arts program in one or more of the arts disciplines (art or art history, film, multimedia, music, theater, video, etc.) or a Bachelor of Science program in computer science or computer or electrical engineering. Other successful applicants will have a BA or BS in another field but will be able to show substantial achievement in the arts, in technology or in digital arts.

In certain cases, students who demonstrate excellent potential for the program but lack proficiency in a "cross discipline" will be admitted to the program with the understanding that they will take courses during their first two quarters of study to make up that deficiency. An arts student lacking sufficient programming experience, for example, will be expected to take one or two programming courses in their first two quarters in addition to the DANM program requirements.

Students will apply online through the Division of Graduate Studies web site between October and February for the following fall quarter. In addition to submitting an on-line application, students will be expected to submit a non-returnable representative sample of their work, i.e., a portfolio, on a CD, CD-ROM or DVD. [Program Description](#) | [Changes to 2009-10 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Faculty and Professional Interests

Ralph H. Abraham, Professor Emeritus, Mathematics

Elliot W. Anderson, Assistant Professor, Art
Electronic art, digital arts/new media

Lawrence Andrews, Associate Professor, Film and Digital Media
Film, video, installation and media art

Amy C. Beal, Associate Professor of Music
American music, 20th-century music, experimental and improvisatory performance practices, postwar and Cold War culture, German new music festivals and radio stations, piano performance, contemporary music ensemble

Tandy Beal, Lecturer, Theater Arts (Dance)
Choreography, improvisation, technique, performance skills, collaborations with classical and jazz composers, circus, theater and video, children's productions

James H. Bierman, Professor, Theater Arts (Drama)
Playwriting, theater history and literature, classical and Renaissance drama, Chicano theater, digital media

Benjamin L. Carson, Assistant Professor, Music
Theories of consciousness and cognition, rhythm perception, Schoenberg, history of compositional method, subjectivity and identity

David H. Cope, Professor Emeritus, Music

E. G. Crichton, Associate Professor of Art
Intermedia, electronic arts, photography, installation

David L. Cuthbert, Assistant Professor, Theater Arts
Lighting design, CADD, projection design, scenic design

Sharon A. Daniel, Professor, Film and Digital Media
Community-based public art in information and communications environments, social and political aspects of information technology, community networks, participatory culture, digital inclusion, net art, human-computer interface design

James E. Davis, Assistant Professor, Computer Science
Computer graphics and computer vision, methods for acquiring and manipulating complex graphical models from the real world

Peter Q. Elsea, Lecturer, Music

Electronic music and music technology

Shelly E. Errington, Professor, Anthropology

Globalization of folk art, visual and social semiotics, photography, film, the Internet and digital media, Southeast Asia, and Latin America

Mary K. Foley, Professor, Theater Arts (Drama)

Asian theater, Southeast Asian studies, performance studies, maskwork, puppetry, multicultural theater

Mark Franko, Professor, Theater Arts (Dance)

Dance history and theory, choreography, technique, performance studies, theatrical theory in historical and critical perspective

Patty Gallagher, Assistant Professor, Theater Arts (Dance)

Movement training for actors, circus and clown traditions, and Indonesian dance/performance

Jennifer A. Gonzáalez, Associate Professor, History of Art and Visual Culture

Contemporary theories of visual culture, semiotics, critical museum studies, photography, public and activist art in the U.S.

Irene Gustafson, Assistant Professor, Film and Digital Media

Producing across the boundaries between "theory" and "practice," non-fiction media, experimental film/video, production design, gender and queer studies

Eli E. Hollander, Professor, Film and Digital Media

Film and video directing; ethnographic documentary directory, editing, cinematography, and videography; digital image generation; screenwriting

Donna M. Hunter, Associate Professor, History of Art and Visual Culture

European painting (especially French) from 1600 to the 1960s; German art and visual culture between the two world wars; art as social practice, portraiture

Kimberly Jannarone, Associate Professor, Theater Arts (Drama)

Directing, dramaturgy, dramatic theory and criticism, theater history, acting

David E. Jones, Professor, Music; Provost, Porter College

Composition and analysis, chamber opera, Balkan music, language and music, timbre and orchestration

Sri Kurniawan, Assistant Professor, Computer Engineering

Human-computer interaction; human factors and ergonomics; accessibility; assistive technology; usability; empirical studies; user-centered design

Norman Locks, Professor, Art

Photography

Suresh K. Lodha, Professor, Computer Science

Geo-spatial visualization, scientific visualization, sensor and computer vision, data mining

Charles L. Lord, Professor, Film and Digital Media

Film and video directing and editing, video theory and history, video installation, screenwriting, documentary production

Irene Lusztig, Assistant Professor, Film and Digital Media

Film and video production, experimental documentary, ethnographic film, autobiographical film, editing

Dominic W. Massaro, Professor, Psychology

Understanding language, speech perception and reading, language learning and speech technology, pattern recognition, psychology of interactive media, psychology of art and new media, human-machine interface

Michael J. Mateas, Assistant Professor, Computer Science

Artificial Intelligence (AI) for art and entertainment, game AI, AI and creativity, AI-based interactive storytelling, autonomous characters

Charles E. McDowell, Professor, Computer Science

Programming languages, parallel computing, and computer science education

Margaret E. Morse, Professor, Film and Digital Media

Digital and electronic media theory and criticism, media art, media history, technology and culture, film history and theory, German cinema, documentary, science fiction, and silent comedy

Soraya Murray, Lecturer, History of Art and Visual Culture

Contemporary art with emphasis in new media art and theory; African diaspora and globalization

Paul Nauert, Professor, Music

Theory, composition; rhythm and meter; music cognition; mathematical and computer models of the compositional process

Dard A. Neuman, Assistant Professor, Music; Kamil and Talat Hasan Endowed Chair in Classical Indian Music

Ethnomusicology; Hindustani music; colonialism, nationalism, technology and performance; sitar

Marcia Ochoa, Assistant Professor, Community Studies

Gender and sexuality, race and ethnicity, Latina/o studies, media and cultural studies, ethnography of media, feminism, queer theory, geography, multimedia production, graphic design, colonialism and modernity, Latin American studies—Colombia and Venezuela

Alex Pang, Professor, Computer Science

Uncertainty visualization, tensor visualization, scientific visualization, collaboration software, virtual reality interfaces

Jennifer Parker, Assistant Professor, Art

Sculpture, installation, video, and performance art

Isabel Reichert, Lecturer, Film and Digital Media Video, conceptual art, and new genres

B. Ruby Rich, Professor, Community Studies

Documentary film and video, post-9/11 culture, new queer cinema, feminist film history, Latin American and Latin/a cinema, U.S. independent film and video, the essay film, the politics of film festival proliferation and the marketing of foreign films in the U.S.

Warren Sack, Associate Professor, Film and Digital Media

Software design and media theory

Daniel Scheie, Professor, Theater Arts (Drama)

Acting, directing, dramatic literature, theater history, Shakespeare, Wagner, gay studies

Barry R. Sinervo, Professor, Ecology and Evolutionary Biology

Animal behavior, evolution, physiological ecology

Catherine M. Soussloff, Professor, History of Art and Visual Culture (UC Presidential Chair)

European cultural theory, aesthetics, and the historiography of art; performance studies; early modern Italian art; media history including film; Jewish identity and representation

Elizabeth Stephens, Associate Professor, Art
Intermedia, electronic art, sculpture, and performance art

Renee Tajima-Pena, Associate Professor of Community Studies
Documentary film and video focusing on Asian American and immigrant communities, media, and social change

Hai Tao, Assistant Professor, Computer Engineering
Image and video processing, computer vision, vision-based graphics, and human-computer interaction

Gustavo Vazquez, Assistant Professor, Film and Digital Media
Film and video production, directing drama, documentary and experimental cross-cultural experiences in film, film curator

Edward C. Warburton, Assistant Professor, Theater Arts
Development of dance thought in action, creative processes, and technology in theater arts; dance technique, movement research and composition, and applied dance practices

Noah Wardrip-Fruin, Assistant Professor, Computer Science
Digital media, computer games, electronic literature, software studies

Lewis G. Watts, Associate Professor, Art
Photography

Emmet J. Whitehead, Associate Professor, Computer Science
Software engineering, software configuration management, web, hypertext, collaborative authoring, hypertext versioning, Internet information systems

[Program Description](#) | [Changes to 2009-10 Catalog Highlighted](#) | [Faculty](#) | [Courses](#)

Graduate Courses

201. Recent Methods and Approaches to Digital Arts and Culture. F

Students examine methods and approaches to research and writing in digital art and new media, while exploring key theories concerning technology, art, and culture. Focus is on the interaction between digital technologies and socio/cultural formations. Enrollment restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor. *S. Murray*

202. Genealogies and Theories of Digital Arts and Culture. F

Provides examination of a particular theoretical and/or historical premise related to issues of media, art, and mediatization, as a means of teaching a common approach to the construction of genealogies within digital art and culture. Enrollment restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 18. *C. McPhee*

203. Dialogues and Questions in Digital Arts and Culture. S

Students engage in dialogues at the intersection of theory and practice with the goal of producing a pre-thesis proposal and essay. Readings and seminar discussions inform the development of project proposals and essays, which theoretically contextualize students' work. Enrollment restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 18. *D. Crane*

204. Ways of Seeing and Hearing. F

Graduate-level advanced seminar explores ways that seeing, hearing, and knowing are influenced by culture, power, race, and other factors.. Readings emphasize how documentary subjects are constituted and known, addressing questions of epistemology, social constructivism, objectivity, and method. (Also offered as Social Documentation 204. Students cannot receive credit for both courses.) Enrollment restricted to social documentation and digital arts new media graduate students. Enrollment limited to 18. *The Staff*

210. Project Design Studio. F

Students work on the design of individual projects by developing project proposals, budgets, "proof of concept" design documents and/or prototypes and exploring tools, technologies, programming languages, hardware, software, and electronics techniques relevant to their projects. Enrollment restricted to graduate students. Enrollment limited to 18. *The Staff*

211. Critique. S

First-year digital arts and new media graduate students are required to present work-in-progress based on the projects developed in earlier courses and during the current

quarter in individual studio critiques with the instructor as well as in group critiques. (Formerly course 211B, *Critique/Lecture II*) Enrollment restricted to graduate students. Enrollment limited to 18. *J. Gonzalez*

212. Thesis Proposal (no credit). S

First-year students work on the development and completion of their thesis-project proposal and abstract under the supervision of the program chair and their thesis committees. Enrollment restricted to DANM students. Enrollment limited to 18. *The Staff*

215. MFA Exhibition Production. S

Second-year digital arts and new media graduate students work with faculty curator/coordinator to develop thesis projects specifically for the group exhibition context. Students contribute to exhibition design and collateral materials while studying the unique presentation and curatorial challenges of new media. Enrollment restricted to graduate students. Enrollment limited to 18. *S. Murray*

216. Digital Bodies. *

Explores the appearance, form, and theoretical status of the human body/political subject in online art. Focuses on representations of race and gender, family resemblances, and local communities, as well as the political and colonial metaphors of spatial interaction operating on the World Wide Web. Visual representations of bodies that take the form of avatars, advertising, robots, and anime studied in their contextual usage. Enrollment restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 17. *J. Gonzalez*

217. Concepts in Electronic Art. *

Study of concepts developed in contemporary conceptual art practice and their application to technological media. Review a broad spectrum of electronic art—the Internet, digital video, interactive systems, kinetics and robotics, biotechnological work—that hold conceptual art practice in the foreground. Use concepts cultivated by early conceptual artists and apply them to individual projects using electronic media. Enrollment restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 17. *I. Reichert*

218. Interactive Game Design. *

As a team, students design a working prototype of a game including the Design Document, Prototypes, and Game Implementation. Introduced to advanced media types including 3D animation, principles of object-oriented programming, digital music, and video. Strongly recommended that students have a working knowledge of programming language, preferably an object-oriented language (Macromedia Lingo preferred). Enrollment restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 17. May be repeated for credit. *B. Sinervo*

219. Introduction to Electronics for Artmaking. F

Intensive introduction to electronic devices used in artmaking, providing hands-on experience with sensors, motors, switches, gears, lights, simple circuits, microprocessors, and hardware storage devices to create kinetic and interactive works of art. Students are billed a materials fee. Enrollment restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 18. *E. Anderson*

220. Introduction to Programming for the Arts. W

Covers aspects of computer programming necessary for digital art projects. Students

learn to manipulate digital media using program control for installations, presentations, and the Internet. No prior programming experience required. Enrollment restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 10. *P. Elsea*

224. Digital Arts Project Studio. *

Provides a context for significant development of digital arts projects: in the first year, individual and collaborative; in the second year, resolution of thesis projects. Individuals and collaborative groups meet with the instructor for focused critical feedback. Students create a public exhibition of their work-in-progress. Enrollment restricted to graduate students. Enrollment limited to 18. *E. Crichton*

225. Theater, Drama, and the Pixar Feature. *

Viewing of the Pixar Animation Studios canon combined with lectures on the major art history movements within discipline of theater history and its attendant dramatic literature: The Marxist Epic: *A Bug's Life* and the Backstage Musical; Shakespeare's Comedic Weltanschauung: *Finding Nemo*; Postmodern Criticism: *Toy Story*; French Romanticism and the Hugo Hero: *Monsters, Inc.*; Alger, Albee, and *The Incredibles'* *American Dream*. Enrollment restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 17. *D. Scheie*

226. Creativity, Collaboration, and Professionalism in Art. *

Exploration of the practice of making a living, as well as a life, in art. Examines strategies for connecting with the community using outreach projects and the joys and sorrows of working collaboratively. Compares corporate and nonprofit funding paths and the business of showing work while maintaining creative challenges. Enrollment restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 17. May be repeated for credit. *T. Beal*

227. Projected Light in Performance. W

Exploration of projected light in performance and art. The history of lighting as art is covered in a hands-on demystifying format from the shadow of a bare light bulb to the latest in automated and projection equipment and techniques. Enrollment restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 20. *D. Cuthbert*

228. Techniques of Modernity and Aesthetic Formations. *

Explores the transformations and aesthetic possibilities of the digital age through a study of perceptual shifts of the past, from orality to literacy, gift to commodity, pre-colonial to colonial, "pre-modern" to "modern," and the technological revolutions that accompanied these shifts. (Also offered as Music 228. Students cannot receive credit for both courses.) Enrollment restricted to graduate students; upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 18. *D. Neuman*

229. Interactive Digital Design for Theater. *

Examination of the integration of graphic and sound designs with live theatrical performance. Create a dazzling array of images, animations, video, and sounds that work as an ensemble to create a performance environment that responds to the cues of the performers. Offered in conjunction with Theater Arts 151 and results in a live performance. Enrollment restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 20. May be repeated for credit. *J. Bierman*

231. Human-Computer Interaction. W

Theory and hands-on practice to understand what makes user interfaces usable and accessible to diverse individuals. Covers human senses and memory and their design implications, requirement solicitation, user-centered design and prototyping techniques, and expert and user evaluations. Individual research project. Interdisciplinary course for social science and engineering graduate students. Students cannot receive credit for this course and course 131. (Also offered as Psychology 223. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. *The Staff*

247. Performance/Performativities. *

Performance acts and theories of performativity in visual culture from modernity to present. Major theoretical positions subtending the emergence of performances/performativities: subjectivity, identity, temporality, media, ritual, the event, the body and embodiment, collaboration, and politics. (Also offered as History of Consciousness 247. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. Qualified seniors accepted with permission of instructor. Enrollment limited to 15. *C. Soussloff*

249. Faculty Seminar (2 credits). W

Faculty lectures to familiarize first-year DANM graduate students with program faculty members and their creative work and research so the students can select their faculty advisers and thesis committee members. Enrollment restricted to graduate students. Enrollment limited to 18. *The Staff*

250A. Collaborative Research Project Group: Mechatronics. F,W,S

Three-quarter collaborative research project group involves faculty-initiated research in the use of a variety of media including video, performance, and sculpture, for the creation of complex, kinetic, audio-visual systems exploring temporality, materiality, experience, and perception. Enrollment restricted to graduate students. Enrollment limited to 8. May be repeated for credit. *The Staff*

250B. Collaborative Research Project Group: Participatory Culture. F,W,S

Three-quarter collaborative research project group encompasses a range of faculty-initiated projects in social computing and community-media activism, which involve the design of new technologies to address social problems and facilitate broader participation in culture and politics. Enrollment restricted to graduate students. Enrollment limited to 8. May be repeated for credit. *The Staff*

250C. Collaborative Research Project Group: Performative Technologies. F,W,S

Three-quarter collaborative research project group generates faculty-initiated new public and performative spaces where digital media, communication networks, and interactive systems may be fused with lighting, movement, stage, and sound design to create shared multimedia experiences for audiences and performers. Enrollment restricted to graduate students. Enrollment limited to 8. May be repeated for credit. *The Staff*

250D. Playable Media. S

Focuses on media, such as computer games, that invite and structure play. Work includes building and critiquing a series of prototypes; studying major examples in the field; and discussing both theoretical and practice-oriented texts. (Also offered as Computer Science 290J. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. May be repeated for credit. *N. Wardrip-Fruin, M. Mateas*

254I. Empirical Approaches to Art Information. *

Reading and practice in empirical methods, as applied to the study of music, visual art, multimedia production, and performance arts. Topics include semiotics, critiques of empiricism, cultural determinants and contingents of perception, the psychophysics of information, sensory perception (visual and auditory), memory, pattern recognition, and awareness. Students apply existing knowledge in the cognitive sciences to a developing creative project, or develop and conduct new experiments. (Also offered as Music 254I. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. Enrollment limited to 17. May be repeated for credit. *B. Carson*

254L. John Cage: Innovation, Collaboration, and Performance Technologies. *

In-depth examination of John Cage's interdisciplinary work, his pioneering activity in live electronic technology, and his influence in current multimedia creativity. Approximately one-half of the seminary is devoted to student research and creative projects and reflect Cage's legacy. (Also offered as Music 254L. Students cannot receive credit for both courses.) Enrollment restricted to juniors, seniors, and graduate students. Upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 12. *The Staff*

267. Workshop in Computer Music and Visualization (2 credits). F,W,S

Graduate-level techniques and procedures of computer music composition and visualization. Practical experience in the UCSC electronic music studio with computer composition systems and software, including visualization and interactive performance systems. Extensive exploration of music and interactive graphic programs such as Max/MSP/Jitter. Enrollment by permission of instructor; appropriate graduate experience required. Enrollment restricted to graduate students. Also offered as Digital Arts and New Media 267. Students cannot receive credit for both courses. (Also offered as Music 267. Students cannot receive credit for both courses.) Enrollment limited to 12. May be repeated for credit. *The Staff*

290. Interactivity in Performance. *

Examines use of interactive technologies to bring about collaboration among visual, performance, and sound art. Goal is to collaboratively produce an interactive live-performance work. Explores methodologies and technologies of interactivity, space, and time and addresses aesthetic and compositional concerns that arise when using interactive digital tools, including critical discussions about how technology itself shapes form and content of an artwork. Meets 3 1/2 hours/week for combination lab and lecture. Enrollment restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor. *E. Anderson*

297. Independent Study. F,W,S

Independent digital arts and new media research project under the guidance of a digital arts and new media faculty member or other faculty with approval of adviser. Project includes readings, research, and a written report. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. Maximum 10 credits. May be repeated for credit. *The Staff*

297G. Independent Study (3 credits). F,W,S

Independent digital arts and new media research project under the guidance of a digital arts and new media faculty member or other faculty with approval of adviser. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for a maximum 6 credits. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Students carry out a master's of fine arts thesis in digital arts and new media research, under the guidance of a thesis committee. The thesis will be an arts project with digital documentation accompanied by a written paper discussing the student's preparatory research as well as the theoretical significance of the project. Enrollment restricted to graduate students. Maximum 10 credits. May be repeated for credit. *The Staff*

*Not offered in 2009-10

Dual-Degree Engineering

Baskin School of Engineering
335 Baskin Engineering Building
(831) 459-2158

<http://www.soe.ucsc.edu>

Program Description

Program Description

~~To meet the growing demand for engineers with an education that combines a solid technical background with a broad liberal arts base, the UCSC campus has developed a dual-degree program with the College of Engineering at UC Berkeley. In this long-standing program, students spend three years at UCSC completing most of the requirements for a bachelor's degree in one of the fields in the social sciences, humanities, or arts. While attending UCSC, students also take science, mathematics, and engineering courses that are prerequisites for admission to UCB's engineering majors, and they are expected to maintain a grade point average of 3.2 or better in these engineering preparatory courses. Students apply to transfer to UCB for the fourth and fifth years of the dual-degree program. If admitted, they complete requirements for a degree in a chosen engineering specialty, and they also take any remaining courses for the UCSC major. Students complete one major from each of the following lists:~~

Prior to establishing the Jack Baskin School of Engineering (SOE), UC Santa Cruz developed a dual-degree program with the College of Engineering at UC Berkeley (UCB) to meet the growing demand for engineers with both solid technical training and a broad liberal arts education. In addition to the challenging engineering majors offered at Baskin SOE, interested students may still pursue the dual-degree program option. As dual-degree majors, students spend three years at UCSC completing major requirements for a bachelor's degree in the social sciences, humanities, or the arts. Students also complete their engineering prerequisite courses in science, mathematics, and engineering for admission to UCB while at UC Santa Cruz. Students who maintain a grade point average of 3.2 or higher in their engineering preparatory courses are eligible to transfer to UCB and complete their fourth and fifth years in the dual-degree program. Once admitted to UCB, students complete requirements for a degree in a chosen engineering specialty, while also completing any remaining courses for their UCSC non-engineering major and general education. Students complete one major from each of the following lists:

UCB Engineering Majors

- Bioengineering
- Civil and environmental engineering
- Engineering sciences
- Industrial engineering and operations research
- Manufacturing engineering
- Materials science
- Mechanical engineering
- Nuclear engineering

Recommended UCSC Majors

- American studies
- Anthropology
- Business management economics
- Community studies
- Economics

Environmental studies
Feminist Studies
Film and digital media
History
History of art and visual culture
Legal studies
Linguistics
Literature
Philosophy
Politics
Psychology
Sociology

Upon completion of the program, the student receives two bachelor's degrees: a B.A. in a social science, humanities, or arts field from UCSC and a B.S. in engineering from UCB. Although the UCSC major cannot be in the Division of Physical and Biological Sciences or the School of Engineering, many combinations of fields are possible in the dual-degree program; examples include engineering along with economics, sociology, or philosophy. Specific curriculum and education plans for dual-degree students are developed in consultation with an engineering adviser and tailored to the needs of individual students. A committee composed of faculty from both UC Santa Cruz and UC Berkeley jointly provide direction and oversight of the program. Students must enter the dual-degree program as first-quarter freshmen, beginning their course work at UCSC in the fall quarter.

Admission

In addition to completing the courses required for UC admission, high school students who plan to pursue the dual-degree engineering route at UCSC should develop a strong background in mathematics and physics.

Prospective students who wish to be considered for the dual-degree program should indicate it as their first choice of major on the UC Application for Undergraduate Admission. When the application is received by the Office of Admissions, additional information about the dual-degree program will be sent to the applicant in late January, along with a request for the applicant's specific choice of majors at UC Berkeley and UC Santa Cruz. *Admission to the campus does not guarantee admission to the dual-degree program.*

The admissions committee for the dual-degree program reviews each application on an individual basis. ~~Selection is based on the applicant's essay and on strong performance in academic courses (particularly science and math), as well as excellent test scores.~~ Criteria for selection includes the applicant's strong performance in academic courses (particularly science and math), the applicant's essay, and excellent test scores. Dual-degree program applicants will also need to complete a formal application to UC Berkeley as a transfer student at the appropriate point in their UCSC studies.

Preparation for Dual-Degree Engineering Program

Dual-degree students typically enroll in a variety of classes while at UCSC due to the need to congruently fulfill their UCSC major and their required preparation for their UCB major. Following are example classes that dual-degree students may take as preparation for the engineering major while at UCSC.

Applied Mathematics and Statistics 27/L, *Mathematical Methods for*

Engineers/ Laboratory

Applied Mathematics and Statistics 131, *Introduction to Probability Theory*

Chemistry 1B/M and 1C/N, *General Chemistry/Laboratories*

Computer Science 12A/[L](#), *Introduction to Programming/Laboratory*; or 60N, *Beginning Programming: Natural Sciences*

Earth Sciences 10, *Geologic Principles*

Earth Sciences 142, *Soil Properties and Mechanics*

Electrical Engineering 70/L, *Introduction to Electronic Circuits/Laboratory*

Engineering 50/L, *Engineering Mechanics/Laboratory*

Mathematics 19A-B, *Calculus for Science, Engineering, and Mathematics*

Mathematics 23A-B, *Multivariable Calculus*

~~Mathematics 107, *Advanced Engineering Mathematics*~~

Physics 5A/L, 5B/M, and 5C/N, *Introduction to Physics*

series/Laboratories; or Physics 6A/L, 6B/M, and 6C/N, *Introductory Physics series/Laboratories*

Physics 160, *Practical Electronics*

Earth and Planetary Sciences

A232 Earth and Marine Sciences Building
(831) 459-4089
<http://www.es.ucsc.edu>

[Changes to 2009-10 Catalog Highlighted](#) | [Faculty](#) | [Courses](#)

Program Description

The Department of Earth and Planetary Sciences teaches and conducts research in a wide array of topics. We seek to answer questions such as:

- How did the Earth form? How has it evolved since then? What makes up the interior of the Earth?
- What is the history of life on Earth? What are the causes and effects of past mass extinctions?
- How do mountain ranges form? What causes earthquakes? What causes island chains to form? What controls the evolution of glaciers? How do we prevent coastal erosion? How well can we predict tsunamis?
- What has Earth's climate been like in the past? How will climate change in the future?
- What controls the supply and quality of our freshwater resources?
- How are other planets in our solar system different from Earth? How did they evolve to their present state? How have the impacts of asteroids on Earth and other planets affected their evolution?

A variety of methods and tools are used to help us address these questions. Geologists examine rocks and geologic formations in order to understand the processes that control their formation and evolution. Geochemists and mineralogists examine the chemical and mineral composition of rocks, sediments, and fossils using a variety of sophisticated analytical instruments. Geophysicists use seismometers to not only record earthquakes, but also to learn about the deeper parts of the Earth. Environmental scientists collect samples of the atmosphere, rivers, lakes, and the oceans, sometimes requiring the use of aircraft and ships. Spacecraft have visited and explored all of the planets in our solar system. Space-based satellites have provided a massive amount of data about Earth over the past few decades. Scientists from all disciplines use computer models to help them understand these complex systems.

The Department of Earth and Planetary Sciences offers a number of degrees that teach undergraduate and graduate students the knowledge and skills necessary to address these questions. Along with the standard Earth sciences major, we offer degrees with concentrations in environmental geology, ocean sciences, planetary sciences, and science education. We also offer combined majors with environmental studies and anthropology. A minor in Earth sciences is also available. We offer courses across a wide range of topics, allowing students to tailor the curriculum to their interests. Courses are comprised of not only classroom lectures, but frequently field trips, labs, and computer exercises are involved. Many related courses are offered by other departments such as Ocean Sciences, Microbiology and Environmental Toxicology, Environmental Studies, Biological Sciences, Chemistry and Biochemistry, and Astronomy and Astrophysics. The university capstone requirement is often fulfilled by attending the departmental field camp, or by completing a senior research thesis, but other choices are also possible.

Graduates of our department continue on to a variety of careers, such as:

- Business and industry
- Geological and environmental consulting
- Governmental agencies at the federal, state, and local level
- Non-profit organizations
- Research at universities, governmental research institutions, or other scientific agencies
- Graduate/professional school in areas such as science, engineering, teaching, law, public health, business

For more information about the people in the department, their areas of interest, departmental facilities, contact e-mails and phone numbers, and how to apply to join our department as an

undergraduate or graduate student, please see our web site: <http://es.ucsc.edu/>.

Academic Advising

A student who wants to become an Earth sciences major should contact the Earth and Planetary Sciences Department undergraduate degree adviser as soon as possible. After developing a formal study plan on a declaration of major petition, students are required to meet with staff and faculty advisers who can help the student plan his or her program in detail and provide information about independent study, thesis research, advanced study, career options, and other educational opportunities. Relevant courses taken at UCSC or other institutions may be substituted for degree requirements by approved petition. Please see the undergraduate adviser for the substitution petition form and more information about this process.

Transfer Students

Transfer students planning to major in Earth sciences are encouraged to call for advice about courses they should complete before arrival at UCSC. It is important that students have completed as many as possible of the required chemistry, biology, calculus, and calculus-based physics courses. Having this course work completed elsewhere allows students greater flexibility in scheduling and completing their UCSC Earth and planetary sciences courses. Junior transfer Earth and planetary sciences majors and prospective majors should meet with department advisers during summer orientation or shortly after their arrival on campus to plan their next two years' schedule of courses.

Bachelor of Science Degree

The B.S. program is designed for students who intend to pursue professional careers in Earth and planetary sciences, engineering, policy, law, teaching, or business or who otherwise desire the broad, quantitative training available at UCSC. In addition to providing comprehensive preparation in the basic physical sciences, and particular breadth and depth in Earth and planetary sciences, the curriculum is structured to prepare students for the competitive graduate school and career marketplace.

The core of the major includes calculus, physics, chemistry, and a group of comprehensive Earth and planetary sciences courses. For the standard B.S., students then select at least four additional courses from a diverse list of upper-division electives, with at least two that involve significant laboratory or field data acquisition and analysis. These electives, often in combination with additional upper-division courses from this and related departments, provide the student with expertise in one or more subdisciplines within Earth sciences.

Elective distributions can be designed to emphasize earthquake and faulting studies, Earth surface processes, Earth system sciences, geologic hazards, geology, crustal and deep-Earth geophysics, marine geophysics, and water resources. Four formal concentrations, all with specific course requirements and leading to an Earth and planetary sciences B.S., are available: environmental geology, ocean sciences, science education, and planetary sciences. A senior comprehensive experience (senior thesis, or geologic field camp, or exemplary performance in a graduate course) is required of all majors.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement will normally be met within one to three courses already required for the major. For detailed information on this major's DC requirement, consult your major adviser or see the 2010-11 general catalog.

Preparation for the Standard Major (B.S.)

Chemistry 1A, 1B/M and 1C/N

Mathematics 11A and 11B or 19A and 19B, and 22 or 23A or Earth Sciences 111

Physics 6A/L and 6B/M (preferred), or 5A/L and 5B/M, and 6C/N or 5C/N or Chemistry 108A/L or 112A/L

Requirements for the Standard Major (B.S.)

Earth Sciences 5/L, or 10/L, or 20/L; 110A/L, 110B/M, and 110C/N, 190 (optional 1-unit)

At least four elective courses from upper-division Earth and planetary sciences offerings, or Ocean Sciences 102 or 120, must be completed. Two of the four upper-division electives must be selected from this subset of courses, which involve significant laboratory or field data acquisition/analysis: 109/L, 116, 117/L, 119, 120/L, 130/L, 140/L, 142, 146, 148, 150/L; 168.

Five (5) credits of internship (Earth Sciences 198) or independent study (Earth Sciences 199) may be substituted for one upper-division elective.

Students also complete the comprehensive requirement described below.

Students are encouraged to take more than the minimum number of elective courses and may craft an elective distribution from many areas of specific research and career interests. The following are examples of suggested elective distributions that develop expertise in important areas (* indicates that the course satisfies the lab or field data acquisition/analysis requirement).

Earth system sciences. Focuses on terrestrial, marine, and atmospheric processes and their relations through time; may include paleoclimatic and paleoenvironmental dynamics, global change issues, and surface geological processes such as weathering, erosion, and hydrology: 100/L, 101/L, 102, 107, 109/L*, 116*, 119*, 120/L*, 121, 125, 128, 148*, 208, Ocean Sciences 102, 120

Earthquake and faulting studies. Focuses on crustal deformation and faulting processes and related phenomena such as plate motions, earthquakes, and stress in the lithosphere: 109/L*, 117/L*, 119*, 150/L*, 162, 168*, 172

Geologic hazards. Focuses on Earth processes that impact society, including earthquakes, volcanoes, coastal erosion, and landslides: 104, 105, 107, 109/L*, 116*, 140/L*, 142*, 146*

Geology. Emphasizes a traditional broad background with field skills, rock genesis and interpretation, and structural relations: 109/L*, 117/L*, 120/L*, 130/L*, 140/L*, 150/L*

Geophysics. Develops breadth in geophysical techniques, composition and structure of Earth's deep interior, and gravitational and magnetic fields: 117/L*, 119*, 150/L*, 160, 162, 168*, 172

Marine geophysics. Emphasizes a breadth of geological and geophysical background for continuing study of the processes involved in the growth, evolution, and destruction of the ocean floor and margins: 107, 117/L*, 146*, 150/L*, 152*, 168*

Surface processes. Emphasizes understanding the fluxes of energy, water, mass, and chemicals within and across Earth's surface and the relations to climatic and tectonic forcing processes: 107, 109/L*, 116*, 119*, 120/L*, 140/L*, 128, 142*, 146*, 148*, 163, Environmental Toxicology 144.

Water resources. Focuses on water resources quality and quantity and relations between climate and water in and on the crust: 105, 109/L*, 116*, 119*, 121, 140/L*, 142*, 146*, 148*, Environmental Toxicology 144, Ocean Sciences 120

Comprehensive Requirement (B.S.)

Students complete one of the following three options:

Satisfactory completion of Earth Sciences 188A-B, *Senior Field Internship*

Satisfactory completion of a senior thesis, which must include a significant element of independent research or original work and can only be undertaken after agreement is obtained from a faculty member to supervise it (approximately three quarters in advance of completion)

Exemplary performance, including a major written report, in a 5-credit graduate course or seminar (which requires permission from the instructor in order to enroll)

Earth Sciences Standard B.S. Major Planner

Students planning a professional career in the Earth and planetary sciences should take more than the minimum number of courses required for the major if possible. Four-year students have ample flexibility to take additional electives if they begin with the required courses in their second year. Junior transfers also have flexibility if they have taken most of their preparatory courses in calculus, chemistry, and physics before entry. Further advice can be obtained from the undergraduate adviser and from faculty members.

Note: Chemistry 1A, 1B/M and 1C/N are offered fall-winter-spring and winter-spring-fall. Physics 6A/L and 6B/M and 6C/N are offered fall-winter-spring and winter-spring-fall, and Mathematics 11A-B and 19A-B and 22 and 23A are offered every quarter.

Year	Fall	Winter	Spring
1st (frsh)	CHEM 1A MATH 3 college core	MATH 11A or 19A CHEM 1B/M	EART 10/L CHEM 1C/N MATH 11B or 19B
2nd (soph)	MATH 22A or 23A or EART 111	PHYS 6A/L	PHYS 6B/M
3rd (jr)	EART 110A/L* PHYS 6C/N or	EART 110B/M* EART elective	EART 110C/N EART elective

	CHEM 108A/L		
4th	EART 109/L*	EART elective	EART 188A-B
(sr)	senior thesis†	senior thesis†	or senior thesis†
	EART 190 (optional)		

* Eart 109/L, 110A/L, and 110B/M are required for participation in Eart 188A-B.

† Students expecting to write a senior thesis for their comprehensive requirement are required to contact the department approximately three quarters before graduation to identify the intended project and faculty adviser. Senior theses usually require at least two or three quarters for completion.

Earth Sciences Major with Concentration in Environmental Geology (B.S.)

The environmental geology concentration is designed to provide quantitative preparation for career pathways involving interdisciplinary study of the environment with a geological emphasis. Additional biology and environmental studies courses are required for this concentration along with other distributions of upper-division requirements and electives.

Required Lower-Division Courses

Earth Sciences 20/L (recommended) or 10/L or 5/L

Environmental Studies 25

Biology: Molecular, Cell, and Developmental Biology (MCD) BIOL 20A; Biology: Ecology and Evolutionary Biology (EEB) BIOE 20B; BIOE 20C (Environmental Studies 24 may be substituted for BIOE 20C)

Chemistry 1A, 1B/M and 1C/N

Mathematics 11A or 19A and 11B or 19B

Physics 6A/L and 6B/M (preferred), or 5A/L and 5B/M

Required Upper-Division Courses

Earth Sciences 110A/L and 110B/M, BIOE 107

At least four of the following Earth and planetary sciences courses: 100/L, 101/L, 102, 104, 105, 107, 109/L, 110C/N, 111, 116, 119, 120/L, 121, 125, 128, 140/L, 142, 146, 148, 150/L

Two additional upper-division electives with environmental topics from biology, chemistry, Earth and planetary sciences, environmental studies, environmental toxicology, or ocean sciences

Students also complete a comprehensive requirement from the list described above.

Earth Sciences (Environmental Geology) B.S. Major Planner

Year	Fall	Winter	Spring

† Students expecting to write a senior thesis for their comprehensive requirement are required to contact the department approximately three quarters before graduation to identify the intended project and faculty adviser. Senior theses usually require two or three quarters for completion.

Earth Sciences Major with Concentration in Ocean Sciences (B.S.)

The ocean sciences concentration is intended to provide quantitative preparation for career pathways that include oceanography and biogeochemistry. Additional biology and chemistry courses are required for this concentration, along with other distributions of upper-division requirements and electives.

Required Lower-Division Courses

Earth Sciences 5/L or 10/L, or 20/L

BIOL 20A and BIOE 20B

Chemistry 1A, 1B/M and 1C/N

Mathematics 11A and 11B or 19A and 19B, and Mathematics 22 or 23A or Earth Sciences 111

Physics 6A/L and 6B/M (preferred), or 5A/L and 5B/M

Required Upper-Division Courses

Earth Sciences 110A/L, 110B/M, 110C/N; Chemistry 108A/L and 108B/M, or 112A/L and 112B/M and 112C/N; Ocean Sciences 101 or 102

Four electives from the following list: courses 101/L, 102, 105, 107, 109/L, 111, 116, 119, 120/L, 121, 128, 130/L, 148, 172; Chemistry 122; Ocean Sciences 101, 102, 118, 120, 130, 200, 220, 260

Students also complete a comprehensive requirement from the list described above. A topic emphasizing ocean sciences is recommended.

† Students expecting to write a senior thesis for their comprehensive requirement are required to contact the department approximately three quarters before graduation to identify the intended project and faculty adviser. Senior theses usually require two or three quarters for completion.

Earth Sciences Major with Concentration in Planetary Sciences (B.S.)

The planetary sciences concentration is designed to provide students with a quantitative background appropriate for career pathways in the interdisciplinary study of planets and their satellites. The upper-division elective courses can be tailored for students interested in planetary interiors, atmospheres, and/or surfaces.

Required Lower-Division Courses

Earth Sciences 10/L (preferred); or 5/L; or 20/L

Astronomy 14; or 16; or 18

Chemistry 1A, 1B/M, and 1C/N

Mathematics 19A-B (preferred) or 11A-B

Mathematics 22; or 23A; or Earth Sciences 111

Physics 5A/L, 5B/M, 5C/N (preferred); or 6A/L, 6B/M, 6C/N; 5D recommended

Required Upper-Division Courses

Earth Sciences 110A/L, 110B/M, 110C/N, 119, 160

One elective from the following Earth sciences courses: 162, 163, 164

Three electives from the following courses: Earth Sciences 107, 109/L, 116, 117/L, 121, 128, 130/L, 140/L, 148, 150/L, 152, 162, 163, 164, 172, 209, 210; Astronomy 112, 118; Mathematics 130

Students also complete the comprehensive requirement from the list described above.

Earth Sciences (Planetary Sciences) B.S. Major Planner

† Students expecting to write a senior thesis for their comprehensive requirement are required to contact the department approximately three quarters before graduation to identify the intended project and faculty adviser. Senior theses usually require two or three quarters for completion.

Earth Sciences Major with Concentration in Science Education (B.S.)

The science education concentration provides future K-12 science teachers with coursework aligned with the California K-12 Earth and planetary science standards; a broad background across the sciences; and a thorough introduction to educational theory and practice including a sequence of three classroom-based internships. Additional biology, astronomy, and ocean science courses required for this concentration ensure that students are very well prepared to enter a rigorous teaching-credential program and, ultimately, a career in education. The senior comprehensive requirement involves a curriculum-development project jointly over seen by faculty in Earth and planetary sciences and UCSC's Cal Teach program.

Students may start with either the Cal Teach or Earth and Planetary Sciences department for degree and course information, but must stay in contact with both for dual advising and development of study plans as well as approval for formally declaring the major.

Required Lower-Division Courses

- Earth Sciences 5/L (strongly recommended) or 10/L or 20/L
- Astronomy 2 (recommended) or another lower-division course in astronomy
- Molecular, Cell, and Developmental Biology 20A
- Ecology and Evolutionary Biology 20B and 20C (Environmental Studies 24 may be substitute for BIOE 20C)
- Education 50C
- Mathematics 11A and 11B, or 19A and 19B
- Physics 7A/L and 7B/M

Required Upper-Division Courses

- Ocean Sciences 102
- Earth Sciences 110A/L and 110B/M
- Earth Sciences 109/L, or both 120/L and 150/L
- Earth Sciences 111, or Mathematics 21 or 22, or Applied Mathematics and Statistics 5
- Two upper-division courses in Earth sciences or ocean sciences, one of which must involve significant laboratory or field data acquisition/analysis
- Education 100C, 185C, 185L

One upper-division education course from the following list: 128, 141, 164, or 181

- Students complete a comprehensive requirement by doing an independent project through Earth and Planetary Sciences, which applies knowledge of Earth and planetary sciences to K-12 curriculum development.

Combined Major in Environmental Studies/Earth Sciences (B.A.)

The combined major in environmental studies and Earth sciences is designed to provide enhanced exposure to geological concepts and processes for students emphasizing environmental policy and social science topics. Students are advised to plan carefully and to contact academic advisers in both the Environmental Studies and Earth and Planetary Sciences departments early if they have questions. For the requirements of the combined environmental studies/Earth sciences B.A., see the Environmental Studies program description at http://reg.ucsc.edu/catalog/html/programs_courses/09_10update/envsPS.html.

Combined Major in Earth Sciences/Anthropology (B.A.)

The Earth sciences/anthropology combined major is intended for students with interests in Earth sciences and the laboratory-based aspect of anthropology. These include anthropology students interested in archaeology or paleoanthropology who desire more intensive training in natural sciences and Earth sciences students interested in paleobiology or archaeology. The combined major provides a rigorous training in both anthropology and Earth sciences and will permit students to enter graduate programs in Earth sciences, archaeology, or paleoanthropology. The combined major has a significantly different set of cognate science and required lower- and upper-division courses than the standard major; therefore, students are advised to plan carefully and to contact academic advisers in the Earth and Planetary Sciences and Anthropology Departments early if they have questions.

Required Lower-Division Courses

Anthropology 1, 2, and 3

Earth Sciences 5/L, or 10/L, or 20/L

Mathematics 11A or 19A, and 11B or 19B

Five lower-division science cognate courses (plus laboratories) chosen from the following:

BIOL 20A, BIOE 20B, BIOE 20C

Chemistry 1A, 1B/M, 1C/N

Physics 6A/L, 6B/M

Required Upper-Division Courses

Earth Sciences 110A/L

Any four five- to seven-credit upper-division electives listed under the Anthropology Department's Physical Anthropology and Archaeology Courses subdivision.

Three upper-division electives in Earth sciences from the following:

Earth Sciences 100/L, 101/L, 102, 105, 107, 109/L, 110B/M, 117/L, 119, 120/L, 128, 130/L, 142, 148, 150/L, 152

Comprehensive Requirement

One of the following:

Anthropology 194-series (any senior seminar in physical anthropology or archaeology) or

Earth Sciences 188A-B* or

Earth Sciences 195 and a senior thesis with faculty readers from both departments or any approved anthropology or Earth sciences field program

* Earth Sciences 188A-B has as prerequisites courses 109/L, 110A/L, and 110B/M.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement will normally be met within one to three courses already required for the major. For detailed information on this major's DC requirement, consult your major adviser or see the 2010-11 general catalog.

Honors

Honors in the major are determined by a review of grades and narrative evaluations at the time a student applies for graduation. A faculty committee makes the decision based on the quality of all course work, but especially in the courses required for the major. Extra course work or independent study as well as more intensive or rigorous course work and the quality of a capstone project may also be taken into consideration. Honors in the combined majors with Environmental Studies and Anthropology will be granted only when the committees in both departments are in agreement. Highest honors may also be awarded in exceptional cases when a student's overall GPA is at 4.0 and performance in the senior capstone requirement is equally outstanding.

Honors on the senior thesis are determined independently of major honors, and must be approved by two faculty readers. Honors in capstone courses (i.e. EART188A and 188B) are awarded if the grade(s) are at A- level or above.

Minor Requirements

Students can earn a minor in Earth sciences by taking courses 5/L or 10/L or 20/L and five upper-division Earth sciences courses. Courses offering less than 5 credits (such as Eart 190 or 2-unit labs and independent studies) may not be counted toward the minor requirements, although additional course work is always encouraged.

Graduate Program

The graduate program in Earth and planetary sciences is designed to prepare students for research, industry, consulting, teaching, and numerous other career paths, including business and law. The aim is to develop habits of critical analysis and thorough documentation, skills in quantitative field, computational, and/or laboratory research, and proficiency in one or more fields of research. The fundamental requirement for admission to the program is substantial evidence of superior scholarship, dedication and determination to do quality work, and aptitude for original research. Preparation in the basic sciences and in Earth and planetary sciences equivalent to the requirements for the Earth sciences bachelor's degree at UCSC is expected, but graduates in chemistry, physics, engineering, biology, or other disciplines who meet the requirement of superior scholarship are eligible and encouraged to apply. Gaps in knowledge can be made up through course work. Prospective students should take the Graduate Record

Examination (GRE) General Test and have the scores sent to the UCSC Division of Graduate Studies.

UCSC awards both the M.S. and the Ph.D. degrees. The M.S. degree may be the terminal degree for some seeking careers in industry, government, and teaching at the secondary level. It may also be an initial step toward the Ph.D. degree, in which the student gains knowledge and confidence in carrying out and completing a more complex scientific project.

Thesis Track (Ph.D., M.S.). In their first year, all thesis-track graduate students register for courses 203, *Introductory Teaching Seminar*; 205, *Introductory Graduate Seminar*; 206, *Great Papers in the Earth Sciences*; and, in consultation with the graduate preliminary interview committee, choose at least one from among courses 207, *Tectonics*; 208, *Methods in Paleoclimatology*; 209, *Solid Earth Geochemistry*; 210, *Overview of Stellar and Planetary Formation and Evolution*; 220, *Ground Water Modeling*; 231, *Igneous Petrology*; 254, *The Climate System*; 262, *Planetary Interiors*; 265, *Order of Magnitude Estimation*; 270, *Global Seismology*; or 275, *Magnetohydrodynamics*. In subsequent years, all students participate in course 293, *Graduate Research Seminar*. Other course requirements are tailored to the individual student's academic background, professional experience, and plans for research. No specific number of course credits is required for the Ph.D., but, ordinarily, students put more of their effort into course work during the first year of graduate study. It is recommended that all thesis-track graduate students attain some teaching experience while at UCSC.

Late in the fall quarter, each first-year thesis track student has an interview with a representative committee of the faculty. Interview topics are drawn from the broad field of Earth and planetary sciences and can include elementary mathematics, physics, chemistry, or biology. The interview is used to determine the student's understanding of basic scientific principles and ability to apply these principles to specific problems. Following the interview, students will be given a list of course requirements and recommendations.

To qualify for candidacy in the Ph.D. program, each student must pass an oral examination in his or her area of specialization by the end of their third year of graduate study, although students are strongly encouraged to take the exam earlier. The exam is based on a research proposal presenting one or more specific questions to be researched by the student in the course of completing their Ph.D. thesis. Students are expected to have in-depth knowledge of fields relevant to the proposal, including familiarity with the professional literature.

The Ph.D. dissertation is a scholarly contribution to knowledge that embodies the results of original and creative effort by the student. Students are urged to prepare their dissertations for publication in peer-reviewed professional journals. A public oral defense of the thesis is required prior to completion of the Ph.D.

The M.S. thesis is a scholarly contribution consisting of results of an original research project by the student. Students are strongly encouraged to prepare their results for publication in the peer-reviewed literature. The M.S. thesis must be completed by the end of the third year after entering the program and students are strongly encouraged to complete their thesis earlier and to present the results of this work publicly.

Course Work M.S. Track. The course work M.S. track is a professional program designed to allow students to increase their breadth, quantitative depth, or emphasis on a particular specialty; to provide the student with a stronger background toward competition for jobs or an enhancement of skills for current employment (e.g., K-14 teaching); and to allow students from other disciplines (e.g., biology, physics, chemistry, mathematics, environmental studies) to acquire advanced training in Earth and planetary sciences. Prior to the first quarter of study, students have a meeting with their faculty adviser in which they develop a study plan of at least nine courses, no more than one of which may be 297 or 298, and a statement of objectives. The plan must be approved by the graduate representative. Students are also limited to one Earth Sciences 290 pro-seminar course. It is expected that the course plan will comprise mainly graduate-level and quantitative upper-level undergraduate elective courses.

Course work master's students are required to fulfill one of the following capstone options: a substantial review/research manuscript or a comprehensive oral examination based on their course work.

There is no foreign language requirement for either the M.S. or Ph.D. degree. However, many students in the Earth and planetary sciences find knowledge of one or more foreign languages necessary in their particular research and therefore study the appropriate language.

Details regarding admission to graduate standing, financial aid, examinations, and the requirements for the master of science and doctor of philosophy degrees are available from the Division of Graduate Studies. For more information, see Graduate Studies at <http://www.es.ucsc.edu/grad/index.html>.

Earth and Planetary Sciences

[2009-10 update to the *General Catalog*, changes highlighted]

A232 Earth and Marine Sciences Building
(831) 459-4089
<http://www.es.ucsc.edu>

Program Description

The Department of Earth and Planetary Sciences teaches and conducts research in a wide array of topics. We seek to answer questions such as:

- How did the Earth form? How has it evolved since then? What makes up the interior of the Earth?
- What is the history of life on Earth? What are the causes and effects of past mass extinctions?
- How do mountain ranges form? What causes earthquakes? What causes island chains to form? What controls the evolution of glaciers? How do we prevent coastal erosion? How well can we predict tsunamis?
- What has Earth's climate been like in the past? How will climate change in the future?
- What controls the supply and quality of our freshwater resources?
- How are other planets in our solar system different from Earth? How did they evolve to their present state? How have the impacts of asteroids on Earth and other planets affected their evolution?

A variety of methods and tools are used to help us address these questions. Geologists examine rocks and geologic formations in order to understand the processes that control their formation and evolution. Geochemists and mineralogists examine the chemical and mineral composition of rocks, sediments, and fossils using a variety of sophisticated analytical instruments. Geophysicists use seismometers to not only record earthquakes, but also to learn about the deeper parts of the Earth. Environmental scientists collect samples of the atmosphere, rivers, lakes, and the oceans, sometimes requiring the use of aircraft and ships. Spacecraft have visited and explored all of the planets in our solar system. Space-based satellites have provided a massive amount of data about Earth over the past few decades. Scientists from all disciplines use computer models to help them understand these complex systems.

The Department of Earth and Planetary Sciences offers a number of degrees that teach undergraduate and graduate students the knowledge and skills necessary to address these questions. Along with the standard Earth sciences major, we offer degrees with concentrations in environmental geology, ocean sciences, planetary sciences, and science education. We also offer combined majors with environmental studies and anthropology. A minor in Earth sciences is also available. We offer courses across a wide range of topics, allowing students to tailor the curriculum to their interests. Courses are comprised of not only classroom lectures, but frequently field trips, labs, and computer exercises are involved. Many related courses are offered by other departments such as Ocean Sciences, Microbiology and Environmental Toxicology, Environmental Studies, Biological Sciences, Chemistry and Biochemistry, and Astronomy and Astrophysics. The university capstone requirement is often fulfilled by attending the departmental field camp, or by completing a senior research thesis, but other choices are also possible.

Graduates of our department continue on to a variety of careers, such as:

- Business and industry
- Geological and environmental consulting
- Governmental agencies at the federal, state, and local level
- Non-profit organizations
- Research at universities, governmental research institutions, or other scientific agencies
- Graduate/professional school in areas such as science, engineering, teaching, law, public health, business

For more information about the people in the department, their areas of interest, departmental facilities, contact e-mails and phone numbers, and how to apply to join our department as an undergraduate or graduate student, please see our web site: <http://es.ucsc.edu/>.

~~The study of Earth and planetary sciences encompasses a broad exploration and understanding of the origin and evolution of the Earth, its sister planets and satellites, and life forms found on and in Earth's crust. Earth science has been unified by the theory of plate tectonics, which considers Earth's surface to be broken into a number of interlocking plates. Plate movements result in ocean basin formation, mountain building, and plate translation along great faults such as the San Andreas, only 15 kilometers east of Santa~~

Cruz. Most earthquakes and volcanic activity occur at modern plate boundaries. Energy, mineral, and water resources, geologic hazards, climate change, and earthquake hazard reduction comprise some pressing societal concerns of the Earth sciences. A large question in planetary sciences is whether Earth-like tectonics operate on other planets and satellites, and, if not, how their interiors and surfaces have evolved.

Students who have a strong background in Earth sciences and related disciplines will be prepared for a wide variety of employment opportunities in teaching, research, government, consulting, and industry.

Faculty and research staff cover many subdisciplines, including petrology, geochemistry, paleobiology, paleoceanography, climatology and paleoclimatology, hydrology, geomorphology, glaciology, tectonics, mineral physics, seismology, paleomagnetism, and planetary sciences.

On campus research facilities include laboratories in seismology, paleomagnetism, mineral physics, stable and radiogenic isotope geochemistry, surface processes, hydrology and hydrogeology, high performance computing for climate modeling and planetary sciences, atmospheric chemistry, electron microscopy, and a wide variety of chemical analysis facilities for rock and water samples (XRF, ICP, microprobe, and XRD spectroscopies). Many laboratory activities are associated with UCSC's Institute of Geophysics and Planetary Physics (IGPP). Research scientists associated with IGPP add significantly to the intellectual and teaching resources available in Earth and planetary sciences at UCSC.

Earth and planetary sciences is also associated with the Institute of Marine Sciences (IMS), a group of physical, geological, chemical, and biological oceanographers. As with IGPP, IMS adds to the intellectual, research, and teaching resources. IMS also includes numerous affiliated researchers from the nearby U.S. Geological Survey Coastal Branch and the Monterey Bay Aquarium Research Institute.

The Earth and Planetary Sciences Department offers both bachelor of arts (when combined or doubled with another major) and bachelor of science degrees. Combined majors leading to a B.A. degree in Earth sciences/anthropology or environmental studies/ Earth sciences are also offered; for the latter program description, see page xxx. A minor in Earth sciences is also available. Students planning to transfer into the program are strongly encouraged to satisfy prerequisites to upper division courses for the B.S. or B.A. degree before transferring to UCSC.

Earth and planetary sciences instruction at UCSC encompasses surficial and internal processes and to geological oceanography, including geology, geophysics, and geochemistry. Undergraduate courses integrate these subdisciplines and applications, with a focus on modern frontiers and career opportunities in the field. A core set of three foundation courses is available to all majors; these provide rigorous development of the central concepts in Earth and planetary sciences. All upper division Earth and planetary sciences courses involve intensive written work, which most students find helpful in developing skills useful in the job market. In addition, there is a requirement to take two upper division courses that provide hands-on experience with data acquisition and analysis, which is also valuable training for the job market and for graduate research.

The remaining requirements for the major are designed with sufficient flexibility to tailor each degree to particular student interests and career intentions. Through appropriate selection of elective courses, students can develop a focus in any of a wide variety of areas, emphasizing, for example, environmental issues, geologic hazards, water resources, global change, or traditional areas such as geology, geophysics, or geochemistry. Some of the many course combinations that can be constructed to prepare for various career directions are discussed below. Obtaining advice from the department's faculty and staff to clarify career opportunities is strongly recommended.

Many related courses are offered by other departments, such as Ocean Sciences, Microbiology and Environmental Toxicology, Environmental Studies, Biology, and Astronomy. Weekly seminars by visiting lecturers provide an opportunity for graduates and undergraduates to gain exposure to leading researchers and research topics in Earth and planetary sciences. An internship program provides opportunities for undergraduate (and graduate) students to gain practical work experience, which may prove beneficial in the industrial and governmental job market. The department also offers an optional mentorship course (course 190, 1 credit) which introduces students to research programs and analytical facilities in the department and helps them to prepare for professional life after graduation. The small class format allows students close interaction with three faculty members during each offering.

Those interested in the M.S. or Ph.D. degree programs should see the description below and request further information and apply online through the Division of Graduate Studies. The Earth and Planetary Sciences Department web site offers valuable information about the graduate program:

<http://es.ucsc.edu/grad/gradprog.html>.

Academic Advising

A student who wants to become an Earth sciences major should contact the Earth and Planetary Sciences Department undergraduate degree adviser as soon as possible. After developing a formal study plan on a declaration of major petition, students are required to meet with staff and faculty advisers who can help the student plan his or her program in detail and provide information about independent study, thesis research, advanced study, career options, and other educational opportunities. ~~For the combined major with environmental studies, students begin the advising process with the Department of Environmental Studies; after which they meet with the Earth and Planetary Sciences Department for dual advising.~~ Relevant courses taken at UCSC or other institutions may be substituted for degree requirements by approved petition. Please see the undergraduate adviser for the substitution petition form and more information about this process.

Transfer Students

Transfer students planning to major in Earth sciences are encouraged to call for advice about courses they should complete before arrival at UCSC. It is important that students have completed as many as possible of the required chemistry, biology, calculus, and calculus-based physics courses. Having this course work completed elsewhere allows students greater flexibility in scheduling and completing their UCSC Earth and planetary sciences courses. Junior transfer Earth and planetary sciences majors and prospective

majors should meet with department advisers during summer orientation or shortly after their arrival on campus to plan their next two years' schedule of courses.

Bachelor of Science Degree

The B.S. program is designed for students who intend to pursue professional careers in Earth and planetary sciences, engineering, policy, law, teaching, or business or who otherwise desire the broad, quantitative training available at UCSC. In addition to providing comprehensive preparation in the basic physical sciences, and particular breadth and depth in Earth and planetary sciences, the curriculum is structured to prepare students for the competitive graduate school and career marketplace.

The core of the major includes calculus, physics, chemistry, and a group of comprehensive Earth and planetary sciences courses. For the standard B.S., students then select at least four additional courses from a diverse list of upper-division electives, with at least two that involve significant laboratory or field data acquisition and analysis. These electives, often in combination with additional upper-division courses from this and related departments, provide the student with expertise in one or more subdisciplines within Earth sciences.

Elective distributions can be designed to emphasize earthquake and faulting studies, Earth surface processes, Earth system sciences, geologic hazards, geology, crustal and deep-Earth geophysics, marine geophysics, and water resources. ~~Three~~ Four formal concentrations, all with specific course requirements and leading to an Earth and planetary sciences B.S., are available: environmental geology, ocean sciences, science education, and planetary sciences. A senior comprehensive experience (senior thesis, or geologic field camp, or exemplary performance in a graduate course) is required of all majors.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement will normally be met within one to three courses already required for the major. For detailed information on this major's DC requirement, consult your major adviser or see the 2010-11 general catalog.

Preparation for the Standard Major (B.S.)

Chemistry 1A, 1B/M and 1C/N

Mathematics 11A ~~or 19A~~ and 11B or 19A and 19B, and 22 or 23A or Earth Sciences 111

Physics 6A/L and 6B/M (preferred), or 5A/L and 5B/M, and 6C/N or 5C/N or Chemistry 108A/L or 112A/L

Requirements for the Standard Major (B.S.)

Earth Sciences 5/L, or 10/L, or 20/L; 110A/L, 110B/M, and 110C/N, 190 (optional 1-unit)

At least four elective courses from upper-division Earth and planetary sciences offerings, or Ocean Sciences 102 or 120, must be completed. Two of the four upper-division electives must be selected from this subset of courses, which involve significant laboratory or field data acquisition/analysis: 109/L, 116, 117/L, 119, 120/L, 130/L, 140/L, 142, 146, 148, 150/L; 168.

Five (5) credits of internship (Earth Sciences 198) or independent study (Earth Sciences 199) may be substituted for one upper-division elective.

Students also complete the comprehensive requirement described below.

Students are encouraged to take more than the minimum number of elective courses and may craft an elective distribution from many areas of specific research and career interests. The following are examples of suggested elective distributions that develop expertise in important areas (* indicates that the course satisfies the lab or field data acquisition/analysis requirement).

Earth system sciences. Focuses on terrestrial, marine, and atmospheric processes and their relations through time; may include paleoclimatic and paleoenvironmental dynamics, global change issues, and surface geological processes such as weathering, erosion, and hydrology: 100/L, 101/L, 102, 107, 109/L*, 116*, 119*, 120/L*, 121, 125, 128, 148*, 208, Ocean Sciences 102, 120

Earthquake and faulting studies. Focuses on crustal deformation and faulting processes and related phenomena such as plate motions, earthquakes, and stress in the lithosphere: 109/L*, 117/L*, 119*, 150/L*, 162, 168*, 172

Geologic hazards. Focuses on Earth processes that impact society, including earthquakes, volcanoes, coastal erosion, and landslides: 104, 105, 107, 109/L*, 116*, 140/L*, 142*, 146*

Geology. Emphasizes a traditional broad background with field skills, rock genesis and interpretation, and structural relations: 109/L*, 117/L*, 120/L*, 130/L*, 140/L*, 150/L*

Geophysics. Develops breadth in geophysical techniques, composition and structure of Earth's deep interior, and gravitational and magnetic fields: 117/L*, 119*, 150/L*, 160, 162, 168*, 172

Marine geophysics. Emphasizes a breadth of geological and geophysical background for continuing study of the processes involved in the growth, evolution, and destruction of the ocean floor and margins: 107, 117/L*, 146*, 150/L*, 152*, 168*

Surface processes. Emphasizes understanding the fluxes of energy, water, mass, and chemicals within and across Earth's surface and the relations to climatic and tectonic forcing processes: 107, 109/L*, 116*, 119*, 120/L*, 140/L*, 128, 142*, 146*, 148*, 163, Environmental Toxicology 144.

Water resources. Focuses on water resources quality and quantity and relations between climate and water in and on the crust: 105, 109/L*, 116*, 119*, 121, 140/L*, 142*, 146*, 148*, Environmental Toxicology 144, Ocean Sciences 120

Comprehensive Requirement (B.S.)

Students complete one of the following three options:

Satisfactory completion of Earth Sciences 188A-B, *Senior Field Internship*

Satisfactory completion of a senior thesis, which must include a significant element of independent research or original work and can only be undertaken after agreement is obtained from a faculty member to supervise it (approximately three quarters in advance of completion)

Exemplary performance, including a major written report, in a 5-credit graduate course or seminar (which requires permission from the instructor in order to enroll)

Earth Sciences Standard B.S. Major Planner

Students planning a professional career in the Earth and planetary sciences should take more than the minimum number of courses required for the major if possible. Four-year students have ample flexibility to take additional electives if they begin with the required courses in their second year. Junior transfers also have flexibility if they have taken most of their preparatory courses in calculus, chemistry, and physics before entry. Further advice can be obtained from the undergraduate adviser and from faculty members.

Note: Chemistry 1A, 1B/M and 1C/N are offered fall-winter-spring and winter-spring-fall. Physics 6A/L and 6B/M and 6C/N are offered fall-winter-spring and winter-spring-fall, and Mathematics 11A-B and 19A-B and 22 and 23A are offered every quarter.

Year	Fall	Winter	Spring
1st (frsh)	CHEM 1A MATH 3 college core	MATH 11A or 19A CHEM 1B/M	EART art 10/L CHEM hem 1C/N MATH ath 11B or 19B

* Eart 109/L, 110A/L, and 110B/M are required for participation in Eart 188A-B.

† Students expecting to write a senior thesis for their comprehensive requirement are required to contact the department approximately three quarters before graduation to identify the intended project and faculty adviser. Senior theses usually require at least two or three quarters for completion.

Earth Sciences Major with Concentration in Environmental Geology (B.S.)

The environmental geology concentration is designed to provide quantitative preparation for career pathways involving interdisciplinary study of the environment with a geological emphasis. Additional biology and environmental studies courses are required for this concentration along with other distributions of upper-division requirements and electives.

Required Lower-Division Courses

Earth Sciences 20/L (recommended) or 10/L or 5/L

Environmental Studies 25

Biology: Molecular, Cell, and Developmental Biology (MCD) BIOL 20A; Biology: Ecology and Evolutionary Biology (EEB) BIOE 20B; BIOE 20C (Environmental Studies 24 may be substituted for BIOE 20C)

Chemistry 1A, 1B/M and 1C/N

Mathematics 11A or 19A and 11B or 19B

Physics 6A/L and 6B/M (preferred), or 5A/L and 5B/M

Required Upper-Division Courses

Earth Sciences 110A/L and 110B/M, BIOE ~~150~~107

At least four of the following Earth and planetary sciences courses: 100/L, 101/L, 102, 104, 105, 107, 109/L, 110C/N, 111, 116, 119, 120/L, 121, **125**, 128, 140/L, 142, 146, 148, 150/L

Two additional upper-division electives with environmental topics from biology, chemistry, Earth and planetary sciences, environmental studies, environmental toxicology, or ocean sciences

Students also complete a comprehensive requirement from the list described above.

† Students expecting to write a senior thesis for their comprehensive requirement are required to contact the department approximately three quarters before graduation to identify the intended project and faculty adviser. Senior theses usually require two or three quarters for completion.

Earth Sciences Major with Concentration in Ocean Sciences (B.S.)

The ocean sciences concentration is intended to provide quantitative preparation for career pathways that include oceanography and biogeochemistry. Additional biology and chemistry courses are required for this concentration, along with other distributions of upper-division requirements and electives.

Required Lower-Division Courses

Earth Sciences 5/L or 10/L, or 20/L

BIOL 20A and BIOE 20B

Chemistry 1A, 1B/M and 1C/N

Mathematics 11A ~~or 19A~~, and 11B or 19A and 19B, and Mathematics 22 or 23A or Earth Sciences 111

Physics 6A/L and 6B/M (preferred), or 5A/L and 5B/M

Required Upper-Division Courses

Earth Sciences 110A/L, 110B/M, 110C/N; Chemistry 108A/L and 108B/M, or 112A/L and 112B/M and 112C/N; Ocean Sciences 101 or 102

Four electives from the following list: courses 101/L, 102, 105, 107, 109/L, 111, 116, 119, 120/L, 121, 128, 130/L, 148, 172; Chemistry 122; Ocean Sciences 101, 102, 118, 120, 130, ~~142, 156~~, 200, 220, 260

Students also complete a comprehensive requirement from the list described above. A topic emphasizing ocean sciences is recommended.

Earth Sciences Major with Concentration in Planetary Sciences (B.S.)

The planetary sciences concentration is designed to provide students with a quantitative background appropriate for career pathways in the interdisciplinary study of planets and their satellites. The upper-division elective courses can be tailored for students interested in planetary interiors, atmospheres, and/or surfaces.

Required Lower-Division Courses

Earth Sciences 10/L (preferred); or 5/L; or 20/L

Astronomy 14; or 16; or 18

Chemistry 1A, 1B/M, and 1C/N

† Students expecting to write a senior thesis for their comprehensive requirement are required to contact the department approximately three quarters before graduation to identify the intended project and faculty adviser. Senior theses usually require two or three quarters for completion.

Earth Sciences Major with Concentration in Science Education (B.S.)

The science education concentration provides future K-12 science teachers with coursework aligned with the California K-12 Earth and planetary science standards; a broad background across the sciences; and a thorough introduction to educational theory and practice including a sequence of three classroom-based internships. Additional biology, astronomy, and ocean science courses required for this concentration ensure that students are very well prepared to enter a rigorous teaching-credential program and, ultimately, a career in education. The senior comprehensive requirement involves a curriculum-development project jointly over seen by faculty in Earth and planetary sciences and UCSC's Cal Teach program.

Students may start with either the Cal Teach or Earth and Planetary Sciences department for degree and course information, but must stay in contact with both for dual advising and development of study plans as well as approval for formally declaring the major.

Required Lower-Division Courses

- Earth Sciences 5/L (strongly recommended) or 10/L or 20/L
- Astronomy 2 (recommended) or another lower-division course in astronomy
- Molecular, Cell, and Developmental Biology 20A
- Ecology and Evolutionary Biology 20B and 20C (Environmental Studies 24 may be substitute for BIOE 20C)
- Education 50C
- Mathematics 11A and 11B, or 19A and 19B
- Physics 7A/L and 7B/M

Required Upper-Division Courses

- Ocean Sciences 102
- Earth Sciences 110A/L and 110B/M
- Earth Sciences 109/L, or both 120/L and 150/L
- Earth Sciences 111, or Mathematics 21 or 22, or Applied Mathematics and Statistics 5

- Two upper-division courses in Earth sciences or ocean sciences, one of which must involve significant laboratory or field data acquisition/analysis
- Education 100C, 185C, 185L
- One upper-division education course from the following list: 128, 141, 164, or 181
- Students complete a comprehensive requirement by doing an independent project through Earth and Planetary Sciences, which applies knowledge of Earth and planetary sciences to K-12 curriculum development.

~~[DISCONTINUANCE OF DEGREE—See attachment C]~~

Bachelor of Arts Degree

The B.A. program encourages connections between the Earth and planetary sciences and other disciplines, and the degree is granted only as part of a double major or for the combined major with anthropology or environmental studies. Students can prepare for careers in environmental engineering, management, remediation, and policy; education; law; medicine; and interdisciplinary science fields. The B.A. can be granted together with any major field.

The preparatory courses in chemistry, mathematics, and physics and four of the six basic courses required for the standard B.S. degree are required for the Earth sciences B.A.; but only two additional electives, which can be chosen from the entire list of upper division courses, are required.

Note that B.A. students who want to take courses 188A-B, *Senior Field Internship*, must first complete courses 109/L, 110A/L, and 110B/M.

Preparation for the Standard Major (B.A.)

Chemistry 1A, 1B/M and 1C/N

Mathematics 11A or 19A and 11B or 19B

Physics 6A/L and 6B/M (preferred), or 5A/L and 5B/M

Requirements for the Standard Major (B.A.)

Earth Sciences 5/L or 10/L or 20/L; 110A/L, 110B/M, 110C/N, plus two additional upper division Earth sciences courses

Comprehensive Requirement for the Standard Major (B.A.)

Students complete one of the following two options:

Satisfactory completion of courses 188A-B, *Senior Field Internship*

Satisfactory completion of a senior thesis, which must include a significant element of independent research or original work and can only be undertaken after agreement is obtained from a faculty member to supervise it (approximately three quarters in advance of completion).

Combined Major in Environmental Studies/Earth Sciences (B.A.)

The combined major in environmental studies and Earth sciences is designed to provide enhanced exposure to geological concepts and processes for students emphasizing environmental policy and social science topics. Students are advised to plan carefully and to contact academic advisers in both the Environmental Studies and Earth and Planetary Sciences departments early if they have questions. For the

requirements of the combined environmental studies/Earth sciences B.A., see http://reg.ucsc.edu/catalog/html/programs_courses/09_10update/envsPS.html. ~~page xxx.~~

Combined Major in Earth Sciences/Anthropology (B.A.)

The Earth sciences/anthropology combined major is intended for students with interests in Earth sciences and the laboratory-based aspect of anthropology. These include anthropology students interested in archaeology or paleoanthropology who desire more intensive training in natural sciences and Earth sciences students interested in paleobiology or archaeology. The combined major provides a rigorous training in both anthropology and Earth sciences and will permit students to enter graduate programs in Earth sciences, archaeology, or paleoanthropology. The combined major has a significantly different set of cognate science and required lower- and upper-division courses than the standard major; therefore, students are advised to plan carefully and to contact academic advisers in the Earth and Planetary Sciences and Anthropology Departments early if they have questions.

Required Lower-Division Courses

Anthropology 1, 2, and 3

Earth Sciences 5/L, or 10/L, or 20/L

Mathematics 11A or 19A, and 11B or 19B

Five lower-division science cognate courses (plus laboratories) chosen from the following:

BIOL 20A, BIOE 20B, BIOE 20C

Chemistry 1A, 1B/M, 1C/N

Physics 6A/L, 6B/M

Required Upper-Division Courses

~~Anthropology 102A, or 107/L, or 185~~

Earth Sciences 110A/L

~~Three upper-division electives in anthropology from the following:~~

Any ~~three~~ ~~four~~ ~~five-~~ ~~to seven-~~credit upper-division electives listed under the Anthropology Department's Physical Anthropology and Archaeology Courses subdivision.

Three upper-division electives in Earth sciences from the following:

Earth Sciences 100/L, 101/L, 102, 105, 107, 109/L, 110B/M, 117/L, 119, 120/L, 128, 130/L, 142, 148, 150/L, 152

Comprehensive Requirement

One of the following:

Anthropology 194-series (any senior seminar in physical anthropology or archaeology) or

Earth Sciences 188A-B* or

Earth Sciences 195 and a senior thesis with faculty readers from both departments or any approved anthropology or Earth sciences field program

* Earth Sciences 188A-B has as prerequisites courses 109/L, 110A/L, and 110B/M.

4th (sr)	ANTH elective sr comp	EART elective sr comp	ANTH elective sr comp

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement will normally be met within one to three courses already required for the major. For detailed information on this major's DC requirement, consult your major adviser or see the 2010-11 general catalog.

Double Majors (B.A. or B.S.)

~~Each Earth sciences double major is required to complete the full requirements of another UCSC major. If a student elects to major in the environmental geology concentration and the environmental biology~~

~~(biological sciences) or environmental chemistry (chemistry) concentrations, the lower-division preparatory courses will count toward both majors since they are identical. All other double majors in Earth sciences prohibit counting any upper-division course toward both majors, unless a minimum of 40 upper-division credits is completed for each degree.~~

Honors

Honors in the major are determined by a review of grades and narrative evaluations at the time a student applies for graduation. A faculty committee makes the decision based on the quality of all course work, but especially in the courses required for the major. Extra course work or independent study as well as more intensive or rigorous course work and the quality of a capstone project may also be taken into consideration. Honors in the combined majors with Environmental Studies and Anthropology will be granted only when the committees in both departments are in agreement. Highest honors may also be awarded in exceptional cases when a student's overall GPA is at 4.0 and performance in the senior capstone requirement is equally outstanding.

Honors on the senior thesis are determined independently of major honors, and must be approved by two faculty readers. Honors in capstone courses (i.e. EART188A and 188B) are awarded if the grade(s) are at A- level or above.

Minor Requirements

Students can earn a minor in Earth sciences by taking courses 5/L or 10/L or 20/L and five upper-division Earth sciences courses. Courses offering less than 5 credits (such as Eart 190 or ~~32~~-unit labs and independent studies) may not be counted toward the minor requirements, although additional course work is always encouraged. ~~Courses taken for any major may not be double-counted toward meeting the minor requirements.~~

Graduate Program

The graduate program in Earth and planetary sciences is designed to prepare students for research, industry, consulting, teaching, and numerous other career paths, including business and law. The aim is to develop habits of critical analysis and thorough documentation, skills in quantitative field, computational, and/or laboratory research, and proficiency in one or more fields of research. The fundamental requirement for admission to the program is substantial evidence of superior scholarship, dedication and determination to do quality work, and aptitude for original research. Preparation in the basic sciences and in Earth and planetary sciences equivalent to the requirements for the Earth sciences bachelor's degree at UCSC is expected, but graduates in chemistry, physics, engineering, biology, or other disciplines who meet the requirement of superior scholarship are eligible and encouraged to apply. Gaps in knowledge can be made up through course work. Prospective students should take the Graduate Record Examination (GRE) General Test and have the scores sent to the UCSC Division of Graduate Studies.

UCSC awards both the M.S. and the Ph.D. degrees. The M.S. degree may be the terminal degree for some seeking careers in industry, government, and teaching at the secondary level. It may also be an initial step toward the Ph.D. degree, in which the student gains knowledge and confidence in carrying out and completing a more complex scientific project.

Thesis Track (Ph.D., M.S.). In their first year, all thesis-track graduate students register for courses 203, *Introductory Teaching Seminar*; 205, *Introductory Graduate Seminar*; 206, *Great Papers in the Earth Sciences*; and, in consultation with the graduate preliminary interview committee, choose at least one from among courses 207, *Tectonics*; 208, *Methods in Paleoclimatology*; 209, *Solid Earth Geochemistry*; 210, *Overview of Stellar and Planetary Formation and Evolution*; ~~220, Ground Water Modeling~~; 231, *Igneous Petrology*; 254, *The Climate System*; 262, *Planetary Interiors*; 265, *Order of Magnitude Estimation*; 270, *Global Seismology*; or 275, *Magnetohydrodynamics*. In subsequent years, all students participate in course 293, *Graduate Research Seminar*. Other course requirements are tailored to the individual student's academic background, professional experience, and plans for research. No specific number of course credits is required for the Ph.D., but, ordinarily, students put more of their effort into course work during the first year of graduate study. It is recommended that all thesis-track graduate students attain some teaching experience while at UCSC.

Late in the fall quarter, each first-year thesis track student has an interview with a representative committee of the faculty. Interview topics are drawn from the broad field of Earth and planetary sciences and can include elementary mathematics, physics, chemistry, or biology. The interview is used to determine the student's understanding of basic scientific principles and ability to apply these principles to specific problems. Following the interview, students will be given a list of course requirements and recommendations.

To qualify for candidacy in the Ph.D. program, each student must pass an oral examination in his or her area of specialization by the end of their third year of graduate study, although students are strongly encouraged to take the exam earlier. The exam is based on a research proposal presenting one or more specific questions to be researched by the student in the course of completing their Ph.D. thesis. Students are expected to have in-depth knowledge of fields relevant to the proposal, including familiarity with the professional literature.

The Ph.D. dissertation is a scholarly contribution to knowledge that embodies the results of original and creative effort by the student. Students are urged to prepare their dissertations for publication in peer-reviewed professional journals. A public oral defense of the thesis is required prior to completion of the Ph.D.

The M.S. thesis is a scholarly contribution consisting of results of an original research project by the student. Students are strongly encouraged to prepare their results for publication in the peer-reviewed literature. The M.S. thesis must be completed by the end of the third year after entering the program and students are strongly encouraged to complete their thesis earlier and to present the results of this work publicly.

Course Work M.S. Track. The course work M.S. track is a professional program designed to allow students to increase their breadth, quantitative depth, or emphasis on a particular specialty; to provide the student with a stronger background toward competition for jobs or an enhancement of skills for current employment (e.g., K–14 teaching); and to allow students from other disciplines (e.g., biology, physics, chemistry, mathematics, environmental studies) to acquire advanced training in Earth and planetary sciences. Prior to the first quarter of study, students have a meeting with their faculty adviser in which they develop a study plan of at least nine courses, no more than one of which may be 297 or 298, and a statement of objectives. The plan must be approved by the graduate representative. Students are also limited to one Earth Sciences 290 pro-seminar course. It is expected that the course plan will comprise mainly graduate-level and quantitative upper-level undergraduate elective courses.

Course work master's students are required to fulfill one of the following capstone options: a substantial review/research manuscript or a comprehensive oral examination based on their course work.

There is no foreign language requirement for either the M.S. or Ph.D. degree. However, many students in the Earth and planetary sciences find knowledge of one or more foreign languages necessary in their particular research and therefore study the appropriate language.

Details regarding admission to graduate standing, financial aid, examinations, and the requirements for the master of science and doctor of philosophy degrees are available from the Division of Graduate Studies. For more information, see Graduate Studies, ~~page xxx.~~ at <http://www.es.ucsc.edu/grad/index.html>.

Faculty and Professional Interests

Erik Asphaug, Professor

Asteroids, comets, the moon and planetary surface evolution

Emily E. Brodsky, Associate Professor

Earthquakes, volcanoes, fluid flow in fractured media

Kenneth L. Cameron, Professor Emeritus

Patrick Y. Chuang, Associate Professor

Clouds, aerosols and climate

Matthew E. Clapham, Assistant Professor

Paleobiology, geobiology

Robert S. Coe, Professor

Geophysics, paleomagnetism, tectonics

Noah J. Finnegan, Assistant Professor

Geomorphology, tectonics

Andrew T. Fisher, Professor

Hydrogeology, crustal studies, coupled flows, modeling

Robert E. Garrison, Professor Emeritus

James B. Gill, Distinguished Professor

Igneous petrology, geochemistry of island arcs

Gary A. Glatzmaier, Professor

Computer simulation of geodynamics and planetary dynamics

Gary B. Griggs, Distinguished Professor, Earth Sciences; Director, Institute of Marine Sciences

Coastal processes, hazards and engineering

Jeremy K. Hourigan, Assistant Professor

Thermochronology, structural geology, tectonics

Elise Knittle, Professor

Mineral physics, experimental geophysics

Paul L. Koch, Professor

Isotope biogeochemistry, vertebrate paleontology

Don G. Korycansky. IGPP Associate Research Planetary Scientist

Planetary impacts, asteroid dynamics

Marc G. Kramer, IGPP Assistant Research Earth Scientist
Biogeochemistry, Earth surface process, remote sensing

Mikhail Kreslavsky, IGPP Assistant Research Planetary Scientist
Mars surface evolution and planetary data analysis

Leo F. Laporte, Professor Emeritus

Thorne Lay, Distinguished Professor, Earth Sciences
Seismology, geophysics

Karen C. Mc Nally, Professor Emerita

Marcia K. McNutt, Professor
Tectonic marine geophysics

J. Casey Moore, Professor Emeritus

Francis Nimmo, Associate Professor
Icy satellites, accretion, Mars, planetary geophysics

Adina Paytan, IMS Associate Research Scientist
Biogeochemistry, paleoceanography, environmental and aquatic chemistry

Hilde L. Schwartz, Lecturer
Vertebrate paleontology, environmental geology, paleoecology, chemosynthetic ecosystems

Susan Y. Schwartz, Professor
Seismology, geophysics, active tectonics

Eli A. Silver, Professor
Marine geology and geophysics, active tectonics, remote sensing

Lisa Sloan, Professor
Paleoclimatology and climate change, Earth system science, surficial processes

Othmar T. Tobisch, Professor Emeritus

Slawek M. Tulaczyk, Professor
Glaciology and glacial geology, geomorphology, soil mechanics

Steven N. Ward, IGPP Research Geophysicist
Seismology, geophysics

Gerald E. Weber, Lecturer Emeritus

Quentin C. Williams, Professor
Mineral physics, tectonophysics, experimental geochemistry

Ru-Shan Wu, IGPP Research Geophysicist
Seismology, geophysics; wave propagation and subsurface imaging

Xiao-Bi Xie, IGPP Associate Research Geophysicist
Theoretical and applied seismology

James C. Zachos, Professor
Paleoceanography, marine stratigraphy

Xixi Zhao, Lecturer, Earth Sciences; IGPP Research Geophysicist
Paleomagnetism and rock magnetism and their application to the history of Earth's

magnetic field

Kenneth W. Bruland, Professor , Ocean Sciences

Chemical oceanography, biogeochemistry of trace metals and radionuclides, aquatic chemistry, geochemistry

Weixin Cheng, Associate Professor, Environmental Studies

Soil ecology, agroecology, biogeochemistry, global change ecology

Margaret (Peggy) L. Delaney, Professor, Ocean Sciences

Paleoceanography, marine geochemistry

A. Russell Flegal, Professor, Microbiology and Environmental Toxicology

Anthropogenic perturbations of biogeochemical cycles, applications of isotopic tracers in anthropology and archaeology

Jonathan Fortney, Assistant Professor, Astronomy

Planetary atmospheres and interiors, extrasolar planets

A. Christina Ravelo, Professor, Ocean Sciences

Stable isotope geochemistry and chemical oceanography, paleoclimatology

[Program Description](#) | [Changes to 2009-10 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses

1. Oceanography. W

An introduction to the physical environment of the ocean. Origin and evolution of ocean basins; sea-floor morphology; origin, distribution, historical record, and economic significance of marine sediments; ocean currents, waves, tides, and changing sea level; beaches, shorelines, and coastal processes; marine resources, pollution, and human impacts on the oceans. Students may also enroll in and receive credit for Ocean Sciences 1. Laboratory/discussion-1.5 hours. (General Education Code(s): IN.) *G. Griggs*

3. Geology of National Parks. *

Geologic concepts and processes responsible for shaping our national parks including mountain building, volcanic and earthquake activity, sedimentation, weathering, erosion, and glaciation. An understanding of how geology impacts our lives is emphasized. Appropriate for both science and non-science majors who wish to enhance their knowledge, enjoyment, and appreciation of our national parks. (General Education Code(s): IN.) *S. Schwartz*

5. California Geology. F

An introduction to physical geology emphasizing the minerals, rocks, volcanoes, mountains, faults, and earthquakes of California. In-class field trips to study the caves, rocks, and landforms of the campus and the Monterey Bay area. Discussion-1 hour. Concurrent enrollment in 5L required for majors and minors. (General Education Code(s): IN.) *E. Knittle*

5L. California Geology Laboratory (1 credit). F

Laboratory sequence illustrating topics covered in course 5 with particular emphasis on rock and mineral identification and map interpretation. Field trip. Laboratory three hours. Students are billed a materials fee. *E. Knittle*

6. Concepts in Environmentalism. *

Learn scientific concepts required to be an informed environmentalist. Topics include urban smog; water resources and pollution; waste treatment; acid rain; global climate change; fossil fuel, nuclear, and renewable energy; overpopulation; and how an individual can minimize his or her environmental impact. Offered in alternate academic years. (General Education Code(s): IN.) *P. Chuang*

7. The History of Life. W

An examination of the major events in the history of life, from the origin of life approximately four billion years ago, to the wave of extinctions that has decimated plants and animals around the globe over the past 30,000 years. Offered in alternate

academic years. (General Education Code(s): IN.) *M. Clapham, P. Koch*

10. Geologic Principles. S

Introduction to the scientific study of Earth, the materials composing it, and the processes shaping it. Topics include minerals and rocks, Earth's internal structure, plate tectonics, earthquakes and volcanoes, oceans and the atmosphere, the formation of landscapes and global change. A one-day, optional field trip is included. Concurrent enrollment in 10L required for majors and minors. (General Education Code(s): IN.) *A. Fisher*

10L. Geologic Principles Laboratory (1 credit). S

Laboratory sequence illustrating topics covered in course 10, with particular emphasis on rock and mineral identification and map interpretation. Laboratory 3 hours. In-lab field trips. Students are billed a materials fee. *A. Fisher*

20. Environmental Geology. W

Introduction to aspects of geology which affect and are affected by humans. Addresses a broad range of topics including resource management, geologic hazards, air and water issues, population and land use, energy costs and effectiveness, and global change, all from a unique geological/environmental perspective. Lectures include strategies for mitigating these issues. Includes a one-day field trip. Concurrent enrollment in 20L required for majors and minors. (General Education Code(s): IN.) *S. Tulaczyk*

20L. Environmental Geology Laboratory (1 credit). W

Laboratory sequence illustrating topics covered in course 20, with emphasis on rock and mineral identification, geologic hazard assessment, geologic resource management, and land use planning. In-lab field trip. Laboratory 3 hours. Students are billed a materials fee. *S. Tulaczyk*

65. Natural History of Dinosaurs. S

Explores the origin, evolution, and extinction of dinosaurs with emphasis on paleobiology and paleoecology. Covers fundamental paleontological and evolutionary principles, dinosaur anatomy and behavior, the hot-blooded/cold-blooded debate, dinosaur-bird relationships, diversity, and exploits of the great dinosaur hunters. One and a half hour of discussion each week. Offered in alternate academic years. (General Education Code(s): IN.) *P. Koch, H. Schwartz*

80A. Earth Catastrophes. F

The role of catastrophic processes in shaping Earth and the environment in which we live. The physical processes causing earthquakes, volcanic eruptions, tsunamis, floods, windstorms, landslides, and meteorite impacts will be described, along with the role played by these rapid processes in the geological and biological evolution of the planet. Interdisciplinary approaches to understanding these phenomena will be discussed. The entire time scale from formation of the universe to the present Earth system will be considered. (General Education Code(s): T2-Natural Sciences.) *T. Lay*

80B. Earthquakes. *

Causes and effects of earthquakes. How do we measure, mitigate, and try to predict earthquakes? Plate motion, frictional faulting, earthquake triggering, wave propagation, earthquake damage, related hazards, and other social effects. Hazard reduction through earthquake forecasting and earthquake-resistant design. Class includes one full day weekend field trip to local faults. Advanced algebra and high school geometry recommended. Students are billed a materials fee. (General Education Code(s): T2-Natural Sciences, Q.) *E. Brodsky*

80C. Introduction to Weather and Climate. F

Many meteorological phenomena are familiar to us: clouds, fog, rain, snow, wind, lightning, and severe storms. Climate is the sum of weather over long periods and is changing (e.g., greenhouse warming, ozone depletion, urban smog) due to mankind's activities. Conceptual understanding of how and why the present-day atmosphere behaves as it does and how this may change in the future is the primary goal of this course. Offered in alternate academic years. (General Education Code(s): T2-Natural Sciences, Q.) *P. Chuang*

80D. Earth Sciences and the Cinema. S

Exploration of cinema's role in defining societal awareness of Earth sciences (underlying concepts and factual basis) for disaster and adventure movies and in more subtle presentations. Topics include evolution of life, surface environment and the planet's deep interior, natural hazards, global warming, and meteorite impacts. (General Education Code(s): T2-Natural Sciences.) *T. Lay*

80G. Planetary Discovery. W

An introductory look at modern solar system exploration, focusing on spacecraft missions presently underway. We will examine the scientific context of each mission, the instrumentation and dynamics of each voyage, and the importance of their discoveries. Open to all students. (General Education Code(s): T2-Natural Sciences.) *E. Asphaug*

98. Earth Sciences Internship. F,W,S

A supervised learning experience involving practical application of lower division Earth sciences knowledge while working with approved companies, governmental agencies, or research organizations. Students consult weekly with supervising faculty and prepare a final report of their work, to be evaluated both by the sponsoring agency and the faculty supervisor. Consult sponsoring agency for enrollment criteria; after instruction on resume preparation and interview skills, student must interview and be selected for internship by approved sponsoring organizations. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

*Upper-Division Courses***100. Vertebrate Paleontology. W**

Introduction to vertebrate history, with an emphasis on vertebrate relationships and the co-evolution of organisms and environments. Specific topics include vertebrate origins, systematics and classification, adaptive revolutions, mass extinctions, and the rise and fall of dinosaurs. Students are billed a materials fee. Prerequisite(s): course 10, 20, 5, Biology 20C, or Anthropology 1. Concurrent enrollment in course 100L is required. Offered in alternate academic years. *H. Schwartz*

100L. Vertebrate Paleontology Laboratory (2 credits). W

Comparative anatomy and functional morphology of vertebrates, and preservation of vertebrate hard parts, using modern and fossil specimens. Laboratory three hours and one 1-day field trip. Concurrent enrollment in course 100 is required. Offered in alternate academic years. *H. Schwartz*

101. The Fossil Record. F

An introduction to paleobiology; the use of fossil evidence to pose and solve evolutionary and geologic questions. Students are billed a materials fee.

Prerequisite(s): course 10 or 5 or 20 or Biology 20C or Anthropology 1. Concurrent enrollment in course 101L is required. *M. Clapham*

101L. The Fossil Record Laboratory (1 credit). F

Systematics, ecology, and evolutionary history of the major groups of fossil-forming animals. Laboratory 3 hours and one 1-day field trip. Concurrent enrollment in course 101 is required. *M. Clapham*

102. Marine Geology. F

Geology of the marine environment. Topics include controls on the types, origin, and distribution of marine sediments; geology of oceanic crust; evolution of continental margins and plate boundaries; introduction to paleoceanography. Discussion: 1 hour. Students cannot receive credit for this course and Ocean Sciences 280. Prerequisite(s): course 5 or 10 or 20 or Biology 20C. *M. Delaney*

104. Geologic Hazards. F

The recognition, evaluation, and mitigation of geologic hazards: earthquakes and faulting, tsunamis, volcanism, landslides and mass movements, and flooding. Students are billed a materials fee. Prerequisite(s): course 10/L or 5/L or 20/L. *S. Schwartz*

105. Coastal Geology. S

An investigation of the evolution, morphology, and processes in the coastal zone including the terrestrial (marine terraces, dunes, estuaries, sea cliffs) and marine (beaches, continental shelves, sea level changes, shoreline erosion and protection, waves, tides) components and their interaction. Laboratory: 3 hours. Students are billed a materials fee. Prerequisite(s): course 10 or 5 or 20. Course 10L or 5L or 20L is suggested as an optional preparation for non-Earth sciences majors. *G. Griggs*

107. Remote Sensing of the Environment. W

Introduction to geographic information systems (GIS) and remote sensing (RS) as valuable tools in the study of geology. Covers application of GIS/RS to study of surface processes, including landslides, hydrologic basins, coastal erosion, modern floods, volcanic activity and surface deformation. Prerequisite(s): course 5 or 10 or 20. Enrollment limited to 36. *E. Silver*

109. Elements of Field Geology. F,S

Basic tools and techniques used in geologic fieldwork. Preparation, analysis, and interpretation of geologic maps. Nine to 10 days of weekend field trips required, including a six-day geologic mapping exercise. Laboratory: 3 hours. Recommended for courses 120, 130, 150, and required for 188A-B. May not be taken concurrently with course 120, 150, or 188. Students are billed a materials fee. (General Education Code(s): W satisfied by taking this course and courses 188A and 188B.)

Prerequisite(s): Satisfaction of the Entry Level Writing Requirement, course 10 or 5 or 20, and 10L or 5L or 20L. Concurrent enrollment in 109L is required. Enrollment limited to 25. (F) *H. Schwartz*, (S) *The Staff*

109L. Field Geology Laboratory (2 credits). F,S

Laboratory exercises essential to the successful completion of fieldwork required in course 109. Topics include topographic maps, Brunton compass, rock identification and description, geologic map analysis, structure section "construction," and landslide recognition. Concurrent enrollment in course 109 required. Enrollment limited to 25. (F) *H. Schwartz*, (S) *The Staff*

110A. Evolution of the Earth. F

Investigation of the processes and mechanisms that have produced the present Earth

system, with an emphasis on the temporal evolution of the earth from the Archean to the present. Specific topics covered include cyclicity in Earth processes and the evolution of, and interplay between the planet's crust, atmosphere, hydrosphere, and biosphere. Prerequisite(s): courses 5 or 10 or 20, and 5L or 10L or 20L, and Mathematics 11A or 19A. *P. Koch*

110B. Earth as a Chemical System. W

The chemical properties of Earth materials and the chemical processes by which the planet has evolved to its present state. Specific topics covered include properties of minerals; the genesis of igneous, metamorphic, and sedimentary rocks; and the linkage between the solid Earth and the hydrosphere. Enrollment is permitted by permission code with equivalent or exceptional background, or if enrolled concurrently in Chemistry 1B. Prerequisite(s): courses 5, or 10, or 20, and 5L, or 10L, or 20L, and Chemistry 1B. *E. Knittle*

110C. The Dynamic Earth. S

Physical processes occurring in the interior of the earth, at its surface and in the oceans and atmospheres including plate tectonics, structural deformation of rocks, and material and heat transport. Students are billed a materials fee. Prerequisite(s): course 5 or 10; or 20 and 5L or 10L or 20L; and course 111 or Mathematics 22 or 23A; and Physics 6A or 5A. *E. Brodsky*

110L. Evolution of the Earth Laboratory (2 credits). F

Laboratory sequence illustrating topics covered in course 110A. Emphasis is on quantifying and evaluating different phenomena related to thermal, tectonic, climatic, and evolutionary processes. Prerequisite(s): concurrent enrollment in course 110A. *P. Koch*

110M. Earth as a Chemical System Laboratory (2 credits). W

Laboratory sequence illustrating topics covered in course 110B. Emphasizes identification of the major rock-forming minerals and common rock types; principles of basic crystallography. Prerequisite(s): concurrent enrollment in course 110B. *E. Knittle*

110N. The Dynamic Earth Laboratory (2 credits). S

Laboratory sequence illustrating topics covered in course 110C. Prerequisite(s): concurrent enrollment in course 110C. *E. Brodsky*

111. Mathematics in the Earth Sciences. F

Series and sequences, vectors, 3D analytic geometry, partial differentiation, matrix algebra, and differential equations with applications in the Earth sciences. Topics include matrix manipulation, systems of linear equations, least-squares, Taylor series, gradients, optimization, analytic and numerical solutions to differential equations. Prerequisite(s): courses 5 or 10 or 20 and Mathematics 11B or 19B. (General Education Code(s): Q.) (F) *W. Nimmo*

116. Hydrology. *

Introduces processes involving water on and near Earth's surface, including meteorology, water properties, surface flows in streams and runoff, flood analysis, ground water, water budgets, sediment transport, erosion, and water quality. Problem set and laboratory each week. Laboratory/field: 3 hours. Students are billed a materials fee. Alternates annually with course 146. Prerequisite(s): course 10 or 5 or 20, and Mathematics 11A or 19A. Course 5L or 10L or 20L recommended. *A. Fisher*

117. Paleomagnetism. S

How the fossil magnetism of rocks is used to decipher Earth's history: applications to tectonics, geochronology, stratigraphy, structural geology, geomagnetism, and archeology. Includes an overnight field trip to collect samples for a class research project. Students are billed a materials fee. Prerequisite(s): course 5, 10 or 20; Mathematics 11A or 19A; course 117L must be taken concurrently. *R. Coe*

117L. Paleomagnetism Laboratory (2 credits). S

A hands-on research project in the Paleomagnetic Laboratory. Students collectively drill oriented cores in the field (one–two days), prepare and measure the samples, and analyze and interpret the data. Each student writes an individual final report based on the class results. Prerequisite(s): concurrent enrollment in course 117 is required. *R. Coe*

119. Introduction to Scientific Computing. W

Introduction to solving scientific problems using computers. A series of simple problems from Earth sciences, physics, and astronomy are solved using a user-friendly scientific programming language (IDL). Prerequisite(s): Mathematics 11A or 19A. (General Education Code(s): IN.) *G. Glatzmaier*

120. Sedimentology and Stratigraphy. S

Stratigraphic principles used in classifying sedimentary rocks. Fundamentals of sedimentary mechanics. Analysis and interpretation of facies and depositional systems. Introduction to seismic facies and basin analysis. Course includes four Saturday field exercises. Students are billed a materials fee. Prerequisite(s): course 110A. Course 110B is recommended as preparation. May not be taken concurrently with course 109. *M. Clapham, J. Zachos*

120L. Sedimentology and Stratigraphy Laboratory (2 credits). S

Laboratory sequence illustrating topics in course 120, including sedimentary petrology, sedimentary structures, sequence stratigraphy, and geohistory analysis. Prerequisite(s): concurrent enrollment in course 120. *M. Clapham, J. Zachos*

121. The Atmosphere. *

Course focuses on understanding basic atmospheric weather and climate phenomena starting from the fundamentals of physics and chemistry. Using this approach, covers topics such as atmospheric circulation, precipitation, clouds, storms, urban and regional air quality, atmospheric aerosols, and climate and global change. Prerequisite(s): Mathematics 11B or 19B, and Chemistry 1C. Offered in alternate academic years. *P. Chuang*

125. Analytical Paleobiology. S

Project-based introduction to analytical methods in paleobiology and paleoecology, including univariate and multivariate statistics, cluster analysis and ordination approaches, and morphometrics. Requires one weekend field trip at the start of the quarter. Prerequisite(s): course 101. Offered in alternate academic years. *M. Clapham*

128. Isotopes: Fundamentals and Applications in Earth and Marine Sciences. *

Explores the fundamentals and concepts of stable, radiogenic, and cosmogenic isotope chemistry with applications relevant to Earth, marine, and biological sciences. Prerequisite(s): course 110B or permission of instructor. *J. Zachos*

130. Magmas and Volcanoes. *

Introduction to the relationship between tectonic environments and the genesis of rock assemblages, primarily igneous and metamorphic. Examples from California and elsewhere are used to illustrate petrogenetic processes and characteristic

petrologic features of rocks from all major tectonic settings. Students are billed a materials fee. Prerequisite(s): course 110B. Concurrent enrollment in course 130L is required. *J. Gill*

130L. Magmas and Volcanos Laboratory (2 credits). *

An introduction to optical mineralogy and the petrography of igneous rocks. Concurrent enrollment in course 130 required. Prerequisite(s): course 110B. Concurrent enrollment in 130 is required. *J. Gill*

140. Geomorphology. W

An introduction to the evolution of the Earth's landscape, with emphasis on the processes responsible. Review of climatic and tectonic forcing followed by detailed discussion of weathering, glaciers, hillslopes, wind, rivers, and coastal processes with emphasis on their geographic distribution. One single day and one three-day field trip. Prerequisite(s): course 110A. Concurrent enrollment in 140L is required. *N. Finnegan*

140L. Geomorphology Laboratory (2 credits). W

Laboratory sequence illustrating topics covered in course 140. These extensive laboratory exercises emphasize the quantification of the geomorphic processes and forms, and on the writing of concise summaries of the science in the form of abstracts. Students are billed a materials fee. Prerequisite(s): Concurrent enrollment in course 140 is required. *N. Finnegan*

142. Engineering Geology for Environmental Scientists. *
