UCSC General Catalog Updates 2011-12

The online catalog, available here in html format, contains comprehensive information about UC Santa Cruz, including both undergraduate and graduate academic programs and courses, degrees and graduation requirements, a list of teaching staff, campus life, and other information.

To find descriptions of each course offered at UCSC, go to the [Programs and Courses](#) section. The introduction to Programs and Courses offers information on how to interpret course descriptions.

The UCSC General Catalog Online 2010-12 reflects the content of the printed catalog, which is printed every other year. Changes that occur after the catalog's last printing have been updated on this web site as follows:

Programs and Courses

- Program statements. Changes to each program for 2011-12, are presented with additions in underlined green type and deletions in ~~red strikethrough type~~. Clean, unmarked copies of program statements with changes also appear in their finalized version in black type without additions and deletions highlighted. Program statements with no changes for 2011-12 are also provided.
- Courses. All active courses for the academic year 2011-12.
- Faculty. Faculty listings by department for the academic year 2011-12.

All Other Sections of the Catalog

All other sections of the catalog are presented regardless whether they underwent revision. Administration and staff departments whose text underwent revision are presented only in final, revised form with changes incorporated, but not highlighted. They include:

- Fields of Study
- Undergraduate Admission and Financial Information
- Expenses and Financial Resources
- Planning Your Academic Program
- Undergraduate Academic Requirements
- Courses that Fulfill General Education Requirements
- Graduation Requirements
- The Colleges
- Teaching and Administrative Staff
- Appendix A

Fees and admissions requirements are kept as current as possible and may be updated at any time.

Quarterly updates to catalog information are also reflected in the [Schedule of Classes](#).

Welcome to UC Santa Cruz

Welcome to UC Santa Cruz. Whether you're here for undergraduate or graduate study, you are beginning an extraordinary chapter of your life. Your years here will be transformational, and I encourage you to take advantage of all that UCSC has to offer.

The stunning natural beauty of our campus is a compelling backdrop for your educational journey. Our redwood forests, expansive meadows, and breathtaking views of the Monterey Bay are unmatched. Prepare to be inspired by your surroundings.

But you will quickly learn that UC Santa Cruz is much more than a pretty place.

Our distinguished faculty make this a dynamic university. They provide classroom experiences that challenge, inspire, and reward students, and they conduct outstanding research that expands the bounds of knowledge. More than 60 percent of UCSC undergraduates gain hands-on research experience during their years here. Faculty are your partners on this educational pathway, and their dedication will help you achieve your goals. Your fellow students are another invaluable resource. Together, you will share experiences and create lifelong memories. In residence halls, classrooms, laboratories, performance halls, and field sites, the diversity of our student body will enrich what you learn—and how you learn it.

This campus is known as a place where artists work with computer scientists, biologists collaborate with engineers, and environmentalists team up with educators. Our researchers reach across the borders of traditional disciplines to form creative collaborations that have produced some of UCSC's proudest achievements. I hope you will bring an adventurous spirit to your studies, delving into unfamiliar territory to expand your horizons.

I congratulate you on choosing UCSC, and I welcome you to our community of proud Banana Slugs. I look forward to congratulating you again at graduation, when you join the distinguished family of UCSC alumni.

Sincerely,

GEORGE BLUMENTHAL
Chancellor

August 2010

Introducing UCSC

The University of California

The University of California was chartered as a land-grant college in 1868. From its rural beginning, the university has developed into one of the world's most distinguished universities, acclaimed for its research, scholarship, and dedication to undergraduate and graduate education. There are 10 University of California campuses located regionally throughout the state: Berkeley, Davis, Irvine, Los Angeles, Merced, Riverside, San Diego, San Francisco, Santa Barbara, and Santa Cruz. In addition, there are some 800 associated research institutes, laboratories, agricultural field stations, and extension centers serving California and the nation. The university is the primary state-funded academic agency for research. Its library collection, with 34 million volumes, is among the best in the country.

The University of California faculty, more than 8,700 in number, is distinctive in its 27 living Nobel Laureates and 372 members of the National Academy of Sciences—more than any other college or university system. Faculty membership in the American Academy of Arts and Sciences totals 519.

There are more than 160,000 undergraduates culled from the top 12.5 percent of the state's high school graduates and approximately 50,000 graduate students. The 1.5 million living alumni enrich the nation with public service and leadership.

The Santa Cruz Campus

Since its inception in 1965, the University of California, Santa Cruz, has been dedicated to excellence in undergraduate education, graduate studies, and research. UCSC students can take advantage of innovative academic planning combined with the research resources and scholarship strengths of the University of California system. At UC Santa Cruz, a program of general education is enhanced with opportunities for academic specialization.

Among the faculty and emeriti drawn to UC Santa Cruz by the opportunity for innovative teaching and scholarship are 14 members of the National Academy of Sciences, 24 members of the American Academy of Arts and Sciences, and 31 members of the American Association for the Advancement of Science. Numerous faculty have been awarded Guggenheim Fellowships, and several have been awarded national awards for distinguished teaching. Furthermore, two faculty members, three bachelor's degree recipients, and two Ph.D. recipients have been named MacArthur Fellows, and since 1972, when UC Santa Cruz began participating in the program, about 115 Fulbright scholarships have been awarded to UC Santa Cruz students and alumni. Five UC Santa Cruz alumni have been awarded Pulitzer Prizes.

The planned enrollment of the campus for 2010–12 is approximately 16,000 students, of whom some 1,500 will be graduate students. UCSC seeks and welcomes students, faculty, and staff of diverse ethnic and cultural experiences. UCSC plans to increase both its enrollment and resources and to diversify its educational and research opportunities over the next few years. New facilities are being built to meet current and future needs. The McHenry Library has been expanded by more than 75 percent and the original building has been seismically reinforced. The 27,000-square-foot Digital Arts building was completed in 2010.

The residential college is an important part of the Santa Cruz undergraduate experience. The 10 colleges divide the university into smaller communities that serve as a social and intellectual gathering place for 1,200 to 1,600 students and 30 to 110 faculty fellows from a variety of academic disciplines. Every undergraduate student affiliates with a particular college while participating in a campuswide academic program. All academic majors are open to students from all colleges.

Each college has a distinctive quality derived from its core course and extracurricular programs, and its faculty and their academic disciplines. Detailed descriptions of the ten colleges can be found in [The Colleges](#).

Undergraduate education. The campus offers more than 60 major programs within the arts, engineering, humanities, physical and biological sciences, and social sciences—as well as interdisciplinary-major programs. A complete list of academic programs and concentrations appears on the [Fields of Study](#) chart, and detailed descriptions begin in the Programs and Courses section of the catalog.

The major programs are administered by departments. In most cases, departments are composed of faculty in the same field, but interdisciplinary programs draw on faculty from several fields. In addition to established major programs, individual majors are available.

At Santa Cruz, letter grades are assigned in all credit courses. In addition, academic performance in each course may be recorded by a narrative performance evaluation. (See [Evaluating Academic Performance](#).)

Undergraduate education at Santa Cruz is focused on the individual student. UCSC's college core courses give first-year students a small-seminar experience; intensive work in writing, discussion, and critical reasoning; as well as an orientation to academic life. To fulfill UCSC's rigorous comprehensive requirement, every senior must pass a comprehensive examination or complete an equivalent body of work.

Individual research is encouraged, and hundreds of research papers coauthored by Santa Cruz undergraduates and their professors have been published in journals.

Annually, about 500 Santa Cruz students broaden their academic careers through the UC [Education Abroad Program \(EAP\)](#), which allows students to incorporate full-time study abroad as UC credit toward their major. The EAP provides a vital international connection for academic preparation in an increasingly interdependent world (see [International Education](#)).

The UCSC campus strongly encourages undergraduate students to take advantage of the many opportunities for public service such as those provided through the campus's field programs, colleges, and Career Center. Individual studies, apprentice teaching, field studies, and internships can be important parts of the undergraduate experience. Over 1,400 students participate in the campus's field programs each year (see [Field Programs](#)).

In a recent survey of graduating seniors, 73 percent indicated plans to continue their education in advanced-degree programs. In a study of more than 60 elite Association of American Universities member schools, UCSC ranked 15th in the ratio of bachelor's degree recipients who went on to receive doctorates. UCSC ranked third in the nation in the percentage of master's degrees awarded to women (44.2 percent). UCSC alumni also display a strong commitment to providing service to others: UCSC ranks 21st nationwide among universities with more than 15,000 undergraduates in the number of volunteers who are serving in the U.S. Peace Corps in 2010. UCSC graduates excel both inside and outside the classroom.

Graduate education. The UCSC campus offers graduate programs in more than 30 fields. Within the graduate programs, there are a range of options for concentrated study in a specialized field. Graduate study at Santa Cruz emphasizes close interaction between faculty and students, independent student research, supervised teaching experience, and interdisciplinary work. Further graduate information begins in the [Graduate Education](#) section of the catalog.

A number of major university research units are based or have a branch at the Santa Cruz campus: UC Observatories/Lick Observatory, the Institute of Marine Sciences, the Santa Cruz Institute for Particle Physics, the Institute of Geophysics and Planetary Physics, the Institute for Quantitative Biomedical Research (QB3), and the Center for Information Technology Research in the Interest of Society (CITRIS). The campus supports other organized research endeavors ranging from Dickens studies to Chicano/Latino research to agroecology. Programs stem from existing academic strengths and the unique assets afforded the campus by its location in the Monterey Bay region (see [Resources for Learning and Research](#)).

The central Santa Cruz campus occupies 2,000 acres on the west side of the city of Santa Cruz, on Monterey Bay, about 75 miles south of San Francisco and 35 miles southwest of San Jose. Expansive meadows at the campus entrance gradually slope up to a redwood forest that covers most of the site. Each residential college is within easy access of the campus's central core, which includes an extensive library, science laboratories, lecture halls, art studios, theater arts and music centers, a student union, and athletic facilities. Although the campus is spread out over many acres of hilly terrain, its programs are accessible to people with mobility impairments (see [Disability Resource Center](#)).

The city of Santa Cruz is a well-known recreational area and center for the arts. Mild weather, miles of beaches, and many cultural opportunities combine to make Santa Cruz an enjoyable place to study and live.

Accreditation. The University of California, Santa Cruz, is accredited by the Accrediting Commission for Senior Colleges and Universities of the Western Association of Schools and Colleges (WASC), 985 Atlantic Avenue, Suite 100, Alameda, CA 95501, (510) 748-9001, an institutional accrediting body recognized by the Council for Higher Education and the U.S. Department of Education.

UC Santa Cruz is also accredited by the Accreditation Board for Engineering and Technology (Computer Engineering and Electrical Engineering), the American Chemical Society Committee on Professional Training (Chemistry), and the California State Commission on Teacher Credentialing (Education).

Persons interested in reviewing the accreditation documents should contact the Office of the Campus Provost and Executive Vice Chancellor, Kerr Hall, (831) 459-3885.

Combined majors. In addition, students may complete a combined major leading to a B.A. degree in a number of designated fields. Combined majors currently available include those in Earth sciences/anthropology, economics/mathematics, environmental studies/biology, environmental studies/Earth sciences, environmental studies/economics, Latin American and Latino studies/global economics, Latin American and Latino studies/literature, Latin American and Latino studies/politics, and Latin American and Latino studies/sociology. Students also have the option of pursuing a double major .								
c = concentration, or emphasis, within a program. Some programs give students the option of following a general course of study or selecting a concentration; other programs require students to choose a concentration. Consult the program on the page indicated.								
1 Combined B.S./M.S. in physics is available with concentrations in: <ul style="list-style-type: none"> a) Materials and device physics b) Energy and the environment c) Computational physics d) Finance and economics e) Medical biophysics 								
2 A combined B.S./M.S. program in computer engineering is also available.								
3 A master of fine arts (M.F.A.) degree is awarded in digital arts and new media.								
4 Because California state law requires prospective teachers to earn a bachelor's degree in an academic discipline other than education, no undergraduate major is offered. All teaching credentials are earned postbaccalaureate. UCSC offers the professional clear Crosscultural, Language and Academic Development (CLAD) and Bilingual Crosscultural, Language and Academic Development (BCLAD) multiple subjects credentials, which are used in self-contained elementary classrooms (K–6) where all subjects are taught by the same teacher. UCSC also offers the CLAD and BCLAD single subjects credentials, which are used in departmentalized settings where the teacher is responsible for one subject (7–12). A Doctor of Education (Ed.D.) in collaborative leadership is also available.								
5 An intensive major is also available.								
6 B.M. degree in music also available. Doctorate of musical arts (D.M.A.) degree in composition also available.								
Degrees B.A. = Bachelor of Arts B.M. = Bachelor of Music B.S. = Bachelor of Science D.M.A. = Doctor of Musical Arts Ed.D. = Doctor of Education M.A. = Master of Arts M.F.A. = Master of Fine Arts M.S. = Master of Science Ph.D. = Doctor of Philosophy

Undergraduate Admission and Financial Information

Admission

Undergraduate admission to the University of California is based on academic achievement, as well as a wide range of personal accomplishments and educational contexts. Minimum admission qualifications are the same for each UC campus, but each campus uses additional criteria when the number of qualified applicants exceeds capacity.

If you are considering applying to UC Santa Cruz, the Office of Admissions wants to help you learn more about the campus and its distinctive educational programs. For more information, see admissions.ucsc.edu.

If you are able to visit the campus, you may wish to take a student-led tour. The Office of Admissions offers tours on weekdays, and reservations are required. Visit our web site at admissions.ucsc.edu/campustours for information and reservations for campus tours. Please see admissions.ucsc.edu/transferworkshops for information and reservations for transfer information sessions.

The University of California, Santa Cruz, continues to take positive steps to increase the diversity of the student population, including applicants coming from low socioeconomic backgrounds, students with disabilities, current members of the military, military veterans, and non-traditionally aged students. The university does not discriminate on the basis of race, color, national origin, religion, sex, gender identity, pregnancy (pregnancy, childbirth, and medical conditions related to childbirth), disability, age, medical condition (cancer-related), ancestry, marital status, citizenship, sexual orientation, or status as a military veteran or special disabled veteran in admission to or participation in its programs, activities, or services.

Educational Opportunity Programs at UCSC are designed to encourage students from educationally and/or economically disadvantaged backgrounds to prepare for and enter the university. For a description of these programs, see [Educational Opportunity Programs](#).

Admission by Exception. Special consideration may be given to a limited number of applicants who do not meet the minimum admission qualifications. Admission by Exception is granted to a very small percentage of those considered for admission. Such factors as academic accomplishments in light of a person's life experiences and/or special circumstances, socioeconomic background, special talents and/or achievements, contributions to the community, and the quality of the applicant's personal statement are taken into consideration when reviewing applicants seeking Admission by Exception.

Graduation rates. The following graduation-rate information is listed in compliance with the 1990 Title I: Federal Right-to-Know Act, Section 103. Fifty percent of the students who entered as first-year students in 2004 graduated in four years; 69 percent of those who entered in 2003 graduated in five years; and 71 percent of those who entered in 2002 graduated in six years. In recent years, those who entered as first-year students took an average of 4.19 years to graduate, and students transferring to UCSC as juniors averaged 2.29 years. These graduation rates are well above the national averages.

In accord with the Education Amendments of 1976, Section 493A, more detailed information regarding retention is available on the Institutional Research web site at planning.ucsc.edu/irps/retengrad.asp.

Admission Procedures

The University of California Application for Undergraduate Admission and Scholarships may be accessed through admissions.ucsc.edu.

In addition to the application, the above site includes a wealth of information for prospective UC students about undergraduate education, admission, financial aid, and various topics of interest.

Application Filing Periods

Applications for the fall quarter must be submitted during the month of November. Applications for winter quarter admission are accepted only as enrollment allows. Check the Office of Admissions in

mid-June to see whether UCSC is accepting applications for winter quarter. UCSC does not accept applications for spring quarter admission.

Quarter of Attendance	Attendance Filing Period
Fall quarter 2012	November 1–30, 2011
Winter quarter 2013	July 1–31, 2012
Fall quarter 2013	November 1–30, 2012
Winter quarter 2014	July 1–31, 2013

Application Fees

The application fee is \$60 (\$70 for international nonimmigrant applicants) to apply to one campus of the university. For each additional campus you select, you must pay an extra \$60 fee (\$70 for international nonimmigrant applicants). These fees are subject to change and are not refundable. The online application includes payment instructions.

Fee Waivers

The University of California will waive application fees for up to four campuses for certain students who otherwise would be unable to apply for admission. To qualify for the fee waiver, you must meet specific requirements related to your family income and size. The fee waiver is for U.S. citizens and permanent residents only.

Students who qualify for fee waivers and who select more than four campuses must pay \$60 for each additional choice. Methods of obtaining fee waivers are listed below.

An online fee waiver form is available to applicants when they apply. The application automatically determines if you are eligible for the fee waiver as soon as it is complete.

- High school students: Use the College Board fee waiver. It is available from your school counselor.
- EOPS community college students: If you are enrolled in Extended Opportunity Programs and Services (EOPS) at a California community college, obtain a fee waiver authorization from the EOPS Office.
- Other applicants: Qualified students may obtain a UC fee waiver authorization at a UC campus Admissions, Relations with Schools, or Educational Opportunity Programs Office. When requesting a fee waiver authorization, be prepared to answer questions about your gross family income and family size.

University of California College Prep (UCCP)

UCCP publishes free high-quality online courses and content to benefit California students, with a special emphasis on helping underserved students gain college eligibility. A statewide University of California program, UCCP mines the educational resources of UC faculty and programs to develop the highest-quality online courses. The program makes its UC-approved Advanced Placement® and college-prep courses available to California students, teachers, and schools at no cost. UCCP courses are aligned to California content standards and are College Board certified. In 2009–2010, more than 323,000 California students and teachers accessed UCCP content and more than 2 million more students and teachers worldwide viewed our courses. The program currently licenses a catalog of 22 high school courses and 34 community college courses through educational partnerships. View UCCP courses at www.uccollegeprep.org.

Admission as a Freshman

The university considers you a freshman applicant if you have graduated from high school and have not enrolled in a regular session at any college or university. If you attend a summer session immediately after graduating from high school, you are still a freshman applicant.

The admission and selection process to UC Santa Cruz reflects the academic rigor and preparation needed for admission to a major research institution. Meeting the minimum qualifications for the university does not guarantee you admission as a freshman. Students are encouraged to achieve well beyond the minimum qualifications to enhance their chances for selection.

UC Santa Cruz uses a holistic approach in selecting freshmen for admission. Applicants are thoroughly reviewed to determine their full spectrum of academic and personal achievements, viewed in the context of his/her academic and personal opportunities. UCSC uses 14 faculty-approved criteria to determine an individual, single score for each applicant.

Information regarding the admission and selection process for UC Santa Cruz can be accessed at admissions.ucsc.edu. This site provides information on the minimum qualifications for the University of California for both residents and nonresidents of California, including international students.

High School Preparation for University Work

Carefully planned high school course work provides you with the best preparation for your undergraduate university studies, and allows for advanced preparation for your chosen field of study. Most important, students who master certain basic knowledge and skills in high school substantially increase their chances of success at the university. (Requirements for transfer students are explained in the [Admission as a Transfer Student](#) section.)

The basic foundation of UC qualifications is the completion of the high school courses required for admission (see "[a–g](#)" [Subject Requirement](#) below). However, you should take courses beyond the minimum levels in reading, writing, and mathematics in order to be adequately prepared for basic university courses that you may be expected to take freshman year.

A well-prepared student will have mastered the equivalent of four years of English composition and literature with a focus on expository writing; four years of mathematics, including a precalculus course in the senior year; two to three years of a language other than English; two to three years of laboratory science; two or more years of history and social sciences; and one or more years of visual or performing arts.

You should also give careful thought to the general field of study, and perhaps the specific major, you want to pursue at the university. By making this decision in advance, you can plan to take additional courses in high school related to the field.

Subject Requirement

a. History/social science—two years required. Two years of history/social science, including one year of world history, cultures, and geography; and one year of U.S. history or one half year of U.S. history and one half year of civics or American government.

b. English—four years required. Four years of college preparatory English that include frequent and regular writing, and reading of classic and modern literature. No more than one year of ESL-type courses can be used to meet this requirement.

c. Mathematics—three years required, four years recommended. Three years of college preparatory mathematics that include the topics covered in elementary and advanced algebra and two- and three-dimensional geometry. Approved integrated math courses may be used to fulfill part or all of this requirement, as may math courses taken in the seventh and eighth grades that your high school accepts as equivalent to its own math courses.

d. Laboratory science—two years required, three years recommended. Two years of laboratory science providing fundamental knowledge in at least two of these three foundational subjects: biology, chemistry, and physics. Advanced laboratory science courses that have biology, chemistry, or physics as prerequisites and offer substantial additional material may be used to fulfill this requirement. The last two years of an approved three-year integrated science program that provides rigorous coverage of at least two of the three foundational subjects may be used to fulfill this requirement.

e. Language other than English—two years required, three years recommended. Two years of the same language other than English. Courses should emphasize speaking and understanding, and include instruction in grammar, vocabulary, reading, composition, and culture. Courses in languages other than English taken in the seventh and eighth grades may be used to fulfill part of this requirement if your high school accepts them as equivalent to its own courses.

f. Visual and performing arts discipline (VPA)—one year required. A single yearlong approved arts course from a single VPA discipline: dance, drama/theater, music, or visual art.

g. College preparatory electives—one year required. One year (two semesters), in addition to those required in "a–f" above, chosen from the following areas: visual and performing arts (non-introductory level courses), history, social science, English, advanced mathematics, laboratory science, and a language other than English (a third year in the language used for the "e" requirement or two years of another language).

Reading. University students must be able to read and understand scholarly publications, analyze what they read, and question themselves about an author's intentions, viewpoint, arguments, and conclusions. You should read commentaries and essays as well as textbooks, and a wide variety of other material—including literature, biography, nonfiction, and criticism—in addition to what you are required to read in class.

Writing. You must learn to write clearly and skillfully in English and to think critically and analyze what you learn in class and in your reading, so that you can present your ideas in a clear and persuasive manner.

University students proficient in composition must be able to understand the assigned topic, select and develop a theme by argument and example, use words and sentences that clearly and

precisely express what they mean, demonstrate an understanding of the rules of standard English, and punctuate and spell correctly.

Mathematics. A number of fields of study require preparation in mathematics beyond the three years necessary for admission to UCSC. All majors in engineering and the physical, mathematical, and life sciences include courses in calculus, as do programs leading to professional degrees in medicine, dentistry, optometry, and pharmacy. Moreover, many majors in the social sciences, business, and economics require statistics and/or calculus.

The recommended four years of high school mathematics should include basic operations with numerical and algebraic functions; operations with exponents and radicals; linear equations and inequalities; polynomials and polynomial equations; functions and their graphs; trigonometry, logarithms, and exponential functions; and applications and word problems.

Senior-Year Program. The senior year should be used to prepare you for your first year at the university and should include honors and advanced courses, as well as courses that will strengthen overall preparation. A challenging, successfully completed senior-year program is a natural bridge between high school and university course work in the intended major. A strong senior program can enhance your chances for admission to UC Santa Cruz.

High School Proficiency Examination

While the University of California expects freshman applicants to have graduated from high school, in lieu of the regular high school diploma, the university will accept the following:

- Certificate of Proficiency, awarded by the State Board of Education upon successful completion of the California High School Proficiency Examination
- General Educational Development (GED) Certificate
- Proficiency tests from other states

Transfer Credit

Transfer credit may be granted to a freshman applicant for acceptable college courses taken while still in high school if an official transcript is received from the college where the course work was completed.

Transfer credit is granted for specified College Board Advanced Placement Examinations completed with a score of 3, 4, or 5 and for specified International Baccalaureate Higher Level Exams completed with a score of 5, 6, or 7. A score of 30 or higher on the International Baccalaureate Diploma is also awarded transfer credit.

Admission as a Transfer Student

The University of California defines a transfer applicant as a student who has been a registered student in a college or university, or in college-level extension classes following high school graduation. Summer session attended immediately following high school graduation is excluded in this determination. If you are a transfer applicant, you cannot disregard your college record and apply for admission as a freshman.

The admission and selection process for transfers to UC Santa Cruz reflects the academic rigor and preparation needed for admission to a major research institution. Meeting the minimum qualifications for the university does not guarantee you admission as a transfer student. Students are encouraged to achieve well beyond the minimum qualifications to enhance their chances for selection, especially by completing as many of the lower-division courses required by their intended major as possible.

Transfer applicants are thoroughly reviewed to determine their full spectrum of academic and personal achievements, including transfer course work completed for their major. UCSC uses faculty-approved criteria to determine which transfer students will be selected for admission. UC Santa Cruz gives the highest priority to junior-level transfer students coming from California community colleges.

Information regarding the admission and selection process for UC Santa Cruz can be accessed at admissions.ucsc.edu. This site provides information on the minimum qualifications for the University of California for both residents and nonresidents of California, including international students.

UC Santa Cruz Transfer Admission Guarantee (TAG) Program

UC Santa Cruz's TAG (Transfer Admission Guarantee) Program is designed for California community college transfer students at the junior level. The benefits of participating in UCSC TAG include early review of academic records, notification that admission to UCSC is guaranteed (subject to the conditions of the program), opportunities for advising about major preparation and general education and/or Intersegmental General Education Transfer Curriculum (IGETC) requirements, informational mailings, and invitations to events.

The UC TAG application must be submitted online between Sept. 1st and Sept. 30th, 2011, for fall 2012 consideration. UCSC accepts transfer admission agreements for fall quarter only.

Further information may be found at admissions.ucsc.edu/apply/transfer-students/tag.html.

Credit for Courses Taken Elsewhere

The university gives unit credit to transfer students for courses they have completed at other accredited colleges and universities, including courses taken at recognized institutions outside of the U.S. To be accepted for credit, your courses must be comparable to those offered at the university, as determined by the UC Santa Cruz Admissions Office. The UC Santa Cruz department sponsoring your major decides which transfer courses may be used to satisfy major requirements.

Because a total of 70 semester units (105 quarter units) of credit toward a university degree may be earned at a community (two-year) college, only subject credit will be granted for courses taken in excess of these amounts.

Applicants will not be considered for admission if they have completed 90 semester units (135 quarter units) or more of UC-transferable credit. If students have earned all of their credits from community college, they are not affected by this limit. Advanced Placement (AP) or International Baccalaureate Higher Level (IBH) credit is permitted to exceed the 90 semester unit maximum by the number of AP or IBH units granted.

Opportunities to take courses at UC Santa Cruz as a nonmatriculated student are available through Summer Session, Open Campus/Concurrent Enrollment through UC Extension, and Intersegmental Cross-Enrollment.

UC Santa Cruz Transfer Services

The Office of Admissions provides information to all students who wish to transfer to UC Santa Cruz. For prospective transfer students and their families, the Office of Admissions offers Transfer Information Sessions. Designed for prospective transfer students and their families, Transfer Information Sessions are small-group meetings in which an Admissions adviser presents information about transfer admissions matters and transfer-related student services. Please note that pre-evaluations of transcripts are not available as part of the sessions. These sessions are designed for students who have not yet applied to UCSC. Students and their families may make reservations at admissions.ucsc.edu/transferworkshops.

Student-led guided tours take place year-round and also require advance reservations. Please see admissions.ucsc.edu/campustours to make a reservation.

In addition, UCSC Admissions counselors visit many community colleges in California. Check with your counseling department or transfer center to determine whether a UCSC counselor will be visiting your community college.

Admission of Students from Outside California

UCSC welcomes students from across the U.S. and all parts of the world to enhance our vibrant campus community. Nonresident applications must meet the same admission qualifications as California-resident students but with a higher GPA. Detailed information is provided at admissions.ucsc.edu/apply/freshman.html and admissions.ucsc.edu/apply/transfer-students/index.html. Information for all nine general campuses of the University of California can be viewed at www.universityofcalifornia.edu/admissions/.

Students who are not California residents are assessed nonresident tuition in addition to educational and registration fees. Residency for fee purposes is determined after admission based on documentation provided in a Statement of Legal Residency: reg.ucsc.edu/students/residency.htm.

Admission of International Students

The University of California welcomes applications from international students. The academic credentials of applicants from other countries are evaluated by Admissions specialists in accordance with UC faculty-approved regulations governing admission.

UC Santa Cruz accepts applications from international students for the fall quarter, and students should begin application inquiries a year before the quarter of desired admission. Openings for the winter quarter may be limited. If you are interested in applying for winter, check with the Office of Admissions. For information, write to admissions@ucsc.edu or the Office of Admissions, University of California, Santa Cruz, 1156 High Street, Santa Cruz, CA 95064.

If your native language is not English, you must certify proficiency in English by one of the following methods: earning a score of 83 or higher on the Internet-based Test of English as a Foreign Language (minimum 550 if paper-based TOEFL; minimum 220 if computer-based TOEFL),

or earning a minimum score of 7.0 on the International English Language Testing System (IELTS) exam, or completing two transferable English composition courses with grades of B or higher in a U.S. college or university.

A financial certificate and official academic records will be required if you are admitted to the university. Generally, nonimmigrant students must provide documentation that sufficient funds will be available to cover nonresident tuition, educational fees, and living expenses. The university does not offer financial assistance to international students.

For information about services for international students, see International Education Office.

Readmission

If you are an undergraduate who wants to return to UC Santa Cruz after an absence of a portion of a quarter or more, you must file an Application for Readmission. The application form is available online at advising.ucsc.edu/student/read and from your college office. The completed application should be filed, along with the nonrefundable \$60 application fee, with the Office of Admissions during the appropriate period:

Quarter of Application	Attendance Filing Period*
Fall quarter	November 1–July 31
Winter quarter	July 1–October 31
Spring quarter	October 1–January 31

*Filing deadlines for priority enrollment: fall, April 1; winter, October 1; spring, January 1.

If during your absence you attended another UC campus, an official transcript must be submitted to the Office of Admissions before your application will be sent to your college for approval. If you attended another collegiate institution, your UC Santa Cruz college may require a transcript. If you left for health reasons, clearance from the Cowell Student Health Center is required. You must pay all outstanding bills owed to the university before you will be permitted to register.

Admission to Special Categories

For information on applying for admission in the categories described below, please contact the Office of Admissions at admissions@ucsc.edu.

Second Bachelor's Degree

If your educational goals have changed substantially since receiving your bachelor's degree, you may be eligible to pursue a second undergraduate degree at UCSC. Applications from students interested in pursuing a second baccalaureate program will be considered as campus enrollment allows. Priority is given to applicants who have not yet had the opportunity to complete a bachelor's degree.

You must meet regular university admission qualifications, and your experience or previous scholarship record must show potential for academic success in your proposed area of study. Additional selection criteria will be applied, and admission is subject to approval by the appropriate department.

For a second degree, you must fulfill major and residence requirements, as well as system-wide requirements in American history and institutions and the [Entry Level Writing Requirement](#). You must enroll for at least three quarters and are usually restricted to six quarters total.

Limited Status

If you have already completed an undergraduate degree and you have a particular reason to take specific undergraduate university classes, you may be eligible to enroll in a nondegree program as a limited-status student. Applications from students interested in limited-status enrollment are permitted as campus enrollment allows. *Priority is given to applicants who have not yet had the opportunity to complete a bachelor's degree.*

Your proposed program of study must either prepare you for graduate or professional school or satisfy some definite educational need or interest. Participants generally enroll full-time for a specified period that does not exceed three quarters. You must meet regular university admission qualifications, and your experience or previous academic record must show potential for success in your proposed program. Additional selection criteria will be applied, and admission is subject to approval by the appropriate department.

Nondiscrimination and Affirmative Action Policies

Student-Related Matters

The University of California, in accordance with applicable federal and state law and university policy, does not discriminate on the basis of race, color, national origin, religion, sex, gender identity, pregnancy, physical or mental disability, medical condition (cancer related or genetic characteristics), ancestry, marital status, age, sexual orientation, citizenship, or service in the uniformed services. The University also prohibits sexual harassment. This nondiscrimination policy covers admission, access, and treatment in University programs and activities. University policy also prohibits retaliation for bringing a complaint of discrimination or participating a complaint process or investigation pursuant to this policy.

Inquiries regarding the University's student-related nondiscrimination policies may be directed to Student Judicial Affairs, (831) 459-1738, or e-mail sja.ucsc.edu.

Inquiries regarding the University's affirmative action, equal employment opportunity, and nondiscrimination policies as they relate to student employment may be directed to the Office for Diversity, Equity and Inclusion, (831) 459-3676 or e-mail cbene@ucsc.edu.

Inquiries regarding UCSC's Policy on Sexual Assault, the UC Policy on Sexual Harassment and Procedures for Reports of Sexual Assault(s) and Sexual Harassment and/or violations of Title IX may be directed to Title IX Coordinator/Sexual Harassment Officer, (831) 459-2462, or e-mail rew@ucsc.edu.

Student inquiries regarding disability or disability accommodations may be addressed to the Director, Disability Resource Center, (831) 459-2089; or e-mail drc@ucsc.edu.

Employment-Related Matters

The University of California prohibits discrimination against or harassment of any person employed by or seeking employment with the University on the basis of race, color, national origin, religion, sex, gender identity, pregnancy, physical or mental disability, medical condition (cancer-related or genetic characteristics), ancestry, marital status, age, sexual orientation, citizenship, or service in the uniformed services (as defined by the Uniformed Services Employment and Reemployment Rights Act of 1994).

University policy also prohibits retaliation against any employee or person seeking employment for bringing a complaint of discrimination or harassment pursuant to this policy, or against a person who assists someone with a complaint of discrimination or harassment for giving such assistance as the complainant may seek, or who participates in any manner in an investigation or resolution of a complaint of discrimination or harassment for participating in a way requested by the complainant or the university.

The University of California is an affirmative action/equal opportunity employer. The university undertakes affirmative action to ensure equal employment opportunity for minorities and women, for persons with disabilities, and for covered veterans. University policy is intended to be consistent with the provisions of applicable state and federal laws.

Inquiries regarding the university's affirmative action, equal employment opportunity, and nondiscrimination policies for academic, staff and student employment may be directed to the Office for Diversity, Equity and Inclusion, (831) 459-3676, or e-mail cbene@ucsc.edu.

Sexual Harassment/Title IX

The university cherishes the free and open exchange of ideas and expansion of knowledge. To maintain this freedom and openness requires objectivity, mutual trust, and confidence; it requires the absence of coercion, intimidation, or exploitation. The principal responsibility for maintaining these conditions must rest upon those members of the university community who exercise the greatest authority and leadership: faculty, managers, and supervisors.

The university has therefore instituted a number of measures designed to protect its community from sexual and other forms of harassment. Students, faculty, and staff who want information, advice, to file a complaint, and/or copies of the UCSC Policy on Sexual Assault, the UC Policy on Sexual Harassment, and Procedures for Reports of Sexual Assault(s) and Sexual Harassment should contact Rita E. Walker, Title IX/Sexual Harassment Officer, 105 Clark Kerr Hall, (831) 459-2462 or via e-mail at rew@ucsc.edu. For detailed information about the services of the Title IX/Sexual Harassment Office, visit the web site at www2.ucsc.edu/title9-sh/. The Title IX/SHO is also available to investigate other violations of Title IX.

Expenses and Financial Resources

In determining the cost of attending UCSC each quarter, students should consider both required fees and personal expenses. The figures below are provided to help you draw up a realistic personal budget. If you then conclude that you will need financial assistance in order to attend UCSC, you should read the Financial Aid section below. Fees and additional financial information for graduate students appear in the [Graduate Studies](#) section. *Tuition, fees, and other charges are subject to change without notice by the UC Regents. For the most current fee information, check Fees.*

Required Fees

Required fees are due and payable before the start of each quarter. At the beginning of each quarter, you will need sufficient funds to cover housing charges and book costs. For many financial aid recipients, however, fees and on-campus housing charges are paid automatically from approved student aid funds. If you are a financial aid recipient, please note that checks and direct deposits for scholarships, grants, and loans in excess of university charges are not available to you until after registration and enrollment each quarter.

The **Student Services Fee** funds student services that provide a supportive and enriching learning environment and that are complementary to, but not part of, the instructional program. Programs include, but are not limited to, services related to the physical and psychological health and well-being of students; social and cultural activities and programs; services related to campus life; and educational and career support.

The **Educational Fee** helps support student financial aid and related programs; admissions; registration; administration; libraries; operation and maintenance of plant; the university's operating budget; and all costs related to instruction, including faculty salaries.

Santa Cruz campus fees help support a wide range of student services, including college and campuswide student government, extracurricular programs and recreation facilities, campus child care, community and public service projects, Educational Opportunity Programs and scholarships, and free-fare use of the local transit systems. Campus fees paid by graduate students are provided on the web at [Course Fees](#).

In addition, all students, including foreign students, are assessed a mandatory **Health Insurance Premium**. The Cowell Student Health Center provides the primary care services for the plan while a contracted insurance company provides major medical and hospitalization insurance. There is an annual deductible, with most expenses covered at 80 percent of the customary and usual charge. Coverage includes, but is not limited to, hospital stays; surgical services; physician visits; emergency treatment; outpatient care; and pregnancy. Dependent coverage is also available. Detailed information is on the web at www2.ucsc.edu/healthcenter/billing/insurance.shtml or contact the Student Health Insurance Office, (831) 459-2389.

Waivers from the mandatory health insurance premium are available if you can show that your private insurance provides coverage equal to or better than the student health insurance plan. Deadlines for applying for a waiver are listed in the *Schedule of Classes* (reg.ucsc.edu/soc).

Some courses charge an additional Course Materials Fee. These fees recover the cost of materials, supplies, equipment, and support services not covered by the normal instructional budget. The fees are reviewed and approved annually by the Miscellaneous and Course Materials Fee Advisory Committee. The list of specific courses charging fees in 2011-12 is available in the quarterly *Schedule of Classes* and on the web at reg.ucsc.edu/coursefees.html.

Nonresident Tuition

If you are a resident of a state other than California or of another country, you must pay nonresident tuition, the nonresident educational fee, and other required fees (university registration and Santa Cruz campus fees). The criteria for residency appear in Appendix A.

Non-U.S. citizens note: Regardless of how long you live in California, only U.S. citizens and holders of immigrant visas may become qualified for resident classification.

Undergraduate Budget, 2011-12

California Residents

Nonresidents

Students Living On Campus	One Quarter	F-W-S Quarters	One Quarter	F-W-S Quarters
Required Tuition and Fees				
Student Services Fee (formerly University Registration Fee)	\$324.00	\$972.00	\$324.00	\$972.00
Tuition (Educational Fee)(a)	3,740.00	11,220.00	11,366.00	34,098.00
Santa Cruz campus fees	408.12	1,224.36	408.12	1,224.36
Health Insurance (waivable)	472.00	1,416.00	472.00	1,416.00
Subtotal	\$4,944.12	\$14,832.36	\$12,570.12	\$13,716.41
Estimated Personal Expenses (b)				
Room and board	\$4,724.00	\$14,172.00	\$4,724.00	\$14,172.00
Books and supplies	467.00	1,401.00	467.00	1,401.00
Miscellaneous	450.00	1,350.00	450.00	1,350.00
Transportation	226.00	678.00	226.00	678.00
Subtotal	\$6,052.00	\$18,156.00	\$6,052.00	\$18,156.00
Total Budget CA Residents	\$10,996.12	\$32,998.36		
Total Budget CA Nonresidents			\$18,622.12	\$55,866.36

a) Undergraduates who are unable to maintain a full-time program of study because of employment responsibilities, family obligations, or health problems may be eligible for a 50 percent reduction in Tuition. One quarter at \$1,870; two quarters at \$3,740.

b) Estimated personal expenses for students living off campus total \$4,784 per quarter or \$14,352 for three quarters. Estimated personal expenses for students living with family total \$3,077 per quarter or \$9,231 for three quarters.

Late Fees

You may be assessed late fees if you fail to make university payments or enroll by the specified deadlines. For example, late fees are assessed on a graduated basis for each month there is an unpaid balance on your university account, and at \$50 each for a late registration payment and/or late enrollment and \$25 for a late housing payment. Deadlines are published in *The Navigator* (the undergraduate campus handbook) and the *Schedule of Classes*, both of which are online at reg.ucsc.edu, and they appear on the Statement of Account.

Estimated Personal Expenses

The figures given for estimated personal expenses are for a single undergraduate living on campus. Expenses will be higher for married students, students with children, and graduate students. The information is as current and realistic as possible; however, expenses for students vary in accordance with lifestyles, priorities, and obligations.

Room and board (in college residences). Rates for room and board in the college residence halls depend on the type of accommodation and meal plan. The current rates may be found on the campus Housing Office website (<http://housing.ucsc.edu/>). The room and board amount of \$14,727 in the Undergraduate Budget table above is the cost for a double room, seven day meal plan and additional flexi dollars.

Schedules of Refunds

All Continuing and Readmitted Students and New Students Not Receiving Federal Financial Aid

Number of calendar days	Percentage of fees refunded*
1st day of instruction	100
2-7	90
8-18	50

19-35	25
36 and over	0

New Students Who Receive Federal Financial Aid and Withdraw during Their First Academic Term

Number of calendar days	Percentage of fees refunded*
1st day of instruction	100
2-7	90
8-14	80
15-21	70
22-28	60
29-35	50
36-42	40
43 and over	0

* For new students, the nonrefundable \$100 Undergraduate Acceptance of Admission Fee is withheld from the University Registration Fee; the schedule of refunds applies to the balance of fees. Percentages listed (days 1–35 or days 1–42) should be applied individually to Nonresident Tuition, the Educational Fee, the University Registration Fee, and Santa Cruz campus fees. The Health Insurance Fee is nonrefundable.

Rates are paid quarterly. The rate ranges listed above do not cover periods of academic recess, nor does the budget above. Housing charges are normally payable at the beginning of each quarter. However, students may arrange with the Campus Housing Office to pay monthly.

More detailed information on room and board expenses for the individual colleges appears in a brochure distributed as part of the admission process or available from the Campus Housing Office, 104 Hahn Student Services Building, (831) 459-2394.

Miscellaneous. This budget item covers a broad range of expenses including clothing, laundry, personal grooming, recreation, and health maintenance. It also covers minimum expenses for modest travel to visit family.

[\[Return to top.\]](#)

Fee Refunds

Students who cancel their registration before the first day of instruction in a given quarter are refunded all required fees minus a \$10 service charge. New undergraduate students who cancel their registration before the first day of instruction are entitled to a refund of all required fees except the nonrefundable \$100 undergraduate acceptance of admission fee (applied toward the Student Services fee).

Once the quarter has begun, students must petition for withdrawal. The percentage of fees refunded is determined by the effective date of the withdrawal, according to the schedule at the left, in which day 1 is the first day of instruction. A student is not eligible for university services after the effective date of withdrawal.

A student entering the armed forces before the sixth week of the quarter is entitled to a full refund of the Student Services fee—provided no course credit is received.

More detailed information on withdrawal and refund procedures is included in the quarterly Schedule of Classes and The Navigator, both online at reg.ucsc.edu, and in the Graduate Student Handbook (graddiv.ucsc.edu). Information on refunds of room and board charges is contained in the campus housing contract, provided to all applicants for on-campus housing. For more information on how withdrawing affects your financial aid, refer to the Financial Aid and Scholarship Office web site at financialaid.ucsc.edu.

Deferred Payment Plan

The Deferred Payment Plan (DPP) provides an alternative method of budgeting and paying registration fees. It allows these fees, to the extent not covered by scholarships, loans, or other financial aid, to be paid in monthly installments. Students have a choice of applying for a three-month plan for individual quarterly fees, or, at the beginning of the fall quarter only, for a nine-month plan to be used for the fall, winter, and spring quarters. A nonrefundable application fee of \$25 for the three-month plan, or \$60 for the nine-month plan, is required. Any student in good financial and academic standing may apply for DPP. Students receiving financial aid sufficient to cover registration fees in full are not eligible for this plan. For more information about how to apply for DPP, application deadlines, and campus policies regarding the program, contact the Office of Student Business Services, 203 Hahn Student Services Building, (831) 459-2107, e-mail oarinfo@ucsc.edu, or visit the web site at sbs.ucsc.edu.

Financial Aid

For undergraduate students who require financial assistance, the university maintains a robust financial aid program of grants, scholarships, loans, and part-time employment. Administered by the Financial Aid and Scholarship Office, these resources help bridge the gap between the cost of education and what parents and students can reasonably contribute.

If you are a dependent student, the amount of the contribution expected from you and your parents is determined through an analysis of your family's financial strength, considering such variables as income, number of dependents, living expenses, and savings and investments (excluding the home you live in). Federal, state, and university procedures and campus policies are used in the evaluation. The same methodology is used for married and independent students but parental information is excluded. The federal definition of independent status is used to determine your dependency when you complete the Free Application for Federal Student Aid (FAFSA).

The UC Blue and Gold Opportunity Plan ensures that undergraduate California residents whose families earn less than \$78,000 a year in 2011–12 who demonstrate financial need will have their UC system-wide fees fully covered with gift aid. Qualified students must be in their first four years of attendance (first two for transfer students). Students must also meet application deadlines.

Application Deadlines

The (FAFSA) may be submitted online at www.fafsa.gov after on January 1 preceding the academic year you wish to receive aid. Submit the FAFSA each year before our deadline which is March 2. A "FAFSA on the Web Worksheet" is available at the same web site to help you prepare for completing the FAFSA.

Students admitted to fall quarter will receive an estimate of their eligibility for financial aid in April.

In some cases, the Financial Aid and Scholarship Office will require additional information from applicants. These applicants will be sent an e-mail instructing them to log onto the student portal at [MyUCSC](#) and view their "To Do List," which will specify the required documents (e.g., copies of student and parent tax returns or other forms). These are mandatory requirements which must be received in the Financial Aid and Scholarship Office by the deadline on the To Do List to be considered for all sources of aid administered by UC Santa Cruz.

Estimated awards for admitted students may change as the result of our review of documentation we request.

Applicants who submit documents after our deadlines will be considered for aid on a funds-available basis.

Students admitted for winter quarter must have submitted a FAFSA by the date of the admission notification. Items requested on your MyUCSC To Do List must be submitted by December 20. Award notifications will be made as soon as possible after you are admitted or readmitted and all requested financial aid documents have been submitted.

[\[Return to top.\]](#)

Types of Aid

If you apply for financial aid and you meet the application deadlines, you are considered for all types of assistance described below. Depending on funds available and your financial need, your financial aid package may include a combination of grants, scholarships, loans, and work opportunities.

Grants

The following grants are available to undergraduates.

- UC Santa Cruz Grants are awarded to students based on their financial need. Funds for this grant program come in part from tuition paid by students at all campuses of the university.
- Cal Grant A and Cal Grant B are awarded by the California Student Aid Commission to California residents who meet income and asset eligibility requirements and who demonstrate financial need and academic achievement. In addition to submitting a FAFSA, applicants who have not previously received a Cal Grant must also complete and submit the Cal Grant GPA Verification Form by the state deadline of March 2 in order to be considered for this grant.
- *Federal Pell Grants* will provide a maximum of \$5,550 during 2010–11.
- *Federal Supplemental Educational Opportunity Grants* are available to students with substantial financial need. The maximum award is \$4,000.

Scholarships

UC Santa Cruz scholarships range from \$250 to \$10,000 per year. (The average award is about \$1,500.) Funding comes from private donors, alumni, and the university. Entering UCSC students apply for scholarships using the University of California Application for Undergraduate Admission. When filling out your UC application, answer the questions in the scholarship section. Your

application essay will serve as your scholarship essay. Selected students are notified in April. All current students will be automatically considered for scholarships based on their cumulative GPA. Notifications are e-mailed in August.

Merit scholarships are awarded competitively based on academic achievement and the potential success.

Regents Scholarships are the most prestigious merit scholarships awarded to undergraduates. Awards are made for periods of four years to entering frosh and for periods of two years to continuing or transfer students beginning their junior year at the university. For freshmen, the Regents Scholarship is \$20,000 paid over four years. For entering junior transfers, the Regents Scholarship is \$10,000 paid over two years. For continuing students, the amount varies based on the year in college and year appointed.

Other scholarships are restricted to students from particular geographic areas or family backgrounds or are limited to students in particular majors, classes, or colleges. The donors have different reasons for giving, and their varied interests are reflected in the wide range of scholarships available. Merit and restricted scholarship awards range up to \$1,500.

Regents Scholarships are awarded for periods of four years to entering frosh and for periods of two years to continuing or transfer students beginning their junior year at the university. These awards are based on academic achievement and promise, irrespective of financial need. For freshmen, the Regents Scholarship is \$20,000 paid over four years. For entering junior transfers, the Regents Scholarship is \$10,000 paid over two years. For continuing students, the amount varies based on grade level and year appointed.

Entering UCSC students apply for scholarships using the University of California Application for Undergraduate Admission. When filling out your UC application, answer the questions in the scholarship section. Your application essay will serve as your scholarship essay. Selected students are notified in April.

All continuing students will be automatically considered for UCSC scholarships based on cumulative GPA. Notifications are e-mailed in August.

Need-Based Loans

Student loan funds are administered by the Financial Aid and Scholarship Office in accordance with the regulations of the federal government. Need-based student loans are interest-free as long as the student is enrolled in college at least half-time.

Federal Perkins Loans are offered to first- and second-year students. Repayment begins nine months after graduation or withdrawal from higher education. When repayment begins the interest rate is 5 percent per year.

William D. Ford Federal Direct Subsidized Student Loans are funded by the federal government. Annual limits for dependent students are \$3,500 for first-year students, \$4,500 for second-year students, and \$5,500 for all other undergraduates. The annual limit for graduate students is \$8,500. Students may borrow up to \$23,000 for undergraduate study and up to \$65,500 for undergraduate and graduate study combined. Students pay an origination fee of up to 0.5 percent. Repayment begins six months after graduation or withdrawal from higher education. The interest rate is 3.4 percent fixed on all loans made in 2010–11.

Non-Need-Based Loans

William D. Ford Federal Direct Unsubsidized Student Loans are offered to students who do not demonstrate financial need. Interest is charged on unsubsidized loans from the date the loan is made. The interest rate is fixed at 6.8 percent.

The borrower must pay an origination fee of up to 0.5 percent. This is deducted from the amount of the loan. Annual loan limits for undergraduate dependent students are the same as the limits for Federal Direct Subsidized Loans (see above) plus an additional \$2000. The cumulative maximum loan for a dependent undergraduate is \$31,500.

Independent students have higher combined Federal Direct Subsidized and Unsubsidized Student Loan limits than dependent students. The annual limits for independent students are as follows: \$9,500 for first-year students; \$10,500 for second-year students; \$12,500 for other undergraduates; and \$20,500 for graduate students. Students may borrow up to \$57,500 for undergraduate study and \$138,500 for undergraduate and graduate study combined.

Students may begin repaying principal and interest on Federal Direct Unsubsidized Student Loans immediately, pay only interest immediately, or defer both principal and interest until they are no longer enrolled in school at least half-time.

Parents of dependent students may apply for a *Federal Direct Parent Loans for Undergraduate Students (PLUS)*. Parents may borrow up to the full cost of education as defined by the UCSC Financial Aid and Scholarship Office, less any financial assistance the student receives. Parents must demonstrate creditworthiness for loan approval. The interest rate is fixed at 7.9 percent. Borrowers pay an origination fee of up to 2.5 percent that is deducted from the loan amount. Loan repayments begin 60 days after the last disbursement.

Other loans. The University of California develops and publishes lists of private lenders who offer the most favorable terms for UC borrowers. Lender lists may be found on our web site at

financialaid.ucsc.edu.

Federal Work-Study

Federal Work-Study gives students the opportunity to work part-time to earn money to help cover expenses while enrolled at UC Santa Cruz. Students who demonstrate financial need may be offered a Work-Study award. This award does not guarantee a job — positions are competitive. Students must apply for positions at our Career Center web site, careers.ucsc.edu/.

Loan Forgiveness Programs

The federal government will forgive all or part of a student loan under certain circumstances. Examples of these include: performing volunteer work or military service; and practicing medicine in certain communities. For a summary of such exemptions, visit <http://www.finaid.org/loans/forgiveness.phtml>.

More Information

For more information about applying for financial aid, application and document deadlines for contact the Financial Aid and Scholarship Office, 205 Hahn Student Services Building, (831) 459-2963, or visit financialaid@ucsc.edu.

Veteran Services

The Veteran Services staff acts as a liaison between the Department of Veterans Affairs and students who, as veterans, veterans' dependents, or reservists, receive education benefits. The staff also assists with the California Department of Veterans Affairs' college fee-waiver program for children of veterans who have service-connected disabilities or who have died from service-related causes. Students who are California residents apply for the college fee-waiver program through their home county Veterans Services Office.

Students who are veterans or veterans' dependents should contact Veteran Services as soon as they receive notification of admission to UC Santa Cruz to ensure timely processing of their benefit claims.

Veteran Services staff members are located at 190 Hahn Student Services Building. An appointment may be arranged by calling (831) 459-2709 or by e-mail at registrar@ucsc.edu.

During their transition to the university and while they are enrolled as UCSC students, military veterans are provided a broad range of academic and support services by Services for Transfer and Re-Entry Students (STARS). The main STARS office is located in room 216A of the Academic Resources Center. Contact staff at (831) 459-2552, or visit the STARS web site, stars.ucsc.edu.

Undergraduate Academic Program

[Planning Your Academic Program](#) | [Graduation Requirements](#) | [General Education Requirements](#) | [Evaluating Academic Performance](#) | [Advising: From Course Selection to Careers](#) | [Office of International Education](#) | [Field and Exchange Programs](#) | [Summer Programs](#) | [UCSC Extension](#) | [Intersegmental Cross-Enrollment](#)

Planning Your Academic Program

At UC Santa Cruz, the academic year is organized on the quarter system. Three quarters—fall, winter, and spring—constitute the regular academic year. Most UCSC courses are equivalent to 5 quarter credits and require approximately equal amounts of work: about 15 hours per week per course. You are normally expected to enroll in 15 credits each quarter; enrolling in a reduced or expanded course load requires special approval. If you maintain a B average at UCSC, you may enroll in more courses without special approval. For specific information on how courses are organized, see [programs and courses](#).

You are normally expected to graduate in four years. To do so, you must pass an average of 45 credits per year, for a total of 180 credits. In order to complete certain majors with extensive course requirements, junior transfer students may need to spend more than two years at UC Santa Cruz.

The requirements for a bachelor's degree are explained in the following section. Your adviser can help you plan a program that fulfills these requirements efficiently while meeting your own educational goals (see [Advising: From Course Selection to Careers](#)).

Here is what you can expect during four years at Santa Cruz:

During your freshman year, you complete your college core course and satisfy the Entry Level Writing Requirement. You also begin to fulfill the general education requirements, which expose you to a range of disciplines, and you may begin courses in your field.

If you are uncertain about your choice of major, you may explore several fields of study during your first two years at Santa Cruz. You are expected to declare your major by the end of your sophomore year. Students interested in majors requiring heavy course prerequisites, such as music and most majors in the physical and biological sciences and engineering, should be certain they start the appropriate sequences in the first year; contact the department for advising.

During your junior and senior years at Santa Cruz, you concentrate on the upper-division requirements for your major and complete your comprehensive requirement, as well as complete your general education requirements. If you entered UCSC without having fulfilled the requirement in American history and institutions, you will need to do so before you graduate.

Transfer students should complete any lower-division requirements for their intended major that are offered at their current campus and may also find it helpful to complete courses that fulfill campus general education requirements. The Office of Admissions can help you select appropriate courses, and you should also consult with your community college adviser.

Graduation Requirements

To qualify for a bachelor's degree, you must meet the following conditions, which are explained in more detail in the following sections:

- Earn a minimum of 180 credits, each with a grade of D or better (or Pass)
- Satisfy the university requirements in American history and institutions and in Entry Level Writing (English composition)
- Meet the UCSC residence requirement
- Satisfy each of the campus general education requirements with a course grade of C or better (or Pass)
- Satisfy requirements of your UCSC college
- Complete an approved major program, including its comprehensive requirement, with grades of Pass, C, or better in all courses satisfying major requirements. In some majors, courses graded Pass may not be used to satisfy major requirements.
- Have a grade-point average of at least 2.0 in all letter-graded courses taken at UCSC and

- other University of California campuses
- Have no more than 25 percent of your UCSC credits graded on a Pass/No Pass basis. This includes any credits completed in the Education Abroad Program or on another UC campus in an intercampus exchange program. Departments may require that some or all courses used to satisfy the major must be taken for a letter grade.

As a UC Santa Cruz student, you are responsible for selecting the courses necessary to fulfill graduation requirements and prepare for advanced study or a career. It is essential that you consult regularly with academic advisers about course selection.

Keep copies of your own records, including your transcripts from other institutions, admission test scores, transfer credit information, UCSC quarterly academic record reports, and performance evaluations.

Transfer students may be able to use some of the courses they completed at other schools to help meet the 180-credit requirement. (Semester-system credits can be multiplied by 1.5 to derive equivalent quarter-system credit. The UCSC Office of Admissions determines which courses are transferable.

University Requirements

The Santa Cruz campus administers three requirements for graduation from the University of California: (1) American history and institutions, (2) Entry level writing requirement, and (3) UCSC residence. These requirements are described in detail below.

American History and Institutions

Every candidate for a bachelor's degree must demonstrate a knowledge of American history and institutions. You may fulfill this requirement in one of the following ways:*

- By achieving a score of 550 or higher on the SAT Subject Examination in U.S. History
- By achieving a score of 3, 4, or 5 on the College Board Advanced Placement Examination in U.S. History, or by achieving a score of 5, 6, or 7 on the IBH History of the Americas Examination
- By satisfactorily completing a college-level course in U.S. history and institutions
- By certification of completion of the requirement on a transcript from an accredited California institution of higher education
- By completing an acceptable history or government course in high school that satisfies the subject requirement for admission to the university, described in [Subject Requirements](#).

Entry Level Writing Requirement

Every candidate for a bachelor's degree must demonstrate an acceptable level of ability in English composition. Before your fourth quarter of enrollment, you must fulfill this requirement in one of the following ways:

- By achieving a score of 680 or higher on the Writing component of the SAT Reasoning Examination
- By achieving a score of 3, 4, or 5 on the College Board Advanced Placement Examination in English Language or English Literature, or by achieving a score of 5, 6, or 7 on the IBH English Language A1 Examination
- By achieving a score of 8 or higher on the systemwide UC Analytical Writing Placement Examination
- By demonstrating an acceptable level of proficiency on UCSC's Writing Placement Examination, given several times each year
- Prior to first enrollment at UC, by completing at another institution an acceptable college-level course of at least 4 quarter credits, or the equivalent, in English composition with a grade of C or better.

California high school seniors who have been admitted to UCSC must take the systemwide UC Analytical Writing Placement Examination given in May, unless they have already satisfied the requirement.

Residence

Every candidate for a bachelor's degree must be registered at UCSC for a minimum of three terms. (A term is a fall, winter, or spring quarter in which a student completes 6 or more credits. Each UCSC Summer Session in which you complete at least 2 credits is the equivalent of half a term's residence.) In addition, of the final 45 quarter credits, 35 must be in regular courses of instruction that you have taken as a registered student at UCSC. No more than 18 of the 35 credits may be completed in Summer Session. Courses taken through University Extension or the Intercampus Visitor Program do not constitute regular courses and therefore do not satisfy residence requirements.

The credit requirement for residence is applied differently to students participating in the Education Abroad Program (EAP) and the University of California in Washington, D.C. (UCDC), program. Students may satisfy the requirement in either of two ways. The first way is for students to complete 35 of their final 45 credits before leaving the Santa Cruz campus to participate in EAP or UCDC. In this scenario, students do not have to return to Santa Cruz for any additional course

work after they have finished EAP or UCDC. The second way to fulfill the residence requirement is for students to complete 35 of their last 90 credits at the Santa Cruz campus, with a minimum of 12 credits completed at UCSC after their return from EAP or UCDC.

General Education Requirements

The general education requirements are designed to introduce you to various kinds of information, reasons for learning, and approaches to acquiring knowledge, as well as to promote responsible use of what is learned. Obviously, general education requirements alone cannot achieve these ends. You are urged to look for as many opportunities as possible to gain a richer understanding of your own cultural heritage and social situation; insight into countries, societies, and eras besides your own; proficiency in another language; understanding of the nature of ethical and moral choice; and expanded knowledge of science and technology. The formal requirements described here should be considered foundations for exploration.

[\[Return to top.\]](#)

New General Education Requirements for Students Entering Beginning Fall 2010

Complete list of Courses That Fulfill General Education Requirements

Beginning in fall 2010, all new students will be required to fulfill a new set of guidelines for general education requirements that were approved by the UCSC Academic Senate in 2009. Continuing students and transfer students may opt to change to the new requirements or fulfill the previous general education requirements. See [Catalog Rights](#) for more information. Contact your college adviser if you have questions.

The general education requirements are meant to accomplish several goals:

- Provide students with a base of knowledge and skills that future learning can build on.
- Expose students to a broad range of disciplines and methodologies, to better prepare them for a world of complex problems and rapid changes.
- Enhance the abilities of students to approach problems in appropriately analytical ways.
- Prepare students to function as responsible and informed participants in civic life, considering pressing societal issues (such as the environment, the economy) productively and from a variety of perspectives.

Each area has a general education code associated with it, and only those courses carrying that code satisfy the requirement. The codes appear in the course descriptions in this catalog and in the "General Education" field on the MyUCSC Class Search page. See a list of courses that fulfill [General Education requirements](#). The list is subject to change. Students should check the [Schedule of Classes](#) each quarter for the most up-to-date information. Students entering using the new general education requirements should review the requirements for their proposed or declared major(s) to ascertain whether some of their general education requirements will be fulfilled by completing their major. As a general rule, each course satisfies only one of the new general education requirements.

Types of General Education Requirements Beginning in Fall 2010

Category	General Education Code	Number of Required Credits
Cross-Cultural Analysis	CC	5
Ethnicity and Race	ER	5
Interpreting Arts and Media	IM	5
Mathematical and Formal Reasoning	MF	5
Scientific Inquiry	SI	5
Statistical Reasoning	SR	5
Textual Analysis	TA	5
Perspectives (choose one from the following three categories)		5
Environmental Awareness	PE-E	
Human Behavior	PE-H	
Technology and Society	PE-T	
Practice (choose one from the following three categories)		2
Collaborative Endeavor	PR-E	
Creative Process	PR-C	
Service Learning	PR-S	
Composition	C1 & C2	10

*Students satisfy the Disciplinary Communication (DC) requirement by completing one to three upper-division courses required for their major, totaling a minimum of five credits.

Cross-Cultural Analysis (CC code: one 5-credit course or equivalent). Courses in cross-cultural Analysis prepare students for a world with increased interaction and integration among peoples, companies, and governments. These courses encourage a broader and deeper understanding of cultures and societies outside the United States. Such courses might focus on an in-depth examination of one culture, or one aspect of such culture (for example, art, music, history, language). Alternatively, these courses help students develop skills of cross-cultural comparison and analysis. A third option comprises courses that explore topics that are inherently cross-cultural such as international relations or the processes of economic globalization. Whatever the approach, these courses all aim to help students develop the openness and sensitivity necessary for cross-cultural understanding.

Ethnicity and Race (ER code: one 5-credit course or equivalent). Courses in Ethnicity and race prepare students for a state and a world that are increasingly multiethnic and multiracial. Beyond familiarizing students with the culture and/or history of one or more ethnic or racial groups, these courses also aim to develop theoretical and practical understanding of questions such as (but not limited to): how categories of ethnicity and race are constructed; the role they can play in identity formation; how ethnicity and race have historically been used to justify forms of enforced inequality; and the contributions of people of various ethnicities to society and to political change. These courses are particularly concerned with how ethnicity and race may intersect with other categories, such as gender, class, or sexual orientation, to shape self-understanding and patterns of human interaction.

Interpreting Arts and Media (IM code: one 5-credit course or equivalent). Interpreting Arts and Media courses explore the complex ways in which information of all kinds is represented by visual, auditory, or kinesthetic means, or through performance. These courses build in-depth understanding of one or more forms of artistic media: that is, media in which nontextual materials play primary roles. They offer skills in the practice, analysis, interpretation and/or history of one or more of these media, as well as the ability to analyze the means by which they encode and convey information.

Mathematical and Formal Reasoning (MF code: one 5-credit course or equivalent). In a world in which much thinking and discourse is directed by emotion and association, formal or mathematical models teach the value of dispassionate analysis. Mathematical and formal-reasoning courses emphasize the development of mathematical, logical, and/or formal reasoning skills. Mathematics-based courses that satisfy this requirement are focused on teaching significant problem-solving skills, and are often oriented toward particular application areas. Other courses that satisfy this requirement train students in formal reasoning skills and/or in the construction and use of formal models. Formal reasoning domains include mathematical proof, logic, and applied logic. Some examples of formal models are: computer programming languages, generative grammars (from linguistics), supply and demand models, and formal music theory.

Scientific Inquiry (SI code: one 5-credit course or equivalent). Courses in Scientific Inquiry teach students about the essential role of observation, hypothesis, experimentation and measurement in the physical, social, life, or technological sciences. In these courses, students acquire key concepts, facts, and theories relevant to the scientific method. By the end of the course students should be able to articulate an understanding of the value of scientific thinking in relation to issues of societal importance.

Statistical Reasoning (SR code: one 5-credit course or equivalent). In today's globalized, media-saturated information society, we are continually presented with—or asked to present—numerical data. Statistical-reasoning courses prepare students to interpret quantitative claims and make judgments in situations of statistical uncertainty. The goal of statistical-reasoning courses is to teach skills for effective reasoning about probability and the use of quantitative information. Students acquire an understanding of making informed decisions in the presence of uncertainty. Topics addressed in statistical-reasoning courses include ways of (mis)representing data; correlation vs. causation; statistical inferences; experimental design and data analysis; understanding orders of magnitude.

Textual Analysis and Interpretation (TA code: one 5-credit course or equivalent). Even in our current multimedia world, the written word remains a major vehicle of communication. Many fields, from literature and history to law, government, science and religion, depend heavily on the understanding and interpretation of written documents. Textual analysis and interpretation courses have as their primary methodology the interpretation or analysis of texts. The aim of these courses is to develop higher-order reading skills and to train students how to read attentively, to think critically and analytically, to produce and evaluate interpretations, to assess evidence, and to deploy it effectively in their own work. These abilities are not only necessary for academic success, but also for full participation in civic life at every level.

Perspectives (one 5-credit course or equivalent from any of the three following categories):

Perspectives: Environmental Awareness (PE-E code). The interactions between people and the earth's environments are subtle, complex, and influenced by a variety of natural, scientific, economic, cultural, and political factors. Courses satisfying the environmental-awareness requirement teach students about the complexity of particular ecosystems and/or people's interactions with nature so that they will better understand the environmental issues and trade-offs that are likely to arise in their lifetimes.

Perspectives: Human Behavior (PE-H code). Courses in human behavior help students to prepare for a world in which many of the most pressing challenges (such as genocide, environmental degradation, poverty) are impacted by human thoughts, decisions, or practices. As well, they provide a kind of "owner's manual" for students to assist them in understanding themselves, their roles (for example, parent, partner, leader), and their social groups (family, workplace, neighborhood, nation).

Perspectives: Technology and Society (PE-T code). The study of technology helps satisfy the need of society for knowledgeable people able to understand, participate, and guide the rapid technological advances that play such a vital role in our world. Technology and society courses focus on understanding technological advances, how they are developed, and their impacts on society.

Practice (one minimum 2-credit course from any of the three following categories):

Practice: Collaborative Endeavor (PR-E code). Students learn and practice strategies and techniques for working effectively in pairs or larger groups to produce a finished product. For example, students might learn specialized practical information such as how to use change-management software to monitor and manage changes initiated by multiple group members. Alternatively, they might learn basic information about leadership, teamwork, and group functioning, which they can incorporate into their own group process. What is common to all courses is that some instruction regarding the process of collaboration is provided, in addition to instruction specific to the academic discipline and the products being produced.

Practice: Creative Process (PR-C code). Creative-process courses teach creative process and techniques in a context of individual or collaborative participation in the arts, including creative writing. Courses may combine theory and experiment in the creation of a new artwork, or new interpretation(s) of an existing artwork. Creative-process courses include studies in individual or group creativity or improvisation, and/or ensemble rehearsal and performance.

Practice: Service Learning (PR-S code). Service-learning courses provide students with an opportunity to integrate their academic course work with community involvement. Such courses provide supervised learning experiences in which students reflect on, communicate, and integrate principles and theories from the classroom in real-world settings. Students gain valuable practical skills, while giving back to the community.

Composition (C1 and C2 codes) (Two 5-credit courses or equivalent): C1 and C2 typically are fulfilled by your college core course and Writing 2, Rhetoric and Inquiry. Students must complete the Entry Level Writing Requirement to satisfy the composition requirements.

Disciplinary Communication (DC) requirement. The goal of this requirement is to ensure that students acquire the skills in writing and other forms of communication appropriate for their discipline. Students satisfy the DC requirement by completing 1 to 3 upper-division courses required for their major, totaling a minimum of 5 credits. The DC requirement is automatically fulfilled by the completion of major requirements.

[\[Return to top.\]](#)

Types of General Education Requirements

Category	General Education Code	Number of Required Credits
Introductions to disciplines-humanities and arts area * (from two different disciplines)	IH	10
Introductions to disciplines-natural sciences and engineering area * (from two different disciplines)	IN	10
Introductions to disciplines-social sciences area (from two different disciplines)	IS	10
Topical courses (one course from each of the three academic areas; appropriately designated college courses fulfill this requirement)	T	15

Quantitative course	Q	5
Composition course **	C or C1/C2	5–10
Writing-intensive course	W	5
Arts course	A	5
U.S. Ethnic minorities/non-Western society course	E	5

*For purposes of the general education requirements, humanities and arts are combined in one academic area, as are natural sciences and engineering.

General Education Requirements for Students Entering Prior to Fall 2010

Designed to expose students to diverse subject areas, the general education requirements also stress a variety of approaches to acquiring knowledge. A description of the general education requirements and a complete list of current courses that satisfy general education requirements under the pre-2010 general education reform are included.

There are nine categories of general education requirements (see table above, Types of General Education Requirements). Each category has a general education code associated with it, and only those courses carrying that code satisfy the requirement. The codes appear in the course descriptions in this catalog and in the [Schedule of Classes](#). A list of [Courses That Fulfill General Education Requirements](#) is included. The list is subject to change. Students should check the [Schedule of Classes](#) each quarter for the most up-to-date information.

Some courses satisfy more than one general education requirement, so the total number of required courses may be 10 to 15.

Introductions to disciplines (IH, IN, and IS codes). These courses introduce a discipline's content, scope, and methodology. Introductory courses from two different departments are required in each of three academic areas: humanities and arts (IH code), natural sciences and engineering (IN code), and social sciences (IS code). Only one language course may be used to satisfy an IH requirement, as all languages are considered to be part of the same discipline. Similarly, only one literature course may be used, and English (transfer) courses are considered to be literature. Only one of the two IH courses may be from the arts (art, film and digital media, history of art and visual culture, music, and theater arts). Transfer courses designated IN from Anatomy, Botany, Physiology, and Zoology Departments are considered to be "biology" courses for general education purposes.

Topical courses (T code). These courses expose students to introductory-level themes of broad social or intellectual relevance. Three courses are required, no more than one from each academic area. For information on which disciplines are in each area, see [Arts](#); [Engineering](#); [Humanities](#); [Physical and Biological Sciences](#); and [Social Sciences](#). College core courses are labeled topical and carry the designation of the appropriate academic area.

Quantitative course (Q code). These courses provide methods for acquiring quantitative reasoning that involve use of advanced algebra, statistics, or calculus. One course is required.

Writing courses (C1, C2, and W codes). These courses stress explicit attention to the craft of writing. Having satisfied the [Entry Level Writing Requirement](#) by the end of your first year of enrollment at UCSC, you must complete two to three courses in writing. One of these must be a writing-intensive course (W code) that provides instruction and extensive practice in writing applied to a particular subject. For some courses, only certain sections are writing intensive (look for the "W" in the Schedule of Classes when enrolling). You must take this course at UCSC.

Students satisfy the other part of the writing requirement by passing two composition courses (C1 and C2 codes). You must fulfill the composition requirement prior to the seventh quarter of enrollment and before you can enroll in a writing-intensive course.

Arts course (A code). These courses provide the exposure to creative or artistic expression necessary for a liberal arts education. One designated arts course is required; most are offered through art, film and digital media, history of art and visual culture, music, and theater arts.

Ethnic minorities/non-Western society course (E code). These courses are intended to increase knowledge of ethnic minorities in the United States and non-Western cultures, improve cross-cultural awareness, and explore relationships between ethnicity and other aspects of a liberal arts curriculum. One course is required. For additional ways to pursue ethnic studies, see the [Ethnic Studies section](#).

Courses of fewer than 5 credits. Students usually meet the general education requirements with 5-credit courses. Several related arts courses of fewer than 5 credits with the same code may be used to satisfy the arts (A) general education requirement if they total at least 5 credits.

Advanced Placement and International Baccalaureate Examinations

[Advanced Placement Exams \(AP\)](#) and [International Baccalaureate Higher Level Exams \(IBH\)](#)

The university grants credit for College Board Advanced Placement (AP) Examinations on which a

student scores 3, 4, or 5 and for International Baccalaureate Higher Level (IBH) Examinations on which a student scores 5, 6, or 7. The university does not grant credit for IB standard or subsidiary level exams. Students completing the International Baccalaureate Diploma with a score of 30 or higher receive 30 quarter credits. The credit is applied toward the total credits required for graduation and toward the UCSC campuswide general education requirements, as indicated in the [Advanced Placement \(AP\)/International Baccalaureate Higher Level \(IBH\) Examinations table](#). Students should be aware that AP, IB, and college-level courses will not be granted duplicate credit. In these cases, the university will award credit for only one.

AP and IBH Examination Credit Toward Degree Requirements

Certain departments also allow prospective majors to obtain waivers for prerequisite courses. (Please see [the table](#)). In all cases, a student should contact the particular department to discuss his or her plans with an adviser. Please note that approval is not automatic; a petition must be filed with most departments.

Credits for Transfer Students

General Education Requirements

Transfer students may apply courses taken at other institutions toward the general education requirements with two exceptions: The disciplinary communication course(s) (DC code) or the writing-intensive course (W code) must be taken at UCSC. Also, transfer courses are not applied to the topical requirement (T code), but topical courses are waived at entrance according to the following formula: 45–83.9 transferable quarter credits, one course waived; 84–104.9 transferable quarter credits, two courses waived; 105 or more transferable quarter credits, all three courses waived. If one topical course is required in residence at UCSC, it may be chosen from any of the three academic areas (humanities and arts, natural sciences and engineering, and social sciences). If two are required, they must be from two different areas.

If you are currently attending one of the California community colleges, see the ASSIST web site at www.assist.org, or consult with the UCSC Office of Admissions or your current counselor to determine which college courses satisfy UCSC general education requirements.

Transfer students who have satisfied the general education or breadth requirements of another UC campus prior to transfer will be considered to have completed the UCSC general education requirements. Completion of the Intersegmental General Education Transfer Curriculum (IGETC) prior to enrollment at UCSC will also be accepted in lieu of the campus general education requirements.

Intersegmental General Education Transfer Curriculum (IGETC)

The Intersegmental General Education Transfer Curriculum (IGETC) is a series of courses that prospective California community college transfer students may complete to satisfy the lower-division breadth/general education requirements at any University of California or California State University (CSU) campus (see the IGETC table below). This curriculum is the result of an agreement, by the University of California, the California State University, and the California community colleges, aimed at simplifying the transfer process for community college students. The IGETC is intended exclusively for California community college transfers and is not an option for continuing UCSC students or for students transferring from four-year colleges or universities.

Students should complete the IGETC prior to transfer or they will be required to satisfy the UCSC general education requirements. For students who are partially certified, please consult the Office of Admissions. Courses used to satisfy IGETC must be completed with a grade of C (2.0) or better. A grade of Credit or Pass may be used if the community college's policy states that it is equivalent to a grade of C (2.0) or better.

IGETC is not recommended for majors that require extensive course preparation, such as any major in the Jack Baskin School of Engineering or the Division of Physical and Biological Sciences.

IGETC Subject and Unit Requirements

Subject Area	Courses Required	Units/Credits Required
1. English Communication One course in English composition and one course in critical thinking/English composition. (Students transferring to CSU must take an additional course in oral communication.)	2 courses	6 semester units or 8-10 quarter units
2. Mathematical Concepts and Quantitative Reasoning	1 course	3 semester units or 4-5 quarter units
3. Arts and Humanities Three courses with at least one from the arts and one from the humanities.	3 courses	9 semester units or 12-15 quarter units
4. Social and Behavioral Sciences Three courses from at least two disciplines or an interdisciplinary sequence.	3 courses	9 semester units or 12-15 quarter units

5. Physical and Biological Sciences One physical science course and one biological science course, at least one of which includes a laboratory.	2 courses	7-9 semester units or 9-12 quarter units
6. Language Other Than English Proficiency equivalent to two years of high school in the same language. (Not required of students transferring to CSU.)	Proficiency	Proficiency
Total	11 courses	34 semester units

[\[Return to top.\]](#)

Major Requirements and Course Prerequisites

Students who believe they have taken courses at other institutions that satisfy major requirements or UCSC course prerequisites should contact the sponsoring department for review.

College Requirements

You must fulfill the requirements of your college in addition to those of your major and of the university. Each college has established a core course, which all first-year students are required to complete. Students admitted as transfer students are exempt from the core course requirement but may take the course at their option on a space-available basis. College requirements are outlined below. The core courses are described more fully in the individual [college descriptions](#).

College Eight

- College Eight 80A, Introduction to University Discourse: Environment and Society, fall quarter, or College Eight 80B, Rhetoric and Inquiry: Environment and Society, fall quarter; and College Eight 81A, The Environment and Us, fall quarter.
- College Eight 81A, The Environment and Us, fall quarter.
- College Eight 81B, Fundamentals of Environmental Science, winter quarter.
- College Eight 81C, Technological Innovation and Environmental Challenges, spring quarter.

Note: College Eight 81A, and either 80A or 80B are mandatory for all incoming freshmen. College Eight 81B and 81C also satisfy many of UCSC's general education requirements, and admission to these courses is selective.

College Nine

- College Nine 80A, Introduction to University Discourse: International and Global Issues, fall quarter, or College Nine 80B, Rhetoric and Inquiry: International and Global Issues, fall quarter

College Ten

- College Ten 80A, Introduction to University Discourse: Social Justice and Community, fall quarter, or College Ten 80B, Rhetoric and Inquiry: Social Justice and Community, fall quarter, or College 10 80C and 80D, Introduction to University Discourse: Social Justice and Community, Writing Intensive.

Cowell

- Cowell 80A, Introduction to University Discourse: Imagining Justice Past and Present, fall quarter, or Cowell 80B, Rhetoric and Inquiry: Imagining Justice Past and Present, fall quarter

Crown

- Crown 80A, Introduction to University Discourse: Ethical Issues in Emerging Technologies, fall quarter, or Crown 80B, Rhetoric and Inquiry: Ethical Issues in Emerging Technologies, fall quarter.

Kresge

- Kresge 80A, Introduction to University Discourse: Power and Representation, fall quarter, or Kresge 80B, Rhetoric and Inquiry: Power and Representation, fall quarter;

Merrill

- Merrill 80A, Introduction to University Discourse: Cultural Identities and Global Consciousness, fall quarter, Merrill 80B, Rhetoric and Inquiry: Cultural Identities and Global Consciousness, fall quarter

Oakes

- Oakes 80A, Introduction to University Discourse: Communicating Diversity for a Just Society, fall quarter, or Oakes 80B, Communicating Diversity for a Just Society, fall quarter

Porter

- Porter 80A, Introduction to University Discourse: Writing Across the Arts, fall quarter, or Porter 80B, Communicating Diversity for a Just Society, fall quarter

Stevenson

- Stevenson 80A, Introduction to University Discourse: Self and Society, fall quarter, or Stevenson 80B, Rhetoric and Inquiry: Self and Society, fall quarter
- Stevenson 81A, Self and Society 2, winter quarter, or Stevenson 81B, Rhetoric and Inquiry: Self and Society 2, winter quarter

Major and Minor Requirements

To qualify for a bachelor's degree at UCSC, you must complete the minimum requirements for a major program, as well as satisfy university, campus, and college requirements.

At UCSC, you have the option of pursuing a single major, a double major, or a combined major. The minimum requirements for an established major program are set by the sponsoring department. (If you are a transfer student, the department will determine which of your transferable courses may be used to satisfy major requirements.) The major involves substantial work in the discipline and requires no fewer than 40 upper-division or graduate credits. Only courses in which you earn a grade of Pass, C, or better satisfy major or minor requirements.

Declaring a Major

The field of interest you indicate on your application to UCSC does not automatically place you in a major. You are advised to declare your major as soon as possible. You are required to file a study plan and declare a major before enrolling in the equivalent of your third year,* in consultation with the appropriate academic advisers. You will not be allowed to enroll in classes for the equivalent of your third year until you have declared a major. Certain majors have a limit on the number of students they can serve. Be sure you are aware of all the necessary criteria for qualifying for the major. It is wise to apply for major status as soon as you feel sure of the field you wish to enter. Junior transfer students must file a study plan and declare a major during their second quarter at UCSC by the deadline printed in the [Academic and Administrative Calendar](#) in the [Schedule of Classes](#).

You should determine the requirements for possible major choices as soon as possible because certain majors require substantial preparation, with many interlocking course sequences. If you intend to pursue such a major, you should start work toward it early in your undergraduate career. (Review majors that interest you in the [Programs and Courses section](#).) Academic advisers can offer assistance in selecting courses appropriate to your individual needs.

*Note: This is the year you would become a junior given normal progress to degree. For example, if you transfer to UCSC as a beginning sophomore, it is your second year here.

Comprehensive Requirement

Every major at UCSC includes a senior exit requirement designed to integrate the knowledge and skills learned throughout the curriculum. This capstone requirement may be a senior thesis, senior seminar, comprehensive examination, or some other integrative experience designed for the major. Choices for satisfying this requirement are specified with the requirements for each major.

Minor Programs

See [Fields of Study](#) for undergraduate minors currently offered at UC Santa Cruz. Completion of a minor is optional. If you wish, you may complete more than one minor.

The sponsoring department establishes the course requirements for a minor. The minor involves substantial work in the discipline and requires no fewer than 25 upper-division or graduate credits. The minor appears on your official transcript but not on your diploma.

Additional Majors or Minors

To complete multiple majors and minors, you must fulfill all of the requirements for all majors and minors declared, including the comprehensive requirement for each major. In general, a single thesis may not be used for more than one major. You may count courses for more than one major or minor, as long as each major includes 40 upper-division credits not used to satisfy the minimum upper-division credits of any other major or minor, and each minor includes at least 25 upper-division credits not used to satisfy the minimum upper-division credits of any other major or minor.

The diploma of a student who has completed a double major in history and music, for example, would read "Bachelor of Arts with Majors in History and Music."

Combined Major

A combined major allows you to complete a course of study involving two disciplines offered as regular programs at UC Santa Cruz.

Examples of combined majors include environmental studies/economics and Latin American and Latino studies/politics. A combined major is designed by faculty representatives from both

disciplines. In general, fewer courses are required than for a double major, and students complete the comprehensive requirements as specified for each combined major. Combined majors currently available are listed in the footnotes in the [Fields of Study](#).

The diploma of a student who has completed a combined major in environmental studies and economics, for example, would read "Bachelor of Arts with a Major in Environmental Studies/Economics."

Individual Major

Students may also work with three faculty members to define an individual major specific to his or her academic goals. Proposals for individual majors require considerable effort to develop, and students are advised to consider double major, combined major, and major/minor alternatives. College advising offices can provide information on the individual major proposal and approval process.

Catalog Rights

Effective for all undergraduates who entered in fall quarter 1993 or after, students may follow the degree requirements from either the UCSC General Catalog published at the time of entering UCSC or subsequent catalog(s). Students need not follow a catalog in its entirety but may elect to follow different catalog years for their college requirements, university and general education requirements, requirements of their major(s), and requirements of any minor(s).

Catalog year will initially be set for the first year of enrollment at UCSC. Students may elect to follow requirements from other catalog year(s) when filing the Petition for Major/Minor Declaration. All requirements for graduation outlined in the catalog(s) selected must be met before graduation. Changing catalog year(s) for majors/minors is done by submitting a new Petition for Major/Minor Declaration.

Changing catalog year(s) for college, university, and general education requirements is done by contacting the college advising office.

Students transferring from other collegiate institutions may elect to meet as graduation requirements one of the following:

- those in effect at the time of transfer to UCSC;
- those subsequently established; or
- those in effect when the student entered a previous collegiate institution, provided that entry was not more than three years prior to the time of transfer to UCSC.

Students who seek readmission to UCSC after a break in attendance greater than two years (six regular quarters) must adhere to the graduation requirements in effect at the time of readmission or those subsequently established.

Students who entered prior to 1993 should see an adviser. Their catalog year(s) for graduation, whether the year they entered UCSC or subsequent year(s), will be decided at the discretion of their major department and/or their college.

Institutional Responsibility

Undergraduate students who have made significant progress toward a degree in a specific major can assume that a degree will be granted if they meet all catalog degree requirements and maintain continuous enrollment and progress.

Should UCSC find it necessary to discontinue a specific major, every effort will be made to allow currently enrolled majors to complete their degrees within a reasonable period of time. This may include (1) movement to a similar or related degree track; (2) substitution of requirements; (3) development of an individual major proposal; or (4) completion of courses at another University of California campus through the Intercampus Visitor Program. Students with questions concerning this policy should contact their major and college advising offices.

In all cases, any financial obligations are the responsibility of the individual student involved.

[\[Return to top.\]](#)

Evaluating Academic Performance

UC Santa Cruz has one of the more comprehensive systems for evaluating students' academic performance of any research university in the United States. The evaluation system consists of two major components: the assignment of a final grade in the course and an accompanying evaluation of your performance.

Evaluations

Beginning fall 2010, undergraduate evaluations are at the option of the faculty. In each course for which you receive a grade of D or better (or P) an evaluation of your academic performance may be submitted. An evaluation may:

- Describe the strengths and weaknesses of your performance in the various areas of class activity (discussion, laboratory work, term papers, examinations)
- Assess your general understanding of the course content
- Recognize additional or particularly outstanding work

Evaluations are used at UCSC in academic advising, reviewing scholarship applications, and awarding College Honors and Honors in the major. Evaluations are a permanent part of your academic record. All students may request transcripts either with or without evaluations.

Grades

At the end of each course, you will receive one of the following grade notations:

A excellent

B good

C fair

D poor

F fail

P passing

NP not passing

I incomplete

IP in progress

W withdrawal

The grades of A and B may be modified by a plus (+) or a minus (-). The grade of C may be modified by a plus only. You will not receive credit for graduation in any course in which you receive a final grade of F or NP. The grades I and IP are temporary grades used in special circumstances. The final notation W indicates that you officially withdrew from the course before completing it.

Grade Points

Grade points are assigned to a letter grade as follows:

4.0 = A+

4.0 = A

3.7 = A-

3.3 = B+

3.0 = B

2.7 = B-

2.3 = C+

2.0 = C

1.0 = D

0.0 = F

The grades P and NP are not included in calculating your GPA and so are not assigned grade points. Courses in which the interim grades I and IP are assigned earn no grade points or credit until the interim grade is replaced by a final letter grade.

Grade-Point Average (GPA)

Undergraduates entering UCSC in fall 2001 and thereafter have a UCSC cumulative grade-point average calculated from UCSC courses, courses taken through the Education Abroad Program, and courses taken at another UC campus as part of the Intercampus Visitor Program.

A grade-point average is determined by dividing the number of grade points earned by the number of units attempted for a letter grade. In calculating your UCSC GPA, the interim grades IP and I are not included in the computation because you do not earn those credits until they are replaced with

a final grade. (However, when checking for whether you have satisfied the 2.0 UC GPA requirement for graduation, these interim grades are included and counted as courses with grade F [or NP]).

If you repeat a course in which you have received a D or F, only the last grade recorded shall be computed in your GPA for the first 15 credits of repeated work. After the 15 credit maximum is reached, the GPA will be based on all grades assigned and total credits attempted.

Undergraduates who entered UCSC for the first time in or after fall 1997 and before fall 2001 have a UCSC cumulative grade-point average only if they have elected letter grades in at least two-thirds of the cumulative credits attempted. Undergraduates who entered UCSC prior to fall 1997 cannot have an official UCSC grade-point average calculated.

Pass/No Pass Option

Students in good academic standing may request to take specific courses on a Pass/No Pass basis. Students receive a P (Pass) for work that is performed at C level or better. Work performed at below a C level receives a notation of NP on the student's transcript, and no academic credit is awarded for the course. Requests for Pass/No Pass grading must be submitted and confirmed by the Grade Option deadline printed in the [Academic and Administrative Calendar](#). If you request P/NP grading in a course and you are later placed on academic probation, your P/NP grading request will be canceled.

No more than 25 percent of the UCSC credits applied toward graduation may be graded on a Pass/No Pass basis. This includes any credits completed in the Education Abroad Program or on another UC campus in an intercampus exchange program. Students must be careful about the use of the Pass/No Pass option. Some courses may only be taken Pass/No Pass, and therefore count against the 25 percent Pass/No Pass limit. Several majors require all or most major requirements to be taken for a letter grade; read the major requirements section carefully before using the Pass/No Pass option for any course in a major you are considering.

Incomplete

The notation I may be assigned when your work for a course is of passing quality but for which some specific required work has not been completed. You must make arrangements with the instructor before the end of the course in order to receive an Incomplete. To remove the Incomplete, you must submit the remaining course work and file a petition by the deadline printed in the Academic and Administrative Calendar (generally the end of the following quarter). If you do not meet the deadline, the Incomplete lapses to a No Pass or an F, depending on the grading option selected at the beginning of the quarter.

The notation IP (In Progress) is reserved for a single course extending over two or three terms of an academic year. The grade for such a course may be awarded at the end of the course and shall then be recorded as applying to each of the terms of the course. A student satisfactorily completing only one or two terms of a course extending over two or three terms of an academic year will be given grades for those terms. The grade option selected in the first quarter of the multiple-term sequence applies to all quarters of the sequence.

Grade changes (except for I and IP, as above) are allowed only to correct clerical or calculation errors by the instructor and must be submitted to the Office of the Registrar by the instructor in charge of the course within one year of the close of the quarter for which the original grade was submitted.

Student Responsibility

Students are responsible for using the Academic Information Systems (AIS) to set and confirm choices for grading options and for ensuring timely completion of all requirements. Students view their schedule at [MyUCSC](#).

Course Loads

The usual course load for UCSC undergraduates is 15 to 19 credits, most often as three 5-credit courses and associated laboratories and sections. After instruction begins, students with a UCSC GPA of 3.0 may enroll in up to 22 credits without special approval and may seek approval for higher loads from their college advising office. Students in their first quarter or with a lower GPA must seek approval from their college advising office for enrollment in more than 19 credits.

College approval is required to carry fewer than 15 credits.

[\[Return to top.\]](#)

Academic Progress

Academic progress is a measure of the completion of courses with a D or better, or Pass. Colleges monitor academic progress to ensure you are progressing toward your degree, which must be earned within five years.

Minimum progress is based on length of time at UCSC. The minimum acceptable progress is completion of 36 credits for each academic year, 12 credits for each additional full-time term, and four-fifths of credits attempted for each part-time term. Progress is measured cumulatively, not term by term. For example, a full-time student must complete 48 credits by the end of the first quarter of the second year.

If you do not maintain minimum progress, your college may require you to take higher course loads, complete Summer Session courses, or make other adjustments to your study plan.

Academic Standing

Academic standing is a measure of performance in completed courses. You must maintain a 2.0 UCSC GPA in order to remain in good academic standing.

If your UCSC term or cumulative GPA falls below 2.0 at the end of any term, you will be placed on academic probation for the next term. You will need to work with your college and major advisers to determine the best way to return to good academic standing. Be sure to take full advantage of the many learning support services available at UCSC.

If your UCSC GPA for any term falls below 1.5, or if you are on academic probation and your cumulative GPA at the end of a term is below 2.0, you are also subject to disqualification. This means that your enrollment at UCSC may be barred for a specific period of time, or you may be disqualified indefinitely from attending the University of California. In many cases, a specific study plan can be developed with your college that will enable you to remain enrolled at UCSC.

For students who entered UCSC prior to fall 2001, academic standing and progress are calculated differently. Contact your college office or see [The Navigator](#) for more information.

Maximum Credits and Years

Students are expected to complete their degree objective(s) within at most 225 credits and five academic years (Advanced Placement and International Baccalaureate units are not counted). Students who transfer with advanced standing are expected to complete their degree objective(s) within at most 135 UCSC credits and three academic years.

Colleges may make exceptions to the credit maximum for students in certain cases. Such exceptions are conditional on maintaining academic standing, minimal progress, and progress toward the degree objective(s).

Students in danger of exceeding the credit limit or the five-year or three-year limit may be required to modify their degree objective, such as by completing a major without a minor or double major, or completing a related major with fewer course requirements.

Repeating Courses

Undergraduates may repeat courses in which they earn a D, F, or No Pass. Courses in which a D or F is earned may not be repeated on a Pass/No Pass basis. Courses in which a grade of No Pass is earned may be repeated on the same basis or for a letter grade. For the first 15 credits of repeated courses, the original grade and corresponding grade points earned are excluded in calculating the GPA, and only the grade and grade points from the repetition are used. After the 15-credit maximum is reached, the GPA will be based on all grades assigned and grade points earned. However, credit is not awarded more than once for the same course. The grade assigned each time the course is taken will be permanently recorded on the official transcript. Repetition of a course more than once requires approval of the student's college.

Academic Integrity

The university is dedicated to the unhindered pursuit of knowledge and its free expression. It is essential that faculty and students pursue their academic work with the utmost integrity. This means that all academic work produced by an individual is the result of the sole effort of that individual and acknowledges the contributions of others explicitly. It is the responsibility of students and faculty to be absolutely clear about what constitutes plagiarism, cheating, or other violations of academic integrity. Violations of academic integrity by students result in both academic sanctions (e.g., failing the course) and disciplinary sanctions (e.g., suspension or dismissal). Consult Appendix G of the campus's [Student Policies and Regulations Handbook](#) for more discussion and information.

Undergraduate Honors Program

UC Santa Cruz awards several honors for outstanding academic achievement.

Dean's List Honors

Students will be eligible for quarterly Dean's Honors if they have earned a minimum of 15 units that quarter, of which at least 10 are graded, with a term grade point average (GPA) equal or higher than that required for University Honors at graduation in their group* for the current academic year. The notation "Dean's Honors" will appear on the transcript.

*Note: GPA thresholds for Baskin School of Engineering majors are calculated separately from those of majors in all other divisions.

Honors at Graduation

Honors at graduation are awarded by the university and by the separate majors and colleges based on a review of their graduates' academic records. In general, honors are limited to 15 percent of the graduating class. University Honors are based solely on the cumulative UC GPA. Faculty review for major and college honors may involve additional criteria.

University Honors

To be considered for University Honors at graduation, students must have completed 70 or more units at the University of California and have attained in their group* a UC GPA that places them in the rankings as follows: Summa Cum Laude, top 2 percent; Magna Cum Laude, next 3 percent; Cum Laude, next 10 percent. Each year and for each group, the registrar will calculate the GPA thresholds required for these levels of University Honors, based on the GPAs of recent graduates. The notation "University Honors" will appear on the diploma and transcript.

* Note: GPA thresholds for Baskin School of Engineering majors are calculated separately from those of majors in all other divisions.

Honors in the Major

At graduation, the department sponsoring a student's major program may confer Honors or Highest Honors in the major. This notation appears on the transcript as well as on the diploma. In general, no more than 15 percent of the graduation class in a major will be awarded Honors at graduation.

College Honors

Some colleges review their graduating students for academic achievement and according to criteria set by the college faculty reviewers. In general, no more than 15 percent of the graduating class of a college will be awarded Honors at graduation.

Deadlines

To be considered for honors in the major or college honors, students must apply to graduate by the Registrar's deadline.

Any Student who has a reportable disciplinary sanction for a violation of academic integrity policies may be ineligible for any honors designation, at the discretion of the agency that awards the designation.

Honor Societies

Many UC Santa Cruz students are members of departmental, professional, local, and national honor societies whose goals are to recognize and improve scholastic standing in an area of interest. Among these are Phi Beta Kappa, the oldest national society that advances scholarship and recognizes excellence in the liberal arts and sciences; Tau Beta Pi, the engineering honor society that recognizes students of distinguished scholarship, exemplary character, and dedication to service; the Golden Key International Honour Society, which provides recognition and leadership opportunities to top-performing students; and Psi Chi, which encourages, stimulates, and maintains excellence in scholarship, and advances the science of psychology.

Awards and Scholarships

UC Santa Cruz has a variety of scholarship and award opportunities that are designed to reward, encourage, and assist students in pursuing academic excellence and leadership roles. Students can find such opportunities through their colleges, departments, divisions, and various external agencies.

The Office of Undergraduate Education provides administrative support to a variety of prestigious scholarships and awards such as the Karl S. Pister Leadership Opportunity Award, Dean's and Chancellor's Award, Steck Foundation Award, Donald A. Strauss Scholarship, Fulbright Scholarship, Marshall Scholarship, and Jack Kent Cooke Scholarship. Acknowledgment of scholarship and award recipients are given at the Undergraduate Academic Achievement Award Ceremony at the end of each academic year.

Transcripts

Academic records are maintained by the Office of the Registrar, which will issue an official transcript only on your authorized request.

For information on ordering transcripts, please refer to the following URL: reg.ucsc.edu.

If you have outstanding financial obligations to the university, a hold may be placed on your transcript. Students may access their unofficial transcript on MyUCSC.

Transcripts for UCSC Extension courses should be requested from UCSC Extension Records, 2505 Augustine Drive, Suite 100, Santa Clara, CA 95054-3003, (408) 861-3700.

Privacy of Records

UCSC students are informed annually of the federal Family Educational Rights and Privacy Act (FERPA) and its provisions. This act, which the institution follows, was designed to protect the privacy of education records and to provide guidelines for the correction of inaccurate or misleading data through informal and formal hearings. Students also have the right to file complaints with the Family Educational Rights and Privacy Act Office concerning alleged failures by the institution to comply with the act.

UCSC policy explains in detail the procedures to be used by the institution for compliance with the provisions of the act. FERPA guidelines are available in The Navigator, the student handbook. The full text of the University of California policies applying to the Disclosure of Information from Student Records is online: reg.ucsc.edu/guidelines.html.

Questions concerning the Family Educational Rights and Privacy Act may be referred to the Office of the Registrar, 190 Hahn Student Services Building.

[\[Return to top.\]](#)

Advising: From Course Selection to Careers

Orientation is an indispensable resource for all students. Students who attend Orientation feel better prepared, encounter fewer problems, and receive priority registration before other students who do not attend Orientation. Attending Orientation is one of the most important steps a new student takes in preparing for the transition to university life, providing the academic advising needed to make informed decisions about classes and majors, and the opportunity to get questions answered, and learn more about the university.

Orientation begins the process of academic advising and provides a comprehensive introduction to all aspects of UCSC. While at Orientation, students enroll in classes, learn to access campus resources, meet with college and department advisers, meet new and continuing students, learn about the many student organizations on campus, attend a resource fair, take pictures for their student ID card, attend breakout sessions, and gain valuable student life information. We urge students to attend Orientation to help facilitate their academic and personal success at the university.

Summer Orientation is held several times over the course of the summer and includes separate programs for first-year and transfer students, as well as a concurrent program for family members.

Fall Welcome Week, scheduled approximately five days prior to the beginning of fall quarter, is the next step in the orientation and advising process for new students entering fall quarter. It provides students with an opportunity to settle into life at UCSC, take advantage of important services, and continue their academic advising.

Winter Orientation is a one-day event focused on transfer students, entering in the winter quarter. It includes a concurrent program for family members.

Students make their reservations for Summer or Winter Orientation online through the UC Santa Cruz portal at [MyUCSC](#).

Questions can be directed to the Office of Campus Orientation Programs at (831) 459-5468, or via e-mail to orientation@ucsc.edu. Web: orientation.ucsc.edu.

Important information on particular majors may be viewed on individual departmental web sites. The sites will give you contact information and office hours. Advisers provide detailed information regarding requirements for the major and assist you in planning a program of study. The department adviser can also assign you to an appropriate faculty adviser who may serve as a mentor in your field, recommending courses and helping you refine your educational goals.

It is also important to seek departmental advising for assistance in planning your overall academic program. For transfer students and for students in many majors (such as those in the physical and biological sciences, engineering, arts, and environmental studies), it is necessary to obtain departmental advising prior to or at the start of the first quarter on campus.

For more general academic questions, make an appointment with a college adviser. Each college has specialized staff members, called academic preceptors, who advise students on everything from general education requirements to choosing a major.

For help in assessing career interests and exploring and choosing career options, contact the Career Center. The staff also will assist with choosing a major, résumé preparation, interviewing skills, applying for an internship, and job-search strategies. Many students find that participation in internships and field programs, [described here](#), gives them a practical basis for making career decisions. The Career Center offers workshops, an online database, and publications on many internship opportunities. The office's Career Advice Network (CAN) will connect you with UCSC alumni professionals who help students achieve their career goals.

If you plan to go on to graduate school, consult with faculty in your major. Faculty advisers

are the best people to ask about the quality of graduate programs in your field of interest. In addition, the Career Center offers advising and workshops on applying to graduate school. A letter-of-reference service enables you to maintain your recommendation letters at the Career Center.

If you intend to pursue graduate study in a field not offered as a major at Santa Cruz, you can prepare for your intended program through one of the campus's regular majors. You must plan your studies carefully, however, and advising will be especially important. The Career Center library has information that will help prepare you for graduate and professional programs. The following are some fields in which UCSC alumni have pursued graduate study and successful careers:

Architecture
Business
Conservation
Film
Finance
Guidance and counseling
Health Fields
High-tech industry
Human resources
Industrial and labor relations
International relations
Law
Marketing
Museum administration
Public administration
Urban planning

If you plan to pursue a career in medicine or another health-related field (including dentistry, nursing, nutrition, occupational therapy, optometry, osteopathic medicine, pharmacology, physical therapy, public health, and veterinary medicine), contact the Health Sciences Career Adviser in the Career Center at (831) 459-5705. Ethnic-minority students may also be eligible for the MARC/MBRS Programs, described below.

If you are interested in the field of law, the prelaw adviser for UCSC is at the Career Center, (831) 459-2957.

A number of programs provide additional academic advising and comprehensive support services to students with specific needs. Educational Opportunity Programs (EOP), Services for Transfer and Re-Entry Students (STARS), the Disability Resource Center, and International Programs are described below.

If you need assistance in another area, check to see if it is listed in the Index. For additional information, check with your college office or consult [The Navigator](#) or [Schedule of Classes](#).

Counseling on personal and family issues is available through [Counseling and Psychological Services](#).

Career Center

UC Santa Cruz graduates find success in many different career fields, and their superior education is the foundation for this success. The staff at the Career Center will help you link your educational experience to the world of work. The center provides a variety of employment and career-development services to help students obtain rewarding and successful careers.

Students are encouraged to visit the Career Center early during their first year on campus. The first step is to meet with a career adviser to begin developing a focused career plan. Simply sign up online for an advising appointment. Your career adviser will show you how to research and discover the many opportunities that are available to UC Santa Cruz students and graduates. Workshops offered by the Career Center include Selecting an Internship, Résumé and Cover Letter Writing, the Graduate and Professional School Information Workshop, Applying to Law School, and special workshops on specific majors or career fields.

Your college experience is likely to include a part-time job or internship in your area of interest. The Career Center has hundreds of opportunities available. Off-campus and on-campus employment opportunities (both work-study and non-work-study) are posted on the [Career Center's web site](#). For your convenience, you may apply for on-campus jobs online.

An internship is one of the best ways to gain practical work experience in your area of interest. The Career Center has a database with hundreds of opportunities in a wide variety of career fields. While visiting the center, be sure to check out the **Chancellor's Undergraduate Internship Program (CUIP)**. This unique internship program is designed to give participants a professionally enriching work experience on campus in one of the university's colleges, administrative units, or academic departments. For information, visit the web: intern.ucsc.edu.

Another interesting and challenging position is the UC Student Regent, with an annual recruitment process. For information, e-mail larojas@ucsc.edu or visit the web: careers.ucsc.edu/jobs/regent.html.

The Career Center's resource library contains material organized in the following manner: Career Exploration, Graduate and Professional Schools, Job Search, Career Fields, Internships, and Employer Information. A computer lab links you to the top career-development sites on the web. However, the most exciting online resource is the Career Advice Network database. The Career Advice Network (CAN) contains career profiles of UCSC alumni. The members of the network have volunteered to answer questions and give career advice pertaining to their particular career field. You may contact CAN members to obtain information on educational preparation, job responsibilities, résumé preparation, and tips on how to conduct your job search.

UC Santa Cruz students and alumni looking for full-time career opportunities need look no further than SlugQuest—an online site that lists job openings targeted to UCSC graduates. You may connect to SlugQuest on the Career Center web site. Another way to obtain a career position is to participate in the On-Campus Interview Program. Corporate recruiters visit campus every fall, winter, and spring to interview and hire students. The Career Center web site has a list of participating companies.

The Career Center sponsors several major events every academic year. The Graduate and Professional School Fair brings graduate and professional school representatives from the nation's top universities to campus to share information about their advanced-degree programs. Job fairs, which bring hiring companies to campus, take place several times a year. Students looking for a job or internship will want to come prepared with a great résumé. Other events include the Student Employment Recognition Awards Program Ceremony, where outstanding student employees are recognized and rewarded for their hard work and dedication, and the Multicultural Career Conference, which brings students and alumni together to develop mentor relationships and explore careers.

The Career Center—located at the Bay Tree Building, Room 305, in Quarry Plaza—can be reached at (831) 459-4420. Office hours are 8 a.m. to 5 p.m. Visit the center's web site at careers.ucsc.edu.

Educational Opportunity Programs (EOP)

The Educational Opportunity Programs (EOP) provide a variety of academic and personal support programs designed to promote the retention, academic success, and graduation rates of California residents who are first-generation college students from low-income and educationally disadvantaged backgrounds. EOP programs and services are designed to ensure that students successfully complete their undergraduate education and acquire the skills that will prepare them for leadership roles and graduate or professional school opportunities.

Advising Programs and Services

EOP advising programs work to enhance student academic and personal success. These programs and services include academic and personal counseling; time-management and study-skills strategies; academic workshops; referrals to resources, programs, and opportunities; peer advising; and community events. Students have access to three EOP academic counselors who provide academic advising and personal counseling to facilitate the students' academic, social, and personal transition/adjustment to the university. The counselors also work closely with the college, department, and financial aid advisers to ensure that students access and utilize all available resources to become "B or Better Scholars." EOP also organizes programs and events to promote and support the students' achievement and advancement. The events include Academic Success Workshops, a Holiday Event, and an Academic Excellence Reception. Other academic programs include the EOP Bridge Program for a select group of entering first-year students. Bridge is an academic-year program to help frosh make a smooth transition from high school to the university. The program includes a summer orientation and instruction, academic advising, learning support, and community-building activities throughout the academic year.

Pregraduate Programs

The pregraduate programs are designed to increase the placement of EOP students in doctoral programs in preparation for the pursuit of academic careers. The two pregraduate programs are the Faculty Mentor Program (FMP) and the Graduate Information Program (GIP).

GIP offers general graduate and professional school advising. GIP activities focus on informing and preparing students for educational opportunities beyond the baccalaureate degree. Through workshops and individual sessions, GIP outlines the process of how to apply to graduate school and helps students make important faculty, staff, and resource connections. The GIP web site offers a comprehensive step-by-step guide to all aspects of the process of preparing for and applying to graduate school, including identifying research interests, searching for graduate schools, securing letters of recommendation, and identifying internships. GIP also maintains a graduate school

resource library and sponsors field trips to conferences and forums within the local area to connect to UC-wide resources. Students can visit the [GIP web site](#).

The Faculty Mentor Program is a two-quarter undergraduate research program designed to encourage and prepare students to undertake future graduate study within the arts, humanities, and social sciences. FMP includes research writing, workshops on applying to graduate school, and hands-on research experience under the guidance of a UCSC faculty sponsor. Students receive academic credit for participation in a weekly seminar along with a 10–15-hour commitment to faculty-sponsored research.

For more information about the Educational Opportunity Programs, drop by the Academic Resources Center, call (831) 459-2296, or visit the web site: www2.ucsc.edu/eop.

[\[Return to top.\]](#)

MARC/MBRS Programs

The Division of Physical and Biological Sciences sponsors two National Institutes of Health grant programs: the Minority Access to Research Careers (MARC) Program and the Minority Biomedical Research Support (MBRS) Program. Though separately funded, the projects share a similar mandate: to increase the number of well-prepared ethnic-minority students who are admitted to graduate or professional schools in biomedical sciences. The program seeks students from groups that have traditionally been denied equal access to educational opportunities in the science professions.

Continuing students who have successfully completed specific introductory courses in biology, chemistry, and mathematics are invited to apply for the MARC/MBRS Programs, which begin in the summer and introduce students to program faculty, their research, and research techniques. After students successfully complete the summer program, they have the opportunity to work in a faculty lab for the following academic year. Financial compensation is available for laboratory placements and participation in the summer program.

The MARC/MBRS Office also works with other campus offices to help make the most of campus resources and provide practical assistance with the graduate and professional school admission process. In addition, the staff maintains an information file on summer enrichment programs, which can provide you with vital research or clinical experience or help you prepare for the Graduate Record Examination.

The program's well-equipped student office provides additional academic support and a convenient place for students to meet. The staff encourages students to make use of this study space and assists them in learning to use the office's personal computers.

For further information, contact the MARC/MBRS Office, 377 Thimann Laboratories, (831) 459-4770, or e-mail malika@biology.ucsc.edu. Web: marcmbrs.ucsc.edu.

Academic Excellence Program (ACE)

ACE is supported by the Division of Physical and Biological Sciences and has as its goal to increase diversity among students receiving bachelor's degrees in science, technology, engineering, and mathematics (STEM) by offering discussion sections for selected mathematics and science courses. These discussion sections replace registrar-scheduled secondary discussion sections for ACE students.

The program received the 1999 Presidential Award for Excellence in Science, Mathematics, and Engineering Mentoring. This award, presented by the White House and administered by the National Science Foundation, is given to individuals or programs that have demonstrated outstanding and sustained mentoring efforts for students underrepresented in science, mathematics, and engineering.

Helping students excel in gateway mathematics and science courses is ACE's focus. The ACE sections provide a structured, workshop setting where students learn by teaching each other. This collaborative method reinforces critical thinking and problem-solving skills. Enrollment in ACE is limited. A professional section leader with an academic background in the subject facilitates these workshops. In addition, undergraduate coleaders/peer mentors who have excelled in the course assist the section leader. This brings the student to teacher ratio to approximately 12:1. Students also meet with a peer mentor, who shares study tips and techniques, as well as opportunities for undergraduate teaching and research internships. Other opportunities available through ACE include office hours, study groups, and career counseling. ACE scholars join a community of scholars dedicated to academic excellence and success.

Applications are accepted quarterly for the upcoming term. Priority is given to students who are studying STEM disciplines and who are first generation to attend college. For more information, visit the web site: ace.ucsc.edu.

Multicultural Engineering Program (MEP)

The Baskin School of Engineering's Multicultural Engineering Program (MEP) promotes diversity and facilitates the success of engineering students.

MEP provides academic and personal support for engineering students who are first-generation college students, are the first in the family to pursue engineering or computer science studies, or are from a low-income (limited financial resources) or educationally disadvantaged background. MEP's academic learning community supplements students' undergraduate experience and encourages students to continue their education into graduate school. MEP has a strong support system and engages students' full participation in a variety of services and activities. These include academic advising, personal counseling, tutorial services, drop-in assistance, individual and small-group study, study-skills workshops, peer-support networks, community-building activities, scholarships, and an engineering Summer Bridge program for a select group of entering first-year and transfer students.

MEP's well-equipped study center and computer lab provides 24-hour access to computer workstations and printer, textbooks, individual lockers, and a place for students to gather and study. Students who have participated in preuniversity service programs (e.g., Early Academic Outreach, Upward Bound, MESA, Talent Search, Puente, DEEP, Smith Scholastic Society) are encouraged to apply to MEP.

For further information, call (831) 459-2868, visit the web site mep.soe.ucsc.edu, or drop by the School of Engineering Undergraduate Affairs Office, 225 Baskin Engineering Building.

Services for Transfer and Re-Entry Students (STARS)

Services for Transfer and Re-Entry Students (STARS) offers a broad range of personal and academic support services for all transfer and re-entry students (undergraduates 25 years and older, graduate students 29 years and older), students who are parents regardless of age, and military veterans. These services include admissions information; orientations for new students; academic seminars courses; study-skills workshops; tutorial services; informal academic advising; drop-in assistance; social, recreational, and cultural programs; scholarships; newsletters; and study centers with computer workstations. STARS also acts as a clearinghouse for information about campus and community resources for UCSC's large transfer and re-entry student populations.

STARS oversees two resource centers housed in different locations on campus. All current and prospective re-entry and transfer students are invited to visit. Hours are 8 a.m. to 5 p.m., Monday through Friday. STARS main offices are in the Academic Resources Center, Rooms 206 and 216. STARS at Kresge is located at the entrance to Kresge College.

Veterans Education Team Support (VETS) is a STARS program for veterans returning to school. In this peer mentor program, veterans meet each other and receive assistance as they navigate admission and transition into university life. Ongoing personal and academic support and outreach to prospective students are also offered.

The Smith Renaissance Scholars Program, which helps foster and former foster youths pursue their educational goals, is affiliated with STARS.

STARS also coordinates the Lifelong Learners program, a UC/community organization dedicated to continuing education. The organization hosts monthly meetings with university faculty and offers a wide variety of interest groups. Some members take campus courses for a minimal fee through UCSC Extension's Concurrent Enrollment.

For further information regarding all the STARS programs, call (831) 459-2552. For current programs and activities, view the [STARS web site](#).

Part-Time Program

If you are unable to attend the university full-time because of family obligations, employment responsibilities, or a medical condition, or you are in your final quarter before graduation, you may qualify for the Part-Time Program. This program enables students to pursue a bachelor's degree part-time in any major offered at UC Santa Cruz. To participate, undergraduate students must file a Part-Time Program application by the appropriate deadline. Full-time students normally take three 5-credit courses per quarter; part-time students may enroll in a maximum of 10 credits.

Students approved for enrollment on a part-time basis pay the same fees as full-time students but pay only one-half of the educational fee. Part-time nonresidents pay one-half of nonresident tuition. Financial aid awards may be affected by enrolling part-time. Students who use the part-time fee reduction may not also use the UC employee reduction.

Applications for undergraduates are available from the Office of the Registrar, 190 Hahn Student Services Building. For more information, call (831) 459-4412 or e-mail registrar@ucsc.edu. Web: reg.ucsc.edu/students/part-time.html.

Disability Resource Center (DRC)

The campus accommodates students with documented disabilities and welcomes their attendance at UCSC. The Disability Resource Center (DRC) provides the following to help meet the needs of students with disabilities: counseling and advising; assistance with enrollment; testing accommodations; alternative media such as audiobooks; adaptive equipment loans; notetaker and interpreter services; and liaison and referrals to appropriate resources, services, and agencies.

The Disability Resource Center is located at 146 Hahn Student Services Building and can be reached by telephone at (831) 459-2089 (voice) or (831) 459-4806 (TTY), or by e-mail at drc@ucsc.edu. Web: drc.ucsc.edu/.

Campus access for people with mobility impairments. Transportation and Parking Services, in coordination with the DRC and Cowell Student Health Center, provides accessibility maps, vans equipped with wheelchair lifts that can transport students throughout campus, and authorization to use disabled or medical parking spaces for the disabled, which are adjacent to all campus buildings. Most buildings on campus have wheelchair-accessible ramps, modified rest rooms, and other facilities. If necessary, classes are rescheduled to meet accessibility needs.

Questions and concerns about

- program accessibility should be addressed to the director of the Disability Resource Center, at (831) 459-2089 (voice); (831) 459-4806 (TTY)
- transportation, physical, or computing access to the campus should be directed to (831) 459-3759 (voice/TTY)
- accommodating job applicants or current employees with disabilities should be directed to (831) 459-4602 (voice)

ROTC and Military Affairs

Students interested in participating in Air Force Reserve Officer Training Corps (AFROTC) have the option of attending AFROTC classes at San Jose State University while taking other academic classes at UC Santa Cruz.

San José State University supports a wing of AFROTC with cadets from San José State University, Santa Clara University, Stanford University, UC Santa Cruz and many local community colleges. The Air Force ROTC program is designed to provide instruction in leadership, management, and national security studies along with military education and training. This prepares the cadet for assignment to positions of responsibility and importance in the modern Air Force. Instruction is conducted on and off campus. This program offers all eligible students the opportunity to obtain an officer's commission in the United States Air Force while earning their college degrees.

Program Overview

Our faculty brings a wealth of experience and diversity to the program. Instructors are Active Duty Air Force officers from various career areas and provide students with a first-rate academic education and military training experience. Each faculty member also acts as a student advisor to guide students through the program and help them reach the goal of an officer's commission in the United States Air Force.

College students wishing to commission as an Air Force officer through ROTC may enroll in a three-, three-and-a-half-, or four-year program. Students attend Air Force ROTC classes along with other college courses and receive elective academic credit.

After successfully completing all requirements, the cadets are commissioned as Air Force officers with a four-year active duty service commitment.

For information on the Air Force ROTC program, contact the Department of Aerospace Studies, AFROTC Det 045, One Washington Square, Industrial Studies Building, Room 214, San Jose State University, San Jose, CA, 95192-0051. Phone: (408) 924-2960. E-mail Det045@maxwell.af.mil or visit the web site: www.sjsu.edu/depts/AFROTC/homepage.html. Students may call or inquire about program prerequisites, scholarship availability, and class schedules at the Department of Aerospace Studies.

[\[Return to top.\]](#)

Undergraduate Research

At the best research universities, professors bring knowledge and creativity from their cutting-edge research into the classroom, integrating the canon of the discipline with its future directions. UC Santa Cruz takes this further with a special tradition of undergraduate research outside the classroom. UC Santa Cruz, its departments, and faculty offer undergraduates many ways to get involved in research and creative activities. These opportunities develop advanced skills and insights and an early introduction to the nature of graduate studies. Research projects can help students launch careers, secure admissions to top graduate schools, and truly impact society.

Many majors incorporate research in their senior comprehensive requirement, with options or requirements of a senior thesis, capstone project, or other creative endeavor based on students' individual research. Other opportunities for undergraduates exist through structured internships or research programs, by joining ongoing faculty research or creative projects, or by developing their

own projects under faculty supervision. The next sections discuss a sampling of UCSC's international education, field-study, and exchange programs, which enable students to deeply enrich their undergraduate experience and education as they learn by doing.

UC LEADS

After being selected as UC LEADS scholars, students begin a two-year program of scientific research and graduate school preparation guided by individual faculty mentors. Scholars are provided with an excellent opportunity to explore their discipline, experience a research environment, and improve their opportunities for future study in their chosen field. Each scholar is mentored by a member of the UC faculty, who assists the student in designing a plan of research and enrichment activities tailored to his or her individual interests and academic goals. To learn more about eligibility requirements and the UC LEADS program, visit graddiv.ucsc.edu/ucleads or stem.ucsc.edu.

National Science Foundation Research Experiences

UC Santa Cruz faculty host four National Science Foundation Research Experiences for Undergraduates (NSF REU) sites. These events typically are 9–10 week summer programs and provide housing and a stipend. The UCSC programs include chemistry's SURF (Summer Undergraduate Research Fellowship) program and a separate international REU in Thailand (www.chemistry.ucsc.edu/Projects/SURF), as well as the School of Engineering's SURF-IT (Information Technology, surf-it.soe.ucsc.edu). There are hundreds of other NSF REU programs nationwide (www.nsf.gov/crssprgm/reu), and faculty and advisers can help you apply.

MARC/MBRS

The MARC/MBRS programs, funded by the National Institutes of Health and discussed elsewhere, seek to increase the number of well-prepared ethnic-minority students who are admitted to graduate and professional schools in the biomedical sciences (marcmbrs.ucsc.edu).

International Education

The International Education Office (IEO) oversees UCSC Programs Abroad and International Scholar and Student Services (ISSS).

For further information, contact the International Education Office, 104 Classroom Units Building, (831) 459-2858, e-mail: oie@ucsc.edu, Web: oie.ucsc.edu.

Programs Abroad

Programs Abroad offers undergraduate and graduate students the opportunity to study through the University of California, Education Abroad Program (EAP) at 115 host universities and colleges in 34 countries as part of their regular UCSC academic program. The program serves students at all UC campuses and is administered by the University Office of the Education Abroad Program in Santa Barbara: eap.ucop.edu.

Additionally, UCSC Programs Abroad assists students participating in study-abroad opportunities through UCSC directly, other UC campuses, and privately sponsored organizations.

UCSC seeks to bring these programs within reach of all students. Extension of studies up to 15 quarters is possible when participating in a program overseas. Students receiving financial aid can apply their award to most programs abroad.

International Scholars and Students

The International Scholar and Student Services (ISSS) office serves as the official campus liaison to the U.S. government agencies that have jurisdiction over immigration matters. ISSS assists international faculty, scholars, and students with visa and immigration issues while they are at UCSC. In addition to preparing the necessary documents to apply for a U.S. visa, ISSS assists students, scholars, and faculty in maintaining their legal status while in the United States. ISSS also provides orientations, travel, and employment workshops, and information and referrals regarding financial, personal, cultural, and academic concerns. ISSS serves more than 1,000 international clients and their accompanying family members who come to the campus each year.

Fulbright Grants for Graduate Study and Research Abroad

The Division of Undergraduate Education facilitates the Fulbright annual awards competition for the Graduate Study and Research Abroad Program for currently enrolled UCSC students. Web: <http://honors.ucsc.edu/scholarships.htm>

Field and Exchange Programs

UCDC Program at the UC Washington Center

The UCDC Program at the UC Washington Center in Washington, D.C., supervises and supports students who pursue internships and academic study in the nation's capital. The program is open through a competitive application process to students in all majors who will have upper-division status by the quarter in which they participate. (Physical and biological sciences and engineering majors are eligible to participate in their sophomore year with department approval.) Students enroll for fall, winter, or spring quarter, earn 12 to 17 course credits, and continue to be registered as full-time students. (In addition, see [Residence](#).) Applicant selection is based on academic record, a written statement, letters of recommendation, and in some cases a personal interview.

Financial-aid eligibility is maintained, and students who are eligible for financial aid may qualify for a Washington D.C. Scholarship to help cover supplemental costs.

Students live in the UC Washington Center with students from all the participating UC campuses. This provides a social and intellectual community throughout the quarter.

Interested students with strong academic records are encouraged to apply. For further information, contact the UCDC coordinator,
5 Merrill College, (831) 459-2855.

Web: <http://politics.ucsc.edu/ucdc>.

Intercampus Visitor Program

UCSC students may take advantage of educational opportunities at other campuses of the University of California through the Intercampus Visitor Program. This program enables you to take courses not available at Santa Cruz, to participate in special programs, or to study with distinguished faculty at other campuses.

To qualify for participation in this program, you must be in good standing after completing at least three quarters in residence at Santa Cruz. Each host campus establishes its own criteria for accepting students from other campuses as visitors. You must also have the approval of your college. Consult with your department about how courses taken at the host campus may apply to your major requirements.

Applications are available at the Office of the Registrar (Web: <http://reg.ucsc.edu/students/intercampus.html>). The application form contains a great deal of useful information about the program and how and when to file; please read it carefully. A nonrefundable application fee of \$60 is due when the application is filed. For further information, contact the special programs assistant in the Office of the Registrar, 190 Hahn Student Services Building, (831) 459-3459, or by e-mail at registrar@ucsc.edu.

Domestic Exchange Programs

UCSC has exchange programs with the University of New Hampshire (UNH) and the University of New Mexico (UNM). UNH is located near the New Hampshire seacoast in the picturesque colonial town of Durham, a little more than an hour from Boston, Massachusetts. UNM is located in Albuquerque, a city of approximately half a million population, situated on the banks of the Rio Grande. Both schools give students the opportunity for an educational experience in an entirely different environment.

While enrolled in the exchange program, students maintain their status at UCSC, and they are expected to return to complete their studies following enrollment at UNH or UNM. Both universities are on the semester system, so students usually participate in the exchange program for the entire academic year. But the option exists for students to participate during fall quarter only, or during winter and spring quarters.

Participants are selected from among students who are in good academic standing. Selection for 2011-12 will take place during winter quarter 2011. Selection for 2012-13 will take place during winter quarter 2012. Each department of study determines the applicability of UNH and UNM courses toward requirements for the major. Letter grades earned while at UNH and UNM will not be calculated into the UCSC GPA or the UC GPA. Further information is available from the exchange program coordinator in the Office of the Registrar, (831) 459-4412. Web: reg.ucsc.edu/students/exchange.html.

[\[Return to top.\]](#)

Field Programs

Many UCSC students complement their major programs with field experience or off-campus internships, which also provide opportunities for students to become involved in public service activities in the local community and throughout the world. Most of the field programs described below are open to students in a range of majors, although some are restricted to students pursuing a designated area of study. Students in all majors may apply for internships sponsored by the [Career Center](#).

In addition to the off-campus placements provided by the programs described below, independent field study is available through some colleges and departments. Public service activities can be arranged through field programs.

Community Studies Field-Study Program

Community studies is an interdisciplinary undergraduate major that examines social change in the context of community. Each student in the program designs his or her curriculum around a six-month field study or internship with a community organization or agency.

The core curriculum for the major includes courses in field-study preparation as well as theory and analysis. Students complete the major by preparing a senior project integrating field study, classroom work, and research. The major has no lower-division prerequisites and usually takes about two years to complete.

With the guidance of a faculty adviser, community studies students choose field placements related to one of the areas of the department's focus. (See the listings of Theory and Practice Seminars, Community Studies 100A–Z, for descriptions of these areas of focus.) Most field placements are in California, although students may do their field placements throughout the U.S. and the world. Students have been placed with health centers, radio and television stations, newspapers, city planning departments, political parties, neighborhood organizations, civil rights groups, battered women's shelters, legal clinics, child care centers, programs for seniors, tenants' unions, government agencies, the offices of elected officials, trade unions, and other organizations working for social change in communities.

The practical experience gained from the six-month field study provides graduates with many choices. About half go on to graduate work in urban studies, public administration, social work, planning, law, policy studies, medicine, or academic disciplines like sociology, anthropology, and politics. Others enter the work world directly, in many cases continuing with agencies such as those in which they did their field study. Community studies graduates are also doctors, community organizers, program directors, public officials, lawyers, university teachers, therapists, nurses, librarians, social workers, news directors, forest management consultants, reporters, day care teachers, union officials, and labor organizers.

One-quarter, 2- to 10-credit field studies are also available to all UCSC students through community studies. For more detailed information, contact the Community Studies Department Office, 231 Oakes College, (831) 459-2371, or the community studies field-study coordinator, 218 Oaks College, (831) 459-4601. E-mail: openup@ucsc.edu. Web: communitystudies.ucsc.edu.

Economics Field-Study Program

The Economics Department offers its majors the opportunity to integrate their academic knowledge with career-related work. The field-study program places students in internships under the supervision of a faculty sponsor and a professional in the workplace. Students can select from a wide variety of field placements such as accounting firms, community nonprofits, government agencies, brokerage firms, marketing agencies, banks, and businesses in Santa Cruz and beyond. Students apply and prepare for field study a quarter in advance. Acceptance into the field-study program is determined by academic standing, class level, and successful completion of Economics 100A, 100B, and 113 (see [Economics courses](#)). Students may earn a maximum of 10 credits and complete up to two quarters in a field placement.

Along with the training and supervision by a professional in the workplace, students receive guidance from a faculty sponsor who directs their academic project. Completion of this project and the job supervisor's evaluation of performance earn the student credit. Economics Field Study (course 193 or 198, see [Economics courses](#)) does not satisfy an upper-division requirement for the major and is available on a passing/not passing (P/NP) basis only.

Interested students should make an appointment or stop by the Economics Field-Study Office: 401 Engineering 2 Bldg.; call (831) 459-2028; or e-mail econintern@ucsc.edu. Web: econ.ucsc.edu.

Environmental Studies Field and Internship Program

Open to all UCSC students, the Environmental Studies Field and Internship Program is an integral academic component of the environmental studies major, and it augments the research and professional development of undergraduate students (see [Environmental Studies](#)). Interns are placed, individually and in groups, in both on-campus and off-campus agencies, where their work results in publications and resource documents and in many cases serves as the primary basis for policy formation. Placements have included research with small businesses and farms, state agencies, nongovernmental organizations, and planning departments; assignments as natural history interpretive guides for state and national parks; and apprentice positions with consultants, architects, solar-energy designers, agroecologists, resource specialists, and teachers. Student interns also have been sent to work with coffee growers in Costa Rica, Nicaragua, El Salvador, and Mexico.

Part- and full-time placements are available, and students may receive 2 to 15 course credits for their work. Each student's placement is supervised by a faculty adviser, a field sponsor, and the internship coordinator. Students spend 12 to 15 hours each week on their assignments for every 5 credits they receive.

Internships and fieldwork are designed to complement a student's course work and are available

for both lower- and upper-division credit. Often, the internship leads to employment after graduation. Qualified environmental studies majors may undertake a senior internship to fulfill the department's comprehensive requirement. In addition, internships provide a fieldwork component for some environmental studies courses. Undergraduates are also afforded ample opportunities to intern on faculty and graduate-student research projects.

Further information is available from the Environmental Studies Field and Internship Program Office, 491 Interdisciplinary Sciences Building, (831) 459-2104, e-mail: ckrohn@ucsc.edu. Web: envs.ucsc.edu/internships.

Global Information Internship Program

The Global Information Internship Program (GIIP) is an instructional program at UCSC sponsored by the Center for Global, International and Regional Studies (see [CGIRS](#)). Guided by administrative and technical support from staff and faculty, GIIP is organized as a student-managed service-learning program that transfers the benefits of information technology to the world's excluded majority. The program places highly motivated interns—trained in social science and information technology—with nongovernmental organizations and civic groups in the U.S. and abroad. GIIP's mission is twofold: to upgrade the informational capacity of excluded communities while nurturing a new generation of information-savvy student leaders committed to advancing the public good.

GIIP interns acquire their skills by enrolling in 140 hours of instruction in Sociology 30A-B-C over a nine-month period. Sixty hours of technical training consists of computer-based instruction. The other 80 hours are devoted to working on projects involving one of GIIP's six themes: Global Justice, Women's Empowerment, Sustainable Environments, Human Rights, Peace and Conflict Resolution, and Education and Social Enterprise.

For more information, visit: giip.ucsc.edu or call (831) 459-1572.

Health Sciences Internship Program

A requirement of the major, the Health Sciences Internship Program offers students a unique opportunity for personal growth and professional development. Paired with a professional mentor, students spend one quarter interning in a community health care setting. Placement opportunities cover a broad range, from individual physicians to community clinics and hospitals, hospices, and public health agencies. The Health Sciences Internship Coordinator works with students to prepare them for their internship and maintains a database of appropriate placements. Junior and senior health sciences majors only are eligible to apply. Applications are due at least one quarter in advance. For further information, contact the Health Sciences Internship Coordinator, Caroline Berger, at (831) 459-5647 or cmberger@ucsc.edu.

Latin American and Latino Studies Field-Study and Internship Opportunities

All majors are strongly encouraged to undertake either a field study in Latin America, the Caribbean, a Latino/a community in the U.S., or formal academic study abroad through the Education Abroad Program (EAP). These paths are the best ways to improve language skills, explore the nature and direction of specific academic and career interests in relation to Latin American and Latino studies, and deepen cross-cultural understanding and relationships based on personal experience.

Field studies comprise independent, community-based study projects for academic credit, done under faculty sponsorship and arranged on an individual basis. Students can do full-time field study for one quarter for full academic credit, part-time field study scheduled in conjunction with formal course work at UCSC, or field study as an extension of the Education Abroad Program (EAP). Projects vary widely, but students who want to develop a field-study proposal are expected to prepare for it by acquiring fluency in the appropriate language, prior cross-cultural experience, and upper-division course work on the region and/or topic that is to be the focus of the study.

Students who wish to pursue a full-time field study are recommended to take the Field Study Seminar (LALS 196) and concurrent lab (LALS 196L). The seminar focuses on preparing to conduct fieldwork in Latin American and Latino communities drawing on readings and mini-case studies by the LALS faculty and affiliated faculty.

The lab develops the skills to document respective field study successfully through hands-on lab exercises, examples, and work with the field-study coordinators. Many of the students who have done full-time field study have developed a senior thesis. Students who pursue a part-time field study are highly encouraged, but not required, to take the Field Study Seminar and lab.

Local opportunities for internships and field study in Latino/a communities on California's Central Coast are numerous. Credit for up to three upper-division courses may be applied toward the major from field study; however, course credit from field study and study abroad combined may not exceed three upper-division courses. Students should check the Latin American and Latino Studies Department web site for further information regarding the field-study process and course credit. A listing of local field-study programs and petition forms are available at the LALS Department office, 32 Merrill Academic Building.

For more information, contact the LALS office at (831) 459-2119 (aalvares@ucsc.edu).

Psychology Field-Study Program

The Psychology Field-Study Program provides qualified students an opportunity to integrate what they have learned in the classroom with direct service to a community agency. Each year, more

than 200 students develop new skills and clarify personal and professional goals by working as interns in schools, criminal justice programs, and mental-health and other social-service agencies, where they are supervised by a professional within that organization. Psychology faculty members sponsor field-study students, helping them to synthesize their intern experience with psychology course work and guiding them through an academic project.

Junior and senior psychology majors in good academic standing are eligible to apply for this competitive program (see [Psychology](#)). Applications can be obtained from the Field-Study Office, 273 Social Sciences 2 Building, and are due one quarter in advance. There is a minimum commitment of two quarters. Information can be viewed on the web at psych.ucsc.edu/field_study, or phone (831) 459-4410.

Education Field Programs

The M.A. in Education/California SB 2042 Preliminary Teacher Credential program provides students with necessary credential preparation for K–12 teaching in the California public schools. Preparation is offered for the Multiple Subject Preliminary credential (grades K–6), and the Single Subject credential (grades 7–12), in the following subject areas: English, math, social science, and science. Students may also pursue a Bilingual Cross-cultural (BCLAD) emphasis in Spanish.

Students pursuing the Education M.A./Credential Preliminary Credential must complete an extensive student teaching course sequence. Student teaching placements are restricted to enrolled students.

The student-teaching sequence consists of five courses: Education 200, 201, 201A (single subject only), 202A, B and C. The first and second quarters of the sequence involve part-time placements in public schools in Santa Cruz County. The third quarter of student teaching is a full-time experience in which students gradually take over full responsibility for the daily instructional program of the classroom in which they are placed. Substantial fieldwork is also incorporated in other courses required for the teaching credential.

The minor in education is an undergraduate program in which students explore the history of educational thought and philosophy, the politics and economics of education, learning theory and pedagogy, and issues of cultural and linguistic diversity. As a part of the six-course minor sequence, students engage in field study in schools through Education 180, Introduction to Teaching.

For more information, see [Education](#), or contact the Education Department, 202 Social Sciences 1 Building, (831) 459-2997. E-mail address: education@ucsc.edu; web: education.ucsc.edu.

M.S. in Computer Engineering (Network Engineering)

The Department of Computer Engineering offers a distance-learning version of its M.S. in computer engineering, with a concentration in network engineering, in collaboration with UCSC Extension. Required and elective courses are presented in Silicon Valley using real-time video technology and faculty in person. This part-time University of California M.S. degree program can be completed in three years. For further information, contact msce@soe.ucsc.edu.

Summer Programs

Summer Session at UC Santa Cruz is offered from mid-June through the end of August. Registration fees are the same for California residents and nonresidents. Please contact the Summer Session Office, UC Santa Cruz, 1156 High Street, Santa Cruz, CA 95064, for further information about Summer Session programs listed below. To request a Summer Session catalog, telephone (831) 459-2524 or fax (831) 459-3070. For additional information, telephone (831) 459-2524 or e-mail summers@ucsc.edu. Visit our home page: summer.ucsc.edu.

Summer Session Courses

Undergraduate credit courses are offered in the arts, engineering, humanities, physical and biological sciences, and social sciences during two five-week Summer Sessions. The sessions run from mid-June through July, and late July through late August. Students may enroll in several classes, with a recommended maximum of 15 credits per session.

Shakespeare Santa Cruz Internship

Shakespeare Santa Cruz (SSC), a professional theater company in residence at the Theater Arts Center at UCSC, offers internships in acting, design, directing, dramaturgy, stage management, and production. Interns attend classes and work closely with artistic, technical, and stage-management staff in support of the summer season productions backstage in rehearsal and in performance. Acting interns are part of the ensemble and/or understudies in the professional productions and perform in an intern production during the summer season. The 5-credit classes, which are part of the SSC Internship Program and offered through UCSC Summer Session, include acting and voice for the actor. These classes are taught by SSC company members. Interns thus have a direct link with top theater professionals, exposure to the latest skills and techniques, professional theater experience to list on their résumé, and an inside advantage for marketing new skills. For more information on internships, contact SSC's administration and education coordinator at (831) 459-5810 or visit the web: shakespearesantacruz.org.

UCSC Extension in Silicon Valley

University of California Extension is the year-round continuing-education service linking the University of California with the people, corporations and communities of the state.

UCSC Extension is located in Santa Clara and primarily serves adults who live and work in the south bay, peninsula, and east bay communities, as well as on the central coast. Programs are open enrollment and vary in length and format, but are mostly multiweek classroom-based or online courses, scheduled workday evenings and on weekends. Certificate programs focus on advanced professional education and are oriented toward immediate application in the workplace. While most certificates can be completed within one year, course work is graded and substantial, typically involving lectures, readings, presentations, and final projects or examinations. The key program areas at UCSC Extension in Silicon Valley are:

- Business and Management
- Engineering and Technology
- Applied and Natural Sciences
- Education

Extension programs are open to any adult but cater to those who hold undergraduate and graduate degrees and who would benefit from additional university-level professional study. The instructors are degreed working professionals with decades of expertise in the fields that match the subject areas they teach. In some cases, they are faculty from UC and other educational institutions.

Lab-based and classroom sessions are held at UCSC Extension's Santa Clara facility or online.

UCSC Extension also offers professional education programs on a contract basis to local corporations and agencies through its academic departments, which also deliver management, engineering, bioscience, and education courses and certificates on site.

Regularly enrolled UCSC students may obtain degree credit for Extension courses numbered 1–199. Upon submission of the Extension transcript to the Office of Admissions, the course credit may be applied toward a bachelor's degree at UCSC. Extension courses numbered other than 1–199 are not applicable to a UCSC degree. However, many Extension courses are recognized for graduate degree credit by other universities. Check the extension catalog for details. Comprehensive program descriptions and course offerings are listed on the web at ucsc-extension.edu. To be placed on the mailing list for a catalog, call (408) 861-3700. The mailing address for UCSC Extension in Silicon Valley is 2505 Augustine Drive, Suite 100, Santa Clara, California 95054-3303.

Open Campus/Concurrent Enrollment

Concurrent Enrollment through Extension is a cooperative arrangement between UC Santa Cruz and UCSC Extension that enables members of the public to enroll in one or two regular UCSC undergraduate or graduate courses per quarter for credit. The program is administered by UCSC Extension, and course credit granted appears on a UCSC Extension transcript. Participants must meet certain criteria outlined in the Concurrent Enrollment application. An application fee is charged for each quarter of enrollment in addition to course fees. A first-time application filed at least one week prior to the first day of instruction for the quarter has a \$55 fee; subsequent applications filed at least one week prior to the first day of instruction for the quarter have a \$10 fee. Applications filed later than one week prior to the first day of instruction for the quarter have a \$100 fee.

Concurrent Enrollment through Extension may be used as a path toward a part-time or full-time degree program or as a way of studying subjects of personal or occupational interest. Credit earned through this program may be used toward degree requirements, when applicable, if participants subsequently seek admission to the university and are accepted.

Seniors 62 and older pay reduced fees and do not pay the application fee.

Financial aid is not available to participants in the Concurrent Enrollment program.

For further information and to obtain the application packet, contact UCSC Extension, 2505 Augustine Drive, Suite 100, Santa Clara, CA 95054-3003, (831) 861-3700 or go to www.ucsc.edu-extension.edu/open-campus.

*High School Scholars Program**

The High School Scholars Program, offered through University Extension, provides an opportunity for qualified seniors who attend Santa Cruz County high schools to take UC

Santa Cruz academic courses. The program is administered through University Extension in cooperation with Cowell College. Program advisers help the participants select appropriate courses from those available.

*UCSC Extension Silicon Valley has announced that the High School Scholars Program has been discontinued for the 2011-12 academic year.

Intersegmental Cross-Enrollment

This program permits a student who is currently enrolled in a California community college or a California State University campus and who meets certain eligibility criteria to enroll in one undergraduate course at UCSC each term, on a space-available basis. A student is qualified to participate in this program if he or she meets the following requirements:

- has completed at least one term at the home campus as a matriculated student and is enrolled in at least 6 credits at the home campus during the term in which he or she seeks to cross-enroll;
- has a grade-point average of 2.0 for work completed;
- has paid tuition or fees required by the home campus for the academic term in which he or she seeks to cross-enroll;
- has appropriate academic preparation as determined by the host campus, consistent with the standard applied to currently enrolled students;
- is a California resident for tuition purposes at the home campus; and
- has not previously been admitted to and registered at UCSC.

Interested students may obtain additional information and an application from the registrar at their home campus.

Graduate Education

UC Santa Cruz offers graduate study in more than 30 academic fields. About 1,500 graduate students are enrolled at the certificate, master's, and doctoral levels. The small size of the UCSC graduate programs encourages close working relations between students and faculty in an informal atmosphere conducive to rapid learning and professional growth. Many graduate programs have interdisciplinary components, and students are encouraged to explore the conceptual connections between related fields as they acquire mastery in their areas of specialization.

Research facilities at UCSC are excellent, and there are extensive opportunities for graduate students to engage in significant independent study and research (see [Resources for Learning and Research](#)). Graduate students are also encouraged to obtain teaching experience, primarily as supervised teaching assistants. They are highly valued members of the UCSC community, contributing substantially to the research and teaching conducted on the campus.

Degrees and Programs

The University of California, Santa Cruz, offers graduate programs leading to advanced degrees or certificates in the following areas:

Department		Degree or certificate
Anthropology		Ph.D.
Astronomy and astrophysics		Ph.D.
Bioinformatics		M.S./Ph.D.
Biology	ecology and evolutionary	M.A./Ph.D.
	molecular, cell, and developmental	M.A./Ph.D.
Chemistry and biochemistry		M.S./Ph.D.
Computer engineering		M.S./Ph.D.
Computer science		M.S./Ph.D.
Digital arts/new media		M.F.A.
Earth and planetary sciences		M.S./Ph.D.
Economics	applied	M.S.
	international	Ph.D.
Education	teaching	M.A.
	research	Ph.D.
	collaborative leadership	Ed.D.
Environmental studies		Ph.D.
Film and digital media		Ph.D.
Electrical engineering		M.S./Ph.D.
History		M.A./Ph.D.
History of consciousness		Ph.D.
Linguistics		M.A./Ph.D.
Literature		M.A./Ph.D.
Mathematics		M.A./Ph.D.
Microbiology and environmental toxicology.		M.S./Ph.D.
Music		M.A./D.M.A./Ph.D.
Ocean sciences		M.S./Ph.D.
Philosophy		M.A./Ph.D.
Physics		M.S./Ph.D.
Politics		Ph.D.

Psychology (with emphasis in social, developmental, or cognitive)	Ph.D.
Science communication (writing)	Certificate
Social documentation	M.A.
Sociology	Ph.D.
Statistics and applied mathematics	M.S./Ph.D.
Technology and information management	M.S./Ph.D.
Theater arts	Certificate
Visual studies	Ph.D.

Program Descriptions

Descriptions of individual programs appear under the specific disciplines in the [programs and courses section](#). Application materials for all programs are available online at graddiv.ucsc.edu.

All of our graduate programs have information on the web at www.ucsc.edu/academics. Inquiries about part-time study should be directed to the individual departments. If there are any problems with the online application process, please e-mail gradadm@ucsc.edu.

Administration

At UCSC, the individual graduate programs are directed by departments. Overall policy is determined by the Graduate Council, and coordination and record keeping for matters common to all graduate students—such as admission applications, fellowships, and advancement to candidacy—are the responsibility of the Division of Graduate Studies. The dean of graduate studies is the chief administrative officer. The Graduate Student Handbook—containing graduate policies and other information—can be found online at <http://graddiv.ucsc.edu/regulations/handbook/index.php>.

Catalog Rights

Students matriculating in a given graduate program will select the UCSC General Catalog they will follow to meet their requirements to be either the one published the year they enter the program, or any subsequent catalog published prior to the year they are awarded the degree sought. Students who seek readmission after a break in attendance of greater than two years (six regular quarters) must adhere to the graduation requirements in effect at the time of readmission or to those subsequently established for all portions of the degree requirements not already fulfilled. The readmitting program will determine which degree requirements remain to be fulfilled, and will communicate this information in the letter offering readmission. This determination constitutes a formal requirement for readmission to the program, and the student's acceptance of readmission implies acceptance of the program's written stipulation of remaining degree requirements. Should any student choose to follow catalog requirements for a year in which the catalog is not printed in hard copy, the requirements will include any online catalog update for that year. A student must follow the chosen catalog in its entirety, including both the individual degree program and general university requirements. General university requirements may be found in the Graduate Student Handbook, <http://www.graddiv.ucsc.edu/regulations/handbook.php>.

Evaluation of Performance

Graduate students are graded Satisfactory/ Unsatisfactory (S/U) or, at student option, A, B, C, D, F. The grade A, B, or S is awarded for satisfactory work. A graduate student receiving a grade of C, D, or U will not be able to use the credit for that course to satisfy any course requirement for a graduate degree. Courses in which a graduate student receives a grade of C, D, F, or U may be repeated. Credits will be counted once, and the most recently earned grade will determine whether a degree requirement has been met. Repeating a course more than once requires the prior written approval of the dean of graduate studies.

Graduate student performance in all courses taken for credit at UC Santa Cruz is also evaluated according to the Narrative Evaluation System. A narrative evaluation usually runs from one to four paragraphs in length and describes (1) the nature and requirements of the course, (2) the student's strengths and weaknesses in the various aspects of the course (e.g., discussion, laboratory work, term papers, and examinations), and (3) the student's general understanding of the course content. Evaluations may be used by academic advisers and become part of the student's official academic record.

Please also refer to the statement on Academic Integrity; Appendix F, Graduate Student-Faculty Adviser Relationship Guide-lines; and Appendix O, Official University Policy on Academic Integrity for Graduate Students, published in the *Student Policies and Regulations Handbook* at www2.ucsc.edu/judicial/handbook.shtml.

Graduate Opportunity Program

Applicants assisted by the Graduate Opportunity Program must be U.S. citizens or permanent residents. During the application process, the Graduate Opportunity Program can help students by requesting an application fee waiver for cases of hardship, by providing insight into the application

process, and by distributing information about the various graduate academic and fellowship programs. The primary goals of the program are to increase the number of applicants through extensive outreach and to increase the number of enrolled students from diverse backgrounds through effective recruitment. Applicants who feel that their acceptance into the academic community at UC Santa Cruz will contribute to the diversity of the institution should call (831) 459-4108 early in the application process.

Diversity-Enhancement Programs

The Eugene Cota-Robles Fellowship is a merit-based diversity-enhancement program that provides financial support for students from diverse backgrounds to pursue and successfully complete a graduate degree. This fellowship is awarded to entering doctoral students who have overcome significant obstacles to achieve a baccalaureate-level degree, and whose economic, educational, or social background contributes to intellectual diversity of the graduate student population. Applicants should refer to the information under Financial Support in the application to gain a better understanding of this fellowship. Fellowship recipients must be U.S. citizens or permanent residents.

The Eugene Cota-Robles Fellowship and the Dissertation-Year Fellowship are part of the University of California's Academic Career Development Program. The Dissertation-Year Fellowship is available to continuing students. Enrolled students are assisted through formal and informal group orientations, individual advice about academic matters, financial aid, postdoctoral opportunities, and the provision of information about career planning, health care, and housing.

If you have questions, call the Division of Graduate Studies, (831) 459-4108.

Intercampus Exchange Program

A graduate student in good standing at Santa Cruz who wishes to take advantage of educational opportunities available only at another campus of the university may become an intercampus exchange graduate student for a quarter or more. This program also permits students to take courses on more than one campus of the university during the same quarter.

To participate in the program, a student must have the approval of his or her faculty adviser, the dean of the Division of Graduate Studies at UC Santa Cruz, and the graduate dean on the campus to be visited. Application forms may be obtained from the Division of Graduate Studies and should be submitted three weeks before the quarter in which the exchange begins.

Student Life

The campus offers a variety of programs to enhance the quality of student life, all available to graduate students. These include child care, sports and recreation, health services, cultural events, transportation services, and the UCSC Women's Center. See [Campus Life](#) for information on these services and a description of the local community. See [Disability Resource Center](#) for services available to students with disabilities.

College Affiliation

Graduate students at Santa Cruz have the opportunity to affiliate with one of the 10 colleges on campus ([college descriptions](#)). Participation in the activities of a college may include taking an occasional meal there, living at the college, or participating in the college's educational and preceptorial programs or in its extracurricular activities.

Graduate Student Association

The Graduate Student Association (GSA) is an organization of all graduate students at UCSC. It seeks to advance the general welfare of the graduate student body and is responsible for promoting extracurricular activities on campus.

Graduate students elect a GSA steering committee, which coordinates activities and their funding. In past years, the steering committee has sponsored student social gatherings, musical events, poetry readings, lectures by visiting scholars, and other activities of special interest to graduate students. A portion of the college student government fee, paid by all students, is available to the association for this purpose. The steering committee also recommends graduate students for appointment to university committees.

Housing

As at all other UC campuses, finding housing is a challenge. Students who wish to reside on campus should submit their application as soon as possible, to secure housing in a timely manner. Likewise, students who wish to live off campus will find this task challenging. Often, single students share housing as a means of lowering expenses. However, married students or students with dependent children do not always have the option of sharing housing with other students.

Twenty apartments for single graduate students are located on the west side of campus between Kresge College and the Baskin Engineering Building. Metro and campus bus stops are nearby. On-site parking is available.

The apartments were designed with privacy, energy conservation, and aesthetics in mind. The wood-frame units have cedar exteriors and are bordered by redwood forest on two sides.

Four students share each apartment, which has a living and dining room, a kitchen, two bathrooms, four single bedrooms, an outdoor deck, and abundant closet and cabinet space. The units contain solid oak and maple furniture, although residents must supply their own linens, cooking utensils, and household supplies. Common facilities include a laundry room and lounges with computer terminals and a large-screen television.

The apartment rental rate for a single room is \$971 per month for the 10-month 2011–12 academic year. Students may stay for the summer at additional cost. First-year graduate students are usually given priority.

Graduate students may also apply to the individual colleges for a limited number of resident preceptorships. These positions offer an on-campus apartment as a stipend and the opportunity to participate in a college community.

Married students and students with dependent children may live in Family Student Housing, a complex of two-bedroom unfurnished apartments located on the west side of campus. These apartments are in great demand, and students often wait up to a year for a vacancy. Interested students should apply as soon as possible.

Another on-campus option is UCSC's 42-space camper park, available to students who own appropriate recreational vehicles.

To assist students in locating living accommodations in the surrounding communities, the Community Rentals Office maintains a list of available rentals. Students intending to live off campus should begin their search at least four weeks before classes begin.

See [Student Life](#) for more detailed information about on- and off-campus housing.

Application and Admission

Application Deadlines

Students may apply for only one UCSC graduate program at a time. The list below shows the date set by each program as the final deadline for submission of all documents. Applications are limited to programs of study beginning in fall quarter (except the M.A. program in education). Please visit our web site at graddiv.ucsc.edu for the most current information on applying to UCSC graduate programs and for application deadlines for 2011–12.

Department		Date
Anthropology		December 15, 2011
Astronomy and astrophysics		January 5, 2012
Bioinformatics		December 1, 2011
Biology	ecology and evolutionary	December 15, 2011
	molecular, cell, and developmental	December 1, 2011
Chemistry and biochemistry		December 15, 2011
Computer engineering		January 3, 2011
Computer science		January 3, 2011
Digital arts/new media		January 3, 2011
Earth and planetary sciences		January 5, 2011
Economics	Economics	January 15, 2011
	applied	Not accepting apps
	international	Not accepting apps
Education	teaching (M.A.)	January 15, 2012
	research (Ph.D.)	December 1, 2011
	collaborative leadership (Ed.D.)	Not accepting apps
Electrical engineering		January 3, 2012
Environmental studies		December 15, 2011
Film and digital media		December 15, 2011
History		December 15, 2011
History of consciousness		December 10, 2011
Linguistics		December 15, 2011
Literature		December 1, 2011
Mathematics		January 15, 2012

Microbiology and environmental toxicology	December 2, 2011
Music	January 5, 2012
Ocean sciences	January 15, 2012
Philosophy	January 1, 2012
Physics	January 15, 2012
Politics	January 4, 2011
Program in Biomedical Sciences and Engineering	December 1, 2011
Psychology	December 15, 2011
Science communication (science writing)	April 1, 2012
Social documentation	January 13, 2012
Sociology	December 15, 2011
Statistics and applied mathematics	January 3, 2012
Technology and information management	January 3, 2012
Theater arts	March 1, 2012
Visual studies	December 15, 2012

The dates listed here are the official deadlines, but students are strongly advised to submit applications in October or November. If an application deadline falls on a weekend or holiday, materials should arrive before the deadline.

To be considered for fellowship support for fall quarter, the admission application and all supporting materials must arrive at the Division of Graduate Studies by the program's deadline or by February 1, 2012, whichever is earlier.

Admission Requirements

To be admitted with graduate status at UCSC, a student must have completed a bachelor's degree or its equivalent from an accredited undergraduate institution of acceptable standing and demonstrate ability to pursue a program of study leading toward an advanced degree. Preparation must provide an adequate foundation for advanced study, as determined by the department for the program in which the student intends to enroll. If the bachelor's degree is not in the same discipline as the graduate program, the student must have sufficient preparation in the intended area of study to undertake graduate-level work.

To apply for admission, the items described below must be submitted before the deadline date to the Division of Graduate Studies. UC Santa Cruz requires that applicants complete an online application to be considered for admission to a graduate program. The Graduate Studies Division will provide access to a printed version for those who qualify under the Americans with Disabilities Act. The application and the accompanying materials should be complete and accurate.

1. Admission application form. Application materials for all programs are available online at graddiv.ucsc.edu. The completed application is paid for online with either a credit card or e-check. This application fee is not refundable. Application fee waivers are available for cases of hardship. International applicants are not eligible for fee waivers.

Applicants to the programs in anthropology, computer engineering, computer science, and electrical engineering also need to conform to the admission guidelines posted on the web pages for these departments. These pages can be accessed from the graduate studies home page: graddiv.ucsc.edu.

2. Statement of purpose. This should be a concise, well-written account of the applicant's background and reasons for pursuing graduate study in the field chosen. Selection committees place particular importance on the statement of purpose. It exhibits the applicant's ability to present ideas in clear, coherent language. The statement of purpose should indicate all of the following:
 - How knowledgeable the applicant is in the desired field of study
 - How undergraduate studies and other experiences (work, community involvement, and so forth) serve as a foundation for graduate study
 - How and why the applicant intends to build on this foundation of knowledge and apply the training to social or theoretical problems
3. Official transcripts. Official transcripts of all previous course work since high school, including certification of degrees received or documentation of status upon leaving each institution, should be obtained. UC Santa Cruz requires only one transcript from each institution. Official evidence that the applicant has received a bachelor's degree from an accredited institution of higher education must be presented. All of the official transcripts and documentation should be requested well in advance of the program deadline to be sent to Graduate Application Processing. Only official transcripts bearing the signature of the registrar and the seal of the issuing institution will be accepted. If work is in progress at the time of application, a final transcript of such work must be submitted before the student can be officially enrolled at UC Santa Cruz. If the bachelor's degree is in a field other than that in

which the student intends to apply, evidence of course work sufficient to prepare for graduate study in the intended field must be shown.

4. Letters of recommendation. Three letters of recommendation should be included in the online application packet, or the applicant should have them forwarded to Graduate Application Processing. These letters should be prepared by professors or others who are in a position to analyze the applicant's abilities and academic promise in the chosen field of graduate study.
5. Graduate Record Examination scores. Individual departmental requirements for the Graduate Record Examination (GRE) follow:

Anthropology: GRE General Test

Astronomy and astrophysics: GRE General Test; GRE Subject Test in Physics or Mathematics strongly recommended

Bioinformatics: GRE General Test; Computer Science Test or Subject Test in major strongly recommended

Biology:

ecology and evolutionary: GRE General Test

molecular, cell, and developmental: GRE General Test; Biology Test or Biochemistry, Cell and Molecular Biology Test recommended

Chemistry and biochemistry: GRE General Test; GRE Subject Test in any of the following strongly recommended: Biochemistry, Cell, and Molecular Biology; Chemistry; Computer Science; Physics

Computer engineering: GRE General Test; GRE Engineering Test or Subject Test in major strongly recommended

Computer science: GRE General Test; GRE Computer Science Test or Subject Test in major strongly recommended

Digital arts/new media: No GRE required

Earth sciences: GRE General Test

Economics

applied: GRE General Test

international: GRE General Test

Education:

teaching (M.A.): No GRE required

research (Ph.D.): GRE General Test

Electrical engineering: GRE General Test; GRE Subject Test in major strongly recommended

Environmental studies: GRE General Test; GRE Subject Test in disciplinary field of student's choice strongly recommended

Film and digital media: GRE General Test **History:** GRE General Test

History of consciousness: GRE General Test

Linguistics: GRE General Test

Literature: GRE General Test

Mathematics: GRE General Test and GRE Mathematics Test

Microbiology and environmental toxicology: GRE General Test; GRE Subject Test in major strongly recommended

Music: GRE General Test and UCSC's Music Graduate Entrance Examination for M.A., D.M.A., and Ph.D. applicants with a bachelor's degree; GRE General Test for Ph.D. applicants with a master's degree

Ocean sciences: GRE General Test and GRE Subject Test in major

Philosophy: GRE General Test

Physics: GRE General Test and GRE Physics Test

Politics: GRE General Test

Psychology: GRE General Test

Science communication (writing): GRE General Test and GRE Subject Test in Biochemistry, Cell, and Molecular Biology; Biology; Chemistry; Computer Science; Geology; Mathematics; or Physics

Social documentation: No GRE required

Sociology: GRE General Test

Statistics and applied mathematics: See Computer Science for details

Theater arts: No GRE required

Visual studies: GRE General Test

If the applicant is applying for admission to a program that requires the GRE, the scores must be received by UC Santa Cruz Graduate Application Processing before the application deadline. It is strongly recommended that all applicants complete testing by November, since December test scores will not reach the division prior to application deadlines.

The Educational Testing Service should be asked to forward the test scores directly to the division. UC Santa Cruz's school code is 4860. *Test results are electronically submitted to UC Santa Cruz Division of Graduate Studies four to six weeks after the exam has been taken.*

6. **Additional required material.** Many of the graduate programs have special application requirements, such as writing samples, portfolios, auditions, or personal interviews.
- Education requires a supplemental application.
 - *Environmental studies* requires that a substantial writing project (undergraduate or master's level) be submitted with the application materials. Also, as part of the application process, applicants are required to contact faculty regarding sponsorship.
 - History of consciousness requires a writing sample of not more than 10 pages.
 - Literature requires a writing sample of 10 to 20 pages.
 - Ocean sciences requires that applicants contact faculty directly about sponsorship as part of the application process.
 - Music
 - M.A.: writing or composition sample (e.g., term paper or senior thesis, scores, or other projects) and a CD, DVD, or audio- or videocassette of one or more recent performances as instrumentalist, vocalist, conductor, or performances of original compositions.
 - D.M.A.: writing or composition sample (e.g., term paper or senior thesis, scores, or other projects) and three composition scores with recordings (if available) on CD, DVD, or VHS. For works involving improvisation, digital audio, or other approaches, one of the three compositions may be submitted in the form of a recording with brief notes on the media and/or performance conditions. Applicants interested in the computer-assisted composition track should include an example of a computer program they have written (a source code for the program plus documentation describing its use) or other evidence of technical competence with computers.
 - Ph.D.: applicants with a bachelor's degree: writing sample (e.g., term paper, senior thesis, or other class paper) and optional materials demonstrating musical skills (e.g., compositions, a performance or lecture-recital on CD, DVD, or VHS, etc.); applicants with a master's degree: writing sample of substantial length (e.g., an excerpt from a master's thesis or a set of class research papers) and optional materials demonstrating musical skills (e.g., compositions, a performance or lecture-recital on CD, DVD, or VHS, etc)
 - Philosophy requires a 10- to 15-page writing sample
 - Politics requests that the writing sample (ideally not to exceed 20 pages) be a term paper, thesis, article, conference paper, or problem solution; it need not be in politics
 - Social documentation requires an analytical writing sample (e.g., research paper, professional report, or substantial essay). Sample documentary production work is recommended but not required (e.g., a video or audio recording, photographic essay, web page). Preferred format for submission of production work is web, DVD, or CD-ROM (provide URLs to publications and documentary productions where possible).
 - Sociology requests a writing sample, preferably in sociology or a related field
 - Theater arts requires a portfolio of projects along with the application. The brochure or web site for the program to which the student is applying should be consulted and all of the requirements specified should be fulfilled.

Duplication of Higher Degrees

It is the policy of the Santa Cruz campus to prohibit the pursuit of duplicate advanced degrees. However, applicants may petition the graduate dean for an exception to this policy if the degree sought is in a field of study distinctly different from the field in which the original advanced degree was attained.

In order for a student who already holds the doctorate to be admitted or readmitted to work toward a second Ph.D.—or toward an academic master's degree—all of the following conditions must be met:

1. The applicant must petition the graduate dean in writing prior to the application deadline for the program in question.
2. The department sponsoring the program to which admission is sought must support the applicant's petition.
3. The department must present the graduate dean with a clear and complete outline of the program required for the degree sought, and must explain the intellectual separateness of

the proposed program from that completed by the applicant in attaining the earlier degree.

The graduate dean will review all materials submitted and decide whether or not to admit the applicant, consulting with the Graduate Council when appropriate.

Admission to a professional master's program after a Ph.D.—or to an academic master's program after a professional doctorate—is not subject to these restrictions.

Transfer of Credit

UC Santa Cruz does not automatically grant credit for graduate-level work undertaken at other universities. Each department determines credit transferability on an individual basis.

International Applicants

Applicants from other countries must meet standard admission requirements and provide satisfactory evidence of financial support before they may obtain the necessary visa documents. Because it normally takes much longer to process international applications, such students are urged to apply as early as possible. A Certificate of Eligibility (I-20) will not be issued by the UC Santa Cruz Office of International Education until all requirements are satisfied and the student has been formally admitted. Please note that international students are eligible for neither need-based financial aid nor application fee waivers.

Applicants from countries where English is not the primary language must take the Test of English as a Foreign Language (TOEFL). A minimum score of 550 on the paper-based TOEFL or 220 on the computer-based test is required. Chemistry and biochemistry, computer engineering, computer science, and electrical engineering require 570 on the paper-based test or 230 on the computer-based test.

All official academic records must be issued in the original language and be accompanied by English translations prepared by the issuing institution. If translations are not available from the institution itself, translations may be prepared by government or official translators. In order for translations to be acceptable, they must bear the stamp or seal of the issuing institution or governmental agency and the original signature of the translator. They must be complete and exact word-for-word translations of the original documents, not interpretations. Grades must not be converted to the American scale. Specially prepared English versions are not acceptable in place of documents issued in the original language. Records submitted to the Division of Graduate Studies may not be borrowed, returned, or sent elsewhere.

Application Processing

The Division of Graduate Studies receives most application materials and sets up a file for each applicant. Once the application is submitted online, it will be available to the appropriate department for review and recommendation. Applicants are admitted by the graduate dean following recommendations by the departments. Applicants will be notified by e-mail whether or not they have been admitted for graduate study at UCSC after all reviews are complete. Under no circumstances will UCSC give out this information over the phone, in person, or by proxy. E-mail notifications are sent throughout the month of March. By a general agreement to which UC Santa Cruz and most graduate schools in the U.S. are signatories, applicants admitted to graduate schools have until April 15 to reply with their acceptance of fellowship offers. Any information about the completeness of the file can be found at apply.graddiv.ucsc.edu. Specific questions about the evaluation of the application should be directed to the graduate representative of the department.

Fees and Expenses

Fees and expenses for graduate students are shown below. *Tuition, fees, and other charges are subject to change without notice by the Regents of the University of California. For current fee information, check reg.ucsc.edu.*

Graduate Student Fees, 2011-12		
	One Quarter	F-W-S Quarters
Student Services Fee (formerly University Registration Fee)	\$324.00	\$9720.00
Tuition (formerly Educational Fee) (b)	3,740.00	11,220.00
Santa Cruz campus fees	362.36	1,081.88
Health Insurance (waivable)	889.00	2,667.00
Total for California Residents	\$5,315.36	\$15,946.08
Nonresident Tuition(a)	5,034.00	15,102.00
Total for Nonresidents of California	\$ 10,349.36	\$31,048.08
a) A limited number of Nonresident Tuition Fellowships are available. Please		

refer to the [Financial Support](#) section.

For information on fee refunds, see [Finances](#).

Minimum annual expenses, including registration fees, for a single graduate student living on campus are estimated to be \$35,706 per academic year. Students should not plan to undertake graduate study without assured funding, since outside employment in the Santa Cruz community can be difficult to obtain. An estimated sample student budget from the 2010–11 academic year is provided below. Non-California residents should add \$15,102 in nonresident tuition and fees to the total. Living expenses and fees are likely to increase for 2011–12.

Graduate Student Budget, 2010-11	
Fees	\$14,247.00
Books and supplies	\$1,479.00
Room and board (on or off campus)(a)	\$15,579.00
Transportation(b)	\$1,809.00
Personal	\$2,592.00
Total	\$35,706.00
a) Estimated room and board for graduate students living with family is \$4,449.	
b) Expenses of owning a car and parking on campus are not included here. For parking fees, see http://www2.ucsc.edu/taps/pdf/2011-12parkingrates.pdf	

Required Fees

Required fees are due and payable before the start of each quarter. At the beginning of each quarter, sufficient funds will be needed to cover housing charges and book costs. For many financial aid recipients, however, fees and on-campus housing charges are paid automatically from approved student aid funds. Financial aid recipients should note that fellowship, grant, and loan checks or bank deposits in excess of university charges are not available until after registration each quarter.

The Student Services Fee supports student services that provide a supportive and enriching learning environment and that are complementary to, but not part of, the instructional program. Programs include, but are not limited to, services related to the physical and psychological health and well-being of students, social and cultural activities and programs, services related to campus life, and educational and career support.

The Educational Fee helps support student financial aid and related programs; admissions; registration; administration; libraries; operation and maintenance of plant; the university's operating budget; and all costs related to instruction, including faculty salaries.

Santa Cruz campus fees help support a wide range of student services, including extracurricular programs, campus child care, community and public service projects, and free-fare use of the local transit systems.

In addition, all students, including foreign students, are assessed a mandatory fee for health insurance. The Cowell Student Health Center provides the primary care services for the plan while a contracted insurance company provides major medical and hospitalization insurance. There is an annual deductible, with most expenses covered at 75 or 95 percent of the customary and usual charge, depending on whether the preferred provider network is used. Coverage includes hospital stays, surgical services, physician visits, emergency treatment, outpatient care, and pregnancy. Dependent coverage is also available. For information, call the Student Health Center, (831) 459-2389.

Waivers from the mandatory insurance fee are available for students who can show that their outside plan provides coverage equal to or better than the student health insurance plan. Deadlines for applying for a waiver are listed in the *Schedule of Classes*—on the web at reg.ucsc.edu/soc—and the Graduate Student Handbook at <http://graddiv.ucsc.edu/regulations/handbook/index.php>.

Nonresident Tuition

A resident of a state other than California or of another country must pay nonresident tuition. General criteria for residency are in Appendix A.

Non-U.S. citizens note: Regardless of how long you live in California, only U.S. citizens and holders of immigrant visas may become qualified for resident classification.

Late Fees

Late fees may be assessed if a student fails to make university payments or enroll by the specified deadlines. *Late fees are assessed on a graduated basis for each month there is an unpaid balance on your university account*, and at \$50 each for a late registration payment and/or late enrollment and \$25 for a late housing payment. Deadlines are published online in the Graduate Student Handbook at <http://graddiv.ucsc.edu/regulations/handbook/index.php> and the *Schedule of Classes* at reg.ucsc.edu/soc, and they appear on the Statement of Account.

Deferred Payment Plan

See the information under [undergraduate expenses](#).

Financial Support

The University of California, Santa Cruz, makes a strong effort to provide financial support to all graduate students who make normal progress in their program of studies. Certain kinds of support are awarded on the basis of academic merit, and others are granted on the basis of need. Students are encouraged to apply for both kinds of assistance by submitting the Free Application for Federal Student Aid (FAFSA). This form must be submitted after January 1 prior to the academic year for which you are requesting aid. The FAFSA may be filled out online and filed electronically at www.fafsa.gov. To receive need-based support for the fall quarter, the FAFSA should be submitted no later than three weeks prior to the end of spring quarter. Applications for student loans for each academic year will be accepted until April of that academic year. More detailed information about the application process and loans [appears here](#). Students may also contact the Financial Aid and Scholarships Office, 205 Hahn Student Services Building, (831) 459-2963. Web: financialaid.ucsc.edu.

Fellowships, Assistantships, Grants

Cal Grant A and B Programs. Students who received one of these awards as undergraduates may request a one-year extension from the California Student Aid Commission to attend a teacher credential program. The Cal Grant A program and Cal Grant B program are both expected to pay a maximum of \$12,192 per year for study at the University of California in 2011-12. Renewal of these awards requires the student to submit the FAFSA by March 2.

Federal TEACH Grant/Loan Program. The Teacher Education Assistance for College and Higher Education (TEACH) Grant Program provides grants of up to \$4,000 per year to students who intend to teach in a high-need field in a public or private elementary or secondary school that serves students from low-income families. The program at UCSC is for M.A. Education students. In exchange for receiving this grant, you must sign an Agreement to Serve and complete online counseling. This grant converts to a loan with retroactive interest if the Service Agreement is not fulfilled. More information and a Fact Sheet can be found at <https://teach-ats.ed.gov/ats/index.action>.

Teaching Assistantships. For the 2010–11 academic year, half-time teaching assistantships provided a salary of \$5,463 per quarter.

Graduate Student Researchships. For the 2010–11 academic year, half-time researchships provided a salary ranging from \$1,351 to \$2,102 per month, depending on the student's academic level and department.

The application for fellowships, assistantships, and researchships is Part C of the admission application, which may be obtained from the Division of Graduate Studies. It should be filed by the program's deadline or by the February 1 preceding admission, whichever is earlier.

The division and the UCSC Career Center (see page 41) can provide information about external graduate fellowships and grants.

Student Loans

Graduate students may apply for student loans through the Financial Aid Office. Students who apply using the FAFSA are eligible for loans funded by the federal government. Students who demonstrate financial need qualify for the William D. Ford Federal Direct Subsidized Student Loan, and students who do not demonstrate need or who want an additional loan qualify for the William D. Ford Federal Direct Unsubsidized Student Loan. Subsidized loans are interest-free while the student is enrolled; interest accrues on unsubsidized loans during enrollment. Graduate students may also be eligible to borrow through the Federal Direct Graduate PLUS loan program. See page 22 for additional information.

Loan Forgiveness Programs

The federal government will forgive all or part of a student loan under certain circumstances. Examples of these include (1) performing volunteer work or military service and (2) practicing medicine in certain communities. For a summary of such exemptions, visit <http://www.finaid.org/loans/forgiveness.phtml>.

The Assumption Program of Loans for Education (APLE) is offered by the California Student Aid Commission. This program serves students who plan to become public schoolteachers.

Students must be nominated by the UCSC Education Department. Under the program, the commission may assume up to \$11,000 in educational loan balances in return for service as a public schoolteacher in California, in either a designated subject-shortage area or at a school serving large populations of students from low-income families. In addition, participants who teach mathematics, science, or special education in the lowest-performing schools may have a total of \$19,000 in debt assumed. To receive full benefits, you must provide four consecutive years of teaching at a California public school. Additional eligibility criteria include California residence, U.S.

citizenship or eligible noncitizenship, academic ability, and financial need. Contact the Education Department at (831) 459-3249 for more information. More information is also available from the California Student Aid Commission at www.csac.ca.gov.

Resources for Learning and Research

University Library

The handsome McHenry and Science & Engineering libraries house the impressive holdings of UCSC's University Library—the largest library collection between Santa Barbara and San Jose. In more than four decades, the collection has grown from a few shelves of books and a substantial dependence on the libraries of UC Berkeley to more than 2 million volumes, over 27,500 periodical titles (including online journals), in excess of 650,000 microforms, and more than 430,000 non-print items including films, slides, and audio- and video recordings.

As part of the statewide University of California library system, the University Library also serves as gateway to millions of other books and periodicals at other campuses throughout the state. The library's efficient Interlibrary Loan service is heavily used, especially the online request service of the California Digital Library.

The University Library collection is divided into two parts. Resources in the humanities, arts, and social sciences are contained in McHenry Library at the heart of the campus, while the engineering, mathematics, and natural sciences collections are housed in the award-winning Science & Engineering Library, conveniently located on "Science Hill."

Subject bibliographers manage the growth and development of UCSC's collection and provide in-depth research assistance.

Most of the holdings of the University Library are shelved in open stacks. Students and faculty are encouraged to help themselves, using information found via the local Cruzcat online library catalog, the systemwide Melvyl® catalog, and the library web site. The library home page provides a convenient gateway to the Cruzcat and Melvyl catalogs, the California Digital Library, and a host of other electronic information resources, such as article databases and online journals. The library staff is also eager to offer its assistance at any of several service points.

At the reference desks in both libraries, reference librarians give individual guidance: general orientation for the newcomer and specialized help for the researcher. Librarians assist in the use of a wide range of resources—in print and online—including more than 200 online article databases to which the library subscribes. Librarians also offer group instruction: orientation sessions at the beginning of each quarter, library research workshops, and upon request, specialized instruction to classes in all disciplines.

The Reserve service, located at the respective circulation desks, lends copies of assigned class readings on a short-term basis, operates a web-based electronic reserve system, and provides protection for vulnerable circulating materials and heavily used periodicals. In addition, the Science & Engineering Library Reserve Unit provides access to recent newspapers.

Special Collections at McHenry Library contains rare, valuable, and often fragile materials that do not circulate. Holdings focus on local history and 20th-century literature and book arts. Special Collections also houses the official campus archive, as well as the archives of George Barati, Gregory Bateson, Thomas Carlyle, Lou Harrison, Kenneth Patchen, Edward Weston, the Grateful Dead, and the Shameless Hussy, Trianon, and Turtle Island presses.

Other important collections and services include:

- Government Publications, a selective depository for documents published by U.S., California, and Santa Cruz government agencies
- The Media Center, which provides access to audio and video in all formats; CD-ROMs; support for music study, including music scores and music reserves via iTunes and electronic reserves (ERes); and language-related audio and video recordings
- The Map Collection, with maps and aerial photographs of Santa Cruz and adjoining counties, and topographic, nautical, and aeronautical maps from all over the world
- The Mary Lea Shane Archives of the Lick Observatory, a national resource for the history of astronomy
- The Regional History Project's documentation of Central California history
- The Visual Resource Collection, which emphasizes art history but also includes slides on science, history, and the UCSC campus and offers the web-based SlideCat slide catalog

For more information, see the library's home page, library.ucsc.edu.

Center for Teaching and Learning (CTL)

The CTL is a professional resource dedicated to promoting, sustaining, and recognizing teaching excellence at UCSC. CTL programs and services support instructors in their efforts to develop as teachers, to enhance the quality of instruction, and to improve students' learning.

Regular programs and services include Instructional Improvement Grants, Excellence in Teaching Awards, Symposia, a library of instructional resources, Electronic Mid-quarter Analysis of Teaching, and UCSC Instructor Evaluations.

CTL is located in 133 Kerr Hall. For more information, visit the web: <http://ctl.ucsc.edu>.

Computing and Technology Services

Information Technology Services (ITS)

ITS at UCSC provides a broad spectrum of IT-related resources, services, and support to students, faculty, and staff in the areas of computing, network, telephones, media services, information systems security, web, e-mail, and instructional technology. See its.ucsc.edu. ITS operates the campus network, which connects computers, workstations, instructional computing labs, and computer-equipped classrooms with each other and the Internet. In addition, wireless access called CruzNet is available across campus. See http://its.ucsc.edu/service_catalog/cruznet. ITS also provides the campus with technical services and computer support through the ITS Support Center. See http://its.ucsc.edu/support_center/.

Purchasing a Computer?

If you are planning on buying a new computer, UCSC recommends purchasing a laptop with both wired and wireless network capability. The campus supports both PC and Mac computers. An excellent source for purchasing computers and computer products is the campus Bay Tree Bookstore, slugstore.ucsc.edu, (831) 459-2082. Through university-negotiated contracts, the bookstore offers a full line of Apple and Dell computers, as well as software and peripheral equipment. Pricing is almost always below outside market prices. And the bookstore works closely with ITS to be certain the equipment you buy will meet campus specifications, both wired and wireless.

Computer Standards

The campus supports both PC and Mac computers. For general campus support standards, see its.ucsc.edu/service_catalog/standards. For standards specific to residential living on campus, see resnet.ucsc.edu/CSD/computer.php.

UCSC Account (CruzID) and E-Mail

All students, faculty, and staff have a CruzID and UCSC e-mail account, such as cruzid@ucsc.edu. In addition to e-mail, CruzID gives individuals access to many campus systems and applications. Every UCSC student is preassigned a CruzID account upon enrollment. They can activate and change the initial password via the campus "MyUCSC" Portal at my.ucsc.edu. All official UC and UCSC communication is e-mailed to the @ucsc.edu address. More information is available at http://its.ucsc.edu/service_catalog/cruzmail/ (for faculty and staff) and http://its.ucsc.edu/service_catalog/slugmail/ (for students).

Residential Network and Telephones

ITS provides in-room Internet access (called ResNet) and a university-owned and operated telephone system to students living on campus. Network services are available to undergraduate and graduate students living in university housing (except for the Camper Park). For assistance with network connections, contact ResNet at resnet@ucsc.edu or call (831) 459-HELP (4357). See resnet.ucsc.edu. Local telephone service is provided in every student room (except for the Camper Park and Family Student Housing). There is one telephone line for each single and double room, and two telephone lines in each room with three or more residents. Each telephone line also includes a voicemail box. Call (831) 459-4357 or e-mail help@ucsc.edu for more information on telephone services.

Computing Labs for Drop-in Use and Academic Classes

ITS manages 12 computer labs throughout the campus. These labs have more than 360 computers available for individuals to use that include PC, Mac, and Sun workstations. Wireless access is available in most labs. The computing labs are used like classrooms; they can be reserved by faculty or teaching assistants for instruction. When not reserved for instruction, the labs are available to UCSC employees and students on a walk-in basis. Even if they are not teaching in the labs, many faculty request that academic software be installed in the labs so that students may complete homework assignments. Faculty or teaching assistants can request ITS staff to conduct training sessions as part of an academic course. Contact the Faculty Instructional Technology Center at fitc@ucsc.edu for more information. More extensive lab information, including hardware and software specifications and hours of operation, is available at ic.ucsc.edu.

Academic Course Materials on the Web

The WebCT course management system* is a tool to create sophisticated web-based course materials to supplement, but not replace, classroom instruction. WebCT uses a web browser as the interface for the course. Faculty using WebCT can incorporate a wide variety of tools in their course

site such as a course calendar, student conferencing system, electronic mail, group projects with student-created web pages, and quizzes. Outside of class time, you can use WebCT to view course materials, participate in web-based class discussions, collaborate on student group projects, and take quizzes. Faculty can use WebCT to see what materials students have viewed before they arrive in class. When faculty administer pre-class quizzes on WebCT, they can see what concepts students understand before class and then tailor the lecture accordingly. See ic.ucsc.edu/services/learning_management_system/.

Note: The WebCT course management system has been discontinued as of Sept. 30, 2010. It has been replaced by [eCommons](#), the university's new service for course site and learning system needs.

Disability Accommodations for Computing

If you have a disability and require adaptive or assistive technology to use lab computers, library facilities, or other campus services, please contact the Disability Resource Center (DRC) right away so that they can coordinate services for you. Instructional Computing labs have common adaptive technologies—such as enlarged type for students with low vision and Dvorak keyboards for students with repetitive strain injuries. If you need accommodations, please call the DRC at (831) 459-2089 (voice), or (831) 459-4806 (TTY).

Research Programs and Facilities

Research at UC Santa Cruz is thriving, facilities are excellent, and the amount of external funding received for research continues to grow. In addition to their individual research projects, faculty are involved in organized research on various scales, from small focused activities within academic divisions, to large research units, some with campuswide scope and others with wider connections to the whole 10-campus University of California system.

Specialized research facilities in addition to those listed below are described in the [programs and courses section](#).

Arboretum

The Arboretum at UCSC is a research and teaching facility committed to plant conservation and serves both the campus and the public. Its rich and diverse collection, containing representatives of more than 300 plant families, provides beginning students with a broad survey of the plant kingdom. Facilities for growing plants offer students and research faculty opportunities to experiment with living plants. The Arboretum maintains collections of rare and threatened plants of unusual scientific interest. Particular specialties are world conifers, primitive angiosperms, and bulb-forming plant families. Large assemblages of plants from Australia, New Zealand, and South Africa, and California natives are displayed on the grounds. Many of the species in these collections are not otherwise available for study in American botanical gardens and arboreta.

Arboretum events educate and engage the public about plant diversity and conservation. Of service to the public and the nursery industry are the Arboretum's activities in importing, selecting, and breeding choice ornamental plants, especially those that are drought tolerant and pest resistant. To date, the Arboretum is the original importer of more than 1,500 different selections of choice ornamentals. Many of these have been and will continue to be the plants of future California gardens.

Norrie's, the Arboretum's volunteer-run gift shop, supports the Arboretum and is open every day, 10 a.m. to 4 p.m. Admission is free to UCSC students.

Arboretum: (831) 427-2998; Norrie's gift shop: (831) 423-4977; e-mail: arboretum@ucsc.edu; web: arboretum.ucsc.edu.

Arts Instructional Computing (IC) Labs

IC has two labs that primarily serve the Arts Division: the IC Arts Mac Lab and the IC Music Lab. The IC Arts Mac Lab at Porter is equipped with Arts-specific software, including high-end video-editing, graphics, web-development and sound-editing software. The Music Lab includes hardware and software for music editing, notation and working with MIDI. See hardware and software details at ic.ucsc.edu/labs.

These Instructional Computing labs are open to all UCSC students. In addition, the Arts Division manages computer labs with specialized equipment and software for the exclusive use of students taking classes in the Art, Film and Digital Media, and Theater Arts Departments, and the Digital Arts and New Media M.F.A. program.

Arts Research Institute (ARI)

ARI funds and facilitates the research and creative work of individual arts faculty, as well as collaborative research, symposia and other creative activities and events. Grants and awards from the ARI have helped to support performances, exhibitions, software design, manuscript preparation, digital recordings, international field research, collaborative colloquia, on-site installations, operas, and electronic productions. These and other innovative projects in arts practice and theory are among the research areas and interests supported by the institute. For complete details, see the

ARI web site at arts.ucsc.edu/ARI or contact the ARI administrator, Christina Waters, Ph.D., at xtina@ucsc.edu or (831) 459-2256.

Baskin School of Engineering (BSOE) Facilities

BSOE occupies principally the Jack Baskin Engineering and Engineering 2 Buildings. Some laboratories and offices are also in the new Biomedical Sciences and Engineering Building (estimated to be completed in 2012), the Physical and Biological Sciences Building and the Sinsheimer Laboratory Building. Outside of the main campus and on the west side of Santa Cruz, BSOE is building a series of advanced material sciences laboratories at 2300 Delaware Ave (formally a Texas Instruments semiconductor fabrication plant). Several BSOE faculty also work closely with colleagues at the adjacent UCSC Long Marine Laboratory and future site of the 98 acre Marine Sciences Campus. "Over the hill," BSOE maintains a strong presence at the UCSC Silicon Valley Center (SVC) located on the grounds of NASA Ames Research Center in Mountain View, California. Many BSOE faculty members maintain offices and research labs and teach classes at the SVC and have joint research agreements with NASA and the University Affiliated Research Center (UARC). Many BSOE faculty are also members of the joint NASA/UCSC Advanced Studies Laboratories (ASL), which is located at NASA Ames Research Center. Web <http://asl.ucsc.edu/>.

BSOE is working to develop additional locations off the main campus often in interdisciplinary partnerships. Web: www.soe.ucsc.edu

BSOE Computing Infrastructure

BSOE operates a computing network of several hundred Unix, Windows and Macintosh computers and several computer laboratories. These labs support research and graduate instruction in applied mathematics and statistics, biomolecular engineering, computer engineering, computer science, electrical engineering and technology and information management. Undergraduate computing is supported by a combination of BSOE Undergraduate Laboratories (also known as the BELS Labs) and the campus's Instructional Computing Laboratories (IC Labs).

For graduate and research computing, the ITS/BSOE computing support team operates a high-speed 100/1000 megabit-per-second network with 1/10 gigabit-per-second fiber optic backbones and redundant core routers and paths. Most areas of BSOE buildings are covered by wireless networking of various types (802.11b/g/n). The BSOE computing network has multiple connections to the main campus network.

UCSC and BSOE have connections to the Corporation for Education Network Initiatives in California (CENIC) via CENIC-managed "dark-fiber," which provides direct connections to CENIC High Performance Research Network, to activities at NASA Ames, and to the BSOE research labs located at 2300 Delaware Ave. Web: <http://www.cenic.org/pressroom/releases/2010/FibertotheFuture.pdf>

BSOE Computing also operates four separate Tier 1+ data centers, all with UPS and air-conditioning support. Two of the data centers have backup power generation and the other two use a campus cogeneration facility for backup power. In addition, BSOE uses the main UCSC data center (Tier 2) for some redundancy and for web sites and copies and/or mirrors data distant Universities (such as the San Diego Supercomputer Center).

- For graduate and research computing, BSOE supports the following:
- Central file servers for core services such as mail, name service, file sharing, and backup
- Several general-access Unix systems
- Multiple compute servers
- Research computing clusters

BSOE maintains several general-use research computing clusters, in addition to the clusters used by individual research groups. These clusters are available to all faculty and graduate students for general-purpose computations:

- Several graduate student computer labs with a mix of Windows, Linux, and Solaris workstations and network printers
- A variety of software purchased in cooperation with UCSC central computing, BSOE computing, and individual faculty members
- A variety of computer-aided-design software, including Altera, Agilent Advanced Design System, AutoCAD, Cadence, Maple, Matlab, Mentor Graphics, National Instruments Labview, Qualnet, Synopsys, and Xilinx.

Baskin Engineering Wireless Networking. BSOE has an installed wireless computer network that covers nearly all interior building spaces of the Baskin Engineering, Engineering 2, and portions of the Physical Sciences Buildings. This service (SOENET) is separate from the UCSC campus wireless network (CruzNet). SOENET allows for much greater flexibility in operations and for greater performance as required by SOE's faculty and researchers. To gain access to SOENET, BSOE faculty or staff members register their computers for use on SOENET. In addition to SOENET, the campus's wireless computing service, CruzNet, is also installed in parallel in several of the undergraduate laboratory spaces of the Baskin Engineering Building. Wireless networking is also at the Silicon Valley Center (SVC) via the CruzNet system. Details of BSOE computing services can be found at www.soe.ucsc.edu/administration/computer.

Undergraduate Engineering Laboratories (Baskin Engineering Lab Support-BELS). BSOE operates the following special instructional laboratories for the exclusive use of engineering students. These laboratories are typically open 24 hours a day, seven days a week, during instructional quarters. The instructional labs available in 2010 are listed below. Please check the web site for updates as

new instructional laboratories are being added:

- Digital Logic Design Laboratory
- Controls, Signals, and Instrumentation Laboratory
- Analog Circuits Laboratory
- Electrical Engineering Senior Projects Laboratory
- Optics and Laser Laboratory
- Computer Engineering Projects Laboratory
- Electromagnetic and Radio Frequency Laboratory
- Physical Electronics Laboratory
- Computer Networking Laboratory
- Computer Game Design Laboratory
- Engineering Honor Society Hardware Laboratory
- Biomolecular Engineering Instructional Laboratory

Detailed information about these labs can be found at the following web site:
www.soe.ucsc.edu/bels.

UCSC Instructional Computing Laboratories. In addition to the facilities provided by the Jack Baskin School of Engineering, students have access to the computing facilities of the UCSC Instructional Computing (IC) Labs. These include several labs located around the campus consisting of Unix, Mac, and Windows workstations. There are two large IC Labs located in the Baskin Engineering Building. Check the UCSC Instructional Computing web site for details on these labs and hours of operation: ic.ucsc.edu.

Research Laboratories

BSOE operates and supports the following research laboratories. Current information about BSOE Research Labs can be found at www.soe.ucsc.edu/research/labs.

Applied and Nano-optics Group. The Applied and Nano-optics group covers a wide range of optical research with an emphasis on experimental nanoscale optics. New methods and devices are developed for optical studies of single particles such as molecules, photons, or nanomagnets. A variety of optical and nanoscale characterization techniques such as time-correlated single-photon counting, ultrafast laser spectroscopy, or scanning-probe microscopy are used and investigated. Applications include integrated biomedical sensors, high-density magnetic memory, single-photon light sources and detectors. Web: <http://photon.soe.ucsc.edu/>.

Biomolecular Engineering Research Facilities

BSOE supports a broad range of biomolecular-engineering (BME) research activities through the use of more than seven state-of-the-art research labs in the department. Areas of research include systems biology, comparative genomics, HIV vaccine development, stem-cell research, nano-device fabrication and DNA-sequencing-device development. BME departmental laboratory facilities include a variety of equipment used for molecular biology, cell biology, protein chemistry, immunology, virology and computational biology. Specific equipment includes high- and low-speed centrifuges, PCR machines, CO2 incubators, bacterial shakers, microtiter plate readers, microtiter plate washers, microscopes (inverted, upright, fluorescence), spectrophotometers, protein-chromatography equipment, a variety of gel electrophoresis equipment including power supplies, gel dryers, gel-imaging equipment, vacuum concentrators, and cryopreservation equipment. Recently acquired and planned equipment purchases to be shared with other investigators include a Fluorescence Activated Cell Sorter (FACS), and next-generation DNA sequencing devices. Shared equipment rooms contain a variety of common equipment including freezers, glass-washing equipment, autoclaves, and refrigerators. Most labs are supplied with basic utilities such as air, gas, vacuum and reverse-osmosis de-ionized (RODI) water. The BME research groups have several computer clusters, one with more than 1,000 CPUs. There is additional access to BSOE laboratories and facilities within other departments. Many of the BME research groups cooperate closely with the Electrical Engineering Department, which operates a clean room, a scanning electron microscope and semiconductor fabrication facilities. Collaborative research with faculty from the Physical and Biological Sciences Division is frequent with routine access to a wide range of biology and chemistry laboratory facilities. Web: www.soe.ucsc.edu/research/labs/

Clean Room. The Electrical Engineering Department operates a shared Class 1,000 clean room for use by researchers in Electrical Engineering. The Biomolecular Engineering Department also uses this facility. Web: www.soe.ucsc.edu/research/labs/

Computer Communication Research Group (CCRG). This group is dedicated to basic and applied research in computer communication. CCRG research focuses on new algorithms, protocols, and architectures for wireless networks based on packet switching (packet-radio networks), Internetworking, multipoint communication, and the control of resources by multiple administrative authorities. Web: www.cse.ucsc.edu/labs/ccrg

Design and Verification Laboratory. This lab facilitates research in software and system design methods, embedded software design, software and system verification, game theory, formal methods. Web: dvlab.cse.ucsc.edu/

Geospatial Visualization Laboratory. This lab creates a consistent four-dimensional space-time visualization of geospatial data and intelligence associated with the environment. This task requires intelligent collection of data using various sensors, including a variety of cameras, LIDAR data, and multispectral imagery in all kinds of frequency bands. The spatiotemporal GIS (geographic information systems) visualization will bring together several layers of information including terrain

data, street maps, buildings, environment data, aerial images, and mobile-objects data. Web: www.cse.ucsc.edu/lodhagisviz/index2.html

Group Researching Advances in Software Engineering (GRASE). This laboratory performs research in the areas of software evolution and reengineering, and software-configuration management. Current research includes identifying unstable areas of evolving software, automatic generation of software configuration-management repositories, and development of web-based versioning and configuration-management infrastructure. Web: <http://www.soe.ucsc.edu/labs/grase>

High-Speed Network Laboratory. Members of this lab explore and expand the field of high-speed computer networking and communication. Current areas of research include high-speed switching, traffic-scheduling algorithms for providing quality-of-service (QoS) guarantees in packet networks, ATM congestion control, and optical networks. Projects are funded by NSF, ARPA, and private industry.

Image Processing and Multimedia Laboratory (IPMML). This lab is the central venue for ongoing research into topics in image processing and multimedia. Areas of interest include wireless digital video; virtual scene and panorama generation; natural and machine-generated image compression; video capture, processing, and editing techniques; color printing technology; image libraries; and combinations of the above.

Information Retrieval and Knowledge Management Lab (IRKM). This lab conducts basic and applied research in information retrieval and data mining. Projects include developing a proactive personalized information-retrieval system (funded by NSF), adaptive information filtering (funded by AFOSR), and collaborative personalized search, recommendation and advertising (with industry funding from Yahoo, Microsoft, Google, NEC, Nokia, Bosch).

Internetworking Research Group (i-NRG). This group conducts research in the design, experimental evaluation, and implementation of network protocols for both wired and wireless internetworks. Research activities include a number of areas in computer networks and distributed systems. Web: inrg.cse.ucsc.edu

Materials Characterization Research Lab. This laboratory is under construction at our 2300 Delaware Ave location. Formerly a Texas Instruments Semiconductor Fabrication plant, the building has infrastructure to support very large clean rooms. We expect the laboratory to be operational around December 2010. The Materials Characterization Research Laboratory studies properties of materials at very low temperatures, nearly zero degrees Kevlin. At these temperatures, some materials behave very differently; a notable example is superconductors. Web: www.soe.ucsc.edu/research/labs/index.html

Micro-Architecture at Santa Cruz (MASC). MASC's focus is on computer-architecture research, with emphasis on energy/performance trade-offs, thread-level speculation, simulation tools, FPGAs, and design complexity. Web: masc.soe.ucsc.edu

Multidimensional Signal Processing Research Group (MDSP). This group's interests are in the area of inverse problems in imaging, statistical detection and estimation, and associated numerical methods. Current projects include image-resolution enhancement and superresolution, computationally efficient image-motion estimation, shape reconstruction from local and global geometric data, multiscale modeling and analysis of signals and images, radon transform-based algorithms for deformation analysis and dynamic imaging, image processing and inverse problems in remote sensing, and automatic target detection and recognition. The group is also associated with the Image Processing and Multimedia Lab. Web: www.users.soe.ucsc.edu/~milanfar/

Network Management and Operations Lab. BSOE, in partnership with Cisco Systems, has established this lab to serve as a "network-systems teaching hospital" where real-world problems and projects are addressed by students and faculty. Projects range from the routine (e.g., quality-assurance and release testing of new products) to the advanced (e.g., research into new architectures for network systems). Students employed as interns work with faculty researchers on these projects in BSOE facilities equipped for the specific needs of the projects. Web: soe.ucsc.edu/labs/nmolab.

Quantum Electronics Group. This group's interests are in the mutual interaction of heat, light and electricity in nano- and microscale materials and devices. Studies and experiments are done in which this mutual interaction is used to improve device or circuit performance for communication, computing or energy-conversion applications. Examples include microrefrigerators on a chip that could be used to remove hot spots in microprocessor chips and internally cooled semiconductor lasers. The group has developed novel thermal-imaging techniques that can provide transient temperature maps of active devices with submicron spatial resolution. The group is also investigating optoelectronic and thermoelectric properties of quantum-wire and quantum-dot materials and the design of low chirp, narrow line-width and widely tunable passive micro-ring-coupled lasers. The group maintains several electrooptics labs with femtosecond lasers, cryogenic and high-temperature setups, confocal and Raman microscopy and houses an on-site molecular beam epitaxy thin-film growth facility. Web: quantum.soe.ucsc.edu

Santa Cruz Laboratory for Visualization and Graphics. Recent research at this lab includes animal modeling and animation, environmental visualization, isosurfaces, d.v.r., hierarchies, irregular grids, massively parallel volume rendering through the net, uncertainty visualization, virtual reality in scientific visualization, nomadic collaborative visualization, tensor visualization, and flow visualization. Web: <http://slvg.soe.ucsc.edu>

Storage Systems Research Center (SSRC).

This center is composed of faculty from the Computer Science, Computer Engineering, and Electrical Engineering Departments and the Technology and Information Management Program, and is funded by the NSF, Department of Energy, and companies such as NetApp, Symantec, HP, LSI, Data Domain, and Agami. Current research topics include long-term archival storage, scalable indexing and metadata, petabyte-scale storage systems, and file systems for next-generation storage technologies such as non-volatile memories and probe-based storage. Issues of particular concern include performance and scalability, reliability, and security. The SSRC's resources include several computing clusters, the largest with more than 80 processor-disk nodes, as well as over 10 terabytes of dedicated storage. In addition, there are several hardware-software testbeds for projects such as self-managing archival storage and large-scale distributed file systems. The SSRC also maintains a PlanetLab site at UC Santa Cruz, allowing researchers to run experiments on the PlanetLab global-scale distributed testbed. Web: www.ssrc.ucsc.edu

Thin Films Research Lab. This laboratory is under construction at our 2300 Delaware Ave location. Formerly a Texas Instruments semiconductor fabrication plant, the building has infrastructure to support very large clean rooms. We expect the laboratory to be operational around December 2010. The Thin Films laboratory will operate several advanced metal organic chemical vapor deposition (MOCVD) systems to fabricate and study thin film semiconductors. Applications include advanced solar cells, memory systems and biosensors. The Thin Films laboratory in April 2010 received an in-kind donation from Phillips LumiLEDs of Santa Clara of an AIXTRON Nitride MOCVD Reactor (AIX 200RF).

UCSC Broadband Communications Research Group. The members of this group investigate the fundamental limits and performance analysis of protocols in wireless ad hoc networks, space-time signal processing, and development of signal processing and coding techniques for wireless communication systems. Web: <http://www.soe.ucsc.edu/%7Ehamid/ucbc/index2.html>

UCSC Genome Sequencing Center. The center features state-of-the-art equipment including the GS FLX Titanium Series sequencing platform from 454 Life Sciences and the SOLiD sequencing platform from Applied Biosystems. Applications include whole-genome and targeted sequencing; resequencing; RNA sequencing; micro-RNA and small-RNA sequencing; chromatin immunoprecipitation (ChIP) sequencing (to identify binding sites of DNA-associated proteins); and metagenomics (also called environmental genomics, involving the analysis of genetic material recovered directly from environmental samples). Web: <http://sequencing.soe.ucsc.edu/>

UCSC Scientific Visualization Laboratory. This lab provides the means for creating visualizations from scientific data. Projects include a simulation of an "extensive air shower" striking the Milagro detector at Los Alamos National Lab, representing a subsonic flow over a delta-wing aircraft, a demonstration of direct volume rendering on a multiple-gridded space-shuttle launch vehicle, an N-body simulation of large-scale structure in the universe, and a representation of a diving whale based on location data from a Monterey Bay tagging experiment. Web: vizwww.cse.ucsc.edu

UCSC Visual Computing Laboratory. This lab explores visual tracking, stereo and sparse IBR, facial modeling and analysis, and image and video processing. Web: soe.ucsc.edu/research/labs

W. M. Keck Center for Nanoscale Optofluidics. The mission of this multidisciplinary center is the development of optofluidic devices and their application to single-particle studies in molecular biology and biomedical diagnostics. Facilities include a dedicated nanofabrication facility housing a FEI Quanta 3D FEG dual beam SEM/FIB nanofabrication instrument for fabrication, imaging, and characterization of nanoscale devices. Web: <http://cfno.soe.ucsc.edu/index.htm>

For additional information regarding BSOE, please check the web site: www.soe.ucsc.edu.

California Carlyle Edition

The splendid Norman and Charlotte Strouse Collection of Thomas Carlyle in Special Collections at McHenry Library is the focus of an exciting and innovative effort by an international group of scholars to publish an eight-volume critical edition of Carlyle's major works. Headquartered at UCSC, it is the first "scientific" edition of Carlyle, using computer technology to compare all the lifetime editions of each work in order to establish an accurate text, as well as providing explanatory notes for the modern reader. The edition promises to set the agenda for work on Carlyle and the Victorian era for the next generation. In addition to producing a much needed critical edition of the works of Carlyle, the project is using the campus's computer facilities to develop and demonstrate many state-of-the-art applications of data-processing technology in the humanities, from optical scanning of some editions and machine-assisted collation and proofreading, to desktop typesetting and the creation of an online Carlyle textual archive. The first volume, *On Heroes, Hero Worship, and the Heroic in History*, was published in 1993 by the University of California Press. The second volume, *Sartor Resartus*, was published in 2000. *Historical Essays*, in 2003, and *Past and Present*, in 2006. *The French Revolution* is forthcoming. Web: www.nd.edu/~carlyle/strouse.html

California Institute for Quantitative Biosciences (QB3)

UCSC is one of three UC campuses sponsoring the QB3, a California Institute for Science and Innovation (CISI). This cooperative effort among three campuses of the University of California, Santa Cruz, Berkeley, and San Francisco, and private industry harnesses the quantitative sciences to integrate our understanding of biological systems at all levels of complexity—from atoms and protein molecules to cells, tissues, organs, and the entire organism. This long-sought integration allows scientists to attack problems that have been unapproachable before, setting the stage for

fundamental new discoveries, new products, and new technologies for the benefit of human health.

The institute involves more than 180 scientists, including 50 from UCSC. It builds on strong biology programs at the three campuses as well as individual campus strengths in biomolecular and computer engineering and mathematical sciences at UC Santa Cruz, biomedical engineering and physical sciences at UC Berkeley, and medical sciences at UC San Francisco. Harnessing these strengths, QB3 is developing effective new solutions to the world's most urgent biomedical problems through multidisciplinary research, innovative educational programs, and industrial and venture capital partnerships.

The institute facilitates access to state-of-the-art resources to enable scientists and engineers to develop devices, drugs, and therapies that save human lives, as well as technologies to prevent or mitigate environmental damage and improve energy production and use. Research areas include biological imaging, synthetic biology, biomolecular structure and mechanism, chemical biology, precision measurement, theoretical modeling of biological systems, and cellular dynamics. Through QB3, researchers in all of these fields come together to develop interdisciplinary collaborations.

In addition to the creation of fundamental new knowledge and potent new technologies, a major goal of the institute is to train a new generation of students able to fully integrate the quantitative sciences with biomedical research.

QB3 fosters industry and venture capital partnerships by identifying potential opportunities for research collaborations and support, and by assisting faculty with intellectual property and technology transfer issues.

QB3 is administered at UCSC through the Center for Biomolecular Science & Engineering and involves faculty from the Departments of Biomolecular Engineering; Molecular, Cell, and Developmental Biology; Chemistry and Biochemistry; Electrical Engineering; Applied Mathematics and Statistics; Computer Science; and Computer Engineering.

Find more information at www.qb3.org.

Center for Agroecology and Sustainable Food Systems (CASFS)

CASFS is a research, education, and public service unit of the Division of Social Sciences, dedicated to increasing ecological sustainability and social justice in the food and agriculture system. CASFS researchers investigate the ecological basis for sustainable agriculture and the cultural, political, and economic aspects of developing sustainable food and agricultural systems. The work of CASFS is multifaceted, and includes research (theoretical and applied), education (practical and academic), and public service (with audiences ranging from local schoolchildren to international agencies). Much of the farming-systems research takes place on organic and conventional farms throughout the region, including a number of projects in the Santa Cruz/Monterey area and the Elkhorn Slough watershed. CASFS social-issues staff organize and participate in the Agrifood Working Group for UCSC faculty, researchers, and graduate students, which meets regularly to discuss topics related to food systems.

CASFS facilities and resources are available to all UC Santa Cruz undergraduate and graduate students. Students can take part in ongoing research and education efforts, or design their own projects and internships in collaboration with affiliated faculty and staff. Many undergraduate students participate in the CASFS as part of the environmental studies major (see [Environmental Studies](#)) and as participants in the Apprenticeship in Ecological Horticulture (see below). The graduate program in environmental studies includes a focus on agroecology and sustainable food systems (see [Environmental Studies](#)); graduate students have access to CASFS facilities and staff assistance for field based work. Students have also pursued undergraduate and graduate studies with the center by working through the Departments of Biology, Education, Anthropology, and Sociology.

In addition, about 35 people complete a six-month apprenticeship organized and taught by CASFS staff each year, earning a Certificate in Ecological Horticulture through UCSC Extension. Through workshops, lectures, and hands-on instruction, apprentices master basic organic farming and gardening techniques.

CASFS gives high priority to forging links with, and serving as a resource for, researchers on and off campus, government agencies at many levels, nongovernmental organizations, producers, consumers, students, gardeners, and other individuals interested in multiple aspects of sustainable agriculture and food systems. Staff coordinate major agricultural conferences, teach short courses, and make presentations at agricultural and ecological events. In addition, CASFS hosts international researchers interested in working with faculty and staff.

CASFS manages two facilities: the 25-acre Farm on a lower meadow of campus and the three-acre Alan Chadwick Garden on the upper part of campus. As the primary on-campus research facility, the CASFS Farm includes research plots, raised-bed gardens, row crops, and orchards, as well as staff offices, a laboratory, greenhouses, and a visitor center. The Chadwick Garden showcases small-scale intensive horticulture and supports a diverse collection of ornamentals, food crops, and native California plants.

The CASFS Farm & Chadwick Garden are open to the public daily from 8 a.m. to 6 p.m. In conjunction with the Friends of the UCSC Farm & Garden, the center sponsors a variety of public education events for the community. For further information, contact the center at (831) 459-3240; or casfs@ucsc.edu for directions to the Farm & Garden, call (831) 459-4140. Web: casfs.ucsc.edu

Center for Biomolecular Science and Engineering (CBSE)

CBSE fosters new approaches to discovery in human health. An umbrella organization of the Jack Baskin School of Engineering and the Division of Physical and Biological Sciences at UCSC, the center supports a vast array of biological and engineering research that fuels biomedical advances and the biotechnology explosion. The center pursues the following goals:

- Promote interdisciplinary research in areas that encompass the study of genomic information and structural biology
- Support the UCSC Genome Browser, a crucial resource for the international scientific community
- Support core facilities, such as the computational cluster used for the UCSC Genome Browser and genomic research, the microarray facility, the embryonic stem cell laboratory, and the transgenic mouse facility
- Help meet the need for trained professionals in industry and academia by developing training programs in the areas of bioinformatics and biomolecular engineering
- Attract research funding for the center, for affiliated faculty, and for students from federal, state, and private agencies
- Cultivate and maintain mutually beneficial relationships with industry through research collaborations, internship opportunities, and gifting programs

CBSE brings researchers together to blend cutting-edge approaches for exploring essential scientific questions affecting health and environment and furthering basic understanding. Areas of interest to CBSE affiliates include bioinformatics, applied mathematics, biostatistics, experimental genomics and proteomics, molecular and cellular biology, stem cell biology, health and environmental science, bioengineering and biotechnology, structural and chemical biology, computational chemistry, biochemistry and biophysics, computer engineering, and scientific visualization.

CBSE's roots go back to 1985, when UCSC scientists met with a group of international visionaries at a conference hosted by former chancellor Sinsheimer, a meeting that triggered the inception of the Human Genome Project. Fifteen years later, UCSC scientists helped the Human Genome Project reach a stunning milestone by providing the computational solution that produced the first assembly of the human genome, the map of our genetic make-up. Out of these accomplishments and a growing interest in cross-disciplinary science grew the Center for Biomolecular Science and Engineering. The center fosters interdisciplinary research and academic programs that address the scientific questions of the post-genomic era.

For more information about CBSE, visit the web site: www.cbse.ucsc.edu.

Center for Collaborative Research for an Equitable California (CCREC)

A University of California multicampus research program and initiative, CCREC coordinates, seeds, and supports multi- and transdisciplinary efforts to address the state's interconnected crises in education, employment, health, nutrition, housing, and the environment. CCREC shapes research-based responses directly geared into policy and community contexts, employing innovative collaborative methodologies and partnerships that draw together university researchers, policy makers, governmental agencies, and community-based entities. CCREC's emergent modes of scholarship and practice reposition the university to confront complex interrelated problems whose resolution entails working outside traditional institutional and intellectual boundaries. CCREC aims to establish epistemological and ethical standards for this innovative work, and to prepare a new generation of scholars skilled in connecting and communicating with policy-makers and local communities, and skilled in utilizing a broad range of databases and digital media in the conduct and dissemination of collaborative research.

For additional information, please contact the center's director, Ronald David Glass, associate professor of philosophy of education, at rglass@ucsc.edu or (831) 459-5188.

Center for Educational Research in the Interest of Underserved Students (ERIUS)

ERIUS develops, conducts, and disseminates educational research to improve the teaching and learning of the nation's increasingly diverse student population and the teachers who serve them. The center is transdisciplinary, drawing on studies of education from multiple theoretical perspectives. ERIUS serves as a hub to integrate the work of scholars who are organized in research groups focusing on three research domains:

1. Teachers and Teacher Development
2. Literacy Education
3. Science, Technology, Engineering, and Mathematics (STEM) Education

Taken together, the research conducted by faculty, graduate students, and academic researchers under the auspices of ERIUS aims to reinvent the institutional and organizational settings for education in order to meet the educational needs of students from underserved communities. ERIUS pursues extramural sources of funding to support its research and other scholarly activities.

Center for Global, International

and Regional Studies (CGIRS)

CGIRS is the primary center for the study of international affairs at UC Santa Cruz. CGIRS seeks to better understand the complex issues surrounding the new economic, social, and political structures of the 21st century. Its programs and activities recognize that contemporary societies are anchored in specific regions and locales even as they are also linked to other places and levels by complex political, economic, social, and cultural networks of communication and action. CGIRS draws on the expertise of a broad range of university faculty and the participation of students to focus on four core areas of research: innovation, security, identity, and sustainability. CGIRS was established within the Division of Social Sciences in 1996, bringing under one umbrella the Center for the Study of Global Transformations, the Institute on Global Conflict and Cooperation (IGCC)–UCSC Campus Program, the UC Pacific Rim Research Program, the Global Information Internship Program, the Global Studies Honors Program initiative, and related research, teaching, conferences, workshops, and public-education activities. CGIRS is funded by the Division of Social Sciences, multicampus research units, private donors, and foundations. For further information, e-mail global@ucsc.edu or visit cgirs.ucsc.edu.

Center for Information Technology Research in the Interest of Society (CITRIS)

CITRIS is one of four California Institutes for Science and Innovation created in 2000. Supported by state, federal, and private funds, the centers concentrate on areas of science and innovation that are of special importance to California's high-tech economy and to emerging renewable energy technologies.

CITRIS applies results from research in information technology to solve important problems facing California and the world. Areas of emphasis include energy and the environment, health care, and intelligent infrastructure. CITRIS fosters multidisciplinary applied research where IT is a central component, and promotes partnerships in research across the CITRIS campuses: UC Berkeley, Davis, Merced, and Santa Cruz. Strong industry support led to the creation of CITRIS, and industry partnership and sponsorship is a significant ingredient in the success of CITRIS. Web: www.citris-uc.org

Information Technologies Institute

The Information Technologies Institute (ITI) is a focused research activity (FRA) founded in 2001 and housed at the Baskin School of Engineering. ITI's objective is to provide an environment in which its members can attract large-scale projects that bridge technology research from concept to prototype and solve problems in social and commercial sectors nationally.

In ITI, advanced Internet applications provide the impetus and focus that bring together the components of research related to the rapidly expanding world of networks, distributed computing, "smart" sensors, and Internet appliances. As electronics and packaging developments lead to powerful low-cost sensors, resulting in a broad array of instruments, these become Internet devices, bringing a significant increase in the data captured, transmitted, stored, managed, and displayed.

Through its research centers, ITI focuses on interrelated areas in computer science, computer engineering, and electrical engineering as well as physics, chemistry, and applied mathematics. Areas of emphasis follow:

- Internet and information systems: architecture, performance, and applications
- Multimedia systems and applications in education, telecommuting, and distance learning
- Design and development of complex networked systems and software technologies
- Storage systems and databases
- Communications
- Optoelectronics (including nanotechnology devices)
- VLSI design, packaging, testing
- Sensors and Internet appliances
- Visualization and computer graphics

ITI manages the participation with other research partnerships of its faculty, including the activities of the Baskin School of Engineering in the Center for Information Technology Research in the Interest of Society (CITRIS), with UC Berkeley, UC Davis, and UC Merced; the High Dependability Computing Consortium (with NASA Ames, Carnegie Mellon, and other universities); the National Partnership for Advanced Computing Infrastructure (NPACI) and the San Diego Supercomputer Center; and local universities and organizations with mutual research interests, including the Naval Postgraduate School; San Jose State University; California State University, Monterey Bay; and the Monterey Bay Aquarium Research Institute (MBARI). Web: www.iti.ucsc.edu

Center for Integrated Spatial Research (CISR)

One of the most exciting developments in research over the past decade has been the increasing sophistication of spatial technology, along with a dramatic increase in the availability of spatially referenced data. Spatial technology is an information technology field that acquires, manages, interprets, integrates, displays, analyzes, or otherwise uses data focusing on the geographic, temporal, and spatial context. Today, spatial technology is recognized as the primary means of dealing with information referenced to a specific location and is being integrated across a broad range of disciplines.

CISR, formerly the GIS/ISC Laboratory, is located in the Department of Environmental Studies, Division of Social Sciences, and serves as a central facility for spatially focused research and training at UCSC. CISR (pronounced "scissor") is focused on integrating advanced spatial technology, methods, and data (geographic information systems—GIS, global positioning systems—GPS, remote sensing, spatial modeling and statistics) with interdisciplinary research challenges in terrestrial, marine, and urban environments. The central goal of the center is to foster cross-domain cooperation in the application of these tools and to promote a diversity of research by increasing campus and community literacy in spatial methods.

CISR manages both a research and teaching facility specializing in state-of-the-art spatial technology, software applications, and data, as well as, an expanded training program. Training options include three academic courses focused on spatial theory and methods (see Environmental Studies course listing); short courses through a professional development certificate program in GIS; and regular workshops and symposia. Access to CISR facilities is limited to current UCSC students, faculty, researchers or staff involved in spatial research and/or courses through the CISR. For more information, visit <http://spatial.cisr.ucsc.edu>.

Center for Integrated Water Research

The Center for Integrated Water Research at UC Santa Cruz undertakes research to help provide safe and reliable supplies of fresh water. Fresh water is critical to our health and quality of life, to providing ample food supplies, to maintaining a vibrant economy, and to supporting the environmental systems we depend on and enjoy. The center studies fresh water through ingenious combinations of natural and engineered systems, which require vast amounts of financial, human, and natural resources to develop and maintain. Billions of dollars and millions of skilled workers are employed in the water sector. Policies on fresh-water management have profound impacts that can last for decades.

Influences on fresh water supply in the early 21st century include growing demand from all categories of water users, replacing and upgrading aging infrastructure, declining water quality, and changing climate and groundcover that affect water availability and quality.

To meet these challenges, society has developed an array of new water-treatment and supply technologies, as well as new approaches to managing when and how water is gathered and used. Many technologies are so innovative they do not fit in well with our existing laws, regulations, and division of responsibilities for water. The roles of water agencies are in flux as water treatment agencies take on water supply roles.

The center provides research expertise in policy, economics, management, and communication related to fresh water. Current projects study the treatment of impaired waters (desalination and water reclamation and reuse), communications between water agencies and the public, design of regional water supply and treatment strategies, and measuring the reliability of alternative water supplies.

The center builds research teams that bring other needed areas of expertise to our projects; collaborates with other universities, government agencies, national laboratories, nonprofit organizations, and the private sector; focuses on applied problems, building theory out of specific cases; and sponsors a Fellows Program that includes nationally and internationally respected scholars.

The center serves the UCSC campus by providing internship opportunities and supporting conference attendance by students, and it develops and maintains relations with individuals in the business, finance, and regulatory sectors, who often lecture at UCSC, thereby helping students learn the cutting-edge issues.

The center works to resolve major debates on water supply, quality, and reliability in the United States; and hopes to refine and develop concepts and methods of studying water that will help regions, states, and nations make good choices regarding water in the 21st century.

Further information is available on the web at <http://ciwr.ucsc.edu>, by e-mail at ciwr@ucsc.edu or kkoeppe@ucsc.edu, or by phone at (831) 459-3114.

Center for Justice, Tolerance, and Community (CJTC)

CJTC, which was established in 2000 as part of the Division of Social Sciences, is an interdisciplinary applied research center tackling issues of social justice, diversity and tolerance, and the building of collaborative communities. Current research projects include studies of educational equity, public attitudes toward social and economic policies, the digital divide, environmental justice, homelessness and the impact of welfare reform on low-income families and others. While the mix of work includes considerations of fundamental issues of discrimination, power, and oppression, the center actively seeks to play a public role in providing research that can inform policy and programs to improve equity. To ensure a public presence, the center sponsors an annual lecture series as well as smaller events bringing together community leaders and academic researchers. The center draws researchers from various divisions and includes opportunities for postdoctoral and affiliated researchers as well as graduate students. For more information, contact CJTC at cjtc@ucsc.edu or (831) 459-5743. Web: cjtc.ucsc.edu

Center for Molecular Biology of RNA

The center, established in 1992, brings together an interdisciplinary group of researchers, from the Departments of Molecular, Cell and Developmental Biology; Chemistry and Biochemistry; and Biomolecular Engineering, whose common interest is to understand the structure, function, and biological roles of DNA's intriguing cousin, RNA. The center promotes interaction between structural biologists, molecular geneticists, biochemists, and computational biologists. Major funding for the center has been provided by the Lucille P. Markey Charitable Trust, the W. M. Keck Foundation and individual research grants from the National Institutes of Health, the National Science Foundation, and other extramural sources. Creation of the center was prompted by exciting developments in the molecular biology of RNA in recent years. Unlike DNA, RNA has the ability to fold into complex and unusual three-dimensional structures that confer its biological functions. RNA, like protein, may possess enzymatic activity and can catalyze specific biochemical reactions. Therefore, RNA may have preceded both protein and DNA in the early molecular evolution of life. Studies on the human genome have shown that, while only a small fraction of the genome codes for protein, the majority of it is transcribed into RNA. Although several new classes of functional RNAs have been discovered recently, including those that regulate development of higher organisms, the roles of most noncoding RNAs are still unknown. New insights into the fundamental properties of RNA will benefit a wide range of medical research projects. For example, a rigorous molecular understanding of RNA viruses—such as HIV, SARS and avian influenza—has become a national priority; knowledge of the molecular structure of the ribosome is leading to the development of new antibiotics. The center's facilities are located in Sinsheimer Laboratories, a state-of-the-art research center. Among the areas currently under investigation by members of the center are RNA splicing, protein synthesis, ribonucleoprotein assembly, RNA-protein recognition, the x-ray crystal structures of RNA and RNA-protein complexes (including the ribosome), the structure and mechanism of action of catalytic RNAs and micro-RNAs, in vitro evolution of novel catalytic and other functional RNAs, and RNA genomics, using diverse approaches including cryo-EM reconstruction, DNA microarrays and high-throughput sequencing. Members of the center participate in the research training of postdoctoral scientists and doctoral students in graduate programs offered by the Department of Molecular, Cell, and Developmental Biology, the Department of Chemistry and Biochemistry, and the Department of Biomolecular Engineering. Web: rna.ucsc.edu/rnacenter

Chicano/Latino Research Center (CLRC)

The CLRC is an internationally recognized, cutting-edge research institution dedicated to fostering interdisciplinary, comparative, multilingual, and cross-border scholarship on the Americas. Research focuses on the politics, cultures, migrations, economics, histories, and societies of Latin America broadly conceived, including Chicana/o and Latina/o communities in the United States, the Caribbean, and wider global linkages to the Americas. The CLRC supports a range of thematic and topical research clusters, sponsors conferences, workshops, colloquia, and publications. Affiliated faculty, graduate students, and undergraduates make up a lively, active intellectual community. Programs include faculty research support, graduate student research grants, an undergraduate research apprenticeship program (URAP), a working paper series, and publishing of research reports. The center provides opportunities to critically engage and reflect on issues of contemporary importance such as globalization, immigration, and social justice as well as questions of identification including gender, sexuality, race, and nationality. For further information, e-mail clrc@ucsc.edu or visit the web page: <http://clrc.ucsc.edu/>.

Educational Partnership Center (EPC)

Established in 1999, the EPC coordinates UCSC's new and long-standing student academic preparation efforts with the goal of increasing access and opportunity to postsecondary education for students in the Monterey Bay and Silicon Valley/San Jose regions. EPC is a research- and data-driven umbrella organization for a variety of complementary, integrated academic preparation and educational partnership programs serving students, teachers, and families from kindergarten through college. To build a college-going culture, EPC partners with K–12 middle and high schools and districts and the 13 regional community colleges in San Benito, Santa Clara, Santa Cruz, San Mateo, and Monterey Counties to help students and families navigate the college-going pathway and achieve their higher-education goals.

EPC's mission is to build college-bound communities that improve student learning and increase college-going rates among students from low-income and traditionally non-college-going families in collaboration with school, college, business, and community partners. An array of direct services and programs support students on the college-going pathway through tutoring, mentoring, academic planning and counseling, leadership training, test preparation, college awareness and enrichment, family involvement initiatives, transfer-student support, and teacher professional development.

EPC's key to success is providing an integrated facility that brings all of the student academic preparation programs together and creates synergy across programs that are each grounded in measurable goals and research-based best practices. Coordinating services across the middle school, high school, and community college programs has been essential to providing students and families with vital information on the various pathways to college. In addition, the Business Office; Partnerships, Policy, Research, and Evaluation Department; Student Employment Office; and Development and Communication Department provide essential support for the following direct services and programs:

California Reading and Literature Project (CRLP) is one of nine California subject-matter projects; it supports professional development opportunities for teachers of reading and literature in K–12 and university classrooms. Governed by the UC Office of the President, CRLP helps ensure that pre-K–12 students in the Monterey Bay region achieve the highest standards of academic

performance through developing teachers' content knowledge and expanding their teaching strategies; focusing on academic English language development to prepare all students to meet or exceed academic content standards; creating a statewide pool of expert teacher leaders to train other teachers on sound classroom practices; and linking universities, schools, and districts together in collaborative partnerships to improve teaching and learning through teacher professional development.

California State Summer School for Mathematics and Science (COSMOS) is a four-week summer residential program at four UC campuses that provides students with an unparalleled opportunity to work side-by-side with outstanding researchers and university faculty, covering topics that extend beyond the typical high school curriculum. The academic experience includes nine clusters taught by UCSC faculty, special discovery lectures, academic field trips, and enrichment sessions. Students' residential life includes weekend events and fun-filled peer activities, and COSMOS alumni have opportunities to attend the California Nobel Laureate event, receive research awards and college scholarships, and participate in an industry internship program.

California Student Opportunity and Access Program (Cal-SOAP). The San Jose Cal-SOAP program supports and sustains a college-going culture by providing academic support and advising services and helping students explore and clarify career interests and make the connection between postsecondary education and future career aspirations. Cal-SOAP also provides transfer student support through "Transfer: Making it Happen" and helps students and parents access important financial-aid information through the annual Cash for College Campaign workshops and events. In addition, the San Jose Cal-SOAP Consortium convenes key stakeholders from higher education institutions, K-12 districts, county offices of education, City of San Jose, and community agencies and businesses to collaboratively develop and implement academic preparation activities to maximize resources and avoid duplication of efforts.

Early Academic Outreach Program (EAOP). The University of California's largest academic preparation program, EAOP works with students at underserved schools to prepare for postsecondary educational opportunities, complete all UC/CSU eligibility requirements, and apply for college and financial aid. EAOP partners with families, schools, and communities to make college dreams a reality and provides a variety of year-round services designed to increase the academic preparation, awareness, and motivation of middle and high school students toward higher education and to inform parents about available education opportunities.

Gaining Early Awareness and Readiness for Undergraduate Programs (GEAR UP) is a federally funded discretionary grant program designed to increase the number of low-income students who are prepared to enter and succeed in postsecondary education. Through the collaborative efforts of school and district partners along with additional business and community partners, GEAR UP provides critical academic preparation and support for students and families to help them navigate the college-going pathway. GEAR UP partnerships supplement existing school reform efforts and use research-proven practices to promote academic rigor and student achievement. The program brings much-needed resources to increase student academic performance and preparation for college, increase student and family college awareness, increase teachers' capacity to prepare students for college, and create a college-going culture within the broader community. EPC provides a variety of school-based academic services in its three GEAR UP partnerships in Watsonville/Pajaro Valley and north and south Monterey County.

Girls in Engineering. Inspiring students to envision themselves as future engineers and scientists, Girls in Engineering brings middle school girls with an interest in mathematics together for a unique, two-week introduction to engineering at the Jack Baskin School of Engineering during the summer. Designed to broaden the STEM pipeline, students participate in hands-on STEM projects, such as building and programming robots; exposure to STEM college and career pathways through guest speakers, industry panels, and special lectures from faculty; research lab tours and visits to engineering and manufacturing firms and museums; early college experiences through UCSC campus tours and college-prep presentations; and other academic enrichment opportunities.

Mathematics, Engineering, Science Achievement (MESA) Schools Program provides academic development for middle and high school students to prepare for baccalaureate degree programs in mathematics and science and careers in engineering and other mathematics-based scientific fields. The program's primary goal is to support students from underserved communities through fun-filled, hands-on projects and other college awareness activities to promote STEM college and career pathways. The UCSC MESA program provides academic support, enrichment opportunities, parent leadership, and college awareness to students, families, and partner schools in Santa Cruz and Monterey counties. The annual MESA Day Preliminary Competition brings hundreds of students to campus to compete against their peers in a variety of science, math, and engineering events.

Transfer Partnerships Program (TPP) identifies and supports prospective community college transfer students through academic planning and guidance services to strengthen the transfer process and help students make the successful transition to a four-year institution. Transfer outreach representatives visit the 13 community colleges in the immediate region around UCSC on an ongoing basis and meet with students and support their transfer goals. TPP helps students advance on the college-going pathway through academic planning and guidance; financial aid workshops and information about scholarships; transfer and UC application workshops; referrals to campuses of interest; course, major, and general articulation; UC Transfer Admission Guarantee referrals; transfer survival-skills workshops; UC campus tours; and invitations to UCSC-sponsored events.

Two policy groups advise and inform EPC and its partnerships, programs, and services. **The**

Monterey Bay Educational Consortium (MBEC) is a strategic alliance among the public educational institutions in the Monterey Bay area dedicated to increasing the levels of educational attainment of all students in the region by focusing on collaborative activities. MBEC convenes the top administrative officers of the three county offices of education, school districts, regional community colleges, and public higher education institutions on a quarterly basis. The MBEC Teacher Workforce Initiative addresses teacher recruitment, retention, and preparation issues in the region; its purpose is to develop an effective data-driven process that begins with the collection of accurate yearly information about the teacher workforce.

The Chancellor's Educational Partnership Advisory Council (CEPAC) engages deans, vice chancellors, and other key campus administrators from all UCSC divisions in discussions about educational partnerships and collaborations throughout the academic pipeline, from K-12 to postsecondary education. This leadership group leverages resources and expertise across the campus to address P-20 issues and advises the chancellor on education outreach and access programs and informs policy related to student academic preparation.

EPC is located at 2901 Mission Street Extension, Suite A. For more information, call (831) 459-3500 or visit online at <http://epc.ucsc.edu>.

Center for Visual and Performance Studies (VPS)

Housed at Porter College and affiliated with Cowell College, VPS develops multidisciplinary and integrated approaches to performance, visual studies, and the arts. Faculty and graduate students come from three divisions: Arts, Humanities, and Social Sciences. Major grants received include UCHRI conference grant, France-Berkeley Fund, ARI collaborative research grants, and UC Presidential Chair funds. VPS supports graduate research assistantships, Fulbright Fellows, and visiting scholars.

Emphasizing historical and socially aware approaches, VPS explores how working across disciplinary boundaries of dance, theater, music, art, literary theory, anthropology, and history can uncover and foster new methodological approaches to the study of performance and visual culture. The intersections of new media, aesthetics and anthropology, of literature and dance, of performance and ethnography, and of all of these with the visual dimensions of representation have become ever more intensive areas of interdisciplinary research since the 1980s. Today, performative and visual media interact and redefine our understanding of culture, causing critical approaches to be of paramount importance to future academic study. Our work generates new theories of interpretation and meanings through conferences, seminars, publications, and classes.

The center sponsors an annual seminar series and special events. Recent seminar series include Visual Histories; Performance Histories (2007-08); Voices for Visualities and Performativities (2008-09); Difficult Dialogues: Sites/Sights of Trauma in Visual Culture (2009-10). Recent conferences include The Ends of Interdisciplinary (2006) and Unfolding the Baroque: Extensions of a Concept (2009). In 2010-11, VPS will focus on the work of Pier Paolo Pasolini, culminating in an international interdisciplinary conference, April 29-30, entitled Pasolini's Body. The center welcomes the participation of all interested graduate students and faculty. For further information, contact the center's director, Mark Franko, mfranko@ucsc.edu, or Trevor Sangrey VPSucsc@gmail.com.

Institute for Humanities Research (IHR)

IHR was established in the fall of 1999 with funding from the Campus Provost/Executive Vice Chancellor's Office and the Humanities Dean's Office. IHR provides infrastructure in support of all manner of research activities, including assistance with grant proposal preparation, administration of grants, hosting of workshops and conferences, and dissemination of information about research opportunities and activities. Recognizing that humanities research is an important component of a first-rate research university and is crucial to excellent teaching and scholarship, IHR provides time, space, and support for the maintenance of a lively, active research community. IHR offers fellowships and grants to faculty, graduate, and undergraduate students in the humanities to pursue their research, and provides seed funds to faculty and students from across the campus to work together on common problems and concerns.

In addition, IHR administers a variety of research centers and initiatives including Center for Cultural Studies, Center for Jewish Studies, Center for Labor Studies, Center for Mediterranean Studies, Center for the Study of Pacific War Memories, Center for World History, Institute for Advanced Feminist Research, Bruce Initiative for Rethinking Capitalism, and Digital Humanities Initiative. Supported activities include research clusters, conferences, seminars, visiting scholars, publications, film series, and NEH summer seminars for university and high-school teachers. IHR also plays a central role in administration of multicampus projects, and is part of the University of California's Humanities Initiative. For more information, please visit us at ihr.ucsc.edu or e-mail us at ihr@ucsc.edu.

Bruce Initiative for Rethinking Capitalism

Three decades of profound advances in financial economics have transformed global markets, but have had relatively little impact on the social sciences and humanities. As a result, scholars face a dearth of intellectual resources that interpret, critique, defend, transform and explain the political phenomenon of derivatives. The crisis of 2008 set many of these issues in stark relief, but marked neither the end nor the beginning of the end. The initiative focuses on the intellectual and policy issues that will haunt us long after the initial reactions to the crisis fade.

Particular attention is paid to the evolution and regulation of derivatives. The model for valuing

derivatives has become a new way of understanding capitalism as a production of new property (a commodity) by means of contract alone. Scholars in the social sciences and humanities are seeking to understand the difference that this new shape of capital has made to their fields. Within the minutiae of esoteric financial instruments lie social, political, and religious assumptions that remain largely unexamined to this day. The role of derivatives in the economy is currently being publicly questioned, criticized, and legislated. Economists are seeking to better understand the cultural, institutional, and moral dimensions of their work.

"Rethinking Capitalism" aims to connect those who are technically adept at the new financial technologies with scholars of culture, institutions, ethics, and theology. We support original research in political economy and the social study of finance. Visit us at rc.ucsc.edu.

Center for Cultural Studies

The Center for Cultural Studies at UC Santa Cruz was founded in the spring of 1988 as a part of the University of California's President's Humanities Initiative. Through an ensemble of research clusters, conferences, workshops, visiting scholars, publications, film series, and a Resident Scholars Program, the Center encourages a broad range of research in the rapidly evolving field of cultural studies.

The international field of cultural studies emerged from the challenges posed to traditional humanistic and social scientific agendas by new research strategies in visual studies; anthropology, ethnography and folklore; feminist studies; comparative sociology and politics; semiotics; social, cultural, literary, and political theory; science studies; colonial discourse analysis; ethnic studies; and the histories of sexualities. These challenges, and the areas of scholarly activity they stimulate, compose the heart of cultural studies at UC Santa Cruz. Thus, the Center for Cultural Studies' concern is to foster research across divisional and disciplinary boundaries.

While based in the humanities, the Center engages with the "interpretive" or "historical" social sciences, science studies, and theoretically informed work in the arts. The membership of the Center's Advisory Board and faculty/graduate student participation in its events clearly reflect this cross-divisional agenda. Visit us at culturalstudies.ucsc.edu.

Center for Jewish Studies

Jewish Studies is one of the most intellectually compelling and broadly relevant fields in the university. We design research projects and host public events that conceptually redraw the boundaries of Jewish studies, while encouraging people who may have previously been uninvolved in Jewish studies to engage with it.

Our primary constituents are the thousands of students at UC Santa Cruz, including the 1,200 who take Jewish Studies courses every year, making it one of the most popular programs in the entire university. We are also committed to creating programs that attract faculty and staff members as well as people from the broader Santa Cruz community. The content of our programming organically integrates the contemporary issues that are most important to our constituents, with a range of perspectives and methods unique to Jewish Studies. In so doing, we place Jewish Studies squarely at the center of the intellectual and cultural life of the campus and illuminate the central role that Jewish creativity has played in helping to shape human civilization for over three thousand years. Visit us at cjs.ucsc.edu.

Center for Labor Studies

The Center for Labor Studies, founded in 2007, is dedicated to the study of working people, the labor movement, and the challenge of the broader global economy as it impacts the working people of California and beyond. Through conferences, workshops, public lectures, and a range of guest speakers, we focus, in particular, on the relationship between the labor movement (broadly defined), social movements, and democratic practices; on gender, race, and ethnic dynamics; and on labor activism in international context. We also address a wide spectrum of questions related to the nature of work, employment, and working people's lives in the U.S. and beyond. Our goal is to serve UCSC students, staff, and faculty while reaching out to the broader community of the Central Coast of California and beyond. Visit us at lhr.ucsc.edu.

Center for Mediterranean Studies

The Center for Mediterranean Studies is dedicated to the study of the nature of premodern Mediterranean societies and cultures and their role in world history and the history of "the West." Located at the intersection of three continents, the premodern Mediterranean was a shared environment characterized by tremendous ethnic and religious diversity and by the particular intensity of its cultural, economic, and political exchange. Among Africans, Asians and Europeans, Christians, Muslims, and Jews, and others, both conflict and peaceful communication encouraged acculturation and spurred innovations that transformed the societies of the Mediterranean and their continental neighbors. It is affiliated with the independent scholarly forum the Mediterranean Seminar.

Because of the dominance of modern national paradigms, the weight of teleological historical traditions, and assumptions about the rigidity of ecumenical divisions, the premodern Mediterranean is frequently regarded as an anomaly. Sponsoring a diverse range of scholarly activities, including a reading group, colloquia, seminars, and publications, the Mediterranean Seminar provides a forum for scholarly exchange and dialogue across the humanities and social sciences. Our aim is to facilitate investigation into the premodern Mediterranean and to promote the incorporation of Mediterranean studies into university curricula. Visit us at

Center for the Study of Pacific War Memories

The Center for the Study of Pacific War Memories was established in the fall of 2006 to promote transnational, collaborative teaching and research projects across the Asia-Pacific region related to memories of the Pacific theater of World War II (1937–1945). Memories of the war are articulated and sustained in a wide range of media and practices at individual and collective levels. At the same time, memory changes over time, with changing contexts and changing agents of memory. Finally, while memory is at the core of identity-formation, memory-making in the modern world always operates at a global level. Thus, memories of the past in one place do not exist in isolation within single national or ethnic boundaries, but are always in formation through engagement with other memories from other places and other groups.

The foundational project of the center is the construction of a web site for a multilingual and multinational research community built around a user-generated digital archive called Eternal Flames: Living Memories of the Asia Pacific War. The site will enable the formation of collaborative research projects among both students and researchers from countries throughout the Pacific region, particularly promoting translingual work. Other center projects include a documentary film about a former Japanese soldier now living in California, an exhibit of photographs of Okinawa taken by an American serviceman in the early 1950s, and a data-rich virtual re-creation of a massive memorial complex in Okinawa. Visit us at cspwm.ucsc.edu.

Center for World History (CWH)

As a part of a collective effort at imagining the development of world history as a research field, the CWH sponsors occasional lectures and conferences, including periodic conferences of the all-UC Multi-Campus Research Group, the World History Workshop. CWH is also active in encouraging the development of world history as a teaching field. To this end, it develops world history teaching materials available online. In summer 2009, the Center hosted an NEH Summer Seminar for classroom teachers on the theme "Production and Consumption in World History." Visit us at cwh.ucsc.edu.

Dickens Project

Through a regular program of conferences, courses, and scholarly gatherings, the Dickens Project coordinates research and instruction in the work, times, influence, and achievement of Charles Dickens. Twice a year, faculty members and graduate students from the 10 campuses of the University of California, joined by colleagues from other universities, present their research findings to conference participants, interested undergraduate and graduate students, and members of the general public. They meet on the Santa Cruz campus each summer and at another university each winter. Each year, the conference is available as a regular Summer Session undergraduate course. The project also publishes its own newsletter and curricular materials and cosponsors international conferences. Visit us at dickens.ucsc.edu.

Digital Humanities Initiative

The Digital Humanities Initiative is constituted by a group of UCSC faculty from the Humanities, Arts, and Engineering divisions who meet regularly to discuss the impact of digital media on research in the humanities. The fundamental concern of the humanities is with the production and interpretation of culture. Focusing on the means of communication—language, inscription, visualization and materialization—and the modes of interpretation—experiential, aesthetic, metaphysical—the humanities address the ways that human beings make sense of their worlds. The emergence of digital media has the potential to dramatically expand the range and dimensions of humanities research while also returning us to a reexamination of our core principles of communication and interpretation. Digital media present opportunities for reconceiving spatiality and temporality, drastically expanding our access to and dissemination of information, and creatively reimagining new possibilities for expression. Perhaps most importantly, addressing the implications of digital media for humanities research compels us to question existing disciplinary boundaries and pursue transdisciplinary research methodologies and agendas. A primary goal for the Digital Humanities Initiative, therefore, is to explore ways that humanities research agendas can converge with and mutually advance research in digital media across the campus. Visit us at ihr.ucsc.edu.

Institute for Advanced Feminist Research (IAFR)

IAFR was established at UC Santa Cruz in 2002. It has a history of and future commitment to sponsoring projects that are historical, transnational, and interdisciplinary in their conception and collaborative and experimental in their practice. IAFR now houses and coordinates the University of California Multi-Campus Research Group (MRG) on Transnationalizing Justice. This research group includes nearly 70 faculty members from all nine UC campuses. Its annual dissertation workshop provides an innovative opportunity for close mentorship. The Group also hosts reading groups, conferences, and other public events. IAFR is also home to the Research Cluster for the Study of Women of Color in Collaboration and Conflict established at UCSC in 1991. Visit us at iafr.ucsc.edu.

Linguistics Research Center (LRC)

LRC at UC Santa Cruz facilitates research and education in the areas of theoretical linguistics—syntax, phonetics, phonology, morphology, and semantics. The members of the linguistics community at UCSC (faculty, students, and visiting scholars) work together under the auspices of the LRC to conduct and disseminate the results of their research to the larger linguistics

community. An increasingly important aspect of LRC's mission is to coordinate and administer the LRC Labs (SynLab, PhonLab and SemLab).

In addition, LRC serves as a liaison between researchers at other institutions and researchers at UC Santa Cruz. Among other efforts, the LRC hosts visiting scholars from other institutions interested in conducting research in the UCSC linguistics community, organizes workshops featuring participants from other U.S. and international institutions, engages in online publication of research conducted at UCSC, coordinates the logistics of externally funded research projects, and in general works to enhance the environment for linguistic research at UCSC.

Examples include UC Santa Cruz's hosting of the 1991 LSA Linguistic Institute, the hosting of various conferences such as Semantics and Linguistic Theory (1999), the West Coast Conference on Formal Linguistics (2002 and 2011), and the Comparative Germanic Syntax Workshop (2006). Upcoming events sponsored by the LRC include UC Santa Cruz's hosting of Formal Approaches to Japanese Linguistics (2010).

Furthermore, a collection of books and journals in linguistics, including working papers from many other linguistics departments, is maintained in the LRC Library, which is available for use by any LRC affiliate. And finally, the LRC sponsors visiting scholars for an entire academic year (or for shorter periods) through the Research Associate Program. Visit us at lrc.ucsc.edu.

Ray Film and Study Collection

The Satyajit Ray Film and Study Collection (Ray FASC) is a focused research activity concentrating on the films and other artistic works of Satyajit Ray, one of the world's greatest filmmakers. Ray FASC maintains, in addition to 35-mm films and videocassettes of Satyajit Ray's films, a collection of the Ray papers: books, articles, letters, screenplays, sketchbooks, costume designs, music tapes/recordings, posters, stills, illustrations, and other examples of Ray's multifaceted genius. Ray FASC has received the Lethbridge Collection of some 1,500 volumes/items of works on Ray and by Ray in some 10 world languages. The gift has come from Mr. and Mrs. Cuthbert Lethbridge of Melbourne, Australia. With a major grant from the Packard Humanities Institute, Ray FASC has prepared an inventory, catalog, and database of the materials in the archive. Ray FASC hosts lectures, film screenings, seminars and exhibitions. It helped organize several Ray retrospectives nationally and internationally. Student internships and research projects in the archives are welcome. Visit us at satyajitray.ucsc.edu

Institute of Geophysics and Planetary Physics (IGPP)

UC's IGPP, a multicampus research unit, includes a branch at UCSC. The IGPP supports a wide range of basic research on the origin, structure, and evolution of Earth, the solar system, and the universe. One of the goals of this research is to predict future changes in global systems that may affect human life.

The UCSC branch of the institute addresses fundamental questions relating to Earth's environment, global change, and planetary sciences. The UCSC branch includes five interdisciplinary research centers: the Center for Origin, Dynamics, and Evolution of Planets (CODEP); the Center for Dynamics and Evolution of the Land-Sea Interface (CDELSI); the Center for the Study of Imaging and Dynamics of the Earth (CSIDE); the Center for Remote Sensing (CRS); and the Center for Adaptive Optics (CfAO). These interdisciplinary centers serve to build bridges between different departments and heighten the focus on collaborative research efforts. A Massive Computer Simulation Facility (MCSF) has been established with a large parallel supercomputer for conducting geophysical and astrophysical modeling.

CDELSI brings together faculty from six departments: Ecology and Evolutionary Biology, Earth and Planetary Sciences, Ocean Sciences, Environmental Toxicology, Anthropology, and Environmental Studies. Researchers in these departments are at the forefront of efforts to understand the complex processes and interactions occurring at the continental margin. A primary concern is the impact of global and regional climate change on key processes in the coastal environment, such as atmospheric circulation, ocean temperature and currents, nutrient cycling, and the geological processes that shape the continental margin.

CODEP brings together faculty from the Departments of Astronomy and Astrophysics, Applied Mathematics and Statistics, Earth and Planetary Sciences, and Physics. The interests of CODEP researchers include Earth's internal dynamics, the formation of planets, how planetary systems evolve, and the discovery of new planets outside the solar system. This is a joint effort to understand as much as possible about planets in general, both in our own solar system and around other stars. The center encourages Earth scientists and astronomers to bring their different perspectives to bear on planetary issues.

CSIDE coordinates research in seismology, geodynamics, geomagnetism, hydrology, geomorphology, active tectonics, and mineral physics addressing structure and dynamics of the Earth's interior. Thermal, chemical, and dynamic processes are studied in six affiliated research laboratories. CSIDE hosts a major industrial consortium focused on development of new seismic-imaging technologies.

CRS coordinates research efforts of faculty in the Departments of Earth and Planetary Sciences, Ocean Sciences, Ecology and Evolutionary Biology, Electrical Engineering, and Computer Engineering for the use of satellite and airborne remote sensing in studying processes occurring on the surfaces of Earth and other planets. Specific interests include astrogeology; plant ecology; coral reef health; volcanic, geothermal, and earthquake processes; climate change; submarine and coastal geology; ocean surface processes and marine habitats; and engineering development.

The Center for Adaptive Optics (CfAO) is a new UC multicampus center within the IGPP. Adaptive optics (AO) is an enabling technology that sharpens images by removing optical aberrations. This technology is transformative for ground-based astronomical telescopes, because it removes blurring due to turbulence in the Earth's atmosphere. An exciting spin-off application is the use of AO for imaging the living human retina. The mission of the IGPP's CfAO is to develop, apply, and disseminate adaptive optics science and technology in service to scientific research, health care, and industry. To accomplish these goals it will connect the different UC campus communities, foster research collaborations across campuses and disciplines, and develop the next generation of young leaders in this new field. The UC CfAO grew out of the successful NSF Science and Technology Center of the same name.

The IGPP was established in 1946 at UCLA. Other branches are located at UC San Diego, UC Riverside, UC Irvine, UC Berkeley, Los Alamos National Laboratory, and Lawrence Livermore National Laboratory. A key objective of the IGPP is to encourage and support cooperative projects that bring together researchers from different disciplines, campuses, and institutions. The UCSC branch was established in 1999. Web: igpp.ucsc.edu

Institute of Marine Sciences (IMS)

With the dynamic combination of university marine scientists, state-of-the art facilities and analytical equipment, collaborative research, and an overriding commitment to quality, UC Santa Cruz is at the forefront of marine sciences research, education, and outreach. Set in the biologically rich environment of Monterey Bay and the nation's largest national marine sanctuary, the campus provides students and scientists who seek to study the ocean and its life a unique opportunity to pursue their dreams.

Established in 1972, the IMS is composed of 37 affiliated faculty; 173 professional researchers, project scientists, specialists, postdoctoral researchers, and research associates; and 25 support staff. Marine scientists from the Departments of Ocean Sciences, Ecology and Evolutionary Biology, Earth and Planetary Sciences, Microbiology and Environmental Toxicology, and Chemistry and Biochemistry conduct their research within the shared focus of the institute. The institute provides facilities and administrative and technical support for faculty, researchers, and graduate and undergraduate students involved in marine sciences. Faculty and researchers work independently and collaboratively within eight clusters:

- Coastal biology
- Environmental toxicology
- Fisheries and fishery management
- Marine and coastal geology
- Marine and coastal policy
- Marine vertebrate biology
- Oceanography and ocean processes
- Paleocceanography, paleoclimatology, and global change

An undergraduate major leading to a B.S. in marine biology is described [here](#); a two-year graduate program leading to an M.S. in ocean sciences is described [here](#). Doctoral students pursue marine research through the Ph.D. programs in the Departments of Ecology and Evolutionary Biology, Earth and Planetary Sciences, Microbiology and Environmental Toxicology, or Ocean Sciences.

Facilities

The institute's on-campus complex includes the IMS administrative office; research laboratories; offices for researchers, postdocs, and visiting scientists; state-of-the-art analytical labs for marine chemistry, biology, and geology; a computer laboratory; culture rooms for invertebrates and algae; portable seagoing analytical labs; and support facilities for cruise staging.

The Joseph M. Long Marine Laboratory, an onshore site three miles from campus on the shoreline of the nation's largest national marine sanctuary, has running seawater capabilities that increase opportunities for research and instruction. Facilities include research laboratory buildings; outdoor tanks for research involving marine mammals (dolphins, seals, sea lions, and otters), seabirds, and fish; and teaching laboratories. Specialized laboratories and facilities for marine physiology, ecology, and marine mammal bioacoustics studies are available. Adjacent to the lab are 55 acres of land for which plans have been developed and approved for an expanded marine lab campus with space for future research and educational facilities. The marine sciences campus also has a protected lagoon, a sandy beach, and rocky intertidal platforms for field research. Because Long Marine Lab is close to the campus, work there is easily incorporated into daily campus activities.

Each year, over 55,000 people—including 10,000 schoolchildren—tour the Seymour Marine Discovery Center at Long Marine Lab. Trained volunteer docents welcome visitors, guide groups through the laboratory, and provide information on research in progress. The Seymour Center houses an aquarium, exhibits that interpret the research underway within the institute, two classrooms for school groups, and an auditorium. All are open to the public—including K-12 classes—for a modest fee.

In addition, the Center for Ocean Health at Long Marine Lab houses offices and labs for marine sciences faculty and their research programs, as well as two nonprofits: the Nature Conservancy's Coastal Waters Program and Island Conservation.

IMS maintains a number of small vessels equipped for nearshore coastal research, several small craft for inshore work, and a scientific diving program. In addition, IMS-associated faculty,

researchers, and students work around the world aboard larger oceanographic vessels.

IMS has scientific control over use of Año Nuevo Island, the largest elephant seal rookery on the Pacific coast ([see description below](#)).

IMS maintains active cooperative research agreements with both the Biological Resources Division and the Coastal and Marine Group of the U.S. Geological Survey that have 50 agency scientists now housed adjacent to Long Marine Laboratory.

The institute maintains a cooperative agreement with the National Marine Fisheries Service (NMFS). In 2000, this agency completed a fisheries laboratory at Long Marine Lab, which houses 55 scientists and staff working on salmon, bottom fish, and fishery-management issues. NMFS scientists study causes of variability in abundance and health of fish populations and the economics of exploiting and protecting natural resources. The National Oceanic and Atmospheric Administration (NOAA) has also located sanctuary staff within this federal building. The California Department of Fish and Game operates a Marine Wildlife Research Center at Long Marine Lab, which provides interior lab space and outdoor pool space for research on sea otters and the effects of oil and other contaminants on marine mammals and seabirds.

Additional collaboration also takes place with scientists at the Monterey Bay Aquarium Research Institute, Moss Landing Marine Laboratories, Hopkins Marine Station, the Monterey Bay Aquarium, the Naval Postgraduate School, and the Monterey Bay National Marine Sanctuary.

IMS web sites: ims.ucsc.edu and www2.ucsc.edu/seymourcenter

Santa Cruz Predatory Bird Research Group

The Santa Cruz Predatory Bird Research Group (SCPBRG) was formed in 1975 to restore an endangered peregrine falcon population in California. Since then, more than 1,000 peregrine falcons have been released to the wild and the Pacific Coast population has recovered and been removed from State and Federal Endangered Species Lists.

SCPBRG advises students on their senior theses, directs interns in individual studies, and teaches a College 8 class, *Peregrine Falcon Recovery—A Case Study in Conservation Success*. In addition, we lead a large conservation education and outreach program that includes falcon nest cameras posted on our web site, training for volunteers who monitor peregrine falcons, and conservation education lectures for schools and community. SCPBRG is located at the Long Marine Laboratory and is affiliated with the Seymour Discovery Center. For more information, visit us at www.scpbrg.org.

Scientific Diving and Boating Safety

The university's Diving Safety Program (DSP) is housed within the Institute of Marine Sciences, with offices at Long Marine Lab. Scuba diving and small boats are tools used in science classes and by UCSC faculty, staff, and student researchers in Monterey Bay and at study sites worldwide. In order to ensure safe scuba diving and scientific boating practices, DSP provides training and oversight for all scuba diving (scientific and recreational) and scientific boating activities conducted under UCSC auspices. The diving safety officer teaches Biology 75, *Scientific Diving Certification*, which is a prerequisite for all UCSC courses and research using scuba diving as a tool. DSP maintains a fleet of boats and diving equipment for researchers to use. DSP assists faculty, staff, and student researchers in complying with federal OSHA standards for scientific scuba diving. Anyone who needs to use scuba diving or small boats for scientific purposes should contact the DSP Office at srclabue@ucsc.edu. Web: www2.ucsc.edu/sci-diving.

Recreational diving opportunities offered by the Office of Physical Education, Recreation, and Sports (OPERS) include numerous scuba courses and the Scuba Club. The web address is www.ucsc.edu/opers/scuba.

Institute for Scientist and Engineer Educators (ISEE)

ISEE, an innovative initiative at UC Santa Cruz, prepares science and engineering (S&E) graduate students for their educational role as future faculty members, and a wide range of other science and engineering careers requiring teaching skills. Graduate students participate in workshops and gain practical teaching experience while completing their S&E graduate studies through a flexible program that includes a certificate pathway. ISEE graduate students will be at the forefront of transforming undergraduate S&E education by leading curricular innovations, focusing on inquiry, diversity and equity issues, and assessment. In ISEE's unique "Teaching Labs," participants gain practical teaching experience in programs and courses at the college level. ISEE currently offers a certificate in teaching innovative laboratory experiences, and will be developing other types of certificates in the near future. Participants in ISEE programs are also eligible for fellowships that support their effort on revising undergraduate courses, or other related projects. Graduate students who have participated in ISEE programs come away with unique qualifications for a their future careers, which go beyond and supplement their research training. They have received prestigious postdoctoral fellowships, and moved into faculty positions across the country.

In addition to workshops on teaching and learning, ISEE offers workshops on mentoring and is expanding programs related to workforce and career development. ISEE also includes a research strand aimed at teaching, learning and professional development, related to science and engineering in higher education through the workforce.

ISEE offers an opportunity for S&E graduate students at UCSC to become part of a dynamic and innovative community that values both research and education. Through programs, workshops, symposia, group meetings, and retreats, ISEE participants experience an environment that supports the professional development of future scientists and engineers.

ISEE is located at the Center for Adaptive Optics building on campus. Visit <http://isee.ucsc.edu/>.

Monterey Bay Education, Science, and Technology (MBEST) Center

UCSC has played a leading role in the development of a multi-institutional center for science, technology, education, and policy—the MBEST Center—as a cornerstone of the Fort Ord defense conversion redevelopment plan.

The mission of the MBEST Center is to promote collaborative interaction among private businesses, government research agencies, public and private education and research institutions, and policy makers in strategic alliances to address the environmental opportunities and challenges of the new millennium.

In 1994, about 1,100 acres at the former Fort Ord Military Reservation were conveyed to the University of California. Of that land, 479 acres are available for development, and 605 acres of adjacent natural habitat are now part of the UC Natural Reserve System. Investments in roadway and utilities infrastructure have been completed, making 55 acres of real estate ready for development. In addition, the UC MBEST Center headquarters and a high-technology business incubator were completed in 2001.

Information about the center is available from the UC MBEST Center Office, 3239 Imjin Road, Marina, CA 93933, (831) 582-1020; via e-mail: info@ucmbest.org; web: www.ucmbest.org.

Natural Reserve System (NRS)

The purpose of the NRS is to establish and maintain, for teaching and research, a system of natural areas that encompass diverse and undisturbed examples of California's terrain, both aquatic and terrestrial. The reserves are open to all qualified individuals and institutions for scholarly work concerned with the natural environment. Such work usually deals with ecological topics or experimental studies in a natural setting.

The University of California administers 37 natural reserves throughout the state. Santa Cruz has responsibility for four—the Landels-Hill Big Creek Reserve, Fort Ord Natural Reserve, Año Nuevo Island, and Younger Lagoon Natural Reserve—in addition to the campus's own reserve. Information about the system's holdings and management is available from the director, NRS, University of California, 1111 Franklin Street, Oakland, CA 94607-5200, (510) 987-0150. Web: nrs.ucop.edu. You may also contact the UCSC natural reserve director, c/o Environmental Studies Department, 467 Natural Sciences 2 Building, (831) 459-4971, ghdayton@ucsc.edu. Web: ucreserve.ucsc.edu

Campus Natural Reserve

Approximately 400 acres of campus wildlands were designated by the Regents in the 1988 *Long-Range Development Plan* as a Campus Natural Reserve. This reserve contains redwood forest, springs, a stream, vernal pools, secondary madrone/Douglas fir forest, chaparral, and many soil types and geological formations and structures. The reserve is used for research and teaching and is overseen by the UCSC natural reserve director, c/o Environmental Studies Department, 467 Natural Sciences 2 Building, (831) 459-4971, ghdayton@ucsc.edu. Web: ucreserve.ucsc.edu/. Students may join the volunteer program by contacting ghdayton@ucsc.edu.

Landels-Hill Big Creek Reserve

This 4,000-acre reserve is located in the Santa Lucia Mountains on the Big Sur coast, about two hours by car from the campus. The reserve includes the lower portions of an undisturbed and protected watershed containing numerous terrestrial and aquatic habitats and several geological formations and associated fault systems. The upper watershed is protected by the Ventana Wilderness of the Los Padres National Forest. The reserve's four miles of rocky coastline, located within the California Sea Otter Refuge area and the Monterey Bay National Marine Sanctuary, is now a California Department of Fish and Game Marine Protected Area and provides opportunities for marine research. There are campsites, a modest field-laboratory facility, a cabin for long-term researchers, and a small storage facility. The Big Creek Reserve is managed by the onsite reserve director. Access is controlled, and applications for use should be made to the resident reserve manager, Big Creek Reserve, Big Sur, CA 93920, (831) 667-2543, readdie@biology.ucsc.edu. Web: <http://ucreserve.ucsc.edu/bigcreek/>

Fort Ord Natural Reserve

This 600-acre reserve was added to the system in 1996. It contains Monterey Bay maritime chaparral, an endemic plant community, and coast live oak woodland, grassland, and coastal scrub, including nine species of plants and animals that are listed as endangered, threatened, or of special status. The reserve was part of the former Fort Ord army base and its habitats are relatively intact. The reserve specializes in studies of plant ecology and rare species conservation. It is a 45-minute drive from campus. For information, contact the UCSC natural reserve director, c/o Environmental Studies Department, 467 Natural Sciences 2 Building, (831) 459-4971, ghdayton@ucsc.edu Web:

Younger Lagoon Reserve

A 26-acre coastal lagoon and beach next to UCSC's Long Marine Laboratory is part of the NRS. Its waters are a haven for many species of migratory birds, and many small mammals, birds, reptiles, and invertebrates live in its marsh and bank vegetation. A 20-year restoration effort has been initiated. The site provides opportunities for student projects and hands-on involvement in restoration and monitoring. Younger Lagoon is managed by the UCSC natural reserve director and field manager, c/o Environmental Studies Department, 467 Natural Sciences 2 Building, (831) 459-4971, ghdayton@ucsc.edu Web: ucreserve.ucsc.edu

Año Nuevo Island Reserve

This 25-acre island, part of the 4,000-acre Año Nuevo State Reserve 20 miles north of Santa Cruz, is a university research reserve of the NRS. Northern elephant seals, California sea lions, northern sea lions, and harbor seals breed and haul out at different seasons. The reserve's breeding colony of elephant seals has been the subject of a remarkable 40-year study by UCSC scientists. More than 300 species of land, shore, and sea birds reside in or migrate through the area, which also has a diversity of fish and intertidal organisms. Access to the island is restricted, and UCSC's research use is managed by the UCSC Institute of Marine Sciences (see [Resources for Learning and Research](#)). An annual use agreement with California State Parks allows research and field work throughout Año Nuevo State Reserve. A small research facility is located on the island, and a day-use facility is available in the state reserve. For further information, call (831) 459-2883, e-mail pamorris@ucsc.edu, or visit the web: <http://ims.ucsc.edu/facilities/index.html>.

Physical and Biological Sciences Division

Research Programs/Centers

Microbiology and Biomedical Research. The Division of Physical and Biological Sciences supports a broad range of biomedical research in the Departments of Chemistry and Biochemistry; Environmental Toxicology; and Molecular, Cell, and Developmental Biology. Structural biology, the molecular biology of RNA, genetics, bioinformatics, chromatin biology, and developmental biology are areas of particular strength. Researchers work in state-of-the-art laboratories, with additional access to shared facilities, equipment, and computational tools. Collaborative research is frequent, both among investigators within the division as well as with faculty in the Baskin School of Engineering, which is internationally recognized for its expertise in computational biology. These collaborative efforts are facilitated by the university's Center for Biomolecular Science and Engineering. There are excellent training opportunities for postdoctoral fellows, and graduate and undergraduate students in areas of biomedical research and the health sciences. Web: biomedical.ucsc.edu

Scientific Discovery through Advanced Computer (SciDAC) and the Supernova Science Center. The center consists of a partnership among UCSC, UC Berkeley, Lawrence Berkeley National Laboratory, Lawrence Livermore National Laboratory, Los Alamos National Laboratory, University of Arizona, Stanford University, State University of New York at Stony Brook, and Johns Hopkins University. This group strives for a full understanding, through numerical computation, of how supernovae of all types explode and how the elements have been created in nature. Web: www.supersci.org

Research Facilities

Chemical Screening Center (CSC). UCSC's CSC offers access to high-throughput screening technologies to speed the identification of small molecules that modulate biochemical or cellular processes and have the potential to alter disease states. The CSC maintains a suite of modern robotic instrumentation that permits high-throughput biochemical and cell-based screening of up to 50,000 compounds a day. In addition to targeted and known drug libraries purchased from commercial vendors, the CSC curates a growing collection of natural products. All libraries housed at UCSC are submitted to a panel of screens in diverse organisms, pairing each compound with a broad bioactivity profile. Active compounds are prioritized based on potency and phenotype, and target ID may be immediately pursued using affinity approaches. Through collaboration with UC investigators, the CSC aims to accelerate the path from new discoveries in biology to validated biological targets to provide novel small-molecule therapies for fighting diseases such as cancer, malaria, Parkinson's disease and cholera. Web: <http://chemscreen.ucsc.edu>

Climate Change and Impacts Laboratory (CCIL). The lab is a computational facility sponsored by the National Science Foundation, the California Energy Commission, and UCSC. The facilities include a 32-processor (quad core) Dell PowerEdge M1000e supercomputer, numerous high-performance workstations, and multiterabyte data storage and backup facilities. The goals of CCIL are to calculate scenarios of likely future climate change and to investigate the possible impacts of climate change on the various dimensions of a given region, providing a multidisciplinary and multidimensional view of the possible effects of future climate change at regional scales. The current focus is concentrated on a region centered in California because of its complex topography, diverse microclimates and ecosystems, large and growing population, and vulnerability to water. CCIL members are scientists from the departments of Earth and Planetary Sciences, Ecology and Evolutionary Biology, Environmental Studies, Microbiology and Environmental Toxicology, and Ocean Sciences, and represent a wide range of expertise on aspects of California's human and natural systems. Web: ccil.ucsc.edu

Confocal Microscopy Facility. The facility houses a Zeiss LSM5 Pascal Confocal Microscope System, providing outstanding optical resolution, as well as high-speed scanning. UCSC investigators currently use this system to study neuronal receptor cellular localization, neuronal targeting, *Vibrio cholerae* biofilm formation, and immune cell interactions during immunological tolerance. Web: <http://microbiology.ucsc.edu/confocal.html>

Crustal Imaging Laboratory (CIL). The lab provides researchers with the sophisticated hardware and software resources necessary to perform high-resolution studies of the Earth's surface and outer layers. CIL facilities consist of a network of Sun, Linux, and PC workstations, a variety of input/output and mass-storage devices, and both commercial and academic multichannel seismic-processing packages for seismic and surface imaging, and geodesy. Research is focused on remote sensing and GPS analysis, surface bathymetric and roughness mapping, and both 2D and 3D seismic-reflection imaging. Web: www.es.ucsc.edu/research/crustal.html

Earth System Modeling Laboratory. The lab is home to the Paleoclimate and Climate Change Research Group, which is presently focused on past and future climatic and environmental change, and hosts several national and international visitors each year. This research takes many forms and involves the use of various kinds of models and observations, as well as a wealth of paleoclimate proxy data from many marine and terrestrial locations. Computing facilities include a Dell PowerEdge M1000e Blade server with 16 PowerEdge M600 blades (2 quad core Xeon processors per blade), numerous high-performance workstations and servers, and multi-terabyte data storage and backup facilities. The computing resources are used for global and regional climate-modeling efforts and data analysis. Web: www.es.ucsc.edu/research/earthsys.html

Electron Microscopy and Digital Imaging Facility. This facility, located in C230 Earth and Marine Science Building, provides instruments and equipment for light and electron microscopy and digital imaging. Two transmission electron microscopes (TEM) are available. A JEOL 1200 EX TEM equipped with a Gatan Bioscan digital camera is used for general room-temperature applications. The lab also houses a state-of-the-art JEOL 1230 TEM equipped with a Gatan cryostage and transfer device, a Gatan Ultrascan digital camera, and a Gatan 626 video camera. Scanning electron microscopy is done using the lab's Hitachi S-2700 SEM, equipped with a digital imaging system. Web: biomedical.ucsc.edu/EM.html

Electron Spin Resonance Facility. The facility is used to examine the structure and properties of metal-containing inorganic complexes, peptides, proteins, enzymes, nanoparticles, and biological membranes. The facility's Bruker ELEXSYS 580 X-band spectrometer operates in either continuous-wave or pulsed mode, with variable temperature control. A high-sensitivity Bruker EMX is especially useful for the limited sample sizes often encountered in biological studies. Web: biomedical.ucsc.edu/ESR.html

UCSC Greenhouses. Located on the rooftops of buildings on Science Hill, the UCSC Greenhouses provide core support for instructional and research programs in the Departments of Ecology and Evolutionary Biology, and Environmental Studies. The instructional facility, open to the campus community, houses an extensive collection of plants and has both indoor and outdoor classroom areas. Two high-quality research facilities provide equipment, space and staffing for prominent work by faculty, graduate, and undergraduate research. Web: greenhouse.ucsc.edu

Hydrogeology Facilities. These facilities include hardware, software, and technical expertise applied to field sampling and measurements, lab analyses, and computer modeling. Hydrologic equipment and supplies include flow meters and rain gauges, autonomous and networked conductivity, temperature, pressure, and water-content sensors; hydraulic and hand augers and other soil-sampling equipment; level tapes and staff plates; infiltrometers, lysimeters, piezometers, and tensiometers; and a borehole geophysical logging system. Lab space is dedicated to sediment analysis, including instruments for geotechnical and hydrologic testing of core samples. Outstanding analytical facilities are available throughout the Earth and Planetary Sciences and Ocean Sciences departments, the Institute of Marine Sciences, and the Institute for Geophysics and Planetary Physics. Collaborations at numerous regional institutions allow for specialized capabilities for isotopic, grain size, CNS, and other analyses of sediment, rock, and water samples. A dedicated computing lab is well equipped with fast workstations (SunOS, Linux, PC, and Mac), portable (field) computers, printers (black and white, and color), a large-format plotter, scanners, and other devices and associated software for interfacing with field and lab instruments. Web: www.es.ucsc.edu/research/hydro.html

W. M. Keck Isotope Laboratory. The laboratory comprises two mass spectrometers (a thermal-ionization mass spectrometer and a ThermoFinnigan Neptune multiple-collector inductively coupled plasma mass spectrometer) and wet chemical labs, all housed in a class 1000 suite of clean labs. The thermal ionization mass spectrometer is a fully automated, nine-Faraday collector VG Sector 54 equipped with a WARP filter and an ion counting Daly. Offering high-precision isotope measurements for almost all elements in the periodic table, the Neptune is equipped with nine Faraday collectors and four ion counters, one of which is located behind an RPQ filter to give high-abundance sensitivity. The facilities include separate rooms for cleaning, dissolution and acid preparation, Sr-Nd-Pb-Hf separations, and U-Th-Ra-Pa separations. Single zircon analysis may also be conducted using the mineral separation lab equipped with a Leica binocular microscope. Projects covering Earth sciences, marine sciences, environmental science and archaeology frequently use the W. M. Keck Isotope Laboratory facilities for high-precision isotope measurements. Web: keckisotope.ucsc.edu

W. M. Keck Seismological Laboratory. Researchers at the seismological laboratory are investigating problems in earthquake seismology, plate tectonics, global Earth structure, seismic wave propagation, and nuclear-testing treaty monitoring. This research is conducted using a state-of-the-art computer system including access to a 1950 node cluster and multicore workstations.

Field equipment includes a portable broadband seismic network for remote deployments, a terrestrial LiDAR, gravimeter, and borehole pressure and temperature sensors. An earthquake physics laboratory also maintains a TA AR2000ex industrial rheometer for granular flow studies and a Zygo Newview white-light interferometer. Web: www.es.ucsc.edu/research/seis.html

Macromolecular X-ray Crystallography Facility. The facility houses a state-of-the-art rotating-anode/imaging-plate X-ray crystallography data collection suite, a cryosystem, and a collection of Apple, SGI and Linux computer workstations and software for crystallography data collection and computation, molecular visualization, and model building. UCSC scientists have used the facility to investigate the structure of the ribosome, catalytic RNA ("ribozymes"), the spliceosome, and protein structures relevant to cell-cycle regulation. Users of the facility also collaborate with the Lawrence Berkeley National Laboratory's Advanced Light Source synchrotron radiation facility and the Stanford Synchrotron Light Source. Web: biomedical.ucsc.edu/Xray.html

Marine Analytical Laboratories. The Marine Analytical labs are a part of the Institute of Marine Sciences at UC Santa Cruz (see [Resources for Learning and Research](#)). They consist of a general access analytical facility for the support of research in the marine sciences. Scientific instruments and other equipment to aid research in marine chemistry, biology, geology, and environmental toxicology are housed in a central lab complex within the Earth and Marine Sciences Building. Analytical instrumentation; instruction in use of the equipment; consultation in experimental design, sampling, analysis, and data interpretation; and general assistance in all aspects of analytical science are available. Web: ims.ucsc.edu/mal

Mass Spectrometry Facility. Mass spectrometry is an analytical technique used to measure the mass-to-charge ratio of chemical ions. The facility currently houses two mass spectrometers: a Thermo Finnigan LC/MS/MS (LTQ) and an Ettan MALDI-TOF. This equipment is capable of determining the molecular weight of both small molecules and peptides, identifying proteins, and characterizing protein modifications. Web: biomedical.ucsc.edu/MassSpecFacility.htm

Microarray Facility. Used for genome-wide splicing and expression analyses of diverse organisms, from microbes to humans, the facility supports both spotted microscope slide and Affymetrix microarray research. Equipment includes an Affymetrix GeneChip system, a robotic microscope slide arrayer, an Axon slide scanner, and a 96-channel automated liquid handler. The staff offer wet-lab expertise to investigators, with bioinformatics specialists from the School of Engineering providing computational support. Web: biomedical.ucsc.edu/Microarray.html

Mineral Physics Laboratory. Experiments to determine the thermochemical and elastic properties of planetary materials at ultrahigh pressure (up to 150 GPa) and temperature (up to 6,000 K) are conducted in this lab. High P-T conditions are generated using the diamond anvil cell coupled with laser heating. Presently, both Raman and infrared spectroscopic facilities are available for characterization of the structural and bonding properties of minerals and fluids in situ at pressures and temperatures characteristic of planetary interiors. In addition, a high-intensity x-ray generator is used to determine the equations of state and phase equilibria of mineral assemblages relevant to the Earth's mantle and core, and a transmission electron microscope is used to analyze crystal defects and for micro-phase identification. Web: www.emerald.ucsc.edu/research/mineral.html

Molecular Ecology and Evolutionary Genetics Facility. The MEEG facility provides molecular technologies for analyses of the structure and dynamics of genetic diversity found in animal, plant, and microbial populations. The facility includes two ABI 3100 Genetic Analyzers for analysis of DNA sequences and DNA fragments, a Packard Multiprobe II Automated Liquid Handling System to facilitate DNA preparation, and a Becton Dickinson FACSCalibur Flow Cytometer, for immunophenotyping, analyses of cellular ploidy level, absolute cell counting, and cell sorting. The facility is capable of assessing hundreds of samples each week for differences in the DNA sequence of individual genes, specific genetic markers, and overall DNA content. Web: microbiology.ucsc.edu/meeg.html

Nanosecond Time-resolved Laser Spectroscopy. The Department of Chemistry and Biochemistry maintains several laser spectroscopy systems capable of measuring time-resolved spectra from the far UV to the near IR regions. Various systems are optimized to measure nanosecond-resolution time-resolved absorption spectra, linear dichroism spectra, circular dichroism spectra, magnetic circular dichroism spectra, optical rotatory dispersion, or magnetic optical rotatory dispersion. Software is available to collect and analyze data to obtain kinetics and spectra of reaction intermediates from nanosecond to second time scales. These facilities are used in a wide variety of research, including photochemical and photobiological studies, examination of functional and folding mechanisms of peptides and proteins, and investigation of fast electron and proton transfer in proteins involved in mitochondrial and bacterial respiration. Web: biomedical.ucsc.edu/Laser.html

Nuclear Magnetic Resonance/Mass Spectroscopy Facilities. The NMR facility brings together an interdisciplinary group of researchers from the departments of Chemistry and Biochemistry and Molecular, Cell, and Developmental Biology. Ongoing research includes structural elucidation of anticancer natural product isolation from marine organisms, organic intermediates for drug synthesis, specially designed peptide intermediates, and oligonucleotide derivatives that remain attached to solid supports. At present, the facility manages four high-resolution NMR spectrometers: two 3-channel Varian Unity+ 500s with direct and inverse detection probes; a Varian INOVA 600 system with a 600-MHz cold-probe system; and a Bruker/TecMag AC250. Initial funding came from the Lucille P. Markey Charitable Trust and the W. M. Keck Foundation, as well as individual research grants from the National Institutes of Health, the National Science Foundation, and other sources available to UCSC. Web: chemistry.ucsc.edu/research/nmr.html

Paleomagnetism Laboratory. This lab is located in a remote building specially constructed with nonmagnetic materials and isolated from major sources of man-made magnetic noise. Inside this building, a magnetically shielded room houses a state-of-the-art superconducting magnetometer, a sensitive spinner magnetometer, thermal and alternating field demagnetizers, and paleointensity equipment. A second lab, devoted to the study of rock and mineral magnetic properties and housed in the Earth and Marine Sciences Building, contains another spinner magnetometer, devices for measuring Curie temperatures, magnetic susceptibility and its anisotropy, hysteresis loops, and computer facilities for data analysis and graphics. Web: www.es.ucsc.edu/research/paleomag

Proteomics Facility. Designed to perform large-scale comparisons in protein expression, such as in cancer progression, Parkinson's disease and manganese toxicity, the facility houses an Amersham Ettan Proteomics Lab with Differential Gel Electrophoresis (DIGE) technology. School of Engineering computer scientists will assist in processing the large amounts of protein data generated. Web: microbiology.ucsc.edu/proteomics.html

Rock Preparation Facility. The facility is fully equipped to aid researchers in petrographic section making, rock crushing, sample sieving, and mineral separation. A full-time technical staff member oversees the facility. Web: www.es.ucsc.edu/research/rock.html.

Shared Stem Cell Facility (SSCF). This facility comprises an advanced stem cell laboratory for research and training in manipulation techniques and the production of transgenic organisms. It supports faculty-led research and course work for the UCSC CIRM Training Program in Systems Biology of Stem Cells. This facility enables work on non-NIH approved human embryonic stem cell (hESC) lines. The facility consists of a laboratory for embryonic stem cell growth and manipulation, a state-of-the-art transgenic facility, and staff with expertise in experimental design, protocol development, and data analysis. The SSCF suite includes a core cell culture room and a cell culture training room for instructing individual researchers, small groups, and students taking the stem cell biology laboratory course. Adjoining rooms include a microscopy core, a live imaging and cytometry core, and rooms for reagent preparation and sample processing and analysis. Web: <http://stemcell.ucsc.edu/facilities/sscf>

Stable Isotope Laboratory. This lab is a state-of-the-art facility that houses five isotope ratio mass spectrometers for the isotopic analyses of carbon, nitrogen, hydrogen and oxygen species in solid and liquid samples. Samples can be analyzed from either natural abundance or, in some instances, enriched sources. Front-ends for the IRMSs include two automated carbonate devices and a full suite of continuous-flow peripheral devices. Web: www.es.ucsc.edu/research/sil.html

Santa Cruz Center for International Economics (SCCIE)

The SCCIE is a group of UCSC and other scholars working in the field of international economics, broadly defined to cover international finance, open-economy macroeconomics, international trade, development economics (and linkages with environmental issues), and international political economy. SCCIE applies leading-edge research, in order to understand the most pressing issues in the international arena, including financial crises, global imbalances, world poverty, economic development in China and India, international labor migration, and world-wide trade patterns.

The objective of SCCIE is to broaden understanding of international economic issues by sponsoring faculty and graduate student research, conferences, undergraduate research internships studies, and the exchange of scholars from around the world. The center also supports and participates in nonpartisan programs designed to bring greater public awareness and understanding to policy issues involving international economics. To this end, SCCIE supports public seminars, publication of working papers, and occasional public forums.

For more information, visit the SCCIE web site: <http://sccie.ucsc.edu>; call (831) 459-1553; fax (831) 459-5077; or e-mail: sccie@ucsc.edu.

Santa Cruz Institute for Particle Physics (SCIPP)

The SCIPP was established on the Santa Cruz campus by the Regents in 1980 to coordinate research and instruction in elementary particle physics and related areas. Its staff members, as well as visiting scientists, are engaged in theoretical and experimental particle physics and particle astrophysics projects that concern the fundamental interactions of matter. Additional work includes projects in neurobiology and radiobiology. They are also involved in graduate and undergraduate instruction as regular faculty or adjunct professors, usually with the Department of Physics.

Experimental work such as the design, testing, and construction of large-scale particle detectors, as well as associated electronics, takes place in the development laboratories on campus. Many of the experiments are ultimately performed at large facilities, national or international laboratories, or using space-based detectors.

The detector development at SCIPP is largely concerned with miniaturization of detectors. Design and testing of custom-integrated circuitry is a major facet of this effort. At present, the institute's principal experimental projects include the following:

- Analysis of data from the BaBar detector, with an emphasis on matter-antimatter mixing for charmed particles, and rare "radiative penguin" decays in which a bottom particle decays into an array of light particles accompanied by the emission of a single high-energy gamma ray
- Studies of ultrahigh-energy cosmic-ray showers at facilities associated with Los Alamos National Laboratory and the VERITAS telescope array

- Scientific exploitation of the ATLAS detector at the Large Hadron Collider facility at the CERN Laboratory in Geneva, Switzerland, of which SCIPP played a major role in design and construction; research and development of the future upgrade to the ATLAS detector, including radiation-hardened electronics and silicon sensors and high-speed data transmission, is a parallel activity
- Development of the ground station and flight components for the BARREL balloon program to study the loss of relativistic electrons from the Van Allen belts to Earth's atmosphere
- Development of the ADELE airborne gamma-ray detector to study particle acceleration associated with lightning
- Scientific exploitation of the GLAST orbiting gamma-ray telescope of which SCIPP played a key role in the design and fabrication

Both graduate and undergraduate students take part in these projects, which give them opportunities for thesis work, independent study, and part-time employment. Students have gained experience in electronics, computer-aided design (CAD) and use of scientific instrumentation as well as in actual experimentation and data analysis.

The institute's theorists have broad interests in high-energy physics, astrophysics, and cosmology—subjects that have become increasingly interrelated in recent years. Topics of their recent work have included the following:

- Phenomenological properties of Higgs bosons and formulation of search strategies for their discovery
- Development and analysis of other new theories of particle physics that can be tested at present and future accelerators, especially supersymmetric theories
- Investigations of gauge theories of strong and electroweak interactions, topics in quantum field theory and string theory
- Physics of the early universe including the origin of matter-antimatter asymmetry, inflation, and the nature of the dark matter and dark energy
- Theories of galaxy formation

The theory group collaborates with the SCIPP experimental group, the UCSC astrophysicists and astronomers associated with Lick and Keck Observatories, the large theoretical physics group at SLAC, and theorists at UC Berkeley, UC Davis, and the Institute for Theoretical Physics at UC Santa Barbara. The theory group supports the research and thesis work of graduate students and occasionally supervises undergraduate theses. Web: scipp.ucsc.edu

Social Sciences Division

Research Facilities

Archaeology and Physical Anthropology Laboratories. These laboratories are dedicated to teaching and research in both anthropological archaeology and physical (biological) anthropology. Within the labs are spaces for the study of ceramics, lithics, spatial archaeology (CISR), zooarchaeology, comparative anatomy and osteology, and forensic anthropology. The laboratories maintain collections related to local Monterey Bay archaeology, as well as comparative vertebrate osteology and taphonomic specimens. Web: anthro.ucsc.edu/labs/.

Center for Integrated Spatial Research. [The Center for Integrated Spatial Research is described above.](#)

Center for Tropical Research in Ecology, Agriculture, and Development (CentTREAD) is a coalition of faculty and students spanning several departments and centers at UC Santa Cruz. The center fosters interdisciplinary research and training to understand tropical environmental issues and develop ecologically based, economically viable, culturally respectful, nonexploitative solutions that serve as a foundation for future generations. The center offers a variety of undergraduate and graduate courses at UCSC, and strives to provide educational opportunities to U.S. citizens who work in tropical countries and to students from tropical countries. Web: centread.ucsc.edu

CineMedia Project (CMP). This is a noncirculating research archive dedicated to the study of Latin American and Latino film and video. CMP, located on the first floor of Casa Latina at Merrill College, is open to UCSC faculty, graduate students, and advanced undergraduates, by making arrangements with the department manager. Visitors may have access to the archive by special arrangements. Visit us at <http://lals.ucsc.edu/research/>.

Life Lab Science Program. Life Lab helps bring learning to life in a garden through curriculum, professional development, and innovative programs at our Garden Classroom site, located on the UCSC Farm.

Museum of Natural History Collections (MNHC). MNHC is dedicated to cultivating an increased understanding and appreciation of the natural world by promoting the use of its natural science collections for teaching, research, and aesthetics. The museum, part of the Environmental Studies Department, is the main repository for natural science collections at UC Santa Cruz. Collections include specimens of plants, fungi, insects, fishes, amphibians, reptiles, birds, and mammals. Web: mnhc.ucsc.edu

Plant Growth Facility (Greenhouses). [The greenhouses are described above.](#)

Social Sciences Media Laboratory. This lab comprises an academic support and resource center for media equipment and services within the Division of Social Sciences. The Media Lab provides

technical consultation and support; equipment training; and equipment loans for faculty, students and staff in the division.

The Media Lab has video workstations, audio workstations, digital-photography workstations, and black-and-white chemical darkroom facilities. The lab's facilities are available for use by Social Sciences faculty, undergraduates and graduate students doing research, course work, independent studies and undergraduate or graduate thesis work within the division.

The Media Lab offers lab classes and specialized workshops to educate faculty and students about the technical fundamentals of the video, audio, and photographic medium.

The lab may be contacted by phone at (831) 459-4010 or by e-mail at mlab@ucsc.edu. Web: http://socialsciences.ucsc.edu/administration/media_lab

South Asia Studies Initiative. UC Santa Cruz is the University of California's campus that meets the needs of Silicon Valley, including the vibrant South Asian diaspora that has contributed to the region's innovations and economic growth. An important aspect of the campus's educational mission is creating a major new South Asia Studies Center with global visibility, contributing to understanding not only South Asia's priceless heritage, but also its future trajectory. The center will focus particularly on India's new role as a leading participant in the world economy, including its emergence as a source of management expertise, entrepreneurship, capital, and innovation. The initiative is a campus-wide collaboration that builds on existing initiatives and research from multiple disciplines and in strong partnership with the region's South Asian community. Currently, the initiative hosts the Mapping the Future of India public lecture series, featuring speakers from around the world focusing on issues of science, technology, economics, and politics in India and the region. For additional information, please contact Andrea Cohen, acohen@ucsc.edu, (831) 459-2919.

UCSC Farm and the Alan Chadwick Garden. [The UCSC Farm and the Alan Chadwick Garden are described above.](#)

University Affiliated Research Center (UARC)

Under a 10-year, \$330 million research contract between NASA and the University of California, which began in September 2003, UC Santa Cruz is leading the UC-wide UARC at NASA Ames. Research, which takes place at the NASA Ames's Moffett Field facility, as well as at several UC campuses, focuses on multidisciplinary research in the following:

- Materials, energy, and nanoscience
- Information sciences
- Biotechnology and fundamental space biology
- Aerospace systems
- Astrobiology (space, life, and Earth sciences)

In addition to research, UARC offers an educational program via its Systems Teaching Institute, which provides opportunities for students to work alongside university and Ames researchers, enhancing their educational experiences while training them to become 21st-century world-class scientists, engineers, and educators.

To learn more about UARC and its programs, go to uarc.ucsc.edu.

University of California Observatories/Lick Observatory

Lick Observatory was established on Mt. Hamilton in the 1880s as a result of the gift of James Lick, a Pennsylvania piano maker who came to San Francisco in 1848 and amassed a fortune through investment in California real estate. The observatory has been part of the University of California since 1888, when the Lick Trustees conveyed the just completed original installation to the Regents.

UCO/Lick astronomers became a partner with California Institute of Technology astronomers to operate and provide instruments for the W. M. Keck Observatory, located at the summit of Mauna Kea in Hawaii. The two Keck 10-meter telescopes began operating in 1993 and 1996. These are the largest and most capable optical/IR telescopes in the world.

In 1988 the Regents established an organization to manage the university's ground-based optical and infrared observatories as a single unit. Known as the University of California Observatories (UCO), the organization includes Lick Observatory and UC's component of the Keck Observatory. UCO is headquartered at UCSC; the Lick director serves also as the director of UCO. UCO/Lick plays a large role in the Keck enterprise: both of the Keck telescopes' secondary mirrors were polished in the optical laboratory at Santa Cruz, and the high-resolution echelle spectro-graph (HIRES), designed and constructed in the instrument-development laboratories here, was the first Keck instrument to become fully operational. The laboratories have also designed and constructed instruments for the second Keck telescope, including a powerful new optical instrument to aid in the search for dark matter (DEIMOS) and a new medium-resolution echelle spectrograph and imager (ESI). Web: www.ucolick.org.

As resident members of the Santa Cruz faculty, the UCO/Lick staff are members of UCSC's Department of Astronomy and Astrophysics, which offers the graduate program in astronomy and astrophysics and an undergraduate minor (see [Astronomy and Astrophysics](#)). A B.S. degree in astrophysics is offered through the Physics Department (see [Physics](#)). The UCO laboratories are

located on campus, as are optical, electronics, engineering, programming, and detector and instrument-development groups. There are resources for measurement, analysis, and computation of data on campus as well.

The telescopes and accompanying facilities on the 3,762-acre reservation on Mt. Hamilton east of San Jose are operated as an observatory, with faculty, research, and student observers commuting to the facility. Telescopes include the Lick 36-inch refractor, the Carnegie 20-inch twin astrograph, and the CAT 24-inch, Crossley 36-inch, Nickel 40-inch reflectors, and the Katzman 30-inch robotic reflector, dedicated to searching for supernovas. The newest telescope is the Automated Planet Finder, which is in the final stages of completion. The largest and most powerful of the Lick telescopes is the Shane 120-inch reflector, which was completed in 1959 and is one of the world's most effective telescopes. The observatory's equipment also includes a variety of auxiliary instruments used in connection with observations at the 120-inch telescope. Among the most recent is the Hamilton echelle spectrograph, judged to be one of the world's most efficient instruments for high-resolution analysis of the light of stars and galaxies and the instrument by which astronomers have discovered new planets outside our solar system. Other instruments include the Kast double spectrograph, a pioneering example of UCO/ Lick's innovative instrumentation capabilities; the multiple-object spectrograph, which gives astronomers the opportunity to look at the spectra of 100 objects simultaneously; and the prime-focus Wide Field Camera, capable of taking digital images of large areas of the sky. One of the most exciting technological innovations developed at Lick Observatory, in conjunction with Lawrence Livermore National Laboratory, is the use of an adaptive-optics system with an artificial laser-produced guide star to correct distortions to incoming light caused by the blurring effects of the atmosphere. The observatory is a systemwide facility used extensively by observers and students from other UC campuses and the national laboratories.

UCSC's courses in astronomy and astrophysics are taught on campus. Advanced students gain observing experience with the Mt. Hamilton telescopes and conduct research directed by the staff.

UCO/Lick astronomers work on a wide variety of astrophysical problems, including solar system and star formation, stellar evolution, the origin and evolution of the Galaxy and external galaxies, abundances of the chemical elements, and the size, structure, and evolution of the universe.

Since 2000, UCO has been a partner in a project to build a giant telescope (30-meter diameter primary mirror) and the adaptive optics systems and instruments that will make this the most powerful astronomical facility of the coming decades. This project—in a \$63 million design and development phase—is called the Thirty-Meter Telescope (TMT).

Center for Adaptive Optics (CfAO)

The Center for Adaptive Optics is a Science and Technology Center that was funded for 10 years by the National Science Foundation (NSF) and is now funded by the University of California. The Center is headquartered at UC Santa Cruz, with members from eight other UC campuses and with many academic and industrial affiliates. Its mission is to advance and disseminate the technology of adaptive optics (AO) in service to science, health care, industry, and education. Its goal is to lead the revolution in AO by developing and demonstrating the technology, creating major improvements in AO systems, and catalyzing advances nationwide. The CfAO implemented a highly successful education program to teach our graduate students methods of inquiry-based science teaching, and to apply this knowledge in programs that attract and retain a new generation of scientists, particularly among women and underrepresented minorities. This education program now resides in the Institute for Scientist and Engineer Educators at UCSC, which serves graduate students throughout the science and engineering fields. The Akamai Workforce Initiative, a partnership between the University of Hawaii's Institute for Astronomy, UCSC's CfAO and ISEE, and Maui Community College, runs education and internship programs in Hawaii. The CfAO is building on UC's strong leadership in AO by connecting UC campuses, by fostering research collaborations across disciplines, and by developing the next generation of young leaders in this field. The center brings together UC astronomers and vision scientists, today's primary users of AO, with UC engineers and technologists who design and construct these systems. A hardware-based outgrowth of the center, the Laboratory for Adaptive Optics within UC Observatories, was established through a \$9 million grant from the Gordon and Betty Moore Foundation. This state-of-the-art laboratory explores new AO techniques, develops and tests new components, and provides training for our students and postdocs. E-mail: cfao@ucolick.org
Web: cfao.ucolick.org and lao.ucolick.org

The Colleges

The University of California, Santa Cruz, is a collegiate university. All undergraduate students and most faculty are affiliated with one of the colleges, their home within the larger university. The colleges are committed to fostering a nurturing and academically thriving environment for students of all backgrounds. Each college strives to promote the attributes of a diverse and multicultural community in its own unique way. In order of founding, the colleges are [Cowell](#), [Stevenson](#), [Crown](#), [Merrill](#), [Porter](#), [Kresge](#), [Oakes](#), [College Eight](#), [College Nine](#), and [College Ten](#).

Self-contained and architecturally distinct, each college is a relatively small community of 30 to 110 faculty members and between 1,400 and 1,500 students, about half of whom live on campus. Each college has its own housing, as well as academic and recreational programming, and each is an integral part of the larger campus. The colleges have their own academic emphases and cultural traditions, although each seeks faculty and students from a variety of disciplines to foster broad intellectual interests. The colleges play a primary role in academic advising and are the center of student life. Students graduate from their college. At the same time, *all university academic programs, resources, and student services are open to students of every college.*

The information students need to rank their college preferences can come from a variety of sources—personal acquaintance, a campus visit, literature available from the colleges, and the descriptions in this section of the catalog. Entering students are asked to list several colleges in order of preference; whenever possible, students are assigned to the college of their choice.

Similarities and Differences

Each college is residential and able to house close to half of its students. Most frosh choose to live on campus, as do a number of sophomores, juniors, and seniors. The particular style of housing varies among the colleges, ranging from residence halls, with a mix of single, double, and triple rooms, to apartment-style housing, where students live together in small groups and may do some of their own cooking. Faculty, staff, and graduate students, along with undergraduate resident assistants, reside in college housing units.

The faculty, or fellows, of each college come from a variety of academic disciplines; many faculty have their offices in the colleges.

Each college offers a distinctive academic program for entering frosh. The required fall course provides a significant bridge between academic and residential life, since all frosh, regardless of major, will be in the course, and most will be in residence as well. Stevenson's core course extends over two quarters, while the other colleges offer one-quarter courses. College core course requirements for transfer students vary. The colleges also offer selected courses in their area of interdisciplinary emphasis and host events and speakers that enhance this focus.

Each college provides academic advising as well as academic and general campus orientations to help you plan your academic program. College academic preceptors and advisers provide advice on general academic matters outside a student's major, including general education, choosing a major, and strategies for academic success. Psychological and personal counseling is also available in each college, and many colleges have well-developed peer advising and tutoring.

The colleges differ in architecture; each was planned by a different architect, who was encouraged to convey the distinct personality of that college through the design of its buildings and their placement in the natural environment. Above all, the colleges differ in subtle ways having to do with their intellectual and social traditions, the different designs of their student governments, and the predominant interests of their students and faculty.

Changing Colleges

Most students, having affiliated with a particular college, develop friendships and intellectual attachments there, and they remain members of that college throughout their undergraduate years. Some students find that changing academic interests draw them to a different college. During the specified filing period, students may request a change of college with the approval of both college administrations.

Cowell College

Cowell College inaugurated the Santa Cruz campus when it opened with a pioneer class of 600 students in 1965. The founding faculty shaped an educational program that challenged and enriched students through wide-ranging inquiry and disciplined study. Today, Cowell has more than 1,500 affiliated students and 60 faculty fellows. Its motto—The Pursuit of Truth in the Company of Friends—expresses a continuing commitment to create a serious academic environment within a

humane and broadly inclusive community. The college is named for the S. H. Cowell Foundation, which endowed the college at its founding.

Academic Emphases

The academic theme of the college encourages students to pursue their general and disciplinary study with attention to the values of liberal arts education: understanding one's individual perspective by exploration of its historical background and world context. Students affiliated with the college pursue majors from all departments on campus.

The faculty fellows affiliated with the college represent all academic divisions (arts, engineering, humanities, physical and biological sciences, and social sciences). The faculty fellows guide the college academic programs and often contribute to the college-based advising system.

In satisfying their general education requirements, first-year Cowell students are required to take the Cowell Core Course in the fall term. The core course, Cowell 80, taught in small seminar sections, seeks to develop critical reading, analytical writing, and seminar discussion skills by reading a selection of classic and contemporary texts focused on the theme of justice.

The college academic buildings house humanities faculty, with notable concentrations in philosophy, classics (study of ancient Greek and Latin language and civilization), and modern foreign languages, especially Chinese, French, Italian, Russian, German, and Japanese. Interdisciplinary faculty groups in visual and performance studies and in pre- and early-modern studies are centered at Cowell College.

Students who develop ideas for research, creative projects, community service, or internship experiences may apply to the college provost for financial support. The college also awards several annual scholarships, sponsors prizes for outstanding academic work.

The college enriches the intellectual and cultural life of the campus by sponsoring events of various kinds: lectures and presentations by local faculty and visiting scholars, theatrical and musical performances, and forums and debates on topics of current interest.

College Community and Facilities

Cowell's seven residence halls and three apartment buildings are arranged in three quadrangles on a hillside overlooking the city of Santa Cruz and Monterey Bay. About 675 students are housed in the college. Each residence hall houses from 40 to 60 students and is divided into two wings, with seven to 11 residents on each floor. Most floors are coed, with men and women sharing common lounges and other facilities, but single-gender floors are provided for those who prefer this arrangement. Apartments house 185 continuing students in six-person units. The residential staff members facilitate diverse educational, social, and recreational programming to enhance the living and learning environment.

Arranged around the college's central plaza are the dining hall, the Page Smith Study Library, the fireside lounge, the coffee shop, and conference rooms and classrooms. Unique to Cowell College are the Eloise Pickard Smith Gallery, which regularly mounts exhibits, and the Cowell Press, where students can learn the fine technique of hand-operated letterpress printing.

Since the college's founding, regularly scheduled College Nights in the dining hall have offered students, staff, and faculty a special meal and a rich mix of after-dinner programs presented by students and professional artists. Community life is enlivened by many other scheduled and impromptu intellectual, cultural, and social events.

The Student Senate meets weekly to discuss campus issues and student government. The Senate advises the college on the allocation of funds for student activities and programs. Members of the Senate are selected each year by lot, but any student may become a voting member by steady attendance at meetings. The college's student groups, staff, and faculty work together to create a supportive community for students from all ethnic groups, all religious traditions, and all sexual orientations and to increase awareness of the many dimensions of diversity in the community.

For more information on the college, see www2.ucsc.edu/cowell or call (831) 459-2253.

Stevenson College

We are Stevensonians; we are free agents of history and masters of our own destinies. Every one of us is important, and we cherish our differences as much as we cherish our shared values of love, chivalry, honesty, hard work, and responsibility.

—Seung Kyun Joseph Mok,
Stevenson Alumnus/Regents Scholar

Stevenson College is named after former statesman and U.S. Ambassador to the United Nations Adlai E. Stevenson. Our faculty, students, and staff take pride in intellectual critical inquiry, academic and civic leadership, and respect for students' concerns about shared student governance, human rights, and social justice.

Stevenson College has a long-standing reputation for excellence in liberal education. The college strives to provide an academically, culturally, and socially supportive environment for all its

members, fostering social responsibility and academic achievement. Stevenson has brought to the campus distinguished individuals such as Senator George McGovern, Congresswoman Bella Abzug, Nobel Laureate Elie Wiesel, Chief of the Miwok Tribe Greg Sarris, Producer Lourdes Portillo, and Associate Director-Counsel Theodore M. Shaw of the NAACP Legal Defense and Educational Fund.

The college's faculty and staff offer professional and personal service for the diverse needs of students. Faculty and staff assist students in all areas of their academic and social experience at Stevenson College, and are committed to instilling respect for the diverse backgrounds of Stevenson students.

Academic Emphases

- Faculty drawn from social sciences, humanities, natural sciences
- Two-quarter frosh core course
- Writing Assistants
- Junior Fellows Program

Stevenson distinguishes itself as the only college with a two-quarter core course intended to provide all first-year students with a common academic experience. The core course allows for more rigorous development of students' critical, writing, and analytical skills. It provides a unique learning environment and a supportive intellectual community for all Stevenson first-year students. Those admitted as transfer students are exempt from the core course requirement but may take the core course at their option pending available space; lower-division transfer students who, prior to enrolling, have not completed at least one UC-transferable college English composition course with a minimum grade of C (2.0) are able to take the core course to satisfy the C1 requirement. Stevenson alumni can be found in legal, political, educational, engineering, medical, computer and information sciences, business, and public administration careers, among others.

The faculty at Stevenson, drawn from a variety of disciplines in the social sciences, humanities, and physical and biological sciences, share a common concern for the study of social processes that shape modern society and determine the quality of our individual lives throughout various global regions and periods of world history. Linguistics, sociology, history, politics, psychology, biology, chemistry, and computer science are strongly represented in the college.

The Stevenson core course, *Self and Society*, enables students to examine the nature of the self and the relationship of the individual to society. In addition, the course fosters an intellectual commitment to the general philosophy that has helped to define Stevenson College since its inception: preservation of human dignity, the social cultivation of individual creativity and citizenship, and a belief in ethical responsibility. The core course reflects the college's long-standing commitment to interdisciplinary and culturally diverse readings, while at the same time it affords students an opportunity to develop research interests, to acquire greater understanding of the role of research universities in contemporary societies, and to acquire the requisite skills to engage in increasingly more sophisticated intellectual work while at UCSC.

The Stevenson College Junior Fellows Program offers juniors and seniors an opportunity to serve as instructors in *Self and Society*. Junior fellows, who must have completed outstanding work in *Self and Society* during their first year, undergo a rigorous application and selection process. Junior fellows (enrolled in Stevenson 120, *Teaching Practicum*) earn 5 course credits.

Stevenson provides writing assistance for all of its students. Stevenson Writing Assistantships are paid student positions open to juniors and seniors with excellent academic records.

College Community Programs

- College Nights
- Stevenson Student Council
- Stevenson Ethics Bowl Team
- Multicultural Advisory Committee (MAC)
- Path to a Greener Stevenson (PTAGS)
- Social and Multicultural Programs/Activities
- Stevenson Housing Association (SHA)
- Rainbow Theater

Stevenson holds regular College Nights, where joining together for a special dinner presents an opportunity for Stevenson faculty, staff, and students to get together in a social context. College Nights—such as Cinco de Mayo, Chinese New Year, Vietnamese College Night—provide the opportunity to celebrate many different cultures. Dinner is followed by entertainment.

The Stevenson Student Council meets on Thursday evenings. This group is responsible for allocating college membership fees to student activities. The council also serves as a forum for the discussion of college and campuswide issues and appoints student representatives to college and

campuswide committees.

Facilities

- Eight small residence halls
- Three apartment buildings
- Theme floors in residence halls:
 - Multicultural and Social Justice House
 - Outdoor Adventure House
 - Continuing Student House
- Coffee house
- Wagstaff Fireside Lounge
- Writers' Center
- Stevenson Library
- Stevenson Event Center
- Silverman Conference Room
- Recreation room

Stevenson has a wide variety of facilities and activities to appeal to many tastes. The college, designed by San Francisco architect Joseph Esherick, has won many architectural awards. The buildings are situated amid redwood trees and sprawling lawns, and the main quad overlooks Monterey Bay. Stevenson is situated close to the campus bookstore, restaurants, McHenry Library, gym, and pool. There are eight small residence houses at the college providing a choice of single-gender or coed floors; each house accommodates about 65 undergraduates. The apartments provide space for 156 continuing students. Nearby are a picnic area, playing fields, and a garden.

The Stevenson Coffee House, which has become *the* gathering place in the college, is a friendly and inviting spot to enjoy lunch or an espresso and pastry— indoors or out on the patio. It is the scene of lively conversation, occasional musical entertainment, and chess matches. Adjoining the coffee house is the recreation room, with Ping-Pong, foosball, pool tables, and television. This area is also the site of much socializing and spontaneous group activity.

In contrast, the Stevenson Library is a striking building designed for quiet reading and study. The Wagstaff Fireside Lounge, a retreat for relaxed discussion, is also used for recitals, special lectures, meetings, and residence house activities. Art exhibits (both student and professional) are on display throughout the year in the lounge, library, and coffee house.

For more information, call (831) 459-4930 or visit the web site: stevenson.ucsc.edu.

Crown College

Crown College faculty and students represent a wide variety of academic disciplines. The majority of the faculty teach in the physical, biological and social sciences. Although Crown has more science and engineering students than any of the other colleges, most of Crown's students major in the social sciences, humanities, and arts. This diversity of interests and academic training enriches our intellectual environment. An important goal of the college is to foster an appreciation for the contributions of diverse cultural groups and to provide an atmosphere in which issues of both diversity and common social purpose are integrated into a wide range of programs and discussions.

Crown is located on a hilltop surrounded by a redwood forest. The core buildings consist of an administration office, dining commons, lounge spaces, study spaces, faculty offices, and classrooms built around a large patio and central fountain. The award-winning architecture with its white walls and high-pitched tiled roofs suggests a hillside Mediterranean village. The college's residential facilities provide housing approximately 700 students. The facilities at Crown College were built through a partnership of public funds and a gift from the Crown Zellerbach Foundation.

Academic Emphases

From the time of its founding in 1967, issues pertaining to the role of science and technology in society have been a focus of special interest at Crown College. We approach these issues from an interdisciplinary perspective that recognizes the influence of social and cultural factors on the scientific enterprise, as well as the ways in which science and technology influence our society.

The Crown College core course, Crown 80A or 80B, *Ethical Issues in Emerging Technologies*, is an interdisciplinary seminar concerning the effects of these world-changing technologies and encourages students to develop decision-making strategies to steer these technologies. The course examines the impacts of these technologies on society using a variety of disciplinary approaches that engage the perspectives of both humanists and scientists. The fall-quarter core course is required of all nontransfer students during their first quarter at UCSC. As with the core courses from our sister colleges, the development of critical reading and writing skills is a major thrust of Crown 80A and 80B.

The Crown Science and Engineering Learning Community is an innovative program to support first-year students who are interested in pursuing a major in engineering and the sciences. Students enrolled in this program live together, forming a supportive community promoting collaborative learning and group problem solving. To facilitate this process, students participating in the Science Learning Community are placed in a special section of Chemistry 1A or Math 3 and participate in a residentially based study group. The program is designed especially for students who have a strong interest in the sciences but feel slightly underprepared for university-level course work. It often acts as a bridge to the ACE Program in the physical and biological sciences and engineering. Participation—limited to first-year students at Crown College—requires a commitment to succeed, a willingness to work hard, and a positive attitude.

The Engineering Learning Community for ACCESS scholars focuses on underrepresented student success in the field. Students receive support from the Baskin School of Engineering, including tutoring, mentoring, and specialized programs. Juniors and seniors can participate in the college's Undergraduate Research Fellowship Program, which awards \$800 fellowships to student-faculty teams and encourages their interaction through undergraduate research.

College Community and Facilities

Crown sponsors a wide variety of cocurricular events spanning cultural, educational, and social areas of interest. One popular series is the Science/Public Affairs Tables, informal dinners at the Provost House that offer students an opportunity to socialize with a faculty member outside the classroom and learn about his or her research.

Students become involved in Crown life by both initiating and participating in a wide range of activities. Social activities vary each year according to the interests of students. At the monthly College Night in the dining commons, a special dinner is followed by entertainment, both often sharing a common cultural theme. Some major events have become a tradition: for example, Karaoke the Crown Formal, and Regression Night. Crown activities and dances draw students from all over campus. Outdoor activities organized by the student government, College Programs Office, or residential staff range from whale watching on the Monterey Bay to ultimate Frisbee and from backpacking to stargazing.

The Social Fiction Conference every April brings students, staff, faculty, and community members together to focus on the intersection of social justice issues with the genres of science fiction, fantasy, and gaming.

The Crown Student Senate (CSS), the elected student government at Crown, holds open weekly meetings to recommend fund allocations for student activities and to discuss issues of concern to students and the college. CSS also sponsors events to enhance the college experience, including the very popular Casino Night.

Crown offers two types of residential facilities: residence halls and apartments. Eight traditional residence halls each house approximately 60 students in single, double, and triple rooms in a coed

environment (single-gender bedrooms with unisex bathrooms) or on all-female floors. For students particularly interested in living with and learning about a special-interest environment, Crown provides transfer floors, Outdoor Pursuits and Academic Success Houses, the Science and Engineering Learning Community, and continuing student houses.

In addition, the college has apartments for approximately 230 upperclass students. Like the residence halls, the apartments are built on a small scale. Each three-story building has two or three apartments per floor that house four to six students in a combination of single, double, and triple rooms and include a kitchen, living room, dining room, bathroom, and outside deck.

Other facilities in the college include the Crown Library study space; a modern computer laboratory housing Sun workstations, which provides students with access to several kinds of systems and an array of applications and instructional software selected to support academic course work; the Fireside Lounge with a piano and a flatscreen television; the Music Practice Room; and the Crown-Merrill Community Room, which has a television, pool table, foosball, and ping-pong table, and provides an informal place to study, hold meetings, or just visit with friends. Dining facilities boast continuous dining and Banana Joe's fast-food and convenience store.

For general information, call the college assistant at (831) 459-2665 or visit the web site: www2.ucsc.edu/crown/. For residential or college programs information, call the Student Life Office manager at (831) 459-4656.

Merrill College

Merrill College seeks to expand its students' awareness of their own heritage and of the diversity of cultures around the world, past and present. Drawn largely from history as well as the social sciences, literature, and foreign languages, many Merrill faculty specialize in social theory, international affairs, and social change. The college makes a special effort to be a home for students from different cultural backgrounds and for international students; it presents unusual opportunities to those who value multicultural perspectives.

Merrill houses the Departments of Politics and Legal Studies, and Latin American and Latino Studies. Merrill is also the home of a Peace Corps satellite office, which helps UCSC students who are interested in working overseas apply to the Peace Corps after graduation, and KZSC, the campus radio station. It also hosts the Chicano/Latino Research Center; UCSC's Gay, Lesbian, Bi, Trans, Intersex Resource Center (aka the Lionel Cantú Center); the student-run Pottery Co-op, the only one of its kind at UCSC; and the Ming Ong Computer Center, a modern computer facility with

more than 40 state-of-the-art personal computers.

College Theme and Core Course

Cultural Identities and Global Consciousness is the theme of Merrill College and of its core course. In the Core Course students read four books: Daoud Hari's *The Translator*; Cristina Garcia's *Dreaming in Cuban*; Fatima Mernissi's *Dreams of Trespass*; and Luis Rodriguez's *Always Running*. Additionally, students are introduced to a selection of secondary sources that supplement and enrich the aforementioned readings. All the Core Course readings are first-person narratives—memoirs or autobiographical works of fiction. They bear witness not only to conflict and crisis but also to individual strength and hope. They constitute material examples of how individuals and communities have dealt with various forms of crisis and conflict, and how people often turn to social activism as a form of healing the wounds left to communities and to individuals as a result of violence.

Through these astonishing personal narratives, the great movements of nationalism, imperialism, and globalization, and their attendant cultural clashes, religious conflicts, and social and gender inequalities are explored. Students are introduced to a myriad of opinions that will heighten their awareness of how differences and diversity relate to contemporary issues of global import. In addition, these secondary readings explore theories that seek to explain the persistent underdevelopment of many countries in the world, and the increasing poverty in the U.S.

Those admitted as transfer students are exempt from the Core Course requirement but may take it at their discretion.

Other Courses and Academic Initiatives

Merrill sponsors a variety of 2- and 5-credit courses on topics that change from year to year, recently ranging from the benefits of reevaluation counseling, to personal empowerment, to Caribbean migrations. Enrollment in these courses is kept to a size that facilitates discussion. Additionally, students can enroll in *Classroom Connection*, a service-learning course that provides opportunities to volunteer in local elementary school classrooms while also engaging in classroom discussions of relevant readings on current issues in educational theory and making a final presentation.

Recognizing the increasingly rigorous requirements for science majors, Merrill—in collaboration with the Academic Excellence Program—coordinates the Science Learning Community to support students majoring in the sciences. Students participating in the program enroll in small discussion sections that encourage a collaborative learning approach.

In 2007–08, Merrill College began an undergraduate mentorship program. The Merrill

Mentorship Program aims to inspire and prepare undergraduate students to pursue graduate studies. It is designed to provide research experience and personal and professional development for Merrill students. Merrill faculty participants nominate a student whose work they are familiar with and whose interests are similar to their own area of research and expertise. Students who participate in the program (juniors and seniors) will be employed as research assistants by their faculty mentors, and receive up to \$1,000 for the school year.

The Merrill College Distinguished Visiting Scholars Program hosts public and class presentations by national and international academics, artists, writers, and activists, representing a wide variety of perspectives.

College Community and Facilities

Located on a hilltop, Merrill's award-winning buildings thread upward through the edge of a redwood forest. The brick patios, gardens, outdoor café, and mission bell tower suggest California's Latino heritage. Merrill offers residence-hall and apartment-style options for students. Four residence halls house approximately 500 students in two high-rise structures and two smaller buildings. Groups of about 16 students share common bathroom and lounge facilities.

The apartments, which are located a short distance from the central area of the college, house 180 continuing Merrill students. Grouped amid winding pathways and redwood trees, these three-story buildings have two or three apartments per floor. Each apartment houses four to six students in a combination of single, double, and triple rooms, and comes fully equipped with kitchen and bath, large living area, and outside deck. Facilities at the apartment complex include common lounges, a large community room, and two laundry rooms.

With the help of the Merrill Coordinators for Residential Education, an enthusiastic residential staff plans recreational activities that include potluck dinners, intramural sports competitions, dances, musical events, film series, and a yearly outdoor mural-painting party. Many of these social and educational activities focus on building a multicultural community. Other facilities at Merrill include the Cultural Center, where events like College Nights and the Glitterball take place. The Baobab Lounge has study space and a television. The taqueria, run by local business Tacos Moreno, provides dining alternatives to the community. Finally, Merrill Academic Success (MAS) provides Merrill students with a place to study as well as computers and a printer. Merrill is the only college that has a student-run pottery co-op. Students can throw, fire, and glaze their works in the workshop space, which is open to Merrill students on a first-come first-served basis.

The physical facilities of Merrill College were provided through a partnership of public funds and gifts from the Charles E. Merrill Trust and the family of Ming Ong. For more information, call (831) 459-2144 or visit the web site: www2.ucsc.edu/merrill/.

Porter College

The Porter College theme, Arts in a Multicultural Society, reflects the consensus among Porter College fellows that the creative process is an inseparable aspect of a broad-minded and rigorous education. The seminars, cocurricular activities, and cultural environment at Porter encourage creativity in all fields—from composition to community studies to computer programming.

Academic Emphases

Porter's faculty includes most of the campus's practicing artists and art scholars, though some of the college's faculty (and half of its students) specialize in the humanities or in the physical and biological or social sciences. The college is the administrative home of the Division of the Arts and the History of Art and Visual Culture Department. The Digital Arts and New Media Program also has offices here.

Porter 80, the core course focuses on writing across the arts, with concentration on literature and arts of California and the Pacific Rim. Those who are admitted as transfer students are exempt from the core course requirement but may take the core course at their option pending available space; lower-division transfer students who, prior to enrolling, have not completed at least one UC-transferable college English composition course with a minimum grade of C (2.0) or better are permitted to take the core course to satisfy the C1 requirement. Students meet with their faculty member in a seminar, attend regular lecture/performances, and participate in writing groups, advising, and other sessions that introduce some of the academic issues they will confront at the university. The course emphasizes critical reading, writing, and close intellectual contact with faculty and other students.

The college also offers 2-credit courses in a variety of areas connected to the arts. These are small classes in the practice or theory of the arts; they may involve studies in music, dance, theater, or film from a particular culture or region, exploration of careers in a field related to the arts, or creation of a show in one of the college galleries. These diverse offerings enable Porter students to experience the significance of creativity in a university education.

The college provides fellowship funds each year to talented students pursuing original research and creative projects.

College Community and Facilities

The traditional residence halls and apartments play an important role in bringing the college community together. Students are encouraged to spend their beginning years in residence in the college, where housing is available for 1,273 students. The residence halls are divided into smaller units, with from 20 to 35 students sharing common lounges and other facilities. Theme halls include Performing Arts, Film and Digital Media, Visual Arts, and Outdoors Experiences. Students also have a choice of quiet/intensive study, same gender, or substance-free halls. The six-person apartments are reserved for upper-division students.

Porter College is also home to the new transfer student living/learning community in Porter A building. All on-campus incoming transfer students reside at Porter regardless of their college affiliation. Special programs are designed to help new transfer students adapt to life at UCSC.

In addition to traditional classrooms, Porter has many specialized facilities such as a fireside lounge, galleries, a study center, and a dining hall that converts to a theater space. The Arts Instructional Computing Laboratories, located at Porter College, consist of two high-end labs oriented toward the arts.

Adjacent to the college are the campus's Theater Arts Center, the Elena Baskin Visual Arts Center, and the Music Center.

Porter provides constructive opportunities for relaxation and recreation to balance the intellectual demands of a university education. The Porter Activities Office, in conjunction with the Porter Student Senate, organizes formal and informal events, including dances and recreational activities, which augment campuswide activities in these areas. For relaxation, Porter students and faculty gather at the college's coffeehouse—the Hungry Slug.

Many students and faculty perform or exhibit their work at Porter, and cultural events are a constant feature of life at the college. The dining commons has been the site of performances by artists such as El Teatro Campesino, lectures and readings by contemporary authors such as Amiri Baraka, and performances by artists such as Komar & Melamid and Nina Wise.

Porter College facilities were constructed through a partnership of public funds and a gift from the Porter-Sesnon family of Santa Cruz. Part of the gift was used to establish an endowment for the college. For more information, call (831) 459-2273 or visit the web site: www2.ucsc.edu/porter.

Kresge College

Kresge's motto is Independence, Creativity, Community.

Academic Emphases

Kresge's core course 80, *Power and Representation*, is a writing class that explores the relationships between individuals and their communities—communities as small as families and friendship, colleges and cities; communities as large as nations and the world. Our goal is

to empower individuals to think beyond easy answers, to express themselves clearly, to feel at home in writing, and to feel powerful in representing themselves on the page. In *Power and Representation*, we examine the many ways we constitute ourselves (and are constituted) as individuals in relation to communities. First, we will study ideas about representation as a theoretical grounding, and then focus on representations of nationality, ethnicity, sexual orientation, gender, and race in many genres—critical theory, film, fiction, theater, and nonfiction. Our purpose is to create a dialogue of ideas about ourselves and our relationship to our communities as it is, as it might be, and as we might help make it.

In addition to section meetings, on Tuesday nights all students come together to watch core-related films or performers or listen to lectures. All students will complete a final creative project that engages with the theme of the course.

Lower-division transfer students who, prior to enrolling, have not completed at least one UC-transferable college English composition course with a minimum grade of C (2.0) or better are permitted to take the core course to satisfy the C1 requirement.

In addition to the core course, Kresge offers a series of courses taught by guest faculty, alumni, and faculty affiliated with the college. These courses give students a chance to study in small groups on topics close to faculty or alumni research interests and offer students the opportunity to enrich the standard curriculum. A new array of classes is offered each year. For example, Kresge has offered journalism, comic writing, documentary film, gardening, and service learning.

Perhaps because Kresge is known for its creativity and independent spirit, it's also known for its association with writing. We house the Writing Program and The Science Writing Program, and are associated with Literature. Our co-provost, Micah Perks, is co-director of the Creative Writing Program at UCSC. Kresge is the home of *Rapt* and *The Kresge Town Krier*, two literary journals, as well as *City On A Hill*, UCSC's student-run newspaper. Writers House is a residential option for students with an interest in journalism and/or creative writing, regardless of their prospective majors.

Residential Life

Kresge was the sixth college to be built on the UCSC campus. The college was founded on the principle of participatory democracy as a means of encouraging a strong sense of community. Architecturally renowned, Kresge has apartments rather than residence halls.

The Kresge apartments attract students with a sense of independence and community participation. Distinctively designed, the apartments at Kresge proper are configured for four to nine people. Kitchen and living areas look out onto the street, with other rooms facing the surrounding redwood forest. At Kresge East, apartments face the forest for greater quiet. These apartments, with three single and one double bedroom, are typically reserved for continuing upper-division students. Kresge's three-person "in-fill" apartments, Buildings J and K, which are situated between Kresge and Porter colleges, are reserved for continuing upper-division students. These two-bedroom apartments have an efficiency-style kitchen and living area.

The Residential Life and College Programs staff at Kresge work to bring students of similar interests together, academically and socially, by designing fun and unique programming based on student interest. Programs that focus on celebrating the diversity of the residential community, on multicultural community-building, and on enhancing academic success, through film series, music events, mural painting, food-centered events, are highlighted.

Community Life

There are a wide variety of events and activities at the college that shape community life: Lectures, workshops, trips, plays, dances, concerts, and films are a regular part of student life at the college. The nature and tenor of these events are a reflection of the interests of students and staff, who are committed to providing voice and opportunity for all community members.

Students actively shape the college community through participation in Kresge Parliament, an openly structured student organization responsible for voting the allocation of all college membership fees in support of activities and events. Parliament and Town Meetings also serve as a forum for the discussion of college and campuswide issues with college staff and faculty.

Transfer Students

In recognition of the wealth of diversity that transfer students bring to the community—in terms of culture and experience—Kresge is the home of the Transfer Center for campuswide transfer students regardless of college affiliation. This is a staffed facility where students can gather to relax, socialize, hold meetings, and obtain campus information and resource support in a central location. The resource center offers workshops, social evenings, and special events that are tailored to meet the needs of transfer students.

Kresge also offers special advising workshops and 2- and 3-credit courses designed to help transfers in the process of entering the university and moving forward in their careers from here.

Facilities

At the entrance to the college is the restful Piazzetta with a beautiful, architecturally designed

fountain. Leading off from the Piazzetta are the Transfer Center, the Commuter Lounge, and a student lounge, equipped with television and DVD player. In addition to the Transfer Center, as a unique facility on the campus, the Commuter Lounge is a place for off-campus students who want to use a kitchen, shower, or lockers while on campus. Kresge's Photo Lab Co-op is above the Piazzetta and offers 24-hour accessibility to darkroom equipment. Adjacent to the nearby meadow are a racquetball court and an outdoor basketball court. The college includes a study center with soaring ceilings and walls of glass overlooking the forest, which also houses a writing center, a computer lab equipped with PCs for student use, and a student-run food co-op, where organic produce is sold and working memberships are available. At the top of the college are the Town Hall performance facility, the Music Co-op, and a cafe.

For more information, call (831) 459-2071 or visit the web site: www2.ucsc.edu/kresge.

Oakes College

Oakes was founded in 1972 to provide high-quality education to students from diverse cultural and social backgrounds. Students, staff, and faculty associated with the college believe that learning takes place not only in the classroom but also in residential settings. For that reason, they work hard to create a multicultural community whose members strive together for certain universal goals—including equal access to educational opportunity and freedom from oppression—while simultaneously affirming and celebrating some of the distinctive aspects of the different backgrounds from which they come.

Academic Emphases

The Oakes College faculty represent a wealth of expertise from the natural sciences to the humanities, and we are proud to have some of the top scholars in the world among our faculty fellows. Our students major in nearly every discipline at UCSC—from Economics and Computer Science to Theater Arts and American Studies—and they are well supported by the depth and breadth of the Oakes College faculty and the extensive knowledge of our advising team. Oakes graduates have gone on to successful careers in fields such as medicine, law, education, medical research, and community service.

The Oakes core course 80, *Communicating Diversity for a Just Society*, is required of all first-year students. The course is writing intensive and examines individual and collective responses to issues of culture, gender, sexuality, race, and class. Those who are admitted as transfer students are exempt from the core course requirement but may take the core course at their option pending available space; lower-division transfer students who, prior to enrolling, have not completed at least one UC-transferable college English composition course with a minimum grade of C (2.0) or better are permitted to take the core course to satisfy the C1 requirement.

At Oakes College, we are committed to fostering student engagement and leadership within and beyond the classroom. To this end, we encourage students to develop the knowledge, skills, and cross-cultural understanding necessary to become active citizens and future leaders in their own communities, workplaces, and academic disciplines as well as in the larger U.S. society and the world as a whole. We also provide a range of resources and programs that will enable all students to succeed in their academic endeavors. Such resources include:

- The Learning Center at Oakes College serves as a location for study groups as well as tutoring and advising programs. Special assistance in writing and tutoring in a variety of subjects is offered to Oakes students and EOP students.
- The Oakes Computer Lab provides access to 20 PCs for Oakes students.
- Cocurricular programs like Oakes 4.0, Oakes Core Café, and our new residential Science Community at Oakes College all offer living-learning opportunities to enhance student success and to provide students with unique opportunities for interacting with faculty in small group contexts.
- Oakes 77: *Exploring Opportunities for Social Justice Field Work* provides students with the opportunity to work with a variety of community service organizations. All Oakes students are encouraged to contribute service to public agencies, schools, and community organizations in the city of Santa Cruz and in economically deprived areas of Santa Cruz and Monterey Counties. Oakes students serve as tutors, teachers, mentors, and community builders. Academic credit is available through the Oakes 77 course.
- Student services at Oakes include academic advising and psychological counseling.

College Community and Facilities

Oakes College, located on the west side of the UCSC campus, commands a sweeping view of Monterey Bay. Students may choose between apartment and residence hall living. The residence halls have a lounge on each floor, attractive courtyards, and views of the ocean and the city of Santa Cruz. Students can also share an apartment-style living space, which includes a common living area and small kitchen. All students participate in a University Meal Plan. Residence halls are coed and provide space for students in double and single rooms.

Full-time coordinators for residential education and neighborhood assistants help residents develop cooperative ways of living together. As one student put it, "Oakes is a community where people of many different backgrounds, interests, and goals form a friendly neighborhood. We share our cultures and adapt to the different lifestyles of our neighbors." The residential program is designed

to assist all students in integrating their academic and social needs. The residential staff hosts activities sponsored through its wellness, academic success, leadership, and social justice and diversity committees.

The college staff seeks to nurture and sustain a community in which mutual respect, understanding, and concern for others are the norm. Within that atmosphere of community expectations, students are also supported and encouraged to find room for their own creative personal expression.

The other physical facilities at Oakes further support the special programs of the college and provide recreational opportunities for the students. College facilities include the Learning Center; a multipurpose room for lectures, movies, and small theater productions; a college library; a quiet space for individual study, a dining facility shared with College Eight; TV lounges in the residences and adjacent to the Oaks Café; and a small basketball court, the "Underdome." Additional recreational facilities located close to the college include tennis courts, a large soccer field, and an indoor basketball court.

A grant from the San Francisco Foundation—from Roscoe and Margaret Oakes Foundation funds—was used in partnership with public funds for the construction of Oakes. Part of the grant was used to establish an endowed fund for the college.

For further information, call (831) 459-2558 or visit the web site: oakes.ucsc.edu.

College Eight

The theme of College Eight is "Environment and society," and our mission is to help nurture green innovators and entrepreneurs. College Eight has a vigorous intellectual life. During the course of the academic year, our faculty and our many associates—mainly professionals from Silicon Valley—offer seminars, lectures, and guest classes on environmental issues and a wide range of other topics, ranging from philosophy to business. College Eight also affords students a sense of community and offers opportunities to augment academic training with a wide range of extracurricular activities. Our students major on nearly every discipline offered at UCSC, while being strongly committed to environmental stewardship.

Academic Emphases

College Eight is in the process of launching a number of exciting new initiatives aimed at furthering its mission. In fall 2009, a pioneering new three-quarter core course, entitled *Nurturing Environmental Citizenship*, was introduced. The course is taught by senior faculty from the departments of Environmental Studies, Ecology and Evolutionary Biology, Earth and Planetary Sciences, and Electrical Engineering. The course is designed to provide all students, regardless of their eventual major, a solid foundation for success in the emerging green economy. The fall-quarter course is mandatory for all incoming freshmen, and its goal is to introduce students to environmental issues, past, present, and future. The winter-quarter course takes on the principles of environmental science, and the spring quarter course, the ability of technological innovation to address environmental challenges.

College Community and Facilities

College Eight is located on a sunny, terraced hillside on the west side of the UCSC campus, a site

that offers a spectacular view of Monterey Bay and the coastline. The college is designed to encourage interaction among resident and commuter students, faculty, and staff. Outdoor spaces allow for relaxing and informal opportunities to socialize; they include small residence hall patios, grass quadrangles, and a large plaza—the heart of the college—where pedestrian traffic converges. Adjacent to the college are recreational facilities including the West Field House, tennis courts, basketball and sand volleyball courts, and playing fields. The Theater Arts and Music Centers, McHenry Library, and Porter and Oakes Colleges are a short distance from the college.

College Eight's facilities include an academic building that accommodates the college office, the Sociology Department and associated research centers, a computer lab with printers, classrooms, and faculty offices.

Approximately 450 students live in a community of two- and three-story residence halls with single, double, and triple rooms, and suites. The residence halls include designated study lounges, laundry facilities, and lobbies that serve as living rooms—favorite places where residents gather to relax, watch television, and catch up on the news of the day. Another 307 students are housed in College Eight's two-, three-, and four-bedroom apartments.

The college's enthusiastic residential staff is composed of coordinators for residential education, who are full-time live-in professionals, along with undergraduate resident assistants. The residential staff plans a variety of educational and recreational events including community barbecues, outdoor movies, and student-initiated events celebrating the diversity of our community. More intimate gatherings include study breaks, coffee talks, and potlucks. The residential staff is available to ease the transition to college life, making the college a comfortable new home for our residents.

The Student Commons building contains the office of College Eight's college programs coordinator and a large meeting room for student use. The study center is located across the plaza. The lively College Eight Café features a pool table and a quiet, comfortable corner with couches. The café is a favorite haven and gathering place for students, faculty, staff, and other members of the campus community.

The College Eight Student Programs Office, in conjunction with the student government and student organizations, plans social, multicultural, and educational events for the college community. Weekly Café Nights—featuring open mics, music, art shows, and guest speakers—accommodate the diverse spectra of cultural and artistic interests of the students. College Night, a quarterly cultural event, provides an opportunity for students to learn about a variety of cultures through entertainment and delicious cuisine. In addition, the College Eight Student Programs Office works closely with the Student Environmental Center to bring programs that educate and build long-lasting networks, which aim to address the environmental issues affecting our world today.

Above all, College Eight seeks to create a community of inclusion, in which each person is encouraged to share and explore beliefs, worldviews, values, and ideas in an atmosphere of mutual support and trust.

For more information, contact the college at (831) 459-2361, e-mail 8housing@ucsc.edu or crmeusel@ucsc.edu, or visit the web site: eight.ucsc.edu.

College Nine

At College Nine, we introduce students to our increasingly interconnected world. Students can learn

about the impact of economic globalization. We also expect them to come to appreciate the diversity of cultural traditions.

—Campbell Leaper, College Nine Founding Provost

Academic Emphases

College Nine's theme of International and Global Perspectives emphasizes the impact of our increasingly interconnected world. We consider how people around the world affect one another through global economies, politics, and culture. Some specific issues that our academic and cocurricular programs consider are economic and cultural globalization, immigration, ethnic conflicts, genocide, and human rights. Our programs seek to respect both diversity and unity in understanding individuals and societies. Students interested in these issues either as their major focus or as part of their general education are invited to join the College Nine community.

Writing Seminar

In the first-quarter frosh course, *Introduction to University Discourse: International and Global Issues*, students examine current issues pertinent to the college's intellectual theme. Topics address issues such as globalization, inequities in wealth and poverty across the world, human rights, and regional conflicts.

The seminar emphasizes the development of students' writing skills. Being able to write well is a valuable asset for success in college and in most careers. Students write several reflective and analytical papers during the quarter. Each paper undergoes at least one revision after the student receives constructive feedback from the instructor. Thus, the instructors work closely with each student throughout the quarter.

All students who enter as frosh are required to pass the college writing seminar with a grade of C or better. Those who are admitted as transfer students are exempt from the core course requirement but may take the core course at their option pending available space; lower-division transfer students who, prior to enrolling, have not completed at least one UC-transferable college English composition course with a minimum grade of C (2.0) or better are permitted to take the core course to satisfy the C1 requirement.

Global Action

In this workshop facilitated by peer instructors, students will learn about current international and global issues through interactive exercises, small group discussions and faculty presentations. Students will develop an "action plan" to raise awareness about one or more of these concerns and take practical steps to create positive change in the world.

Global Issues Colloquium Series

Through weekly presentations by leading experts, students learn about global challenges and also consider possible solutions. Students have the option of taking this as a 1-credit class or of attending the presentations on a drop-in basis.

CLNI 105, *Researching Food Sovereignty*, is a 5-credit seminar course in which students engage in individual and collective research projects on transformational food systems in the U.S. and abroad. Readings will look at the current global food system and grassroots responses to food and environmental crises.

Special Academic and Cocurricular Programs

Optional programs are available to involve College Nine students in academic and cocurricular activities beyond the first-quarter course. They are designed to promote students' academic achievement and success by connecting them with faculty mentors and helping them pursue leadership experiences in particular contexts.

Service Learning: Esprit de Corps (110 and 110B)

Students can extend their learning beyond the classroom by gaining practical experience volunteering for a school or a nonprofit organization in the Santa Cruz community. Examples include assisting in a classroom or at a homeless shelter. College Nine has its own service-learning class, *Esprit de Corps* (110 and 110B), taught by our service-learning coordinator. Students meet weekly to reflect on their experiences, discuss readings, and listen to speakers from the community. To complete the service experience, students develop a final paper or project related to civic engagement. The class is available all three quarters and is facilitated by students during the winter and spring. Praxis, College Nine's community-service organization, provides another way to serve the Santa Cruz community.

Students as Teachers and Mentors

College Nine students have special opportunities to become course assistants, tutors, and student mentors for course credit. Students gain independent experience as teachers leading their own discussion sections of a College Nine course. They receive close supervision that emphasizes a collaborative approach to developing and enhancing teaching, communication, and leadership skills. The College Nine academic advisers can also direct students to other opportunities for student teaching and peer-mentoring programs on campus. These are excellent opportunities to work

closely with a faculty member and to develop one's own skills as a teacher and a leader.

Global Information Internship Program

The Global Information Internship Program (GIIP) places highly motivated students in internships with nongovernmental organizations and community groups. Students in GIIP help these organizations and groups in the use of Internet-based information and communications technologies. Interns acquire leadership and organizational skills through the "learning-by-doing" method. For more information, visit the web site at www2.ucsc.edu/giip.

Practical Activism: Tools for Local and Global Change

The annual Practical Activism Conference is a daylong, student-led event featuring keynote speakers, 10 workshops, various on- and off-campus organizations, performances, and a variety of hands-on activism activities. Students gain valuable leadership and organizing skills through developing and planning this exceptional program, which involves collaboration among faculty, staff, and the local community. Visit activism.ucsc.edu for more information.

Education Abroad

The UC Education Abroad Program places students at a university in another country for one or more quarters. Studying abroad can be a valuable way to expand one's understanding of the world. Given the international focus at College Nine, students are encouraged (but not required) to develop a second language or to study abroad.

Research Opportunities

The faculty at UC Santa Cruz are ranked high in their quality of research. College Nine students are encouraged to take advantage of the many excellent opportunities available to work closely with faculty as research apprentices. Students will find many internship, independent study, or senior thesis programs in the departments of most majors. The College Nine academic advisers will help link students with these programs.

College Nine Pathways to Distinction

Another feature of College Nine is that qualified students may graduate with College Nine Distinction. This recognition is intended to serve as an incentive for students to pursue activities that are especially apt to help them succeed in college and beyond. Two pathways are possible:

Research and scholarship. In this pathway, students pursue research with faculty by completing three quarters (15 credits) of work on a senior thesis or a research internship. Students may be recognized with College Nine Distinction if they do a thesis or a research internship in their major on a topic related to international or global issues.

Language and culture. Students who enroll in at least three quarters (15 credits) in either Education Abroad or a foreign language (or a combination) may qualify for College Nine Distinction.

College Community and Facilities

Founded in fall 2000, College Nine is one of the newest colleges at UCSC. Consistent with UCSC's founding vision, College Nine creates an integrated living and learning environment through engaging academic and extracurricular programs focusing on the theme of International and Global Perspectives. Students and staff collaborate to develop an array of programs exploring the many aspects of the college's theme. Some of the programs include faculty presentations, guest speakers, debates, films, arts events, and interactive workshops. These programs bring together members of our community to learn, debate, and challenge ourselves about important issues facing us today in an atmosphere of mutual respect and engagement.

College Nights

Several times a quarter, the college community comes together to plan College Night, which is a large-scale community celebration held in the dining commons and open to all College Nine students whether or not they live on campus. These events are planned by students and focus on some element of international and global issues. College Nights include food, entertainment, and educational materials related to the theme. Some past College Nights have included Carnival and Lunar New Year.

International Living Center

The International Living Center (ILC) at College Nine offers a unique living environment fostering understanding, cooperation, and friendship among upper-division students from different nations, cultures, and backgrounds. Half of the residents are students from the United States, and the other half are students from various countries around the world. Students reside in the College Nine and Ten Apartments. Based out of the International Living Center, the International Affairs Group (IAG) offers all College Nine and Ten community members the opportunity to engage in lively discussions about important current international issues with one another through guest speakers, film, literature, media and personal experience.

Cocurricular Programs and Opportunities

Getting involved in cocurricular activities is a predictor of college success. Not only do college

activities help students make friends, they foster leadership and group cooperation skills. There are many opportunities at College Nine for student involvement. These include the following groups as well as many other programs, activities, and clubs.

Global Leadership Development (GLAD)

GLAD meets weekly throughout the fall quarter and provides a wide range of exercises, guest speakers, and programs designed to foster and develop participants' efficacy as world citizens and leaders of College Nine.

Student Government

Student Government represents the students in the college. It appoints students to campus and college committees, consults with college administration on policy development, and provides monetary support to student organizations.

CREATE

CREATE (Cultural Resources to Educate and to Empower) offers a community at College Nine for students of color to find support and empowerment through mentorship and friendship.

PHAT

PHAT (Programming House Activities Team) is a planning committee for the apartment residents who are interested in getting people out of their rooms and into their communities. Programs include the annual Haunted House and the Battle of the Buildings.

Praxis (Student Volunteer Community)

Praxis is an organization geared toward community building and social justice. By participating in Praxis, students gain exposure to a variety of Santa Cruz community agencies and explore what it means to be agents of social change.

Intercultural Community Weekend

This two-day retreat provides international and American students from diverse backgrounds the opportunity to explore various components of intercultural communication. Through a series of structured exercises and small-group discussions, students share perspectives on issues such as multiculturalism, values orientation, and diversity. The goal of the workshop is to build community and friendship among international and American students as well as to increase students' understanding of the complexity of communicating across cultures.

Physical Surroundings

College Nine is situated in a redwood grove next to the Social Sciences 1 and 2 Buildings near the heart of campus. One of the campus's Instructional Computing Labs is conveniently located in the Social Sciences 1 Building. A nature preserve serves as College Nine's "backyard." College Nine students have immediate access to hiking, running, and mountain bike trails in the adjacent forest.

Residence halls offer approximately 500 single, double, and triple bedrooms. These fully furnished residence halls include student lounges, recreational spaces, and Internet connections. In addition, there is a state-of-the-art dining hall with an adjoining multipurpose room and recreation lounge for both Colleges Nine and Ten.

Colleges Nine and Ten also house approximately 300 upper-division students in apartments, with 190 students in single bedrooms and the balance in double and triple rooms. All apartments have full kitchens, living rooms, bathrooms, and Internet connections. Ground-floor apartments have decks, and most upper apartments have private balconies.

For more information about academic or general college programs, call (831) 459-5034, e-mail sarahcw@ucsc.edu, or visit the web site: collegenine.ucsc.edu.

College Ten

Our goal at College Ten is to foster students' concerns for social justice and their respect for diversity. This appreciation develops through both understanding and practice. Students can study the roots of social problems such as prejudice, ethnic hatreds, poverty, and political oppression. Another form of learning can occur through involvement in community organizations and other agencies. In these ways, we hope our students can contribute to the makings of a better world.

—Campbell Leaper, *College Ten Founding Provost*

Academic Emphases

College Ten's theme of Social Justice and Community addresses a range of social problems and their impact on all members of society. In particular, the academic and cocurricular programs consider the injustices that many people confront in their lives. Possible community and governmental policies for addressing social, political, and economic inequalities are also examined. In addition, the college provides students with opportunities to make their own positive contributions to social change through community involvement or scholarly research.

The college curriculum will explore the causes and consequences of social injustice in several ways. Students will examine the roots of prejudice, discrimination, and violence directed toward groups based on their ethnicity, skin color, gender, sexual orientation, religious beliefs, or political views. They will also consider the causes and consequences of poverty both within the United States and around the world.

Writing Seminar

In the first-quarter frosh course, *Introduction to University Discourse, Social Justice and Community*, students examine current issues pertinent to the college's intellectual theme. Topics address issues such as poverty, discrimination, and economic injustice. Ways that communities, governments, and businesses can address inequities in society are also examined.

The seminar emphasizes the development of students' writing, reading, and speaking skills. Being able to write well is a valuable asset for success in college and later in most careers. Students write several reflective and analytical papers during the quarter. Each paper undergoes at least one revision after the student receives constructive feedback from the instructor. Thus, the instructors work closely with each student throughout the quarter.

All students who enter as frosh are required to pass the college writing seminar with a grade of C or better. Those who are admitted as transfer students are exempt from the core course requirement but may take the core course at their option pending available space; lower-division transfer students who, prior to enrolling, have not completed at least one UC-transferable college English composition course with a minimum grade of C (2.0) or better are permitted to take the core course to satisfy the C1 requirement.

CLTE 105, *The Making and Influencing of Nuclear Policy*, is a 5-credit seminar course that explores how policy is made and influenced, using nuclear policy as a case study. Topics include FOIA, legislation and rulemaking, licensing and judicial proceedings, research and news media. Focus is on skills that enable citizens to influence policy.

Special Academic and Cocurricular Programs

Optional programs are available to involve College Ten students in academic and cocurricular activities beyond the first-quarter core course. They are designed to promote students' academic achievement and success by connecting them with faculty mentors and helping them pursue leadership experiences in particular contexts.

Social Justice Issues Workshop

College Ten students have the option of enrolling in the *Social Justice Issues Workshop* in winter quarter. This 2-credit course meets once per week and can be taken in addition to a regular 15-credit academic load. The workshop offers a small, dynamic learning community in which members explore important issues of personal and cultural identity; social, political, and environmental concerns; and community-mindedness. The class emphasizes small-group experiential learning through structured exercises and group activities, and also includes discussions, film presentations, and guest speakers.

Service Learning: Esprit de Corps (110 and 110B)

Students can extend their learning beyond the classroom by gaining practical experience volunteering for a school or nonprofit in the Santa Cruz community for credit. Examples include assisting in a classroom or at a homeless shelter. College Ten has its own service-learning class, *Esprit de Corps* (110 and 110B), taught by our service-learning coordinator. Students meet weekly to reflect on their experiences, discuss readings, and listen to speakers from the community. To complete the service experience, students develop a final project related to civic engagement. The class is available all three quarters and is facilitated by students during the winter and spring. Praxis, College Nine's community-service organization, provides another way to serve the Santa Cruz community.

Practical Activism: Tools for Local and Global Change

The annual Practical Activism Conference is a daylong, student-led event featuring keynote speakers, 10 workshops, various on-and off-campus organizations, performances, and a variety of hands-on activism activities. Students gain valuable leadership and organizing skills through developing and planning this exceptional program, which involves collaboration among faculty, staff, and the local community. Visit activism.ucsc.edu for more information.

Students as Teachers and Mentors

College Ten students have special opportunities to become course assistants, tutors, and student mentors for course credit. Students gain independent experience as teachers leading their own

discussion sections of a College Ten course. They receive close supervision that emphasizes a collaborative approach to developing and enhancing teaching, communication, and leadership skills. The College Ten academic advisers can also direct students to other opportunities for student teaching and peer-mentoring programs on campus. These are excellent opportunities to work closely with a faculty member and to develop one's own skills as a teacher and a leader.

Research Opportunities

The UC Santa Cruz faculty are ranked high in their quality of research. College Ten students are encouraged to take advantage of the many excellent opportunities available to work closely with faculty as research apprentices. Students will find many internship, independent study, or senior thesis programs in the departments of most majors. The College Ten academic advisers will help link students with these programs.

College Ten Pathways to Distinction

We understand that learning styles and educational commitments are unique and personal. Therefore, students are recognized with College Ten Distinction upon successful completion of three quarters (15 Credits) of experiential course work in Service and Leadership and/or Research and Scholarship focused on social justice and diversity issues. Applicable courses in service-learning and research opportunities with faculty can fulfill the criteria for distinction. This recognition is intended to serve as an incentive for students to pursue activities that are apt to help them succeed in college and beyond.

College Community and Facilities

Founded in fall 2002, College Ten is the newest college at UCSC. Consistent with UCSC's founding vision, College Ten creates an integrated living-and-learning environment through engaging academic and extracurricular programs focusing on the theme of Social Justice and Community. Students and staff collaborate to develop an array of programs exploring the many aspects of social justice. Some of the programs include faculty presentations, guest speakers, debates, films, arts events, and interactive workshops. These programs bring together members of our community to learn, debate, and challenge ourselves about important issues facing us today in an atmosphere of mutual respect and engagement.

College Nights

Several times a quarter, students and staff work together to plan College Nights, which are large-scale community celebrations held in the dining commons and open to all College Ten students whether or not they live on campus. College Nights include food, entertainment, and educational materials related to a theme.

Student Government

Student Government represents the students in the college. It appoints students to campus and college committees, consults with college administration on policy development, and provides monetary support to student organizations.

Cocurricular Programs and Opportunities

Getting involved in cocurricular activities is a predictor of college success. Not only do college activities help students make friends, they foster leadership and group cooperation skills. There are many opportunities at College Ten for student involvement. These include the following groups as well as many other programs, activities, and clubs.

CREATE

The purpose of CREATE (Cultural Resources to Educate and to Empower) is to facilitate the ongoing discussion of diversity issues at College Ten and in our living communities, learn about and promote multiculturalism, plan activities, and help students and staff have a resource for inclusiveness and training.

ENGAGE

ENGAGE (Explore New Growth and Gain Experience) offers students the opportunity to explore and develop their own beliefs, values, and feelings about current issues and social concerns. Students gain leadership skills through collaborating on a community action project, and develop relationships and experience to become leaders in the College Ten community. ENGAGE meets weekly throughout fall quarter.

PHAT

PHAT (Programming House Activities Team) is a planning committee for the apartment residents who are interested in getting people out of their rooms and into their communities. Programs include the annual Haunted House, the Battle of the Buildings, and Freestyle Fridays.

WATER

WATER (White Allies To End Racism) tackles issues of diversity and racism through the exploration of white racial identity. The group provides a safe and open space for dialogue and the opportunity to work with students of color groups on collaborative action projects.

Multicultural Community Weekend

This two-day retreat provides students from diverse backgrounds the opportunity to explore aspects of social justice, diversity, and community through a series of exercises and discussions (both structured and informal). Participants explore issues impacting our individual identities (e.g., race, class, gender, sexual orientation, ability, religion), increase their understanding of the complexities of communicating across diverse experiences and backgrounds, build communication skills, and share in celebrating and deconstructing the diversity of our community. The Multicultural Community Weekend is optional; students apply for this opportunity in the fall.

Café Revolución

Located at College Ten, Café Revolución is a favorite gathering place. It is open nightly for social justice performances, music, and social interaction.

Physical Surroundings

College Ten is situated in a redwood grove next to the Social Sciences 1 and 2 Buildings near the heart of campus. One of the campus's Instructional Computing Labs is conveniently located in Social Sciences 1. A nature preserve serves as College Ten's "backyard." College Ten students have immediate access to hiking, running, and mountain bike trails in the adjacent forest. Residence halls offer 450 single, double, and triple bedrooms. These fully furnished residence halls include student lounges, recreational spaces, and Internet connections. In addition, there is a state-of-the-art dining hall with an adjoining game room and student lounge for both Colleges Nine and Ten. Colleges Ten and Nine also house approximately 300 upper-division students in apartments, with 190 students in single bedrooms and the balance in double and triple rooms. All apartments have full kitchens, living rooms, bathrooms, and Internet connections. Ground-floor apartments have decks, and most upper apartments have private balconies.

For more information about academic or general college programs, call (831) 459-5034, e-mail dslater@ucsc.edu, or visit the College Ten web site: collegeten.ucsc.edu.

Student Life

Campus life is all about learning, discussion, and debate; meeting people from diverse backgrounds; making new and lasting friendships; attending cultural celebrations and artistic and musical performances; and getting involved with student organizations and clubs. UCSC provides a wealth of opportunity for personal growth within the context of a rich and meaningful academic experience. You will live, study, and socialize with other students in your college. You will also meet students from the other colleges—in your classes and at the many campuswide events that take place throughout the year. The colleges (described in the previous section) and various campuswide units provide a wide range of student services to respond to individual needs, interests, and levels of personal development. In addition, students can take advantage of the campus's stunning natural setting, the friendly and engaging local community, and easy access to the Monterey and San Francisco Bay Areas.

Santa Cruz Community

Located on the northern tip of Monterey Bay, Santa Cruz is famous for its Mediterranean climate, forested state parks, and miles of scenic beaches. Recreational opportunities abound—hiking through redwood forests, bicycling along mountain roads, and surfing, sailing, and scuba diving. The Santa Cruz Mountains are minutes away; the majestic Sierra Nevada is a four-hour drive to the east.

The metropolitan centers of the San Francisco Bay Area are easily accessible. By car, Berkeley and San Francisco are less than two hours from campus. San Jose, Monterey, and Carmel are one hour away.

The city of Santa Cruz, with a population of about 56,000, was originally founded as a Spanish mission. Santa Cruz is a small community with cosmopolitan appeal and a strong awareness of environmental and political issues. Art exhibits, local theater companies, a symphony orchestra, fine restaurants, and a lively contemporary music scene combine to make Santa Cruz an interesting place to live.

Housing

College Residences

All undergraduate students are affiliated with one of 10 residential colleges at UC Santa Cruz, whether they live on campus or not. Each college provides academic support, organizes student activities, and sponsors events that enhance the intellectual and social life of the campus in addition to housing students in small-scale residential communities. About 45 percent of single undergraduate students live in university housing.

Freshmen and new transfer students entering in fall quarter are guaranteed university housing for their first two years at UCSC. All deadlines must be met to qualify for guarantees.

You must be admitted as a full-time student and affiliated with one of the 10 colleges before applying for housing. All new single students who state a preference for university housing as part of the admissions acceptance process and submit the required advance housing fee by the stated deadline will be sent housing information after college assignments are made. The housing packet will include additional information about your affiliated college and instructions for completing the online housing application/contract process.

The room and board rates for the 2011–12 academic year range from \$9,945 to \$15,921, depending upon the type of accommodation and meal plan.

The colleges at UC Santa Cruz offer two kinds of living accommodations—residence halls and apartments, both with access to common dining facilities. The residence hall floors, typically shared by 12 to 30 students, have common bathrooms and lounge areas. Students can request to live in a coed or single-gender area. Gender-neutral rooms are also available. Apartments, typically shared by four to seven students, have common living/dining rooms, kitchens and bathrooms, and a combination of shared and private bedrooms. Each community provides accessible housing for students with disabilities.

The specific room options available to you will differ, depending on which college you are affiliated with and whether you are a new freshman or a new transfer student. Freshmen are generally assigned to live at their colleges. All incoming transfer students requesting university housing are housed at the Transfer Community, regardless of college affiliation. These residential settings provide academically and socially supportive environments to help new students transition to campus life and get the most out of their UCSC experience.

The Transfer Community, located in the newly renovated Porter College residence hall, is perfectly situated on campus to provide easy access to Services for Transfer and Re-Entry Students (STARS) and the Academic Resource Center (ARC). Students live at the Transfer Community for their first quarter to full academic year, at which time they may choose to move to another university housing community.

There are a variety of theme-housing options for those who are interested. Based on academic pursuits, hobbies, individual backgrounds, and lifestyle preferences, these living/learning options serve to complement a student's experience in residence.

Each college's residential program is a team effort. Professional staff (coordinators of residential education) work with students trained as resident assistants. They help organize activities and events, provide referral information about academic or personal concerns, and assist with roommate problems.

All housing contracts for residence halls and apartments at the colleges, and at the University Inn, include meal plans. Students with meal plans may use their student ID cards to access any of the five dining halls on campus, as well as the University Inn dining hall in downtown Santa Cruz. Meal plans include Flexi Dollars (a dollar-for-dollar exchange for "food dollars" that can be used at college coffee shops, campus restaurants, and all dining halls). Additional Flexi Dollars may be added to any meal plan.

For more information on the colleges, refer to the brochure titled *UC Santa Cruz, The Colleges: Communities of Learning*, or contact the Campus Housing Office.

Redwood Grove Apartments

Located on the west side of campus, between Kresge College and Graduate Student Housing, Redwood Grove Apartments is a community where undergraduate students from all colleges can live together. Each apartment has four single bedrooms, living room, kitchen, dining room, and bathroom. The room and board rates for 2011–12 range from \$13,833 to \$15,924 depending upon the type of meal plan. Call (831) 466-1359 or e-mail redwoodgrove@ucsc.edu for more information.

The Village

Located in the Lower Quarry, the Village houses a mix of continuing undergraduates and graduate students. Each of the 17 houses has nine single bedrooms with Internet connections, three bathrooms, and a kitchenette. A meal plan is optional. A manager's apartment, office, laundry facility, community kitchen, and community lounge are located on site. The live-in manager and residential assistants are available to assist students. The Village housing fee for academic year 2011–12 is \$9,297. Call (831) 459-4388 or e-mail village@ucsc.edu for more information.

University Town Center

The University Town Center (UTC), located at the corner of Pacific and Cathcart in downtown Santa Cruz, provides housing for continuing students in two- and three-person studio apartments. A meal plan is optional. The UTC housing rates for 2011–12 range from \$8,010 to \$10,341 depending on the type of accommodation. Contact the UTC Housing Office for more information, (831) 502-0031 or utc@ucsc.edu.

Family Student Housing

Family Student Housing, located on the west side of campus, has apartments for students and their families (see [information on child care and youth programs](#)). The apartments are unfurnished, and each has two bedrooms, a bathroom, a small study, a combined living-dining area, and an electric kitchen. Several apartments are accessible to people with mobility impairments. For 2011–12 the monthly rent is \$1,407, not including utilities and phone. There is a \$500 refundable security deposit and a \$25 nonrefundable application fee. If you are interested in an apartment, download an application form at housing.ucsc.edu/fsh and submit it with the application fee. Early application is advisable as these apartments are in great demand. Students with children are given priority. For more information, contact the Family Student Housing Office, (831) 459-2549, or fsh@ucsc.edu.

Camper Park

A 42-space camper park on the north side of campus is available to students who own recreational vehicles. All have water and electrical hookups; eight also have sewer hookups. Rates for 2011–12 are \$500; or \$556 with sewer hookup. The community includes a small central facility with rest rooms, showers, a meeting room, and a laundry room. For more information about the park and the vehicle requirements, or to request an application, contact the Village Office, (831) 459-4388, rvpark@ucsc.edu.

Graduate Student Housing

Four-bedroom apartments for single graduate students are located on the west side of campus, between Kresge College and the Baskin Engineering Building. For more information, contact the Graduate Student Housing Office, (831) 459-5712, gradhsg@ucsc.edu.

Campus Housing Office

This office is responsible for the application and contract records for all single students living in campus residence halls and apartments, the Village, University Town Center, University Inn, and Graduate Student Housing. Staff are available to advise students about room and board billing, payment plans, and contractual responsibilities. Students can purchase meal plans or Flexi Dollars online at studenthousing@ucsc.edu.

Centrally located at 104 Hahn Student Services Building, Campus Housing is open 8 a.m. to 5 p.m. Monday through Friday, (831) 459-2394, e-mail: housing@ucsc.edu, web: housing.ucsc.edu.

Community Rentals Office

The Community Rentals Office (CRO) maintains current rental listings accessible on the CRO web site. Other services include online Renters' Workshop, rental forms and resource information, and basic advising about tenants' rights and responsibilities.

Locating suitable housing in the Santa Cruz area can take from one to four weeks, depending on specific requirements and restrictions. Average rental rates are available at housing.ucsc.edu/cro/costs.html.

The Community Rentals Office, located at 104 Hahn Student Services (North Entrance), is open 8 a.m. to 5 p.m., Monday through Friday. For further information, call (831) 459- 4435, e-mail communityrentals@ucsc.edu, or visit the web site: communityrentals.ucsc.edu.

The Sustainable Living Center at UCSC (SLC)

SLC's mission is to create a site on campus where students from multiple disciplines can apply classroom knowledge in real settings, gain hands-on experience in sustainable technologies and community food systems, and prepare to become environmental educators and leaders. We believe that with such experience students can become engaged agents of change within their communities and embody the values of environmental consciousness and social justice to create a more sustainable world.

SLC is being developed as a program of the Environmental Studies Department and is located in the Village of the Lower Quarry on campus. It is home to the Program in Community and Agroecology (PICA) and Friends of the Community Agroecology Network (FoCAN). At SLC, students from diverse majors are engaged in projects including food production, ecological landscaping, green building, alternative trade systems and much more.

At SLC, young people learn the necessary skills and tools to become leaders in educating and engaging communities in sustainable and equitable food systems. We follow an educational model in which students engage in project-based learning, gain experience through community internships, and use the knowledge they gain from their internships to educate others in the student community.

SLC Programs

Program in Community and Agroecology (PICA), an academic program of the Environmental Studies Department, is an experiential living/learning program at UCSC where students use agroecological principles in the maintenance of a half-acre organic garden, work together to develop community projects such as a composting program for the Village, and share in the many aspects of sustainable living—by harvesting, cooking, and eating healthful food grown organically right next to their rooms. Through a unique collaboration that integrates classroom instruction and community-based experience, PICA has become a model for an experiential learning program that allows students to practice sustainability at a hands-on level.

Academics. PICA offers classes and training in agroecology, horticulture, and organic agriculture through UCSC's Environmental Studies Department. PICA students and faculty work closely in both the classroom and in the field, addressing topics such as:

- Ecological design of farming, landscaping, and gardening practices
- The impact of consumer choice within a global food system
- Food equity for diverse urban communities
- Social justice and empowerment in agricultural communities
- Environmental education focused on sustainability

Many PICA classes incorporate on-farm experience as a vital component of the academic curriculum. The various campus gardens and the world-renowned farm at UCSC serve as outdoor classrooms for hands-on learning. Through PICA, students are finding unique ways to learn and participate in sustainable food systems and communities.

On-campus living at PICA. The PICA residential program offers students an alternative to standard dorm living. At the Village in the Lower Quarry, students from across academic disciplines come together to create a sustainable living environment on campus. PICA residents grow organic food at the nearby Foundational Roots Garden, come together to share in weekly community meals, implement ecological landscaping projects around their housing units, and direct a Village-wide composting program. This living/learning experience allows students a way to link healthy

communities with healthy food systems.

Internships and Field Studies. Through internship and field studies programs, students participate in community partnerships and placements in agricultural communities that span geographic and cultural situations ranging from local to international. PICA continues to broaden its network of partnerships with nonprofit, government, community-based, and private agencies and farms working toward sustainability. These internship and field-studies opportunities are an important way of engaging students with issues facing food systems and farming communities around the world.

Friends of CAN is a UCSC student organization affiliated with the Community Agroecology Network, a nonprofit organization that assists rural communities in Mexico and Central America to develop sustainable livelihoods while conserving the natural resources and landscapes of their regions. Through three programs (Action Education, Trade Network Innovations, and Participatory Action Research), an educational and research model for achieving sustainable development has been put in place.

Together these organizations facilitate hands-on learning activities that engage students with all aspects of a sustainable food system—from growing organic food that supports local communities to conscious consumerism on a global level.

For further information, please contact Bee Vadakan at vvadakan@ucsc.edu.

Student-Run Cooperatives

Co-ops are an alternative form of organizing a group of people or a business. Here at UCSC, the co-ops are entirely student run and operated. Although memberships in the Bike and Kresge Food Co-ops are available, anyone, student or otherwise, is welcome to use them.

Kresge Food Co-op

Mission statement: "We are a group of students whose goal is to run a natural food store through consensus decision-making and group responsibility. We embrace cooperation as our tool for social change. We are not for profit; we are for collective power. As a cooperative business we seek to educate all members of the community, including ourselves. We use our buying power to reflect our ideals regarding ecological, social, and political issues. For this reason we carry healthful, locally based, cruelty-free, organic products. We focus on products that are good for the earth, the people who produce them, and the people who consume them. Open to all, we provide a space where good food and revolutionary action meet at the checkout line." Call (831) 426-1506 for more information.

Bike Co-op

The co-op is student owned and operated, run cooperatively, and nonprofit. Whether you need to purchase a bike, repair a bike, or want to learn, the co-op can accommodate your needs. People are encouraged to attend meetings, learn more about cooperatives, and get involved. The Bike Co-op is located at the Student Union. For information, come by or call (831) 457-8281.

Transportation and Parking Services

The UCSC campus strives for an academic environment disturbed as little as possible by automobile traffic. The university has chosen to reserve flatlands for future buildings, natural areas, and social and recreational spaces; as a result, parking is a limited resource on campus. UCSC requests that students not bring cars.

Comprehensive transportation systems have been developed to reduce traffic and eliminate the need for a car. Movement on the spacious campus is made easier by the care with which buildings have been located, a network of foot and bicycle paths, and an extensive intracampus shuttle system that links the colleges, central core facilities, and the two remote parking lots. Shuttle buses operate on 10- to 30-minute frequencies from 7:30 a.m. to 8 p.m. weekdays (except on academic holidays). During summer and quarter breaks, day shuttle service is provided at 12- to 15-minute intervals. In addition, a night shuttle service, operating at 10- to 30-minute intervals, runs seven nights a week between 8 p.m. and 12:30 a.m. during the academic year. The night shuttle provides curb-to-curb transportation to the colleges. Both day and night shuttles provide wheelchair-accessible services and are free of charge. Transportation and Parking Services (TAPS) also operates the Disability Van Service, which provides transportation to those with mobility impairments.

Shuttle routes and schedules are available at the colleges and at campus Transportation Information Centers.

The Santa Cruz Metropolitan Transit District (Metro) provides regular and convenient bus transportation to campus and to outlying areas from Boulder Creek to Watsonville, as well as to the Santa Cruz community. Metro provides service to UCSC every five to eight minutes on weekdays during academic sessions. Metro "Night Owl" buses provide late-night service to campus until 3 a.m. on Friday and Saturday nights. Sunday-through-Thursday-night service to campus operates until 2 a.m. This service is funded by a mandatory student fee. Students may ride any Metro bus without additional charge by showing their current UCSC identification card to the driver.

Bicycles are a popular means of transportation on campus and in Santa Cruz. UCSC offers bicycle

programs including licensing, a bike trailer for commuters, and bike racks on the shuttles. Multigear bicycles are advisable because of the hilly terrain, and helmets are required.

Permits for on-campus parking are limited. Parking in the residential areas adjacent to the campus is restricted and strictly enforced. Due to lack of space, storage of vehicles for on-campus residents is limited, and the majority of remote-lot spaces are available to commuting students. Parking on campus for first- and second-year students living on campus is available by exception only. Parking regulations are strictly enforced; all students who bring a car to campus must purchase a permit in advance. UCSC requests that students not bring vehicles to campus if they are not eligible to purchase an on-campus parking permit.

UCSC offers a weekend shuttle between the campus and the Fremont BART Station. Use the shuttle to connect with BART, which offers rail service throughout the north bay, including stops in San Francisco, Berkeley, Pittsburg, Pleasanton, Concord, and Richmond. The UCSC Fremont BART Connector provides service on Fridays and Sundays during the academic year. Reservations are required and can be made weekdays 10 a.m. to 3 p.m. at (831) 459-3779.

Santa Cruz is served by commercial bus lines on a regularly scheduled basis. The nearest commercial airport is in San Jose, approximately 35 miles from Santa Cruz. The San Francisco Airport is about 70 miles from campus. Both airports are accessible by commercial van and limousine services.

For the occasional need of a car to travel off campus, go to the beach, go shopping, or even go home for the weekend, UC Santa Cruz has contracted with Zipcar to provide car sharing services to all eligible UCSC students 18 years of age and older. Zipcar is a membership-based car rental program providing self-service access to a variety of vehicles located on and off campus, 24/7. Reserve a car online by the hour or day, just "pay as you go"; low fees include rental costs, gas, mileage and insurance. Join Zipcar even before arriving campus at www.zipcar.com/ucsc.

Services can change, so it is recommended that you get up-to-date information from TAPS. Call (831) 459-2190, e-mail taps@ucsc.edu, or visit the web: taps.ucsc.edu.

Student Health Services

Located on McLaughlin Drive across from Colleges Nine and Ten, the Student Health Center provides quality health care focused on the particular needs of students. All registered students have access to the Student Health Center regardless of their insurance plan, as services are partially supported by their Student Services fee. Care is provided by board-certified physicians, nurse practitioners, and physician assistants. Students can be seen by appointment or, in cases of acute illness or injury, on the same day in Urgent Care. In case of emergencies, either during the day or after normal operating hours, please call 911.

In addition, the Student Health Center offers psychiatry services, nutritional counseling, health promotion, x-ray, and laboratory and pharmacy services on site. The center is open daily during the regular academic year. (For summer services and hours, visit the Student Health Center's web site.) For more information about the Health Center, call (831) 459-2211; e-mail healthcenter@ucsc.edu; web: healthcenter.ucsc.edu.

Student Health Insurance

To ensure emergencies and other health care costs do not interfere with a student's education, all University of California students are required to carry medical insurance. A comprehensive and inexpensive program specifically designed for students is available through the university via the Student Health Insurance Plan (SHIP). All students are automatically enrolled in SHIP and billed quarterly through their student account, unless they choose to waive this coverage by providing proof of comparable insurance by the specified deadline. For detailed information regarding insurance coverage and the waiver process, visit healthcenter.ucsc.edu. You may also contact the insurance office at insure@ucsc.edu or (831) 459-2389.

Mandatory Hepatitis B Immunization

California state law mandates that all entering students under 19 years old must be immunized against Hepatitis B. These students are required to provide the Student Health Center with documentation proving their compliance with this law. Those not in compliance at the beginning of the quarter may be dropped from their classes. For more information, visit healthcenter.ucsc.edu or call (831) 459-2211.

Student Health Outreach and Promotion

Student Health Outreach and Promotion (SHOP) provides opportunities for students to explore and enhance their health and wellness as they pursue their academic and personal goals. Our various programs and services offer UCSC students culturally sensitive, nonjudgmental information, education, resources, and support around issues related to alcohol and other drug use, sexuality and sexual health, holistic health, and other health concerns. Students can get involved with SHOP by becoming peer educators, HIV test counselors, Volunteers for the Condom Co-op, and/or CUIP Interns. For more information about these positions, visit SHOP at Kresge College in the Piazzetta (across from STARS), view the SHOP web site at www2.ucsc.edu/healthcenter/shop, e-mail us at shop@ucsc.edu, or call (831) 459-3772.

Alcohol and Other Drug Education. SHOP coordinates alcohol and other drug (AOD) education, prevention, and early intervention efforts on campus. Staff members work collaboratively with

students to help identify relevant information and facilitate informed decision making. Educators provide formal and informal sessions and workshops for students, college residential staff, and other campus groups. Staff also serve on the campuswide AOD Advisory Committee, which develops, implements, and assesses policies.

HIV and Other STI Prevention. Helping students explore their options around the sexual choices that they make, SHOP seeks to reduce students' risk of HIV, other sexually transmitted infections (STIs), and unplanned pregnancy. SHOP offers the following: free and anonymous HIV testing, run by highly trained student test counselors; the Condom Co-op, selling safer-sex supplies at a reduced cost; SLUG LOVE workshops and other presentations addressing STIs, safer sex, and values clarification and communication; and academic classes. SHOP also cosponsors special events such as the annual Santa Cruz AIDS Walk.

Student Health Advisory Committee. The Student Health Advisory Committee (SHAC) is composed of students interested in health care at UCSC. The group serves as a liaison between students and the Health Center staff; creates and supports campus health initiatives and other educational opportunities; and provides a fun, practical way for students to get involved and make connections with other students and health care practitioners.

Counseling and Psychological Services

Counseling and Psychological Services (CAPS) offers a range of professional services to undergraduate and graduate students seeking help with personal concerns. We provide assistance for students with academic and personal stress, relationship and family issues, psychological problems, and crisis situations. Depending on a student's needs, a student may be provided with brief individual or couples counseling, group counseling, psychiatric services, crisis intervention, or a referral for longer-term therapy off campus. Information provided to any CAPS professional staff member is confidential and cannot be released without a student's permission except in specific circumstances involving risk and safety. All services are aimed at helping a student gain greater personal effectiveness and academic success. Professional staff members are available at various locations on campus, including the Student Health Services building, the Colleges, and Family Student Housing.

Staff members are also available to provide consultation to staff, faculty, individuals, or family members for assistance in helping students in distress. Counseling psychologists can also provide trainings and programs on a variety of mental health topics, stress and coping skills, multicultural issues, and organizational development.

For more information about Counseling and Psychological Services, please call (831) 459-2628 or visit our web site at www2.ucsc.edu/counsel/.

Sexual-Assault and Rape-Prevention Education

Since 1979, UCSC has addressed the issues of rape—especially acquaintance rape. Students are required to take an online education course called Sexual Assault Edu and to attend educational presentations to encourage respect, responsibility, and mutuality among students. Workshops are organized in the residence halls and a variety of educational resources are available for male and female students. In addition, self-defense classes for women are offered quarterly.

An experienced Sexual Health Educator in SHOP is available for individual appointments and provides nonjudgmental support for those who have experienced sexual assault or have been raped. These resources are available for their friends and loved ones. The sexual health educator is certified as a crisis counselor by the state of California. Police officers are available 24 hours a day, as are emergency phones, guards at campus entrances from 8 p.m. until 3 a.m., and frequent shuttles and buses. For more information, contact SHOP at the Student Health Center, (831) 459-3772; e-mail: shop@ucsc.edu; web: healthcenter.ucsc.edu/shop.

Resource Centers

African American

The African American Resource and Cultural Center (AARCC) develops and fosters cocurricular initiatives that promote academic success, leadership training, and student development. Since the center's inception in 1991, the program's primary mission has been to serve as a key resource to acclimate students to general campus life and academic culture. In addition, the program provides advocacy and support in helping to monitor students' academic progress and subsequent achievement of their educational goals. AARCC works closely with overall campus outreach to enhance the recruitment and retention of students of African descent.

AARCC welcomes volunteers and student interns to serve as members of TEAM AARCC Outreach Program or on our Advisory Council. Academic clubs include Black Science Network, Student National Medical Association, UCSC Gospel Choir, Honors and Scholars Club, and National Society of Black Engineers. Other organizations affiliated with the center include African/Black Student Alliance, African American Theater Arts Troupe, Black Sistas United, Black Men's Alliance, Alpha Kappa Alpha Sorority, Destination Higher Education, Rainbow Theatre, University Brothers/Sisters, MLK Youth Classic, and Delta Sigma Theta Sorority. AARC works collaboratively with others on campus and in the surrounding community to enhance cultural and ethnic diversity initiatives on the UCSC campus. The center, located on the third floor of the Bay Tree Building in Quarry Plaza, is open Monday through Friday from 9 a.m. to 5 p.m. For more information, call (831) 459-3207, fax (831) 459-2469, e-mail african@ucsc.edu, or consult our web site at www2.ucsc.edu/aasl.

American Indian

The American Indian Resource Center (AIRC) works in collaboration with the Student Alliance of North American Indians (SANAI), the University of California American Indian Counselors/Recruiters Association, and native faculty and staff, as well as the indigenous tribal community leaders of the region to develop information, programs, and events that assist public understanding of native peoples. Invested in creating a campus climate that supports all students, the center provides mentoring and personal and academic advising. AIRC is located on the third floor of the Bay Tree Building in Quarry Plaza. For more information, call (831) 459-2881 or e-mail native@ucsc.edu.

Asian American/Pacific Islander

The Asian American/Pacific Islander Resource Center (AA/PIRC) provides and enhances opportunities for education and dialogue on issues affecting Asian Americans and Pacific Islanders, as well as opportunities for leadership development and community building. AA/PIRC aims to address students' multiple and diverse academic, social, cultural, and other cocurricular needs through programs and services. Programs include Asian American/Pacific Islander Heritage Month, Year-End Ceremony for graduating seniors, leadership skills workshops, graduate school panels, and community receptions. AA/PIRC events also highlight writers, performance artists, scholars, and community leaders. AA/PIRC sponsors academic and paid internships for students interested in gaining professional experience. Through AA/PIRC, students benefit from networking with individuals and resources such as alumni, faculty and staff, off-campus community-based organizations, and on-campus student organizations.

AA/PIRC is located on the third floor of the Bay Tree Building with the African American, American Indian, and Chicano Latino Resource Centers. Add your e-mail address to AA/PIRC's listserv to receive announcements on leadership, scholarship, internship opportunities, events, and community news. For more information, call (831) 459-5349; e-mail aapirc@ucsc.edu, or visit www2.ucsc.edu/aapirc.

Chicano Latino

The Chicano Latino Resource Center (El Centro) is a hub of organized activities and resources that support Chicano and Latino student transition, retention, and academic advancement at the university. Through collaborative efforts with campus partners, students can participate in a host of activities that encourage intellectual growth, leadership development, preparation for graduate or professional school, and career options. El Centro encourages and supports student and community development through cultural and educational programming. Programs include the following: New Student Welcome Program; Chicana Latina Pipeline Project; César Chavez Convocation; dialogue on academic, social, cultural, and personal issues that affect the Chicano and Latino community; and a weekly online newsletter, CHISME E-news. El Centro offers student internships that support leadership-skills development while students help to organize events and activities. For more information or to schedule an appointment, call (831) 459-5449 or e-mail cab@ucsc.edu. Web: www2.ucsc.edu/raza

Gay, Lesbian, Bisexual, Transgender, Intersex

The Lionel Cantú Gay, Lesbian, Bi, Trans, Intersex (GLBTI) Resource Center (aka the Cantú Queer Center), housed in a beautiful redwood building near Crown and Merrill Colleges, is a friendly, welcoming space for the entire community. The center's mission is to provide educational, social, support and advocacy services to students, staff, faculty and alumni on GLBTI issues. The Cantú Queer Center is home to several student organizations that meet weekly; a host of exciting programs; the GALA gallery; and a library offering nearly 3,000 books, magazines, and films. Safer-sex information and other GLBTI-related materials are also on hand. Information and referral to campus and community GLBTI resources is available by phone or in person. Throughout the year, the Cantú Queer Center coordinates student programming with a queer focus. Education of the nonGLBTI campus population is another function of the resource center; professional staff members offer workshops for groups, classes, and dorms about unlearning heterosexism and transphobia. Everyone is welcome to use the center's cozy lounge, full kitchen, and study center to relax, study, socialize, and become involved in the campus's queer community. The center is open Monday-Friday; usual hours are 9 a.m. to 5 p.m. Stop by and meet the center's friendly staff and find out about internship and volunteer opportunities. You can reach the center at (831) 459-2468 or via e-mail at queer@ucsc.edu. The center's web site, queer.ucsc.edu, provides an overview. Self-subscribe to QConnect, the center's e-newsletter and calendar, on the site's home page.

Women's Center

Located in Cardiff House, a historic farmhouse near the main entrance to campus, the Women's Center is devoted to helping students maximize their success at UCSC. Resource referrals and informal advising are always available, and weekly events include films, readings, and talks. At least one staff member is a state-certified domestic violence peer counselor. We create or sponsor student-oriented workshops on topics ranging from money management to positive body image and stress reduction.

The Women's Center is home base for a variety of student groups and student-run community-service efforts. Other opportunities for involvement include internships, independent study, and

work-study jobs. Students can become involved in such Women's Center projects as the 51% Pipeline Project (leadership), Take Back The Night (anti-violence), Inside Out Writing Project (Women in jail)—or create projects with the support and mentorship of staff.

The Center, a haven located in a picturesque meadow, is also close to the campus police station. The center's meeting rooms, kitchen, and garden are ideal places to study, relax, or connect with students, staff, faculty, and community members. Rotating art exhibits bring the center's walls to life, and students are encouraged to inquire about showing their work.

For more information, visit the center's web site at womenscenter.ucsc.edu, e-mail women@ucsc.edu, or call (831) 459-2072.

Physical Education, Recreation, Sports, and Wellness

The physical education, recreation, sports, and wellness programs provide a variety of interesting and challenging activities intended to attract you to becoming an active participant. The emphasis is on giving you an opportunity to develop knowledge, skills, and habits related to wellness to last through a lifetime of enjoyable physical and recreational activity.

Obtain further information about the programs described below from the Office of Physical Education, Recreation, and Sports, located at the East Field House, (831) 459-2531. Web <http://opers.ucsc.edu>

Physical Education Courses

Regularly scheduled courses, which carry no academic credit but are recorded on your transcript, are available in a broad range of physical activities (see [Physical Education](#)). Many classes are small, and all offer expert instruction and carefully designed practice periods so that you can accomplish much in sessions of two to three hours per week. Most activities have intermediate and advanced sections as well as courses for beginners. Subjects offered include swimming, scuba, sailing, rowing, basketball, racquetball, tennis, volleyball, ballet, folk dance, jazz dance, modern dance, fencing, soccer, aerobics, tai chi chuan, weight training, yoga, aikido, and tae kwon do.

Web: <http://opers.ucsc.edu/homepage/physicaleducation.html>

Intramurals

The intramural sports program includes competitive leagues, tournaments, and special one-day events. Many of the activities are coeducational. The leagues feature basketball, flag football, floor hockey, indoor and outdoor soccer, softball, ultimate frisbee, and volleyball. Some of the leagues are divided into different skill levels. There are tournaments in basketball, racquetball, and tennis. Special events include a 5-k and 10-k run, and an annual triathlon. Prospective participants are encouraged to form their own teams. Individuals looking to be placed on a team are also welcome. Web: <http://www.ucscintramurals.com>

Sports Clubs

The sports club program offers a variety of activities depending on student interest. Currently, active clubs include men's and women's rugby, water polo, and ultimate frisbee; men's soccer, baseball, cross-country, lacrosse, and track and field; and coed Special Olympics, cheerleading, dance, equestrian, triathlon, disc golf, cycling, sailing, badminton, and fencing. Web: <http://www.ucscsportsclubs.com/>

Intercollegiate Teams

UC Santa Cruz offers the only National Collegiate Athletic Association (NCAA) Division III program in the UC system. As a Division III member, the program offers no scholarships or grants in aid that are based on athletic ability. Both men's and women's NCAA intercollegiate teams compete in the following sports: basketball, soccer, swimming and diving, tennis, and volleyball. Women's teams compete in golf and cross-country. For information on teams, rosters, schedules and Booster Club, go to www.goslugs.com.

Wellness Center

Located within the East Field House complex and overlooking Monterey Bay, the Wellness Center offers two floors of state-of-the-art cardiovascular and strength-training equipment. Classes, workshops, fitness testing, and personal training are available to assist everyone in reaching their fitness goals. Web: <http://wellness.ucsc.edu>

Recreation

The Recreation Program is designed to fulfill the diverse needs and interests of all members of the UCSC community. More than 100 activities, workshops, classes, off-campus outings, and special events are scheduled quarterly. In addition, the program offers a 10-day Wilderness Orientation (WO) prior to the start of school. WO is an invaluable experience for incoming college students, serving as an introduction to mountain travel and the "journey" of college education. The beautiful settings of the Sierra Nevada provide students an opportunity to form new friendships and discuss their hopes and fears about entering college while learning outdoor skills. No previous backpacking experience is necessary.

The Outdoor Equipment Rental Center offers recreational equipment including surfboards, wetsuits, and high-quality backpacking and camping gear. If you are interested in planning your own outing, contact the Recreation Program Office for assistance. The office has extensive files, and staff members act as consultants, planning with people as well as for them. The office sells international student ID cards, provides bicycle licensing, and offers a free weekly drop-in bicycle maintenance program.

Open recreation hours are scheduled quarterly; you are strongly encouraged to use the facilities. Sports equipment may be borrowed without charge. There are also recreation clubs if you are primarily interested in organized recreation and individual performance. Clubs are coed and feature some combination of recreational participation, advanced instruction, and individual competition. For a list of currently active clubs, go to ucscrecreation.com.

Banana Slug Mascot

The Banana Slug, a bright yellow, indigenous gastropod found in the campus's redwood forest, was the unofficial mascot for UC Santa Cruz's coed teams since the university's early years. In 1981, when some campus teams wanted more organized participation in extramural competition, UCSC joined Division III of the NCAA. Since the application required an official team name, UCSC's then chancellor polled the student players, and out of this small group emerged a consensus for a new moniker—the sea lions. It was a choice that the chancellor considered more dignified and suitable to serious play than the Banana Slugs. But the new name did not find favor with the majority of students, who continued to root for the Slugs even after a sea lion was painted in the middle of the basketball floor. After five years of dealing with the two-mascot problem, an overwhelming pro-Slug straw vote by students in 1986 convinced the chancellor to make the lowly but beloved Banana Slug UCSC's official mascot.

Facilities

To make it convenient for you to utilize campus physical education, recreation, and sports facilities, field houses are located on the east and west sides of the campus. At both the East Field House and the West Field House, you will find the following: gymnasium, tennis courts, outdoor basketball and volleyball courts, and locker rooms. The East Field House also has a dance studio, martial arts room, handball/racquetball courts, equipment center, fitness center, 50-meter swimming pool, half-mile jogging track, and sports fields. A strength-training and cardiovascular-fitness court is located near the east jogging track.

The UCSC Boating Center is located at the Santa Cruz Small Craft Harbor, about five miles from the campus. The boating program offers instruction and recreation using sailing and rowing vessels, such as Moore-24 sloops, Laser dinghies, C-15 dinghies, rowing dories, and sea kayaks. Web: <http://www2.ucsc.edu/opers/boating/index.html>

All facilities are open daily during academic terms and are available for individual recreation whenever they are not being used for classes or other scheduled activities.

Student Union

The Student Union is a student-governed facility located at the center of campus where students can take a break and lounge, play pool or ping pong, use computers, meet, or watch television. The Student Union is also home to registered student organizations, campuswide student government, the Student Union Governance Board, the Bike Co-op, and Engaging Education.

Located in Quarry Plaza across from the Bay Tree Bookstore, the Union complements college facilities by providing an alternative social, recreational, and educational gathering place for all students and members of the campus community. Student-support offices located at the Union include Student Union administration, Engaging Education, and Student Activities.

The Union is open Monday through Thursday 9 a.m. to 9 p.m., Friday 9 a.m. to 6 p.m., and has limited weekend hours. The Union is closed holidays and quarter breaks. For up-to-date information, call (831) 459-3167.

Student Activities

Campuswide Student Organizations

Expand your horizons and your academic life by joining one of over 150 student organizations. Get involved in one or more cultural, ethnic, religious, Greek, political, service, or social organizations. Gain valuable life experience in leadership and develop rewarding and lifelong friendships.

Student organization membership is open to all UCSC students. Learn more about UCSC's campuswide groups or start your own at the Student Organization Advising and Resources (SOAR) office. Contact SOAR at (831) 459-2934, e-mail soar@ucsc.edu, or visit the web site: www.soar.ucsc.edu. SOAR is located on the second floor of the Student Union.

Sports or recreation organizations can be contacted through the Office of Physical Education, Recreation, Sports, and Wellness (OPERS): sports clubs at (831) 459-4220; recreation clubs at (831) 459-2806. Broadcast or print media clubs can be reached at (831) 459-2840.

Community Service Opportunities

Community service is a vital part of the university's mission. It is possible for individual students, as well as campus-wide student organizations, to develop service projects that link the university with the broader Santa Cruz community. With the financial support of the campus's Community Service Project funding, students have aided local groups such as Students Toward Achievement in Writing Success, the Strange Queer Youth Conference, and renovation of the Siena House.

The Student Volunteer Center, located in the Career Center, connects students with local volunteer opportunities based on skills and interest. Volunteer opportunities range from aiding youth and elderly to addressing homelessness and environmental issues.

Service programs also exist through some colleges. Check with your college office about opportunities. Student resource centers also coordinate volunteer efforts on and off campus.

For more information about service opportunities, see the web site volunteer.ucsc.edu or contact the Student Volunteer Center at (831) 459-3364 or volunteer@ucsc.edu.

UCSC Student Voice

Santa Cruz offers you a unique variety of opportunities to participate in university governance at the college, campus, systemwide, and national levels. Regardless of what level you choose, participating in student government will provide you with a wonderful chance to practice leadership skills, meet others who share your interests, and learn a great deal about yourself and the university.

Advisory Committees

Serving on a campus advisory committee is a recognized channel for student involvement in the university's decision-making processes. Advisory committees, composed of faculty, staff, and student representatives, are established to develop and recommend policies on a wide range of subjects. Annually, the Student Committee on Committees (composed of one student appointed by each college and chaired by the Internal Vice-Chair of the Student Union Assembly) nominates more than 100 students to serve on over 50 administrative and Academic Senate committees. For information about the selection process, contact Student Committee on Committees, (831) 459-5533, or the Student Union Assembly, (831) 459-4838.

College Student Governments

Each college has its own form of student government, enabling students to gain experience in planning, budgeting, executing, and evaluating a wide range of college programs and policies. Like the colleges themselves, each college governing body has its own character, structure, and meeting times and dates. For information, inquire in your college office or talk to our college programs coordinator.

Campuswide Student Government

The Student Union Assembly (SUA) is the undergraduate advocacy organization and the

official student voice of UCSC. It comprises three representatives from each college government; six elected officers: chair, internal vice chair, external vice chair, organizing director, commissioner of academic affairs, and commissioner of diversity; and one appointed representative from each of the following student organizations that represent historically underrepresented people within the UC system: African/Black Student Alliance; Asian Pacific Islander Student Alliance; The Network (Gay, Lesbian, Bisexual, Transgender, and Intersex Students); Movimiento Estudiantil Chicano de Aztlan; Student Alliance of North American Indians; and Ethnic Student Organization Council. The SUA also provides paid part-time internship opportunities for students each year. These internships include but are not limited to field organizers, treasurers, outreach and publicity, and strategy and planning. The SUA conducts open meetings that are held every Tuesday at 6 p.m. throughout the academic year. Students interested in advocacy, activism, and politics, as well as those concerned with their own and their friends' lives, are invited to get involved. The assembly operates via issue-specific campaigns and around general campus concerns. In the past, the SUA has formed campaigns around fighting fee-hikes, defending affirmative action, saving financial aid on a national and state level, striving for reasonable campus growth, and reforming UC Regents' procedures. Current issues have been fighting to make a UC education affordable, fighting to stop balancing budgets on the backs of students, fighting for the rights of UC workers, and working with community groups because UCSC students are also Santa Cruz residents. The SUA also works with the UC Student Association and the United States Student Association on system, state, and national issues and will host the 2006 Statewide Womyn of Color Conference. For more information, contact the SUA at (831) 459-4838, or visit the SUA office on the second floor of the Student Union.

The Graduate Student Association (GSA) provides governance and representation for graduate students, and its Steering Committee coordinates student-life programs and activities for graduate students. For more information, contact the SGSA, (831) 459-3142, or visit the SUA office on the second floor of the Student Union.

Systemwide Student Government

The UC Student Association (UCSA) is the statewide association of graduate and undergraduate student governments from the 10 UC campuses. UCSA is the officially recognized voice of the students to the UC Board of Regents, various UC administrative offices, and the UC Office of the

President. Issues covered by UCSA include UC fees and financial aid, comprehensive admissions policies, and academic policies, as well as broader issues of social responsibility such as environmental concerns and civil rights. UCSA coordinates the yearly selection of the UC Student Regent.

The SUA external office provides grassroots membership and support for the two main UCSA offices in Oakland and Sacramento. The campus office organizes students to run the grassroots campaigns that are adopted each summer during the UCSA Congress. At this session, delegates from the 10 UC campuses come together and choose the critical issues to be worked on for the next year. Issues in the past have included voter registration drives, letter-writing campaigns on particular UC issues, and increases in financial aid. UCSA provides a thorough introduction to UC politics and student representation. Students may also serve on systemwide committees through UCSA and gain a wide knowledge of the entire UC system through their service.

Two officers help to coordinate UCSA activities on our campus. The external vice-chair (EVC) is the official representative to the UCSA Board of Directors. This position has voting rights for UCSC, is the primary contact regarding all UCSA issues, and coordinates all lobbying of UCSA and local, state, and Federal governments on behalf of UCSC students. The organizing director (OD) coordinates with the EVC to effectively run the grassroots campaigns that are sponsored by UCSA every year. These positions are elected for one-year terms during spring quarter every year.

The Student Union Assembly officers in charge of UCSA activities can be reached at (831) 459-4838.

Student Media

UCSC Student Media comprises 20 print publications; KZSC 88.1, the campus radio station serving the campus as well as the tricity Monterey Bay Area; and campus Student Cable Television (SCTV Channel 28). Over 700 students enrich their cocurricular involvement through internships, academic credit, fellowships, and employment opportunities.

With the greatest broadcasting power of the UC stations, KZSC broadcasts diverse music, news, and public affairs programming. KZSC is a student-governed station with more than 20 students serving in management and leadership positions.

The state and national award-winning student newspaper of record, the weekly *City on a Hill Press*, covers campus, local, national, and international news and offers reviews and commentary. *Fish Rap Live!* publishes twice monthly and provides an alternative forum for free expression of ideas, coverage of local and campus events, and personal journalism. Campus newsmagazines include *EyeCandy*, *TWANAS*, *Kresge Town Krier*, *Leviathan*, *Disorientation Guide*, and *The Project*.

Annual literary journals offer poetry, prose, photography, and art. Examples include *Chinquapin*, *Big Q*, *Red Wheelbarrow*, *La Revista*, *Alay*, *Las Girlfriends*, *Yellowt*, *Matchbox*, and *the Black African Voice*.

SCTV is a student-governed campus cable television station, which programs and broadcasts artistic, narrative, experimental, documentary, and public-service announcement submissions of video and film by 10 broadcasting organizations. These include Banana Slug News, Rainbow TV, Film Production Coalition, Moxie Production Group, Barn TV, SCTV Events, the Community Service Documentation Project, On the Spot, and others. Many of the students are affiliated with the film and digital media major; however, students from all disciplines are encouraged to participate.

If you are interested in contacting any of the Student Media print or broadcast organizations, call the Press Center at (831) 459-2840, KZSC at (831) 459-3811, or SCTV at (831) 459-5630. Visit the web site for links to print and broadcast organizations: studentmedia.ucsc.edu.

Campus Cultural Programs

Throughout the year, UCSC offers frequent and varied cultural opportunities. Students, faculty, and staff have the opportunity to participate as audience members, performers, or behind-the-scenes support crew.

The considerable range of offerings includes art exhibits, lectures, films, concerts, recitals, and dance and drama presentations; programs vary from single performances to weeklong cultural celebrations. The colleges host a number of events, and the departments frequently engage speakers of particular academic interest to address the campus community or present lecture-demonstrations.

The Arts Division serves as a gateway to the entire University, presenting high-quality research and work by faculty, students, and guest artists. Art exhibitions, film screenings, digital arts presentations, music recitals, and several major theater, dance, and music presentations are mounted each quarter in conjunction with the academic programs. In addition, the Arts Division offers regular public lectures and colloquia to introduce audiences to professional practitioners and scholars in the traditional and digital arts.

Recent full-scale mainstage productions by the Theater Arts Department have included the musical *Hair* and Bertolt Brecht's *The Good Person of Sezuán*. The department also regularly produces classic and contemporary plays such as *Equus* by Peter Shaffer, *In the Blood* by Suzan-Lori Parks, and *Language of Angels* by Naomi Iizuka as well as the annual showcase of student choreography, *Random with a Purpose*. In 2010, Theater Arts produced an original multimedia production in collaboration with the Digital Arts and New Media M.F.A. program entitled *Stop the Press!*

The Music Department presents a variety of classical and contemporary concerts by the University Orchestra and Chamber Singers, as well as fully staged operas. Recent performances have featured works such as Mozart's *Requiem*, Rossini's *Petite Messe Solennelle*, and the opera *L'elisir d'amore* (The Elixir of Love) by Donizetti. The Music Department also presents concerts by the Jazz Ensembles, Big Band, Electronic Music Studios, and ethnomusicology groups such as the West Javanese and Balinese Gamelan Ensembles and Latin American Ensembles. In addition, the department sponsors regular performances of Indian classical music, featuring artists such as sarode player Pandit Aashish Khan, as well as the Pacific Rim Music Festival in alternate years. Student recitals, class open rehearsals, and informal "Friday at Four" showings round out the calendar.

The Sesnon Gallery, located at UCSC's Porter College, operates a museum-oriented program for educational purposes. The gallery organizes an annual schedule of exhibitions that represents a broad range of methods, media and cultures in a local, regional, and national context, with a focus on contemporary practice. The Sesnon Gallery works to integrate these programs and exhibitions into the lives of a broader community. Details on exhibitions are available at arts.ucsc.edu/sesnon and (831) 459-3606.

The Digital Arts and New Media (DANM) M.F.A. program's graduate student exhibition takes place on campus each year in the Digital Arts Research Center. DANM hosted the acclaimed Digital Arts and New Media Festival in 2006 and The Art of Collaboration Symposium in 2009.

All students, not just Arts Division majors, are encouraged to audition for Theater Arts Department and Music Department productions and ensembles. For information about how to get involved, call the Theater Arts Department at (831) 459-2974 and the Music Department at (831) 459-2292.

The Music Center, including the 396-seat Recital Hall and Indonesian gamelan and electronic music studios, houses all Music Department programs as well as performances by visiting artists.

The Theater Arts Center is the setting for a diverse, year-round program of drama, dance, and special events. The 528-seat Theater Arts Mainstage, 215-seat Second Stage, 400-seat Media Theater, and modular Experimental Theater, provide professional facilities for campus and visiting artists and productions.

Other on-campus performance venues include the 153-seat Barn Theater, the Kresge Town Hall, the outdoor Upper Quarry Amphitheater, and the colleges' dining commons. Ticket information is available from the UCSC Ticket Office, located at the Theater Arts Center, (831) 459-2159 (voice or TDD) and santacruztickets.com.

For additional information about presentations from the Arts Division, contact the Arts Division Events Office at (831) 459-2787 and visit our online calendar at arts.ucsc.edu.

Shakespeare Santa Cruz

Shakespeare Santa Cruz (SSC), recognized by USA Today as one of the 10 "most influential" Shakespeare festivals nationally, is a professional theater company in residence at UCSC. Every July and August, SSC produces a summer season that includes two plays by William Shakespeare as well as non-Shakespeare productions carefully chosen by the artistic director to complement the season.

SSC offers courses through the university Summer Session; sponsors lectures in dialogue for scholars, teachers, and passionate theatergoers; and provides opportunities for the community to get involved in the intellectual and theatrical components of Shakespeare. The summer acting company is composed of professional Equity actors and top nonunion talent from throughout the United States, local professionals, and college-age interns. Production crews are made up of regional and local professionals and also include university students as interns.

Every spring, SSC sends out a touring group of 10 student actors and a stage manager to local schools in Santa Cruz, Monterey, and Santa Clara Counties. This program, Shakespeare to Go, performs a 50-minute version of one of the plays to be produced in the summer.

For further information, contact the Shakespeare Santa Cruz Office in the Theater Arts Center, (831) 459-2121, or visit the web site: shakespearesantacruz.org.

Bay Tree Bookstore

UCSC's Bay Tree Bookstore is located in the Quarry Plaza complex in the center of campus, at the intersection of Hagar Drive and Steinhart Way. The bookstore serves as the campus resource for UCSC course materials, including new and used course books and customized faculty publications, general reading and reference books, a wide variety of school and personal supplies (including computers and computer supplies), and many other items such as backpacks, emblematic apparel, art supplies, posters, gifts, greeting cards, and academic regalia. Services include online reservations for course materials, student debit accounts, special ordering of books, book buyback services, fax services, and limited check cashing. The bookstore also houses the campus's convenience store (the Express Store) and Student ID Card Services. For more information, call (831) 459-4544 or visit the web: slugstore.ucsc.edu/.

Child Care and Early Education Services

Child Care and Early Education Services offers programs for children of students currently enrolled

in classes at UCSC. All of our centers are conveniently located on campus near the West Entrance. Free or low-cost tuition rates are available for students who meet the eligibility requirements for subsidized care (please see Eligibility for State Funding Chart at <http://housing.ucsc.edu/childcare/>). All meals are included in the program (breakfast, lunch, and afternoon snack).

Our programs are dedicated to providing the highest-quality developmental care possible in a secure, homelike environment characterized by warmth, affection, and support. The classrooms stress the importance of meeting children's needs in all areas of development: social, emotional, physical, cognitive and creative. The curriculum emphasizes play as a learning process and provides environments that are rich and challenging.

Programs are open to all children without regard to religion, color, ethnicity, gender and physical or mental ability. All of our centers are located in the Family Student Housing Complex. Each of our centers is operated during the academic year from September through June, closed during the summer months, administrative and university holidays and staff development days. All of the childcare spaces are provided for children of student families only. The majority of the spaces are reserved for students who meet the qualifications for subsidized care. Fee-for-service spaces at a below market rate may be available for student families whose income exceeds state-subsidy requirements.

Information on all programs, fees, and applications is available at <http://housing.ucsc.edu/childcare/>, and at the Early Education Services Office in the Community Building at Family Student Housing, (831) 459-2967, or e-mail earlyeducation@ucsc.edu.

Infant Center

The Infant Center serves 12 children ages 14 to 24 months. Small groups, low child-to-adult ratios, and primary caregivers ensure consistent and nurturing care. The hours of operation are 8:30 a.m.–5:30 p.m.

Preschool Center

There are three preschool classrooms that serve a total of 36 children from 24 months until they enter kindergarten. Each classroom provides small groups with low child-to-adult ratios, and an environment that provides a stimulating and rich curriculum, which helps prepare children for kindergarten. The hours of operation are 8:30 a.m.–5:30 p.m.

School Age Center

The School Age Program serves 16 children. It operates as an after-school recreation program during the academic year. The program provides developmentally appropriate arts and crafts, life-skills and sports activities, occasional community outings and quiet time for homework. The hours of operation are 12 p.m.–5:30 p.m. for kindergarteners; and 2:30 p.m.–5:30 p.m. on Mondays, Tuesdays, Thursdays and Fridays for 2nd through 4th graders. On Wednesdays (public school minimum days), care is available from 12–5:30 p.m. for all school-age children. Extended care is available on a sign-up basis on some Santa Cruz City Schools closure days (university closure days excluded).

UCSC Alumni Association

UCSC's graduates—more than 70,000 of them—can maintain a lifelong connection to the campus through the UCSC Alumni Association. Through the dues they pay, Association members contribute to the living-learning environments at each college and the enrichment of the entire campus. Thirty percent of annual membership dues directly support student programs, special activities, and other projects at the colleges and campuswide.

The association promotes excellence at UCSC by making three annual awards. It supports students by offering two types of awards (college service and financial need), and enriches campus and college intellectual life through its Distinguished Visiting Professor program and endowment.

Hundreds of alumni return to campus during the annual Reunion Weekend to enjoy receptions, tours, panel discussions, and other programs through which they reconnect with old friends, faculty, and students. Thousands more reconnect through the Online Community (community.ucsc.edu), which offers an online alumni directory, association event information and RSVP services, and much more.

Alumni are keenly interested in career issues. More than 1,000 of them act as career mentors online through the Online Community and Career Services' Career Advice Network, and in person at the annual Multicultural Career Conference and similar events. The Alumni Association, in partnership with other UC Alumni Associations, brings politically minded graduates to Sacramento for an annual legislative conference aimed at increasing support for UC.

Alumni reconnect at events offered by regional groups across the nation and by six affinity groups.

Members of the Alumni Association enjoy a range of benefits. These include use of the campus pool and recreation facilities, insurance coverage, use of a UC vacation center, UC Extension discounts statewide, library privileges across the entire UC system, the online Digital Library, invitations to alumni events, and more.

Information about the Alumni Association is available by contacting us at 1156 High Street, Santa

Cruz, CA 95064, locally at (831) 459-2530, toll-free at (800) 933-SLUG, via e-mail at alumni@ucsc.edu, and on the web: alumni.ucsc.edu/.

Programs and Courses

[Programs and Courses](#) | [Links to Departments](#)

Courses

The academic programs offered at UC Santa Cruz are described in detail in this section. Curricula, courses, and degrees listed in this catalog are subject to change through normal academic channels. New proposals and changes are initiated by the relevant departments, divisions, or colleges and approved by the appropriate academic dean and by the Committee on Educational Policy or the Graduate Council. The designations F (fall), W (winter), S (spring), or Summer that appear at the end of each course indicate the intentions of the academic units; however, on occasion, the actual scheduling of classes may change.

For changes and additions to courses listed in this catalog, consult the *Schedule of Classes*, published each quarter and available on the web at reg.ucsc.edu/soc/. Students may also view the university catalog on the web at reg.ucsc.edu/catalog/. The Office of the Registrar also provides detailed information on its pages at reg.ucsc.edu.

Course Credit

Unless otherwise specified in the course description, each course earns 5 quarter credits. Therefore, regardless of course format or scheduling, each course makes approximately equal demands on enrolled students.

All physical education courses are noncredit. Other noncredit courses include certain graduate seminars. Laboratory courses, music courses involving individual lessons or ensemble participation, as well as some special-interest seminars and individual studies courses carry less than 5 credits and are designated accordingly.

The normal UCSC undergraduate program of study is three 5-credit courses per quarter or equivalent. In 12 quarters at UCSC, most students complete 180 credits. With a college's approval, a student may be allowed to vary the course load. See also [Part-Time Program](#).

Course Numbering

Undergraduate courses are classified as lower division or upper division. Lower-division courses (numbered 1–99) are designed for first-year and sophomore students but may be taken by more advanced students. Upper-division courses (numbered 100–199) are designed for junior and senior students but are open to first-year and sophomore students who have sufficient background and the consent of the instructor in charge.

Graduate courses (numbered 200–299) are either restricted to graduate students or open only to students who can show the instructor that they have completed sufficient upper-division course work basic to the subject matter of the course.

Footnotes

Courses marked with an asterisk (*) will not be offered in the 2010–11 academic year. Courses marked with a dagger (†) will be offered, with the quarter as yet to be determined.

General Education Codes

The general education codes that appear in some course descriptions are explained in the section on [general education requirements](#), page 26.

Course Format

Most courses at UCSC are taught as lectures or, when the class is small enough for considerable discussion, as seminars. A large number of courses require enrollment in a secondary discussion section scheduled at a different time from the primary course. Sometimes there is laboratory or fieldwork associated with a course.

Occasionally, a student may wish to do an individual project as part of the work for a course. UCSC instructors are usually quite willing to consider and evaluate such work, time permitting.

Prerequisite Policy

When applicable, prerequisites are listed in this catalog within the course description for each course. There are many courses that meet general education requirements and do not require a prerequisite.

Prerequisites come in many forms—for example, specific courses, placement examinations, or “satisfaction of the Entry Level Writing and Composition requirement” for writing courses. Some course descriptions also specify that students must be declared majors or seniors in order to enroll. Other course descriptions recommend the appropriate background for a course—for example, “ability to use algebra and solve problems.”

Questions concerning prerequisites should be directed to the instructor of the course or the respective department office. Students who have not met all prerequisites may be excluded from a course. Alternatively, the instructor or a department adviser may waive the prerequisite based on demonstrated competence or equivalent academic experience.

Class Size

A student’s class level plays a large part in how many small classes are available. Introductory classes tend to be large, although they are usually accompanied by required small sections or laboratories. Many small classes have prerequisite courses that enroll large numbers of students. Also, certain large classes fulfill campuswide general education requirements. First-year students experience at least one small seminar in conjunction with the college core course, and they are likely to experience an increasing proportion of small classes as they progress to senior status.

Individual Study

Especially in the upper division, students are encouraged to devise special courses to pursue independently, under the guidance of faculty members. A study plan should be discussed with a faculty member in the general subject area of interest. This faculty member will ultimately be responsible for evaluating the work done. The study plan must also be approved by the appropriate program and the student’s college; it should be noted that not all proposed plans are accepted.

Field Study

Independent, off-campus field study is available through many departments. It is handled in much the same way as individual study. In addition, there are several established field programs that offer a variety of full- or part-time, off-campus, field placements as part of the regular program of academic study. For more information on these programs, see page 46.

Apprentice Teaching

An upper-division or graduate student may apply for approval to teach an undergraduate seminar of his or her own design. The seminar is supervised by a faculty member and carries normal academic credit for the students and the apprentice teacher. Interested students should initiate a proposal with a faculty member in the appropriate subject area.

Credit by Petition

Regularly enrolled students may obtain full academic credit for a course by challenging the course. Challenging the course entails passing an examination or completing an appropriate body of work supervised by a regular instructor for the course. The petition for such credit must be approved by the instructor of the course, the chair of the department offering the course (or provost, if it is a course offered by a college), and the provost of the student’s college. Some courses are not considered appropriate for credit by petition.

For foreign language students, credit by petition may not be used by students whose language ability greatly exceeds the course level proposed for challenge. Petitions for credit for levels 4 and 5 cannot be filed in the same quarter. Contact the Language Program, 239 Cowell, 459-2054, for more information.

Auditing of Classes

Instructors may permit nonenrolled students to attend their classes when space is available after all students who wish to enroll officially have done so. An instructor is not obligated to devote time to the work of students who are not officially enrolled in the class.

Additional Courses of Interest

Sometimes, following the official course listings for a program, related courses offered by other academic units are listed under the heading Additional Courses of Interest. Some of these courses may be accepted in partial satisfaction of the major requirements. Students should consult with the chair of the program offering the major about the availability of major credit for enrollment in related courses. The full descriptions of the related courses should also be checked for prerequisites.

(There were no substantive changes to the American Studies Program Description from the General Catalog 2010-12.)

Program Description

American studies gives students an interdisciplinary and historically grounded framework for studying the United States; its political, social, and cultural institutions; its position in the world as a political, economic, and cultural entity; and the diverse peoples who live within or pass through its borders. We encourage frames of analysis that remain within the borders of the nation as well as those that compare aspects of the United States with those of other societies. We seek to build among our majors a critical perspective on the rights, responsibilities, and privileges of being a citizen of the United States or residing within its borders in the 21st century. We also help students develop critical thinking, research, and writing skills so that they will be able to act effectively in an ever-changing, complicated, and culturally diverse world.

Our major curriculum provides enough flexibility to let students explore the aspects of American studies that interest them most. That said, we believe that all students of American society should possess certain critical thinking and communication skills, should be familiar with fundamental disciplinary theories and concepts, and should have a working knowledge of United States history. Accordingly, all majors are required to take a series of shared foundation courses that reflect the department's particular strengths in historical inquiry, cultural analysis, and critical race and ethnic studies, as well as a course in the History Department. Building on this foundation, our students—in dialogue with their advisers—are required to take at least four upper-division courses that cohere around a particular area of study (e.g., Native American studies, technology and culture, 19th-century literature and culture, immigration and citizenship, etc.). Finally, they are required to take the senior seminar, in which they write a research paper related to their selected area of study.

Because of their broad-based exposure to the history and culture of the United States, collective learning experience, and their ability to focus on topics of particular interest to them, American studies students find the major a useful preparation for careers in education, law, journalism, social work, community organizing, business, and government. Students intending to go on to graduate school, whether in American studies or some other discipline, are advised to bear such plans in mind as they settle on their individual areas of study.

Requirements for the Major

Students wishing to pursue a major in American studies must submit a proposed study plan that meets the major requirements in a coherent manner. In order to apply for the major, students must have taken or currently be enrolled in AMST 10. Students are urged to submit their study plan no later than the third quarter of their sophomore year or, in the case of transfer students, no later than the first quarter of their junior year.

The study plan must be approved by the American Studies Department before the student is formally accepted into the major. The study plan should reflect a commitment to take the required foundation courses as soon as the applicant is admitted to the major. AMST 100 should be taken during the first quarter of foundation-level work; the remaining foundation courses should be taken as soon as possible thereafter. The study plan must also identify a proposed area of emphasis in the remaining upper-division coursework and list eight courses that fall within it. Ultimately, students are expected to take four elective courses within this area of emphasis. Forms and information about the major are available from the American Studies Department office and online at <http://americanstudies.ucsc.edu>. After meeting with the undergraduate adviser, students are referred to a faculty adviser for further consultation. The faculty adviser must approve the area of emphasis and courses that fall within it before the student can declare the major. Upon acceptance to the major, each student should meet periodically with both the department undergraduate adviser and the faculty adviser to make appropriate revisions to their plans for the major. Any change to the student's area of emphasis must be approved by the faculty adviser.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in American studies is satisfied by completing courses 100, 102, and 190.

Course Requirements

To graduate with a major in American studies, a student is required to complete 12 courses with the approval of the department:

- **One lower-division foundation course: AMST 10.**
- **Three upper-division foundation courses—AMST 100, 101, and 102.** Students should take these courses as soon as possible after declaring the major. AMST 100 should be taken during the first quarter of foundation coursework. Transfer students may petition to be admitted to AMST 100 if they intend to declare the major and are currently enrolled in AMST 10.
- **One survey course in U.S. history in the History Department (HIS 10A or 10B).** A student may petition to substitute an upper-division History Department course with the approval of his or her adviser. Transfer students may petition to substitute a relevant offering from their previous institution.
- **Four upper-division elective courses that define the student's area of emphasis in the major.** These electives may be taken in American studies or from affiliated departments. The number of courses taken in American studies will depend on the student's area of emphasis. The faculty adviser must approve the area of emphasis, the courses that fulfill it, and any revisions to this emphasis. The department maintains lists of sample areas of emphasis and courses with American studies content offered in other departments on campus.
- **Two additional upper-division elective courses.** Students may substitute 10 credits of Education Abroad Program (EAP), internship, or language study for these upper-division elective courses.
- **One comprehensive exit seminar: AMST 190.** Students may petition to complete a senior thesis project in lieu of the senior seminar course.

Graduate Studies

Graduate students may work toward a designated emphasis in American studies on their doctor of philosophy (Ph.D.) degree documents. Students must initiate the request through their home departments. Guidelines and application forms are available in the American Studies Department office or online at <http://americanstudies.ucsc.edu>.

The following are required for the designated emphasis:

- a designated graduate adviser who is a faculty member of the American Studies Department and who will serve on the student's qualifying examination or dissertation committee;
- submission of a significant piece of scholarly writing in the area of American studies;
- five graduate courses in American studies. One of these must be in the introductory proseminar offered by the American Studies Department. The remaining courses may be selected from among relevant graduate offerings of any UCSC departments or program with the approval of the American Studies graduate adviser;
- teaching experience as a teaching assistant or instructor in an American studies course.

Faculty and Professional Interests

Professor

MICHAEL H. COWAN, Professor Emeritus, American Studies

JOHN DIZIKES, Professor Emeritus, American Studies

AMY LONETREE, Associate Professor, American Studies
Indigenous history, museum studies, memory and American history, Native American cultural production, public history, and Ho-Chunk tribal history

ERIC C. PORTER, Professor, American Studies
Black cultural and intellectual history; U.S. cultural history and cultural studies; comparative ethnic studies; popular music and jazz studies

JUDITH YUNG, Professor Emerita, American Studies

DAVID H. ANTHONY, Associate Professor, History
African and African American history, art, music, literature, and cinema; eastern and southern Africa; African languages; Indian Ocean world; African and African American linkages; Islamic civilization; African diaspora studies; world history

GABRIELA ARREDONDO, Associate Professor Latin American and Latino Studies
African Latina/o studies; U.S. immigration history; U.S. social and cultural history; Chicana/o history; critical race and ethnicity theories; Chicana and Mexicana feminism; "borderlands" studies; history of modern Mexico

MARTIN BERGER, Professor, History of Art and Visual Culture
American studies and visual studies; construction of gender and race

MICHAEL K. BROWN, Professor, Politics
Inequality, race and African American politics, political economy, political development of welfare states, theories and methods of historical social science

DAVID T. BRUNDAGE, Professor, History
American working-class and immigration history, history of U.S. social movements, Irish history and politics

GEORGE BUNCH, Assistant Professor, Education
Language and education in linguistically diverse settings, preparation of teachers for linguistically diverse, language policy, and bilingualism

BENJAMIN CARSON, Associate Professor, Music
Theory and composition; music perception; empiricism and subjectivity; Schoenberg; popular music; improvisation

PEDRO G. CASTILLO, Associate Professor, History
Chicano/a history and culture; American social and urban history; race, class, and gender in California history, immigration history, Latina/os in the U.S.

GINA DENT, Associate Professor, Feminist Studies, History of Consciousness, and Legal Studies
Africana literary and cultural studies, legal theory, popular culture

BARBARA L. EPSTEIN, Professor, History of Consciousness
Social movements and theories of social movements, 20th-century U.S. politics and culture, Marxism and related theories of social change

ROSA-LINDA FREGOSO, Professor, Latin American and Latino Studies
Cultural studies, feminist studies, film and visual culture, human-rights studies, and gender-based violence

SUSAN GILLMAN, Professor, American Literature
Nineteenth-century American literature and culture; theories of culture, race, and gender; world literature and cultural studies

HERMAN S. GRAY, Professor, Sociology
Cultural studies, media and television studies, black cultural politics, social theory

MIRIAM GREENBERG, Assistant Professor, Sociology
Media studies, cultural studies, globalization, political and cultural economies of global cities, video production, and ethnography

KIRSTEN SILVA GRUESZ, Professor, Literature
Transnational Americas studies; Chicano/Latino literatures and cultures; 19th-century U.S. and Latin American literature; poetry; history of the book; reading and literacy; bilingualism

LISBETH HAAS, Associate Professor, History
U.S.-Mexico borderlands, Chicano and Native American history; visual culture in the colonial Americas; the U.S. West and California; historical memory, theory, and historical methodology

JUDITH A. HABICHT MAUCHE, Professor, Anthropology
Precontact and early contact North American cross-cultural interaction and trade; ceramic technology; archaeology of gender, power, and identity; Southwest and Southern Plains

SUSAN F. HARDING, Professor, Anthropology
Culture, politics, narrative, gender, local/global studies, ethnographic writing, fundamentalism, Christianity, state-making, aging, America, and Spain

KIMBERLY J. LAU, Professor Literature; Provost Oakes College
Feminism, discourse, and power; feminist theory; discourse, analysis, and ethnographic methods; folklore and narrative; globalization

OLGA NAJERA-RAMIREZ, Professor, Anthropology
Folklore theory, ritual, festival, dance, greater Mexican culture, history and folklore, transnationalism, identity; expressive culture, ethnomusicology, bilingual communication, gender, history, and culture of Latin America, the U.S., and Mexico

MARCIA OCHOA, Assistant Professor, Feminist Studies
Gender and sexuality, race and ethnicity, Latina/o studies, media and cultural studies, ethnography of media, feminism, queer theory, geography, multimedia production, graphic design, colonialism and modernity, Latin American studies—Colombia and Venezuela

TRILOKI NATH PANDEY, Professor, Anthropology
Native peoples of North America, cultures of India, political anthropology, anthropological theories and comparisons; native North America; tribal India; Nepal

MARY BETH PUDUP, Associate Professor, Community Studies
Regional studies, economic justice, public policy, historical geography of the U.S.

CATHERINE S. RAMIREZ, Associate Professor, Latin American and Latino Studies
Chicana and U.S. Latino literature, culture, and history; gender studies and feminist theory; visual culture and style politics; cultural studies; popular and urban youth cultures; speculative fiction, Afrofuturism, and Chicanafuturism; science, technology, race, and gender; theories and methods of American studies

RENYA K. RAMIREZ, Associate Professor, American Studies
Native American studies, Indian identity, Native Americans and anthropology, urban Indians, Native American women, cultural citizenship, expressive culture, and anti-racist education

FORREST G. ROBINSON, Professor, Humanities
Nineteenth- and 20th-century American literature, including Mark Twain, the American West, and popular culture; biography and American culture theory

SHELLEY STAMP, PROFESSOR, Film and Digital Media
Film history, theory, and criticism; silent cinema; women's filmmaking; film censorship; histories of moviegoing; feminist approaches to cinema

DANA TAKAGI, Professor, Sociology
Social inequality and identity, research methods, race relations, nationalism and social movements

MARILYN J. WESTERKAMP, Professor, History
British colonial and revolutionary America, early modern cultural and religious history, U.S. religious history, women's history, gender

DANIEL J. WIRLS, Professor, Politics
American politics, including national political institutions (Congress) and the President; public policy (military and foreign policy) and political history

MATTHEW WOLF-MEYER, Assistant Professor, Anthropology
Medical anthropology; science studies; actor-network theory; American studies; popular culture,

media studies, history of medicine and public health

ALICE S. YANG-MURRAY, Associate Professor, History

Historical memory, Asian American history, gender history, race and ethnicity, 20th-century U.S., oral history

PATRICIA J. ZAVELLA, Professor, Latin American and Latino Studies

Chicana/o-Latina/o studies, women's work and domestic labor, poverty, family, sexuality and social networks, feminist studies, ethnographic research methods, and transnational migration of Mexicana/o workers and U.S. capital

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses

10. Introduction to American Studies. *

Organized around the themes of democracy and citizenship, explores the many ways the United States of America has been defined and interpreted. Highlights primary questions in American studies, and draws from multiple texts, genres, and methods. Satisfies American History and Institutions Requirement. (General Education Code(s): ER, IH, E.) (F) *K. Lau*, (S) *A. Lonetree*

Upper-Division Courses

100. Key Concepts in American Studies. F,W,S

Provides majors with an in-depth introduction to American studies and the major at UCSC. Introduces key American studies concepts and highlights the emphases of this major. Careful attention paid to critical reading skills and analytical writing. Required of all American studies majors. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to American studies majors. Enrollment limited to 20. (General Education Code(s): W.) *F. Robinson, The Staff*

101. Power, Identity, and Social Formations. W,S

Introduces critical conversations regarding social difference and power occurring in American studies and related disciplines and fields. Students address such issues from historical and contemporary perspectives, examining individual groups and taking a comparative approach. Course 100 recommended as preparation. Enrollment restricted to American studies majors. *R. Ramirez, E. Porter*

102. Reading Culture. F,W

Introduction to theoretical and methodological debates at the center of cultural studies as practiced in American studies. Balances theoretical readings with case studies to explore wide-ranging cultural productions and formations from different disciplinary perspectives and interpretive frameworks. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to American studies majors. Enrollment limited to 25. *J. Daehnke, K. Lau*

102A. Gender and U.S. Society. *

Introduction to the gendered analysis of U.S. society and culture from theoretical and historical perspectives. Particular attention given to the ways in which gender intersects with racial, ethnic, and class differences, focusing on the themes of work, politics, and sexuality. Course 1 or 10 is recommended prior to taking this course. *K. Lau*

102B. Sexuality and Culture. *

Examines how aspects of sexuality (such as sexual identities, preferences, roles, and desires) are fundamentally shaped by social-cultural and psychological factors. Topics include gender formation, the social construction of sexuality, and the historical emergence of the modern "gay" and "lesbian" identity of the U.S. Recommended for senior American studies majors. *The Staff*

107A. U.S. Popular Culture: 1800–1918. *

A survey of major popular cultural forms and texts in the pre-WWI era including Minstrelsy, *Uncle Tom's Cabin*, P.T. Barnum, *Ramona*, *The Wizard of Oz*, and *Birth of a Nation*, with attention to historical context and theory. *F. Robinson*

107B. U.S. Popular Culture: 1920–Present. *

Major popular cultural forms from the 1920s to the present. Topics include early "race" recordings; Depression radicalism; WWII entertainments; the Cold War; popular film genres; the 1970s and 1980s contemporary music (conjunto, jazz, rock, and rap). Particular attention to multicultural issues. Course 107A recommended. *The Staff*

109A. Technology and American Culture. *

Assesses political conditions under which the U.S. became committed to certain technologies, discusses merits of recent accounts of "crisis" in our politics and environment, and examines alternatives to mainstream politics and technology. Enrollment restricted to sophomores, juniors, and seniors. *The Staff*

109B. Science Fiction in Multicultural America. *

Science fiction by authors and artists of diverse cultural backgrounds, contextualized within the political and economic conditions of the U.S. Enrollment restricted to sophomores, juniors, and seniors. *C. Ramirez*

111A. The West in American Culture. W

Features texts with Western settings and with representative casts of Western characters. The often contradictory patterns that emerge from this regional literature and the qualities that attach to its familiar hero are explored. *F. Robinson*

112. Immigration and Assimilation. F

Examines immigration to U.S. from colonial era to present with special emphasis on issues of citizenship, social identities, and social membership. (General Education Code(s): ER.) *C. Ramirez*

113A. Imagining America. F

Examination of varied and often conflicting ways the ambiguous entity conventionally labeled "America" has been imagined, both positively and negatively, in political speeches, painting, fiction, film, television, music, drama, advertising, parades, and other modes of expression. *J. Daehnke*

113C. Citizens, Denizens, and Aliens. *

Compares the United States and France, two heterogeneous nations with Enlightenment-era origins, to explore theories and practices of citizenship, with a focus on both formal (e.g., political-judicial) and informal membership in a collective. Compares and contrasts citizens and non-citizens, such as denizens, migrants, and aliens, and the roles they play in and for the nation, state, civil society, and market. Enrollment restricted to sophomores, juniors, and seniors. *C. Ramirez*

114A. Politics and American Culture. *

Examination of major conceptions of citizenship in the context of American society and culture, with particular attention both to the sources of these conceptions in Western political thought and to their elaboration and testing in specific historical situations. Enrollment restricted to juniors and seniors. *The Staff*

114B. Marxist Thought in American Culture. *

Explores history of Marxist thought and activism in the U.S. with special emphasis on uses and effects of Marxism within aggrieved communities of color. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. (General Education Code(s): W.) *The Staff*

114C. Labor in U.S. Society. *

Examines the history of work and class in U.S. society with particular attention to how race and gender inform the constructions of multiple working classes. Drawing upon primary and secondary materials, the course analyzes the formations of labor unions, regional labor patterns, and the development of the capitalist market economy. *The Staff*

121C. Mixed Race in America. *

Examines what it means to be of mixed race in America along historical, social, political, and cinematic lines. Theories on racial and identity formation applied to understanding multiracial experiences of various racial groups in the U.S. (General Education Code(s): E.) *The Staff*

123. Native American Studies.

123F. Native American Women. *

Introduces students to the history of Native North American women's lives. Topics include the impact of colonization and Christianization on Native women, political activism, the role of Native women in tribal politics, and contemporary artistic production. (General Education Code(s): E.) *R. Ramirez*

123M. Celluloid Natives: American Indian History on Film. F

Examines how American Indian history and culture has been portrayed in Hollywood films, with an emphasis on films that represent Native Americans over the broad spectrum of Native American/white relations. (General Education Code(s): IM, E.) *A. Lonetree*

123T. Inventing the Savage. *

Examines how colonialism is at the root cause of cultural trauma in Native American communities; how colonialism affects both the colonizer and the colonized; how Native American scholars have theorized cultural trauma; and using novels, how Native Americans create strategies to heal from the negative effects of colonialism. (General Education Code(s): E.) *R. Ramirez*

123X. American Indian History in the Twentieth Century. S

History of Native peoples of the U.S., from 1900 to present, with emphasis on Indian/white relations and continuing development of federal Indian policy and its impact. Attention also given to the persistence, change, and adaption of Native cultures to historical and contemporary social conditions. (General Education Code(s): E.) *A. Lonetree*

123Z. Native Americans and Museums. *

Provides an historical overview of the relationship between American Indians and museums. Current issues and practices in museums—primarily those associated with ethics, collecting practices, exhibitions, education/interpretation, and administration/governance—are explored. (General Education Code(s): E.) *A. Lonetree*

125. African American Studies.

125A. Aspects of African American Culture. S

A seminar examining the dominant and defining characteristics of African American culture, covering such areas as folklore, religion, politics, music, verbal arts, and social ritual, as well as more "everyday" manifestations of the culture. May be repeated for credit. (General Education Code(s): E.) *The Staff*

125E. Jazz Cultures. S

Explores the meaning of jazz in American culture, particularly the social and cultural forces that have produced different jazz styles and the various ways that social conflicts and ideals have been displaced onto jazz. A prior familiarity with the music itself will be helpful but is not required. (General Education Code(s): E.) *E. Porter*

125H. Black Feminism. *

Explores elements of African American feminist thought and its articulation in writings, music, literature, and practice/activism in 20th-century U.S. Sexuality and reproduction is a primary theme—especially motherhood, politics of reproduction, and sexual narratives. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to junior and senior American studies majors. Enrollment limited to 25. (General Education Code(s): W, E.) *The Staff*

126. Chicano Studies.

126A. Chicana/o Latina/o Culture. S

Explores Chicana/o and/or Latina/o cultures, texts, and/or practices. Topics may include: literature and literacy; music; and popular, folk, and visual cultures. (General Education Code(s): ER.) *The Staff*

126B. Chicana/o Music. *

Examines Chicana/o music. Topics include *corridos* and border rebellion, music and social movements, Chicano radio and record industries, Chicanas/os and the emergence of rock and roll, Latin American/Latino music, and contemporary Chicana/o music. (General Education Code(s): E.) *The Staff*

126C. Chicana/o Literature and Film. *

Examines the formations and contestations of social, political, and cultural identities for Chicanas and Chicanos through a critical study of select Mexican American texts and films. (General Education Code(s): E.) *The Staff*

126L. Chicana/o Literature. *

Focuses on Latino literature, including traditional and emergent literary forms. Mostly focuses on Latinas and Latinos in the U.S., although course may also highlight the convergences and divergences of U.S. Latino and Latin American literary production. Students may study traditional literary forms, such as poetry or the novel, or more emergent ones, including blogs, graphic novels, and performance. No previous background in Latino literature is necessary, although some familiarity with literary criticism and theory is useful. (General Education Code(s): TA, E.) *C. Ramirez*

127. Asian American Studies.

127A. Aspects of Asian American Culture. *

Selected topics on Asian American culture, religion, music, foodways, literature, theater, film, and/or art. May be repeated for credit. (General Education Code(s): E.) *The Staff*

127C. Asian American Literature and Culture: Memories of War. *

Course assumes that war is key element in transpacific formation of Asian America and attempts to examine wars in Asia/Pacific region from Filipino-American through the Pacific, Korean, and Vietnam Wars U.S. has participated in and to ask how war memories have shaped the Asian American experience and reconfigured notion of the homeland. Looks at specific Asian American texts to discuss issues of ethnicity, politics of memory, immigration, and diaspora in respective war context and considers impact of cold war as transpacific structure of ideological determination. Enrollment limited to 60. (General Education Code(s): E.) *The Staff*

127D. Filipino Americans: History and Culture. *

Examines the history and culture of Filipinos in the U.S. from 1763 to present day within the context of colonial and postcolonial relations between the Philippines and the U.S. Topics include immigration, labor, community, identity, politics, and contemporary issues. (General Education Code(s): E.) *The Staff*

127E. Asian American Women. *

Examines the intersectionality of race, class, gender, and sexuality in the history and lives of Asian American women from a woman-centered perspective. Topics include immigration, work, family, identities, exploitation, and political and social activism. Students cannot receive credit for this course and History 189. (General Education Code(s): E.) *The Staff*

127K. South Asian Americans. *

Examines South Asian migration to the U.S., with specific attention to historical and political contexts of immigration and to (re)configurations of culture, politics, and identity in the South

Asian American diaspora. (General Education Code(s): E.) *The Staff*

141. The Great Book of America. *

The course will feature texts that were conceived as, or have been widely received as, expressions of themes and values that are especially or essentially American. *Moby Dick*, *Walden*, *Leaves of Grass*, and *Huckleberry Finn* are such books. *F. Robinson*

142. Melville. *

Lectures on a selection of Melville's major writings, including *Moby Dick*, *Pierre*, *The Confidence Man*, *Billy Budd*, and selected short works. Students are required to complete two critical essays. *F. Robinson*

145. Mark Twain and American Culture. *

A survey of Mark Twain's major writings with special attention to biography and historical content. The writer's status as a leading cultural spokesperson is also explored. Satisfies literature major requirement. Students cannot receive credit for this course and American Literature 120B. (General Education Code(s): TA.) *F. Robinson*

146A. U.S. History and Literature. *

Seminar on American historical fiction, including works by Hawthorne, Twain, Faulkner, Cather, Stegner, Doctorow, and Morrison, and with some attention to relevant theoretical texts. Students are required to submit two critical essays. *F. Robinson*

150. Mediating Desire. F

From a foundation in semiotics, considers the ways race and gender are constructed, understood, performed, embraced, commodified, and exploited through representations. Uses representations of, by, and for the margins to engage theories of communication, identity, and representation. Creative final projects encouraged. (Formerly Community Studies 152) (Also offered as Feminist Studies 150. Students cannot receive credit for both courses.) Enrollment restricted to sophomore, junior, and senior American studies majors or by permission of instructor. Enrollment limited to 100. (General Education Code(s): ER, E.) *M. Ochoa*

152. Gender, Folklore, and Popular Culture. *

Investigates the ways that folklore and popular culture contribute to dominant understandings of gender and sexuality as well as the ways that they might also offer possibilities for resisting and subverting such representations and constructions. *K. Lau*

157. Sexual Identities and Communities. W

Examines how gay, lesbian, bisexual, and transgendered people negotiate the intersections of their sexual and gender identities with their racial, ethnic, and class identities in the contemporary U.S. Considers the ramifications of these intersections for notions of "gay issues" and "queer communities." *The Staff*

172. Asian Americans in Film. *

Introduction to the history and relevance of film and video productions within Asian America. Explores reasons why, and ways how, Asian Americans have represented themselves through the visual medium of moving pictures. Emphasis on basic tools of film analysis and appreciation. (General Education Code(s): E.) *The Staff*

180. Special Topics in American Studies. F,W,S

Highlights important, relevant, and topical themes in American studies and society. By closely examining one topic or theme, students connect larger issues and think across areas of study. Topics include: the prison industrial complex; radical traditions in America; race and cultural exchange; and citizenship in America. May be repeated for credit. *The Staff*

188. 9/11. *

Considers the events of September 11, 2001, and the subsequent changes in U.S. society and in the country's role across the globe. Focuses on three arenas where these transformations have occurred: politics, culture, popular culture, and racial and ethnic relations. *E. Porter*

190. Senior Research Seminars. F,W,S

As a capstone, this seminar begins by reflecting on the field of American studies or on a topic that defines it. Students then develop a research project relevant to their emphasis in the major. Focus and topics vary by instructor. Satisfies American studies senior comprehensive requirement. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to American studies majors. Enrollment limited to 25. *R. Ramirez, A. Lonetree*

194. Group Tutorial. F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

195A. Senior Project. F,W,S

For students continuing work on their senior thesis. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

195B. Senior Project. F,W,S

For students continuing work on their senior thesis. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198. Independent Field Study. F,W,S

Individual study program off campus for which faculty supervision is not in person (e.g., supervision is by correspondence). Up to three such courses may be taken for credit in any one quarter. Approval of student's adviser and certification of adequate preparation required. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Various topics to be arranged. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Various topics to be arranged. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

200. Proseminar in American Studies. *

Introduces graduate students to current theories and methods in American studies, to the history of the field, and to the faculty in the department. Required introductory seminar for all students wishing to pursue a designated emphasis in American studies. Enrollment restricted to graduate students. Enrollment limited to 10. *E. Porter*

295. Directed Reading. F,W,S

Directed reading which does not involve a term paper. Designed for graduate students. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

296. Special Student Seminar. F,W,S

A seminar study group for graduate students arranged between students and faculty member. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

297. Independent Study. F,W,S

Independent study for graduate students who need to establish a research area for their thesis. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Independent thesis research for graduate students. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

*Not offered in 2011-12

[Program Description](#) | [Changes to 2010-12 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Program Description

Anthropology studies people throughout the world and through time. Because it covers a wide range of topics—physical evolution, material remains of the past, and the world that humans create through their ideas and practices in present-day societies—anthropology is an especially integrative discipline. The anthropology program at UCSC offers courses that reflect the diversity of the field.

- Cultural anthropology explores the movements of people, objects, and ideas in diverse societies, including our own. Cultural anthropology courses examine such topics as race and ethnicity, medicine, science, gender, sexuality, the environment, religion, law, popular culture, and politics.
- Archaeology uses the material evidence of human activities to understand past human lives. Archaeology at UCSC focuses on past people's interactions with one another at the local level and within their wider social and ecological contexts. Faculty research areas include the pre-colonial and early post-colonial history of East Africa and the American Southwest.
- Physical anthropology traces the human journey from its beginnings in Africa over five million years ago. Physical anthropology courses look at fossil evidence, evolutionary theory, human variation, and the behavior of primate relatives in order to analyze biological, social, and cultural changes over time.

UCSC students have the opportunity to do independent library and field research in cultural anthropology, archaeology, and physical anthropology. Laboratory courses in archaeology and physical anthropology offer practical experience in the analysis of biological and cultural materials. Students may use the social science media laboratory to develop technical and creative skills in visual and audio media. In cultural anthropology courses, students learn to carry out anthropological research through interviews, participant observation, surveys, the collection of oral histories, and the interpretation of archives.

Because anthropology is concerned with understanding human interaction, it is a useful major for anyone planning a career that involves working with people, especially those from diverse cultures. Some UCSC anthropology graduates are in social work, many are in teaching, and others pursue careers in law, city planning, politics, medicine, public health, cultural resource management, and journalism. Students intending to specialize in anthropology usually go on to graduate school because professional employment in the field almost always demands an advanced degree.

Most anthropology faculty have their offices in Social Sciences 1 Building. Social Sciences 1 also houses the Visual Culture Research Laboratory and laboratories for archaeology and physical anthropology where space is provided for laboratory and individual studies courses and for collections of mammalian skeletal material, casts of fossil hominids, ceramics, stone tools, and other archaeological artifacts.

The Anthropology Society, a campus club, is open to all students interested in anthropology. The Anthropology Colloquium showcases guest speakers and gives faculty and students an opportunity to discuss new approaches to anthropological questions. Students and faculty interested in archaeology also gather informally at the Archaeology/Physical Anthropology Forum to share information on fieldwork and employment opportunities.

Undergraduate Handbook

All undergraduate majors should obtain a copy of the Anthropology Department undergraduate handbook from the department office (361 Social Sciences I Building) or the department web site. It outlines information on department procedures and requirements, program planning, independent study, faculty interests, and campus resources for anthropology majors.

Major Requirements

The Anthropology Department urges students to seek faculty advice early in planning for the major. Faculty hold regular office hours weekly and encourage students to come in to talk about

their program or coursework. Peer advisers are also available.

To graduate with an anthropology major, students must take courses 1, 2, 3, and either course 4 or an 80s-level course as background for upper-division courses. They must take a minimum of nine upper-division courses, including at least one course selected from each of these four categories listed below. Students must also complete the Disciplinary Communication (DC) Requirement.

Anthropological Theory Courses

- 100 *History and Theory of Physical Anthropology*
- 150 *Communicating Anthropology*
- 152 *Survey of Cultural Anthropological Theory*
- 170 *History of Archaeological Theory*

Sociocultural Anthropology Courses

- 123 *Psychological Anthropology*
- 124 *Anthropology of Religion*
- 126 *Sexuality and Society in Cross-Cultural Perspective*
- 127 *Ethnographies of Capitalism*
- 128 *Contemporary American Evangelical Culture*
- 129 *Other Globalizations: Cultures and Histories of Interconnection*
- 131 *Women in Cross-Cultural Perspective*
- 132 *Photography and Anthropology*
- 133 *Narratives of the Popular*
- 134 *Medical Anthropology*
- 135A *Cities*
- 137 *Consuming Culture*
- 138 *Political Anthropology*
- 139 *Language and Culture*
- 142 *Anthropology of Law*
- 143 *Performance and Power*
- 145X *Special Topics in Socio-Cultural Anthropology*
- 146 *Anthropology and the Environment*
- 151 *Workshop in Ethnography*
- 154 *Multimedia Ethnography*
- 155 *Cultural Encounters*
- 157 *Modernity and Its Others*
- 159 *Race and Anthropology*
- 164 *Anthropology of Dance*
- 165 *Anthropological Folklore*

Ethnographic Area Studies Courses

- 130A *Peoples and Cultures of Africa*
- 130B *Brazil*
- 130C *Politics and Culture in China*
- 130E *Culture and Politics of Island Southeast Asia*
- 130F *African Diasporas in the Americas*
- 130G *Asian Americans in Ethnography and Film*
- 130H *Ethnography of Russia and Eastern Europe*

- 130I *Cultures of India*
- 130L *Ethnographies of Latin America*
- 130M *Inside Mexico*
- 130N *Native Peoples of North America*
- 130O *Postcolonial Britain and France*
- 130R *Provincializing America*
- 130T *Anthropological Approaches to Islam*
- 130X *Special Topics in Ethnography*

Physical Anthropology and Archaeology Courses

- 101 *Human Evolution*
- 102A *Human Skeletal Biology*
- 103 *Forensic Anthropology*
- 104 *Human Adaptability*
- 106 *Primate Behavior and Ecology*
- 110 *Comparative Functional Anatomy*
- 111 *Human Ecology*
- 112 *Life Cycles*
- 172 *Archaeological Research Design*
- 173 *Origins of Farming*
- 174 *Origins of Complex Societies*
- 175A *African Archaeology*
- 175B *African Archaeology: Development*
- 175C *African Diaspora Archaeology*
- 176A *North American Archeology*
- 176B *Meso-American Archaeology*
- 177 *European Conquest of the Americas*
- 178 *Historical Archaeology: A Global Perspective*
- 180 *Ceramic Analysis in Archaeology*
- 182A *Lithic Technology*
- 183 *Introduction to Quantitative Methods in Archaeology*
- 184 *Zooarchaeology*
- 185 *Osteology of Mammals, Birds, and Fish*
- 187 *Cultural Heritage in Colonial Contexts*

Exit Requirement

Students can fulfill the senior comprehensive requirement in anthropology either by passing an advanced senior seminar (194-series course, 190ABC, or 196AB), by writing an acceptable independent senior thesis, or by passing an approved graduate-level topical seminar in anthropology.

Senior seminars are small, writing-intensive classes focusing on advanced topics in anthropology. The prerequisite for admission to a senior seminar is successful completion of courses 1, 2, and 3; senior seminars are restricted to senior anthropology majors.

Students considering an independent thesis must arrange for the sponsorship and support of a faculty member before beginning research. An independent senior thesis (not written within a senior seminar) should be based on original research and reflect the student's understanding of fundamental theories and issues in anthropology. The thesis should be comparable in content, style, and length (generally 25–30 pages) to a professional journal article in its subfield.

Students who intend to satisfy the exit requirement by taking a graduate seminar must first get permission from the department. Not all graduate seminars are appropriate for fulfilling this

requirement.

All majors, including double majors, must prepare a program of study in consultation with a member of the Anthropology Department. A combined major in anthropology and Earth and planetary sciences, leading to a bachelor of arts (B.A.) degree, is also offered; for that program description, see Earth and Planetary Sciences. Students going on to graduate school should plan course schedules in close consultation with faculty advisers.

Many anthropology majors whose studies emphasize archaeology have benefited from concurrent study in the Cabrillo College Archaeological Technology Certificate Program. This vocational certification program is sponsored entirely by Cabrillo College, but credit for its summer field survey and excavation component may be transferred for credit at UCSC. Although courses in the Archaeological Technology Certificate Program do not count toward the UCSC anthropology major, students who have obtained the certificate in tandem with their bachelor's degree in anthropology have expanded their employment and advanced degree program opportunities. Students interested in exploring this possibility are encouraged to consult with UCSC archaeology faculty and to visit the program's web site at <http://www.cabrillo.edu/academics/archtech/>.

- 194A *Community*
- 194B *Chimpanzees: Biology, Behavior and Evolution*
- 194D *Tribes/Castes/Women*
- 194E *Belief*
- 194F *Memory*
- 194G *Politics and Secularism*
- 194I *Consumption and Consumerism*
- 194K *Reading Ethnographies*
- 194L *Archaeology of the African Diaspora*
- 194M *Medical Anthropology*
- 194N *Comparison of Cultures*
- 194O *Masculinities*
- 194P *Space, Place, and Culture*
- 194Q *Race, Ethnicity, Nation*
- 194R *Religion, Gender, Sexuality*
- 194S *The Anthropology of Sound*
- 194T *Poverty and Inequality*
- 194U *Environmental Anthropology: Nature, Culture, Politics*
- 194V *Picturing Cultures*
- 194W *The Anthropology of Social Movements*
- 194X *Women in Politics: A Third World Perspective*
- 194Y *Archeology of Space and Landscape*
- 194Z *Emerging Worlds*
- 196AB *Southwest American Archaeology*

Two-credit courses do not count toward the nine upper-division courses required for the major. Only one 5-credit individual studies course (197, 198, or 199) may be counted toward the nine required upper-division courses. Course 107L does not count toward the nine upper-division courses required for the major. Theory courses can only be counted toward the theory requirement or an upper-division elective.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. Anthropology's DC requirement aims especially at cultivating high-level skills in critical and ethnographic writing. To satisfy the DC requirement students must: a) complete an Anthropological Theory Course (chosen from ANTH 100, 150, 152, 170) and; b) complete a Senior Seminar or complete an Independent Senior Thesis, following the guidelines of the senior exit requirement. Please refer to the *Undergraduate Handbook* for details.

Transfer Students

If possible, transfer students should complete lower-division requirements for the major before coming to UCSC by taking classes equivalent to courses 1, 2, and 3. Department policy also allows students to petition up to 10 quarter credits (equivalent to two UCSC courses) of upper-division transfer credit toward the major requirements. Transfer students should bring an unofficial copy of all pertinent transcripts to the undergraduate adviser in the department office (361 Social Sciences 1 Building) as soon as possible after reaching campus so that prerequisites can be verified and course enrollment can proceed smoothly.

Peer Advisers

The Anthropology Department has instituted a peer adviser program as a supplement to academic advising offered by faculty members. The peer advisers are juniors and seniors who have been trained to help students with questions and general guidance through the anthropology major. Peer advisers hold regularly scheduled office hours in the department office.

Honors

The Anthropology Department awards honors in the major and highest honors in the major based on a ranked departmental grade-point average (GPA) that is calculated using all upper-division courses taken in the major with the exception that only one independent-study course can be used in this calculation. For students who have taken multiple independent-study courses in the department, the independent-study course that has the highest grade is used for the calculation. Approximately 15 percent of the graduating class is considered for honors based on their cumulative (GPA) through the quarter before graduation. The criteria for awarding highest honors in the major are overall superlative performance in the major and general breadth of excellence across the subfields of anthropology. Receiving honors on the senior exit requirement is also considered as a factor in awarding highest honors, but is not always determinative. When applicable, narrative evaluations can be taken into consideration for highest honors.

Minor Requirements

Students earn a minor in anthropology by completing all of the requirements for the major with the following differences:

The number of upper-division courses is reduced from nine to six. Of these, at least one must be from each of the following categories: 1) theory, 2) sociocultural anthropology, 3) ethnographic area studies, and 4) physical anthropology or archaeology.

Independent study courses cannot be used toward completion of the minor.

No senior seminar or thesis is required.

For more information regarding department policies, please consult the undergraduate adviser at the Anthropology Department office, 361 Social Sciences 1 Building. A handbook on the anthropology program is available there or on the anthropology web site <http://anthro.ucsc.edu/>.

Graduate Program

The anthropology doctoral program at UCSC consists of two tracks: cultural anthropology and anthropological archaeology. The majority of students are admitted to the cultural anthropology program. Smaller numbers of students are admitted to the in anthropological archaeology program. Admission of students who are interested in the physical anthropology program described below have been suspended indefinitely.

Although applicants are accepted only for the doctor of philosophy (Ph.D.) program, students may obtain a master of arts (M.A.) degree after fulfilling specific requirements during the first two years.

The theme of emerging worlds—culture and power after progress unites the research interests of many faculty in the cultural anthropology graduate program at UCSC. In recent years, anthropology's central concept of culture has been subjected to extraordinary ethnographic and theoretical pressures. Across the social sciences, scholars are responding to emergent scientific and social dilemmas by turning to the concept of culture and the ethnographic method. Such disciplinary turns grow from a challenging new set of social configurations, which affect both scholarly and lay understandings of the present, past, and future: the demise of certainties about progress and modernization and the need to understand newly emergent worlds. Nineteenth- and 20th-century ideas of progress and programs of modernization both created the concept of culture and relegated it to a nostalgic role as backward-looking sentiment. Anthropologists studied "vanishing worlds." In the last 30 years, however, such certainties have been challenged. Grand theories of human behavior that depended on the idea of a universal man have begun to fray around the edges. Heterogeneity and disjuncture have caught the attention of a wide range of social scientists, calling out for ethnographic investigation. In this context, scholarly discussions have turned toward culture, the world-making networks, geographies, innovations, meanings, and assemblages that are carrying us into the future.

Our concentration on "emerging worlds" and on the construction of anthropological knowledge is especially well suited for drawing together diverse scholars and specialists in challenging and enriching conversations. Rather than reproduce the boundaries among the traditional subfields of

anthropology, we explore how recombinations of these approaches can elucidate specific anthropological problems.

Working with their faculty advisory committee, students in cultural anthropology have considerable freedom to design their own programs of study after completing the two-quarter core course and the ethnographic practice course during the first year. To achieve Ph.D. candidacy, students are expected to pass a first-year and second-year review of their written work, take three additional 5-credit courses in anthropology (excluding independent study courses), maintain satisfactory academic progress, satisfy the ethnographic writing requirement and the foreign language requirement, pass a qualifying exam at the end of the third year, and meet the specific requirements of the Division of Graduate Studies. After advancing to Ph.D. candidacy, students carry out a sustained ethnographic fieldwork project and are expected to complete their dissertation within two years after returning from the field.

Graduate students in cultural anthropology may obtain a designated emphasis on the anthropology Ph.D. diploma indicating that they have specialized in feminist studies or Latin American and Latino studies (LALS) if they meet requirements spelled out by the individual committee composed of anthropology faculty and faculty from the program awarding the notation.

The Ph.D. program in archaeological anthropology is highly selective, focusing on the archaeology of late precolonial societies in East and West Africa and North America, especially the Southwest and California. The program also features an emerging concentration on the archaeology of colonial encounters among peoples of Europe, Africa, and the Americas. It is distinctive in insisting that theories of power, production and exchange, human ecology, gender, ethnicity, and technological practice be explored through rigorous laboratory and field research methods.

The Ph.D. program in physical anthropology combines a strong emphasis on hard and soft tissue anatomy with a broad evolutionary perspective. This highly selective track is characterized by intense mentoring of students, involvement of students in instruction as well as coursework, and interdisciplinary training. Specific training is offered in skeletal biology, comparative primate anatomy, behavior and ecology, forensic anthropology, and evolutionary theory.

Although the areas of study of the archaeological and physical anthropology programs are distinct, their paths toward the Ph.D. are similar. In the first year, students take two foundational theory courses and pass a review of their work. Within the first two years of study, students complete at least two foundational materials/methods courses or laboratory courses in other departments; two advanced laboratory apprenticeship courses or similar courses in other departments; two foundational courses in geographic/temporal areas or, in physical anthropology, topical areas; two graduate seminars with other anthropology or campus faculty; one quantitative methods course; and two terms of supervised teaching experience.

The third-year requirements are three laboratory apprenticeship courses, the grant writing seminar, and tutorials to prepare the student for the qualifying exams. All courses outside the department must be approved by the student's adviser. After advancing to Ph.D. candidacy, the student carries out a sustained laboratory or fieldwork project and is expected to complete the dissertation within a year after finishing research.

Program Description

Anthropology studies people throughout the world and through time. Because it covers a wide range of topics—physical evolution, material remains of the past, and the world that humans create through their ideas and practices in present-day societies—anthropology is an especially integrative discipline.

The anthropology program at UCSC offers courses that reflect the diversity of the field.

- Cultural anthropology explores the movements of people, objects, and ideas in diverse societies, including our own. Cultural anthropology courses examine such topics as race and ethnicity, medicine, science, gender, sexuality, the environment, religion, law, popular culture, and politics.
- Archaeology uses the material evidence of human activities to understand past human lives. Archaeology at UCSC focuses on past people's interactions with one another at the local level and within their wider social and ecological contexts. Faculty research areas include the pre-colonial and early post-colonial history of East Africa and the American Southwest.
- Physical anthropology traces the human journey from its beginnings in Africa over five million years ago. Physical anthropology courses look at fossil evidence, evolutionary theory, human variation, and the behavior of primate relatives in order to analyze biological, social, and cultural changes over time.

UCSC students have the opportunity to do independent library and field research in cultural anthropology, archaeology, and physical anthropology. Laboratory courses in archaeology and physical anthropology offer practical experience in the analysis of biological and cultural materials. Students may use the social science media laboratory to develop technical and creative skills in visual and audio media. In cultural anthropology courses, students learn to carry out anthropological research through interviews, participant observation, surveys, the collection of oral histories, and the interpretation of archives.

Because anthropology is concerned with understanding human interaction, it is a useful major for anyone planning a career that involves working with people, especially those from diverse cultures. Some UCSC anthropology graduates are in social work, many are in teaching, and others pursue careers in law, city planning, politics, medicine, public health, cultural resource management, and journalism. Students intending to specialize in anthropology usually go on to graduate school because professional employment in the field almost always demands an advanced degree.

Most anthropology faculty have their offices in Social Sciences 1 Building. Social Sciences 1 also houses the Visual Culture Research Laboratory and laboratories for archaeology and physical anthropology where space is provided for laboratory and individual studies courses and for collections of mammalian skeletal material, casts of fossil hominids, ceramics,

stone tools, and other archaeological artifacts.

The Anthropology Society, a campus club, is open to all students interested in anthropology. The Anthropology Colloquium showcases guest speakers and gives faculty and students an opportunity to discuss new approaches to anthropological questions. Students and faculty interested in archaeology also gather informally at the Archaeology/Physical Anthropology Forum to share information on fieldwork and employment opportunities.

Undergraduate Handbook

All undergraduate majors should obtain a copy of ~~the~~ Anthropology Department undergraduate handbook ~~at UCSC~~ from the department office (361 Social Sciences I Building) [or the department web site](#). It outlines information on department procedures and requirements, program planning, independent study, faculty interests, and campus resources for anthropology majors.

Major Requirements

The Anthropology Department urges students to seek faculty advice early in planning for the major. Faculty hold regular office hours weekly and encourage students to come in to talk about their program or coursework. Peer advisers are also available.

To graduate with an anthropology major, students must take courses 1, 2, 3, and either course 4 or an 80s-level course as background for upper-division courses. They must take a minimum of nine upper-division courses, including at least one course selected from each of these four categories listed below. Students must also complete the Disciplinary Communication (DC) Requirement.

Anthropological Theory Courses

- 100 History and Theory of Physical Anthropology
- 150 Communicating Anthropology
- 152 Survey of Cultural Anthropological Theory
- 170 History of Archaeological Theory

Sociocultural Anthropology Courses

- 123 Psychological Anthropology
- 124 Anthropology of Religion
- 126 Sexuality and Society in Cross-Cultural Perspective
- 127 Ethnographies of Capitalism
- 128 Contemporary American Evangelical Culture
- 129 Other Globalizations: Cultures and Histories of Interconnection
- 131 Women in Cross-Cultural Perspective
- 132 Photography and Anthropology
- 133 Narratives of the Popular
- 134 Medical Anthropology
- 135A Cities
- 137 Consuming Culture
- 138 Political Anthropology
- 139 Language and Culture
- 142 Anthropology of Law
- 143 Performance and Power

- 145X Special Topics in Socio-Cultural Anthropology
- 146 Anthropology and the Environment
- 151 Workshop in Ethnography
- 154 Multimedia Ethnography
- 155 Cultural Encounters
- 157 Modernity and Its Others
- 159 Race and Anthropology
- 164 Anthropology of Dance
- 165 Anthropological Folklore

Ethnographic Area Studies Courses

- 130A Peoples and Cultures of Africa
- 130B Brazil
- 130C Politics and Culture in China
- 130E Culture and Politics of Island Southeast Asia
- 130F African Diasporas in the Americas
- 130G Asian Americans in Ethnography and Film
- 130H Ethnography of Russia and Eastern Europe
- 130I Cultures of India
- 130L Ethnographies of Latin America
- 130M Inside Mexico
- 130N Native Peoples of North America
- 130O Postcolonial Britain and France
- 130R Provincializing America
- 130T Anthropological Approaches to Islam
- 130X Special Topics in Ethnography

Physical Anthropology and Archaeology Courses

- 101 Human Evolution
- 102A Human Skeletal Biology
- 103 Forensic Anthropology
- 104 Human Adaptability
- 106 Primate Behavior and Ecology
- ~~107- Human Functional Anatomy~~
- 110 Comparative Functional Anatomy
- 111 Human Ecology
- 112 Life Cycles
- 172 Archaeological Research Design
- 173 Origins of Farming
- 174 Origins of Complex Societies
- 175A African Archaeology
- 175B African Archaeology: Development
- 175C African Diaspora Archaeology
- 176A North American Archeology
- 176B Meso-American Archaeology
- 177 European Conquest of the Americas

- 178 Historical Archaeology: A Global Perspective
- 180 Ceramic Analysis in Archaeology
- 182A Lithic Technology
- 183 Introduction to Quantitative Methods in Archaeology
- 184 Zooarchaeology
- 185 Osteology of Mammals, Birds, and Fish
- 187 Cultural Heritage in Colonial Contexts

Exit Requirement

Students can fulfill the senior comprehensive requirement in anthropology either by passing an advanced senior seminar (194-series course, 190ABC, or 196AB), by writing an acceptable independent senior thesis, or by passing an approved graduate-level topical seminar in anthropology.

Senior seminars are small, writing-intensive classes focusing on advanced topics in anthropology. The prerequisite for admission to a senior seminar is successful completion of courses 1, 2, and 3; senior seminars are restricted to senior anthropology majors.

Students considering an independent thesis must arrange for the sponsorship and support of a faculty member before beginning research. An independent senior thesis (not written within a senior seminar) should be based on original research and reflect the student's understanding of fundamental theories and issues in anthropology. The thesis should be comparable in content, style, and length (generally 25–30 pages) to a professional journal article in its subfield.

Students who intend to satisfy the exit requirement by taking a graduate seminar must first get permission from the department. Not all graduate seminars are appropriate for fulfilling this requirement.

All majors, including double majors, must prepare a program of study in consultation with a member of the Anthropology Department. A combined major in anthropology and Earth and planetary sciences, leading to a bachelor of arts (B.A.) degree, is also offered; for that program description, see Earth and Planetary Sciences. Students going on to graduate school should plan course schedules in close consultation with faculty advisers.

Many anthropology majors whose studies emphasize archaeology have benefited from concurrent study in the Cabrillo College Archaeological Technology Certificate Program. This vocational certification program is sponsored entirely by Cabrillo College, but credit for its summer field survey and excavation component may be transferred for credit at UCSC. Although courses in the Archaeological Technology Certificate Program do not count toward the UCSC anthropology major, students who have obtained the certificate in tandem with their bachelor's degree in anthropology have expanded their employment and advanced degree program opportunities. Students interested in exploring this possibility are encouraged to consult with UCSC archaeology faculty and to visit the program's web site at <http://www.cabrillo.edu/academics/archtech/>.

~~190A Tropical Forest Ecology~~

194X Women in Politics: A Third World Perspective

194Y Archeology of Space and Landscape

194Z Emerging Worlds

196AB Southwest American Archaeology

Two-credit courses do not count toward the nine upper-division courses required for the major. Only one 5-credit individual studies course (197, 198, or 199) may be counted toward the nine required upper-division courses. Course 107L does not count toward the nine upper-division courses required for the major. Theory courses can only be counted toward the theory requirement or an upper-division elective.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. Anthropology's DC requirement aims especially at cultivating high-level skills in critical and ethnographic writing. To satisfy the DC requirement students must: a) complete an Anthropological Theory Course (chosen from ANTH 100, 150, 152, 170) and; b) complete a Senior Seminar or complete an Independent Senior Thesis, following the guidelines of the Senior Exit Requirement. Please refer to the Undergraduate Handbook for details.

~~Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. Anthropology's DC Requirement aims especially at cultivating high-level skills in critical and ethnographic writing. The DC Requirement in anthropology is under review. Please refer to updated DC information at <http://reg.ucsc.edu/catalog/html/disciplinarycommunicationchart.html>.~~

Transfer Students

If possible, transfer students should complete lower-division requirements for the major before coming to UCSC by taking classes equivalent to courses 1, 2, and 3. Department

policy also allows students to petition up to 10 quarter credits (equivalent to two UCSC courses) of upper-division transfer credit toward the major requirements. Transfer students should bring ~~a copy of their UCSC Transfer Credit Summary and~~ an unofficial copy of all pertinent transcripts to the undergraduate adviser in the department office (361 Social Sciences 1 Building) as soon as possible after reaching campus so that prerequisites can be verified and course enrollment can proceed smoothly.

Peer Advisers

The Anthropology Department has instituted a peer adviser program as a supplement to academic advising offered by faculty members. The peer advisers are juniors and seniors who have been trained to help students with questions and general guidance through the anthropology major. Peer advisers hold regularly scheduled office hours in the department office.

Honors

The Anthropology Department awards honors in the major and highest honors in the major based on a ranked departmental grade-point average (GPA) that is calculated using all upper-division courses taken in the major with the exception that only one independent-study course can be used in this calculation. For students who have taken multiple independent-study courses in the department, the independent-study course that has the highest grade is used for the calculation. Approximately 15 percent of the graduating class is considered for honors based on their cumulative (GPA) through the quarter before graduation. The criteria for awarding highest honors in the major are overall superlative performance in the major and general breadth of excellence across the subfields of anthropology. Receiving honors on the senior exit requirement is also considered as a factor in awarding highest honors, but is not always determinative. When applicable, narrative evaluations can be taken into consideration for highest honors.

~~The Anthropology Department awards "honors in the major" based on a ranked departmental grade-point average that is calculated using all upper-division courses taken in the major with the exception that only one independent-study course can be used in this calculation. For students who have taken multiple independent-study courses in the department, the independent-study course that has the highest grade is used for the calculation. Approximately 15 percent of the graduating class is considered for honors based on their cumulative grade-point average (GPA) through the quarter before graduation.~~

~~"Highest honors in the major" is determined by faculty review of all the departmental narrative evaluations for all students considered for honors within a particular quarter. The criteria for awarding highest honors in the major are overall superlative performance in the major and general breadth of excellence across the subfields of anthropology as reflected in the narrative evaluations. Receiving honors on the senior exit requirement is also considered as a factor in awarding highest honors, but is not always determinative.~~

Minor Requirements

Students earn a minor in anthropology by completing all of the requirements for the major with the following differences:

- The number of upper-division courses is reduced from nine to six. Of these, at least one must be from each of the following categories: 1) theory, 2) sociocultural anthropology, 3) ethnographic area studies, and 4) physical anthropology or archaeology.
- Independent study courses cannot be used toward completion of the minor.
- No senior seminar or thesis is required.

For more information regarding department policies, please consult the undergraduate adviser at the Anthropology Department office, 361 Social Sciences 1 Building. A handbook on the anthropology program is available there or on the anthropology web site

<http://anthro.ucsc.edu/>.

Graduate Program

The anthropology doctoral program at UCSC consists of two tracks: cultural anthropology and anthropological archaeology. The majority of students are admitted to the cultural anthropology program. Smaller numbers of students are admitted to the in anthropological archaeology program. Admission of students who are interested in the physical anthropology program described below have been suspended indefinitely.

Although applicants are accepted only for the doctor of philosophy (Ph.D.) program, students may obtain a master of arts (M.A.) degree after fulfilling specific requirements during the first two years.

The theme of emerging worlds—culture and power after progress unites the research interests of many faculty in the cultural anthropology graduate program at UCSC. In recent years, anthropology's central concept of culture has been subjected to extraordinary ethnographic and theoretical pressures. Across the social sciences, scholars are responding to emergent scientific and social dilemmas by turning to the concept of culture and the ethnographic method. Such disciplinary turns grow from a challenging new set of social configurations, which affect both scholarly and lay understandings of the present, past, and future: the demise of certainties about progress and modernization and the need to understand newly emergent worlds. Nineteenth- and 20th-century ideas of progress and programs of modernization both created the concept of culture and relegated it to a nostalgic role as backward-looking sentiment. Anthropologists studied "vanishing worlds." In the last 30 years, however, such certainties have been challenged. Grand theories of human behavior that depended on the idea of a universal man have begun to fray around the edges. Heterogeneity and disjuncture have caught the attention of a wide range of social scientists, calling out for ethnographic investigation. In this context, scholarly discussions have turned toward culture, ~~not as "tradition," but as~~ the world-making networks, geographies, innovations, meanings, and assemblages that are carrying us into the future.

Our concentration on "emerging worlds" and on the construction of anthropological knowledge is especially well suited for drawing together diverse scholars and specialists in challenging and enriching conversations. Rather than reproduce the boundaries among the traditional subfields of anthropology, we explore how recombinations of these approaches can elucidate specific anthropological problems.

Working with their faculty advisory committee, students in cultural anthropology have considerable freedom to design their own programs of study after completing the two-quarter core course and the ethnographic practice course during the first year. To achieve Ph.D. candidacy, students are expected to pass a first-year and second-year review of their written work, take three additional 5-credit courses in anthropology (excluding independent study courses), maintain satisfactory academic progress, satisfy the ethnographic writing requirement and the foreign language requirement, pass a qualifying exam at the end of the third year, and meet the specific requirements of the Division of Graduate Studies. After advancing to Ph.D. candidacy, students carry out a sustained ethnographic fieldwork project and are expected to complete their dissertation within ~~a~~ two years s after returning from the field.

Graduate students in cultural anthropology may obtain a designated emphasis ~~notation~~ on the anthropology Ph.D. diploma indicating that they have specialized in feminist studies or Latin American and Latino studies (LALS) if they meet requirements spelled out by the

individual committee composed of anthropology faculty and faculty from the program awarding the notation.

The Ph.D. program in anthropological archaeology is highly selective, focusing on the archaeology of late precolonial societies in East and West Africa and North America, especially the Southwest and California. The program also features an emerging concentration on the archaeology of colonial encounters among peoples of Europe, Africa, and the Americas . It is distinctive in insisting that theories of power, production and exchange, human ecology, gender, ethnicity, and technological practice be explored through rigorous laboratory and field research methods.

The Ph.D. program in physical anthropology combines a strong emphasis on hard and soft tissue anatomy with a broad evolutionary perspective. This highly selective track is characterized by intense mentoring of students, involvement of students in instruction as well as coursework, and interdisciplinary training. Specific training is offered in skeletal biology, comparative primate anatomy, behavior and ecology, forensic anthropology, and evolutionary theory.

Although the areas of study of the archaeology and physical anthropology programs are distinct, their paths toward the Ph.D. are similar. In the first year, students take two foundational theory courses and pass a review of their work. Within the first two years of study, students complete at least two foundational materials/methods courses or laboratory courses in other departments; two advanced laboratory apprenticeship courses or similar courses in other departments; two foundational courses in geographic/temporal areas or, in physical anthropology, topical areas; two graduate seminars with other anthropology or campus faculty; one quantitative methods course; and two terms of supervised teaching experience.

The third-year requirements are three laboratory apprenticeship courses, the grant writing seminar, and tutorials to prepare the student for the qualifying exams. All courses outside the department must be approved by the student's adviser. After advancing to Ph.D. candidacy, the student carries out a sustained laboratory or fieldwork project and is expected to complete the dissertation within a year after finishing research.

Faculty and Professional Interests

Professor

DONALD BRENNIS

Linguistic anthropology, folklore, legal anthropology, ethnomusicology, overseas Indians, South Asia, disputing and dispute management, legal language, bureaucratic institutions

NANCY N. CHEN

Medical anthropology, visual anthropology, urban anthropology, Asian American identity, mental health, food, China

MAY N. DIAZ, Emerita

SHELLY ERRINGTON

Globalization of folk art, visual and social semiotics, photography, film, the Internet and digital media, Southeast Asia, and Latin America

ALISON GALLOWAY

Skeletal biology, forensic anthropology, human variation, history and ethics of physical anthropology, reproductive energetics and aging

DIANE GIFFORD-GONZALEZ

Neolithic Africa and Eurasia, colonial New Mexico, origins of food production, pastoralists, zooarchaeology, history of archaeology, interpretive theory, visual anthropology

JUDITH A. HABICHT-MAUCHE

Precontact and early contact North America; cross-cultural interaction and trade; ceramic technology; archaeology of gender, power, and identity; Southwest and Southern Plains

SUSAN HARDING

Culture, politics, narrative, gender, local/global studies, ethnographic writing, fundamentalism, Christianity, state-making, aging, America, and Spain

DIANE K. LEWIS, Emerita

DANIEL T. LINGER, EMERITUS

CAROLYN MARTIN SHAW, EMERITA

OLGA NAJERA-RAMÍREZ

Folklore theory, ritual, festival, dance, greater Mexican culture, history and folklore, transnationalism, identity; expressive culture, ethnomusicology, bilingual communication, gender, history, and culture of Latin America, the U.S., and Mexico

TRILOKI NATH PANDEY

Native peoples of North America, cultures of India, political anthropology, anthropological theories and comparisons; native North America; tribal India; Nepal

RICHARD R. RANDOLPH, Emeritus

LISA ROFEL

Critical theory, anthropology of modernity, popular/public culture, gender and sexuality, queer theory, transnational capitalism, postcolonial and transnational feminism, China

STUART A. SCHLEGEL, Emeritus

ANNA TSING

Culture and politics; feminist theory; globalization; multi-species anthropology; social landscapes and forest ethnologies; multi-sited ethnography; Indonesia, Southeast Asia, and the U.S.

ADRIENNE L. ZIHLMAN

Primate and human evolution, comparative functional anatomy of monkeys and apes, sex and gender, growth and development, life history and evolutionary theory, history of physical

anthropology

Associate Professor

MARK ANDERSON

Racial formation, diaspora, nationalism, transnationalism, culture and power; Latin America, African diaspora

MELISSA L. CALDWELL

Poverty and welfare; charity and philanthropy; religion; the politics of food, gardens, nature, and landscapes; socialism and postsocialism; Russia, the former Soviet Union, and Eastern Europe

Danilyn Rutherford

Borders and frontiers, colonialism, nationalism, ethnicity, kinship, performance, Christianity, secularism, sovereignty, publics, affect, technology, governancy, theory and method in anthropology, West Papua, Indonesia, the U.S.

Assistant Professor

CHELSEA BLACKMORE

Pre-Columbian archaeology (Mesoamerican focus), identity formation, complex societies, class and state formation, gender, feminist/queer theory

MAYANTHI FERNANDO

Anthropology of religion, secularism, Islam, multiculturalism/pluralism; colonial and post-colonial France, Europe

ANDREW SALVADOR MATHEWS

Environmental anthropology, science and technology studies, conservation and development

J. CAMERON MONROE

Historical archaeology, complex societies, political economy, architecture and landscape, Africa and the African diaspora

MEGAN MOODIE

South Asian studies, feminist theory, reproductive and population politics, kinship, development, legal identities, tribal communities

MATTHEW WOLF-MEYER

Anthropology and history of medicine and public health, science studies, American studies, popular culture, the United States and the United Kingdom

Professor

RAOUL BIRNBAUM (History of Art and Visual Culture)

Buddhist studies, especially Chinese practices from medieval times to the present; religion and visual culture in China

JOHN BROWN CHILDS, EMERITUS (Sociology)

Ethnic conflict and transcommunal cooperation; sociology of knowledge; African American, Native American, Latino interactions

JAMES T. CLIFFORD (History of Consciousness)

History of anthropology, travel, and exoticism; transnational cultural studies, museum studies, indigenous studies

CAROLYN DEAN (History of Art and Visual Culture)

Cultural histories of the native Americas and colonial Latin America

A. RUSSELL FLEGAL (Microbiology and Environmental Toxicology)

Anthropogenic perturbations of biogeochemical cycles, applications of isotopic tracers in anthropology and archaeology

STEPHEN R. GLIESSMAN, EMERITUS (Environmental Studies)

Agroecology, sustainable agriculture, tropical land use and development, alternative trade networks, sustainable livelihoods and conservation, community and agroecology

DONNA HARAWAY (History of Consciousness and Feminist Studies)

Feminist theory, cultural and historical studies of science and technology, relation of life and human sciences, human-animal relations, and animal studies

PAUL KOCH (Earth Sciences)

Isotope biogeochemistry, vertebrate paleontology

MARC S. MANGEL (Applied Mathematics and Statistics)

Mathematical modeling of biological phenomena, especially the evolutionary ecology of growth, aging, and longevity; quantitative issues in fishery management; mathematical and computational

aspects of disease

PATRICIA ZAVELLA, EMERITA (Latin American and Latino Studies)

Chicana/Latino studies, women's work and domestic labor, poverty, family, sexuality and social networks, feminist studies, ethnographic research methods, and transnational migration of Mexicans

Associate Professor

JEFFREY BURY (Environmental Studies)

Political ecology; sustainable development; Latin American studies; international relations; institutional dimensions of natural resource conservation in the global south ; extractive industries; climate change; new models of conservation

S. RAVI RAJAN (Environmental Studies)

Environmental history and political ecology, risk and disaster studies, science and technology studies, North-South environmental conflicts, environmental social theory, environmental ethics

RENYA RAMIREZ (American Studies)

Native American studies, Indian identity, Native Americans and anthropology, urban Indians, Native American women, cultural citizenship, expressive culture, and anti-racist education

Assistant Professor

MARCIA OCHOA (Feminist Studies)

Gender and sexuality, race and ethnicity, Latina/o studies, media and cultural studies, ethnography of media, feminism, queer theory, geography, multimedia production, graphic design, colonialism and modernity, Latin American studies—Colombia and Venezuela

FLORA LU (Latin American and Latino Studies)

Ecological anthropology, human behavioral ecology, Amazon rainforest, indigenous peoples, conservation, Ecuador, culture change, market integration, indigenous resource management, political ecology, environmental justice

CECILIA RIVAS (Latin American and Latino Studies)

Salvadoran transnationalism; media (Internet newspapers; migration; globalization; race, ethnicity, and gender; bilingualism; consumption; El Salvador Central America

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses

1. Introduction to Human Evolution. F

Study of evolution illustrated by Pleistocene hominid fossils and variation in living human groups. Behavior and evolution of primates examined as they contribute to the understanding of human evolution. Required for all anthropology majors. (General Education Code(s): SI, IN.) *C. Juarez*

2. Introduction to Cultural Anthropology. S

A number of different peoples are studied and a variety of approaches to the nature of the culture and to the study of specific cultures presented. Required for all anthropology majors. (General Education Code(s): IS.) *S. Harding*

3. Introduction to Archaeology. W

Overview of ways of learning about the human past beyond the scope of written history. Reviews development of archaeology, fundamental methods and theories, and archaeology's contribution to understanding human origins, the emergence of farming, and the origins of complex societies. (General Education Code(s): SI, IS.) *J. Monroe*

4. Public Life and Contemporary Issues. W

How can cultural anthropology help us to understand current events unfolding locally, nationally, and globally? Students learn how to "read" newspapers differently—that is, through the lens of cultural analysis. The world of everyday politics and society, as it unfolds in debates happening right now, forms the topical substance of the course. (General Education Code(s): IS.) *S. Errington*

42. Student-Directed Seminar.

Seminars taught by upper-division students under faculty supervision. (See course 192.) *The Staff*

80C. Introduction to Forensic Anthropology. *

Introductory level course in basic analysis of human remains for the medico-legal profession. Course covers development of the field of forensic anthropology, introduction to human osteology, how age, sex, ancestry, and stature are determined from skeletal material, and how skeletal trauma is evaluated. (General Education Code(s): T3-Social Sciences.) *The Staff*

80G. Barrio Popular Culture. *

Introduces students to a broad sampling of verbal and nonverbal forms of Mexican folklore. Concentrates on experiencing these forms through texts, film, and if possible, performances. Attention to how these forms have been used by scholars to comment on Mexican culture is an underlying theme. Knowledge of Spanish is useful but not required. (General Education Code(s): T3-Social Sciences, E.) *O. Najera Ramirez*

80H. Acoustic Culture. *

Explores relationships between culture and the acoustic worlds, including environmental, verbal, and musical, which humans inhabit. How can paying attention to cultures of listening and sound-making help us think about cultural life and experience in new ways? (General Education Code(s): T3-Social Sciences.) *D. Brenneis*

80I. Culture and Power in Latin America. F

Introduces key issues in the anthropology of Latin America, with emphasis on identity formation, cultural practices, and power. Major themes include race, class, and gender as intersecting forms of oppression, violence, and terror and indigenous social movements. (General Education Code(s): T3-Social Sciences, E.) *G. Delgado-P*

80J. Introduction to Visual Culture. S

Introduces current issues in cultural anthropology using film as a medium with which to explore culture. Raises questions about visual representations and the portrayal of cultural difference in the context of global inequalities. (General Education Code(s): T3-Social Sciences.) *N. Chen*

80K. Culture through Food. *

Examines anthropology of food and politics of eating. Cultural and social uses of food in rituals of solidarity or fasting, identities and meanings of food for individuals, and consumption in the global context are key components of study. (General Education Code(s): T3-Social Sciences.) *N. Chen*

80L. Biology of Everyday Life. *

Addresses cross-cultural attitudes to the human body and its everyday biological concerns—sleeping, eating, breathing, sex, and defecation. (General Education Code(s): T3-Social Sciences.) *M. Wolf-Meyer*

80N. Anthropology of Globalization. *

Introduces anthropological concepts and approaches to historical and contemporary globalizations. Using ethnographies, films, and other cultural productions, raises questions about the impacts of transnational capitalism, colonialism, migration/movement, and media on "local" and "global" identities, cultures, and communities. (General Education Code(s): T3-Social Sciences.) *The Staff*

80P. India and Indian Diaspora through Films. W

Explores several themes of relevance in contemporary India and Indian diaspora, concentrating on anthropological research and various documentary and popular Bollywood films. Through films and ethnographies, students analyze the nature of anthropological contributions to the study of Indian societies. (General Education Code(s): T3-Social Sciences, E.) *A. Pandey*

80R. Religion in American Politics and Culture. W

Introduces dominant discourses about Christianity and Islam in the American public sphere, with particular attention paid to race, gender, sexuality, and class in thinking about religion. Visual and textual media, political commentary, and popular ethnographies are analyzed. (Also offered as Feminist Studies 80T. Students cannot receive credit for both courses.) *M. Fernando*

80Y. Power, Politics, and Protest. *

Examines the many ways in which organized groups engage in political protest against those whom they understand to dominate them. The course first establishes the framework for the discussion of power, politics, and protest, and then examines a variety of forms taken by political protests worldwide. (General Education Code(s): T3-Social Sciences.) *The Staff*

80Z. The Good Life. *

Examines cultural constructions of meaningful living, with emphasis on ethnographic analysis, through comparative studies of how societies assign value to different formations of everyday life. Topics include: cultivation of taste; pleasure; hierarchies of values; social justice; and distinctions between work and leisure. (General Education Code(s): T3-Social Sciences.) *M. Caldwell*

81A. Mexican Folklórico Dance (2 credits). F

Provides instruction in the aesthetic, cultural, and historical dimensions of Mexican folklórico dance. Students taught choreographed dances from various regions of Mexico and also learn dance techniques (técnica) and stage make-up application. Additional workshops and lectures offered to supplement class. Open to all students; no previous experience required. (Also offered as Latin American and Latino Studies 81A. Students cannot receive credit for both courses.) May be repeated for credit. (General Education Code(s): PR-C, A.) *O. Najera Ramirez*

81B. Mexican Folklórico Dance (2 credits). W

Second course in series. Provides instruction in the aesthetic, cultural, and historical dimensions of Mexican folklórico dance. (Also offered as Latin American and Latino Studies 81B. Students cannot receive credit for both courses.) May be repeated for credit. (General Education Code(s): PR-C, A.) *O. Najera Ramirez*

81C. Mexican Folklórico Dance (2 credits). S

Third course in series. Provides instruction in the aesthetic, cultural, and historical dimensions of Mexican folklórico dance. (Also offered as Latin American and Latino Studies 81C. Students cannot receive credit for both courses.) Prerequisite(s): course 81A or 81B. May be repeated for credit. (General Education Code(s): PR-C, A.) *O. Najera Ramirez*

81J. Introduction to Visual Culture Lab (2 credits). S

Optional digital photography lab. Students learn to compose shots, download photos, resize them, and put them into a meaningful sequence. Concurrent enrollment in Anthropology 80J required. Enrollment limited to 36. *N. Chen*

93. Field Study. F,W,S

Supervised research or organized projects on anthropological topics for lower-division students. Conducted either on or off campus. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses

100. History and Theory of Physical Anthropology. S

Provides an historical overview from the 18th century to the present of race, ape-human relationships, and human nature. Emergence of an evolutionary framework and of fossil, genetic, and primate information becomes the basis for reformulating ideas about human biology within anthropology. Prerequisite(s): courses 1, 2, and 3 and satisfaction of the Entry Level Writing and Composition requirements. *A. Zihlman*

101. Human Evolution. F

Study of human evolution covering the last five million years. Examines the fossil evidence and

emphasizes the reconstruction of behavior from the paleontological and anatomical evidence. Prerequisite(s): course 1. Offered in alternate academic years. *A. Zihlman*

102A. Human Skeletal Biology. F

Presents basic human osteology allowing students to identify skeletal material by element. Emphasizes the dynamic nature of bone by integrating anatomy with a discussion of bone physiology within the context of the human life cycle. Prerequisite(s): course 1. Enrollment limited to 16. *C. Juarez*

103. Forensic Anthropology. S

Covers the basic analysis of human skeletal remains for the medicolegal profession. Assessment of age, sex, ancestry, and general physical characteristics, trauma, and disease are discussed. Legal responsibilities of the anthropologist are addressed. Prerequisite(s): course 1. Enrollment restricted to juniors and seniors. *C. Juarez*

104. Human Adaptability. S

Explores the major environmental factors (temperature, altitude, diet, and disease); how they are perceived by the human body; the physiological, micro- and macroanatomical responses; and how behavior and culture can modify the impact of these stresses. Course 1 is highly recommended as preparation. *C. Juarez*

105. Human Paleopathology. W

Examines paleopathology beginning with ancient hominid populations and proceeding to modern populations. Uses both the skeletal evidence and historical documentation when available. Considers evolutionary, cultural, and biological factors. Topics include: osteological diagnosis of infectious disease; trauma; nutritional deficiencies; dental disease; and developmental defects. Prerequisite(s): course 1; course 102A recommended. *C. Juarez*

106. Primate Behavior and Ecology. W

The nature of primate social systems and social bonds is examined in the light of evolutionary and ecological concepts. Students cannot receive credit for this course and course 206. Prerequisite(s): course 1. *A. Zihlman*

111. Human Ecology. *

Reviews the environmental, physiological, behavioral, and cultural ways that humans interact with their physical surroundings. The effects of human culture on the environment and of the environment on the shape of human culture is emphasized. *The Staff*

112. Life Cycles. *

Examines the human life cycle using an evolutionary framework. Examines key aspects of the human life stages using findings and concepts from developmental biology, physiology, nutrition, evolutionary ecology, and life-history theory. Prerequisite(s): course 1. *The Staff*

113. Tutoring Writing in Anthropology (2 credits). S

Trains students to tutor writing in undergraduate anthropology courses; supports and guides them during the quarter they are tutoring. Enrollment by interview only. Prerequisite(s): satisfaction of the Composition requirement. *J. Todd*

119. Indigenous Visual Culture. W

Examines the relationship between visual cultures and indigenous peoples. First, class discusses what is visual anthropology. Second, class examines the relationship between museums and indigenous peoples. Third, class examines ethnographic photography and indigenous uses of photography. Fourth, class examines the uses of ethnographic film, and then its relationship to indigenous peoples. Finally, class examines indigenous uses of film. *R. Ramirez*

120. Culture in Film. *

Introduces current and historical issues in visual anthropology, using film as a medium with which to represent culture. Raises questions about visual representation and advocacy in the context of global inequalities. Prerequisite(s): course 2 or 80J or Film 20A or 20B, or History of Art and Visual Culture 10D, 10E, 10F or 10G. (General Education Code(s): IM.) *S. Errington*

120L. Culture in Film Laboratory (2 credits). *

This lab in video production is to train students in *Culture in Film*. The video lab, through lectures, demonstrations, hands-on instruction, and review of students' work will enable students enrolled in *Culture in Film* to learn the fundamentals of film/video pre-production, production, and post-production skills. Portfolio review prior to enrollment and concurrent enrollment in course 120 required. Enrollment limited to 15. *The Staff*

121. Socialism. *

Ethnography-based course that examines the social worlds of socialism, with particular focus on state socialism. Topics include: social problems that inspired socialist movements; implementation and experience of socialism in daily life; and significance of class, race, nation, science, technology, rationality. *M. Caldwell*

122. Postsocialism. *

Examines the demise of socialist systems. Addresses the political, social, cultural, and economic experiences of everyday life that led to that demise, what new social inequalities have arisen since, and how citizens use the socialist past to critique the present. *L. Rofel*

123. Psychological Anthropology. S

An introduction to some of the central theoretical issues in psychological anthropology. Psychoanalytic, cognitive, and relativist perspectives on the link between person and society are discussed and compared. Prerequisite(s): course 2. *D. Linger*

124. Anthropology of Religion. F

Study of the phenomenon of religion as manifested in ethnographic literature, with special attention to traditional and recent modes of analysis of religious behavior. Special topics include myth, religious healing, witchcraft and sorcery, ritual, and millenarian movements. *A. Pandey*

126. Sexuality and Society in Cross-Cultural Perspective. *

The meaning and social processes associated with sexuality in selected societies. Examination of variations in sexual expressions and control of sexuality, and in economic and political organizations, highlights the interrelationship of sex and society. Prerequisite(s): course 2. *C. Shaw*

127. Ethnographies of Capitalism. W

Challenges approaches to capitalism that treat it as socioeconomic relations separable from "culture." Readings include ethnographies demonstrating the inextricability of cultural meanings from capitalist practices. Topics include capitalism's relationship to colonialism, nationalism, socialism, gender, and the commodification of aesthetics. *L. Rofel*

128. Contemporary American Evangelical Cultures. W

Study of contemporary, American, born-again Protestant discourse using ethnographic materials and interpretive theories. Topics include biblical literalism, Christian conversion and self-fabulation, charismatic gifts, preaching, sacrificial giving, prosperity theology, apocalypticism, creationism, pro-family and pro-life rhetoric, and televangelism. (Formerly *Born-Again Religion and Culture*.) *S. Harding*

129. Other Globalizations: Cultures and Histories of Interconnection. *

The history of social and cultural interconnections at a global scale. Anthropological approaches to the study of cultural encounter are used to investigate topics such as trade, religion, and citizenship and to evaluate shifting concepts of civilization and barbarism. Prerequisite(s): course 2. *A. Tsing*

130. Ethnographic Area Studies.

The Staff

130A. Peoples and Cultures of Africa. *

Survey of sub-Saharan societies. Analysis of principles of social organization and factors of cultural unity of selected western, eastern, central, and southern African peoples. (General Education Code(s): CC, E.) *C. Shaw*

130B. Brazil. W

Examines Brazilian culture and its link to interpersonal relationships, religion, politics, and psychological experience. Prerequisite(s): course 2. (General Education Code(s): CC, E.) *D. Linger*

130C. Politics and Culture in China. *

Joins substantive information "about" Chinese society and culture with debates in social theory and rethinks conventional wisdom about colonialism and modernity. Topics include representations of "Chineseness," class revolution, Chinese diaspora, popular culture, family and kinship, nationalism, history/memory, race and gender. (General Education Code(s): CC, E.) *N. Chen*

130E. Culture and Politics of Island Southeast Asia. *

Southeast Asia includes a variety of societies exhibiting many ecological adaptations, religions, marriage systems, and experiences with colonial powers. Case studies of particular societies, chosen to reveal variety, are examined comparatively. Emphasis on religion and social organization. Prerequisite(s): course 2. (General Education Code(s): CC, E.) *D. Rutherford*

130F. African Diasporas in the Americas. *

Focuses on African diasporas of the Caribbean, United States, and Latin America. Themes include: theorizing diaspora, historical formations, slavery, analytical approaches to cultures of the African diaspora, religion, music, comparative identity formation and racism, gender dynamics, social movements, and transnationalism. (General Education Code(s): CC, E.) *M. Anderson*

130G. Asian Americans in Ethnography and Film. F

Critically examines category of Asian Americans. Addresses historic representations of Asians and Asian Americans in ethnographic research and film. Explores contemporary issues of race, culture, and politics through ethnographic practice and cultural production. (General Education Code(s): E.) *N. Chen*

130H. Ethnography of Russia and Eastern Europe. *

Introduces students to the ethnography of Eurasia, with special attention to the lived experience and legacy of state socialism in this region. Topics include new ideas of personhood, changing economic practices, public health, and international development. (General Education Code(s): CC, E.) *M. Caldwell*

130I. Cultures of India. W

An examination of anthropological studies of tribal, rural, and urban cultures of India and a look at changes taking place in India. Prerequisite(s): course 2. Offered in alternate academic years.

(General Education Code(s): CC, E.) *T. Pandey*

130J. Politics and Statemaking in Latin America. F

Introduction to ethnohistory and political anthropology of one or more Latin American countries: Typically Mexico and one other country. Students explore how contested concepts such as indigeneity, nation or state come to gain credibility and are deployed in contemporary politics. (General Education Code(s): CC.) *A. Mathews*

130L. Ethnographies of Latin America. *

A broad introduction to issues and areas of cultural production and transformation in the Caribbean, Mexico, and Central and South America. Colonial, neocolonial, class, ethnic, gender, religious, ecological, and political relations intersect as represented in ethnographies and film. Prerequisite(s): course 2. (General Education Code(s): CC, E.) *The Staff*

130M. Inside Mexico. *

Examines various communities within the Republic of Mexico as represented in ethnographic texts and other forms of cultural production, particularly music and dance. Emphasis on the interplay between the concept of regionalism and national identity. Previous course work in Mexican culture and/or history strongly recommended. Some reading in Spanish is required. (General Education Code(s): CC, E.) *O. Najera Ramirez*

130N. Native Peoples of North America. F

A survey of Native American cultures and experience during the past century, with emphasis on Pueblo cultures of the American Southwest. (General Education Code(s): ER, E.) *T. Pandey*

130O. Postcolonial Britain and France. *

Examines politics and culture of postcolonial Britain and France. Topics include: immigration from South Asia and North Africa; racism and anti-racism; minority difference and citizenship practices, with special attention to Muslim minorities. Readings include social theory, ethnographies, novels, and films. (General Education Code(s): CC, E.) *M. Fernando*

130T. Religion and Politics in the Muslim World. F

Analyzes post-colonial forms of Islam, with particular attention to Muslim societies and cultures in the Middle East, North Africa, and Europe. Emphasizes the relationship between power, knowledge, and representation in anthropological approaches to Islam and Muslims. (Formerly Anthropological Approaches to Islam.) (General Education Code(s): CC, E.) *M. Fernando*

130U. Central America. *

Draws on political, economic, and anthropological perspectives to analyze the key role of transnationalism and neoliberalism in contemporary Central America. Key topics include: the aftermath of revolutions; labor and gender; indigenous movements and multiculturalism; and transnational migration and governance. *M. Anderson*

130X. Special Topics in Ethnography. F,W,S

This course on special topics in ethnography will be taught on a rotating basis by various faculty members. Precise focus of each year's courses will vary according to the instructor and will be announced by the department. May be repeated for credit. *The Staff*

131. Women in Cross-Cultural Perspective. F

Examines the diversity of women's as well as men's roles, experiences, and self-conceptions in a number of societies to explore how women and men shape, and are shaped by, particular forms of social life. Prerequisite(s): course 2. Offered in alternate academic years. *R. Ramirez*

131H. Russian-Language Readings Course: Readings in Anthropology of Russia (2 credits). *

Contemporary topics and readings in anthropology of Russia and the former Soviet Union. All readings, films, and other materials are in Russian. Discussions are in English. Accompanies course 130H, Ethnography of Russia and Eastern Europe. Prerequisite(s): course 130H and proof of Russian proficiency in reading and writing. Enrollment by permission of instructor. Enrollment limited to 10. *M. Caldwell*

133. Narratives of the Popular. *

Addresses the increasing importance of popular culture as the terrain upon which to address issues of culture and power. Emphasizes an ethnographic approach to popular culture as sociocultural phenomena. Students learn about a variety of activities including television and film viewing, music, fashion, photography, postcards, comic books, and urban spatial relations and architecture. Offered in alternate academic years. *The Staff*

134. Medical Anthropology: An Introduction. F

Cross-cultural study of health, disease, and illness behavior from ecological and ethnomedical perspectives. Implications for biomedical health care policy. Students cannot receive credit for this course and course 254. Prerequisite(s): course 2. *M. Wolf-Meyer*

135A. Cities. *

Examines cities from an anthropological perspective. Reviews pertinent social scientific literature of the 19th and early 20th centuries. Surveys the concepts and methods used by contemporary anthropologists to investigate urban phenomena. *The Staff*

136. The Biology of Everyday Life. *

Addresses cross-cultural attitudes to the human body and its everyday biological concerns: sleeping, eating, breathing, sex, and defecation. Prerequisite(s): course 2. *M. Wolf-Meyer*

137. Consuming Culture. *

Explores consumption as a cultural form. Beginning with theories of capitalism and exchange, it then focuses on sites and modes of consumption and display such as department stores, museums and zoos, advertisements and photography, cultural tourism. *M. Caldwell*

138. Political Anthropology. *

The ideas, in selected non-Western societies, about the nature of power, order, social cohesion, and the political organization of these societies. (Also offered as Legal Studies 138. Students cannot receive credit for both courses.) Offered in alternate academic years. *T. Pandey*

139. Language and Culture. *

Examination of language system and language use in relationship to cultural contexts of communication in Western and non-Western societies. Topics include the Sapir-Whorf linguistic relativity hypothesis; linguistic constructions of gender; speech variation in relation to class, ethnicity, and national identity; and the emergence of self in communicative acts. Prerequisite(s): course 2. *D. Brenneis*

142. Anthropology of Law. F

An ethnographically informed consideration of law, dispute management, and social control in a range of societies including the contemporary U.S. Topics include conflict management processes, theories of justice, legal discourse, and relations among local, national, and transnational legal systems. (Also offered as Legal Studies 142. Students cannot receive credit for both courses.) Enrollment restricted to anthropology and legal studies majors. *D. Brenneis*

143. Performance and Power. W

Explores relationships between power and performance forms and media, both "traditional" and emergent. Links aesthetics with politics, and recent transcultural exchanges with local circumstances and consequences. Prerequisite(s): course 2 or any other Anthropology course. *D. Brenneis*

144. Anthropology of Poverty and Welfare. *

Examines phenomena of poverty and welfare in cross-cultural perspective with an emphasis on critical ethnographies and social analyses of social pathologies, economic systems, and community. Topics include informal economies, labor, household systems, social-support networks, and public policies. *M. Caldwell*

145X. Special Topics in Socio-Cultural Anthropology. F,W,S

Taught annually on a rotating basis by faculty members. Each year's topic varies by instructor and is announced by the department. May be repeated for credit. *The Staff*

146. Anthropology and the Environment. W

Examines recent approaches to study of nature and the environment. Considers historical relationship between nature, science, and colonial expansion as well as key issues of contemporary environmental concern: conservation, environmental justice, and social movements. Prerequisite(s): course 2. (General Education Code(s): PE-E.) *A. Tsing*

148. Gender and Development. W

Uses the critical tools of feminist theory and cultural anthropology to look at how global development discourses and institutions mobilize, reinforce, and challenge systems of gender-based inequality. Topics include non-governmental organizations (NGOs), development practice, microcredit, and technocrat cultures. (Also offered as Feminist Studies 148. Students cannot receive credit for both courses.) *M. Moodie*

150. Communicating Anthropology. F

Encourages anthropology majors to explore different means of communicating anthropology with much attention to individual writing and presentation skills. Intensive work on library research; recognizing, comparing, and making arguments; and analyzing ethnographies, articles, reviews, and films. Prerequisite(s): two of the following courses: 1, 2, or 3; satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to sophomore and junior anthropology majors. (General Education Code(s): W.) *L. Rofel*

151. Workshop in Ethnography. S

Through demonstration, practice, and participation, acquire skills in collecting and analyzing cultural data. Work with members of other cultures and with each other to learn to identify significant cultural patterns. Lectures and readings provide added perspective and a theoretical base. Prerequisite(s): course 2. Enrollment limited to 20. *M. Wolf-Meyer*

152. Survey of Cultural Anthropological Theory. W

Major figures, ideas, and writings in 19th- and 20th-century cultural anthropology surveyed. Prerequisite(s): course 2 and satisfaction of the Entry Level Writing and Composition requirements; enrollment restricted to anthropology majors. (General Education Code(s): W.) *M. Anderson*

153. Medicine and Colonialism. *

Addresses the overlapping relationship between medicine and colonialism in the 19th century, with attention to post-colonial theory and contemporary studies of post-colonial medical pluralism in the 20th century. Prerequisite(s): courses 2 and 134. *M. Wolf-Meyer*

154. Multimedia Ethnography. F

Students learn the fundamentals of photography or video production and audio recording in order to create mini-ethnographies. Prerequisite(s): courses 1, 2, and 3. Concurrent enrollment in course 154L is required. Enrollment restricted to anthropology majors. Enrollment limited to 40. (General Education Code(s): PR-C.) *S. Errington*

154L. Multimedia Laboratory (2 credits). F

Designed to instruct in aesthetics and technical production of a short digital slideshow. Using iMovie3 editing program, produce a digital slideshow incorporating sound (narration, music, and sound effects) and still images. Concurrent enrollment in course 154 required. Enrollment limited to 12. *S. Errington*

157. Modernity and Its Others. *

Beginning with the conquest of the Americas, considers how Western thinkers have explained seemingly "irrational" ways of being and thinking (like witchcraft, human sacrifice, and bodily mutilation), and asks how we interpret beliefs and practices radically different from our own. *M. Fernando*

158. Feminist Ethnographies. S

Considers the relationship between anthropology and feminism. Provides historical perspective on gender inequalities in the discipline as well as the emergence of feminist anthropology. Students read and engage with examples of feminist ethnography from a variety of regions and subfields. *M. Moodie*

159. Race and Anthropology. *

Examines concept of race in anthropology. Begins with histories of race in anthropology; turns to contemporary analysis of racism, identity formation, and diaspora; and concludes with current debates on the validity of "race" as an object of analysis. (General Education Code(s): ER.) *M. Anderson*

160. Reproductive and Population Politics. *

Examines reproductive and population politics across the globe, with a focus on feminist and ethnographic analyses of the stakes of various actors, from states to religious bodies to non-governmental organizations, in questions of who reproduces and in what circumstances. *M. Moodie*

162. Anthropology of Displaced Persons. *

Examines the causes, consequences, forms, and experiences of human movement, displacement, and abandonment. Topics include: migration, refugees, forced displacement, environmental displacement, tourism, transnational communities, and other displaced populations. *M. Caldwell*

163. Kinship. S

Provides a critical survey of debates, old and new, in the study of kinship. Readings range from classical treatments to recent reformulations that use kinship as a lens for exploring intimacy, memory, futurity, embodiment, commodification, and power. Students cannot receive credit for this course and course 263. *D. Rutherford*

166. States, Bureaucracies , and Other Cosmological Propositions. S

Investigates the cosmologies of states and bureaucracies and the practices through which officials or rulers seek to produce order, knowledge, or stability. Looks at paperwork, nationalist and court rituals, practices of mapping and classification, forms of citizenship. *A. Mathews*

170. History of Archaeological Theory. F

Historical review of prehistoric archaeology from antiquarianism to the present. Emphasis on development of archaeological theory and its relation to evolutionary and anthropological theory. Students cannot receive credit for this course and course 270. Prerequisite(s): course 3; satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to anthropology and Earth sciences/anthropology combined majors. Recommended for juniors. (General Education Code(s): W.) *J. Habicht Mauche*

172. Archaeological Research Design. W

Introduces theories and methods for recovering and analyzing archaeological data. Critically explores the nature of archaeological evidence and how archaeologists know what they know. Strongly recommended for those contemplating further studies in archaeology. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, course 3, and one upper-division archaeology course. Strongly recommended for those contemplating further studies in archaeology. Enrollment limited to 25. Offered in alternate academic years. (General Education Code(s): W.) *C. Blackmore*

173. Origins of Farming. *

Survey of the ecological and archaeological evidence for the origins of plant and animal domestication in Africa, Eurasia, and the Americas. Discussion will center on the preconditions of this drastic alteration in human ecology and its consequences in transforming human societies. Open to nonmajors. Students cannot receive credit for this course and course 273. Offered in alternate academic years. *D. Gifford-Gonzalez*

174. Origins of Complex Societies. W

Deals with evidence and theories concerning the origins of complex society; the transition from egalitarian, foraging societies to the hierarchical, economically specialized societies often referred

to as "civilizations." Focuses on both Old World and New World cultures. Prerequisite(s): course 3. *C. Blackmore*

175A. African Archaeology: 2.5 Million BP to Farming. W

Archaeological history of Africa from the first 2.5 million-year-old artifacts to the emergence of African pastoralism and farming. Disciplinary models and assumptions critically examined in their historic and political contexts. Students cannot receive credit for this course and course 275A. (Formerly *African Archaeology*.) Prerequisite(s): course 3 or by permission of instructor. Enrollment restricted to junior and senior anthropology and Earth sciences/anthropology combined majors. Enrollment limited to 45. *D. Gifford-Gonzalez*

175B. African Complex Societies. S

Introduces the evolution of African kingdoms and states from the emergence of farming communities to initial contact with Europe. Particular attention paid to the origins of social inequality and the evolution of centralized polities. Students cannot receive credit for this course and Anthropology 275B. Prerequisite(s): course 3; course 175A strong recommended. *J. Monroe*

176A. North American Archaeology. W

Development of Native cultures in North America. Topics include peopling of the New World, early foragers, spread of agriculture and complex societies in the Southwest and Eastern Woodlands, and review of cultural developments in the West and Far North. Prerequisite(s): course 3 or consent of instructor. *J. Habicht Mauche*

176B. Meso-American Archaeology. F

Review of the archaeological and ethnohistorical evidence for the origins and development of pre-Columbian civilizations in Meso-America including the Olmec, Maya, Zapotec, Mixtec Teotihuacan, Toltec, Tarascan, and Aztec. Prerequisite(s): course 3. *C. Blackmore*

177. European Conquest of the Americas. *

Uses ethnographic, archaeological, and historical sources to examine the clash of cultures between Native Americans and Europeans during the 15th through 19th centuries. Focuses on the social, political, and demographic impacts of contact on Native American societies. Prerequisite(s): courses 2 and 3. Enrollment limited to 34. *J. Habicht Mauche*

178. Historical Archaeology: A Global Perspective. F

Introduces archaeology of European colonialism and the early-modern world. Topics include historical archaeological methods; the nature of European colonial expansion in New and Old Worlds; culture contact and change; and power and resistance in colonial societies. Students cannot receive credit for this course and Anthropology 278. Prerequisite(s): course 3 or consent of instructor. *J. Monroe*

180. Ceramic Analysis in Archaeology. S

Focuses on theories and techniques used by archaeologists to bridge the gap between the recovery of ceramic materials and their interpretation within cultural contexts. Topics include the origins of pottery, production methods, classification and typology, seriation, functional analysis, materials analysis and description, organization of production, trade, and the analysis of style. Students are billed a \$25 materials fee. Students cannot receive credit for this course and course 280. Prerequisite(s): course 3. Concurrent enrollment in course 180L required. Enrollment restricted to anthropology majors. *J. Habicht Mauche*

180L. Ceramic Analysis Laboratory (2 credits). S

Practicum in ceramic materials analysis and description. Students perform material experiments in materials selection and processing, hand-building techniques, and open-pit firing. Demonstrations of standard techniques of attribute analysis and the mineralogical and chemical characterization of ceramic materials are presented. Students cannot receive credit for this course and course 280L. Prerequisite(s): course 3. Concurrent enrollment in course 180 required. Enrollment restricted to anthropology majors. Enrollment limited to 16. *J. Habicht Mauche*

182A. Lithic Technology. *

Introduction to lithic and ceramic analysis in archaeology. Includes lab analysis, discussions of classification and typology, and exploration of the concept of style as it relates to ceramics and lithics in archaeology. Prerequisite(s): course 3. Enrollment limited to 20. *The Staff*

184. Zooarchaeology. *

Lectures and seminar on archaeological faunal analysis. Topics include mammalian evolution and osteology, vertebrate taphonomy, reconstruction of human diet from faunal remains, foraging strategy theory, data collection and management, and methods of quantitative analysis. Students cannot receive credit for this course and course 284. Prerequisite(s): course 3. Offered in alternate academic years. *D. Gifford-Gonzalez*

185. Osteology of Mammals, Birds, and Fish. *

Practicum in archaeological faunal analysis. Students learn to identify bones of all larger mammal species of central California plus selected bird and fish species. Students cannot receive credit for this course and course 285. Prerequisite(s): courses 184 or 102 or Biology 138/L or Earth Sciences 100 or Environmental Studies 105/L, and permission of instructor. Enrollment limited to 16. Offered in alternate academic years. *D. Gifford-Gonzalez*

187. Cultural Heritage in Colonial Contexts. S

Critical examination of the definitions of "cultural heritage," its development as a concept, and the

various laws, charters, and conventions that shape our management of the past in the present. The focus is on heritage in comparative colonial contexts. *J. Daehnke*

192. Directed Student Teaching. F,W,S

Teaching of a lower-division seminar under faculty supervision. (See course 42.) Students submit petition to sponsoring agency. *The Staff*

193. Field Study. F,W,S

Students submit petition to sponsoring agency. *The Staff*

194. Senior Seminar.

The Staff

194A. Anthropology of Dead Persons. W

Explores the cultural meanings of dead bodies and dead persons, including memorialization; the body in the United States legal system; cadavers in education and research; dead persons in mass disasters and human-rights cases; and repatriation of the dead. Prerequisite(s): Satisfaction of the Entry Level Writing and Composition requirements, and courses 1, 2, and 3. Enrollment restricted to senior anthropology majors. Enrollment limited to 16. *A. Galloway, D. Gifford-Gonzalez*

194B. Chimpanzees: Biology, Behavior, and Evolution. W

Explores studies on wild and captive chimpanzees with reference to other apes and humans. Topics include sociality, tool using, locomotion, traditions, and life history; social and physical dimensions of growth and development; language studies, genetics, and applications to human evolution. Prerequisite(s): courses 1, 2, and 3; satisfaction of the Entry Level Writing and Composition requirement. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *A. Zihlman*

194D. Tribes/Castes/Women. *

Examines historical constructions and contemporary deployments of the categories that have structured popular and anthropological understandings of social life in South Asia, particularly those of "tribe," "caste," and "women." Students gain familiarity with the mobilization of these categories in contemporary political movements across India. Prerequisite(s): courses 1, 2, and 3. Satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *M. Moodie*

194E. Belief. *

Focuses on problems and opportunities raised by the concept of belief. Students work to develop an anthropological understanding of belief as practiced, then put it to use in analyzing episodes from the NPR series "This I Believe." Prerequisite(s): courses 1, 2, and 3 and satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to senior anthropology majors. Enrollment limited to 16. (General Education Code(s): W.) *D. Rutherford*

194F. Memory. S

Intensive and fast-paced seminar focusing on theoretical and ethnographic studies of memory as a means for dealing with the past. Examines how ordinary people and societies have coped with the past through acts of selective remembering and forgetting. Prerequisite(s): courses 1, 2, and 3; satisfaction of the Entry Level Writing and Composition requirement. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *M. Caldwell*

194G. Politics and Secularism. *

Examines secularism as political doctrine and practice of government. Topics include: transformation of religion by secularization; forms of inclusion/exclusion enacted by secularism; relationship between secularism and colonial rule. Case studies drawn from Europe, South Asia, United States, and the Middle East. Prerequisite(s): courses 1, 2, and 3, and satisfaction of the Entry Level Writing and Composition requirements; enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *M. Fernando*

194H. Paleoanthropology. *

Detailed overview of the evidence for the origin and evolution of humans with emphasis on reconstructing the paleobiology of extinct hominids. Discussion of individual groups of ancient hominids from the Miocene apes to anatomically modern humans. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 1, 2, and 3. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *The Staff*

194I. Consumption and Consumerism. *

Investigates cultural analysis of consumer society, commodities, and consumer practices. Students develop their own research projects. Themes include: critiques of consumer society; symbolic analysis of goods, consumption as resistance, anthropologies of marketing, culture jamming; consumption and (post) colonialism. Prerequisite(s): courses 1, 2, and 3; satisfaction of the Entry Level Writing and Composition requirement. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *M. Anderson*

194K. Reading Ethnographies. *

Explores issues in the representation of culture through reading and discussing ethnographies. Recent experimental ethnographies open topics including the relation between fieldwork and writing, textual strategies, and the politics of ethnographic writing and research. Prerequisite(s): courses 1, 2, and 3; satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education

Code(s): W.) *S. Harding*

194L. Archaeology of the African Diaspora. *

Senior seminar on African diaspora archaeology. Draws on archaeological, historical, and anthropological perspectives to examine the cultural, social, economic, and political lives of Africans and their descendants in the New World and West Africa from the 15th through 19th centuries. Prerequisite(s): courses 1, 2, 3 and an upper division course in archaeology; satisfaction of the Entry Level Writing and Composition requirement. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *J. Monroe*

194M. Medical Anthropology. W

Focuses on critical issues in the social sciences of health and healing. Designed for students pursuing graduate work in medical anthropology and/or public health. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 1, 2, 3, and 134. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *N. Chen*

194N. Comparison of Cultures. W

Seminar for upper-division students interested in theories and methodology of social and cultural anthropology. Devoted to critical discussion of different methods of comparison practiced in anthropology. Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements; courses 1, 2, and 3. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *T. Pandey*

194O. Masculinities. S

Considers the social construction of men and masculinities in a variety of ethnohistorical contexts as well as the unique contribution enabled by anthropological methods, particularly ethnographic fieldwork, to the study of gender and power. Prerequisite(s): courses 1, 2, and 3 and satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to senior anthropology majors. Enrollment limited to 16. (General Education Code(s): W.) *M. Moodie*

194P. Space, Place, and Culture. *

Examines ways anthropologists have studied relationship between space, place, and culture. Covers early formulations acknowledging people in different cultural contexts ascribe particular meanings to places and to the concept of space and then traces the ways these questions have come to the fore in more recent scholarship. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *M. Wolf-Meyer*

194Q. Race, Ethnicity, Nation. *

Provides students with theoretical and methodological approaches to studying the relationships between race, ethnicity, and nation, with a comparative focus on the United States, Latin America, and Europe. Students use ethnographic methods and/or discourse analysis to develop individual research projects. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and courses 1 and 2 and 3. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *M. Anderson*

194R. Religion, Gender, Sexuality. F

Examines religion in relation to gender and sexuality. Examines how gender, sexuality, and religion intersect in notions of civilization, progress, and modernity in the contemporary and colonial periods. Particular attention paid to Islam, Christianity, and Hinduism. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and courses 1 and 2 and 3. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *M. Fernando*

194S. Hearing Culture: The Anthropology of Sound. F

Explores relationships between culture and acoustic worlds—environmental, verbal, and musical—within which we live. How sound is shaped by human belief and practice and the role sound plays in cultural and social life, both past and present. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 1, 2, and 3. Enrollment restricted to senior anthropology majors. Enrollment limited to 15. (General Education Code(s): W.) *D. Brenneis*

194T. Poverty and Inequality. *

Through ethnographies about homelessness, food deprivation, and unemployment, examines the institutions through which poverty is recognized, the systems of morality shaping debates about need and appropriate behavior, and the effects of community responses to poverty. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 1, 2, and 3. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *M. Caldwell*

194U. Environmental Anthropology: Nature, Culture, Politics. S

Presents key readings in environmental anthropology focusing on environmental conflicts. Students guided in developing research paper on a society environment topic of their choice. Class is writing intensive with in-class discussion and final presentations. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *A. Mathews*

194V. Picturing Cultures. F

A historical, analytical, and practical exploration of the uses of still and moving pictures in

ethnographic representations, research, and production. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 1, 2, and 3; and course 80J, 120, 132, or 154. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *S. Errington*

194W. The Anthropology of Social Movements. *

Focuses on the anthropology of social movements, especially the impact that global capital provokes on peripheral Latin American societies and the ways these respond through the organizing of social movements validating alternative worldviews that coalesce around issues pertaining to indigeneity, the environment, gender, and concepts of human dignity. Prerequisite(s): courses 1, 2, and 3, and satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *G. Delgado-P*

194X. Women in Politics: A Third World Perspective. *

Focuses cross-culturally on the status of women in the Third World and their formal and informal participation in politics. Also discussed are organized efforts, through participation in both national and autonomous movements, for women's rights. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 1, 2, and 3. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *The Staff*

194Y. Archaeologies of Space and Landscape. *

Examines contemporary archaeological perspectives on space and landscape. Focuses on how archaeology can contribute to an appreciation of the economic, cultural, and political factors that shape human perception, use, and construction of the physical world. Prerequisite(s): courses 1, 2, 3, and an upper-division archaeology course; satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *J. Monroe*

194Z. Emerging Worlds. *

Addresses encounters and contact zones between cultures that give rise to "emerging worlds." "Emerging worlds" refers to the cultural heterogeneity and diversity created within world-making networks, geographies, innovations, and meanings, moving us beyond ideas about vanishing, autonomous cultures. Prerequisite(s): courses 1, 2, and 3, and satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to senior anthropology majors. Enrollment limited to 20. (General Education Code(s): W.) *L. Rofel*

197. Laboratory Tutorial. F,W,S

Independent laboratory research on selected topics in archeology and physical anthropology. Interview with appropriate instructor required. May be repeated for credit. *The Staff*

197F. Laboratory Tutorial (2 credits). F,W,S

Independent laboratory research on selected topics in archaeology and physical anthropology. Interview with appropriate instructor required. Enrollment restricted to anthropology majors. May be repeated for credit. *D. Gifford-Gonzalez, A. Zihlman, C. Blackmore, A. Galloway, J. Monroe, J. Habicht Mauche*

198. Independent Field Study. F,W,S

Off-campus field study. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

200. Theoretical Foundations of Physical Anthropological Research. S

Provides historical and theoretical foundation of physical anthropology. Grounds students in the changing frameworks and perspectives during the last 150 years regarding questions in human biology, evolution, nature, and culture, by examining texts and scientific journals. Enrollment restricted to graduate students. Enrollment limited to 15. *A. Zihlman*

200A. Core Graduate Course (10 credits). F

Introduces history, ethnography, and theory of cultural anthropology with emphasis on awareness of construction of anthropological canon and areas of conflict within it, leading up to contemporary debates on a variety of issues. Two-term course: students must enroll in both quarters. Enrollment restricted to anthropology graduate students. Enrollment limited to 12. *D. Rutherford*

200B. Core Graduate Course. W

Introduces history, ethnography, and theory of cultural anthropology with emphasis on awareness of construction of anthropological canon and areas of conflict within it, leading up to contemporary debates on a variety of issues. Multiple-term course; students must enroll in both quarters to receive academic credit. Enrollment restricted to anthropology graduate students. Enrollment limited to 12. *A. Mathews*

201. Human Evolution. F

Provides an overview of the first five million years of human evolution and a framework for studying evolution and reconstructing the human past. Emphasizes that all lines of evidence must

be included: hominid fossils, archaeology, paleoecology, and molecular data. Enrollment restricted to graduate students. Enrollment limited to 15. *A. Zihlman*

202A. Skeletal Biology. F

Focuses on human skeletal biology, the identification of elements, physiology of hard tissue formation, growth, and maintenance. Students are required to show competence in skeletal identification to pass this class. Prerequisite(s): course 102A or permission of instructor. Enrollment restricted to graduate students. Enrollment limited to 5. *The Staff*

206. Primate Behavior. W

An overview of primate evolution and review of the major groups of primates in terms of their ecological, locomotor, dietary, and social adaptations. Theoretical frameworks, such as behavioral ecology, sexual selection, and life history, are evaluated from long-term studies of primate behavior. Students cannot receive credit for this course and course 106. Enrollment restricted to graduate students. Enrollment limited to 15. *A. Zihlman*

208A. Ethnographic Practice. S

Introduces graduate students to the practice of fieldwork. Students design and carry out a quarter-long research project exploring a range of methods and producing an analytical case study. Readings and discussion emphasize both methodological critique and successful implementation. Concurrent enrollment in course 208L is required; enrollment restricted to anthropology graduate students. Enrollment limited to 15. *N. Chen*

208L. Video Laboratory (2 credits). S

Provides students with hands-on training with a variety of audiovisual equipment. Through lectures, demonstrations, hands-on field exercises, and review of students' media exercises, students learn the fundamentals of photography, video production, and audio recording in the field. Concurrent enrollment in course 208A required; enrollment restricted to anthropology graduate students. Enrollment limited to 15. *N. Chen*

211. Human Ecology. *

Reviews environmental, physiological, behavioral, and cultural ways that humans interact with their physical surroundings. Effects of human culture on the environment, and of the environment on the shape of human culture will be emphasized. Enrollment restricted to graduate students. Enrollment limited to 15. *The Staff*

212. The Human Life Cycle. *

Examines the human life cycle using an evolutionary framework. Examines key aspects of the human life stages using findings and concepts from developmental biology, physiology, nutrition, evolutionary ecology, and life history theory. These stages include: gestation, infancy, childhood, juvenile and adolescent periods, and senescence. Each stage of the life cycle is compared and contrasted with the developmental life of nonhuman primates and mammals. Other related topics include developmental plasticity and epigenetics. Enrollment restricted to graduate students. Enrollment limited to 15. *The Staff*

225. The Anthropology of Things: Sign, Gift, Commodity, Tool. *

Examines some approaches used by anthropologists and other thinkers to bring things into focus: as gifts, signs, commodities, and tools. Explores whether, by taking things seriously, anthropologists might learn to be empirical in new ways. Enrollment restricted to graduate students. Enrollment limited to 15. *D. Rutherford*

228. Grant Writing. F

Devoted entirely to writing grant proposals. Students either work on their graduate education fellowships or their doctoral dissertation grants or both. Reading materials consist of granting agency documents plus examples of successful applications. Enrollment restricted to anthropology graduate students. Enrollment limited to 15. May be repeated for credit. *M. Caldwell*

229. Constructing Regions. *

Discusses centrality of the idea of "regions" in studies of culture, the history of "locating" social theory, and debates about area studies. Students develop area of transregional bibliographies. Primarily for second- or third-year anthropology graduate students reading "area" literatures. Enrollment restricted to graduate students. Enrollment limited to 15. *The Staff*

231. Intimacy and Affective Labor. *

Examines recent work on the role of intimacy and affective labor in value production, political mobilization, and transnational capital linkages. Special attention given to how these terms are invoked to answer methodological and narrative concerns in ethnographic writing. Enrollment restricted to graduate students. Enrollment limited to 15. *M. Moodie*

235. Language and Culture. W

An examination of language system and language use in relationship to cultural contexts of communication in Western and non-Western societies. Also examines the complex role which linguistic inquiry and models have played in broader theories of culture. Enrollment restricted to graduate students. Enrollment limited to 15. *D. Brenneis*

238. Advanced Topics in Cultural Anthropology. *

Advanced topics in cultural anthropology. Current topics in anthropological theory and ethnography taught on a rotating basis by various faculty members. Precise focus of each seminar varies and will be announced by the department. Enrollment restricted to graduate students. Enrollment

limited to 15. *D. Linger*

241. Social Justice. *

Explores theoretical and methodological issues in the field of social justice with an emphasis on ethnographic analysis. Topics include: rights, obligations, justice, equality, compensation, and ethics. Enrollment restricted to graduate students. Enrollment limited to 15. *M. Caldwell*

243. Cultures of Capitalism. W

Introduction to selected themes in political economy, stressing the work of Marx. Topics include the development of capitalism, colonialism, dependency, world systems, state formation, class consciousness, commodity fetishism, the nature of late capitalism, post-modernism, and the aesthetics of mass culture. Through political economy's interlocutors, raises questions about gender, race and ethnicity, and post-structuralist critiques. Enrollment restricted to graduate students. Enrollment limited to 15. *L. Rofel*

246. Race in Theory and Ethnography. S

Explores theoretical and methodological approaches to the cross-cultural study of "race," with an emphasis on historical and ethnographic analysis. Main approaches considered include Foucauldian, Gramscian, diaspora theory and the everyday poetics and politics of race. Enrollment restricted to graduate students. Enrollment limited to 15. *M. Anderson*

248. Shadowy Dealings: Anthropology of Finance, Money, and Law. *

Moves from a brief introduction to classic economic anthropology to recent work on histories of money and capitalism and cultures of financial markets, of accounting, and of legal and illegal trading practices. Enrollment restricted to graduate students. Enrollment limited to 15. *A. Mathews*

249. Ecological Discourses. *

Explores narratives of nature and their practical consequences in contests over "wild places" and their resources. Readings focus on the histories of forests and on analytic frameworks—ecology, social history, interpretation, cultural studies—with which to investigate competing constructions of the environment. Enrollment restricted to graduate students. Enrollment limited to 15. *A. Tsing*

252. Survey of Cultural Anthropological Theory. W

Major figures, ideas, and writing in 19th- and 20th-century cultural anthropology surveyed. Enrollment restricted to graduate students. Enrollment limited to 15. *M. Anderson*

253. Advanced Cultural Theory. S

Examines cultural anthropology's interdisciplinary practices of knowledge formation at an advanced level. Drawing on various types of theoretical texts, the course elaborates on the relationship between culture and power, taking up different themes each time it is taught. Enrollment restricted to graduate students. Enrollment limited to 15. *A. Tsing*

254. Medicine and Culture. F

Surveys medicine cross-culturally, with particular focus on power, tradition, and theories of embodiment. Students cannot receive credit for this course and course 134. Enrollment restricted to graduate students. Enrollment limited to 15. *M. Wolf-Meyer*

258. Experimental Cultures. *

Addresses the use of experiments in anthropological research, theory, and writing. Enrollment restricted to graduate students. Enrollment limited to 15. *M. Wolf-Meyer*

260. Anthropology of Freedom. *

Examines conceptualizations and practices of freedom across geographical space and historical time. Readings drawn from Greek philosophy, Islamic, Christian, and Buddhist religious traditions. Enlightenment philosophy, liberal and neo-thought, and contemporary ethnographies. Enrollment restricted to graduate students. *M. Fernando*

261. Replication, Mimesis, and Fakery. *

Replicas, copies, and fakes anchored conceptually by the authentic/original enable the marketing of cultural commodities like arts and crafts, especially since the advent of photography. Course explores these commercial and signifying processes in the global art and culture market. Enrollment restricted to graduate students. Enrollment limited to 15. *S. Errington*

263. Kinship. S

Provides a critical survey of debates, old and new, in the study of kinship. Readings range from classical treatments to recent reformulations that use kinship as a lens for exploring intimacy, memory, futurity, embodiment, commodification, and power. Students cannot receive credit for this course and course 163. Enrollment restricted to graduate students. Enrollment limited to 15. *D. Rutherford*

268A. Rethinking Capitalism. S

Readings include works by speakers at UCSC's "Rethinking Capitalism Initiative." Topics are: (1) financialization versus commodification (how options-theory has changed capitalism); (2) material markets (how this theory performs); and (3) valuation and contingency (how economies make worlds). (Also offered as History of Consciousness 268A. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. Enrollment limited to 15. *R. Meister*

268B. Rethinking Capitalism. F

Course 268A addressed changes in the theory and practice of capitalism as derivatives markets

have become increasingly central to it. This course, which can be regarded as either background or sequel, concerns questions that surround recent debates about derivatives from the standpoint of broader developments in law, culture, politics, ethics, ontology, and theology. What would it mean to see questions of contingency and value as a challenge to late-modern understandings of these modes of thought? (Also offered as History of Consciousness 268B. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. Enrollment limited to 15. *R. Meister*

270. History of Archaeology. F

Historical review of prehistoric archaeology from antiquarianism to the present. Emphasis on the development of archaeological theory, its relation to evolutionary and anthropological theory, and themes ongoing over time. Students cannot receive credit for this course and course 170. Enrollment restricted to graduate students. Enrollment limited to 15. *J. Habicht Mauche*

272. Advanced Archaeological Research. S

Introduces graduate students to archaeological research design. Topics include: middle range theory; multistage research strategies; sampling strategies and appropriate field methodology; and issues specific to particular scales of archaeological analysis (artifact, household, site, region). Enrollment restricted to graduate students. Enrollment limited to 15. *J. Habicht Mauche*

273. Origins of Farming. *

Survey of the ecological and archaeological evidence for the origins of plant and animal domestication in Africa, Eurasia, and the Americas. Discussion will center on the preconditions of this drastic alteration in human ecology and its consequences in transforming human societies. Students cannot receive credit for this course and course 173. Enrollment restricted to graduate students. Enrollment limited to 15. *D. Gifford-Gonzalez*

274. Origins of Complex Societies. W

The origins of complex society: the transition from egalitarian foraging societies to the hierarchical, economically specialized societies often referred to as "states" or "civilizations." Focuses on both Old World and New World cultures. Students may not receive credit for this course and course 174. Enrollment restricted to graduate students. Enrollment limited to 15. *C. Blackmore*

275A. Seminar on Early African Archaeology. W

Tutorial on archaeology of Africa, from 2.5 million years ago to emergence of African pastoralism and farming. Weekly examination of disciplinary models and assumptions in historic context, emphasizing overarching themes in prehistoric archaeology. Students cannot receive credit for this course and course 175A. (Formerly *Tutorial on African Archaeology*.) Enrollment restricted to graduate students or by consent of instructor. Enrollment limited to 15. *D. Gifford-Gonzalez*

275B. Tutorial in Archaeology of African Complex Societies. S

Graduate tutorial on the archaeology of precolonial African kingdoms and states. Particular attention paid toward the origins of social inequality and the evolution of centralized polities. Students cannot receive credit for this course and course 175B. Prerequisite(s): Enrollment restricted to graduate students. Enrollment limited to 15. *J. Monroe*

276A. Advanced Topics in North American Archaeology. W

In-depth examination of development of Native cultures in North America from end of last ice age to time of European contact. Focuses on specific regional trajectories and problems of social change. Enrollment restricted to graduate students. Enrollment limited to 15. *J. Habicht Mauche*

276B. Mesoamerican Archaeology. F

Examines the pre-Columbian cultures of Mesoamerica and reviews the archaeological and ethnohistorical evidence related to the origins and development of cultures including the Olmec, Maya, Zapotec, Mixtec, and Aztec. Students cannot receive credit for this course and course 176B. Enrollment restricted to graduate students. Enrollment limited to 15. *C. Blackmore*

278. Tutorial on Historical Archaeology. F

Tutorial on archaeology of European colonialism and the early-modern world. Focuses on the nature of European colonial expansion in New and Old Worlds; culture contact and change; and power and resistance in colonial societies. Students cannot receive credit for this course and course 178. Enrollment restricted to graduate students. Enrollment limited to 15. *J. Monroe*

279. Feminism and Gender in Archaeology. S

Considers feminist perspectives on the human past; archaeologists' perspectives on feminist theory; and the impact of gender, feminist, and critical social theory on the archaeological profession. Enrollment restricted to graduate students. Enrollment limited to 15. *C. Blackmore*

280. Advanced Ceramic Analysis. S

Advanced graduate seminar that focuses on techniques and theories used to bridge the gap between the recovery of ceramic remains from archaeological contexts and their interpretation with respect to various anthropological issues and problems. Students cannot receive credit for this course and course 180. Enrollment restricted to graduate students. Concurrent enrollment in Anthropology 280L required. Enrollment limited to 5. *J. Habicht Mauche*

280L. Advanced Ceramic Analysis Laboratory (2 credits). S

Emphasizes advanced techniques of ceramic analysis, including materials selection and processing, hand-building, and open-pit firings. Standard techniques for describing and measuring formal and technological attributes of pottery also presented. Students cannot receive credit for this course and course 180L. Enrollment restricted to graduate students. Concurrent enrollment in

Anthropology 280 required. Enrollment limited to 5. *J. Habicht Mauche*

284. Tutorial in Zooarchaeology. *

Lectures and seminar on archaeological faunal analysis. Topics include: mammalian evolution and osteology; vertebrate taphonomy; reconstruction of human diet from faunal remains; foraging strategy theory; data collection and management; and methods of quantitative analysis. Students cannot receive credit for this course and course 184. (Formerly *Zooarchaeological Research Design*.) Enrollment restricted to graduate students. *D. Gifford-Gonzalez*

285. Osteology of Mammals, Birds, and Fish. *

Practicum in vertebrate osteology, covering all larger mammal species of central California, plus selected bird and fish species, and topics in evolution and ecology of selected taxa. Students cannot receive credit for this course and course 185. Enrollment restricted to graduate students. Enrollment limited to 15. *D. Gifford-Gonzalez*

287. Advanced Topics in Archaeology. *

A graduate seminar on advanced theoretical or methodological topics pertinent to advanced graduate student and faculty interests. Enrollment restricted to graduate students or by consent of instructor. Enrollment limited to 12. *J. Monroe*

292. Graduate Colloquium (2 credits). F,W,S

Designed to offer an institutionalized mechanism for the presentation of research papers and teaching efforts by faculty and advanced graduate students. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

294N. Comparison of Cultures. W

Seminar for students interested in theories and methodology of social and cultural anthropology devoted to critical discussion of different methods of comparison practiced in anthropology. Enrollment restricted to graduate students. Enrollment limited to 15. *T. Pandey*

297. Independent Study. F,W,S

Students submit petition to sponsoring agency. *The Staff*

298. Advanced Laboratory Apprenticeship. F,W,S

Supervised tutorial in specialized analytic methods in archaeology or physical anthropology. Students collaborate on laboratory research with a departmental mentor or, with advisor's consent, with researchers on or off campus, preparing a manuscript for publication or an extensive literature review. Permission of instructor required. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Prerequisite(s): petition on file with sponsoring agency. *The Staff*

*Not offered in 2011-12

[Program Description](#) | [Changes to 2010-12 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Program Description

The Art Department offers an integrated program of study in theory and practice exploring the power of visual communication for personal expression and public interaction. The department provides students with the means to pursue this exploration through courses that provide the practical skills for art production in a variety of media within the contexts of critical thinking and broad-based social perspectives.

The art program at UCSC is composed of courses in drawing, painting, photography, sculpture, print media, intermedia, critical theory, electronic art, public art, and interactive technologies. Baskin visual arts studios provide world-class facilities for art production in these areas. The Art Department is committed to pursuing a continuing dialogue about what constitutes basic preparation in the arts while offering students experience in established practices, new genres, and new technologies. Foundation courses are open to all non-art students after priority enrollment. Art and pre-art majors have enrollment priority in all art courses. Non-art majors may enroll in art courses on the first day of class if space permits.

Students graduating with a major in art may become professional artists or pursue careers in such diverse areas as arts management, museum and gallery practices, communication technologies, public school teaching, media arts, and publishing. Many students who want to teach at the college level continue their education in graduate school.

Declaring the Pre-Art Major—Fresh

Students must declare the pre-art major in order to enroll in introductory studio courses. Students should declare their pre-art major in the first quarter of their freshman year to insure their ability to enroll in studio courses. Students who declare early in their sophomore year may not be able to complete the major in three years. Students may declare the pre-art major at any time. Please note that students who have declared the pre-art major still need to follow the procedure for acceptance to the full major; a student may not graduate as a pre-art major.

Acceptance to the Art Major—Fresh

Students may apply for admission to the art major after completing at least three lower-division studio courses at UCSC (not foundation courses) with grades of B or better. If one of these classes is graded B- or lower, the student must take a different lower-division studio course and receive a B to be eligible to declare art. Students cannot take more than four lower-division studio classes to obtain the requisite B grades. Failure to achieve three Bs in four attempts triggers a process of advising whose outcome is either an alternative path to success or exclusion from the major. While completing this lower-division course work, it is critical that each student meet with a faculty adviser regarding the student's potential to proceed to the major level.

Acceptance to the Art Major—Junior Transfer Students

Junior transfer students are accepted into the art major for fall quarter after passing a portfolio review in early April. Their acceptance is contingent upon their acceptance to UCSC. Acceptance to UCSC does not guarantee admittance to the art program, nor does passing the portfolio review guarantee that UCSC will accept the student to the university. Transfer students must identify themselves as potential art majors when applying to the university in order to receive information on the portfolio review deadlines and the materials required for the review. All junior transfers will be required to take Art 160, Forms and Ideas, and Art 150C, *Critical Issues in Contemporary Art* in their junior year at UCSC in lieu of the first-year foundation program requirements. Junior transfer students who do not pass the portfolio review will not be allowed to take art classes at UCSC during the fall, winter, and spring quarters. Consequently, if accepted to UCSC, it is imperative that students realize they must pursue another major. Students will be notified of the results of the review before they need to submit their Statement of Intent to Register for UCSC.

Requirements for the Art Major

The minimum requirements for frosh art majors are completion of six lower-division and eight upper-division courses and satisfaction of the senior comprehensive requirement. Junior transfer students complete four lower division and eight upper-division courses and their senior comprehensive requirement. A maximum of three courses total from outside the Art Department (including UC Education Abroad Program (EAP) courses) may be substituted for regular art courses with the approval of a major adviser. In these courses, students must have received a grade of B or higher. Students should plan carefully when using this option.

Students plan their course of study in consultation with a faculty adviser.

Lower-Division Requirements

Students complete six courses as follows:

- the foundation series consists of two courses: 80C, *Introduction to Visual Arts* (winter quarter), and 10G, *2-D Foundation* (spring quarter)

or

10H, *3-D Foundation* (fall quarter)

- three courses from the following list (with a grade of B or better):

21 *Introduction to Computer Art*

22 *Introduction to Electronics for Intermedia*

23 *Intermedia I*

24A/B *Introduction to Painting. A: Oil, B: Acrylic***

25 *Relief Printmaking*

26 *Introduction to Printmaking*

27 *Monoprinting/Mixed Media Printing*

28 *Figurative Sculpture*

30 *Introduction to Photography for Art Majors*

33 *Introduction to Screen Printing*

36 *Relief / Mixed Media Printmaking*

37 *Material Metaphor I*

38 *Digital Printmaking*

39 *Public Art I: Community, Site, and Place*

40 *Sculpture I*

80A *Introduction to Drawing*

80D *Introduction to Photography*

- One course from either Art 80F, *Introduction to Issues in Digital Media*; Art 80V, *Issues and Artists*; or a history of art and visual culture (HAVC) course.***

* Students may use Advance Placement Courses (AP) in drawing with a score of 4, 5, or 6 in lieu of Art 20.

** Students may apply either 24A or 24B, but not both, toward the lower-division course requirements for declaring the full art major.

*** Students may use Advance Placement (AP) in Art History in lieu of the history of art and visual culture requirement.

Upper-Division Requirements

Students complete eight courses as follows:

- Five upper-division (100+ numbered) studio courses;
- 10 credits of senior studio courses or two upper-division studios in the area of focus;
- One art writing class from: 150C, *Critical Issues in Contemporary Art*; Art 170W, *Writing for Artists*; Art 171W, *Writing in the Arts*; Art 172W, *Writing and Vocabulary Power for Visual Artists*.

The last three quarters of course work for the major must be completed in residence at UCSC.

Art Major Planner

The following is a recommended academic plan for students to complete during their first two years as preparation for the art major.

Year	Fall	Winter	Spring
1st (frsh)	ART 10H*	ART 10G*	ART 80C
		low-div studio	low-div studio
	low-div studio		
2nd (soph)	HAVC**		
*Students take only one foundation course of their choice **Courses from history of art and visual culture or art breadth: Art 80F, <i>Intro to Issues in Digital Media</i> or Art 80V, <i>Issues and Artists</i>			

Lower-Division Requirements (Junior Transfers)

- Three lower-division studios (equivalent to those found in the above list) should be taken at the community college, college, or university in preparation for the mandatory portfolio review prior to acceptance to the art major. Please remember that three studios is a minimum requirement and may not be enough studio work undertaken to pass the highly competitive nature of the portfolio review.
- One course from history of art and visual culture may be taken at the community college, college, or university, if available, or at UCSC.

Upper-Division Requirements (Junior Transfers)

Students complete eight courses as follows:

- Art 160, *Forms and Ideas*;
- Four upper-division (100+ numbered) studio courses
- 10 credits of senior studio courses or two upper-division studios in the area of focus;
- Art 150C, *Critical Issues in Contemporary Art*.

The last three quarters of course work for the major must be completed in residence at UCSC.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in art is satisfied by completing Art 149A or 149B, *Contemporary Visual Media: Issues of Theory and Practice*; 150C, *Critical Issues in Contemporary Art*; Art 170W, *Writing for Artists*; Art 171W, *Writing in the Arts*, or Art 172W, *Writing for Power Vocabulary for Artists*. (Courses 170W, 171W, and 172W are offered in summer only.)

Comprehensive Requirement

Senior majors should meet with their faculty adviser about this requirement. Students may satisfy the comprehensive requirement with one of the following two options:

1. Completing 10 credits of senior studio course work;
2. Completing 10 credits of upper-division studio course work in the area of focus; and
 - a. Presenting an exhibition and, by appointment, meeting with a faculty member for review and critique of the exhibition; or
 - b. Submitting a portfolio and, by appointment, meeting with a faculty member for review and critique of the portfolio.

Study Abroad

The UC Education Abroad Program (EAP) offers students the opportunity for study abroad. Art majors may participate in EAP in their junior year. Pre-art majors are not approved to study abroad. Art students may not go abroad in their senior year because the last three quarters of course work must be in residence at UCSC. When considering attending EAP, the student should be mindful that only three courses may be substituted in the art major and each must receive a grade of B or better.

Materials Fee

Art students should be aware of the materials fee required for some studio courses. The fee is billed to the student's account for specific course materials purchased by the Art Department through the university. Fees generally range from \$5 to \$150 per course. Students may incur

additional expense purchasing individual supplies.

Acceptance to the Art Major—Junior Transfer Students

Junior transfer students are accepted into the art major for fall quarter after passing a portfolio review in early April. Their acceptance is contingent upon their acceptance to

UCSC. Acceptance to UCSC does not guarantee admittance to the art program, nor does passing the portfolio review guarantee that UCSC will accept the student to the university. Transfer students must identify themselves as potential art majors when applying to the university in order to receive information on the portfolio review deadlines and the materials required for the review. All junior transfers will be required to take Art 160, *Forms and Ideas*, and Art 150C, + Critical Issues in Contemporary Art ~~one-art seminar~~ in their junior year at UCSC in lieu of the first-year foundation program requirements. Junior transfer students who do not pass the portfolio review will not be allowed to take art classes at UCSC during the fall, winter, and spring quarters. Consequently, if accepted to UCSC, it is imperative that students realize they must pursue another major. Students will be notified of the results of the review before they need to submit their Statement of Intent to Register for UCSC.

Requirements for the Art Major

The minimum requirements for ~~freshmen~~ fresh ~~the-art majors~~ are completion of six lower-division and eight upper-division courses and satisfaction of the senior comprehensive requirement. Junior transfer students complete four lower division and eight upper-division courses and their senior comprehensive requirement. A maximum of three courses total from outside the Art Department (including UC Education Abroad Program (EAP) courses) may be substituted for regular art courses with the approval of a major adviser. In these courses, students must have received a grade of B or higher. Students should plan carefully when using this option.

Students plan their course of study in consultation with a faculty adviser.

Lower-Division Requirements

Students complete six courses as follows:

the foundation series consists of two courses: 80C, *Introduction to Visual Arts* (winter quarter), and 10G, *2-D Foundation* (spring quarter)

or

10H, *3-D Foundation* (fall quarter)

three courses from the following list (with a grade of B or better):

~~20 Introduction to Drawing for the Major*~~

21 *Introduction to Computer Art*

22 *Introduction to Electronics for Intermedia*

23 *Intermedia I*

24A/B *Introduction to Painting. A: Oil, B: Acrylic***

25 *Relief Printmaking*

26 *Introduction to Printmaking*

27 *Monoprinting/Mixed Media Printing*

28 *Figurative Sculpture*

30 *Introduction to Photography for Art Majors*

~~32 Beginning Digital/Film Photography~~

33 *Introduction to Screen Printing*

36 Relief / Mixed Media Printmaking

37 *Material Metaphor I*

38 Digital Printmaking

39 *Public Art I: Community, Site, and Place*

40 *Sculpture I*

80A Introduction to Drawing

80D Introduction to Photography

One course from either Art 80F, *Introduction to Issues in Digital Media*; Art 80V, *Issues and Artists*; or a history of art and visual culture (HAVC) course.***

* Students may use Advance Placement Courses (AP) in drawing with a score of 4, 5, or 6 in lieu of Art 20.

** Students may apply either 24A or 24B, but not both, toward the lower-division course requirements for declaring the full art major.

*** Students may use Advance Placement (AP) in Art History in lieu of the history of art and visual culture requirement.

Upper-Division Requirements

Students complete eight courses as follows:

Five upper-division (100+ numbered) studio courses;

10 credits of senior studio courses or two upper-division studios in the area of focus;

One art ~~writing class~~ ~~seminar~~ from: ~~Art 149A or 149B, Contemporary Visual Media: Issues of Theory and Practice;~~ 150C, ~~Critical Issues in Contemporary Art~~ Issues in Collaboration and Interactivity; Art 170W, *Writing for Artists*; Art 171W, *Writing in the Arts*; Art 172W, *Writing and Vocabulary Power for Visual Artists*.

The last three quarters of course work for the major must be completed in residence at UCSC.

Art Major Planner

The following is a recommended academic plan for students to complete during their first two years as preparation for the art major.

Year	Fall	Winter	Spring
1st (frsh)	Art 10H*	Art 80G <u>10G*</u>	Art 10G <u>80C</u>
		low-div studio	low-div studio
2nd (soph)	low-div studio		
	HAVC**		
*Students take only one foundation course of their choice **Course s from history of art and visual culture or art breadth: <u>Art 80F: Intro to Issues in Digital Media or Art 80V: Issues and Artists</u>			

Lower-Division Requirements (Junior Transfers)

Three lower-division studios (equivalent to those found in the above list) should be taken at the community college, college, or university in preparation for the mandatory portfolio review prior to acceptance to the art major. Please remember that three studios is a minimum requirement and may not be enough studio work undertaken to pass the highly competitive nature of the portfolio review.

One course from history of art and visual culture may be taken at the community college, college, or university, if available, or at UCSC.

Upper-Division Requirements (Junior Transfers)

Students complete eight courses as follows:

Art 160, Forms and Ideas;

Four upper-division (100+ numbered) studio courses

10 credits of senior studio courses or two upper-division studios in the area of focus;

~~One art seminar from: Art 149A or 149B, Contemporary Visual Media: Issues of Theory and Practice; Art 150C, Critical Issues in Contemporary Art Issues in Collaboration and Interactivity.~~

The last three quarters of course work for the major must be completed in residence at UCSC.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in art is satisfied by completing Art 149A or 149B, *Contemporary Visual Media: Issues of Theory and Practice*; 150C, *Critical Issues in Contemporary Art*; ~~Issues in Collaboration and Interactivity~~; Art 170W, *Writing for Artists*; Art 171W, *Writing in the Arts*, or Art 172W, *Writing for Power Vocabulary for Artists*. (Courses 170W, 171W, and 172W are offered in summer only.)

Comprehensive Requirement

Senior majors should meet with their faculty adviser about this requirement. Students may satisfy the comprehensive requirement with one of the following two options:

Completing 10 credits of senior studio course work ~~in the area of focus~~;

Completing 10 credits of upper-division studio course work in the area of focus; and

Presenting an exhibition and, by appointment, meeting with a faculty member for review and critique of the exhibition; or

Submitting a portfolio and, by appointment, meeting with a faculty member for review and critique of the portfolio.

Study Abroad

The UC Education Abroad Program (EAP) offers students the opportunity for study abroad. Art majors may participate in EAP in their junior year. Pre-art majors are not approved to study abroad. Art students may not go abroad in their senior year because the last three quarters of course work must be in residence at UCSC. When considering attending EAP, the student should be mindful that only three courses may be substituted in the art major and each must receive a grade of B or better.

Materials Fee

Art students should be aware of the materials fee required for some studio courses. The fee is billed to the student's account for specific course materials purchased by the Art Department through the university. Fees generally range from \$5 to \$150 per course. Students may incur additional expense purchasing individual supplies.

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses**10. Foundation Series in Art.**

Introduces general education students and prospective majors to theory and practice of art and contemporary discourse surrounding it. Courses 10G and 10H comprise large lecture sections that meet once a week and smaller studio sections that meet once or twice a week. Courses include both lecture and studio components and are not intended to be technique-intensive studio classes. Students must register for both lecture and studio sections. *The Staff*

10G. 2D Foundation. W

Introduction to two-dimensional art practice and theory. Readings and lectures address both history and contemporary contexts of 2D art practice. Covers issues of content, representation, communication, and process. In the studio, students apply concepts covered in lecture to art projects. Students are billed a materials fee. Enrollment restricted to pre-art and art majors during priority enrollment. (General Education Code(s): IM, A.) *The Staff*

10H. 3D Foundation. F

Introduction to three-dimensional sculpture, intermedia, performance art, and technologically based contemporary art. Weekly lectures and section discussions introduce historical, theoretical, and critical methods of viewing and understanding contemporary art. Studio assignments introduce students to a range of contemporary techniques and materials used to make sculptural, performative, and technologically based work. Students are billed a materials fee. Enrollment restricted to pre-art and art majors during priority enrollment. (General Education Code(s): IM, A.) *W. Hibbert-Jones, J. Parker, E. Stephens*

20. Introduction to Drawing for the Major. *

Introduction to the methods, materials, and purposes of drawing to develop perceptual and conceptual skills through a series of assignments, providing various approaches to drawing as a tool for creative exploration. Discussions and critiques facilitate the development of critical skills. Designed for students considering the art major. Students are billed a materials fee. Enrollment restricted to pre-art majors. (General Education Code(s): PR-C, A.) *The Staff, M. Gwyn, F. Galuszka*

21. Introduction to Computer Art. *

Basic introduction to the use of a computer as a fine art tool and medium. Addresses basic skills, concepts relevant to contemporary art theories, and practices. Provides a hands-on introduction to fundamentals of graphics, image acquisition, and manipulation and programming with demonstrations of relevant software. Students work independently and in groups. Assignments include digital image acquisition and manipulation, basic scripting, hypertext and web publishing, and computer programming. Lectures, readings, and discussions examine new technology artwork and technology's relationship to contemporary culture. Enrollment restricted to pre-art majors. (General Education Code(s): A.) *E. Anderson, The Staff*

22. Introduction to Electronics for Intermedia. *

Provides basic introduction to electronic devices for use in making intermedia art. Provides hands-on experience working with sensors, motors, switches, gears, lights, simple circuits, and hardware store devices to create kinetic and interactive works of art. Produce sculptural or installation-based projects. Demonstrations, lectures, and critical discussion of work given to develop concepts and technical skills. Students are billed a materials fee. Enrollment restricted to pre-art majors. (General Education Code(s): PR-C, A.) *E. Anderson, The Staff*

23. Intermedia I. F,W

Introduction to combining media, materials, and forms to explore contemporary art practices such as installation, time based work, performance, collaboration, and interactivity. Assignments encourage an exploration of conscious subject matter, process, and technique. Discussions, reading handouts, and critiques help develop perceptual and conceptual skills. Skill workshops introduce new techniques. Students are billed a materials fee. Enrollment restricted to pre-art majors. (General Education Code(s): PR-C, A.) *The Staff, E. Crichton, E. Stephens*

24A. Introduction to Painting: Oil. F,W

Introduction to medium of oil painting and to painting process. Assignments develop understanding

of potential of this medium as a tool for perceptual and conceptual exploration. Slide lectures introduce assignments and are basis for class discussion of contemporary and historical art activity in the field. Students are billed a materials fee. (Formerly course 24.) Prerequisite(s): course 20 or 80A. Enrollment restricted to pre-art majors. (General Education Code(s): PR-C, A.) *M. Gwyn, The Staff*

24B. Introduction to Painting: Acrylic. F,S

Introduction to acrylic painting and to painting process. Assignments develop understanding of this medium's potential as a tool for perceptual and conceptual exploration. Slide lectures introduce assignments and are basis for class discussion of contemporary and historical art activity in this field. Students are billed a materials fee. Prerequisite(s): course 20 or 80A. Enrollment restricted to pre-art majors. (General Education Code(s): PR-C, A.) *F. Galuszka*

25. Relief Printmaking. *

Introduction and development of relief printmaking. Course explores the traditions and contemporary issues of relief printmaking with emphasis on color work including reduction process, multiplate and viscosity printing. Students will build a portfolio using a wide spectrum of this complex relief process. Students are billed a materials fee. Enrollment restricted to pre-art majors. *P. Rangell, J. Lee*

26. Introduction to Printmaking. S

Survey of print medium: basic terminology, techniques, application of tools, materials, and condensed history of development of printmaking. Assignments consist of individual and collaborative projects aimed at building skills and gathering technical experience. Introduction to relief printing (black and white and color), intaglio, letterpress, and interface between photography/computer and the handmade print. Exploration of print media for communication of issues including formal aesthetics, social/psychological and personal narrative. Students are billed a materials fee. Enrollment restricted to pre-art majors. (General Education Code(s): PR-C, A.) *The Staff, P. Rangell, J. Lee*

27. Monoprinting/Mixed Media Printing. *

Explores crossover discipline that combines skills of drawing and painting with printmaking, offering a wide range of possibility for personal expression using both oil-based and water-based inks on a variety of plates. Registration and over-printing methods are demonstrated along with mixed media prints. Students are billed a materials fee. Enrollment restricted to pre-art majors. (General Education Code(s): PR-C, A.) *J. Lee*

28. Introduction to Figurative Sculpture. S

Introduction to a wide range of techniques for creating sculpture, based on and about the body/figure, through the exploration of contemporary concepts and ideas. Provides demonstrations, slide lectures, and critical discussion of work to develop concepts and technical skills. Students are billed a materials fee. Enrollment restricted to pre-art majors. (General Education Code(s): PR-C, A.) *The Staff, J. Parker, W. Hibbert-Jones*

30. Introduction to Photography for Art Majors. *

Introduction to photography as an art form that explores visual ideas beginning with camera-ready use, negative development, and printing. Prepares for further work in photography or for collaboration with other media in art including computer arts and two- and three-dimensional mixed media. Critically examines photographic works while reading historical and theoretical texts. Students are billed a materials fee. Enrollment restricted to pre-art and history of art and visual culture majors. (General Education Code(s): PR-C, A.) *The Staff, N. Locks, L. Watts*

32. Beginning Digital/Film Photography. *

Introduction to photography as an art form, exploring visual ideas beginning with analogue and digital camera use, film development, and digital printing. Prepares students for further work in photography or for collaboration with other media in art, including computer arts and two- and three-dimensional mixed media. Students critically examine photographic works while reading historical and theoretical texts. Students are billed a materials fee. Enrollment restricted to pre-art majors. (General Education Code(s): PR-C.) *The Staff, N. Locks, L. Watts*

33. Introduction to Screenprinting. *

Introduction to a variety of water-based, screen-printing processes including stencil, photographic, and digital techniques. A continuing development of student's content and aesthetic awareness through the rich possibilities that screen printing offers as a fine art medium. Students are billed a materials fee. Enrollment restricted to pre-art majors. (General Education Code(s): PR-C.) *J. Lee, The Staff*

36. Relief/Mixed-Media Printmaking. W

Introduces relief, monoprinting, and mixed-media printmaking. Explores the traditional and contemporary issues and processes of relief printmaking in conjunction with mono/mixed-media printing which is a blend of drawing, printing, and printmaking in order to expand the creative possibilities of all three. Students are billed a materials fee. Enrollment restricted to pre-art majors. (General Education Code(s): PR-C.) *J. Lee*

37. Material Metaphor I. W,S

Introduction to the basic skills in three-dimensional art and concepts relevant to contemporary art discourses. Challenges and expands the definition of art and its function through exercises in seeing, thinking, and making. Class proceeds through a series of technical demonstrations, slide presentations, and group discussions. Students are billed a materials fee. Enrollment restricted to

pre-art majors. (General Education Code(s): PR-C.) *E. Stephens, The Staff*

38. Digital Printmaking. F

Introduces the computer as a creative tool for art-making in the context of print media, primarily as a means for creating and printing digital images. Investigation of conceptual and technical identities in digital image-making as contemporary art practice and visual culture. Students are billed a materials fee. Enrollment restricted to pre-art majors. (General Education Code(s): PR-C.) *The Staff*

39. Public Art I: Community, Site, and Place. W

Introduces contemporary public art through studio practice, slides, and readings. Create public art works, design scale models, drawings, and project proposals. Includes a local community-based public art project and an ephemeral landscape project. Students are billed a materials fee. Enrollment restricted to pre-major art majors. (General Education Code(s): PR-C, A.) *W. Hibbert-Jones, The Staff*

40. Sculpture I. F,S

Introduction to a range of concepts and forms used to make contemporary sculpture. Assignments facilitate becoming familiar with sculptural techniques and materials to enable students to visually manifest their sculptural ideas. Combines lectures and demonstrations with work time in class. Students are billed a materials fee. Enrollment restricted to pre-art majors. (General Education Code(s): PR-C, A.) *The Staff, J. Parker, E. Stephens, W. Hibbert-Jones*

42. Student-Directed Seminar. *

Seminars taught by upper-division students under faculty supervision. Does not fulfill major requirement. (See course 192.) *The Staff*

80A. Introduction to Drawing. F,W

Introductory course for beginners. Covers the history of what are considered master drawings from prehistory to the present. Various media are examined and assigned in specific exercises. Course is a balance of historical study and practice through assigned homework exercises. A disciplined performance is expected. Students are billed a materials fee. Enrollment restricted to pre-art majors. (General Education Code(s): PR-C, T4-Humanities and Arts, A.) *The Staff*

80C. Introduction to Visual Arts. S

Surveys the major art forms and critical ideas that have shaped artistic practice globally from the 1980s to the present, including the many cultural forces that have inspired artists to articulate human experience in visual form. Enrollment restricted to pre-art majors during priority enrollment. (General Education Code(s): IM, T4-Humanities and Arts, A.) *The Staff*

80D. Introduction to Photography. F,S

Introductory course for beginners. Various techniques examined and assigned in specific exercises. Work on projects using color film; this is a non-darkroom course. Examples given of photography from 1826 to the present. Balances historical study and practice through assigned homework exercises. This is a non-darkroom course and does not satisfy prerequisites for upper-division photography classes. Students are billed a materials fee. Enrollment restricted to pre-art majors. (General Education Code(s): IM, T4-Humanities and Arts, A.) *The Staff*

80F. Introduction to Issues in Digital Media. F,W

Digital media is revolutionizing ways in which artists create and exchange information. Introduces digital media through lectures, demonstrations, and exercises. Topics include networks, imaging, MIDI, interactivity, audio/video, and the World Wide Web. Enrollment restricted to pre-art and art majors. (General Education Code(s): IM, T6-Natural Sciences or Humanities and Arts, A.) *E. Anderson, The Staff*

80V. Issues and Artists. S

Focuses on key issues in contemporary art, art theory, and curatorial practice through lectures, discussions, and readings. Course consists of weekly series of lectures designed to familiarize students with theories and practice surrounding seven current topics of interest in the larger art world. Instructor introduces each topic theoretically and shows work of relevant artists and curators. Guest artists and curators present their work in relation to the topic. (General Education Code(s): IM, T4-Humanities and Arts, A.) *The Staff, E. Crichton, L. Watts, E. Stephens*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses

100. Gallery/Museum Practices (2 credits). *

Focuses on providing practical experience in all phases of exhibition design and implementation. General tasks of program operation supplemented with selective reading and written assignments designed to enhance theoretical understanding of broader issues in art administration. Includes field trips to galleries and museums as well as in-class visits by artists and arts professionals. (Formerly *Gallery/Museum Management and Practices*.) Enrollment restricted to art, pre-art, and history of art and visual culture majors. *S. Graham*

101. Intermediate/Advanced Drawing. W,S

Work moves toward individual directions in drawing. A variety of media are explored. Each student

is expected to do 150 hours of drawing over the quarter. Students are billed a materials fee. Prerequisite(s): course 20 or 80A. Enrollment restricted to art majors. May be repeated for credit. *The Staff, M. Gwyn, F. Galuszka*

102. Figure Drawing. *

Focuses on drawing from the human figure and exploring the figure for the purpose of personal expression and social communication. Intended for the intermediate/advanced drawing student. Students are billed a materials fee. Prerequisite(s): course 20 or 80A. Enrollment restricted to art majors. May be repeated for credit. (General Education Code(s): PR-C, A.) *F. Galuszka, The Staff*

103. Intermediate/Advanced Painting. F,W,S

Continuation of the development of a basic foundation in painting with emphasis on the development of individual, experimental procedures. Students are billed a materials fee. Prerequisite(s): course 24A or 24B. Enrollment restricted to art majors. May be repeated for credit. *The Staff, M. Gwyn, F. Galuszka*

104. Special Topics in Painting. F

Special studies in painting as announced. Students are billed a materials fee. Prerequisite(s): course 24A or 24B, and 103. Enrollment restricted to art majors. May be repeated for credit. *M. Gwyn, F. Galuszka*

105. Special Topics in Drawing. F

Special topics in drawing as announced. Students are billed a materials fee. Prerequisite(s): course 20 or 80A. Enrollment restricted to art majors. May be repeated for credit. *M. Gwyn*

106A. Senior Studio in Drawing and Painting. *

An intensive studio experience for art majors, meeting three full days per week. Major emphasis is on the development of individual projects in preparation for the senior exhibition. Satisfies senior exit requirement. 106A and 106B must be taken concurrently. Students are billed a materials fee. Course is designed for senior art majors. Portfolio review prior to advance enrollment required; students should complete course 103 as preparation. May be repeated for credit. *M. Gwyn, F. Galuszka*

106B. Senior Studio in Drawing and Painting. *

An intensive studio experience for art majors, meeting three full days per week. Major emphasis is on the development of individual projects in preparation for the senior exhibition. Satisfies senior exit requirement. Course is designed for senior art majors. Portfolio review prior to advance enrollment required; students should complete course 103 as preparation. Courses 106A and 106B must be taken concurrently. May be repeated for credit. *M. Gwyn, F. Galuszka*

107. Mixed Media Works on Paper. W

This course stresses alternative drawing processes, techniques, and materials. Intended for the intermediate or advanced student. Students are billed a materials fee. Prerequisite(s): course 20 or 80A. Enrollment restricted to art majors. May be repeated for credit. (General Education Code(s): PR-C, A.) *The Staff, P. Rangell, F. Galuszka*

107A. Outdoor Painter's Project. *

Accompanying an increasing general concern to preserve our natural environment is a resurgence of interest in celebrating the landscape through painting. This impulse to strengthen the bond between art and nature has provided a degree of urgency, revitalizing a tradition that had once been a simple nostalgia for a romantic and rural past. Explores the potential for meaning in outdoor painting today. Emphasis is placed on group excursions and intensive discussion that includes visiting artists. May be repeated for credit. (General Education Code(s): PR-C.) *The Staff*

108A. Inter-Arts Senior Studio. S

Intensive studio experience for seniors from all areas of the Art Department. Students create a coherent body of work using the media and forms of their choice. Major emphasis is on development of individual and/or collaborative projects in preparation for the senior exhibition. Students are billed a materials fee. Prerequisite(s): Concurrent enrollment in course 108B is required. Enrollment restricted to senior art majors. Enrollment by interview only. Portfolio review prior to advance enrollment required. Satisfies the senior exit requirement. May be repeated for credit. *J. Lee, E. Crichton, N. Locks, F. Galuszka*

108B. Inter-Arts Senior Studio. S

Intensive studio experience for seniors from all areas of the Art Department. Students create a coherent body of work using the media and forms of their choice. Major emphasis is on development of individual and/or collaborative projects in preparation for the senior exhibition. Prerequisite(s): Concurrent enrollment in course 108A required. Enrollment restricted to senior art majors. Enrollment by interview only. Portfolio review prior to advance enrollment required. Satisfies the senior exit requirement. May be repeated for credit. *J. Lee, E. Crichton, N. Locks, F. Galuszka*

109. Intermedia II. W

Further investigation in combining media, materials, and forms to explore a variety of contemporary art practices. Students develop their projects thematically throughout the quarter. Assignments encourage experimentation with time and motion, text and images, collaboration, installation, performance, and interactivity. Discussions, reading handouts, and critiques further the development of perceptual and conceptual skills. Skill workshops introduce new techniques. Students are billed a materials fee. Prerequisite(s): course 22 or 23 or 29 or 37 or 39 or 40.

Enrollment restricted to art majors. May be repeated for credit. (General Education Code(s): PR-C, A.) *E. Crichton, E. Stephens*

110. Special Topics in Intermedia. S

Exploring interactive strategies for making art. Projects experiment with combining forms and mediums to engage an audience. Students are billed a materials fee. Prerequisite(s): course 22 or 23 or 29 or 30 or 32 or 37 or 39 or 40 or 80D. Enrollment restricted to art majors. May be repeated for credit. *E. Crichton, E. Stephens*

112. Intaglio I. W

Introduces students to various methods used in making intaglio prints. Encourages individual artistic growth of imagery and technique through assignments designed to explore the medium. Includes discussion and critique of work with equal emphasis on technique and concept. Students are billed a materials fee. Prerequisite(s): course 25, 26, 27, 33, 36, or 38. Enrollment restricted to art majors. May be repeated for credit. (General Education Code(s): PR-C, A.) *J. Lee*

113. Intaglio II. *

This presentation of advanced intaglio techniques emphasizes a variety of multi-plate color printing and photo etching processes. The course concentrates on individual development in style and concept through the intaglio process. Students are billed a materials fee. Prerequisite(s): course 25, 26, 27, 33, 36, 38, or 112. Enrollment restricted to art majors. May be repeated for credit. (General Education Code(s): PR-C, A.) *J. Lee*

114. Lithography I. F

Introduction to drawing, processing, and printing of lithographs from stone. Emphasis on discovery of tonal, textural, and expressive potential from the surface of the stone, while establishing individual directions in imagery. Condensed history of the medium, technical theory, and critique in lecture and demonstrations. Students are billed a materials fee. Prerequisite(s): course 20, 25, 26, 27, 33, 36, 38, or 80A. Enrollment restricted to art majors. May be repeated for credit. (General Education Code(s): PR-C, A.) *P. Rangell*

115. Lithography II. *

Continuation of course 114. Introduction of tusche wash, aluminum plates, transfers, photo-lithography (computer interface), and multiple color techniques. Emphasis on experimentation, refinement of craft and approach, defining individual imagery, and expanding scale. Further investigation of the history of the medium and contemporary practice. Students are billed a materials fee. Prerequisite(s): course 114. Enrollment restricted to art majors. May be repeated for credit. *P. Rangell*

116A. Senior Studio in Print Media. *

An intensive studio experience for majors, meeting three full days per week. Provides an opportunity for in-depth practice in all print media in preparation for the senior exhibition. In addition to individual projects, students work collaboratively and in series. Prints incorporating multiple colors and concurrent media, and utilizing a larger scale are encouraged. Readings and research are required. Satisfies senior exit requirement. Students are billed a materials fee. Portfolio review prior to advance enrollment required; students should complete courses 113 and 114, or 112 and 115, as preparation. Courses A and B must be taken concurrently. (Formerly *Senior Studio in Printmaking*.) May be repeated for credit. *P. Rangell, J. Lee*

116B. Senior Studio in Print Media. *

An intensive studio experience for majors, meeting three full days per week. Provides an opportunity for in-depth practice in all print media in preparation for the senior exhibition. In addition to individual projects, students work collaboratively and in series. Prints incorporating multiple colors and concurrent media, and utilizing a larger scale are encouraged. Readings and research are required. Satisfies senior exit requirement. Portfolio review prior to advance enrollment required; students should complete courses 113 and 114, or 112 and 115, as preparation. Courses A and B must be taken concurrently. May be repeated for credit. *P. Rangell, J. Lee*

117. Special Topics in Printmaking. F,S

Special studies in printmaking, as announced. Students are billed for a materials fee. Prerequisite(s): course 25, 26, 27, 33, 36, or 38. Enrollment restricted to art majors. May be repeated for credit. *The Staff, P. Rangell, J. Lee*

117X. Seminar in Printmaking: 1475-2008. *

Through a chronological overview, this course touches on topics regarding the history of printmaking from the late medieval period to the present. Covers commerce of art, censorship, propaganda, politics, issues of gender, and the distribution of art and ideas over the centuries. Enrollment restricted to junior and senior art majors. *J. Lee, The Staff*

118. Computer Art: Theories, Methods, and Practices. W

Examines computer interactivity and interface in art making through theory and practice. Students develop interactive installation and sculptural works of art. Assignments may include the acquisition and creation of digital images, two-dimensional animation, programming with MAX/MSP/Jitter, basic electronics and sensors, and digital video and audio. Discussions, readings, and critiques address content, aesthetics, concepts, and expression as well as a practical grasp of relevant software. Students are encouraged to develop research projects and explore experimental practices. Students are billed a materials fee. Prerequisite(s): course 21 or 22 or 80F or 109 or prior basic programming experience and permission of instructor. May be repeated for credit. (General

Education Code(s): PR-C, A.) *E. Anderson, The Staff*

119. Digital Video. F

An exploration of the video medium including production using the digital video format. Digital video cameras will be used to produce digital source material to be manipulated in a non-linear digital editing system. Image manipulation, effects, and editing will be explored. A variety of video structures, theories, concepts, and forms will be examined through production, discussions, and viewing students' and artists' work. Prerequisite(s): course 21 or 22 or 23 or 80F or 118, or by permission of instructor. Enrollment restricted to art majors. May be repeated for credit. (General Education Code(s): PR-C, A.) *E. Anderson, The Staff*

120. Advanced Projects in Computer Art I. *

Independent and collaborative creative projects using advanced computer methods. May include networking projects, virtual representations, interactive multimedia, installation, performance, robotics, and three-dimensional modeling. Emphasis on advanced critical and experimental approaches to computers as a unique art medium and contemporary research issues. Students are required to enroll in scheduled lab sections. Students are billed a materials fee. Prerequisite(s): course 118. May be repeated for credit. *E. Anderson*

121. Advanced Projects in Computer Art II. S

Independent and collaborative creative projects using advanced computer methods, which may be a continuation of projects initiated in course 120. May include networking projects, virtual representations, interactive multimedia, installation, performance, 3D modeling and animation, or robotics. Emphasis on advanced critical and experimental approaches to computers as a unique art medium, and contemporary research issues. Students are required to enroll in scheduled lab section. Students are billed for a materials fee. May be repeated for credit. *E. Anderson, The Staff*

125. Print Media in Visual Communication. W

Explores a unique approach reviewing the printed images in visual communications. A wide blend of traditional and cutting-edge print media processes with an interdisciplinary focus will be taught for conceptualizing, producing, and presenting the printed image. Students are billed a materials fee. Prerequisite(s): course 25 or 26 or 27 or 33 or 36 or 38, and course 112 or 114. Enrollment restricted to art majors. May be repeated for credit. (General Education Code(s): PR-C.) *J. Lee, The Staff*

126. Art of Bookmaking. *

Introduction to production of small edition books and multiples utilizing sequential visual imaging, narrative content, and mixed media in bookmaking. Provides instruction in conceptualizing, producing, and distributing printed artists' multiples. Ideas encouraged within a broad range of possibilities via the format of artists' books. Students are billed a materials fee. Enrollment restricted to art majors. May be repeated for credit. (General Education Code(s): PR-C, A.) *The Staff*

127A. Visiting Artist Special Topics: A. *

Students work collaboratively with a professional visiting artist on his/her research to develop their studio skills, discuss current critical and theoretical readings, and learn skills necessary to becoming a professional artist. Enrollment by portfolio review and restricted to junior and senior art majors. Concurrent enrollment in course 127B is required. Students are billed a materials fee. Enrollment restricted to junior art majors. May be repeated for credit. *The Staff*

127B. Visiting Artist Special Topics: B. *

Students develop independent projects under the advice and guidance of a professional visiting artist during weekly studio classes and discussions. Enrollment by portfolio review and restricted to junior and senior art majors. Concurrent enrollment in course 127A required. Enrollment restricted to junior art majors. May be repeated for credit. *The Staff*

129. Photo-Based Printmaking. S

Intermediate/advanced studio course exploring the processes, history, and the recent developments in contemporary photomechanical printmaking. Through experimentation and research students learn how to utilize photographic imagery, blending them in multiple layers and colors, thereby facilitating articulation of their conceptual foundations. Students are billed a materials fee. Prerequisite(s): course 25 or 26 or 27 or 33 or 36 or 38, and course 112 or 114. Enrollment restricted to art majors. May be repeated for credit. (General Education Code(s): PR-C.) *J. Lee*

130. Intermediate Photography. F,W,S

Continuation of courses 30, 32 and 80D. Students explore visual ideas, directing their work toward individualized goals. Required work includes making photographic prints, reading historical and theoretical works, and examination of photographs. Students are billed a materials fee. Prerequisite(s): course 30, 32 or 80D. Enrollment restricted to art majors. May be repeated for credit. *The Staff, N. Locks, L. Watts*

131. Advanced Photography. W,S

Continuation of course 130. Students produce a portfolio of photographs, read historical and theoretical works, and study photographs and other art works. Students are billed a materials fee. Prerequisite(s): course 30 or 32 and one of the following: course 130, 132, 134 or 138. Enrollment restricted to art majors. May be repeated for credit. *The Staff, N. Locks, L. Watts*

132. Color in Photography. *

Concentration on making photographic works in color. Students produce a portfolio of color

photographs, read historical and theoretical works, and study photographs and other art works. Individualized projects may include work with color transparencies, color xerox, computer-generated imagery, or mixed media. Students are billed for a materials fee. Prerequisite(s): course 130. Enrollment restricted to art majors. May be repeated for credit. *The Staff, N. Locks, L. Watts*

133A. Senior Studio in Photography. *

An intensive studio experience, with major emphasis on the development of individual projects leading to a required senior exhibition. Satisfies senior exit requirement. Students are billed a materials fee. Portfolio review prior to advance enrollment required. Courses 133A and 133B must be taken concurrently. Enrollment restricted to art majors. May be repeated for credit. *N. Locks, L. Watts*

133B. Senior Studio in Photography. *

An intensive studio experience, with major emphasis on the development of individual projects leading to a required senior exhibition. Satisfies senior exit requirement. Portfolio review prior to advance enrollment required. Courses 133A and 133B must be taken concurrently. Enrollment restricted to art majors. May be repeated for credit. *N. Locks, L. Watts*

134. Special Topics in Photography. F,W

Special studies in photography, concentrating on specific subject matter or media. Topics may include documentary photography, landscape, alternative processes, or mixed media. Students are billed a materials fee. Prerequisite(s): course 30, 32, or 80D. Enrollment restricted to art majors. May be repeated for credit. *The Staff, E. Crichton, N. Locks, L. Watts*

135. Introduction to Digital Photography. *

Introduction to basic theories behind the digital production, manipulation, and output of photographic images. Through readings and production, students address major issues specific to working with images in an increasingly digital environment. Students are billed a materials fee. Prerequisite(s): course 30, 32, or 80D. Enrollment restricted to art majors. May be repeated for credit. (General Education Code(s): PR-C, A.) *E. Crichton, L. Watts*

136. Advanced Digital Photography. *

A continuation of course 135 to further study the practice, theories, and criticisms of the digital production, manipulation, and output of photographic images. Major issues specific to the production of digital images will be addressed through readings and discussion, including techniques and theories drawn from a course reader and a textbook on advanced Photoshop skills. A final project is required. Students are billed a materials fee. Prerequisite(s): course 135 or portfolio review. Enrollment restricted to art majors. May be repeated for credit. (General Education Code(s): PR-C, A.) *N. Locks*

138. Darkroom Practices. W,S

Continuation of courses 30, 32, and 80D concentrating on darkroom practices. Students explore visual ideas, directing their work toward individualized goals. Required work includes making photographic prints, reading historical and theoretical works, and examination of photographs. Students are billed a materials fee. Prerequisite(s): courses 30, 32, or 80D. Enrollment restricted to art majors. May be repeated for credit. (General Education Code(s): PR-C.) *The Staff, N. Locks, L. Watts*

139. Intermediate to Advanced Sculpture (Foundry). *

This intermediate/advanced course provides the information and facilities necessary to express ideas through the indirect process of metal casting. The "lost wax" method is used to manifest ideas in sculpture. Lectures and demonstrations are combined with work time in class. Students generate sculpture forms in wax then gate, invest, weld, chase, patina, and present at least one finished piece. Students are billed a materials fee. May be repeated for credit. Prerequisite(s): one of the following: course 23, 28, 29, 37, 39, 40, or 41. Enrollment restricted to art majors. May be repeated for credit. *W. Hibbert-Jones, J. Parker, E. Stephens*

140. Metal Fabrication. F,S

Focus on teaching intermediate to advanced students the processes and techniques of direct metal fabrication for contemporary sculpture and design. Explores a range of welding, cutting, and forming techniques and processes through demonstrations, slide lectures, field trips, and studio time. Demonstrations, slide lectures, and critical discussion of work help develop technical and conceptual skills. Students are billed a materials fee. (Formerly Metal Sculpture.) Prerequisite(s): one of the following courses: 22, 23, 28, 29, 37, 39, 40, or 41. Enrollment restricted to art majors. May be repeated for credit. *The Staff, J. Parker, E. Stephens, W. Hibbert-Jones*

141. Sculpture II. W

More advanced fabrication techniques in sculpture using wood, metal, industrial, and other materials. Techniques include carpentry and woodshop skills, and an introduction to sculptural forms, processes, and ideas. Demonstrations, slide lectures, and critical discussion of work help develop technical and conceptual skills. Students are billed a materials fee. Prerequisite(s): course 23, 28, 29, 37, 39, or 40. Enrollment restricted to art majors. May be repeated for credit. (General Education Code(s): PR-C, A.) *The Staff, J. Parker, E. Stephens, W. Hibbert-Jones*

145. Material Metaphor II. *

Continuation of course 37. Workshops introduce further investigation of materials and techniques. Students explore diverse methods of visual communication through a series of projects that require individual research and collaborative efforts. Students are encouraged to develop projects according to their motivation, expertise, and self assessment. Emphasis placed on contemporary

studio practices of installation, students will integrate a variety of materials and metaphor within the architectural and environmental space. Students are billed a materials fee. Prerequisite(s): course 23, 28, 29, 37, 39, or 40. Enrollment restricted to art majors. May be repeated for credit. *E. Stephens, The Staff*

146. Special Topics in Intermedia: Conceptual and Process-Oriented Approaches. W,S

Special subjects to be offered by regular staff or visiting artists as announced. Students are billed a materials fee. Prerequisite(s): one of the following courses: 23, 28, 29, 37, 39, or 40. Enrollment restricted to art majors. May be repeated for credit. *The Staff, E. Crichton, E. Stephens, J. Parker*

148. Special Topics in Sculpture. F

Special topics in sculpture as announced, concentrating on specific aspects of subject matter and media. Students are billed a materials fee. Prerequisite(s): course 23 or 28 or 29 or 37 or 39 or 40 or 143 or 145. Enrollment restricted to art majors. Offered in alternate academic years. May be repeated for credit. *The Staff, J. Parker, E. Stephens, W. Hibbert-Jones*

149A. Contemporary Visual Media: Issues of Theory and Practice. *

Examines selected issues in critical theory relevant to contemporary visual practices through writing assignments and class discussions of core readings. Specifically, thematically explores the relationship between visual art and film aesthetics. Prerequisite(s): Satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to juniors and seniors. (General Education Code(s): W.) *The Staff*

149B. Contemporary Visual Media: Issues of Theory and Practice. *

Examines selected issues in critical theory relevant to contemporary visual practices through writing assignments and class discussions of core readings. Specifically, focuses on the creative process: How do artists work and what informs their production? Prerequisite(s): Satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to juniors and seniors. (General Education Code(s): W.) *The Staff*

150. Seminar in Contemporary Art.

150C. Critical Issues in Contemporary Art. W

This writing-specific course is concerned with the role of the artist in society and offers a comprehensive overview of contemporary thought within the visual arts from an international perspective. Special emphasis placed on current trends and shifts in artistic production, theory, and criticism, and on art works that are artistically and intellectually inventive, as well as those that produce controversial and often challenging results. Prerequisite(s): Satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to junior and senior art majors. (General Education Code(s): W.) *The Staff*

151. Introduction to Gallery Management. *

Provides practical experience in all phases of an exhibition program's design and implementation including curation, registration, preparation, and publicity. The general tasks of program operation are supplemented with selected reading and written assignments designed to enhance theoretical understanding of broader issues in art administration, including an introduction to the political and ethical realities professionals face. Enrollment restricted to art majors. *The Staff*

156. Topics in Public Art II: Memory, Landscape, and Artist as Activist. S

In-depth exploration of art in the public sphere. Students build an understanding of public art sparked by practical experience designing and developing projects. Theoretical aspects of contemporary public art, and an introduction to the range of current public art practices will be introduced through readings, lectures, and artist's talks. The combination of practical hands-on technique and theoretical ideology will enable students to fully develop their own project within the class. Students are billed a materials fee. Prerequisite(s): course 23, 37, 39, 40, or by permission of instructor. Enrollment restricted to art majors. May be repeated for credit. *W. Hibbert-Jones, The Staff*

159A. Senior Studio: Intermedia, Sculpture, Electronic Art, and Public Art. *

An intensive studio experience for art majors concentrating in the areas of intermedia, sculpture, public art, installation art, electronic art, and interactive art. Major emphasis is on development of individual and collaborative projects in preparation for the senior exhibition. Readings and research required. Class discussions focus on project work and critiques, assigned reading, and the development of a written component by each student. Satisfies senior exit requirement. Students are billed a materials fee. Portfolio review prior to advance enrollment required. Enrollment restricted to art majors. Courses 159A and 159B must be taken concurrently. May be repeated for credit. *E. Anderson, W. Hibbert-Jones, E. Crichton, J. Parker, E. Stephens*

159B. Senior Studio: Intermedia, Sculpture, Electronic Art, and Public Art. *

An intensive studio experience for art majors concentrating in the areas of intermedia, sculpture, public art, installation art, electronic art, and interactive art. Major emphasis is on development of individual and collaborative projects in preparation for the senior exhibition. Readings and research required. Class discussions focus on project work and critiques, assigned reading, and the development of a written component by each student. Satisfies senior exit requirement. Portfolio review prior to advance enrollment required. Enrollment restricted to art majors. Courses 159A and 159B must be taken concurrently. May be repeated for credit. *E. Anderson, W. Hibbert-Jones, E. Crichton, J. Parker, E. Stephens*

160. Forms and Ideas. W

Required for all junior transfer student art majors. Introduction to the art program, emphasizing awareness of contemporary visual practices and theory. Combines studio practice and theory. Students are billed a materials fee. (Formerly course 60.) Enrollment restricted to junior transfer art majors. (General Education Code(s): A.) *The Staff*

161. Picturing Identity: Document and Culture. S

Studio addresses issues of race, gender, culture, personal identity, and visual representation. Examines ways ideas of identity are given visual form and communicated in fine arts and mass media. Students research ways traditionally underrepresented groups in society have been and are being represented in mass media; they then visually interpret that information in forms of visual artifacts. This process and interpretation serve as springboard to examination of expanded ideas of identity, including personal and/or family culture and history, gender, and ethnicity. Encourages use of broad range of mediums available to construct visual representations of identity. Students are billed a materials fee. Enrollment restricted to art majors. (General Education Code(s): PR-C, A.) *The Staff*

191. Teaching Apprenticeship. F,W,S

Designed for art majors at the upper-division level. Each student assists in a lower-division art course under the direct supervision of a faculty member. Students assist in technical instruction, critiques, and class discussions. May not be repeated for credit. Does not count toward upper-division major requirements. Enrollment restricted to art majors. *The Staff*

192. Directed Student Teaching. F,W,S

Teaching of a lower-division seminar under faculty supervision. (See course 42.) Students should have upper-division standing with a proposal supported by a faculty member willing to supervise. Students submit petition to sponsoring agency. Enrollment limited to 5. *The Staff*

193. Field Study. F,W,S

Supervised off-campus study conducted under the immediate and direct guidance of a faculty supervisor. To be used primarily by upper-division students doing part-time off-campus study. Students submit petition to sponsoring agency. Petitions may be obtained in the Art Department Office. May be repeated for credit. *The Staff*

196. Senior Project. F,W,S

Student will concentrate on completing work for comprehensive exhibition under the direction of his or her art adviser, with help from other faculty as needed. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

197. Individual Study. F,W,S

Individual study in areas approved by sponsoring instructors. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198. Independent Field Study. F,W,S

Provides for department-sponsored independent study programs off campus for which faculty supervision is not in person (e.g., supervision is by correspondence). Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Individual study in areas approved by sponsoring instructors. Students submit petition to sponsoring agency. Students are billed a materials fee. May be repeated for credit. *The Staff*

*Not offered in 2011-12

Arts Division

Porter College, D Building,
(831) 459-4940
<http://arts.ucsc.edu>

(There were no substantive changes to the Arts Division Program Description from the General Catalog 2010-12.)

The Arts Division offers both creative and critical studies of art and culture at the undergraduate and graduate level. The Division is committed to building a sustainable model for excellence in the arts. Instruction in the arts inspires and develops the capacity for individual and collaborative creative thought, analysis, and action within and beyond the university. Our faculty consists of artists, historians, critics, and theorists working across the arts in a global context. Undergraduate education in the arts includes programs in the departments of Art, Film and Digital Media, History of Art and Visual Culture, Music, and Theater Arts. Established graduate programs include the interdisciplinary digital arts/new media Master of Fine Arts (M.F.A.) program, the music composition Doctor of Musical Arts (D.M.A.), the music Doctor of Philosophy (Ph.D.), the music Master of Arts (M.A.) and the fifth-year certificate in theater arts. New Ph.D. programs in film and digital media and in visual studies will admit their first classes in 2010-11, while graduate programs in art and theater arts are currently in development.

The Arts Division provides students with access to quality work spaces, including a new digital-arts research facility with two experimental media labs, along with a state-of-the-art music recital hall, practice rooms, electronic music studios, and recording facilities, three theaters for dramatic productions, filmmaking studios and editing suites, surround-sound screening theaters, drama and dance studios, painting and printmaking studios, a foundry, photography and computer laboratories, and specialized lecture and seminar classrooms. McHenry Library houses an extensive collection of books and periodicals on the arts, as well as an analogue and digital slide collection, music scores and recording, and one of the largest collections of films and DVDs in the University of California system. Exhibition space in the arts includes galleries for students and faculty shows; the Sesnon Gallery presents curated exhibitions to the university community and the general public. The Center for Art and Visual Studies, a focus for interdisciplinary exhibitions, conferences, symposia, and seminars is currently in development.

The departments and majors in the Arts Division are listed in detail under Art, Film and Digital Media, History of Art and Visual Culture, Music, Theater Arts, and Digital Arts and New Media.

Among the Division's many performing and fine arts programs, Shakespeare Santa Cruz is an internationally recognized, professional, repertory company. The campus hosts several film festivals each year, including the Women of Color Film and Video Festival and Cine Maiz. Student work is regularly broadcast on SCTV, and Eyecandy publishes student writing on film, television, and digital media. The Music Department hosts an annual Festival of Contemporary Music in April and presents a variety of solo and ensemble concert programs throughout the year. The History of Art and Visual Culture Department hosts a series of speakers and seminars each year on rotating topics that are supported by the Rebele Chair. The Art Department sponsors regularly scheduled public presentations as well as quarterly open studios and a print and photo sale in the spring. The digital arts and new media M.F.A. program regularly sponsors digital arts events, such as festivals, symposia, visiting speakers, and exhibitions of student work, both on and off-campus, culminating in an annual exhibition of graduate thesis research.

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

(There were no substantive changes to the Astronomy and Astrophysics Program Description from the General Catalog 2010-12.)

Program Description

The science of astronomy has the universe as its domain. Galaxies, stars, planets, and an ever-increasing variety of phenomena observed from ground- and space-based observatories are among the objects of study. Areas of special interest at UCSC include cosmology, the formation and evolution of planets, stars, and galaxies, high-energy astrophysics, active galaxies, supernovae and nucleosynthesis, extra-solar planets, interstellar medium, intergalactic medium, solar system dynamics, and all aspects of observational optical and infrared astronomy. Astronomers use concepts from and contribute to the development of many other scientific disciplines, including optics, mechanics, relativity, atomic and nuclear physics, applied mathematics, chemistry, geology, and meteorology. The interdisciplinary nature of astronomy, including its historical and philosophical elements, makes its study valuable to those planning careers in a variety of fields.

The Astronomy and Astrophysics Department offers a broad undergraduate curriculum that fulfills the needs of students seeking a general education but also enables students wishing to obtain a minor or major in astrophysics to study the subject in greater depth.

The graduate program is intended for those with a professional interest in the subject. The interests of the faculty embrace a wide range of both theoretical and observational aspects of astronomy. Current research and course offerings include our solar system and other solar systems, stellar structure and evolution, stellar spectroscopy, the interstellar medium, galactic structure, active galaxies and quasars, cosmology, general relativity and gravitational radiation, the origin of the elements, infrared and radio astronomy, advanced astronomical instrumentation, astrobiology, high-energy astrophysics, and X-ray and gamma-ray astronomy.

Graduate students have access to state-of-the-art instrument development and data reduction technology, the UCO/Lick Observatory computer network, and an unusually extensive astronomical library at the Lick Observatory headquarters on campus. Graduate students may conduct supervised research using selected telescopic facilities of the Lick Observatory on Mount Hamilton, 55 miles from Santa Cruz. The 10-meter Keck Telescope in Hawaii, the world's largest, is administered from the UCSC campus and is used for frontier research by UC astronomers. The Center for Adaptive Optics (CfAO) is also headquartered at UCSC. Education is central to the CfAO's mission, and a key element of this is the support provided by the center to graduate students. In addition to research, the center provides interdisciplinary access to a nationwide network of scientists in astronomy and vision science.

Undergraduate Courses

Instruction in astronomy for undergraduates at UCSC is designed to meet the needs of several groups of students.

Courses 1, 2, 3, 4, 5, 6, 8, 80B, and 80D, providing a general survey of the universe as now understood from historical and modern observations, are offered for those not specializing in a scientific discipline.

Courses 11, 12, 13, 14, 15, 16, and 18, emphasizing basic physical laws and theories as applied to astronomy, taken together provide a survey of modern astronomy for students with some facility in mathematics. Taken separately, these courses provide an in-depth introduction to gravitational interaction, stellar evolution, and extragalactic astrophysics. These courses are designed for students intending to major in a scientific subject, although qualified nonscience majors may enroll. A good high school background in mathematics and physics is required. Prior or concurrent enrollment in a basic calculus course (Mathematics 11A or 19A) and a basic

physics course (Physics 5A/L or 6A/L) is helpful but not required.

Finally, a more thorough quantitative treatment of selected topics in astronomy and astrophysics at the upper-division level is provided by courses 111, 112, 113, 117, and 118. Completion of course work in calculus of several variables (Mathematics 22 or 23A-B) and Physics 5B/M or 6B/M and 101A is required for these advanced courses.

Astrophysics Minor

For undergraduate students having a particular interest in the subject, a minor in astronomy and astrophysics is offered. Most students who minor in astronomy and astrophysics are majors in another science, though majors in other fields are also possible. The minor in astronomy and astrophysics requires that students take the Physics 5 or 6 series (with associated laboratories), Physics 101A, a minimum of two courses from the Astronomy 11–18 series, and a minimum of three courses from the following, Astronomy 111–118. A senior thesis on an astronomy-related topic is also encouraged. Interested students should contact the Astronomy and Astrophysics Department office for further information.

Astrophysics Major

The UCSC major in astrophysics is administered by the Physics Department and combines a core physics major with advanced electives in astrophysics, an astrophysics laboratory course, and senior thesis work on a topic in astrophysics. It is a rigorous program designed to prepare students for a broad range of technical careers or for entry into graduate or professional programs. A full description of the major can be found in the physics section of this catalog.

Preparation for Graduate Work in Astrophysics

The UCSC graduate program in astronomy and astrophysics is designed for Ph.D. students seeking a professional career in teaching and research. In view of the thorough preparation in mathematics and physics required for graduate study, most entering astronomy graduate students major in physics or astrophysics as undergraduates.

The suggested minimum requirements for admission to graduate standing at UCSC include the following undergraduate courses:

Basic physics. Mechanics, wave motion, sound, light, electricity and magnetism, thermodynamics, atomic physics, and quantum mechanics (Physics 5A, 5B, and 5C).

Basic mathematics. Calculus (Mathematics 19A-B and 23A-B or equivalent) and statistics (Mathematics and Statistics 5).

Intermediate-level physics. Mechanics (Physics 105); electricity, magnetism, and optics (Physics 110A-B); mathematical methods in physics (Physics 116A-B-C); nuclear and particle physics (Physics 129); and quantum mechanics (Physics 139A-B).

Intermediate-level mathematics. Linear algebra (Mathematics 21), complex analysis (Mathematics 103), and ordinary and partial differential equations (Mathematics 106 and 107).

Graduate Program

Graduate instruction is built upon a two-year cycle of 11 one-quarter courses in astronomy and physics that are required of all students.

Seven courses are specifically required:

Astronomy 202, *Radiative Processes*

Astronomy 204, *Astrophysical Flows*

Astronomy 205, *Introduction to Astronomical Research*

Astronomy 212, *Dynamical Astronomy*

Astronomy 220A, *Stellar Structure and Evolution*

Astronomy 230, *Diffuse Matter in Space*

Astronomy 233, *Physical Cosmology*

and four additional courses are chosen from the list of electives given below. In addition, students must fulfill the following requirements:

Students must meet at least quarterly with an assigned adviser.

Each student must also be a teaching assistant for at least one quarter.

By the end of their second year, students must:

- Complete one quarter of independent study with a faculty member and give a department talk on that work.

- Pass a preliminary examination based on course material, relevant physics, and general astronomical knowledge.
- Submit one lead-author paper to a refereed journal that is based on research conducted at UCSC. A one-year probation and extension will be allowed by department faculty vote at the board review meeting at the end of the second year, but such extension will not be considered unless a reasonable first draft is submitted at the board review and accompanied by a proposed completion strategy which has been approved by the student's adviser.

By the end of the third year, students must complete a qualifying examination that presents and defends a proposed thesis topic.

After passing the board review based on the above-mentioned requirements and the qualifying examination, students pursue independent research leading to the doctoral dissertation. Upon completion of the Ph.D. dissertation, students must pass an oral dissertation defense. A completed draft of the thesis must be submitted to the dissertation committee at least two weeks before the date of the defense, and the defense itself must occur at least two weeks before the campus deadline for thesis submissions in that quarter. Exceptions to this policy will be granted only under exceptional circumstances and must be approved by the department chair, associate chair, and the department graduate advising committee.

The department has established five years as the normative time to degree. Normative times is the elapsed calendar time, in years, that, under normal circumstances, will be needed to complete all requirements for the Ph.D. A one-year extension may be granted if funding is available. Funding support will not, in general, be provided beyond six years. Exceptions for extension beyond six years will be granted only for exceptional extenuating circumstances, and will be decided upon by the department chair, associate chair, and the department graduate advising committee.

Electives (four required) may be drawn from this list:

Astronomy 207, *Future Directions/Future Missions*

Astronomy 214, *Special Topics in Cosmology*

Astronomy 220B, *Star Formation*

Astronomy 220C, *Advanced Stages of Stellar Evolution and Nucleosynthesis*

Astronomy 222, *Planetary Formation and Evolution*

Astronomy 223, *Planetary Physics*

Astronomy 225, *High-Energy Astrophysics*

Astronomy 231, *Diffuse Gas In and Between Galaxies*

Astronomy 235, *Numerical Techniques*

Astronomy 237, *Accretion Processes*

Astronomy 240A, *Galactic and Extragalactic Stellar Systems*

Astronomy 240B, *High Redshift Galaxies*

Astronomy 257, *Modern Astronomical Techniques*

Astronomy 260, *Instrumentation for Astronomy*

Astronomy 289, *Adaptive Optics and Its Applications*

Physics/Astronomy 224, *Origin and Evolution of the Universe*

Physics/Astronomy 226, *General Relativity*

Earth Sciences 275, *Magnetohydrodynamics*

Engineering 206, *Bayesian Statistics*

Engineering 214, *Applied Dynamical Systems*

Engineering 217, *Introduction to Fluid Dynamics*

Physics 210, *Classical Mechanics*

Physics 215, *Introduction to Non-Relativistic Quantum Mechanics*

Physics 216, *Advanced Topics in Non-Relativistic Quantum Mechanics*

Physics 217, *Quantum Field Theory I*

Physics 218, *Quantum Field Theory II*

Physics 227, *Advanced Fluid Dynamics*

Faculty and Professional Interests

Professor/Astronomer

REBECCA BERNSTEIN

Galaxy formation and evolution, astronomical instrumentation and optical design

PETER H. BODENHEIMER, Emeritus

MICHAEL J. BOLTE

Dynamics of star clusters, ages of star clusters, chemical enrichment history of the galaxy, observations of interacting galaxies

JEAN P. BRODIE

Extragalactic globular clusters, galaxy formation, near-field cosmology

HARLAND W. EPPS

Astronomical optics and instrumentation

SANDRA M. FABER

Galaxies, stellar populations, cosmology, instrumentation

PURAGRA (RAJA) GUHA THAKURTA

Galaxy formation and evolution: resolved stellar populations in the Local Group and distant galaxies. Globular clusters. Interstellar dust.

GARTH D. ILLINGWORTH

High redshift galaxies, galaxy formation/evolution, science policy

BURTON F. JONES, Emeritus

DAVID C. KOO

Cosmology, birth and evolution of galaxies and quasars

ROBERT P. KRAFT, Emeritus

CLAIRE MAX

Adaptive optics and high spatial resolution imaging, colliding galaxies, active galactic nuclei and their supermassive black holes

JOSEPH S. MILLER, Emeritus

JERRY E. NELSON

Design and construction of large telescopes; project scientist for the two Keck telescope and Thirty Meter telescope

JASON PROCHASKA

Damped Ly α systems in quasars, Lyman limit systems, stellar abundances, thick disk imaging of our galaxy

DAVID M. RANK, Emeritus

GRAEME H. SMITH

Stellar populations, chromospheric activity among late-type stars

STEVEN S. VOGT

Extrasolar planets, stellar, spectroscopy, instrumentation

MERLE F. WALKER, Emeritus

Astronomer

LLOYD B. ROBINSON, Emeritus

Associate Professor/Associate Astronomer

CONSTANCE ROCKOSI

Galactic structure, stellar populations, CCD detectors, astronomical instrumentation

Professor

GEORGE R. BLUMENTHAL

Cosmology, galaxy formation, high-energy astrophysics

FRANK D. DRAKE, Emeritus

JOHN FAULKNER, Emeritus

GREGORY LAUGHLIN

Extra-solar planets, numerical astrophysics

DOUGLAS N. C. LIN

Fluid dynamics, star formation, galactic structure, planetary systems, accretion disks, extra-solar planets

PIERO MADAU

Cosmology, high-energy astrophysics

BRUCE H. MARGON

High-energy astrophysics, space astronomy

WILLIAM G. MATHEWS, Research Professor

High-energy astrophysics, intracluster gas

STANFORD E. WOOSLEY

Supernovae, stellar evolution, nucleosynthesis

Associate Professor

JONATHAN FORTNEY

Planetary atmospheres and interiors, extrasolar planets

ENRICO RAMIREZ-RUIZ

Stellar explosions, gamma-ray bursts accretion physics, near compact stars

Assistant Professor

MARK KRUMHOLZ

Star formation, interstellar medium, numerical methods

Lecturer

ADRIANE STEINACKER

Planet formation, MHD simulations

Professor

JOEL R. PRIMACK (Physics)

Cosmology, galaxy, formation and evolution, particle astrophysics, nature of dark matter, gamma ray astronomy

GARY GLATZMAIER (Earth and Planetary Sciences)

Computer simulation of geodynamics and planetary dynamics

STEVEN RITZ (Physics)

Particle physics and astrophysics

Associate Professor

ANTHONY N. AGUIRRE (Physics)

Cosmology of the early and late universe: inflation and the global structure of cosmological models; the intergalactic medium and its enrichment with heavy elements; galaxy formation, evolution, and feedback processes; dark matter; theories of modified gravity

PASCALE GARAUD (Applied Mathematics)

Astrophysics, geophysics, fluid dynamics, numerical resolutions of differential equations, and mathematical modeling of natural flows

DAVID M. SMITH (Physics)

High-energy astrophysics; X-ray and gamma-ray detectors and instrumentation; solar, terrestrial, and planetary sources of gamma radiation

Research Astronomer

BRUCE BIGELOW

Design, project management for complex optical-mechanical systems, astronomical instrumentation for large telescopes

DONALD GAVEL

Development of next generation adaptive optics for large telescopes, Director of Laboratory for Adaptive Optics

BRAD HOLDEN

Design, development, and oversight of UC Astronomy Data Center (all data obtained by UC astronomers at the Lick and Keck Observatories), early evolution of elliptical galaxies

ROBERT KIBRICK

Development of computer software and wide-area networks in support of remote control and data-acquisition systems for telescopes and complex astronomical instrumentation systems

TERRY MAST

Development of large telescopes and their instrumentation

DREW PHILLIPS

Extragalactic star-formation, gas-phase abundances, galaxy kinematics, and galaxy formation and evolutions; development of astronomical optics and instrumentation

RICHARD STOVER

Development and construction of state-of-the-art detector systems for instruments at Lick Observatory and the Keck Observatory

MINGZHI WEI

CCD detectors and CCD controllers

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses**1. Introduction to the Cosmos. F**

Overview of the main ideas in our current view of the universe and how these ideas originated. Galaxies, quasars, stars, black holes, and planets. Students cannot receive credit for this course and course 2. (General Education Code(s): SI, IN.) *P. Guha Thakurta*

2. Overview of the Universe. F,W,S

An overview of the main ideas in our current view of the universe, and how they originated. Galaxies, quasars, stars, pulsars, and planets. Intended primarily for nonscience majors interested in a one-quarter survey of classical and modern astronomy. (General Education Code(s): MF, IN, Q.) *S. Vogt, R. Bernstein, A. Steinacker*

3. Introductory Astronomy: The Solar System. W,S

Properties of the solar system, the sun, solar system exploration, the physical nature of the Earth and the other planets, comets and asteroids, origin of the solar system, possibility of life on other worlds, planet formation, and search for planets beyond the solar system. Intended for nonscience majors. Courses 3, 4, and 5 are independent and may be taken separately or sequentially. (General Education Code(s): MF, IN, Q.) *D. Lin, A. Steinacker*

4. Introductory Astronomy: The Stars. *

Stellar evolution: observed properties of stars, internal structure of stars, stages of a star's life including stellar births, white dwarfs, supernovae, pulsars, neutron stars, and black holes. Planet and constellation identification. Intended for nonscience majors. Courses 3, 4, and 5 are independent and may be taken separately or sequentially. (General Education Code(s): MF, IN, Q.) *The Staff*

5. Introductory Astronomy: The Formation and Evolution of the Universe. W

The universe explained. Fundamental concepts of modern cosmology (Big Bang, dark matter, curved space, black holes, star and galaxy formation), the basic physics underlying them, and their scientific development. Intended for non-science majors. Courses 3, 4, and 5 are independent and may be taken separately. (General Education Code(s): MF, IN, Q.) *J. Brodie*

6. The Space-Age Solar System. W

Scientific study of the Moon, Earth, Mercury, Venus, and Mars by the space program; history of rocket development; the Apollo program and exploration of the Moon; unmanned spacecraft studies of the terrestrial planets; scientific theories of planetary surfaces and atmospheres. Intended for nonscience majors. (Formerly course 80A.) (General Education Code(s): SI, T-2 Natural Sciences.) *G. Smith*

12. Stars and Stellar Evolution. W

An introduction to the observational facts and physical theory pertaining to stars. Topics include the observed properties of stars and the physics underlying those properties; stellar atmospheres; stellar structure and evolution. Intended for science majors and qualified non-science majors. Knowledge of high school physics and an understanding of mathematics at the Mathematics 2 level required. Offered in alternate academic years. (General Education Code(s): MF, IN, Q.) *S. Woosley*

13. Galaxies, Cosmology, and High Energy Astrophysics. S

Introduction to modern cosmology and extragalactic astronomy. Topics include the origin of the universe, Big Bang cosmology, expansion of the universe, dark matter and dark energy, properties of galaxies and active galactic nuclei, and very energetic phenomena in our own and other galaxies. Intended for science majors and qualified non-science majors. Knowledge of high school physics and an understanding of mathematics at the Math 2 level required. (General Education Code(s): MF, IN, Q.) *D. Koo*

15. Dead Stars and Black Holes. *

Course is primarily concerned with the structure, formation, and astrophysical manifestations of compact objects, such as white dwarfs, neutron stars, and black holes, and the astronomical evidence for their existence. Intended for science majors and qualified non-science majors. Knowledge of high school physics and an understanding of mathematics at the Math 2 level required. (General Education Code(s): MF, IN, Q.) *E. Ramirez-Ruiz*

16. Astrobiology: Life in the Universe. F

Topics include the detection of extrasolar planets, planet formation, stellar evolution and properties of Mars, the exploration of our solar system and the search for life within it, and the evolution of life on Earth. Intended for science majors and qualified non-science majors. Knowledge of high school physics and an understanding of mathematics at the Math 2 level required. Enrollment limited to 50. (General Education Code(s): MF, IN, Q.) *A. Steinacker*

18. Planets and Planetary Systems. *

Our solar system and newly discovered planetary systems. Formation and structure of planets, moons, rings, asteroids, comets. Intended for science majors and qualified non-science majors. Knowledge of high school physics and an understanding of mathematics at the Mathematics 2 level required. Offered in alternate academic years. (General Education Code(s): IN, Q.) *C. Max*

70. Honors Undergraduate Seminar in Astrophysical Research (2 credits). F

Explores current problems in astrophysical research and how they are being solved by practicing scientists. Each presentation-discussion focuses on a different problem or question, explaining how the problem relates to broader astronomical issues, describing the methods used to solve the problem and reviewing the hoped for, or anticipated outcome. Intended for students considering a career in the physical sciences. *S. Faber, G. Smith*

Upper-Division Courses

111. Order-of-Magnitude Astrophysics. *

Examines the most basic and direct connection between physics and astrophysics in order to derive a better understanding of astrophysical phenomena from first principles to the extent possible. Prerequisite(s): Mathematics 22 or 23A; Physics 5B or 6B; and Physics 101A. Enrollment limited to 25. *E. Ramirez-Ruiz*

112. Physics of Stars. F

The leading observational facts about stars as interpreted by current theories of stellar structure and evolution. Spectroscopy, abundances of the elements, nucleosynthesis, stellar atmospheres, stellar populations. Final stages of evolution, including white dwarfs, neutron stars, supernovae. Prerequisite(s): Mathematics 22 or 23A, Physics 5B or 6B, and 101A. *J. Fortney*

113. Introduction to Cosmology. S

Physical examination of our evolving universe: the Big Bang model; simple aspects of general relativity; particle physics in the early universe; production of various background radiations; production of elements; tests of geometry of the universe; dark energy and dark matter; and formation and evolution of galaxies and large-scale structure. (Formerly "Physical Cosmology.") Prerequisite(s): Mathematics 22 or 23A, Physics 5B or 6B, and 101A. *P. Madau*

117. High Energy Astrophysics. *

Theory and practice of space and ground-based x-ray and gamma-ray astronomical detectors. High-energy emission processes, neutron stars, black holes. Observations of x-ray binaries, pulsars, magnetars, clusters, gamma-ray bursts, the x-ray background. High-energy cosmic rays. Neutrino and gravitational-wave astronomy. Prerequisite(s): Mathematics 22 or 23A, Physics 5B or 6B, and 101A. *E. Ramirez-Ruiz*

118. Physics of Planetary Systems. W

Determination of the physical properties of the solar system, its individual planets, and extrasolar planetary systems through ground-based and space-based observations, laboratory measurements, and theory. Theories of the origin and evolution of planets and planetary systems. Prerequisite(s): Mathematics 22 or 23A or 23B, Physics 5B or 6B, and 101A. Offered in alternate academic years. *J. Fortney*

135. Astrophysics Advanced Laboratory. *

Introduction to the techniques of modern observational astrophysics at optical and radio wavelengths through hands-on experiments. Offered in some academic years as a multiple-term course: 135A in fall and 135B in winter, depending on astronomical conditions. (Also offered as Physics 135. Students cannot receive credit for both courses.) Prerequisite(s): Physics 133 and at least one astronomy course. Intended primarily for juniors and seniors majoring or minoring in astrophysics. *R. Dewey*

135A. Astrophysics Advanced Laboratory (3 credits). F

Introduction to techniques of modern observational astrophysics at optical and radio wavelengths through hands-on experiments. Intended primarily for juniors and seniors majoring or minoring in astrophysics. Offered in some academic years as single-term course 135 in fall, depending on astronomical conditions. (Also offered as Physics 135A. Students cannot receive credit for both courses.) Prerequisite(s): Physics 133 and at least one astronomy course. *R. Dewey*

135B. Astrophysics Advanced Laboratory (2 credits). W

Introduction to techniques of modern observational astrophysics at optical and radio wavelengths through hands-on experiments. Intended primarily for juniors and seniors majoring or minoring in astrophysics. Offered in some academic years as single-term course 135 in fall, depending on astronomical conditions. (Also offered as Physics 135B. Students cannot receive credit for both courses.) Prerequisite(s): Physics 133 and at least one astronomy course. *R. Dewey*

171. General Relativity, Black Holes, and Cosmology. F

Special relativity is reviewed. Curved space-time, including the metric and geodesics, are illustrated with simple examples. The Einstein equations are solved for cases of high symmetry. Black-hole physics and cosmology are discussed, including recent developments. (Also offered as Physics 171. Students cannot receive credit for both courses.) Prerequisite(s): courses 105, 110A, 110B, and 116A-B-C. *A. Aguirre*

199. Tutorial. F,W,S

May be repeated for credit. *The Staff*

Graduate Courses

202. Radiative Processes. W

Survey of radiative processes of astrophysical importance from radio waves to gamma rays. The interaction of radiation with matter: radiative transfer, emission, and absorption. Thermal and non-thermal processes, including bremsstrahlung, synchrotron radiation, and Compton scattering. Radiation in plasmas. (Formerly *Electromagnetism and Plasma Physics*.) Offered in alternate academic years. *E. Ramirez-Ruiz*

204. Astrophysical Flows. F

Explores how physical conditions in astrophysical objects can be diagnosed from their spectra. Discussion topics include how energy flows determine the thermal state of radiating objects and how the physics of radiative transfer can explain the emergent spectral characteristics of stars, accretion disks, Lyman-alpha clouds, and microwave background. (Formerly 204A *Physics of Astrophysics I* and 204B *Physics of Astrophysics II*.) Enrollment restricted to graduate students. Offered in alternate academic years. *G. Laughlin*

205. Introduction to Astronomical Research. F

Lectures by UCSC faculty on current areas of astronomical and astrophysical research being carried out locally. Enrollment restricted to graduate students. *G. Smith*

207. Future Directions/Future Missions. *

Examines possible key science goals for the the next decade, such as planet detection, galaxy formation, and "dark energy" cosmology; the means for addressing these goals, such as new space missions and/or ground-based facilities; and the political, technical, and scientific constraints on such research. Looks at the role of the Decadal Survey. Examines a few existing programs (DEEP, ALMA, SNAP, NGST) as examples. Enrollment restricted to graduate students. Offered in alternate academic years. *G. Illingworth*

212. Dynamical Astronomy. *

Surveys dynamical processes in astrophysical systems on scales ranging from the planetary to the cosmological, stability and evolution of planetary orbits, scattering processes and the few-body problem, processes in stellar clusters, spiral structure and galactic dynamics, galactic collisions, and evolution of large-scale structure. Enrollment restricted to graduate students. *G. Laughlin*

214. Special Topics in Galactic and Extragalactic Astronomy. *

Survey of some principal areas of research on the origin and growth of cosmic structures and galaxies: the "dark ages;" 21cm tomography; first galaxies; first stars and seed black holes; reionization and chemical enrichment of the intergalactic medium; the assembly of massive galaxies; quasi-stellar sources; interactions of massive black holes with their environment; extragalactic background radiation; numerical simulations and the nature of the dark matter; the dark halo of the Milky Way. (Formerly Special Topics in Cosmology) Enrollment restricted to graduate students. *P. Madau*

220A. Stellar Structure and Evolution. *

Survey of stellar structure and evolution. Physical properties of stellar material. Convective and radiative energy transport. Stellar models and evolutionary tracks through all phases. Brown dwarfs and giant planets. Comparison with observations. Enrollment restricted to graduate students. *J. Fortney*

220B. Star Formation. *

Theory and observations of star formation. Observational techniques used to study star formation, particularly millimeter line and continuum observations, and infrared, visible, and UV star-formation tracers. Physics of giant molecular clouds and galaxy-scale star formation. Gravitational instability, collapse, and fragmentation. Pre-main sequence stellar evolution. Protostellar accretion disks and jets. Radiative feedback and HII regions. (Formerly *Star and Planet Formation*) Prerequisite(s): course 220A. *M. Krumholz*

220C. Advanced Stages of Stellar Evolution and Nucleosynthesis. *

The evolution of massive stars beyond helium burning; properties of white dwarf stars; physics and observations of novae, supernovae, and other high energy stellar phenomena; nuclear systematics and reaction rates; the origin and production of all the chemical elements. Prerequisite(s): course 220A. Enrollment restricted to graduate students. *S. Woosley*

222. Planetary Formation and Evolution. S

Theory and observations of protoplanetary disks. Origin and evolution of the solar nebula. Formation and evolution of the terrestrial planets and the giant planets. (Formerly *Planetary Science*) Enrollment restricted to graduate students. Offered in alternate academic years. *D. Lin*

223. Planetary Physics. *

Survey of interiors, atmospheres, thermal evolution, and magnetospheres of planets, with focus on the astronomical perspective. Course covers exoplanets and solar system planets, both giant and terrestrial, with attention to current and future observations. Enrollment restricted to graduate students. *J. Fortney*

224. Origin and Evolution of the Universe. S

Introduction to the particle physics and cosmology of the very early universe: relativistic cosmology, initial conditions, inflation and grand unified theories, baryosynthesis, nucleosynthesis, gravitational collapse, hypotheses regarding the dark matter and consequences for formation of galaxies and large scale structure. (Also offered as Physics 224. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. Offered in alternate academic years. *J. Primack*

225. High-Energy Astrophysics. *

High-energy astrophysics and the final stages of stellar evolution: supernovae, binary stars, accretion disks, pulsars; extragalactic radio sources; active galactic nuclei; black holes. (Formerly *Physics of Compact Objects*) Offered in alternate academic years. *E. Ramirez-Ruiz*

226. General Relativity. W

Develops the formalism of Einstein's general relativity, including solar system tests, gravitational waves, cosmology, and black holes. (Also offered as Physics 226. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. *A. Aguirre*

230. Diffuse Matter in Space. S

Fundamental physical theory of gaseous nebulae and the interstellar medium. Ionization, thermal balance, theory and observation of emission spectra. Interstellar absorption lines, extinction by interstellar dust. Ultraviolet, optical, infrared, and radio spectra of gaseous nebulae. (Formerly *Low-Density Astrophysics*) Offered in alternate academic years. *M. Krumholz*

231. Diffuse Gas In and In Between Galaxies. *

Examines the observational data and theoretical concepts related to the interstellar medium (gas inside galaxies); intracluster medium (gas in between galaxies in clusters); and intergalactic medium (gas in between field galaxies). Emphases on the inferred physical conditions of this gas and its implications for cosmology and processes of galaxy formation. Enrollment restricted to graduate students. *J. Prochaska*

233. Physical Cosmology. *

Survey of modern physical cosmology, including Newtonian cosmology, curved space-times, observational tests of cosmology, the early universe, inflation, nucleosynthesis, dark matter, and the formation of structure in the universe. Prerequisite(s): course 202. Offered in alternate academic years. *P. Madau*

235. Numerical Techniques. *

Gives students a theoretical and practical grounding in the use of numerical methods and simulations for solving astrophysical problems. Topics include N-body, SPH and grid-based hydro methods as well as stellar evolution and radiation transport techniques. Enrollment restricted to graduate students. Offered in alternate academic years. *G. Laughlin*

237. Accretion Processes. *

Theories of spherical accretion, structure and stability of steady-state accretion disks, and the evolution of time-dependent accretion disks. Applications of these theories to the formation of the solar system as well as the structure and evolution of dwarf novae and X-ray sources are emphasized. (Formerly *Accretion in Early and Late Stages of Stellar Evolution*) Offered in alternate academic years. *D. Lin*

240A. Galactic and Extragalactic Stellar Systems. F

Structure and evolutionary histories of nearby galaxies. Stellar populations, galactic dynamics, dark matter, galactic structure and mass distributions. Peculiar galaxies and starbursting galaxies. Structure and content of the Milky Way. Evolution of density perturbations in the early universe. Hierarchical clustering model for galaxy formation and evolution. Offered in alternate academic years. *C. Rockosi*

240B. High Redshift Galaxies. S

Galaxy formation and evolution from observations of intermediate-to-high redshift galaxies (z 0.5-5). Complements and builds on 240A. Cluster galaxies and field galaxies. Foundation from classic papers on distant galaxies. Recent discoveries from IR and sub-mm measurements. Impact of AGNs and QSOs. Overview of modeling approaches. Identify theoretical and observational issues. (Formerly *Galactic and Extragalactic Stellar Systems*) Enrollment restricted to graduate students. Offered in alternate academic years. *G. Illingworth*

257. Modern Astronomical Techniques. W

Covers physical, mathematical, and practical methods of modern astronomical observations at all wavelengths at a level that prepares students to comprehend published data and to plan their own observations. Topics include: noise sources and astrophysical backgrounds; coordinate systems; filter systems; the physical basis of coherent and incoherent photon detectors; astronomical optics and aberrations; design and use of imaging and spectroscopic instruments; antenna theory; aperture synthesis and image reconstruction techniques; and further topics at the discretion of the instructor. (Formerly *Modern Observational Techniques*) Offered in alternate academic years. *The*

Staff

260. Instrumentation for Astronomy. *

An introduction to astronomical instrumentation for infrared and visible wavelengths. Topics include instrument requirements imposed by dust, atmosphere, and telescope; optical, mechanical, and structural design principles and components; electronic and software instrument control. Imaging cameras and spectrographs are described. Offered in alternate academic years. Enrollment restricted to graduate students. *C. Rockosi*

289. Adaptive Optics and Its Application. F

Introduction to adaptive optics and its astronomical applications. Topics include effects of atmospheric turbulence on astronomical images, basic principles of feedback control, wavefront sensors and correctors, laser guide stars, how to analyze and optimize performance of adaptive optics systems, and techniques for utilizing current and future systems for astronomical observations. (Formerly course 289C.) Enrollment restricted to graduate students. Offered in alternate academic years. *C. Max*

292. Seminar (no credit). F,W,S

Seminar attended by faculty, graduate students, and upper-division undergraduate students. *The Staff*

297. Independent Study. F,W,S

Independent study or research for graduate students who have not yet begun work on their theses. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. *The Staff*

299. Thesis Research. F,W,S

Students submit petition to sponsoring agency. *The Staff*

*Not offered in 2011-12

Program Description

Research at the macromolecular, molecular, and atomic levels is revolutionizing our understanding of the fundamental processes of life. Students interested in joining this search are best prepared by undertaking coursework in biology, chemistry, physics, mathematics, and computer science. Toward this end, an undergraduate major in biochemistry and molecular biology (BMB) is offered by faculty who are actively engaged in research on biological systems.

Students who declare the BMB major earn a bachelor of science (B.S.) degree. The BMB major constitutes an integrated curriculum of basic instruction in biology, chemistry, mathematics, and physics, followed by the opportunity to pursue advanced study in specialized areas of interest. In modern, well-equipped laboratories, distinguished faculty are engaged in frontline research at UCSC. The Departments of Chemistry and Biochemistry and Molecular, Cell, and Developmental Biology host very active seminar series of national and international scholars in which advanced undergraduates are encouraged to participate.

The BMB program features close faculty-student interaction, small upper-division classes, stimulating learning environments, and opportunities for independent research and study. Students majoring in BMB are encouraged to become involved in research under the guidance of a faculty sponsor. Many students participating in this aspect of the program have made important contributions to the scientific literature.

Given the wide scope and interdisciplinary nature of this program, a considerable degree of flexibility has been incorporated into the major. All prospective majors should see the BMB academic adviser in the Undergraduate Affairs Office as early as possible. Junior transfer students or others with questions should consult the Undergraduate Affairs web site at <http://undergrad.pbsci.ucsc.edu/>. A double major of BMB with the biological sciences majors or chemistry is not permitted. No minor is offered.

Requirements for the B.S. Degree

Lower-Division Requirements

General Chemistry: Chemistry 1A, 1B/M, and 1C/N

Calculus: Mathematics 11A-B and 22; or Mathematics 19A-B and 22

Statistics: Applied Mathematics and Statistics 5 or 7/L

Introductory Biology: Biology: Molecular, Cell, and Developmental (BIOL) 20A and Biology: Ecology and Evolutionary (BIOE) 20B

Physics: Physics 5A/L, 5B/M, and 5C/N; or 6A/L, 6B/M, and 6C/N

Upper-Division Requirements

Organic Chemistry: Chemistry 108A/L, 108B/M or 112A/L, 112B/M, and 112C/N

Biochemistry: BIOC 100A, 100B, and 100C and BIOL 100K

Genetics: BIOL 105

Cell Biology: BIOL 110

Molecular Biology: BIOL 115

Physical Chemistry: Chemistry 163A and 163B

One of the following laboratory courses:

BIOC 110L, *Advanced Biochemistry Laboratory*
 BIOL 100L, *Advanced Biochemistry Laboratory*
 BIOL 105L, *Eukaryotic Genetics Laboratory*
 BIOL 105M, *Microbial Genetics Laboratory*
 BIOL 109L, *Yeast Molecular Genetics Laboratory*
 BIOL 110L, *Cell Biology Laboratory*
 BIOL 115L, *Eukaryotic Molecular Biology Laboratory*
 BIOL 119L, *Microbiology Laboratory*
 BIOL 121L, *Environmental Phage Biology Laboratory*
 BIOL 186L, *Undergraduate Research in MCD Biology*
 BIOL 187L, *Molecular Biotechnology Laboratory*
 Biomolecular Engineering (BME) 122, *Environmental Virus Bioinformatics Laboratory*

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in Biochemistry and Molecular Biology is satisfied by completing one of the following courses: BIOC 110L, BIOL 100L, 105L, 105M, 109L, 110, 115L, 119L, 121L, 186L, 187L, or BME 122. Please refer to updated information at <http://reg.ucsc.edu/catalog/html/disciplinarycommunicationchart.html>.

Biochemistry and Molecular Biology Planner

<http://undergrad.pbsci.ucsc.edu/programs/bioc/biocbs.html>

Comprehensive Requirement

Students have the following options for fulfilling the comprehensive requirement:

- By completing a senior thesis (see Chemistry and Biochemistry for more information);
- By completing a senior essay (see Chemistry and Biochemistry for more information);
- By receiving a passing grade in an independent research laboratory:

BIOC 110L, *Advanced Biochemistry Laboratory*
 BIOL 100L, *Advanced Biochemistry Laboratory*
 BIOL 105L, *Eukaryotic Genetics Laboratory*
 BIOL 105M, *Microbial Genetics Laboratory*
 BIOL 109L, *Yeast Molecular Genetics Laboratory*
 BIOL 110L, *Cell Biology Laboratory*
 BIOL 115L, *Eukaryotic Molecular Biology Laboratory*
 BIOL 119L, *Microbiology Laboratory*
 BIOL 121L, *Environmental Phage Biology Laboratory*
 BIOL 186L, *Undergraduate Research in MCD Biology*
 BIOL 187L, *Molecular Biotechnology Laboratory*
 BME 122, *Environmental Virus Bioinformatics Laboratory*

- By achieving a graduate record examination (GRE) score at or above the 50th percentile on the biology subject test or the biochemistry, cell, and molecular biology subject test. Reports of GRE scores must be submitted to the Physical and Biological Sciences Undergraduate Affairs office before the last day of the graduating quarter.
- By obtaining a medical college admission test (MCAT) score at or above the 50th percentile on the biological sciences section. Reports of MCAT scores must be submitted to the biological sciences advising office before the last day of the graduating quarter.

Program Planning Notes

Students who do not begin the lower-division requirements during their first year may have difficulty completing the program within four years. Transfer students who transfer to UCSC prior to completing their introductory requirements will have problems completing the program within

the allotted time. The BMB academic adviser works closely with students interested in pursuing the major to insure that they begin the program immediately and follow the appropriate steps toward its completion.

It is strongly recommended that students avail themselves of the opportunities to obtain firsthand research experience through either independent study or senior thesis research. A tutorial course or a senior thesis research course may not be substituted for the required laboratory elective.

A number of graduate courses in biochemistry and molecular biology are offered by the molecular, cell, and developmental (MCD) biology, and chemistry and biochemistry programs. Advanced undergraduates with the necessary background may take one or more of these courses with the consent of the instructor; however, graduate courses may not be substituted for the required elective courses.

Letter Grade Policy

For all students entering UCSC in fall 2001 and later, all courses used to satisfy any of the major requirements must be taken for a letter grade.

Major Disqualification Policy

All biochemistry and molecular biology majors are subject to the Biological Sciences major disqualification policy.

Materials Fee

Biochemistry and molecular biology students should be aware of the materials fee required for some laboratory courses. The fee is billed to the student's account for specific laboratory materials purchased by the Department of Chemistry and Biochemistry through the university. Fees generally range from \$15 to \$75 per course. Students may incur additional expenses purchasing individual supplies.

Program Description

Research at the macromolecular, molecular, and atomic levels is revolutionizing our understanding of the fundamental processes of life. Students interested in joining this search are best prepared by undertaking course-work in biology, chemistry, physics, mathematics, and computer science. Toward this end, an undergraduate major in biochemistry and molecular biology (BMB) is offered by faculty who are actively engaged in research on biological systems.

Students who declare the BMB major earn a bachelor of science (B.S.) degree. The BMB major constitutes an integrated curriculum of basic instruction in biology, chemistry, mathematics, and physics, followed by the opportunity to pursue advanced study in specialized areas of interest. In modern, well-equipped laboratories, distinguished faculty are engaged in frontline research at UCSC. The Departments of Chemistry and Biochemistry [and Molecular, Cell, and Developmental Biology](#) hosts a very active seminar series of national and international scholars in which advanced undergraduates are encouraged to participate.

The BMB program features close faculty-student interaction, small upper-division classes, stimulating learning environments, and opportunities for independent research and study. Students majoring in BMB are encouraged to become involved in research under the guidance of a faculty sponsor. Many students participating in this aspect of the program have made important contributions to the scientific literature.

Given the wide scope and interdisciplinary nature of this program, a considerable degree of flexibility has been incorporated into the major. All prospective majors should ~~consult~~ [see](#) the ~~Department of Chemistry and Biochemistry to be assigned a~~ BMB [academic](#) adviser [in the Undergraduate Affairs Office](#) as early as possible. Junior transfer students or others with questions should consult the ~~Department of Chemistry and Biochemistry undergraduate program adviser. To become a BMB major, a student must file a declaration of major petition through the Department of Chemistry and Biochemistry.~~ [Undergraduate Affairs web site at http://undergrad.pbsci.ucsc.edu/](#). A double major of BMB with the biological sciences majors or chemistry is not permitted. No minor is offered.

Requirements for the B.S. Degree

Lower-Division Requirements

General Chemistry: Chemistry 1A, 1B/M, and 1C/N

Calculus: Mathematics 11A-B and 22; or Mathematics 19A-B and 22

Statistics: Applied Mathematics and Statistics 5 or 7/L

Introductory Biology: Biology: Molecular, Cell, and Developmental (BIOL) 20A and Biology: Ecology and Evolutionary (BIOE) 20B

Physics: Physics 5A/L, 5B/M, and 5C/N; or 6A/L, 6B/M, and 6C/N

Upper-Division Requirements

Organic Chemistry: Chemistry 108A/L, 108B/M or 112A/L, 112B/M, and 112C/N

Biochemistry: BIOC 100A, 100B, and 100C and BIOL 100K

Genetics: ~~Biology: Molecular, Cell, and Developmental~~ BIOL 105

Cell Biology: BIOL 110

Molecular Biology: BIOL 115

Physical Chemistry: Chemistry 163A and 163B

One of the following laboratory courses:

BIOC 110L, Advanced Biochemistry Laboratory

BIOL 100L, *Advanced Biochemistry Laboratory*

BIOL 105L, *Eukaryotic Genetics Laboratory*

BIOL 105M, *Microbial Genetics Laboratory*

BIOL 109L, *Yeast Molecular Genetics Laboratory*

BIOL 110L, *Cell Biology Laboratory*

BIOL 115L, *Eukaryotic Molecular Biology Laboratory*

BIOL 119L, *Microbiology Laboratory*

BIOL 121L, Environmental Phage Biology Laboratory

BIOL 186L, *Undergraduate Research in MCD Biology*

BIOL 187L, *Molecular Biotechnology Laboratory*

Biomolecular Engineering (BME) 122, Environmental Virus Bioinformatics Laboratory

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in Biochemistry and Molecular Biology is satisfied by completing one of the following courses: BIOC 110L, BIOL 100L, 105L, 105M, 109L, 110, 115L, 119L, 121L, 186L, or 187L, or BME 122. Please refer to updated information at

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Faculty and Professional Interests

Professor

ROGER W. ANDERSON, PROFESSOR, CHEMISTRY AND BIOCHEMISTRY

Experiments and theory for low temperature, light-activated chemical vapor deposition, achromatic focusing of molecules with external electric fields, discrete orthogonal polynomials in molecular collision theory, fractal geometry structural measures for large molecules

MANUEL ARES JR., PROFESSOR, MOLECULAR, CELL, AND DEVELOPMENTAL BIOLOGY

RNA processing, structure and function of RNA

ILAN BENJAMIN, PROFESSOR, CHEMISTRY AND BIOCHEMISTRY

Theoretical chemistry, molecular dynamics of chemical reactions in liquids and at interfaces

CLAUDE F. BERNASCONI, PROFESSOR, CHEMISTRY AND BIOCHEMISTRY

Kinetic studies of fast reactions, organic reaction mechanisms, acid-base catalysis, proton transfers, nucleophilic reactions, organometallic reactions, ab initio molecular orbital calculations

NEEDHI BHALLA, ASSISTANT PROFESSOR, MOLECULAR, CELL, AND DEVELOPMENTAL BIOLOGY

Meiotic chromosome dynamics

HANNS H. BOEGER, ASSISTANT PROFESSOR, MOLECULAR, CELL, AND DEVELOPMENTAL BIOLOGY

Chromatin structure and the regulation of transcription

ROBERTO A. BOGOMOLNI, PROFESSOR, CHEMISTRY AND BIOCHEMISTRY

Biophysical chemistry, photobiology, light energy conversion and signal transduction in biological systems

BARRY BOWMAN, PROFESSOR, MOLECULAR, CELL, AND DEVELOPMENTAL BIOLOGY

Membrane biochemistry and genetics, biochemistry and molecular biology of membrane proteins

REBECCA BRASLAU, PROFESSOR, CHEMISTRY AND BIOCHEMISTRY

Synthetic organic chemistry: new synthetic methodologies using free radicals; nitroxides, nitroxide mediated "living" polymerizations: design and functionalization of tailored polymers for biomedical applications and nanotechnology, profluorescent nitroxides as sensors

BIN CHEN, ASSISTANT PROFESSOR, MOLECULAR, CELL, AND DEVELOPMENTAL BIOLOGY

Mammalian brain development

SHAOWEI CHEN, PROFESSOR, CHEMISTRY AND BIOCHEMISTRY

Synthesis, characterization, and manipulation of novel functional nanomaterials (metals and semiconductors); surface engineering of nanoparticles; nanoscale electron transfer; applications in fuel cells, photocatalysis, photovoltaics, and nano optoelectronics.

PHILIP O. CREWS, PROFESSOR, CHEMISTRY AND BIOCHEMISTRY

Marine natural products chemistry, bioorganic chemistry, organic structural analysis by NMR, natural products of marine macro- and microorganisms

ÓLÓF EINARSDÓTTIR, PROFESSOR, CHEMISTRY AND BIOCHEMISTRY

Time-resolved spectroscopy; biophysics and bioenergetics; heme-copper oxidases; electron transfer and ligand binding; application of photolabile NO and O₂ donors; molecular dynamics simulations of ligand access channels in heme-copper oxidases

DAVID FELDHEIM, PROFESSOR, MOLECULAR, CELL, AND DEVELOPMENTAL BIOLOGY

Developmental neuroscience

GRANT HARTZOG, PROFESSOR, MOLECULAR, CELL, AND DEVELOPMENTAL BIOLOGY

Biochemistry, genetics, chromatin and transcriptional regulation

LINDSAY HINCK, PROFESSOR, MOLECULAR, CELL, AND DEVELOPMENTAL BIOLOGY

Breast development and cancer, cell biology, development

THEODORE R. HOLMAN, PROFESSOR, CHEMISTRY AND BIOCHEMISTRY

Biochemistry and bioinorganic chemistry; lipoxygenase enzymology, protein engineering, inhibitor discovery, computer inhibitor design, mass spectroscopy, electron paramagnetic resonance

MELISSA JURICA, ASSOCIATE PROFESSOR, MOLECULAR, CELL, AND DEVELOPMENTAL BIOLOGY

Structure and function of human splicing machinery

ROHINTON T. KAMAKAKA, PROFESSOR, MOLECULAR, CELL, AND DEVELOPMENTAL BIOLOGY

Chromatin domains, epigenetic gene regulation and insulators

DOUGLAS R. KELLOGG, PROFESSOR, MOLECULAR, CELL, AND DEVELOPMENTAL BIOLOGY

Coordination of cell growth and cell division

DAVID S. KLIGER, EMERITUS, CHEMISTRY AND BIOCHEMISTRY

JOSEPH P. KONOPELSKI, PROFESSOR, CHEMISTRY AND BIOCHEMISTRY

Synthetic organic chemistry; heterocyclic chemistry, bioorganic chemistry

YAT LI, ASSISTANT PROFESSOR, CHEMISTRY AND BIOCHEMISTRY

Experimental physical chemistry, materials chemistry, nanomaterials, nanoscale photonics and electronics, energy conversion

ROGER G. LININGTON, ASSISTANT PROFESSOR, CHEMISTRY AND BIOCHEMISTRY

Marine natural products; drugs for neglected diseases; chemical biology; chemical probes

R. SCOTT LOKEY, ASSOCIATE PROFESSOR, CHEMISTRY AND BIOCHEMISTRY

Organic chemistry; combinatorial synthesis, biotechnology, molecular cell biology

ROBERT A. LUDWIG, PROFESSOR, MOLECULAR, CELL, AND DEVELOPMENTAL BIOLOGY

Plant microbe interactions, photorespiration, genetic recombination in plants

PRADIP MASCHARAK, PROFESSOR, CHEMISTRY AND BIOCHEMISTRY

Bioinorganic chemistry, design of antitumor drugs, modeling of active sites of metalloenzymes, design of catalysts for hydrocarbon oxidation, studies on intermediates in non-heme oxygenase chemistry, design of NO-donors for photodynamic therapy

GLENN L. MILLHAUSER, PROFESSOR, CHEMISTRY AND BIOCHEMISTRY

Electron spin resonance; nuclear magnetic resonance, melanocortin receptor signaling, agouti proteins, prions, peptide synthesis

HARRY F. NOLLER, PROFESSOR, MOLECULAR, CELL, AND DEVELOPMENTAL BIOLOGY

Ribosomes, RNA structure and function, RNA protein interaction

SCOTT R. OLIVER, ASSOCIATE PROFESSOR, CHEMISTRY AND BIOCHEMISTRY

Materials chemistry: nanoporous crystals for environmental cleanup, catalysis and biomaterials; polymer templating of metal oxides for solar cells and water splitting

AMY RALSTON, ASSISTANT PROFESSOR, MOLECULAR, CELL, AND DEVELOPMENTAL BIOLOGY

Origins and regulation of mammalian stem cells

MICHAEL REXACH, PROFESSOR, MOLECULAR, CELL, AND DEVELOPMENTAL BIOLOGY

Structure and function of nuclear pore complex, nuclear transport

SETH M. RUBIN, ASSISTANT PROFESSOR, CHEMISTRY AND BIOCHEMISTRY

Biomolecular mechanisms of cell-cycle regulation and cancer; structural biology and biochemistry; macromolecular x-ray crystallography; nuclear magnetic resonance

JEREMY SANFORD, ASSISTANT PROFESSOR, MOLECULAR, CELL, AND DEVELOPMENTAL BIOLOGY

Genomic analysis of protein-RNA interactions

WILLIAM M. SAXTON, PROFESSOR, MOLECULAR, CELL, AND DEVELOPMENTAL BIOLOGY

Cytoskeletal motors and active transport processes

THOMAS W. SCHLEICH, PROFESSOR, CHEMISTRY AND BIOCHEMISTRY

Biomedical magnetic resonance spectroscopy, magnetic resonance imaging, nuclear magnetic resonance spectroscopy, biophysical chemistry

WILLIAM G. SCOTT, PROFESSOR, CHEMISTRY AND BIOCHEMISTRY

Structure and function of RNA, proteins, and their complexes, origin of life

BAKTHAN SINGARAM, PROFESSOR, CHEMISTRY AND BIOCHEMISTRY

Organic synthesis, organoborane chemistry, heterocyclic chemistry, organometallic chemistry, asymmetric synthesis, biosensors, and natural products chemistry

MICHAEL STONE, ASSISTANT PROFESSOR, CHEMISTRY AND BIOCHEMISTRY

Molecular basis of telomere length and telomerase-related diseases; biophysical characterization of nucleic acid-associated molecular motors; development of novel approaches for imaging enzymes in cells

SUSAN STROME, PROFESSOR, MOLECULAR, CELL, AND DEVELOPMENTAL BIOLOGY

Chromatin and RNA regulation in C. elegans

WILLIAM T. SULLIVAN, PROFESSOR, MOLECULAR, CELL, AND DEVELOPMENTAL BIOLOGY
Cell cycle, cytoskeleton, and host-pathogen interactions

EUGENE SWITKES, PROFESSOR, CHEMISTRY AND BIOCHEMISTRY
Quantum theory applied to problems in chemistry and biochemistry; visual information processing, spatial vision, color vision

JOHN W. TAMKUN, PROFESSOR, MOLECULAR, CELL, AND DEVELOPMENTAL BIOLOGY
Transcriptional regulation, molecular genetics of Drosophila development, regulation of gene expression

W. TODD WIPKE, EMERITUS, CHEMISTRY AND BIOCHEMISTRY

ALAN M. ZAHLER, PROFESSOR, MOLECULAR, CELL, AND DEVELOPMENTAL BIOLOGY
Molecular biology, splice site selection, and alternative pre-mRNA processing

JIN Z. ZHANG, PROFESSOR, CHEMISTRY AND BIOCHEMISTRY
Design, synthesis, characterization, and application of nanomaterials, including semiconductors, metals, and metal oxides; ultrafast dynamics and laser spectroscopy; cancer diagnosis and therapy; solar energy conversion; surface-enhanced Raman spectroscopy (SERS).

MARTHA C. ZUÑIGA, PROFESSOR, MOLECULAR, CELL, AND DEVELOPMENTAL BIOLOGY
Molecular, cellular, and developmental biology of the immune system

YI ZUO , ASSISTANT PROFESSOR, MOLECULAR, CELL, AND DEVELOPMENTAL BIOLOGY
Synaptic plasticity in learning and memory

Upper-Division Courses

100A. Biochemistry. F

Fundamentals of molecular biology, structure and function of nucleic acids, and protein structure. Designed for students preparing for research careers in biochemistry and molecular biology. Lecture: 3-1/2 hours; discussion: 1-1/4 hours. Prerequisite(s): Chemistry 108B or 112C; Biology 20A; Concurrent enrollment in BIOL 100K is required. *H. Noller*

100B. Biochemistry. W

Covers enzyme mechanisms, kinetics, regulations, membrane composition and structure, specialized membrane functions, active transport and electro-chemical storage, excitable membranes and neurotransmitters, membrane receptors and sensory transduction mechanisms. Lecture: 3-1/2 hours; discussion: 1-1/4 hours. Prerequisite(s): course 100A *S. Rubin*

100C. Biochemistry. S

Biochemistry: intermediary metabolism and bioenergetics. How enzymatically catalyzed reactions are organized and regulated; how energy from molecules is extracted for chemical work. Lecture: 3-1/2 hours; discussion: 1-1/4 hours. Prerequisite(s): course 100B *The Staff*

110L. Advanced Biochemistry Laboratory. S

An introduction to the major techniques used in the isolation and characterization of biological components. Laboratory: 8 hours; lecture: 1-1/4 hours. Students are billed a materials fee. (Formerly course 110, Biochemistry Laboratory) Prerequisite(s): course 100B and satisfaction of the Entry Level Writing and Composition requirements. (General Education Code(s): W.) *O. Einarsdottir*

Biological Sciences

The biological sciences at UCSC are comprised of two academic departments: Ecology and Evolutionary Biology (courses BIOE) and Molecular, Cell, and Developmental Biology (courses BIOL). The two academic departments collectively sponsor the undergraduate program while each offers its own independent graduate program. Faculty within the biological sciences are affiliated with either Ecology and Evolutionary Biology, or Molecular, Cell, and Developmental Biology. The biological sciences undergraduate programs are administered by the divisional Undergraduate Affairs Office.

Undergraduate Program Description

The biological sciences have entered into an exciting new era in which phenomena that once seemed insoluble mysteries—such as embryonic development, the functions of the brain, and the dynamics of ecosystems—are now yielding their secrets as the technology to study them becomes more and more sophisticated. From molecular biology, with its potential to revolutionize medicine and agriculture, to ecology, with its lessons for the sustainable management of the environment, biologists are fully engaged in meeting the challenges of the future, helping to improve the quality of human life and to preserve habitats and biodiversity. Thus, it is no surprise that the biological sciences are at the heart of many of today's most pressing intellectual and social concerns.

The Departments of Ecology and Evolutionary Biology (EEB) and Molecular, Cell, and Developmental Biology (MCDB) offer a broad spectrum of courses that reflect the exciting new developments and directions in the field of biology. An outstanding group of faculty, each with a vigorous, internationally recognized research program, is available to teach courses in their specialties as well as core courses for the major. Areas of research strength within the departments include RNA molecular biology, molecular and cellular aspects of genetics and development, neurobiology, microbial biochemistry, plant biology, animal behavior, physiology, evolution, ecology, and marine biology. UCSC is unique in the UC system in providing exceptional opportunities for undergraduate research, allowing students to interact one-on-one with faculty and other researchers in a laboratory or field setting.

Biological Sciences Majors

Students may plan a program that leads to one of several bachelor of arts (B.A.) or bachelor of science (B.S.) degrees. Students may choose from the following major options:

Majors jointly sponsored by Ecology and Evolutionary Biology (EEB) and Molecular, Cell, and Developmental Biology (MCDB):

Biology B.A.
Biology B.S.
Biology B.A. (bioeducation concentration)

Majors sponsored by Ecology and Evolutionary Biology (EEB):

Ecology and evolution B.S.
Marine biology B.S.
Plant sciences B.S.

Environmental studies/biology combined major B.A. (administered in conjunction with the Environmental Studies Department)

Majors sponsored by Molecular, Cell, and Developmental Biology (MCDB):

Human biology B.S.

Molecular, cell, and developmental biology B.S.

Neuroscience B.S.

Biochemistry and molecular biology B.S. (administered in conjunction with the Chemistry and Biochemistry Department)

Bioinformatics B.S. (administered in conjunction with the School of Engineering)

Bioengineering B.S. (administered in conjunction with the School of Engineering)

Advanced undergraduates, with the guidance of faculty mentors, have access to extensive departmental laboratory facilities for independent research. Fieldwork draws on a remarkable variety of terrestrial habitats, as well as ready access to Monterey Bay and the open Pacific. Marine studies are supported by a coastal facility with running seawater, with a research vessel available for offshore work. Año Nuevo Island, north of Santa Cruz, is the site of extensive behavioral studies of marine mammals. Hospitals, convalescent and physical therapy centers, veterinary clinics, and other enterprises in the vicinity of the campus provide the opportunity to pursue field projects and internships comparable to on-the-job training. This array of opportunities for directed independent study enables biological science majors to enhance their upper-division programs to reflect and strengthen their own interests and goals in the sciences.

Prerequisites for the Biological Sciences

The introductory biology sequence is prerequisite to virtually all upper-division biology courses. BIOL 20A has a prerequisite of Chemistry 1A and 1B. Therefore, it is essential for students considering a major in the biological sciences to start chemistry as soon as possible. Students who have not taken Chemistry 1A or 1B but are prepared to begin biology may begin the introductory sequence with BIOE 20C. The entire introductory biology sequence should be taken the first and second year, concurrently with or following the general chemistry sequence.

The Mathematics Department offers a placement examination several times a year. Biological science majors are expected to take this examination. If the results indicate a need for precalculus, students need to take Mathematics 3 as soon as possible. Students with even less preparation may need to take college algebra at another institution.

Students intending to major in human biology should take the Spanish placement examination, offered by the language program, to determine with which course they should begin the Spanish sequence.

Course Substitution/Transfer Credit Policy

At least half of the upper-division courses (numbered 100–190) required for each major must be taken through the biological sciences program at UCSC, not as transfer credits from another department or institution. Transfer students are advised to contact the Physical and Biological Sciences Undergraduate Affairs office before enrolling in numerous upper-division courses at other institutions. For more information on transferring courses to UCSC, please consult the undergraduate web site at <http://undergrad.pbsci.ucsc.edu>.

A maximum of one upper-division course requirement may be met with a research-based independent study or graduate-level UCSC biology course or a course offered by another UCSC department.

Declaration Process for Biological Sciences Majors

Declaration guidelines can be found on the Physical and Biological Sciences Undergraduate Affairs web site at <http://undergrad.pbsci.ucsc.edu>.

Double Major in the Biological Sciences

Students interested in pursuing multiple majors within the biological sciences may not declare the following combination of majors: General Biology (B.A., B.S., bioeducation concentration, or minor) and any other biological sciences major; any combination of two EEB majors (Ecology and Evolution, Marine Biology, Plant Sciences, or Environmental Studies/Biology combined major); Molecular, Cell and Developmental Biology and Neuroscience; Molecular, Cell and Developmental Biology and Biochemistry and Molecular Biology; Neuroscience and Biochemistry and Molecular Biology.

Comprehensive Requirement

All majors in the biological sciences require a comprehensive requirement. This requirement can be satisfied in one of the following ways:

- by passing course 190, *Senior Seminar*;
- by receiving a passing grade in an internship, independent research laboratory, or field course:

Biological Sciences-EEB

BIOE 114L, *Field Methods in Herpetological Research*

BIOE 141L, *Behavioral Ecology Field Course*

BIOE 145L, *Field Methods in Plant Ecology*

BIOE 150L, *Ecological Field Methods*

BIOE 151, *Ecology and Conservation in Practice*

BIOE 155L, *Freshwater Ecology Laboratory*

BIOE 158L, *Marine Ecology Laboratory*

BIOE 159, *Marine Ecology Field Quarter*

BIOE 161L, *Kelp Forest Ecology Laboratory*

BIOE 183, *Undergraduate Research in EEB*

Biological Sciences-MCDB

BIOL 100L, *Advanced Biochemistry Laboratory*

BIOL 105L, *Eukaryotic Genetics Laboratory*

BIOL 105M, *Microbial Genetics Laboratory*

BIOL 109L, *Yeast Molecular Genetics Laboratory*

BIOL 110L, *Cell Biology Laboratory*

BIOL 111L, *Immunology Laboratory*

BIOL 115L, *Eukaryotic Molecular Biology Laboratory*

BIOL 119L, *Microbiology Laboratory*

BIOL 120L, *Developmental Biology Laboratory*

BIOL 121L, *Environmental Phage Biology Laboratory*

BIOL 178L, *Protocols in Stem Cell Biology*

BIOL 186L, *Undergraduate Research in MCD Biology*

BIOL 186R, *Undergraduate Research in MCD Biology*

BIOL 187L, *Molecular Biotechnology Laboratory*

BIOL 189, *Health Sciences*

BIOL 110L, *Advanced Biochemistry Laboratory*

BME 122, *Environmental Virus Bioinformatics Laboratory*

- by completing a senior thesis;
- by achieving a graduate record examination (GRE) score at or above the 50th percentile on the biology subject test or the biochemistry, cell, and molecular biology subject test. Reports of GRE scores must be submitted to the biological sciences advising office before the last day of the graduating quarter;
- by obtaining an medical college admission test (MCAT) score at or above the 50th percentile on the biological sciences section. Reports of MCAT scores must be submitted to the biological sciences advising office before the last day of the graduating quarter.

Letter Grade Policy

For all students entering UCSC in fall 2001 and later, all courses used to satisfy any of the biological sciences majors must be taken for a letter grade.

Major Disqualification Policy

The biological sciences departments have adopted a major disqualification policy that is intended to encourage students to take their performance in the introductory requirements seriously and to make a strong effort to pass the introductory courses.

Students who receive more than one No Pass, D, and/or F in the following introductory major

requirements will not be permitted to major in any of the biological sciences majors:

BIOL 20A, *Cell and Molecular Biology*

BIOE 20B, *Development and Physiology*

BIOE 20C, *Ecology and Evolution*

Chemistry 1A, *General Chemistry*

Chemistry 1B, *General Chemistry*

Chemistry 1C, *General Chemistry*

Mathematics 11A, *Calculus with Applications*

Mathematics 11B, *Calculus with Applications*

Mathematics 19A, *Calculus for Science, Engineering, and Mathematics*

Mathematics 19B, *Calculus for Science, Engineering, and Mathematics*

Students will be assessed for disqualification after grades are submitted each quarter and at the end of each summer session.

Students may appeal their disqualification within the appeal period by writing a letter to the department chair. This appeal must be submitted to the advising office no later than the 15th day of the subsequent quarter. The advising office will subsequently notify the student, the college, and the Office of the Registrar of the decision no later than 15 days after the submission of the appeal.

A student who has been disqualified from the major may, no earlier than three months from the date of the disqualification, petition to be reinstated. This application will be considered only if there is substantial new evidence that the student is capable of making normal progress in the major.

Students will not be allowed to repeat a course more than once without approval of the student's college (Academic Senate Regulation A9.1.8).

Academic Advising

Academic advising is available at the Physical and Biological Sciences Undergraduate Affairs office. Students should take full advantage of this opportunity and should keep in frequent touch with the office to stay informed about late announcements of courses, changes in scheduling, and opportunities for special study.

The undergraduate web site (<http://undergrad.pbsci.ucsc.edu>) serves as the program handbook containing advice and information pertinent to students' most frequently voiced questions. Each student in the major should review the information posted on the web site; for further assistance, contact an academic advisor.

Transfer Students

The faculty encourages applications from transfer students in the biological sciences. It is imperative transfer students complete science prerequisite courses before they transfer, especially a complete sequence of calculus, general chemistry, and introductory biology. Students should also take organic chemistry, if possible. Students who transfer without having completed the prerequisite coursework may have difficulty enrolling in courses and may require more than two years to complete a biological sciences degree. Prospective transfer students should review the transfer preparation guidelines at <http://undergrad.pbsci.ucsc.edu/advising/prep-trans.html> or contact the Physical and Biological Sciences Undergraduate Affairs office for further information.

Honors

Honors in the biological sciences majors are awarded to graduating students whose academic performance demonstrates excellence at a grade point average (GPA) of 3.5 or above. Highest honors are awarded to those students whose performance demonstrates the highest level of excellence and results in a GPA of 3.8 or above.

Medical and Professional School Admission

Medical and professional school admissions requirements vary; students should verify that their coursework will satisfy the admissions requirements of the programs to which they plan to apply.

Education Abroad Opportunities

The UC Education Abroad Program (EAP) offers qualified students unique opportunities to broaden their educational horizons. The biological sciences departments encourage interested students to participate. Many programs are in English-speaking countries or use English for advanced courses. Many programs offer small classes, extensive laboratories, and/or field research experience.

There are excellent programs for biological science students in Costa Rica, Australia, New Zealand, the United Kingdom, Denmark, and Germany, among others. The Costa Rica Tropical Biology Program is of note to students interested in tropical biology and ecology. Held spring and fall quarters at the Monteverde research station, this program gives students experience with hands-on field research, offers a homestay program, and carries credit for two upper-division biology courses. The University of Queensland (Australia) offers an intensive, full-semester marine science program, which includes stays at research stations on the Great Barrier Reef and in sheltered mangrove and seagrass habitats near Brisbane.

Students interested in study abroad need to get an early start on their basic science requirements, including chemistry, mathematics, and introductory biology and must declare their major prior to applying to go abroad. Visit the EAP office as soon as possible to begin planning, and seek advice about your schedule from the biological sciences undergraduate adviser and/or faculty adviser.

General Biology Majors and Minor

The general biology majors permit flexibility, but demand careful attention to a student's own interests and plans. Each student should select courses on the basis of up-to-date information in consultation with a biology faculty adviser whose interests reflect the student's interests.

General Biology B.A. Major Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B, and 20C

General Chemistry: Chemistry 1A, 1B and 1C/N

Organic Chemistry: Chemistry 108A/L and 108B

Calculus: Mathematics 11A-B or 19A-B

Statistics: Applied Mathematics and Statistics 5 or 7/L

Physics: Physics 6A/L, and 6B or 6C

Advanced Requirements

A total of eight upper-division biology courses, as follows:

Three core courses:

Biochemistry: BIOL 100/K

Genetics: BIOL 105

Evolution: BIOE 109

Students must fulfill the major distribution requirement, which includes one course from each of the following groups:

Cell/Developmental biology:

BIOL 110, *Cell Biology*

BIOL 111A, *Immunology*

BIOL 115, *Eukaryotic Molecular Biology*

BIOL 119, *Microbiology*

BIOL 120, *Developmental Biology*

Physiology:

BIOE 131/L, *Animal Physiology/Laboratory*

BIOE 135/L, *Plant Physiology/Laboratory*

BIOL 113, *Endocrinology*

BIOL 125, *Introduction to Neuroscience*

BIOL 130/L, *Human Physiology/Laboratory*

Ecology:

BIOE 107, *Ecology*

BIOE 108, *Marine Ecology*

Electives

Students must complete two additional upper-division biology electives chosen from Biological Sciences-EEB or Biological Sciences-MCDB.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement for the biology bachelor of arts degree is satisfied by completing courses BIOE 107, *Ecology*, or BIOE 108, *Marine Ecology*, and BIOE 109, *Evolution*.

General Biology B.A. Sample Planners

<http://undergrad.pbsci.ucsc.edu/programs/biol/biolba-sample.html>

General Biology, Bioeducation Concentration, B.A.

The General Biology, Bioeducation Concentration, B.A. major is designed to meet the needs of students who plan careers as K-12 science teachers. It provides students with a rigorous education in biology through science breadth courses to prepare them for the state credentialing examinations (CSET) in biology/life sciences, and courses covering education theory and practical teaching experience through internships in local schools.

General Biology, Bioeducation Concentration, B.A. Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B, and 20C

General Chemistry: Chemistry 1A, 1B, and 1C/N

Organic Chemistry: Chemistry 108A/L and 108B

Calculus: Mathematics 11A-B or 19A-B

Statistics: Applied Mathematics and Statistics 5 or 7/L

Physics: Physics 6A/L, and 6B or 6C

Education: Education 50C

Earth Sciences: Earth Sciences 20/L (optional*)

Astronomy: Astronomy 2 (optional*)

*These courses are recommended for students interested in pursuing a credential to teach general science.

Advanced Requirements

A total of 10 upper-division biology and education courses, as follows:

BIOL 100/K, *Biochemistry/Laboratory*

BIOL 105, *Genetics*

BIOE 109, *Evolution*

BIOE 107, *Ecology*

Students must fulfill the major distribution requirement, which includes one course from each of the following groups:

Cell/developmental biology:

BIOL 110, *Cell Biology*

BIOL 115, *Eukaryotic Molecular Biology*

BIOL 119, *Microbiology*

BIOL 120, *Developmental Biology*

Physiology:

BIOE 131, *Animal Physiology*

BIOE 135, *Plant Physiology*

BIOL 113, *Endocrinology*

BIOL 130, *Human Physiology*

Biology Laboratory:

One five-credit upper-division biology laboratory course, or

BIOE 131L, *Animal Physiology Laboratory*

BIOE 135L, *Plant Physiology Laboratory*

BIOL 130L, *Human Physiology Laboratory*

(BIOL 135L cannot be used to satisfy the laboratory requirement in the bioeducation concentration.)

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in the General Biology, Bioeducation Concentration is satisfied by completing courses BIOE 107, *Ecology*, and BIOE 109, *Evolution*.

General Biology, Bioeducation Concentration, B.A. Sample Planners

<http://undergrad.pbsci.ucsc.edu/programs/biol/biolba-educ-sample.html>

General Biology B.S. Major Requirements**Introductory Requirements**

Introductory Biology: BIOL 20A, BIOE 20B, and 20C

General Chemistry: Chemistry 1A, 1B, and 1C/N

Organic Chemistry: Chemistry 108A/L and 108B

Calculus: Mathematics 11A-B or 19A-B

Statistics: Applied Mathematics and Statistics 5 or 7/L

Physics: Physics 6A/L, and 6B or 6C

Advanced Requirements

A total of nine upper-division biology courses; one must include laboratory or fieldwork:

Three core courses:

Biochemistry with Laboratory: BIOL 100/K

Genetics: BIOL 105

Evolution: BIOE 109

Students must fulfill the major distribution requirement, which includes one course from each of the following groups:

Cell/developmental biology:

BIOL 110, *Cell Biology*

BIOL 111A, *Immunology*

BIOL 115, *Eukaryotic Molecular Biology*

BIOL 119, *Microbiology*

BIOL 120, *Developmental Biology*

Physiology:

BIOE 131/L, *Animal Physiology/Laboratory*

BIOE 13/L, *Plant Physiology/Laboratory*

BIOL 113, *Endocrinology*

BIOL 125, *Introduction to Neuroscience*

BIOL 130/L, *Human Physiology/Laboratory*

Ecology:

BIOE 107, *Ecology*

BIOE 108, *Marine Ecology*

Electives

Students must complete three additional upper-division biology electives chosen from Biological Sciences-EEB courses or Biological Sciences-MCDB courses.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement for the biology bachelor of science degree is satisfied by completing courses BIOE 107, *Ecology*, or BIOE 108, *Marine Ecology*, and BIOE 109, *Evolution*.

General Biology B.S. Sample Planners

<http://undergrad.pbsci.ucsc.edu/programs/biol/biolbs-sample.html>

General Biology Minor Requirements

In addition to the introductory biology, chemistry, mathematics, and physics (as listed above for the biology B.A.), students are required to take a total of five upper-division biology courses including courses BIOL 100/K, BIOL 105, and the three distribution requirement courses; one course must include a laboratory. There is no senior comprehensive requirement for the minor. Please contact the Physical and Biological Sciences Undergraduate Affairs office for further information.

Degree Programs Sponsored by Ecology and Evolutionary Biology

Ecology and Evolution Major

Program Description

The ecology and evolution major provides students with interdisciplinary skills necessary for understanding and solving complex problems in ecology, evolution, behavior, and physiology. While some of these disciplines focus on molecular or chemical mechanisms, they all address questions on larger spatial and temporal scales that can be applied to important environmental problems, including genetic and ecological aspects of conservation biology and biodiversity.

Students majoring in ecology and evolution will receive a B.S. degree based on an integrated series of courses providing breadth in fundamental areas of biology and allied sciences that enhance understanding of evolutionary and ecological processes. The capstone of this curriculum is a suite of field courses providing students unique opportunities to learn and conduct research in a host of ecological systems. Students are encouraged to take field courses in their areas of specialization. Other opportunities include participation in research projects with faculty sponsors and the intensive Education Abroad Programs (EAP) in Costa Rica (tropical biology) and Australia (marine sciences).

Ecology and Evolution B.S. Major Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B, and 20C

General Chemistry: Chemistry 1A, 1B and 1C/N

Calculus: Mathematics 11A-B or 19A-B

Biostatistics: Applied Mathematics and Statistics 7/L

Physics: Physics 6A/L, and 6B or 6C

Advanced Requirements

A total of eleven upper-division courses; two must include laboratory or fieldwork.

Three upper-division core courses:

Genetics: BIOL 105

Ecology: BIOE 107

Evolution: BIOE 109

One of the following physiology courses:

BIOE 131/L, *Animal Physiology/Laboratory*

BIOE 135/L, *Plant Physiology/Laboratory*

One of the following organism courses:

BIOE 112/L, Ornithology/Ornithology Field Studies

BIOE 114/L, Herpetology/Field Methods in Herpetological Research

BIOE 117/L, *Systematic Botany of Flowering Plants/Laboratory*

BIOE 120/L, *Marine Botany/Laboratory*

BIOE 122/L, *Invertebrate Zoology/Laboratory*

BIOE 127/L, Ichthyology/Laboratory

BIOE 129/L, Biology of Marine Mammals/Laboratory

BIOL 119/L, *Microbiology/Laboratory*

Elective list for Ecology and Evolution Major

Three topical electives chosen from the following:

BIOE 108, *Marine Ecology*

BIOE 112/L, *Ornithology/Laboratory*

BIOE 114/L, *Herpetology/Laboratory*

BIOE 117/L, *Systematic Botany/Laboratory*

BIOE 120/L, *Marine Botany/Laboratory*

BIOE 122/L, *Invertebrate Zoology/Laboratory*

BIOE 127/L, *Ichthyology/Laboratory*

BIOE 129/L, *Biology of Marine Mammals/Laboratory*

BIOE 131/L, *Animal Physiology/Laboratory*

BIOE 135/L, *Plant Physiology/Laboratory*

BIOE 140, *Behavioral Ecology*

BIOE 141L, *Behavioral Ecology Field Course*

BIOE 145, *Plant Ecology*

BIOE 145L, *Field Methods in Plant Ecology*

BIOE 147, *Community Ecology*

BIOE 149, *Disease Ecology*

BIOE 150, *Ecological Field Methods*

BIOE 150L, *Ecological Field Methods Laboratory*

BIOE 151ABCD, *Ecology and Conservation in Practice*

BIOE 155, *Freshwater Ecology*

BIOE 155L, *Freshwater Ecology Laboratory*

BIOE 158L, *Marine Ecology Laboratory*

BIOE 159ABCD, *Marine Ecology Field Quarter*

BIOE 161, *Kelp Forest Ecology*

BIOE 161L, *Kelp Forest Ecology Laboratory*

BIOE 163, *Ecology of Reefs, Mangroves, and Seagrasses*

BIOE 165, *Marine Conservation Biology*

BIOE 172/L, *Population Genetics/Laboratory*

BIOL 100/K, *Biochemistry/Laboratory*

BIOL 110, *Cell Biology*

BIOL 115, *Eukaryotic Molecular Biology*

BIOL 119, *Microbiology*

BIOL 119L, *Microbiology Laboratory*

BIOL 120, *Development*

BIOL 120L, *Development Laboratory*

Ocean Sciences 118, *Marine Microbial Ecology*

Three general electives chosen from the following:

Biological Sciences-EEB

any BIOE course

Biological Sciences-MCDB

BIOL 100/K, *Biochemistry/Laboratory*

BIOL 110, *Cell Biology*

BIOL 115, *Eukaryotic Molecular Biology*

BIOL 119, *Microbiology*

BIOL 119L, *Microbiology Laboratory*

BIOL 120, *Development*

BIOL 120L, *Development Laboratory*

Chemistry

CHEM 108A, *Organic Chemistry*

CHEM 108B, *Organic Chemistry*

Earth Sciences

EART 100/L, *Vertebrate Paleontology*

EART 102, *Marine Geology*

EART 105, *Coastal Geology*

EART 122, *Paleoceanography*

Economics

ECON 166A, *Game Theory and Applications I*

ECON 166B, *Game Theory and Applications II*

Environmental Studies (enrollment by permission of instructor)

ENVS 104A, *Introduction to Environmental Field Methods*

ENVS 108/L, *General Entomology/Laboratory*

ENVS 115A/L, *GIS and Environmental Applications/Exercises in GIS*

ENVS 120, *Conservation Biology*

ENVS 122, *Tropical Ecology and Conservation*

ENVS 123, *Animal Ecology and Conservation*

ENVS 160, *Restoration Ecology*

ENVS 161A/L, *Soils and Plant Nutrition/Laboratory*

ENVS 162, *Plant Physiological Ecology*

ENVS 163/L, *Plant Disease Ecology/Laboratory*

ENVS 167, *Freshwater and Wetland Ecology*

ENVS 168, *Biochemistry and the Global Environment*

Ocean Sciences

OCEA 118, *Marine Microbial Ecology*

OCEA 130, *Biological Oceanography*

Psychology

PSYC 123, *Behavioral Neuroscience*

One of the following may also be used as an upper-division general elective:

Biological Sciences-EEB

BIOE 183L, *Undergraduate Research in EEB*

BIOE 195, *Senior Thesis*

BIOE 198, *Independent Field Study*

BIOE 199, *Tutorial*

Environmental Studies

ENVS 183, *Environmental Studies Internship*

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in ecology and evolution is satisfied by completing courses BIOE 107, *Ecology*, and BIOE 109, *Evolution*.

Ecology and Evolution B.S. Sample Planners

<http://undergrad.pbsci.ucsc.edu/programs/eeb/ecevbbs-sample.html>

Marine Biology Major

Program Description

UCSC is situated within five miles of Monterey Bay and its great diversity of coastal marine ecosystems; nature reserves; and state, federal, and private marine research institutions and resource management agencies. These resources, combined with on-campus computing and analytical facilities and the Long Marine Laboratory, make UCSC an exceptional campus for the study of marine biology and its application to coastal conservation and management. Descriptions of nearby environments, institutions, and facilities are available through the Ecology and Evolutionary Biology Department web site at <http://www.eeb.ucsc.edu/>.

The marine biology major is designed to introduce students to marine organisms and the biological and physical processes that affect these organisms, their populations, and their coastal and oceanic ecosystems. The emphasis is on basic principles that help in understanding the processes that shape life in marine environments. The marine biology major is a demanding program that offers a B.S. degree and requires several more courses than the general biology B.A. major.

Marine Biology B.S. Major Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B, and 20C

General Chemistry: Chemistry 1A, 1B and 1C/N

Calculus: Mathematics 11A-B or 19A-B

Biostatistics: Applied Mathematics and Statistics 7/L

Physics: Physics 6A/L, and 6B or 6C

Advanced Requirements

A total of 11 upper-division courses; two must include laboratory or fieldwork.

Two core courses:

Genetics: BIOL 105

Evolution: BIOE 109

One ecology course:

BIOE 107, *Ecology*

BIOE 108, *Marine Ecology*

One marine-environment course:

OCEA 101, *Marine Environment*

OCEA 130, *Biological Oceanography*

One marine course:

BIOE 120/L, *Marine Botany/Laboratory*

BIOE 122/L, *Invertebrate Zoology/Laboratory*

BIOE 127/L, *Ichthyology/Laboratory*

BIOE 129/L, *Biology of Marine Mammals/Laboratory*

Elective list for Marine Biology Major

Three topical electives chosen from the following:

BIOE 108, *Marine Ecology*

BIOE 120/L, *Marine Botany/Laboratory*

BIOE 122/L, *Invertebrate Zoology/Laboratory*

BIOE 127/L, *Ichthyology/Laboratory*

BIOE 129/L, *Biology of Marine Mammals/Laboratory*

BIOE 198, *Independent Field Study*

BIOE 199, *Tutorial*

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in marine biology is satisfied by completing courses BIOE 107, *Ecology*, or BIOE 108, *Marine Ecology*, and BIOE 109, *Evolution*.

Marine Biology B.S. Sample Planners

Plant Sciences Major

Program Description

UCSC has a strong program in the plant sciences (sometimes called botany). A fine natural environment, the campus Arboretum, the facilities under the Center for Agroecology and Sustainable Food Systems (especially the Farm and Garden), and an excellent greenhouse collection all enhance the resources that support UCSC's botanical programs.

The plant sciences major is designed for students with an interest in plant biology and its associated curricular fields such as plant ecology, plant physiology, plant pathology, plant molecular biology, soils, and applied plant sciences. After completion of the core courses, students can proceed in one of several directions depending on their interest. For example, a more in-depth study of physiology and molecular biology courses can serve as preparation for work in the biotechnology field or for graduate school; further studies in plant ecology, tropical ecology, or restoration ecology can lead to careers such as resource ecologist or naturalist or to the pursuit of related fields in graduate school; upper-division training in agroecology can lead to careers in agriculture or food systems. There are many opportunities for internships both on the UCSC campus and in the community at large.

Plant Sciences B.S. Major Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B, and 20C

General Chemistry: Chemistry 1A, 1B and 1C/N

Calculus: Mathematics 11A-B or 19A-B

Biostatistics: Applied Mathematics and Statistics 7/L

Physics: Physics 6A/L, and 6B or 6C

Advanced Requirements

A total of 11 upper-division courses; two of which must include laboratory or fieldwork.

Three core courses:

Genetics: BIOL 105

Ecology: BIOE 107

Evolution: BIOE 109

One plant physiology course from the following:

BIOE 135/L, *Plant Physiology/Laboratory*

Environmental Studies 162, *Plant Physiological Ecology*

One botany course from the following:

BIOE 117/L, *Systematic Botany/Laboratory*

BIOE 120/L, *Marine Botany/Laboratory*

Elective list for Plant Sciences Major

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in plant sciences is satisfied by completing courses BIOE 107, *Ecology*, and BIOE 109, *Evolution*.

Plant Sciences B.S. Sample Planners

<http://undergrad.pbsci.ucsc.edu/programs/eeb/plntbs-sample.html>

Human Biology Major

Program Description

The B.S. major in human biology is designed for students interested in careers in medicine or biomedical research and satisfies the admission requirements for most U.S. medical schools. It is based on the existing B.S. degree in molecular, cell, and developmental biology, with similar course requirements in chemistry, physics, and mathematics. Students are required to take five courses directly relevant to human health in addition to genetics, biochemistry, and cell biology. Students in this program must also fulfill Spanish language and health care internship requirements.

Human Biology B.S. Major Requirements *

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B, and BIOL 20L

General Chemistry: Chemistry 1A, 1B/M and 1C/N

Organic Chemistry: Chemistry 108A/L and 108B/M, 108C recommended for pre-med students, or 112A/L, 112B/M, and 112C/N

Calculus: Mathematics 11A-B or 19A-B; and 22 (three quarters)

Statistics: Applied Mathematics and Statistics 5 or 7/L

Physics: Physics 6A/L, 6B/M, and 6C/N

Advanced Requirements

Four upper-division core courses to include:

Four core courses:

Biochemistry with Laboratory: BIOL 100/K or BIOG 100A, 100B, 100C, and BIOL 100K

Genetics: BIOL 105

Cell Biology: BIOL 110

Human Physiology with Laboratory: BIOL 130/L

Three of the following electives:

BIOL 111, *Immunology*

BIOL 113, *Mammalian Endocrinology*

BIOL 114, *Cancer Cell Biology*

BIOL 115, *Eukaryotic Molecular Biology*

BIOL 119, *Microbiology*

BIOL 120, *Development*

BIOL 125, *Neuroscience*

BIOL 126, *Advanced Neural Development*

BIOL 127, *Neurodegenerative Disease*

BIOL 135/L, *Anatomy of the Human Body/Laboratory*

BIOL 140, *Biophysics*

BIOL 178, *Stem Cell Biology*

BIOL 179, *Biotechnology and Drug Development*

BIOL 182, *Genomics*

Internship Requirement: BIOL189, *Health Sciences Internship*. The student must participate in a community health care service activity approved by the health sciences internship coordinator. Credit may be earned over multiple quarters.

Language Requirement: Spanish 1–4 or the equivalent and one quarter of Spanish for health-care workers (Spanish 5M).

* Note: Medical and professional school admissions requirements vary; students should verify that their coursework will satisfy the admissions requirements of the programs to which they plan to apply.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in human biology is satisfied by completing courses BIOL 130L, *Human Physiology Laboratory*, and BIOL 189, *Health Sciences Internship* and BIOL 189W, *Disciplinary Communication: Human Biology*.

Human Biology B.S. Sample Planners

Molecular, Cell, and Developmental Biology Major

Program Description

The molecular, cell, and developmental (MCD) biology major is designed for students interested in medical or other professional graduate programs and those preparing for careers in biotechnology industries. This major is more structured than the general biology major and requires that students pay careful attention to the prerequisites required for upper-division biology courses.

Molecular, Cell, and Developmental Biology B.S. Major Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B, and 20C

General Chemistry: Chemistry 1A, 1B and 1C/N

Organic Chemistry: Chemistry 108A/L and 108B

Calculus: Mathematics 11A-B or 19A-B

Biostatistics: Applied Mathematics and Statistics 5 or 7/L

Physics: Physics 6A/L and 6B or 6C

Advanced Requirements

Four upper-division core courses:

Biochemistry with Laboratory: BIOL 100/K or the series BIOE 100A, 100B, 100C, and BIOL 100K
(Upon completion of the series, BIOE 100C may be used to satisfy one lecture elective)

Genetics: BIOL 105

Cell Biology: BIOL 110

Eukaryotic Molecular Biology: BIOL 115

Three of the following electives:

BIOE 100C, *Biochemistry*

BIOL 111A, *Immunology*

BIOL 113, *Mammalian Endocrinology*

BIOL 114, *Cancer Cell Biology*

BIOL 118, *Biology of Disease*

BIOL 119, *Microbiology*

BIOL 120, *Development*

BIOL 125, *Neuroscience*

BIOL 126, *Advanced Neural Development*

BIOL 127, *Neurodegenerative Disease*

BIOL 130/L, *Human Physiology/Laboratory*

BIOL 140, *Biophysics*

BIOL 178, *Stem Cell Biology*

BIOL 178L, *Protocols in Stem Cell Biology*

BIOL 179, *Biotechnology and Drug Development*

BIOL 180/L, *Research Programming for Biologists and Biochemists/Laboratory*

BIOL 181, *Computational Biology Tools*

BIOL 182, *Genomics*

BIOE 109, *Evolution*

BIOE 135/L, *Plant Physiology/Laboratory*

One of the following laboratory courses:

BIOE 110, *Biochemistry Laboratory*

BIOL 100L, *Advanced Biochemistry Laboratory*

BIOL 105L, *Eukaryotic Genetics Laboratory*

BIOL 105M, *Microbial Genetics Laboratory*

BIOL 109L, *Yeast Molecular Genetics Laboratory*

BIOL 110L, *Cell Biology Laboratory*

BIOL 115L, *Eukaryotic Molecular Biology Laboratory*

BIOL 119L, *Microbiology Laboratory*
BIOL 120L, *Development Laboratory*
BIOL 121L, *Environmental Phage Biology Laboratory*
BIOL 186L, *Undergraduate Research in MCD*
BIOL 186R, *Undergraduate Research in MCD Biology*
BIOL 187L, *Molecular Biotechnology Laboratory*
BIOC 110L, *Advanced Biochemistry Laboratory*
BME 122, *Environmental Virus Bioinformatics Laboratory*

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in molecular, cell, and developmental biology is satisfied by completing one of the following courses: BIOC 110L, BIOL 100L, 105L, 105M, 109L, 110L, 115L, 119L, 120L, 121L, 186L, 187L, or BME 122. Please refer to updated information at <http://reg.ucsc.edu/catalog/html/disciplinarycommunicationchart.html>.

Molecular, Cell and Developmental Biology B.S. Sample Planners

<http://undergrad.pbsci.ucsc.edu/programs/mcdb/mcdbbs.html>

Neuroscience Major

Program Description

Neuroscience, the study of the nervous system and behavior of animals, is a frontier area in biology, touching psychology on the one hand and computer science on the other. The neuroscience major provides students with rigorous preparation for graduate studies and research in the field of neuroscience. Rigorous course work is supplemented by opportunities for hands-on research.

Neuroscience B.S. Major Requirements

Introductory Course Requirements

Introductory Biology: BIOL 20A, BIOE 20B, and 20C

General Chemistry: Chemistry 1A, 1B and 1C/N

Organic Chemistry: Chemistry 108A/L and 108B

Calculus: Mathematics 11A-B or 19A-B

Biostatistics: Applied Mathematics and Statistics 7/L

Physics: Physics 6A/L, and 6C

Advanced Course Requirements

Five upper-division core courses:

Biochemistry: BIOL 100/K

Genetics: BIOL 105

Cell Biology: BIOL 110

Neuroscience: BIOL 125

Advanced Neuroscience: BIOL 126

Three of the following electives:

BIOE 131/L, *Animal Physiology/Laboratory*

BIOE 140, *Behavioral Ecology*

BIOL 113, *Mammalian Endocrinology*

BIOL 115, *Eukaryotic Molecular Biology*

BIOL 118, *Biology of Disease*

BIOL 120, *Development*

BIOL 127, *Neurodegenerative Disease*

BIOL 130/L, *Human Physiology/Laboratory*

BIOL 140, *Biophysics*

BIOL 178L, *Protocols in Stem Cell Laboratory*

BIOL 179, *Biotechnology and Drug Development*

BIOL 180/L, *Research Programming for Biologists and Biochemists/Laboratory*

BIOL 181, *Computational Biology Tools*

BIOL 182, *Genomics*

PSYC 121, *Perception*

PSYC 123, *Behavioral Neuroscience*

One of the following laboratory electives:

BIOE 141L, *Behavioral Ecology Field Course*

BIOE 183L, *Undergraduate Research in EEB*

BIOL 100L, *Advanced Biochemistry Laboratory*

BIOL 105L, *Eukaryotic Genetics Laboratory*

BIOL 109L, *Yeast Molecular Genetics Laboratory*

BIOL 110L, *Cell Biology Laboratory*

BIOL 115L, *Eukaryotic Molecular Genetics Laboratory*

BIOL 120L, *Development Laboratory*

BIOL 121L, *Environmental Phage Biology Laboratory*

BIOL 178L, *Protocols in Stem Cell Laboratory*

BIOL 186L, *Undergraduate Research in MCD*

BIOL 186R, *Undergraduate Research in MCD Biology*

BIOL 187L, *Molecular Biotechnology Laboratory*

BME 122, *Environmental Virus Bioinformatics Laboratory*

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in neuroscience is satisfied by completing one of the following: BIOC 110L, BIOE 141L, 183L; BIOL 100L, 105L, 109L, 110L, 115L, 120L, 121L, 186L, 187L; or BME 122. Please refer to updated information at

<http://reg.ucsc.edu/catalog/html/disciplinarycommunicationchart.html>.

Neuroscience B.S. Sample Planners

<http://undergrad.pbsci.ucsc.edu/programs/mcdb/neurobs-sample.html>

Degree Programs Sponsored by Ecology and Evolutionary Biology

Ecology and Evolutionary Biology

Ecology and Evolutionary Biology
A308 Earth and Marine Sciences
(831) 459-5358
<http://www.eeb.ucsc.edu>

The Ecology and Evolutionary Biology (EEB, courses BIOE) Graduate Program at UCSC reflects the remarkable local and global diversity of species and environments studied by the EEB faculty and students. The vision of the EEB graduate program is to provide a nurturing, creative, and intellectual environment conducive to the development of world-class scientists. The small size of the EEB graduate program encourages close working relations between students and faculty in an informal atmosphere advantageous to rapid learning and professional growth. Interdisciplinary collaborations with oceanographers, geologists, mathematicians, toxicologists, and others enable students to explore the conceptual connections between related fields as they acquire mastery in

their areas of specialization.

The graduate program in Ecology and Evolutionary Biology at UCSC is one of the premier EEB programs in the country. EEB-UCSC graduate students regularly garner prestigious awards for their presentations at international meetings and publish their work in the best journals of their fields. In addition to taking advantage of local field sites and state-of-the-art departmental laboratories, more than two-thirds of the EEB faculty also participates in field studies throughout the world, especially in Africa, Latin America, and around the Pacific Rim.

A special strength of the EEB program is the integration of terrestrial and aquatic perspectives across all research tracks. The course requirements and examinations emphasize both breadth and depth.

Research in EEB comprises four core tracks

1. Ecology
2. Evolutionary biology
3. Physiology
4. Behavior

Degree Requirements

Doctor of Philosophy (Ph.D.) Requirements

Courses

BIOE 200A, Scientific Skills

BIOE 200B, Advanced Organismal Biology

BIOE 279, Evolutionary Ecology

BIOE 293, Readings in Ecology and Evolution (or equivalent)

BIOE 294, Ecology, Evolutionary Biology Seminar (taken each quarter when in residence)

BIOE 295, Advanced Ecology and Evolutionary Biology Seminar (may substitute for BIOE 293)

Each Ph.D. student should expect to complete at least two quarters as a teaching assistant during their graduate career.

During fall of the second year, students take a comprehensive examination. This is a two-part examination, written and oral, the goal of which is to examine the student's breadth and depth of knowledge of evolution, ecology, physiology, behavior, organismal, and general biology.

Later in the second or third year, the student submits a dissertation proposal to the proposal committee and must defend it in an oral examination, followed by a seminar on his/her proposed research. The student advances to candidacy only after having completed all coursework, the comprehensive examination, the proposal defense, and the proposal seminar.

No sooner than 30 days after submitting the dissertation to a dissertation reading committee, the student defends the dissertation to the committee, followed by a public seminar. At least one chapter of the dissertation must be submitted to a refereed journal for publication before receipt of the Ph.D.

Master of Arts (M.A.) Requirements

Courses

BIOE 200B, Advanced Organismal Biology

BIOE 279, Evolutionary Ecology

BIOE 293, Readings in Ecology and Evolution (or equivalent): two quarters

BIOE 294, Ecology and Evolutionary Biology Seminar (taken every quarter)

Thirty days after submitting the master's thesis to a thesis reading committee, the student defends the thesis to the committee, followed by a public seminar.

Degree Programs Sponsored by Molecular, Cell, and Developmental Biology

Molecular, Cell, and Developmental Biology

225 Sinsheimer Laboratories
(831) 459-4986
<http://www.mcd.ucsc.edu/>

Graduate Program Description

The program in molecular, cell, and developmental (MCD) biology (courses BIOL) leads to either the doctor of philosophy (Ph.D.) or the master of arts (M.A.) and is designed to prepare students for careers in research, teaching, and biotechnology. Current research in MCD biology focuses on such topics as the structure and function of RNA, gene expression, chromatin structure, epigenetics, signaling, cell division, development, nerve cell function, and stem cell biology. A unique focus of the department is the center for the molecular biology of RNA.

Degree Requirements

Ph.D. and master's students complete the graduate core courses, BIOL 200A, 200B, and 200C, and 200D in the first year. Additional undergraduate courses required to strengthen the student's background may be assigned by the advisory committee during the initial advising meeting. Typically, these courses are Biochemistry 100A and BIOL 115. Students are required to participate in laboratory research meetings and departmental seminar series every quarter.

First-year Ph.D. students complete three 10-week laboratory rotations. Students choose their rotation laboratories in consultation with the Graduate Advisory Committee. The laboratory rotations give students a chance to learn about the diverse fields and methods of inquiry and to interact with members of the department. At the end of each quarter, students present a short talk to the department on their rotation project. At the end of spring quarter, students consult with rotation faculty to identify a permanent thesis laboratory.

Second-year Ph.D. students are required to submit two proposals—one on their proposed thesis work and a second on an unrelated MCDB research topic. The Ph.D. qualifying examination, taken in spring quarter of the second year, is an oral examination before a committee comprised of three internal reviewers and one external reviewer.

Once the qualifying examination is passed, a student, with her/his faculty adviser, selects a thesis committee to consult with in the development of the student's thesis. This committee monitors the student's progress and ultimately approves the final draft of the student's dissertation. The student must meet with the thesis committee at least once a year after passing the qualifying examination.

A student is advanced to candidacy following presentation of their research to the department in a seminar. This presentation takes place no later than spring of the third year.

Graduate students must take two approved advanced graduate electives. Students who enter the Ph.D. program with a master's degree but without doing rotations must complete an additional two approved graduate elective courses.

Ph.D. Requirements

Complete the graduate core course

Complete the *Practice of Science* course

Complete an oral qualifying examination

Complete an advancement to candidacy seminar

Complete two advanced, graduate elective courses

Meet yearly with a thesis committee after the qualifying examination

Complete two quarters of service as a teaching assistant

Complete thesis research resulting in a dissertation of individual work

Present the thesis defense in departmental seminar

M.A. Requirements

Students apply to the master's degree program through the same portal as for the Ph.D. degree program. However, since master's students do not do research rotations, they must identify a research adviser at the outset of the training period.

Completion of the graduate core courses

Completion of the *Practice of Science* course

Write a master's thesis based on original research

Presentation of thesis defense in departmental seminar

[\[Return to top.\]](#)

Biological Sciences

The biological sciences at UCSC are comprised of two academic departments: Ecology and Evolutionary Biology (courses BIOE) and Molecular, Cell, and Developmental Biology (courses BIOL). The two academic departments collectively sponsor the undergraduate program while each offers its own independent graduate program. Faculty within the biological sciences are affiliated with either Ecology and Evolutionary Biology, or Molecular, Cell, and Developmental Biology. [The biological sciences undergraduate programs are administered by the divisional Undergraduate Affairs Office.](#)

Physical and Biological Sciences Undergraduate Affairs [Office](#)

387 Thimann Laboratories

(831) 459-4143

<http://undergrad.pbsci.ucsc.edu>

Undergraduate Program Description

The biological sciences have entered into an exciting new era in which phenomena that once seemed insoluble mysteries—such as embryonic development, the functions of the brain, and the dynamics of ecosystems—are now yielding their secrets as the technology to study them becomes more and more sophisticated. From molecular biology, with its potential to revolutionize medicine and agriculture, to ecology, with its lessons for the sustainable management of the environment, biologists are fully engaged in meeting the challenges of the future, helping to improve the quality of human life and to preserve habitats and biodiversity. Thus, it is no surprise that the biological sciences are at the heart of many of today's most pressing intellectual and social concerns.

The Departments of Ecology and Evolutionary Biology (EEB) and Molecular, Cell, and Developmental Biology (MCDB) offer a broad spectrum of courses that reflect the exciting new developments and directions in the field of biology. An outstanding group of faculty, each with a vigorous, internationally recognized research program, is available to teach courses in their specialties as well as core courses for the major. Areas of research strength within the departments include RNA molecular biology, molecular and cellular aspects of genetics and development, neurobiology, **immunology**, microbial biochemistry, plant biology, animal behavior, physiology, evolution, ecology, and marine biology. UCSC is unique in the UC system in providing exceptional opportunities for undergraduate research, allowing students to interact one-on-one with faculty and other researchers in a laboratory or field setting.

Biological Sciences Majors

Students may plan a program that leads to one of several bachelor of arts (B.A.) or bachelor of science (B.S.) degrees. Students may choose from the following major options:

Majors jointly sponsored by Ecology and Evolutionary Biology (EEB) and Molecular, Cell, and Developmental Biology (MCDB):

Biology B.A.

Biology B.S.

Biology B.A. (bioeducation concentration)

Majors sponsored by Ecology and Evolutionary Biology (EEB):

Ecology and evolution B.S.

Marine biology B.S.

Plant sciences B.S.

Environmental studies/biology combined major B.A. (administered in conjunction with the Environmental Studies Department)

Majors sponsored by Molecular, Cell, and Developmental Biology (MCDB):

Human biology B.S.

Molecular, cell, and developmental biology B.S.

Neuroscience B.S.

Biochemistry and molecular biology B.S. (administered in conjunction with the Chemistry and Biochemistry Department)

Bioinformatics B.S. (administered in conjunction with the School of Engineering)

Bioengineering B.S. (administered in conjunction with the School of Engineering)

Advanced undergraduates, with the guidance of faculty mentors, have access to extensive departmental laboratory facilities for independent research. Fieldwork draws on a remarkable variety of terrestrial habitats, as well as ready access to Monterey Bay and the open Pacific. Marine studies are supported by a coastal facility with running seawater, with a research vessel available for offshore work. Año Nuevo Island, north of Santa Cruz, is the site of extensive behavioral studies of marine mammals. Hospitals, convalescent and physical therapy centers, veterinary clinics, and other enterprises in the vicinity of the campus provide the opportunity to pursue field projects and internships comparable to on-the-job training. This array of opportunities for directed independent study enables biological science majors to enhance their upper-division programs to reflect and strengthen their own interests and goals in the sciences.

Prerequisites for the Biological Sciences

The introductory biology sequence is prerequisite to virtually all upper-division biology courses. BIOL 20A has a prerequisite of Chemistry 1A and 1B. Therefore, it is essential for students considering a major in the biological sciences to start chemistry as soon as possible. Students who have not taken Chemistry 1A or 1B but are prepared to begin biology may begin the introductory sequence with BIOE 20C. The entire introductory biology sequence should be taken the first and second year, concurrently with or following the general chemistry sequence ~~(Chemistry 1A, 1B, and 1C/N)~~.

The Mathematics Department offers a placement examination several times a year. Biological science majors are expected to take this examination. If the results indicate a need for precalculus, students need to take Mathematics 3 as soon as possible. Students with even less preparation may need to take college algebra at another institution.

Students intending to major in human biology should take the Spanish placement examination, offered by the language program, to determine with which course they should begin the Spanish sequence.

Course Substitution/Transfer Credit Policy

At least half of the upper-division courses (numbered 100–190) required for each major must be taken through the biological sciences program at UCSC, not as transfer credits from another department or institution. Transfer students are advised to contact the Physical and Biological Sciences Undergraduate Affairs office before enrolling in numerous

upper-division courses at other institutions. For more information on transferring courses to UCSC, please consult the undergraduate web site at <http://undergrad.pbsci.ucsc.edu>.

A maximum of one upper-division course requirement may be met with a research-based independent study or graduate-level UCSC biology course or a course offered by another UCSC department.

Declaration Process for Biological Sciences Majors

Declaration guidelines can be found on the Physical and Biological Sciences Undergraduate Affairs web site at <http://undergrad.pbsci.ucsc.edu>.

Double Major in the Biological Sciences

Students interested in pursuing multiple majors within the biological sciences may not declare the following combination of majors: General Biology (B.A., B.S., bioeducation concentration, or minor) and any other biological sciences major; any combination of two EEB majors (Ecology and Evolution, Marine Biology, Plant Sciences, or Environmental Studies/Biology combined major); Molecular, Cell and Developmental Biology and Neuroscience; Molecular, Cell and Developmental Biology and Biochemistry and Molecular Biology; Neuroscience and Biochemistry and Molecular Biology.

Comprehensive Requirement

All majors in the biological sciences require a comprehensive requirement. This requirement can be satisfied in one of the following ways:

- by passing course 190, Senior Seminar;
- by receiving a passing grade in an internship, independent research laboratory, or field course:

Biological Sciences-EEB

BIOE 114L, *Field Methods in Herpetological Research*

BIOE 141L, *Behavioral Ecology Field Course*

BIOE 145L, *Field Methods in Plant Ecology*

BIOE 150L, *Ecological Field Methods*

BIOE 151, *Ecology and Conservation in Practice*

BIOE 155L, *Freshwater Ecology Laboratory*

BIOE 158L, *Marine Ecology Laboratory*

BIOE 159, *Marine Ecology Field Quarter*

BIOE 161L, *Kelp Forest Ecology Laboratory*

BIOE 183, *Undergraduate Research in EEB*

Biological Sciences-MCDB

BIOL 100L, *Advanced Biochemistry Laboratory*

BIOL 105L, *Eukaryotic Genetics Laboratory*

BIOL 105M, *Microbial Genetics Laboratory*

BIOL 109L, *Yeast Molecular Genetics Laboratory*

BIOL 110L, *Cell Biology Laboratory*

BIOL 111L, *Immunology Laboratory*

BIOL 115L, *Eukaryotic Molecular Biology Laboratory*

BIOL 119L, *Microbiology Laboratory*

BIOL 120L, *Developmental Biology Laboratory*

BIOL 121L, *Environmental Phage Biology Laboratory*

[BIOL 178L, *Protocols in Stem Cell Biology*](#)

BIOL 186L, *Undergraduate Research in MCD Biology*

[BIOL 186R, *Undergraduate Research in MCD Biology*](#)

[BIOL 187L, *Molecular Biotechnology Laboratory*](#)

BIOL 189, *Health Sciences Internship*

[BIOC 110L, *Advanced Biochemistry Laboratory*](#)

[BME 122L, *Environmental Virus Bioinformatics Laboratory*](#)

- by completing a senior thesis;
- by achieving a graduate record examination (GRE) score at or above the 50th percentile on the biology subject test or the biochemistry, cell, and molecular biology subject test. Reports of GRE scores must be submitted to the biological sciences advising office before the last day of the graduating quarter;
- by obtaining an medical college admission test (MCAT) score at or above the 50th percentile on the biological sciences section. Reports of MCAT scores must be submitted to the biological sciences advising office before the last day of the graduating quarter.

Letter Grade Policy

For all students entering UCSC in fall 2001 and later, all courses used to satisfy any of the biological sciences majors must be taken for a letter grade.

Major Disqualification Policy

The biological sciences departments have adopted a major disqualification policy that is intended to encourage students to take their performance in the introductory requirements seriously and to make a strong effort to pass the introductory courses.

Students who receive more than one No Pass, D, and/or F in the following introductory major requirements will not be permitted to major in any of the biological sciences majors:

BIOL 20A, *Cell and Molecular Biology*

BIOE 20B, *Development and Physiology*

BIOE 20C, *Ecology and Evolution*

Chemistry 1A, *General Chemistry*

Chemistry 1B, *General Chemistry*

Chemistry 1C, *General Chemistry*

Mathematics 11A, *Calculus with Applications*

Mathematics 11B, *Calculus with Applications*

Mathematics 19A, *Calculus for Science, Engineering, and Mathematics*

Mathematics 19B, *Calculus for Science, Engineering, and Mathematics*

Students will be assessed for disqualification after grades are submitted each quarter and at the end of each summer session.

Students may appeal their disqualification within the appeal period by writing a letter to the department chair. This appeal must be submitted to the advising office no later than [the 15th day of the subsequent quarter](#) ~~15 days from the date the disqualification notification was mailed~~. The advising office will subsequently notify the student, the college, and the Office of the Registrar of the decision no later than 15 days after the submission of the appeal.

A student who has been disqualified from the major may, no earlier than three months from the date of the disqualification, petition to be reinstated. This application will be considered only if there is substantial new evidence that the student is capable of making

normal progress in the major.

Students will not be allowed to repeat a course more than once without approval of the student's college (Academic Senate Regulation A9.1.8).

Academic Advising

Academic advising is available at the Physical and Biological Sciences Undergraduate Affairs office. Students should take full advantage of this opportunity and should keep in frequent touch with the office to stay informed about late announcements of courses, changes in scheduling, and opportunities for special study.

The undergraduate web site (<http://undergrad.pbsci.ucsc.edu>) serves as the program handbook containing advice and information pertinent to students' most frequently voiced questions. Each student in the major should review the information posted on the web site; for further assistance, contact an academic advisor.

Transfer Students

The faculty encourages applications from transfer students in the biological sciences. It is imperative transfer students complete science prerequisite courses before they transfer, especially a complete sequence of calculus, general chemistry, and introductory biology. Students should also take organic chemistry, if possible. Students who transfer without having completed the prerequisite coursework may have difficulty enrolling in courses and may require more than two years to complete a biological sciences degree. Prospective transfer students should review the transfer [preparation](http://undergrad.pbsci.ucsc.edu/advising/prep-trans.html) guidelines at <http://undergrad.pbsci.ucsc.edu> <http://undergrad.pbsci.ucsc.edu/advising/prep-trans.html> or contact the Physical and Biological Sciences Undergraduate Affairs office for further information.

Honors

Honors in the biological sciences majors are awarded to graduating students whose academic performance demonstrates excellence at a grade point average (GPA) of 3.5 or above. Highest honors are awarded to those students whose performance demonstrates the highest level of excellence and results in a GPA of 3.8 or above.

Medical and Professional School Admission

Medical and professional school admissions requirements vary; students should verify that their coursework will satisfy the admissions requirements of the programs to which they plan to apply.

Education Abroad Opportunities

The UC Education Abroad Program (EAP) offers qualified students unique opportunities to broaden their educational horizons. The biological sciences departments encourage interested students to participate. Many programs are in English-speaking countries or use English for advanced courses. Many programs offer small classes, extensive laboratories, and/or field research experience.

There are excellent programs for biological science students in Costa Rica, Australia, New Zealand, the United Kingdom, Denmark, and Germany, among others. The Costa Rica Tropical Biology Program is of note to students interested in tropical biology and ecology. Held spring and fall quarters at the Monteverde research station, this program gives students experience with hands-on field research, offers a homestay program, and carries credit for two upper-division biology courses. The University of Queensland (Australia) offers an intensive, full-semester marine science program, which includes stays at research

stations on the Great Barrier Reef and in sheltered mangrove and seagrass habitats near Brisbane.

Students interested in study abroad need to get an early start on their basic science requirements, including chemistry, mathematics, and introductory biology and must declare their major prior to applying to go abroad. Visit the EAP office as soon as possible to begin planning, and seek advice about your schedule from the biological sciences undergraduate adviser and/or faculty adviser.

General Biology Majors and Minor

The general biology majors permit flexibility, but demand careful attention to a student's own interests and plans. Each student should select courses on the basis of up-to-date information in consultation with a biology faculty adviser whose interests reflect the student's interests.

General Biology B.A. Major Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B~~7~~ and 20C

General Chemistry: Chemistry 1A, 1B and 1C/N

Organic Chemistry: Chemistry 108A/L and 108B

Calculus: *Mathematics* 11A-B or 19A-B

Statistics: Applied Mathematics and Statistics 5 [or 7/L](#)

Physics: Physics 6A/L, and 6B or 6C

Advanced Requirements

A total of eight upper-division biology courses, as follows:

[Three core courses:](#)

Biochemistry: BIOL 100/K

Genetics: BIOL 105

Evolution: BIOE 109

Students must fulfill the major distribution requirement, which includes one course from each of the following groups:

Cell/Developmental biology:

BIOL 110, *Cell Biology*

BIOL 111~~A~~, *Immunology*

BIOL 115, *Eukaryotic Molecular Biology*

BIOL 119, *Microbiology*

BIOL 120, *Developmental Biology*

Physiology:

BIOE 131/L, *Animal Physiology/Laboratory*

BIOE 135~~L~~, *Plant Physiology/Laboratory*

BIOL 113, *Endocrinology*

BIOL 125, *Introduction to Neuroscience*

BIOL 130/L, *Human Physiology/Laboratory*

Ecology:

BIOE 107, *Ecology*

Electives

Students must complete two additional upper-division biology electives chosen from Biological Sciences-EEB or Biological Sciences-MCDB.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement for the biology bachelor of arts degree is satisfied by completing courses BIOE 107, *Ecology*, or BIOE 108, *Marine Ecology*, and BIOE 109, *Evolution*.

General Biology B.A. Sample Planners

<http://undergrad.pbsci.ucsc.edu/programs/biol/biolba-sample.html>

General Biology, Bioeducation Concentration, B.A.

The General Biology, Bioeducation Concentration, B.A. major is designed to meet the needs of students who plan careers as K-12 science teachers. It provides students with a rigorous education in biology through science breadth courses to prepare them for the state credentialing examinations (CSET) in biology/life sciences ~~and general science~~, and courses covering education theory and practical teaching experience through internships in local schools.

General Biology, Bioeducation Concentration, B.A. Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B~~7~~ and 20C

General Chemistry: Chemistry 1A, 1B~~7~~ and 1C/N

Organic Chemistry: Chemistry 108A/L and 108B

Calculus: Mathematics 11A-B or 19A-B

Statistics: Applied Mathematics and Statistics 5 or 7/L

Physics: Physics 6A/L, and 6B or 6C

~~*Earth Sciences:* Earth Sciences 20/L~~

Education: Education 50C

Earth Sciences: Earth Sciences 20/L (optional*)

Astronomy: Astronomy 2 (optional*)

**These courses are recommended for students interested in pursuing a credential to teach general science.*

Advanced Requirements

A total of ~~seven~~ 10 upper-division biology and education courses, as follows:

BIOL 100/K, *Biochemistry/Laboratory*

BIOL 105, *Genetics*

BIOE 109, *Evolution*

BIOE 107, *Ecology*

Students must fulfill the major distribution requirement, which includes one course from each of the following groups:

Cell/developmental biology:

BIOL 110, *Cell Biology*

BIOL 115, *Eukaryotic Molecular Biology*

BIOL 119, *Microbiology*

BIOL 120, *Developmental Biology*

Physiology:

BIOE 131, *Animal Physiology*

BIOE 135, *Plant Physiology*

BIOL 113, *Endocrinology*

BIOL 130, *Human Physiology*

Biology Laboratory:

One five-credit upper-division biology laboratory course, or

~~BIOL 130L, *Human Physiology Laboratory*~~

~~BIOL~~ BIOE 131L, *Animal Physiology Laboratory*

BIOE 135L, *Plant Physiology Laboratory*

BIOL 130L, *Human Physiology Laboratory*

(BIOL 135L cannot be used to satisfy the laboratory requirement in the bioeducation concentration.)

Diversity:

EDUC 128, *Immigrants and Education*

EDUC 141, *Bilingual and Schooling*

EDUC 164, *Urban Education*

EDUC 181, *Race, Class, and Culture of Education*

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in the General Biology, Bioeducation Concentration is satisfied by completing courses BIOE 107, *Ecology*, ~~or BIOE 108, *Marine Ecology*~~, and BIOE 109, *Evolution*.

General Biology, Bioeducation Concentration, B.A. Sample Planners

<http://undergrad.pbsci.ucsc.edu/programs/biol/biolba-educ-sample.html>

General Biology B.S. Major Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B~~7~~ and 20C

General Chemistry: Chemistry 1A, 1B~~7~~ and 1C/N

Organic Chemistry: Chemistry 108A/L and 108B

Calculus: Mathematics 11A-B or 19A-B

Statistics: Applied Mathematics and Statistics 5 or 7/L

Physics: Physics 6A/L, and 6B or 6C

Advanced Requirements

A total of nine upper-division biology courses; one must include laboratory or fieldwork as follows:

Three core courses:

Biochemistry with Laboratory: BIOL 100/K

Genetics: BIOL 105

Evolution: BIOE 109

~~Students must complete one upper-division biology course that includes regular laboratory or fieldwork.~~ Students must fulfill the major distribution requirement, which includes one course from each of the following groups:

Cell/developmental biology:

BIOL 110, *Cell Biology*

BIOL 111A, *Immunology*

BIOL 115, *Eukaryotic Molecular Biology*

BIOL 119, *Microbiology*

BIOL 120, *Developmental Biology*

Physiology:

BIOE 131/L, *Animal Physiology/Laboratory*

BIOE 135/L, *Plant Physiology/Laboratory*

BIOL 113, *Endocrinology*

BIOL 125, *Introduction to Neuroscience*

BIOL 130/L, *Human Physiology/Laboratory*

Ecology:

BIOE 107, *Ecology*

BIOE 108, *Marine Ecology*

Electives

Students must complete three additional upper-division biology electives chosen from Biological Sciences-EEB courses or Biological Sciences-MCDB courses.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement for the biology bachelor of science degree is satisfied by completing courses BIOE 107, *Ecology*, or BIOE 108, *Marine Ecology*, and BIOE 109, *Evolution*.

General Biology B.S. Sample Planners

<http://undergrad.pbsci.ucsc.edu/programs/biol/biolbs-sample.html>

General Biology Minor Requirements

In addition to the introductory biology, chemistry, mathematics, and physics (as listed above for the biology B.A.), students are required to take a total of five upper-division biology courses including courses BIOL 100/K, BIOL 105, and the three distribution requirement courses; one course must include a laboratory. There is no senior comprehensive requirement for the minor. Please contact the Physical and Biological Sciences Undergraduate Affairs office for further information.

Degree Programs Sponsored by Ecology and Evolutionary Biology

Ecology and Evolution Major

Program Description

The ecology and evolution major provides students with interdisciplinary skills necessary for understanding and solving complex problems in ecology, evolution, behavior, and physiology. While some of these disciplines focus on molecular or chemical mechanisms, they all address questions on larger spatial and temporal scales that can be applied to important environmental problems, including genetic and ecological aspects of conservation biology and biodiversity.

Students majoring in ecology and evolution will receive a B.S. degree based on an integrated series of courses providing breadth in fundamental areas of biology and allied sciences that enhance understanding of evolutionary and ecological processes. The capstone of this curriculum is a suite of field courses providing students unique opportunities to learn and conduct research in a host of ecological systems. Students are encouraged to take field courses in their areas of specialization. Other opportunities include participation in research projects with faculty sponsors and the intensive Education Abroad Programs (EAP) in Costa Rica (tropical biology) and Australia (marine sciences).

Ecology and Evolution B.S. Major Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B~~7~~ and 20C

General Chemistry: Chemistry 1A, 1B and 1C/N

Calculus: Mathematics 11A-B or 19A-B

Biostatistics: Applied Mathematics and Statistics 7/L

Physics: Physics 6A/L, and 6B or 6C

Advanced Requirements

A total of eleven upper-division courses; two must include laboratory or fieldwork.

Three upper-division core courses:

Genetics: BIOL 105

Ecology: BIOE 107

Evolution: BIOE 109

One of the following physiology courses:

BIOE 131/L, *Animal Physiology/Laboratory*

BIOE 135/L, *Plant Physiology/Laboratory*

One of the following organism courses:

BIOE 112/L, *Ornithology/Ornithology Field Studies*

BIOE 114/L, *Herpetology/Field Methods in Herpetological Research*

BIOE 117/L, *Systematic Botany of Flowering Plants/Laboratory*

BIOE 120/L, *Marine Botany/Laboratory*

BIOE 122/L, *Invertebrate Zoology/Laboratory*

BIOE 127/L, *Ichthyology/Laboratory*

BIOE 129/L, *Biology of Marine Mammals/Laboratory*

BIOL 119/L, *Microbiology/Laboratory*

Elective list for Ecology and Evolution Major

Three topical electives chosen from the following:

BIOE 108, *Marine Ecology*
BIOE 112/L, *Ornithology/Laboratory*
BIOE 114/L, *Herpetology/Laboratory*
BIOE 117/L, *Systematic Botany/Laboratory*
BIOE 120/L, *Marine Botany/Laboratory*
BIOE 122/L, *Invertebrate Zoology/Laboratory*
BIOE 127/L, *Ichthyology/Laboratory*
BIOE 129/L, *Biology of Marine Mammals/Laboratory*
BIOE 131/L, *Animal Physiology/Laboratory*
BIOE 135/L, *Plant Physiology/Laboratory*
BIOE 140, *Behavioral Ecology*
BIOE 141L, *Behavioral Ecology Field Course*
BIOE 145, *Plant Ecology*
BIOE 145L, *Field Methods in Plant Ecology*
BIOE 147, *Community Ecology*
BIOE 149, *Disease Ecology*
BIOE 150, *Ecological Field Methods*
BIOE 150L, *Ecological Field Methods Laboratory*
BIOE 151ABCD, *Ecology and Conservation in Practice*
BIOE 155, *Freshwater Ecology*
BIOE 155L, *Freshwater Ecology Laboratory*
BIOE 158L, *Marine Ecology Laboratory*
BIOE 159ABCD, *Marine Ecology Field Quarter*
BIOE 161, *Kelp Forest Ecology*
BIOE 161L, *Kelp Forest Ecology Laboratory*
BIOE 163, *Ecology of Reefs, Mangroves, and Seagrasses*
BIOE 165, *Marine Conservation Biology*
BIOE 172/L, *Population Genetics/Laboratory*
BIOL 100/K, *Biochemistry/Laboratory*
BIOL 110, *Cell Biology*
BIOL 115, *Eukaryotic Molecular Biology*
BIOL 119, *Microbiology*
BIOL 119L, *Microbiology Laboratory*
BIOL 120, *Development*
BIOL 120L, *Development Laboratory*
Ocean Sciences 118, *Marine Microbial Ecology*

Three general electives chosen from the following:

Biological Sciences-EEB

any BIOE course ~~numbered 100-180~~

Biological Sciences-MCDB

BIOL 100/K, *Biochemistry/Laboratory*
BIOL 110, *Cell Biology*
BIOL 115, *Eukaryotic Molecular Biology*
BIOL 119, *Microbiology*

BIOL 119L, *Microbiology Laboratory*

BIOL 120, *Development*

BIOL 120L, *Development Laboratory*

Chemistry

CHEM 108A, *Organic Chemistry*

CHEM 108B, *Organic Chemistry*

Earth Sciences

EART 100/L, *Vertebrate Paleontology*

EART 102, *Marine Geology*

EART 105, *Coastal Geology*

EART 122, *Paleoceanography*

Economics

ECON 166A, *Game Theory and Applications I*

ECON 166B, *Game Theory and Applications II*

Environmental Studies (enrollment by permission of instructor)

ENVS 104A, *Introduction to Environmental Field Methods*

ENVS 108/L, *General Entomology/Laboratory*

ENVS 115A/L, *GIS and Environmental Applications/Exercises in GIS*

ENVS 120, *Conservation Biology*

ENVS 122, *Tropical Ecology and Conservation*

ENVS 123, *Animal Ecology and Conservation*

ENVS 129, *Integrated Pest Management*

One of the following may also be used as an upper-division general elective:

Biological Sciences-EEB

BIOE 183L, *Undergraduate Research in EEB*

BIOE 195, *Senior Thesis*

BIOE 198, *Independent Field Study*

BIOE 199, *Tutorial*

Environmental Studies

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in ecology and evolution is satisfied by completing courses BIOE 107, *Ecology*, ~~or BIOE 108, *Marine Ecology*~~, and BIOE 109, *Evolution*.

Ecology and Evolution B.S. Sample Planners

<http://undergrad.pbsci.ucsc.edu/programs/eeb/ecevbs-sample.html>

Marine Biology Major

Program Description

UCSC is situated within five miles of Monterey Bay and its great diversity of coastal marine ecosystems; nature reserves; and state, federal, and private marine research institutions and resource management agencies. These resources, combined with on-campus computing and analytical facilities and the Long Marine Laboratory, make UCSC an exceptional campus for the study of marine biology and its application to coastal conservation and management. Descriptions of nearby environments, institutions, and facilities are available through the Ecology and Evolutionary Biology Department web site at <http://www.eeb.ucsc.edu/>~~<http://www.biology.ucsc.edu/eeb/index.html>~~.

The marine biology major is designed to introduce students to marine organisms and the biological and physical processes that affect these organisms, their populations, and their coastal and oceanic ecosystems. The emphasis is on basic principles that help in understanding the processes that shape life in marine environments. The marine biology major is a demanding program that offers a B.S. degree and requires several more courses than the general biology B.A. major.

Marine Biology B.S. Major Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B~~7~~ and 20C

General Chemistry: Chemistry 1A, 1B~~/M~~ and 1C/N

Calculus: Mathematics 11A-B or 19A-B

Biostatistics: Applied Mathematics and Statistics 7/L

Physics: Physics 6A/L, and 6B or 6C

Advanced Requirements

A total of ~~eleven~~11 upper-division courses; two must include laboratory or fieldwork.

Two core courses:

Genetics: *BIOL 105*

Evolution: *BIOE 109*

One ecology course:

BIOE 107, *Ecology*

BIOE 108, *Marine Ecology*

One marine-environment course:

~~Ocean Sciences~~OCEA 101, *Marine Environment*

~~Ocean Sciences~~OCEA 130, *Biological Oceanography*

One marine course:

BIOE 120/L, *Marine Botany/Laboratory*
BIOE 122/L, *Invertebrate Zoology/Laboratory*
BIOE 127/L, *Ichthyology/Laboratory*
BIOE 129/L, *Biology of Marine Mammals/Laboratory*

Elective list for Marine Biology Major

Three topical electives chosen from the following:

BIOE 108, *Marine Ecology*
BIOE 120/L, *Marine Botany/Laboratory*
BIOE 122/L, *Invertebrate Zoology/Laboratory*
BIOE 127/L, *Ichthyology/Laboratory*

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in marine biology is satisfied by completing courses BIOE 107, *Ecology*, or BIOE 108, *Marine Ecology*, and BIOE 109, *Evolution*.

Marine Biology B.S. Sample Planners

<http://undergrad.pbsci.ucsc.edu/programs/eeb/mabibs-sample.html>

Plant Sciences Major

Program Description

UCSC has a strong program in the plant sciences (sometimes called botany). A fine natural environment, the campus Arboretum, the facilities under the Center for Agroecology and

Sustainable Food Systems (especially the Farm and Garden), and an excellent greenhouse collection all enhance the resources that support UCSC's botanical programs.

The plant sciences major is designed for students with an interest in plant biology and its associated curricular fields such as plant ecology, plant physiology, plant pathology, plant molecular biology, soils, and applied plant sciences. After completion of the core courses, students can proceed in one of several directions depending on their interest. For example, a more in-depth study of physiology and molecular biology courses can serve as preparation for work in the biotechnology field or for graduate school; further studies in plant ecology, tropical ecology, or restoration ecology can lead to careers such as resource ecologist or naturalist or to the pursuit of related fields in graduate school; upper-division training in agroecology can lead to careers in agriculture or food systems. ~~A special feature of this major is a one-quarter internship and/or independent research requirement.~~ There are many opportunities for internships both on the UCSC campus and in the community at large.

Plant Sciences B.S. Major Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B~~7~~ and 20C

General Chemistry: Chemistry 1A, 1B and 1C/N

Calculus: Mathematics 11A-B or 19A-B

Biostatistics: Applied Mathematics and Statistics 7/L

Physics: Physics 6A/L, and 6B or 6C

Advanced Requirements

A total of ~~eleven~~11 upper-division courses; two of which must include laboratory or fieldwork.

Three core courses:

Genetics: BIOL 105

Ecology: BIOE 107

Evolution: BIOE 109

One plant physiology course from the following:

BIOE 135/L, *Plant Physiology/Laboratory*

Environmental Studies 162, *Plant Physiological Ecology*

One botany course from the following:

BIOE 117/L, *Systematic Botany/Laboratory*

BIOE 120/L, *Marine Botany/Laboratory*

Elective list for Plant Sciences Major

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in plant sciences is satisfied by completing courses BIOE 107, *Ecology*, and BIOE 109, *Evolution*.

Plant Sciences B.S. Sample Planners

<http://undergrad.pbsci.ucsc.edu/programs/eeb/plntbs-sample.html>

Degree Programs Sponsored by Molecular, Cell, and Developmental Biology

Human Biology Major

Program Description

The B.S. major in human biology is designed for students interested in careers in medicine or biomedical research and satisfies the admission requirements for most U.S. medical schools. It is based on the existing B.S. degree in molecular, cell, and developmental biology, with similar course requirements in chemistry, physics, and mathematics. Students are required to take five courses directly relevant to human health in addition to genetics, biochemistry, and cell biology. Students in this program must also fulfill Spanish language and health care internship requirements.

Human Biology B.S. Major Requirements*

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B, and BIOL 20L

General Chemistry: Chemistry 1A, 1B/M and 1C/N

Organic Chemistry: Chemistry 108A/L and 108B/M, 108C recommended for pre-med students, or 112A/L, 112B/M, and 112C/N

Calculus: Mathematics 11A-B or 19A-B; and 22 (three quarters)

Statistics: Applied Mathematics and Statistics 5 or 7/L

Physics: Physics 6A/L, 6B/M, and 6C/N

Advanced Requirements

~~A total of eight upper-division biology courses,~~
~~as follows:~~ Four upper-division core courses to include:

Four core courses:

Biochemistry with laboratory: BIOL 100/K or BIOC 100A, 100B, 100C, and BIOL 100K

Genetics: BIOL 105

Cell Biology: BIOL 110

Human Physiology with Laboratory: BIOL 130/L

Three of the following electives ~~lecture courses~~:

BIOL 111A, *Immunology*

BIOL 113, *Mammalian Endocrinology*

BIOL 114, *Cancer Cell Biology*

BIOL 115, *Eukaryotic Molecular Biology*

BIOL 119, *Microbiology*

BIOL 120, *Development*

BIOL 125, *Neuroscience*

BIOL 126, *Advanced Neural Development*

BIOL 127, *Neurodegenerative Disease*

BIOL 135/L, *Anatomy of the Human Body/Laboratory*

BIOL 140, *Biophysics*

BIOL 178, *Stem Cell Biology*

BIOL 179, *Biotechnology and Drug Development*

BIOL 182, *Genomics*

-

Internship Requirement: BIOL 189, *Health Sciences Internship*. The student must participate in a community health care service activity approved by the health sciences internship coordinator. Credit may be earned over multiple quarters.

Language Requirement: Spanish 1-4 or the equivalent and one quarter of Spanish for health-care workers (Spanish 5M).

* Note: Medical and professional school admissions requirements vary; students should verify that their coursework will satisfy the admissions requirements of the programs to which they plan to apply.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in human biology is satisfied by completing courses BIOL 130L, *Human Physiology Laboratory*, and BIOL 189, *Health Sciences Internship* and BIOL 189W, *Disciplinary Communication: Human Biology*.

Human Biology B.S. Sample Planners

<http://undergrad.pbsci.ucsc.edu/programs/eeb/hbio+bs-sample.html>

Molecular, Cell, and Developmental Biology Major

Program Description

The molecular, cell, and developmental (MCD) biology major is designed for students interested in medical or other professional graduate programs and those preparing for careers in biotechnology industries. This major is more structured than the general biology major and requires that students pay careful attention to the prerequisites required for upper-division biology courses.

Molecular, Cell, and Developmental Biology B.S. Major Requirements

Introductory Requirements

Introductory Biology: BIOL 20A, BIOE 20B, and 20C

General Chemistry: Chemistry 1A, 1B/~~M~~ and 1C/N

Organic Chemistry: Chemistry 108A/L and 108B

Calculus: Mathematics 11A-B or 19A-B

Biostatistics: Applied Mathematics and Statistics 5 or 7/L

Physics: Physics 6A/L and 6B or 6C

Advanced Requirements

~~A total of nine upper-division biology courses,~~
~~as follows:~~ Four upper-division core courses:

~~Four core courses:~~

Biochemistry with Laboratory: BIOL 100/K or the series BIOE 100A, 100B, 100C, and BIOL 100K (Upon completion of the series, BIOE 100C may be used to satisfy one lecture elective)

Genetics: BIOL 105

Cell Biology: BIOL 110

Eukaryotic Molecular Biology: BIOL 115

Three of the following electives ~~lecture courses~~:
BIOE 100C, *Biochemistry*

~~BIOE 110, *Biochemistry Laboratory*~~

BIOL 111A, *Immunology*

BIOL 113, *Mammalian Endocrinology*

BIOL 114, *Cancer Cell Biology*

BIOL 118, *Biology of Disease*

BIOL 119, *Microbiology*

BIOL 120, *Development*

BIOL 125, *Neuroscience*

BIOL 126, *Advanced Neural Development*

BIOL 127, *Neurodegenerative Disease*

BIOL 130/L, *Human Physiology/Laboratory*

BIOL 140, *Biophysics*

BIOL 178, *Stem Cell Biology*

BIOL 178L, *Protocols in Stem Cell Biology*

BIOL 179, *Biotechnology and Drug Development*

BIOL 180/L, *Research Programming for Biologists and Biochemists/Laboratory*

BIOL 181, *Computational Biology Tools*

BIOL 182, Genomics

-

BIOE 109, *Evolution*

BIOE 135L, *Plant Physiology/Laboratory*

One of the following laboratory courses:

BIOL 100L, *Advanced Biochemistry Laboratory*

BIOL 105L, *Eukaryotic Genetics Laboratory*

BIOL 105M, *Microbial Genetics Laboratory*

BIOL 109L, *Yeast Molecular Genetics Laboratory*

BIOL 110L, *Cell Biology Laboratory*

~~BIOL 111L, Immunology Laboratory~~

BIOL 115L, *Eukaryotic Molecular Biology Laboratory*

BIOL 119L, *Microbiology Laboratory*

BIOL 120L, *Development Laboratory*

BIOL 121L, Environmental Phage Biology Laboratory

~~BIOL 178L, Protocols in Stem Cell Biology~~

BIOL 186L, *Undergraduate Research in MCD*

BIOL 186R, Undergraduate Research in MCD Biology

-

BIOL 187L, *Molecular Biotechnology Laboratory*

BIOC 110L, Advanced Biochemistry Laboratory

BME 122L, Environmental Virus Bioinformatics Laboratory

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in molecular, cell, and developmental biology is satisfied by completing one of the following courses: BIOC 110L, BIOL 100L, 105L, 105M, 109L, 110L, ~~111L~~, 115L, 119L, 120L, 121L ~~178L~~, 186L, 187L -or BME 122L ~~187L~~. Please refer to updated information at

<http://reg.ucsc.edu/catalog/html/disciplinarycommunicationchart.html>.

Molecular, Cell and Developmental Biology B.S. Sample Planners

Neuroscience Major

Program Description

Neuroscience, the study of the nervous system and behavior of animals, is a frontier area in biology, touching psychology on the one hand and computer science on the other. The neuroscience major provides students with rigorous preparation for graduate studies and research in the field of neuroscience. Rigorous course work is supplemented by opportunities for hands-on research.

Neuroscience B.S. Major Requirements

Introductory Course Requirements

Introductory Biology: BIOL 20A, BIOE 20B~~7~~ and 20C

General Chemistry: Chemistry 1A, 1B and 1C/N

Organic Chemistry: Chemistry 108A/L and 108B

Calculus: Mathematics 11A-B or 19A-B; ~~and 22~~

Biostatistics: Applied Mathematics and Statistics 7/L

Physics: Physics 6A/L; ~~7~~ and 6C

Advanced Course Requirements

Five upper-division core courses ~~to include:~~

Biochemistry: BIOL 100/K

Genetics: BIOL 105

Cell Biology: BIOL 110

Neuroscience: BIOL 125

Advanced Neuroscience: BIOL 126

Three of the following ~~lecture~~-electives:

BIOE 131/L, *Animal Physiology/Laboratory*

BIOE 140, *Behavioral Ecology*

BIOL 113, *Mammalian Endocrinology*

BIOL 115, *Eukaryotic Molecular Biology*

BIOL 118, *Biology of Disease*

BIOL 120, *Development*

BIOL 127, *Neurodegenerative Disease*

BIOL 130/L, *Human Physiology/Laboratory*

BIOL 140, *Biophysics*

BIOL 178L, *Protocols in Stem Cell Laboratory*

BIOL 179, *Biotechnology and Drug Development*

BIOL 180/L, *Research Programming for Biologists and Biochemists/Laboratory*

BIOL 181, *Computational Biology Tools*

BIOL 182, *Genomics*

~~Psychology~~ PSYC 121, *Perception*

~~Psychology~~ PSYC 123, *Behavioral Neuroscience*

One of the following laboratory electives:

BIOE 141L, *Behavioral Ecology Field Course*

BIOE 183L, *Undergraduate Research in EEB*

BIOL 100L, *Advanced Biochemistry Laboratory*

BIOL 105L, *Eukaryotic Genetics Laboratory*

BIOL 109L, *Yeast Molecular Genetics Laboratory*

BIOL 110L, *Cell Biology Laboratory*

~~BIOL 111L, *Immunology Laboratory*~~

BIOL 115L, *Eukaryotic Molecular Genetics Laboratory*

BIOL 120L, *Development Laboratory*

BIOL 121L, *Environmental Phage Biology Laboratory* ~~BIOL 178L, *Protocols in Stem Cell Laboratory*~~

BIOL 186L, *Undergraduate Research in MCD*

BIOL 186R, *Undergraduate Research in MCD Biology*

BIOL 187L, *Molecular Biotechnology Laboratory*

BME 122L, *Environmental Virus Bioinformatics Laboratory*

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in neuroscience is satisfied by completing one of the following: [BIOC 110L](#), BIOE 141L, [183L](#); BIOL [100L](#), 105L, 109L, 110L, ~~111L~~, 115L, 120L, [121L](#), ~~178L~~, [186L](#), [187L](#); or [BME 122L](#)~~187L~~. Ecology and Evolutionary Biology

Ecology and Evolutionary Biology
A308 Earth and Marine Sciences
(831) 459-5358

<http://www.eeb.ucsc.edu/>

Graduate Program Description

The Ecology and Evolutionary Biology (EEB, courses BIOE) Graduate Program at UCSC reflects the remarkable local and global diversity of species and environments studied by the EEB faculty and students. The vision of the EEB graduate program is to provide a nurturing, creative, and intellectual environment conducive to the development of world-class scientists. The small size of the EEB graduate program encourages close working relations between students and faculty in an informal atmosphere ~~conducive~~ [advantageous](#) to rapid learning and professional growth. Interdisciplinary collaborations with oceanographers, geologists, mathematicians, toxicologists, and others enable students to explore the conceptual connections between related fields as they acquire mastery in their areas of specialization.

The graduate program in Ecology and Evolutionary Biology at UCSC is one of the premier EEB programs in the country. EEB-UCSC graduate students regularly ~~win~~ [garner](#) prestigious awards for their presentations at international meetings and publish their work in the best journals of their fields. In addition to taking advantage of local field sites and state-of-the-art departmental laboratories, more than two-thirds of the EEB faculty also participates in field studies throughout the world, especially in Africa, Latin America, and around the Pacific Rim.

A special strength of the EEB program is the integration of terrestrial and aquatic perspectives across all research tracks. The course requirements and examinations emphasize both breadth and depth.

Research in EEB comprises four core tracks

Ecology

Evolutionary biology

Physiology

Behavior

Degree Requirements

Doctor of Philosophy (Ph.D.) Requirements

Courses

BIOE 200A, *Scientific Skills*

BIOE 200B, *Advanced Organismal Biology*

BIOE 279, *Evolutionary Ecology*

BIOE 293, *Readings in Ecology and Evolution* (or equivalent)

BIOE 294, *Ecology, Evolutionary Biology Seminar* (taken each quarter when in residence)

BIOE 295, *Advanced Ecology and Evolutionary Biology Seminar* (may substitute for BIOE 293)

Each Ph.D. student should expect to complete at least two quarters as a teaching assistant during their graduate career.

During fall of the second year, students take a comprehensive examination. This is a two-part examination, written and oral, the goal of which is to examine the student's breadth and depth of knowledge of evolution, ecology, physiology, behavior, organismal, and general biology.

Later in the second or third year, the student submits a dissertation proposal to the proposal committee and must defend it in an oral examination, followed by a seminar on his/her proposed research. The student advances to candidacy only after having completed all coursework, the comprehensive examination, the proposal defense, and the proposal seminar.

No sooner than 30 days after submitting the dissertation to a dissertation reading committee, the student defends the dissertation to the committee, followed by a public seminar. At least one chapter of the dissertation must be submitted to a refereed journal for publication before receipt of the Ph.D.

Master of Arts (M.A.) Requirements

Courses

BIOE 200B, *Advanced Organismal Biology*

BIOE 279, *Evolutionary Ecology*

BIOE 293, *Readings in Ecology and Evolution* (or equivalent): two quarters

BIOE 294, *Ecology and Evolutionary Biology Seminar* (taken every quarter)

Thirty days after submitting the master's thesis to a thesis reading committee, the student defends the thesis to the committee, followed by a public seminar.

Molecular, Cell, and Developmental Biology

Graduate Program Description

The program in molecular, cell, and developmental (MCD) biology (courses BIOL) leads to either the doctor of philosophy (Ph.D.) or the master of arts (M.A.) and is designed to prepare students for careers in research, teaching, and biotechnology. Current research in MCD biology focuses on such topics as the structure and function of RNA, gene expression, [chromatin structure](#), [epigenetics](#), signaling, cell division, development, [nerve cell function](#), and [pathogenesis stem cell biology](#). A unique focus of the department is the center for the molecular biology of RNA.

Degree Requirements

Ph.D. and master's students complete the graduate core courses, BIOL 200A, 200B, and 200C, and 200D in the first year. Additional undergraduate courses required to strengthen the student's background may be assigned by the advisory committee during the initial advising meeting. Typically, these courses are Biochemistry 100A and BIOL 115. Students are required to participate in laboratory research meetings and departmental seminar series every quarter.

First-year Ph.D. students complete three 10-week laboratory rotations. Students choose their rotation laboratories in consultation with the Graduate Advisory Committee. The laboratory rotations give students a chance to learn about the diverse fields and methods of inquiry and to interact with members of the department. At the end of each quarter, students present a short talk to the department on their rotation project. At the end of spring quarter, students consult with rotation faculty to identify a permanent thesis laboratory.

Second-year Ph.D. students are required to submit two proposals—one on their proposed thesis work and a second on an unrelated MCDB research topic. The Ph.D. qualifying examination, taken in spring quarter of the second year, is an oral examination before a committee comprised of three internal reviewers and one external reviewer.

Once the qualifying examination is passed, a student, with her/his faculty adviser, selects a thesis committee to consult with in the development of the student's thesis. This committee monitors the student's progress and ultimately approves the final draft of the student's dissertation. The student must meet with the thesis committee at least once a year after passing the qualifying examination.

A student is advanced to candidacy following presentation of their research to the department in a seminar. This presentation takes place no later than spring of the third year.

Graduate students must take two approved advanced graduate electives. Students who enter the Ph.D. program with a master's degree but without doing rotations must complete an additional two approved graduate elective courses.

Ph.D. Requirements

- **Complete the Practice of Science course**
- **Complete an oral qualifying examination**
- **Complete an advancement to candidacy seminar**
- **Complete two advanced, graduate elective courses**
- **Meet yearly with a thesis committee after the qualifying examination**
- **Complete two quarters of service as a teaching assistant**
- **Complete thesis research resulting in a dissertation of individual work**
- **Present the thesis defense in departmental seminar**

M.A. Requirements

- **Students apply to the master's degree program through the same portal as for the Ph.D. degree program. However, since master's students do not do research rotations, they must identify a research adviser at the outset of the training period.**
- **Completion of the graduate core courses**
- **Completion of the Practicenof Science course**
- **Write a master's thesis based on original research**
- **Presentation of thesis defense in departmental seminar**

Faculty and Professional Interests

GIACOMO BERNARDI

Fish biology, phylogenetics, evolution

MARK H. CARR

Marine ecology, applied marine ecology

DANIEL P. COSTA

Physiological ecology of marine mammals and birds

DONALD CROLL

Ecology and conservation of islands and seabirds

NATHANIEL J. DOMINY

Ecology and foraging behavior of humans and non-human primates; sensory ecology; color vision; primate evolution; tropical forests

LAUREL R. FOX

Terrestrial population and community ecology, plant-animal interactions

KATHLEEN M. KAY

Plant evolutionary ecology

A. MARM KILPATRICK

Disease ecology, population biology

BRUCE E. LYON

Behavioral ecology, evolutionary ecology, avian ecology

RITA MEHTA

Comparative marine physiology

INGRID M. PARKER

Plant ecology, plant-pathogen interactions, biological invasions

JARMILA PITTMANN

Plant physiology

GRANT H. POGSON

Molecular population genetics, ecological genetics, marine invertebrates and fishes

DONALD C. POTTS

Coral reef ecology, genetics, evolution, and geological history; marine biodiversity; tropical biology, global change, and remote sensing

PETER T. RAIMONDI

Marine ecology, evolutionary ecology, experimental design, applied ecology

BARRY SINERVO

Animal behavior, evolution, physiological ecology

JOHN N. THOMPSON

Coevolution, evolutionary ecology and genetics of species interactions, organization of biodiversity

TERRIE M. WILLIAMS

Large mammal physiology, bioenergetics, exercise and environmental physiology

Ecology and Evolutionary Biology Emeritus Faculty

RALPH BERGER

WILLIAM JACKSON DAVIS

WILLIAM DOYLE

LYNDA J. GOFF

RALPH HINEGARDNER
JEAN LANGENHEIM
BURNEY LEBOEUF
CHARLES (LEO) ORTIZ
A. TODD NEWBERRY
JOHN PEARSE

Ecology and Evolutionary Biology Lecturers

BALDO MARINOVIC
JILL THOMPSON

Adjuncts

JAMES ESTES (Ecology and Evolutionary Biology)
Marine sciences, community ecology, species interactions

SAMANTHA FORDE (Ecology and Evolutionary Biology)
Experimental evolutionary ecology

R. BRUCE MAC FARLANE (Ecology and Evolutionary Biology)
Physiological ecology of marine, estuarine, and anadromous fishes

DEVON PEARSE (Ecology and Evolutionary Biology)
Evolutionary and ecological genetics, conservation biology

BERNIE TERSHY (Ecology and Evolutionary Biology)
Ecology and conservation of seabirds and island ecosystems

M. TIM TINKER (Ecology and Evolutionary Biology)
Foraging ecology and demography of the southern sea otter

ROBERT VRIJENHOEK (Ecology and Evolutionary Biology)

KERSTIN WASSON (Ecology and Evolutionary Biology)
Evolutionary ecology, invasion biology, conservation science

JONATHAN ZEHR (Ocean Sciences)
Aquatic microbial ecology, biological oceanography

Affiliates

GREG GILBERT (Environmental Studies)
Disease ecology, conservation biology, tropical forest ecology, microbial ecology

KAREN D. HOLL (Environmental Studies)
Restoration ecology, conservation biology, landscape ecology

PAUL L. KOCH (Earth Sciences)
Isotope biogeochemistry, vertebrate paleontology

RAPHAEL KUDELA (Ocean Sciences)
Ecological modeling and remote sensing, satellite oceanography, phytoplankton ecology and harmful algal blooms

MARC S. MANGEL (Applied Mathematics and Statistics)
Mathematical modeling of biological phenomena, especially the evolutionary ecology of growth, aging, and longevity; quantitative issues in fishery management; mathematical and computational aspects of disease

JONATHAN ZEHR (Ocean Sciences)
Aquatic microbial ecology, biological oceanography

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses**20B. Development and Physiology. F,W,S**

Topics in morphology, physiology, development, genetics, and endocrinology selected to exemplify current issues and perspectives in organismic biology. Prerequisite(s): BIOL 20A. *I. Parker, R. Mehta, J. Pittermann, T. Williams*

20C. Ecology and Evolution. F,W,S

Introduction to ecology and evolution covering principles of evolution at the molecular, organismal, and population levels. Evolutionary topics include genetic and phenotypic variation, natural selection, adaptation, speciation, and macroevolution. Also covers behavioral, population, and community ecology including applied ecological issues. *B. Marinovic*

75. Scientific Diving Certification (2 credits). F,S

Prerequisite for course 161/L, *Kelp Forest Ecology*, and all research diving performed under the auspices of UCSC or other academic institutions. Course work includes lectures and scuba diving. Topics include subtidal sampling techniques, navigation, low visibility diving, search and recovery, rescues, small boat use, oxygen administration for divers, technical blue water deep diving, physics, and physiology. Apply online at <http://www2.ucsc.edu/sci-diving>. Students are billed a course materials fee that covers costs for equipment use, materials, and transportation. Prerequisite(s): skill level equal to Advanced Scuba Diver Certification, pass scuba physical, provide own scuba gear, be certified in CPR and First Aid; and interview: pass swim test and scuba skills test. Enrollment limited to 16. *The Staff*

80N. Biology of Human Health and Nutrition. W,S

An introduction to the biology of human nutrition and its effects on human health. The course explores how nutrient balance, exercise, and age interact in their effects on human health, fitness, and disease. (General Education Code(s): SI, T-2 Natural Sciences.) *J. Thompson*

80P. Infectious Diseases and Human Populations. W,S

An overview of the biology of infectious diseases in human societies including why diseases vary in severity, how human bodies defend themselves, and how public health efforts cope with the problem of rapidly evolving pathogens. (General Education Code(s): SI, T-2 Natural Sciences.) *J. Thompson*

99. Tutorial. F,W,S

Individual, directed study for undergraduates. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses**107. Ecology. W,S**

Focuses on physiological, behavioral, and population ecology, and on linking ecological processes to evolution. It includes basic principles, experimental approaches, concepts of modeling, and applications to ecological problems. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; BIOL 20A, BIOE 20B, and BIOE 20C. (W) *B. Lyon*, (S) *J. Estes*

108. Marine Ecology. W

Paradigms and designs in marine ecology. A review of the paradigms that have shaped our understanding of marine ecology; analysis and discussion of experiments with these paradigms. Students cannot receive credit for this course and course 208. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; BIOL 20A, BIOE 20B, and BIOE 20C; BIOE 107 or 140 recommended. Enrollment restricted to juniors and seniors. *M. Carr, P. Raimondi*

109. Evolution. F,W

An examination of the history and mechanisms of evolutionary change. Topics include molecular evolution, natural and sexual selection, adaptation, speciation, biogeography, and macroevolution. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; BIOL 20A, BIOE 20B, BIOE 20C, and BIOL 105. *G. Bernardi*, (F) *G. Pogson*

112. Ornithology. F

Introduction to the evolution, ecology, behavior, and natural history of birds, using exemplary case histories to illustrate key concepts in evolution, ecology, and behavior. Prerequisite(s): BIOE 107,

BIOE 109, or BIOE 140. Concurrent enrollment in BIOE 112L is required. *B. Lyon*

112L. Ornithology Field Studies (2 credits). F

Field trips introduce students to field identification skills and field investigation of census, foraging behavior, migration, social behavior, and communication. Examination of specimens in the laboratory will be used to highlight the diversity and taxonomy of birds. Students are billed a materials fee. Some field trips may require students to provide their own transportation. Prerequisite(s): BIOE 107, BIOE 109, or BIOE 140. Concurrent enrollment in BIOE 112 is required. Offered in alternate academic years. *B. Lyon*

114. Herpetology. S

Lectures introduce students to evolution, development, physiology, behavior, ecology, and life history of reptiles and amphibians. The materials integrate with conceptual and theoretical issues of ecology, evolution, physiology, and behavior. Prerequisite(s): BIOE 107, BIOE 109, BIOE 110, or BIOE 140. Concurrent enrollment in BIOE 114L required. Offered in alternate academic years. *B. Sinervo*

114L. Field Methods in Herpetological Research (2 credits). S

Field trips introduce students to natural history, censusing techniques, physiological ecology, and behavioral analysis of reptiles and amphibians. Laboratories introduce students to techniques for analyzing behavior and physiology. Field studies culminate with a group project in a natural setting. Some field trips may be held on weekends due to weather considerations. Some field trips may require students to provide their own transportation, some transportation will be provided by UCSC. Students are billed a materials fee. Prerequisite(s): BIOE 107, 109, 110, or 140. Concurrent enrollment in BIOE 114 is required. Offered in alternate academic years. *B. Sinervo*

117. Systematic Botany of Flowering Plants. S

An examination of the taxonomy and evolution of flowering plants. Special topics include phylogenetics and cladistics, plant species concepts, and modern methods of systematic research. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. Must be taken concurrently with BIOE 117L. *K. Kay*

117L. Systematic Botany of Flowering Plants Laboratory (2 credits). S

Weekly laboratory concerned primarily with California flora and plant families. Several field trips. Students are billed a materials fee. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. Must be taken concurrently with BIOE 117. *K. Kay*

120. Marine Botany. S

An introduction to the biology of marine algae, fungi, and angiosperms with regard to form and function. Major boreal, temperate, and tropical marine plant communities. Lecture format. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. Must be taken concurrently with BIOE 120L. *The Staff*

120L. Marine Botany Laboratory (2 credits). S

One laboratory weekly and several field trips. Focuses on marine algae, fungi, and angiosperms. Students are billed a materials fee. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. Must be taken concurrently with BIOE 120. *The Staff*

122. Invertebrate Zoology. W

An examination of invertebrates and their habitats. Lecture format. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. BIOE 122L must be taken concurrently. *B. Marinovic*

122L. Invertebrate Zoology Laboratory (2 credits). W

An examination of invertebrates and their habitats. Weekly laboratories or field trips. Students are billed a materials fee. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. BIOE 122 must be taken concurrently. *B. Marinovic*

127. Ichthyology. F

An introduction to the biology of jawless, cartilaginous, and bony fishes—their classification, evolution, form, physiology, and ecology. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. BIOE 127L must be taken concurrently. Offered in alternate academic years. *G. Bernardi*

127L. Ichthyology Laboratory (2 credits). F

One laboratory session a week and several field trips to study the biology of fish. Students are billed a materials fee. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. BIOE 127 must be taken concurrently. Offered in alternate academic years. *G. Bernardi*

129. Biology of Marine Mammals. S

A survey of cetaceans, pinnipeds, sirenians, and sea otters, including natural history, systematics, physiology, behavior, anatomy, and conservation. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C; BIOL 110 is recommended. *D. Costa*

129L. Biology of Marine Mammals Laboratory (2 credits). S

Covers the basics of marine mammal taxonomy, anatomy, and field methods with an emphasis on local field identification and understanding of local species. Will include field trips to Long Marine Lab, Ano Nuevo, and Monterey Bay. Students are billed a materials fee. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. Must be taken concurrently with BIOE 129. *D. Costa*

131. Animal Physiology. S

Principles and concepts underlying the function of tissues and organ systems in animals with emphasis on vertebrate systems. Students cannot receive credit for this course and BIOL 130. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. *T. Williams*

131L. Animal Physiology Laboratory (2 credits). S

Experiments conducted with primary focus on quantitative physiological principles of organ systems and intact organisms. Students cannot receive credit for this course and course 130L. Students are billed a materials fee. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. Concurrent enrollment in BIOE 131 is required. *T. Williams*

133. Exercise Physiology. W

An advanced-level course concerning physiological and biochemical processes associated with human performance. Emphasis is on the integration of organ systems for exercise. Topics include metabolism and fuel utilization, cardiovascular and respiratory dynamics during activity, and the effects of training. Requires a good understanding of basic physiological function and anatomy. Prerequisite(s): BIOL 20A, BIOE 20B and 20C. BIOE 131 recommended. Concurrent enrollment in BIOE 133L required. *T. Williams*

133L. Exercise Physiology Laboratory (2 credits). W

An introduction to basic measurement techniques used in assessing the physiological response of humans to exercise. Sessions cover oxygen consumption, respiratory rate, and heart rate monitoring during aerobic and anaerobic activity. Prerequisite(s): BIOL 20A, and BIOE 20B and 20C. BIOE 131 recommended. Concurrent enrollment in BIOE 133 is required. *T. Williams*

135. Plant Physiology. W

Cellular and organismal functions important in the life of green plants. Prerequisite(s): BIOL 20A and BIOE 20B and 20C; concurrent enrollment in course 135L is required. *J. Pittermann*

135L. Plant Physiology Laboratory (2 credits). W

Weekly laboratory concerning the cellular and organismal functions of green plants. Students are billed a materials fee. Prerequisite(s): BIOL 20A and BIOE 20B and BIOE 20C; concurrent enrollment in course 135. *J. Pittermann*

140. Behavioral Ecology. F

An introduction to social and reproductive behavior. Emphasis on studies of vertebrates in their natural habitat. Ideas concerning the evolution of social behavior, mating systems, and individual reproductive strategies. Case histories of well-studied animals that illustrate key principles in courtship and mating, parental behavior, and food-getting behavior. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. *The Staff*

141L. Behavioral Ecology Field Course. *

A field-based course introducing students to concepts and methods for studying behavioral ecology in nature. Students will conduct observations and field experiments on various local model organisms including elephant seals, hummingbirds, sparrows, lizards, ants, bees, frogs, and salamanders. Students are billed a materials fee. Prerequisite(s): BIOE 107 or BIOE 140 or BIOE 110; satisfaction of the Entry Level Writing and Composition requirements. Enrollment limited to 25. Offered in alternate academic years. (General Education Code(s): W.) *B. Sinervo, B. Lyon*

145. Plant Ecology. F

An exploration of the ecology of plant form, function, distribution, abundance, and diversity. Topics include plant adaptations to environmental conditions, life history variation, competition, reproductive ecology, herbivory, and patterns of diversity. Lecture with discussions of original papers and independent field project. Students cannot receive credit for this course and course 245. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. BIOE 107 is recommended. *I. Parker*

145L. Field Methods in Plant Ecology. F

Hands-on exploration of the concepts and techniques of plant ecology. A combination of lab, greenhouse, and field-based exercises (irrespective of weather conditions). Statistical analysis and scientific writing. One required weekend field trip. Students cannot receive credit for this course and course 245L. Students are billed a materials fee. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; BIOL 20A, BIOE 20B, and BIOE 20C. Concurrent enrollment in BIOE 145 is required. BIOE 107 is recommended. (General Education Code(s): W.) *I. Parker*

147. Community Ecology. S

Develops the major themes of community biology: structure, trophic dynamics, succession, complex interactions among species, herbivory, evolution and coevolution. Uses case histories of well-studied marine and terrestrial systems. Students cannot receive credit for this course and course 247. Prerequisite(s): BIOE 107, 108, 145, 155 or 159A; or Environmental Studies 24 by permission of instructor. *L. Fox*

148. Quantitative Ecology. S

Quantitative treatment of the central concepts and applications of theoretical ecology. Emphasis on the mathematical modeling of single populations and species interactions, and the integration of models with data. Topics include stochastic and deterministic processes of extinction; discrete- and continuous-time models of growth and population viability analysis relevant to small and harvested populations; numeric and analytical investigations of dynamics and stability; introduction to model-fitting in information theoretic framework using R and/or MATLAB. Prerequisite(s): BIOE 107. *M. Tinker*

149. Disease Ecology. W

Focuses on the ecological and evolutionary processes that drive the transmission of pathogens between hosts; the impact of disease on host populations; and what causes the emergence of an infectious disease. Includes theoretical framework, description of field techniques, and discussion of wildlife and human diseases including malaria, West Nile virus, Lyme disease, HIV, avian influenza (bird flu), Chikungunya, tuberculosis, chytridiomycosis, and Ebola. Prerequisite(s): BIOL 20A, and BIOE 20B and 20C and 107. *A. Kilpatrick*

150. Ecological Field Methods. *

Lectures and laboratory computer exercises designed to familiarize students with research methods, study design, statistical approaches, and analysis tools for ecological research. Students cannot receive credit for this course and Environmental Studies 104A. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C; concurrent enrollment in BIOE 150L is required. BIOE 107, 108, 140, or 147 recommended. Enrollment limited to 25. *D. Croll*

150L. Ecological Field Methods Laboratory. *

Field-oriented course in the study of animal ecology and behavior. Combines overview of methodologies and approaches to field research with practical field studies. Students are billed a materials fee. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C; concurrent enrollment in BIOE 150 is required. BIOE 107, 108, 140, or 147 recommended. Enrollment limited to 25. (General Education Code(s): W.) *D. Croll*

151A. Ecology and Conservation in Practice Supercourse: Ecological Field Methods. S

An intensive, on-site learning experience in terrestrial field ecology and conservation, using the University of California Natural Reserves. Students study advance concepts in ecology, conservation, and field methods for four weeks, then experience total immersion in field research at the UC Natural Reserves. Lectures, field experiments, and computer exercises familiarize students with research methods, study design, statistical approaches, and analytical tools for ecological research. Enrollment by application. Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C or ENVS 23, 24, 100; and AMS 7 and 7L. Concurrent enrollment in BIOE 151B-C-D or ENVS 109B-C-D is required. Satisfies the senior exit requirement for biological sciences majors and satisfies the senior exit requirement for environmental studies majors by prior approval. Students cannot receive credit for this course and BIOE 107, 107L, ENVS 104A or 196A. (Also offered as Environmental Studies 109A. Students cannot receive credit for both courses.) *D. Croll, E. Zavaleta*

151B. Ecology and Conservation in Practice Supercourse: Ecological Field Methods Laboratory. S

Field-oriented course in ecological research. Combines overview of methodologies and approaches to field research with practical field studies. Students complete field projects in ecology and also learn the natural history of the flora and fauna of California. Students are billed a materials fee. Enrollment by application. Prerequisite(s): Entry Level Writing and Composition requirements; BIOL 20A, BIOE 20B, BIOE 20C or ENVS 23, 24, 100; and AMS 7 and 7L. Concurrent enrollment in BIOE 151A-C-D or ENVS 109A-C-D is required. Satisfies the senior exit requirement for biological sciences majors and satisfies the senior exit requirement for environmental studies majors by prior approval. Students cannot receive credit for this course and BIOE 150, 150L, ENVS 104A or 196A. (Also offered as Environmental Studies 109B. Students cannot receive credit for both courses.) (General Education Code(s): W.) *D. Croll, E. Zavaleta*

151C. Ecology and Conservation in Practice Supercourse: Functions and Processes of Terrestrial Ecosystems. S

From lectures and discussion of terrestrial community and ecosystem ecology, students work individually or in small groups to present an idea for a project, review relevant literature, develop a research question/hypothesis, design and perform an experiment, collect and analyze data, and write a report. The instructor evaluates the feasibility of each student's project before it begins. Enrollment by application. Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C or ENVS 23, 24, 100; and AMS 7 and 7L. Concurrent enrollment in BIOE 151A-B-D or ENVS 109A-B-D is required. Satisfies the senior exit requirement for biological sciences majors and satisfies the senior exit requirement for environmental studies majors by prior approval. Students cannot receive credit for this course and BIOE 150, 150L, ENVS 104A or 196A. (Also offered as Environmental Studies 109C. Students cannot receive credit for both courses.) *D. Croll, E. Zavaleta*

151D. Ecology and Conservation in Practice Supercourse: Conservation in Practice. S

Focuses on current issues in environmental and conservation biology and the emerging field methods used to address them. From field-oriented lectures about current issues in environmental and conservation biology, students pursue research project as individuals and small groups to develop hands-on experience with field skills in conservation research and resource management. Enrollment by application. Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C or ENVS 23, 24, 100; and AMS 7 and 7L. Concurrent enrollment in BIOE 151A-B-C or ENVS 109A-B-C is required. Satisfies the senior exit requirement for biological sciences majors and satisfies the senior exit requirement for environmental studies majors by prior approval. Students cannot receive credit for this course and BIOE 150, 150L, ENVS 104A or 196A. (Also offered as Environmental Studies 109D. Students cannot receive credit for both courses.) *D. Croll, E. Zavaleta*

155. Freshwater Ecology. F

Provides an overview of the physical, chemical, and biological processes that characterize inland waters such as lakes, streams, rivers, and wetlands. Also addresses relationships between humans and freshwater, and discusses these challenges in conservation. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. *The Staff*

158L. Marine Ecology Laboratory. S

Supervised individual research projects in experimental marine biology. Students carry out a complete research project, including (1) the formation of hypotheses; (2) the design and implementation of experiments; (3) collection, analysis, and interpretation of data; and (4) write-up of an oral presentation. Students are billed a materials fee. Prerequisite(s): BIOE 108; satisfaction of the Entry Level Writing and Composition requirements. Offered in alternate academic years. (General Education Code(s): W.) *M. Carr, P. Raimondi*

159A. Marine Ecology Field Quarter: Marine Ecology with Laboratory. *

Total immersion in marine ecology for very motivated students. Students develop a research project during first five weeks on campus and then spend five weeks of immersion in directed research without distraction in isolated locations off campus (past locations include the Gulf of California in Mexico and Moorea in French Polynesia). Not available through University Extension. No other courses may be taken during this quarter. Students must sign a contract agreeing to standards of behavior outlined in the *UCSC Rule Book* and by the instructors. Students are billed a materials, transportation (not airfare), and room and board fee. Paradigms and designs in marine ecology. A review of the paradigms that have shaped our understanding of marine ecology and analysis and discussion of experiments with these paradigms. Students carry out a complete research project, including the formation of hypotheses; the design and implementation of experiments; the collection, analysis, and interpretation of data; and the write-up and oral presentation of results. Admission by interview during previous winter quarter. BIOE 159A, 159B, 159C, and 159D are equivalent to BIOE 127, 127L, 108, and 158L for major requirements. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; BIOE 159A, 159B, 159C, and 159D must be taken concurrently. Enrollment limited to 26. Offered in alternate academic years. (General Education Code(s): W.) *P. Raimondi*

159B. Marine Ecology Field Quarter: Ichthyology with Laboratory. *

An introduction to the biology of jawless, cartilaginous, and bony fishes—their classification, evolution, form, physiology, and ecology. Admission by interview during previous winter quarter. BIOE 159A, 159B, 159C, and 159D are equivalent to BIOE 127, 127L, 108, and 158L for major requirements. BIOE 159A, 159B, 159C, and 159D must be taken concurrently. Enrollment limited to 26. Offered in alternate academic years. *G. Bernardi*

159C. Marine Ecology Field Quarter: Methods in Field Ecology. *

Students learn quantitative methods for field experiments and surveys. Emphasis will be on marine environments, but there will also be exposure to terrestrial systems. This is the lecture component to course 159D. No text is required for this course; instead, readings from the current literature will be assigned. Students are evaluated on written independent field project proposals and class participation. Admission by interview during previous winter quarter. BIOE 159A, 159B, 159C, and 159D are equivalent to BIOE 127, 127L, 108, and 158L for major requirements. BIOE 159A, 159B, 159C, and 159D must be taken concurrently. Enrollment limited to 26. Offered in alternate academic years. *P. Raimondi*

159D. Marine Ecology Field Quarter: Methods in Field Ecology Laboratory. *

This is laboratory portion of course 159C. Students carry out independent field projects under the supervision of course instructors. All work is done during the 5–6 week off-campus portion of course 159. Students are evaluated on field techniques, the final write-up of their independent field projects, and class participation. Admission by interview during previous winter quarter. BIOE 159A, 159B, 159C, and 159D are equivalent to BIOE 127, 127L, 108, and 158L for major requirements. BIOE 159A, 159B, 159C, and 159D must be taken concurrently. Enrollment limited to 26. Offered in alternate academic years. *G. Bernardi*

161. Kelp Forest Ecology. F,S

Study of organization of kelp forests as models for examining biological communities. The physical and biotic factors responsible for community organization of kelp forests are explored using original literature and data collected in BIOE 161L. Class meets one full morning each week. Prerequisite(s): by interview only; BIOL 20A, BIOE 20B, and BIOE 20C are required. Students must pass the University Research Diving Certification (contact the diving safety officer, Institute of Marine Sciences, for further information). Enrollment restricted to seniors. BIOE 161L must be taken concurrently; BIOE 107, 120/L, 122/L are recommended. Enrollment limited to 24. Offered in alternate academic years. *M. Carr, P. Raimondi*

161L. Kelp Forest Ecology Laboratory. F,S

Fieldwork using SCUBA to quantitatively and qualitatively examine the abundance and distribution of organisms in kelp forests, with additional laboratory work. Culminates with a directed individual research project. Class meets one full morning each week. Students are billed a materials fee. Admission by interview. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C; satisfaction of the Entry Level Writing and Composition requirements; BIOE 161 must be taken concurrently; BIOE 107, 120/L, 122/L are recommended. Students must pass the University Research Diving Certification (contact the Diving Safety Officer, Institute of Marine Sciences, for further information). Enrollment limited to 24. Offered in alternate academic years. (General Education Code(s): W.) *M. Carr, P. Raimondi*

163. Ecology of Reefs, Mangroves, and Seagrasses. W

Integrated treatment of coral reefs, sea grasses, and mangroves emphasizing interactions and processes through time. Major topics: biological and geological history, biogeography, evolution and ecology of dominant organisms, biodiversity, community and ecosystem ecology, geology, biogeochemistry, global change, human impacts. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C. *D. Potts*

165. Marine Conservation Biology. F

Initially undertakes an in-depth comparison of the biology and conservation of marine versus terrestrial ecosystems. With this foundation, course examines marine biodiversity loss resulting from overexploitation, habitat loss, species introduction, and pollution, with particular emphasis on the resulting trophic cascades, biodiversity losses, and climate change. Students cannot receive credit for this course and Environmental Studies 120. Prerequisite(s): BIOL 20A, BIOE 20B, and BIOE 20C; OCEA 101 recommended. *D. Croll*

172. Population Genetics. *

Basic population genetics and selected topics will be covered, including genetics of speciation, tempo and mode of evolution, genetics of social behavior, natural selection in human populations, and the impact of molecular studies on evolutionary theory. Students cannot receive credit for this course and BIOE 272. Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C, and BIOL 105. Concurrent enrollment in BIOE 172L is required. Offered in alternate academic years. *G. Pogson*

172L. Population Genetics Laboratory (2 credits). *

A companion course to 172, *Population Genetics*, that applies the theory developed in that course to related disciplines including conservation biology, ecology, agriculture, and population biology. Original scientific literature relating to the theory developed in BIOE 172 is read, and applied problem sets are solved by the students. Students cannot receive credit for this course and BIOE 272L. Prerequisite(s): BIOL 20A, BIOE 20B, BIOE 20C, and BIOL 105. Concurrent enrollment in BIOE 172 is required. Offered in alternate academic years. *G. Pogson*

183F. Undergraduate Research in Ecology and Evolutionary Biology (2 credits). F,W,S

Supervised undergraduate research on a project with an ecology and evolutionary biology faculty member for students considering a career based on biological research. Class reviews the philosophy of science, basic statistics, and library searches, and emphasizes how to input data, create graphs, and prepare results for publication, and talks. Enrollment restricted to junior and senior EEB majors conducting research project with EEB faculty member. *The Staff*

183L. Undergraduate Research in Ecology and Evolutionary Biology. F,W,S

Supervised undergraduate research on a project with an ecology and evolutionary biology faculty member for students considering a career based on biological research. Class reviews the philosophy of science, basic statistics, and library searches, and emphasizes how to input data, create graphs, and prepare results for publication, and talks. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; enrollment restricted to junior and senior EEB majors conducting research project with EEB faculty member. (General Education Code(s): W.) *The Staff*

188. Introduction to Science Writing. S

A rigorous examination and practice of the skills involved in writing articles about science, health, technology, and the environment for the general public. Covers the essential elements of news writing and explanatory journalism, including developing a story idea, interviewing scientists, fact checking, composition, and editing of multiple drafts about scientific research. (Also offered as Science Communication 160. Students cannot receive credit for both courses.) Prerequisite(s): satisfaction of the Entry Level Writing and C1, C2 requirements. Enrollment restricted to junior and senior biological sciences majors. Enrollment limited to 18. (General Education Code(s): W.) *The Staff*

190. Senior Seminar (2 credits). S

Satisfies the senior exit requirement for all biological sciences majors. (Also offered as Biology: Molecular Cell & Dev 190. Students cannot receive credit for both courses.) *The Staff*

195. Senior Thesis. F,W,S

An individually supervised course, with emphasis on independent research. Students required to submit a senior thesis. Enrollment restricted to majors in biology, ecology and evolution, marine biology, plant sciences, and the combined major with environmental studies. Students submit petition to sponsoring agency. *The Staff*

198. Independent Field Study. F,W,S

Provides for individual programs of study (a) by means other than the usual supervision in person, or (b) when the student is doing all or most of the course work off campus. With permission of the department, may be repeated for credit, or two or three courses taken concurrently. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198F. Independent Field Study (2 credits). F,W,S

Provides for two units of independent field study (a) by means other than the usual supervision in person, or (b) when the student is doing all or most of the course work off campus. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Reading, discussion, written reports, and laboratory research on selected biological topics, using facilities normally available on campus. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Two-unit Tutorial. Reading, discussion, written reports, and laboratory research on selected biological topics, using facilities normally available on campus. Students submit petition to

sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

200A. Scientific Skills. F

Exposes graduate students to teaching skills, understanding the scientific method, searching and organizing literature, grant proposal and scientific writing, data management and presentation, and scientific speaking. Students are evaluated on their participation and the quality of a written research proposal. Enrollment restricted to graduate students. *M. Carr*

200B. Advanced Organismal Biology. F

Consists of lectures focusing on pivotal topics in ecology and evolution. Relevant background material is developed followed by a critical analysis of readings from the primary literature. Designed to give graduate (and advanced undergraduate) students direct contact with the major areas of research that are currently at the forefront of organismal biology. Enrollment restricted to graduate students. *L. Fox, A. Kilpatrick, D. Costa*

208. Marine Ecology. W

Paradigms and designs in marine ecology. A review of the paradigms that have shaped our understanding of marine ecology; analysis and discussion of experiments with these paradigms. Students cannot receive credit for this course and course 108. Enrollment restricted to graduate students. *M. Carr, P. Raimondi*

245. Plant Ecology. F

An exploration of the ecology of plant form, function, distribution, abundance, and diversity. Topics include plant adaptations to environmental conditions, life history variation, competition, reproductive ecology, herbivory, and patterns of diversity. Lecture with discussions of original papers and independent field project. Students cannot receive credit for this course and course 145. Prerequisite(s): BIOE 107 or ENVS 24 or permission of instructor. Concurrent enrollment in BIOE 245L is required except by permission of instructor. Enrollment restricted to graduate students. *I. Parker*

245L. Field Methods in Plant Ecology Laboratory. F

Hands-on exploration of the concepts and techniques of plant ecology. A combination of lab, greenhouse, and field-based exercises (irrespective of weather conditions), statistical analysis, and scientific writing. One required weekend field trip. Students cannot receive credit for this course and course 145L. Concurrent enrollment in BIOE 245 is required. Enrollment restricted to graduate students. Enrollment limited to 2. *I. Parker*

247. Community Ecology. S

Develops the major themes of community ecology: structure, trophic dynamics, succession, complex interactions among species, herbivory, evolution, and coevolution. Uses case histories of well-studied marine and terrestrial systems. Students cannot receive credit for this course and course 147. Enrollment restricted to graduate students. *L. Fox*

258L. Experimental Marine Ecology. S

Supervised individual research projects in experimental marine biology. Students carry out a complete research project, including (1) the formation of hypotheses, (2) the design and implementation of experiments, (3) collection, analysis, and interpretation of data, and (4) the write-up of an oral presentation. Prerequisite(s): BIOE 208; and interview to assess ability to carry out field project. Enrollment limited to 20. Offered in alternate academic years. *M. Carr, P. Raimondi*

272. Population Genetics. *

Basic population genetics and selected topics are covered including genetics of speciation, tempo and mode of evolution, genetics of social behavior, natural selection in human populations, and the impact of molecular studies on evolutionary theory. Students cannot receive credit for this course and Biology 172. Concurrent enrollment in BIOE 272L is required. Enrollment restricted to graduate students. Offered in alternate academic years. *G. Pogson*

272L. Population Genetics Laboratory (2 credits). *

A companion course to 272, *Population Genetics*, that applies the theory developed in that course to related disciplines including conservation biology, ecology, agriculture, and population biology. Original scientific literature relating to the theory developed in course 272 is read, and applied problem sets are solved by the students. Students cannot receive credit for this course and course 172L. Must be taken concurrently with BIOE 272. Enrollment restricted to graduate students. Offered in alternate academic years. *G. Pogson*

274. Evolutionary Game Theory. W

Reviews static equilibrium concepts, games of incomplete information, and the traditional theory of dynamic games in discrete time. Develops recent evolutionary game models, including replicator and best reply dynamics, and applications to economics, computer science, and biology. Prerequisite(s): upper-division math courses in probability theory are strongly recommended. Cannot receive credit for this course and Economics 166B or Computer Science 166B. (Also offered as Computer Science 272. Students cannot receive credit for both courses.) *B. Sinervo, The Staff*

279. Evolutionary Ecology. W

Analysis of the ways in which ongoing evolution and coevolution shape the ecological structure and dynamics of populations, species, and species interactions across geographic landscapes.

Enrollment restricted to graduate students. *J. Thompson*

281A. Topics in Basic and Applied Marine Ecology. F,W,S

Seminar focusing on concepts in basic and applied ecology. Structure rotates quarterly between graduate student research and readings of journal articles and textbooks. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. *M. Carr*

281B. Topics in Molecular Evolution (2 credits). F,W,S

A discussion of current research and literature review on the subject of molecular evolution. Primary focus on recent results on molecular phylogenetics and molecular population genetics. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *G. Bernardi*

281C. Topics in Physiological Ecology. F,W,S

An intensive seminar focusing on the interaction between physiological constraint and life history options and solutions employed by animals. Topics vary from comparative physiology to ecological theory. Participants are required to present results of their own research or review papers of interest. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *D. Costa*

281F. Ecological Research Topics. F,W,S

Intensive research and discussions on plant-animal interactions. All students undertake a research project and meet weekly with the faculty sponsor to monitor progress. The group meets weekly to discuss experimental design and analysis, specific problems related to the students' research, relevant research papers, or manuscripts that the group members are writing. Each student gives a formal presentation of research plans or progress each quarter. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *L. Fox*

281H. Topics in Comparative Marine Physiology. F,W,S

Intensive seminar on selected topics in marine physiology. Students present results from their own research and discuss recent advances from the literature. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *R. Mehta*

281I. Topics in Disease Ecology, Population Biology, and Conservation. F,W,S

Selected topics in population biology and disease ecology. Students present results from their own research and discuss recent advances from the literature. (Formerly "Topics in Plant Population and Disease Ecology") Enrollment restricted to graduate students; qualified undergraduates may enroll by permission of instructor. Enrollment limited to 18. May be repeated for credit. *A. Kilpatrick*

281J. Topics in Research on Biochemical Ecology. *

Seminar in which students give critically evaluated presentations regarding current research on selected topics in plant ecology with an emphasis on biochemical ecology. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 12. May be repeated for credit. *J. Langenheim*

281K. Topics in Plant Evolution. F,W,S

Intensive seminar on selected topics in plant evolution. Students present results from their own research and discuss recent advances from the literature. Enrollment restricted to graduate students; qualified undergraduates may enroll by permission of instructor. Enrollment limited to 18. May be repeated for credit. *K. Kay*

281L. Topics in Behavioral and Evolutionary Ecology. F,W,S

An intensive seminar on selected topics in behavioral and evolutionary ecology. Students are expected to discuss the current literature and present literature reviews, research proposals, and preliminary results from their ongoing research. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. *B. Lyon*

281N. Topics in Marine Vertebrate Ecology. F,W,S

Seminar on the ecology of marine vertebrates. Topics vary from the factors that explain the distribution of marine predators to island biogeography and the ecosystem effects of introduced vertebrates on islands. Enrollment restricted to graduate students. Enrollment limited to 12. May be repeated for credit. *D. Croll*

281O. Topics in Plant-Water Relations. F,W,S

Intensive seminar focusing on fundamental and evolutionary concepts in plant-water relations. Students present results from their own research and discuss recent advances from the literature. Enrollment restricted to graduate students; qualified undergraduates may enroll by permission of instructor. Enrollment limited to 18. May be repeated for credit. *J. Pittermann*

281P. Topics in Plant Population Ecology. F,W,S

An intensive seminar on selected topics in plant ecology and population biology. Students present results from their own research and discuss recent advances from the literature. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission from instructor. Enrollment limited to 12. May be repeated for credit. *I. Parker*

281Q. Topics in Molecular Evolutionary Genetics. F,W,S

An intensive seminar on selected topics in molecular evolutionary genetics. Students are required to present results from their own research projects, present a critical review paper at least once during the quarter, and submit a written research proposal. Enrollment restricted to graduate students; qualified undergraduate students may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *G. Pogson*

281R. Topics in Marine Ecology and Evolutionary Biology. F,W,S

An intensive seminar series focusing on fundamental concepts in marine ecology. Emphasis changes quarter to quarter. At least one quarter per year is devoted to discussion of graduate student research. Other quarters involve reading and evaluating current and classic literature on marine ecology and evolutionary biology. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *P. Raimondi*

281T. Species Interactions and Coevolution. F,W,S

The genetics and ecological structure of species interactions, and the role of coevolution between species in shaping biodiversity. Enrollment restricted to graduate students. Enrollment limited to 15. May be repeated for credit. *J. Thompson*

281U. Topics in Invertebrate Biology. F,W,S

An intensive study about concepts, theory, and techniques for graduate students conducting research on the ecology, genetics, evolution, systematics, or biodiversity of marine invertebrates. Enrollment restricted to graduate students; advanced undergraduates may enroll with permission of instructor. Enrollment limited to 15. May be repeated for credit. *D. Potts*

281V. Topics in Behavioral Ecology. F,W,S

A discussion of current topics and methods in behavioral ecology and life history evolution. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *B. Sinervo*

281W. Topics in Exercise and Environmental Physiology. F,W,S

A weekly seminar discussion on current research and techniques in mammalian exercise and environmental physiology. Areas covered include locomotor physiology, exercise testing and cardiovascular monitoring, and biomechanics. Oral presentation of ongoing research or current literature required from each student. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *T. Williams*

286. Experimental Design and Data Analysis. W

Focuses on problems and designs in ecology and population biology. Topics include basic experimental design; exploratory data analysis—from a graphical perspective; hands-on statistics; and graphical theory. Structured around a statistical analysis and graphics computer program to teach students to design their own surveys and experiments and analyze their data correctly. Students cannot receive credit for this course and course 186. Prerequisite(s): one course in statistics or by permission of instructor. Enrollment restricted to graduate students. *P. Raimondi*

286L. Experimental Design and Data Analysis Lab (2 credits). W

Required lab that accompanies Biology 286. Lab will focus on hands-on statistical problem solving, graphical presentations and experimental design issues. Concurrent enrollment in course 286 is required. Enrollment restricted to graduate students. *P. Raimondi*

293. Readings in Ecology and Evolution (2 credits). W,S

Weekly readings and discussions of recent research papers in ecology, evolution, and related topics from organismal biology. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

294. Ecology, Evolutionary Biology Seminar (no credit). F,W,S

Selected topics of current interest to ecologists and evolutionary biologists presented by weekly guest speakers. Enrollment restricted to graduate students. *The Staff*

295. Advanced Ecology and Evolutionary Biology Seminar (no credit). F,W,S

Course consists of extended weekly meetings organized around an advanced theme in theoretical or applied evolutionary biology, ecology, physiology, behavior, or other aspect of organismal biology. Course is targeted at students who already have reached a professional level of expertise in their field and advanced master students. Enrollment restricted to graduate students. Enrollment limited to 24. *The Staff*

297. Independent Study. F,W,S

Independent study for graduate students who have not yet settled on a research area for their thesis. Students submit petition to sponsoring agency. *The Staff*

299. Thesis Research. F,W,S

Students submit petition to sponsoring agency. *The Staff*

Faculty and Professional Interests

MANUEL ARES JR.

RNA processing, structure and function of RNA

NEEDHI BHALLA

Meiotic chromosome dynamics

HANNS H. BOEGER

Chromatin structure and the regulation of transcription

BARRY BOWMAN

Membrane biochemistry and genetics, biochemistry and molecular biology of membrane proteins

BIN CHEN

Mammalian brain development

DAVID FELDHEIM

Developmental neuroscience

GRANT HARTZOG

Biochemistry, genetics, chromatin and transcriptional regulation

LINDSAY HINCK

Breast development and cancer, cell biology, development

MELISSA JURICA

Structure and function of human splicing machinery

ROHINTON T. KAMAKAKA

Chromatin domains, epigenetic gene regulation and insulators

DOUGLAS R. KELLOGG

Coordination of cell growth and cell division

JEREMY LEE

Molecular biology education and curriculum development; Drosophila models of neurodegeneration

ROBERT A. LUDWIG

Plant microbe interactions, photorespiration, genetic recombination in plants

HARRY F. NOLLER

Ribosomes, RNA structure and function, RNA protein interaction

AMY RALSTON

Origins and regulation of mammalian stem cells

MICHAEL REXACH

Structure and function of nuclear pore complex, nuclear transport

JEREMY SANFORD

Genomic analysis of protein-RNA interactions

WILLIAM M. SAXTON

Cytoskeletal motors and active transport processes

SUSAN STROME

Chromatin and RNA regulation in C. elegans

WILLIAM T. SULLIVAN

Cell cycle, cytoskeleton, and host-pathogen interactions

JOHN W. TAMKUN

Transcriptional regulation, molecular genetics of Drosophila development, regulation of gene expression

ALAN M. ZÄHLER

Molecular biology, splice site selection, and alternative pre-mRNA processing

MARTHA C. ZÜÑIGA

Molecular, cellular, and developmental biology of the immune system

YI ZUO

Synaptic plasticity in learning and memory

Molecular, Cell, and Developmental Biology Emeritus Faculty

CHARLES DANIEL

ROBERT EDGAR

JERRY F. FELDMAN

HENRY HILGARD

KIVIE MOLDAVE

CLIFTON A. POODRY

LINCOLN TAIZ

FRANK J. TALAMANTES

HOWARD H. WANG

Molecular, Cell, and Developmental Biology Lecturers

MICHAEL DALBEY

LINDA ÖGREN

MARY ZAVANELLI

VICTORIA AUERBACH-STONE (Microbiology and Environmental Toxicology)

The interaction between the gut pathogen Yersinia pseudotuberculosis and the mammalian immune system

CAMILLA FORSBERG (Biomolecular Engineering)

Hematopoietic stem cells; transcriptional regulation; chromatin; blood cell development; cell surface receptors; genomics

DAVID HAUSSLER (Biomolecular Engineering)

Molecular evolution, neurodevelopment, genomics, bioinformatics, computational molecular biology, statistical models, machine learning, neural networks

SCOTT LOKEY (Chemistry and Biochemistry)

Organic chemistry; combinatorial synthesis, biotechnology, molecular cell biology

TODD M. LOWE (Biomolecular Engineering)

Experimental and computational genomics, ncRNA gene finders, DNA microarrays to study the biology of Archaea

KAREN OTTEMANN (Environmental Toxicology)

Environmental responses of pathogenic bacteria

SETH RUBIN (Chemistry and Biochemistry)

Biomolecular mechanisms of cell-cycle regulation and cancer; structural biology and biochemistry; macromolecular x-ray crystallography; nuclear magnetic resonance

WILLIAM G. SCOTT (Chemistry and Biochemistry)

Structure and function of RNA, proteins, and their complexes

ALEXANDER SHER (PHYSICS)

Development of experimental techniques for the study of neural function

MICHAEL STONE (CHEMISTRY)

Single-molecule Biophysics and Enzymology; Structure, function, and assembly of the telomerase ribonucleoprotein, Fluorescence Resonance Energy Transfer (FRET), optical/magnetic trapping, sub-diffraction optical imaging of telomeres and the nucleus

FITNAT YILDIZ (Environmental Toxicology)

Microbiology, molecular genetics, genomics; the mechanism of persistence of survival of Vibrio cholerae

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses**15. Undergraduate Research Reports (1 credit). F,W,S**

Undergraduate students who work in faculty research laboratories present the results of their projects. Organized by the Minority Undergraduate Research Program and the Minority Access to Research Careers Program. Designed for students with membership in the above-mentioned programs. Prerequisite(s): qualifications as determined by instructor at first class meeting. May be repeated for credit. *B. Bowman*

20A. Cell and Molecular Biology. F,W,S

Introduction to molecular biology, cell physiology, and genetics. Prerequisite(s): Chemistry 1A and 1B. (General Education Code(s): IN.) *M. Ares, M. Dalbey, B. Bowman*

20L. Experimental Biology Laboratory (2 credits). F,W,S

Provides biology majors with the theory and practice of experimental biology. A wide range of concepts and techniques used in the modern laboratory are included in the exercises. Designed to satisfy the introductory biology lab requirement of many medical and professional schools. Students are billed a materials fee. Prerequisite(s): BIOL 20A and previous or concurrent enrollment in BIOE 20B. Enrollment restricted to human biology and health sciences majors; other majors by permission. Enrollment limited to 20. *M. Dalbey, L. Ogren*

80A. Female Physiology and Gynecology. S

Biochemical, medical, social, and clinical aspects of the female body. Emphasis will be on biological-chemical interactions in the female organs. Topics include female anatomy, cell physiology, endocrine functions, sexuality and intimacy, sexually transmitted diseases, puberty, pregnancy, menopause, birth control, abortion, immunity, cancer. (General Education Code(s): SI, T-2 Natural Sciences.) *M. Zavanelli*

80E. Evolution. *

Introduction to Darwinian evolution including how the theory was devised and a discussion of other theories proposed at the time. Explores the facts and evidence of evolutionary processes and the insights they provide in biological diversity, consequences of extinction, and emergence of new diseases. Includes a discussion of evolution and spirituality. (General Education Code(s): SI, T-2 Natural Sciences.) *M. Zavanelli*

80J. Biology of AIDS. W

An overview of the biology of the acquired immunodeficiency syndrome (AIDS) and the social and legal issues that surround it are explored in a series of lectures by biology faculty and experts in the field. (General Education Code(s): SI, T-2 Natural Sciences.) *M. Zavanelli*

Upper-Division Courses**100. Biochemistry. F,S**

An introduction to biochemistry including biochemical molecules, protein structure and function, membranes, bioenergetics, and regulation of biosynthesis. Provides students with basic essentials of modern biochemistry and the background needed for upper-division biology courses. Students who plan to do advanced work in biochemistry and molecular biology should take the Biochemistry and Molecular Biology 100 series directly. Students cannot receive credit for this course after they have completed any two courses from the BIOC 100A, 100B, and 100C sequence with grades of Pass, C, or better. Prerequisite(s): BIOL 20A and BIOE 20B; and CHEM 108A or 112A. Concurrent enrollment in course 100K is required. *J. Sanford, M. Dalbey*

100K. Biochemistry Laboratory (2 credits). F,W,S

Laboratory course providing hands-on experience with, and covering conceptual background in, fundamental techniques in molecular biology and biochemistry, including DNA cloning, PCR, restriction digest, gel electrophoresis, protein isolation, protein quantification, protein immunoblot (Western) analysis, and use of online bioinformatics tools. Students are billed a materials fee. Concurrent enrollment in course 100 or BIOC 100A is required. *J. Lee*

100L. Advanced Biochemistry Laboratory. W

Basic techniques and principles of laboratory biochemistry including isolation and characterization of a natural product, manipulation of proteins and nucleic acids to demonstrate basic physical and chemical properties; and characterization of enzyme substrate interactions. Students are billed a

materials fee. (Formerly Biochemistry Laboratory). Prerequisite(s): previous or concurrent enrollment in BIOL 100; satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to biological sciences and affiliated majors; biology minors; non-majors by instructor permission. Enrollment limited to 20. (General Education Code(s): W.) *M. Dalbey*

105. Genetics. F,W,S

Mendelian and molecular genetics; mechanisms of heredity, mutation, recombination, and gene action. Prerequisite(s): BIOL 20A. *M. Dalbey, N. Bhalla, R. Kamakaka*

105L. Eukaryotic Genetics Laboratory. F,W

Classical and newly developed molecular-genetic techniques used to explore genetic variation in wild populations of the fruit fly *Drosophila melanogaster*. Topics include Mendelian fundamentals, mapping, design of genetic screens, bio-informatic and database analysis, genetic enhancers, and population genetics. Students are billed a materials fee. Prerequisite(s): BIOL 105; BIOL 100 or BIOC 100A recommended; satisfaction of Entry Level Writing and Composition Requirements. Enrollment restricted to biological sciences and affiliated majors; biology minors; non-majors by instructor permission. (General Education Code(s): W.) *J. Lee*

105M. Microbial Genetics Laboratory. *

Exploration of basic genetics processes such as replication, mutation, DNA repair, recombination, gene exchange, population genetics, and evolution using microbial model organisms; classic techniques in microbial genetics and contemporary molecular techniques presented. Students are billed a materials fee. Prerequisite: BIOL 105; satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to biological sciences and affiliated majors; biology minors; other majors by instructor permission. Enrollment limited to 16. (General Education Code(s): W.) *M. Dalbey*

109L. Yeast Molecular Genetics Laboratory. *

The powerful genetic and molecular techniques available for yeast combined with the complete genomic DNA sequence offers opportunity for discovery of fundamental aspects of eukaryotic life. Lab providing practical experience in using yeast as an experimental system. Students are billed a materials fee. Prerequisite(s): BIOL 105; BIOL 115 strongly recommended; satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to biological sciences and affiliated majors; biology minors; other majors by instructor permission. Enrollment limited to 15. (General Education Code(s): W.) *The Staff*

110. Cell Biology. F,S

Covers the structure, organization, and function of eukaryotic cells. Topics include biological membranes, organelles, protein and vesicular trafficking, cellular interactions, the cytoskeleton, and signal transduction. Requires a good understanding of basic biochemistry and molecular biology. Prerequisite(s): BIOL 105, and BIOL 100 or BIOC 100A. *D. Feldheim, L. Hinck*

110L. Cell Biology Laboratory. S

Fundamental aspects of cell biology explored through experimentation in a modern laboratory setting. Research topics include the structure and function of biological membranes; intracellular transport and organelle biogenesis; the cell cycle; and the cytoskeleton. Students are billed a materials fee. Prerequisite(s): BIOL 100 or BIOC 100A; previous/concurrent enrollment in course 110; satisfaction of the Entry Level Writing and Composition requirements. Restricted to biological sciences/affiliated majors; biology minors; other majors by permission. Enrollment limited to 16. (General Education Code(s): W.) *M. Rexach*

111A. Immunology I. W

Principles and concepts of the innate and adaptive immune systems, with emphasis on mechanisms of action and molecular and cellular networks. The development, differentiation, and maturation of cells of the immune system are also discussed. Prerequisite(s): courses BIOE 20B, and BIOL 20A, 105, and 110. *M. Zuniga*

111B. Immunology II. S

The immune system in health and disease, including failures of host immune-defense mechanisms, allergy and hypersensitivity, autoimmunity, transplantation biology, the immune response to tumors, immune-system interactions with pathogens, and manipulation of the immune response. Prerequisite(s): courses BIOE 20B, and 20A, 105, 110, and 111A. *M. Zuniga*

113. Mammalian Endocrinology. S

Introduction to the major endocrine organs, their hormones, and their receptors. Emphasis is on the following topics: structural analysis of the hormones and receptors at the protein and molecular level, regulation of expression of hormones and their receptors, and the biological functions of hormones. Prerequisite(s): BIOL 100 or BIOC 100A. *L. Ogren*

114. Cancer Cell Biology. *

Focuses on the molecular and cellular mechanisms behind cancer. Topics covered include oncogenes, tumor suppressor genes, cell growth genes, checkpoint genes, telomeres, and apoptosis. Students will gain experience in reading the primary scientific literature. Prerequisite(s): BIOL 110 or 115. (General Education Code(s): TA.) *A. Zahler*

115. Eukaryotic Molecular Biology. W,S

Covers eukaryotic gene and genome organization; DNA, RNA, and protein synthesis; regulation of gene expression; chromosome structure and organization; and the application of recombinant DNA technology to the study of these topics. Prerequisite(s): BIOL 100 or BIOC 100A, and BIOL 105.

Enrollment restricted to biological sciences and affiliated majors, non-majors by permission of instructor. *H. Boeger, M. Jurica*

115L. Eukaryotic Molecular Biology Laboratory. F,W,S

A laboratory designed to provide students with direct training in basic molecular techniques. Each laboratory is a separate module which together builds to allow cloning, isolation, and identification of a nucleic acid sequence from scratch. Students cannot receive credit for this course and course 187L or 287L. Students are billed a materials fee. Prerequisite(s): BIOL 100 or BIOC 100A; previous/concurrent enrollment in course 115; satisfaction of the Entry Level Writing and Composition requirements. Restricted to biological sciences/affiliated majors; biology minors; other majors by permission. Enrollment limited to 20. (General Education Code(s): W.) *M. Zavarelli*

118. Pathogenesis: Molecular Mechanisms of Disease. *

Overview of the pathogenic mechanisms underlying human disease at the physiological and molecular levels, with their implications for epidemiology, diagnosis, and treatment. Includes discussion of clinical cases and of emerging areas of research. Geared toward students interested in future research or clinical careers in the area of human or animal health. Students cannot receive credit for this course and Microbiology and Environmental Toxicology 238. (Also offered as Microbiol & Environ Toxicology 138. Students cannot receive credit for both courses.) Prerequisite(s): Biology 130. Enrollment restricted to students majoring in biology; human biology; molecular, cell and developmental biology; biochemistry and molecular biology; or neuroscience. Offered in alternate academic years. *M. Camps*

119. Microbiology. F,W

Cell and molecular biology of bacteria and their viruses, including applications in medicine, public health, agriculture, and biotechnology. (Also offered as Microbiol & Environ Toxicology 119. Students cannot receive credit for both courses.) Prerequisite(s): BIOL 100 or BIOC 100A. *V. Stone, F. Yildiz*

119L. Microbiology Laboratory. F,W,S

An introduction to the principles and practices of laboratory microbiology, with a substantial presentation of optical microscopy. Students are billed a materials fee. (Also offered as Microbiol & Environ Toxicology 119L. Students cannot receive credit for both courses.) Prerequisite(s): previous or concurrent enrollment in BIOL 119 is required; satisfaction of Entry Level Writing and Composition requirements. Enrollment restricted to biological sciences and affiliated majors; biology minors; other majors by permission. (General Education Code(s): W.) *C. Saltikov, K. Ottemann*

120. Development. W

A description and analysis of selected developmental events in the life cycle of animals. Experimental approaches to understanding mechanisms are emphasized. Prerequisite(s): BIOL 100 or BIOC 100A, and BIOL 105 and BIOL 110. *J. Lee*

120L. Development Laboratory. *

Experimental studies of animal development using a variety of locally obtainable organisms. Approximately eight hours weekly, but it will often be necessary to monitor continuing experiments throughout the week. Students are billed a materials fee. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; previous or concurrent enrollment in BIOL 120 required. Enrollment restricted to biological sciences and affiliated majors; biology minors; other majors by permission. *J. Lee*

121L. Environmental Phage Biology Laboratory. F

Introduction to hypothesis-driven laboratory research. Students isolate a unique bacteriophage and characterize its structure and genome. An understanding of molecular biology and basic genetics required. Students are billed a materials fee. Enrollment by online application and permission of instructor. Enrollment restricted to biological sciences and affiliated majors with sophomore standing or higher. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment limited to 20. *G. Hartzog*

125. Introduction to Neuroscience. F

The structure and function of the nervous system. Topics include elementary electrical principles, biophysics and physiology of single nerve and muscle cells, signal transduction at synapses, development of the nervous system, and neural basis of behavior. Requires a good understanding of basic biochemistry, cell biology, and molecular biology. Prerequisite(s): BIOL 100. Concurrent enrollment in BIOL 105 or 110 is encouraged. *B. Chen*

126. Advanced Molecular Neuroscience. W

Explores in detail cellular and molecular events that underlay the function of the nervous system. Topics include neural development, axon guidance and regeneration, advanced electrical principles (synaptic transmission through a variety of receptors), synaptic plasticity, learning and memory, as well as several neural disorders. Prerequisite(s): BIOL 125. (General Education Code(s): TA.) *Y. Zuo*

127. Mechanisms of Neurodegenerative Disease. S

Focuses on cellular and molecular processes that underlie neurodegenerative diseases. Includes lectures, student oral presentations, discussions, a term paper, and exams. Prerequisite(s): BIOL 105 and 110. (General Education Code(s): TA.) *W. Saxton*

130. Human Physiology. F,W

Function, organization, and regulation of the major organ systems of humans, with emphasis on

integration among systems. Students cannot receive credit for this course and course 131. Prerequisite(s): BIOL 20A, BIOE 20B, BIOL 100 or BIOC 100A, and BIOL 110. *L. Ogren*

130L. Human Physiology Laboratory (2 credits). F,W

Examines fundamental principles of systemic physiology focusing on the human. Students cannot receive credit for this course and BIOE 131L. Students are billed a materials fee. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; BIOL 20A, BIOE 20B, BIOL100, and BIOL 110. Previous or concurrent enrollment in BIOL130 is required; restricted to biological sciences and affiliated majors; biology minors; other majors by permission. *L. Ogren*

140. Biophysics. S

Physical principles and techniques used in biology: X-ray diffraction; nuclear magnetic resonance; statistics, kinetics, and thermodynamics of macromolecules; viscosity and diffusion; DNA/RNA pairing; electrophoresis; physics of enzymes; biological energy conversion; optical tweezers. (Also offered as Physics 180. Students cannot receive credit for both courses.) Enrollment restricted to juniors and seniors. *J. Deutsch*

178. Stem Cell Biology. W

Basic concepts, experimental approaches, and therapeutic potential are discussed. Students gain experience in reading the primary scientific literature. (Also offered as Biomolecular Engineering 178. Students cannot receive credit for both courses.) Prerequisite(s): BIOL 110; BIOL 115 recommended. *C. Forsberg*

178L. Protocols in Stem Cell Biology. W

Provides hands-on experience in embryonic stem cell culture methods and techniques. Students grow and passage mouse embryonic stem (mES) cells and perform established protocols that differentiate mES cells into cardiac muscle cells and neurons. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; previous or concurrent enrollment in course 178. Enrollment restricted to biological sciences and affiliated majors; biology minors; non-majors by permission. Enrollment limited to 16. *D. Feldheim*

179. Biotechnology and Drug Development. W

Recommended for students interested in careers in the biopharmaceutical industry. Focuses on recombinant DNA technology and the drug-development process, including discovery research; preclinical testing; clinical trials; and regulatory review, as well as manufacturing and production considerations. Students may not receive credit for this course and Biomolecular Engineering 255 and Chemistry 255. (Also offered as Biomolecular Engineering 155. Students cannot receive credit for both courses.) Prerequisite(s): BIOL 20A and BIOL 100 or BIOC 100A. Enrollment limited to 15. *P. Berman*

180. Research Programming for Biologists and Biochemists. S

No programming experience required, but basic computer skills assumed. Students without prior programming experience taught basic proficiency in Perl, BioPerl, and other Perl libraries needed to analyze, transform, and publish biological data. Students required to solve a research problem as a final project. Lectures and labs are shared with Biomolecular Engineering 60. Students cannot receive credit for this course and Biomolecular Engineering 60. (Also offered as Biomolecular Engineering 160. Students cannot receive credit for both courses.) Prerequisite(s): BIOL 20A or BIOL 21A. Concurrent enrollment in BIOL 180L is required. (General Education Code(s): MF.) *The Staff*

180L. Research Programming for Biologists and Biochemists Laboratory (1 credit). S

Laboratory sequence illustrating topics covered in course 160. One two-hour laboratory per week. Students cannot receive credit for this course and Biomolecular Engineering 60L. (Also offered as Biomolecular Engineering 160L. Students cannot receive credit for both courses.) Prerequisite(s): BIOL 20A or BIOL 21A. Concurrent enrollment in BIOL 180 is required. *The Staff*

181. Computational Biology Tools. F,S

Hands-on laboratory geared to teach basic tools used in computational biology (motif searching, primer selection, sequence comparison, multiple sequence alignment, genefinders, phylogenetics analysis, X-ray crystallography software). Web- and Unix-based tools/databases are used. Open to all science students; no prior Unix experience required. (Also offered as Biomolecular Engineering 110. Students cannot receive credit for both courses.) Prerequisite(s): course 100, 105, or Biochemistry 100A or declared bioinformatics majors. Enrollment limited to 25. *D. Gerloff, T. Lowe*

182. Genomes. F

Advanced elective for biology majors, examining biology on the genome scale. Topics include genome sequencing; large scale computational and functional analysis; features specific to prokaryotic, eukaryotic, or mammalian genomes; proteomics; SNP analysis; medical genomics; and genome evolution. (Also offered as Biomolecular Engineering 130. Students cannot receive credit for both courses.) Prerequisite(s): Biology 100 or Biochemistry 100A and Biology 105, or approval of instructor. Enrollment limited to 30. *The Staff*

186F. Undergraduate Research in MCD Biology (2 credits). F,W,S

Supervised undergraduate research in laboratory of an MCD biology faculty member accompanied by weekly lectures on ethical and practical scientific issues. Topics include laboratory safety; the scientific method; the collection, treatment, and presentation of data; critical evaluation of scientific literature; scientific misconduct; and peer review. Career issues, including how to apply for admission to graduate and professional schools, also discussed. Prerequisite(s): BIOL 20A and BIOE 20B; at least one of BIOL 100, BIOL 105, or BIOC 100A; and permission of instructor. May be

repeated for credit. *The Staff*

186L. Undergraduate Research in MCD Biology. F,W,S

Supervised undergraduate research in laboratory of an MCD biology faculty member accompanied by weekly lectures on ethical and practical scientific issues. Topics include laboratory safety; the scientific method; the collection, treatment, and presentation of data; critical evaluation of scientific literature; scientific misconduct; and peer review. Career issues, including how to apply for admission to graduate and professional schools, also discussed. Prerequisite(s): satisfaction of the Entry-Level Writing and Composition requirements; courses BIOL 20A and BIOE 20B; at least one of BIOL 100, BIOL 105, or BIOC 100A; and permission of instructor. (General Education Code(s): W.) *The Staff*

186R. Undergraduate Research in MCD Biology. F,W,S

Supervised undergraduate research in the laboratory of an MCD biology faculty member accompanied by weekly lectures on practical scientific issues. Topics include: laboratory safety; the scientific method; the collection, treatment, and presentation of data; critical evaluation of scientific literature; ethics and scientific misconduct; and peer review. Career issues, including how to apply for admission to graduate and professional schools, are discussed. Students cannot receive credit for this course and course 186L. Prerequisite(s): BIOL 100K and previous completion of the Disciplinary Communication requirement, and permission of instructor. May be repeated for credit. *The Staff*

187L. Molecular Biotechnology Laboratory. F

An intensive molecular biology laboratory that presents procedures used in molecular and biotechnology research. Topics and procedures include DNA/RNA isolation, cloning and library construction, southern and northern hybridization, DNA fingerprinting, PCR, manual and automated sequencing, and computer methods for analyzing molecular data. New procedures currently being developed in biotechnology industries are presented by industry representatives. Students cannot receive credit for this course and BIOL 116L or BIOL 287L. Students are billed a materials fee. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements and BIOL 20A, BIOE 20B, BIOE 20C, BIOL 100, and BIOL 110. Enrollment limited to 20. *M. Zavanelli*

189. Health Sciences Internship (3 credits). F,W,S

Structured off-campus learning experience providing hands-on experience and pre-professional mentoring in a variety of health-related settings. Interns are trained and supervised by a professional at their placement and receive academic guidance from their faculty sponsor. Students spend 10-12 hours per week at their placement, participate in weekly discussion meetings on campus, keep a reflective journal, and submit a final paper. Enrollment by application. Students interview with health sciences internship coordinator; applications are due one quarter in advance to the Health Sciences Internship Office. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; concurrent enrollment in course 189W is required. Enrollment restricted to human biology majors. *The Staff*

189F. Health Sciences Internship (2 credits). F,W,S

Structured off-campus learning experience providing hands-on experience and pre-professional mentoring in a variety of health-related settings. Interns are trained and supervised by a professional at their placement, and receive academic guidance from their faculty sponsor. Students spend six hours per week at their placement, keep a reflective journal, and submit a final paper. Enrollment by application. Students interview with health sciences internship coordinator. Applications due one quarter in advance to the Health Sciences Internship Office. May be repeated for credit. *The Staff*

189W. Disciplinary Communication: Human Biology (2 credits). F,W,S

Writing-intensive course offered in conjunction with the health sciences internship. Weekly class meetings include academic guidance and mentoring as well as discussion of the mechanisms and conventions of academic writing about health and health care. Students complete multiple writing assignments, culminating in a term paper in the format of a scholarly article. Enrollment by application. Students interview with the health-sciences internship coordinator; applications are due one quarter in advance to the Health Care Sciences Internship Office. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Previous or concurrent enrollment in course 189 is required. Enrollment restricted to human biology majors. *G. Hartzog*

190. Senior Seminar (2 credits). S

Satisfies the senior exit requirement for all biological sciences majors. (Also offered as Biology:Ecology & Evolutionary 190. Students cannot receive credit for both courses.) *The Staff*

191. ACE Program Service Learning (2 credits). F

Students participate in training and development to co-facilitate collaborative learning in ACE chemistry discussion sections and midterm/exam review sessions. Students are role models for students pursuing science- and math-intensive majors. Prerequisite(s): Prior participation in ACE; good academic standing; no non-passing grades in prior quarter. Enrollment restricted to sophomores, juniors, and seniors. (Formerly course 182.) Enrollment limited to 10. (General Education Code(s): PR-S.) *The Staff*

195. Senior Thesis Research. F,W,S

An individually supervised course, with emphasis on independent research, to culminate in a senior thesis. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198. Independent Field Study. F,W,S

Provides for individual programs of study (a) by means other than the usual supervision in person, or (b) when the student is doing all or most of the course work off campus. With permission of the department, may be repeated for credit, or two or three courses taken concurrently. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198F. Independent Field Study (2 credits). F,W,S

Provides for two units of independent field study (a) by means other than the usual supervision in person, or (b) when the student is doing all or most of the course work off campus. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Reading, discussion, written reports, and laboratory research on selected biological topics, using facilities normally available on campus. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Two-unit Tutorial. Reading, discussion, written reports, and laboratory research on selected biological topics, using facilities normally available on campus. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

200A. Critical Analysis of Scientific Literature. F

Development of critical thinking skills via discussion of research articles on a broad range of topics. Prepares students to critically evaluate research publications, and improves their ability to organize effective oral presentations and to evaluate the oral presentations of other scientists. Enrollment restricted to graduate students in MCD biology, or by permission of instructor. Enrollment limited to 20. *W. Saxton*

200B. Advanced Molecular Biology. F

An in-depth coverage of the structure, function, and synthesis of DNA, RNA, and proteins. Discussion of the roles of macromolecules in the regulation of information in the cell. Prerequisite(s): Enrollment restricted to graduate students. *R. Kamakaka, M. Ares*

200C. Advanced Cell Biology. W

An in-depth coverage of topics in cellular and subcellular organization, structure, and function in plants and animals. Emphasis on current research problems. Prerequisite(s): BIOL 200B. Enrollment restricted to graduate students. *W. Sullivan*

200D. Developmental Biology. S

Key topics in developmental biology, including developmental genetics, epigenetics, stem cell biology, and developmental neurobiology. Lectures are accompanied by critical analysis and discussion of recent publications. Enrollment restricted to graduate students in MCD biology, or by permission of instructor. Enrollment limited to 20. *S. Strome*

201. RNA Processing. *

An advanced graduate-level course on biological aspects of RNA function and processing in eukaryotes. Lectures and discussions will be developed using the current literature. Prerequisite(s): BIOL 200B or permission of instructor. Enrollment restricted to graduate students. Enrollment limited to 15. *M. Ares*

203. Ribosomes and Translation. *

Covers the field of ribosome research in depth, including the structure and function of ribosomes and the molecular mechanisms of protein synthesis. Begins with historical review of the ribosome field and proceeds to the most recent findings. Focus is on central questions: (1) How is the accuracy of the aminoacyl-tRNA selection determined? (2) What is "accommodation"? (3) What is the mechanism of peptide bond formation (peptidyl transferase)? (4) What is the mechanism of translocation? (5) What are the mechanistic roles of the ribosome and translation factor EF-G in translocation? (6) To what extent is the mechanism of translation determined by RNA? (7) Why is RNA so well suited for the ribosome? (8) How did translation evolve from an RNA world? Prerequisite(s): BIOC 100A, BIOL 200B or permission of instructor. Enrollment restricted to graduate students. *H. Noller*

204. Chromatin. *

Eukaryotic DNA is complexed with histones to form chromatin. This course focuses on the ways in which chromatin influences and is manipulated to regulate gene expression. Prerequisite(s): BIOL 105 and BIOL 115; undergrads by permission of instructor. Enrollment restricted to graduate students. Enrollment limited to 15. Offered in alternate academic years. *J. Tamkun, G. Hartzog*

205. Epigenetics. *

In-depth coverage of epigenetics focusing on how alterations in chromatin structure and DNA methylation establish and maintain heritable states of gene expression. Lectures are supplemented with critical discussion of recent publications. Prerequisite(s): BIOL 105 and BIOL 115, or permission of instructor. Enrollment restricted to graduate students. Enrollment limited to 20. *S. Strome, J. Tamkun*

206. Introduction to Stem Cell Biology. F

Fundamental concepts, experimental approaches, and current advances in stem cell biology, with consideration of key ethical issues. Topics include: self-renewal and differentiation; the

microenvironment; epigenetics; cell-cycle regulation; and how basic research translates to medical therapeutics. Ethical, moral, and political issues surrounding stem cell research are discussed with lectures from philosophy and other relevant disciplines. Enrollment restricted to graduate students. Enrollment limited to 15. *W. Sullivan*

206L. Current Protocols in Stem Cell Biology. W

Provides students with hands-on experience in embryonic stem cell culture methods. Enrollment restricted to graduate students; qualified undergraduates may enroll by permission of instructor. Enrollment limited to 10. *D. Feldheim*

208. Cellular Signaling Mechanisms. *

All eukaryotic cells utilize intricate signaling pathways to control such diverse events as cell-cell communication, cell division, and changes in cell morphology. This course covers the molecular basis of these cellular signaling pathways, focusing on the most current research. Prerequisite(s): BIOL 105, BIOL 110, and BIOL 115. Enrollment restricted to seniors and graduate students. Enrollment limited to 15. Offered in alternate academic years. *D. Kellogg*

214. Cancer Cell Biology. *

Focuses on molecular and cellular mechanisms behind cancer. Topics include oncogenes, tumor suppressor genes, cell growth genes, checkpoint genes, telomeres, and apoptosis. Students gain experience in understanding the cutting edge of cancer drug design and formulate their own proposals for applying molecular and cellular biological techniques toward cancer diagnosis and treatment. Enrollment restricted to graduate students. Enrollment limited to 10. *A. Zahler*

226. Advanced Molecular Neuroscience. W

Basis of neural behavior at the cellular, molecular and system levels. First half of course focuses on cellular, molecular, and developmental aspects of the nervous system and covers two sensory systems: olfaction and auditory. Last half of course concerns higher-level functions of the nervous system, such as processing and integrating information. Discusses human diseases and disorders. Enrollment restricted to graduate students. *Y. Zuo*

280A. Topics in Research on Molecular Genetics of Yeast (2 credits). F,W,S

Intensive research seminar on the structure and function of the gene expression machinery in the simple eukaryote *Saccharomyces cerevisiae* and its relationship to the human gene expression machinery. Enrollment restricted to graduate students; qualified undergraduates may enroll with approval of instructor. May be repeated for credit. *M. Ares*

280B. Chromatin Structure and Transcriptional Regulation (2 credits). F,W,S

Weekly seminar on structure and gene regulatory function of chromatin. Discusses research of participants and relevant scientific literature. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *H. Boeger*

280C. Mammalian Brain Development (2 credits). F,W,S

Seminar covers research into the development of the mammalian brain. Enrollment restricted to graduate students; undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *B. Chen*

280D. RNA Processing (2 credits). F,W,S

A discussion of current research and literature concerning the regulation of precursor messenger RNA processing. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *A. Zahler*

280E. Meiotic Chromosome Dynamics (2 credits). F,W,S

Intensive course on the molecular mechanisms underlying homolog pairing, synapses, and recombination; and how they are regulated, coordinated, and monitored to ensure accurate meiotic chromosome segregation. Enrollment restricted to graduate students; undergraduates may enroll with permission of instructor. May be repeated for credit. *N. Bhalla*

280F. Development of Vertebrate Neural Connections (2 credits). F,W,S

Intensive research seminar on molecular mechanisms by which neural connections are established during mouse development. Special focus on topographic maps and role of Eph receptors and ephrins in this process. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *D. Feldheim*

280H. Topics on Research into Chromatin and Transcription (2 credits). F,W,S

Seminar covering research into the effects of chromatin on transcription in yeast. Enrollment restricted to graduate students; undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *G. Hartzog*

280I. Epigenetic Gene Silencing and Insulators (2 credits). F,W,S

Intensive course on molecular mechanisms by which insulator elements regulate epigenetic gene silencing. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *R. Kamakaka*

280J. Structures of Macromolecular Complexes (2 credits). F,W,S

Focuses on structure and function of the spliceosome using electron microscopy and x-ray crystallography. Participants present results from their own research and relevant journal articles. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of

instructor. Enrollment limited to 20. May be repeated for credit. *M. Jurica*

280K. Topics in Cell Cycle Research (2 credits). F,W,S

An intensive seminar focusing on current research on the molecular mechanisms that control cell division. Participants are required to present results of their own research or to review journal articles of interest. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. *D. Kellogg*

280L. Topics on Neural Development (2 credits). F,W,S

Seminar covering research into breast development and cancer. Enrollment restricted to graduate students. Enrollment limited to 12. May be repeated for credit. *L. Hinck*

280M. Post-Transcriptional Control of Mammalian Gene Expression (2 credits). F,W,S

Intensive course on the molecular mechanisms by which RNA binding proteins regulate gene expression. Enrollment restricted to graduate students; qualified undergraduates may enroll with the permission of the instructor. Enrollment limited to 8. May be repeated for credit. *J. Sanford*

280N. Structure and Function of Ribosomes (2 credits). F,W,S

An intensive and advanced course focusing on the structure and function of ribosomes. Participants present research findings in an organized, critical fashion, in the context of current research literature in the ribosome field. Enrollment restricted to graduate students; qualified undergraduate students may enroll with permission of the instructor. Enrollment limited to 20. May be repeated for credit. *H. Noller*

280O. Topics in Bacterial Pathogenesis (2 credits). F,W,S

Intensive seminar focusing on mechanisms of bacterial pathogenesis of the ulcer-causing bacterium *Helicobacter pylori*. Participants are required to present results from their own research and relevant journal articles. (Also offered as Microbiol & Environ Toxicology 281O. Students cannot receive credit for both courses.) Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 20. May be repeated for credit. *K. Ottemann*

280Q. Cell Biology of Oocytes, Embryos, and Neurons (2 credits). F,W,S

Weekly seminar and round-table discussion about research problems and recent advances in molecular motor proteins, cytoskeletons, and the control of force-producing processes. Each participant reports recent advances in their field from current literature, their own primary research questions, current approaches to answering those questions, and their research progress. Enrollment restricted to graduate students; undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *W. Saxton*

280R. Structure and Function of the Nuclear Pore Complex (2 credits). F,W,S

Intensive and advanced course focusing on structure and function of the nuclear pore complex. Participants present research findings in an organized critical fashion in the context of current research literature in the nucleo-cytoplasmic transport field. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *M. Rexach*

280S. Chromatin and RNA Regulation in *C. elegans* (2 credits). F,W,S

Intensive research seminar about regulators of chromatin organization; the composition and function of germ granules; and the roles of both levels of regulation in germline development in *C. elegans*. Participants present their research results and report on related journal articles. Enrollment restricted to graduate students; undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *S. Strome*

280T. Molecular Biology of *Drosophila* Development (2 credits). F,W,S

An intensive seminar concerning the molecular genetics of *Drosophila*. Recent research is discussed weekly, with an emphasis on gene regulation and development. Students present their own research or critical reviews of recent articles at least once during the quarter. Enrollment restricted to graduate students. Qualified undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *J. Tamkun*

280U. Discussions on the Development of the *Drosophila* Embryo (2 credits). F,W,S

Involves a two-hour weekly meeting in which the students discuss topics concerning the cell cycle, early embryonic development, and the cytoskeleton. These discussions critically evaluate ongoing research in this area. Material is drawn from student research and recently published journal articles. Students are also expected to meet individually with the instructor two hours weekly. In addition to a three-five page research proposal, each student gives two one-hour oral presentations. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *W. Sullivan*

280W. Membrane Proteins (2 credits). F

Seminar on recent research on membrane proteins, with an emphasis on ion-pumping ATPase. Enrollment restricted to graduate students; qualified undergraduates may enroll with permission of instructor. Enrollment limited to 20. May be repeated for credit. *B. Bowman*

280X. Mammalian Developmental and Stem Cell Biology (2 credits). F,W,S

Explores topics in developmental and stem cell biology, with emphasis on mammalian systems. Students present results of independent research projects in the context of relevant publications and other background information. Course meets once each week. Enrollment restricted to

graduate students. May be repeated for credit. *A. Ralston*

280Y. Activity-Dependent Synaptic Plasticity (2 credits). F,W,S

Research seminar covering the regulation of synaptic plasticity in the mammalian nervous system, focusing on how the activity regulates the structural and functional dynamics of synapses. Enrollment restricted to graduate students; undergraduates may enroll with permission of instructor. Enrollment limited to 10. May be repeated for credit. *Y. Zuo*

289. Practice of Science. W

Examination of ethical and practical scientific issues, including the collection and treatment of data, attribution of credit, plagiarism, fraud, and peer review. Career issues, including how to apply for grants and positions in industry or academia, will be discussed. Prerequisite(s): BIOL 200A, BIOL 200B, and BIOL 200C or permission of instructor. Enrollment restricted to graduate students; undergraduates may enroll with permission of the instructor. Enrollment limited to 20. *The Staff*

291. Molecular, Cellular, and Developmental Biology Seminar (2 credits). F,W,S

Topics of current interest in molecular, cellular, and developmental biology are presented weekly by graduate students, faculty, and guest speakers. Enrollment restricted to graduate students. Enrollment limited to 60. May be repeated for credit. *Y. Zuo*

292. MCD Seminar (no credit). F,W,S

Various topics by weekly guest speakers. Enrollment restricted to graduate students. *Y. Zuo*

296. Laboratory Research in Molecular, Cell, and Developmental Biology. F,W,S

Independent laboratory research in molecular, cellular, and developmental biology. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

297. Independent Study. F,W,S

Independent study for graduate students who have not yet settled on a research area for their thesis. Students submit petition to sponsoring agency. *The Staff*

299. Thesis Research. F,W,S

Students submit petition to sponsoring agency. *The Staff*

*Not offered in 2011-12

Program Description

Chemistry is central to modern science and, ultimately, most phenomena in biology, medicine, geology, and the environmental sciences can be described in terms of the chemical and physical behavior of atoms and molecules. Because of the wide appeal and utility of chemistry, UCSC offers many lower-division courses, differing in emphasis and style, to meet diverse needs. Students should also note the numerous upper-division course offerings and select those most suitable to their academic interests. The curriculum in chemistry exposes the student to the principal areas of modern chemistry, including organic, inorganic, physical, analytical, and biochemistry. The curriculum is designed to meet the needs of students who plan to end their formal education with a bachelor of arts (B.A.) or bachelor of science (B.S.) degree, as well as those who wish to go on for an advanced degree. The UCSC chemistry B.A. or B.S. graduate is well prepared to pursue a career in chemistry or an allied field.

Research in chemistry at UCSC is closely interwoven with graduate and undergraduate education. The chemistry and biochemistry research program is active at the graduate level, and faculty also encourage undergraduates to become involved in research. Research is done for academic credit in Chemistry 195A-B-C, *Senior Research*; or in Chemistry 199, *Tutorial*. There are also opportunities for interdisciplinary research spanning, for example, chemistry/physics, chemistry/geology, chemistry/oceanography, chemistry/biology, chemistry/computer science, and chemistry/microbiology and environmental toxicology. At UCSC, it is not uncommon for students to see their own original work published in research journals.

Chemistry and biochemistry faculty and approximately 90 graduate students and 30 postdoctoral fellows are housed in the Physical Sciences Building near the Science Library. Standard and specialized spectrophotometric equipment, a number of instruments devoted to structural studies, instrumentation for specialized analytical purposes, and computer facilities used in studies of structure and reactivity are all available. The Science Library has an excellent collection of current journals, in print and electronic form, and reference works, as well as earlier volumes of all the major journals. Additional source material can be readily and rapidly obtained on interlibrary loan.

A degree in chemistry opens the door to a wide variety of academic careers. Some UCSC graduates are working as researchers in industry in areas such as electronic materials, biotechnology, medicinal chemistry, or laser technology. Others have entered government service as research chemists in the Food and Drug Administration, the Environmental Protection Agency, or law enforcement crime laboratories. Fields such as patent law, commercial development, and scientific writing are open to graduates. Many chemistry majors go on to university graduate programs across the nation to prepare for careers in research, teaching, or a combination of the two. The degree in chemistry also provides a strong disciplinary background in preparation for a career in the important and much needed area of science teaching in high school. A major in chemistry is also an excellent beginning for one of the many opportunities in the health sciences.

The UCSC Chemistry and Biochemistry Department offers both B.S. and B.A. degree programs. The B.S. degree should be the choice if a student is interested in getting a job in industry immediately after receiving his or her college degree. The B.S. program also provides a good background for graduate work in chemistry. The B.A. program has fewer requirements and should be considered by students who wish to take more science courses outside of chemistry to enter an interdisciplinary area. Examples might be chemical oceanography, geochemistry, chemical physics, environmental chemistry, and health sciences. The B.A. might also be a good choice for students who wish to become high school teachers. However, for either degree, the courses stress the fundamentals of chemistry and allow students to pursue independent research.

A minor in chemistry is also offered for those who wish to have a strong complementary program

in chemistry while majoring in another course of study.

Requirements for the Chemistry B.A. Degree

The requirements for the bachelor of arts in chemistry have been kept to a minimum so that students may tailor their program to their own purposes, for example, to pursue a double major, to study areas of the humanities or social sciences, to complete major requirements late in their college career, or to concentrate on a study in a specific branch of chemistry. The minimum requirements (including prerequisites) constitute 54 percent of a student's total undergraduate program; consequently, there is ample time to explore and discover other interests within the university. To plan wisely, students are advised to refer to each course description for a detailed listing of prerequisites. Students who decide they want a professional career in chemistry are advised to meet with the chemistry undergraduate faculty adviser.

Lower-Division Requirements

General Chemistry: Chemistry 1A, 1B/M, and 1C/N

Calculus: Mathematics 11A-B and 22; or Mathematics 19A-B and 22

Physics: Physics 5A/L, 5B/M, and 5C/N; or 6A/L, 6B/M, and 6C/N

Upper-Division Requirements

Organic Chemistry: Chemistry 108A/L and 108B/M; or 112A/L, 112B/M, and 112C/N

Inorganic Chemistry: Chemistry 151A/L

Physical Chemistry: Chemistry 163A, 163B, 164A, and 164B

One of the following laboratory courses: Chemistry 146A, *Advanced Laboratory in Organic Chemistry*; 146B, *Advanced Laboratory in Inorganic Chemistry*; 146C, *Advanced Laboratory in Physical Chemistry*.

Students currently conducting senior thesis research are required to choose an advanced laboratory in the Chemistry 146-series that is outside their research area.

Elective(s)

At least two if 108A/L and 108B/M are taken; or at least one from the following list if 112A/L, 112B/M, and 112C/N are taken:

Chemistry 103, *Biochemical Structures, Reactions and Energetics**

Chemistry 122, 143, 151B, 156C, 163C, and graduate-level lecture courses in chemistry

Biochemistry and Molecular Biology 100A, 100B, 100C

Computer Science 12A or 5C, or Biomolecular Engineering 60

Microbiology and Environmental Toxicology 101 or 102

Ocean Sciences 120 or 220

Physics 110A-B, 116A-B-C

*Can be used as elective only if Biochemistry and Molecular Biology 100A, 100B, and 100C are not taken as electives

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement for the bachelor of arts degree in chemistry is satisfied by completing Chemistry 151L, *Inorganic Chemistry Laboratory*, and either Chemistry 146A, 146B, or 146C.

Chemistry Major B.A. Planner

<http://undergrad.pbsci.ucsc.edu/programs/chemistry/2010-11/chemba-sample1011.html>

Requirements for the Chemistry B.S. Degree

The bachelor of science major program is designed for students who intend to pursue a professional career in chemistry. It is rigorous and broadly based, appropriate for that purpose. The course requirements for the B.S. major are as follows; please refer to each course description for a detailed listing of prerequisites.

Lower-Division Requirements

General Chemistry: Chemistry 1A, 1B/M, and 1C/N

Calculus: Mathematics 11A-B and 22; or Mathematics 19A-B and Mathematics 22;

Advanced Mathematics: Applied Mathematics and Statistics 10, or Mathematics 21, or Mathematics 24

Physics: Physics 5A/L, 5B/M, and 5C/N; or 6A/L, 6B/M, and 6C/N

Upper-Division Requirements

Organic Chemistry: Chemistry 112A/L, 112B/M, and 112C/N; or 108A/L, 108B/M, and 143

Inorganic Chemistry: Chemistry 151A/L

Biochemical Structures, Reactions, and Energetics: Chemistry 103

Physical Chemistry: Chemistry 163A, 163B, 163C, 164A, and 164B

One of the following laboratory courses:

Chemistry 146A, *Advanced Laboratory in Organic Chemistry*

Chemistry 146B, *Advanced Laboratory in Inorganic Chemistry*

Chemistry 146C, *Advanced Laboratory in Physical Chemistry*

Students currently conducting senior thesis research are required to choose an advanced laboratory in the Chemistry 146-series that is outside their research area.

Elective(s)

At least two from the following list:

Chemistry 122, *Principles of Instrument Analysis**

Chemistry 143, *Organic Chemical Structure and Reactions* (if not taken for the organic chemistry requirement)

Chemistry 151B, *Chemistry of the Main Element Groups*

Biochemistry and Molecular Biology 100A, *Biochemistry*

Biochemistry and Molecular Biology 100B, *Biochemistry*

Biochemistry and Molecular Biology 100C, *Biochemistry* (can substitute for Chemistry 103)

Microbiology and Environmental Toxicology 101, *Sources and Fates of Pollutants*

Microbiology and Environmental Toxicology 102, *Cellular and Organismal Toxicology*

Ocean Sciences 120, *Aquatic Chemistry: Principles and Applications*

Ocean Sciences 220, *Chemical Oceanography*

Physics 110A-B, *Electricity, Magnetism, and Optics*

Physics 116A-B, *Mathematical Methods in Physics*

*To receive certification from the American Chemical Society, you must complete Chemistry 122; see additional information below.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement for the bachelor of science degree in chemistry is satisfied by completing Chemistry 151L, *Inorganic Chemistry Laboratory*, and either Chemistry 146A, 146B, or 146C.

Chemistry Major B.S. Planner

<http://undergrad.pbsci.ucsc.edu/programs/chemistry/2010-11/chembs-sample1011.html>

Chemistry B.S. Degree with Biochemistry Concentration

The biochemistry concentration is designed for students who intend to pursue a career in biochemistry or in a related field such as biotechnology, and it provides an exceptionally rigorous chemistry emphasis..

Lower-Division Requirements

General Chemistry: Chemistry 1A, 1B/M, 1C/N

Calculus: Mathematics 11A-B, and 22; or Mathematics 19A-B and 22

Advanced Mathematics: Applied Mathematics and Statistics 10, or Mathematics 21, or Mathematics 24

Introductory Biology: Molecular, Cellular and Developmental Biology (BIOL) 20A, and Ecology and Evolutionary Biology (BIOE) 20B

Physics: Physics 5A/L, 5B/M, and 5C/N; or Physics 6A/L, 6B/M, and 6C/N

Upper-Division Requirements

Organic Chemistry: Chemistry 112A/L, 112B/M, and 112 C/N; or Chemistry 108A/L, 108B/M, and 143

Inorganic Chemistry: Chemistry 151 A/L

Biochemistry: Biochemistry and Molecular Biology 100A-C and 110

Physical Chemistry: Chemistry 163A-C

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in chemistry with a biochemistry concentration is satisfied by completing Chemistry 151L, *Inorganic Chemistry Laboratory*, and Biochemistry and Molecular Biology 110, *Biochemistry Laboratory*.

Chemistry Major B.S. with Biochemistry Concentration Planner

<http://undergrad.pbsci.ucsc.edu/programs/chemistry/2010-11/chembs-bioc-sample1011.html>

Biochemistry and Molecular Biology B.S.

See the biochemistry and molecular biology program description and major requirements.

Chemistry B.S. Degree with Environmental Chemistry Concentration

A concentration within the biology, chemistry and biochemistry, and Earth sciences degree programs, collectively identified as the environmental sciences program, is offered. Students will develop a core competence suitable for pursuing graduate work in the environmental chemistry area or in graduate environmental sciences programs.

Lower-Division Requirements

General Chemistry: Chemistry 1A, 1B/M, and 1C/N

Introductory Biology: Molecular, Cell, and Developmental Biology (BIOL) 20A, and Ecology and Evolutionary Biology (BIOE) 20B

Geology: Earth Sciences 20/L, 10/L, or 5/L

Environmental Policy and Economics: Environmental Studies 25

Calculus: Mathematics 11A-B and 22; or 19A-B and 22

Physics: Physics 5A/L, 5B/M, and 5C/N; or 6A/L, 6B/M, and 6C/N

Upper-Division Requirements

Environmental Toxicology: Microbiology and Environmental Toxicology 101 or 102

Biochemical Structures, Reactions, and Energetics: Chemistry 103

Organic Chemistry: Chemistry 108A/L, 108B/M

Instrumental Analysis: Chemistry 122

Inorganic Chemistry: Chemistry 151A/L

Physical Chemistry: Chemistry 163A 163B, 164A, and 164B

Earth Sciences: Earth Sciences 110B/M

Ocean Sciences: Ocean Sciences 120 or 220

One of the following laboratory courses:

Chemistry 146A, *Advanced Laboratory in Organic Chemistry*

Chemistry 146B, *Advanced Laboratory in Inorganic Chemistry*

Chemistry 146C, *Advanced Laboratory in Physical Chemistry*

Students currently conducting senior thesis research are required to choose an advanced laboratory in the Chemistry 146-series that is outside their research area.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in chemistry with an environmental chemistry concentration is satisfied by completing Chemistry 151L, *Inorganic Chemistry Laboratory*, and either Chemistry 146A, 146B, or 146C.

Chemistry Major B.S. with Environmental Chemistry Planner

<http://undergrad.pbsci.ucsc.edu/programs/chemistry/2010-11/chembs-envr-sample1011.html>

Comprehensive Requirement

The comprehensive requirement is a part of all UCSC degrees. In the Department of Chemistry and Biochemistry, there are two options for satisfying this requirement:

Senior thesis: A senior research project based on original experimental or theoretical research (Chemistry 195A-B-C). At the conclusion of the project, the student submits a satisfactory formal research paper to the faculty sponsor. Students arrange for a faculty sponsor by consulting with a relevant faculty member within the chemistry and biochemistry or the biochemistry and molecular biology major programs. In some cases, faculty outside these major programs (for example, in biology, ocean sciences, microbiology and environmental toxicology, or Earth sciences) may be an appropriate sponsor. Students who select a sponsor outside the chemistry or the biochemistry and molecular biology major programs should have the title and description of the proposed thesis reviewed by the Chemistry and Biochemistry Department undergraduate faculty adviser. Students, usually working in the laboratory of the faculty sponsor, acquire experimental and/or theoretical research experience and skills in the laboratory as well as instruction in the writing of a research paper. Students are expected to make satisfactory academic progress and be in good academic standing while they take Chemistry 195 courses. Students who achieve excellence in both research and thesis may be awarded honors in the thesis upon graduation.

Senior essay: An essay based on literature research (Chemistry 199). After agreeing in advance on an appropriate topic of interest and a format, the student submits a satisfactory essay on the topic. Students arrange for a faculty sponsor by consulting with a relevant faculty member within the chemistry and biochemistry major program. In some cases, faculty outside these major programs (for example, in biology, ocean sciences, microbiology and environmental toxicology, or Earth sciences) may be an appropriate sponsor. Students who select a sponsor outside the chemistry and biochemistry major program should have the title and description of the proposed essay reviewed by the Chemistry and Biochemistry Department undergraduate faculty adviser. Students acquire experience and skills in scientific literature research as well as in the writing of a research paper.

Requirements for the Minor

The course requirements for the minor, including electives, are the same as for the B.A. degree, with the exclusion of Chemistry 146A, 146B, 146C, 151A/151L, 164A, and 164B. The minor has no senior comprehensive requirement.

Chemistry Minor Planner

<http://undergrad.pbsci.ucsc.edu/programs/chemistry/chemmin.html>

Chemistry Major Disqualification Policy

The Chemistry and Biochemistry Department's major disqualification policy is intended to encourage students to take their performance seriously and to make a strong effort to pass the lower-division and beginning upper-division courses.

Students who receive more than one No Pass, D, and/or F in any combination of the following requirements will not be permitted to pursue any of the chemistry degrees:

Chemistry 1A, *General Chemistry*

Chemistry 1B, *General Chemistry*

Chemistry 1C, *General Chemistry*

Chemistry 108A, *Organic Chemistry*

Chemistry 108B, *Organic Chemistry*

Chemistry 112A, *Organic Chemistry*

Chemistry 112B, *Organic Chemistry*

Chemistry 112C, *Organic Chemistry*

Chemistry 163A, *Physical Chemistry*

Chemistry 163B, *Physical Chemistry*

Mathematics 11A, *Calculus with Applications*

Mathematics 11B, *Calculus with Applications*

Mathematics 19A, *Calculus for Science, Engineering, and Mathematics*

Mathematics 19B, *Calculus for Science, Engineering, and Mathematics*

Mathematics 22, *Introduction to Calculus of Several Variables*

Physics 5A, *Introduction to Physics*

Physics 5B, *Introduction to Physics*

Physics 5C, *Introduction to Physics*

Physics 6A, *Introductory Physics*

Physics 6B, *Introductory Physics*

Physics 6C, *Introductory Physics*

Students may appeal their disqualification within the appeal period by writing a letter to the undergraduate faculty adviser. This appeal must be submitted to the advising office no later than 15 days from the date the disqualification notification was mailed. The advising office will subsequently notify the student and the college of the decision no later than 15 days after the submission of the appeal.

A student who has been disqualified from the major may, no earlier than three months from the date of the disqualification, petition to be reinstated. This application will be considered only if there is substantial new evidence that the student is capable of making normal progress in the major.

Advising

The chemistry and biochemistry adviser provides counsel to undergraduate majors. Students are encouraged to declare their major at an early date so that advising and planning can commence. For assistance with advising, please refer to the Physical and Biological Sciences Undergraduate Affairs web site at <http://undergrad.pbsci.ucsc.edu/>.

Prerequisites

Students who wish to obtain permission to take a course without having completed the listed prerequisites must make prior arrangements with the instructor. Courses are designed for students who have met all the prerequisites; those who have not are at a disadvantage.

Materials Fee

Chemistry students should be aware of the materials fee required for some courses. The fee is billed to the student's account for specific laboratory materials purchased by the Chemistry and Biochemistry Department through the university. Fees generally range from \$15 to \$50 per course. Students may incur additional expense purchasing individual supplies.

High School Preparation

Prospective chemistry majors are encouraged to get a solid foundation in high school mathematics; familiarity with algebra, logarithms, trigonometry, and analytic geometry is particularly recommended. Students who take chemistry at UCSC begin with Chemistry 1A or 1B, both of which require a strong background in high school chemistry. Students without a high school chemistry background may begin with Chemistry 1P, Essentials of Chemistry. Starting with Chemistry 1P does not cause impediment to progress in the major. To assess your level of preparation in chemistry, please see the Chemistry Self-Assessment examination on the Undergraduate Affairs web site at <http://undergrad.pbsci.ucsc.edu/>.

Transfer Students

The Chemistry and Biochemistry Department welcomes applications from community college students. Students who intend to transfer from other institutions, particularly community colleges, should complete one full year of general chemistry, organic chemistry, calculus, and physics prior to transfer. If the institution offers a physics course based on calculus as well as a non-calculus-based course, the student should take the calculus-based course. Prospective transfer students should consult the Physical and Biological Sciences Undergraduate Affairs web site for information on preparing to transfer to UCSC at <http://undergrad.pbsci.ucsc.edu/>.

Program for Students of the Health Sciences

Students intending to enter medical, dental, or another health science professional school can satisfy entrance requirements with a major program in chemistry supplemented with further

courses, especially in biology, as specified by the admissions requirements of the school where they intend to apply. Students are urged to contact the Career Center for assistance with the application process.

American Chemical Society Certification

The American Chemical Society (ACS) recognizes certain undergraduate programs, including those of UCSC, to be of such quality as to entitle graduates to become ACS members immediately upon graduation. Graduates must be individually certified to the ACS by the Chemistry and Biochemistry Department chair if they have satisfactorily completed an approved program of study. ACS certification standards are rigorous; a graduate who has met them carries a distinction that is well recognized in the profession. Broadly speaking, ACS certification requirements are satisfied by completing a B.S. major in chemistry (not including the biochemistry concentration) at UCSC, including Chemistry 122 as an elective. A year of study in a major modern foreign language (preferably German) is recommended. More information is available from the Chemistry and Biochemistry undergraduate adviser.

Honors in the Major

Honors in the chemistry major requires at least a 3.5 grade point average (GPA) in all chemistry courses. Highest honors requires at least a 3.8 GPA in all chemistry courses for the major.

Graduate Programs

The Chemistry and Biochemistry Department offers three graduate degrees: the doctor of philosophy (Ph.D.), a thesis master of science (M.S.), and a coursework M.S. The Ph.D. and thesis M.S. programs are designed to help students develop into independent scholars while pursuing the excitement of scientific research in a personal, supportive environment. Both the Ph.D. and the research M.S. programs prepare students for careers in academia, industry, government laboratories, and other settings requiring an advanced education in chemistry and related disciplines. The coursework M.S. does not require research and is suited to teachers and others wishing to update or broaden their chemical expertise. Approximately 90 graduate students are currently enrolled in the graduate program.

Within the Ph.D. program students have the flexibility to design a course of study focused on personal research interests, and at the same time are expected to maintain the high intellectual standards associated with the doctoral degree. Research options include biochemistry, physical chemistry, biophysical chemistry, inorganic chemistry, bioinorganic chemistry, materials, organic chemistry, and bio-organic chemistry. Collaborative research efforts are encouraged, both intra- and inter-departmentally. The interdisciplinary Center for Biomolecular Science and Engineering emphasizes bioinformatics, nanotechnology, and computational approaches to chemistry. Biochemists join geneticists, computer scientists, and biologists in the Center for the Molecular Biology of RNA. Productive interactions have developed between the Chemistry and Biochemistry Department, the Department of Microbiology and Environmental Toxicology, the Department of Molecular, Cell and Developmental Biology, and the School of Engineering. Several Chemistry and Biochemistry faculty members also participate in the new graduate Program in Biomedical Sciences and Engineering.

Before beginning coursework, Ph.D. students take attainment examinations to confirm their level of preparation in four areas: organic, inorganic, physical, and biochemistry. First-year students take Chemistry 292 and 296, and select a research adviser and research committee in spring quarter. In the first two years, students enroll in core courses and electives related to their specialization. Core courses are Chemistry 200A, B, and C for biochemistry and biophysical chemistry; Chemistry 234 and 256A, B, or C for inorganic and bioinorganic chemistry; the Chemistry 240-series for organic chemistry; and Chemistry 261, 262, and 263 for physical chemistry. Organic studies students must pass four cumulative examinations based on assigned reading in current research journals. The Ph.D. candidate's research committee meets formally with the student to evaluate research progress at least once a year. Students are expected to finish all Ph.D. requirements in five to six years.

M.S. students and Ph.D. students who have not advanced to candidacy attend a weekly seminar (Chemistry 291A, B, C, or D). Speakers from UCSC, other universities, and research labs expose students to advances at the frontiers of chemical research, offering the opportunity for personal contact with leading scientists.

Teaching assistantships provide both financial support and the opportunity to put into practice the required pedagogical training offered in Chemistry 296 (presentation techniques, discussion strategies, laboratory teaching skills, laboratory safety procedures, and time management). Advanced doctoral students can also be supported as graduate-student researchers.

Ph.D. Requirements

- Pass all four attainment examinations and meet any deficiencies as directed by spring of the first year.
- Take Chemistry 292 and 296 in the fall of the first year.
- Take Chemistry 291A, B, C, or D, Research Seminar, every quarter until advanced to candidacy.
- Organic studies students must pass four out of 12 "cumulative examinations" based on reading lists of current published organic research.

- Select an adviser and nominate members of the research committee in the spring of the first year.
- Present a second-year seminar on a topic of current interest in published research outside the candidate's own research area.
- Serve as a teaching assistant (TA) during at least three quarters in the first two years, before attempting the Ph.D. oral qualifying examination.
- Pass five lecture courses (25 credits): at least four at the graduate (200) level, and at least four in chemistry and biochemistry (with departmental approval, up to two courses may be at upper-division undergraduate level).
- In the fall of the third year, pass the Ph.D. oral qualifying examination before an examining committee consisting of three research committee members plus one outside member approved by the graduate dean. The Ph.D. candidate presents (a) a summary of current research results and possible future direction, and (b) an original research proposal on a chemistry or biochemistry topic either related or unrelated to the candidate's current thesis research.
- Nominate members of the Dissertation Reading Committee (DRC).
- Submit a research prospectus (outline of dissertation chapters) in the spring of the fourth year, and meet with the DRC to review research progress.
- Submit an updated research prospectus (outline of dissertation chapters) to the DRC in the winter of the fifth year.
- Submit written dissertation based on original research.
- Present dissertation seminar.

The average time to degree is five and one-quarter years. Ph.D. candidates are expected to complete research and write the dissertation within nine quarters after advancing to candidacy following a successful Ph.D. oral qualifying examination. Financial support is not available after 18 quarters in the graduate program.

For both Ph.D. and M.S. students, the standard course load is three courses per quarter, or a total of 15 credits per quarter.

M.S. Requirements: Research Thesis Path

- Pass all four attainment examinations in the first year.
- Take Chemistry 292.
- Take Chemistry 296 if working as teaching assistant (TA) at any time.
- Take Chemistry 291A, B, C, or D each quarter.
- Select an adviser and nominate members of the research committee in the first year.
- Pass at least five Chemistry and Biochemistry lecture courses, of which at least three must be graduate (200) level.
- Conduct original laboratory research.
- Capstone requirement: write a thesis based on original research.

M.S. Requirements: Coursework Path

- Pass all four attainment examinations in the first year.
- Take Chemistry 296 if enrolled as teaching assistant (TA) at any time.
- Take Chemistry 291A, B, C, or D each quarter.
- Pass seven chemistry lecture courses (at least four at the graduate (200) level) from three of the four sub-disciplines: organic, inorganic, physical chemistry, and biochemistry.
- Capstone requirement: present a seminar on a topic of current interest in published research.

<http://undergrad/pbsci.ucsc.edu/index.html>***Program Description***

Chemistry is central to modern science and, ultimately, most phenomena in biology, medicine, geology, and the environmental sciences can be described in terms of the chemical and physical behavior of atoms and molecules. Because of the wide appeal and utility of chemistry, UCSC offers many lower-division courses, differing in emphasis and style, to meet diverse needs. Students should also note the numerous upper-division course offerings and select those most suitable to their academic interests. The curriculum in chemistry exposes the student to the principal areas of modern chemistry, including organic, inorganic, physical, analytical, and biochemistry. The curriculum is designed to meet the needs of students who plan to end their formal education with a bachelor of arts (B.A.) or bachelor of science (B.S.) degree, as well as those who wish to go on for an advanced degree. The UCSC chemistry B.A. or B.S. graduate is well prepared to pursue a career in chemistry or an allied field.

Research in chemistry at UCSC is closely interwoven with graduate and undergraduate education. The chemistry and biochemistry research program is active at the graduate level, and faculty also encourage undergraduates to become involved in research. Research is done for academic credit in Chemistry 195A-B-C, *Senior Research*; or in Chemistry 199, *Tutorial*. There are also opportunities for interdisciplinary research spanning, for example, chemistry/physics, chemistry/geology, chemistry/oceanography, chemistry/biology, chemistry/computer science, and chemistry/microbiology and environmental toxicology. At UCSC, it is not uncommon for students to see their own original work published in research journals.

Chemistry and biochemistry faculty and approximately 90 graduate students and 30 postdoctoral fellows are housed in the Physical Sciences Building near the Science Library. Standard and specialized spectrophotometric equipment, a number of instruments devoted to structural studies, instrumentation for specialized analytical purposes, and computer facilities used in studies of structure and reactivity are all available. The Science Library has an excellent collection of current journals, in print and electronic form, and reference works, as well as earlier volumes of all the major journals. Additional source material can be readily and rapidly obtained on interlibrary loan.

A degree in chemistry opens the door to a wide variety of academic careers. Some UCSC graduates are working as researchers in industry in areas such as electronic materials, biotechnology, medicinal chemistry, or laser technology. Others have entered government service as research chemists in the Food and Drug Administration, the Environmental

Protection Agency, or law enforcement crime laboratories. Fields such as patent law, commercial development, and scientific writing are open to graduates. Many chemistry majors go on to university graduate programs across the nation to prepare for careers in research, teaching, or a combination of the two. The degree in chemistry also provides a strong disciplinary background in preparation for a career in the important and much needed area of science teaching in high school. A major in chemistry is also an excellent beginning for one of the many opportunities in the health sciences.

The UCSC Chemistry and Biochemistry Department offers both B.S. and B.A. degree programs. ~~The B.S. program has more requirements, and a student in this program earns a degree that meets the requirements of an American Chemical Society-certified program.~~ The B.S. degree should be the choice if a student is interested in getting a job in industry immediately after receiving his or her college degree. The B.S. program also provides a good background for graduate work in chemistry. The B.A. program has fewer requirements and should be considered by students who wish to take more science courses outside of chemistry to enter an interdisciplinary area. Examples might be chemical oceanography, geochemistry, chemical physics, environmental chemistry, and health sciences. The B.A. might also be a good choice for students who wish to become high school teachers. However, for either degree, the courses stress the fundamentals of chemistry and allow students to pursue independent research.

A minor in chemistry is also offered for those who wish to have a strong complementary program in chemistry while majoring in another course of study.

Requirements for the Chemistry B.A. Degree

The requirements for the bachelor of arts in chemistry have been kept to a minimum so that students may tailor their program to their own purposes, for example, to pursue a double major, to study areas of the humanities or social sciences, to complete major requirements late in their college career, or to concentrate on a study in a specific branch of chemistry. The minimum requirements (including prerequisites) constitute 54 percent of a student's total undergraduate program; consequently, there is ample time to explore and discover other interests within the university. To plan wisely, students are advised to refer to each course description for a detailed listing of prerequisites. Students who decide they want a professional career in chemistry are advised to meet with the chemistry undergraduate faculty adviser.

Lower-Division Requirements

General Chemistry: Chemistry 1A, 1B/M, and 1C/N

Calculus: Mathematics 11A-B and 22; or Mathematics 19A-B and 22

Physics: Physics 5A/L, 5B/M, and 5C/N; or 6A/L, 6B/M, and 6C/N

Upper-Division Requirements

Organic Chemistry: Chemistry 108A/L and 108B/M; or 112A/L, 112B/M, and 112C/N

Inorganic Chemistry: Chemistry 151A/L

Physical Chemistry: Chemistry 163A, 163B, 164A, and 164B

One of the following laboratory courses: Chemistry 146A, Advanced Laboratory in Organic Chemistry; 146B, Advanced Laboratory in Inorganic Chemistry; 146C, Advanced Laboratory in Physical Chemistry.

Students currently conducting senior thesis research are required to choose an advanced laboratory in the Chemistry 146-series that is outside their research area.

Elective(s)

At least two if 108A/L and 108B/M are taken; or at least one from the following list if 112A/L, 112B/M, and 112C/N are taken:

*Chemistry 103, Biochemical Structures, Reactions and Energetics**

Chemistry 122, 143, 151B, 156C, 163C, and graduate-level lecture courses in chemistry

Biochemistry and Molecular Biology 100A, 100B, 100C

Computer Science 12A or 5C, or Biomolecular Engineering 60

Microbiology and Environmental Toxicology 101 or 102

Ocean Sciences 120 or 220

Physics 110A-B, 116A-B-C

*Can be used as elective only if Biochemistry and Molecular Biology 100A, 100B, and 100C are not taken as electives

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement for the bachelor of arts degree in chemistry is satisfied by completing Chemistry 151L, *Inorganic Chemistry Laboratory*, and either Chemistry 146A, 146B, or 146C.

Chemistry Major B.A. Planner

<http://undergrad.pbsci.ucsc.edu/programs/chemistry/chemba-sample.html>

Requirements for the Chemistry B.S. Degree

The bachelor of science major program is designed for students who intend to pursue a professional career in chemistry. It is rigorous and broadly based, appropriate for that purpose. The course requirements for the B.S. major are as follows; please refer to each course description for a detailed listing of prerequisites.

Lower-Division Requirements

General Chemistry: Chemistry 1A, 1B/M, and 1C/N

Calculus: Mathematics 11A-B and 22; or Mathematics 19A-B and Mathematics 22;

Advanced Mathematics: Applied Mathematics and Statistics 10, or Mathematics 21, or Mathematics 24

Physics: Physics 5A/L, 5B/M, and 5C/N; or 6A/L, 6B/M, and 6C/N

Upper-Division Requirements

Organic Chemistry: Chemistry 112A/L, 112B/M, and 112C/N; or 108A/L, 108B/M, and 143

Inorganic Chemistry: Chemistry 151A/L

Biochemical Structures, Reactions, and Energetics: Chemistry 103

Physical Chemistry: Chemistry 163A, 163B, 163C, 164A, and 164B

One of the following laboratory courses:

Chemistry 146A, *Advanced Laboratory in Organic Chemistry*

Chemistry 146B, *Advanced Laboratory in Inorganic Chemistry*

Chemistry 146C, *Advanced Laboratory in Physical Chemistry*

Students currently conducting senior thesis research are required to choose an advanced

laboratory in the Chemistry 146-series that is outside their research area.

Elective(s)

At least two from the following list:

Chemistry 122, *Principles of Instrument Analysis**

Chemistry 143, *Organic Chemical Structure and Reactions* (if not taken for the organic chemistry requirement)

Chemistry 151B, *Chemistry of the Main Element Groups*

Biochemistry and Molecular Biology 100A, *Biochemistry*

Biochemistry and Molecular Biology 100B, *Biochemistry*

Biochemistry and Molecular Biology 100C, *Biochemistry* (can substitute for Chemistry 103)

Microbiology and Environmental Toxicology 101, *Sources and Fates of Pollutants*

Microbiology and Environmental Toxicology 102, *Cellular and Organismal Toxicology*

Ocean Sciences 120, *Aquatic Chemistry: Principles and Applications*

Ocean Sciences 220, *Chemical Oceanography*

Physics 110A-B, *Electricity, Magnetism, and Optics*

Physics 116A-B, *Mathematical Methods in Physics*

*To receive certification from the American Chemical Society, you must complete Chemistry 122; see additional information below.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement for the bachelor of science degree in chemistry is satisfied by completing Chemistry 151L, *Inorganic Chemistry Laboratory*, and either Chemistry 146A, 146B, or 146C.

Chemistry Major B.S. Planner

<http://undergrad.pbsci.ucsc.edu/programs/chemistry/chembs-sample.html>

Chemistry B.S. Degree with Biochemistry Concentration

The biochemistry concentration is designed for students who intend to pursue a career in biochemistry or in a related field such as biotechnology, and it provides an exceptionally rigorous chemistry emphasis..

Lower-Division Requirements

General Chemistry: Chemistry 1A, 1B/M, 1C/N

Calculus: Mathematics 11A-B, and 22; or Mathematics 19A-B and 22

Advanced Mathematics: Applied Mathematics and Statistics 10, or Mathematics 21, or Mathematics 24

Introductory Biology: Molecular, Cellular and Developmental Biology (BIOL) 20A, and Ecology and Evolutionary Biology (BIOE) 20B

Physics: Physics 5A/L, 5B/M, and 5C/N; or Physics 6A/L, 6B/M, and 6C/N

Upper-Division Requirements

Organic Chemistry: Chemistry 112A/L, 112B/M, and 112 C/N; or Chemistry 108A/L, 108B/M, and 143

Inorganic Chemistry: Chemistry 151 A/L

Biochemistry: Biochemistry and Molecular Biology 100A-C and 110

Physical Chemistry: Chemistry 163A-C

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in chemistry with a biochemistry concentration is satisfied by completing Chemistry 151L, *Inorganic Chemistry Laboratory*, and Biochemistry and Molecular Biology 110, *Biochemistry Laboratory*.

Chemistry Major B.S. with Biochemistry Concentration Planner

<http://undergrad.pbsci.ucsc.edu/programs/chemistry/chembs-bioc-sample.html>

Biochemistry and Molecular Biology B.S.

See the biochemistry and molecular biology program description and major requirements.

Chemistry B.S. Degree with Environmental Chemistry Concentration

A concentration within the biology, chemistry and biochemistry, and Earth sciences degree programs, collectively identified as the environmental sciences program, is offered. Students will develop a core competence suitable for pursuing graduate work in the environmental chemistry area or in graduate environmental sciences programs.

Lower-Division Requirements

General Chemistry: Chemistry 1A, 1B/M, and 1C/N

Introductory Biology: Molecular, Cell, and Developmental Biology (BIOL) 20A, and Ecology and Evolutionary Biology (BIOE) 20B

Geology: Earth Sciences 20/L, 10/L, or 5/L

Environmental Policy and Economics: Environmental Studies 25

Calculus: Mathematics 11A-B and 22; or 19A-B and 22

Physics: Physics 5A/L, 5B/M, and 5C/N; or 6A/L, 6B/M, and 6C/N

Upper-Division Requirements

Environmental Toxicology: Microbiology and Environmental Toxicology 101 or 102

Biochemical Structures, Reactions, and Energetics: Chemistry 103

Organic Chemistry: Chemistry 108A/L, 108B/M

Instrumental Analysis: Chemistry 122

Inorganic Chemistry: Chemistry 151A/L

Physical Chemistry: Chemistry 163A 163B, 164A, and 164B

Earth Sciences: Earth Sciences 110B/M

Ocean Sciences: Ocean Sciences 120 or 220

One of the following laboratory courses:

Chemistry 146A, *Advanced Laboratory in Organic Chemistry*

Chemistry 146B, *Advanced Laboratory in Inorganic Chemistry*

Students currently conducting senior thesis research are required to choose an advanced laboratory in the Chemistry 146-series that is outside their research area.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) Requirement. The DC Requirement in chemistry with an environmental chemistry concentration is satisfied by completing Chemistry 151L, *Inorganic Chemistry Laboratory*, and either Chemistry 146A, 146B, or 146C.

Chemistry Major B.S. with Environmental Chemistry Planner

<http://undergrad.pbsci.ucsc.edu/programs/chemistry/chembs-envr-sample.html>

Comprehensive Requirement

The comprehensive requirement is a part of all UCSC degrees. In the Department of Chemistry and Biochemistry, there are two options for satisfying this requirement:

Senior thesis: A senior research project based on original experimental or theoretical research (Chemistry 195A-B-C). At the conclusion of the project, the student submits a satisfactory formal research paper to the faculty sponsor. Students arrange for a faculty sponsor by consulting with a relevant faculty member within the chemistry and biochemistry or the biochemistry and molecular biology major programs. In some cases, faculty outside these major programs (for example, in biology, ocean sciences, microbiology and environmental toxicology, or Earth sciences) may be an appropriate sponsor. Students who select a sponsor outside the chemistry or the biochemistry and molecular biology major programs should have the title and description of the proposed thesis reviewed by the Chemistry and Biochemistry Department undergraduate faculty adviser. Students, usually working in the laboratory of the faculty sponsor, acquire experimental and/or theoretical research experience and skills in the laboratory as well as instruction in the writing of a research paper. Students are expected to make satisfactory academic progress and be in good academic standing while they take Chemistry 195 courses. Students who achieve excellence in both research and thesis may be awarded honors in the thesis upon graduation.

Senior essay: An essay based on literature research (Chemistry 199). After agreeing in advance on an appropriate topic of interest and a format, the student submits a satisfactory essay on the topic. Students arrange for a faculty sponsor by consulting with a relevant faculty member within the chemistry and biochemistry major program. In some cases, faculty outside these major programs (for example, in biology, ocean sciences, microbiology and environmental toxicology, or Earth sciences) may be an appropriate sponsor. Students who select a sponsor outside the chemistry and biochemistry major program should have the title and description of the proposed essay reviewed by the Chemistry and Biochemistry Department undergraduate faculty adviser. Students acquire experience and skills in scientific literature research as well as in the writing of a research paper.

Requirements for the Minor

The course requirements for the minor, including electives, are the same as for the B.A. degree, with the exclusion of Chemistry 146A, 146B, 146C, 151A/151L, 164A, and 164B. The minor has no senior comprehensive requirement.

Chemistry Minor Planner

Chemistry Major Disqualification Policy

The Chemistry and Biochemistry Department's major disqualification policy is intended to encourage students to take their performance seriously and to make a strong effort to pass the lower-division and beginning upper-division courses.

Students who receive more than one No Pass, D, and/or F in any combination of the following requirements will not be permitted to pursue any of the chemistry degrees:

Chemistry 1A, General Chemistry

Chemistry 1B, General Chemistry

Chemistry 1C, General Chemistry

Chemistry 108A, Organic Chemistry

Chemistry 108B, Organic Chemistry

Chemistry 112A, Organic Chemistry

Chemistry 112B, Organic Chemistry

Chemistry 112C, Organic Chemistry

Chemistry 163A, Physical Chemistry

Chemistry 163B, Physical Chemistry

Mathematics 11A, Calculus with Applications

Mathematics 11B, Calculus with Applications

Mathematics 19A, Calculus for Science, Engineering, and Mathematics

Mathematics 19B, Calculus for Science, Engineering, and Mathematics

Mathematics 22, Introduction to Calculus of Several Variables

Physics 5A, Introduction to Physics

Physics 5B, Introduction to Physics

Physics 5C, Introduction to Physics

Physics 6A, Introductory Physics

Physics 6B, Introductory Physics

Physics 6C, Introductory Physics

Students may appeal their disqualification within the appeal period by writing a letter to the undergraduate faculty adviser. This appeal must be submitted to the advising office no later than 15 days from the date the disqualification notification was mailed. The advising office will subsequently notify the student and the college of the decision no later than 15 days after the submission of the appeal.

A student who has been disqualified from the major may, no earlier than three months from the date of the disqualification, petition to be reinstated. This application will be considered only if there is substantial new evidence that the student is capable of making normal progress in the major.

Advising

The chemistry and biochemistry adviser provides counsel to undergraduate majors. Students are encouraged to declare their major at an early date so that advising and planning can commence. For assistance with advising, please refer to the Physical and Biological Sciences Undergraduate Affairs web site at <http://undergrad.pbsci.ucsc.edu/>.

Prerequisites

Students who wish to obtain permission to take a course without having completed the listed prerequisites must make prior arrangements with the instructor. Courses are designed for students who have met all the prerequisites; those who have not are at a disadvantage.

Materials Fee

Chemistry students should be aware of the materials fee required for some courses. The fee is billed to the student's account for specific laboratory materials purchased by the Chemistry and Biochemistry Department through the university. Fees generally range from \$15 to \$50 per course. Students may incur additional expense purchasing individual supplies.

High School Preparation

Prospective chemistry majors are encouraged to get a solid foundation in high school mathematics; familiarity with algebra, logarithms, trigonometry, and analytic geometry is particularly recommended. Students who take chemistry at UCSC begin with Chemistry 1A or 1B, both of which require a strong background in high school chemistry. Students without a high school chemistry background may begin with Chemistry 1P, Essentials of Chemistry. Starting with Chemistry 1P does not cause impediment to progress in the major. To assess your level of preparation in chemistry, please see the Chemistry Self-Assessment examination on the Undergraduate Affairs web site at <http://undergrad.pbsci.ucsc.edu/>.

Transfer Students

The Chemistry and Biochemistry Department welcomes applications from community college students. Students who intend to transfer from other institutions, particularly community colleges, should complete one full year of general chemistry, organic chemistry, calculus, and physics prior to transfer. If the institution offers a physics course based on calculus as well as a non-calculus-based course, the student should take the calculus-based course. Prospective transfer students should consult the Physical and Biological Sciences Undergraduate Affairs web site for information on preparing to transfer to UCSC at <http://undergrad.pbsci.ucsc.edu/>.

Program for Students of the Health Sciences

Students intending to enter medical, dental, or another health science professional school can satisfy entrance requirements with a major program in chemistry supplemented with further courses, especially in biology, as specified by the admissions requirements of the school where they intend to apply. Students are urged to contact the Career Center for assistance with the application process.

American Chemical Society Certification

The American Chemical Society (ACS) recognizes certain undergraduate programs, including those of UCSC, to be of such quality as to entitle graduates to become ACS members immediately upon graduation. Graduates must be individually certified to the ACS by the Chemistry and Biochemistry Department chair if they have satisfactorily completed an approved program of study. ACS certification standards are rigorous; a

graduate who has met them carries a distinction that is well recognized in the profession. Broadly speaking, ACS certification requirements are satisfied by completing a ~~B.S. B.S.~~ major in chemistry (not including ~~the concentrations in~~ biochemistry ~~concentration or~~ ~~environmental chemistry~~) at UCSC, including Chemistry 122 as an elective. A year of study in a major modern foreign language (preferably German) is recommended. More information is available from the Chemistry and Biochemistry undergraduate adviser.

Honors in the Major

~~The chemistry h~~ Honors in the ~~Major Chemistry major program~~ requires at least a 3.5 grade point average (GPA) in all chemistry courses. Highest honors requires at least a 3.8 GPA in all chemistry courses for the major.

Graduate Programs

The Chemistry and Biochemistry Department offers three graduate degrees: the doctor of philosophy (Ph.D.), a thesis master of science (M.S.), and a coursework M.S. The Ph.D. and thesis M.S. programs are designed to help students develop into independent scholars while pursuing the excitement of scientific research in a personal, supportive environment. Both the Ph.D. and the research M.S. programs prepare students for careers in academia, industry, government laboratories, and other settings requiring an advanced education in chemistry and related disciplines. The coursework M.S. does not require research and is suited to teachers and others wishing to update or broaden their chemical expertise. Approximately 90 graduate students are currently enrolled in the graduate program.

Within the Ph.D. program students have the flexibility to design a course of study focused on personal research interests, and at the same time are expected to maintain the high intellectual standards associated with the doctoral degree. Research options include biochemistry, physical chemistry, biophysical chemistry, inorganic chemistry, bioinorganic chemistry, materials, organic chemistry, and bio-organic chemistry. Collaborative research efforts are encouraged, both intra- and inter-departmentally. The interdisciplinary Center for Biomolecular Science and Engineering emphasizes bioinformatics, nanotechnology, and computational approaches to chemistry. Biochemists join geneticists, computer scientists, and biologists in the Center for the Molecular Biology of RNA. Productive interactions have developed between the Chemistry and Biochemistry Department, the ~~departments~~ Department of Microbiology and Environmental Toxicology, ~~and the Department of~~ Molecular, Cell and Developmental Biology, and the School of Engineering. Several Chemistry and Biochemistry faculty members also participate in the new graduate Program in Biomedical Sciences and Engineering.

Before beginning coursework, Ph.D. students take attainment examinations to confirm their level of preparation in four areas: organic, inorganic, physical, and biochemistry. First-year students take Chemistry 292 and 296, and select a research adviser and research committee in spring quarter. In the first two years, students enroll in core courses and electives related to their specialization. Core courses are Chemistry 200A, B, and C for biochemistry and biophysical chemistry; Chemistry 234 and 256A, B, or C for inorganic and bioinorganic chemistry; the Chemistry 240-series for organic chemistry; and Chemistry 261, 262, and 263 for physical chemistry. Organic studies students must pass four cumulative examinations based on assigned reading in current research journals. The Ph.D. candidate's research committee meets formally with the student to evaluate research progress at least once a year. Students are expected to finish all Ph.D. requirements in five to six years.

M.S. students and Ph.D. students who have not advanced to candidacy attend a weekly seminar (Chemistry 291A, B, C, or D). Speakers from UCSC, other universities, and research labs expose students to advances at the frontiers of chemical research, offering

the opportunity for personal contact with leading scientists.

Teaching assistantships provide both financial support and the opportunity to put into practice the required pedagogical training offered in Chemistry 296 (presentation techniques, discussion strategies, laboratory teaching skills, laboratory safety procedures, and time management). Advanced doctoral students can also be supported as graduate-student researchers.

Ph.D. Requirements

Pass all four attainment examinations and meet any deficiencies as directed by spring of the first year.

Take Chemistry 292 and 296 in the fall of the first year.

Take Chemistry 291A, B, C, or D, *Research Seminar*, every quarter until advanced to candidacy.

Organic studies students must pass four out of 12 "cumulative examinations" based on reading lists of current published organic research.

Select an adviser and nominate members of the research committee in the spring of the first year.

Present a second-year seminar on a topic of current interest in published research outside the candidate's own research area.

Serve as a teaching assistant (TA) during at least three quarters in the first two years, before attempting the Ph.D. oral qualifying examination.

Pass five lecture courses (25 credits): at least four at the graduate (200) level and at least four in chemistry and biochemistry (with departmental approval, up to two courses may be at upper-division undergraduate level).

In the fall of the third year, pass the Ph.D. oral qualifying examination before an examining committee consisting of three research committee members plus one outside member approved by the graduate dean. The Ph.D. candidate presents (a) a summary of current research results and possible future direction, and (b) an original research proposal on a chemistry or biochemistry topic either related or unrelated to the candidate's current thesis research.

Nominate members of the Dissertation Reading Committee (DRC).

Submit a research prospectus (outline of dissertation chapters) in the spring of the fourth year, and meet with the DRC to review research progress.

Submit an updated research prospectus (outline of dissertation chapters) to the DRC in the winter of the fifth year.

Submit written dissertation based on original research.

Present dissertation seminar.

The average time to degree is five and one-quarter years. Ph.D. candidates are expected to complete research and write the dissertation within nine quarters after advancing to candidacy following a successful Ph.D. oral qualifying examination. Financial support is not available after 18 quarters in the graduate program.

For both Ph.D. and M.S. students, the standard course load is three courses per quarter, or a total of 15 credits per quarter.

M.S. Requirements: Research Thesis Path

Pass all four attainment examinations in the first year.

Take Chemistry 292.

Take Chemistry 296 if working as teaching assistant (TA) at any time.

Take Chemistry 291A, B, C, or D each quarter.

Select an adviser and nominate members of the research committee in the first year.

Pass at least five Chemistry and Biochemistry lecture courses, of which at least three must be graduate (200) level.

Conduct original laboratory research.

Capstone requirement: write a thesis based on original research.

M.S. Requirements: Coursework Path

Pass all four attainment examinations in the first year.

Take Chemistry 296 if enrolled as teaching assistant (TA) at any time.

Take Chemistry 291A, B, C, or D each quarter.

Pass seven chemistry lecture courses (at least four at the graduate (200) level) from three of the four sub-disciplines: organic, inorganic, physical chemistry, and biochemistry.

Capstone requirement: present a seminar on a topic of current interest in published research.

Faculty and Professional Interests

Professor

ROGER W. ANDERSON

Experiments and theory for low temperature, light-activated chemical vapor deposition, achromatic focusing of molecules with external electric fields, discrete orthogonal polynomials in molecular collision theory, fractal geometry structural measures for large molecules

FRANK C. ANDREWS, Emeritus**ILAN BENJAMIN**

Theoretical chemistry, molecular dynamics of chemical reactions in liquids and at interfaces

CLAUDE F. BERNASCONI

Kinetic studies of fast reactions, organic reaction mechanisms, acid-base catalysis, proton transfers, nucleophilic reactions, organometallic reactions, ab initio molecular orbital calculations

ROBERTO A. BOGOMOLNI

Biophysical chemistry, photobiology, light energy conversion and signal transduction in biological systems

REBECCA BRASLAU

Synthetic organic chemistry: new synthetic methodologies using free radicals; nitroxides, nitroxide mediated "living" polymerizations; design and functionalization of tailored polymers for biomedical applications and nanotechnology, profluorescent nitroxides as sensors

JOSEPH F. BUNNETT, Emeritus**SHAOWEI CHEN**

Synthesis, characterization, and manipulation of novel functional nanomaterials (metals and semiconductors); surface engineering of nanoparticles; nanoscale electron transfer; applications in fuel cells, photocatalysis, photovoltaics, and nano optoelectronics

PHILIP O. CREWS

Marine natural products chemistry, bioorganic chemistry, organic structural analysis by NMR, natural products of marine macro- and microorganisms

ÓLÓF EINARSDÓTTIR

Time-resolved spectroscopy; biophysics and bioenergetics; heme-copper oxidases; electron transfer and ligand binding; application of photolabile NO and O₂ donors; molecular dynamics simulations of ligand access channels in heme-copper oxidases

THEODORE R. HOLMAN

Biochemistry and bioinorganic chemistry; lipoxygenase enzymology, protein engineering, inhibitor discovery, computer inhibitor design, mass spectroscopy, electron paramagnetic resonance

DAVID S. KLIGER, Emeritus

Time-resolved laser spectroscopy, biophysics, studies of visual transduction, protein function, and protein folding

JOSEPH P. KONOPELSKI

Synthetic organic chemistry; heterocyclic chemistry, bioorganic chemistry

PRADIP MASCHARAK

Bioinorganic chemistry, design of antitumor drugs, modeling of active sites of metalloenzymes, design of catalysts for hydrocarbon oxidation, studies on intermediates in non-heme oxygenase chemistry, design of NO-donors for photodynamic therapy

GLENN L. MILLHAUSER

Electron spin resonance; nuclear magnetic resonance, melanocortin receptor signaling, agouti proteins, prions, peptide synthesis

THOMAS W. SCHLEICH

Biomedical magnetic resonance spectroscopy, magnetic resonance imaging, nuclear magnetic resonance spectroscopy, biophysical chemistry

WILLIAM G. SCOTT

Structure and function of RNA, proteins, and their complexes, origin of life

BAKTHAN SINGARAM

Organic synthesis, organoborane chemistry, heterocyclic chemistry, organometallic chemistry, asymmetric synthesis, biosensors, and natural products chemistry

EUGENE SWITKES

Quantum theory applied to problems in chemistry and biochemistry; visual information processing, spatial vision, color vision

STANLEY M. WILLIAMSON, Emeritus

W. TODD WIPKE, Emeritus

Molecular engineering for drug discovery, computational high-throughput screen QSAR; virtual library design; improving cancer chemotherapy

JIN Z. ZHANG

Design, synthesis, characterization, and application of nanomaterials, including semiconductors, metals, and metal oxides; ultrafast dynamics and laser spectroscopy; cancer diagnosis and therapy; solar energy conversion; surface-enhanced Raman spectroscopy (SERS)

Associate Professor

R. SCOTT LOKEY

Organic chemistry; combinatorial synthesis, biotechnology, molecular cell biology

SCOTT R. OLIVER

Materials chemistry: nanoporous crystals for environmental cleanup, catalysis and biomaterials; polymer templating of metal oxides for solar cells and water splitting

Assistant Professor

YAT LI

Experimental physical chemistry, materials chemistry, nanomaterials, nanoscale photonics and electronics, energy conversion

ROGER G. LININGTON

Marine natural products; drugs for neglected diseases; chemical biology; chemical probes

SETH M. RUBIN

Biomolecular mechanisms of cell-cycle regulation and cancer; structural biology and biochemistry; macromolecular x-ray crystallography; nuclear magnetic resonance

MICHAEL STONE

Molecular basis of telomere length and telomerase-related diseases; biophysical characterization of nucleic acid-associated molecular motors; development of novel approaches for imaging enzymes in cells

Lecturer

DANIEL PALLEROS

RANDA ROLAND

Professor

KENNETH W. BRULAND (Ocean Sciences)

Chemical oceanography, biogeochemistry of trace metals and radionuclides, aquatic chemistry, geochemistry

A. RUSSELL FLEGAL (Microbiology and Environmental Toxicology)

Anthropogenic perturbations of biogeochemical cycles, applications of isotopic tracers in anthropology and archaeology

DONALD R. SMITH (Microbiology and Environmental Toxicology)

Neurotoxicity, cellular and organismal responses to environmental toxins

MANEL CAMPS (Microbiology and Environmental Toxicology)

Molecular mechanisms of reactive DNA methylation toxicity

PHILLIP BERMAN (Biomolecular Engineering)

Drug development vaccines, AIDS, monoclonal antibody therapeutics, immunology, molecular cell/biology, recombinant protein production (commercial scale)

HOLGER SCHMIDT (Electrical Engineering)

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses

1A. General Chemistry. F,W,S

First quarter of an integrated study of general chemistry. Covers a range of topics including the atomic structure of matter; molecules; chemical reactions; acids and bases; gases; and equilibria in the gas and liquid phase. Lecture: 3-1/2 hours; discussion: 1-1/4 hours. Students expected to use algebra to solve problems. Prerequisite(s): Course 1P or strong high school level chemistry equivalent to 1P is strongly recommended; taking the online chemistry self-assessment exam is strongly recommended. . (General Education Code(s): SI, IN, Q.) *T. Holman, G. Millhauser, T. Schleich, I. Benjamin*

1B. General Chemistry. F,W,S

Second quarter of an integrated study of general chemistry. Coverage includes quantum mechanics; the hydrogen atom; many-electron atoms and chemical periodicity; elementary covalent bonding; transition metals; and chemical kinetics. Lecture: 3-1/2 hours, discussion: 1-1/4 hours. Prerequisite(s): Course 1P or strong high school level chemistry equivalent to 1P is strongly recommended; taking the online chemistry self-assessment exam is strongly recommended. Concurrent enrollment in course 1M is recommended. . (General Education Code(s): IN, Q.) *E. Switkes, W. Scott, R. Bogomolni*

1C. General Chemistry. F,W,S

Third quarter of an integrated study of general chemistry. Coverage includes thermodynamics; oxidation-reduction and electrochemistry; liquids and solids; intermolecular forces and solutions, including colligative properties; and nuclear chemistry. Lecture: 3-1/2 hours; discussion: 1-1/4 hours. Prerequisite(s): course 1A. Concurrent enrollment in course 1N is required. (General Education Code(s): IN, Q.) *R. Roland, R. Bogomolni, J. Zhang*

1M. General Chemistry Laboratory (2 credits). F,W,S

Laboratory sequence illustrating topics covered in courses 1B and 1C and important experimental techniques. Laboratory: 3 hours; lecture: 1-1/4 hours. Students are billed a materials fee. Prerequisite(s): Previous or concurrent enrollment in course 1B is required. *R. Roland, The Staff*

1N. General Chemistry Laboratory (2 credits). F,W,S

Laboratory sequence illustrating topics covered in courses 1B-1C, respectively, and important experimental techniques. Laboratory: 3 hours; lecture: 1-1/4 hours. Students are billed a materials fee. Prerequisite(s): Concurrent enrollment in course 1C is required. *R. Roland, The Staff*

1P. Chemistry Essentials (3 credits). F

Introduction to basic concepts required for the Chemistry 1 series. This course is for students who have little background in high school chemistry or equivalent. Covers elementary topics including units, conversions, the mole, chemical reactions, and balancing. *R. Roland*

80A. Chemistry of Nutrition: Concepts and Controversy. *

Description of the relevant chemical and physical properties of the main classes of foods, vitamins, and minerals. Discussion of their digestion, sources, metabolism, recommended daily allowances, deficiencies, and how to optimize an overall healthy diet using scientific methods. Prerequisite(s): High school chemistry course recommended. (General Education Code(s): SI, T-2 Natural Sciences.) *T. Johnson*

80H. Introduction to Wines and Wine Chemistry. *

Introduction to scientific aspects of winemaking and wine sensory evaluation. Overview of wines emphasizing chemical and biological principles appropriate for both non-science and science students. Aspects of wine presented including history, viticulture, fermentation, winery operations, and physiology of wine consumption. Students are billed a materials fee. (General Education Code(s): T2-Natural Sciences.) *P. Crews*

80L. Introduction to Chemistry of Wines and Musts (2 credits). *

An integrated course exploring elementary aspects of wine evaluation and modern winemaking. Topics: effects of grape varieties, vineyard locations, production techniques, aging practices on

wine quality, and winemaking. Survey of commercial wine styles and lab methods of wine component analysis provide insights on how fine wines are made and analyzed. Students are billed a materials fee. Prerequisite(s): concurrent enrollment in or completion of course 80H. Enrollment limited to 32. *P. Crews*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses

103. Biochemical Structures, Reactions, and Energetics. S

Introduces biochemical molecules that compose all living organisms. Focus on structure and function relationships in chemical components of cells, primary enzyme-catalyzed reactions of metabolism. Chemical principles of cell function at molecular level; molecular structure of nucleic acids discussed. Prerequisite(s): courses 1B and 1C; 108A-B or 112A-B-C or 7. *M. Stone*

108A. Organic Chemistry. F,W

An integrated study of fundamental organic chemistry, with emphasis on materials especially relevant to the biological sciences. Students with credit for course 112A cannot receive credit for course 108A. Lecture: 3-1/2 hours, discussion: 1-1/4 hours. Prerequisite(s): courses 1B, 1C, and 1N. *R. Linington, R. Braslau*

108B. Organic Chemistry. W,S

An integrated study of fundamental organic chemistry, with emphasis on materials especially relevant to the biological sciences. Students with credit for 112B cannot receive credit for 108B. Lecture: 3-1/2 hours, discussion: 1-1/4 hours. Prerequisite(s): course 108A or 112A. *P. Crews, B. Singaram*

108C. Organic Chemistry (3 credits). S

Integrated study of fundamental organic chemistry, with emphasis on materials especially relevant to biological sciences. Lecture: 2 hours, 20 minutes. Discussion: 1 hour. Prerequisite(s): course 108B or equivalent. *D. Palleros*

108L. Organic Chemistry Laboratory (2 credits). F,W

Laboratory experience in organic chemistry associated with course 108A. Designed to introduce the student to the many techniques associated with organic chemistry while affording an opportunity to explore the concepts discussed in the lecture material. Laboratory: 4 hours, lecture: 1-1/4 hours. Students are billed a materials fee. Prerequisite(s): courses 1C/N and previous or concurrent enrollment in 108A is required. *D. Palleros*

108M. Organic Chemistry Laboratory (2 credits). W,S

Laboratory experience in organic chemistry associated with course 108B. Designed to introduce the student to the many techniques associated with organic chemistry while affording an opportunity to explore the concepts discussed in the lecture material. Laboratory: 4 hours, lecture: 1-1/4 hours. Students are billed a materials fee. Prerequisite(s): courses 108A/L and previous or concurrent enrollment in 108B is required. *D. Palleros*

112A. Organic Chemistry. F

An integrated study of fundamental organic chemistry, including principles, descriptive chemistry, synthetic methods, reaction mechanisms, and compounds of biological interest. These courses are coordinated with 112L-M-N respectively and are to be taken concurrently with them. Students with credit in course 108A cannot receive credit for 112A. Lecture: 3-1/2 hours; optional discussion section: 1-1/4 hours. Prerequisite(s): courses 1B, 1C, and 1N. Concurrent enrollment in course 112L is required. Enrollment limited to 80. *C. Bernasconi*

112B. Organic Chemistry. W

An integrated study of fundamental organic chemistry, including principles, descriptive chemistry, synthetic methods, reaction mechanisms, and compounds of biological interest. These courses are coordinated with 112L-M-N respectively and are to be taken concurrently with them. Students with credit in 108B cannot receive credit for 112B. Lecture: 3-1/2 hours; optional discussion section: 1-1/4 hours. Prerequisite(s): course 112A/L. Concurrent enrollment in course 112M is required. Enrollment limited to 80. *C. Bernasconi*

112C. Organic Chemistry. S

An integrated study of fundamental organic chemistry, including principles, descriptive chemistry, synthetic methods, reaction mechanisms, and compounds of biological interest. These courses are coordinated with 112L-M-N respectively and are to be taken concurrently with them. Lecture: 3-1/2 hours; optional discussion section: 1-1/4 hours. Prerequisite(s): courses 112B/M. Concurrent enrollment in course 112N required. Enrollment limited to 80. *R. Lokey*

112L. Organic Chemistry Laboratory (2 credits). F

Laboratory experience in organic chemistry and associated principles. Experiments involve the preparation, purification, characterization, and identification of organic compounds and make use of modern as well as classical techniques. Lecture: 1-1/2 hours. Laboratory: 4 hours. Students are billed a materials fee. Prerequisite(s): courses 1C/N. Concurrent enrollment in course 112A

required. Enrollment limited to 80. *D. Palleros*

112M. Organic Chemistry Laboratory (2 credits). W

Laboratory experience in organic chemistry and associated principles. Experiments involve the preparation, purification, characterization, and identification of organic compounds and make use of modern as well as classical techniques. Lecture: 1-1/2 hours. Laboratory: 4 hours. Students are billed a materials fee. Prerequisite(s): course 112A/L. Concurrent enrollment in course 112B is required. Enrollment limited to 80. *D. Palleros*

112N. Organic Chemistry Laboratory (2 credits). S

Laboratory experience in organic chemistry and associated principles. Experiments involve the preparation, purification, characterization, and identification of organic compounds and make use of modern as well as classical techniques. Lecture: 1-1/4 hours. Laboratory: 8 hours. Students are billed a materials fee. Prerequisite(s): courses 112B/M. Concurrent enrollment in course 112C required. Enrollment limited to 80. *D. Palleros*

122. Principles of Instrumental Analysis. F

A laboratory course designed to develop familiarity with techniques and instrumentation used in analytical chemistry, emphasizing determination of trace inorganic species. Primary emphasis on applications utilizing the absorption or emission of electromagnetic radiation and on voltammetry. Topics include molecular UV-visible absorption and fluorescence spectrometry; atomic absorption, emission and fluorescence spectrometry; and various forms of voltammetry. Lecture: 2 hours; laboratory: 8 hours. Students are billed a materials fee. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, course 108B or 112C. (General Education Code(s): W.) *D. Smith*

143. Organic Chemical Structure and Reactions. F

Advanced topics such as the chemistry of terpenes, steroids, synthetic polymers, alkaloids, reactive intermediates, and reaction mechanisms are treated. Lecture: 4 hours. Prerequisite(s): course 108B or 112C. *B. Singaram*

146A. Advanced Laboratory in Organic Chemistry (3 credits). F

Exposes students to advanced laboratory techniques in organic chemistry. Designed for students without previous research background in organic chemistry. Experiments carry a research-like format and cover the areas of natural products and reaction chemistry. Modern methods of organic analysis are emphasized including chromatographic methods and organic structure determination by spectroscopy. Laboratory: 8 hours. Students billed a materials fee. (General Education Code(s): W satisfied by taking this course and courses 151L and 164B.) Prerequisite(s): courses 108B/M or 112C/N; satisfaction of Entry Level Writing and Composition requirements.; enrollment restricted to chemistry majors. Enrollment limited to 16. *R. Lokey*

146B. Advanced Laboratory in Inorganic Chemistry (3 credits). S

Designed to expose students to advanced synthetic and spectroscopic techniques in inorganic chemistry. Examples include anaerobic manipulations, characterization of inorganic materials through spectral assignments and synthesis of coordination and organometallic complexes. Lecture: 1-1/4 hours; laboratory: 8 hours. Students billed a materials fee. (General Education Code(s): W satisfied by taking this course and courses 151L and 164B.) Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements; courses 108B/M or 112C/N; 163A. *T. Holman*

146C. Advanced Laboratory in Physical Chemistry (3 credits). S

Provides advanced laboratory experience in the areas of nanomaterial synthesis and characterization; spectroscopy; fabrication and measurements energy-conversion devices; and soft lithography techniques and instrumentation. Lecture: 1-1/4 hours; laboratory: 4 hours. Students are billed a materials fee. (General Education Code(s): W satisfied by taking this course and courses 151L and 164B.) Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements; course 163B and 164B. Enrollment limited to 20. *S. Chen*

151A. Chemistry of Metals. S

Fundamental topics of inorganic chemistry are presented at the level of the standard texts of field. Special emphasis is given to maintain breadth in the areas of metallic, nonmetallic, and biological aspects of inorganic chemistry. Lecture: 3-1/2 hours; discussion: 1-1/4 hours. Prerequisite(s): courses 108B/M or 112C/N; 163A. Concurrent enrollment in course 151L required. *S. Oliver*

151B. Chemistry of the Main Group Elements. W

Fundamental aspects of inorganic chemistry of main group elements are discussed. The emphasis is placed on the chemistry of nontransition elements including noble gases and halogens. In addition, students are exposed to the concepts of extended structures, new materials, and solid-state chemistry. Lecture: 3-3/4 hours. Prerequisite(s): courses 108B/M or 112C/N, and 163A. Recommended for chemistry majors. *P. Mascharak*

151L. Inorganic Chemistry Laboratory (2 credits). S

Laboratory experience in inorganic chemistry. Experiments involve the preparation, purification, and characterization of inorganic compounds. In addition, experiments are designed to illustrate fundamental principles in inorganic chemistry and are coordinated with lectures in course 151A. Laboratory: 4 hours per week. Laboratory lecture: 1 1/4 hours per week. Students are billed a materials fee. (General Education Code(s): W satisfied by taking this course and courses 164B and either course 146A, 146B, or 146C.) Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements; courses 108B/M or 112C/N; 163A. Concurrent enrollment in course 151A required. *S. Oliver*

156C. Advanced Topics in Inorganic Chemistry. F

Advanced topics in inorganic chemistry and an introduction to solid state chemistry. Synthesis and structure of materials discussed as well as their influence on properties for modern devices and applications. Recent developments in area of material science also explored. Taught in conjunction with course 256C. Prerequisite(s): course 151A. Enrollment restricted to seniors. *S. Oliver*

163A. Quantum Mechanics and Basic Spectroscopy. F

A detailed introduction to quantum theory and the application of wave mechanics to problems of atomic structure, bonding in molecules, and fundamentals of spectroscopy. Prerequisite(s): courses 1B and 1C, Physics 5A-B-C or 6A-B-C and Mathematics 22 or 23B. Physics 6C can be taken concurrently. *Y. Li*

163B. Chemical Thermodynamics. W

Fundamentals of thermodynamics and applications to chemical and biochemical equilibria. (Formerly Thermodynamics and Kinetic Theory.) Prerequisite(s): courses 1B and 1C, Physics 6A or 5A, and Math 22 or 23B. *E. Switkes*

163C. Kinetic Theory and Reaction Kinetics, Statistical Mechanics, Spectroscopic Applications. S

Introduction to statistical mechanics, kinetic theory, and reaction kinetics and topics in spectroscopy. Prerequisite(s): courses 163A and 163B. *G. Millhauser*

164. Physical Chemistry Laboratory. W

Provides laboratory experience and data analysis in the areas of thermodynamics, kinetics, and spectroscopy. Lecture: 1.75 hours; experimental laboratory : 4 hours; computer laboratory : 2 hours. (Formerly courses 164A and 164B.) Prerequisite(s): courses 1B and 1C; and Physics 5A and Physics 5B and Physics 5C, or Physics 6A and Physics 6B and Physics 6C; and Mathematics 22 or Mathematics 23B. *S. Chen*

170. Frontiers in Drug Action and Discovery. S

Lectures and case studies explore principles and approaches in drug discovery and development, emphasizing concepts in pharmacology; medicinal chemistry; and genomics- and bioinformatics-based approaches to drug discovery to illustrate pathways from discovery through development for clinical use. Cannot receive credit for this course and course 270. (Also offered as Biomolecular Engineering 170. Students cannot receive credit for both courses.) Prerequisite(s): Biology 100 and Biology 100K; or Chemistry 108; or Biochemistry 100 A, 100B, 100C, and Biology 100K. Biology 110 and 130/L or 131/L are recommended. Enrollment restricted to juniors and seniors. *D. Smith, T. Holman, M. Camps, R. Linington, P. Berman*

182. ACE Program Service Learning (2 credits). F

Students participate in training and development to co-facilitate collaborative learning in ACE chemistry discussion sections and midterm/exam review sessions. Students are role models for students pursuing science- and math-intensive majors. Prerequisite(s): Prior participation in ACE; good academic standing; no non-passing grades in prior quarter. Enrollment restricted to sophomores, juniors, and seniors. Enrollment limited to 10. (General Education Code(s): PR-S.) *J. Konopelski*

195A. Senior Research. F

An individually supervised course with emphasis on independent research. Multiple-term course extending over two or three quarters; the grade and evaluation submitted for the final quarter apply to all previous quarters. Students submit petition to sponsoring agency; may not be repeated for credit. Prerequisite(s): satisfaction of the Entry Level and Composition requirements. (General Education Code(s): W satisfied by taking two of the following: courses 195A, 195B, and 195C.) (Formerly course 180A.) *The Staff*

195B. Senior Research. W

An individually supervised course with emphasis on independent research. Multiple-term course extending over two or three quarters; the grade and evaluation submitted for the final quarter apply to all previous quarters. Students submit petition to sponsoring agency; may not be repeated for credit. Prerequisite(s): satisfaction of the Entry Level and Composition requirements. (General Education Code(s): W satisfied by taking two of the following: courses 195A, 195B, and 195C.) (Formerly course 180B.) *The Staff*

195C. Senior Research. S

An individually supervised course with emphasis on independent research. Multiple-term course extending over two or three quarters; the grade and evaluation submitted for the final quarter apply to all previous quarters. Students submit petition to sponsoring agency; may not be repeated for credit. Prerequisite(s): satisfaction of the Entry Level and Composition requirements. (General Education Code(s): W satisfied by taking two of the following: courses 195A, 195B, and 195C.) (Formerly course 180C.) *The Staff*

199. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

200A. Advanced Biochemistry: Biophysical Methods. F

An introduction to the theory, principles, and practical application of biophysical methods to the study of biomolecules, especially proteins and nucleic acids. Emphasis on spectroscopic techniques. Topics include magnetic resonance, optical spectroscopy, fast reaction techniques, crystallography, and mass spectrometry. *The Staff*

200B. Advanced Biochemistry: Protein Structure and Function. W

A detailed discussion of protein chemistry, ranging from the structure, thermodynamics, and folding of proteins to the relationship between structure and function, and encompassing the methods used to determine such information. *M. Stone*

200C. Advanced Biochemistry: Structure and Function of Nucleic Acids. S

A variety of contemporary problems in biochemistry and molecular biology are investigated in a detailed manner. Lecture: 3-1/2 hours. *W. Scott*

231. Enzyme Mechanisms and Kinetics. *

A study of enzyme kinetics, mechanisms, and factors involved in enzymic catalysis. Lecture: 3-1/2 hours. Offered in alternate academic years. *W. Scott*

234. Bioinorganic Chemistry. S

The role played by transition metals in biological systems is discussed through application of the principles of coordination chemistry and inorganic spectroscopy. Topics include metalloproteins involved in oxygen binding, iron storage, biological redox reactions, and nitrogen fixation, as well as metal complexes of nucleic acids. Lecture: 4 hours. Prerequisite(s): courses 151A/L, 163A; and Biochemistry and Molecular Biology 100A. *P. Mascharak*

238. Topics in Biophysical Chemistry. *

A discussion of the application of selected topics in biophysical chemistry to contemporary problems in biochemistry and molecular biology. Lecture: 3-1/2 hours. Offered in alternate academic years. *T. Schleich*

240A. Kinetics and Mechanisms of Organic Reactions (3 credits). S

Basic principles and methods of the kinetic study of reaction mechanisms are covered, including linear free energy relationships. Theories are examined concerning how reactions choose a mechanism. *C. Bernasconi*

240B. Chemistry and Biology of Drug Design and Discovery (3 credits). *

Covers topics related to the chemistry of drug action and methods of drug discovery, including combinatorial and medicinal chemistry, computer-assisted drug design, pharmacodynamics and pharmacokinetics, high-throughput screening, and the biology of drug-target interactions. (Formerly Combinatorial and High-Throughput Methods in Synthetic Chemistry.) Enrollment restricted to seniors and graduate students. *R. Lokey*

240C. Organic Structure Analysis from Spectra (3 credits). F

Determination of 2-D and 3-D structure and functionality of organic molecules from spectroscopic properties, including nuclear magnetic resonance, infrared, ultraviolet-visible and mass spectroscopy. *R. Linington*

240E. Modern Synthetic Methods (3 credits). F

An advanced study designed to provide the background and insight to enable the student to compare and contrast new reagents and reactions with existing methods. Prerequisite(s): course 143. *B. Singaram*

240F. Selectivity and Strategy in Organic Synthesis (3 credits). S

An advanced study on the use of chemoselectivity, regioselectivity, and stereoselectivity in organic transformations. Strategic planning in approaching the synthesis of complex molecules focuses primarily on retrosynthetic analysis and stereochemical control. Prerequisite(s): course 240E. *R. Braslau*

240G. Bioorganic Chemistry of Amino Acids and Peptides (3 credits). W

Chemistry of amino acids and secondary structure of amino acid polymers (peptides and proteins) discussed. Special emphasis placed on structure and function of the distinct amino acid side chain functionality as it contributes to structure and function. *J. Konopelski*

246. Advanced Topics in Organic Chemistry. *

A graduate course covering advanced topics in organic chemistry. Topics vary from year to year. *The Staff*

246A. Organic Reactions and Molecular Orbital Theory. *

Qualitative molecular orbital concepts, especially concerning aromaticity, orbital symmetry, and perturbation theory, and their application toward interpretation of reactivity and mechanism. Lecture: 3-1/2 hours. Prerequisite(s): courses 273 and 240A. Offered in alternate academic years. May be repeated for credit. *The Staff*

246B. Marine Organic Chemistry. *

A survey of organic natural products from marine sources. Organic chemical structural families

unique to marine organisms are outlined. Pathways of their synthesis and interconversions; their role in the marine environment; approaches to their analysis; the distribution of organics in seawater. Lecture: 3-1/2 hours. Prerequisite(s): courses 108B/M or 112C/N. Offered in alternate academic years. May be repeated for credit. *P. Crews*

246C. Computers and Information Processing in Chemistry. *

An introduction to digital computers and their applications in chemistry. Includes Monte Carlo, artificial intelligence, pattern recognition, modeling, simulation, and optimization problem-solving methods. Applications to include structural analysis, spectroscopy, organic synthesis, and kinetics. Lecture: 3-1/2 hours; laboratory: 1-1/2 hours. Offered in alternate academic years. May be repeated for credit. *The Staff*

246F. Organoboranes in Organic Synthesis. *

An introduction to organoborane chemistry and its applications to synthetic organic chemistry, including principles, synthetic methods, reaction mechanisms, and asymmetric synthesis. A variety of topics including allylboration, boron-enolates, and asymmetric reductions are discussed. Enrollment restricted to seniors and graduate students. Offered in alternate academic years. May be repeated for credit. *B. Singaram*

246G. Heterocyclic Chemistry. *

Advanced study of synthesis and reactions of heterocyclic organic compounds; particular emphasis on structures with important medicinal value from natural products or pharmaceutical research. Prerequisite(s): course 143 or approval of instructor. *J. Konopelski*

246H. Organic Free Radical Chemistry. *

Covers a range of topics including radical stabilization, rates of fundamental radical reactions, methods of radical generation, synthetic applications of free radicals, persistent radicals, and some aspects of free radicals in biology. Prerequisite(s): course 143 or permission of instructor. *R. Braslau*

246I. Advanced Mechanistic Chemistry and Solution Kinetics. *

Kinetic approach to selected topics in mechanistic chemistry with emphasis on structure-reactivity relationships in organic as well as inorganic and biochemical systems. Discussion of significance and treatment of kinetic data illustrated with examples from various branches of chemistry. Prerequisite(s): permission of instructor. *C. Bernasconi*

255. Biotechnology and Drug Development. W

Recommended for students interested in careers in the biopharmaceutical industry. Focuses on recombinant DNA technology and the drug-development process, including discovery research; preclinical testing; clinical trials; and regulatory review, as well as manufacturing and production considerations. Students may not receive credit for this course and Biomolecular Engineering 155 and Biology 179. (Also offered as Biomolecular Engineering 255. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. Enrollment limited to 15. *P. Berman*

256A. Advanced Topics in Inorganic Chemistry. *

Advanced topics in inorganic chemistry are presented. Topics covered vary from year to year, and are announced in advance. Possible topics include A) organometallic chemistry; B) structural methods in inorganic chemistry; C) solid-state chemistry. Prerequisite(s): courses 151A/L and 146B or graduate standing. *The Staff*

256B. Advanced Topics in Inorganic Chemistry. *

Advanced topics in inorganic chemistry are presented. Topics covered vary from year to year, and are announced in advance. Possible topics include A) organometallic chemistry; B) structural methods in inorganic chemistry; C) solid-state chemistry. Prerequisite(s): courses 151A/L and 146B or graduate standing. *T. Holman*

256C. Advanced Topics in Inorganic Chemistry. F

Advanced topics in inorganic chemistry are presented. Topics covered vary from year to year, and are announced in advance. Possible topics include A) organometallic chemistry; B) structural methods in inorganic chemistry; C) solid-state chemistry. Prerequisite(s): courses 151A/L and 146B or graduate standing. *S. Oliver*

256D. X-ray Crystallography. *

Course in chemical crystallography focuses on the needs of small-molecule, single-crystal diffraction studies. Includes diffraction theory, space-group analysis, data collection, structure solution, and refinement. Practical component: use of diffraction equipment and solution/refinement software. Enrollment restricted to graduate students and seniors who have taken courses 151A, 151L, and 163A. *The Staff*

261. Foundations of Spectroscopy. *

The basic theory of time dependent processes is covered at an advanced level. The interaction of electromagnetic radiation and matter is described using both semiclassical and quantum field formulations. A variety of modern spectroscopic techniques are discussed both in terms of the basic processes and their use in the elucidation of chemical structure and dynamics. Prerequisite(s): course 163A. Offered in alternate academic years. *J. Zhang*

262. Statistical Mechanics. S

Theory and concepts of statistical mechanics with applications to ideal gases, condensed systems, phase transition, and non-equilibrium thermodynamics. Lecture: 3-1/2 hours. Prerequisite(s):

course 160B or 163A. Offered in alternate academic years. *I. Benjamin*

263. Quantum Mechanics. W

A rigorous introductory course: the Schrödinger equation, operator formalism, matrix mechanics, angular momentum, and spin. Perturbation and other approximate methods. Applications to atomic and molecular problems. Lecture: 3-1/2 hours. Prerequisite(s): courses 163A and Physics 114A-B. Offered in alternate academic years. *J. Zhang*

265. Computer Simulation in Statistical Mechanics. *

A detailed introduction of the use of computer simulation methods in physical and biophysical chemistry. Includes review of thermodynamics and statistical mechanics, molecular mechanics, molecular dynamics, and Monte-Carlo methods. Applications to liquid structure, reaction dynamics, and protein dynamics. Offered in alternate academic years. *I. Benjamin*

266. Advanced Topics in Physical Chemistry. *

A graduate course covering advanced topics in physical chemistry. Topics vary from year to year. *The Staff*

266A. Lasers and Their Chemical Applications. *

Introduces the basic theoretical principles of lasers and laser light. Various types of lasers and selected applications to chemistry are discussed. The use of lasers in photochemistry, spectroscopy, chemical kinetics, and chemical analysis is considered. Lecture: 3-1/2 hours. Prerequisite(s): course 163A and Physics 114A-B. Offered in alternate academic years. May be repeated for credit. *The Staff*

266B. Gas Phase Kinetics. *

A discussion of rate processes in gases. Descriptions of experimental and theoretical work on unimolecular, bimolecular, and termolecular reactions and energy transfer processes. Lecture: 3-1/2 hours. Prerequisite(s): course 262. Offered in alternate academic years. May be repeated for credit. *The Staff*

268. Solid State and Materials Chemistry. *

Topics include synthesis of solid-state materials and their characterization using experimental techniques: XRD, TEM spectroscopy, NMR, and their applications in technologies. Emphasis on new materials, e.g., polymer, biopolymers, nanomaterials, organic/inorganic composites, ceramics, superconductors, electronic, magnetic, and opto-electronic materials. Prerequisite(s): courses 163A and 163B. Enrollment restricted to senior and graduate chemistry majors. *Y. Li*

269. Electrochemistry. S

Designed to introduce basic principles and applications of electrochemistry to students at upper undergraduate and lower graduate levels in various fields including analytical, physical, and materials chemistry. Enrollment restricted to seniors and graduate students. *S. Chen*

270. Frontiers in Drug Action and Discovery. S

Lectures and case studies explore principles and approaches in drug discovery and development, emphasizing concepts in pharmacology; medicinal chemistry; and genomics- and bioinformatics-based approaches to drug discovery to illustrate pathways from discovery through development for clinical use. Cannot receive credit for this course and course 170. (Also offered as Biomolecular Engineering 270. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. *D. Smith, T. Holman, M. Camps, R. Linington, P. Berman*

273. Applications of Symmetry and Quantum Mechanics. *

Group theory and quantum mechanics are applied to problems of the electronic structure and spectra of molecules. A variety of topics including molecular orbital theory, reactivity, electronic structure calculations, and spectroscopy are discussed. Lecture: 3-1/2 hours. Prerequisite(s): course 163A. Offered in alternate academic years. *E. Switkes*

274. Proseminar in Synthetic and Polymer Chemistry. F,W,S

Weekly meetings devoted to study of synthetic organic chemistry and controlled polymer design for applications in nanotechnology. Topics drawn from current literature and research interests of participants. May be repeated for credit. *R. Braslau*

275. Proseminar in Biological Inorganic Chemistry. F,W,S

Weekly meetings devoted to biological inorganic chemistry and biochemistry. Topics are drawn from current literature. Papers and reviews are discussed, and participants give short seminars on their research interests. May be repeated for credit. *T. Holman*

282. Proseminar: Synthetic Methods. F,W,S

Weekly meetings devoted to the study of asymmetric and/or enantio-selective synthesis of optically active organic compounds of biological and medicinal significance. Topics drawn from the current literature and the research interests of the participants. May be repeated for credit. *B. Singaram*

284. Proseminar in Synthetic Organic Chemistry. F,W,S

Weekly meetings devoted to the study of synthetic organic chemistry. Topics drawn from the current literature and the research interests of the participants. May be repeated for credit. *J. Konopelski*

285. Proseminar: Photobiochemistry and Photobiology. F,W,S

A detailed study of molecular mechanisms of light energy conversion and light-signal transduction

processes in biological systems. Student participation in critical discussion of current literature examples are emphasized. Two-hour lecture and two-hour seminar weekly. Enrollment limited to 8. May be repeated for credit. *R. Bogomolni*

286. Proseminar in Natural Products Chemistry. F,W,S

Weekly meetings devoted to the study of natural products. Topics drawn from the current literature and research interests of the participants. May be repeated for credit. *P. Crews*

288. Proseminar in Bioinorganic Chemistry. F,W,S

Weekly meetings devoted to inorganic and bioinorganic research. Topics are drawn from current literature. Papers and reviews are discussed. Participants also give short seminars on topics of their research interests. May be repeated for credit. *P. Mascharak*

289. Proseminar: Biophysical Chemistry. *

Weekly meetings devoted to a detailed study of the theory and applications of nuclear magnetic resonance spectroscopy and imaging and related spectroscopic techniques to problems in biophysical chemistry. Topics are drawn from the current research literature and the research experiences of the participants. Enrollment limited to 20. May be repeated for credit. *T. Schleich*

291A. Organic Chemistry Research Seminar. F,W,S

Open to chemistry graduate students interested in organic chemistry. Weekly meetings are held to hear both local and external speakers discuss their work. Enrollment restricted to graduate students. May be repeated for credit. *R. Braslau, R. Linington, P. Crews*

291B. Biochemistry and Molecular Biology Research Seminar. F,W,S

A weekly seminar series covering topics on the frontiers of biochemistry and molecular biology. The speakers include experts in these fields from other institutions. Enrollment restricted to graduate students. May be repeated for credit. *W. Scott, M. Stone, G. Millhauser*

291C. Inorganic Chemistry Research Seminar. F,W,S

For those interested in following the recent developments in the various areas of inorganic chemistry. External speakers; weekly discussion based on personal research or recent literature, led by the inorganic chemistry faculty, postdoctoral fellows, and students. Enrollment restricted to graduate students. May be repeated for credit. *T. Holman, S. Oliver, P. Mascharak*

291D. Physical Chemistry Research Seminar. F,W,S

A weekly seminar series covering topics of current research in physical chemistry. Weekly meetings are held to hear both local and external speakers discuss their work. Enrollment restricted to graduate students. May be repeated for credit. *I. Benjamin, Y. Li, (S) J. Zhang*

292. Seminar (2 credits). F

Enrollment restrictions: graduate standing or approval of the graduate adviser. *The Staff*

296. Teaching Chemistry (2 credits). F

University-level pedagogy in chemistry; examines the role of preparation, assessment, and feedback in teaching chemistry discussion and laboratory sections. Effective classroom techniques and organizational strategies discussed; oral presentations analyzed critically. Required of entering chemistry graduate students. *R. Roland*

297. Independent Study. F,W,S

A topic will be studied with faculty tutorial assistance to satisfy a need for the student when a regular course is not available. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Students submit petition to sponsoring agency. *The Staff*

*Not offered in 2011-12

<http://language.ucsc.edu>

[Program Description](#) | [Changes to 2010-12 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Program Description

Students interested in acquiring proficiency in Chinese can enroll in language courses from beginning to advanced levels. Students may choose a major or minor in language studies, a minor in East Asian studies through the History Department, an individual major in East Asian studies through their college, or a global economics major.

The sequence of lower-division courses 1-6 is aimed at enabling students to gain proficiency in aural comprehension, speaking, reading, and writing skills. Instruction takes place mostly in Chinese from the second half of the first quarter.

Campus Language Laboratories and Placement Exams

Information about these topics can be found under Language Program.

Study Abroad

Students may apply to study intensive Chinese language at one of China's finest universities-in Taipei, Hong Kong, or Beijing-for periods ranging from a summer up to a full year through the Office of International Education (OIE). Courses taken abroad can, with approval of an adviser, be applied to major requirements. For a list of current programs and requirements, visit their web site, <http://oie.ucsc.edu>. For information on credit applied to a major, please contact the appropriate department.

Lower-Division Courses

1. Instruction in the Chinese (Mandarin) Language. F

Instruction in elementary spoken and written Chinese (Mandarin), beginning with the sounds of Chinese and their representation in the pinyin romanization system. Conversation, structural analysis, and an introduction to character texts. Elementary sequence (1-2-3) begins only in fall quarter. Students interested in learning Chinese who are uncertain about where they should enter the sequence should meet with the instructor, prior to the first class meeting. *The Staff*

2. Instruction in the Chinese (Mandarin) Language. W

Continuation of Chinese 1, which assumes that students are familiar both with the pinyin romanization system and approximately 150 basic characters. Prerequisite(s): course 1, or equivalent. *The Staff*

3. Instruction in the Chinese (Mandarin) Language. S

Continuation of Chinese 2, which assumes that students are familiar both with the pinyin romanization system and approximately 300 basic characters. Prerequisite(s): course 2, or equivalent. *The Staff*

4. Intermediate Chinese (Mandarin). F

Instruction in intermediate spoken and written Chinese (Mandarin). Conversation, composition, and the reading of modern texts. Intermediate sequence (4-5-6) begins only in fall quarter. Students interested in improving their Chinese who are uncertain about where they should enter the sequence should meet with the instructor, prior to the first class meeting. Prerequisite(s): course 3, or equivalent. (General Education Code(s): IH.) *The Staff*

5. Intermediate Chinese (Mandarin). W

Continuation of Chinese 4. Conversation, composition, and the reading of modern texts. Prerequisite(s): course 4, or equivalent. (General Education Code(s): IH.) *The Staff*

6. Intermediate Chinese (Mandarin). S

Continuation of Chinese 5. Conversation, composition, and the reading of modern texts. Prerequisite(s): course 5, or equivalent. (General Education Code(s): IH.) *The Staff*

94. Group Tutorial. F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses**103. Advanced Chinese: Readings in Economics and Trade. F**

Designed to familiarize students with the issues and specialized vocabulary relating to China's trade, development, and economic policies through extensive reading and translating of essays, articles, and documents. Students interested in this course who have not taken the prerequisite should meet with the instructor prior to the first class meeting. May be repeated for credit. *The Staff*

104. Advanced Chinese: Readings in Literature. W

Covers a body of Chinese literature of recognized merit from the modern or classical tradition. Students are introduced to the basic critical concepts, in Chinese, relating to narrative and/or poetry, revealed by the works under discussion. Students interested in this course who have not taken the prerequisite should meet with the instructor prior to the first class meeting. Prerequisite(s): course 50 or placement by interview. May be repeated for credit. *The Staff*

105. Advanced Chinese: Readings in History. S

Offers an appreciation of some of the central issues in Chinese history as defined by Chinese

historians of the 20th century. Through readings of graduated difficulty, the vocabulary, style, and form of modern Chinese historical writing are introduced. Students interested in this course who have not taken the prerequisite should meet with the instructor prior to the first class meeting. Prerequisite(s): course 50 or placement by interview. *The Staff*

107. Introduction to Classical Chinese. *

Introduces the grammar and lexicon of classical Chinese and the language of China's pre-modern canonical writings in philosophy, religion, history, music, visual art, and literature. Reading from the Han and pre-Han era is featured. Prerequisite(s): course 50 or placement by interview. (General Education Code(s): IH.) *The Staff*

108. Introduction to Classical Chinese. *

Introduces the grammar and lexicon of classical Chinese and the language of China's pre-modern canonical writings in philosophy, religion, history, music, visual art, and literature. Reading from the Han and pre-Han era is featured. Prerequisite(s): course 50 or placement by interview. (General Education Code(s): IH.) *The Staff*

194. Group Tutorial. F,W,S

Provides a means for a small group of students to study a particular topic in consultation with a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Classical Studies

Department of History
201 Humanities
(831) 459-2982
<http://classicalstudies.ucsc.edu/>

[Program Description](#) | [Changes to 2010-12 Catalog Highlighted](#) | [Faculty](#)

Program Description

"Classics" is a traditional designation for the study of the literature, history, and culture of ancient Greece and Rome. Classical studies at UCSC combines features of traditional programs, such as solid grounding in the ancient languages, with innovative, interdisciplinary approaches (literary theory, gender studies, performance, and film).

Classical studies is an interdisciplinary field. While the core of the program is focused on courses in the ancient Greek and Latin languages it also includes courses in history, history of art and visual culture, linguistics, literature, philosophy, politics, religious studies, and theater arts. Students are encouraged to study the literary and material artifacts of Greece and Rome within the larger context of ancient Mediterranean and Near Eastern cultures.

The classical studies program offers an opportunity to work in small classes with a dedicated teaching faculty and excellent fellow students. Classical studies is an excellent preparation for further study in a wide variety of graduate and professional programs including comparative literature, English, philosophy, law, and publishing.

The basic requirements for the classical studies major allow a variety of emphases and concentrations. For example, students with an interest in contemporary philosophy and political theory might want to concentrate in Greek, taking upper-division courses in Greek, history, philosophy, and politics. Students with an interest in European literature might want to concentrate in Latin, taking upper-division courses in Latin, history, and literature in translation. Students planning on pursuing a classics degree at the Ph.D. level should concentrate most of their coursework in the Greek and Latin languages themselves.

Classical studies is administered by the History Department.

Requirements for the Major

A prerequisite for the classical studies major is the lower-division sequence in elementary Greek or Latin language (Greek 1 and 2 or Latin 1 and 2). A minimum of 40 upper-division units must be completed within the classical studies major course requirements. The major requires a total of 10 courses plus a senior comprehensive examination and must include the following:

- one lower-division survey of ancient history or literature in translation;
- three upper-division courses in Greek or Latin literature;
- six additional approved upper-division courses (which may include additional courses in Greek or Latin literature);
- enrollment in a 2-credit comprehensive examination preparatory course, History 199F, is required in the same quarter that the senior comprehensive examination will be given. The preparatory course will be taken with the chair of the student's examination committee.

Disciplinary Communication (DC) Requirement.

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in classical studies is satisfied by completing two upper-division courses in Greek literature or Latin literature from the following list: Greek Literature 102, 103, 104, and 105; or Latin Literature 102, 103, and 104.

Honors in the Classical Studies Major.

All students who announce candidacy during the academic year are reviewed for honors or highest honors in the major. The classical studies faculty advisers determine honors based upon courses applied toward the classical studies major. Performance in courses taken elsewhere and being

transferred toward the major will be considered when applicable. The minimum standard applied is excellence in most courses for honors, and excellence in all courses for highest honors. Summer graduates are reviewed for honors in fall quarter.

Requirements for the Minor

A minor in classical studies requires the lower-division sequence in elementary Greek or Latin language (Greek 1 and 2 or Latin 1 and 2) and Greek or Latin Literature 100 plus any four of the upper-division courses listed as satisfying the classical studies major requirements.

[Program Description](#) | [Faculty](#)

Faculty and Professional Interests

KAREN BASSI, Professor of Literature
Greek and Latin literatures; gender; literary and cultural theory; pre- and early modern studies; historiography; visual and performance studies

JOHN BOWIN, Assistant Professor of Philosophy
Ancient philosophy, especially ancient science and metaphysics, and contemporary analytic metaphysics

MARIA EVANGELATOU, Assistant Professor, History of Art and Visual Culture
Medieval visual culture, with emphasis on Byzantium and its periphery; manuscript illumination, Marian cult and iconography; ancient Greek and Roman visual culture; Islamic visual culture; gender studies

MARY-KAY GAMEL, Professor of Literature
Performance studies, ancient Mediterranean performance, Greek and Latin literatures, myth, reception of Greek and Roman texts and artifacts, film, feminist approaches to literature and performance

GILDAS HAMEL, Security of Employment Lecturer
History of Israel, Hellenistic and Roman Palestine, and Christianity; Hebrew and Greek Bible; classical languages; Celtic cultures

CHARLES W. HEDRICK JR., Professor of History
Greek and Roman history

JENNIFER K. LYNN, Lecturer
Later Roman Republic and Principate; Homeric epic; Hellenistic and Augustan poetry

JOHN P. LYNCH, Professor of Literature, Emeritus

DEAN MATHIOWETZ, Associate Professor of Politics
Ancient political thought, philosophies of language and affect, early-modern and late-modern political economy

GARY B. MILES, Professor of History, Emeritus

DANIEL L. SELDEN, Professor of Literature
Afroasiatic languages and literatures, Greek and Latin, Hellenistic culture, the classical tradition, history of criticism, literary theory

Program Faculty Advisers

KAREN BASSI, Professor of Literature

MARY-KAY GAMEL, Professor of Literature

CHARLES W. HEDRICK JR., Professor of History

JENNIFER LYNN, Lecturer

DANIEL L. SELDEN, Professor of Literature

Lower-Division Courses**10. Academic Success (2 credits). ***

An interactive course providing students with the opportunity to assess and revise methods of and purposes in studying. Critical, effective approaches to reading, writing, participating in lectures and sections, taking exams, balancing competing responsibilities, and utilizing campus resources are all explored. Prerequisite(s): permission of college adviser. Enrollment limited to 30. *The Staff*

20C. The Water Environment: Literature of the Sea (2 credits). *

Students consider the representation of the sea in selected texts, noting how it becomes the focal point for the fears, hopes, and prejudices of Western civilization. Students write critical papers and their own narratives. Enrollment restricted to first-year and sophomore college members. Enrollment limited to 25. *C. Calsoyas*

20D. College Students' Lives (2 credits). *

Students understand their peers and themselves better through an exploration of issues that affect the daily life of college students. Topics include campus/student cultures, the academic system, and other critical issues. Overview of campus resources also provided. Enrollment restricted to first-year and sophomore College Eight members. *J. Pehlke*

20F. Justice on Earth (3 credits). *

Examines issues of oppression, privilege, and social justice within a global and environmental context through self-reflective and group work. May include an optional service-learning component requiring travel during spring break. Enrollment limited to 20. *The Staff*

20G. Peregrine Falcons Return (2 credits). W

Required training laboratory for students who wish to pursue a hands-on, two-credit service project (laboratory or field) that is focused on peregrine falcon conservation. Enrollment limited to 26. *G. Stewart*

28. Peer Leadership in Higher Education (3 credits). S

Overview of theories of student development, critical student issues, and skills needed for appropriate peer leadership interventions. Utilizes a variety of learning modes including readings, discussions, case studies, lectures, and group projects. Interview only: approval of instructor; Resident Assistant (RA) pre-employment training course. Enrollment limited to 25. May be repeated for credit. *J. Pehlke*

61. Education for Sustainable Living Program (2 credits). S

Analyzes sustainability and its application in daily life and on campus, involving collaboration between students, faculty, staff, administration, and the community. Guest lecturers, discussions, an optional UC-wide retreat, and essays allow engagement with aspects of ecological and social sustainability. *J. Borrego*

80A. Introduction to University Discourse: Environment and Society. F

Explores rhetorical principles and conventions of university discourse, providing intensive practice in analytical writing, critical reading, and speaking. Introduces students to environmental history, ethics, and policy options, and teaches them to analyze and interpret key literary texts. Students cannot receive credit for this course and course 80B. Concurrent enrollment in course 81A is required. Enrollment restricted to first-year college members who have not satisfied the C1 requirement. (General Education Code(s): TA, T3-Social Sciences, C1.) *S. Rajan*

80B. Rhetoric and Inquiry: Environment and Society. F

Explores the intersections of investigation, interpretation, and persuasion and hones strategies for writing and research. Introduces students to environmental history, ethics, and policy options, and teaches them to analyze and interpret key literary texts. Students cannot receive credit for this course and course 80A. Prerequisite(s): satisfaction of the C1 requirement; concurrent enrollment in course 81A is required. Enrollment restricted to first-year college members. (General Education Code(s): TA, T3-Social Sciences, C2.) *S. Rajan*

81A. The Environment and Us (3 credits). F

Takes students through a wide range of approaches to environmental citizenship and provides conceptual and practical tools to explore alternatives. Students also participate in a hands-on sustainability project designed to connect academic learning with practical applications. Concurrent enrollment in course 80A or 80B is required. Enrollment restricted to first-year college members. *S. Rajan*

81B. Fundamentals of Environmental Science. W

Addresses major issues in physical and biological environmental sciences and provides tools to critically evaluate, debate, and make informed choices regarding one's own impact on the environment. Topics include: climate change, water resources, air pollution, evolution, ecology (from populations to ecosystems), and conservation. Quantitative problem solving is an integral part of this course. (Also offered as Earth Sciences 81B. Students cannot receive credit for both courses.) Prerequisite(s): courses 80A or 80B. Enrollment restricted to first-year and sophomore college members. (General Education Code(s): MF, IN, Q.) *P. Chuang*

81C. Technological Innovation and Environmental Challenges. S

Introduces key technological solutions to environmental problems; discusses their underlying principles; and examines their societal dimensions. Topics include: conventional and renewable energy; emerging technologies for transportation, energy efficiency clean water; planetary engineering; and lean manufacturing. (Also offered as Electrical Engineering 81C. Students cannot receive credit for both courses.) Prerequisite(s): courses 80A or 80B. Enrollment restricted to first-year and sophomore college members. (General Education Code(s): SI, T-2 Natural Sciences.) *K. Pedrotti, J. Vesecky*

90. College Eight Garden Internship (1 credit). F,W,S

One-credit internship in the College Eight Garden. Offers students of College Eight an opportunity to become involved in an experimental learning project focusing on application of concepts of sustainable agriculture. Enrollment restricted to members of College Eight. Enrollment limited to 10. May be repeated for credit. *The Staff*

93. Field Study. F,W,S

The Staff

99. Tutorial. F,W,S

May be repeated for credit. *The Staff*

99F. Tutorial (2 credits). F,W,S

Individual study for lower-division students directed by a faculty member affiliated with College Eight. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses

128. Advanced Peer Leadership Practicum (3 credits). S

Advanced practicum for the application of skills and theoretical knowledge studied in course 28. Uses many learning modes including readings, discussions, case studies, lectures, and group projects. Prerequisite(s): course 28. Enrollment by permission of instructor. Enrollment limited to 25. May be repeated for credit. *The Staff*

160. Developing Leadership to Facilitate Environmental Education. W

Prepares students to facilitate an action research team for "Sustainable Living" (courses 61/161) during spring quarter. Workshops and training selected to build the skills and preparation to become successful facilitators. Topics include: facilitation skills; syllabus planning and curriculum building; experiential learning techniques; leadership skills; and non-violent communication training. Enrollment by interview only. Enrollment restricted to sophomores, juniors, and seniors. Enrollment limited to 30. *S. Rajan*

161. Education for Sustainable Living Program. S

Analyzes sustainability and its application in daily life and on campus, involving collaboration between students, faculty, staff, administration, and the community. Guest lecturers, discussions, an optional UC-wide retreat, and essays allow engagement with aspects of ecological and social sustainability. Enrollment limited to 25. *The Staff*

193. Field Study. F,W,S

The Staff

193F. Field Study (2 credits). F,W,S

Provides for individual programs of study sponsored by the college and performed off campus. Must be sponsored by College Eight faculty. Approval of the student's adviser and the academic preceptor is needed to enroll. May be repeated three times for credit. Students submit petition to sponsoring agency. *The Staff*

195. Senior Thesis. F,W,S

May be repeated for credit. *The Staff*

198. Independent Field Study. F,W,S

The Staff

199. Tutorial. F,W,S

May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Individual study for upper-division students directed by a faculty member affiliated with College Eight. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

*Not offered in 2011-12

Lower-Division Courses**80A. Introduction to University Discourse: International and Global Issues. F**

Explores rhetorical principles and conventions of university discourse and provides intensive practice in analytical writing, critical reading, and speaking. Topics address contemporary global issues including economic globalization, human rights, international and inter-ethnic conflicts, poverty, and immigration. Students cannot receive credit for this course and course 80B. Enrollment restricted to first-year college members who have not satisfied the C1 requirement. Enrollment limited to 22. (General Education Code(s): T3-Social Sciences, C1.) *The Staff*

80B. Rhetoric and Inquiry: International and Global Issues. F

Explores the intersection of investigation, interpretation, and persuasion and refines strategies for writing, research, and speaking. Topics address contemporary global issues including economic globalization, human rights, international and inter-ethnic conflicts, poverty, and immigration. Students cannot receive credit for this course and course 80A. Prerequisite(s): satisfaction of the Entry Level Writing and C1 requirements. Enrollment restricted to first-year college members. Enrollment limited to 22. (General Education Code(s): T3-Social Sciences, C2.) *The Staff*

80C. Introduction to University Discourse: International and Global Issues Writing Intensive 1. F

Explores rhetorical principles and conventions of university discourse and provides intensive practice in analytical writing, critical reading, and speaking. Topics address contemporary global issues. More writing intensive than course 80A; prerequisite to 80D. Enrollment restricted to first-year college members who have not satisfied the C1 requirement. Enrollment limited to 22. *The Staff*

80D. Introduction to University Discourse: International and Global Issues Writing Intensive 2. W

Continues to provide practice in analytical writing, critical reading, and speaking, and to examine global issues. Prerequisite(s): course 80C. Enrollment restricted to first-year college members who have not satisfied the C1 requirement. Enrollment limited to 22. (General Education Code(s): C1.) *The Staff*

85. Global Action (2 credits). W

Workshop facilitated by peer instructors. Students learn about current international and global issues through interactive exercises, small-group discussions, and faculty presentations. Students develop an "action plan" to raise awareness about one or more of these concerns and take practical steps to create positive change in the world. Enrollment restricted to College Nine members during priority enrollment only. Enrollment limited to 20. *E. Ramsden*

86. College Leadership Development (2 credits). S

Students newly appointed into leadership positions at College Nine explore the concept of leadership relating to college's theme of International and Global Perspectives. Prerequisite(s): current College Nine student leader; permission of instructor. *H. Jibri*

91. Global Issues Colloquium (1 credit). F,W,S

Weekly colloquium on global issues with different topical focus each quarter. Presentations by UCSC faculty and invited speakers. Students must attend class, read an assigned article, and write a one-page synopsis. Co-sponsored by College Nine and The Center for Global, International, and Regional Studies. Enrollment restricted to College Nine members. Enrollment limited to 50. May be repeated for credit. *The Staff*

Upper-Division Courses**105. Researching Food Sovereignty. S**

Students engage in individual and collective research projects on transformational food systems in the United States and abroad. Readings look at the current global food system and grassroots responses to food and environmental crises. Enrollment restricted to junior and senior College Nine and College Ten members during priority enrollment only. Enrollment limited to 20. *The Staff*

112. Model United Nations: A Group Seminar (2 credits). W

Provides the opportunity to simulate the experience of the United Nations. Each student takes the position of a member country and learns skills associated with preparing and presenting position papers on current, controversial, political topics. Enrollment limited to 24. *The Staff*

191. Teaching Global Action. W

Undergraduates at upper-division level participate in teaching discussion groups for College Nine 80 (F) or College Nine 85 (W). Prerequisite(s): permission of instructor: essay describing interest in becoming course assistant, copies of evaluations, and letter of recommendation from faculty member and/or college staff member. Enrollment restricted to College Nine juniors and seniors. *E. Ramsden*

199. Independent Study. F,W,S

Individual directed study for upper-division college members with college-affiliated faculty. Students must submit petition with one of the college academic advisers with accompanying letter from faculty adviser. Approval of provost required. Enrollment restricted to upper-division College Nine members. May be repeated for credit. *The Staff*

199F. Independent Study (2 credits). F,W,S

Individual directed study for upper-division college members with college-affiliated faculty. Students must submit petition with one of the college academic advisers with accompanying letter from faculty adviser. Approval of provost required. Enrollment restricted to upper-division College Nine members. May be repeated for credit. *The Staff*

Lower-Division Courses**80A. Introduction to University Discourse: Social Justice and Community. F**

Explores rhetorical principles and conventions of university discourse and provides intensive practice in analytical writing, critical reading, and speaking. Examines social justice issues; topics include racism, sexism, and other forms of prejudice and discrimination; poverty and welfare; civil liberties; and community involvement and citizenship. Students cannot receive credit for this course and course 80B. Enrollment restricted to first-year college members who have not satisfied the C1 requirement. Enrollment limited to 22. (General Education Code(s): T3-Social Sciences, C1.) *The Staff*

80B. Rhetoric and Inquiry: Social Justice and Community. F

Explores the intersection of investigation, interpretation, and persuasion and refines strategies for writing, research, and speaking. Examines social justice issues; topics include racism, sexism, and other forms of prejudice and discrimination; poverty and welfare; civil liberties; and community involvement and citizenship. Students cannot receive credit for this course and course 80A. Prerequisite(s): satisfaction of the Entry Level Writing and C1 requirements. Enrollment restricted to first-year college members. Enrollment limited to 22. (General Education Code(s): T3-Social Sciences, C2.) *The Staff*

80C. Introduction to University Discourse: Social Justice and Community Writing Intensive 1. F

Explores rhetorical principles and conventions of university discourse and provides intensive practice in analytical writing, critical reading, and speaking. Examines social-justice issues. Topics include: racism, sexism, and other forms of prejudice and discrimination; poverty and welfare; civil liberties; and community involvement and citizenship. More writing-intensive than 80A; prerequisite to 80D. Enrollment restricted to first-year college members who have not satisfied the Entry Level Writing and C1 requirement and who scored a 5 or lower on the AWPE (Analytical Writing and Placement Exam). Enrollment limited to 22. *The Staff*

80D. Introduction to University Discourse: Social Justice and Community Writing Intensive 2. W

Continues to provide practice in analytical writing, critical reading, and speaking, and to examine social-justice issues. Prerequisite(s): course 80C. Enrollment restricted to first-year college members who have not satisfied the C1 requirement. Enrollment limited to 22. (General Education Code(s): C1.) *The Staff*

85. Social Justice Issues Workshop (2 credits). W

Series of presentations, films, and workshops that address personal and cultural identity and examine social, cultural, political, environmental, and other justice concerns. Enrollment restricted to College Ten members during priority enrollment only. Enrollment limited to 20. *W. Baxter*

86. College Leadership Development (2 credits). S

Students newly appointed into leadership positions at College Ten explore the concept of leadership relating to program's theme of Social Justice and Community. Prerequisite(s): current College Ten student leader; permission of instructor. *H. Jibri*

91. Introduction to Nuclear Policy (2 credits). F

Introduces the key aspects of nuclear policy. Examines issues associated with nuclear weapons and civil nuclear power and the interplay between the two with regards to proliferation. Presentations will be given by guest speakers. Enrollment limited to 50. May be repeated for credit. *D. Hirsch*

95. Nonviolent Communication (Living-Learning Community) (1 credit). F,W,S

The Nonviolent Living-Learning Community operates in a spirit of cooperation, compassion, and good will without competition or hierarchy. Students living in the Nonviolent Living-Learning Community enroll in this course each quarter of the academic year. Restricted to residents of the Nonviolent Living-Learning Community. Enrollment limited to 25. May be repeated for credit. *The Staff*

Upper-Division Courses**105. The Making and Influencing of Nuclear Policy. W**

Explores how policy is made and influenced, using nuclear policy as a case study. Topics include: Freedom of Information Act (FOIA); legislation and rule-making; environmental impact statements (EISs); licensing and judicial proceedings; research and news media. Focuses on skills that enable

citizens to impact policy. Enrollment restricted to junior and senior College Nine and College Ten members during priority enrollment only. Enrollment limited to 50. *D. Hirsch*

110. Service-Learning Field Study (Esprit de Corps). F,W,S

Provides college members opportunity to apply their academic learning in a practical setting in the community. Students earn academic credit by volunteering in a non-profit agency or school for approximately 12 hours per week. Students supervised by a professional on site. Students attend a weekly class, complete readings, listen to local leaders from the community, reflect upon their experiences with fellow students, and submit a final project related to their service-learning placement. Taught concurrently with course 110B. Enrollment restricted to sophomore, junior, and senior College Nine and College Ten members. Enrollment limited to 22. May be repeated for credit. (General Education Code(s): PR-S.) *A. Asher*

110B. Service-Learning Field Study (Esprit de Corps) (2 credits). F,W,S

Provides college members opportunity to apply their academic learning in a practical setting in the community. Students earn academic credit by volunteering in a non-profit agency or school for approximately three hours per week. Students supervised by a professional on site. Students attend a weekly class, complete readings, listen to local leaders from the community, reflect upon their experiences with fellow students, and submit a final project related to their service-learning placement. Taught concurrently with course 110. Enrollment restricted to sophomore, junior, and senior College Nine and College Ten members. Enrollment limited to 22. May be repeated for credit. (General Education Code(s): PR-S.) *A. Asher*

191. Teaching Social Justice. W

Undergraduates at upper-division level participate in teaching discussion groups for College Ten 80 (F) or College Ten 85 (W). Prerequisite(s): permission of instructor: essay describing interest in becoming course assistant, copies of evaluations, and letter of recommendation from faculty member and/or college staff member. Enrollment restricted to College Ten juniors and seniors. *W. Baxter*

199. Independent Study. F,W,S

Individual directed study for upper-division college members with college-affiliated faculty. Students must submit petition with one of the college academic advisers with accompanying letter from faculty adviser. Approval of provost required. Enrollment restricted to upper-division College Ten members. May be repeated for credit. *The Staff*

199F. Independent Study (2 credits). F,W,S

Individual directed study for upper-division college members with college-affiliated faculty. Students must submit petition with one of the college academic advisers with accompanying letter from faculty adviser. Approval of provost required. Enrollment restricted to upper-division College Ten members. May be repeated for credit. *The Staff*

[Program Description](#) | [Changes to 2010-12 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Program Description

The bachelor of arts degree in community studies was suspended effective April 2010. The degree remains available during this time to all currently declared majors, as well as to students who had begun taking the preparatory courses for the major.

Community studies is an interdisciplinary major that integrates scholarship and community engagement in both research and teaching. Since its founding in 1969, and across radically changing political landscapes, the department has maintained a focus on identifying, analyzing, and helping to construct sites for social change and cultural transformation. To this end, the Community Studies Department addresses principles of social justice and the dynamics of racial and class inequity through courses that explore constructions of community and their implications.

The range of the faculty's disciplines, research interests, and arenas of civic engagement permits the department to delve into cross-cutting contemporary approaches that color every aspect of social life. The major offers community studies students a dynamic array of courses in areas such as public health and health politics, gender and sexuality, political economy and globalization, agriculture and food justice, race and racism, historical and contemporary social movements, immigration history and policy, and the theory and practice of documentary representation.

Pedagogically, community studies relies on developing a critical awareness of the relationship between the theoretical and practical issues involved in social change, and of the wider global contexts in which social justice is defined and achieved. A distinguishing feature of the community studies major is the six-month, full-time field study. The department's model of field-study immersion requires undergraduate majors to spend six months engaging with specific communities through residence and participation in (mostly) non-profit organizations with a social change and/or social justice mission. The undergraduate core curriculum focuses on the development of academic tools for social analysis and field observation/participation while deepening students' knowledge of specific histories and theoretical perspectives that are essential to the study of communities and transformation. Students complete their work in the major with a senior capstone project integrating academic coursework, field study, and original research. The major usually takes about two years to complete.

With the shared guidance of a faculty adviser and a field-study coordinator, community studies students choose field placements related to one of the department's areas of focus. Placements have been arranged in the past with health centers, immigrant-rights organizations, newspapers, media centers, direct-action mobilizations, sustainable-development projects, city planning departments, neighborhood organizations, civil rights groups, farm-to-school programs, battered women's shelters, legal clinics, community-based cultural organizations, programs for seniors, tenant unions, government agencies and the offices of elected officials, trade unions, and other organizations committed to and working for social justice.

Facilities

The Community Studies Department maintains several unique resources for students. A media laboratory is available where majors can learn the use of video, audio, and photography as research and presentation tools. A field-study coordinator works with students to develop part- and full-time field studies, and a field-study resource office is available to assist students in selecting an appropriate organization. The field-study office provides logistical and academic support during the field study, while also functioning as a liaison between students, faculty, and host organizations.

Major Program

The program for all students in the major includes courses that develop a substantive focus for the field study, courses that contextualize the field study in broader social forces, courses that provide methodological tools for analyzing the field study, the field study itself, and the capstone requirement. Students who wish to pursue a major in Community Studies must satisfactorily

complete course 10, *Introduction to Community Activism* prior to or concurrently with CMMU 102.

It is important to emphasize community studies is a major with a sequential core curriculum. This means that some required courses must be successfully completed in a specified order, as indicated by the quarter(s) when those courses are offered.

To begin the major and declaration process, a student must be enrolled in one of the CMMU 100(A-Z) gateway seminars. Through these seminars students develop a substantive focus for their academic study plan, field study, and senior capstone requirement. Students in the 100 (A-Z) seminars are presented with recommended organizations from which to select their placements. Several sections of CMMU 100(A-Z) are offered each fall quarter. Topics vary from year to year and may include economic justice; health-care inequities, and agriculture, food, and social justice. Following (or concurrent with) the gateway seminar is course 101, *Communities, Social Movements, and the Third Sector*, offered only in winter quarter, and course 102, *Preparation for Field Study*, offered only in spring quarter. In addition, four directed electives must be taken, one each in the areas of 1) race, class, and privilege, 2) regional or historical background, 3) political economy, and 4) cultural politics and representation. Students must complete at least two of the four directed electives before leaving for their field study: one class that addresses race, class, and privilege and one class that provides regional or historical background for their field study. Two of the four directed electives must be satisfied through courses offered inside the department; a complete list of directed electives for each area is posted on the department's web site <http://communitystudies.ucsc.edu/>. The remaining two directed electives, one course in political economy (the 140 series) and one course focusing on cultural politics and representation, may be completed any quarter prior to finishing the major.

Students are expected to arrange the rest of their academic program of study around the six-month, full-time field study (two quarters of 15 credits each). Students must conduct their fieldwork in summer and fall quarters so that they can enroll in course 194, *Analysis of Field Materials* immediately upon their return because course 194 is offered only in winter quarter.

Language competency must be demonstrated by all students planning a field study in a non-English speaking country and, therefore, such students must plan appropriate language study well in advance of the field study. In addition, students must demonstrate knowledge of the history, culture, and political economy of the place where they will be carrying out their field study—whether that place is a neighborhood in Santa Cruz, New York City, or a small village in Guatemala.

Admission to the Major

A general background or coursework in politics, sociology, anthropology, and/or community activism is suggested for students considering the community studies major. Students are required to have enrolled in two community studies courses at the time they declare the major: one must be a CMMU 100(A-Z) seminar and the other may be any of five-credit, lower- or upper-division course, including CMMU 10, except for the 42 series of student-directed seminars or independent or field studies.

The process of declaring the community studies major begins when a student enrolls in a section of CMMU 100(A-Z), the gateway seminar series. Prospective majors must choose a seminar that matches their own academic and social justice focus. Because of their small size, the CMMU 100(A-Z) seminars are enrolled through an "interview only" procedure, which usually takes the form of attending the first class, participating in discussion, and completing a questionnaire regarding background and interests. Based on this interview, each CMMU 100(A-Z) instructor will decide who gets priority in the class. Although the seminars are open to all students, prospective community studies majors enjoy priority enrollment. You must attend the first class to be considered for enrollment.

It is wise to communicate with your potential CMMU 100(A-Z) instructor to discuss your plans for the major prior to the beginning of the quarter to make sure that the Community Studies Department and the specific course you have chosen is appropriate for your interests and needs. Occasionally, a student is not accepted into the major because the student's social-justice and field-study focus are poorly matched with the department's areas of expertise and/or the student's academic interests cannot be fulfilled by current department offerings.

Instructions for Applying to the Major

1. Attend a department orientation held at the beginning of each quarter.
2. Choose and enroll in the appropriate CMMU 100(A-Z) seminar. If you are accepted into the class, a permission number will allow you to register; you can then move on to the next step.
3. Print out a Declaration of Major petition from <http://advising.ucsc.edu>, fill in the University General Education and College Requirements portion, and obtain the signature of your college adviser. Complete the Application for Admission to Community Studies (available in the Student Handbook, found on the department web site: communitystudies.ucsc.edu.) Prepare an academic study plan on a separate piece of paper with your plans for completing all requirements for the major including field study and selection of directed electives.
4. Write a three- to four-page essay (typewritten) explaining:
 - Why you think that the community studies major is the best way for you to pursue your academic and social-change interests and how your focus matches the emphasis of your gateway seminar.
 - The type of social-change or social-justice organization with which you expect to

work.

- The classes you have taken and/or plan to take, in addition to CMMU 100(A-Z), to prepare you to work with this organization.

Keep in mind that the department is interested in both the substance of your essay and your ability to express yourself in written form.

Meet with your CMMU 100(A-Z) seminar professor to discuss your essay, field-study plans, electives, and other application materials. Be prepared to list which electives you plan to take to fulfill your directed elective requirement, although you may need to be flexible on your elective choices as your faculty adviser may make other recommendations. Obtain the faculty signature on the application form. Bring any evaluations or progress reports from currently enrolled courses to support your application to the major.

Well before the deadline for the declaration of major, bring your completed Declaration of Major petition, draft study plan, signed application form, and essay to the Community Studies Department office (231 Oakes College) for final approval and processing. You are not officially declared until step 6 is finalized.

Note: you cannot begin course 102 without declaring the major.

Major Course Requirements

Summary of Core Sequence Requirements	Credits
10 <i>Introduction to Community Activism</i> (spring)	5
100(A-Z) <i>Gateway Seminar</i> (fall)	5
101 <i>Communities, Social Movements, and the Third Sector</i> (winter)	5
102 <i>Preparation for Field Studies</i> (spring)	5
120-129 <i>Race, Class, and Privilege Directed Elective</i> (can be satisfied within or outside the department) (any quarter before field study)	5
130-139 <i>Regional or Historical Directed Elective</i> (can be satisfied within or outside the department) (any quarter before field study)	5
140-149 <i>Political Economy Directed Elective</i> (can be satisfied within or outside the department) (any quarter before finishing)	5
150-159 <i>Cultural Politics and Representation Directed Elective</i> (can be satisfied within or outside the department) (any quarter before finishing)	5
194 <i>Analysis of Field Materials</i> (winter)	5
198 <i>Independent Field Study</i> (summer/fall)	30

10, Introduction to Community Activism

This course introduces students to different approaches to community activism including charity, volunteering, labor and community organizing, non-violent resistance, non-profit sector involvement, and social documentation.

100(A-Z), Gateway Seminars

The CMMU 100(A-Z) seminars provide students with a substantive focus for their academic work and field study. In each of these courses, students learn about the social, cultural, historical, geographic, and/or economic context of specific issues as well as efforts to change existing conditions.

101, Communities, Social Movements, and the Third Sector

This course critically engages with concepts central to the major including constructions of community in social-change efforts and the institutionalization of social movements in third-sector organizations. It is designed to deepen students' understanding of the opportunities and obstacles embedded in various avenues of social action.

102, Preparation for Field Study

This course examines participatory and other social-research methods including participant-observation, conducting interviews, writing ethnographic field notes, and collecting descriptive data. Students receive practical experience with developing research questions, methods, and writing field notes. The course also addresses ethical and logistical issues of research. The final project is a field-study prospectus with articulated research questions and methods.

120-129, Race, Class, and Privilege Electives

These courses examine race, class, and other hierarchies of difference as they intersect with structural inequality, self-identification, and identity politics. The requirement may be satisfied

within or outside the department from a pre-approved list of courses.

130-139, Regional/Historical Electives

Students have a choice of courses that provide historical/geographic knowledge of particular peoples, places, or regions in preparation for their field study. The requirement may be satisfied within or outside the department from a pre-approved list of courses, by petition, or through an approved independent study.

140-149, Political Economy Electives

Students have a choice of courses that examine the dynamics, logics, and/or institutions of colonialism, capitalism, neoliberalism, and/or globalization. The requirement may be satisfied within or outside the department from a pre-approved list of courses.

150-159, Cultural Politics and Representation Electives

Students have a choice of courses that examine ideas of discourse, social construction, knowledge, and representation as they help explain political and cultural contestation in the arts, science, medicine, media, and everyday life. The requirement may be satisfied within or outside the department from a pre-approved list of courses.

198, Full-Time Independent Field Study

During the full-time, six-month field study, students are enrolled at UCSC and receive full-time university credit. Students are required to submit field notes and several papers during the field study.

194, Analysis of Field Materials

This course is designed for students returning from their full-time field study. The course has two related goals: (1) to help students, both individually and collectively, analyze and gain perspective on their field experiences; and (2) to move students through the process of completing the senior capstone requirement. Students work with their field material to develop findings and arguments. For students completing the major with a senior essay, the essay is completed in course 194. For students doing a senior thesis, project, or student-directed seminar, the student completes at least three major pieces of writing; some or all of which will be incorporated into the completed thesis, project, or student-directed seminar.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The Community Studies Department's model of experiential pedagogy relies heavily on writing instruction to develop students' analytical, reflexive, and communicational skills. Although students in the community studies major receive disciplinary writing skills throughout the core curriculum, they fulfill the Disciplinary Communication requirement with two required upper-division courses, CMMU 102 and CMMU 194. The goals of the Community Studies Department's Disciplinary Communication requirement are to teach students to:

1. Research and synthesize core arguments, debates, and ideas related to students' topical focus within community studies.
2. Formulate a proposal describing a conceptual framework to approach the topical focus in a specific social context, including background, literature review, research questions, and methods.
3. Write descriptive and analytical field notes, then analyze the results of the field study and report findings in a capstone essay, thesis, or project.

Senior Capstone Requirement

Each student must fulfill a senior capstone requirement, either through the senior essay, a senior thesis, a senior project, or a student-directed seminar. For a thesis, project, or student-directed seminar, the student must choose a faculty member to serve as his or her adviser.

Senior Essay: Students complete a senior essay that incorporates field study observations and contextualizes their findings historically and theoretically; the essay can incorporate writing completed in other courses, including CMMU 100(A-Z) and field study, along with essays written in course 194. The minimum length is 25 pages, plus bibliography. The senior essay is completed entirely in course 194, *Analysis of Field Materials*.

Senior Thesis: Some students may choose to complete a senior thesis, which is comprised of field-study observations, historical and theoretical contextualizations of the field study, and deeper analysis of the social-justice issues at the heart of the field study. In general, a thesis involves a more tightly developed argument related to field-study findings than the senior essay. It may also involve post-field-study research; typical length is 35–50 pages, including bibliography. Students begin the senior thesis during course 194 and should complete it in the following quarter(s) by enrolling in course 195, *Senior Thesis*.

Senior Project: Students may choose to complete a senior project in other genres of social documentation including video production, photography, audio production, creative writing, and other formats such as grant proposals and organizing pamphlets. The senior project also requires a significant analytical essay of 20 pages, plus bibliography, describing the project conceptualization,

rationale, methodology, and evaluation. Students begin the senior project during course 194 and complete it the following quarter by enrolling in course 195, *Senior Thesis*.

Student-Directed Seminar (SDS): The SDS capstone option is reserved for exceptional students. Under the direction of a faculty adviser, the student develops and teaches a Community Studies 42 course that relates to the student's field-study and social-justice focus, accompanied by a seminar completion report.

The department selects only a limited number of student-directed seminars each year. Selection is based on the excellence of the SDS proposal, the relevance of the subject matter to the major, the student's background preparation, and the total number of proposals submitted each quarter. The Committee on Educational Policy gives the final approval.

For students interested in teaching a student-directed seminar, it is recommended that they meet with their adviser early on—prior to the full-time field study—to begin the process of obtaining course approval. A short written work providing the theoretical basis for the project, giving a brief analysis of the connection between the student's field work and the project itself, a course syllabus, a bibliography, and copies of the student's evaluations are required, along with a letter from the sponsoring faculty.

Students must also take course 199, *Tutorial*, the quarter prior to teaching the student-directed seminar, to give them time to prepare the course material. A student-directed seminar guide, giving detailed information about preparing for and teaching a student-directed seminar, is available in the department office.

Honors in the Major

Honors in the community studies major are awarded to graduating seniors whose academic performance in their major coursework is judged to be consistently excellent to outstanding. Students must also do excellent work on their senior capstone requirement; an honors-eligible senior essay must be particularly outstanding. The senior capstone must have intellectual merit, a genuine social change/social-justice focus, and evidence that the student gained insight into processes of social change. In accordance with UCSC policy, the Community Studies Department aims to award honors to approximately 15 percent of community studies graduates.

<http://communitystudies.ucsc.edu>

Program Description

The bachelor of arts degree in community studies was suspended effective April 2010 ~~for up to two years~~. The degree remains available during this time to all currently declared majors, as well as to students who had begun taking the preparatory courses for the major.

Community studies is an interdisciplinary major that integrates scholarship and community engagement in both research and teaching. Since its founding in 1969, and across radically changing political landscapes, the department has maintained a focus on identifying, analyzing, and helping to construct sites for social change and cultural transformation. To this end, the Community Studies Department addresses principles of social justice and the dynamics of racial and class inequity through courses that explore constructions of community and their implications.

The range of the faculty's disciplines, research interests, and arenas of civic engagement permits the department to delve into cross-cutting contemporary approaches that color every aspect of social life. The major offers community studies students a dynamic array of courses in areas such as public health and health politics, gender and sexuality, political economy and globalization, agriculture and food justice, race and racism, historical and contemporary social movements, immigration history and policy, and the theory and practice of documentary representation.

Pedagogically, community studies relies on developing a critical awareness of the relationship between the theoretical and practical issues involved in social change, and of the wider global contexts in which social justice is defined and achieved. A distinguishing feature of the community studies major is the six-month, full-time field study. The department's model of field-study immersion requires undergraduate majors to spend six months engaging with specific communities through residence and participation in (mostly) non-profit organizations with a social change and/or social justice mission. The undergraduate core curriculum focuses on the development of academic tools for social analysis and field observation/participation while deepening students' knowledge of specific histories and theoretical perspectives that are essential to the study of communities and transformation. Students complete their work in the major with a senior capstone project integrating academic coursework, field study, and original research. The major usually takes about two years to complete.

With the shared guidance of a faculty adviser and a field-study coordinator, community studies students choose field placements related to one of the department's areas of focus. Placements have been arranged in the past with health centers, immigrant-rights organizations, newspapers, media centers, direct-action mobilizations, sustainable-

development projects, city planning departments, neighborhood organizations, civil rights groups, farm-to-school programs, battered women's shelters, legal clinics, community-based cultural organizations, programs for seniors, tenant unions, government agencies and the offices of elected officials, trade unions, and other organizations committed to and working for social justice.

Facilities

The Community Studies Department maintains several unique resources for students. A media laboratory is available where majors can learn the use of video, audio, and photography as research and presentation tools. ~~Two~~ A field-study coordinator~~s~~ works with students to develop part- and full-time field studies, and a field-study resource office is available to assist students in selecting an appropriate organization. The field-study office provides logistical and academic support during the field study, while also functioning as a liaison between students, faculty, and host organizations.

Major Program

The program for all students in the major includes courses that develop a substantive focus for the field study, courses that contextualize the field study in broader social forces, courses that provide methodological tools for analyzing the field study, the field study itself, and the capstone requirement. Students who wish to pursue a major in Community Studies must satisfactorily complete course 10, *Introduction to Community Activism* prior to or concurrently with CMMU 102.

It is important to emphasize community studies is a major with a sequential core curriculum. This means that some required courses must be successfully completed in a specified order, as indicated by the quarter(s) when those courses are offered.

To begin the major and declaration process, a student must be enrolled in one of the CMMU 100(A-Z) gateway seminars. Through these seminars students develop a substantive focus for their academic study plan, field study, and senior capstone requirement. Students in the 100 (A-Z) seminars are presented with recommended organizations from which to select their placements. Several sections of CMMU 100(A-Z) are offered each fall ~~and winter~~ quarter. Topics vary from year to year and may include economic justice; health-care inequities; ~~immigration and social justice; sex, gender, and sexuality; politics of culture, and~~ agriculture, food, and social justice; ~~and media and social change~~. Following (or concurrent with) the gateway seminar is course 101, *Communities, Social Movements, and the Third Sector*, offered only in winter quarter, and course 102, *Preparation for Field Study*, offered only in spring quarter. In addition, four directed electives must be taken, one each in the areas of 1) race, class, and privilege, 2) regional or historical background, 3) political economy, and 4) cultural politics and representation. Students must ~~also~~ complete at least two of the four directed electives before leaving for their field study: one class that addresses race, class, and privilege and one class that provides regional or historical background for their field study. Two of ~~these~~ the four directed electives must be satisfied through courses offered inside the department; a complete list of directed electives for each area is posted on the department's web site <http://communitystudies.ucsc.edu/>. The remaining two directed electives, one course in political economy (the 140 series) and one course focusing on cultural politics and representation, may be completed any quarter prior to finishing the major.

Students are expected to arrange the rest of their academic program of study around the six-month, full-time field study (two quarters of 15 credits each). Students must conduct their fieldwork in summer and fall quarters so that they can enroll in course 194, *Analysis of Field Materials* immediately upon their return because course 194 is offered only in winter quarter. ~~The remaining two directed electives, one course in political economy (the~~

140 series) and one course focusing on cultural politics and representation, may be ~~completed any quarter prior to finishing the major.~~

Language competency must be demonstrated by all students planning a field study in a non-English speaking country and, therefore, such students must plan appropriate language study well in advance of the field study. In addition, students must demonstrate knowledge of the history, culture, and political economy of the place where they will be carrying out their field study—whether that place is a neighborhood in Santa Cruz, New York City, or a small village in Guatemala. ~~Students who find media production relevant to their fieldwork and are required to take course 80L prior to their field study; note that course 80L includes laboratories facilitated by the instructional staff of the Social Sciences Media Laboratory, located in 47 Social Sciences 2.~~

Admission to the Major

A general background or coursework in politics, sociology, anthropology, and/or community activism is suggested for students considering the community studies major. Students are required to have enrolled in two community studies courses at the time they declare the major: one must be a CMMU 100(A-Z) seminar and the other may be any of five-credit, lower- or upper-division course, including CMMU 10, except for the 42 series of student-directed seminars or independent or field studies.

The process of declaring the community studies major begins when a student enrolls in a section of CMMU 100(A-Z), the gateway seminar series. Prospective majors must choose a seminar that matches their own academic and social justice focus. Because of their small size, the CMMU 100(A-Z) seminars are enrolled through an “interview only” procedure, which usually takes the form of attending the first class, participating in discussion, and completing a questionnaire regarding background and interests. Based on this interview, each CMMU 100(A-Z) instructor will decide who gets priority in the class. Although the seminars are open to all students, prospective community studies majors enjoy priority enrollment. You must attend the first class to be considered for enrollment.

It is wise to communicate with your potential CMMU 100(A-Z) instructor to discuss your plans for the major prior to the beginning of the quarter to make sure that the Community Studies Department and the specific course you have chosen is appropriate for your interests and needs. Occasionally, a student is not accepted into the major because the student’s social-justice and field-study focus are poorly matched with the department’s areas of expertise and/or the student’s academic interests cannot be fulfilled by current department offerings.

Instructions for Applying to the Major

Attend a department orientation held at the beginning of each quarter.

Choose and enroll in the appropriate CMMU 100(A-Z) seminar. If you are accepted into the class, a permission number will allow you to register; you can then move on to the next step.

Print out a Declaration of Major petition from <http://advising.ucsc.edu>, fill in the University General Education and College Requirements portion, and obtain the signature of your college adviser. Complete the Application for Admission to Community Studies (available in the *Student Handbook*, found on the department web site: communitystudies.ucsc.edu.) Prepare an academic study plan on a separate piece of paper with your plans for completing all requirements for the major including field study and selection of directed electives.

Write a three- to four-page essay (typewritten) explaining:

- Why you think that the community studies major is the best way for you to pursue

your academic and social-change interests and how your focus matches the emphasis of your gateway seminar.

- The type of social-change or social-justice organization with which you expect to work.

The classes you have taken and/or plan to take, in addition to CMMU 100(A–Z), to prepare you to work with this organization.

~~Your social location (defined as the intersections of nationality, immigration history, ethnicity, racial privilege, class, gender, age, urban/rural/suburban/ex-urban upbringing, and/or sexuality) and how it may influence and/or be influenced by your proposed six-month field placement. For this part of the essay we encourage you to think deeply about all of these aspects although you are not required to reveal details about any individual category listed nor will you be accepted or rejected from the major on the basis of any of these categories.~~

Keep in mind that the department is interested in both the substance of your essay and your ability to express yourself in written form.

Meet with your CMMU 100(A–Z) seminar professor to discuss your essay, field-study plans, electives, and other application materials. Be prepared to list which electives you plan to take to fulfill your directed elective requirement, although you may need to be flexible on your elective choices as your faculty adviser may make other recommendations. Obtain the faculty signature on the application form. Bring any evaluations or progress reports from currently enrolled courses to support your application to the major.

Well before the deadline for the declaration of major, bring your completed Declaration of Major petition, draft study plan, signed application form, and essay to the Community Studies Department office (231 Oakes College) for final approval and processing. You are not officially declared until step 6 is finalized.

Note: you cannot begin course 102 without declaring the major. ~~Failure to do so will defer your progress in the major until the following year when the 102 course is next offered (spring only).~~

Major Course Requirements

Summary of Core

Sequence Requirements Credits

10	<i>Introduction to Community</i>	5
	<i>Community Activism (spring)</i>	
100(A–Z)	<i>Gateway Seminar (fall)</i>	5
101	<i>Communities, Social Movements,</i>	5
	<i>and the Third Sector (winter)</i>

outside the department) (any quarter
before field study)

140-149 *Political Economy Directed* 5

Elective (can be satisfied within or
outside the department) (any quarter
before finishing)

150-159 *Cultural Politics and Representation* 5

Directed Elective (can be satisfied within
or outside the department) (any quarter
before finishing)

194 *Analysis of Field Materials* (winter) 5

198 *Independent Field Study* (summer/fall) 30

10, Introduction to Community Activism

This course introduces students to different approaches to community activism including charity, volunteering, labor and community organizing, non-violent resistance, non-profit sector involvement, and social documentation.

100(A–Z), Gateway Seminars

The CMMU 100(A-Z) seminars provide students with a substantive focus for their academic work and field study. In each of these courses, students learn about the social, cultural, historical, geographic, and/or economic context of specific issues as well as efforts to change existing conditions.

101, Communities, Social Movements, and the Third Sector

This course critically engages with concepts central to the major including constructions of community in social-change efforts and the institutionalization of social movements in third-sector organizations. It is designed to deepen students' understanding of the opportunities and obstacles embedded in various avenues of social action.

102, Preparation for Field Study

This course examines participatory and other social-research methods including participant-observation, conducting interviews, writing ethnographic field notes, and collecting descriptive data. Students receive practical experience with developing research questions, methods, and writing field notes. The course also addresses ethical and logistical issues of research. The final project is a field-study prospectus with articulated research questions and methods.

120-129, Race, Class, and Privilege Electives

These courses examine race, class, and other hierarchies of difference as they intersect with structural inequality, self-identification, and identity politics. The requirement may be satisfied within or outside the department from a pre-approved list of courses.

130-139, Regional/Historical Electives

Students have a choice of courses that provide historical/geographic knowledge of particular peoples, places, or regions in preparation for their field study. The requirement

may be satisfied within or outside the department from a pre-approved list of courses, by petition, or through an approved independent study.

140-149, *Political Economy Electives*

Students have a choice of courses that examine the dynamics, logics, and/or institutions of colonialism, capitalism, neoliberalism, and/or globalization. The requirement may be satisfied within or outside the department from a pre-approved list of courses.

150-159, *Cultural Politics and Representation Electives*

Students have a choice of courses that examine ideas of discourse, social construction, knowledge, and representation as they help explain political and cultural contestation in the arts, science, medicine, media, and everyday life. The requirement may be satisfied within or outside the department from a pre-approved list of courses.

198, *Full-Time Independent Field Study*

During the full-time, six-month field study, students are enrolled at UCSC and receive full-time university credit. Students are required to submit field notes and several papers during the field study.

194, *Analysis of Field Materials*

This course is designed for students returning from their full-time field study. The course has two related goals: (1) to help students, both individually and collectively, analyze and gain perspective on their field experiences; and (2) to move students through the process of completing the senior capstone requirement. Students work with their field material to develop findings and arguments. For students completing the major with a senior essay, the essay is completed in course 194. For students doing a senior thesis, project, or student-directed seminar, the student completes at least three major pieces of writing; some or all of which will be incorporated into the completed thesis, project, or student-directed seminar.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The Community Studies Department's model of experiential pedagogy relies heavily on writing instruction to develop students' analytical, reflexive, and communicational skills. Although students in the community studies major receive disciplinary writing skills throughout the core curriculum, they fulfill the Disciplinary Communication requirement with two required upper-division courses, CMMU 102 and CMMU 194. The goals of the Community Studies Department's Disciplinary Communication requirement are to teach students to:

Research and synthesize core arguments, debates, and ideas related to students' topical focus within community studies.

Formulate a proposal describing a conceptual framework to approach the topical focus in a specific social context, including background, literature review, research questions, and methods.

Write descriptive and analytical field notes, then analyze the results of the field study and report findings in a capstone essay, thesis, or project.

Senior Capstone Requirement

Each student must fulfill a senior capstone requirement, either through the senior essay, a senior thesis, a senior project, or a student-directed seminar. For a thesis, project, or student-directed seminar, the student must choose a faculty member to serve as his or her

adviser.

Senior Essay: Students complete a senior essay that incorporates field study observations and contextualizes their findings historically and theoretically; the essay can incorporate writing completed in other courses, including CMMU 100(A–Z) and field study, along with essays written in course 194. The minimum length is 25 pages, plus bibliography. The senior essay is completed entirely in course 194, *Analysis of Field Materials*.

Senior Thesis: Some students may choose to complete a senior thesis, which is comprised of field-study observations, historical and theoretical contextualizations of the field study, and deeper analysis of the social-justice issues at the heart of the field study. In general, a thesis involves a more tightly developed argument related to field-study findings than the senior essay. It may also involve post-field-study research; typical length is 35–50 pages, including bibliography. Students begin the senior thesis during course 194 and should complete it in the following quarter(s) by enrolling in course 195, *Senior Thesis*.

Senior Project: Students may choose to complete a senior project in other genres of social documentation including video production, photography, audio production, creative writing, and other formats such as grant proposals and organizing pamphlets. The senior project also requires a significant analytical essay of 20 pages, plus bibliography, describing the project conceptualization, rationale, methodology, and evaluation. Students begin the senior project during course 194 and complete it the following quarter by enrolling in course 195, *Senior Thesis*.

Student-Directed Seminar (SDS): The SDS capstone option is reserved for exceptional students. Under the direction of a faculty adviser, the student develops and teaches a Community Studies 42 course that relates to the student's field-study and social-justice focus, accompanied by a seminar completion report.

The department selects only a limited number of student-directed seminars each year. Selection is based on the excellence of the SDS proposal, the relevance of the subject matter to the major, the student's background preparation, and the total number of proposals submitted each quarter. The Committee on Educational Policy gives the final approval.

For students interested in teaching a student-directed seminar, it is recommended that they meet with their adviser early on—prior to the full-time field study—to begin the process of obtaining course approval. A short written work providing the theoretical basis for the project, giving a brief analysis of the connection between the student's field work and the project itself, a course syllabus, a bibliography, and copies of the student's evaluations are required, along with a letter from the sponsoring faculty.

Students must also take course 199, *Tutorial*, the quarter prior to teaching the student-directed seminar, to give them time to prepare the course material. A student-directed seminar guide, giving detailed information about preparing for and teaching a student-directed seminar, is available in the department office.

Honors in the Major

Honors in the community studies major are awarded to graduating seniors whose academic performance in their major coursework is judged to be consistently excellent to outstanding. Students must also do excellent work on their senior capstone requirement; an honors-eligible senior essay must be particularly outstanding. The senior capstone must have intellectual merit, a genuine social change/social-justice focus, and evidence that the student gained insight into processes of social change. In accordance with UCSC policy, the Community Studies Department aims to award honors to approximately 15 percent of community studies graduates.

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses

10. Introduction to Community Activism. S

Surveys different strategies of community activism including charity, volunteering, labor and community organizing, and recently emerging global activism with goal of demonstrating how certain strategies challenge existing social relations and arrangements while others typically (and often by design) reproduce them. (General Education Code(s): IS.) *The Staff*

42. Student-Directed Seminar. F,W,S

Seminars taught by upper-division or graduate students under faculty supervision. (See course 192.) *The Staff*

93. Field Study. F,W,S

Supervised research for lower-division students, conducted off campus within regular commuting distance of the campus. Petitions may be obtained in the Community Studies Office. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

93F. Field Study (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

93G. Field Study (3 credits). F,W,S

Supervised off-campus study conducted under the immediate and direct guidance of a faculty supervisor. For lower-division students doing part-time off-campus study. Petition must be obtained from the Community Studies Department. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Individual directed study for lower-division undergraduates. Petitions may be obtained in the Community Studies Office. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses

100. Theory and Practice.

Introduces students to different ways of perceiving and understanding social phenomena in an ongoing dialogue about practical implications of theory and theoretical implications of practice. Faculty introduce and discuss their own work in these terms. Topics vary from quarter to quarter. Enrollment priority given to proposed community studies majors. Permission of instructor required; see enrollment conditions in the *Schedule of Classes*. *The Staff*

100E. Economic Justice. F

Examines how markets operate within the political economy of contemporary capitalism to generate myriad and often chronic forms of economic and social inequality in the United States. Explores different approaches to addressing inequality within the multi-faceted economic justice movement. Interview only: admission determined at first class meeting. Enrollment limited to sophomores and juniors. (Formerly *Theory and Practice of Economic Justice*.) Enrollment limited to 25. (General Education Code(s): E.) *M. Pudup*

100J. Immigration and Social Justice. *

Introduction to contemporary U.S. immigration patterns and policies, to major problems facing immigrant communities, and to theory and practice of immigrants and their allies in confronting these problems and working for social justice. Interview only: admission determined at first class meeting. Enrollment limited to sophomores and juniors. Enrollment limited to 25. (General Education Code(s): E.) *D. Brundage*

100M. Health Care Inequalities. F

Examines system and non-system that is American health care with special attention to inequalities in access, financing, and quality of care. Covers concepts such as equality, fairness, and need as well as community organizing and community building for health. Interview only: admission

determined at first class meeting. Enrollment limited to sophomores and juniors. Enrollment limited to 25. *A. Steiner*

100T. Agriculture, Food, and Social Justice. *

Examines the primary ways in which activists are attempting to resist, provide alternatives to, and/or transform aspects of the food system using social and environmental justice frameworks to evaluate such activism. Topics explored include organic farming, food charity, fair trade, relocalization, and farmworker organizing. Interview only: admission determined at first class meeting. Enrollment limited to sophomores and juniors. Enrollment limited to 25. *J. Guthman*

100X. Sex, Gender, and Sexuality. *

How do people produce and politicize sex, gender, and sexuality on their bodies? How are these represented and disciplined? Topics include transgender, sex work, feminist and queer realities. Materials include testimonials, films, ethnography, social theory, and clinical texts. Interview only: admission determined at first class meeting. Enrollment limited to sophomores and juniors. Enrollment limited to 25. *M. Ochoa*

101. Communities, Social Movements, and the Third Sector. W

Engages with crosscutting ideas and concepts central to the major including constructions of community in social-change efforts and the institutionalization of social movements in third-sector organizations. Deepens students' understanding of the opportunities and obstacles embedded in various avenues of social action. Enrollment restricted to community studies majors. *M. Pudup*

102. Preparation for Field Studies. S

A practicum to prepare students for field study. Course must be successfully completed prior to the six-month field study. Prerequisite(s): course 10; satisfaction of the Entry Level Writing and Composition requirements; submission of signed Goals and Objectives form and completion of admissions process to the major; signed approval of full-time field study. Enrollment limited to community studies majors. *A. Steiner*

103. Field Study Practicum (2 credits). S

A practicum in social change work in which the students works for a social change organization on a part-time basis. Concurrent enrollment in course 102 required. *A. Steiner*

110. Resistance and Social Movements. *

Where do ideas for democratic social change come from? How are new social movements formed? Emphasis will be placed on subaltern groups including slaves, peasants, workers, utopians, and "second-class citizens" of the global economy from 1492 to the present. (Formerly course 100P.) (General Education Code(s): E.) *The Staff*

114. Communities, Problems and Interventions. *

Prepares students to develop and design responses to problems affecting communities. Informed by the history of community interventions in Chicana/o, feminist, labor, civil rights, HIV/AIDS, and GLBT/queer movements, students research, design, and propose a community-level intervention. (Formerly course 160.) Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment limited to 25. (General Education Code(s): W.) *M. Ochoa*

122. Whiteness, Racism, and Anti-Racism. F

Examines the social, cultural, institutional, and personal ways that white privilege and racial domination are constructed, maintained, and reproduced in U.S. society. Goal is to reveal the "hidden" quality of whiteness and illuminate effective strategies for anti-racist activism. (Formerly course 114.) Enrollment limited to 25. (General Education Code(s): E.) *The Staff*

123. Immigrants and Immigration in U.S. History. W

Introduces U.S. immigration history from the colonial era to the present, with emphasis on the recent past. Particular attention given to changing immigration patterns; the character of the immigrant experience; and the range of responses to immigration, including nativism. (Also offered as History 123. Students cannot receive credit for both courses.) (General Education Code(s): ER.) *D. Brundage*

132. American Cities and Social Change. S

Examines the historical development of and contemporary conditions within U.S. cities by focusing on social and economic restructurings of cities, cultural and political transformations, and spatial reorganizations of the urban landscape. Goal is understanding the changing nature of urban experience. (Formerly course 163.) *M. Pudup*

136. Northern Ireland: Communities in Conflict. *

Introduction to the so-called "troubles" in Northern Ireland, from the 1960s to the present. Examination of the historical background to the conflict, the patterns of conflict in the 1970s and 1980s, and the emergence of a peace process in the 1990s. (Formerly course 166.) (General Education Code(s): CC.) *D. Brundage*

142. Introduction to Marxism. *

A close study of original texts by Marx and Engels and contemporary Marxists, focusing on the basic tenets of Marxism and their applicability to current community problems. An interdisciplinary course for students with little previous experience in Marxist method. *M. Rotkin*

143. Wal-Mart Nation. *

Examines origins and growth of Wal-Mart stores as powerful guides to understanding dynamics of

contemporary global political economy and, relatedly, the changing fortunes of global social classes. (Formerly course 123.) *M. Pudup*

145. Globalization and Its Discontents. *

Provides an overview of the origins and existing character of major institutions, structures, and dynamics of the global political economy. Examines some social consequences of neoliberalism as well as political responses to it. (Formerly course 168.) *J. Guthman*

149. Political Economy of Food and Agriculture. W

Examines key concepts in agrarian political economy; the historical development of the world food system; and a selection of contemporary issues related to food production, consumption, distribution, and regulation. (General Education Code(s): PE-E.) *J. Guthman*

155. Popular Culture and Social Change. *

Examines the roles popular culture plays in peoples' everyday lives and the ways in which popular-culture texts reflect, shape, and contest the social values, ideas, and ideologies of particular historical moments. Special emphasis on examining the relationship between popular culture and social change in an effort to map out and study its transformations. *A. Berney*

156. Politics of Obesity. *

Critically examines the construction and representation of the so-called epidemic of obesity, the major explanations for the rise in obesity and the interventions they beget, and the implications of naming obesity as a problem. (Formerly course 145.) (General Education Code(s): PE-H.) *J. Guthman*

157. Ageism and Activism. *

Introduces students to gerontology, the study of aging. Taking a multidisciplinary approach, critically examines the theories, stereotypes, and realities of worldwide demographic transition and considers the many interesting implications for organizing social and personal life. (Formerly course 111.) *A. Steiner*

160. Public Health. W

Examination of community activism to address health issues: examples are drawn from a range of concerns, e.g., environmental racism, prison conditions, feminist health matters, the AIDS epidemic, violence, and alcoholism. Special attention is given to the social frameworks of health and to the utilization of social and political strategies for improving community well-being. (Formerly course 110.) *A. Steiner*

161. Women's Health Activism. *

Examines concrete aspects of women's health in social and political contexts, including such factors as environmental and occupational health, the role of race and nationality, diverse sexualities and health, American medical care systems, and international comparisons and organizing approaches. (Formerly course 148.) *A. Steiner*

162. Community Gardens and Social Change. *

Examines history, theory, and practice of community gardening, emphasizing contemporary garden projects using the transformative power of direct contact with nature to effect social change. Aims include understanding the nonprofit sector's response to social problems with novel programs and practices. (Formerly course 117.) Enrollment limited to 50. *M. Pudup*

189. Methods of Teaching Community Studies. F,W,S

Each student serves as a facilitator for small discussion groups in connection with core community studies courses. Facilitators complete course readings and meet with instructor as a group to discuss the teaching process. May not be counted toward upper-division major requirements. Prerequisite(s): prior course work in the major. *The Staff*

192. Directed Student Teaching. F,W,S

Teaching of a lower-division seminar, course 42, under faculty supervision. Students submit petition to sponsoring agency. Approval by the Committee on Educational Policy the prior quarter. *The Staff*

193. Field Study. F,W,S

Supervised off-campus study conducted under the immediate and direct guidance of a faculty supervisor. To be used primarily by upper-division students doing part-time off-campus study. Petitions may be obtained in the Community Studies Department Office. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

193F. Field Study (2 credits). F,W,S

Supervised off-campus study conducted under the immediate and direct guidance of a faculty supervisor. For upper-division students doing part-time off-campus study. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

193G. Field Study (3 credits). F,W,S

Supervised off-campus study conducted under the immediate and direct guidance of a faculty supervisor. For upper-division students doing part-time off-campus study. Petition must be obtained from the Community Studies Department. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

194. Analysis of Field Materials. W

A seminar for students who have completed a full-time field study. Devoted to the systematic analysis of field materials, integrating appropriate concepts and relevant literature, as well as utilizing the experience of other students. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, course 198. Enrollment restricted to community studies majors. (General Education Code(s): W.) *The Staff, A. Steiner, J. Guthman, D. Brundage, M. Pudup*

195A. Senior Thesis. F,W,S

Individual study with a faculty member to complete the senior thesis. Petitions may be obtained in the Community Studies Department Office. Students submit petition to sponsoring agency. *The Staff*

195B. Senior Thesis. F,W,S

Individual study with a faculty member to complete the senior thesis. Petitions may be obtained in the Community Studies Department Office. Students submit petition to sponsoring agency. *The Staff*

195C. Senior Thesis. F,W,S

Individual study with a faculty member to complete the senior thesis. Petitions may be obtained in the Community Studies Department Office. Students submit petition to sponsoring agency. *The Staff*

198. Independent Field Study. F

Provides for department-sponsored individual study programs off campus for which faculty supervision is not in person (e.g., supervision is by correspondence). Community studies majors are required to take 30 credits of field study. Students engaging in full-time field study must complete all application procedures as described in the Community Studies handbook. Students submit petition to sponsoring agency. Prerequisite(s): course 102 must be successfully completed before enrollment in this course. May be repeated for credit. *M. Rotkin, The Staff*

199. Tutorial. F,W,S

Advanced directed reading and research for the serious student. May be repeated for credit with consent of instructor. Petitions may be obtained in the Community Studies Department Office. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Advanced directed reading and research for the serious student. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

209. Ethnographic Writing. *

Fleshes out social analysis. Prepares students entering or returning from fieldwork to represent people, places, and social processes in writing. Employs writing exercises, in-class workshop, and review of ethnographic literature. Enrollment restricted to graduate students. Enrollment limited to 30. *M. Ochoa*

297. Independent Study. F,W,S

Either study related to a course being taken or a totally independent study. Designed for graduate students. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

*Not offered in 2011-12

[Program Description](#) | [Changes to 2010-12 Catalog Highlighted](#)

Program Description

Cognitive science has emerged in the last few decades as a major discipline that promises to be increasingly important in the 21st century. Focused on achieving a scientific understanding of how human cognition works and how cognition is possible, its subject matter encompasses cognitive functions (such as memory and perception), the structure and use of human language, the evolution of the mind, animal cognition, artificial intelligence, and more.

The cognitive science degree provides a strong grounding in the principles of cognition through courses in cognitive psychology, and, in addition, provides breadth in the interdisciplinary aspects of cognitive science such as anthropology, linguistics, biology, philosophy, and computer science. Graduates will be well prepared for advanced training in research fields of cognitive psychology and cognitive neuroscience, technology industries such as human-computer interface, and health fields in the treatment of brain disorders.

The cognitive science major is intended for students wishing to enter doctor of philosophy (Ph.D.) programs in cognitive psychology, cognitive science, or cognitive neuroscience to pursue careers in research; enter the field of public health to work with individuals with neurological disorders and learning disabilities; or to enter the field of human-computer interface design; or pursue other related careers.

The Department of Psychology administers the program and student major advising.

Preparation for the Major

Students who are not prepared to begin the calculus requirement should take preparatory courses offered by the mathematics and applied mathematics departments, including pre-calculus.

Requirements for the Cognitive Science Major

The undergraduate degree program in cognitive science is a program offering a course of study leading to the bachelor of science (B.S.) degree. Fifteen courses (75 credits) are required. Because some courses have additional prerequisites, students should read the descriptions of courses carefully, noting the prerequisites for courses of interest to them.

Lower-Division Requirements:

PSYC 2, *Introduction to Psychological Statistics*

PSYC 20, *Introduction to Cognitive Psychology*

Calculus (one of AMS 11A, MATH 11A, 19A or 20A)

Computer Programming (one of CMPE 13/L, CMPS 5C, 5J, 5P, 12A)

Upper-Division Requirements:

PSYC 100, *Research Methods in Psychology* (7 credits)

Core Courses: students must complete three of the following:

PSYC 121, *Perception*

PSYC 123, *Behavioral Neuroscience*

PSYC 125, *Psychology of Language*

PSYC 129, *Human Learning and Memory*

Cognitive Psychology Electives: students must complete three additional upper-division

Psychology courses from the following list. One of the core courses that is not used to satisfy the core courses requirement may be used to satisfy this requirement:

Any of PSYC 120139 (i.e., the Cognitive Series)

PSYC 104, *Development in Infancy*

PSYC 105, *Children's Thinking*

PSYC 119F, *Language Development*

PSYC 181, *Psychological Data Analysis*

PSYC 194, *Advanced Cognitive Research*

PSYC 195A, *Senior Thesis*

PSYC 204-252, graduate cognitive courses, by petition

Interdisciplinary Electives ? students must complete four interdisciplinary electives from lists of courses pre-approved by the Psychology Department. The electives fall into four groups: Evolution; Artificial Intelligence and Human-Computer Interaction; Linguistics; Philosophy. Three of the four electives must be selected from the same group. Students are responsible for planning their course of study to complete any necessary prerequisites for electives they wish to take. Possible sequences of interdisciplinary courses, including prerequisites, are given below.

Group 1: Evolution

Anthropology 1, 101, 106, 194B, Biology: Ecology and Evolutionary Biology 20C, 129, 140

Group 2: Artificial Intelligence and Human-Computer Interaction

Computer Engineering 8, 80A, 131, Computer Science 20, 80B, 80K, 80V

Group 3: Linguistics

Linguistics 50, 53, 80D, 101, 102, 105, 111 (formerly Linguistics 55), 112 (formerly Linguistics 52), 113, 116, 117, 125

Group 4: Philosophy

Philosophy 100B (formerly Philosophy 93), 100C (formerly Philosophy 94), 121, 123, 133, 135, 138, 141

Major Admission Requirements

Students may petition to declare the cognitive science major once they have completed the lower-division requirements. Students admitted to the major must have a 3.00 grade-point average (GPA) in the lower-division requirements, with no single grade lower than C and no course taken P/NP. Transfer students may substitute equivalent courses from other institutions. Students receiving a C or lower in one of the lower-division courses may contact the department for possible substitutions.

Comprehensive Requirement

UCSC requires that every student satisfy a senior exit/comprehensive requirement prior to graduation. Cognitive Science students will satisfy this requirement by receiving a passing grade in either a cognitive seminar (PSYC 139A-G), or research experience (PSYC 194B, *Advanced Cognitive Research*, or PSYC 195, *Senior Thesis*).

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that majors upper-division Disciplinary Communication (DC) requirement. The DC requirement in cognitive science is satisfied by completing Psychology 100, Research Methods in Psychology, and one of the following seminars: Psychology 119F, 139F, 139G, and 139H. Please refer to updated information at <http://reg.ucsc.edu/catalog/html/disciplinarycommunicationchart.html>.

Honors

Honors in the cognitive science major are awarded to graduating seniors whose academic performance is judged to be consistently excellent by a committee of psychology faculty. Highest honors in the major are reserved for students with consistently excellent academic performance and an honors-level senior thesis.

Cognitive Science Course Planners

Following are two recommended academic plans for students to complete the Cognitive Science major. Plan 1 assumes typical curriculum selections. Plan 2 assumes the maximum number of prerequisites.

Plan One			
Year	Fall	Winter	Spring
1st (frsh)	MATH 2	MATH 3	Calculus
	PSYC 20	Programming	
	college core		
2nd (soph)	Interdisciplinary prerequisite	PSYC 2	PSYC 100
		Interdisciplinary prerequisite	
3rd (jr)	core	core	core
	Interdisciplinary prerequisite	Interdisciplinary prerequisite	Interdisciplinary prerequisite
	Cognitive elective	Cognitive elective	Cognitive elective
4th (sr)	Interdisciplinary prerequisite	Cognitive upper-division	Cognitive upper-division

Plan Two			
Year	Fall	Winter	Spring
1st (frsh)	MATH 2	MATH 3	Calculus
	PSYC 20	Programming	
	college core		
2nd (soph)	Interdisciplinary prerequisite	PSYC 2	PSYC 100

Lower-Division Courses**10. Becoming a Successful Student (2 credits). ***

An interactive approach to effective studying, note-taking, critical thinking, and exams. Also explored: time management; good communication with staff and faculty; major and career exploration; and use of campus resources. Enrollment priority given to first-year students and sophomores. Enrollment restricted to college members, or by permission of instructor. Enrollment limited to 15. *The Staff*

12. Public Speaking (2 credits). W

Introduces students to the theory and practice of formal and informal public speaking through composition, presentation, and evaluation of informative reports, persuasive speech, introductory remarks, panels, and extemporaneous speech. Enrollment restricted to college members during priority enrollment. Enrollment limited to 20. *C. Carlstroem*

42. Student-Directed Seminar. F,W,S

Seminars taught by upper-division students under faculty supervision. (See course 192.) *The Staff*

50. Library Skills for the Digital Age (2 credits). *

Intended to enhance students' skills in using the most powerful learning tool in any university: the library. Topics: organization of the library; how to begin researching; search engine and database use; judging the quality of sources; using sources responsibly. Disciplinary focus changes from quarter to quarter. Enrollment restricted to first-year and sophomore Cowell college members, or by permission of instructor. Enrollment limited to 22. *W. Martyna*

61. Critical Journeys (2 credits). *

For publication in a Cowell literary journal, students substantively revise one of their fall quarter essays by studying a major work that influences, acknowledges, or further clarifies a required reading of the Cowell core course. Prerequisite(s): course 80A or 80B; enrollment restricted to members of Cowell College. Enrollment limited to 20. *J. Wilson, C. Carlstroem*

64. Social Justice: Issues and Debates (2 credits). *

Focused followup on social justice topics and readings introduced in the Cowell core course. Allows first-year students to pursue social justice themes in greater depth. Students must have previously taken a Cowell core course (or equivalent). Enrollment restricted to first-year students. Enrollment limited to 20. *J. Christianson*

70A. Bookbinding.

Students learn techniques of bookbinding, construction, and design, and fundamentals of letterpress printing. Students are billed a materials fee. May not be used to fulfill art major requirements. Enrollment limited to 12. (General Education Code(s): A.) *G. Young*

70B. Printing I: Elements of Printing.

Learn fundamental skills in fine letterpress printing, including hand typesetting and instruction in the operation of printing presses. Basic typography explored as students design and print a small edition of a selected text. Students are billed a materials fee. May not be used to fulfill art major requirements. Prerequisite(s): course 70A. Enrollment limited to 12. (General Education Code(s): A.) *G. Young*

70C. Printing II: Typography and Book Design.

Students learn fundamental skills in fine letterpress printing, including hand typesetting and instruction in the operation of printing presses. Basic typography explored as students design and print a small edition of a selected text. Students are billed a materials fee. May not be used to fulfill art major requirements. Prerequisite(s): course 70B or by instructor permission. Enrollment limited to 12. May be repeated for credit. (General Education Code(s): A.) *G. Young*

80A. Introduction to University Discourse: Imagining Justice Past and Present. F

Explores rhetorical principles and conventions of university discourse, providing intensive practice in analytical writing, critical reading, and speaking. Focuses on conceptions of justice, historic and contemporary, and considers how literary and artistic media may transmit, question, or revise notions of the just. Students cannot receive credit for this course and course 80B. Enrollment restricted to first-year college members who have not satisfied the C1 requirement. Enrollment limited to 22. (General Education Code(s): T4-Humanities and Arts, C1.) *The Staff*

80B. Rhetoric and Inquiry: Imagining Justice Past and Present. F

Explores the intersections of investigation, interpretation, and persuasion and hones strategies for

writing and research. Focuses on conceptions of justice, historic and contemporary, and considers how literary and artistic media may transmit, question, or revise notions of the just. Incorporates independent research. Students cannot receive credit for this course and course 80A.

Prerequisite(s): satisfaction of the Entry Level Writing and C1 requirements. Enrollment restricted to first-year college members. Enrollment limited to 22. (General Education Code(s): T4-Humanities and Arts, C2.) *The Staff*

85. Introduction to Chinese Writing Systems. *

Gateway course illuminating the operation of the writing systems of greater China. Intended for students who are curious about the world's longest continually used symbol set as well as for those who may be considering a serious commitment to learning the language. *D. Keenan*

86. College Leadership Development (2 credits). *

Students newly appointed as residential life assistants in the college prepare for taking up their positions by studying identity and diversity issues; student development; community building; conflict resolution; intercultural competency; and leadership skills. Restricted to students selected for Cowell College Resident Assistantship, and by permission of instructor. May be repeated for credit. *The Staff*

93. Field Study. F,W,S

Various topics to be arranged. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

93F. Field Study (2 credits). F,W,S

Various topics to be arranged. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

94. Group Tutorial. F,W,S

A program of independent study arranged between a group of students and a faculty instructor. Students submit petition to sponsoring agency. Enrollment limited to 10. May be repeated for credit. *The Staff*

94F. Group Tutorial (2 credits). F,W,S

A program of independent study arranged between a group of students and a faculty instructor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Various topics to be arranged. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99F. Tutorial (2 credits). F,W,S

Various topics to be arranged. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses

111. Mock Trial Workshop (2 credits). F

Designed for training and mentoring of UCSC's Mock Trial team and students interested in acquiring forensic speech skills. Enrollment limited to 15. *D. Robertson*

118B. Words & Music: Poetry, Musical Theater, Opera.

Study of significant texts enhanced by music for performance. Topics vary annually. Course compares original texts in English translation with their adaptation to musical theater (*My Fair Lady*, *Oklahoma*, etc.) and opera (*Carmen*, etc.) May be repeated for credit. (General Education Code(s): IH.) *M. Ellis*

138A. The Place of Higher Education in a Democratic Society. F

Centers around interviews of alumni and involves a reflective term paper on a specific topic having to do with the role of higher education in a democratic society. Teaches students how to conduct interviews. Prerequisite(s): course 80A or 80B. Enrollment limited to junior and senior Cowell College members. Enrollment limited to 20. (General Education Code(s): PE-H.) *F. Crosby*

138B. Life Development (2 credits). W

Visits from alumni form the centerpiece of this course. In teams, students study the lives and the issues of the visitors. The aim is to reflect on the meaning of education in adult development. Prerequisite(s): course 38A, and 80A or 80B. Enrollment limited to 40. *F. Crosby*

156M. Arts and Sciences. *

Seminar exploring the relations between scientific modes of understanding and those pertaining to the liberal and fine arts, including literature, philosophy, and the visual and performing arts. Winter 2009: literature and medicine. May help students preparing to take the MCAT (reading comprehension and writing sections). Enrollment restricted to juniors and seniors. Priority to Cowell College students. Enrollment limited to 15. May be repeated for credit. *D. Schultz*

168A. Social Change (2 credits). W

How do you change the world, working alone and in concert with others? To find out, students work in groups with specific community partners who, in turn, help place students in social-change organizations in Santa Cruz County. Enrollment limited to 40. (General Education Code(s): PR-S.)

F. Crosby

168B. Social Change (2 credits). S

How do you change the world, working alone and in concert with others? To find out, students work in groups with specific community partners who, in turn, help place students in social-change organizations in Santa Cruz County. Enrollment limited to 40. (General Education Code(s): PR-S.)

F. Crosby

184A. Leadership and Institution Building (2 credits). F

Through lectures by senior administrators and student consensus-and-recommendation teams, students learn how leaders work with constituent groups, build cooperation, and develop implementation plans in an institution such as the University of California, specifically, UC Santa Cruz. Enrollment restricted to undergraduates accepted in the Chancellor's Undergraduate Internship Program. Enrollment limited to 40. *W. Ladusaw*

184B. Leadership and Institution Building (2 credits). W

Through lectures by senior administrators and student consensus-and-recommendation teams, students learn how leaders work with constituent groups, build cooperation, and develop implementation plans in an institution such as the University of California, specifically, UC Santa Cruz. Enrollment restricted to undergraduates accepted in the Chancellor's Undergraduate Internship Program. Enrollment limited to 40. *W. Ladusaw*

184C. Leadership and Institution Building (2 credits). S

Through lectures by senior administrators and student consensus-and-recommendation teams, students learn how leaders work with constituent groups, build cooperation, and develop implementation plans in an institution such as the University of California, specifically, UC Santa Cruz. Enrollment restricted to undergraduates accepted in the Chancellor's Undergraduate Internship Program. Enrollment limited to 40. *W. Ladusaw*

192. Directed Student Teaching. F,W,S

Teaching of a lower-division seminar under faculty supervision. (See course 42.) Upper-division standing required and a proposal supported by a faculty member willing to supervise. *The Staff*

193. Field Study. F,W,S

Program of study arranged between a group of students and an instructor, which may involve work with an off-campus or non-departmental agency (e.g., internship or field work). Interview only; prior arrangement with instructor. Enrollment restricted to juniors and seniors. May be repeated for credit. *The Staff*

193F. Field Study (2 credits). F,W,S

Program of study arranged between a group of students and an instructor, which may involve work with an off-campus or non-departmental agency (e.g., internship or field work). Interview only; prior arrangement with instructor. Enrollment restricted to juniors and seniors. May be repeated for credit. *The Staff*

194. Group Tutorial. F,W,S

A program of independent study arranged between a group of students and an instructor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

194F. Group Tutorial (2 credits). F,W,S

A program of independent study arranged between a group of students and an instructor. Students submit petition to sponsoring agency. Enrollment restricted to juniors and seniors. May be repeated for credit. *The Staff*

195. Senior Thesis. F,W,S

Students submit petition to sponsoring agency. *The Staff*

198. Independent Field Study. F,W,S

Provides for college-sponsored individual study programs off campus, for which faculty supervision is not in person (e.g., supervision is by correspondence.) Up to three such courses may be taken for credit in any one quarter. Approval of student's adviser, certification of adequate preparation, and approval by provost required. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Various topics to be arranged. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Various topics to be arranged. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

*Not offered in 2011-12

Crown College

College Office
(831) 459-2665
<http://www2.ucsc.edu/crown>

Lower-Division Courses**28. Crown Student Leadership Development Seminar (2 credits). W**

Explore leadership as it relates to student development at Crown College. Examine how values, ethics, involvement, identity, and theory affect leadership in a variety of content areas. Evaluate student's leadership strengths to determine objectives for improvement. *The Staff*

31. Crown College Student Leadership in Action Seminar (2 credits). S

Focuses on developing and establishing leadership skills and styles for new leaders at Crown College. Explores communication styles, group dynamics, community development, programming, moral development and conflict resolution concepts and strategies. Applies theory to action. Enrollment limited to college members and by permission of instructor. *The Staff*

60. The Environment on Film: Rhetoric of Ecocriticism. W

Examines the overt as well as the subtle cinematic elements that depict, ponder, and persuade concerning issues of the environment and the role of humans regarding nature, animals, and the human-made landscape. Enrollment restricted to college members during priority enrollment. Enrollment limited to 24. (General Education Code(s): IM, IH.) *M. Foster*

70. Introduction to Broadcast Media: Radio. F,W,S

Comprehensive history of noncommercial radio as a mass-communication medium. Course also serves as an introduction to UCSC's radio station KZSC-FM and broadcasting. Through lectures, hands-on instruction, and written assignments, students learn the fundamentals of program presentation and audio production. Enrollment by permission of instructor. Enrollment limited to 14. (General Education Code(s): PR-S.) *M. Bryant*

80A. University Discourse: Ethical Issues in Emerging Technologies. F

Explores rhetorical principles and conventions of university discourse, providing intensive practice in analytical writing, critical reading, and speaking. Examines ethical challenges brought about by rapidly changing science and technology. Students cannot receive credit for this course and course 80B. Enrollment restricted to first-year college members who have not satisfied the C1 requirement. (General Education Code(s): T6-Natural Sciences or Humanities and Arts, C1.) *F. Ferguson*

80B. Rhetoric/Inquiry: Ethical Issues in Emerging Technologies. F

Explores intersection, interpretation, and persuasion and hones strategies for writing and research. Examines ethical challenges brought about by rapidly changing science and technology. Students cannot receive credit for this course and course 80A. Prerequisite(s): satisfaction of the Entry Level Writing and C1 requirements. Enrollment restricted to first-year Crown College members. (General Education Code(s): T6-Natural Sciences or Humanities and Arts, C2.) *F. Ferguson*

80F. Science Fictions.

Examines how science fictions have imagined better and worse worlds, social relations, and identities by using science and technology. Students read novels and short stories from the 19th Century to the present and discuss and debate questions of justice, freedom, difference, and identity. (Formerly "Seminar in Science Fiction.") Prerequisite(s): satisfaction of the Entry Level Writing and C1 requirements. Enrollment limited to 22. (General Education Code(s): TA, T7-Natural Sciences or Social Sciences.) *D. Farquhar, A. Rava*

80J. Cyborg Society: Myths, Realities, Choices.

Examines content and methodologies of the emerging field of cyborgology. Includes social studies of science, anthropology, sociology, philosophy, politics, art, biology, and informatics. Enrollment limited to 25. (General Education Code(s): PE-T, T5-Humanities and Arts or Social Sciences.) *C. Gray*

80L. Food Safety and Environmental Quality: The Complexities of a Safe Salad. *

In recent years, outbreaks of food-borne illness have alarmed farmers and consumers alike. This course examines the complexities of ensuring food safety in the complex natural, economic, and social settings that characterize U.S. food-production systems. Enrollment limited to 24. (General Education Code(s): PE-E, T7-Natural Sciences or Social Sciences.) *K. Lowell*

80S. Undergraduate Seminar in Science, Technology, and Society. *

An honors seminar for first year students on selected topics that examine the relationship between science, technology, and society. Precise focus of each seminar varies and is announced by the college. Preference given to Crown College students. Enrollment restricted to first-year and sophomore students. Enrollment limited to 20. (General Education Code(s): T2-Natural Sciences.)

The Staff

93. Field Study. F,W,S

Provides for individual programs of study sponsored by the college and performed off campus. Students should review plans with an appropriate fellow of the college. A proposal should be presented to the college academic preceptor no later than the seventh week of the preceding quarter. Credit is granted by the sponsor upon approval of the work performed. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

93F. Field Study (2 credits). F,W,S

Provides for individual field study in the vicinity of the campus under the direct supervision of a faculty sponsor. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

99F. Tutorial (2 credits). F,W,S

Individual study for lower-division students directed by a fellow of Crown College. Students submit petition to sponsoring agency. Enrollment restricted to college members. *The Staff*

Upper-Division Courses

123. Science and Human Values. S

Study and application of ideas and practices that social scientists and therapists have empirically shown empower people to choose to create better lives rather than just follow old habits. Course is personally challenging, writing-intensive, and discussion-intensive. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; permission of instructor after written letter, and interview with instructor during the preceding winter quarter. Enrollment limited to 48. (General Education Code(s): W.) *F. Andrews*

185. Career and Internship Preparation (1 credit). F,W

For juniors and seniors preparing for an internship experience or career position. Subjects include: self-assessment of career objectives and/or internship goals; exploration of resources and techniques for finding and evaluating potential positions; resume writing; interview techniques; techniques to maximize learning in an internship and advancement in a job; communication; conflict resolution and problem solving in the organizational setting. Enrollment limited to 40. *K. Cope*

198. Independent Field Study. F,W,S

Provides for college-sponsored individual study programs off campus. Approval of student's faculty sponsor and college academic provost required. *The Staff*

199. Tutorial. F,W,S

Individual study for upper-division students directed by a fellow of Crown College. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Individual study for upper-division students directed by a fellow of Crown College. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

[Program Description](#) | [Changes to 2010-12 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Program Description

New technologies have profoundly changed contemporary culture and inevitably altered the role of the arts in society. The Digital Arts and New Media (DANM) Master of Fine Arts (M.F.A.) Program serves as a center for the development and study of digital media and the cultures that they have helped create. Faculty and students are drawn from a variety of backgrounds, such as the arts, computer engineering, humanities, the sciences, and social sciences, to pursue interdisciplinary artistic and scholarly research and production in the context of a broad examination of digital arts and cultures.

The Digital Arts and New Media M.F.A. Program is a two-year program organized into four interdependent and equally important pursuits:

New Praxis—The term “praxis” has many meanings, which include “translating ideas into action” and “action and reflection upon the world in order to change it.” New Praxis in DANM is comprised of “critique” and “practicum” which provide students with both the practical training and critical dialogue necessary to pursue their own individual goals as artists and cultural practitioners.

Studies—DANM “studies” include required core seminars that allow students first to explore an array of recent methods and approaches in digital arts and culture, and then to pursue the construction of specific genealogies and theories with a sustained focus on a particular topic, by engaging in various dialogues at the intersection of theory and practice while developing their thesis project and paper.

Collaborative Research—Students and faculty engage in research collaborations resulting in publications and exhibitions in one of four possible focused research areas: mechatronics, participatory culture, performative technologies, and playable media described below.

Mechatronics

Mechatronics is the functional integration of mechanical, electronic, and information technologies. In DANM this framework may be employed for the development and production of physical, systems-based artwork that incorporates elements of robotics, motion control, software engineering, and hardware design. DANM mechatronics research involves the use of a variety of media including video, performance, and sculpture for the creation of complex, kinetic, audio-visual systems for the exploration of temporality, materiality, experience, and perception.

Participatory Culture

Participatory culture studies and research efforts explore the role of information and communication technologies in the current shift from “top-down” culture to a culture of participation and social engagement. Within the social register, the human/computer interface acts as both a boundary and a bridge. Participatory culture research in DANM encompasses a range of projects in social computing and community-media activism which involve the design of new technologies to address social problems and facilitate broader participation in culture and politics.

Performative Technologies

Research in performative technologies explores new methods for combining media and technology to create the visual, aural, and connective material of performance. DANM performance research generates new public and performative spaces where digital media, communication networks, and interactive systems may be fused with lighting, movement, and stage and sound design to create real-time shared multimedia experiences for audiences and performers at both local and remote locations. Ongoing projects in this area may include work in telematics; performance-driven, real-time graphics; algorithmic composition of sound and image; computer vision and motion capture; and studies of ritual, performativity, embodiment, interactivity, and subjectivity.

Playable Media

Playable media research explores the potential of computational systems for the creation of new

media forms that invite and structure play. This group works to understand and create new ways for computer games and related forms to engage audiences, make arguments, tell stories, and shape social space. Ongoing playable-media work combines game-design and artificial-intelligence research with writing, art, and media authoring.

Prospective students are asked to identify their choice of research group in their application and statement of purpose. Admissions are tied to DANM project group foci. New students are admitted into a specific project group based on the quality and relevance of the student's prior work and expertise to the group project in their chosen area of focus. Students collaborate on faculty-initiated and -directed research projects. This work is intended to provide the student with the opportunity to learn collaborative and practical research methodologies, and to participate in a professional-level research project. The collaborative-project group experience is intended to inform, but not necessarily contribute to, the student's thesis project.

Pedagogy—DANM trains future arts academics through practical experience. Students are awarded teaching assistantships as part of their overall support package as well as opportunities to assist faculty in workshops.

Requirements

The DANM M.F.A. Program requires 72 credits of academic course work. In the first year, students generally take three courses each term—one course in each of the program areas, New Praxis, Studies, and Collaborative Research. In the second year, students primarily take elective courses, work with their thesis committees, and pursue independent and directed research leading to the completion of the thesis project and paper.

New Praxis

New Praxis in DANM is comprised of "critique" and "practicum." Students are required to take seven new praxis courses over two years and have the option to take two new praxis electives.

New Praxis—Year One

Practicum—This area of praxis is designed to allow students to develop the conceptual, technical, and practical skills they need to successfully complete projects that realize their own individual goals as digital media artists.

DANM 210—First-year students are required to take a Project Design Studio in the first quarter. This course guides the development of students' individual studio practice, particularly in relation to the transition to digital media.

Electronic and programming requirements—First-year students also take basic courses in electronics and programming. Students with prior experience in programming and/or electronics should discuss their background with the instructor and their adviser to determine if the course is needed or if an alternative course should be taken to fulfill this credit requirement. Students seeking an alternative means to fulfill this requirement may choose to:

- serve as assistants in workshops for beginning students;
- take electronics or programming electives offered in computer engineering; or
- enroll in independent studies, as approved by their adviser.

Critique—This area of praxis is designed to allow students to present their own work and review the work of their fellow students as a means of engaging in the critical dialogue necessary to pursue their own individual goals as digital media artists. First-year students are required to present work-in-progress based on the projects developed in the project-design course in both individual studio and group critiques, and participate in group critique discussion.

During the spring quarter, first-year students identify and engage a thesis committee under the supervision of the program director.

New Praxis—Year Two

Practicum—During the fall quarter, second-year students work on the development of their thesis project proposal and abstract under the supervision of their thesis committee. Second-year students are encouraged to take practice-based electives and independent studies that facilitate the development of their thesis projects.

DANM 299—In the winter and spring quarters, second-year students enroll in a minimum of 10 credits of independent thesis research which is supervised by one or more members of their thesis committee.

DANM 215—Students work with faculty curator/coordinator on development of thesis projects specifically for the group exhibition context. Students contribute to development of exhibition design and collateral materials, while studying the unique presentation and curatorial challenges of new media.

Studies

Students are required to take three core seminars over two years and have the option to take two studies electives.

Studies—Year One

DANM 201 *Recent Methods and Approaches to Digital Arts and Culture*—In this seminar students examine an array of methods and approaches to research and writing in digital media art and culture and explore key theories concerning digital media and cultures.

DANM 202 *Dialogues and Questions in Digital Arts and Culture*—A pre-thesis course in which students engage in dialogues at the intersection of theory and practice with the goal of producing a pre-thesis proposal and preparatory essay. Readings and seminar discussions will inform the development of pre-thesis project proposals and essays.

Studies—Year Two

DANM 203 *Frameworks and Arguments in Digital Arts and Culture*—This course is intended to help students develop and write the M.F.A. thesis. Students conduct research on the thesis topic, design outlines, construct strong theoretical arguments, and draft the final document. The course is intended to help students structure and develop their thesis papers which are intended to theoretically contextualize their thesis projects.

Elective—Students may choose to take an elective offered by the program or choose an elective from a broad array of graduate courses offered on campus with the approval of their adviser.

Collaborative Research

Students participate in a three-quarter-long, collaborative-research project group in one of four possible DANM research focus areas, which begins in the winter quarter of the first year. In the second year, students continue with the final two quarters of their project group (spring and fall). This work is intended to provide the student with the opportunity to learn collaborative and practical research methodologies, and to participate in a professional-level research project.

Thesis Requirement

Students are required to complete a thesis project and written paper under the supervision of their thesis committee. The thesis will be an arts project with digital documentation accompanied by a written paper. Thesis projects may be individual or collaborative and are expected to grow out of the research pursued in the project groups during the three quarters prior as well as work developed in new praxis courses. Each student will be expected to complete a 20- to 30-page paper discussing the student's preparatory research as well as the theoretical significance of the project. In the case of collaborative projects, each student will be required to submit his or her own paper. During the thesis year, students will make at least two progress presentations to their thesis committee. The chair of the three-person committee will be a full associate professor and DANM faculty member. A completed thesis project and paper must be submitted to and approved by the thesis committee before the degree can be awarded.

Applications

Prospective students in the Digital Arts and New Media program will have a foundation in the arts with some demonstrated interest in technology or a foundation in technology with demonstrated background in the arts. Many, but not all, entering students will have completed a Bachelor of Arts (B.A.) program in one or more of the arts disciplines (art or art history, film, multimedia, music, theater, video, etc.) or a Bachelor of Science (B.S.) program in computer science or computer or electrical engineering. Other successful applicants will have a B.A. or B.S. in another field but will be able to show substantial achievement in the arts, in technology, or in digital arts.

In certain cases, students who demonstrate excellent potential for the program but lack proficiency in a "cross discipline" will be admitted to the program with the understanding that they will take courses during their first two quarters of study to make up that deficiency. An arts student lacking sufficient programming experience, for example, will be expected to take one or two programming courses in their first two quarters in addition to the DANM program requirements.

Students will apply online through the Division of Graduate Studies web site between October and February for the following fall quarter. In addition to submitting an online application, students will be expected to submit an online portfolio. Further information can be found at: <http://graddiv.ucsc.edu>.

Program Description

New technologies have profoundly changed contemporary culture and inevitably altered the role of the arts in society. The Digital Arts and New Media (DANM) Master of Fine Arts (M.F.A.) Program serves as a center for the development and study of digital media and the cultures that they have helped create. Faculty and students are drawn from a variety of backgrounds, such as the arts, computer engineering, humanities, the sciences, and social sciences, to pursue interdisciplinary artistic and scholarly research and production in the context of a broad examination of digital arts and cultures.

The Digital Arts and New Media M.F.A. Program is a two-year program organized into four interdependent and equally important pursuits:

New Praxis—The term “praxis” has many meanings, which include “translating ideas into action” and “action and reflection upon the world in order to change it.” New Praxis in DANM is comprised of “critique” and “practicum” which provide students with both the practical training and critical dialogue necessary to pursue their own individual goals as artists and cultural practitioners.

Studies—DANM “studies” include required core seminars that allow students first to explore an array of recent methods and approaches in digital arts and culture, and then to pursue the construction of specific genealogies and theories with a sustained focus on a particular topic, by engaging in various dialogues at the intersection of theory and practice while developing their thesis project and paper.

Collaborative Research—Students and faculty engage in research collaborations resulting in publications and exhibitions in one of four possible focused research areas: mechatronics, participatory culture, performative technologies, and playable media described below.

Mechatronics

Mechatronics is the functional integration of mechanical, electronic, and information technologies. In DANM this framework may be employed for the development and production of physical, systems-based artwork that incorporates elements of robotics, motion control, software engineering, and hardware design. DANM mechatronics research involves the use of a variety of media including video, performance, and sculpture for the creation of complex, kinetic, audio-visual systems for the exploration of temporality, materiality, experience, and perception.

Participatory Culture

Participatory culture studies and research efforts explore the role of information and

communication technologies in the current shift from “top-down” culture to a culture of participation and social engagement. Within the social register, the human/computer interface acts as both a boundary and a bridge. Participatory culture research in DANM encompasses a range of projects in social computing and community-media activism which involve the design of new technologies to address social problems and facilitate broader participation in culture and politics.

Performative Technologies

Research in performative technologies explores new methods for combining media and technology to create the visual, aural, and connective material of performance. DANM performance research generates new public and performative spaces where digital media, communication networks, and interactive systems may be fused with lighting, movement, and stage and sound design to create real-time shared multimedia experiences for audiences and performers at both local and remote locations. Ongoing projects in this area may include work in telematics; performance-driven, real-time graphics; algorithmic composition of sound and image; computer vision and motion capture; and studies of ritual, performativity, embodiment, interactivity, and subjectivity.

Playable Media

Playable media research explores the potential of computational systems for the creation of new media forms that invite and structure play. This group works to understand and create new ways for computer games and related forms to engage audiences, make arguments, tell stories, and shape social space. Ongoing playable-media work combines game-design and artificial-intelligence research with writing, art, and media authoring.

Prospective students are asked to identify their choice of research group in their application and statement of purpose. Admissions are tied to DANM project group foci. New students are admitted into a specific project group based on the quality and relevance of the student’s prior work and expertise to the group project in their chosen area of focus. Students collaborate on faculty-initiated and -directed research projects. This work is intended to provide the student with the opportunity to learn collaborative and practical research methodologies, and to participate in a professional-level research project. The collaborative-project group experience is intended to inform, but not necessarily contribute to, the student’s thesis project.

Pedagogy—DANM trains future arts academics through practical experience. Students are awarded teaching assistantships as part of their overall support package as well as opportunities to assist faculty in workshops.

Requirements

The DANM M.F.A. Program requires 72 credits of academic course work. In the first year, students generally take three courses each term—one course in each of the program areas, New Praxis, Studies, and Collaborative Research. In the second year, students primarily take elective courses, work with their thesis committees, and pursue independent and directed research leading to the completion of the thesis project and paper.

New Praxis

New Praxis in DANM is comprised of “critique” and “practicum.” [Students are required to take seven new praxis courses over two years and have the option to take two new praxis electives.](#)

New Praxis—Year One

Practicum—This area of praxis is designed to allow students to develop the conceptual, technical, and practical skills they need to successfully complete projects that realize their own individual goals as digital media artists.

DANM 210—First-year students are required to take a *Project Design Studio* in the first quarter. This course guides the development of students' individual studio practice, particularly in relation to the transition to digital media.

Electronic and programming requirements— First-year students also take basic courses in electronics and programming. Students with prior experience in programming and/or electronics should discuss their background with the instructor and their adviser to determine if the course is needed or if an alternative course should be taken to fulfill this credit requirement. Students seeking an alternative means to fulfill this requirement may choose to

- serve as assistants in workshops for beginning students;
- take electronics or programming electives offered in computer engineering; or
- enroll in independent studies, as approved by their adviser.

Critique—This area of praxis is designed to allow students to present their own work and review the work of their fellow students as a means of engaging in the critical dialogue necessary to pursue their own individual goals as digital media artists. First-year students are required to present work-in-progress based on the projects developed in the project-design course in both individual studio and group critiques, and participate in group critique discussion.

During the spring quarter, first-year students identify and engage a thesis committee under the supervision of the program director.

New Praxis—Year Two

Practicum—During the fall quarter, second-year students work on the development of their thesis project proposal and abstract under the supervision of their thesis committee. Second-year students are encouraged to take practice-based electives and independent studies that facilitate the development of their thesis projects.

DANM 299—In the winter and spring quarters, second-year students enroll in a minimum of 10 credits of independent thesis research which is supervised by one or more members of their thesis committee.

DANM 215—Students work with faculty curator/coordinator on development of thesis projects specifically for the group exhibition context. Students contribute to development of exhibition design and collateral materials, while studying the unique presentation and curatorial challenges of new media.

Studies

Students are required to take three~~four~~ core seminars over two years and have the option to take two studies electives.

Studies—Year One

DANM 201 *Recent Methods and Approaches to Digital Arts and Culture*—In this seminar students examine an array of methods and approaches to research and writing in digital media art and culture and explore key theories concerning digital media and cultures.

DANM 202 *Dialogues and Questions in Digital Arts and Culture*—A pre-thesis course in which students engage in dialogues at the intersection of theory and practice with the goal of producing a pre-thesis proposal and preparatory essay. Readings and seminar

discussions will inform the development of pre-thesis project proposals and essays.

Studies—Year Two

DANM 203 *Frameworks and Arguments in Digital Arts and Culture*—This course is intended to help students develop and write the M.F.A. thesis. Students conduct research on the thesis topic, design outlines, construct strong theoretical arguments, and draft the final document. The course is intended to help students structure and develop their thesis papers which are intended to theoretically contextualize their thesis projects.

Elective—Students may choose to take an elective offered by the program or choose an elective from a broad array of graduate courses offered on campus with the approval of their adviser.

Collaborative Research

Students participate in a three-quarter-long, collaborative-research project group in one of four possible DANM research focus areas, which begins in the winter quarter of the first year. In the second year, students continue with the final two quarters of their project group (spring and fall). This work is intended to provide the student with the opportunity to learn collaborative and practical research methodologies, and to participate in a professional-level research project.

Thesis Requirement

Students are required to complete a thesis project and written paper under the supervision of their thesis committee. The thesis will be an arts project with digital documentation accompanied by a written paper. Thesis projects may be individual or collaborative and are expected to grow out of the research pursued in the project groups during the three quarters prior as well as work developed in new praxis courses. Each student will be expected to complete a 20- to 30-page paper discussing the student's preparatory research as well as the theoretical significance of the project. In the case of collaborative projects, each student will be required to submit his or her own paper. During the thesis year, students will make at least two progress presentations to their thesis committee. The chair ~~will be senate faculty and at least two members~~ of the three-person committee will be a full or associate professor and DANM faculty member. ~~members of the DANM program faculty.~~ A completed thesis project and paper must be submitted to and approved by the thesis committee before the degree can be awarded.

Applications

Prospective students in the Digital Arts and New Media program will have a foundation in the arts with some demonstrated interest in technology or a foundation in technology with demonstrated background in the arts. Many, but not all, entering students will have completed a Bachelor of Arts (B.A.) program in one or more of the arts disciplines (art or art history, film, multimedia, music, theater, video, etc.) or a Bachelor of Science (B.S.) program in computer science or computer or electrical engineering. Other successful applicants will have a B.A. or B.S. in another field but will be able to show substantial achievement in the arts, in technology, or in digital arts.

In certain cases, students who demonstrate excellent potential for the program but lack proficiency in a "cross discipline" will be admitted to the program with the understanding that they will take courses during their first two quarters of study to make up that deficiency. An arts student lacking sufficient programming experience, for example, will be expected to take one or two programming courses in their first two quarters in addition to the DANM program requirements.

Students will apply online through the Division of Graduate Studies web site between

October and February for the following fall quarter. In addition to submitting an online application, students will be expected to submit an online portfolio. Further information can be found at: <http://graddiv.ucsc.edu>.

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Faculty and Professional Interests

RALPH H. ABRAHAM, Professor Emeritus, Mathematics

ELLIOT W. ANDERSON, Associate Professor, Art
Electronic art, digital arts/new media

LAWRENCE ANDREWS, Associate Professor, Film and Digital Media
Film, video, installation and media art

NEDA ATANASOSKI, Assistant Professor, Feminist Studies
U.S. and Eastern European film and media; cultural studies and critical theory; war and nationalism; gender, ethnicity, and religion

GOPAL BALAKRISHNAN, Associate Professor, History of Consciousness
Classics of political thought from Plato to Rousseau, early modern and modern European intellectual history, historical sociology, the history and future of capitalism, nationalism

BRANDIN BARON-NUSBAUM, Associate Professor, Theater Arts
Costume design, history of design

AMY C. BEAL, Professor, Music
American music, 20th-century music, experimental and improvisatory performance practices, postwar and Cold War culture, German new music festivals and radio stations, piano performance, contemporary music ensemble

TANDY BEAL, Lecturer, Theater Arts (Dance)
Choreography, improvisation, technique, performance skills, collaborations with classical and jazz composers, circus, theater and video, children's productions

JAMES H. BIERMAN, Professor, Theater Arts (Drama)
Playwriting, theater history and literature, classical and Renaissance drama, Chicano theater, digital media

BENJAMIN L. CARSON, Associate Professor, Music
Theories of consciousness and cognition, rhythm perception, Schoenberg, history of compositional method, subjectivity and identity

ALAN CHRISTY, Associate Professor, History
Early modern and modern Japan; history of social sciences, colonialism, nationalism

DAVID H. COPE, Professor Emeritus, Music

E. G. CRICHTON, Associate Professor, Art
Intermedia, electronic arts, photography, installation

DAVID L. CUTHBERT, Associate Professor, Theater Arts
Lighting design, CADD, projection design, scenic design

SHARON A. DANIEL, Professor, Film and Digital Media
Community-based public art in information and communications environments, social and political aspects of information technology, community networks, participatory culture, digital inclusion, net art, human-computer interface design

JAMES E. DAVIS, Associate Professor, Computer Science
Computer graphics and computer vision, methods for acquiring and manipulating complex graphical models from the real world

KATE EDMUNDS, Associate Professor, Theater Arts
Set design for theater and film

PETER Q. ELSEA, Lecturer, Music
Electronic music and music technology

SHELLY E. ERRINGTON, Professor, Anthropology

Globalization of folk art, visual and social semiotics, photography, film, the Internet and digital media, Southeast Asia, and Latin America

MARY K. FOLEY, Professor, Theater Arts (Drama)

Asian theater, Southeast Asian studies, performance studies, maskwork, puppetry, multicultural theater

MARK FRANKO, Professor, Theater Arts (Dance)

Dance history and theory, choreography, technique, performance studies, theatrical theory in historical and critical perspective

PATTY GALLAGHER, Associate Professor, Theater Arts (Dance)

Movement training for actors, circus and clown traditions, and Indonesian dance/performance

JENNIFER A. GONZÁLEZ, Associate Professor, History of Art and Visual Culture

Contemporary theories of visual culture, semiotics, critical museum studies, photography, public and activist art in the U.S.

IRENE GUSTAFSON, Associate Professor, Film and Digital Media

Producing across the boundaries between "theory" and "practice," non-fiction media, experimental film/video, production design, gender and queer studies

HELEN MAYER HARRISON, Research Professor, Digital Art and New Media

NEWTON HARRISON, Research Professor, Digital Art and New Media

BARNEY HAYNES, Lecturer, Digital Arts and New Media

Video art, performance, reactive installation, and invasive media recombining themes and industrial surplus into media machines that evolve and mutate

KARLTON HESTER, Associate Professor, Music

Premeditated, electroacoustic, and spontaneous composition; flutes, saxophones, and interdisciplinary performance; improvisational and Afrocentric music theory, analysis and history

DEE HIBBERT-JONES, Associate Professor, Art

Public art, sculpture

ELI E. HOLLANDER, Professor, Film and Digital Media

Film and video directing; ethnographic documentary directory, editing, cinematography, and videography; digital image generation; screenwriting

DONNA M. HUNTER, Associate Professor, History of Art and Visual Culture

European painting (especially French) from 1600 to the 1960s; German art and visual culture between the two world wars; art as social practice, portraiture

KIMBERLY JANNARONE, Associate Professor, Theater Arts (Drama)

Directing, dramaturgy, dramatic theory and criticism, theater history, acting

ARNAV JHALA, Assistant Professor, Computer Science

Artificial intelligence: video games, graphics, and intelligent user interfaces

DAVID E. JONES, Professor, Music; Provost, Porter College

Composition and analysis, chamber opera, Balkan music, language and music, timbre and orchestration

JAMES KHAZAR, Lecturer, Art

CHRISTINE L. KING, Lecturer, Kresge

SRI KURNIAWAN, Associate Professor, Computer Engineering

Human-computer interaction; human factors and ergonomics; accessibility; assistive technology; usability; empirical studies; user-centered design

JOHN JOTA LEANOS, Assistant Professor, Social Documentation

Social documentation, social art practice, community arts, Chicana/o cultural studies, fine arts and animation

NORMAN LOCKS, Professor, Art

Photography

CHARLES L. LORD, Professor Emeritus, Film and Digital Media

Film and video directing and editing, video theory and history, video installation, screenwriting, documentary production

PAUL M. LUBECK, Professor, Sociology

Political sociology; political economy of development, globalization, labor and work; logics of methodology; religion and social movements; Islamic society and identities; information and networks

IRENE LUSZTIG, Assistant Professor, Film and Digital Media

Film and video production, experimental documentary, ethnographic film, autobiographical film, editing

DOMINIC W. MASSARO, Professor Emeritus, Psychology

MICHAEL J. MATEAS, Associate Professor, Computer Science

Artificial Intelligence (AI) for art and entertainment, game AI, AI and creativity, AI-based interactive storytelling, autonomous characters

CHARLES E. McDOWELL, Professor, Computer Science

Programming languages, parallel computing, and computer science education

MARGARET E. MORSE, Professor, Film and Digital Media

Digital and electronic media theory and criticism, media art, media history, technology and culture, film history and theory, German cinema, documentary, science fiction, and silent comedy

DEREK C. MURRAY, Assistant Professor, History of Art and Visual Culture

Contemporary art, globalization, theory and criticism, African-diaspora art, visual-culture studies, cultural theory

SORAYA MURRAY, Assistant Professor, Film and Digital Media

Contemporary art with emphasis in new media art and theory; African diaspora and globalization

PAUL NAUERT, Professor, Music

Theory, composition; rhythm and meter; music cognition; mathematical and computer models of the compositional process

DARD A. NEUMAN, Assistant Professor, Music; Kamil and Talat Hasan Endowed Chair in Classical Indian Music

Ethnomusicology; Hindustani music; colonialism, nationalism, technology and performance; sitar

A. TODD NEWBERRY, Professor Emeritus, Ecology and Evolutionary Biology

MARCIA OCHOA, Assistant Professor, Community Studies

Gender and sexuality, race and ethnicity, Latina/o studies, media and cultural studies, ethnography of media, feminism, queer theory, geography, multimedia production, graphic design, colonialism and modernity, Latin American studies—Colombia and Venezuela

ALEX PANG, Professor, Computer Science

Uncertainty visualization, tensor visualization, scientific visualization, collaboration software, virtual reality interfaces

JENNIFER PARKER, Associate Professor, Art

Sculpture, installation, video, and performance art

STEPHEN C. PETERSEN, Lecturer, Computer Engineering

Embedded controller systems, RF wireless systems, modulation and spectrum reuse, digital signal processing, circuit theory

ERIC PORTER, Professor, American Studies

Black cultural and intellectual history; U.S. cultural history and cultural studies; comparative ethnic studies; popular music and jazz studies

S. RAVI RAJAN, Associate Professor, Environmental Studies

Environmental history and political ecology, risk and disaster studies, science and technology studies, North-South environmental conflicts, environmental social theory, environmental ethics

B. RUBY RICH, Professor, Community Studies

Documentary film and video, post-9/11 culture, new queer cinema, feminist film history, Latin American and Latin/a cinema, U.S. independent film and video, the essay film, the politics of film festival proliferation and the marketing of foreign films in the U.S.

ADRIENNE ROBERTS, Lecturer, Art

WARREN SACK, Associate Professor, Film and Digital Media

Software design and media theory

DANIEL SCHEIE, Professor, Theater Arts (Drama)

Acting, directing, dramatic literature, theater history, Shakespeare, Wagner, gay studies

BARRY R. SINERVO, Professor, Ecology and Evolutionary Biology

Animal behavior, evolution, physiological ecology

ELIZABETH STEPHENS, Professor, Art

Intermedia, electronic art, sculpture, and performance art

RENEE TAJIMA-PENA, Professor, Community Studies

Documentary film and video focusing on Asian American and immigrant communities, media, and social change

HAI TAO, Associate Professor, Computer Engineering

Image and video processing, computer vision, vision-based graphics, and human-computer interaction

GUSTAVO VAZQUEZ, Associate Professor, Film and Digital Media

Film and video production, directing drama, documentary and experimental cross-cultural experiences in film, film curator

FABIAN WAGMISTER, Associate Professor, Film and TV (UCLA)

EDWARD C. WARBURTON, Associate Professor, Theater Arts

Development of dance thought in action, creative processes, and technology in theater arts; dance technique, movement research and composition, and applied dance practices

NOAH WARDRIP-FRUIIN, Associate Professor, Computer Science

Digital media, computer games, electronic literature, software studies

ZACHARY WATKINS, Lecturer, Music

Music composition, engineering, sound art

LEWIS G. WATTS, Associate Professor, Art

Photography

EMMET J. WHITEHEAD, Associate Professor, Computer Science

Software engineering, software configuration management, web, hypertext, collaborative authoring, hypertext versioning, Internet information systems

DON WILLIAMS, Director, Cultural Arts and Diversity Center

African American Theater Arts Troupe, Rainbow Theatre

ROB WILSON, Professor, Literature

Transnational and postcolonial literatures, especially as located in Asia/Pacific emergences as posited against American empire of globalization; cultural poetics of America; the sublime, Longinus to Hiroshima; mongrel poetics of experimental writing, especially poetry

RICHARD WOHLFEILER, Lecturer, Art

Printmaking, drawing

DAVID YAGER, Professor, Art

Photography, design, and print media

Digital Arts and New Media

DARC 204
(831) 459-1919
<http://danm.ucsc.edu>

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Graduate Courses**201. Recent Methods and Approaches to Digital Arts and Culture. F**

Students examine methods and approaches to research and writing in digital art and new media, while exploring key theories concerning technology, art, and culture. Focus is on the interaction between digital technologies and socio/cultural formations. Enrollment restricted to graduate students. *S. Murray*

202. Dialogues and Questions in Digital Arts and Culture. S

Students engage in dialogues at the intersection of theory and practice with the goal of producing a pre-thesis proposal and essay. Readings and seminar discussions inform the development of project proposals and essays, which theoretically contextualize students' work. (Formerly Digital Arts and New Media 203.) (Also offered as Music 254Q. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. *B. Carson*

203. Frameworks and Arguments in Digital Arts and Culture. S

Intended to help students develop and write the MFA thesis. Students conduct research on the thesis topic, design outlines, construct strong theoretical arguments, and draft the final document. (Formerly course 202, Genealogies and Theories of Digital Arts and Culture.) *M. Morse*

204. Ways of Seeing and Hearing. F

Graduate-level advanced seminar explores ways that seeing, hearing, and knowing are influenced by culture, power, race, and other factors. Readings emphasize how documentary subjects are constituted and known, addressing questions of epistemology, social constructivism, objectivity, and method. (Also offered as Social Documentation 204. Students cannot receive credit for both courses.) Enrollment restricted to social documentation and digital arts new media graduate students. *M. Ochoa*

205. Approaches to Social Documentation. F

Comprehensive review and analysis of documentary strategies aimed at societal critique and social change, evaluating changes in argument, evidence, and process over development of the discipline. (Also offered as Social Documentation 200. Students cannot receive credit for both courses.) A concurrent media lab is required. Enrollment restricted to digital arts and new media graduate students. Enrollment limited to 15. *B. Rich*

206. Practice of Social Documentary. F

Introduction to social documentary genres including video, photography, new media and other mediums, which addresses social-scientific research and methodology in the context of these processes. (Also offered as Social Documentation 202. Students cannot receive credit for both courses.) A concurrent media lab is required. Enrollment restricted to digital arts and new media graduate students. Enrollment limited to 15. *J. Leanos*

207. Video Production of the Social Documentary. W

Intensive directing and producing course that covers conceptualization, research, treatment and proposal writing, interview technique, camera, editing, production, and distribution. (Also offered as Social Documentation 280. Students cannot receive credit for both courses.) A concurrent media lab is required. Enrollment restricted to digital arts and new media graduate students. Enrollment limited to 15. *R. Tajima*

208. Special Topics in Social Documentation. F,W,S

Designed to provide supplemental instruction on specific topical and/or technical matters related to social documentation. Topics include technical standards and innovations within the field of social documentation, documentary subjects, location production, and/or the work of individual professional documentarians. (Also offered as Social Documentation 290. Students cannot receive credit for both courses.) Enrollment restricted to digital arts and new media graduate students. Enrollment limited to 15. May be repeated for credit. *The Staff*

210. Project Design Studio. F

Students work on the design of individual projects by developing project proposals, budgets, "proof of concept" design documents and/or prototypes and exploring tools, technologies, programming languages, hardware, software, and electronics techniques relevant to their projects. Enrollment restricted to graduate students. *E. Crichton*

211. Critique. S

First-year digital arts and new media graduate students are required to present work-in-progress based on the projects developed in earlier courses and during the current quarter in individual studio critiques with the instructor as well as in group critiques. Enrollment restricted to graduate students. Enrollment limited to 18. *S. Daniel*

212. Thesis Proposal (no credit). S

First-year digital art and new media graduate students work on the development and completion of their thesis-project proposal and abstract under the supervision of the program chair and their thesis committees. Enrollment restricted to DANM students. *The Staff*

215. MFA Exhibition Production. W

Second-year digital arts and new media graduate students work with faculty curator/coordinator to develop thesis projects specifically for the group exhibition context. Students contribute to exhibition design and collateral materials while studying the unique presentation and curatorial challenges of new media. Enrollment restricted to graduate students. *S. Murray*

216. Digital Bodies. *

Explores the appearance, form, and theoretical status of the human body/political subject in online art. Focuses on representations of race and gender, family resemblances, and local communities, as well as the political and colonial metaphors of spatial interaction operating on the World Wide Web. Visual representations of bodies that take the form of avatars, advertising, robots, and anime studied in their contextual usage. Enrollment restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 17. *J. Gonzalez*

217. Concepts in Electronic Art. *

Study of concepts developed in contemporary conceptual art practice and their application to technological media. Review a broad spectrum of electronic art—the Internet, digital video, interactive systems, kinetics and robotics, biotechnological work—that hold conceptual art practice in the foreground. Use concepts cultivated by early conceptual artists and apply them to individual projects using electronic media. Enrollment restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 17. *I. Reichert*

219. Introduction to Electronics for Artmaking. F

Intensive introduction to electronic devices used in artmaking, providing hands-on experience with sensors, motors, switches, gears, lights, simple circuits, microprocessors, and hardware storage devices to create kinetic and interactive works of art. Students are billed a materials fee. Enrollment restricted to graduate students. *The Staff*

220. Introduction to Programming for the Arts. W

Covers aspects of computer programming necessary for digital art projects. Students learn to manipulate digital media using program control for installations, presentations, and the Internet. No prior programming experience required. Enrollment restricted to graduate students. *P. Elsea*

221. Mathematics and the Arts. *

Examines the role of mathematics in the arts since the computer revolution with an emphasis on chaos, fractals, and symmetry. Covers abstract animation and algorithmic music, including the history of leading innovators and techniques from 1950 to the present. Student projects explore the creative process today using cutting-edge technologies. Enrollment restricted to graduate students. Upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 30. May be repeated for credit. *R. Abraham*

224. Digital Arts Project Studio. *

Provides a context for significant development of digital arts projects: in the first year, individual and collaborative; in the second year, resolution of thesis projects. Individuals and collaborative groups meet with the instructor for focused critical feedback. Students create a public exhibition of their work-in-progress. Enrollment restricted to graduate students. Enrollment limited to 18. *E. Crichton*

227. Projected Light in Performance. W

Exploration of projected light in performance and art. The history of lighting as art is covered in a hands-on demystifying format from the shadow of a bare light bulb to the latest in automated and projection equipment and techniques. Enrollment restricted to graduate students. Juniors and seniors may enroll with permission of instructor. Enrollment limited to 20. *D. Cuthbert*

228. Techniques of Modernity and Aesthetic Formations. *

Explores the transformations and aesthetic possibilities of the digital age through a study of perceptual shifts of the past, from orality to literacy, gift to commodity, pre-colonial to colonial, "pre-modern" to "modern," and the technological revolutions that accompanied these shifts. (Also offered as Music 228. Students cannot receive credit for both courses.) Enrollment restricted to graduate students; upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 18. *D. Neuman*

231. Human-Computer Interaction. W

Theory and hands-on practice to understand what makes user interfaces usable and accessible to diverse individuals. Covers human senses and memory and their design implications, requirement solicitation, user-centered design and prototyping techniques, and expert and user evaluations. Individual research project. Interdisciplinary course for art, social science and engineering graduate students. Students cannot receive credit for this course and course 131. (Also offered as Computer

Engineering 231. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. *S. Kurniawan*

233. The Object as Interface. *

Combination theory and studio-based exploration into the role of the object in real and virtual space. Provides a broad conceptual and theoretical examination of issues relating to object-making on a physical and dematerialized plane. Enrollment restricted to graduate students. Enrollment limited to 15. *W. Hibbert-Jones*

250A. Collaborative Research Project Group: Mechatronics. F,W,S

Three-quarter collaborative research project group involves faculty-initiated research in the use of a variety of media including video, performance, and sculpture, for the creation of complex, kinetic, audio-visual systems exploring temporality, materiality, experience, and perception. Enrollment restricted to graduate students. Enrollment limited to 8. May be repeated for credit. *The Staff*

250B. Collaborative Research Project Group: Participatory Culture. F,W,S

Three-quarter collaborative research project group encompasses a range of faculty-initiated projects in social computing and community-media activism, which involve the design of new technologies to address social problems and facilitate broader participation in culture and politics. Enrollment restricted to graduate students. Enrollment limited to 8. May be repeated for credit. *The Staff*

250C. Collaborative Research Project Group: Performative Technologies. F,W,S

Three-quarter collaborative research project group generates faculty-initiated new public and performative spaces where digital media, communication networks, and interactive systems may be fused with lighting, movement, stage, and sound design to create shared multimedia experiences for audiences and performers. Enrollment restricted to graduate students. Enrollment limited to 8. May be repeated for credit. *The Staff*

250D. Playable Media. W

Focuses on media, such as computer games, that invite and structure play. Work includes building and critiquing a series of prototypes; studying major examples in the field; and discussing both theoretical and practice-oriented texts. (Also offered as Computer Science 290J. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. May be repeated for credit. *N. Wardrip-Fruin, M. Mateas*

254I. Empirical Approaches to Art Information. *

Reading and practice in empirical methods, as applied to the study of music, visual art, multimedia production, and performance arts. Topics include semiotics, critiques of empiricism, cultural determinants and contingents of perception, the psychophysics of information, sensory perception (visual and auditory), memory, pattern recognition, and awareness. Students apply existing knowledge in the cognitive sciences to a developing creative project, or develop and conduct new experiments. (Also offered as Music 254I. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. Enrollment limited to 17. May be repeated for credit. *B. Carson*

254L. John Cage: Innovation, Collaboration, and Performance Technologies. *

In-depth examination of John Cage's interdisciplinary work, his pioneering activity in live electronic technology, and his influence in current multimedia creativity. Approximately one-half of the seminar is devoted to student research and creative projects and reflect Cage's legacy. (Also offered as Music 254L. Students cannot receive credit for both courses.) Enrollment restricted to juniors, seniors, and graduate students. Upper-division undergraduates may enroll with permission of instructor. Enrollment limited to 12. *The Staff*

267. Workshop in Computer Music and Visualization (2 credits). F,W,S

Graduate-level techniques and procedures of computer music composition and visualization. Practical experience in the UCSC electronic music studio with computer composition systems and software, including visualization and interactive performance systems. Extensive exploration of music and interactive graphic programs such as Max/MSP/Jitter. Enrollment by permission of instructor; appropriate graduate experience required. Enrollment restricted to graduate students. (Also offered as Music 267. Students cannot receive credit for both courses.) Enrollment limited to 12. May be repeated for credit. *P. Elsea*

297. Independent Study. F,W,S

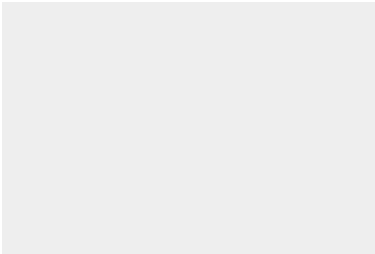

Independent digital arts and new media research project under the guidance of a digital arts and new media faculty member or other faculty with approval of adviser. Project includes readings, research, and a written report. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. Maximum 10 credits. May be repeated for credit. *The Staff*

297G. Independent Study (3 credits). F,W,S

Independent digital arts and new media research project under the guidance of a digital arts and new media faculty member or other faculty with approval of adviser. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for a maximum 6 credits. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Students carry out a master's of fine arts thesis in digital arts and new media research, under the guidance of a thesis committee. The thesis will be an arts project with digital documentation accompanied by a written paper discussing the student's preparatory research as well as the

theoretical significance of the project. Enrollment restricted to graduate students. Maximum 10 credits. May be repeated for credit. *The Staff*

*Not offered in 2011-12

Program Description

The Earth and Planetary Sciences Department teaches and conducts research in a wide array of topics. We seek to answer questions such as:

- How did the Earth form? How has it evolved since then? What makes up the interior of the Earth?
- What is the history of life on Earth? What are the causes and effects of past mass extinctions?
- How do mountain ranges form? What causes earthquakes? What causes island chains to form? What controls the evolution of glaciers? How do we prevent coastal erosion? How well can we predict tsunamis?
- What has Earth's climate been like in the past? How will climate change in the future?
- What controls the supply and quality of our freshwater resources?
- How are other planets in our solar system different from Earth? How did they evolve to their present state? How have the impacts of asteroids on Earth and other planets affected their evolution?

A variety of methods and tools are used to help us address these questions. Geologists examine rocks and geologic formations in order to understand the processes that control their formation and evolution. Geochemists and mineralogists examine the chemical and mineral composition of rocks, sediments, and fossils using a variety of sophisticated analytical instruments. Geophysicists use seismometers to not only record earthquakes, but also to learn about the deeper parts of the Earth. Environmental scientists collect samples of the atmosphere, rivers, lakes, and the oceans, sometimes requiring the use of aircraft and ships. Spacecraft have visited and explored all of the planets in our solar system. Space-based satellites have provided a massive amount of data about Earth over the past few decades. Scientists from all disciplines use computer models to help them understand these complex systems.

The Department of Earth and Planetary Sciences offers a number of degrees that teach undergraduate and graduate students the knowledge and skills necessary to address these questions. Along with the standard Earth sciences major, we offer degrees with concentrations in environmental geology, ocean sciences, planetary sciences, and science education. We also offer combined majors with environmental studies and anthropology. A minor in Earth sciences is also available. We offer courses across a wide range of topics, allowing students to tailor the curriculum to their interests. Courses are comprised of not only classroom lectures, but frequently field trips, laboratories, and computer exercises are involved. Many related courses are offered by other departments such as Ocean Sciences, Microbiology and Environmental Toxicology, Environmental Studies, Biological Sciences, Chemistry and Biochemistry, and Astronomy and Astrophysics. The university capstone requirement is often fulfilled by attending the departmental field camp, or by completing a senior research thesis, but other choices are also possible.

Graduates of our department continue on to a variety of careers, such as:

- Business and industry
- Geological and environmental consulting
- Governmental agencies at the federal, state, and local level
- Non-profit organizations
- Research at universities, governmental research institutions, or other scientific agencies
- Graduate/professional school in areas such as science, engineering, teaching, law, public health, business

For more information about the people in the department, their areas of interest, departmental facilities, contact e-mails and phone numbers, and how to apply to join our department as an undergraduate or graduate student, please see our web site: <http://es.ucsc.edu/>.

Academic Advising

A student who wants to become an Earth sciences major should contact the Earth and Planetary Sciences Department undergraduate staff adviser as soon as possible. After developing a formal study plan and submitting a declaration of major petition, students are required to meet with staff and faculty advisers who can help the student plan his or her program in detail and provide information about independent study, thesis research, advanced study, career options, and other educational opportunities. Relevant courses taken at UCSC or other institutions may be substituted for degree requirements by approved petition. Please see the undergraduate adviser for the substitution petition form and more information about this process.

Transfer Students

Transfer students planning to major in Earth sciences are encouraged to complete as many as possible of the required chemistry, biology, calculus, and calculus-based physics courses. Having this coursework completed elsewhere allows students greater flexibility in scheduling and completing their UCSC Earth and planetary sciences courses. Transfer students intending to become Earth sciences majors should meet with department advisers during summer orientation or shortly after their arrival on campus to plan their next year's schedule of courses.

Bachelor of Science Degree

The bachelor of science (B.S.) program is designed for students who intend to pursue professional careers in Earth and planetary sciences, engineering, policy, law, teaching, or business or who otherwise desire the broad, quantitative training available at UCSC. In addition to providing comprehensive preparation in the basic physical sciences, and particular breadth and depth in Earth and planetary sciences, the curriculum is structured to prepare students for the competitive graduate school and career marketplace.

The core of the major includes calculus, physics, chemistry, and a group of comprehensive Earth and planetary sciences courses. For the standard B.S., students then select at least four additional courses from a diverse list of upper-division electives, with at least two that involve significant laboratory or field data acquisition and analysis. These electives, often in combination with additional upper-division courses from this and related departments, provide the student with expertise in one or more subdisciplines within Earth sciences.

Elective distributions can be designed to emphasize earthquake and faulting studies, Earth surface processes, Earth system sciences, geologic hazards, geology, crustal and deep-Earth geophysics, marine geophysics, and water resources. Four formal concentrations, all with specific course requirements and leading to an Earth and planetary sciences B.S., are available: environmental geology, ocean sciences, science education, and planetary sciences. A senior comprehensive experience (senior thesis, or geologic field camp, intensive internship experience, or exemplary performance in a graduate course) is required of all majors.

Prerequisites for Declaring the Major

We recommend that you consult with the department's undergraduate staff adviser to discuss options for degree concentrations and coursework priorities before you start the process of officially declaring your major. A student may not officially declare the Earth sciences major until he or she completes (with a minimum grade of C) one of the following introductory courses in physical geology:

Earth Sciences 5, *California Geology*

Earth Sciences 10, *Geologic Principles*

Earth Sciences 20, *Environmental Geology*

Transfer students may take an approved substitution for one of the above courses.

The process for declaring the major starts by obtaining a Declaration of Major petition (available online at <http://advising.ucsc.edu/student/declaration/Declaration.pdf>) and having it approved and processed by the department staff adviser.

Preparation for the Standard Major (B.S.)

Chemistry 1A, 1B/M and 1C/N

Mathematics 11A-B or 19A-B, or Applied Mathematics and Statistics 15A-B, Mathematics 22 or 23A or Earth Sciences 111

Physics 6A/L and 6B/M (preferred), or 5A/L and 5B/M

Physics 6C/N or 5C/N or Chemistry 108A/L or 112A/L

Requirements for the Standard Major (B.S.)

Earth Sciences 5/L, or 10/L, or 20/L; 110A/L, 110B/M, and 110C/N, 190 (optional, 1-credit mentorship class)

At least four elective courses from upper-division Earth and planetary sciences offerings, or Ocean Sciences 102 or 120, must be completed. Two of the four upper-division electives must be selected from this subset of courses, which involve significant laboratory or field data acquisition/analysis:

109/L, 116, 117/L, 119, 120/L, 130/L, 140/L, 142, 146, 148, 150/L; 168.

Five (5) credits of internship (Earth Sciences 198) or independent study (Earth Sciences 199) may be substituted for one upper-division elective.

Students also complete the comprehensive requirement described below.

Students are encouraged to take more than the minimum number of elective courses and may craft an elective distribution from many areas of specific research and career interests. The following are examples of suggested elective distributions that develop expertise in important areas (an asterisk (*) indicates that the course satisfies the laboratory or field data acquisition/analysis requirement).

Earth system sciences. Focuses on terrestrial, marine, and atmospheric processes and their relations through time; may include paleoclimatic and paleoenvironmental dynamics, global change issues, and surface geological processes such as weathering, erosion, and hydrology: 100/L, 101/L, 102, 107, 109/L*, 116*, 119*, 120/L*, 121, 125, 128, 148*, 191, 208, Ocean Sciences 102, 120

Earthquake and faulting studies. Focuses on crustal deformation and faulting processes and related phenomena such as plate motions, earthquakes, and stress in the lithosphere: 109/L*, 117/L*, 119*, 150/L*, 162, 168*, 172

Geologic hazards. Focuses on Earth processes that impact society, including earthquakes, volcanoes, coastal erosion, and landslides: 104, 105, 107, 109/L*, 116*, 140/L*, 142*, 146*

Geology. Emphasizes a traditional broad background with field skills, rock genesis and interpretation, and structural relations: 109/L*, 117/L*, 120/L*, 130/L*, 140/L*, 150/L*

Geophysics. Develops breadth in geophysical techniques, composition and structure of Earth's deep interior, and gravitational and magnetic fields: 117/L*, 119*, 150/L*, 160, 162, 168*, 172

Marine geophysics. Emphasizes a breadth of geological and geophysical background for continuing study of the processes involved in the growth, evolution, and destruction of the ocean floor and margins: 107, 117/L*, 146*, 150/L*, 152, 168*

Surface processes. Emphasizes understanding the fluxes of energy, water, mass, and chemicals within and across Earth's surface and the relations to climatic and tectonic forcing processes: 107, 109/L*, 116*, 119*, 120/L*, 140/L*, 128, 142*, 146*, 148*, 163, Microbiology and Environmental Toxicology 144

Water resources. Focuses on water resources quality and quantity and relations between climate and water in and on the crust: 105, 109/L*, 116*, 119*, 121, 140/L*, 142*, 146*, 148*, Microbiology and Environmental Toxicology 144, Ocean Sciences 120

Comprehensive Requirement (B.S.)

Students complete one of the following four options:

1. Satisfactory completion of Earth Sciences 188A-B, Summer Field Internship and GIS with Applications in the Earth Sciences
2. Satisfactory completion of a senior thesis (Earth Sciences 195), which must include a significant element of independent research or original work and can only be undertaken after agreement is obtained from a faculty member to supervise it (approximately three quarters in advance of completion)
3. Exemplary performance (grade of B or better), including a major written report, in a 5-credit graduate course or seminar (which requires permission from the instructor in order to enroll)
4. Satisfactory completion of a 5-credit internship (Earth Sciences 198) under the guidance of an on-site supervisor, with coordination and prior approval of the department's internship director. The project must include a comprehensive final written report.

PLEASE NOTE: Options 3. and 4. may not count toward fulfilling an upper-division elective if used as a capstone.

Earth Sciences Standard B.S. Major Planner

Students planning a professional career in the Earth and planetary sciences should take more than the minimum number of courses required for the major if possible. Four-year students have ample flexibility to take additional electives if they begin with the required courses in their second year. Junior transfers also have flexibility if they have taken most of their preparatory courses in calculus, chemistry, and physics before entry. Further advice can be obtained from the undergraduate adviser and from faculty members.

Note: Chemistry 1A, 1B/M and 1C/N and Mathematics 11A-B and 19A-B and 22 and 23A are offered every quarter. Physics 6A/L is offered every quarter but Physics 6B/M is not offered in fall and Physics 6C/N is not offered in winter.

Year	Fall	Winter	Spring
1st (frsh)	CHEM 1A	MATH 11A or 19A or AMS 15A	EART 10/L MATH 11B or 19B or AMS 15B
	College core	CHEM 1B/M	CHEM 1C/N
2nd (soph)	EART 110A/L*	EART 110B/M*	EART 109/L*
	MATH 22A or 23A or EART 111	PHYS 6A/L	PHYS 6B/M
3rd (jr)		EART elective	EART 110C/N
	PHYS 6C/N or CHEM 108A/L		
4th (sr)	EART elective	EART elective	EART 188A-B or senior thesis †
	senior thesis †	senior thesis †	
	EART 190 (1-credit, optional)		

*EART 109/L, 110A/L, and 110B/M are required for participation in EART 188A-B

†Students expecting to write a senior thesis for their comprehensive requirement are required to contact the department approximately three quarters before graduation to identify the intended project and faculty adviser. Senior theses usually require at least two or three quarters for completion.

Earth Sciences Major with Concentration in Environmental Geology (B.S.)

The environmental geology concentration is designed to provide quantitative preparation for career pathways involving interdisciplinary study of the environment with a geological emphasis. Additional biology and environmental studies courses are required for this concentration along with other distributions of upper-division requirements and electives.

Required Lower-Division Courses

Earth Sciences 20/L (recommended) or 10/L or 5/L

Environmental Studies 25

Biology: Molecular, Cell, and Developmental Biology (MCD) BIOL 20A; Biology: Ecology and Evolutionary Biology (EEB) BIOE 20B; BIOE 20C

Chemistry 1A, 1B/M, and 1C/N

Mathematics 11A-B or 19A-B, or Applied Mathematics and Statistics 15A-B

Physics 6A/L and 6B/M (preferred), or 5A/L and 5B/M

Required Upper-Division Courses

Earth Sciences 110A/L and 110B/M, 190 (optional, 1-credit mentorship class); BIOE 107

At least four of the following Earth and planetary sciences courses: 100/L, 101/L, 102, 104, 105, 107, 109/L, 110C/N, 111, 116, 119, 120/L, 121, 125, 128, 140/L, 142, 146, 148, 150/L

Two additional upper-division electives with environmental topics from biology, chemistry, Earth and planetary sciences, environmental studies, environmental toxicology, or ocean sciences

Students also complete a comprehensive requirement from the list described above.

Earth Sciences (Environmental Geology) B.S. Major Planner

† Students expecting to write a senior thesis for their comprehensive requirement are required to contact the department approximately three quarters before graduation to identify the intended project and faculty adviser. Senior theses usually require two or three quarters for completion.

Earth Sciences Major with Concentration in Ocean Sciences (B.S.)

The ocean sciences concentration is intended to provide quantitative preparation for career pathways that include oceanography and biogeochemistry. Additional biology and chemistry courses are required for this concentration along with other distributions of upper-division requirements and electives.

Required Lower-Division Courses

Earth Sciences 5/L or 10/L, or 20/L

BIOL 20A and BIOE 20B

Chemistry 1A, 1B/M and 1C/N

Mathematics 11A-B or 19A-B, or Applied Mathematics and Statistics 15A-B

Mathematics 22 or 23A or Earth Sciences 111

Physics 6A/L and 6B/M (preferred), or 5A/L and 5B/M

Required Upper-Division Courses

Earth Sciences 110A/L, 110B/M, 110C/N, 190 (optional, 1-credit mentorship class); Chemistry 108A/L and 108B/M, or 112A/L and 112B/M and 112C/N; Ocean Sciences 101 or 102

Four electives from the following list: Earth Sciences 101/L, 102, 105, 107, 109/L, 111, 116, 119, 120/L, 121, 128, 130/L, 148, 172; Chemistry 122; Ocean Sciences 101, 102, 118, 120, 130, 200, 220, 260

Students also complete a comprehensive requirement from the list described above. For those choosing a thesis, a topic emphasizing ocean sciences is recommended.

† Students expecting to write a senior thesis for their comprehensive requirement are required to contact the department approximately three quarters before graduation to identify the intended project and faculty adviser. Senior theses usually require two or three quarters for completion.

Earth Sciences Major with Concentration in Planetary Sciences (B.S.)

The planetary sciences concentration is designed to provide students with a quantitative background appropriate for career pathways in the interdisciplinary study of planets and their satellites. The upper-division elective courses can be tailored for students interested in planetary interiors, atmospheres, and/or surfaces.

Required Lower-Division Courses

Earth Sciences 10/L (preferred); or 5/L; or 20/L

One of: Astronomy 12; or 16; or 18

Chemistry 1A, 1B/M, and 1C/N

Mathematics 19A-B (preferred) or 11A-B, or AMS 15A-B

Mathematics 22; or 23A; or Earth Sciences 111

Physics 5A/L, 5B/M, 5C/N (preferred); or 6A/L, 6B/M, 6C/N; 5D recommended

Required Upper-Division Courses

Earth Sciences 110A/L, 110B/M, 110C/N, 119, 160, 190 (optional, 10credit mentorship class)

One elective from the following Earth sciences courses: 162, 163, 164

Three electives from the following courses: Earth Sciences 107, 109/L, 116, 117/L, 121, 128, 130/L, 140/L, 148, 150/L, 152, 162, 163, 164, 172, 209, 210; Astronomy 112, 118; Mathematics 130

Students also complete the comprehensive requirement from the list described above. For those choosing a thesis, a topic emphasizing planetary sciences is recommended.

* EART 109/L, 110A/L, and 110B/M are required for participation in EART 188A-B.

† Students expecting to write a senior thesis for their comprehensive requirement are required to contact the department approximately three quarters before graduation to identify the intended project and faculty adviser. Senior theses usually require two or three quarters for completion.

Earth Sciences Major with Concentration in Science Education (B.S.)

The science education concentration provides future K-12 science teachers with coursework aligned with the California K-12 Earth and planetary science standards; a broad background across the sciences; and a thorough introduction to educational theory and practice including a sequence of three classroom-based internships. Additional biology, astronomy, and ocean science courses required for this concentration ensure that students are very well prepared to enter a rigorous teaching-credential program and, ultimately, a career in education. The senior comprehensive requirement involves a curriculum-development project jointly overseen by faculty in Earth and planetary sciences and UCSC's California Teach (Cal Teach) program.

Students may start with either the Cal Teach or Earth and Planetary Sciences Department for degree and course information, but must stay in contact with both for dual advising and development of study plans as well as approval for formally declaring the major.

Required Lower-Division Courses

Earth Sciences 5/L (strongly recommended) or 10/L or 20/L

Astronomy 2 (recommended) or another lower-division course in astronomy

Molecular, Cell, and Developmental Biology (BIOL) 20A

Ecology and Evolutionary Biology (BIOE) 20B and 20C

Education 50C

Mathematics 11A-B, or 19A-B, or Applied Mathematics and Statistics 15A-B

Chemistry 1A, 1B/M, and 1C/N

Physics 6A/L and 6B/M

Required Upper-Division Courses

Ocean Sciences 102

Earth Sciences 110A/L and 110B/M

Earth Sciences 109/L, or both 120/L and 150/L

Earth Sciences 111, or Mathematics 21 or 22, or Applied Mathematics and Statistics 5

Two upper-division courses in Earth sciences or ocean sciences, one of which must involve significant laboratory or field data acquisition/analysis

Education 100C, 185C, 185L

One upper-division education course from the following list: Education 128, 141, 164, or 181

Students complete a comprehensive requirement by doing an independent project through the Earth and Planetary Sciences Department, which applies knowledge of Earth and planetary sciences to K-12 curriculum development (Earth Sciences 194F).

Combined Major in Environmental Studies/Earth Sciences (B.A.)

The combined major in environmental studies and Earth sciences is designed to provide enhanced exposure to geological concepts and processes for students emphasizing environmental policy and social science topics. Students are advised to plan carefully and to contact academic advisers in both the Environmental Studies and Earth and Planetary Sciences Departments early if they have questions. For the requirements of the combined environmental studies/Earth sciences bachelor of arts (B.A.) degree, see

http://reg.ucsc.edu/catalog/html/programs_courses/09_10update/envsPS.html.

Combined Major in Earth Sciences/Anthropology (B.A.)

The Earth sciences/anthropology combined major is intended for students with interests in Earth sciences and the laboratory-based aspect of anthropology. These include anthropology students interested in archaeology or paleoanthropology who desire more intensive training in natural sciences and Earth sciences students interested in paleobiology or archaeology. The combined major provides a rigorous training in both anthropology and Earth sciences and will permit students to enter graduate programs in Earth sciences, archaeology, or paleoanthropology. The combined major has a significantly different set of cognate science and required lower- and upper-division courses than the standard major; therefore, students are advised to plan carefully and to contact academic advisers in the Earth and Planetary Sciences and Anthropology Departments early if they have questions.

Required Lower-Division Courses

Anthropology 1, 2, and 3

Earth Sciences 5/L, or 10/L, or 20/L

Mathematics 11A-B, 19A-B, or Applied Mathematics and Statistics 15A-B

Five lower-division science cognate courses (plus laboratories) chosen from the following:

BIO 20A, BIO 20B, BIO 20C

Chemistry 1A, 1B/M, 1C/N

Physics 6A/L, 6B/M

Required Upper-Division Courses

Earth Sciences 110A/L

Any three upper-division electives (5+ credits) in Earth sciences

Any four five- to seven-credit upper-division electives listed under the Anthropology Department's Physical Anthropology and Archaeology Courses subdivision.

Comprehensive Requirement

One of the following:

1. Satisfactory completion of Anthropology 194-series (any senior seminar in physical anthropology or archaeology)
2. Satisfactory completion of Earth Sciences 188A-B*, Summer Field Internship and Geographic Information Systems with Applications to the Earth Sciences
3. Satisfactory completion of a senior thesis (Earth Sciences 195) with faculty readers from both departments, which must include a significant element of independent research or original work and can only be undertaken after agreement is obtained from faculty members to supervise it (approximately three quarters in advance of completion)
4. Satisfactory completion of a 5-credit internship (Earth Sciences 198) under the guidance of an on-site supervisor, with coordination and prior approval of the Earth and Planetary Science department's internship director. The project must include a comprehensive final written report.

* Earth Sciences 188A-B has as prerequisites courses 109/L, 110A/L, and 110B/M.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division disciplinary communication (DC) requirement. All degree options for the Earth sciences major except science education require students to pass at least two of the following designated DC courses (totaling 10 credits), all of which entail writing assignments:

Earth Sciences 100, *Vertebrate Paleontology*

Earth Sciences 101, *The Fossil Record*

Earth Sciences 102, *Marine Geology*

Earth Sciences 104, *Geologic Hazards*
Earth Sciences 109, *Field Geology*
Earth Sciences 116, *Hydrology*
Earth Sciences 120, *Sedimentology and Stratigraphy*
Earth Sciences 125, *Analytical Paleobiology*
Earth Sciences 140, *Geomorphology*
Earth Sciences 146, *Groundwater*
Earth Sciences 148, *Glaciology*
Earth Sciences 150, *Structural Geology*
Earth Sciences 152, *Active Tectonics*
Earth Sciences 160, *Planetary Science*
Earth Sciences 188A, *Summer Field Internship*
Earth Sciences 191, *Climate Change Science and Policy*
Earth Sciences 195, *Senior Thesis*

Students in the science education concentration are required to take Education 185L and at least one of the DC courses designated above (totaling eight credits).

Students in the combined major in Earth sciences/anthropology are required to pass two courses in any combination from the above list of Earth sciences courses or the following anthropology courses: 100, 170, 194B, 194L, and 194Y.

Honors

Honors in the major are determined by a review of grades and narrative evaluations at the time a student applies for graduation. A faculty committee makes the decision based on the quality of all coursework, but especially in the courses required for the major. Extra coursework or independent study as well as more intensive or rigorous coursework and the quality of a capstone project may also be taken into consideration. Honors in the combined majors with environmental studies and anthropology will be granted only when the committees in both departments are in agreement. Highest honors may also be awarded in exceptional cases when a student's overall grade point average (GPA) is at 3.75 and performance in the senior capstone requirement is equally outstanding.

Honors on the senior thesis are determined independently of major honors, and must be approved by two faculty readers. Honors in capstone courses (i.e., Earth Sciences 188A or 188B) are awarded if the grade(s) are at A- level or above.

Disqualification from the Major

Students will be disqualified from the major if they are unsuccessful in two attempts to pass (minimum grade C) any of the Earth Sciences 110 foundation series courses or associated 2-unit laboratories:

Earth Science 110A/L, *Evolution of the Earth*;

Earth Science 110B/M, *Earth as a Chemical System*;

Earth Science 110C/N, *The Dynamic Earth*.

Any two failures of the same lecture or laboratory course will implement disqualification. Warning of disqualification notification will be sent upon each failed course.

Minor Requirements

Students can earn a minor in Earth sciences by taking courses 5/L or 10/L or 20/L and five upper-division Earth sciences courses. Courses offering less than 5 credits (such as Earth Sciences 190 or 2-credit laboratories and independent studies) may not be counted toward the minor requirements, although additional coursework is always encouraged.

Graduate Program

The graduate program in Earth and planetary sciences is designed to prepare students for research, industry, consulting, teaching, and numerous other career paths, including business and law. The aim is to develop habits of critical analysis and thorough documentation; skills in quantitative field, computational, and/or laboratory research; and proficiency in one or more fields of research. The fundamental requirement for admission to the program is substantial evidence of superior scholarship, dedication and determination to do quality work, and aptitude for original

research. Preparation in the basic sciences and in Earth and planetary sciences equivalent to the requirements for the Earth sciences bachelor's degree at UCSC is expected, but graduates in chemistry, physics, engineering, biology, or other disciplines who meet the requirement of superior scholarship are eligible and encouraged to apply. Gaps in knowledge can be made up through coursework. Prospective students should take the Graduate Record Examination (GRE) General Test and have the scores sent to the UCSC Division of Graduate Studies.

UCSC awards both the master of science (M.S.) and the doctor of philosophy (Ph.D.) degrees. The M.S. degree may be the terminal degree for some seeking careers in industry, government, and teaching at the secondary level. It may also be an initial step toward the Ph.D. degree, in which the student gains knowledge and confidence in carrying out and completing a more complex scientific project.

Thesis Track (Ph.D., M.S.). In their first year, all thesis-track graduate students register for courses 203, *Introductory Teaching Seminar*; 204, *Fundamentals of Earth and Planetary Sciences*; 205, *Introductory Graduate Seminar*; 206, *Great Papers in the Earth Sciences*; and, in consultation with the graduate advising committee, choose at least one from among courses 207, *Tectonics*; 208, *Methods in Paleoclimatology*; 209, *Solid Earth Geochemistry*; 210, *Overview of Stellar and Planetary Formation and Evolution*; 220, *Ground Water Modeling*; 231, *Igneous Petrology*; 254, *The Climate System*; 262, *Planetary Interiors*; 265, *Order of Magnitude Estimation*; 270, *Global Seismology*; or 275, *Magnetohydrodynamics*. Additionally, all students will be required to take one course in quantitative analysis from an approved list (available at the department office). In subsequent years, all students participate in course 293, *Graduate Research Seminar*. Other course requirements are tailored to the individual student's academic background, professional experience, and plans for research. Master's degree students must take a minimum of 35 quarter credits of graduate and upper-division undergraduate courses (at least 20 of which are graduate-level and not including Earth Science 297, *Independent Research*) including the courses mentioned above. No specific number of course credits is required for the Ph.D., but ordinarily students put more of their effort into coursework during the first year of graduate study. It is recommended that all thesis-track graduate students attain some teaching experience while at UCSC.

Before the start of fall quarter, each first-year thesis track student is required to meet with his/her faculty adviser to determine a list of course offerings recommended to meet academic and research goals. Immediately afterwards, a meeting is scheduled with the graduate program director to finalize and approve this initial discussion with a written study plan. Yearly academic review meetings will then reassess the student's progress in completing these courses and independent research, initially with the primary adviser but eventually with a reading committee composed of at least three members of the faculty and research staff (at least 50 percent of which must be members of the Academic Senate).

To qualify for candidacy in the Ph.D. program, each student must pass an oral examination in his or her area of specialization by the end of their third year of graduate study, although students are strongly encouraged to take the examination earlier. The examination is based on a research proposal presenting one or more specific questions to be researched by the student in the course of completing their Ph.D. thesis. Students are expected to have in-depth knowledge of fields relevant to the proposal, including familiarity with the professional literature.

The Ph.D. dissertation is a scholarly contribution to knowledge that embodies the results of original and creative effort by the student. Students are urged to prepare their dissertations for publication in peer-reviewed professional journals. A public oral defense of the thesis is required prior to completion of the Ph.D.

The M.S. thesis is a scholarly contribution consisting of results of an original research project by the student. Students are strongly encouraged to prepare their results for publication in the peer-reviewed literature. The M.S. thesis must be completed by the end of the third year after entering the program, and students are strongly encouraged to complete their thesis earlier and to present the results of this work publicly.

Coursework M.S. Track. The coursework M.S. track is a professional program designed to allow students to increase their breadth, quantitative depth, or emphasis on a particular specialty; to provide the student with a stronger background toward competition for jobs or an enhancement of skills for current employment (e.g., K-14 teaching); and to allow students from other disciplines (e.g., biology, physics, chemistry, mathematics, environmental studies) to acquire advanced training in Earth and planetary sciences. Prior to the first quarter of study, students have a meeting with their faculty adviser in which they develop a study plan of at least nine courses, no more than one of which may be 297 or 298, and a statement of objectives. The plan must be approved by the graduate representative. Students are also limited to one Earth Sciences 290 pro-seminar course. It is expected that the course plan will comprise mainly graduate-level and quantitative, upper-level, undergraduate elective courses.

Coursework master's students are required to fulfill one of the following capstone options: a substantial review/research manuscript or a comprehensive oral examination based on their coursework.

There is no foreign-language requirement for either the M.S. or Ph.D. degree. However, many students in the Earth and planetary sciences find knowledge of one or more foreign languages necessary in their particular research and therefore study the appropriate language.

Details regarding admission to graduate standing, financial aid, examinations, and the requirements for the master of science and doctor of philosophy degrees are available from the Division of Graduate Studies. For more information, see Graduate Studies at

<http://www.es.ucsc.edu/grad/index.html>.

A232 Earth and Marine Sciences Building

(831) 459-4089

<http://www.es.ucsc.edu>***Program Description***

The Earth and Planetary Sciences Department teaches and conducts research in a wide array of topics. We seek to answer questions such as:

- How did the Earth form? How has it evolved since then? What makes up the interior of the Earth?
- What is the history of life on Earth? What are the causes and effects of past mass extinctions?
- How do mountain ranges form? What causes earthquakes? What causes island chains to form? What controls the evolution of glaciers? How do we prevent coastal erosion? How well can we predict tsunamis?
- What has Earth's climate been like in the past? How will climate change in the future?
- What controls the supply and quality of our freshwater resources?
- How are other planets in our solar system different from Earth? How did they evolve to their present state? How have the impacts of asteroids on Earth and other planets affected their evolution?

A variety of methods and tools are used to help us address these questions. Geologists examine rocks and geologic formations in order to understand the processes that control their formation and evolution. Geochemists and mineralogists examine the chemical and mineral composition of rocks, sediments, and fossils using a variety of sophisticated analytical instruments. Geophysicists use seismometers to not only record earthquakes, but also to learn about the deeper parts of the Earth. Environmental scientists collect samples of the atmosphere, rivers, lakes, and the oceans, sometimes requiring the use of aircraft and ships. Spacecraft have visited and explored all of the planets in our solar system. Space-based satellites have provided a massive amount of data about Earth over the past few decades. Scientists from all disciplines use computer models to help them understand these complex systems.

The Department of Earth and Planetary Sciences offers a number of degrees that teach undergraduate and graduate students the knowledge and skills necessary to address these questions. Along with the standard Earth sciences major, we offer degrees with concentrations in environmental geology, ocean sciences, planetary sciences, and science education. We also offer combined majors with environmental studies and anthropology. A minor in Earth sciences is also available. We offer courses across a wide range of topics, allowing students to tailor the curriculum to their interests. Courses are comprised of not only classroom lectures, but frequently field trips, laboratories, and computer exercises are involved. Many related courses are offered by other departments such as Ocean Sciences, Microbiology and Environmental Toxicology, Environmental Studies, Biological Sciences, Chemistry and Biochemistry, and Astronomy and Astrophysics. The university capstone requirement is often fulfilled by attending the departmental field camp, or by completing a

senior research thesis, but other choices are also possible.

Graduates of our department continue on to a variety of careers, such as:

Business and industry

Geological and environmental consulting

Governmental agencies at the federal, state, and local level

Non-profit organizations

Research at universities, governmental research institutions, or other scientific agencies

Graduate/professional school in areas such as science, engineering, teaching, law, public health, business

For more information about the people in the department, their areas of interest, departmental facilities, contact e-mails and phone numbers, and how to apply to join our department as an undergraduate or graduate student, please see our web site:

<http://es.ucsc.edu/>.

Academic Advising

A student who wants to become an Earth sciences major should contact the Earth and Planetary Sciences Department undergraduate ~~degree~~staff-adviser as soon as possible. After developing a formal study plan ~~and submitting on~~-a declaration of major petition, students are required to meet with staff and faculty advisers who can help the student plan his or her program in detail and provide information about independent study, thesis research, advanced study, career options, and other educational opportunities. Relevant courses taken at UCSC or other institutions may be substituted for degree requirements by approved petition. Please see the undergraduate adviser for the substitution petition form and more information about this process.

Transfer Students

Transfer students planning to major in Earth sciences are encouraged to ~~call for advice about courses they should complete before arrival at UCSC. It is important that students have~~ completed as many as possible of the required chemistry, biology, calculus, and calculus-based physics courses. Having this coursework completed elsewhere allows students greater flexibility in scheduling and completing their UCSC Earth and planetary sciences courses. ~~Junior~~Transfer ~~students intending to become Earth and planetary sciences majors and prospective majors~~ should meet with department advisers during summer orientation or shortly after their arrival on campus to plan their next ~~two-year's~~ schedule of courses.

Bachelor of Science Degree

The bachelor of science (B.S.) program is designed for students who intend to pursue professional careers in Earth and planetary sciences, engineering, policy, law, teaching, or business or who otherwise desire the broad, quantitative training available at UCSC. In addition to providing comprehensive preparation in the basic physical sciences, and particular breadth and depth in Earth and planetary sciences, the curriculum is structured to prepare students for the competitive graduate school and career marketplace.

The core of the major includes calculus, physics, chemistry, and a group of comprehensive Earth and planetary sciences courses. For the standard B.S., students then select at least four additional courses from a diverse list of upper-division electives, with at least two that involve significant laboratory or field data acquisition and analysis. These electives, often in combination with additional upper-division courses from this and related

departments, provide the student with expertise in one or more subdisciplines within Earth sciences.

Elective distributions can be designed to emphasize earthquake and faulting studies, Earth surface processes, Earth system sciences, geologic hazards, geology, crustal and deep-Earth geophysics, marine geophysics, and water resources. Four formal concentrations, all with specific course requirements and leading to an Earth and planetary sciences B.S., are available: environmental geology, ocean sciences, science education, and planetary sciences. A senior comprehensive experience (senior thesis, or geologic field camp, [intensive internship experience](#), or exemplary performance in a graduate course) is required of all majors.

Prerequisites for Declaring the Major

We recommend that you consult with the department's [undergraduate](#) staff adviser to discuss options for degree concentrations and coursework priorities before you start the process of officially declaring your major. A student may not officially declare the Earth sciences major until he or she completes (with a minimum grade of C) one of the following introductory courses in physical geology:

Earth Sciences 5, California Geology

Earth Sciences 10, Geologic Principles

Earth Sciences 20, Environmental Geology

Transfer students may take an approved substitution for one of the above courses.

The process for declaring the major starts [by obtaining a Declaration of Major petition \(also available online at <http://advising.ucsc.edu/student/declaration/Declaration.pdf>\) and having it approved and processed by the department staff adviser.](#)

Preparation for the Standard Major (B.S.)

Chemistry 1A, 1B/M and 1C/N

Mathematics 11A ~~and 11B~~ or 19A ~~and 19B~~, [or Applied Mathematics and Statistics 15A-B](#)

[Mathematics 22](#) or 23A or Earth Sciences 111

Physics 6A/L and 6B/M (preferred), or 5A/L and 5B/M ~~and~~

[Physics 6C/N](#) or 5C/N or Chemistry 108A/L or 112A/L

Requirements for the Standard Major (B.S.)

[Earth Sciences 5/L](#), or 10/L, or 20/L; 110A/L, 110B/M, and 110C/N, 190 (optional, [1-unit credit-mentorship class](#))

At least four elective courses from upper-division Earth and planetary sciences offerings, or Ocean Sciences 102 or 120, must be completed. Two of the four upper-division electives must be selected from this subset of courses, which involve significant laboratory or field data acquisition/analysis: 109/L, 116, 117/L, 119, 120/L, 130/L, 140/L, 142, 146, 148, 150/L; 168.

Five (5) credits of internship (Earth Sciences 198) or independent study (Earth Sciences 199) may be substituted for one upper-division elective.

Students also complete the comprehensive requirement described below.

Students are encouraged to take more than the minimum number of elective courses and

may craft an elective distribution from many areas of specific research and career interests. The following are examples of suggested elective distributions that develop expertise in important areas (an asterisk (*) indicates that the course satisfies the laboratory or field data acquisition/analysis requirement).

Earth system sciences. Focuses on terrestrial, marine, and atmospheric processes and their relations through time; may include paleoclimatic and paleoenvironmental dynamics, global change issues, and surface geological processes such as weathering, erosion, and hydrology: 100/L, 101/L, 102, 107, 109/L*, 116*, 119*, 120/L*, 121, 125, 128, 148*, [191](#), 208, Ocean Sciences 102, 120

Earthquake and faulting studies. Focuses on crustal deformation and faulting processes and related phenomena such as plate motions, earthquakes, and stress in the lithosphere: 109/L*, 117/L*, 119*, 150/L*, 162, 168*, 172

Geologic hazards. Focuses on Earth processes that impact society, including earthquakes, volcanoes, coastal erosion, and landslides: 104, 105, 107, 109/L*, 116*, 140/L*, 142*, 146*

Geology. Emphasizes a traditional broad background with field skills, rock genesis and interpretation, and structural relations: 109/L*, 117/L*, 120/L*, 130/L*, 140/L*, 150/L*

Geophysics. Develops breadth in geophysical techniques, composition and structure of Earth's deep interior, and gravitational and magnetic fields: 117/L*, 119*, 150/L*, 160, 162, 168*, 172

Marine geophysics. Emphasizes a breadth of geological and geophysical background for continuing study of the processes involved in the growth, evolution, and destruction of the ocean floor and margins: 107, 117/L*, 146*, 150/L*, 152, 168*

Surface processes. Emphasizes understanding the fluxes of energy, water, mass, and chemicals within and across Earth's surface and the relations to climatic and tectonic forcing processes: 107, 109/L*, 116*, 119*, 120/L*, 140/L*, 128, 142*, 146*, 148*, 163, [Microbiology and Environmental Toxicology](#) 144

Water resources. Focuses on water resources quality and quantity and relations between climate and water in and on the crust: 105, 109/L*, 116*, 119*, 121, 140/L*, 142*, 146*, 148*, [Microbiology and Environmental Toxicology](#) 144, Ocean Sciences 120

Comprehensive Requirement (B.S.)

Students complete one of the following ~~four~~ [three](#) options:

1. Satisfactory completion of [Earth Sciences](#) 188A-B, ~~Summer~~ [Senior Field Internship and GIS with Applications in the Earth Sciences](#)
2. Satisfactory completion of a senior thesis ([Earth Sciences 195](#)), which must include a significant element of independent research or original work and can only be undertaken after agreement is obtained from a faculty member to supervise it (approximately three quarters in advance of completion)
3. Exemplary performance ([grade of B or better](#)), including a major written report, in a 5-credit graduate course or seminar (which requires permission from the instructor in order to enroll)
4. Satisfactory completion of a 5-credit internship ([Earth Sciences 198](#)) under the guidance of an on-site supervisor, with coordination and prior approval of the department's internship director. ~~-The project must include a comprehensive final written report.~~

[PLEASE NOTE: Options 3. and 4. may not count toward fulfilling an upper-division](#)

elective if used as a capstone.

Earth Sciences Standard B.S. Major Planner

Students planning a professional career in the Earth and planetary sciences should take more than the minimum number of courses required for the major if possible. Four-year students have ample flexibility to take additional electives if they begin with the required courses in their second year. Junior transfers also have flexibility if they have taken most of their preparatory courses in calculus, chemistry, and physics before entry. Further advice can be obtained from the undergraduate adviser and from faculty members.

Note: Chemistry 1A, 1B/M and 1C/N ~~are offered fall-winter-spring and winter-spring-fall.~~ ~~Physics 6A/L and 6B/M and 6C/N are offered fall-winter-spring and winter-spring-fall,~~ and Mathematics 11A-B and 19A-B and 22 and 23A are offered every quarter. -Physics 6A/L is offered every quarter but Physics 6B/M is not offered in fall and Physics 6C/N is not offered in winter.

Year	Fall	Winter	Spring

*EART 109/L, 110A/L, and 110B/M are required for participation in EART 188A-B

†Students expecting to write a senior thesis for their comprehensive requirement are required to contact the department approximately three quarters before graduation to identify the intended project and faculty adviser. Senior theses usually require at least two or three quarters for completion.

Earth Sciences Major with Concentration in Environmental Geology (B.S.)

The environmental geology concentration is designed to provide quantitative preparation for career pathways involving interdisciplinary study of the environment with a geological emphasis. Additional biology and environmental studies courses are required for this concentration along with other pertinent distributions of upper-division requirements and electives.

Required Lower-Division Courses

Earth Sciences 20/L (recommended) or 10/L or 5/L

Environmental Studies 25

Biology: Molecular, Cell, and Developmental Biology (MCD) BIOL 20A; Biology: Ecology and Evolutionary Biology (EEB) BIOE 20B; BIOE 20C (~~Environmental Studies 24 may be substituted for BIOE 20C~~)

Chemistry 1A, 1B/M, and 1C/N

Mathematics 11A-~~B or 19A~~, and 11B-~~or 19B~~, or 19A-B, or Applied Mathematics and Statistics 15A-B

Physics 6A/L and 6B/M (preferred), or 5A/L and 5B/M

Required Upper-Division Courses

Earth Sciences 110A/L and 110B/M, 190 (optional, 1-credit mentorship class); BIOE 107

At least four of the following Earth and planetary sciences courses: 100/L, 101/L, 102, 104, 105, 107, 109/L, 110C/N, 111, 116, 119, 120/L, 121, 125, 128, 140/L, 142, 146, 148, 150/L

Two additional upper-division electives with environmental topics from biology, chemistry, Earth and planetary sciences, environmental studies, environmental toxicology, or ocean sciences

-

Students also complete a comprehensive requirement from the list described above.

Earth Sciences Major with Concentration in Ocean Sciences (B.S.)

The ocean sciences concentration is intended to provide quantitative preparation for career pathways that include oceanography and biogeochemistry. Additional biology and chemistry courses are required for this concentration along with other distributions of upper-division requirements and electives.

Required Lower-Division Courses

Earth Sciences 5/L or 10/L, or 20/L

BIOL 20A and BIOE 20B

Chemistry 1A, 1B/M and 1C/N

Mathematics 22 or 23A or Earth Sciences 111

Physics 6A/L and 6B/M (preferred), or 5A/L and 5B/M

Required Upper-Division Courses

Earth Sciences 110A/L, 110B/M, 110C/N, 190 (optional, 1-credit mentorship class);
Chemistry 108A/L and 108B/M, or 112A/L and 112B/M and 112C/N; Ocean Sciences 101 or 102

Four electives from the following list: Earth Sciences 101/L, 102, 105, 107, 109/L, 111, 116, 119, 120/L, 121, 128, 130/L, 148, 172; Chemistry 122; Ocean Sciences 101, 102, 118, 120, 130, 200, 220, 260

Students also complete a comprehensive requirement from the list described above. For

those choosing a thesis, a topic emphasizing ocean sciences is recommended.

† Students expecting to write a senior thesis for their comprehensive requirement are required to contact the department approximately three quarters before graduation to identify the intended project and faculty adviser. Senior theses usually require two or three quarters for completion.

Earth Sciences Major with Concentration in Planetary Sciences (B.S.)

The planetary sciences concentration is designed to provide students with a quantitative background appropriate for career pathways in the interdisciplinary study of planets and their satellites. The upper-division elective courses can be tailored for students interested

in planetary interiors, atmospheres, and/or surfaces.

Required Lower-Division Courses

Earth Sciences 10/L (preferred); or 5/L; or 20/L

One of:- Astronomy ~~12~~~~14~~; or 16; or 18

Chemistry 1A, 1B/M, and 1C/N

	EART 190 (optional) -		

* EART 109/L, 110A/L, and 110B/M are required for participation in EART 188A-B.

† Students expecting to write a senior thesis for their comprehensive requirement are required to contact the department approximately three quarters before graduation to identify the intended project and faculty adviser. Senior theses usually require two or three quarters for completion.

Earth Sciences Major with Concentration in Science Education (B.S.)

The science education concentration provides future K-12 science teachers with coursework aligned with the California K-12 Earth and planetary science standards; a broad background across the sciences; and a thorough introduction to educational theory and practice including a sequence of three classroom-based internships. Additional biology, astronomy, and ocean science courses required for this concentration ensure that students are very well prepared to enter a rigorous teaching-credential program and, ultimately, a career in education. The senior comprehensive requirement involves a curriculum-development project jointly overseen by faculty in Earth and planetary sciences and UCSC's California Teach (Cal Teach) program.

Students may start with either the Cal Teach or Earth and Planetary Sciences Department for degree and course information, but must stay in contact with both for dual advising and development of study plans as well as approval for formally declaring the major.

Required Lower-Division Courses

Earth Sciences 5/L (strongly recommended) or 10/L or 20/L

Astronomy 2 (recommended) or another lower-division course in astronomy

Molecular, Cell, and Developmental Biology (BIOL) 20A

Ecology and Evolutionary Biology (BIOE) 20B and 20C

~~(Environmental Studies 24 may be substituted for BIOE 20C)~~

Education 50C

Mathematics 11A-~~and 11B~~, or 19A-~~and 19B~~ or Applied Mathematics and Statistics 15A-B

Chemistry 1A, 1B/M, and 1C/N

Physics 6A/L and 6B/M

Required Upper-Division Courses

Ocean Sciences 102

Earth Sciences 110A/L and 110B/M

Earth Sciences 109/L, or both 120/L and 150/L

Earth Sciences 111, or Mathematics 21 or 22, or Applied Mathematics and Statistics 5

Two upper-division courses in Earth sciences or ocean sciences, one of which must involve significant laboratory or field data acquisition/analysis

Education 100C, 185C, 185L

One upper-division education course from the following list: Education 128, 141, 164, or 181

Students complete a comprehensive requirement by doing an independent project through the Earth and Planetary Sciences Department, which applies knowledge of Earth and planetary sciences to K-12 curriculum development (Earth Sciences 194F).

Combined Major in Environmental Studies/Earth Sciences (B.A.)

The combined major in environmental studies and Earth sciences is designed to provide enhanced exposure to geological concepts and processes for students emphasizing environmental policy and social science topics. Students are advised to plan carefully and to contact academic advisers in both the Environmental Studies and Earth and Planetary Sciences Departments early if they have questions. For the requirements of the combined environmental studies/Earth sciences bachelor of arts (B.A.) degree, see http://reg.ucsc.edu/catalog/html/programs_courses/09_10update/envsPS.html.

Combined Major in Earth Sciences/Anthropology (B.A.)

The Earth sciences/anthropology combined major is intended for students with interests in Earth sciences and the laboratory-based aspect of anthropology. These include anthropology students interested in archaeology or paleoanthropology who desire more intensive training in natural sciences and Earth sciences students interested in paleobiology or archaeology. The combined major provides a rigorous training in both anthropology and Earth sciences and will permit students to enter graduate programs in Earth sciences, archaeology, or paleoanthropology. The combined major has a significantly different set of cognate science and required lower- and upper-division courses than the standard major; therefore, students are advised to plan carefully and to contact academic advisers in the Earth and Planetary Sciences and Anthropology Departments early if they have questions.

Required Lower-Division Courses

Anthropology 1, 2, and 3

Earth Sciences 5/L, or 10/L, or 20/L

Mathematics ~~11A or 19A, and 11B or 19B~~ 11A-B or 19A-B or Applied Mathematics and Statistics 15A-B

Five lower-division science cognate courses (plus laboratories) chosen from the following:

BIOL 20A, BIOE 20B, BIOE 20C

Chemistry 1A, 1B/M, 1C/N

Physics 6A/L, 6B/M

Required Upper-Division Courses

Earth Sciences 110A/L

Any three upper-division electives (5+ credits) in Earth sciences

Any four five- to seven-credit upper-division electives listed under the Anthropology Department's Physical Anthropology and Archaeology Courses subdivision.

Comprehensive Requirement

One of the following:

1. Satisfactory completion of Anthropology 194-series (any senior seminar in physical anthropology or archaeology) ~~or~~
2. Satisfactory completion of Earth Sciences 188A-B*, Summer Field Internship and Geographic Information Systems with Applications to the Earth Sciences ~~or~~
3. Satisfactory completion of ~~Earth Sciences 195 and~~ a senior thesis (Earth Sciences 195) with faculty readers from both departments, which must include a significant element of independent research or original work and can only be undertaken after agreement is obtained from faculty members to supervise it (approximately three quarters in advance of completion) ~~or any approved anthropology or Earth sciences field program~~
4. Satisfactory completion of a 5-credit internship (Earth Sciences 198) under the guidance of an on-site supervisor, with coordination and prior approval of the Earth and Planetary Science department's internship director. -The project must include a comprehensive final written report.

* Earth Sciences 188A-B has as prerequisites courses 109/L, 110A/L, and 110B/M.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division disciplinary communication (DC) requirement. All degree options for the Earth sciences major except science education require students to pass at least two of the following designated DC courses (totaling 10 credits), all of which entail writing assignments:

Earth Sciences 100, *Vertebrate Paleontology*

Earth Sciences 101, *The Fossil Record*

Earth Sciences 102, *Marine Geology*

Earth Sciences 104, *Geologic Hazards*

Earth Sciences 109, *Field Geology*

Earth Sciences 116, *Hydrology*

Earth Sciences 120, *Sedimentology and Stratigraphy*

Earth Sciences 125, *Analytical Paleobiology*

Earth Sciences 140, *Geomorphology*

Earth Sciences 146, *Groundwater*

Earth Sciences 148, *Glaciology*

Earth Sciences 150, *Structural Geology*

Earth Sciences 152, *Active Tectonics*

Earth Sciences 160, *Planetary Science*

Earth Sciences 188A, *Summer Field Internship*

Earth Sciences 191, *Climate Change Science and Policy*

Earth Sciences 195, *Senior Thesis*

Students in the science education concentration are required to take Education 185L and at least one of the DC courses designated above (totaling eight credits).

-

Students in the combined major in Earth sciences/anthropology are required to pass two courses in any combination from the above list of Earth sciences courses or the following anthropology courses: 100, 170, 194B, 194L, and 194Y.

Honors

Honors in the major are determined by a review of grades and narrative evaluations at the time a student applies for graduation. A faculty committee makes the decision based on the quality of all coursework, but especially in the courses required for the major. Extra coursework or independent study as well as more intensive or rigorous coursework and the quality of a capstone project may also be taken into consideration. Honors in the combined majors with environmental studies and anthropology will be granted only when the committees in both departments are in agreement. Highest honors may also be awarded in exceptional cases when a student's overall grade point average (GPA) is at least 3.75~~4.0~~ and performance in the senior capstone requirement is equally outstanding.

Honors on the senior thesis are determined independently of major honors, and must be approved by two faculty readers. Honors in capstone courses (i.e., [Earth Sciences 188A](#) and 188B) are awarded if the grade(s) are at A- level or above.

Disqualification from the Major

Students will be disqualified from the major if they are unsuccessful in two attempts to pass (minimum grade C) any of the Earth Sciences 110 foundation series courses or associated 2-unit laboratories:

Earth Science 110A/L, Evolution of the Earth;

Earth Science 110B/M, Earth as a Chemical System;

Earth Science 110C/N, The Dynamic Earth

Any two failures of the same lecture or laboratory course will implement disqualification. Warning of disqualification notification will be sent upon each failed course.

Minor Requirements

Students can earn a minor in Earth sciences by taking courses 5/L or 10/L or 20/L and five upper-division Earth sciences courses. Courses offering less than 5 credits (such as Earth Sciences 190 or 2-credit laboratories and independent studies) may not be counted toward the minor requirements, although additional coursework is always encouraged.

Graduate Program

The graduate program in Earth and planetary sciences is designed to prepare students for research, industry, consulting, teaching, and numerous other career paths, including business and law. The aim is to develop habits of critical analysis and thorough documentation; skills in quantitative field, computational, and/or laboratory research; and proficiency in one or more fields of research. The fundamental requirement for admission to the program is substantial evidence of superior scholarship, dedication and determination to do quality work, and aptitude for original research. Preparation in the basic sciences and in Earth and planetary sciences equivalent to the requirements for the Earth sciences bachelor's degree at UCSC is expected, but graduates in chemistry, physics, engineering, biology, or other disciplines who meet the requirement of superior scholarship are eligible and encouraged to apply. Gaps in knowledge can be made up through coursework. Prospective students should take the Graduate Record Examination (GRE) General Test and have the scores sent to the UCSC Division of Graduate Studies.

UCSC awards both the master of science (M.S.) and the doctor of philosophy (Ph.D.) degrees. The M.S. degree may be the terminal degree for some seeking careers in industry, government, and teaching at the secondary level. It may also be an initial step toward the Ph.D. degree, in which the student gains knowledge and confidence in carrying out and completing a more complex scientific project.

Thesis Track (Ph.D., M.S.). In their first year, all thesis-track graduate students register for courses 203, *Introductory Teaching Seminar*; 204, *Fundamentals of Earth and Planetary Sciences*; 205, *Introductory Graduate Seminar*; 206, *Great Papers in the Earth Sciences*; and, in consultation with the graduate advising committee, choose at least one from among courses 207, *Tectonics*; 208, *Methods in Paleoclimatology*; 209, *Solid Earth Geochemistry*; 210, *Overview of Stellar and Planetary Formation and Evolution*; 220, *Ground Water Modeling*; 231, *Igneous Petrology*; 254, *The Climate System*; 262, *Planetary Interiors*; 265, *Order of Magnitude Estimation*; 270, *Global Seismology*; or 275, *Magnetohydrodynamics*. Additionally, all students will be required to take one course in quantitative analysis from an approved list (available at the department office). In

subsequent years, all students participate in course 293, *Graduate Research Seminar*. Other course requirements are tailored to the individual student's academic background, professional experience, and plans for research. Master's degree students must take a minimum of 35 quarter credits of graduate and upper--division undergraduate courses (at least 20 of which are graduate-level and not including Earth Science 297, *Independent Research*) including the courses mentioned above. No specific number of course credits is required for the Ph.D., but, ordinarily, students put more of their effort into coursework during the first year of graduate study. It is recommended that all thesis-track graduate students attain some teaching experience while at UCSC.

Before the start of fall quarter, each first-year thesis track student is required to meet with his/her faculty adviser to determine a list of course offerings recommended to meet academic and research goals. Immediately afterwards, a meeting is scheduled with the graduate program director to finalize and approve this initial discussion with a written study plan. -Yearly academic review meetings will then re-assess the student's progress in completing these courses and independent research, initially with the primary adviser but eventually with a reading committee composed of at least three members of the faculty and research staff (at least 50 percent of which must be members of the Academic Senate). ~~Late in the fall quarter, each first-year, thesis-track student has an interview with a representative committee of the faculty. Interview topics are drawn from the broad field of Earth and planetary sciences and can include elementary mathematics, physics, chemistry, or biology. The interview is used to determine the student's understanding of basic scientific principles and ability to apply these principles to specific problems. Following the interview, students will be given a list of course requirements and recommendations.~~

To qualify for candidacy in the Ph.D. program, each student must pass an oral examination in his or her area of specialization by the end of their third year of graduate study, although students are strongly encouraged to take the examination earlier. The examination is based on a research proposal presenting one or more specific questions to be researched by the student in the course of completing their Ph.D. thesis. Students are expected to have in-depth knowledge of fields relevant to the proposal, including familiarity with the professional literature.

The Ph.D. dissertation is a scholarly contribution to knowledge that embodies the results of original and creative effort by the student. Students are urged to prepare their dissertations for publication in peer-reviewed professional journals. A public oral defense of the thesis is required prior to completion of the Ph.D.

The M.S. thesis is a scholarly contribution consisting of results of an original research project by the student. Students are strongly encouraged to prepare their results for publication in the peer-reviewed literature. The M.S. thesis must be completed by the end of the third year after entering the program, and students are strongly encouraged to complete their thesis earlier and to present the results of this work publicly.

Coursework M.S. Track. The coursework M.S. track is a professional program designed to allow students to increase their breadth, quantitative depth, or emphasis on a particular specialty; to provide the student with a stronger background toward competition for jobs or an enhancement of skills for current employment (e.g., K-14 teaching); and to allow students from other disciplines (e.g., biology, physics, chemistry, mathematics, environmental studies) to acquire advanced training in Earth and planetary sciences. Prior to the first quarter of study, students have a meeting with their faculty adviser in which they develop a study plan of at least nine courses, no more than one of which may be 297 or 298, and a statement of objectives. The plan must be approved by the graduate representative. Students are also limited to one Earth Sciences 290 pro-seminar course. It is expected that the course plan will comprise mainly graduate-level and quantitative,

upper-level, undergraduate elective courses.

Coursework master's students are required to fulfill one of the following capstone options: a substantial review/research manuscript or a comprehensive oral examination based on their coursework.

There is no foreign-language requirement for either the M.S. or Ph.D. degree. However, many students in the Earth and planetary sciences find knowledge of one or more foreign languages necessary in their particular research and therefore study the appropriate language.

Details regarding admission to graduate standing, financial aid, examinations, and the requirements for the master of science and doctor of philosophy degrees are available from the Division of Graduate Studies. For more information, see Graduate Studies at <http://www.es.ucsc.edu/grad/index.html>.

Faculty and Professional Interests

ERIK ASPHAUG, Professor

Asteroids, comets, planet-forming collisions, terrestrial surfaces

EMILY E. BRODSKY, Professor

Earthquakes, volcanoes, fluid flow in fractured media

KENNETH L. CAMERON, Professor Emeritus

PATRICK Y. CHUANG, Associate Professor

Clouds, aerosols and climate

MATTHEW E. CLAPHAM, Assistant Professor

Paleobiology, geobiology

ROBERT S. COE, Professor

Geophysics, paleomagnetism, tectonics

DANIEL FARBER, Lecturer

Paleogeomorphology using short-lived nuclides; high-pressure experiments with applications to Earth's deep interior

NOAH J. FINNEGAN, Assistant Professor

Geomorphology, active tectonics

ANDREW T. FISHER, Professor

Hydrogeology, crustal studies, coupled flows, modeling

Ian Garrick-Bethell, Assistant Professor

Planetary interiors, paleomagnetism

ROBERT E. GARRISON, Professor Emeritus

James B. Gill, Professor Emeritus

GARY A. GLATZMAIER, Professor

Computer simulation of geodynamics and planetary dynamics

GARY B. GRIGGS, Distinguished Professor, Earth Sciences; Director, Institute of Marine Sciences

Coastal processes, hazards and engineering

JEREMY K. HOURIGAN, Assistant Professor

Thermochronology, structural geology, tectonics

ELISE KNITTLE, Professor

Mineral physics, experimental geophysics

PAUL L. KOCH, Professor

Isotope geochemistry, paleobiology and ecology

DON G. KORYCANSKY, IGPP Associate Research Planetary Scientist

Planetary impacts, asteroid dynamics

MARC G. KRAMER, IGPP Associate Research Earth Scientist

Biogeochemistry, Earth surface process, remote sensing

MIKHAIL KRESLAVSKY, IGPP Assistant Research Planetary Scientist

Mars surface evolution and planetary data analysis

LEO F. LAPORTE, Professor Emeritus

THORNE LAY, Distinguished Professor

Seismology, geophysics

KAREN C. Mc NALLY, Professor Emerita

J. CASEY MOORE, Professor Emeritus
Structural geology, accretionary prisms, faulting

FRANCIS NIMMO, Professor
Icy satellites, accretion, Mars, planetary geophysics

ADINA PAYTAN, Lecturer, IMS Research Scientist
Biogeochemistry, paleoceanography, environmental and aquatic chemistry

HILDE L. SCHWARTZ, Senior Lecturer
Vertebrate paleontology, environmental geology, paleoecology, chemosynthetic ecosystems

SUSAN Y. SCHWARTZ, Professor
Seismology, geophysics, active tectonics

ELI A. SILVER, Professor
Marine geology and geophysics, active tectonics, remote sensing

LISA SLOAN, Professor
Past and future climate change, climate modeling, Earth system science

OTHMAR T. TOBISCH, Professor Emeritus

SLAWEK M. TULACZYK, Professor
Glaciology and glacial geology, soil mechanics

STEVEN N. WARD, IGPP Research Geophysicist
Seismology, geophysics

GERALD E. WEBER, Lecturer Emeritus

QUENTIN WILLIAMS, Professor
Mineral physics, tectonophysics, experimental geochemistry

RU-SHAN WU, IGPP Research Geophysicist
Seismology, geophysics; wave propagation and subsurface imaging

XIAO-BI XIE, IGPP Research Geophysicist
Theoretical and applied seismology

JAMES C. ZACHOS, Professor
Paleoceanography, marine stratigraphy

XIXI ZHAO, Lecturer, Earth Sciences; IGPP Research Geophysicist
Paleomagnetism and rock magnetism and their application to the history of Earth's magnetic field

KENNETH W. BRULAND, Professor, Ocean Sciences
Chemical oceanography, biogeochemistry of trace metals and radionuclides, aquatic chemistry, geochemistry

WEIXIN CHENG, Associate Professor, Environmental Studies
Soil ecology, agroecology, biogeochemistry, global change ecology

MARGARET (PEGGY) L. DELANEY, Professor, Ocean Sciences
Paleoceanography, marine geochemistry

A. RUSSELL FLEGAL, Professor, Microbiology and Environmental Toxicology
Anthropogenic perturbations of biogeochemical cycles, applications of isotopic tracers in anthropology and archaeology

JONATHAN FORTNEY, Assistant Professor, Astronomy and Astrophysics
Planetary atmospheres and interiors, extrasolar planets

MICHAEL LOIK, Associate Professor, Environmental Studies
Plant physiological ecology, climate change ecology, biometeorology, ecohydrology

A. CHRISTINA RAVELO, Professor, Ocean Sciences
Stable isotope geochemistry and chemical oceanography, paleoclimatology

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses

1. Oceanography. W

An introduction to the physical environment of the ocean. Origin and evolution of ocean basins; sea-floor morphology; origin, distribution, historical record, and economic significance of marine sediments; ocean currents, waves, tides, and changing sea level; beaches, shorelines, and coastal processes; marine resources, pollution, and human impacts on the oceans. Students may also enroll in and receive credit for Ocean Sciences 1. Laboratory/discussion-1.5 hours. (General Education Code(s): PE-E, IN.) *G. Griggs*

2. Earth Catastrophes. F

The role of catastrophic processes in shaping Earth and the environment in which we live. The physical processes causing earthquakes, volcanic eruptions, tsunamis, floods, windstorms, landslides, and meteorite impacts will be described, along with the role played by these rapid processes in the geological and biological evolution of the planet. Interdisciplinary approaches to understanding these phenomena will be discussed. The entire time scale from formation of the universe to the present Earth system will be considered. (Formerly course 80A.) (General Education Code(s): SI, T-2 Natural Sciences.) *T. Lay*

3. Geology of National Parks. S

Geologic concepts and processes responsible for shaping our national parks including mountain building, volcanic and earthquake activity, sedimentation, weathering, erosion, and glaciation. An understanding of how geology impacts our lives is emphasized. Appropriate for both science and non-science majors who wish to enhance their knowledge, enjoyment, and appreciation of our national parks. (General Education Code(s): SI, IN.) *S. Schwartz*

4. Earth's Environment and the Cinema. *

Exploration of cinema's role in defining societal awareness of Earth sciences (underlying concepts and factual basis) for disaster and adventure movies and in more subtle presentations. Topics include evolution of life, surface environment and the planet's deep interior, natural hazards, global warming, and meteorite impacts. (Formerly course 80D, Earth Sciences and the Cinema.) (General Education Code(s): PE-E, T2-Natural Sciences.) *T. Lay*

5. California Geology. F

An introduction to physical geology emphasizing the minerals, rocks, volcanoes, mountains, faults, and earthquakes of California. In-class field trips to study the caves, rocks, and landforms of the campus and the Monterey Bay area. Discussion-1 hour. Concurrent enrollment in 5L required for majors and minors. (General Education Code(s): SI, IN.) *E. Knittle*

5L. California Geology Laboratory (1 credit). F

Laboratory sequence illustrating topics covered in course 5 with particular emphasis on rock and mineral identification and map interpretation. Field trip. Laboratory three hours. Students are billed a materials fee. *E. Knittle*

6. Concepts in Environmentalism. *

Learn scientific concepts required to be an informed environmentalist. Topics include urban smog; water resources and pollution; waste treatment; acid rain; global climate change; fossil fuel, nuclear, and renewable energy; overpopulation; and how an individual can minimize his or her environmental impact. Offered in alternate academic years. (General Education Code(s): IN.) *P. Chuang*

7. The History of Life. *

An examination of the major events in the history of life, from the origin of life approximately four billion years ago, to the wave of extinctions that has decimated plants and animals around the globe over the past 30,000 years. (General Education Code(s): SI, IN.) *M. Clapham, P. Koch*

8. Planetary Discovery. *

An introductory look at modern solar system exploration, focusing on spacecraft missions presently underway. We will examine the scientific context of each mission, the instrumentation and dynamics of each voyage, and the importance of their discoveries. Open to all students. (Formerly course 80G.) (General Education Code(s): SI, T-2 Natural Sciences.) *E. Asphaug*

9. Earth History and Global Change. F

Over the past 4.5 billion years, planet Earth has evolved in exciting ways. Environments, climates, and life forms have come and gone in fascinating combinations. Course examines changing physical, biological, and climatological conditions through geologic time, beginning with the evolution of the Earth through changes leading to the current state of the planet, and considers prospects for Earth's future. (Formerly course 80F). (General Education Code(s): PE-E, T2-Natural Sciences.) *L. Sloan*

10. Geologic Principles. S

Introduction to the scientific study of Earth, the materials composing it, and the processes shaping it. Topics include minerals and rocks, Earth's internal structure, plate tectonics, earthquakes and volcanoes, oceans and the atmosphere, the formation of landscapes and global change. A one-day, optional field trip is included. Concurrent enrollment in 10L required for majors and minors. (General Education Code(s): SI, IN.) *A. Fisher*

10L. Geologic Principles Laboratory (1 credit). S

Laboratory sequence illustrating topics covered in course 10, with particular emphasis on rock and mineral identification and map interpretation. Laboratory 3 hours. In-lab field trips. Students are billed a materials fee. *A. Fisher*

11. Earthquakes. W

Causes and effects of earthquakes. How do we measure, mitigate, and try to predict earthquakes? Plate motion, frictional faulting, earthquake triggering, wave propagation, earthquake damage, related hazards, and other social effects. Hazard reduction through earthquake forecasting and earthquake-resistant design. Class includes one full day weekend field trip to local faults. Advanced algebra and high school geometry recommended. Students are billed a materials fee. (Formerly course 80B.) (General Education Code(s): MF, T-2 Natural Sciences, Q.) *E. Brodsky*

12. Introduction to Weather and Climate. S

Many meteorological phenomena are familiar to us: clouds, fog, rain, snow, wind, lightning, and severe storms. Climate is the sum of weather over long periods and is changing (e.g., greenhouse warming, ozone depletion, urban smog) due to mankind's activities. Conceptual understanding of how and why the present-day atmosphere behaves as it does and how this may change in the future is the primary goal of this course. (Formerly course 80C.) Offered in alternate academic years. (General Education Code(s): MF, T-2 Natural Sciences, Q.) *P. Chuang*

20. Environmental Geology. W

Introduction to aspects of geology which affect and are affected by humans. Addresses a broad range of topics including resource management, geologic hazards, air and water issues, population and land use, energy costs and effectiveness, and global change, all from a unique geological/environmental perspective. Lectures include strategies for mitigating these issues. Includes a one-day field trip. Concurrent enrollment in 20L required for majors and minors. (General Education Code(s): SI, IN.) *S. Tulaczyk*

20L. Environmental Geology Laboratory (1 credit). W

Laboratory sequence illustrating topics covered in course 20, with emphasis on rock and mineral identification, geologic hazard assessment, geologic resource management, and land use planning. In-lab field trip. Laboratory 3 hours. Students are billed a materials fee. *S. Tulaczyk*

65. Natural History of Dinosaurs. *

Explores the origin, evolution, and extinction of dinosaurs with emphasis on paleobiology and paleoecology. Covers fundamental paleontological and evolutionary principles, dinosaur anatomy and behavior, the hot-blooded/cold-blooded debate, dinosaur-bird relationships, diversity, and exploits of the great dinosaur hunters. One and a half hour of discussion each week. (General Education Code(s): SI, IN.) *P. Koch, H. Schwartz*

81B. Fundamentals of Environmental Science. W

Addresses major issues in physical and biological environmental sciences and provides tools to critically evaluate, debate, and make informed choices regarding one's own impact on the environment. Topics include: climate change, water resources, air pollution, evolution, ecology (from populations to ecosystems), and conservation. Quantitative problem solving is an integral part of this course. (Also offered as College Eight 81B. Students cannot receive credit for both courses.) (General Education Code(s): MF, IN, Q.) *P. Chuang, I. Parker*

98. Earth Sciences Internship. F,W,S

A supervised learning experience involving practical application of lower division Earth sciences knowledge while working with approved companies, governmental agencies, or research organizations. Students consult weekly with supervising faculty and prepare a final report of their work, to be evaluated both by the sponsoring agency and the faculty supervisor. Consult sponsoring agency for enrollment criteria; after instruction on resume preparation and interview skills, student must interview and be selected for internship by approved sponsoring organizations. May be repeated for credit. *The Staff*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses

100. Vertebrate Paleontology. W

Introduction to vertebrate history, with an emphasis on vertebrate relationships and the co-evolution of organisms and environments. Specific topics include vertebrate origins, systematics and classification, adaptive revolutions, mass extinctions, and the rise and fall of dinosaurs. Students are billed a materials fee. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements and course 5 or 10 or 20 or Biology 20C, or Anthropology 1. Concurrent enrollment in course 100L is required. *H. Schwartz*

100L. Vertebrate Paleontology Laboratory (2 credits). W

Comparative anatomy and functional morphology of vertebrates, and preservation of vertebrate hard parts, using modern and fossil specimens. Laboratory three hours and one 1-day field trip. Concurrent enrollment in course 100 is required. *H. Schwartz*

101. The Fossil Record. F

An introduction to paleobiology; the use of fossil evidence to pose and solve evolutionary and geologic questions. Students are billed a materials fee. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements and course 5 or 10 or 20 or Biology 20C or Anthropology 1. Concurrent enrollment in course 101L is required. *M. Clapham*

101L. The Fossil Record Laboratory (1 credit). F

Systematics, ecology, and evolutionary history of the major groups of fossil-forming animals. Laboratory 3 hours and one 1-day field trip. Concurrent enrollment in course 101 is required. *M. Clapham*

102. Marine Geology. F

Geology of the marine environment. Topics include controls on the types, origin, and distribution of marine sediments; geology of oceanic crust; evolution of continental margins and plate boundaries; introduction to paleoceanography. Discussion: 1 hour. Students cannot receive credit for this course and Ocean Sciences 280. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and course 5 or 10 or 20 or Biology 20C. *A. Ravelo*

104. Geologic Hazards. F

The recognition, evaluation, and mitigation of geologic hazards: earthquakes and faulting, tsunamis, volcanism, landslides and mass movements, and flooding. Students are billed a materials fee. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and course 10/L or 5/L or 20/L. *S. Schwartz*

105. Coastal Geology. S

An investigation of the evolution, morphology, and processes in the coastal zone including the terrestrial (marine terraces, dunes, estuaries, sea cliffs) and marine (beaches, continental shelves, sea level changes, shoreline erosion and protection, waves, tides) components and their interaction. Laboratory: 3 hours. Students are billed a materials fee. Prerequisite(s): course 1 or 5 or 10 or 20; course 10L or 5L or 20L recommended for non-majors. *G. Griggs*

107. Remote Sensing of the Environment. W

Introduction to geographic information systems (GIS) and remote sensing (RS) as valuable tools in the study of geology. Covers application of GIS/RS to study of surface processes, including landslides, hydrologic basins, coastal erosion, modern floods, volcanic activity and surface deformation. Prerequisite(s): course 5 or 10 or 20. Enrollment limited to 36. *E. Silver*

109. Elements of Field Geology. F,S

Basic tools and techniques used in geologic fieldwork. Preparation, analysis, and interpretation of geologic maps. Nine to 10 days of weekend field trips required, including a six-day geologic mapping exercise. Laboratory: 3 hours. Recommended for courses 120, 130, 150, and required for 188A-B. May not be taken concurrently with course 120, 150, or 188. Students are billed a materials fee. (General Education Code(s): W satisfied by taking this course and courses 188A and 188B.) Enrollment restricted to majors and minors in Earth and planetary sciences and the combined majors with anthropology and environmental studies. Prerequisite(s): Satisfaction of the Entry Level Writing and Composition requirements, course 5 or 10 or 20, and 5L or 10L or 20L, or by permission of instructor. Concurrent enrollment in 109L is required. Enrollment limited to 25. (F) *H. Schwartz*, (S) *J. Hourigan*, (S) *P. Koch*

109L. Field Geology Laboratory (2 credits). F,S

Laboratory exercises essential to the successful completion of fieldwork required in course 109. Topics include topographic maps, Brunton compass, rock identification and description, geologic map analysis, structure section "construction," and landslide recognition. Concurrent enrollment in course 109 required. Enrollment restricted to majors and minors in Earth and planetary sciences and the combined majors with anthropology and environmental studies or by permission of instructor. Enrollment limited to 25. (General Education Code(s): PR-E.) (F) *H. Schwartz*, (S) *J. Hourigan*, (S) *P. Koch*

110A. Evolution of the Earth. F

Investigation of the processes and mechanisms that have produced the present Earth system, with an emphasis on the temporal evolution of the earth from the Archean to the present. Specific topics covered include cyclicity in Earth processes and the evolution of, and interplay between the planet's crust, atmosphere, hydrosphere, and biosphere. Prerequisite(s): courses 5 or 10 or 20, and 5L or 10L or 20L, and Mathematics 11A or Mathematics 19A or Applied Mathematics and Statistics 15A. (General Education Code(s): PE-E.) *Q. Williams*, *J. Zachos*

110B. Earth as a Chemical System. W

The chemical properties of Earth materials and the chemical processes by which the planet has evolved to its present state. Specific topics covered include properties of minerals; the genesis of igneous, metamorphic, and sedimentary rocks; and the linkage between the solid Earth and the hydrosphere. Enrollment is permitted by permission code with equivalent or exceptional background, or if enrolled concurrently in Chemistry 1B. Prerequisite(s): courses 5, or 10, or 20, and 5L, or 10L, or 20L, and Chemistry 1B. *E. Knittle*

110C. The Dynamic Earth. S

Physical processes occurring in the interior of the earth, at its surface and in the oceans and atmospheres including plate tectonics, structural deformation of rocks, and material and heat transport. Students are billed a materials fee. Prerequisite(s): course 5 or 10 or 20; and 5L or 10L or 20L; and course 111 or Mathematics 22 or 23A; and Physics 6A or 5A. *E. Brodsky*

110L. Evolution of the Earth Laboratory (2 credits). F

Laboratory sequence illustrating topics covered in course 110A. Emphasis is on quantifying and evaluating different phenomena related to thermal, tectonic, climatic, and evolutionary processes. Prerequisite(s): concurrent enrollment in course 110A. (General Education Code(s): PR-E.) *Q. Williams, J. Zachos*

110M. Earth as a Chemical System Laboratory (2 credits). W

Laboratory sequence illustrating topics covered in course 110B. Emphasizes identification of the major rock-forming minerals and common rock types; principles of basic crystallography. Prerequisite(s): concurrent enrollment in course 110B. *E. Knittle*

110N. The Dynamic Earth Laboratory (2 credits). S

Laboratory sequence illustrating topics covered in course 110C. Prerequisite(s): concurrent enrollment in course 110C. *E. Brodsky*

111. Mathematics in the Earth Sciences. F

Series and sequences, vectors, 3D analytic geometry, partial differentiation, matrix algebra, and differential equations with applications in the Earth sciences. Topics include matrix manipulation, systems of linear equations, least-squares, Taylor series, gradients, optimization, analytic and numerical solutions to differential equations. Prerequisite(s): courses 5 or 10 or 20, and Mathematics 11B or Mathematics 19B or Applied Mathematics and Statistics 15B. (General Education Code(s): Q.) *(F) E. Asphaug*

116. Hydrology. *

Introduces processes involving water on and near Earth's surface, including meteorology, water properties, surface flows in streams and runoff, flood analysis, ground water, water budgets, sediment transport, erosion, and water quality. Problem set and laboratory each week. Laboratory/field: 3 hours. Students are billed a materials fee. Alternates annually with course 146. Enrollment restricted to majors and minors in Earth and planetary sciences and the combined majors with anthropology and environmental studies. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, course 5 or 10 or 20, Mathematics 11A or 19A or Applied Mathematics or Statistics 15A, or by permission of instructor. Course 5L or 10L or 20L recommended. *A. Fisher*

117. Paleomagnetism. S

How the fossil magnetism of rocks is used to decipher Earth's history: applications to tectonics, geochronology, stratigraphy, structural geology, geomagnetism, and archeology. Includes an overnight field trip to collect samples for a class research project. Students are billed a materials fee. Prerequisite(s): course 5, 10 or 20; Mathematics 11A or Mathematics 19A or Applied Mathematics or Statistics 15A; course 117L must be taken concurrently. *R. Coe*

117L. Paleomagnetism Laboratory (2 credits). S

A hands-on research project in the Paleomagnetic Laboratory. Students collectively drill oriented cores in the field (one–two days), prepare and measure the samples, and analyze and interpret the data. Each student writes an individual final report based on the class results. Prerequisite(s): concurrent enrollment in course 117 is required. *R. Coe*

119. Introduction to Scientific Computing. W

Introduction to solving scientific problems using computers. A series of simple problems from Earth sciences, physics, and astronomy are solved using a user-friendly scientific programming language (IDL). Prerequisite(s): Mathematics 11A or Mathematics 19A or Applied Mathematics or Statistics 15A. (General Education Code(s): IN.) *M. Krumholz, G. Glatzmaier*

120. Sedimentology and Stratigraphy. S

Stratigraphic principles used in classifying sedimentary rocks. Fundamentals of sedimentary mechanics. Analysis and interpretation of facies and depositional systems. Introduction to seismic facies and basin analysis. Course includes four Saturday field exercises. Students are billed a materials fee. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and course 110A. Course 110B is recommended as preparation. May not be taken concurrently with course 109. *M. Clapham, L. Sloan*

120L. Sedimentology and Stratigraphy Laboratory (2 credits). S

Laboratory sequence illustrating topics in course 120, including sedimentary petrology, sedimentary structures, sequence stratigraphy, and geohistory analysis. Prerequisite(s): concurrent enrollment in course 120. *M. Clapham, L. Sloan*

121. The Atmosphere. *

Course focuses on understanding basic atmospheric weather and climate phenomena starting from the fundamentals of physics and chemistry. Using this approach, covers topics such as atmospheric circulation, precipitation, clouds, storms, urban and regional air quality, atmospheric aerosols, and climate and global change. Prerequisite(s): Mathematics 11B or Mathematics 19B or Applied Mathematics or Statistics 15B, and Chemistry 1C, and Physics 5A or 6A. Offered in alternate academic years. *P. Chuang*

125. Analytical Paleobiology. *

Project-based introduction to analytical methods in paleobiology and paleoecology, including univariate and multivariate statistics, cluster analysis and ordination approaches, and morphometrics. Requires one weekend field trip at the start of the quarter. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements and course 101. Offered in alternate academic years. (General Education Code(s): SR.) *M. Clapham*

128. Isotopes: Fundamentals and Applications in Earth and Marine Sciences. W

Explores the fundamentals and concepts of stable, radiogenic, and cosmogenic isotope chemistry with applications relevant to Earth, marine, and biological sciences. Prerequisite(s): course 110B or permission of instructor. *J. Zachos*

130. Igneous and Metamorphic Petrology. S

Introduction to the relationship between tectonic environments and the genesis of rock assemblages, primarily igneous and metamorphic. Examples from California and elsewhere are used to illustrate petrogenetic processes and characteristic petrologic features of rocks from all major tectonic settings. Students are billed a materials fee. (Formerly Magmas and Volcanoes.) Prerequisite(s): course 110B. Concurrent enrollment in course 130L is required. Offered in alternate academic years. *E. Knittle*

130L. Igneous and Metamorphic Petrology Laboratory (2 credits). *

An introduction to optical mineralogy and the petrography of igneous rocks. (Formerly Magmas and Volcanos Laboratory.) Prerequisite(s): course 110B. Concurrent enrollment in 130 is required. Offered in alternate academic years. *E. Knittle*

134. Thermochemistry of Geologic Systems. *

Introduction to the thermodynamic and kinetic principles with a strong emphasis on applications to Earth materials. Implications for phase equilibria, geothermometry/geobarometry, element partitioning, and physical properties of minerals, magmas, and solutions. Will be offered in the 2010-11 academic year. Prerequisite(s): course 110B. Offered in alternate academic years. *Q. Williams*

140. Geomorphology. W

An introduction to the evolution of the Earth's landscape, with emphasis on the processes responsible. Review of climatic and tectonic forcing followed by detailed discussion of weathering, glaciers, hillslopes, wind, rivers, and coastal processes with emphasis on their geographic distribution. One single day and one three-day field trip. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements and course 110A. Concurrent enrollment in 140L is required. *The Staff*

140L. Geomorphology Laboratory (2 credits). W

Laboratory sequence illustrating topics covered in course 140. These extensive laboratory exercises emphasize the quantification of the geomorphic processes and forms, and on the writing of concise summaries of the science in the form of abstracts. Students are billed a materials fee. Prerequisite(s): Concurrent enrollment in course 140 is required. *The Staff*

142. Engineering Geology for Environmental Scientists. *

Introduction to the formation, composition, and classification of soils; the chemical interaction of soil and groundwater; and basic soil mechanics: stress-strain behavior, effective stress concept, consolidation, soil testing methods. Applications to problems including slope stability, landslides, liquefaction, subsidence, soil creep, debris flows. Laboratory: 3 hours. Students are billed a materials fee. Prerequisite(s): course 5 or 10 or 20; Mathematics 11A or Mathematics 19A or Applied Mathematics or Statistics 15A. Offered in alternate academic years. *S. Tulaczyk*

146. Ground Water. W

Explores saturated and unsaturated fluid flow below Earth's surface, well hydraulics, and recourse evaluation and development. Introduces modeling, field techniques, geochemistry, and contaminant transport and remediation. Problem set and laboratory each week; final paper. Laboratory: 3 hours. Students are billed a materials fee. Alternates annually with course 116. Enrollment restricted to majors and minors in Earth and planetary sciences and the combined majors with anthropology and environmental studies. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, course 5 or 10 or 20, Mathematics 11A or 19A or Applied Mathematics or Statistics 15A, or by permission of the instructor. Course 5L or 10L or 20L recommended. *A. Fisher*

148. Glaciology. S

Introduction to the role of snow and ice in the dynamics of the earth surface system. Snow deposition and metamorphosis. Heat and mass balance at snow and ice surfaces. Flow of glaciers, ice sheets, and sea ice. Methods of climate reconstruction. Ice age theories. Students are billed a materials fee. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and courses 5 or 10 or 20; and Mathematics 11A or Mathematics 19A or Applied Mathematics or Statistics 15A. Offered in alternate academic years. *S. Tulaczyk*

150. Structural Geology. F

Principles and methods of analysis of brittly and ductily deformed rocks. Includes descriptions of structures, field analysis of structures, and mechanics of deformation. Three day-long field trips on weekends. Students are billed a materials fee. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and course 110A or 110B; course 109 recommended; concurrent enrollment in course 150L is required. *The Staff*

150L. Structural Geology Laboratory (2 credits). F

Structural analysis of faults, folds, and maps. Use of stereographic projections. Cross section construction and balancing from field data. Concurrent enrollment in course 150 is required. *The Staff*

152. Tectonics. S

The processes, techniques, and interpretations involved in the study of active crustal movements; constraints from plate tectonics; horizontal and vertical motions and rates; geodesy, including GPS; stress measurement; image interpretation; fault system analysis; paleoseismicity; fluid effects. Examples from the circum-Pacific. Laboratory-3 hours. Students cannot receive credit for this course and course 207. Students are billed a materials fee. (Formerly Active Tectonics.) Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and course 10 or 5 or 20 and 10L or 5L or 20L, and Physics 5A or 6A or equivalent per instructor permission. *E. Silver*

160. Planetary Science. F

Broad introduction to planetary science. Topics include the fundamental characteristics of solar system bodies; space exploration of these bodies; formation and evolution of surfaces, atmospheres and interiors of planets, satellites and small bodies. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, and Mathematics 11B or Mathematics 19B or Applied Mathematics and Statistics 15B; and Physics 5A or 6A. *I. Garrick-Bethell*

162. Planetary Interiors. W

The chemical and thermal structure and evolution of silicate planet interiors. Topics include equation of state of mantle and core materials, thermal history of the mantle and core, dynamics of mantle convection, geophysical determination of interior structure. Students cannot receive credit for this course and course 262. Prerequisite(s): course 160; and course 111 or Mathematics 22 or 23A; and Physics 5C or 6C. Offered in alternate academic years. *I. Garrick-Bethell*

163. Planetary Surfaces. *

Comparative study of surfaces and atmospheres of planetary bodies in solar system, focusing on comparative planetology and geophysical processes at work, including differentiation, impact cratering, tectonics, volcanism, and geomorphic evolution. Explores terrestrial planets, giant planets and their moons. Students cannot receive credit for this course and course 263. Prerequisite(s): course 160. Enrollment limited to 20. Offered in alternate academic years. *E. Asphaug*

164. Planetary Atmospheres. S

A quantitative study of the origin, chemistry, dynamics, and observations of the atmospheres of terrestrial and gas-giant planets. Students cannot receive credit for this course and course 264. Prerequisite(s): course 160. Enrollment limited to 18. *W. Nimmo*

168. Reflection Seismology. †

Introduction to reflection seismology, presenting an overview of data acquisition, processing, and interpretation; common depth point method; velocity determinations; filtering; migration; display. Applications to seismic stratigraphy and structure of the crust and of continental margins. Laboratory: 3 hours. Prerequisite(s): course 111; or Mathematics 11A and B; or Mathematics 19A and B; or Applied Mathematics and Statistics 15A and B. Offered in alternate academic years. *The Staff*

172. Geophysical Fluid Dynamics. W

Introduces fluid motion influenced by rotation. Topics include the Coriolis force, geostrophic flow, potential vorticity, the shallow water model, quasigeostrophic approximation, planetary waves, Ekman theory, thermal wind, models of the large-scale oceanic and atmospheric circulation, and equatorial dynamics. Taught in conjunction with course 272. Students cannot receive credit for this course and course 272. (Also offered as Ocean Sciences 172. Students cannot receive credit for both courses.) Prerequisite(s): Physics 107 or Applied Mathematics and Statistics 107; Mathematics 22 or 23B recommended. Offered in alternate academic years. *C. Edwards*

188A. Summer Field Internship. S

Three weeks of summer field study in geologically complex regions in the White-Inyo Mountains of eastern California. Activities include geologic field mapping on topographic and photographic base maps, stratigraphy, petrology, and structure analysis. A fee is required for participation. Contact sponsoring agency for details. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 109/L, 110A/L, and 110B/M. Enrollment restricted to Earth sciences majors. Concurrent enrollment in course 188B is required. (General Education Code(s): W satisfied by taking this course and courses 109 and 188B.) Interview only via application filed with department. (General Education Code(s): PR-E.) *H. Schwartz*

188B. Geographic Information Systems with Applications to the Earth Sciences. S

Introduction to basic principles of geographic information systems (GIS). Visualization of earthscapes with applications to problem-solving in the Earth sciences. Laboratory exercises in

loading, manipulation, and interpretation of data sets. Field investigations of phenomena visualized in laboratory, including geological description, interpretation, and written report preparation. Lecture and laboratory portions of course occur during spring quarter. Field investigations and report-writing occur in the summer following spring quarter. A fee is required for participation. Contact sponsoring agency for details. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 109/L, 110A/L, and 110B/M. Enrollment restricted to Earth sciences majors. Concurrent enrollment in course 188A is required. (General Education Code(s): W satisfied by taking this course and courses 188A and 109.) Interview only via application filed with department. Enrollment limited to 25. *N. Finnegan*

190. Earth Sciences Mentorship (1 credit). F

Faculty research activity, analytic facilities, and career counseling in three separate Earth sciences laboratories are offered with varied formats including field trips, discussions, and equipment demonstrations. Three different faculty participate in each offering. Enrollment restricted to Earth sciences, Earth sciences/anthropology, and environmental studies/Earth sciences majors. Enrollment limited to 24. May be repeated for credit. *The Staff*

191. Climate Change Science and Policy. W

Explores the scientific basis of current and pending climate change, and the state of climate policy issues in California, the nation, and the world. Work includes foundational lectures on both public policy and climate science; additional guest lectures from policy makers, politicians, and scientists. Students are introduced to and become familiar with addressing climate-change issues from both policy and scientific perspectives; research papers and public presentations are required activities. Prerequisite(s): Satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to senior majors in Earth and planetary sciences and the combined major with anthropology. *L. Sloan*

194F. Education Capstone (2 credits). F,W,S

Students write a paper on a lesson plan developed after their CalTeach internship courses. This independent study is supervised by Earth and planetary sciences faculty or ocean sciences faculty, as well as a member of the CalTeach staff or Education Department. Prerequisite(s): Education 185C and 185L. Enrollment restricted to Earth and planetary sciences majors with a concentration in science education. *The Staff*

195. Senior Thesis. F,W,S

Students submit petition to sponsoring agency. Enrollment restricted to seniors. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. May be repeated for credit. (General Education Code(s): W.) *The Staff*

196B. Teaching Earth Sciences in the University. F,W,S

Students facilitate laboratory and field exercises in conjunction with faculty and teaching assistants in various Earth sciences courses. May not count toward upper-division major requirements. Approval of sponsoring agency; interview and selection by primary instructor of specific courses required. Participation in course 196A is expected. Enrollment restricted to Earth sciences, Earth sciences/anthropology, and environmental studies/Earth sciences majors. *The Staff*

196C. Teaching Earth Sciences in the University (2 credits). F,W,S

Students facilitate laboratory and field exercises in conjunction with faculty and teaching assistants in various Earth sciences courses. May not count toward upper-division major requirements. Approval of sponsoring agency; interview and selection by primary instructor of specific courses required. Participation in course 196A is expected. Enrollment restricted to Earth sciences, Earth sciences/anthropology, and environmental studies/Earth sciences majors. May be repeated for credit. *The Staff*

198. Earth Sciences Internship. F,W,S

A supervised learning experience involving practical application of Earth sciences through working with approved companies, governmental agencies, or research organizations. Students consult weekly with supervising faculty and prepare a final report of their work. Consult sponsoring agency for enrollment criteria. After instruction on resume preparation and interview skills, students must interview and be selected for internship by approved sponsoring organizations. Enrollment restricted to Earth sciences, Earth sciences/anthropology, and environmental studies/Earth sciences majors. May be repeated for credit. *E. Silver*

198F. Earth Sciences Internship (2 credits). F,W,S

A supervised learning experience involving practical application of Earth sciences through working with approved companies, governmental agencies, or research organizations. Students consult weekly with supervising faculty and prepare a final report of their work. May not be counted toward upper-division major requirements. Consult sponsoring agency for enrollment criteria. After instruction on resume preparation and interview skills, student must interview and be selected for internship by approved sponsoring organizations. Enrollment restricted to Earth sciences, Earth sciences/anthropology, and environmental studies/Earth sciences majors. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Introduction to research in laboratory, field, or theoretical subjects. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Introduction to research in laboratory, field, or theoretical subjects. May not be counted toward

upper-division major requirements. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

203. Introductory Teaching Seminar (1 credit). F

Intended for new Earth sciences graduate students. Focus on preparation, assessment, and feedback. Classroom techniques, organizational and time management strategies, practice teaching sessions specific to laboratory and/or science instruction. Required follow-up meetings to discuss practical teaching experience. Enrollment restricted to graduate students. *E. Brodsky*

204. Earth and Planetary Sciences Foundations (4 credits). F

Provides a comprehensive overview of key concepts, dominant paradigms, and research frontiers in Earth and planetary sciences in plenary talks by multiple faculty. Provides a required foundation course for all incoming students pursuing graduate degrees in Earth and planetary sciences. Enrollment restricted to Earth sciences graduate students. Enrollment limited to 20. *T. Lay*

205. Introductory Graduate Seminar (2 credits). F

Lecture and- seminar-style class intended to welcome new graduate students to the department and to introduce students to the research and interests of departmental faculty and researchers. Includes exercises to develop skills in reading scientific abstracts and papers and in writing abstracts and proposals. Two weekend field trips. Students are billed a materials fee. Enrollment restricted to Earth sciences graduate students. *E. Brodsky*

206. Great Papers in the Earth Sciences. W

Exposure to the most important ideas in the Earth sciences through exploration of the primary literature. Seminal papers in different subdisciplines of the Earth sciences are read and analyzed to provide breadth and improve students' ability to think critically. Enrollment restricted to Earth sciences graduate students. *Q. Williams, E. Asphaug*

207. Tectonics. S

An overview of tectonic theory and processes for application to the Earth sciences. The course explores the primary tools of tectonic interpretation including plate kinematics, rheology, plate boundary dynamics, and the behavior of active fault systems. Taught in conjunction with course 152. Students cannot receive credit for this course and course 152. Prerequisite(s): graduate standing or permission of instructor. *E. Silver*

208. Methods in Paleoclimatology. F

Addresses methods used to reconstruct aspects of paleoclimates and paleoenvironments from the geologic record, focusing primarily on terrestrial records. Topics to be covered include dendrochronology and dendroclimatology, paleopalynology, paleobotany, ice cores, and paleosol studies. Lectures, discussions, and laboratory work. Enrollment restricted to graduate students. Offered in alternate academic years. *L. Sloan*

209. Solid Earth Geochemistry. †

Origin and distribution of the elements in the earth and meteorites; bulk and isotopic composition and differentiation of terrestrial planets, core, mantle, and crust; Sr-Nd-Pb-Hf-U isotopic tracers. Course designed for graduate students, but available to qualified earth sciences majors per instructor permission. Enrollment restricted to graduate students. *The Staff*

210. Overview of Stellar and Planetary Formation and Evolution. *

Overview of current understanding of star and planet formation and evolution. Examines our solar system in the context of the galactic planetary census. Provides a uniform introduction to astronomy and Earth science planetary students. Enrollment restricted to graduate students. *G. Laughlin*

213. Biogeochemical Cycles. *

Overview of biogeochemical cycles, present and past, and geochemical models. Topics include: marine, terrestrial, and global views of the carbon, nitrogen, phosphorus, silicon, sulfur, and oxygen cycles, and the evolution of these cycles and Earth's redox balance through geologic time. (Also offered as Ocean Sciences 213. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. Upper-division undergraduates may enroll with instructor approval. College-level chemistry and an upper-division course in at least one relevant discipline are recommended. *M. Delaney*

220. Ground Water Modeling. F

Introduction to building and using models to solve hydrogeologic problems. Modeling methods include mainly analytical and finite-difference. Emphasis on using models rather than the details of their functioning, although some coding is required. Comfort with mathematical methods and computers expected. Course designed for graduate students, but available to qualified Earth science majors. Prerequisite(s): graduate standing or permission of instructor required. One year of calculus and courses in differential equations and basic hydrologic principles are recommended as preparation. Offered in alternate academic years. *A. Fisher*

229. Isotopic Methods in Environmental Science. S

Explores how natural variations in stable isotope ratios answer questions in ecology, paleobiology, and other environmental sciences. Format includes lectures by the instructor and student presentations on applications following literature-based research on each topic. Enrollment

restricted to graduate students. Enrollment limited to 25. *P. Koch*

231. Igneous Petrology. †

Systematic study of the major igneous rock suites, combining petrography, experimental petrology, major and trace elements, volatiles, and isotopic characteristics. Laboratory: three hours. Course designed for graduate students but available to qualified earth sciences majors. Course 130 is recommended as preparation. *The Staff*

240. Communicating Science (3 credits). *

Introduces inquiry-based instructional strategies for communicating a passion for science. These strategies, combined with content knowledge and enthusiasm for sharing it, equips college students to introduce science to K-8 students and teachers in local schools. Enrollment restricted to graduate students. Enrollment limited to 20. *A. Paytan*

251. Photogrammetry. †

Introduces photogrammetry 's basic principles of imaging systems and digital-image processing for both terrestrial and planetary data, leading to the application of photogrammetry techniques to a final project of the student's choosing. Enrollment restricted to graduate students or by permission of instructor. *The Staff*

254. The Climate System. *

Focuses on atmospheric and oceanic processes that are important within the Earth's climate system, especially those that operate on annual to centennial time scales. Format includes lectures by the instructors, paper readings, and discussion. Enrollment restricted to graduate students. Offered in alternate academic years. *P. Chuang, A. Ravelo*

256. Paleoclimate Modeling: Methods and Applications. *

Addresses methods of paleoclimate modeling on global and regional scales, from both surface and atmospheric perspectives. Applications of models to current significant paleoclimate problems will be examined. Includes both lecture and seminar formats. Enrollment restricted to graduate students; undergraduates by permission of instructor only. *The Staff*

258. Deep Time Paleoclimates. S

Weekly lectures/readings/presentations focused on the key events in the long-term evolution of Earth's climate (i.e., before the Pliocene), including early Archean, faint, young-sun period; Proterozoic snowballs; Paleozoic glaciations and greenhouse events; the mid-Cretaceous oceanic anoxic events (OAEs); and Paleogene thermal maxima and glacial intervals. Considerable emphasis on evaluating the proxies of climate and mechanisms of climate change (e.g., greenhouse gasses, paleogeography). Enrollment restricted to graduate students. Enrollment limited to 15. Offered in alternate academic years. *J. Zachos*

260. Introductory Data Analysis in the Ocean and Earth Sciences. S

Introduces data analysis methods regularly encountered within the ocean and earth sciences. Topics include: error propagation; least squares analysis; data interpolation methods; empirical orthogonal functions; and Monte Carlo methods applied to problems drawn from oceanographic and earth sciences datasets. Introduces and uses a high-level computing and visualization package, MATLAB. Student project consists of analysis of the student's own dataset. (Also offered as Ocean Sciences 260. Students cannot receive credit for both courses.) Prerequisite(s): previous course in ocean or earth sciences is recommended. Enrollment restricted to graduate students; undergraduates with permission of instructor. *C. Edwards*

262. Planetary Interiors. W

The chemical and thermal structure and evolution of silicate planet interiors. Topics include equation of state of mantle and core materials, thermal history of the mantle and core, dynamics of mantle convection, geophysical determination of interior structure. Students cannot receive credit for this course and course 162. Enrollment restricted to graduate students. Enrollment limited to 20. Offered in alternate academic years. *I. Garrick-Bethell*

263. Planetary Surfaces. *

Comparative study of surfaces of planetary bodies in our solar system, focusing on comparative planetology and geophysical processes at work, including differentiation; on-impact cratering; tectonics; volcanism and geomorphic evolution; and exobiology. Explores terrestrial planets, giant planets and their moons, and trans-Neptunian objects, focusing on modern exploration. Students cannot receive credit for this course and course 163. Enrollment restricted to graduate students. Offered in alternate academic years. *E. Asphaug*

263L. Planetary Field Course (2 credits). †

Field class in comparative planetology. Three- to four -day field trip plus planning and debriefing sessions. Students are billed a materials fee. Enrollment restricted to graduate students. Enrollment limited to 12. Offered in alternate academic years. *E. Asphaug*

264. Planetary Atmospheres. S

Quantitative study of the origin, chemistry, dynamics, and observations of the atmospheres of terrestrial and gas giant planets. Students cannot receive credit for this course and course 164. Enrollment restricted to graduate students. *W. Nimmo*

265. Order of Magnitude Estimation. W

Practice in making rough estimates and leading-order approximations in physical and chemical processes. Enrollment restricted to graduate students. Offered in alternate academic years. *W.*

266. Geologic Signal Processing and Inverse Theory. *

Theoretical and practical aspects of digital signal analysis including data sampling, spectral estimation, digital filtering, statistical estimation, correlation tools, and principle-component analysis. Emphasis on practical examples of geophysical time series. Multivariable calculus and linear algebra are required and used extensively in the course. (Formerly Geological Signal Processing.) Enrollment restricted to graduate students. Enrollment limited to 15. May be repeated for credit. *S. Schwartz*

269. Advanced Marine Stratigraphy: Techniques and Applications. †

Explores concepts and methods of correlating marine sedimentary sequences. Emphasis on the integration of techniques and development of the Cenozoic stratigraphic record. One 2-hour laboratory each week. Upper-division students who have completed course 120 may enroll in this course. Enrollment restricted to graduate students. *J. Zachos*

270. Global Seismology. *

Introduction to quantitative earthquake and global Earth structure seismology. Topics include basic elasticity, wave characteristics, seismic ray theory, wave reflection, surface waves, normal modes, seismic instrumentation, application of seismic waves to reveal Earth structure and resulting models, representation of earthquake sources such as explosions and faulting, earthquake rupture scaling, modern methods of modeling seismic recordings to study source complexity, and an introduction to seismotectonics. Laboratory: 3 hours. Enrollment restricted to graduate students. Offered in alternate academic years. *T. Lay*

271. Current Research Topics in Deep Earth Processes. †

Students and instructor lead discussions of recent and significant publications in geophysics and chemistry of deep Earth. Articles structured around current theme of interest are selected by participants and approved by instructor. Emphasis on defining multidisciplinary significance of each article and its relationship to fundamental processes in deep Earth, including core and mantle. Designed for graduate students but available to qualified Earth sciences majors. May be repeated for credit. *T. Lay*

272. Geophysical Fluid Dynamics. W

Introduces fluid motion influenced by rotation. Topics include the Coriolis force, geostrophic flow, potential vorticity, the shallow water model, quasigeostrophic approximation, planetary waves, Ekman theory, thermal wind, models of the large-scale oceanic and atmospheric circulation, and equatorial dynamics. Students cannot receive credit for this course and course 172. (Also offered as Ocean Sciences 272. Students cannot receive credit for both courses.) Physics 227 is recommended as preparation. Enrollment restricted to graduate students. Offered in alternate academic years. *C. Edwards*

275. Magnetohydrodynamics. S

Study of fluid dynamics and magnetic fields with a focus on convection and magnetic field generation in planets and stars. Students develop a computer program for modeling magneto-convection. Computer programming experience required. Enrollment restricted to graduate students. Offered in alternate academic years. *G. Glatzmaier*

276. Geology of the Peopling of the Americas. †

Using a multidisciplinary approach, examines physical geology, paleoenvironment, human biology, linguistics, and culture history of Americas at end of last Ice Age. Particular emphasis on reconstructing timing, routes, and context of first peopling of the American continents. Taught in conjunction with Anthropology 276D. Students cannot receive credit for both courses.) Enrollment restricted to graduate students. Enrollment limited to 15. *P. Koch*

278A. Advanced Seismology. W

Elastic wave propagation. Advanced topics in ray theory, WKBJ solutions in seismology, singularities and nonlinearities, surface wave theory, propagating matrices, normal modes, and inversion theory. Selected topics in time series analysis and seismic signal processing, seismic wave dispersion. Course designed for graduate students but available to qualified Earth sciences majors. Physics 110B and 114B are recommended as preparation. Enrollment restricted to graduate students. May be repeated for credit. *T. Lay*

280D. Short Course in Atmospheric/Climate Science (3 credits). †

Addresses specialized topics in atmospheric and/or climate science that are too narrow for a full (5-credit) format. Examples include: cloud physics; atmospheric boundary layer; aerosol physics and chemistry; atmospheric radiation; atmospheric thermodynamics. Enrollment restricted to graduate students. May be repeated for credit. *P. Chuang*

290. Proseminar.

Special topics offered from time to time by visiting professors or staff members. May be repeated for credit. *The Staff*

290B. Topics in Glaciology. F

Advanced review of the physics and chemistry of ice and snow. Mass and heat balance of ice masses. Motion of glaciers and ice sheets. Subglacial and englacial hydrology. Thermodynamics of ice masses and the linkage to climate. Enrollment restricted to graduate students. May be repeated for credit. *S. Tulaczyk*

290C. Topics in Geophysics. F

Different problems and approaches will be stressed from year to year such as geotectonics, paleomagnetism, or properties and processes in the mantle and core. Enrollment restricted to graduate students; qualified Earth sciences majors by permission of instructor. (W) *R. Coe*

290D. Petrology and Plate Tectonics. †

Selected topics illustrating relationships between igneous and metamorphic rocks and plate tectonics are explored in detail. Designed for graduate students but available to qualified Earth sciences majors. May be repeated for credit. *The Staff*

290E. Topics in Planetary Science. S

We examine one well-defined topic in planetary science, beginning with a summary of current knowledge and concluding with the latest research literature. Topics will vary from year to year and may include planetary collisions, terrestrial planets, origin of planetary systems, small bodies, the New Mars, and satellites of Jupiter. Achievement will be evaluated based on class participation, exams, and a research project. Open to undergraduate majors with permission of instructor. Enrollment restricted to graduate students. May be repeated for credit. *I. Garrick-Bethell, E. Asphaug*

290F. Topics in Coastal Processes (2 credits). F,W,S

Instructor and students lead discussions and make presentations on current research, problems, and publications in coastal processes. These topics include littoral drift, sediment transport and storage on the inner shelf, shoreline erosion/change and its documentation, and related issues. Enrollment restricted to graduate students. May be repeated for credit. *G. Griggs*

290G. Topics in Global Tectonics. *

Explores different problems of special interest in global tectonics with the approach of integrating marine and terrestrial geologic and geophysical information. Course designed for graduate students but available to qualified Earth sciences majors. May be repeated for credit. *E. Silver*

290H. Topics in Hydrogeology. *

Selected topics in groundwater, hydrothermal systems, and related subjects. Discussion of theoretical models, field and laboratory approaches, and recent research. Topics vary from year to year. Course designed for graduate students but available to qualified Earth sciences majors. Offered in alternate academic years. May be repeated for credit. *A. Fisher*

290I. Topics in Geomorphology. S

Discussion of journal articles focused on a theme in contemporary geomorphology. Topics include: coupling of climate; tectonics and landscape evolution; mechanics of bedrock river channels; fundamentals of fluvial gravel transport; and inference of tectonic rates and processes from analysis of topography. Enrollment restricted to graduate students; qualified undergraduates may enroll by permission of instructor. May be repeated for credit. *N. Finnegan*

290J. Topics in Earthquake Physics. *

Why do earthquakes happen? Topics include friction, fracture, earthquake triggering, stress in the crust, observed source scalings, and seismicity statistics. Emphasis on observations and current research topics. Enrollment restricted to graduate students and advanced undergraduates. *E. Brodsky*

290K. Paleontology Seminar (3 credits). S

Seminar discussion based on current readings in the literature around some topic in the history and evolution of life. Course designed for graduate students but available to qualified upper-division science students. Offered in alternate academic years. May be repeated for credit. *M. Clapham, P. Koch*

290L. Topics in Climate Change. *

Explores current issues and recent developments in the field of past, present, and future climate change. Topic is different each year, but focuses on the interaction between different components of Earth's environment and the effect of that interaction on climate change. Designed for graduate students but open to qualified undergraduates. Enrollment restricted to graduate students. Enrollment limited to 20. May be repeated for credit. *L. Sloan*

290M. Topics in Atmospheric Science. *

Selected topics encompassing atmospheric physics and chemistry. Topics vary from year to year. Sample topics include: atmospheric physics, atmospheric chemistry, boundary layer meteorology, aerosol science, and atmospheric thermodynamics. (Formerly Topics in Atmospheric Chemistry.) Designed for graduate students, but qualified undergraduates may enroll with permission of instructor. May be repeated for credit. *P. Chuang*

290N. Topics in Mineral Physics. S

Selected topics encompassing the physics and chemistry of Earth's interior, planetary physics, high-pressure experimental geophysics and material properties at high pressure and temperature. Topics vary from year to year. Enrollment restricted to graduate students and qualified Earth sciences majors by permission of instructor.. May be repeated for credit. *E. Knittle*

290P. Interdisciplinary Topics in the Earth Sciences. W

An understanding of the chemical and physical properties and processes in the earth is sought by integrating information from several subdisciplines in the Earth sciences. Topics vary from year to year, focusing on areas of active research. Course designed for graduate student but available to

qualified Earth sciences majors. Prerequisite(s): graduate standing or permission of instructor. Course designed for graduate student but available to qualified Earth sciences majors. May be repeated for credit. *S. Schwartz*

290Q. Topics in Outer Solar System. *

Exploration of the planets and satellites beyond the asteroid belt, with an emphasis on the underlying physical processes at work. Course includes lectures, computer practicals, and student presentations. Enrollment restricted to graduate students. May be repeated for credit. *W. Nimmo*

290R. Topics in the Chemistry and Physics of the Earth. *

Explores problems and current research developments in the application of physics and chemistry to planetary interiors. Topics differ from year to year and include, but are not limited to, research related to the accretion, differentiation, evolution, and structure of the terrestrial planets. Course designed for graduate students but available to qualified Earth sciences majors. May be repeated for credit. *Q. Williams*

290T. Current Research Topics in Paleocceanography and Paleoclimatology. *

Students and instructor lead discussions of recent and significant problems in paleocceanography and paleoclimatology. Articles structured around current themes of interest are selected by the instructor. Emphasis on major climatic transitions or events which noticeably influenced evolution of biota. Course designed for graduate students but available to qualified Earth sciences majors. *P. Koch, J. Zachos*

290U. Topics in Thermochronology. W

Surveys the use of thermochronometry to quantify the rates of tectonic processes. Topics include heat conduction and diffusion; radioactive decay; analytical methods; and modeling of thermochronologic data. Seminars review seminal papers from the literature. Enrollment restricted to graduate students. Enrollment limited to 20. *J. Hourigan*

290X. Topics in Modeling Planetary Interiors. S

Introduces computer modeling of thermal convection in planetary interiors. Students learn to write and run a basic computer code using spectral and finite-difference methods, then are shown how to improve the numerical method and physics. Basic computer programming experience is required (for example, in Fortran, C, IDL, or MATLAB). Course designed for and enrollment restricted to graduate students, but available to qualified science majors. May be repeated for credit. *G. Glatzmaier*

292. Seminar (no credit). F,W,S

Weekly seminar attended by faculty, graduate students, and upper-division undergraduate students. *The Staff*

293. Graduate Research Seminar (1 credit). S

Weekly seminar series covering a broad spectrum of topics in the Earth sciences. Graduate students give 15- to 20-minute oral presentations on current or anticipated research. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

296. Special Student Seminar. F,W,S

Permission of instructor required. *The Staff*

297. Independent Study. F,W,S

Permission of instructor required. *The Staff*

298. Earth Sciences Internship. F,W,S

A supervised learning experience involving practical, graduate-level application of Earth sciences through working with approved companies, governmental agencies, or research organizations. Students consult weekly with supervising faculty and prepare a final report of their work. Consult sponsoring agency for enrollment criteria. After instruction on resume preparation and interview skills, students must interview and be selected for internship by approved sponsoring organizations. *The Staff*

299. Thesis Research. F,W,S

Permission of instructor required. *The Staff*

*Not offered in 2011-12

Department of History

201 Humanities

(831) 459-2982

<http://eastasianstudies.ucsc.edu>***Program Description***

East Asian studies addresses the three societies of China, Japan, and Korea in northeast Asia. We recognize that they compose a meaningful regional designation that contains a diverse range of peoples, languages, and cultures. Linked by centuries of common use of the Chinese writing system, a shared textual canon, general principles of statecraft, and the continual circulation of people and goods, the three societies nevertheless also possess distinctive languages, histories, and social identities, making it necessary to explore each society in its own right.

In recognition of this diversity within the common bonds, East Asian studies at UCSC encourages students to explore East Asia in both depth and breadth. Building first upon developing language skills in Chinese or Japanese, students also begin their studies in one of two historical surveys—History 40A, *Early Modern East Asia*, or History 40B, *The Making of Modern East Asia*—which explore the broad regional forces that contextualize each society's particular trajectory. From these foundations, students are encouraged to investigate a broad range of questions pertinent to each society in classes across the university, including anthropology, economics, education, feminist studies, film and digital media, history, history of art and visual culture, languages, linguistics, literature, music, politics, sociology, and theater arts.

Requirements for the Minor

Language. Completion of the Chinese or Japanese language sequence, at least two of which must be upper-division. A student who wishes to complete the East Asian studies program should enroll in beginning Chinese or Japanese no later than the sophomore year.

Required courses. One core course: History 40A, *Early Modern East Asia*, or History 40B, *The Making of Modern East Asia*.

Three additional upper-division courses from the East Asian studies curriculum, one of which may be an individual study (course 199).

[A minimum of 25 upper-division units must be completed within the East Asian studies minor course requirements.](#)

Study Abroad

Because the minor is designed to support the integration of language training with exploration of East Asian societies, we strongly endorse participation in one of the many education abroad programs available for UC students in East Asia where language skills acquired at the university are put to practical use in daily life and research. At present,

there are UC education abroad programs in China, Japan, Hong Kong, Korea, and Taiwan. For more information on the program, see the UC Education Abroad program (EAP) web sites: UCSC—<http://oie.ucsc.edu/sa/apply.html>, and UC system-wide—<http://eap.ucop.edu/>.

Associated Faculty

Noriko Aso, Associate Professor of History

Dilip Basu, Associate Professor of History

Raoul Birnbaum, Professor of History of Art and Visual Culture

Nancy Chen, Professor of Anthropology

Alan Christy, Associate Professor of History

Christopher Connery, Professor of Literature

Sakae Fujita, Lecturer of Languages

Hiroshi Fukurai, Professor of Sociology

K.C. Fung, Professor of Economics

Per Gjerde, Professor Emeritus of Psychology

June Gordon, Professor of Education

Gail B. Hershatter, Professor of History

Christine Hong, Assistant Professor of Literature

Emily Honig, Professor of History

Minghui Hu, Assistant Professor of History

Junko Ito, Professor of Linguistics

Stacy Kamehiro, Associate Professor of History of Art and Visual Culture

Hi Kyung Kim, Associate Professor of Music

L.S. Kim, Associate Professor of Film and Digital Media

Paul Lubek, Professor of Sociology

Boreth Ly, Assistant Professor of History of Art and Visual Culture

David Keenan, Lecturer of Languages

Shigeko Okamoto, Professor of Languages

Benjamin Read, Assistant Professor of Politics

Lisa Rofel, Professor of Anthropology

Dana Y. Takagi, Professor of Sociology

Yiman Wang, Assistant Professor of Film and Digital Media

[Program Description](#) | [Changes to 2010-12 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Program Description

An understanding of economics is a vital component of a liberal arts education and a necessity for anyone interested in such areas as business, environmental policy, welfare reform, unemployment, international competitiveness and trade, or transformations in the global economy.

The programs offered by the UCSC Economics Department are designed to acquaint students with the broad range of issues studied by economists and with the tools they use. The department offers the following majors:

Economics B.A.
Business management economics B.A.
Global economics B.A.

The department also offers the following combined majors:

Economics/Mathematics B.A.
Environmental studies/Economics B.A.
Latin American and Latino studies/Global economics B.A.

A minor in economics is also available.

The economics curriculum begins at the introductory level; no specific high school preparation is required. All economics majors study a substantial core of economic theory and mathematical and statistical methods, and then choose among a wide variety of upper-division electives. Economics majors may combine their upper-division elective choices in a variety of ways to achieve specialization in a number of possible areas, including environmental economics, public policy, political economy, international economics, economic development, and quantitative methods.

General Requirements

Admission into an Economics Major and Minor

The Economics Department administers four undergraduate majors: economics, business management economics, global economics, and economics/mathematics. The admission requirements are the same for all four.

Students must take two courses prior to petitioning for entry to an economics major: Economics 1 (Introductory Microeconomics) and Economics 2 (Introductory Macroeconomics). Students who have a combined grade-point average (GPA) of 2.8 or better in Economics 1 and 2 will be admitted to the economics major upon applying. Courses for which the grade of W (withdraw) is given are not counted in the computation of the average grade for those two courses. If courses 1 and 2 are repeated, the department will only consider the grades from the first attempt in determining whether students qualify for admittance into the major. Students are encouraged to apply to the major as soon as they have satisfactorily completed these two courses. Equivalent courses may be taken at other universities or community colleges. Students should check on assist.org for already established equivalency agreements. Transfer students are strongly encouraged to have these requests reviewed by the department prior to matriculation at UCSC, since an offer of admission to UCSC does not automatically imply admission to the economics major.

Students may petition for admission to the major by filling the *Petition for Major/Minor Declaration* and the *UCSC Academic Planning* form and by supplying evidence of their grades in the two pre-major courses.

Students who have a GPA lower than 2.8 in Economics 1 and 2 are not eligible for admission to the major. Students not eligible for the economics majors may appeal by submitting a letter to the Economics Department. Appeals are rarely granted. The appeal letter must be filed no later than the third week of the fall quarter in the student's junior year. Please check the department web site (<http://econ.ucsc.edu>) for guidelines on the appeal process.

Students are strongly encouraged to take courses 1 and 2 for letter grades. In the case of courses taken on a Pass/No Pass basis, the department will use unofficial grades assigned by the instructor but not reported to the Office of the Registrar, in its assessment of eligibility for the major.

The Economics Department offers a minor in economics. Students who have a combined GPA of 2.8 or better in Economics 1 and 2 are eligible to declare the minor in economics.

Major Disqualification Policy

Students are expected to maintain good academic standing in the major. Only courses with a grade of P or a letter grade of C or better will satisfy the major requirements. Students who fail any of the upper-division core courses (Economics 100A [or 100M], 100B [or 100N], and 113) twice will be disqualified from the major. Disqualified students will be notified no later than by the first day of instruction in the subsequent quarter following the disqualifying failure. The Office of the Registrar and the student's college will be notified of the disqualification. Similar to the major admission appeals process, students may appeal their disqualification by submitting a letter to the Economics Department. This letter must explain the poor performance in upper division courses and the appeal must be filed no later than 15 days after the disqualification notification was mailed, or the 10th day of classes in the quarter of their disqualification, whichever is later.

Core Requirements for All Economics Majors

Economics 1 and 2, 11A, 11B, 100A (or 100M), 100B (or 100N), 113, and Applied Mathematics and Statistics 5 are required for all economics majors and are prerequisites for most upper-division courses. Students are urged to complete these courses as soon as possible. Students who are committed to the major early in their academic career, should plan to complete at least Economics 1, 2, 11A, 11B, and preferably 100A, 100B, and 113 by the end of their sophomore year. Students are also encouraged to choose the letter grade option when taking these courses.

.

Mathematics and Statistics Content Requirement

Mathematics: Successful completion of Economics 11A and 11B, also offered as Applied Mathematics and Statistics 11A and 11B, (or equivalent) is required of all economics majors and is prerequisite to Economics 100A (or 100M), 100B (or 100N), and 113. Therefore, students are advised to take Economics 11A and 11B or their equivalent as early as possible in their undergraduate career. Mathematics 11A-B and 22 or 23A, or 19A-B and 22 or 23A, are acceptable equivalents to Economics 11A and 11B. Students may also complete the mathematics requirement by taking Mathematics 11A or Mathematics 19A, and then Economics 11B or Applied Mathematics and Statistics 11B. Students planning to do graduate work in economics or business should seriously consider more intensive mathematical training; consult an adviser.

Statistics: Applied Mathematics and Statistics 5

Comprehensive Requirement

The comprehensive requirement may be satisfied in one of the following ways: 1) by passing the intermediate core courses with grades of C or better (Economics 100A or 100M, 100B or 100N, 113); 2) by completion of a senior thesis with consent of an instructor.

Note that item 2 (senior thesis) has been rare. Most students who write a senior thesis have already met the comprehensive requirement.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in economics is satisfied by completing ECON 197, *Economic Rhetoric*.

Minor Requirements

Students earn a minor in economics by completing all of the requirements for the major with the following differences:

- The number of additional upper-division courses is reduced from five to three.
- There is no comprehensive requirement.
- Economics 191, 192, 193, 193F, 198, and 198F may not be used to meet minor requirements.

Independent Study

Students are encouraged to petition for independent study on topics of special interest to them. Economics 199, *Tutorial*, may be used as only one of the upper-division courses required for the

major or minor.

Field-Study Program

The Economics Department offers its majors the opportunity to integrate their academic knowledge with career-related work. The field-study program places students in internships under the supervision of a faculty sponsor and a professional at the workplace. Students can select from a wide variety of field placements such as accounting firms, community non-profits, government agencies, brokerage firms, marketing agencies, banks, and businesses in Santa Cruz and beyond. Students apply for field study a quarter in advance. Participation in the field-study program requires at least junior standing, completion of courses 100A (or 100M), 100B (or 100N), and 113 as well as good academic standing. Students may earn a maximum of 10 academic credits and complete up to two quarters in a field placement. A field study requires 12 hours per week spent working on internship duties. Time spent toward the academic requirements set by the faculty sponsor is not included in the 12 hours spent at the field placement.

Along with the training and supervision by a professional at the workplace, students receive guidance from a faculty sponsor who directs their academic project. Students earn credit through the completion of this project and the job supervisor's evaluation of performance. Economics field-study courses (193 and 198) do not satisfy any upper-division requirements for the major and are available as Pass/No Pass only.

Interested students should make an appointment or stop by the Economics Field Study office at 401A Engineering 2; or call (831) 459-5028; or e-mail econintern@ucsc.edu. Web address: <http://econ.ucsc.edu>.

Transfer Students

A student transferring to UCSC may fulfill some of the requirements for the major by completing equivalent courses, with a grade of C or better, at another recognized institution. Please refer to the section on *Admission to the Major and Minor* for specific admission requirements for the Economics majors. Students should check on assist.org for already established equivalency agreements between UC and the California community colleges. For courses not already articulated through assist.org, transfer students must present their Transfer Credit Summary (available on the student portal) and course syllabi or descriptions to an Economics Department adviser. The department approves courses applicable for economics prerequisites and major requirements. All transfer students must complete the senior comprehensive requirement at UCSC. Economics and global economics majors must take at least three of their upper-division economics electives at UCSC. Business management economics majors must take at least four of their upper-division economics electives at UCSC, one of which must be 101, 133, or 135. Courses taken for credit elsewhere may not be repeated for credit here.

Combined Majors

The Economics Department offers the following combined majors: economics/mathematics, environmental studies/economics, and Latin American and Latino studies/global economics. Requirements for these majors may be reviewed under their separate entries in this catalog.

Economics Program Description

Economics is the study of a vast range of human behavior and its social implications, ranging from how individuals and businesses make financial and consumption decisions to how society organizes production and makes allocation decisions over time and place.

Economics majors study a substantial core of economic theory and mathematical and statistical methods. Focusing on these two areas provides the foundation for graduate studies in economics. The required core courses may also be combined with electives in a general economics major program especially suitable for students who plan either to enter law school or to go into more specialized programs emphasizing areas such as applied economics, environmental economics, public policy, political economy, international economics, economic development, and quantitative methods.

Economics Major Requirements

Students who major in economics are required to take the following courses:

1 *Introductory Microeconomics: Resource Allocation and Market Structure*

2 *Introductory Macroeconomics: Aggregate Economic Activity*

11A *Mathematical Methods for Economists I* (or equivalent)

11B *Mathematical Methods for Economists II* (or equivalent)

100A *Intermediate Microeconomics*

(or 100M *Intermediate Microeconomics, Math Intensive*)

100B *Intermediate Macroeconomics*

(or 100N *Intermediate Microeconomics, Math Intensive*)

113 *Introduction to Econometrics*

197 *Economic Rhetoric*

Applied Mathematics and Statistics 5 *Statistics*

and five additional upper-division economics courses, at least three of which must be selected from the following:

104 *Is There Truth in Numbers: The Role of Statistics in Economics*

105 *Macroeconomic Theory*

106 *Evolutionary Thought in the Social Sciences*

114 *Advanced Quantitative Methods*

120 *Economic Development*

121 *Economic Growth*

125 *Economic History of the U.S.*

126 *Why Economies Succeed or Fail*

128 *Poverty and Public Policy*

130 *Money and Banking*

137 *Performing Arts in the Public and Private Economy*

140 *International Trade*

141 *International Finance*

142 *Advanced Topics in International Finance*

143 *Policy Issues in the International Economy*

148 *Latin American Economies*

149 *The Economies of East and Southeast Asia*

150 *Public Finance*

152 *Setting Domestic Priorities*

153 *Cost-Benefit Analysis*

156 *Health Care and Medical Economics*

159 *The Economics of Organizations*

160A *Industrial Organization*

160B *Government and Industry*

165 *Economics as an Experimental Science*

166A *Game Theory and Applications I*

166B *Game Theory and Applications II*

169 *Economic Analysis of the Law*

170 *Environmental Economics*

171 *Natural Resource Economics*

175 *Energy Economics*

180 *Labor Economics*

183 *Women in the Economy*

184 *Labor Wars in Theory and Film*

185 *The Value and Support of the Arts: Challenges and Opportunities in American Society*

189 *Political Economy of Capitalism*

190 *Senior Proseminar*

Courses 191, 192, 193, 193F, 198, and 198F may not be used to meet major requirements. Either

course 195 or 199 may be used to fill one of the five upper-division major requirements. Other electives are listed under the Business Management Economics program description.

Business Management Economics Program Description

The business management economics major provides students who are interested in careers in business or management with a foundation in economics and a selection of applied fields related to business management. Particular areas of strength of the program are accounting, finance, and technology management. This course of study prepares students for entrance into the business world or admission to graduate programs—either the master's program in applied economics and finance at UCSC or graduate programs in business and management at other universities.

The program provides a business and management education embedded within a broader economics and liberal arts context and is closely related to the economics and global economics majors and the information systems management major.

The UCSC business management economics curriculum begins at the introductory level; no specific high school preparation is required. All majors study a substantial core of economic theory and mathematical and statistical methods, and they are then able to choose among a wide range of business and management electives.

This major has several important elements. First, it combines the strong analytic approach of economics with the technical aspects of management. Second, it recognizes that computing is intrinsic to business and is an essential skill for those who wish to enter this field. Students in this major gain knowledge about using computing as a tool of analysis for economic, statistical, and financial data. Third, the major offers field placements (arranged with the economics field-study program coordinator) which provide an excellent way to apply academic economics, business, and management to issues and problems in the real world; they provide marketable skills as well as important job contacts.

In cooperation with the UC Education Abroad Program (EAP), opportunities are available for students to take some business courses (taught in English) in Europe, Mexico, and Hong Kong. Students should ask the Economics Department for additional information about these programs.

Students who are committed to the major early in their academic career should plan to complete Economics 1, 2, 10A, 10B, 11A, 11B and preferably 100A, 100B, and 113 no later than the end of their sophomore year.

Business Management Economics Major Requirements

Introductory and core requirements. Students who major in business management economics are required to take the following courses:

1 *Introductory Microeconomics: Resource Allocation and Market Structure*

2 *Introductory Macroeconomics: Aggregate Economic Activity*

10A *Economics of Accounting* (or equivalent, see under General Requirements)

10B *Economics of Accounting* (or equivalent, see under General Requirements)

11A *Mathematical Methods for Economists I* (or equivalent)

11B *Mathematical Methods for Economists II* (or equivalent)

100A *Intermediate Microeconomics*

(or 100M *Math Intensive Intermediate Microeconomics*)

100B *Intermediate Macroeconomics*

(or 100N *Math Intensive Intermediate Macroeconomics*)

113 *Introduction to Econometrics*

197 *Economic Rhetoric*

Applied Mathematics and Statistics 5 *Statistics*

Computer literacy requirement. Students must complete a minimum of two courses from the following list (with department approval, a student may substitute other computing courses):

Computer Engineering

12/L *Computer Systems and Assembly Language*

80N *Introduction to Networking and the Internet*

Computer Science

10 *Introduction to Computer Science*

12A/L *Introduction to Programming*

5C *Introduction to Programming in C++* (formerly CMPS 60 N)

5J *Introduction to Programming in Java* (formerly CMPS 60 G)

5P *Introduction to Programming in Python*

80B *Systems and Simulation*

Technology and Information Management

50 *Business Information Systems*

58 *Systems Analysis and Design*

Linguistics

80G *Introduction to Unix*

Economics

216 *Applied Econometric Analysis I* (with permission of instructor)

Note: Students with no prior programming experience are encouraged to take Computer Science 5J and Computer Science 10 rather than Computer Science 12A/L.

Upper-division electives. Students are required to take six additional courses: four in business management and two other economics electives. Students must choose four courses from the following list; at least one of the four must be a course designated with an asterisk (*).

*101 *Managerial Economics*

110 *Managerial Cost Accounting and Control*

111A *Intermediate Accounting I*

111B *Intermediate Accounting II*

112 *Auditing and Attestation*

115 *Introduction to Management Sciences*

117A *Tax Factors for Individuals*

117B *Tax Factors for Business and Investment*

119 *Advanced Accounting*

131 *International Financial Markets*

*133 *Security Markets and Financial Institutions*

*135 *Corporate Finance*

136 *Business Strategy*

138 *The Economics and Management of Technology and Innovation*

139A *Economics of Electronic Commerce*

139B *E-Commerce Strategy*

161A *Marketing*

161B *Marketing Research*

164 *Economics and the Telecommunications Industry*

188 *Management in the Global Economy*

194 *Advanced Topics in Management*

Students must choose the remaining two courses from the upper-division economics electives listed for the economics major (see preceding page).

Courses 191, 192, 193, 193F, 198, and 198F may not be used to meet major requirements. Either course 195 or 199 may be used to fill one of the six upper-division major requirements.

Field study. One quarter of field study is strongly recommended. Placements and credit for course 193 or 198 are arranged through the economics field-study coordinator. See above under Field-Study Program description.

Global Economics Program Description

Global economics is an interdisciplinary major designed to prepare students to participate in the global economy; the program aims to deepen the student's knowledge of economics within a

culturally and linguistically diverse world. The major is particularly useful to students contemplating careers at home or overseas in international relations, in international business, or with international organizations. Hence the major requires overseas study, regional area study, and second-language proficiency in addition to the basic economics requirements.

The UCSC global economics curriculum begins at the introductory level; no specific high school preparation is required. The global economics major program is closely related to the economics major program. See above under the general economics program description for more information.

Global Economics Major Requirements

Introductory and core requirements. Students who major in global economics are required to take the following courses:

1 *Introductory Microeconomics: Resource Allocation and Market Structure*

2 *Introductory Macroeconomics: Aggregate Economic Activity*

11A *Mathematical Methods for Economists* (or equivalent)

11B *Mathematical Methods for Economists* (or equivalent)

100A *Intermediate Microeconomics*

(or 100M *Math Intensive Intermediate Microeconomics*)

100B *Intermediate Macroeconomics*

(or 100N *Math Intensive Intermediate Macroeconomics*)

113 *Introduction to Econometrics*

197 *Economic Rhetoric*

Applied Mathematics and Statistics 5 *Statistics*

Students are strongly recommended to complete courses 100A (or 100M), 100B (or 100N), and 113 prior to study abroad. In addition, majors must have language study, area study, and overseas study, as described below.

Courses 191, 192, 193, 193F, 198 and 198F may not be used to meet major requirements. Either course 195 or 199 may be used to fill one of the five upper-division major requirements.

Upper-division requirements. Five additional upper-division courses are required. Please see courses listed under the Economics and Business Management majors as well. These may include approved courses offered by other departments.

At least one of the five courses must be selected from the following three:

120 *Economic Development*

140 *International Trade*

141 *International Finance*

In addition, at least one course must be chosen from the following departmental listings:

Economics

120 *Economic Development*

126 *Why Economies Succeed or Fail: Lessons from Western and Japanese History*

131 *International Financial Markets*

140 *International Trade*

141 *International Finance*

142 *Advanced Topics in International Economics*

148 *Latin American Economies*

149 *The Economies of East and Southeast Asia*

188 *Management in the Global Economy*

Latin American and Latino Studies

140 *Rural Mexico in Crisis*

168 *Economic History of Latin America*

169 *Latin American Industrialization in a Global Perspective: Past, Present, Future*

Politics

140B *Comparative Post-Communist Politics*

176 *International Political Economy*

Sociology

163 *Global Corporations and National States*

167 *Development and Underdevelopment*

The other three required upper-division electives are determined by the student's interests. See advisers for details.

The global economics major has three additional elements:

1. **Foreign Language Study:** The global economics major requires a foreign language since students who plan to work in the larger world must have fluency in a language other than English. This language should be relevant to their regional area of interest. Students can meet this requirement by completing two years of university-level language courses or by demonstrating an equivalent level of competence through a recognized language test.
2. **Area Study:** The major requires students to take two additional courses selected from the offerings of departments other than economics in order to learn about the history, political economy, or culture of some other part of the world. These can be lower- or upper-division courses; the courses should focus on the area of the student's language study and overseas study. The Economics Department provides a list of approved courses; substitute courses are welcomed when they are part of the student's overseas program or from other UCSC departments, but must be approved by the adviser for the global economics major.
3. **Study Abroad:** All students are required to spend at least one term abroad in an approved course of study in their regional area of concentration; students may also choose a year-long program. Typically, a student will do this through the UC Education Abroad Program (EAP). Numerous overseas study sites are available through EAP. Students desiring to fulfill their required study abroad through EAP must apply directly to the EAP office for the selected program and are subject to the admission requirements determined by UC EAP. In countries and at universities where EAP programs are not available, students may make their own arrangements for study with the permission of the director of the program. Students may use the time abroad to further their language study, to meet the area study course requirements, to meet some of the upper-division economics course requirements, or to take courses unrelated to the major. Students who are not accepted to an overseas program or who cannot meet the language or area course requirements are advised to complete the general economics major as an alternative.

Combined Economics/Mathematics Program Description

The major in Economics and Mathematics is designed to meet the needs of undergraduate students who plan to pursue doctoral study in economics or business, or who wish to pursue a career as an actuary or other professional requiring a sophisticated understanding of economics and mathematics. The major combines the main undergraduate content of both Economics and Mathematics within a programmatic structure that joins the two disciplines. It provides a coursework combination required to prepare for an economics doctoral (Ph.D.) program, or for a group of technically demanding professional careers.

Economics/Mathematics Major Requirements

In addition to completing the University's general education requirements, students must complete 17 courses: 12 required (60 credits) and 5 electives (25 credits). The required courses include:

Economics Required Courses

1 *Introductory Microeconomics: Resource Allocation and Market Structure*

2 *Introductory Macroeconomics: Aggregate Economic Activity*

100A or 100M *Intermediate Microeconomics*

100B or 100N *Intermediate Macroeconomics*

113 *Introduction to Econometrics*

197 **Economic Rhetoric**

Applied Mathematics and Statistics 5, *Statistics*

Economics elective courses

(choose three from the following list)

101 *Managerial Economics*

104 *Is There Truth in Numbers: The Role of Statistics in Economics*

114 *Advanced Quantitative Methods*
 115 *Introduction to Management Science*
 120 *Economic Development*
 125 *Economic History of the U.S.*
 126 *Why Economies Succeed or Fail*
 128 *Poverty and Public Policy*
 130 *Money and Banking*
 131 *International Financial Markets*
 133 *Security Markets and Financial Institutions*
 135 *Corporate Finance*
 136 *Business Strategy*
 137 *Performing Arts in the Public and Private Economy*
 138 *Economics and Management of Technology and Innovation*
 139A *Economics of Electronic Commerce*
 139B *E-Commerce Strategy*
 140 *International Trade*
 141 *International Finance*
 142 *Advanced Topics in International Finance*
 148 *Latin American Economies*
 149 *The Economies of East and Southeast Asia*
 150 *Public Finance*
 160A *Industrial Organization*
 161A *Marketing*
 164 *Economics and the Telecommunications Industry*
 165 *Economics as an Experimental Science*
 169 *Economic Analysis of the Law*
 170 *Environmental Economics*
 171 *Natural Resource Economics*
 175 *Energy Economics*
 180 *Labor Economics*
 183 *Women in the Economy*
 184 *Labor Wars in Theory and Film*
 188 *Management in the Global Economy*
 189 *Political Economy of Capitalism*
 Mathematics required courses
 Mathematics 19A *Calculus for Science, Engineering, and Mathematics*
 Mathematics 19B *Calculus for Science, Engineering, and Mathematics*
 Mathematics 21 *Linear Algebra*
 Mathematics 22 *Calculus of Several Variables* or 23A-B, *Multivariable Calculus*
 Mathematics 100 *Mathematical Proof*
 Mathematics 105A *Real Analysis*
Mathematics electives
 (choose two from the following list)

Mathematics 106 *Systems of Ordinary Differential Equations*

Mathematics 107 *Partial Differential Equations*

Mathematics 114 *Introduction to Financial Mathematics*

Mathematics 117 *Advanced Linear Algebra*

Mathematics 145/L *Chaos Theory*

Mathematics 194 *Senior Seminar*

Applied Mathematics and Statistics 114 *Introduction to Dynamical Systems*

Applied Mathematics and Statistics 131 *Introduction to Probability Theory*

Applied Mathematics and Statistics 132 *Statistical Inference*

Applied Mathematics and Statistics 147 *Computational Methods and Applications*

Applied Mathematics and Statistics 162 *Design and Analysis of Computer Simulation Experiments*

Comprehensive Requirement

In addition to successfully completing program requirements, students need to satisfy the comprehensive requirement for this major; this can be satisfied by one of the following options:

- Mathematics 194 or 195;
- by passing the three intermediate core courses with grades of C or better: (Economics 100A or 100M, 100B or 100N, and 113); or
- by completion of a senior thesis in economics with consent of an instructor: (Economics 195, *Senior Thesis*).

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in economics is satisfied by completing ECON 197, *Economic Rhetoric*.

Major Admission Requirements

Although there are no specific requirements, high school students are encouraged to take four years of high school mathematics and an economics class. Transfer students are encouraged to complete as many lower-division (mathematics and economics) courses as they can at their junior college.

The admission requirements for the economics/mathematics major are the same as for the other economics major programs.

Major Disqualification Policy

Students are expected to maintain good academic standing. Only courses with a grade of P or a letter grade of C or better will satisfy the major requirements. Students who fail any of the upper-division core courses (Economics 100A (or 100M), 100B (or 100N), and 113; and Mathematics 100 and 105A) twice will be disqualified from the major. Students who are disqualified will be notified no later than the first day of instruction in the subsequent quarter, as well as the student's college and the Office of the Registrar.

Students may appeal their disqualification by submitting a letter to the Economics Department. This appeal must be filed no later than 15 days after the disqualification notification was mailed, or the 10th day of classes in the quarter of their disqualification, whichever is later.

Additional Preparation for the Major

Students interested in the combined major must meet a minimum GPA requirement in Economics 1 and 2. Transfer students should check assist.org for agreements with California community colleges about economics and mathematics courses. Students who have met all articulations before transferring will need at least six economics and four to five mathematics classes at UCSC to complete the major.

Honors in the Major

The Economics Department considers for honors and highest honors students who have completed a major program with superior or exceptional work. Honors decisions are made by the department's Honors and Scholarship Committee.

At the end of each quarter, faculty teaching the upper-division core courses submit to the department a list of students in their respective classes whose performance is at the honors level. At the time of graduation, all students who received an honors designation in one or more of these courses are reviewed by the department's honor committee, narrative evaluations are included; the

committee reviews all files. The faculty committee looks for a record of excellence in courses offered towards the major, with a strong performance in the upper-division core (theory and econometrics—courses 100A/M, 100B/N, and 113) being a necessary condition for honors. Although a GPA is not computed for the economics courses, in general highest honors are awarded to students who have received a grade of at least an “A” throughout their economics program. Honors are awarded to students who have no more than two courses with grades of less than an “A-.” Students who have completed a portion of the major at another institution may be asked to submit a transcript for evaluation.

Students interested in being reviewed for honors may request that the department conduct a review, and such requests are always granted.

In general, honors have been awarded to between 10 and 15 percent of each year’s graduating class.

Graduate Programs

Master’s Program in Applied Economics and Finance

The master of science (M.S.) program in applied economics and finance is designed for students who wish to supplement their undergraduate work in economics with analytical graduate training that prepares them for careers in business, government, international and domestic banking, consulting firms, and nonprofit organizations. The program is unique in its focus on graduate-level economics training for practical application and its emphasis on communication skills. The curriculum stresses the application of micro and macro concepts, statistical techniques, finding and using data sources, working out substantial practical applications, developing writing and reporting skills, and presenting material orally before an audience. The program differs from typical master of business administration (M.B.A.) programs by preparing students to meet the increasing technical demands of private- and public-sector employers through comprehensive course work in economic analysis.

The Economics Department has restructured the M.S. program in Applied Economics and Finance into a one-year program. However, the department is not accepting applications for fall 2012. If you would like to be included on a mailing list to receive information concerning when new applications might be accepted, please send your name and contact information to econ_grad_coor@ucsc.edu.

Ph.D. Program in Economics

The Ph.D. program in economics provides students with training in modern microeconomics, macroeconomics, and econometrics, combined with specialized training in the fields of international finance and international trade and options to pursue specializations in economic development, monetary economics, applied microeconomics, experimental economics, and other areas. The core emphasis of the program is on international finance and international, and the program offers more intensive course work in these areas, as well as greater faculty depth in various aspects of international economics, than do traditional Ph.D. programs in economics that offer international economics as a single subfield. However, the department is also home to a large number of internationally recognized faculty whose work is outside of international and who regularly supervise Ph.D. students. Graduates of the program have conducted research on a wide variety of topics; examples include monetary economics, experimental economics, environmental economics, and economic growth and development as well as international economics.

Courses and Program Requirements

Courses and Program Requirements

Year	Fall	Winter	Spring
1st (frsh)	204A Advanced Micro Theory	204B Advanced Micro Theory	204C Advanced Micro Theory

	297A Independent Study	297B Independent Study	297C Independent Study
			Last quarter to challenge QE without academic probation

*ECON 243 is not offered every year; it may be taken in the 2nd or 3rd year. ECON 220A, 220B, 221A, 221B not necessarily offered every year.

Course requirements are satisfied by a letter grade of B or better or a grade of S (satisfactory). A letter grade of C in a course is not satisfactory for meeting a course requirement for the Ph.D. program.

Preliminary Requirements

Preliminary examinations are given in two parts: one test in micro theory and one test in macro theory. Students are expected to pass both examinations before the beginning of their second year. Preliminary examinations are currently offered in June and September, although scheduling is subject to change.

In the spring quarter of the first year and again in the fall quarter of the second year, each student must enroll in Economics 212. An econometrics paper is due at the end of the first full week of fall quarter of the second year. A field paper (in finance or trade) is due by the end of June in the second year of the program. The graduate handbook of the department details the evaluation procedure for the econometrics and the field papers.

Students who do not pass both preliminary examinations, the econometrics paper, and the field paper requirements will not be allowed to continue in the Ph.D. program.

Qualifying Examination

Advancement to candidacy for the Ph.D. degree requires completion with satisfactory grades or better of the required coursework, preliminary examinations, the econometrics paper, the field paper, and the oral examination. The oral examination is taken after all other requirements have been completed. A student cannot advance to candidacy before clearing any incomplete grades from their record.

Dissertation

The final requirement for the Ph.D. degree is acceptance of the student's dissertation under the rules of the Academic Senate. A three-member dissertation advisory committee, headed by the student's research adviser, evaluates the dissertation for the department. The dissertation advisory committee must be approved by both the Economics Ph.D. Committee and the Graduate Council. The committee may require a formal public defense of the dissertation.

(831) 459-2743

<http://economics.ucsc.edu>***Program Description***

An understanding of economics is a vital component of a liberal arts education and a necessity for anyone interested in such areas as business, environmental policy, welfare reform, unemployment, international competitiveness and trade, or transformations in the global economy.

The programs offered by the UCSC Economics Department are designed to acquaint students with the broad range of issues studied by economists and with the tools they use. The department offers the following majors:

Economics B.A.

Business management economics B.A.

Global economics B.A.

The department also offers the following combined majors:

Economics/Mathematics B.A.

Environmental studies/Economics B.A.

Latin American and Latino studies/Global economics B.A.

A minor in economics is also available.

The economics curriculum begins at the introductory level; no specific high school preparation is required. All economics majors study a substantial core of economic theory and mathematical and statistical methods, and then choose among a wide variety of upper-division electives.

Economics majors may combine their upper-division elective choices in a variety of ways to achieve specialization in a number of possible areas, including environmental economics, public policy, political economy, international economics, economic development, and quantitative methods. ~~Highly qualified seniors may take appropriate graduate courses and earn a master of science (M.S.) as well as a bachelor of arts (B.A.) degree in five years.~~

General Requirements**Admission into an Economics Major and Minor**

The Economics Department administers four undergraduate majors: economics, business management economics, global economics, and economics/mathematics. The admission requirements are the same for all four.

Students must take two courses prior to petitioning for entry to an economics major: Economics 1 (*Introductory Microeconomics*) and Economics 2 (*Introductory Macroeconomics*). Students who have a combined grade-point average (GPA) of 2.8 or better in Economics 1 and 2 will be admitted to the economics major upon applying. Courses for which the grade of W (withdraw) is given are not counted in the computation of the average grade for those two courses. If courses 1 and 2 are repeated, the department will only consider the grades from the first attempt in determining whether students qualify for admittance into the major. Students are encouraged to apply to the major as soon as they have satisfactorily completed these two courses. Equivalent courses may be taken at other universities or community colleges. Students should check on assist.org for already established equivalency agreements. Transfer students ~~may~~ are strongly encouraged to have these requests reviewed by the department prior to matriculation at UCSC, since an offer of admission to UCSC does not automatically imply admission to the economics major.

Students may petition for admission to the major by filling the *Petition for Major/Minor Declaration* and the *UCSC Academic Planning* form ~~out the UCSC declaration of major form~~ and by supplying evidence of their grades in the two pre-major courses.

Students who have a GPA lower than 2.8 in Economics 1 and 2 are not eligible for admission to the major. Students not eligible for the economics majors may appeal by submitting a letter to the Economics Department. Appeals are rarely granted. The appeal letter must be filed no later than the third week of the fall quarter in the student's junior year. Please check the department web site (<http://econ.ucsc.edu>) for guidelines on the appeal process.

~~Admission to the major is automatic for students with a combined grade-point average (GPA) of at least 2.8 in courses 1 and 2. Students with a GPA below 2.8 in these courses may submit a GPA letter of appeal. Letters of appeal should describe any extenuating circumstances that might affect the student's record. Please come by the Economics Office, Engineering 2, Room 401, to receive guidelines on the appeal process.~~

Students ~~should~~ are strongly encouraged to take courses 1 and 2 for letter grades. In the case of courses taken on a Pass/No Pass basis, the department will use unofficial grades assigned by the instructor but not reported to the Office of the Registrar, in its assessment of eligibility for the major.

The Economics Department offers a minor in economics. Students who have a combined GPA of 2.8 or better in Economics 1 and 2 are eligible to declare the minor in economics.

~~Courses for which the grade of W (withdraw) is given are not counted in the computation of the GPA. If courses 1 or 2 are repeated, the department will consider the grades from the first attempt in determining whether students qualify for admittance into the major.~~

~~For purposes of advising, students who are interested in pursuing an economics major are encouraged to declare the pre-economics major with the understanding that this does not automatically provide entry to the economics major.~~

Major Disqualification Policy

Students are expected to maintain good academic standing in the major. Only courses with a grade of P or a letter grade of C or better will satisfy the major requirements. Students who fail any of the upper-division core courses (Economics 100A [or 100M], 100B [or 100N], and 113) twice will be disqualified from the major. Disqualified students will be notified no later than by the first day of instruction in the subsequent quarter following the disqualifying failure. The Office of the Registrar and the student's college will be notified of the disqualification.

Similar to the major admission appeals process, sStudents may appeal their disqualification by submitting a letter to the Economics Department. This letter must explain the poor performance in upper division courses and the appeal must be filed~~This appeal must be filed~~ no later than 15 days after the disqualification notification was mailed, or the 10th day of classes in the quarter of their disqualification, whichever is later.

Core Requirements for All Economics Majors

Economics 1 and 2, 11A, 11B, 100A (or 100M), 100B (or 100N), 113, and Applied Mathematics and Statistics 5 are required for all economics majors and are prerequisites for most upper-division courses. Students are urged to complete these courses as soon as possible. Students who are committed to the major early in their academic career, ~~or who are considering the combined B.A./M.S. program,~~ should plan to complete at least Economics 1, 2, 11A, 11B, and preferably 100A, 100B, and 113 by the end of their sophomore year. Students are also encouraged to choose the letter grade option when taking these courses.

~~Disciplinary Communication (DC) Requirement~~

~~Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The new Disciplinary Communication (DC) general education requirement replaced the W requirement for students enrolled at UCSC for fall quarter 2009 and thereafter. The DC requirement in economics is under review. Please refer to updated DC information at <http://reg.ucsc.edu/catalog/html/disciplinarycommunicationchart.html>.~~

Mathematics and Statistics Content Requirement

Mathematics: Successful completion of Economics 11A and 11B, also offered as Applied Mathematics and Statistics 11A and 11B, (or equivalent) is required of all economics majors and is prerequisite to Economics 100A (or 100M), 100B (or 100N), and 113. Therefore, students are advised to take Economics 11A and 11B or their equivalent as early as possible in their undergraduate career. Mathematics 11A-B and 22 or 23A, or 19A-B and 22 or 23A, are acceptable equivalents to Economics 11A and 11B. Students may also complete the mathematics requirement by taking Mathematics 11A or Mathematics 19A, and then Economics 11B or Applied Mathematics and Statistics 11B. Students planning to do graduate work in economics or business should seriously consider more intensive mathematical training; consult an adviser.

Statistics: Applied Mathematics and Statistics 5

Comprehensive Requirement

The comprehensive requirement may be satisfied in one of the following ways: 1) by passing the intermediate core courses with grades of C or better (Economics 100A or 100M, 100B or 100N, 113); 2) by completion of a senior thesis with consent of an instructor.

Note that item 2 (senior thesis) has been rare. Most students who write a senior thesis have already met the comprehensive requirement.

Disciplinary Communication (DC) Requirement

Students of every major must satisfy that major's upper-division Disciplinary Communication (DC) requirement. The DC requirement in economics is satisfied by completing ECON 197, *Economic Rhetoric*.

Minor Requirements

Students earn a minor in economics by completing all of the requirements for the major with the following differences:

- The number of additional upper-division courses is reduced from five to three.
- There is no comprehensive requirement.
- Economics 191, 192, 193, 193F, 198, and 198F may not be used to meet minor requirements.

Independent Study

Students are encouraged to petition for independent study on topics of special interest to them. Economics 199, *Tutorial*, may be used as only one of the upper-division courses required for the major or minor.

Field-Study Program

The Economics Department offers its majors the opportunity to integrate their academic knowledge with career-related work. The field-study program places students in internships under the supervision of a faculty sponsor and a professional at the workplace. Students can select from a wide variety of field placements such as accounting firms, community non-profits, government agencies, brokerage firms, marketing agencies, banks, and businesses in Santa Cruz and beyond. Students apply for field study a quarter in advance. Participation in the field-study program requires at least junior standing, completion of courses 100A (or 100M), 100B (or 100N), and 113 as well as good academic standing. Students may earn a maximum of 10 academic credits and complete up to two quarters in a field placement. A field study requires 12 hours per week spent working on internship duties. Time spent toward the academic requirements set by the faculty sponsor is not included in the 12 hours spent at the field placement.

Along with the training and supervision by a professional at the workplace, students receive guidance from a faculty sponsor who directs their academic project. Students earn credit through the completion of this project and the job supervisor's evaluation of performance. Economics field-study courses (193 and 198) do not satisfy any upper-division requirements for the major and are available as Pass/No Pass only.

Interested students should make an appointment or stop by the Economics Field Study office at ~~401B~~-401A Engineering 2; or call (831) 459-~~2028~~5028; or e-mail econintern@ucsc.edu. Web address: <http://econ.ucsc.edu>.

Transfer Students

A student transferring to UCSC may fulfill some of the requirements for the major by completing equivalent courses, with a grade of C or better, at another recognized institution. Please refer to the section on Admission to the Major and Minor for specific admission requirements for the Economics majors. Students should check on *assist.org* for already established equivalency agreements between UC and the California community colleges. For courses not already articulated through *assist.org*, transfer students must present their Transfer Credit Summary (available on the student portal) and course syllabi or descriptions to an Economics Department adviser. The department approves courses applicable for economics prerequisites and major requirements. All transfer students must complete the senior comprehensive requirement at UCSC. Economics and global economics majors must take at least three of their upper-division economics electives at UCSC. Business management economics majors must take at least four of their upper-division economics electives at UCSC, one of which must be 101, 133, or 135. Courses taken for credit elsewhere may not be repeated for credit here.

Combined Majors

The Economics Department offers the following combined majors: economics/mathematics, environmental studies/economics, and Latin American and Latino studies/global economics. Requirements for these majors may be reviewed under their separate entries in this catalog.

Economics Program Description

Economics is the study of a vast range of human behavior and its social implications, ranging from how individuals and businesses make financial and consumption decisions to how society organizes production and makes allocation decisions over time and place.

Economics majors study a substantial core of economic theory and mathematical and statistical methods. Focusing on these two areas provides the foundation for graduate studies in economics. The required core courses may also be combined with electives in a general economics major program especially suitable for students who plan either to enter law school or to go into more specialized programs emphasizing areas such as applied economics, environmental economics, public policy, political economy, international economics, economic development, and quantitative methods.

Economics Major Requirements

Students who major in economics are required to take the following courses:

1 *Introductory Microeconomics: Resource Allocation and Market Structure*

2 *Introductory Macroeconomics: Aggregate Economic Activity*

11A *Mathematical Methods for Economists I* (or equivalent)

11B *Mathematical Methods for Economists II* (or equivalent)

100A *Intermediate Microeconomics*

(or 100M *Intermediate Microeconomics, Math Intensive*)

100B *Intermediate Macroeconomics*

(or 100N *Intermediate Microeconomics, Math Intensive*)

113 *Introduction to Econometrics*

[197 *Economic Rhetoric*](#)

Applied Mathematics and Statistics 5 *Statistics*

and five additional upper-division economics courses, at least three of which must be selected from the following:

104 *Is There Truth in Numbers: The Role of Statistics in Economics*

105 *Macroeconomic Theory*

106 *Evolutionary Thought in the Social Sciences*

114 *Advanced Quantitative Methods*

120 *Economic Development*

121 *Economic Growth*

125 *Economic History of the U.S.*

126 *Why Economies Succeed or Fail*

- 128 *Poverty and Public Policy*
- 130 *Money and Banking*
- 137 *Performing Arts in the Public and Private Economy*
- 140 *International Trade*
- 141 *International Finance*
- 142 *Advanced Topics in International Finance*
- 143 *Policy Issues in the International Economy*
- 148 *Latin American Economies*
- 149 *The Economies of East and Southeast Asia*
- 150 *Public Finance*
- 152 *Setting Domestic Priorities*
- 153 *Cost-Benefit Analysis*
- 156 *Health Care and Medical Economics*
- ~~157~~159 *The Economics of Organizations*
- 160A *Industrial Organization*
- 160B *Government and Industry*
- 165 *Economics as an Experimental Science*
- 166A *Game Theory and Applications I*
- 166B *Game Theory and Applications II*
- 169 *Economic Analysis of the Law*
- 170 *Environmental Economics*
- 171 *Natural Resource Economics*
- 175 *Energy Economics*
- 180 *Labor Economics*
- 183 *Women in the Economy*
- 184 *Labor Wars in Theory and Film*
- 185 *The Value and Support of the Arts: Challenges and Opportunities in American Society*
- 189 *Political Economy of Capitalism*
- 190 *Senior Proseminar*

Courses 191, 192, 193, 193F, 198, and 198F may not be used to meet major requirements. Either course 195 or 199 may be used to fill one of the five upper-division major requirements. Other electives are listed under the Business Management Economics program description.

Business Management Economics Program Description

The business management economics major provides students who are interested in careers in business or management with a foundation in economics and a selection of

applied fields related to business management. Particular areas of strength of the program are accounting, finance, and technology management. This course of study prepares students for entrance into the business world or admission to graduate programs—either the master's program in applied economics and finance at UCSC or graduate programs in business and management at other universities.

The program provides a business and management education embedded within a broader economics and liberal arts context and is closely related to the economics and global economics majors and the information systems management major.

The UCSC business management economics curriculum begins at the introductory level; no specific high school preparation is required. All majors study a substantial core of economic theory and mathematical and statistical methods, and they are then able to choose among a wide range of business and management electives.

This major has several important elements. First, it combines the strong analytic approach of economics with the technical aspects of management. Second, it recognizes that computing is intrinsic to business and is an essential skill for those who wish to enter this field. Students in this major gain knowledge about using computing as a tool of analysis for economic, statistical, and financial data. Third, the major offers field placements (arranged with the economics field-study program coordinator) which provide an excellent way to apply academic economics, business, and management to issues and problems in the real world; they provide marketable skills as well as important job contacts.

In cooperation with the UC Education Abroad Program (EAP), opportunities are available for students to take some business courses (taught in English) in Europe, Mexico, and Hong Kong. Students should ask the Economics Department for additional information about these programs.

Students who are committed to the major early in their academic career ~~or who are considering the combined B.A./M.S. program~~ should plan to complete Economics 1, 2, 10A, 10B, 11A, 11B and preferably 100A, 100B, and ~~112~~ 113 no later than the end of their sophomore year.

Business Management Economics Major Requirements

Introductory and core requirements. Students who major in business management economics are required to take the following courses:

1 *Introductory Microeconomics: Resource Allocation and Market Structure*

2 *Introductory Macroeconomics: Aggregate Economic Activity*

10A *Economics of Accounting* (or equivalent, see under General Requirements)

10B *Economics of Accounting* (or equivalent, see under General Requirements)

11A *Mathematical Methods for Economists I* (or equivalent)

11B *Mathematical Methods for Economists II* (or equivalent)

100A *Intermediate Microeconomics*

(or 100M *Math Intensive Intermediate Microeconomics*)

100B *Intermediate Macroeconomics*

(or 100N *Math Intensive Intermediate Macroeconomics*)

113 *Introduction to Econometrics*

197 Economic Rhetoric

Applied Mathematics and Statistics 5 *Statistics*

Computer literacy requirement. Students must complete a minimum of two courses from the following list (with department approval, a student may substitute other computing courses):

Computer Engineering

12/L *Computer Systems and Assembly Language*

80N *Introduction to Networking and the Internet*

Computer Science

10 *Introduction to Computer Science*

12A/L *Introduction to Programming*

5C *Introduction to Programming in C++* (formerly CMPS 60 N)

5J *Introduction to Programming in Java* (formerly CMPS 60 G)

5P *Introduction to Programming in Python*

80B *Systems and Simulation*

~~Information Systems Management~~ Technology and Information Management

50 *Business Information Systems*

58 *Systems Analysis and Design*

Linguistics

80G *Introduction to Unix*

Economics

216 *Applied Econometric Analysis I* (with permission of instructor)

Note: Students with no prior programming experience are encouraged to take Computer Science 5J and Computer Science ~~11~~10 rather than Computer Science 12A/L.

Upper-division electives. Students are required to take six additional courses: four in business management and two other economics electives. Students must choose four courses from the following list; at least one of the four must be a course designated with an asterisk (*).

*101 *Managerial Economics*

~~102 Forecasting~~

110 *Managerial Cost Accounting and Control*

111A *Intermediate Accounting I*

111B *Intermediate Accounting II*

112 *Auditing and Attestation*

115 *Introduction to Management Sciences*

117A *Tax Factors for Individuals*

117B *Tax Factors for Business and Investment*

~~118 Fraud Examination~~

119 *Advanced Accounting*

131 *International Financial Markets*

*133 *Security Markets and Financial Institutions*

*135 *Corporate Finance*

136 *Business Strategy*

138 *The Economics and Management of Technology and Innovation*

139A *Economics of Electronic Commerce*

139B *E-Commerce Strategy*

161A *Marketing*

161B *Marketing Research*

164 *Economics and the Telecommunications Industry*

~~181 Economics of Real Estate~~

188 *Management in the Global Economy*

194 *Advanced Topics in Management*

Students must choose the remaining two courses from the upper-division economics electives listed for the economics major (see preceding page).

Courses 191, 192, 193, 193F, 198, and 198F may not be used to meet major requirements. Either course 195 or 199 may be used to fill one of the six upper-division major requirements.

Field study. One quarter of field study is strongly recommended. Placements and credit for course 193 or 198 are arranged through the economics field-study coordinator. See above under Field-Study Program description.

Global Economics Program Description

Global economics is an interdisciplinary major designed to prepare students to participate in the global economy; the program aims to deepen the student's knowledge of economics within a culturally and linguistically diverse world. The major is particularly useful to students contemplating careers at home or overseas in international relations, in international business, or with international organizations. Hence the major requires overseas study, regional area study, and second-language proficiency in addition to the basic economics requirements.

The UCSC global economics curriculum begins at the introductory level; no specific high school preparation is required. The global economics major program is closely related to the economics major program. See above under the general economics program description for more information.

Global Economics Major Requirements

Introductory and core requirements. Students who major in global economics are required to take the following courses:

- 1 *Introductory Microeconomics: Resource Allocation and Market Structure*
- 2 *Introductory Macroeconomics: Aggregate Economic Activity*

11A *Mathematical Methods for Economists (or equivalent)*

11B *Mathematical Methods for Economists (or equivalent)*

100A *Intermediate Microeconomics*

(or 100M *Math Intensive Intermediate Microeconomics*)

100B *Intermediate Macroeconomics*

(or 100N *Math Intensive Intermediate Macroeconomics*)

113 *Introduction to Econometrics*

[197 *Economic Rhetoric*](#)

Applied Mathematics and Statistics 5 Statistics

Students are strongly recommended to complete courses 100A (or 100M), 100B (or 100N), and 113 prior to study abroad. In addition, majors must have language study, area study, and overseas study, as described below.

Courses 191, 192, 193, 193F, 198 and 198F may not be used to meet major requirements. Either course 195 or 199 may be used to fill one of the five upper-division major requirements.

Upper-division requirements. Five additional upper-division courses are required. Please see courses listed under the Economics and Business Management majors as well. These may include approved courses offered by other departments.

At least one of the five courses must be selected from the following three:

120 *Economic Development*

140 *International Trade*

141 *International Finance*

In addition, at least one course must be chosen from the following departmental listings:

Economics

120 *Economic Development*

126 *Why Economies Succeed or Fail: Lessons from Western and Japanese History*

131 *International Financial Markets*

140 *International Trade*

141 *International Finance*

142 *Advanced Topics in International Economics*

148 *Latin American Economies*

149 *The Economies of East and Southeast Asia*

188 *Management in the Global Economy*

Latin American and Latino Studies

140 *Rural Mexico in Crisis*

168 *Economic History of Latin America*

169 *Latin American Industrialization in a Global Perspective: Past, Present, Future*

Politics

140B *Comparative Post-Communist Politics*

176 *International Political Economy*

Sociology

163 *Global Corporations and National States*

167 *Development and Underdevelopment*

The other three required upper-division electives are determined by the student's interests. See advisers for details.

The global economics major has three additional elements:

Foreign Language Study: The global economics major requires a foreign language since students who plan to work in the larger world must have fluency in a language other than English. This language should be relevant to their regional area of interest. Students can meet this requirement by completing two years of university-level language courses or by demonstrating an equivalent level of competence through a recognized language test.

Area Study: The major requires students to take two additional courses selected from the offerings of departments other than economics in order to learn about the history, political economy, or culture of some other part of the world. These can be lower- or upper-division courses; the courses should focus on the area of the student's language study and overseas study. The Economics Department provides a list of approved courses; substitute courses are welcomed when they are part of the student's overseas program or from other UCSC departments, but must be approved by the adviser for the global economics major.

Study Abroad: All students are required to spend at least one term abroad in an approved course of study in their regional area of concentration; students may also choose a year-long program. Typically, a student will do this through the UC Education Abroad Program (EAP). Numerous overseas study sites are available through EAP. Students desiring to fulfill their required study abroad through EAP must apply directly to the EAP office for the selected program and are subject to the admission requirements determined by UC EAP. In countries and at universities where EAP programs are not available, students may make their own arrangements for study with the permission of the director of the program. Students may use the time abroad to further their language study, to meet the area study course requirements, to meet some of the upper-division economics course requirements, or to take courses unrelated to the major. Students who are not accepted to an overseas program or who cannot meet the language or area course requirements are advised to complete the general economics major as an alternative.

Combined Economics/Mathematics Program Description

The major in Economics and Mathematics is designed to meet the needs of undergraduate students who plan to pursue doctoral study in economics or business, or who wish to pursue a career as an actuary or other professional requiring a sophisticated understanding of economics and mathematics. The major combines the main undergraduate content of both Economics and Mathematics within a programmatic structure that joins the two disciplines. It provides a coursework combination required to prepare for an economics doctoral (Ph.D.) program, or for a group of technically demanding professional careers.

Economics/Mathematics Major Requirements

In addition to completing the University's general education requirements, students must

complete 17 courses: 12 required (60 credits) and 5 electives (25 credits). The required courses include:

Economics Required Courses

1 *Introductory Microeconomics: Resource Allocation and Market Structure*

2 *Introductory Macroeconomics: Aggregate Economic Activity*

100A or 100M *Intermediate Microeconomics*

100B or 100N *Intermediate Macroeconomics*

113 *Introduction to Econometrics*

197 *Economic Rhetoric*

Applied Mathematics and Statistics 5, *Statistics*

Economics elective courses

(choose three from the following list)

101 *Managerial Economics*

~~102 *Forecasting*~~

104 *Is There Truth in Numbers: The Role of Statistics in Economics*

114 *Advanced Quantitative Methods*

115 *Introduction to Management Science*

120 *Economic Development*

125 *Economic History of the U.S.*

126 *Why Economies Succeed or Fail*

128 *Poverty and Public Policy*

130 *Money and Banking*

131 *International Financial Markets*

133 *Security Markets and Financial Institutions*

135 *Corporate Finance*

136 *Business Strategy*

137 *Performing Arts in the Public and Private Economy*

138 *Economics and Management of Technology and Innovation*

139A *Economics of Electronic Commerce*

139B *E-Commerce Strategy*

140 *International Trade*

141 *International Finance*

142 *Advanced Topics in International Finance*

148 *Latin American Economies*

149 *The Economies of East and Southeast Asia*

150 *Public Finance*
160A *Industrial Organization*
161A *Marketing*
164 *Economics and the Telecommunications Industry*
165 *Economics as an Experimental Science*
169 *Economic Analysis of the Law*
170 *Environmental Economics*
171 *Natural Resource Economics*
175 *Energy Economics*
180 *Labor Economics*
183 *Women in the Economy*
184 *Labor Wars in Theory and Film*
188 *Management in the Global Economy*
189 *Political Economy of Capitalism*

Mathematics required courses

Mathematics 19A *Calculus for Science, Engineering, and Mathematics*

Mathematics 19B *Calculus for Science, Engineering, and Mathematics*

Mathematics 21 *Linear Algebra*

Mathematics 22 *Calculus of Several Variables* or 23A-B, *Multivariable Calculus*

Mathematics 100 *Mathematical Proof*

Mathematics 105A *Real Analysis*

Mathematics electives

(choose two from the following list)

Mathematics 106 *Systems of Ordinary Differential Equations*

Mathematics 107 *Partial Differential Equations*

Mathematics 114 *Introduction to Financial Mathematics*

Mathematics 117 *Advanced Linear Algebra*

Mathematics 145/L *Chaos Theory*

Mathematics 194 *Senior Seminar*

Applied Mathematics and Statistics 114 *Introduction to Dynamical Systems*

Applied Mathematics and Statistics 131 *Introduction to Probability Theory*

Applied Mathematics and Statistics 132 *Statistical Inference*

Applied Mathematics and Statistics 147 *Computational Methods and Applications*

Applied Mathematics and Statistics 162 *Design and Analysis of Computer Simulation Experiments*

Comprehensive Requirement

In addition to successfully completing program requirements, students need to satisfy the comprehensive requirement for this major; this can be satisfied by one of the following options:

- Mathematics 194 or 195;
- by passing the three intermediate core courses with grades of C or better: (Economics 100A or 100M, 100B or 100N, and 113); or
- by completion of a senior thesis in economics with consent of an instructor: [\(Economics 195 Senior Thesis.](#)

Disciplinary Communication (DC) Requirement

[Students of every major must satisfy that major's upper-division Disciplinary Communication \(DC\) requirement. The DC requirement in economics is satisfied by completing ECON 197, *Economic Rhetoric*.](#)

Major Admission Requirements

Although there are no specific requirements, high school students are encouraged to take four years of high school mathematics and an economics class. Transfer students are encouraged to complete as many lower-division (mathematics and economics) courses as they can at their junior college.

The admission requirements for the economics/mathematics major are the same as for the other economics major programs.

Major Disqualification Policy

Students are expected to maintain good academic standing. Only courses with a grade of P or a letter grade of C or better will satisfy the major requirements. ~~Students who receive a lower grade in upper-division core courses~~ [fail any of the upper-division core courses](#) (Economics 100A [or 100M], 100B [or 100N], and 113; and Mathematics 100 and 105A) twice will be disqualified from the major. Students who are disqualified will be notified ~~by~~ [no later than](#) the first day of instruction in the subsequent quarter, as well as the student's college and the Office of the Registrar.

Students may appeal their disqualification by submitting a letter to the Economics Department. This appeal must be filed no later than 15 days after the disqualification notification was mailed, or the 10th day of classes in the quarter of their disqualification, whichever is later.

Additional Preparation for the Major

Students interested in the combined major must meet a minimum GPA requirement in Economics 1 and 2. Transfer students should check assist.org for agreements with California community colleges about economics and mathematics courses. Students who have met all articulations before transferring will need at least six economics and four to five mathematics classes at UCSC to complete the major.

Honors in the Major

The Economics Department considers for honors and highest honors students who have completed a major program with superior or exceptional work. Honors decisions are made by the department's Honors and Scholarship Committee.

At the end of each quarter, faculty teaching the upper-division core courses submit to the department a list of students in their respective classes whose performance is at the

honors level. At the time of graduation, all students who received an honors designation in one or more of these courses are reviewed by the department's honor committee, narrative evaluations are included, and the department's faculty honors committee reviews all files. The faculty committee looks for a record of excellence in courses offered towards the major, with a strong performance in the upper-division core (theory and econometrics—courses 100A/M, 100B/N, and 113) being a necessary condition for honors. Although a GPA is not computed for the economics courses, in general highest honors are awarded to students who have received a grade of at least an "A" throughout their economics program. Honors are awarded to students who have no more than two courses with grades of less than an "A-." Students who have completed a portion of the major at another institution may be asked to submit a transcript for evaluation.

Students interested in being reviewed for honors may request that the department conduct a review, and such requests are always granted.

In general, honors have been awarded to between 10 and 15 percent of each year's graduating class.

Graduate Programs

Master's Program in Applied Economics and Finance

The master of science (M.S.) program in applied economics and finance is designed for students who wish to supplement their undergraduate work in economics with analytical graduate training that prepares them for careers in business, government, international and domestic banking, consulting firms, and nonprofit organizations. The program is unique in its focus on graduate-level economics training for practical application and its emphasis on communication skills. The curriculum stresses the application of micro and macro concepts, statistical techniques, finding and using data sources, working out substantial practical applications, developing writing and reporting skills, and presenting material orally before an audience. The program differs from typical master of business administration (M.B.A.) programs by preparing students to meet the increasing technical demands of private- and public-sector employers through comprehensive course work in economic analysis.

The Economics Department has restructured the M.S. program in Applied Economics and Finance into a one-year program. However, the department is not accepting applications for fall 2012. If you would like to be included on a mailing list to receive information concerning when new applications might be accepted, please send your name and contact information to econ_grad_coor@ucsc.edu.

~~Requirements for admission include an undergraduate degree in economics or successful completion of undergraduate courses in intermediate microeconomics, macroeconomics, and statistics and adequate preparation in mathematics. At least two quarters of calculus and one of linear algebra are strongly recommended. Students are also expected to have basic computer skills.~~

~~Students normally complete the master's program in two years. All students must complete 12 courses (60 credits) of graduate study, including the following core courses which are taken in the first year:~~

~~200 Microeconomic Analysis~~

~~201 Applications in Microeconomics~~

~~202 Macroeconomic Analysis~~

~~216 Applied Econometric Analysis I~~

~~217 Applied Econometric Analysis II~~

233 Finance

~~In addition, first-year students take a two-credit workshop (course 294) in fall. Students normally enroll for 15 credits. The minimum for full-time is 12 credits.~~

~~In the fourth and fifth quarters, students must take at least four elective courses numbered 200 or higher. Students may choose from among the following courses: finance (courses 234, 235, 236, and 239), international economics (courses 249A, 249B), public economics (courses 250, 259A, 259B), accounting (courses 209A, 209B), or any economics doctor of philosophy (Ph.D.) course. Note that these courses are not offered each year; elective courses vary from year to year and are dependent on the staffing capabilities of the Economics Department.~~

~~Second-year master's students may count no more than two upper-division economics courses toward the elective requirements.~~

~~Students may also satisfy elective requirements by taking relevant courses from another discipline. Students will need to file a departmental petition for review and approval of either their upper-division economics courses and/or courses from a related discipline. Please see the graduate adviser for the pre-approved list. Students should begin the approval process at least one quarter in advance.~~

~~In the final quarter, each candidate completes a major project in conjunction with course 291, *Workshop in Applied Economics*, and 10 credits of course 297, *Independent Study*. Students with graduate credit from other institutions may submit a written request for course substitution and/or credit to the graduate committee for review.~~

Applied Economics and Finance B.A./M.S. Dual-Degree Program for Undergraduates

~~Students entering UCSC as undergraduates may complete a combined B.A./M.S. in applied economics and finance in five years. To qualify for this program, students must complete all of the core courses for their specific major: courses 1, 2, 11A, 11B, 100A (or 100M), 100B (or 100N), and 113. Business management economics majors must also complete 10A and 10B. In addition, students are strongly advised to complete a minimum of three upper-division economics electives (business management economics majors must complete four) as well as the general education requirements before the end of their junior year. Students are also advised to take a course in linear algebra (Mathematics 21). Students majoring in business management economics or global economics should refer to those sections for the respective dual-degree requirements.~~

~~Students must also take the Graduate Record Examination General Test during the fall quarter of their junior year. Advance planning for the program is essential, and interested students should consult with a faculty adviser well in advance of applying to the dual-degree program.~~

~~A student in the program begins the first-year M.S. courses in the senior year while continuing to maintain undergraduate status. In the fifth year, the student is officially enrolled as a graduate student and completes the remaining graduate course work, culminating in the M.S. degree.~~

~~Admission to the dual-degree program is by formal application directly to the Economics Department; the application deadline is February 15 of the junior year. Undergraduates who plan to apply to quantitative-oriented Ph.D. programs at other institutions may take some of the first-year M.S. classes with the permission of the instructor.~~

Ph.D. Program in ~~International~~ Economics

The Ph.D. program in ~~international~~ economics provides students with training in modern

microeconomics, macroeconomics, and econometrics, combined with specialized training in the fields of international finance and international trade and options to pursue specializations in economic development, monetary economics, applied microeconomics, experimental economics, and other areas. The core emphasis of the program is on international finance and international, and the program offers more intensive course work in these areas, as well as greater faculty depth in various aspects of international economics, than do traditional Ph.D. programs in economics that offer international economics as a single subfield. However, the department is also home to a large number of internationally recognized faculty whose work is outside of international and who regularly supervise Ph.D. students. Graduates of the program have conducted research on a wide variety of topics; examples include monetary economics, experimental economics, environmental economics, and economic growth and development as well as international economics. ~~Students learn to bring an international perspective to all areas of economics and to conduct research on current and emerging international economic issues. The program offers more intensive course work in international trade and finance, as well as greater faculty depth in various aspects of international economics, than do traditional Ph.D. programs in economics that offer international economics as a single subfield. The large number of internationally recognized faculty in the department who are actively engaged in research in international economics provides a unique focus to the program and the department. While the core emphasis is on international trade and finance, the program also offers courses in economic development, macro/monetary economics, applied micro, and in special topics., and s~~Students in the program have conducted research on a wide variety of topics in other areas; examples include monetary economics, experimental economics, environmental economics, and economic growth and development. This makes graduates of the program particularly well prepared for academic careers and for research careers in both domestic and international policy institutions.

*ECON 243 is not offered every year; it may be taken in the 2nd or 3rd year. [ECON 220A, 220B, 221A, 221B not necessarily offered every year.](#)

Course requirements are satisfied by a letter grade of B or better or a grade of S (satisfactory). A letter grade of C in a course is not satisfactory for meeting a course requirement for the Ph.D. program.

Preliminary Requirements

Preliminary examinations are given in two parts: one test in micro theory and one test in macro theory. Students are expected to pass both examinations before the beginning of their second year. Preliminary examinations are currently offered in June and September, although scheduling is subject to change.

In the spring quarter of the first year and again in the fall quarter of the second year, each student must enroll in Economics 212. An econometrics paper is due at the end of the first full week of fall quarter of the second year. A field paper (in finance or trade) is due by the end of June in the second year of the program. The graduate handbook of the department details the evaluation procedure for the econometrics and the field papers.

Students who do not pass both preliminary examinations, the econometrics paper, and the field paper requirements will not be allowed to continue in the Ph.D. program.

Qualifying Examination

Advancement to candidacy for the Ph.D. degree requires completion with satisfactory grades or better of the required coursework, preliminary examinations, the econometrics paper, the field paper, and the oral examination. The oral examination is taken after all other requirements have been completed. A student cannot advance to candidacy before clearing any incomplete grades from their record.

Dissertation

The final requirement for the Ph.D. degree is acceptance of the student's dissertation under the rules of the Academic Senate. A three-member dissertation advisory committee, headed by the student's research adviser, evaluates the dissertation for the department. The dissertation advisory committee must be approved by both the Economics Ph.D. Committee and the Graduate Council. The committee may require a formal public defense of the dissertation.

Faculty and Professional Interests

Professor

ROBERT F. ADAMS, Emeritus

JOSHUA AIZENMAN
International economics, economic development

YIN-WONG CHEUNG
Applied econometrics and international finance

MICHAEL P. DOOLEY
International finance, monetary theory and policy

ROBERT W. FAIRLIE
Labor economics, public policy, entrepreneurship, applied econometrics

DANIEL FRIEDMAN
Microeconomic theory, experimental economics, evolution and learning, behavioral economics, financial markets

K.C. FUNG
International trade and finance, WTO, foreign direct investment, global environmental economics, and Asia/Pacific economies

RONALD E. GRIESON, Emeritus

MICHAEL M. HUTCHISON
International finance, macroeconomics, emerging markets

JOHN W. ISBISTER, Emeritus

DAVID E. KAUN
Economics of art and culture; political economy of capitalism (including the quality of public discourse and its impact on public policy)

KENNETH KLETZER
International economics, macroeconomics, economic development

LORI G. KLETZER
Employment and wage determination, impact of globalization on the domestic labor market, industrial relations, government labor market policies, higher education and the labor market

JACOB B. MICHAELSEN, Emeritus

PEGGY B. MUSGRAVE, Emerita

NIRVIKAR SINGH
Industrial organization, political economy, economic development, technology and innovation, South Asian immigrants in the U.S., Indian economy

CARL E. WALSH
Monetary theory and policy, macroeconomics

DONALD A. WITTMAN
Economic theory, politics, law

Adjunct Professor

SHARATH SURY
Investment management and research, portfolio theory, strategic asset allocation, active risk budgeting, hedge funds, alpha/beta risk separation

Associate Professor

CARLOS E. DOBKIN

Public health, public policy, and econometrics

BERNARD L. ELBAUM

Economic history

PHILLIP MCCALMAN

International trade, intellectual property rights, industrial organization

JUSTIN G. MARION

Public economics, empirical industrial organization

Assistant Professor

RICARD GIL

Industrial organization, organizational economics, and applied microeconomics

ASPEN GORRY

Macroeconomics, search theory, employment and labor market policies

RYAN OPREA

Experimental economics, industrial organization, applied game theory, and financial markets, economic dynamics, behavioral economic, experimetrics and applied theory

JENNIFER POOLE

International trade; Latin American economics; applied microeconomics

JONATHAN ROBINSON

Economic development, with an emphasis on field experiments and primary data collection

ALAN SPEAROT

International trade; industrial organization, applied econometrics

THOMAS WU

International finance, macroeconomics, Brazilian macroeconomic policy

Senior Lecturer

ROBERT J. SHEPHERD

Financial, managerial, cost accounting; intermediate accounting; and certified public accountant examination

Lecturer

MARY FLANNERY

Economics of the telecommunications industry, applied microeconomics, business strategy and marketing

PAUL M. LUBECK, Professor of Sociology

Political sociology; political economy of development, globalization, labor and work; logics of methodology; religion and social movements; Islamic society and identities; information and networks

JOHN T. MUSACCHIO, Assistant Professor of Information Systems Management

Control, analysis, and pricing of communications networks; applications of game theory in networking; wireless ad-hoc networks; and management of technology

KEVIN G. ROSS, Assistant Professor of Information Systems Management

Service engineering and management; resource allocation; operations research, pricing, scheduling; queueing theory; networks

HELEN SHAPIRO, Associate Professor of Sociology

Political economy, Latin American economic history and development (with an emphasis on Brazil), industrial policy, the auto industry, the state and transnational corporations

YI ZHANG, Associate Professor of Technology and Information Management

Information retrieval, knowledge management, natural language processing, machine learning

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses

1. Introductory Microeconomics: Resource Allocation and Market Structure. F,W,S

For all interested students as well as prospective economics majors. Examines how markets allocate resources in different kinds of economies. Topics include competitive markets, monopoly, financial markets, income distribution, market failures, the environment, and the role of government. (General Education Code(s): PE-H, IS.) *The Staff*

2. Introductory Macroeconomics: Aggregate Economic Activity. F,W,S

For all interested students and prospective economics majors. Examines how the overall level of national economic activity is determined, including output, employment, and inflation. Explores the roles of monetary and fiscal policies in stabilizing the economy and promoting growth, with a focus on contemporary policy debates. (General Education Code(s): PE-H, IS.) *The Staff*

10A. Economics of Accounting. F,W

Introduction to accounting principles and practice; preparation and analysis of financial statements; study of internal control procedures. Courses 10A and 10B satisfy the Accounting 1A-B requirement at UC Berkeley. *The Staff*

10B. Economics of Accounting. W,S

Managerial accounting emphasizing analysis and control; accounting for corporations; introduction to taxation, budgeting, and equity/debt financing; management decision making. Courses 10A and 10B satisfy the Accounting 1A-B requirement at UC Berkeley. Prerequisite(s): course 10A. *The Staff*

11A. Mathematical Methods for Economists I. F,W,S

Introduction to mathematical tools and reasoning, with applications to economics. Topics are drawn from differential calculus in one variable and include limits, continuity, differentiation, elasticity, Taylor polynomials, and optimization. Students cannot receive credit for both this course and Mathematics 11A or 19A or Applied Math and Statistics 15A. (Also offered as Applied Math and Statistics 11A. Students cannot receive credit for both courses.) Students who have already taken Mathematics 11A and 19A should not take this course. Prerequisite(s): score of 31 or higher on Mathematics Placement Exam. Students who do not place into precalculus should enroll in Mathematics 2. (General Education Code(s): IN, Q.) *The Staff*

11B. Mathematical Methods for Economists II. F,W,S

Mathematical tools and reasoning, with applications to economics. Topics are drawn from multivariable differential calculus and single variable integral calculus, and include partial derivatives, linear and quadratic approximation, optimization with and without constraints, Lagrange multipliers, definite and indefinite integrals, and elementary differential equations. Students cannot receive credit for both this course and Mathematics 11B or 19B or Applied Math and Statistics 15B. (Also offered as Applied Math and Statistics 11B. Students cannot receive credit for both courses.) Prerequisite(s): course 11A, or Applied Mathematics and Statistics 11A, or Mathematics 11A, or Mathematics 19A. (General Education Code(s): MF, IN, Q.) *The Staff*

42. Student-Directed Seminar. F,W,S

Seminars taught by upper-division students under faculty supervision. (See course 192.) *The Staff*

80A. The Theory, Hope, and Crisis of Capitalism. S

Assessment of modern-day capitalism from the three major economic paradigms-liberal, conservative, radical. Theories of Smith, Marx, and Keynes are explored in contemporary writing, with focus on the U.S. from WW II to present. Students cannot receive credit for this course and course 189. (General Education Code(s): T3-Social Sciences.) *D. Kaun*

80G. Money and the Arts: Two All-Consuming Passions. W

Analysis of the performing arts: a commodity providing a rich and varied source of satisfaction, an occupation for thousands of talented and creative individuals, and an activity whose funding (public versus private) is the source of significant controversy. Students cannot receive credit for this course and course 137. (General Education Code(s): T3-Social Sciences.) *D. Kaun*

80H. Wall Street and the Money Game. *

Provides a demystifying introduction to financial markets. Examines the theory of stock market investment, the workings of the international money market, the implications of corporate takeovers, and the regulation of the economy by the Federal Reserve Board. (General Education Code(s): T3-Social Sciences.) *The Staff*

93. Field Study. F,W,S

Supervised fieldwork experience, off campus, in an area connected with economics or business. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

93F. Field Study (2 credits). F,W,S

Supervised off-campus fieldwork experience in an area connected with economics or business. Prerequisite(s): permission of instructor; students submit petition to sponsoring agency. *The Staff*

99. Tutorial. F,W,S

May be repeated for credit. *The Staff*

Upper-Division Courses**100A. Intermediate Microeconomics. F,W,S**

Covers major theoretical issues arising in the study of resource allocation, the function of markets, consumer behavior, and the determination of price, output, and profits in competitive, monopolistic, and oligopolistic market structures. Also considers issues of welfare and public policy. Students cannot receive credit for this course and course 100M. Prerequisite(s): courses 1; 2; and 11B or Applied Mathematics and Statistics 11B or Mathematics 22 or 23A. *The Staff*

100B. Intermediate Macroeconomics. F,W,S

Covers major theoretical issues arising in the study of income, employment, interest rates, and the price level. Examines the role of monetary and fiscal policy in economic stabilization. Also considers these issues as they relate to the global economy. Students cannot receive credit for this course and course 100N. Prerequisite(s): courses 1; 2; and 11B or Applied Mathematics and Statistics 11B or Mathematics 22 or 23A. *The Staff*

100M. Intermediate Microeconomics, Math Intensive. W

Mathematically sophisticated version of course 100A. Provides analytically rigorous treatment of the subject using a calculus-intensive presentation of microeconomic theory. For specific topics, see course 100A. Students cannot receive credit for this course and course 100A. Prerequisite(s): courses 1; 2; and 11B or Applied Mathematics and Statistics 11B, or Mathematics 22 or 23A. *The Staff*

100N. Intermediate Macroeconomics, Math Intensive. S

Provides rigorous, mathematical-intensive treatment of topics covered in course 100B. Core is devoted to model-based analysis of questions in macroeconomics. Use of mathematical tools allows study of advanced topics and data-intensive applications. See course 100B for specific topics. Students cannot receive credit for this course and course 100B. Prerequisite(s): courses 1; 2; and 11B or Applied Mathematics and Statistics 11B, or Mathematics 22 or 23A. *The Staff*

101. Managerial Economics. F,W

Analysis of the theory and practice of decision making in business firms, applying the concepts and techniques of microeconomics. Topics may include pricing schemes, non-price competition, internal organization of firms, incentive contracts, asymmetric information, and game theory. Case studies are used to illustrate some topics. Prerequisite(s): courses 100A or 100M, and 113. *The Staff*

104. Is There Truth in Numbers: The Role of Statistics in Economics. *

Applies the techniques of econometrics and experimental economics to the understanding of economics. A "hands-on" course where real economic data is used in an interactive way so that students develop the art of empirical analysis. Prerequisite(s): courses 100A or 100M, 100B or 100N, and 113. *The Staff*

105. Topics in Macroeconomic Theory. S

A seminar in advanced macroeconomics focusing on a selection of theoretical issues. Emphasis is on detailed modeling and analysis of macroeconomic processes. Prerequisite(s): course 100B or 100N, and 113. *The Staff*

110. Managerial Cost Accounting and Control. S

Focuses on how cost data are used by managers in the planning and control of both private- and public-sector organizations. Specific topics include organization of the management and control function, use of cost data for the pricing of goods and services, the effect of cost systems on management performance, and capital budgeting. Prerequisite(s): course 10B. *The Staff*

111A. Intermediate Accounting I. F

Principles, control, and theory of accounting for assets; accounting as an information system; measurement and determination of income. Projects involving spreadsheet software required. Students cannot receive credit for this course and course 209A. Prerequisite(s): course 10B. *R. Shepherd*

111B. Intermediate Accounting II. W

Principles, control, and theory of accounting for liabilities and equities; preparation and analysis of cash flow statements and earnings per share computation. Projects involving spreadsheet software required. Students cannot receive credit for this course and course 209B. Prerequisite(s): course 10B. *R. Shepherd*

112. Auditing and Attestation. W

For business management economics majors interested in careers that emphasize accounting, finance, or technology management. Also for students who intend to take the CPA exam. Covers

audit techniques, risk analysis, and development of control structures for major financial processes including cash, investments, accounts receivable, inventories, accounts payable, debt, equity capital, and related information systems security. Prerequisite(s): courses 10A and 10B. *The Staff*

113. Introduction to Econometrics. F,W,S

Practical methods for organizing and analyzing economic data, testing economic hypotheses, and measuring economic relationships. Regression analysis is the main empirical method, and basic statistical and probability theory is included. Students gain hands-on computer experience with an econometric software package. Students cannot receive credit for this course and Applied Mathematics and Statistics 113. Prerequisite(s): courses 1 and 2; Applied Mathematics and Statistics 5 or 7; and one of the following: course 11B, Applied Mathematics and Statistics 11B, Mathematics 22, or Mathematics 23A. Courses 100A or 100B strongly recommended as preparation. (General Education Code(s): SR, Q.) *The Staff*

114. Advanced Quantitative Methods. S

Application of statistical methods to estimating and testing economic relationships, i.e., econometric techniques. Topics include the effects of misspecification, choice of functional form, serial correlation, heteroscedasticity, limited dependent variables, and simultaneous equations. Includes discussion of existing empirical work and econometric projects by students. Prerequisite(s): courses 100A or 100M, and 113. *The Staff*

115. Introduction to Management Sciences. F

The scientific study of management decision making. Topics include linear, integer, and non-linear programming. Special emphasis on a wide variety of practical applications, including production scheduling, optimal transportation assignments, and optimal inventory policy. Prerequisite(s): course 100A or 100M. *The Staff*

117A. Income Tax Factors for Individuals. F

Introduces federal taxation for individuals. Topics for study include taxable income, gross income exclusions and inclusions, capital gains, depreciation, business and itemized deductions, personal and dependency exemptions, passive activity losses, tax credits, and methods of accounting. Prerequisite(s): course 10B. *The Staff*

117B. Tax Factors of Business and Investment. W

Focuses on various tax subjects providing a strong foundation in tax concepts and preparation for work in either public or corporate accounting. Topics include historical perspective of the U.S. tax system, introduction to estate and gift taxes, employment and self-employment taxes, tax concepts and laws, business expenses, capital recovery, tax credits, capital gains and losses, capital investments, and corporate operations. (Formerly course 117.) Prerequisite(s): course 10B. *T. Moschetti*

119. Advanced Accounting. S

Accounting for business organizations; partnerships; government and non-profit organization funds; branches, consolidations, and installment sales. Projects involving spreadsheet software required. Prerequisite(s): courses 111A and 111B. *The Staff*

120. Economic Development. F

A comparative approach to the study of the economic development of low-income countries. Various obstacles to growth are identified, and different types of solutions are analyzed. Prerequisite(s): courses 1, 2, and 113. (General Education Code(s): E.) *The Staff*

121. Economic Growth. *

Studies economic growth from theoretical, empirical, and historical perspectives. Topics include: theories of economic growth and their empirical importance, technology and innovation, social institutions and growth, and competing explanations of the global distribution of wealth. Prerequisite(s): courses 1, 2, 11A, and 11B (or the equivalent); course 100B is strongly recommended. *The Staff*

125. Economic History of the U.S. S

The development of the American economy from colonial times to the present, with emphasis on the interaction between institutional structure and economic development. Topics include the economics of slavery, the rise of big business, and the causes of the Great Depression. Prerequisite(s): courses 1 and 2. Related course work in history also helpful. *B. Elbaum*

126. Why Economies Succeed or Fail: Lessons from Western and Japanese History. F

Examines the emergence of capitalism and the world's first industrial revolution in Britain, continental Europe industrialization, Soviet economic growth and collapse, and the Japanese economic miracle. Asks about the historical sources of long-run economic development, stagnation, and decline. Draws lessons for current debates over free market versus more interventionist policies, economic reform in the former Communist nations, and economic rivalry between the U.S. and Japan. Prerequisite(s): courses 1 and 2. Related course work in history also helpful. *B. Elbaum*

128. Poverty and Public Policy. F

Studies the causes, consequences, and governmental response to urban poverty in the U.S. Topics include how public policy, the macroeconomy, race, gender, discrimination, marriage, fertility, child support, and crime affect and are affected by urban poverty. Emphasizes class discussion and research. (Also offered as Legal Studies 128. Students cannot receive credit for both courses.) Prerequisite(s): satisfaction of Entry Level Writing & Composition requirement; courses 100A or 100M; and course 113. Enrollment restricted to economics, business management economics,

global economics, legal studies, or economics combined majors. Enrollment limited to 35. (General Education Code(s): W, E.) *The Staff*

130. Money and Banking. W

The institutional structure of central banking and of bank and nonbank financial intermediation in the U.S.; theoretical and empirical investigations of the role of monetary policy in macroeconomic stabilization and economic growth. Prerequisite(s): courses 100B or 100N, and 113. *The Staff*

131. International Financial Markets. S

International financial management analyzes the key financial markets and instruments that facilitate trade and investment activity on a global scale. Inquiry spans two areas: (1) economic determinants of prices in international financial markets; and (2) decisions facing private individuals and enterprises, with topics including capital financing, investment, and risk management. Prerequisite(s): courses 100A or 100M, and 100B or 100N. *The Staff*

133. Security Markets and Financial Institutions. F,S

An examination of all major financial markets: equities, bonds, options, forwards, and futures. Uses modern financial theory, including asset pricing models such as CAPM and APT. Prerequisite(s): courses 100A or 100M, and 113. *The Staff*

135. Corporate Finance. S

An analysis of financial policies of business enterprises. Topics include cash flow analysis, stock and bond valuation, asset pricing models, capital budgeting, financial market institutions, and financial planning. Prerequisite(s): courses 10A, 100A or 100M, and 113. *The Staff*

136. Business Strategy. W,S

The strategic management process, techniques for analyzing single-business and diversified companies, implementing strategy, organization, business planning, financial strategy, competitive analysis, entrepreneurial skills. Prerequisite(s): courses 10A and either 100A or 100M. Concurrent enrollment in course 136L is not required. *The Staff*

137. Performing Arts in the Public and Private Economy. W

Analysis of the performing arts: a commodity satisfying a rich and varied source of satisfaction, an occupation for thousands of talented and creative individuals, and an activity whose funding (public versus private) is the source of significant controversy. Economics 1 is strongly recommended as a preparation. Students cannot receive credit for this course and course 80G. *D. Kaun*

138. The Economics and Management of Technology and Innovation. F

Examines the analytics of issues in technology and innovation, including cooperation in research and development (R&D), standardization and compatibility, patents and intellectual property rights, and strategic management, using economic models and firm case studies. Prerequisite(s): course 100A or 100M, or permission of instructor. *The Staff*

139A. The Economics of Electronic Commerce. W

An analysis of the broad spectrum of issues affecting commercial uses of the Internet and the next-generation information infrastructure. Uses economics to examine market structure, pricing quality, intellectual property rights, security, electronic payments and currencies, and public policy implications. Prerequisite(s): course 100A or 100M, or permission of instructor. *N. Singh*

139B. E-Commerce Strategy. *

Introduction and review of economic principles for e-commerce. Overview of trends in e-commerce. Online retailing of physical products; digital products; financial services; housing and related markets. Online business-to-business transactions. Internet infrastructure industry. Government regulation of e-commerce and business strategy responses. Prerequisite(s): course 139A. *N. Singh*

140. International Trade. F

The theory of international production and trade. The effects of tariffs and quantitative trade restrictions; the nature of economic integration; multinational firms; effects of trade and protection on economic stability and welfare. Prerequisite(s): course 100A or 100M. *The Staff*

141. International Finance. W

Topics include national accounting, balance of payments theories, parity conditions in international finance, exchange rate determination models, forward-looking financial instruments, international monetary systems, country interdependence and exchange rate regimes, international monetary integration, and Eurocurrency market. Prerequisite(s): course 100B or 100N. *The Staff*

142. Advanced Topics in International Economics. S

Selected issues in contemporary international economics: theory, empirical evidence, and public policy. Seminar emphasizing discussion and individual research. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, courses 100A or 100M, and 100B or 100N, and 140 or 141. (General Education Code(s): W.) *The Staff*

143. Policy Issues in the International Economy. F

Covers selected issues concerning the international economy. Topics include: U.S. competitiveness; U.S. trade policy; immigration; trade and the environment; developing countries; foreign investment; foreign exchange markets; and international economic institutions. Prerequisite(s): courses 1, 2, and 100A or 100M. *The Staff*

148. Latin American Economies. W

This course is designed to familiarize students with the economic and business environment in Latin America. Prerequisite(s): courses 1 and 2. *The Staff*

149. The Economies of East and Southeast Asia. F

Examines the pattern of international trade, investment, and industrial structure in Asia. Examines competing explanations of rapid growth of Japan, Korea, and Taiwan; presents an overview of economic developments in China, Hong Kong, and Taiwan. Concludes with an analysis of high technology trade and multinationals in Asia in 2000 and beyond. Prerequisite(s): courses 1 and 2. *The Staff*

150. Public Finance. F

Economics of taxation, including incidence, equity issues, efficiency, and supply side effects. Close attention to taxes in the U.S. system and tax-reform issues. Students cannot receive credit for this course and course 250. Prerequisite(s): course 100A or 100M, and course 100B or 100N. *The Staff*

156. Health Care and Medical Economics. *

Health economics theory and review of studies of the health industry, including current topics. Focuses on the structure of the U.S. health care system, including analysis of health policy issues. Relationship to models of perfect competition and efforts at reform. Prerequisite(s): courses 100A or 100M and 113. *C. Dobkin*

159. The Economics of Organizations. *

Uses an economic approach to shed light on questions such as why and how organizations are formed, and what consequences they may have on the adoption of different types of organizations for economic performance. Also emphasizes differences between the "internal markets" within organizations and market transactions. Prerequisite(s): course 11B or Applied Mathematics and Statistics 11B or Mathematics 22, and course 100A or 100M. *R. Gil*

160A. Industrial Organization. W

The structure and conduct of American industry with strong emphasis on the role of government, regulation, anti-trust, etc. The evolution of present-day industrial structure. The problems of overall concentration of industry and of monopoly power of firms. Pricing, output decisions, profits, and waste. Approaches include case study, theory, and statistics. (Also offered as Legal Studies 160A. Students cannot receive credit for both courses.) Prerequisite(s): course 100A or 100M. *R. Gil*

160B. Government and Industry. *

The influence of government regulation on industry and the allocation of resources is rigorously examined using theory and statistics. Areas of regulation include transportation and power, pollution and congestion, rent control, and liability insurance regulation. Both optimal and actual regulation are examined from the point of view of effectiveness, efficiency, social welfare, and re-distribution. Prerequisite(s): course 100A or 100M. *The Staff*

161A. Marketing. F,S

The evolution of markets and marketing; market structure; marketing cost and efficiency; public and private regulation; the development of marketing programs including decisions involving products, price, promotional distribution. (Formerly course 161.) Prerequisite(s): course 100A or 100M. *The Staff*

161B. Marketing Research. W

Prepares students to conduct market research and use it in solving real management problems. Students work with a company to solve marketing-based problems. Students conduct research, process data, and make a presentation to the company's management. Course work involves marketing, statistics, and communications; material is both qualitative and quantitative. Prerequisite(s): courses 113 and 161A. *The Staff*

164. Economics and the Telecommunications Industry. F

Covers the economics of the telecommunications industry including telephone, cellular telephone, and data communications. Particular emphasis on the Internet, satellite, paging, cable television, radio and television broadcasting. Examines the industry structure and implications of moving from a regulated environment to competition. Topics examined from a competitive strategic standpoint as well as public policy perspective. Prerequisite(s): courses 100A or 100M, and 113. *The Staff*

165. Economics as an Experimental Science. S

The design, execution, and analysis of laboratory experiments in economics. Students study experimental methodology, critically survey the published literature, and design an experiment. Literature includes lab studies of investigations in auctions, markets, social choice theory, and game theory. Prerequisite(s): course 100A or 100M, and course 113. Enrollment limited to 40. (General Education Code(s): W.) *R. Oprea*

166A. Game Theory and Applications I. F

Introduces modern game theory, including applications in social science, biology, and engineering. Topics include extensive form, strategic form, mixed strategies, incomplete information, repeated games, evolutionary games, and simulation techniques. (Also offered as Computer Science 166A. Students cannot receive credit for both courses.) Prerequisite(s): Applied Math and Statistics 5 or 7 or Economics 113; and Economics 11B, Applied Math and Statistics 11B, or Mathematics 11B or 19B. Enrollment restricted to juniors and seniors. Enrollment limited to 100. *The Staff, B. Sinervo, D. Friedman*

166B. Game Theory and Applications II. W

Explores research frontiers in game theory, emphasizing applications in social science, biology, and engineering. Each interdisciplinary team develops a topic, and presents it to the class in oral and written reports and demonstrations. Students must have shown a strong performance in course 166A or equivalent. Students cannot receive credit for this course and Economics 272, Computer Science 272, or Biology: Ecology and Evolutionary 274. (Also offered as Computer Science 166B. Students cannot receive credit for both courses.) Prerequisite(s): course 166A, Computer Science 166A, or Biology: Ecology and Evolutionary 166A; satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to juniors and seniors. Enrollment limited to 40. (General Education Code(s): W.) *The Staff, B. Sinervo, D. Friedman*

169. Economic Analysis of the Law. W

The application of the theories and methods of neoclassical economics to the central institutions of the legal system, including the common law doctrines of negligence, contract, and property; bankruptcy and corporate law; and civil, criminal, and administrative procedure. (Also offered as Legal Studies 169. Students cannot receive credit for both courses.) Prerequisite(s): course 100A or 100M or permission of instructor. *D. Wittman*

170. Environmental Economics. F

Economic analysis of environmental issues. Environmental pollution and deterioration as social costs. Economic policy and institutions for environmental control. Influences of technology, economic growth, and population growth on environmental quality. Prerequisite(s): courses 100A or 100M, and 113. *The Staff*

171. Natural Resource Economics. W

The application of economic analysis to the use of renewable and nonrenewable natural resources. Efficiency and distributional aspects of natural resource scarcity. Measurement of the benefits and costs. Optimal extraction or use policies. Common property and externalities. Government policies. Prerequisite(s): course 100A or 100M. *The Staff*

175. Energy Economics. S

Applications of micro, welfare, and international economic theory and methodology to the energy field. Questions considered include optimal allocation of natural resources; pricing and investment; regulations and taxes; import and export control; redistributive policies. Prerequisite(s): course 100A or 100M. *The Staff*

180. Labor Economics. W

A study of the changing nature and composition of the U.S. labor force. Topics include the demand for and supply of labor; wage determination; the role and impact of unions in the labor market; racial, ethnic, and gender differences in job and income opportunities and the role of discrimination in explaining these differences; and the theory of human capital, all considered from the traditional neoclassical as well as institutional and radical perspectives. Prerequisite(s): course 100A or 100M. Course 113 is strongly recommended as preparation. *The Staff*

183. Women in the Economy. *

Study of gender roles in economic life, past and present. Topics include occupational structure, human capital acquisition, income distribution, poverty, and wage differentials. The role of government in addressing economic gender differentials is examined. (Also offered as Legal Studies 183. Students cannot receive credit for both courses.) Prerequisite(s): satisfaction of Entry Level Writing and Composition requirements; courses 1, 2, and 100A or 100M; course 113 strongly recommended. (General Education Code(s): W.) *The Staff*

184. Labor Wars in Theory and Film. W

This seminar focuses on the impact of trade unions and labor-market discrimination on the U.S. work force. The neo-classical, institutional, and radical/Marxist approaches to these questions are employed in the analysis. Films, both fictional and documentary, are utilized as primary source material. Prerequisite(s): permission of instructor based on quality of work in economics; courses 100A or 100M, 100B or 100N, and 113; satisfaction of the Entry Level Writing and Composition requirements. Enrollment limited to 20. (General Education Code(s): W.) *D. Kaun*

186. Mathematical Methods for Economic Analysis. *

Presents mathematical methods commonly used in graduate-level economic analysis: basic matrix algebra, real analysis, functions, continuity concepts, differentiation, Taylor expansions, and implicit function theorem and optimization. Prerequisite(s): interview only: admitted to M.S. or Pathway Programs. *The Staff*

188. Management in the Global Economy. S

An overview of how firms do business in the global economy. Focus is on the firm, but also explores the impact of corporate decision-making on national welfare. Emphasizes how national economic policies and international institutions influence firm strategy and industrial structure. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; courses 2 and 100A or 100M; course 100B or 100N strongly recommended as preparation. (General Education Code(s): W.) *The Staff*

189. Political Economy of Capitalism. S

An assessment of modern day capitalism from the three major economics paradigms-liberal, conservative, radical. Theories of Smith, Marx, and Keynes are explored in contemporary writing, with focus on the U.S. from WW II to present. Students cannot receive credit for this course and course 80A. Prerequisite(s): courses 1 and 2; courses 100A or 100M, and 100B or 100N are

recommended as preparation. *D. Kaun*

190. Senior Proseminar. W,S

Courses focus on problems of interest to advanced students of economics. They offer a flexible framework, so those interested in specific issues can read, present papers, and develop their ideas. *The Staff*

191. Economics Teaching Practicum. F,W,S

Each student serves as facilitator for small discussion group in connection with core economics courses. Facilitators complete course readings and meet with instructor as a group to discuss the teaching process. May *not* be counted toward upper-division major requirements. May be repeated for credit. *The Staff*

192. Directed Student Teaching. F,W,S

Teaching of a lower-division seminar, course 42, under faculty supervision. May *not* be counted toward the upper-division major requirements. Students submit petition to sponsoring agency. *The Staff*

193. Field Study. F,W,S

Provides for department-sponsored individual field study in the vicinity of the campus under the direct supervision of a faculty sponsor (in contrast to course 198 where faculty supervision is by correspondence). May *not* be counted toward the upper-division major requirements. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

193F. Field Study (2 credits). F,W,S

Provides for department-sponsored individual field study in the vicinity of the campus under the direct supervision of a faculty sponsor. May *not* be counted toward the upper-division major requirements. Students spend 8-10 hours per week at job site. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

194. Advanced Topics in Management. *

Honors course providing detailed analysis of specialized topics in management. Possible topics include: venture capital, the financial services industry, e-business, behavioral finance, advanced consumer behavior, entrepreneurship, high-tech marketing, risk management, and option value approaches to business strategy. Students cannot receive credit for this course and course 194F. Prerequisite(s): courses 100A or 100M, 100B or 100N, and 113. Enrollment by permission of instructor, and review of performance in economics courses. Enrollment restricted to senior and junior business management economics majors. (Formerly *Advanced Topics in Business Management Economics*.) Enrollment limited to 30. *The Staff*

194F. Advanced Topics in Management (2 credits). *

Detailed analysis of specialized topics in management. Possible topics include: venture capital, the financial services industry, e-business, behavioral finance, advanced consumer behavior, entrepreneurship, high-tech marketing, risk management, and option value approaches to business strategy. Students cannot receive credit for this course and course 194F. Prerequisite(s): courses 100A or 100M, 100B or 100N, and 113. Enrollment by permission of instructor, and review of performance in economics courses. Enrollment restricted to senior and junior business management economics majors. Enrollment limited to 30. *The Staff*

195. Senior Thesis. F,W,S

A supervised research project. If the project is of unusual scope, the course may be repeated for credit. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements, students submit petition to sponsoring agency. (General Education Code(s): W.) *The Staff*

197. Economic Rhetoric: Using Economic Theory and Empirical Evidence in Arguing Policy. F

Economics students are expected to learn to effectively communicate economic theory and evidence relating to economic policy to audiences that do not have economics degrees. The skills to be learned are both written and oral communication. Students learn to present convincing policy arguments in position papers, executive summaries, and in oral presentation that may include charts and other means of communication. Prerequisite(s): Entry Level Writing & Composition requirement; courses 100A or 100M; 100B or 100N; 113; and a concurrent, upper-division, economic-policy course. Restricted to junior/senior economics, business-management economics, global economics majors. *D. Wittman*

198. Independent Field Study. F,W,S

Provides for department-sponsored individual study program off campus for which faculty supervision is not in-person, but by correspondence. May *not* be counted toward the upper-division major requirements. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198F. Independent Field Study (2 credits). F,W,S

Provides for department-sponsored individual study program off campus for which faculty supervision is not in person, but by correspondence. May *not* be counted toward the upper-division major requirements. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

May be repeated for credit, but may be counted only once toward the upper-division major

requirements. Undergraduates may not take graduate courses for credit as 199. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Specialized study with individual faculty. May not be applied toward the major requirements. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

200. Microeconomic Analysis. *

Survey of partial equilibrium analysis, market distortions, consumer choice and production and trade theory, perfect and imperfect competition, price discrimination, and intertemporal choice theory. *The Staff*

201. Applications in Microeconomics. *

Applies concepts and tools developed in course 200 to problems encountered in private- and public-sector output and labor markets. The focus is empirical; topics include analysis of labor supply and labor demand and the role of government labor market policies, analysis of pricing policies and regulation, estimation of the returns to schooling, estimation of demand and cost functions, and the role of unions in the economy. Course 200 is strongly recommended as preparation. *The Staff*

202. Macroeconomic Analysis. *

Aggregate economic analysis: determinants of aggregate expenditures and output, the roles of monetary and fiscal policy, recent developments in macro theory; macro policy issues. *The Staff*

204A. Advanced Microeconomic Theory. F

Economic theory of individual and market behavior, including constrained optimization, duality, theory of the consumer, theory of the producer, dynamic optimization, behavior under uncertainty, intertemporal choice, asymmetric information, game theory, partial and general equilibrium, pure and applied welfare economics, public goods and externalities. Illustrative examples emphasize international applications. Courses must be taken in sequence. *The Staff*

204B. Advanced Microeconomic Theory. W

Economic theory of individual and market behavior, including constrained optimization, duality, theory of the consumer, theory of the producer, dynamic optimization, behavior under uncertainty, intertemporal choice, asymmetric information, game theory, partial and general equilibrium, pure and applied welfare economics, public goods and externalities. Illustrative examples emphasize international applications. Courses must be taken in sequence. Prerequisite(s): course 204A. *The Staff*

204C. Advanced Microeconomic Theory. S

Economic theory of individual and market behavior, including constrained optimization, duality, theory of the consumer, theory of the producer, dynamic optimization, behavior under uncertainty, intertemporal choice, asymmetric information, game theory, partial and general equilibrium, pure and applied welfare economics, public goods and externalities. Illustrative examples emphasize international applications. Courses must be taken in sequence. Prerequisite(s): course 204B. *The Staff*

205A. Advanced Macroeconomic Theory. F

Modern macroeconomic theory: determination of national income; employment, inflation, and exchange rates; theories of growth and business cycle fluctuations; international transmission of inflation and other disturbances; recent developments in the analysis of macroeconomic policy; modern theoretical and empirical analysis of aggregate relationships. Courses must be taken in sequence. *The Staff*

205B. Advanced Macroeconomic Theory. W

Modern macroeconomic theory: determination of national income; employment, inflation, and exchange rates; theories of growth and business cycle fluctuations; international transmission of inflation and other disturbances; recent developments in the analysis of macroeconomic policy; modern theoretical and empirical analysis of aggregate relationships. Courses must be taken in sequence. Prerequisite(s): course 205A. *The Staff*

205C. Advanced Macroeconomic Theory. S

Modern macroeconomic theory: determination of national income; employment, inflation, and exchange rates; theories of growth and business cycle fluctuations; international transmission of inflation and other disturbances; recent developments in the analysis of macroeconomic policy; modern theoretical and empirical analysis of aggregate relationships. Courses must be taken in sequence. Prerequisite(s): course 205B. *The Staff*

209A. Accounting 1. F

Principles, control, and theory of accounting for assets; accounting as an information system; measurement and determination of income. M.S. level projects required. Students cannot receive credit for this course and course 111A. Enrollment restricted to graduate students. *R. Shepherd*

209B. Accounting II. W

Principles, control, and theory of accounting for liabilities and equities; preparation and analysis of cash flow statements and earnings per share computation. M.S. level projects required. Students cannot receive credit for this course and course 111B. Enrollment restricted to graduate students. *R. Shepherd*

210A. Mathematical Methods for Economic Analysis. *

Mathematical methods commonly used in economic analysis are discussed. Covers basic matrix algebra, real analysis, functions, continuity concepts, differentiation, Taylor expansion, implicit function theorem, and optimization. Prerequisite(s): qualifications as determined by instructor; inquire at department office. *The Staff*

210B. Mathematical Methods for Economic Analysis. F

A course in introductory mathematical economics which covers standard optimization problems, difference and differential equations, optimal control theory, decisions under uncertainty, game theory, and stochastic calculus. Course 210A or equivalent is strongly recommended as preparation. *The Staff*

211A. Advanced Econometrics. F

Advanced econometric methods are introduced. Topics include the standard regression analysis, simultaneous equation estimation, nonlinear models, qualitative response models, panel data analysis, and univariate and multivariate time series analysis. *The Staff*

211B. Advanced Econometrics. W

Advanced econometric methods are introduced. Topics include the standard regression analysis, simultaneous equation estimation, nonlinear models, qualitative response models, panel data analysis, and univariate and multivariate time series analysis. Course 211A is strongly recommended as preparation for course 211B. *The Staff*

211C. Topics in Empirical Research. S

A topic course in econometrics designed for graduate students interested in quantitative analysis. Selected topics, including standard and recently developed econometric techniques, are critically and thoroughly discussed. In addition to methodology, focuses on exploring the research potential and applications of advanced econometric techniques. Courses 211A and 211B are strongly recommended as preparation. *The Staff*

212. Empirical Project in Econometrics (2 credits). *

Empirical project or paper in econometrics to demonstrate student's ability to conduct applied econometric analysis. Ph.D. requirement to be completed by beginning of student's third year of study. Prerequisite(s): courses 211A and 211B. May be repeated for credit. *The Staff*

216. Applied Econometric Analysis I. *

The use of statistical techniques for the testing of economic hypotheses and the estimation of parameters, with emphasis on regression analysis. Includes methods of dealing with serial correlation, errors in variables, multicollinearity, and heteroscedasticity. Experience with common statistical packages. *The Staff*

217. Applied Econometric Analysis II. *

Focuses on the application of advanced econometric and time series techniques to economic issues. Computer assignments and empirical applications are used to discuss and illustrate the practical aspects of simultaneous equation systems, nonlinear models, qualitative response models, time series model specification, unit root test, and cointegration analysis. Course 216 is strongly recommended as preparation. *The Staff*

220A. Development Economics: Theory and Cases. F

Surveys traditional development economics and the neoclassical resurgence in development theory. Topics include sources of growth, income distribution, population and human capital development, savings, fiscal and monetary mobilization and allocation, foreign investment and aid, and macroeconomic policies. Case study focus in the second quarter. Courses 204A and 205A are strongly recommended as preparation. *The Staff*

220B. Development Economics: Theory and Cases. W

Surveys traditional development economics and the neoclassical resurgence in development theory. Topics include sources of growth, income distribution, population and human capital development, savings, fiscal and monetary mobilization and allocation, foreign investment and aid, and macroeconomic policies. Case study focus in the second quarter. Courses 204A and 205A are strongly recommended as preparation. *The Staff*

221A. Advanced Monetary Economics I. W

Covers major issues in monetary economics, focusing on the core theoretical models employed in monetary economics. Topics include: money in general equilibrium; money-in-the-utility function approaches; cash-in-advance models; search-based models; welfare costs of inflation; optimal inflation tax; informational frictions in monetary economies; financial and credit frictions; nominal price and wage frictions; time-dependent and state-dependent models of price adjustment; and money in new Keynesian models. Prerequisite(s): course 205 A-B-C, or by permission of instructor. Enrollment restricted to graduate students. *F. Ravenna, C. Walsh*

221B. Advanced Monetary Economics II. *

Covers major issues in monetary economics, focusing on the core lessons for design and implementation of monetary policies. Topics include: welfare-based policy objectives; optimal policy under discretion; optimal commitment policies; model dynamic stochastic general equilibrium (DSGE) for policy analysis; open economy models for monetary policy analysis; learning; model uncertainty and policy design; empirical evidence on the channels of monetary policy transmission; monetary policy operating procedures; zero nominal interest-rate bound; international transmission of monetary policy; policy and asset prices. Prerequisite(s): course 205 A-B-C, or by permission of

instructor. Enrollment restricted to graduate students. *F. Ravenna, C. Walsh*

233. Finance I. *

Applications of economic analysis in private finance. Topics include risky choice and intertemporal choice theory, asset pricing models, efficient market hypotheses, market institutions, and derivative securities. Course 200 is strongly recommended as preparation. *The Staff*

234. Financial Institutions and Markets. S

This course examines the evolving microstructure of financial markets, instruments, and institutions. Topics include the role of banks and other financial intermediaries and the trading practices for domestic and international financial instruments, including equity, debts, futures, and options. Prerequisite(s): course 233. *The Staff*

235. Corporate Finance. W

Application of modern financial theory to corporate decision making. Topics covered include capital budgeting and the firm's investment decision, capital structure, dividend policies, and the implications of corporate governance for enterprise financial goals. Prerequisite(s): course 233. *The Staff*

236. Financial Engineering. F

This course surveys the financial risks faced by corporation, banks, and other financial institutions that arise from changes in interest rates, foreign exchange rates, commodity prices, and stock prices. It examines the characteristics, payoffs, and pricing of financial derivatives and other instruments for managing risk, including options, forwards, futures, swaps, structured notes, and asset-backed securities. Several cases will be used to illustrate how actual firms solve financial risk management problems. Prerequisite(s): course 233. *The Staff*

239. Current Topics in Finance. *

Topics in finance selected by the instructor. Prerequisite(s): course 233. *The Staff*

240A. Advanced International Trade Theory I. F

The theory of international trade and commercial policy. Both traditional analyses and recent developments are covered. Topics include both normative and positive theoretical analyses, as well as empirical testing of theory. Enrollment restricted to graduate students. Courses 204A-B-C are strongly recommended as preparation. *The Staff*

240B. Advanced International Trade Theory II. W

This is the second quarter of a two-quarter sequence. It deals with most major current advanced research topics in trade. It is both theoretical and empirical and is designed to acquaint students with recent research in the field. Research topics include models of political economy of trade policies; trade and labor markets; regionalism and multilateralism; trade and environment; theories, determinants, and implications of foreign direct investments; economic geography. Prerequisite(s): course 240A. *The Staff*

240C. Advanced International Trade Theory III. S

Covers the empirical aspects of international trade issues. Topics include the testing and estimation of various trade models such as the Ricardian model, Heckscher-Ohlin-Vanek model, intra-industry trade models, trade models associated with multinational corporations, models of trade and intellectual property rights, the impact of trade on income inequality, and trade between developed and developing economies. Prerequisite(s): course 240B. Enrollment restricted to graduate students. *The Staff*

241A. Advanced International Finance I. F

Financial aspects of aggregate capital and trade flows and income determination in open economies. Specific topics include financial risk in the international setting, international borrowing and lending, money and exchange rate regimes, income determination and macroeconomic policy, current issues in international monetary reform. *The Staff*

241B. Advanced International Finance II. W

An examination of the formulation and implementation of international economic policy from both theoretical and empirical perspectives. Topics include case studies in fiscal, monetary, exchange rate, tariff, and other regulatory policies. *The Staff*

241C. Advanced International Finance III. S

Focuses on empirical applications in international finance. Topics include structural and reduced form models of exchange rates, interest parity conditions, purchasing power parity, capital controls, capital flows to emerging markets, and government intervention in foreign exchange markets. Courses 202 and 203 or 205A-B-C strongly recommended as preparation. *The Staff*

243. History of the International Economy. *

Studies the evolution and functioning of the international economy from the days of the gold standard to the present. Particular attention is paid to the interwar period with its problems of structural transformations and their relation to the Great Depression and its immediate aftermath, the rise and fall of the Bretton Woods system, the experience of floating exchange rate regimes, the rise of the "new industrial countries," and the problems of international indebtedness. Courses 204A and 205A are strongly recommended as preparation. *The Staff*

249A. International Trade and Development Policy I. W

Focuses on a range of real-life issues in international trade and development. Topics include North

American Free Trade Agreement (NAFTA), the semiconductor industry, the Boeing-Airbus aircraft trade problems, the World Trade Organization (WTO) and developing countries, U.S./Japan trade, trade and the environment, and U.S./China trade. Enrollment restricted to graduate students. *The Staff*

249B. International Trade and Development Policy II. S

Emphasizes government policies to promote growth. Topics include the "Washington Consensus," the East Asian "model," and recent policy changes in East Asia, Latin America, Eastern Europe, and the former Soviet Union. Prerequisite(s): course 249A. Enrollment restricted to graduate students. *The Staff*

250. Advanced Public Finance. F

Theory of the role of public sector expenditures and taxes in market economies. Analyzes efficiency and equity arguments for government intervention. Topics include the role of public debt and deficits in economies, international effects of tax and spending policies, and economic theories of public sector decision making. Courses 204A and 205A are strongly recommended as preparation. Students cannot receive credit for this course and course 150. *The Staff*

259A. Cost-Benefit Analysis. *

Applications of economic analysis in public finance, largely from the revenue side: taxation. The issues considered include the effects of taxation on consumer welfare, consumption, labor, capital, production, growth. Course 200 is strongly recommended as preparation. Students cannot receive credit for this course and course 153. *The Staff*

259B. Public Policy Analysis. *

Applications of welfare and microeconomic theory and methodology to the public expenditure question: cost-benefit. Effects of the taxes discussed in course 259A and sophisticated tools used in the face of these and other distortions with regard to measurement of benefits, costs, and the discount rate. Course 200 strongly recommended as preparation. *The Staff*

270. Advanced Topics in Applied Microeconomics. S

Advanced topics and current research in microeconomic theory, including game theory and general equilibrium analysis. Courses 204A-B and 205A are strongly recommended as preparation. (Formerly *Advanced Topics in Microeconomic Theory.*) *The Staff*

271. Advanced Topics in Macroeconomic Theory. S

Advanced topics and current research in macroeconomic theory, including DSGE models, empirical issues, and optimal policy analysis. Prerequisite(s): courses 204A-B-C, 205A-B-C, and 211A-B-C are strongly recommended as preparation. *The Staff*

272. Evolutionary Game Theory. W

Reviews static equilibrium concepts, games of incomplete information, and the traditional theory of dynamic games in discrete time. Develops recent evolutionary game models, including replicator and best reply dynamics, and applications to economics, computer science, and biology. Prerequisite(s): upper-division math courses in probability theory are strongly recommended. Cannot receive credit for this course and Economics 166B or Computer Science 166B. (Also offered as Computer Science 272. Students cannot receive credit for both courses.) *The Staff*

273. Advanced Applied Microeconomics. W

Covers topics in applied microeconomics, including labor economics, public economics, and demography. Discusses advanced econometric techniques and theory commonly used in applied microeconomics and microeconomic theory. Students make extensive use of statistical packages and large data sets to complete course assignments. Upper-division econometric and microeconomics courses strongly recommended. *J. Marion*

274. Workshop in Macroeconomics and Monetary Economics (3 credits). F,W,S

For Ph.D. students in economics who are at the early stages of their research careers as well as for those who are engaged in dissertation work in macroeconomics and monetary economics. Topics vary from quarter to quarter depending on the interests of participants. Prerequisite(s): courses 205A, 205B, and 205C, or by consent of instructor. Enrollment restricted to graduate students. May be repeated for credit. *F. Ravenna, C. Walsh*

275. Workshop in Applied Microeconomics (3 credits). F,W,S

For Ph.D. students in economics who are at the early stages of their research careers as well as for those who are engaged in dissertation work in applied microeconomics or other empirical work. Topics vary from quarter to quarter depending on the interests of participants. Enrollment restricted to graduate students. May be repeated for credit. *J. Robinson, A. Spearot*

290. Topics in International Economics. *

Covers several advanced topics in the history of international economics, international trade, and international finance. Topics include imperfect competition and trade, strategic trade policies, increasing returns, and the pattern of trade, economic geography, exchange rate target zones, and balance of payment crises. Topics vary from year to year. Courses 204A-B-C and 205A-B-C are strongly recommended as preparation. *The Staff*

291. Workshop in Applied Economics. *

Experience in applied projects, report writing and presentation, drawing on previous course work. *The Staff*

293. Field Study. F,W,S

Students will undertake analytical projects in public or private institutions. The material covered must be different from that of the thesis topic. *The Staff*

294A. Applied Economics Laboratory (2 credits). *

Practical experience in managing computerized data sets and running statistical packages. Covers SAS, RATS, TSP, Bridge Equity System, LIMDEP, GAUSS, and MAPLE programs; and internet, IFS, OECD, and SPIRS EconLit databases. May be repeated for credit. *The Staff*

294B. Applied Economics Seminar (2 credits). *

Weekly seminar designed to present students with current working applications in various fields of applied economics and finance. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

295A. Directed Reading. F

Reading in research area of student interest, with faculty supervision through weekly discussion. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

295B. Directed Reading. W

Reading in research area of student interest, with faculty supervision through weekly discussion. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

295C. Directed Reading. S

Reading in research area of student interest, with faculty supervision through weekly discussion. Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

296A. Third Year Ph.D. Seminar. F

Student presentations of literature and/or original research in areas of student research interest. Student discussion of presentations under faculty supervision. Prerequisite(s): courses 204C, 205C, 211B, 240A, 240B, 241A, and 241B are required preparation. *The Staff*

296B. Third Year Ph.D. Seminar. W

Student presentations of literature and/or original research in areas of student research interest. Student discussion of presentations under faculty supervision. Prerequisite(s): courses 204C, 205C, 211B, 240A, 240B, 241A, and 241B are required preparation. *The Staff*

296C. Third Year Ph.D. Seminar. S

Student presentations of literature and/or original research in areas of student research interest. Student discussion of presentations under faculty supervision. Prerequisite(s): courses 204C, 205C, 211B, 240A, 240B, 241A, and 241B are required preparation. *The Staff*

297. Independent Study. F,W,S

Independent study and research under faculty supervision. Students submit petition to sponsoring agency. *The Staff*

298. Dissertation Research. F,W,S

Research toward Ph.D. dissertation under faculty supervision. Prerequisite(s): advancement to candidacy and students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

May be taken once to meet course requirements for the master's degree. Students submit petition to sponsoring agency. *The Staff*

Program Description

The purpose of the Education Department's instructional programs is to prepare all students, undergraduates and graduates, to engage in the analysis and integration of educational theory, research, and practice for an increasingly diverse society. The department's primary intellectual and practical focus is on fostering equitable and effective schooling for all students. In working toward this goal, the department seeks to understand the profound issues involved in transforming public education so that it better meets the needs of students from diverse language, ethnic, racial, and class backgrounds. We are a small department with the large agenda of developing educational leaders and pursuing educational research that will affect the future of teaching and learning both inside and outside of schools. Our commitment lies in three essential and interrelated domains: 1) school, families, and communities; 2) teacher education and development; and 3) mathematics and science. Undergirding them all is a focus on the socio-cultural context in which learning and teaching takes place and an understanding of the power of language and literacy in both formal and informal educational settings.

The Education Department has two growing doctor of philosophy (Ph.D.) and doctor of education (Ed.D.) programs that attract students who have exemplary preparation as well as experience working in educational settings; a model teacher-education program; and two vibrant minor tracks that serve more than 300 undergraduates each year.

Minors in Education

The UCSC undergraduate courses in education engage students in the study of the history of educational thought and philosophy, the politics and economics of education, learning theory and pedagogy, and issues of cultural and linguistic diversity in education.

Because an academic major in education is not permitted in the state of California, UCSC offers two minors in education for those students who are considering a career in teaching and also for those who hold a general interest in educational studies. Please note that the minors in education do not provide a California Teaching Credential. Additionally, the UCSC teaching credential program is a graduate program and coursework taken in the minor cannot be substituted for credential requirements.

General Minor in Education

The general minor in education consists of six courses totaling 30 credits: Education 60, 180, and four upper-division education courses (please refer to the Education Department's web site for a list of approved upper-division courses being offered during the current academic year, <http://education.ucsc.edu>).

To declare a minor, students must bring from their major department a completed Petition for Major/Minor Declaration and a UCSC Academic Planning Forms to the Education Department's Undergraduate Adviser. . Students pursuing a minor in education should meet with the Education Department's Undergraduate Adviser as early as possible. The adviser will assist students in completing the Petition for a Major/Minor Declaration and the UCSC Academic Planning Forms.

For Further Information

For specific instructions about how to declare a minor in education and for the current Drop-in Advising Schedule, please refer to the Education Department's web site <http://education.ucsc.edu>. For other inquiries, please contact the Undergraduate Adviser by sending an e-mail to education@ucsc.edu

Science, Technology, Engineering, and Mathematics (STEM) Education Minor

The STEM minor specifically serves students in STEM majors who are considering careers in secondary mathematics or science teaching. The STEM minor in education consists of eight courses, totaling 32 credits and including 90-100 hours of classroom field placements: EDUC 50,

EDUC 60, EDUC 100, EDUC 185B or 185C, EDUC 185L, one education course addressing cultural and linguistic diversity (e.g., EDUC 128, 135, 141, 164, 170, 177, or 181), and two education upper-division electives. Students pursuing the STEM education minor should meet with the Cal Teach staff as early as possible. Entry into EDUC 50 is by interview only, and interested students must submit an application to the Cal Teach program (see <http://calteach.ucsc.edu> or e-mail calteach@ucsc.edu).

Graduate Programs

Master of Arts in Education and California Teacher Credential Program

Please note that students are not admitted into the program for a stand-alone master of arts (M.A.) in education or a stand-alone credential.

Because program requirements are authorized by statutes and regulated by a state entity, the California Commission on Teacher Credentialing, program requirements must be responsive to new legislation and regulatory policies. Admission requirements and programs of study referred to are subject to change to comply with regulatory mandates.

The master of arts in education and California teacher credential program prepares prospective teachers to work with California's culturally and linguistically diverse student population. Students in this program earn a master's degree and are eligible to apply for a Preliminary California Credential upon completing a five-quarter program comprised of two summers and one academic year. Graduates of the program are prepared to teach English language learners enrolled in K–12 public schools. The program also offers the Bilingual, Crosscultural, Language, and Academic Development (BCLAD) emphasis. The UCSC BCLAD emphasis authorizes primary language instruction or dual language immersion instruction in a K–12 setting. The UCSC BCLAD language of emphasis is Spanish.

Students who complete the program are eligible to apply for a California Preliminary Multiple Subjects Teaching Credential or a California Preliminary Single Subject Teaching Credential. The Multiple Subjects Teaching Credential authorizes the holder to teach in a K–12, self-contained public school classroom, where all subjects are taught by the same teacher. The Single Subject Teaching Credential authorizes the holder to teach in his/her credential subject area in a K–12 departmentalized classroom setting within a public school system.

The UCSC, single-subject, teacher-credential program offers the following subject areas: mathematics, English, social science, and science. Programs of study are subject to change.

Prerequisite Admission Requirements

All candidates must have preparation in the following areas:

A course, or equivalent experience, that addresses cultural and linguistic diversity. The following UCSC undergraduate education courses are examples of courses that meet this requirement: 128, *Immigrants and Education*; 141, *Bilingualism and Schooling*; 164, *Urban Education*; 181, *Race, Class, and Culture in Education*; and 92C *Introduction to Issues in Diversity and Education*. Other courses offered outside the Education Department may be acceptable. However, outside coursework cannot be preapproved by the department.

A documented field experience with children or youth in an educational setting. Experiences such as directed observation, substitute teaching, school tutoring, work in after-school programs, camp counseling, instructional aide, or the equivalent are acceptable experiences. When applying to the program, please describe your field experience in the designated area of the application titled, PERSONAL STATEMENT.

Application Selection Criteria

Admission to the program is competitive. Candidates for admission are selected, in part, on the following criteria:

Academic Record

College coursework is evaluated with attention to content and grades or narrative evaluations. The appropriateness of courses taken for the credential sought is also taken into consideration. For the multiple subjects credential, students should have an extensive breadth of courses in the core subject areas taught in elementary school—math, science, social science, and English. For the single subject credential, students should have an extensive body of coursework in the content area.

Statement of Purpose, Writing Sample, Letters of

Recommendation, Personal Statement, and Résumé

Information provided in these documents is used in the selection of candidates. All documents must be submitted by the application deadline.

The *statement of purpose* should discuss the following:

- an explanation of why you want to become a teacher;
- how your experience has contributed to your motivation and potential to be an educational

- leader;
- a description of your experiences related to youth, cultural and linguistic diversity, and community involvement.
- Writing sample*: a sample of your writing (no more than 10 pages). A research-based paper is preferred, for example, a paper written on an educational topic or a paper written in your content area. Alternatively, applicants may choose to write a brief piece specifically for this application.
- Letters of recommendation*: three letters of recommendation are required. At least one letter should be written by university faculty who can address the applicant's academic merit, and at least one letter written from someone in the field who has observed the applicant's work with children or youth. It is recommended that these letters address your qualifications in the following areas:

a) academic performance

b) field work with youth

c) experience in culturally and linguistically diverse settings and with student populations who have traditionally been underserved in schools and classrooms.

- Personal history*: write a statement (approximately two to five pages) explaining how your personal history has influenced your decision to apply to this graduate program.
- Résumé*: a résumé that includes an employment history; any relevant volunteer or community work, especially in schools and/or with children; and experiences in multicultural and multilingual settings. Include information on languages (other than English) in which you have competence.
- BCLAD Essay (BCLAD applicants only)*: candidates must submit an essay in Spanish as described in the online application.

Admission Requirements

Testing

All required examinations must be met by the stated deadlines.

All admitted applicants must verify completion of the California Basic Educational Skills Test (CBEST) requirement and submit a passing-status verification by June 1 in order to enroll in the program.

Additional information can be found at the CSET Registration web site, <http://www.cset.nesinc.com/> (*state requirement and subject to change*). It is recommended that passing verification be submitted with the application.

Subject-Matter Competence

California state law mandates that all teachers provide evidence of their subject-matter knowledge (*state requirement and subject to change*).

Admitted Multiple Subject applicants must submit verification of having passed the California Subject Examinations for Teachers (CSET): Multiple Subjects Subtests by June 1 prior to enrollment in the program. However, it is highly recommended that documentation of passing CSET scores be submitted with the application. Multiple Subject applicants must pass each section of the CSET; no coursework or "waiver" program can substitute for passing CSET scores.

Deadline to complete this requirement: June 1 of each year prior to enrollment into the program. However, applicants are encouraged to complete this requirement prior to applying to the program.

Additional information can be found at the CSET Registration web site, <http://www.cset.nesinc.com/>.

Single Subject

The California Subject Examinations for Teachers (CSET), or verification of an approved subject matter program from the applicant's undergraduate institution is required. Admitted applicants must submit verification of having passed the CSET examination for their subject (e.g., mathematics), or confirmation of 100 percent completion of an approved subject matter program.

Deadline to complete this requirement: June 1 of each year prior to enrollment into the program. However, it is highly recommended that documentation of subject matter competence be submitted with the application. Additional information can be found at the CSET Registration web site, <http://www.cset.nesinc.com/>.

Certificate of Clearance

In accordance with Education Code Section 44320(b), each credential candidate for an initial credential, prior to admission to any credential program, must obtain a Certificate of Clearance.

A Certificate of Clearance is a document that indicates that the individual has completed the fingerprint and character and identification process and has been cleared by the California Commission on Teacher Credentialing to begin student teaching.

To comply with this regulation the UCSC Education Department must have on file a copy of the Certificate of Clearance before allowing a person to begin public school fieldwork or student teaching.

If you hold or have applied for a credential from the California Commission on Teacher Credentialing (such as an emergency substitute teaching permit) you are not required to apply for another Certificate of Clearance. Please submit a photo copy of your prior credential for your application to the program by mail to: Education Dept., UC Santa Cruz, 1156 High St., Santa Cruz, CA, 95064.

Applicants who do not hold a valid California credential or have not previously applied for a Certificate of Clearance through the Commission on Teacher Credentialing must apply for the Certificate of Clearance.

Further information regarding this requirement, including Live Scan form LS-41, is also available within the UCSC Graduate School Online Application available October 1 each year (<http://graddiv.ucsc.edu/prospective/>). Please send an e-mail to the Education Department, edma@ucsc.edu, for further instructions regarding your Certificate of Clearance Application.

Deadline for completing this requirement: January 15 of each year.

Program and State of California Requirements (Not Required for Initial Admission in the Program)

These requirements may be met prior to or while enrolled in the program, but they must be met to be eligible for a California teaching credential.

BCLAD Candidates

The CSET Languages Other Than English (LOTE) (Spanish) Subtest III (CSET test code 147). It is recommended that passing test scores be submitted with the application. Individuals may still apply to the program without having passed the CSET LOTE. However, all admitted BCLAD applicants must submit passing verification for the examination prior to being issued a credential. (CSET Registration: <http://www.cset.nesinc.com>).

U.S. Constitution Requirement

A course on the U.S. Constitution (or completion of an examination offered by the Education Department to enrolled students) is required. UCSC-approved courses that meet this requirement are Politics 20, *American Politics*; Politics 111, *Constitutional Law*; Politics 120A, *Congress, President, and the Court in American Politics*; and History 25A, *United States History to 1877*.

Reading Instruction Competence Assessment (RICA)

Multiple Subjects candidates are required—prior to completion of the program and in order to be recommended for a preliminary credential—to pass the RICA exam. The RICA measures the knowledge, skills, and abilities essential to offer effective reading instruction to K–12 students. Candidates should not take this examination prior to completing course 220.

CPR

A certified cardiopulmonary resuscitation (CPR) course (infant, child, and adult) must be completed and valid upon application for the credential.

Student Teaching

The successful development of teaching skills in the classrooms is the culmination of a teacher education program. Therefore, candidates must demonstrate, by the end of their program, teaching competence in the classroom. Credentialed public school teachers are responsible for the nurturing of children and youth. Therefore, teaching credential candidates must consistently display conduct befitting the profession. To this end, the candidate must be able to cope with the demands and responsibilities of teaching as outlined below:

- Meet university and program requirements and deadlines (including school expectations during field experiences).
- Plan ahead to anticipate needs and potential student teaching problems.
- Be able to adapt to institutional and/or professional expectations and policies.
- Relate appropriately to children, parents, and school staff.
- Demonstrate sensitivity to the social, cultural, economic context of the school environment.
- Adhere to school expectations for dress, appearance, and personal hygiene.

Candidates whose professional behavior does not meet these minimal standards may be recommended for dismissal from the program.

Beginning student teaching, which begins during the Summer Bridge between the university summer and fall quarters, constitutes the first classroom observation experience for students in the program. Student teachers are in their classroom placements from 10–14 hours a week depending on the school site schedule. To enroll in this course, students must have a Certificate of Clearance issued and on file with the California Commission on Teacher Credentialing.

Intermediate and advanced student teaching is a two-quarter experience (winter/spring) in which student teachers are placed with cooperating teachers in local schools. Students are in the classroom placements 14 or more hours a week in winter quarter leading toward full time in the classroom by spring quarter. They gradually assume responsibility for preparation, instruction, and evaluation of the class during this two-quarter period. Supervisors of teacher education give ongoing and frequent support to students in their classroom placements and in seminars at UCSC. Multiple Subjects candidates obtain classroom experience in both primary and intermediate grades. Single Subjects candidates obtain classroom experience in middle school/junior high and high school.

Admission to course 201 and 201A, *Intermediate Student Teaching*, and courses 202A-B-C, *Advanced Student Teaching*, is based on an assessment of academic performance, experience, leadership, and initiative shown in public school placements and required courses taken earlier in the program.

Capstone Requirements

Students will complete a capstone portfolio, which includes a teaching performance assessment and reflective papers. Prompts for these assignments may vary from year to year as they reflect the most current California state credentialing requirements.

Multiple Subject Course Requirements

200 *Applied Classroom Analysis and Methods: Beginning Student Teaching*

201 *Intermediate Student Teaching*

202ABC *Advanced Student Teaching*

203 *Methods of English Language Development*

205 *Teaching, Learning, and Schooling*

207 *Social Foundations of Education*

208 *Portfolio Development*

210 *Creating Supportive, Healthy Environments for Student Learning*

211 *Teaching Special Populations*

212ABC (BCLAD students only) *Bilingualism and Bilingualism*

217 *Topics in Elementary Education: Physical Education*

218 *Topics in Elementary Education: Visual Arts*

219 *Topics in Elementary Education: Performing Arts*

220 *Reading and Language Arts for Elementary Classrooms*

221 *Science Learning and Teaching in Elementary Classrooms*

222 *Mathematics Learning and Teaching in Elementary Classrooms*

MA/C students must fulfill the requirements for Level 1 technology skills. Students meet this requirement in one of two ways: (a) passing the CSET examination, or (b) passing an approved course offered via UCSC Extension.

Single Subject Course Requirements

200 *Applied Classroom Analysis and Methods: Beginning Student Teaching*

201 *Intermediate Student Teaching*

201A *Intermediate Student Teaching: Single Subject*

202ABC *Advanced Student Teaching*

204 *Methods of English Language Development*

206 *Teaching, Learning, and Schooling*

207 *Social Foundations of Education*

208 *Portfolio Development*

210 *Creating Supportive, Healthy Environments for Student Learning*

211 *Teaching Special Populations*

212ABC (BCLAD students only) *Bilingualism and Biliteracy*

225 *Reading Across the Curriculum in Middle School and Secondary*

Single Subject Credential students enroll in the two methods courses related to their subject area:

226 *English Teaching: Theory and Curriculum*

227 *English Teaching for Secondary Classrooms*

228 *Math Education: Research and Practice*

229 *Teaching Mathematics in the Secondary Classroom*

230 *Science Education: Research and Practice*

231 *Teaching Science in the Secondary Classroom*

232 *Social Science: Theory and Curriculum*

233 *Social Science Teaching for Secondary Classrooms*

MA/C students must fulfill the requirements for Level 1 technology skills. Students meet this requirement in one of two ways: (a) passing the CSET examination, or (b) passing an approved course offered via UCSC Extension.

For Further Information

Please contact the credential analyst by sending an e-mail to edma@ucsc.edu, or view the department's home page on the web at <http://education.ucsc.edu> where potential applicants can obtain full details about the programs.

Ed.D in Collaborative Leadership

Overview

The goal of the Ed.D. program is to prepare educational professionals to enact research-based leadership in the transformation of schools and other educational institutions serving racially, culturally, and linguistically diverse communities in California's Central Coast and Bay Area region. Ed.D. students' dissertations apply cutting-edge theory and research in action-research reform efforts. Research projects will often be situated within the student's professional work site. Graduates of the Ed.D. program will be qualified for leadership positions in schools and school districts, as well as for the instruction of professional courses in universities and colleges. Graduates may also choose to work for independent or governmental policy centers.

Admission Requirements

- M.A. or equivalent with a background in research methodology
- 3.0 grade point average (GPA) or above
- Official Graduate Record Examination (GRE) scores <http://www.gre.org/~> taken within the last five years
- Documentation of second language and/or multicultural focus
- Statement of purpose
- Personal history
- A research project proposal
- Official transcripts from all undergraduate and graduate work
- Application essay, which includes:

Experience in and/or commitment to underserved schools and communities

Research area of interest

- Three current recommendation letters specifying potential for collaborative leadership and scholarly productivity.
- Application fee

Prior to completing your application, we highly recommend a personal interview with at least one of our faculty members. Please contact an Education Department faculty member whose research interest is similar to your own (please visit the Education Department web site at <http://education.ucsc.edu/>)

Course Requirements and Sequencing

Courses required in year one:

- EDUC 235, *Introduction to Educational Inquiry*
- EDUC 236, *Quantitative Methods in Educational Research*
- EDUC 237, *Qualitative Research Methods*
- EDUC 262, *Social and Cultural Context of Education Core Seminar*
- EDUC 263, *Foundations of Educational Reform*
- EDUC 268, *Schools, Communities, and Families*
- EDUC 269ABC, *First-Year Doctoral Pro-seminar*
- Summer research and coursework optional, though encouraged

Courses required in year two

- EDUC 266, *Program Evaluation and Action Research in Educational Reform*
- EDUC 271, *Theoretical Perspectives on Learning and Using Literacy*, or EDUC 273, *Language Acquisition, Bilingualism, and Education*
- EDUC 277ABC, *Second/Third-Year Professional Development Seminar Families*
- Summer research and coursework optional, though encouraged

Courses required in year three

- EDUC 277ABC, *Second/Third-Year Professional Development Seminar*
- EDUC 279ABC, *Dissertation Supervision*
- EDUC 299, *Directed Research* (each quarter)
- Qualifying examination (conclusion of spring quarter)

Courses required in year four

- Graduation

For Further Information

Contact the doctoral adviser, by sending an e-mail to edphd@ucsc.edu or view the department's home page on the web at <http://education.ucsc.edu> where potential applicants can obtain full details about the program.

Ph.D. in Education

Overview

The goal of the Ph.D. in education is to support graduate students in becoming creative scholars who engage in research focused on the educational needs of students from linguistic and cultural groups that have historically not fared well in our nation's public schools. To achieve this goal, this program provides students with grounding in the varieties of interdisciplinary theorizing, research methods, and applications needed to advance the study of learning and teaching for diverse student populations. The courses and research experiences are closely related to practice in K-12 classrooms. Students in this interdisciplinary program apply tools and perspectives from education, anthropology, linguistics, philosophy, psychology, sociology, cognitive science, and cultural historical activity theory. The program integrates theory and practice to examine learning and teaching within the multiple contexts of classroom, school, family, and community. Graduates of this program will be qualified to teach and to conduct the kinds of educational research demanded by tenure-track positions in research and regional universities. Graduates may also work in non-university based institutions that focus on teacher professional development, curriculum development, and related areas of educational research and development.

Together with his or her faculty academic adviser, each student develops an integrated program of study that includes advanced coursework, seminars, and electives within the five program concentrations: language, literacy and culture; teachers and teacher development; mathematics and science education; learning and teaching; and social and cultural contexts of education. Students learn through an apprenticeship model in which they develop expertise through active participation in research. Courses may be taken in other departments, when appropriate.

Ph.D. Admissions Guidelines

The minimum grade-point average (GPA) established by the University of California for admission to graduate school is 3.0. In general, the Ph.D. in education program looks for potential excellence in graduate students, whether this manifests itself in a high grade-point average, strong letters of recommendation, or a high Graduate Record Examination (GRE) scores, or a strong statement of purpose. Applicants will be evaluated on their individual merits and also with regard to how well their proposed doctoral research can be supported by the existing resources of the program.

Admission Requirements

- Bachelor's degree, or its equivalent, from an accepted university prior to the quarter for which admission is sought
- 3.0 GPA or above
- Official GRE scores <http://www.gre.org/~> taken within the last five years
- Experience working with culturally and linguistically diverse communities
- Statement of purpose
- Personal history
- A writing sample, preferably in education or a related field. The sample can be a term paper, a field report, a research proposal, or an essay written especially for the application
- Official transcripts from all colleges/universities attended after high school
- Three current recommendation letters specifying potential for scholarly productivity
- Current resume
- Application fee
- International applicants must take the Test of English as a Foreign Language (TOEFL). A minimum score of 550 on the TOEFL (paper) or 220 on the TOEFL (computer) is required for admission. The TOEFL examination may be waived for international students who have taken

and successfully passed a freshman composition course at an accredited university in the United States.

Prior to completing your application, we highly recommend a personal interview with at least one of our faculty members. Please contact an education faculty member whose research interest is similar to your own (please visit the Education Department web site at <http://education.ucsc.edu/>)

Preferred Prerequisites for Mathematics and Science Education Concentration

A bachelor of science (B.S.) or a bachelor of arts (B.A.) degree in a mathematical or natural science discipline (mathematics, applied mathematics and statistics, biology, chemistry, computer science, physics, etc.) or equivalent upper-division coursework.

Program Requirements

During the first two years of study, all students are expected to enroll in a set of required courses, including core seminars, methodology courses, the first- and second-year professional development seminars, and a research apprenticeship. The student and his/her adviser will also design a course of study within one or more of the department's concentrations. The overall number courses and seminars taken varies depending on the student's preparation, interests, and plans, which are determined in consultation with relevant faculty and the department chair. The program encourages interdisciplinary study.

To achieve Ph.D. candidacy, students are expected to pass an annual review of their written work, maintain satisfactory academic progress, complete all required courses, attend department colloquia, complete a second-year research project, complete a TAsip or teaching internship in education, pass a qualifying examination (QE), and meet the specific requirements of the Division of Graduate Studies.

The QE is intended to assess a student's depth and breadth of knowledge in his or her areas of concentrations and his/her competence to do extended dissertation-level research and analysis. Normally taken during the third year of enrollment, the QE consists of both written and oral components. For the written portion, the student prepares three papers, two of which are position papers on a theoretical topic; the third is a dissertation prospectus. The student presents and defends his/her work to at the oral examination.

A dissertation based on original research is required. After the dissertation has been completed and submitted, students must defend the dissertation in an oral exam.

Course Requirements and Sequencing

The following courses are required. Incoming students should consult with their faculty adviser to determine the most appropriate order in which to fulfill course requirements in the student's proposed concentration(s). All required courses must be completed prior to advancement to candidacy.

Core Courses (30 credits)

Course Number and Name	Type	When Taken
EDUC 261, <i>Thinking, Learning and Teaching</i> (1)	Core (can be counted as learning and teaching concentration)	Before Advancement to Candidacy (AC)
EDUC 262, <i>Social and Cultural Contexts of Education</i>	Core (can be counted as social and cultural contexts of education concentration)	Before Advancement to Candidacy (AC)
EDUC 235, <i>Introduction to Educational Inquiry</i>	Methods	Year 1
EDUC 236, <i>Introduction to Quantitative Methods in Educational Research</i>	Methods	Before Advancement to Candidacy (AC)
EDUC 237, <i>Introduction to Quantitative Methods in Educational Research</i>	Methods	Before Advancement to Candidacy (AC)
Advanced methods course. (Course in a different department might count as an advanced methods course, at adviser's discretion.)	Advanced methods course (can be counted toward a concentration course, if applicable)	Before Advancement to Candidacy (AC)

Professional Development Courses (22 credits)

Course Number and Name	Type	When Taken
EDUC 269ABC, <i>Pro-Seminar</i> First year professional development seminar; 2 credits/quarter	Pro-seminar	Year 1
EDUC 293A or EDUC 293B, <i>Research Apprenticeship</i> (minimum of 5 credits)	Research apprenticeship	Recommended in Year 1, but required before Advancement to Candidacy (AC)
EDUC 270ABC, <i>Professional Development</i> seminars; 2 credits/quarter	Pro-seminar	Year 2
EDUC 294, <i>Second-Year Research Project</i> (minimum 5 credits)	Research apprenticeship (second-year project)	Year 2

Concentration Courses (30 credits)

Course Number and Name	Type	When Taken
EDUC Concentration course (2) (minimum of four in any one concentration)	Concentration	Before Advancement to Candidacy (AC)
EDUC Concentration course (minimum of four in any one concentration)	Concentration	Before Advancement to Candidacy (AC)
EDUC Concentration course (minimum of four in any one concentration)	Concentration	Before Advancement to Candidacy (AC)
EDUC Concentration course (minimum of four in any one concentration)	Concentration	Before Advancement to Candidacy (AC)
EDUC/Other Elective/Concentration course (3,4)	Elective/Concentration	Before Advancement to Candidacy (AC)
EDUC/Other Elective/Concentration course	Elective/Concentration	Before Advancement to Candidacy (AC)

Other Degree Requirements

Course Number and Name	Type	When Taken
One TAsip in Education or Teaching Internship in Education	Other	Before Advancement to Candidacy (AC)
Attendance to all department-sponsored colloquiums	Other	Years 1 and 2
Second-		Before

Year Project Oral Presentation	Other	Advancement to Candidacy (AC)
--------------------------------------	-------	--

A student may count EDUC 261 or 262 toward a relevant four concentration-course requirement but must still take six courses (i.e., concentration courses) beyond the core courses.

Concentration courses will be crosslisted when appropriate. Students may claim up to two (or, in rare cases, three) concentrations. Students may petition DPC for an independent study to count as a concentration course, but this is expected only in cases where sufficient course offerings for the student do not exist. Four concentration courses alone will not demonstrate expertise in a concentration, however, in conjunction with independent readings, research work, qualifying examination papers, and other experiences, a concentration designation (or two) will be defended and awarded during the qualifying examination.

These two additional elective/concentration courses can count as concentration courses, or can be advanced methods courses, or courses from other departments/divisions. This is left up to adviser's discretion.

Students are encouraged to take courses beyond the minimum required, and, therefore, teaching faculty (and second-year project readers) are encouraged not to overload the students. It is expected that students will take Pro-Seminar plus three courses each academic quarter until advancement to candidacy

Requirements for the M.A. Degree

Although applications for a master's degree are not accepted, students in the Ph.D. program may obtain a M.A. degree after successfully completing a minimum of three quarters residency, 60 course credits including courses 235, 237, 269ABC, 270ABC, 293A or 293B, 294, and a second-year research project. Students seeking an M.A. degree must adhere to the guidelines set out by the Graduate Division for filing for a degree.

Designated Emphasis in Education

The Designated Emphasis in Education enables doctoral students in other departments to pursue interests in education and obtain formal certification of a "minor" level of competence in the field of education. The requirements for obtaining a Designated Emphasis in Education are the following:

1. Have a designated graduate adviser from among the faculty in education. This adviser will be in addition to the graduate adviser from the student's home department. The education adviser must serve on the student's qualifying examination committee and, as appropriate, may also serve on the student's dissertation committee.
2. Complete at least two (2) of the following three core courses in education:
 - EDUC 261, *Thinking, Learning, and Teaching*
 - EDUC 262, *Social and Cultural Context of Education*
 - EDUC 263, *Foundations of Educational Reform*
3. Complete additional courses as needed to total five graduate courses in education, no more than one of which may be a directed readings course (*Independent Studies*). Courses must be approved by the student's graduate adviser in education. Courses in other departments focused on education may be approved by petition to the Education Department's Doctoral Programs Committee.
4. Prepare a significant piece of writing in some area of education. This writing may take the form of a substantial position paper (seminar paper, QE paper, dissertation chapter, master's thesis) grounded in the literature of educational research, as determined by the graduate adviser in education.

Education is an institutional field in which scholars from a wide variety of disciplines—including sociology, psychology, politics, economics, mathematics and science—have scholarly interests. A Designated Emphasis in Education enables graduate students from other departments to ground their work in theory and research on important issues in education.

The Education Department's core courses, EDUC 261 and 262, are offered every year; and EDUC 263 is offered biennially. The department typically offers six doctoral courses during each year across five concentrations: language, literacy, and culture; teachers and teacher development; mathematics and science education; learning and teaching, and social and cultural contexts of education. The Education Department annually admits 7-10 Ph.D. students, leaving adequate room for doctoral students from other departments to take courses in education.

Other Requirements

Students are required to attend the Education Department's colloquium series during their first and second years in the program.

The education Ph.D. program emphasizes teaching experience, and all students are required to complete one TAship or teaching internship in education prior to advancement to candidacy.

Students are required to complete a second-year project paper by the first day of fall quarter in

year three.

Financial Support

Financial support for students includes a variety of fellowships, research assistantships, and teaching assistantships in the Education Department. Students may participate in research projects under the auspices of several interdisciplinary research centers, including the Center for Justice, Tolerance, and Community (CJTC), Chicano/Latino Research Center (CLRC), the Vocabulary Innovations in Education (VINE) project, The Teachers With Computers: Ward Annotations for Vocabulary Education (tecWAVE) project, Effective Science Teaching for English Language Learners (ESTELL) project, The Center for Collaborative Research for an Equitable California (CREC), and the Center for Educational Research in the Interest of Underserved Students (ERIUS).

For Further Information

Contact the doctoral adviser, by sending an e-mail to edphd@ucsc.edu or view the department's home page on the web at <http://education.ucsc.edu> where potential applicants can obtain full details about the programs.

Advising: (831) 459-2589

<http://education.ucsc.edu>education@ucsc.edu***Program Description***

The purpose of the Education Department's instructional programs is to prepare all students, undergraduates and graduates, to engage in the analysis and integration of educational theory, research, and practice for an increasingly diverse society. The department's primary intellectual and practical focus is on fostering equitable and effective schooling for all students. In working toward this goal, the department seeks to understand the profound issues involved in transforming public education so that it better meets the needs of students from diverse language, ethnic, racial, and class backgrounds. We are a small department with the large agenda of developing educational leaders and pursuing educational research that will affect the future of teaching and learning both inside and outside of schools. Our commitment lies in three essential and interrelated domains: 1) school, families, and communities; 2) teacher education and development; and 3) mathematics and science. Undergirding them all is a focus on the socio-cultural context in which learning and teaching takes place and an understanding of the power of language and literacy in both formal and informal educational settings.

The Education Department has two growing doctor of philosophy (Ph.D.) and doctor of education (Ed.D.) programs that attract students who have exemplary preparation as well as experience working in educational settings; a model teacher-education program; and two vibrant minor tracks that serve more than 300 undergraduates each year.

Minors in Education

The UCSC undergraduate courses in education engage students in the study of the history of educational thought and philosophy, the politics and economics of education, learning theory and pedagogy, and issues of cultural and linguistic diversity in education.

Because an academic major in education is not permitted in the state of California, UCSC offers two minors in education for those students who are considering a career in teaching and also for those who hold a general interest in educational studies. Please note that the minors in education do not provide a California Teaching Credential. Additionally, the UCSC teaching credential program is a graduate program and coursework taken in the minor cannot be substituted for credential requirements.

General Minor in Education

The general minor in education consists of six courses totaling 30 credits: [Education 60](#), 180, and four upper-division education courses (please refer to the Education Department's web site for a list of approved upper-division courses ~~for the education minor~~ [being offered during the current academic year](#), <http://education.ucsc.edu>).

To declare a minor, students must bring from their ~~M~~major ~~D~~department a completed Petition for Major/Minor Declaration and a UCSC Academic Planning Forms to the Education Department's Undergraduate Adviser. ~~file a Proposed Plan and Declaration of Major/Minor form at the Education Department.~~ Students pursuing a minor in education should meet with the Education Department's ~~academic~~ Undergraduate Adviser as early as possible. The adviser will assist students in ~~filing~~ completing the Petition for a Major/Minor Declaration and the UCSC Academic Planning Forms. ~~the Proposed Study Plan and the Declaration of a Major/Minor form.~~

For Further Information

For specific instructions about how to declare a minor in education and for the current Drop-in Advising Schedule, please refer to the Education Department's web site <http://education.ucsc.edu>. For other inquiries, please contact the Undergraduate Adviser or by sending an e-mail to education@ucsc.edu

Science, Technology, Engineering, and Mathematics (STEM) Education Minor

The STEM minor specifically serves students in STEM majors who are considering careers in secondary mathematics or science teaching. The STEM minor in education consists of eight courses, totaling 32 credits and including 90-100 hours of classroom field placements: EDUC 50, EDUC 60, EDUC 100, EDUC 185B or 185C, EDUC 185L, one education course addressing cultural and linguistic diversity (e.g., EDUC 128, 135, 141, 164, 170, 177, or 181), and two education upper-division electives. Students pursuing the STEM education minor should meet with the Cal Teach staff as early as possible. Entry into EDUC 50 is by interview only, and interested students must submit an application to the Cal Teach program (see <http://calteach.ucsc.edu> or e-mail calteach@ucsc.edu).

Graduate Programs

Master of Arts in Education and California Teacher Credential Program

Please note that students are not admitted into the program for a stand-alone master of arts (M.A.) in education or a stand-alone credential.

Because program requirements are authorized by statutes and regulated by a state entity, the California Commission on Teacher Credentialing, program requirements must be responsive to new legislation and regulatory policies. Admission requirements and programs of study referred to are subject to change to comply with regulatory mandates.

The master of arts in education and California teacher credential program prepares prospective teachers to work with California's culturally and linguistically diverse student population. Students in this program earn a master's degree and are eligible to apply for a Preliminary California Credential upon completing a five-quarter program comprised of two summers and one academic year. Graduates of the program are prepared to teach English language learners enrolled in K-12 public schools. The program also offers the Bilingual, Crosscultural, Language, and Academic Development (BCLAD) emphasis. The UCSC BCLAD emphasis authorizes primary language instruction or dual language immersion instruction in a K-12 setting. The UCSC BCLAD language of emphasis is Spanish.

Students who complete the program are eligible to apply for a California Preliminary Multiple Subjects Teaching Credential or a California Preliminary Single Subject Teaching Credential. The Multiple Subjects Teaching Credential authorizes the holder to teach in a K-12, self-contained public school classroom, where all subjects are taught by the same teacher. The Single Subject Teaching Credential authorizes the holder to teach in his/her credential subject area in a K-12 departmentalized classroom setting within a public school

system.

The UCSC, single-subject, teacher-credential program offers the following subject areas: mathematics, English, social science, and science. Programs of study are subject to change.

Prerequisite Admission Requirements

All candidates must have preparation in the following areas:

A course, or equivalent experience, that addresses cultural and linguistic diversity. The following UCSC undergraduate education courses are examples of courses that meet this requirement: 128, *Immigrants and Education*; 141, *Bilingualism and Schooling*; 164, *Urban Education*; 181, *Race, Class, and Culture in Education*; and 92C *Introduction to Issues in Diversity and Education*. Other courses offered outside the Education Department may be acceptable. However, outside coursework cannot be preapproved by the department.

A documented field experience with children or youth in an educational setting.

Experiences such as directed observation, substitute teaching, school tutoring, work in after-school programs, camp counseling, instructional aide, or the equivalent are acceptable experiences. When applying to the program, please describe your field experience in the designated area of the application titled, PERSONAL STATEMENT.

Application Selection Criteria

Admission to the program is competitive. Candidates for admission are selected, in part, on the following criteria:

Academic Record

College coursework is evaluated with attention to content and grades or narrative evaluations. The appropriateness of courses taken for the credential sought is also taken into consideration. For the multiple subjects credential, students should have an extensive breadth of courses in the core subject areas taught in elementary school—math, science, social science, and English. For the single subject credential, students should have an extensive body of coursework in the content area.

Statement of Purpose, Writing Sample, Letters of Recommendation, Personal Statement, and Résumé

Information provided in these documents is used in the selection of candidates. All documents must be submitted by the application deadline.

The statement of purpose should discuss the following:

- an explanation of why you want to become a teacher;
- how your experience has contributed to your motivation and potential to be an educational leader;
- a description of your experiences related to youth, cultural and linguistic diversity, and community involvement.
- Writing sample: a sample of your writing (no more than 10 pages). A research-based paper is preferred, for example, a paper written on an educational topic or a paper written in your content area. Alternatively, applicants may choose to write a brief piece specifically for this application.
- Letters of recommendation: three letters of recommendation are required. At least one letter should be written by university faculty who can address the applicant's academic merit, and at least one letter written from someone in the field who has observed the applicant's work with children or youth. It is recommended that these letters address your qualifications in the following areas:

a) academic performance

b) field work with youth

c) experience in culturally and linguistically diverse settings and with student populations who have traditionally been underserved in schools and classrooms.

- Personal history: write a statement (approximately two to five pages) explaining how your personal history has influenced your decision to apply to this graduate program.
- Résumé: a résumé that includes an employment history; any relevant volunteer or community work, especially in schools and/or with children; and experiences in multicultural and multilingual settings. Include information on languages (other than English) in which you have competence.
- BCLAD Essay (BCLAD applicants only): candidates must submit an essay in Spanish as described in the online application.

Admission Requirements

Testing

All required examinations  must be met by the stated deadlines.

All admitted applicants must verify completion of the California Basic Educational Skills Test (CBEST) requirement and submit a passing-status verification by June 1 in order to enroll in the program.

Additional information can be found at the CSET Registration web site, <http://www.cset.nesinc.com/> (*state requirement and subject to change*). It is recommended that passing verification be submitted with the application.

Subject-Matter Competence

California state law mandates that all teachers provide evidence of their subject-matter knowledge (*state requirement and subject to change*).

Admitted Multiple Subject applicants must submit verification of having passed the California Subject Examinations for Teachers (CSET): Multiple Subjects Subtests by June 1 prior to enrollment in the program. However, it is highly recommended that documentation of passing CSET scores be submitted with the application. Multiple Subject applicants must pass each section of the CSET; no coursework or "waiver" program can substitute for passing CSET scores.

Deadline to complete this requirement: June 1 of each year prior to enrollment into the program. However, applicants are encouraged to complete this requirement prior to applying to the program.

Additional information can be found at the CSET Registration web site, <http://www.cset.nesinc.com/>.

Single Subject

The California Subject Examinations for Teachers (CSET), or verification of an approved subject matter program from the applicant's undergraduate institution is required. Admitted applicants must submit verification of having passed the CSET examination for their subject (e.g., mathematics), or confirmation of 100 percent completion of an approved subject matter program.

Deadline to complete this requirement: June 1 of each year prior to enrollment into the program. However, it is highly recommended that documentation of subject matter competence be submitted with the application. Additional information can be found at the CSET Registration web site, <http://www.cset.nesinc.com/>.

Certificate of Clearance

In accordance with Education Code Section 44320(b), each credential candidate for an

initial credential, prior to admission to any credential program, must obtain a Certificate of Clearance.

A Certificate of Clearance is a document that indicates that the individual has completed the fingerprint and character and identification process and has been cleared by the California Commission on Teacher Credentialing to begin student teaching.

To comply with this regulation the UCSC Education Department must have on file a copy of the Certificate of Clearance before allowing a person to begin public school fieldwork or student teaching.

If you hold or have applied for a credential from the California Commission on Teacher Credentialing (such as an emergency substitute teaching permit) you are not required to apply for another Certificate of Clearance. Please submit a photo copy of your prior credential for your application to the program by mail to: Education Dept., UC Santa Cruz, 1156 High St., Santa Cruz, CA, 95064.

Applicants who do not hold a valid California credential or have not previously applied for a Certificate of Clearance through the Commission on Teacher Credentialing must apply for the Certificate of Clearance.

Further information regarding this requirement, including Live Scan form LS-41, is also available within the UCSC Graduate School Online Application available October 1 each year (<http://graddiv.ucsc.edu/prospective/>). Please send an e-mail to the Education Department, edma@ucsc.edu, for further instructions regarding your Certificate of Clearance Application.

Deadline for completing this requirement: January 15 of each year.

Program and State of California Requirements (Not Required for Initial Admission in the Program)

These requirements may be met prior to or while enrolled in the program, but they must be met to be eligible for a California teaching credential.

BCLAD Candidates

The CSET Languages Other Than English (LOTE) (Spanish) Subtest III (CSET test code 147). It is recommended that passing test scores be submitted with the application. Individuals may still apply to the program without having passed the CSET LOTE. However, all admitted BCLAD applicants must submit passing verification for the examination prior to being issued a credential. (CSET Registration: <http://www.cset.nesinc.com>).

U.S. Constitution Requirement

A course on the U.S. Constitution (or completion of an examination offered by the Education Department to enrolled students) is required. UCSC-approved courses that meet this requirement are Politics 20, *American Politics*; Politics 111, *Constitutional Law*; Politics 120A, *Congress, President, and the Court in American Politics*; and History 25A, *United States History to 1877*.

Reading Instruction Competence Assessment (RICA)

Multiple Subjects candidates are required—prior to completion of the program and in order to be recommended for a preliminary credential—to pass the RICA exam. The RICA measures the knowledge, skills, and abilities essential to offer effective reading instruction to K–12 students. Candidates should not take this examination prior to completing course 220.

CPR

A certified cardiopulmonary resuscitation (CPR) course (infant, child, and adult) must be

completed and valid upon application for the credential.

Student Teaching

The successful development of teaching skills in the classrooms is the culmination of a teacher education program. Therefore, candidates must demonstrate, by the end of their program, teaching competence in the classroom. Credentialed public school teachers are responsible for the nurturing of children and youth. Therefore, teaching credential candidates must consistently display conduct befitting the profession. To this end, the candidate must be able to cope with the demands and responsibilities of teaching as outlined below:

- Meet university and program requirements and deadlines (including school expectations during field experiences).
- Plan ahead to anticipate needs and potential student teaching problems.
- Be able to adapt to institutional and/or professional expectations and policies.
- Relate appropriately to children, parents, and school staff.
- Demonstrate sensitivity to the social, cultural, economic context of the school environment.
- Adhere to school expectations for dress, appearance, and personal hygiene.

Candidates whose professional behavior does not meet these minimal standards may be recommended for dismissal from the program.

Beginning student teaching, which begins during the Summer Bridge between the university summer and fall quarters, constitutes the first classroom observation experience for students in the program. Student teachers are in their classroom placements from 10–14 hours a week depending on the school site schedule. To enroll in this course, students must have a Certificate of Clearance issued and on file with the California Commission on Teacher Credentialing.

Intermediate and advanced student teaching is a two-quarter experience (winter/spring) in which student teachers are placed with cooperating teachers in local schools. Students are in the classroom placements 14 or more hours a week in winter quarter leading toward full time in the classroom by spring quarter. They gradually assume responsibility for preparation, instruction, and evaluation of the class during this two-quarter period. Supervisors of teacher education give ongoing and frequent support to students in their classroom placements and in seminars at UCSC. Multiple Subjects candidates obtain classroom experience in both primary and intermediate grades. Single Subjects candidates obtain classroom experience in middle school/junior high and high school.

Admission to course 201 and 201A, *Intermediate Student Teaching*, and courses 202A-B-C, *Advanced Student Teaching*, is based on an assessment of academic performance, experience, leadership, and initiative shown in public school placements and required courses taken earlier in the program.

Capstone Requirements

Students will complete a capstone portfolio, which includes a teaching performance assessment and reflective papers. Prompts for these assignments may vary from year to year as they reflect the most current California state credentialing requirements.

Multiple Subject Course Requirements

200 *Applied Classroom Analysis and Methods: Beginning Student Teaching*

201 *Intermediate Student Teaching*

202ABC *Advanced Student Teaching*

203 *Methods of English Language Development*

205 *Teaching, Learning, and Schooling*

207 *Social Foundations of Education*

208 *Portfolio Development*

~~209 *Introduction to Technology in Schools*~~

210 *Creating Supportive, Healthy Environments for Student Learning*

211 *Teaching Special Populations*

212ABC (BCLAD students only) *Bilingualism and Bilingualism*

217 *Topics in Elementary Education: Physical Education*

218 *Topics in Elementary Education: Visual Arts*

219 *Topics in Elementary Education: Performing Arts*

220 *Reading and Language Arts for Elementary Classrooms*

221 *Science Learning and Teaching in Elementary Classrooms*

222 *Mathematics Learning and Teaching in Elementary Classrooms*

~~224 *Learning and Teaching Writing in Elementary Classrooms*~~

MA/C students must fulfill the requirements for Level 1 technology skills. Students meet this requirement in one of two ways: (a) passing the CSET examination, or (b) passing an approved course offered via UCSC Extension.

Single Subject Course Requirements

200 *Applied Classroom Analysis and Methods: Beginning Student Teaching*

201 *Intermediate Student Teaching*

201A *Intermediate Student Teaching: Single Subject*

202ABC *Advanced Student Teaching*

204 *Methods of English Language Development*

206 *Teaching, Learning, and Schooling*

207 *Social Foundations of Education*

208 *Portfolio Development*

~~209 *Introduction to Technology in Schools*~~

210 *Creating Supportive, Healthy Environments for Student Learning*

211 *Teaching Special Populations*

212ABC (BCLAD students only) *Bilingualism and Biliteracy*

225 *Reading Across the Curriculum in Middle School and Secondary*

Single Subject Credential students enroll in the two methods courses related to their subject area:

~~223 *Writing Across the Curriculum for Secondary*~~

226 *English Teaching: Theory and Curriculum*

227 *English Teaching for Secondary Classrooms*

- 228 *Math Education: Research and Practice*
- 229 *Teaching Mathematics in the Secondary Classroom*
- 230 *Science Education: Research and Practice*
- 231 *Teaching Science in the Secondary Classroom*
- 232 *Social Science: Theory and Curriculum*
- 233 *Social Science Teaching for Secondary Classrooms*

MA/C students must fulfill the requirements for Level 1 technology skills. Students meet this requirement in one of two ways: (a) passing the CSET examination, or (b) passing an approved course offered via UCSC Extension.

For Further Information

~~Phone the Education Department~~ Please contact the credential analyst by sending ~~at (831) 459-2200, send~~ e-mail to edma@ucsc.edu, or view the department's home page on the web at <http://education.ucsc.edu> where potential applicants can obtain full details about the programs.

Ed.D in Collaborative Leadership

Overview

The goal of the Ed.D. program is to prepare educational professionals to enact research-based leadership in the transformation of schools and other educational institutions serving racially, culturally, and linguistically diverse communities in California's Central Coast and Bay Area region. Ed.D. students' dissertations apply cutting-edge theory and research in action-research reform efforts. Research projects will often be situated within the student's professional work site. Graduates of the Ed.D. program will be qualified for leadership positions in schools and school districts, as well as for the instruction of professional courses in universities and colleges. Graduates may also choose to work for independent or governmental policy centers.

Admission Requirements

- M.A. or equivalent with a background in research methodology
- 3.0 grade point average (GPA) or above
- Official Graduate Record Examination (GRE) scores <http://www.gre.org/~> taken within the last five years
- Documentation of second language and/or multicultural focus
- Statement of purpose
- Personal history
- A research project proposal
- Official transcripts from all undergraduate and graduate work
- Application essay, which includes:
 - Experience in and/or commitment to underserved schools and communities
 - Research area of interest
 - Three current recommendation letters specifying potential for collaborative leadership and scholarly productivity.
 - Application fee

Prior to completing your application, we highly recommend a personal interview with at least one of our faculty members. Please contact an Education Department faculty member whose research interest is similar to your own (please visit the Education Department web site at <http://education.ucsc.edu/>)

Course Requirements and Sequencing

Courses required in year one:

EDUC 235, *Introduction to Educational Inquiry*

EDUC 236, *Quantitative Methods in Educational Research*

EDUC 237, *Qualitative Research Methods*

EDUC 262, *Social and Cultural Context of Education Core Seminar*

EDUC 263, *Foundations of Educational Reform*

EDUC 268, *Schools, Communities, and Families*

EDUC 269ABC, *First-Year Doctoral Pro-seminar*

Summer research and coursework optional, though encouraged

Courses required in year two

EDUC 266, *Program Evaluation and Action Research in Educational Reform*

EDUC 271, *Theoretical Perspectives on Learning and Using Literacy*, or EDUC 273, *Language Acquisition, Bilingualism, and Education*

EDUC 277ABC, *Second/Third-Year Professional Development Seminar Families*

Summer research and coursework optional, though encouraged

Courses required in year three

EDUC 277ABC, *Second/Third-Year Professional Development Seminar*

EDUC 279ABC, *Dissertation Supervision*

EDUC 299, *Directed Research* (each quarter)

Qualifying examination (conclusion of spring quarter)

Courses required in year four

Graduation

For Further Information

Contact the ~~D~~doctoral ~~A~~adviser, by sending an e-mail to edphd@ucsc.edu or view the department's home page on the web at <http://education.ucsc.edu> where potential applicants can obtain full details about the program.

Ph.D. in Education

Overview

The goal of the Ph.D. in education is to support graduate students in becoming creative scholars who engage in research focused on the educational needs of students from linguistic and cultural groups that have historically not fared well in our nation's public schools. To achieve this goal, this program provides students with grounding in the varieties of interdisciplinary theorizing, research methods, and applications needed to advance the study of learning and teaching for diverse student populations. The courses and research experiences are closely related to practice in K-12 classrooms. Students in this interdisciplinary program apply tools and perspectives from education, anthropology, linguistics, philosophy, psychology, sociology, cognitive science, and cultural historical activity theory. The program integrates theory and practice to examine learning and

teaching within the multiple contexts of classroom, school, family, and community. Graduates of this program will be qualified to teach and to conduct the kinds of educational research demanded by tenure-track positions in research and regional universities. Graduates may also work in non-university based institutions that focus on teacher professional development, curriculum development, and related areas of educational research and development.

Together with his or her faculty academic adviser, each student develops an integrated program of study that includes advanced coursework, seminars, and electives within the five program concentrations: language, literacy and culture; teachers and teacher development; mathematics and science education; learning and teaching; and social and cultural contexts of education. Students learn through an apprenticeship model in which they develop expertise through active participation in research. Courses may be taken in other departments, when appropriate.

Ph.D. Admissions Guidelines

The minimum grade-point average (GPA) established by the University of California for admission to graduate school is 3.0. In general, the Ph.D. in education program looks for potential excellence in graduate students, whether this manifests itself in a high grade-point average, strong letters of recommendation, or a high Graduate Record Examination (GRE) scores, or a strong statement of purpose. Applicants will be evaluated on their individual merits and also with regard to how well their proposed doctoral research can be supported by the existing resources of the program.

Admission Requirements

Bachelor's degree, or its equivalent, from an accepted university prior to the quarter for which admission is sought

3.0 GPA or above

Official GRE scores <http://www.gre.org/~> taken within the last five years

Experience working with culturally and linguistically diverse communities

Statement of purpose

Personal history

A writing sample, preferably in education or a related field. The sample can be a term paper, a field report, a research proposal, or an essay written especially for the application

Official transcripts from all colleges/universities attended after high school

Three current recommendation letters specifying potential for scholarly productivity

Current resume

Application fee

International applicants must take the Test of English as a Foreign Language (TOEFL). A minimum score of 550 on the TOEFL (paper) or 220 on the TOEFL (computer) is required for admission. The TOEFL examination may be waived for international students who have taken and successfully passed a freshman composition course at an accredited university in the United States.

Prior to completing your application, we highly recommend a personal interview with at least one of our faculty members. Please contact an education faculty member whose research interest is similar to your own (please visit the Education Department web site at <http://education.ucsc.edu/>)

Preferred Prerequisites for Mathematics and Science Education Concentration

A bachelor of science (B.S.) or a bachelor of arts (B.A.) degree in a mathematical or natural science discipline (mathematics, applied mathematics and statistics, biology, chemistry, computer science, physics, etc.) or equivalent upper-division coursework.

Program Requirements

During the first two years of study, all students are expected to enroll in a set of required courses, including core seminars, methodology courses, the first- and second-year professional development seminars, and a research apprenticeship. The student and his/her adviser will also design a course of study within one or more of the department's concentrations. The overall number courses and seminars taken varies depending on the student's preparation, interests, and plans, which are determined in consultation with relevant faculty and the department chair. The program encourages interdisciplinary study.

To achieve Ph.D. candidacy, students are expected to pass an annual review of their written work, maintain satisfactory academic progress, complete all required courses, attend department colloquia, complete a second-year research project, complete a TAsnip or teaching internship in education, pass a qualifying examination (QE), and meet the specific requirements of the Division of Graduate Studies.

The QE is intended to assess a student's depth and breadth of knowledge in his or her areas of concentrations and his/her competence to do extended dissertation-level research and analysis. Normally taken during the third year of enrollment, the QE consists of both written and oral components. For the written portion, the student prepares three papers, two of which are position papers on a theoretical topic; the third is a dissertation prospectus. The student presents and defends his/her work to at the oral examination.

A dissertation based on original research is required. After the dissertation has been completed and submitted, students must defend the dissertation in an oral exam.

Course Requirements and Sequencing

The following courses are required. Incoming students should consult with their faculty adviser to determine the most appropriate order in which to fulfill course requirements in the student's proposed concentration(s). All required courses must be completed prior to advancement to candidacy.

Core Courses (30 credits)		
Course Number and Name	Type	When Taken
EDUC 261, <i>Thinking, Learning and Teaching</i> (1)	Core (can be counted as learning and teaching concentration)	Before Advancement to Candidacy (AC)
EDUC 262, <i>Social and Cultural Contexts of Education</i>	Core (can be counted as social and cultural contexts of education concentration)	Before Advancement to Candidacy (AC)

EDUC 235, <i>Introduction to Educational Inquiry</i>	Methods	Year 1
EDUC 236, <i>Introduction to Quantitative Methods in Educational Research</i>	Methods	Before Advancement to Candidacy (AC)
EDUC 237, <i>Introduction to Quantitative Methods in Educational Research</i>	Methods	Before Advancement to Candidacy (AC)
Advanced methods course. (Course in a different department might count as an advanced methods course, at adviser's discretion.)	Advanced methods course (can be counted toward a concentration course, if applicable)	Before Advancement to Candidacy (AC)

Professional Development Courses (22 credits)		
Course Number and Name	Type	When Taken
EDUC 269ABC, <i>Pro-Seminar</i> First year professional development seminar; 2 credits/quarter	Pro-seminar	Year 1
EDUC 293A or EDUC 293B, <i>Research Apprenticeship</i> (minimum of 5 credits)	Research apprenticeship	Recommended in Year 1, but required before Advancement to Candidacy (AC)
EDUC 270ABC, <i>Professional Development</i> seminars; 2 credits/quarter	Pro-seminar	Year 2
EDUC 294, <i>Second-Year Research Project</i> (minimum 5 credits)	Research apprenticeship (second-year project)	Year 2

--	--	--

Concentration Courses (30 credits)		
Course Number and Name	Type	When Taken
EDUC Concentration course (2) (minimum of four in any one concentration)	Concentration	Before Advancement to Candidacy (AC)
EDUC Concentration course (minimum of four in any one concentration)	Concentration	Before Advancement to Candidacy (AC)
EDUC Concentration course (minimum of four in any one concentration)	Concentration	Before Advancement to Candidacy (AC)
EDUC Concentration course (minimum of four in any one concentration)	Concentration	Before Advancement to Candidacy (AC)
EDUC/Other Elective/Concentration course (3,4)	Elective/Concentration	Before Advancement to Candidacy (AC)
EDUC/Other Elective/Concentration course	Elective/Concentration	Before Advancement to Candidacy (AC)
Other Degree Requirements		
One TAsip in Education or Teaching Internship in Education	Other	Before AC
Attendance to all department-sponsored colloquiums	Other	Years 1 and 2
Second-Year Project Oral Presentation	Other	Before AC End of spring quarter

--	--	--

A student may count EDUC 261 or 262 toward a relevant four concentration-course requirement but must still take six courses (i.e., concentration courses) beyond the core courses.

Concentration courses will be crosslisted when appropriate. Students may claim up to two (or, in rare cases, three) concentrations. Students may petition DPC for an independent study to count as a concentration course, but this is expected only in cases where sufficient course offerings for the student do not exist. Four concentration courses alone will not demonstrate expertise in a concentration, however, in conjunction with independent readings, research work, qualifying examination papers, and other experiences, a concentration designation (or two) will be defended and awarded during the qualifying examination.

These two additional elective/concentration courses can count as concentration courses, or can be advanced methods courses, or courses from other departments/divisions. This is left up to adviser's discretion.

Students are encouraged to take courses beyond the minimum required, and, therefore, teaching faculty (and second-year project readers) are encouraged not to overload the students. It is expected that students will take *Pro-Seminar* plus three courses each academic quarter until advancement to candidacy

Requirements for the M.A. Degree

Although applications for a master's degree are not accepted, students in the Ph.D. program may obtain a M.A. degree after successfully completing a minimum of three quarters residency, 60 course credits including courses 235, 237, 269ABC, 270ABC, 293A or 293B, 294, and a second-year research project. Students seeking an M.A. degree must adhere to the guidelines set out by the Graduate Division for filing for a degree.

Designated Emphasis in Education

The Designated Emphasis in Education enables doctoral students in other departments to pursue interests in education and obtain formal certification of a "minor" level of competence in the field of education. The requirements for obtaining a Designated Emphasis in Education are the following:

Have a designated graduate adviser from among the faculty in education. This adviser will be in addition to the graduate adviser from the student's home department. The education adviser must serve on the student's qualifying examination committee and, as appropriate, may also serve on the student's dissertation committee.

Complete at least two (2) of the following three core courses in education:

EDUC 261, *Thinking, Learning, and Teaching*

EDUC 262, *Social and Cultural Context of Education*

EDUC 263, *Foundations of Educational Reform*

Complete additional courses as needed to total five graduate courses in education, no more than one of which may be a directed readings course (*Independent Studies*). Courses must be approved by the student's graduate adviser in education. Courses in other departments focused on education may be approved by petition to the Education Department's Doctoral Programs Committee.

Prepare a significant piece of writing in some area of education. This writing may take the form of a substantial position paper (seminar paper, QE paper, dissertation chapter,

master's thesis) grounded in the literature of educational research, as determined by the graduate adviser in education.

Education is an institutional field in which scholars from a wide variety of disciplines—including sociology, psychology, politics, economics, mathematics and science—have scholarly interests. A Designated Emphasis in Education enables graduate students from other departments to ground their work in theory and research on important issues in education.

The Education Department's core courses, EDUC 261 and 262, are offered every year; and EDUC 263 is offered biennially. The department typically offers six doctoral courses during each year across five concentrations: language, literacy, and culture; teachers and teacher development; mathematics and science education; learning and teaching, and social and cultural contexts of education. The Education Department annually admits 7-10 Ph.D. students, leaving adequate room for doctoral students from other departments to take courses in education.

Other Requirements

Students are required to attend the Education Department's colloquium series during their first and second years in the program.

The education Ph.D. program emphasizes teaching experience, and all students are required to complete one TAship or teaching internship in education prior to advancement to candidacy.

Students are required to complete a second-year project paper by the first day of fall quarter in year three.

Financial Support

Financial support for students includes a variety of fellowships, research assistantships, and teaching assistantships in the Education Department. Students may participate in research projects under the auspices of several interdisciplinary research centers, including the Center for Justice, Tolerance, and Community (CJTC), Chicano/Latino Research Center (CLRC), the Vocabulary Innovations in Education (VINE) project, The Teachers With Computers: Ward Annotations for Vocabulary Education (tecWAVE) project, Effective Science Teaching for English Language Learners (ESTELL) project, The Center for Collaborative Research for an Equitable California (CREC), and the Center for Educational Research in the Interest of Underserved Students (CERIUS).

For Further Information

Contact the doctoral adviser, by sending an e-mail to edphd@ucsc.edu or view the department's home page on the web at <http://education.ucsc.edu> where potential applicants can obtain full details about the programs.

Faculty and Professional Interests

Professor

MARGARET (GRETA) A. GIBSON, Emerita

JUNE A. GORDON

Urban comparative education; sociology of education; schooling and society in Japan, China, the U.K., and the U.S.A.; marginalized youth and economic conditions

JUDIT MOSCHKOVICH

Mathematics cognition and learning; student conceptions of linear functions; discourse in mathematics and science classrooms; everyday mathematical practices; and bilingual mathematics learners

RODNEY OGAWA

Educational leadership, educational reform, and the impact of social institutions on the structure of school organization

ART PEARL, Emeritus

TRISH STODDART

Teacher education, science education, educational reform

DAVID SWANGER, Emeritus

ROLAND G. THARP, Emeritus

C. GORDON WELLS

Language and literacy development, analysis of discourse in learning and teaching, inquiry-oriented curriculum; socio-cultural theory and education, collaborative action research

Associate Professor

DORIS ASH

Informal science learning, teacher professional development, science discourse in and out of the classroom

GEORGE BUNCH

Language and education in linguistically diverse settings, preparation of teachers for linguistic diversity, language policy, and bilingualism

RON GLASS

Moral and political philosophy and education, ideology and education, race and education, urban school reform

BRAD OLSEN

Teacher development (with emphasis on knowledge and identity), English education, and sociolinguistics

LUCINDA PEASE-ALVAREZ

Language and literacy development, language-minority education, bilingualism, informal learning

JUDITH SCOTT

Literacy and language learning; academic language; reading, writing, vocabulary development; teachers professional development through collaboration and inquiry

JEROME SHAW

Scientific inquiry, specifically examining the science education experiences of English language learners and their teachers; includes examining ways in which assessments in English measure content knowledge versus language proficiency

KIP TLLEZ

Preparation of teachers for linguistic and cultural diversity, second language learning, studies of the school curriculum, educational assessment

Assistant Professor

LORA BARTLETT

Educational policy and school reform, schools as workplaces for teachers, the conditions of teachers commitment

CYNTHIA CRUZ

Ethnography; community-based learning and pedagogies; decolonial feminist pedagogies; Chicana studies and epistemologies; U.S. Third World Feminisms; cultural studies and education

EDUARDO MOSQUEDA

Mathematics education of English learners; large-scale dataset quantitative analysis; urban education issues

Professor

CATHERINE R. COOPER (Psychology)

Cultural perspectives on child and adolescent development; linkages among families, peers, schools, and work; issues of diversity, ethnicity, and gender in identity; research, practice, and policy in university outreach programs; linking qualitative and quantitative research

BRUCE N. COOPERSTEIN (Mathematics)

Algebra, algebraic number theory

BARBARA ROGOFF (Psychology)

Human development in sociocultural activity; informal and formal arrangements for learning; adult/child and peer communication in families and schools in diverse cultural communities; learning through observation; cognitive development, especially problem solving, planning, and attention

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses**50A. CAL Teach 1: Science and Mathematics (2 credits).**

Introductory seminar exploring secondary students, teaching, and schools in the context of science and/or mathematics instruction. Concurrent participation in a secondary school internship required. Course material supports and enhances students' placement experiences. Prerequisite(s): Acceptance into CAL Teach and concurrent participation in a secondary school internship in a science or math classroom. Enrollment limited to 25. (General Education Code(s): PR-S.) *The Staff*

50B. CAL Teach 1: Mathematics (2 credits). F,W

Introductory seminar exploring secondary students, teaching, and schools in the context of mathematics instruction. Concurrent participation in a secondary school internship required. Course material supports and enhances students' placement experiences. Prerequisite(s): Acceptance into CAL Teach and concurrent participation in a secondary school internship in a math classroom. Enrollment limited to 25. (General Education Code(s): PR-S.) *The Staff*

50C. CAL Teach 1: Science (2 credits). F,W

Introductory seminar exploring secondary students, teaching, and schools in the context of science instruction. Concurrent participation in a secondary school internship required. Course material supports and enhances students' placement experiences. Prerequisite(s): Acceptance into CAL Teach and concurrent participation in a secondary school internship in a science classroom. Enrollment limited to 25. (General Education Code(s): PR-S.) *The Staff*

60. Introduction to Education: Learning, Schooling, and Society. F,W

Explores the foundations of learning and teaching, the social and political forces within schools and school systems in the U.S., and the educational policies and practices in culturally and linguistically diverse communities. (General Education Code(s): IS, E.) *L. Bartlett, D. Ash*

99. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Upper-Division Courses**100A. Cal Teach 2: Science and Mathematics (2 credits). F**

Examines students, schools, and science and/or mathematics instruction with emphasis on developing an instructional project aligned with state-mandated content standards. Concurrent participation in a secondary school internship required. Course content supports and enhances students' internship experience. (Formerly course 75A.) (General Education Code(s): W satisfied by taking this course and course 185L.) Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; course 50A, 50B, or 50C; and acceptance into the Cal Teach program. Enrollment restricted to sophomores, juniors, and seniors. Enrollment limited to 25. *The Staff*

100B. Cal Teach 2: Mathematics (2 credits). S

Examines students, schools, and mathematics instruction with emphasis on developing an instructional project aligned with state-mandated content standards. Concurrent participation in a secondary school internship required. Course content supports and enhances students' internship experience. (Formerly course 75B.) (General Education Code(s): W satisfied by taking this course and course 185L.) Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; course 50A, 50B, or 50C; and acceptance into the Cal Teach program. Enrollment restricted to sophomores, juniors, and seniors. Enrollment limited to 25. *The Staff*

100C. Cal Teach 2: Science (2 credits). S

Examines students, schools, and science instruction with emphasis on developing an instructional project aligned with state-mandated content standards. Student must concurrently participate in a K-12 school internship. Concurrent participation in a secondary school internship required. Course content supports and enhances students' internship experience. (Formerly course 75C.) (General Education Code(s): W satisfied by taking this course and course 185L.) Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; course 50A, 50B, or 50C; and acceptance into the Cal Teach program. Enrollment restricted to sophomores, juniors, and seniors. Enrollment limited to 25. *The Staff*

102. Education, Media, and Society. S

Focusing on ways the media (both news and the entertainment industry) portrays schools, teachers, and students to the public, investigates the way society views education, the way

education is presented in the media, and the way education is influenced by society. Enrollment restricted to juniors, seniors, or education minors. Enrollment limited to 50. (General Education Code(s): IM.) *B. Olsen*

104. Ethical Issues and Teaching. W

Emphasizes a philosophical exploration of the moral complexities of teaching. Students read theoretical investigations of these complexities, and examine case studies that pose difficult moral questions and illuminate the dilemmas of everyday life in classrooms. Course is grounded in a dialogical approach to learning. Enrollment restricted to juniors, seniors, or education minors. Enrollment limited to 50. *R. Glass*

115. K–12 Student Assessment. *

Provides an overview of educational testing. Appropriate use and interpretation of standardized, classroom achievement and special needs assessments are examined. Issues on fair testing of diverse populations of students are discussed within each topic area. Enrollment restricted to juniors, seniors, or education minors. Enrollment limited to 50. *The Staff*

120. The Arts in Schools: Aesthetic Education Theory and Practice. *

Explores the historical legacy of the arts within education; considers aesthetic education as an inter-arts philosophical and practical endeavor; studies alternatives to the current situation of the arts in education; develops theory, curricula and methods necessary to teach the arts. Addresses both elementary and secondary teaching in the arts. Meets third-course requirements. Enrollment restricted to juniors, seniors, or education minors. Enrollment limited to 50. (General Education Code(s): IM.) *B. Olsen*

125. Multicultural Children's Literature for Elementary Classrooms.

Offers opportunities for undergraduate and graduate students to learn about fundamental aspects of children's literature, increase their knowledge of range and quality of children's literature, enhance their understanding of multicultural children's literature, and develop ways to integrate children's literature into elementary- and middle-school curriculum areas. (Formerly *Introduction to Teaching Children's Literature in Grades K–8.*) Enrollment restricted to juniors, seniors, or education minors. Enrollment limited to 50. *J. Scott*

128. Immigrants and Education.

Research and theory on the education of immigrant students. Major topics include the Americanization movement and America's changing demography, identity maintenance and change, home-school relations, and educators' roles in meeting the needs of culturally and linguistically diverse student populations. Enrollment restricted to juniors, seniors, or education minors. Enrollment limited to 50. (General Education Code(s): ER, E.) *M. Gibson*

135. Gender and Education. W

Addresses the changing but continuing patterns of unequal expectations, opportunities, and treatment throughout the educational system for all students, female and male, who do not match a standard model of gender performance. Enrollment restricted to juniors, seniors, or education minors. Enrollment limited to 50. *C. Cruz*

141. Bilingualism and Schooling. W

Introduces participants to issues related to the schooling of students who speak languages other than or in addition to English. Uses a multidisciplinary perspective to understand the circumstances these students face in schools and considers approaches and policies that best meet their needs. Enrollment restricted to juniors, seniors, or education minors. Enrollment limited to 50. (General Education Code(s): E.) *L. Pease-Alvarez*

160. Issues in Educational Reform. S

Explores a variety of perspectives on key educational policy issues including desegregation, bilingual education, affirmative action, charter schools, national and state curriculum standards, student assessment and the assessment and certification of teachers. Enrollment restricted to juniors, seniors, or education minors. Enrollment limited to 50. *L. Bartlett*

164. Urban Education. F

Focuses on urban schooling through critical readings, fieldwork, group projects, and extensive writing. Students explore how socialization, marginalization, and assimilation impede or support academic success, how class intersects with "race", and how "culture" affects one's orientation to education. Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements. Enrollment restricted to juniors, seniors, or education minors. Enrollment limited to 50. Satisfies American History and Institutions Requirement. (General Education Code(s): W, E.) *The Staff*

170. East Asian Schooling and Immigration. F

Focuses on an historical and contemporary study of education in Japan, China, Korea, Hong Kong, and Taiwan, and the adaptation to schooling in the U.S. of immigrant families from those cultures. Topics include the effects on schooling of language acquisition, religion and cultural practices, family patterns, socioeconomic status, career aspirations, and parental expectations. (Formerly *Schools and Asian Cultures.*) Prerequisite(s): Enrollment restricted to juniors, seniors, or education minors. Enrollment limited to 50. (General Education Code(s): CC.) *J. Gordon*

171. South and Southeast Asian Schooling and Immigration. S

Historical and contemporary study of education in India, Vietnam, Cambodia, Laos, and the Philippines, and the adaptation to schooling in the U.S. of immigrant families. Topics include: effects of language acquisition; religion and cultural practices; family patterns; socioeconomic

status; career aspirations; and parental expectations. Prerequisite(s): Enrollment restricted to juniors, seniors, or education minors. Enrollment limited to 50. (General Education Code(s): CC.) *J. Gordon*

173. Seminar in Critical Pedagogy. F

Philosophical and pedagogical exploration of relationships among oppression, power, society, education, and change. Examines how history, power, economics, and discrimination shape societal perspectives and schooling practices, and considers ways to transform education. Enrollment restricted to juniors, seniors, or education minors. Enrollment limited to 50. May be repeated for credit. *R. Glass*

177. Teaching Culturally and Linguistically Diverse Students Math and Science. W

Examines equity issues in the learning and teaching of math and science in culturally and linguistically diverse school settings. Draws on multicultural, bilingual, and math/science education perspectives. Intended for undergraduate majors considering a K-12 teaching career. Satisfies an elective requirement for the minor in education program. Prior completion of course 180 is advised. Enrollment restricted to juniors, seniors, or education minors. Enrollment limited to 50. (General Education Code(s): ER.) *E. Mosqueda*

180. Introduction to Teaching. F,W

Designed to encourage students to think about teaching in new ways. Assumptions about teaching and schooling are examined as well as considering what it takes to teach so that children learn and understand. Not a course in how to teach, but an opportunity to reconsider what teaching should try to accomplish and what kinds of learning teachers should foster. Practicum in the schools of 30 hours per quarter required. Enrollment restricted to juniors, seniors, or education minors. Enrollment limited to 120. *The Staff*

181. Race, Class, and Culture in Education.

Examines the schooling experience and educational attainment of racial/ethnic minority students in the U.S. Focuses primarily on domestic minorities. Addresses issues of variability between and within minority groups and the role of cultural, structural, and psychological factors in the educational attainment of these students. Enrollment restricted to juniors, seniors, or education minors. Enrollment limited to 50. (General Education Code(s): ER, E.) *The Staff*

182. American Teacher. *

Examines multiple and competing images of "teachers" and, more specifically, notions of the "good teacher"; also explores social, cultural, historical, and policy context of teachers' work in the U.S. Enrollment restricted to juniors, seniors, or education minors. Enrollment limited to 50. *The Staff*

183. Children's Mathematical Thinking. S

Provides an introduction to children's mathematical thinking and an overview of major themes, issues, and questions that researchers in mathematics education have studied in relation to children's mathematical thinking. Prerequisite(s): course 60. Enrollment restricted to junior and senior education minors. Enrollment limited to 50. *J. Moschkovich*

185B. Introduction to Teaching Mathematics. W

Provides an introduction to principles and practices for teaching mathematics in secondary classrooms; examines theoretical and practical approaches to teaching mathematics; provides an introduction to national and state standards and an overview of mathematics curricula and current issues in mathematics teaching. Enrollment restricted to majors in mathematics, physics, Earth sciences, computer science, computer engineering, and electrical engineering or to STEM minors. Enrollment limited to 50. *J. Moschkovich*

185C. Introduction to Teaching Science. W

An introduction to the principles and practices for teaching science in secondary classrooms. Course examines theoretical and practical approaches to teaching science, provides an introduction to national and state standards and an overview of science curricula and current issues in science teaching. Enrollment restricted to juniors, seniors, or education minors. Enrollment limited to 50. *D. Ash*

185L. Introduction to Teaching: Cal Teach 3 (3 credits). W

Supplements theoretical and practical introduction to the teaching of science or mathematics with subject-pedagogical approaches. Concurrent participation in an advanced Cal Teach internship provides context to apply theory and practical techniques. (Formerly course 180A.) (General Education Code(s): W satisfied by taking this course and one of the following: courses 100A, 100B, and 100C.) Prerequisite(s): satisfaction of the Entry Level Writing and Composition requirements; course 50A, 50B, or 50C; previous or concurrent enrollment in courses 100A, 100B, or 100C; 185B or 185C. Enrollment restricted to juniors and seniors or education minors. Enrollment limited to 30. *The Staff*

187. Cognition and Instruction. *

Addresses the question, "How do people learn?" by examining theories of learning and research on cognition, learning, and instruction. Enrollment restricted to juniors, seniors, or education minors. Enrollment limited to 60. *C. Wells*

194. Group Projects. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

194F. Group Projects (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198. Independent Field Study. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198F. Independent Field Study (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199. Tutorial. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

199F. Tutorial (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

200. Beginning Student Teaching. F

A required course that introduces students to the diverse cultural and linguistic settings of today's classrooms. Classroom practices, instructional strategies, and analysis are emphasized. First course in the student teaching placement series. Placements are used to examine and apply teaching methods while developing classroom management skills. Class meetings include discussion and demonstration of teaching methods. (Formerly Applied Classroom Analysis and Methods: Beginning Student Teaching.) Enrollment restricted to MA/credential students. *The Staff*

201. Intermediate Student Teaching. W

Designed to provide students enrolled in the UCSC teacher education program a coherent, integrated, pre-professional experience in public school classrooms. Students assume part-time student teaching responsibilities totalling 14–16 hours per week under the direct supervision of an exemplary classroom teacher. Weekly seminars and ongoing supervision by department staff are required. Prerequisite(s): course 200. Enrollment restricted to MA/credential students. *The Staff*

201A. Intermediate Student Teaching: Single Subject. W

Provides advanced pre-professional experience for single subject teaching candidates who progressively assume full-time responsibility for public school student teaching beginning in winter quarter. Taken concurrently with course 201. Weekly supervision and seminars with teacher supervisors are required. Prerequisite(s): course 200. Enrollment restricted to MA/credential students. *The Staff*

202A. Advanced Student Teaching. S

Designed for students who have extensive field and course experience in education, and who wish to qualify for the single-subject or multiple-subject teaching credential by undertaking a quarter of full-time, supervised student teaching. Prerequisite(s): course 201. Enrollment restricted to M.A./credential students. *The Staff*

202B. Advanced Student Teaching. S

Designed for students who have extensive field and course experience in education, and who wish to qualify for the single-subject or multiple-subject teaching credential by undertaking a quarter of full-time, supervised student teaching. Prerequisite(s): course 201. Enrollment restricted to M.A./credential students. *The Staff*

202C. Advanced Student Teaching. S

Designed for students who have extensive field and course experience in education, and who wish to qualify for the single-subject or multiple-subject teaching credential by undertaking a quarter of full-time, supervised student teaching. Prerequisite(s): course 201. Enrollment restricted to M.A./credential students. *The Staff*

203. Methods of English Language Development: Multiple Subject Credential. W

This course will help future educators develop a practical theory for teaching English in the elementary and secondary schools to students who speak other languages. Topics include current trends in the field, language assessment, and the design of instructional units. Enrollment restricted to MA/credential students. *K. Tellez*

204. Methods of English Language Development: Single Subject. F

Course helps future educators develop a practical theory for teaching English in the elementary and secondary schools to students who speak other languages. Topics include current trends in the field, language assessment, and the design of instructional units. Enrollment restricted to MA/credential students. *G. Bunch*

205. Teaching, Learning, and Schooling in a Diverse Society: Multiple Subject. *

Required for master's students in education. Three basic units comprise the subject matter: teaching/learning, with such topics as development, learning, pedagogy, and socialization theories; second, schooling, as the context of teaching/learning both in its existent structures and its reform movements; third, the sociocultural context in which educational institutions exist, topics such as cultural and historical forces, political and economic condition, family, and community structures. Enrollment restricted to MA/credential students. *C. Wells*

206. Teaching, Learning, and Schooling: Single Subject. *

Required for master's students in education. Three basic units comprise the subject matter: teaching/learning, with such topics as development, learning, pedagogy, and socialization theories; schooling, as the context of teaching/learning both in its existent structures and its reform

movements; and the sociocultural context in which educational institutions exist, including topics such as cultural and historical forces, political and economic conditions, family, and community structures. Enrollment restricted to MA/credential students. Enrollment limited to 30. *P. Stoddart*

207. Social Foundations of Education. *

A sustained inquiry into the social, political, economic, and historical foundations of schools with an emphasis on community attitudes toward education. Student narratives of engagement and resistance will provide a basis for insights and interventions useful to educators. Enrollment restricted to MA/credential students. *C. Cruz*

208. Portfolio Development (2 credits). *

Provides student and faculty adviser with time to confer over the completion of the required portfolio. Enrollment restricted to MA/credential students. *The Staff*

209. Introduction to Technology in Schools (2 credits). *

This course is required for prospective teachers. It provides an overview of the use of technology in the K–12 classroom. Topics covered include using the Internet and the web, building a web page, and using resources for educators on the web. Students will review software applications in a particular content area, use technology to develop lesson plans, and create integrated, thematic curricula in which technology is utilized to promote higher-order thinking, creativity, and problem-solving. Enrollment restricted to MA/credential students. *The Staff*

210. Health, Safety, and Community (2 credits). *

Addresses the preparation of teachers for creating a supportive, healthy environment for student learning. Covers topics related to physical, emotional, and social health. Enrollment restricted to MA/credential students. *The Staff*

211. Topics in Elementary Education: Teaching Special Populations (2 credits). F

Addresses the preparation of teachers for meeting needs of special populations within the general education setting. Covers basic knowledge, skills, and strategies. Enrollment restricted to MA/credential students. *The Staff*

212A. Bilingualism and Biliteracy: History, Politics, Theory, and Practice (2 credits). F

Taught in Spanish. Prepares future bilingual teachers to be knowledgeable about history, politics, theory, and practices related to bilingual instructional programs. Topics: second-language acquisition, bilingual-program models, equity pedagogy. Enrollment restricted to MA/credential students. *The Staff*

212B. Bilingualism and Biliteracy: Language, Literacy and Content Instruction (2 credits). W

Taught in Spanish. Prepares future bilingual teachers to teach language, literacy, and the content areas in ways that address the needs of culturally and linguistically diverse students. Topics: literacy in two languages; academic language; assessment. Enrollment restricted to MA/credential students. *The Staff*

212C. Bilingualism and Biliteracy: Community and School Partnerships (2 credits). S

Taught in Spanish. Provides opportunities for future bilingual teachers to develop culturally relevant practices that build collaboration between the school, students' families, and community. Topics: Latino culture and history, school-parent communication. Enrollment restricted to MA/credential students. *The Staff*

217. Topics in Elementary Education: Physical Education (2 credits). *

Examines pedagogical understanding in teaching physical education. Introduces candidates to theoretical and research basis in physical education and content standards and frameworks. Also investigates and presents instructional practices. Enrollment restricted to MA/credential students. *The Staff*

218. Topics in Elementary Education: Visual Arts (2 credits). *

Examines pedagogical understanding in teaching visual arts. Introduces candidates to theoretical and research basis for teaching visual arts and content standards and frameworks. Also investigates and presents instructional practices. Enrollment restricted to MA/credential students. *The Staff*

219. Topics in Elementary Education: Performing Arts (2 credits). *

Examines pedagogical understanding in teaching performing arts. Introduces candidates to theoretical and research basis for teaching performing arts and content standards and frameworks. Also investigates and presents instructional practices. Enrollment restricted to MA/credential students. *The Staff*

220. Reading and Language Arts for Elementary Classrooms. F

This course provides both a theoretical and practical foundation for literacy instruction, emphasizing reading and language arts instruction in grades K–8. Interactive instruction and field experience will be used to examine curricula, methods, materials, and literacy evaluation. Enrollment restricted to MA/credential students. *(F) L. Pease-Alvarez*

221. Science Learning and Teaching in Elementary Classrooms. W

Examines constructivist and sociocultural approaches to the learning and teaching of science in elementary classrooms, including beliefs about the nature of science and theories of how children learn science. Provides a critical overview of curricula, instructional theories, and multiple

approaches to teaching the "big ideas" in elementary science. Students are billed a materials fee. Enrollment restricted to MA/credential students. *J. Shaw*

222. Mathematics Learning and Teaching in Elementary Classrooms. F

This course is required for the multiple subject credential. Examines constructivist and sociocultural approaches to the learning and teaching of mathematics in elementary classrooms, including the nature of mathematics and theories of how children learn mathematics. Provides an introduction to mathematics teaching standards and a critical overview of curricula, instructional theories, and multiple approaches to teaching the "big ideas" in elementary mathematics. Enrollment restricted to MA/credential students. *The Staff*

223. Writing Across the Curriculum in Middle and Secondary Classrooms (2 credits). *

Reviews issues of literacy and writing in secondary content areas. Students write in several genre and prepare lesson plans for teaching writing within the discourse of their respective curricular area. Concurrent enrollment in course 225 is required; enrollment restricted to MA/credential students. *The Staff*

225. Reading Across the Curriculum in Middle School and Secondary. *

Provides a theoretical and practical foundation for teaching reading within content area instruction in middle school and secondary classrooms. Field experiences and interactive instruction will facilitate learning about strategies, curricula, methods, materials, and observation. Intended for students pursuing a single subject credential. Enrollment restricted to MA/credential students. *The Staff*

226. English Teaching: Theory and Curriculum. F

Required for the single subject English credential student. Examines sociocultural approaches to the learning and teaching of English in secondary classrooms, including theories of how children learn English language, literature, and composition. Enrollment restricted to MA/credential students. *The Staff*

227. English Teaching for Secondary Classrooms. W

Prepares English single subject credential candidates for student teaching in winter and spring. Course focuses on developing curricula and strategies in the content area. Through classroom placements, students observe and apply techniques to develop curriculum units used in student teaching. Enrollment restricted to MA/credential students. *L. Baker*

228. Math Education: Research and Practice. F

Examines research on the learning and teaching of mathematics. Topics include the nature of mathematics cognition and learning, how children learn mathematics, mathematical discourse, and perspectives on addressing diversity in mathematics classrooms. Course is required for M.A./credential students in secondary (single subject) mathematics and of Ph.D. students in mathematics education. Enrollment restricted to MA/credential students. *J. Moschkovich*

229. Teaching Mathematics in the Secondary Classroom. W

Examines constructivist and sociocultural approaches to teaching mathematics in the secondary classroom. Course will provide an introduction to mathematics teaching standards and a critical overview of curricula, instructional theories, and multiple approaches to teaching the "big ideas" in secondary mathematics. Required for mathematics secondary credential. Prerequisite(s): course 228. Enrollment restricted to MA/credential students. *A. England*

230. Science Education: Research and Practice. F

Examines theoretical approaches to the learning and teaching of science including the nature of scientific knowledge, theories of how children learn science, approaches to scientific discourse, and perspectives on addressing diversity in science classrooms. Course is required for single subjects science credential. Enrollment restricted to MA/credential students. *D. Ash*

231. Teaching Science in the Secondary Classroom. W

Examines constructivist and sociocultural approaches to teaching science in secondary classrooms. Course will provide a critical overview of curricula, instructional theories, and multiple approaches to teaching the "big ideas" in science. Students are billed a materials fee. Enrollment restricted to MA/credential students. *The Staff*

232. Social Science: Theory and Curriculum. F

Required for the single subject social science credential student. Tracks both the implicit and explicit connections between theory and practice, illustrating that theory suggests best practice while practice informs theory-formation and testing. Enrollment restricted to MA/credential students. *The Staff*

233. Social Science Teaching for Secondary Classrooms. W

Prepares social science single subject credential candidates for student teaching in winter and spring. Course focuses on developing curricula and strategies in the content area. Through classroom placements, students observe and apply techniques to develop curriculum units that are used in student teaching. Enrollment restricted to MA/credential students. *E. Dyer*

235. Introduction to Educational Inquiry. F

Addresses foundational knowledge needed to understand and conduct educational inquiry and research. Topics include epistemology in the human sciences, philosophical foundations of modern research strategies, and general classes of research investigations in education. Enrollment restricted to graduate students. Enrollment limited to 15. *R. Ogawa*

236. Quantitative Methods in Educational Research. W

Promotes intermediate-level knowledge of quantitative research methods in educational settings. Students learn the foundations of quantitative data theory, general logic behind statistical inference, and specific methods of data analysis in educational contexts. Enrollment limited to 15. *E. Mosqueda*

237. Qualitative Research Methods. W

Graduate level introduction to qualitative methods, with special attention to ethnographic research on schooling. Moves from overview of different methods, through examination of selected studies, to discussion of issues in research design, data collection, analysis, and writing. Enrollment restricted to graduate students; priority is given to graduate students in education. Enrollment limited to 12. *L. Bartlett*

250. Teacher Thinking, Teacher Knowledge, and Teacher Identity. *

This doctoral seminar explores recent research on teacher thinking, teacher knowledge, and teacher identity to examine interrelationships among teachers' perspectives, preparation experience, biographies, work contexts, career shapes, professional practices, and effects on student achievement. Enrollment restricted to graduate students. Enrollment limited to 15. *B. Olsen*

251. Analysis of Activity and Interaction in Educational Settings. *

Analyzes topics, which vary systematically from year to year, including analysis of classroom interaction, video recording and transcription, coding and analysis of discourse data, and software programs for qualitative analysis. Prerequisite(s): course 237. Enrollment restricted to graduate students. Enrollment limited to 12. May be repeated for credit. (W) *C. Wells*, (S) *B. Olsen*

252. Hermeneutics of Education. *

Investigates philosophical hermeneutics to deeply interrogate education. Addresses such questions as: What is hermeneutics? How is education an hermeneutic enterprise? How does knowing hermeneutics deepen the ability to engage in education research? Enrollment restricted to graduate students. Enrollment limited to 12. *B. Olsen*

253. Research Design in Mathematics and Science Education. *

Examines multiple approaches to designing research studies in mathematics and science education. Introduces multiple types of research designs and principles used by education researchers examining mathematics/science learning and teaching. Enrollment restricted to graduate students. Enrollment limited to 15. *J. Moschkovich*

254. Critical and Alternative Paradigms in Education Research. *

Examines theoretical foundations of critical and alternative research paradigms commonly used in education, including critical ethnography, participatory research, counter-storytelling, and social-design experiments. Examines critiques of qualitative/quantitative research from feminist and critical theory; surveys how such critiques have informed the development of new paradigms in education research; and explores the benefits and limits of selected alternative paradigms. Enrollment restricted to graduate students. Enrollment limited to 15. *The Staff*

255. Intermediate Quantitative Methods. *

Focuses on the applied statistical modeling and analysis of educational data (large-scale data sets), not on the mathematical foundations of science. Students learn to address quantitative research questions using general linear model (GLM) statistical methods. GLM includes regression analysis, analysis of variance (ANOVA), and analysis of covariance (ANCOVA). Students learn statistics by doing statistics. Prerequisite(s): introductory statistics course (course 236 or equivalent). Enrollment restricted to graduate students. Enrollment limited to 15. *E. Mosqueda*

256. Advanced Qualitative Analysis in Education Research. S

Emphasizes the analysis of qualitative data in education research and introduces interpretive analytical approaches for its use with empirical data, the use of coding software for ethnographic analysis, and video recording and transcription. Enrollment restricted to graduate students. Enrollment limited to 15. May be repeated for credit. *L. Bartlett*

261. Thinking, Learning, and Teaching. F

Examines multiple theoretical perspectives on thinking, learning, and teaching; the development of the whole person in a variety of cultural contexts; the roles thinking, learning, and teaching play in that development; and how researchers' and educators' conceptions shape instruction. Enrollment restricted to graduate students. Enrollment limited to 15. *C. Wells*

262. Social and Cultural Context of Education. W

Application of anthropological and sociological theories to study of education. Examines social, cultural, and linguistic context of schooling with particular attention to role of race, class, culture, power, and language in influencing schooling outcomes. Enrollment restricted to graduate students. Enrollment limited to 15. *C. Cruz*

263. Foundations of Educational Reform. S

Provides students with multiple analytic perspectives from which to examine important educational issues by analyzing political, historical, and philosophical origins of educational reform in the U.S. and internationally. Enrollment restricted to graduate students. Enrollment limited to 15. *R. Ogawa*

264. Research on Teacher Development and Teacher Education. *

Addresses personal and professional development of teachers. Explores models of teacher

education with specific attention to methods and processes by which teachers can be better prepared to work with culturally and linguistically diverse students. Enrollment restricted to graduate students. Enrollment limited to 15. *K. Tellez*

266. Program Evaluation and Action Research in Educational Reform. *

Overview of the purpose of and practice in program evaluations in a variety of contexts with a specific focus on educational settings. Students learn the techniques of program evaluation; the historical and theoretical context of program evaluations, including its relation to experimental research; and how action research can be used in conducting field-based evaluations. Students should be familiar with basic quantitative and qualitative methodologies. Enrollment restricted to graduate students. Enrollment limited to 15. *K. Tellez*

268. Schools, Communities, and Families. *

Examines the nexus of schools, communities, and families, and, in particular, how collaboration across institutional boundaries can facilitate school and community reform. Enrollment restricted to graduate students. Enrollment limited to 15. *R. Glass*

269A. First-Year Doctoral Proseminar (2 credits). F

This three-quarter seminar supports professional development for first-year doctoral students. Students develop essential skills for success as scholars, discuss issues in educational research and practice, and are introduced to research by Education Department faculty. Enrollment restricted to education graduate students. Enrollment limited to 15. *G. Bunch*

269B. First-Year Doctoral Proseminar (2 credits). W

This three-quarter seminar supports professional development for first-year doctoral students. Students develop essential skills for success as scholars, discuss issues in educational research and practice, and are introduced to research by Education Department faculty. Enrollment restricted to education graduate students. Enrollment limited to 15. *G. Bunch*

269C. First-Year Doctoral Proseminar (2 credits). S

This three-quarter seminar supports professional development for first-year doctoral students. Students develop essential skills for success as scholars, discuss issues in educational research and practice, and are introduced to research by Education Department faculty. Enrollment restricted to education graduate students. Enrollment limited to 15. *G. Bunch*

270A. Second-Year Professional Development Seminar (2 credits). F

Three-quarter seminar supports professional development for second-year doctoral students. Activities include preparation of research and conference proposals, presentation of second-year project findings, and attendance at department colloquia. Enrollment restricted to second-year Ph.D. students. Enrollment limited to 12. *J. Scott*

270B. Second-Year Professional Development Seminar (2 credits). W

Three-quarter seminar supports professional development for second-year doctoral students. Activities include preparation of research and conference proposals, presentation of second-year project findings, and attendance at department colloquia. Enrollment restricted to second-year Ph.D. students. Enrollment limited to 12. *J. Scott*

270C. Second-Year Professional Development Seminar (2 credits). S

Three-quarter seminar supports professional development for second-year doctoral students. Activities include preparation of research and conference proposals, presentation of second-year project findings, and attendance at department colloquia. Enrollment restricted to second-year Ph.D. students. Enrollment limited to 12. *J. Scott*

271. Theoretical Perspectives on Learning and Using Literacy. *

Examines theoretical perspectives, educational issues, and scholarship related to use and development of literacy among diverse populations, particularly those who have not fared well in U.S. schools. Enrollment restricted to graduate students. Enrollment limited to 12. *L. Pease-Alvarez*

272. Sociolinguistics in Education. S

Investigates discipline of sociolinguistics and explores actual ways in which sociolinguistics has become a useful lens for better understanding teaching, learning, and schooling. Conduct own sociolinguistic analyses of data collected for culminating project. Enrollment restricted to graduate students. Enrollment limited to 15. *B. Olsen*

273. Language Acquisition, Bilingualism, and Education. W

Foundations of first- and second-language acquisition and bilingualism with emphasis on implications for education in linguistically diverse settings. Topics include linguistic, cognitive, sociolinguistic, and sociocultural approaches to development of languages and the nature of individual and societal bilingualism. Enrollment restricted to graduate students. Enrollment limited to 15. *G. Bunch*

274. Language and Power in Education. *

Examines relationships between sociopolitical struggles and language/language practices. Students study ways in which Marxism, critical theory, and post structuralism have represented links between language and power, and investigate contemporary studies of language and power in education. Enrollment restricted to graduate students. Enrollment limited to 15. *B. Olsen*

276. Theory and Practice of Writing. *

Explores first and second language-writing theory, research, and practice, especially relating to language minority students and others considered academically under-prepared. Focuses on educational settings from pre-school settings including families and communities. Enrollment restricted to graduate students. Enrollment limited to 15. *G. Bunch, L. Pease-Alvarez*

277A. Second-year Doctoral Proseminar (2 credits). *

This three-quarter seminar supports professional development for second-year doctoral students as they prepare their qualifying materials and begin dissertation work. Prerequisite(s): courses 269 A-B-C. Enrollment restricted to graduate students. Enrollment limited to 20. *The Staff*

277B. Second-year Doctoral Proseminar (2 credits). *

This three-quarter seminar supports professional development for second-year doctoral students as they prepare their qualifying materials and begin dissertation work. Prerequisite(s): courses 269 A-B-C. Enrollment restricted to graduate students. Enrollment limited to 20. *The Staff*

277C. Second-year Doctoral Proseminar (2 credits). *

This three-quarter seminar supports professional development for second-year doctoral students as they prepare their qualifying materials and begin dissertation work. Prerequisite(s): courses 269 A-B-C. Enrollment restricted to graduate students. Enrollment limited to 20. *The Staff*

278. Critical Exploration of Reading Theory and Practice. *

Doctoral seminar that examines historical and current research on reading processes and instructional practices. Intensive study of factors affecting the development of proficient, engaged, and reflective readers who can acquire new knowledge from text. Enrollment restricted to graduate students. Enrollment limited to 15. *J. Scott*

280. Academic Language. F

Considers and critiques conceptualizations of the language used for academic pursuits, from the early years of schooling to higher education. Focuses on implications for research and practice related to the education of students in linguistically diverse schools and societies. Enrollment restricted to graduate students. Enrollment limited to 15. *J. Scott*

281. Conceptual Change in Science and Mathematics. *

Examines approaches in cognitive science, mathematics education, and science education to documenting student conceptions in science and mathematics, defining conceptual change, and describing relationship between conceptual change and learning with understanding. Enrollment restricted to graduate students. Enrollment limited to 12. *J. Moschkovich*

282. Informal Learning in Sciences and Mathematics. *

Explores research on learning outside of school in multiple settings such as museums, after-school clubs, aquariums, workplaces, and homes. Readings draw from multiple fields and disciplines, including cognitive psychology, cognitive anthropology, cognitive science, education, museum education and evaluation, science, and mathematics education. Examine theoretical approaches to describing and understanding how people learn science and mathematics outside of school, empirical studies documenting learning in multiple non-school settings, and diversity issues in out-of-school settings. Enrollment restricted to graduate students. Enrollment limited to 15. *D. Ash*

283. Equity and Social Justice in Mathematics and Science Education. *

Examines the theory, research, policy and practice of social justice and equity in mathematics and science education in local, national, and international contexts. Emphasizes the promotion of equity and critical mathematics and science literacy in schools and communities. Enrollment restricted to graduate students. *J. Shaw*

284. Gender in Mathematics and Science Education.

Explores basic aspects of gender in the fields of mathematics and science education. Discusses historical trends, current dilemmas, and how science and mathematics block or enable access for women. Enrollment restricted to graduate students. Enrollment limited to 15. *D. Ash*

285. Culture and Learning. F

Examines multiple approaches to the study of the relation between culture and learning. Readings include historical and contemporary perspectives from cognitive science, cognitive anthropology, cross-cultural psychology, cultural psychology, and socio-cultural theories as frameworks for the study of culture and learning. Enrollment restricted to graduate students. Enrollment limited to 15. *J. Moschkovich*

286. Special Topics in Math and Science Education. *

Focuses on particular issues of theoretical importance to research in mathematics and science education. Topics vary from year to year. Particular issues in cognition, learning, teaching, curriculum, and assessment in mathematics and science education may be covered. Enrollment restricted to graduate students. Enrollment limited to 15. May be repeated for credit. *J. Moschkovich, D. Ash, J. Shaw*

287. Issues in Educational Assessment. S

Familiarizes students with the basic concepts of educational assessment and explores issues related to the design and implementation of educational assessment as well as the application of educational assessment in educational research. Enrollment restricted to graduate students. Enrollment limited to 12. *J. Shaw*

288. Ethnographies of Education. F

Offers opportunity to critique a range of book-length ethnographic studies of education focusing on relationship between culture, learning, and schooling in the U.S. with comparative studies from other countries. Enrollment restricted to graduate students. Enrollment limited to 12. *M. Gibson*

289. School Organization. *

Applies multiple perspectives drawn from organizational theory, highlighting important aspects of organization of schools, including their operational environment, instructional organization, and professional and bureaucratic dimensions. Enrollment restricted to graduate students. Enrollment limited to 12. *R. Ogawa*

290. CHAT and Educational Practice and Research. *

Introduction to cultural-historical activity theory (CHAT) based on work of Vygotsky, Bakhtin, and contemporary developments of their ideas. Explores the utility of CHAT as a framework for thinking about educational practice and research. Enrollment restricted to graduate students. Enrollment limited to 15. *C. Wells*

291. Globalization and Transnationalism in Education. *

Examines educational access and advancement in several nations affected by globalization, national policies, and localized identity and opportunity structures. Attention to language and cultural expectations relevant to research in international contexts and how this knowledge provides reflection on the American condition. (Formerly "Comparative and International Education.") Enrollment restricted to graduate students. Enrollment limited to 15. *J. Gordon*

292. Ideology and Education. *

Philosophical study of the theory of ideology from Marx to the present and how ideologies (racism, sexism, classism, linguisticism, abilityism) become embodied, reproduced, resisted, and transformed (and particularly the role of education therein). Enrollment restricted to graduate students. Enrollment limited to 22. *R. Glass*

293A. Research Apprenticeship (2 credits). F,W,S

Research apprenticeship under guidance of faculty member during first or second year of doctoral studies. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

293B. Research Apprenticeship. F,W,S

Research apprenticeship under guidance of faculty member during first or second year of doctoral studies. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

294. Second-Year Research Project. F,W,S

Doctoral students work with faculty advisors to plan, carry out, and write up small independent research project during second year of graduate studies. Students submit petition to sponsoring agency. Enrollment restricted to graduate students. May be repeated for credit. *The Staff*

295. Critical Theories of Education. *

Investigates critical theories in education. Situates the themes against and within critical theory and philosophic foundations of Paulo Freire's theory of liberation education. Elaborates these themes within the discourses on critical race theory and education, and feminism and education. Enrollment restricted to graduate students. Enrollment limited to 15. *R. Glass*

296. Educational Policy and the Context of Teachers' Work. *

Focuses on both the conceptual and methodological developments in the study of policy and on the research relation to the policy context of teachers' work. Enrollment restricted to graduate students. Enrollment limited to 12. *L. Bartlett*

297. Independent Study. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

297F. Independent Study (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

299. Thesis Research. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Baskin School of Engineering

The Baskin School of Engineering has a high-technology focus incorporating programs and curricula that educate students to meet the changing demands of society and a high-technology global marketplace. The school offers a stimulating academic environment that provides a foundation for professional growth as well as a lifetime of learning. The Baskin School's programs and courses prepare students for the human aspects, as well as the technical challenges, of careers in engineering, computer science, and bioinformatics. The Baskin School of Engineering includes the Department of Applied Mathematics and Statistics, the Department of Biomolecular Engineering, the Department of Computer Engineering, the Department of Computer Science, and the Department of Electrical Engineering. The Department of Technology and Information Management is awaiting approval.

Graduate Study

The Baskin School of Engineering offers 12 graduate programs designed to prepare students for advanced study and research in major areas of biomolecular, computer, and electrical engineering, as well as computer science and statistics and stochastic modeling:
Biomolecular engineering and bioinformatics master of science (M.S.) and doctor of philosophy (Ph.D.)

Computer engineering M.S. and Ph.D.

Computer science M.S. and Ph.D.

Electrical engineering M.S. and Ph.D.

Statistics and applied mathematics M.S. and Ph.D.

Technology and information management M.S. and Ph.D.

These programs are described in subsequent sections. The aim of these programs is to develop professionals who can address the complex scientific and technological problems of today and tomorrow.

Undergraduate Study

The School of Engineering offers 12 undergraduate degree programs in the following majors.

Bioengineering bachelor of science (B.S.)

Bioinformatics B.S. or combined B.S./Graduate

Computer engineering B.S. or combined B.S./M.S.

Computer science bachelor of arts (B.A.) and B.S.

Computer science: computer game design B.S.

Electrical engineering B.S.

Network and digital technology B.A.

Robotics engineering B.S.

Technology and information management B.S.

Bioengineering. The bioengineering program prepares graduates for a rewarding career at the interfaces between engineering, medicine and biology. UCSC bioengineering graduates will have a thorough grounding in the principles and practices of bioengineering and the scientific and mathematical principles upon which they are built; they will be prepared for further education (both formal and informal) and for productive employment in industry. The program includes a broad range of courses in the sciences, engineering, ethics, and other topics, and is co-sponsored by the Departments of Biomolecular Engineering, Computer Engineering, Electrical Engineering, and Molecular, Cell and Developmental Biology.

Bioinformatics. The bioinformatics curriculum combines mathematics, the physical sciences, computer science, and engineering to explore and understand biological data from high-throughput experiments, such as genome sequencing and gene expression chips. The immense growth of biological information stored in computerized databases has led to a critical need for people who can understand the languages, tools, and techniques of mathematics, science, and engineering. The undergraduate bioinformatics degree program prepares students for graduate school or a career in the fast-paced pharmaceutical or biotechnology industries.

Computer Engineering. The computer engineering curriculum focuses on making digital systems that work. It overlaps with computer science on one end (software systems) and with electrical engineering on the other (digital hardware). The emphasis of our program is on design rather than analysis—on making things work, rather than on explaining the abstract theory of computation or electronics. The program's emphasis on problem solving provides both excellent training for future engineers and a strong foundation for graduate study. The computer engineering B.S. program is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET). The combined B.S./M.S. program provides an opportunity for outstanding undergraduates to begin advanced study and earn both degrees in five years.

Computer Science. The computer science curriculum has options that include topics in hardware and software, giving students a solid grounding in both theoretical and practical aspects of computer technology and computer usage. The bachelor of arts focus is designed to give students a solid grounding in both theoretical and practical topics in computer science, computer engineering, and mathematics while leaving flexibility for a broad program of study, including many courses outside of science and engineering. The bachelor of science curriculum has a stronger concentration in the sciences, with more courses in computer science and computer engineering, as well as courses in physics or chemistry. Students become proficient in many areas, with a good academic foundation for various careers in the software industry, as well as preparation for graduate school.

Computer Science: Computer Game Design. The computer game design curriculum is a four-year interdisciplinary program that focuses on the technical, dramatic, and artistic elements of computer games. The program provides a rigorous education in computer science, in concert with a broad introduction to those aspects of art, music, narrative, digital media, and computer engineering most relevant to games. An intensive year-long game design studio sequence permits students to create substantial video games as part of a multi-student team. Students receive proficiency in many aspects of computer science, a good academic foundation for careers in the computer game industry or information technology industry, or for the pursuit of graduate studies in computer science, or computer game design.

Electrical Engineering. The electrical engineering curriculum provides a balance of engineering science and design and allows students to specialize in both the traditional topics and the latest subjects in electrical engineering. Students may concentrate their electives in the areas of electronics and optics, communications, or signals and systems. The major is designed to attract motivated students who, upon graduation, will be sought by employers in the high-tech industry. The electrical engineering program is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

Network and Digital Technology. The network and digital technology B.A. program provides students with in-depth knowledge of the underlying structure and function of network and computer technology and the design processes which make these technologies function. The program, through its flexible requirements, is especially tailored to students who wish to combine technology with other fields, such as through a double major or a minor, or who, through the choice of

electives, with to concentrate on the digital design or computer networks aspects of computer engineering in preparation for future employment. The network and digital technology B.A. program is offered by the Computer Engineering Department.

Technology and Information Management. The technology and information management (TIM) curriculum is multidisciplinary and focuses on the fusion of information systems, technology, and business management for two purposes: the use of information systems to solve business problems and the management of technology, which includes new product development and enterprise management. Students must learn the mathematics, science, and technical fundamentals of computer science and engineering as well as understand the environment in which information technology (IT) solutions will be applied—through economics, business, and management of technology courses. It is a rigorous, challenging major for those students wanting to pursue careers in information systems management and the management of technology.

Undergraduate Minors

Undergraduate students may choose from the following seven minor options:

Applied Mathematics. The applied mathematics minor is available to students who wish to develop 1) proficiency in modeling real-life problems using mathematics and 2) knowledge of standard, practical analytical and numerical methods for the solution of these models. This minor could be combined with a major in any of the physical, biological, mathematical, or engineering sciences as preparation for a graduate degree in that field or in applied mathematics.

Bioinformatics. The bioinformatics minor is intended primarily for bioinformatics tool users who are majoring in a biological or chemical specialty. The bioinformatics minor is also appropriate for computer science or computer engineering majors who are considering graduate work in bioinformatics.

Computer Engineering. The computer engineering minor provides a solid foundation in digital hardware, electronics, and computer software, as well as the prerequisite material in mathematics and physics. The minor is well-suited to students who wish to take part in the design of computer and embedded systems in any discipline.

Computer Science. The computer science minor is available for students whose primary interest is in another area, and are interested in the applications of computer science in other areas of study, from art and music to business and science.

Electrical Engineering. The electrical engineering minor provides a solid foundation in the core areas of electronic circuits and signals and systems, as well as the prerequisite material in mathematics and physics. Concentration of upper-division electives in either of the major tracks constitutes substantial and focused work in the discipline of electrical engineering. This minor is particularly suitable for students with majors in applied physics or any School of Engineering major.

Technology and Information Management. The technology and information management (TIM) program provides a minor in information systems and technology management (ISTM) to provide undergraduates in the School of Engineering as well in other programs and divisions in the university, such as economics and business management economics, the physical and biological sciences, and arts, the opportunity to expand the breadth of their knowledge and training to include the management of information systems and the management of technology.

Statistics. The statistics minor is available for students who wish to gain a quantitative understanding of how to a) measure uncertainty and b) make good decisions on the basis of incomplete or imperfect information and apply these skills to their interests in another field. This minor could also be combined with a major in mathematics as preparation for a graduate degree in statistics or biostatistics.

Undergraduate Advising Office

The Baskin School of Engineering undergraduate advising office offers general advising for prospective and declared undergraduates majoring in School of Engineering programs. The office handles major declarations, transfer credits, course substitutions, articulations, and degree certifications. Undergraduate students obtain and submit all paperwork requiring departmental approval to the undergraduate advising office. Students may obtain additional information and assistance on the School of Engineering web site: <http://ua.soe.ucsc.edu/>.

Admission to School of Engineering Majors

High School Preparation for Engineering Students

It is recommended that high school students intending to apply to a School of Engineering major have completed four years of mathematics (through advanced algebra and trigonometry) and three years of science in high school. Comparable college mathematics and science courses completed at other institutions also serve to properly prepare students for these majors.

College Board Advanced Placement Credit

Prospective students are encouraged to take the College Board Advanced Placement (AP) Examinations in computer science, mathematics, economics, chemistry, or biology, because an

acceptable score on these examinations may satisfy both university and major degree requirements. Students must provide official examination scores to the UCSC Office of Admissions to be granted credit toward course prerequisites or degree requirements as follows:

Biology: a score of 5 on the AP Biology examination can be substituted for Biology 20A, *Cell and Molecular Biology*, and Biology 20B, *Development and Physiology*.

Computer Science: a score of 3 on Exam A satisfies Computer Science 5J, *Introduction to Programming in Java*; a score of 4 or 5 on Exam A satisfies Computer Science 12A, *Introduction to Programming*, and the associated laboratory, Computer Science 12L; a score of 4 or 5 on Exam AB satisfies both Computer Science 12A, *Introduction to Programming*, and Computer Science 12B, *Introduction to Data Structures*, and the associated laboratories, Computer Science 12L, and Computer Science 12M. A score of 5 on the IBH Computer Science examination satisfies Computer Science 12A, *Introduction to Programming*, and the associated laboratory, Computer Science 12L; a score of 6 or 7 on the IBH Computer Science examination satisfies Computer Science 12A, *Introduction to Programming*, and Computer Science 12B, *Introduction to Data Structures*, and the associated laboratories, Computer Science 12L, and Computer Science 12M.

Economics: a score of 4 or 5 on the Microeconomics examination satisfies Economics 1, *Introductory Microeconomics*; a score of 4 or 5 on the Macroeconomics examination satisfies Economics 2, *Introductory Macroeconomics*.

Mathematics: a score of 4 or 5 on the Calculus AB examination satisfies Mathematics 19A, *Calculus for Science, Engineering, and Mathematics*; a score of 4 or 5 on the Calculus BC examination satisfies both Mathematics 19A-B.

Students may check with the Office of Admissions for details about other AP examinations that also satisfy university requirements.

Admission as First-Year Students

Students interested in declaring a School of Engineering major are encouraged to do so during their first year at UCSC. Some students may be admitted directly into their School of Engineering major of choice at the time they are admitted to UCSC.

First-year applicants to UCSC may apply for direct acceptance to a School of Engineering major by indicating the major as their first or second choice on the application. Applicants will be granted direct acceptance based on their high school grade point average, courses completed in mathematics and sciences, scores on standardized tests, and/or their personal statement. To take advantage of direct acceptance, first-year students must complete the declaration of major process in their first term at UCSC or forfeit their direct acceptance status.

Students not directly admitted may still apply during their first year and their acceptance into their selected major will be based upon their School of Engineering grade point average (GPA—described below), their high school grade point average, courses completed in mathematics and sciences, and scores on standardized tests.

Post First-Year Current Students Acceptance to Majors

Any student admitted to UCSC as a lower-division student that has completed three or more quarters at UCSC can apply to declare a School of Engineering major upon completion (with a grade of C or better) of all the foundation courses for that major. Specific information about requirements and the School of Engineering major declaration process can be found at <http://ua.soe.ucsc.edu/>.

School of Engineering GPA Calculation

The School of Engineering GPA is calculated on grades received for all School of Engineering and Division of Physical and Biological Sciences courses. Students are strongly advised not to request Pass/No Pass grading in any School of Engineering or Division of Physical and Biological Sciences courses since a grade of P is treated as a C for calculating the School of Engineering GPA regardless of the content of the evaluation. No Pass grades are treated as an F. Although the campus GPA excludes the first 15 credits of repeated courses from the GPA calculation, all attempts are included in the School of Engineering GPA calculation. The School of Engineering GPA is used in determining acceptance into School of Engineering majors and the School of Engineering disqualification process described later in this section.

Junior Transfer Acceptance to Majors

The School of Engineering strongly encourages applications from transfer students. Due to the prerequisite structure for upper-division courses, prospective transfer students should have completed as many of the lower-division requirements for the respective majors as possible to complete the degree within a reasonable time. Students must plan carefully because many courses must be taken sequentially.

Transfer students should **not** follow the Intersegmental General Education Transfer Curriculum (IGETC) because it will not provide transfer students with enough mathematics and engineering courses to allow them to complete School of Engineering programs at UCSC in two years.

Students who apply as transfer students with junior status (90 quarter credits or more of transfer credit) who wish to earn a degree from the School of Engineering must indicate a School of Engineering major as their first choice on their UC application. (Students may also indicate an alternative School of Engineering major as their second choice.)

Junior transfers who do not list a School of Engineering major on their application to UCSC will not be considered for admission to such majors after the first day of their first quarter on campus. Acceptance into the major is based on the student's academic college record and preparation for the major. Applicants are encouraged to take and excel in as many courses that are equivalent to the department's foundation courses as possible. For many School of Engineering majors, completion of a year of calculus (accepted as equivalent to Mathematics 19A-B), linear algebra, differential equations, a year of calculus-based physics courses (accepted as equivalent to Physics 5A, 5B, 5C), and two programming courses (accepted as equivalent to Computer Science 12A/L, Computer Science 12B/M, or Computer Engineering 12/L or Computer Engineering 13/L) are strongly recommended. An applicant will be approved, conditionally approved, or declined. Only students who have completed most or all of the foundation courses will be approved or conditionally approved for acceptance into the major.

Students who are approved for acceptance and who have course credit for all the foundation courses for their major must declare the major in their first term of enrollment at UCSC. The status of students who are approved for acceptance but who, upon review of their transcripts, are found not to have course credit for all the foundation courses for their major will be changed to conditionally approved.

Students who are conditionally approved must complete the remaining required foundation courses for their major in their first term at UCSC and declare the major at the beginning of the following term at UCSC. Conditionally approved students will be evaluated based upon their performance in the foundation courses attempted during their first term at UCSC. Students who are conditionally approved for the major should be prepared to declare an alternative major outside of the School of Engineering in case they are unsuccessful in their attempt to complete their remaining foundation courses.

Course Substitutions

The School of Engineering undergraduate advising office may require that a Petition for Course Substitution be approved before credit for a course completed at another institution can be applied to any School of Engineering major requirement. The undergraduate advising staff can help determine if this petition process is necessary based on transcript information provided to them by the student. This petition is in addition to and separate from the transfer credit awarded by the university. Petition forms are available at the undergraduate advising office and online at <http://ua.soe.ucsc.edu/policies-forms>. Each petition must be accompanied by a course description, syllabus, and verification of the number of credits earned with a grade of C or better. To guarantee equivalency, departments may sometimes require a grade of B or better. It is very helpful if students can provide further evidence of course content, such as examples of programming assignments, homework, or examinations.

Appeal Process

Appeal of negative decisions concerning School of Engineering admission will be evaluated by the academic program to which the student applied. Appeal letters must be submitted in writing to the undergraduate advising office within the time frame given in the letter of denial. Late appeals will not be considered. Letters of appeal should describe any extenuating circumstances that might affect the faculty's evaluation of the record.

Students whose petitions are denied may still be admitted to UCSC, but they may not reapply for acceptance to the engineering major(s) for which they were originally considered.

Letter Grade Policy

The School of Engineering strongly advises students to request letter grades in all foundation courses for all engineering concentrations. Many majors in the School of Engineering have additional restrictions on the use of the Pass/No Pass option. Foundation courses should not be taken Pass/No Pass because doing so may lower students' School of Engineering GPA and affect their admission into School of Engineering majors. Major grade requirements are as follows:

Bioengineering major: All courses required for the major must be taken for a letter grade. Two lower-division exceptions are allowed.

Bioinformatics major: Same as campus requirements, but foundation courses should not be taken Pass/No Pass, since doing so may lower the declaration GPA needed for admission to the major.

Computer engineering major: All courses required for the major must be taken for a letter grade. Two lower-division exceptions are allowed.

Computer engineering minor: Same as campus requirements.

Computer science major: All courses required for the major must be taken for letter grades. Two lower-division exceptions are allowed.

Computer game design major and minor: All courses required for the major and

minor must be taken for letter grades. Two lower-division exceptions are allowed.

Electrical engineering major: All courses required for the major must be taken for letter grades. Two lower-division exceptions are allowed.

Network and Digital Technology major: All courses required for the major must be taken for a letter grade. Two lower-division exceptions are allowed.

Robotics engineering major: All courses required for the major must be taken for a letter grade. Two lower-division exceptions are allowed.

Technology and information management major: All courses required for the major must be taken for letter grades. Two lower-division exceptions are allowed (not to include Technology and Information Management 50 or 58).

Statistics minor: same as campus requirements.

Note: for admission into any School of Engineering major, a grade of Pass is treated as a C, which may adversely affect your admission to the major.

Disqualification Policy

GPA Requirement

The cumulative School of Engineering GPA is calculated from all School of Engineering and Physical and Biological Sciences courses attempted. The term School of Engineering GPA is calculated from all School of Engineering and Physical and Biological Sciences courses taken in the previous quarter as a UCSC student. Students are considered in good departmental standing when both the cumulative and the term School of Engineering GPAs are 2.0 or greater. If the cumulative and/or term GPAs are less than 2.0, the student is placed on departmental probation. Students on departmental probation whose cumulative GPA is below 2.0 at the beginning of the next quarter are subject to disqualification from the major. Students with a term School of Engineering GPA that falls below 1.5 in any term are also subject to disqualification from the major. All students subject to disqualification are reviewed by their departmental faculty to determine whether to require the student to choose a different major or to be on departmental probation.

Ethics Requirement

Graduates of the Baskin School of Engineering are expected to become professionals with the highest ethical standards. Knowledge and practice of professional ethics is a requirement for the degree. Examples of professional society codes of ethics are available at www.ieee.org/about/ethics_code/index.html and www.acm.org/serving/se/code.htm. Students of the Baskin School of Engineering are also expected to adhere to high ethical standards while pursuing their undergraduate studies.

Students found guilty of a single incident of academic dishonesty may, at the discretion of the department, be disqualified from the major. In addition, students may be subject to other possible university sanctions. A second incident of academic dishonesty will result in automatic disqualification from the major.

Additional Notes on Disqualification

Please note the Repeating Courses policy in the School of Engineering section of this catalog. Two failed attempts in a class will endanger your opportunity to continue in a School of Engineering major.

Bioengineering, Bioinformatics, Computer Engineering, and Computer Science have additional disqualification criteria. Please see those sections of this catalog for details.

Repeating Courses

No School of Engineering course may be attempted more than twice without prior approval from the chair of the department offering the course. A class in which a W is given is counted as an attempt.

Courses Taken Elsewhere After Enrollment

It is the intent of the faculty of the Baskin School of Engineering that all degree requirements be completed at UCSC or prior to first enrollment at UCSC. Course substitutions, such as taking a course at another UC campus, in the Education Abroad Program (EAP), or at a community college, require approval prior to taking the class. Applications and procedures for pre-approval are obtained from and given to the School of Engineering undergraduate advising office.

California Community College articulation agreements do not apply to enrolled students. Students must get pre-approval before taking a class at a community college.

When a student declares their major, minor, or proposed major in a School of Engineering program, the decision as to whether a course taken elsewhere is accepted for this School of Engineering major or minor is made by the major department at that point. (Note: There is no guarantee that a course will be applicable toward a School of Engineering major, minor, or proposed major even if the student has completed more advanced courses in that department.)

School-Wide Information and Policies

Computing Facilities

The Baskin School of Engineering houses research facilities and teaching laboratories in the Baskin Engineering Building for courses in programming, software design, circuits, electronics, graphics, digital design, and computer and system architecture. Emphasis in these laboratories is on state-of-the-art equipment, including personal computers, engineering workstations, a 1000-processor Linux cluster, logic analyzers, microprocessor development systems, a wireless network for mobile computers, and network support at 100MB/sec.

All Unix computers and workstations and most personal computers on campus are networked together, allowing students to access the School of Engineering and the Information Technology Services (ITS) facilities from any computer account on campus. For a more complete description of the computing facilities on campus, see <http://its.ucsc.edu/>.

Prerequisites

Because of the sequential nature of the School of Engineering curricula, most courses have prerequisites, which are listed in the course descriptions. Students should carefully review these descriptions in the catalog and the quarterly *Schedule of Classes*. Students must have passed all prerequisites of a course for which they are enrolling. Pre-enrolled students who then fail a prerequisite are no longer eligible to be enrolled in the course and will be dropped.

For example, to enroll in Computer Science 101, a prerequisite to many upper-division courses, the prerequisite courses that must be completed or in progress are Computer Science 12B, Computer Engineering 16, Mathematics 19B, and one of the following: Mathematics 21, 22, 23A, 24, or Applied Mathematics and Statistics 10.

Students who have transferable course work from another institution that appears to satisfy a UCSC course prerequisite should promptly consult with the School of Engineering's staff advisers. Students will be asked to present records from the other institution to document the course equivalency. Until such evidence has been verified by the department, students attempting to enroll in a course using a prerequisite course that was not completed at UCSC will be informed that they have not satisfied the course prerequisite. (See the Course Substitutions section under Admission to School of Engineering Majors.)

Permission Numbers

Students not meeting the regular prerequisite requirements for courses sponsored by the Baskin School of Engineering may petition the course instructor to receive a permission number to enroll. The instructor may ask a student to demonstrate the ability and/or potential to succeed in the course or may request additional information to formulate a decision. If no instructor has been assigned to the course, please contact the undergraduate advising office for direction.

Materials Fee

Students should be aware that some laboratory courses require each student to purchase miscellaneous parts or a material kit for completion of the laboratory work. Some laboratory courses may include consumable (one-time use) parts and materials that are distributed to the entire class. Some laboratory kits include parts that the student will assemble into a project and keep. Please refer to the Baskin Engineering Laboratory Support web page for specific course material fee amounts: <https://intranet.soe.ucsc.edu/lab-support/fees>.

Miscellaneous Fees

Miscellaneous breakage or loss of equipment fees are assessed to address the cost of damaged laboratory equipment and loss of laboratory materials due to abuse or negligence. This fee is only charged if a student breaks or loses laboratory equipment or materials and is not a mandatory fee charged to all students taking the course. Please refer to the Baskin Engineering Laboratory Support web page for more information: <https://intranet.soe.ucsc.edu/lab-support/fees>.

Baskin School of Engineering

The Baskin School of Engineering has a high-technology focus incorporating programs and curricula that educate students to meet the changing demands of society and a high-technology global marketplace. The school offers a stimulating academic environment that provides a foundation for professional growth as well as a lifetime of learning. The Baskin School's programs and courses prepare students for the human aspects, as well as the technical challenges, of careers in engineering, computer science, and bioinformatics. The Baskin School of Engineering includes the Department of Applied Mathematics and Statistics, the Department of Biomolecular Engineering, the Department of Computer Engineering, the Department of Computer Science, and the Department of Electrical Engineering. The Department of Technology and Information Management is awaiting approval.

Graduate Study

The Baskin School of Engineering offers 12 graduate programs designed to prepare students for advanced study and research in major areas of biomolecular, computer, and electrical engineering, as well as computer science and statistics and stochastic modeling:

Biomolecular engineering and bioinformatics master of science (M.S.) and doctor of philosophy (Ph.D.)

Computer engineering M.S. and Ph.D.

Computer science M.S. and Ph.D.

Electrical engineering M.S. and Ph.D.

Statistics and applied mathematics M.S. and Ph.D

Technology and information management M.S. and Ph.D.

These programs are described in subsequent sections. The aim of these programs is to develop professionals who can address the complex scientific and technological problems of today and tomorrow.

Undergraduate Study

The School of Engineering offers ~~>10~~ 12 undergraduate degree programs in the following majors.

Bioengineering bachelor of science (B.S.)

Bioinformatics B.S. or combined B.S./Graduate

Computer engineering B.S. or combined B.S./M.S.

Computer science bachelor of arts (B.A.) and B.S.

Computer science: computer game design B.S.

Electrical engineering B.S.

Network and digital technology B.A.

Robotics engineering B.S.

~~Information systems management~~ Technology and information management B.S.

Bioengineering. The bioengineering program prepares graduates for a rewarding career at the interfaces between engineering, medicine and biology. UCSC bioengineering graduates will have a thorough grounding in the principles and practices of bioengineering and the scientific and mathematical principles upon which they are built; they will be prepared for further education (both formal and informal) and for productive employment in industry. The program includes a broad range of courses in the sciences, engineering, ethics, and other topics, and is co-sponsored by the Departments of Biomolecular Engineering, Computer Engineering, Electrical Engineering, and Molecular, Cell and Developmental Biology.

Bioinformatics. The bioinformatics curriculum combines mathematics, the physical sciences, computer science, and engineering to explore and understand biological data from high-throughput experiments, such as genome sequencing and gene expression chips. The immense growth of biological information stored in computerized databases has led to a critical need for people who can understand the languages, tools, and techniques of mathematics, science, and engineering. The undergraduate bioinformatics degree program prepares students for graduate school or a career in the fast-paced pharmaceutical or biotechnology industries.

Computer Engineering. The computer engineering curriculum focuses on making digital systems that work. It overlaps with computer science on one end (software systems) and with electrical engineering on the other (digital hardware). The emphasis of our program is on design rather than analysis—on making things work, rather than on explaining the abstract theory of computation or electronics. The program's emphasis on problem solving provides both excellent training for future engineers and a strong foundation for graduate study. The computer engineering B.S. program is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET). The combined B.S./M.S. program provides an opportunity for outstanding undergraduates to begin advanced study and earn both degrees in five years.

Computer Science. The computer science curriculum has options that include topics in hardware and software, giving students a solid grounding in both theoretical and practical aspects of computer technology and computer usage. The bachelor of arts focus is designed to give students a solid grounding in both theoretical and practical topics in computer science, computer engineering, and mathematics while leaving flexibility for a broad program of study, including many courses outside of science and engineering. The bachelor of science curriculum has a stronger concentration in the sciences, with more courses in computer science and computer engineering, as well as courses in physics or chemistry. Students become proficient in many areas, with a good academic foundation for various careers in the software industry, as well as preparation for graduate school.

Computer Science: Computer Game Design. The computer game design curriculum is a four-year interdisciplinary program that focuses on the technical, dramatic, and artistic elements of computer games. The program provides a rigorous education in computer science, in concert with a broad introduction to those aspects of art, music, narrative, digital media, and computer engineering most relevant to games. An intensive year-long game design studio sequence permits students to create substantial video games as part of a multi-student team. Students receive proficiency in many aspects of computer science, a good academic foundation for careers in the computer game industry or information technology industry, or for the pursuit of graduate studies in computer science, or computer game design.

Electrical Engineering. The electrical engineering curriculum provides a balance of engineering science and design and allows students to specialize in both the traditional topics and the latest subjects in electrical engineering. Students may concentrate their electives in the areas of electronics and optics, communications, or signals and systems. The major is designed to attract motivated students who, upon graduation, will be sought by employers in the high-tech industry. The electrical engineering program is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET).

Network and Digital Technology. The network and digital technology B.A. program provides students with in-depth knowledge of the underlying structure and function of network and computer technology and the design processes which make these technologies function. The program, through its flexible requirements, is especially tailored to students who wish to combine technology with other fields, such as through a double major or a minor, or who, through the choice of electives, wish to concentrate on the digital design or computer networks aspects of computer engineering in preparation for future employment. The network and digital technology B.A. program is offered by the Computer Engineering Department.

~~Information Systems Management~~**Technology and Information Management.** The ~~information systems management~~**technology and information management (ISM/TIM)** curriculum is multidisciplinary and focuses on the fusion of information systems, technology, and business management for two purposes: the use of information systems to solve business problems and the management of technology, which includes new product development and enterprise management. Students must learn the mathematics, science, and technical fundamentals of computer science and engineering as well as understand the environment in which information technology (IT) solutions will be applied—through economics, business, and management of technology courses. It is a rigorous, challenging major for those students wanting to pursue careers in information systems management and the management of technology.

Undergraduate Minors

Undergraduate students may choose from the following ~~eight~~seven minor options:

Applied Mathematics. The applied mathematics minor is available to students who wish

to develop 1) proficiency in modeling real-life problems using mathematics and 2) knowledge of standard, practical analytical and numerical methods for the solution of these models. This minor could be combined with a major in any of the physical, biological, mathematical, or engineering sciences as preparation for a graduate degree in that field or in applied mathematics.

Bioinformatics. The bioinformatics minor is intended primarily for bioinformatics tool users who are majoring in a biological or chemical specialty. The bioinformatics minor is also appropriate for computer science or computer engineering majors who are considering graduate work in bioinformatics.

Computer Engineering. The computer engineering minor provides a solid foundation in digital hardware, electronics, and computer software, as well as the prerequisite material in mathematics and physics. The minor is well-suited to students who wish to take part in the design of computer and embedded systems in any discipline.

Computer Science. The computer science minor is available for students whose primary interest is in another area, and are interested in the applications of computer science in other areas of study, from art and music to business and science.

~~Computer Technology. The computer technology minor is intended for students outside the School of Engineering interested in exploring computer software and hardware. It is particularly recommended for students interests in the use of computer technology in another discipline or in K-12 teaching.~~

Electrical Engineering. The electrical engineering minor provides a solid foundation in the core areas of electronic circuits and signals and systems, as well as the prerequisite material in mathematics and physics. Concentration of upper-division electives in either of the major tracks constitutes substantial and focused work in the discipline of electrical engineering. This minor is particularly suitable for students with majors in applied physics or any School of Engineering major.

~~Technology and Information Management~~ **Information Systems and Technology Management.** The ~~information systems management~~ technology and information management (ISTM) program provides a minor in information systems and technology management (ISTM) to provide undergraduates in the School of Engineering as well in other programs and divisions in the university, such as economics and business management economics, the physical and biological sciences, and arts, the opportunity to expand the breadth of their knowledge and training to include the management of information systems and the management of technology.

Statistics. The statistics minor is available for students who wish to gain a quantitative understanding of how to a) measure uncertainty and b) make good decisions on the basis of incomplete or imperfect information and apply these skills to their interests in another field. This minor could also be combined with a major in mathematics as preparation for a graduate degree in statistics or biostatistics.

Undergraduate Advising Office

The Baskin School of Engineering undergraduate advising office offers general advising for prospective and declared undergraduates majoring in School of Engineering programs. The office handles major declarations, transfer credits, course substitutions, articulations, and degree certifications. Undergraduate students obtain and submit all paperwork requiring departmental approval to the undergraduate advising office. Students may obtain additional information and assistance on the School of Engineering web site: <http://ua.soe.ucsc.edu/>.

Admission to School of Engineering Majors

High School Preparation for Engineering Students

It is recommended that high school students intending to apply to a School of Engineering

major have completed four years of mathematics (through advanced algebra and trigonometry) and three years of science in high school. Comparable college mathematics and science courses completed at other institutions also serve to properly prepare students for these majors.

College Board Advanced Placement Credit

Prospective students are encouraged to take the College Board Advanced Placement (AP) Examinations in computer science, mathematics, economics, chemistry, or biology, because an acceptable score on these examinations may satisfy both university and major degree requirements. Students must provide official examination scores to the UCSC Office of Admissions to be granted credit toward course prerequisites or degree requirements as follows:

Biology: a score of 5 on the AP Biology examination can be substituted for Biology 20A, *Cell and Molecular Biology*, and Biology 20B, *Development and Physiology*.

~~Chemistry: a score of 5 on the AP Chemistry examination fulfills the prerequisite for enrollment in Chemistry 1B/M.~~

Computer Science: a score of 3 on Exam A satisfies Computer Science 5J, *Introduction to Programming in Java*; a score of 4 or 5 on Exam A satisfies Computer Science 12A, *Introduction to Programming*, and the associated laboratory, Computer Science 12L; a score of 4 or 5 on Exam AB satisfies both Computer Science 12A, *Introduction to Programming*, and Computer Science 12B, *Introduction to Data Structures*, and the associated laboratories, Computer Science 12L, and Computer Science 12M. A score of 5 on the IBH Computer Science examination satisfies Computer Science 12A, *Introduction to Programming*, and the associated laboratory, Computer Science 12L; a score of 6 or 7 on the IBH Computer Science examination satisfies Computer Science 12A, *Introduction to Programming*, and Computer Science 12B, *Introduction to Data Structures*, and the associated laboratories, Computer Science 12L, and Computer Science 12M.

Economics: a score of 4 or 5 on the Microeconomics examination satisfies Economics 1, *Introductory Microeconomics*; a score of 4 or 5 on the Macroeconomics examination satisfies Economics 2, *Introductory Macroeconomics*.

Mathematics: a score of 4 or 5 on the Calculus AB examination satisfies Mathematics 19A, *Calculus for Science, Engineering, and Mathematics*; a score of 4 or 5 on the Calculus BC examination satisfies both Mathematics 19A-B.

Students may check with the Office of Admissions for details about other AP examinations that also satisfy university requirements.

Admission as First-Year Students

Students interested in declaring a School of Engineering major are encouraged to do so during their first year at UCSC. Some students may be admitted directly into their School of Engineering major of choice at the time they are admitted to UCSC.

First-year applicants to UCSC may apply for direct acceptance to a School of Engineering major by indicating the major as their first or second choice on the application. Applicants will be granted direct acceptance based on their high school grade point average, courses completed in mathematics and sciences, scores on standardized tests, and/or their personal statement.

To take advantage of direct acceptance, first-year students must complete the declaration of major process in their first term at UCSC or forfeit their direct acceptance status.

Students not directly admitted may still apply during their first year and their acceptance into their selected major will be based upon their School of Engineering grade point average (GPA—described below), their high school grade point average, courses completed in mathematics and sciences, and scores on standardized tests.

Post First-Year Current Students Acceptance to Majors

Any student admitted to UCSC as a lower-division student that has completed three or more quarters at UCSC can apply to declare a School of Engineering major upon completion (with a grade of C or better) of all the foundation courses for that major. Specific information about requirements and the School of Engineering major declaration process can be found at <http://ua.soe.ucsc.edu/>.

School of Engineering GPA Calculation

The School of Engineering GPA is calculated on grades received for all School of Engineering and Division of Physical and Biological Sciences courses. Students are strongly advised not to request Pass/No Pass grading in any School of Engineering or Division of Physical and Biological Sciences courses since a grade of P is treated as a C for calculating the School of Engineering GPA regardless of the content of the evaluation. No Pass grades are treated as an F. Although the campus GPA excludes the first 15 credits of repeated courses from the GPA calculation, all attempts are included in the School of Engineering GPA calculation. The School of Engineering GPA is used in determining acceptance into School of Engineering majors and the School of Engineering disqualification process described later in this section.

Junior Transfer Acceptance to Majors

The School of Engineering strongly encourages applications from transfer students. Due to the prerequisite structure for upper-division courses, prospective transfer students should have completed as many of the lower-division requirements for the respective majors as possible to complete the degree within a reasonable time. Students must plan carefully because many courses must be taken sequentially.

Transfer students should **not** follow the Intersegmental General Education Transfer Curriculum (IGETC) because it will not provide transfer students with enough mathematics and engineering courses to allow them to complete School of Engineering programs at UCSC in two years.

Students who apply as transfer students with junior status (90 quarter credits or more of transfer credit) who wish to earn a degree from the School of Engineering must indicate a School of Engineering major as their first choice on their UC application. (Students may also indicate an alternative School of Engineering major as their second choice.)

Junior transfers who do not list a School of Engineering major on their application to UCSC will not be considered for admission to such majors after the first day of their first quarter on campus.

Acceptance into the major is based on the student's academic college record and preparation for the major. Applicants are encouraged to take and excel in as many courses that are equivalent to the department's foundation courses as possible. For many School of Engineering majors, completion of a year of calculus (accepted as equivalent to Mathematics 19A-B), linear algebra, differential equations, a year of calculus-based physics courses (accepted as equivalent to Physics 5A, 5B, 5C), and two programming courses (accepted as equivalent to Computer Science 12A/L, Computer Science 12B/M, or Computer Engineering 12/L or Computer Engineering 13/L) are strongly recommended. An applicant will be approved, conditionally approved, or declined. Only students who have completed most or all of the foundation courses will be approved or conditionally approved for acceptance into the major.

Students who are approved for acceptance and who have course credit for all the foundation courses for their major must declare the major in their first term of enrollment at UCSC. The status of students who are approved for acceptance but who, upon review of their transcripts, are found not to have course credit for all the foundation courses for their major will be changed to conditionally approved.

Students who are conditionally approved must complete the remaining required foundation courses for their major in their first term at UCSC and declare the major at the beginning of the following term at UCSC. Conditionally approved students will be evaluated based upon their performance in the foundation courses attempted during their first term at UCSC. Students who are conditionally approved for the major should be prepared to declare an alternative major outside of the School of Engineering in case they are unsuccessful in their attempt to complete their remaining foundation courses.

Course Substitutions

The School of Engineering undergraduate advising office may require that a Petition for Course Substitution be approved before credit for a course completed at another institution can be applied to any School of Engineering major requirement. The undergraduate advising staff can help determine if this petition process is necessary based on transcript information provided to them by the student. This petition is in addition to and separate from the transfer credit awarded by the university. Petition forms are available at the undergraduate advising office [and online at http://ua.soe.ucsc.edu/policies-forms](http://ua.soe.ucsc.edu/policies-forms). Each petition must be accompanied by a course description, syllabus, and verification of the number of credits earned with a grade of C or better. To guarantee equivalency, departments may sometimes require a grade of B or better. It is very helpful if students can provide further evidence of course content, such as examples of programming assignments, homework, or examinations.

Appeal Process

Appeal of negative decisions concerning School of Engineering admission will be evaluated by the academic program to which the student applied. Appeal letters must be submitted in writing to the undergraduate advising office within the time frame given in the letter of denial. Late appeals will not be considered. Letters of appeal should describe any extenuating circumstances that might affect the faculty's evaluation of the record.

Students whose petitions are denied may still be admitted to UCSC, but they may not reapply for acceptance to the engineering major(s) for which they were originally considered.

Letter Grade Policy

The School of Engineering strongly advises students to request letter grades in all foundation courses for all engineering concentrations. Many majors in the School of Engineering have additional restrictions on the use of the Pass/No Pass option. Foundation courses should not be taken Pass/No Pass because doing so may lower students' School of Engineering GPA and affect their admission into School of Engineering majors. Major grade requirements are as follows:

Bioengineering major: All courses required for the major must be taken for a letter grade. Two lower-division exceptions are allowed.

Bioinformatics major: Same as campus requirements, but foundation courses should not be taken Pass/No Pass, since doing so may lower the declaration GPA needed for admission to the major.

Computer engineering major: All courses required for the major must be taken for a letter grade. Two lower-division exceptions are allowed.

Computer engineering minor: Same as campus requirements.

Computer science major ~~and minor~~: All courses required for the major ~~and minor~~ must be taken for letter grades. Two lower-division exceptions are allowed.

Computer game design major and minor: All courses required for the major and minor must be taken for letter grades. Two lower-division exceptions are allowed.

Electrical engineering major: All courses required for the major must be taken for letter grades. Two lower-division exceptions are allowed.

Network and Digital Technology major: All courses required for the major must be taken for a letter grade. Two lower-division exceptions are allowed.

Robotics engineering major: All courses required for the major must be taken for a letter grade. Two lower-division exceptions are allowed.

~~**Information systems management**~~**Technology and information management**
major: All courses required for the major must be taken for letter grades. Two lower-division exceptions are allowed (not to include ~~Information Systems Management~~Technology and Information Management 50 or 58).

Statistics minor: same as campus requirements.

Note: for admission into any School of Engineering major, a grade of Pass is treated as a C, which may adversely affect your admission to the major.

Disqualification Policy

GPA Requirement

~~Your cumulative School of Engineering GPA is calculated from all School of Engineering and Physical and Biological Sciences courses attempted. Your term School of Engineering GPA is calculated from all School of Engineering and Physical and Biological Sciences courses you have taken in the previous quarter as a UCSC student.~~

~~If both your cumulative and term School of Engineering GPAs are 2.0 or greater, you are in good departmental standing. If either your cumulative or term GPAs are less than 2.0, you are on departmental probation. If you are on departmental probation and your cumulative School of Engineering GPA is below 2.0 at the beginning of the next quarter, you are subject to disqualification from the major. If your term School of Engineering GPA falls below 1.5 in any term, you are also subject to disqualification from the major. All students that are subject to disqualification are reviewed by their departmental faculty to determine whether to require the student to choose a different major or to be on departmental probation.~~ The cumulative School of Engineering GPA is calculated from all School of Engineering and Physical and Biological Sciences courses attempted. The term School of Engineering GPA is calculated from all School of Engineering and Physical and Biological Sciences courses taken in the previous quarter as a UCSC student. Students are considered in good departmental standing when both the cumulative and the term School of Engineering GPAs are 2.0 or greater. If the cumulative and/or term GPAs are less than 2.0, the student is placed on departmental probation. Students on departmental probation whose cumulative GPA is below 2.0 at the beginning of the next quarter are subject to disqualification from the major. Students with a term School of Engineering GPA that falls below 1.5 in any term are also subject to disqualification from the major. All students subject to disqualification are reviewed by their departmental faculty to determine whether to require the student to choose a different major or to be on departmental probation.

Ethics Requirement

Graduates of the Baskin School of Engineering are expected to become professionals with

the highest ethical standards. Knowledge and practice of professional ethics is a requirement for the degree. Examples of professional society codes of ethics are available at www.ieee.org/about/whatis/code.html, www.ieee.org/about/ethics_code/index.html and www.acm.org/serving/se/code.htm. Students of the Baskin School of Engineering are also expected to adhere to high ethical standards while pursuing their undergraduate studies.

Students found guilty of a single incident of academic dishonesty may, at the discretion of the department, be disqualified from the major. In addition, students may be subject to other possible university sanctions. A second incident of academic dishonesty will result in automatic disqualification from the major.

Additional Notes on Disqualification

Please note the Repeating Courses policy in the School of Engineering section of this catalog. Two failed attempts in a class will endanger your opportunity to continue in a School of Engineering major.

Bioengineering, Bioinformatics, Computer Engineering, and Computer Science have additional disqualification criteria. Please see those sections of this catalog for details.

Repeating Courses

No School of Engineering course may be attempted more than twice without prior approval from the chair of the department offering the course. A class in which a W is given is counted as an attempt.

Courses Taken Elsewhere After Enrollment

It is the intent of the faculty of the Baskin School of Engineering that all degree requirements be completed at UCSC or prior to first enrollment at UCSC. Course substitutions, such as taking a course at another UC campus, in the Education Abroad Program (EAP), or at a community college, require approval prior to taking the class. Applications and procedures for pre-approval are obtained from and given to the School of Engineering undergraduate advising office.

California Community College articulation agreements do not apply to enrolled students. Students must get pre-approval before taking a class at a community college.

When a student declares their major, minor, or proposed major in a School of Engineering program, the decision as to whether a course taken elsewhere is accepted for this School of Engineering major or minor is made by the major department at that point. (**Note:** There is no guarantee that a course will be applicable toward a School of Engineering major, minor, or proposed major even if the student has completed more advanced courses in that department.)

School-Wide Information and Policies

Computing Facilities

The Baskin School of Engineering houses research facilities and teaching laboratories in the Baskin Engineering Building for courses in programming, software design, circuits, electronics, graphics, digital design, and computer and system architecture. Emphasis in these laboratories is on state-of-the-art equipment, including personal computers, engineering workstations, a 1000-processor Linux cluster, logic analyzers, microprocessor development systems, a wireless network for mobile computers, and network support at 100MB/sec.

All Unix computers and workstations and most personal computers on campus are networked together, allowing students to access the School of Engineering and the Information Technology Services (ITS) facilities from any computer account on campus. For a more complete description of the computing facilities on campus, see <http://its.ucsc.edu/>.

Prerequisites

Because of the sequential nature of the School of Engineering curricula, most courses have prerequisites, which are listed in the course descriptions. Students should carefully review these descriptions in the catalog and the quarterly *Schedule of Classes*. Students must have passed all prerequisites of a course for which they are enrolling. Pre-enrolled students who then fail a prerequisite are no longer eligible to be enrolled in the course and will be dropped.

For example, to enroll in Computer Science 101, a prerequisite to many upper-division courses, the prerequisite courses that must be completed or in progress are Computer Science 12B, Computer Engineering 16, Mathematics 19B, and one of the following: Mathematics 21, 22, 23A, 24, or Applied Mathematics and Statistics 10.

Students who have transferable course work from another institution that appears to satisfy a UCSC course prerequisite should promptly consult with the School of Engineering's staff advisers. Students will be asked to present records from the other institution to document the course equivalency. Until such evidence has been verified by the department, students attempting to enroll in a course using a prerequisite course that was not completed at UCSC will be informed that they have not satisfied the course prerequisite. (See the Course Substitutions section under Admission to School of Engineering Majors .)

Permission Numbers

Students not meeting the regular prerequisite requirements for courses sponsored by the Baskin School of Engineering may petition the course instructor to receive a permission number to enroll. The instructor may ask a student to demonstrate the ability and/or potential to succeed in the course or may request additional information to formulate a decision. If no instructor has been assigned to the course, please contact the undergraduate advising office for direction.

Materials Fee

Students should be aware that some laboratory courses require each student to purchase miscellaneous parts or a material kit for completion of the laboratory work. Some laboratory courses may include consumable (one-time use) parts and materials that are distributed to the entire class. Some laboratory kits include parts that the student will assemble into a project and keep. Please refer to the Baskin Engineering Laboratory Support web page for specific course material fee amounts:

www.soe.ucsc.edu/administration/labs/

<https://intranet.soe.ucsc.edu/lab-support/fees>.

Miscellaneous Fees

Miscellaneous breakage or loss of equipment fees are assessed to address the cost of damaged laboratory equipment and loss of laboratory materials due to abuse or negligence. This fee is only charged if a student breaks or loses laboratory equipment or materials and is not a mandatory fee charged to all students taking the course. Please refer to the Baskin Engineering Laboratory Support web page for more information:

www.soe.ucsc.edu/administration/labs/ <http://intranet.soe.ucsc.edu/lab-support/fees>.

Applied Mathematics and Statistics

Baskin School of Engineering
(831) 459-2158
<http://www.soe.ucsc.edu>

[Program Description](#) | [Changes to 2010-12 Catalog Highlighted](#) | [Faculty](#) | [Course Descriptions](#)

Program Description

Applied mathematics and statistics are disciplines devoted to the use of mathematical methods and reasoning to solve real-world problems of a scientific or decision-making nature in a wide variety of subjects, principally (but not exclusively) in engineering, medicine, the physical and biological sciences, and the social sciences. Applied mathematical modeling often involves the use of systems of (partial) differential equations to describe and predict the behavior of complex real-world systems that unfold dynamically in time. Statistics, construed broadly, is the study of uncertainty: how to measure it (using ideas and methods in probability theory), and what to do about it (using concepts from statistical inference and decision theory).

The Applied Mathematics and Statistics Department at UCSC offers master's and doctoral programs in Statistics and Applied Mathematics, or Applied Mathematics and Statistics, depending on chosen emphasis. The goal of these programs is to help students develop into independent scholars who are prepared for productive careers in research, teaching, and industry. The department also offers a designated emphasis in statistics, a minor in statistics, and a minor in applied mathematics.

Additional information on these programs can be found on the department's web pages at www.soe.ucsc.edu.

Undergraduate Programs

Requirements for an Undergraduate Minor in Statistics

The statistics minor is available for students who wish to gain a quantitative understanding of how to (a) measure uncertainty and (b) make good decisions on the basis of incomplete or imperfect information, and to apply these skills to their interests in another field. This minor could also be combined with a major in mathematics as preparation for a graduate degree in statistics or biostatistics.

Students are required to take a two-quarter basic calculus sequence:

- Applied Mathematics and Statistics 11A-B or Economics 11A-B or Applied Mathematics and Statistics 15A-B or Mathematics 11A-B or Mathematics 19A-B or Mathematics 20A-B
- Plus one course from each of the following seven categories:
 - Statistical Concepts: Applied Mathematics and Statistics 5 or 7/L
 - Computer Programming: Bioinformatics 60/L or Computer Science 12A/L or 5C or 5J or 5P or Computer Engineering 13/L
 - Linear Algebra: Applied Mathematics and Statistics 10 or Mathematics 21 (also recommended that students take Applied Mathematics and Statistics 20 or Mathematics 24)
 - Multivariate Calculus: Mathematics 22 or both Mathematics 23A and Mathematics 23B
 - Probability: Applied Mathematics and Statistics 131 or Computer Engineering 107
 - Statistical Inference: Applied Mathematics and Statistics 132
 - Computational Methods: Applied Mathematics and Statistics 14
- Plus two electives from the following category:
 - Statistical Elective: Applied Mathematics and Statistics 118; 156; 198; 202; 205B; 206B; 256;
 - Biomolecular Engineering 205; Computer Engineering 108; Economics 114; Electrical Engineering 151; Mathematics 114; Psychology 181; Sociology 103A.
 - Students planning graduate work in statistics are recommended to choose Mathematics 23A-B, Applied Mathematics and Statistics 205B, and Mathematics 105A-B.

Requirements for an Undergraduate Minor in Applied Mathematics

The applied mathematics minor is available for students who wish to develop (1) proficiency in modeling real-life problems using mathematics and (2) knowledge of standard, practical analytical and numerical methods for the solution of these models. This minor could be combined with a

major in any of the physical, biological, mathematical, or engineering sciences as preparation for a graduate degree in that field or in applied mathematics.

Students are required to take the four-quarter calculus sequence:

- Calculus Sequence: Mathematics 19A-B or Mathematics 20A-B, and Mathematics 23A-B
- Plus one of the following sequences:
 - Applied Mathematics and Statistics 10 and 20
 - Mathematics 21 and 24
 - Physics 116A and 116B

(**Note:** Students who complete Mathematics 21 and 24 or Physics 116A and 116B, are strongly recommended to complete the MATLAB self-paced tutorial at:

<http://matlab-training.soe.ucsc.edu/>)

- Plus one course from each of the following categories:
 - Probability Theory: Applied Mathematics and Statistics 131 or Computer Engineering 107
 - Dynamical Systems: Applied Mathematics and Statistics 114 or Applied Mathematics and Statistics 214
 - Introduction to Numerical Methods: Applied Mathematics and Statistics 147, Physics 115, or Earth Sciences 119
 - Partial Differential Equations: Applied Mathematics and Statistics 212A, Physics 116C, or Mathematics 107
- Plus one applied-mathematics elective from the following list:
 - Applied Mathematics and Statistics 107/217, 115/215, 132, 198, 212B, 213, 216, 231, 290B

Students may also propose other electives which use applied mathematical methods, subject to approval by the department.

Graduate Programs (M.S., Ph.D.)

Requirements for a Graduate Degree in Statistics and Applied Mathematics

This track is for students emphasizing statistics. All students must complete the core courses described below.

Master's Program

Required core Applied Mathematics and Statistics courses:

200 *Research and Teaching in Applied Mathematics and Statistics*

205A *Mathematical Statistics*, or 205B, *Statistical Inference*

206 *Bayesian Statistics*

207 *Intermediate Bayesian Statistical Modeling*

211 *Foundations of Applied Mathematics*

256 *Linear Statistical Models*

280B *Seminar in Statistics and Applied Mathematical Modeling*

In addition to these 30 credits, master of science (M.S.) students must complete two additional 5-credit courses from the approved list, for a total requirement of 40 credits.

Ph.D. Program

Required core Applied Mathematics and Statistics courses:

200 *Research and Teaching in Applied Mathematics and Statistics*

205B *Statistical Inference*

206 *Bayesian Statistics*

207 *Intermediate Bayesian Statistical Modeling*

211 *Foundations of Applied Mathematics*

256 *Linear Statistical Models*

280B *Seminar in Statistical and Applied Mathematical Modeling*

In addition to these 30 credits, doctor of philosophy (Ph.D.) students must complete four additional 5-credit courses from the approved list, for a total requirement of 50 credits.

Requirements for a Graduate Degree in Applied Mathematics and Statistics

This track is for students emphasizing Applied Mathematics. All students must complete the core courses described below.

Required core Applied Mathematics and Statistics courses:

200 *Research and Teaching in Applied Mathematics and Statistics*

205A *Mathematical Statistics*, or 205B, *Statistical Inference*

211 *Foundations of Applied Mathematics*

212A *Applied Mathematical Methods I*

212B *Applied Mathematical Methods II*

213 *Numerical Solutions Differential Equations*

214 *Applied Dynamical Systems*

280B *Seminar in Statistical and Applied Mathematical Modeling*

In addition to these 35 credits, Ph.D. students must complete four additional 5-credit courses from the approved list, for a total requirement of 55 credits.

For both emphasis tracks, M.S. students will be allowed to substitute up to two courses with their required research project in which they conduct a research program in one or two of the quarters of their second year. The project will consist of solving a problem or problems from the selected area of application and will be presented to the sponsoring faculty member as a written document. Ph.D. students will be required to serve as teaching assistants for at least two quarters during their graduate study. Certain exceptions may be permitted for those with extensive prior teaching experience, for those who are not allowed to be employed due to visa regulations, or for other reasons approved by the graduate director.

Qualifying Examinations

At the end of the first year, all students will take a pre-qualifying examination covering the five or six (non-seminar) core courses. This examination will have two parts: an in-class written examination, followed by a take-home project involving data analysis. Students who do not pass this examination will be allowed to retake it before the start of the following fall quarter; if they fail the second examination they will be dismissed from the program.

Ph.D. students must complete the oral proposal defense, through which they advance to candidacy, by the end of the spring quarter of their third year. The proposal defense is a public seminar as part of an oral qualifying examination given by the qualifying committee.

Thesis and/or Dissertation Requirements

A capstone project is required for the M.S. degree and a dissertation for the Ph.D. degree.

For the M.S. degree, students will conduct a capstone research project in their second year (up to three quarters). Students must submit a proposal to the potential faculty sponsor by the start of the fourth academic quarter. If the proposal is accepted, the faculty member will become the sponsor and will supervise the research and writing of the project. The project will involve the solution of a problem or problems from the selected area of application. When the project is completed and written, it will be submitted to and must be accepted by a committee of two individuals, consisting of the faculty adviser and one additional reader. Additional readers will be chosen appropriately from within the Applied Mathematics and Statistics Department or outside of it. Either the adviser or the additional reader must be from within the Applied Mathematics and Statistics Department.

A dissertation is required for the Ph.D. degree. Ph.D. students must select a faculty research adviser by the end of the second year. A written dissertation proposal will be submitted to the adviser, and filed with the graduate secretary. A qualifying examination committee will be formed, consisting of the adviser and three additional members, approved by the Chair of the Graduate Program and the Dean of the Graduate Division. The student will submit the written dissertation proposal to all members of the committee and the graduate secretary no less than one month in advance of the qualifying examination. The dissertation proposal will be formally presented in a public oral qualifying examination with the committee, followed by a private examination.

Students will advance to candidacy after they have completed all course requirements (including removal of all incompletes), passed the qualifying examination, and paid the filing fee. Under normal progress, a student will advance to candidacy by the end of the spring quarter of her/his third year. A student who has not advanced to candidacy by the start of the fourth year will be subject to academic probation. Upon advancement to candidacy, a dissertation reading committee will be formed, consisting of the dissertation supervisor and at least two additional readers appointed by the Graduate Program chair upon recommendation of the dissertation supervisor. At least one of these additional readers must be in the Applied Mathematics and Statistics Department. The committee is subject to the approval of the Graduate Division.

The dissertation will consist of a minimum of three chapters composed of material suitable for submission and publication in major professional journals in statistics and stochastic modeling. The completed dissertation will be submitted to the reading committee at least one month before the

dissertation defense, which consists of a public presentation of the research followed by a private examination by the reading committee. Successful completion of the dissertation defense is the final requirement for the Ph.D. degree.

Relationship of Masters and Doctoral Programs

The M.S. and Ph.D. programs are freestanding and independent, so that students can be admitted to either. Students completing the M.S. program may proceed into the Ph.D. program, and students in the Ph.D. program can receive a M.S. degree upon completion of M.S. requirements, including the capstone research project. Each Ph.D. student will be required to have knowledge of statistics and applied mathematics equivalent to that required for the M.S. degree. In addition, Ph.D. candidates will be required to complete coursework beyond the M.S. level.

Transfer Credit

Up to three School of Engineering courses fulfilling the degree requirements of either the M.S. or Ph.D. degrees may be taken before beginning the graduate program through the concurrent enrollment program. Ph.D. students who have previously earned a master's degree in a related field at another institution may substitute courses from their previous university with approval of the adviser and the graduate committee. Courses from other institutions may not be applied to the M.S. degree course requirements.

Petitions should be submitted along with the transcript from the other institution or UCSC Extension. For courses taken at other institutions, copies of the syllabi, exams, and other course work should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UCSC. At most, a total of three courses may be transferred from concurrent enrollment and other institutions.

Review of Progress

Each year, the faculty reviews the progress of every student. Students not making adequate progress toward completion of degree requirements are subject to dismissal from the program (see the Graduate Handbook for the policy on satisfactory academic progress). For specific guidelines on the annual student reviews, please refer to <http://www.soe.ucsc.edu/programs/ssm/graduate/index.html>.

Requirements for a designated emphasis to an external degree program

Students from another degree program who meet the following requirements can have the designated emphasis of "statistics" annotated to their degree title. For example, a Ph.D. student in electrical engineering who meets the requirements would get a certification that read "Ph.D. Electrical Engineering (Statistics)." This certification is supplied for those students who effectively do a statistics M.S. on their way to a Ph.D. in another program. The course requirements are:

Required core Applied Mathematics and Statistics courses:

205A *Mathematical Statistics*, or 205B, *Statistical Inference*

206 *Bayesian Statistics*

207 *Intermediate Bayesian Statistical Modeling*

256 *Linear Statistical Models*

and one other course from a list of approved courses in AMS (currently 211, 221, 223, 241, 245, 261, 274)

Applied Mathematics and Statistics

Baskin School of Engineering
(831) 459-2158
<http://www.soe.ucsc.edu>

Program Description

Applied mathematics and statistics are disciplines devoted to the use of mathematical methods and reasoning to solve real-world problems of a scientific or decision-making nature in a wide variety of subjects, principally (but not exclusively) in engineering, medicine, the physical and biological sciences, and the social sciences. Applied mathematical modeling often involves the use of systems of (partial) differential equations to describe and predict the behavior of complex real-world systems that unfold dynamically in time. Statistics, construed broadly, is the study of uncertainty: how to measure it (using ideas and methods in probability theory), and what to do about it (using concepts from statistical inference and decision theory).

The Applied Mathematics and Statistics Department at UCSC offers master's and doctoral programs in Statistics and Applied Mathematics, or Applied Mathematics and Statistics, depending on chosen emphasis. The goal of these programs is to help students develop into independent scholars who are prepared for productive careers in research, teaching, and industry. The department also offers a designated emphasis in statistics, a minor in statistics, and a minor in applied mathematics.

Additional information on these programs can be found on the department's web pages at www.soe.ucsc.edu.

Undergraduate Programs

Requirements for an Undergraduate Minor in Statistics

The statistics minor is available for students who wish to gain a quantitative understanding of how to (a) measure uncertainty and (b) make good decisions on the basis of incomplete or imperfect information, and to apply these skills to their interests in another field. This minor could also be combined with a major in mathematics as preparation for a graduate degree in statistics or biostatistics.

Students are required to take a two-quarter basic calculus sequence:

~~Basic calculus sequence:~~

- Applied Mathematics and Statistics 11A-B or Economics 11A-B or [Applied Mathematics and Statistics 15A-B](#) or Mathematics 11A-B or Mathematics 19A-B or Mathematics 20A-B
- Plus one course from each of the following ~~nine~~ [seven](#) categories:

Statistical Concepts: Applied Mathematics and Statistics 5 or 7/L

Computer Programming: Bioinformatics 60/L or Computer Science 12A/L or 5C or 5J or 5P or Computer Engineering 13/L

~~Mathematical Methods for Engineers I or~~ Linear Algebra: Applied Mathematics and Statistics 10 or Mathematics 21 (also recommended that students take ~~Basic Mathematical Methods for Engineers II or Mathematical Methods for Engineers II or Ordinary Differential Equations~~ Applied Mathematics and Statistics 20A or Applied Mathematics and Statistics 20 or Mathematics 24)

Multivariate Calculus: Mathematics 22 or [both Mathematics 23A and Mathematics 23B](#)

Probability: Applied Mathematics and Statistics 131 or Computer Engineering 107

Statistical Inference: Applied Mathematics and Statistics 132

Computational Methods: Applied Mathematics and Statistics 147

- Plus two electives from the following category:

~~Bayesian Statistics: Applied Mathematics and Statistics 206~~

Statistical Elective: Applied Mathematics and Statistics 118; 156; 198; 202; 205A 205B; 206B; 256; Biomolecular Engineering 205; Computer Engineering 108; Economics 114; Electrical Engineering 151; Mathematics 114; Psychology 181; Sociology 103A.

Students planning graduate work in statistics are recommended to choose Mathematics 23A-B, ~~and~~ Applied Mathematics and Statistics ~~205A 205B, and also to take Mathematics 23B~~ and Mathematics 105A-B.

Requirements for an Undergraduate Minor in Applied Mathematics

The applied mathematics minor is available for students who wish to develop (1) proficiency in modeling real-life problems using mathematics and (2) knowledge of standard, practical analytical and numerical methods for the solution of these models. This minor could be combined with a major in any of the physical, biological, mathematical, or engineering sciences as preparation for a graduate degree in that field or in applied mathematics.

Students are required to take the four-quarter calculus sequence:

- Calculus Sequence: Mathematics 19A-B or Mathematics 20A-B, and Mathematics 23A-B
- Plus one of the following sequences:

Applied Mathematics and Statistics 10 and 20

Mathematics 21 and 24

Physics 116A and 116B

(Note: Students who complete Mathematics 21 and 24 or Physics 116A and 116B, are strongly recommended to complete the MATLAB self-paced tutorial at: <http://matlab-training.soe.ucsc.edu/>)

- Plus one course from each of the following categories:

Probability Theory: Applied Mathematics and Statistics 131 or Computer Engineering 107

Dynamical Systems: Applied Mathematics and Statistics 114 or Applied Mathematics and Statistics 214

Introduction to Numerical Methods: Applied Mathematics and Statistics 147, Physics 115, or Earth Sciences 119

Partial Differential Equations: Applied Mathematics and Statistics 212A, Physics 116C, or Mathematics 107

- Plus one applied-mathematics elective from the following list:

Applied Mathematics and Statistics 107/217, 115/215, 132, 198, 212B, 213, 216, 231, 290B

Students may also propose other electives which use applied mathematical methods, subject to approval by the department.

Graduate Programs (M.S., Ph.D.)

Requirements for a Graduate Degree in Statistics and Applied Mathematics

This track is for students emphasizing statistics. All students must complete the core courses described below.

Master's Program

Required core Applied Mathematics and Statistics courses:

200 *Research and Teaching in Applied Mathematics and Statistics*

205A *Mathematical Statistics*, or 205B, *Statistical Inference*

206 *Bayesian Statistics*

207 *Intermediate Bayesian Statistical Modeling*

211 ~~*Applied Mathematical Methods*~~ *Foundations of Applied Mathematics*

256 *Linear Statistical Models*

280B *Seminar in ~~Statistics and Stochastic Modeling~~ Statistical and Applied Mathematical*

Modeling

In addition to these 30 credits, master of science (M.S.) students must complete two additional 5-credit courses from the approved list, for a total requirement of 40 credits.

Ph.D. Program

Required core Applied Mathematics and Statistics courses:

200 *Research and Teaching in Applied Mathematics and Statistics*

205B *Statistical Inference*

206 *Bayesian Statistics*

207 *Intermediate Bayesian Statistical Modeling*

211 ~~Applied Mathematical Methods I~~ Foundations of Applied Mathematics

256 *Linear Statistical Models*

280B *Seminar in Statistical~~s~~ and Applied Mathematical Stochastic Modeling*

In addition to these 30 credits, doctor of philosophy (Ph.D.) students must complete four additional 5-credit courses from the approved list, for a total requirement of 50 credits.

Requirements for a Graduate Degree in Applied Mathematics and Statistics

This track is for students emphasizing Applied Mathematics. All students must complete the core courses described below.

Required core Applied Mathematics and Statistics courses:

200 *Research and Teaching in Applied Mathematics and Statistics*

205A *Mathematical Statistics*, or 205B, *Statistical Inference*

211 *Foundations of Applied Mathematics* ~~for Science and Engineering~~

212A *Applied Mathematical Methods I*

212B *Applied Mathematical Methods II*

213 *Numerical Solutions Differential Equations*

214 *Applied Dynamical Systems*

280B *Seminar in ~~Statistics~~ Statistical and ~~Stochastic~~ Applied Mathematical Modeling*

In addition to these 35 credits, Ph.D. students must complete four additional 5-credit courses from the approved list, for a total requirement of 55 credits.

For both emphasis tracks, M.S. students will be allowed to substitute up to two courses with their required research project in which they conduct a research program in one or two of the quarters of their second year. The project will consist of solving a problem or problems from the selected area of application and will be presented to the sponsoring faculty member as a written document.

Ph.D. students will be required to serve as teaching assistants for at least two quarters during their graduate study. Certain exceptions may be permitted for those with extensive prior teaching experience, for those who are not allowed to be employed due to visa regulations, or for other reasons approved by the graduate director.

Qualifying Examinations

At the end of the first year, all students will take a pre-qualifying examination covering the five or six (non-seminar) core courses. This examination will have two parts: an in-class written examination, followed by a take-home project involving data analysis. Students who do not pass this examination will be allowed to retake it before the start of the following fall quarter; if they fail the second examination they will be dismissed from the program.

Ph.D. students must complete the oral proposal defense, through which they advance to candidacy, by the end of the spring quarter of their third year. The proposal defense is a public seminar as part of an oral qualifying examination given by the qualifying committee.

Thesis and/or Dissertation Requirements

A capstone project is required for the M.S. degree and a dissertation for the Ph.D. degree.

For the M.S. degree, students will conduct a capstone research project in their second year (up to three quarters). Students must submit a proposal to the potential faculty sponsor by the start of the fourth academic quarter. If the proposal is accepted, the faculty member will become the sponsor and will supervise the research and writing of the project. The project will involve the solution of a problem or problems from the selected area of application. When the project is completed and written, it will be submitted to and must be

accepted by a committee of two individuals, consisting of the faculty adviser and one additional reader. Additional readers will be chosen appropriately from within the Applied Mathematics and Statistics Department or outside of it. Either the adviser or the additional reader must be from within the Applied Mathematics and Statistics Department.

A dissertation is required for the Ph.D. degree. Ph.D. students must select a faculty research adviser by the end of the second year. A written dissertation proposal will be submitted to the adviser, and filed with the graduate secretary. A qualifying examination committee will be formed, consisting of the adviser and three additional members, approved by the Chair of the Graduate Program and the Dean of the Graduate Division. The student will submit the written dissertation proposal to all members of the committee and the graduate secretary no less than one month in advance of the qualifying examination. The dissertation proposal will be formally presented in a public oral qualifying examination with the committee, followed by a private examination. Students will advance to candidacy after they have completed all course requirements (including removal of all incompletes), passed the qualifying examination, and paid the filing fee. Under normal progress, a student will advance to candidacy by the end of the spring quarter of her/his third year. A student who has not advanced to candidacy by the start of the fourth year will be subject to academic probation. Upon advancement to candidacy, a dissertation reading committee will be formed, consisting of the dissertation supervisor and at least two additional readers appointed by the Graduate Program chair upon recommendation of the dissertation supervisor. At least one of these additional readers must be in the Applied Mathematics and Statistics Department. The committee is subject to the approval of the Graduate Division.

The dissertation will consist of a minimum of three chapters composed of material suitable for submission and publication in major professional journals in statistics and stochastic modeling. The completed dissertation will be submitted to the reading committee at least one month before the dissertation defense, which consists of a public presentation of the research followed by a private examination by the reading committee. Successful completion of the dissertation defense is the final requirement for the Ph.D. degree.

Relationship of Masters and Doctoral Programs

The M.S. and Ph.D. programs are freestanding and independent, so that students can be admitted to either. Students completing the M.S. program may proceed into the Ph.D. program, and students in the Ph.D. program can receive a M.S. degree upon completion of M.S. requirements, including the capstone research project. Each Ph.D. student will be required to have knowledge of statistics and applied mathematics equivalent to that required for the M.S. degree. In addition, Ph.D. candidates will be required to complete coursework beyond the M.S. level.

Transfer Credit

Up to three School of Engineering courses fulfilling the degree requirements of either the M.S. or Ph.D. degrees may be taken before beginning the graduate program through the concurrent enrollment program. Ph.D. students who have previously earned a master's degree in a related field at another institution may substitute courses from their previous university with approval of the adviser and the graduate committee. Courses from other institutions may not be applied to the M.S. degree course requirements.

Petitions should be submitted along with the transcript from the other institution or UCSC Extension. For courses taken at other institutions, copies of the syllabi, exams, and other course work should accompany the petition. Such petitions are not considered until the completion of at least one quarter at UCSC. At most, a total of three courses may be transferred from concurrent enrollment and other institutions.

Review of Progress

Each year, the faculty reviews the progress of every student. Students not making adequate progress toward completion of degree requirements are subject to dismissal from the program (see the *Graduate Handbook* for the policy on satisfactory academic progress). For specific guidelines on the annual student reviews, please refer to <http://www.soe.ucsc.edu/programs/ssm/graduate/index.html>.

Requirements for a designated emphasis to an external degree program

Students from another degree program who meet the following requirements can have the designated emphasis of "statistics" annotated to their degree title. For example, a Ph.D. student in electrical engineering who meets the requirements would get a certification that read "Ph.D. Electrical Engineering (Statistics)." This certification is supplied for those students who effectively do a statistics M.S. on their way to a Ph.D. in another program. ~~To qualify for this, the degree-granting department must sign an agreement with the AMS department regarding designated emphases.~~ The course requirements are:

Required core Applied Mathematics and Statistics courses:

205A *Mathematical Statistics*, or 205B, *Statistical Inference*

206 *Bayesian Statistics*

207 *Intermediate Bayesian [Statistical](#) Modeling*

256 *Linear Statistical Models*

and one other course from a list of approved courses in AMS (currently 211, 221, 223, 241, 245, 261, 274 although others will be added in the future)

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Faculty and Professional Interests

Professor

NICHOLAS BRUMMELL

Fluid dynamics; magnetohydrodynamics; numerical simulations of geophysical and astrophysical dynamics, especially solar interior physics; supercomputing

DAVID DRAPER

Bayesian statistics, hierarchical modeling, Bayesian nonparametric methods, model specification and model uncertainty, quality assessment, risk assessment, statistical applications in the environmental, medical, and social sciences

HERBERT LEE

Bayesian statistics, computer simulation experiments, spatial statistics, inverse problems, model selection and model averaging, nonparametric regression, neural networks, classification and clustering

MARC MANGEL, Distinguished Professor of Applied Mathematics and Statistics
Program Director, Information Systems Management

Mathematical modeling of biological phenomena, especially quantitative issues in fishery management; mathematical and computational aspects of aging and disease; impact of technology on biological systems

RAQUEL PRADO

Bayesian non-stationary time series modeling, multivariate time series, biomedical signal processing and statistical genetics

BRUNO SANSÓ

Bayesian spatio-temporal modeling, environmental and geostatistical applications, modeling of extreme values, statistical assessment of climate variability

HONGYUN WANG

Single-molecule studies and biophysics, statistical physics, stochastic processes and stochastic differential equations, classical analysis; numerical analysis

Associate Professor

PASCALE GARAUD

Astrophysical and geophysical fluid dynamics, magnetohydrodynamics; analytical and numerical solutions of partial differential equations related to these phenomena

ATHANASIOS KOTTAS

Bayesian nonparametrics, analysis of computer model experiments, mixture models, modeling and inference for point processes, quantile regression, survival analysis, applications in ecology and engineering

ABEL RODRÍGUEZ

Bayesian nonparametrics, Bayesian time series and spatial models, machine learning, document modeling, public health, financial econometrics, structural proteomics, genomics

Assistant Professor

QI GONG

Computational methods for real-time control systems, trajectory optimization and motion planning, nonlinear filtering and observer design, robust and adaptive control of nonlinear systems, industry applications of control theory

DEJAN MILUTINOVIĆ

Stochastic dynamical systems and statistical signal processing, multi-agent systems/robotics, systems biology/immune system, optimal control, hybrid and discrete event systems

Associate Adjunct Professor

DANIEL MERL

Cyber security, computational methods for analyzing large-scale data, large-scale bioinformatic analyses, semiparametric mixture models, computational pragmatism

ROBIN MORRIS

Bayesian analysis of scientific data, with applications in Earth remote sensing, particle and astroparticle physics, signal processing and engineering

TIMOUR RADKO

Physical oceanography and geophysical fluid dynamics. Particular subjects include the dynamics of mesoscale jets and vortices, general circulation of the ocean, double diffusive convection, wave motion

Adjunct Professor**YUEFENG WU, Visiting Assistant Professor**

Nonparametric Bayesian analysis, Bayesian asymptotic, minimum disparity estimator, dynamic system inference, functional data analysis, limit theorems in probability

Assistant Adjunct Professor**ERIC ANDERSON**

Statistical methods in fisheries management and ecology, parentage inference, inference of species hybrids, genetic stock identification

Lecturer**YONATAN KATZNELSON**

Number theory

BRUNO MENDES

Parameter and model uncertainty in geophysics and groundwater contamination modeling, Bayesian statistics, parallel computation

**WILLIAM DUNBAR (COMPUTER ENGINEERING)**

Theory and application of feedback control, single-molecule biophysics, nanopore sensors, dynamics and control of biomolecules

GABRIEL ELKAIM (COMPUTER ENGINEERING)

Embedded systems; robust software architectures for real-time reactive systems; sensor fusion; guidance, navigation, and control (GNC) system identification; robust and advanced control schemes; feedback control systems; robotics; unmanned autonomous vehicles (UAVs); and cooperative control

ANDREW T. FISHER (EARTH SCIENCES)

Hydrogeology, crustal studies, coupled flows, modeling

GARY A. GLATZMAIER (EARTH SCIENCES)

Computer simulation of geodynamics and planetary dynamics

DAVID HAUSSLER (BIOMOLECULAR ENGINEERING; DISTINGUISHED PROFESSOR OF BIOMOLECULAR ENGINEERING; INVESTIGATOR, HOWARD HUGHES MEDICAL INSTITUTE; DIRECTOR, CENTER FOR BIOMOLECULAR SCIENCE AND ENGINEERING; SCIENTIFIC CO-DIRECTOR, CALIFORNIA INSTITUTE FOR QUANTITATIVE BIOSCIENCES [QB3])

Molecular evolution, neurodevelopment, genomics, bioinformatics, computational molecular biology, statistical models, machine learning, neural networks

DAVID P. HELMBOLD (COMPUTER SCIENCE)

Machine learning, computational learning theory, analysis of algorithms

ROBERTO MANDUCHI (COMPUTER ENGINEERING)

Computer vision and sensor processing, with application to assistive technology for the visually impaired

RICHARD MONTGOMERY (MATHEMATICS)

Celestial mechanics, differential geometry, gauge theory, mechanics (quantum and classical), and control theory

KATIA OBRACZKA (COMPUTER ENGINEERING)

Computer networks, distributed systems, operating systems, Internet information systems, mobile computing, wireless networks

HAMID SADJADPOUR (COMPUTER ENGINEERING)

Wireless communication systems, network information theory and scaling laws, performance analysis of wireless ad hoc and sensor networks, routing and MAC protocol design for wireless networks

MANFRED WARMUTH (COMPUTER SCIENCE)

Online learning, machine learning, statistical decision theory, game theory, analysis of algorithms

PETER YOUNG (PHYSICS)

Condensed matter theory, statistical mechanics

YI ZHANG (TECHNOLOGY AND INFORMATION MANAGEMENT)

Information retrieval, knowledge management, natural language processing, machine learning

[Program Description](#) | [Faculty](#) | [Course Descriptions](#)

Lower-Division Courses

2. Pre-Statistics. F

Reviews and introduces mathematical methods useful in the elementary study of statistics, including logic, real numbers, inequalities, linear and quadratic equations, functions, graphs, exponential and logarithmic functions, and summation notation. Prerequisite(s): Mathematics 2 or placement exam score of 20 or higher. (General Education Code(s): MF, Q.) *B. Mendes, The Staff*

3. Precalculus for Science and Engineering. S

Includes inequalities, linear and quadratic equations, functions (linear, quadratic, rational, power, exponential, logarithms, trigonometric), and analytic geometry, with application to science and engineering. Students cannot receive credit for both this course and Mathematics 3. Mathematics 3 can substitute for course 3. Prerequisite(s): score of 20 or higher on Mathematics Placement Exam or Mathematics 2. (General Education Code(s): MF, Q.) *The Staff, P. Garaud, B. Mendes*

5. Statistics. F,W,S

Introduction to statistical methods/reasoning, including descriptive methods, data-gathering (experimental design and sample surveys), probability, interval estimation, significance tests, one- and two-sample problems, categorical data analysis, correlation and regression. Emphasis on applications to the natural and social sciences. Students cannot receive credit for this course if they have already received credit for course 7. (General Education Code(s): SR, IN, Q.) *The Staff, H. Lee, A. Kottas, R. Morris, J. Katznelson, A. Rodriguez, B. Sanso*

7. Statistical Methods for the Biological, Environmental, and Health Sciences. F,W,S

Case-study-based introduction to statistical methods as practiced in the biological, environmental, and health sciences. Descriptive methods, experimental design, probability, interval estimation, hypothesis testing, one- and two-sample problems, power and sample size calculations, simple correlation and simple linear regression, one-way analysis of variance, categorical data analysis. (Formerly *Statistical Methods for the Biological and Environmental Sciences*.) Prerequisite(s): score of 31 or higher on mathematics placement exam, or course 2 or 3 or 11A or 15A or Mathematics 3 or 11A or 19A. Concurrent enrollment in course 7L is required. (General Education Code(s): SR, IN, Q.) *H. Lee, A. Rodriguez, D. Draper, R. Prado*

7L. Statistical Methods for the Biological, Environmental, and Health Sciences Laboratory (2 credits). F,W,S

Computer-based laboratory course in which students gain hands-on experience in analysis of data sets arising from statistical problem-solving in the biological, environmental, and health sciences. Descriptive methods, interval estimation, hypothesis testing, one- and two-sample problems, correlation and regression, one-way analysis of variance, categorical data analysis. (Formerly *Statistical Methods for the Biological and Environmental Sciences Laboratory*.) Prerequisite(s): score of 31 or higher on mathematics placement exam, course 2 or 3 or 11A or 15A or Mathematics 3 or 11A or 19A. Concurrent enrollment in course 7 is required. *H. Lee, D. Draper, R. Prado*

10. Mathematical Methods for Engineers I. F,S

Applications-oriented course on complex numbers and linear algebra integrating Matlab as a computational support tool. Introduction to complex algebra. Vectors, bases and transformations, matrix algebra, solutions of linear systems, inverses and determinants, eigenvalues and eigenvectors, and geometric transformations. Students cannot receive credit for this course and for courses 10A or Mathematics 21. Prerequisite(s): Score of 40 or higher on mathematics placement exam, or course 3, or Mathematics 3. (General Education Code(s): MF, Q.) *The Staff, H. Wang, Q. Gong, J. Katznelson, N. Brummell, B. Mendes*

10A. Basic Mathematical Methods for Engineers I (3 credits). F,S

Applications-oriented course on complex numbers and linear algebra integrating Matlab as a computational support tool. Introduction to complex algebra. Vectors, bases and transformations, matrix algebra, solutions of linear systems, inverses and determinants. Students cannot receive credit for this course and courses 10 or Mathematics 21. Prerequisite(s): Score of 40 or higher on mathematics placement exam, or course 3, or Mathematics 3. *The Staff, H. Wang, Q. Gong, J. Katznelson, N. Brummell, B. Mendes*

10B. Mathematical Methods for Engineers IB (2 credits). F,S

Can only be taken by students who need a transition from course 10A to course 10. Students cannot receive credit for this course and for course 10 or Mathematics 21. Prerequisite(s): course

10A. Enrollment by permission of instructor only. *The Staff*

11A. Mathematical Methods for Economists I. F,W,S

Introduction to mathematical tools and reasoning, with applications to economics. Topics are drawn from differential calculus in one variable and include limits, continuity, differentiation, elasticity, Taylor polynomials, and optimization. Students cannot receive credit for both this course and Mathematics 11A or 19A or Applied Math and Statistics 15A. (Also offered as Economics 11A. Students cannot receive credit for both courses.) Students who have already taken Mathematics 11A and 19A should not take this course. Prerequisite(s): score of 31 or higher on Math Placement Exam. Students who do not place into precalculus should enroll in Mathematics 2. (General Education Code(s): IN, Q.) *J. Katznelson, D. Milutinovic, M. Mangel*

11B. Mathematical Methods for Economists II. F,W,S

Mathematical tools and reasoning, with applications to economics. Topics are drawn from multivariable differential calculus and single variable integral calculus, and include partial derivatives, linear and quadratic approximation, optimization with and without constraints, Lagrange multipliers, definite and indefinite integrals, and elementary differential equations. Students cannot receive credit for both this course and Mathematics 11B or 19B or Applied Math and Statistics 15B. (Also offered as Economics 11B. Students cannot receive credit for both courses.) Prerequisite(s): course 11A, Economics 11A, Mathematics 11A, or Mathematics 19A. (General Education Code(s): MF, IN, Q.) *J. Katznelson*

15A. Case-Study Calculus I. W

Case-study-based, first-quarter introduction to single-variable calculus, with computing labs/discussion sections featuring contemporary symbolic, numerical, and graphical computing tools. Case studies drawn from biology, environmental sciences, health sciences, and psychology. Includes functions, mathematical modeling, limits, continuity, tangents, velocity, derivatives, the chain rule, implicit differentiation, higher derivatives, exponential and logarithmic functions and their derivatives, differentiating inverse functions, the mean value theorem, concavity, inflection points, function optimization, and curve-sketching. Students cannot receive credit for this course and course 11A or Economics 11A or Mathematics 11A or 19A. Prerequisite(s): course 3 or Mathematics 3 or score of 30 or higher on precalculus placement exam or by permission of instructor. (General Education Code(s): MF, IN, Q.) *B. Mendes, The Staff*

15B. Case-Study Calculus II. S

Case-study based, second-quarter introduction to single-variable calculus, with computing labs/discussion sections featuring symbolic numerical, and graphical computing tools. Case studies are drawn from biology, environmental science, health science, and psychology. Includes indefinite and definite integrals of functions of a single variable; the fundamental theorem of calculus; integration by parts and other techniques for evaluating integrals; infinite series; Taylor series, polynomial approximations. Students cannot receive credit for this course and course 11B or Economics 11B or Mathematics 11B or 19B. Prerequisite(s): course 15A or 11A or Economics 11A or Mathematics 11A or 19A. (General Education Code(s): MF, IN, Q.) *The Staff, D. Milutinovic, B. Mendes*

20. Mathematical Methods for Engineers II. W

Applications-oriented class on ordinary differential equations (ODEs) and systems of ODEs using Matlab as a computational support tool. Covers linear ODEs and systems of linear ODEs; nonlinear ODEs using substitution and Laplace transforms; phase-plane analysis; introduction to numerical methods. Students cannot receive credit for this course and for courses 20A or Mathematics 24. Prerequisite(s): Mathematics 19B, and course 10 or 10A or Mathematics 21. (General Education Code(s): MF.) *Q. Gong, J. Katznelson*

20A. Basic Mathematical Methods for Engineers II (3 credits). W

Applications-oriented class on ordinary differential equations (ODEs) and systems of ODEs integrating Matlab as a computational support tool. Covers linear ODEs and systems of linear ODEs; nonlinear ODEs using substitution and Laplace transforms. Students cannot receive credit for this course and for courses 20 or Mathematics 24. Prerequisite(s): Mathematics 19B, and course 10 or 10A or Mathematics 21. *Q. Gong, J. Katznelson*

20B. Mathematical Methods for Engineers IIB (2 credits). W

Can only be taken by students who need a transition from course 20A to course 20. Students cannot receive credit for this course and for course 20 or Mathematics 24. Prerequisite(s): course 20A. Enrollment by permission of instructor only. *The Staff*

80A. Gambling and Gaming. F,W

Games of chance and strategy motivated early developments in probability, statistics, and decision theory. Course uses popular games to introduce students to these concepts, which underpin recent scientific developments in economics, genetics, ecology, and physics. (General Education Code(s): SR, T7-Natural Sciences or Social Sciences, Q.) *A. Rodriguez, H. Lee*

80B. Data Visualization. *

Introduces the use of complex-data graphical representations to extract information from data. Topics include: summary statistics, boxplots, histograms, dotplots, scatterplots, bubble plots, and map-creation, as well as visualization of trees and hierarchies, networks and graphs, and text. (General Education Code(s): SR.) *A. Rodriguez*

Upper-Division Courses

100. Mathematical Methods for Engineers III. *

Applications-oriented course on complex analysis and partial differential equations using Maple as symbolic math software support. In addition, introduces Fourier analysis, special functions, and asymptotic methods. Students cannot receive credit for this course and Physics 116B or Physics 116C. Prerequisite(s): course 20, or by permission of instructor. Enrollment limited to 25. *The Staff*

107. Introduction to Fluid Dynamics. W

Covers fundamental topics in fluid dynamics: Euler and Lagrange descriptions of continuum dynamics; conservation laws for inviscid and viscous flows; potential flows; exact solutions of the Navier-Stokes equation; boundary layer theory; gravity waves. Students cannot receive credit for this course and Applied Mathematics and Statistics 217. (Also offered as Physics 107. Students cannot receive credit for both courses.) Prerequisite(s): Mathematics 107 or Physics 116C or Earth and Planetary Sciences 111. *N. Brummell, The Staff*

114. Introduction to Dynamical Systems. S

Introduces continuous and discrete dynamical systems. Topics include: fixed points; stability; limit cycles; bifurcations; transition to and characterization of chaos; fractals. Examples are drawn from sciences and engineering. Students cannot receive credit for this course and course 214. (Formerly course 146.) Prerequisite(s): course 20 or 20A, or Mathematics 21 and Mathematics 24, or Physics 116B. Enrollment restricted to sophomores, juniors and seniors. (General Education Code(s): MF.) *D. Milutinovic, P. Garaud*

115. Stochastic Modeling in Biology. *

Application of differential equations, probability, and stochastic processes to problems in cell, organismal, and population biology. Topics include life-history theory, behavioral ecology, and population biology. Students may not receive credit for this course and course 215. Prerequisite(s): course 131, a university-level course in biology, and operational knowledge of a programming language; or consent of instructor. *M. Mangel*

118. Estimation and Introduction to Control of Stochastic Processes. F

Provides practical knowledge of Kalman filtering and introduces control theory for stochastic processes. Selected topics include: state-space modeling; discrete- and continuous-time Kalman filter; smoothing; and applications in feedback control. Students learn through hands-on experience. Students cannot receive credit for this course and course 218. Enrollment by permission of instructor. (General Education Code(s): SR.) *D. Milutinovic*

131. Introduction to Probability Theory. F,S

Introduction to probability theory and its applications. Combinatorial analysis, axioms of probability and independence, random variables (discrete and continuous), joint probability distributions, properties of expectation, Central Limit Theorem, Law of Large Numbers, Markov chains. Students cannot receive credit for this course and course 203 and Computer Engineering 107. Prerequisite(s): course 11B or Economics 11B or Mathematics 11B or 19B. (General Education Code(s): SR, Q.) *R. Prado, A. Kottas, M. Mangel, D. Draper, B. Sanso*

132. Classical and Bayesian Inference. W

Introduction to statistical inference at a calculus-based level: maximum likelihood estimation, sufficient statistics, distributions of estimators, confidence intervals, hypothesis testing, and Bayesian inference. Students cannot receive credit for this course and course 206. (Formerly Statistical Inference.) Prerequisite(s): course 131 or Computer Engineering 107. (General Education Code(s): SR.) *A. Kottas, A. Rodriguez, D. Draper*

147. Computational Methods and Applications. W

Applications of computational methods to solving mathematical problems using Matlab. Topics include solution of nonlinear equations, linear systems, differential equations, sparse matrix solver, and eigenvalue problems. Prerequisite(s): course 10 or 10A, or Mathematics 21. Knowledge of differential equations is recommended (course 20 or 20A, or Mathematics 24). (General Education Code(s): MF.) *H. Wang*

156. Linear Regression. *

Covers simple linear regression, multiple regression, and analysis of variance models. Students learn to use the software package R to perform the analysis, and to construct a clear technical report on their analysis, readable by either scientists or nontechnical audiences. (Formerly *Linear Statistical Models*.) Prerequisite(s): course 132 and satisfaction of the Entry Level Writing and Composition requirements. Enrollment limited to 30. (General Education Code(s): W.) *H. Lee*

198. Independent Study or Research. F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

198F. Independent Study or Research (2 credits). F,W,S

Students submit petition to sponsoring agency. May be repeated for credit. *The Staff*

Graduate Courses

200. Research and Teaching in AMS (3 credits). F

Basic teaching techniques for teaching assistants, including responsibilities and rights; resource materials; computer skills; leading discussions or lab sessions; presentation techniques;

maintaining class records; and grading. Examines research and professional training, including use of library; technical writing; giving talks in seminars and conferences; and ethical issues in science and engineering. Enrollment restricted to graduate students. *The Staff*

202. Linear Models in SAS. *

Case study-based course teaches statistical linear modeling using the SAS software package. Teaches generalized linear models; linear regression; analysis of variance/covariance; analysis of data with random effects and repeated measures. Prerequisite(s): course 156 or 256, or permission of instructor. Enrollment restricted to graduate students. *B. Mendes*

203. Introduction to Probability Theory. F,S

Introduces probability theory and its applications. Requires a multivariate calculus background, but has no measure theoretic content. Topics include: combinatorial analysis; axioms of probability; random variables (discrete and continuous); joint probability distributions; expectation and higher moments; central limit theorem; law of large numbers; and Markov chains. Students cannot receive credit for this course and course 131 or Computer Engineering 107. Enrollment restricted to graduate students, or by permission of the instructor. *R. Prado, B. Sanso, A. Kottas*

205B. Intermediate Classical Inference. W

Statistical inference from a frequentist point of view. Properties of random samples; convergence concepts applied to point estimators; principles of statistical inference; obtaining and evaluating point estimators with particular attention to maximum likelihood estimates and their properties; obtaining and evaluating interval estimators; and hypothesis testing methods and their properties. (Formerly Statistical Inference.) Prerequisite(s): course 203 or equivalent. Enrollment restricted to graduate students. *D. Draper, B. Sanso*

206. Classical and Bayesian Inference. W

Introduction to statistical inference at a calculus-based level: maximum likelihood estimation, sufficient statistics, distribution of estimators, confidence intervals, hypothesis testing, and Bayesian inference. Students cannot receive credit for this course and course 132. (Formerly Bayesian Statistics.) Prerequisite(s): course 203. Enrollment restricted to graduate students; undergraduates may enroll by permission of instructor. *D. Draper, H. Lee*

206B. Intermediate Bayesian Inference. W

Bayesian statistical methods for inference and prediction including: estimation; model selection and prediction; exchangeability; prior, likelihood, posterior, and predictive distributions; coherence and calibration; conjugate analysis; Markov Chain Monte Carlo methods for simulation-based computation; hierarchical modeling; Bayesian model diagnostics, model selection, and sensitivity analysis. Prerequisite(s): course 203. Enrollment restricted to graduate students; undergraduates may enroll by permission of instructor. *A. Rodriguez*

207. Intermediate Bayesian Statistical Modeling. S

Hierarchical modeling, linear models (regression and analysis of variance) from the Bayesian point of view, intermediate Markov chain Monte Carlo methods, generalized linear models, multivariate models, mixture models, hidden Markov models. Prerequisite(s): course 206, and graduate standing or permission of instructor. *R. Prado, D. Draper, B. Sanso*

211. Foundations of Applied Mathematics. F

Accelerated class reviewing fundamental applied mathematical methods for all sciences. Topics include: multivariate calculus, linear algebra, Fourier series and integral transform methods, complex analysis, and ordinary differential equations. Enrollment restricted to graduate students. *N. Brummell*

212A. Applied Mathematical Methods I. W

Focuses on analytical methods for partial differential equations (PDEs), including: the method of characteristics for first-order PDEs; canonical forms of linear second-order PDEs; separation of variables; Sturm-Liouville theory; Green's functions. Illustrates each method using applications taken from examples in physics. Course 211 or equivalent is strongly recommended as preparation. Enrollment restricted to graduate students. Undergraduates are encouraged to take this class with permission of instructor. *H. Wang, N. Brummell, P. Garaud*

212B. Applied Mathematical Methods II. S

Covers perturbation methods: asymptotic series, stationary phase and expansion of integrals, matched asymptotic expansions, multiple scales and the WKB method, Padé approximants and improvements of series. (Formerly course 212.) Prerequisite(s): course 212A. *H. Wang, N. Brummell, P. Garaud*

213. Numerical Solutions of Differential Equations. W

Teaches basic numerical methods for numerical linear algebra and, thus, the solution of ordinary differential equations (ODEs) and partial differential equations (PDEs). Covers LU, Cholesky, and QR decompositions; eigenvalue search methods (QR algorithm); singular value decomposition; conjugate gradient method; Runge-Kutta methods; error estimation and error control; finite differences for PDEs; stability, consistency, and convergence. Basic knowledge of computer programming is needed. Enrollment restricted to graduate students or permission of instructor. *H. Wang, Q. Gong, N. Brummell, P. Garaud*

214. Applied Dynamical Systems. S

Introduces continuous and discrete dynamical systems. Topics include: fixed points; stability; limit cycles; bifurcations; transition to and characterization of chaos; and fractals. Examples drawn from

sciences and engineering; founding papers of the subject are studied. Students cannot receive credit for this course and course 114. Enrollment restricted to graduate students. Enrollment of undergraduates by permission of instructor. Enrollment limited to 15. *H. Wang, D. Milutinovic, P. Garaud, M. Mangel*

215. Stochastic Modeling in Biology. *

Application of differential equations and probability and stochastic processes to problems in cell, organismal, and population biology. Topics include: life-history theory, behavioral ecology, and population biology. Students may not receive credit for this course and course 115. Enrollment restricted to graduate students or permission of instructor. *M. Mangel*

216. Stochastic Differential Equations. *

Introduction to stochastic differential equations and diffusion processes with applications to biology, biomolecular engineering, and chemical kinetics. Topics include Brownian motion and white noise, gambler's ruin, backward and forward equations, and the theory of boundary conditions. Enrollment restricted to graduate students or consent of instructor. *H. Wang*

217. Introduction to Fluid Dynamics. W

Covers fundamental topics in fluid dynamics at the graduate level: Euler and Lagrange descriptions of continuum dynamics; conservation laws for inviscid and viscous flows; potential flows; exact solutions of the Navier-Stokes equation; boundary layer theory; gravity waves. Students cannot receive credit for this course and course 107. Enrollment restricted to graduate students. *N. Brummell, The Staff*

218. Estimation and Introduction to Control of Stochastic Processes. F

Provides practical knowledge of Kalman filtering and introduces control theory for stochastic processes. Selected topics include: state-space modeling; discrete- and continuous-time Kalman filter; smoothing; and applications in feedback control. Students learn through hands-on experience. Students cannot receive credit for this course and course 118. Enrollment restricted to graduate students. *D. Milutinovic*

221. Bayesian Decision Theory. *

Explores conceptual and theoretical bases of statistical decision making under uncertainty. Focuses on axiomatic foundations of expected utility, elicitation of subjective probabilities and utilities, and the value of information and modern computational methods for decision problems. Prerequisite(s): course 206. Enrollment restricted to graduate students. *B. Sanso*

223. Time Series Analysis. W

Graduate level introductory course on time series data and models in the time and frequency domains: descriptive time series methods; the periodogram; basic theory of stationary processes; linear filters; spectral analysis; time series analysis for repeated measurements; ARIMA models; introduction to Bayesian spectral analysis; Bayesian learning, forecasting, and smoothing; introduction to Bayesian Dynamic Linear Models (DLMs); DLM mathematical structure; DLMs for trends and seasonal patterns; and autoregression and time series regression models. Prerequisite: course 206. Enrollment restricted to graduate students. *R. Prado*

225. Multivariate Statistical Methods. *

Introduction to statistical methods for analyzing data sets in which two or more variables play the role of outcome or response. Descriptive methods for multivariate data. Matrix algebra and random vectors. The multivariate normal distribution. Likelihood and Bayesian inferences about multivariate mean vectors. Analysis of covariance structure: principle components, factor analysis. Discriminant, classification and cluster analysis. Prerequisite(s): course 206. Enrollment restricted to graduate students. *D. Draper*

231. Nonlinear Control Theory. S

Covers analysis and design of nonlinear control systems using Lyapunov theory and geometric methods. Includes properties of solutions of nonlinear systems, Lyapunov stability analysis, effects of perturbations, controllability, observability, feedback linearization, and nonlinear control design tools for stabilization. Prerequisite(s): basic knowledge of mathematical analysis and ordinary differential equations is assumed. Enrollment restricted to graduate students or permission of instructor. *Q. Gong*

232. Applied Optimal Control. *

Introduces optimal control theory and computational optimal control algorithms. Topics include: calculus of variations, minimum principle, dynamic programming, HJB equation, linear-quadratic regulator, direct and indirect computational methods, and engineering application of optimal control. Prerequisite(s): course 114 or 214, or Computer Engineering 240 or 241, or Mathematics 145. Enrollment restricted to graduate students. *Q. Gong*

236. Motion Coordination of Robotic Networks. *

Comprehensive introduction to motion coordination algorithms for robotic networks. Emphasis on mathematical tools to model, analyze, and design cooperative strategies for control, robotics, and sensing tasks. Topics include: continuous and discrete-time evolution models, proximity graphs, performance measures, invariance principles, and coordination algorithms for rendezvous, deployment, flocking, and consensus. Techniques and methodologies are introduced through application setups from multi-agent robotic systems, cooperative control, and mobile sensor networks. Enrollment restricted to graduate students. Enrollment limited to 15. *The Staff*

241. Bayesian Nonparametric Methods. *

Theory, methods, and applications of Bayesian nonparametric modeling. Prior probability models for spaces of functions. Dirichlet processes. Polya trees. Nonparametric mixtures. Models for regression, survival analysis, categorical data analysis, and spatial statistics. Examples drawn from social, engineering, and life sciences. Prerequisite(s): course 207. Enrollment restricted to graduate students. *A. Kottas*

245. Spatial Statistics. *

Introduction to the analysis of spatial data: theory of correlation structures and variograms; kriging and Gaussian processes; Markov random fields; fitting models to data; computational techniques; frequentist and Bayesian approaches. Prerequisite(s): course 207. Enrollment restricted to graduate students. *B. Sanso, H. Lee*

256. Linear Statistical Models. S

Theory, methods, and applications of linear statistical models. Review of simple correlation and simple linear regression. Multiple and partial correlation and multiple linear regression. Analysis of variance and covariance. Linear model diagnostics and model selection. Case studies drawn from natural, social, and medical sciences. Course 205 strongly recommended as a prerequisite. Undergraduates are encouraged to take this class with permission of instructor. Prerequisite(s): course 205A or 205B or permission of instructor. Enrollment restricted to graduate students. *B. Sanso, R. Prado*

261. Probability Theory with Markov Chains. *

Introduction to probability theory: probability spaces, expectation as Lebesgue integral, characteristic functions, modes of convergence, conditional probability and expectation, discrete-state Markov chains, stationary distributions, limit theorems, ergodic theorem, continuous-state Markov chains, applications to Markov chain Monte Carlo methods. Prerequisite(s): course 205B or by permission of instructor. Enrollment restricted to graduate students. *A. Kottas*

263. Stochastic Processes. F

Includes probabilistic and statistical analysis of random processes, continuous-time Markov chains, hidden Markov models, point processes, Markov random fields, spatial and spatio-temporal processes, and statistical modeling and inference in stochastic processes. Applications to a variety of fields. Prerequisite(s): course 205A, 205B, or 261, or by permission of instructor. *A. Kottas*

274. Generalized Linear Models. S

Theory, methods, and applications of generalized linear statistical models; review of linear models; binomial models for binary responses (including logistical regression and probit models); log-linear models for categorical data analysis; and Poisson models for count data. Case studies drawn from social, engineering, and life sciences. Prerequisite(s): course 205A, 205B, or 256. Enrollment restricted to graduate students. *A. Kottas*

280A. Seminar in Mathematical and Computational Biology (2 credits). F,W,S

Weekly seminar on mathematical and computational biology. Participants present research findings in organized and critical fashion, framed in context of current literature. Students present own research on a regular basis. Enrollment restricted to graduate students. Enrollment limited to 20. May be repeated for credit. *M. Mangel*

280B. Seminars in Statistical and Applied Mathematical Modeling (2 credits). F,W,S

Weekly seminar series covering topics of current research in applied mathematics and statistics. Permission of instructor required. Enrollment restricted to graduate students. (Formerly *Seminar in Applied Mathematics and Statistics*.) May be repeated for credit. *The Staff*

280C. Seminar in Geophysical and Astrophysical Fluid Dynamics (2 credits). F,W,S

Weekly seminar/discussion group on geophysical and astrophysical fluid dynamics covering both analytical and computational approaches. Participants present research progress and findings in semiformal discussions. Students must present their own research on a regular basis. Enrollment restricted to graduate students. May be repeated for credit. *N. Brummell, P. Garaud*

280D. Seminar in Bayesian Statistical Methodology (2 credits). *

Weekly seminar/discussion group on Bayesian statistical methods, covering both analytical and computational approaches. Participants present research progress and finding in semiformal discussions. Students must present their own research on a regular basis. Enrollment restricted to graduate students. May be repeated for credit. *A. Rodriguez*

285. Seminar in Career Skills (2 credits). F

Seminar in career skills for applied mathematicians and statisticians. Learn about professional activities such as the publication process, grant proposals, and the job market. Enrollment restricted to graduate students, typically within two years of their expected Ph.D. completion date. *The Staff*

290A. Topics in Mathematical and Computational Biology (2 credits). *
